West Virginia's
2005 Section 102 Expenditures

West Virginia received a total of $2,349,474 under Title I Section 102 of the Help America Vote Act. Section 102 allows for states to utilize this funding for the replacement of punch card and lever machines within 736 precincts in 15 counties of West Virginia. As of the end of 2005, no funds had been spent. However, with careful planning, West Virginia created an additional $75,655 of funding for the replacement of these machines through monthly interest payments. With interest accumulation, the total Section 102 funding has been increased to $2,444,308, or $3,298 per precinct.

West Virginia accepted the delivery of voting equipment that replaced the punch card and lever machines within the state by December 31, 2005, but there has not yet been a transfer of payments to the selected vendor, Election Systems and Software, Inc. (We are waiting for the vendor to supply final contractual peripherals. We expect to begin to make payment to the vendor sometime in the month of March 2006.) Therefore, no expenditures were made for Section 102 compliance.

Section 102 requires that the new voting system meets the requirements of Section 301 and Section 906 of HAVA. The Section 301 requirements state that the voting system must allow the voter to prevent or notify the voter of an overvote, provide an auditable record, and allow the voter to correct a ballot before it is counted. Section 906 requires that the system must allow the voter and the election administrators to comply with numerous federal election requirements including the National Voters Rights Act and the Americans with Disabilities Act. Each requirement is met by the options set forth in the West Virginia State plan.

In order to meet the requirements of Section 102, West Virginia offered each of the punch card and lever counties several options. The first option allowed for a replacement of the voting system with an optical scan system. This system included a central count scanner as well as one unassisted iVotronic touch screen unit per precinct. A second option was a complete replacement of all equipment with iVotronic voting systems. Also offered was the use of precinct based optical scanners and AutoMark optical scan equipment. In additional to the equipment replacement, the Secretary of State also agreed to provide each county with one election cycle worth of ballots and programming to assist in the transition of equipment for each county.

The following chart reflects the choices made by the punch card and lever counties within West Virginia, along with the eventual cost of the replacement:

In order to assist each county with the cost of replacing the equipment, West Virginia has provided for a revolving loan fund. The fund allows for counties that need additional financial resources to replace or update equipment to borrow from the account and make interest free payments over five years. This allows for a continual source of income that is perpetually available to counties who choose to upgrade at a later date.
