<sup>1</sup> The Public Integrity Section of the Criminal Division of the Department of Justice has all of the 93 U.S. Attorneys appoint Assistant U.S. Attorneys to serve as DEOs for two years. DEOs are required to screen and conduct preliminary investigations of complaints, in conjunction with the FBI and PIN, to determine whether they constitute potential election crimes and should become matters for investigation; oversee the investigation and prosecution of election fraud and other election crimes in their districts; coordinate their district’s (investigative and prosecutorial) efforts with DOJ headquarters prosecutors; coordinate election matters with state and local election and law enforcement officials and make them aware of their availability to assist with election-related matters; issue press releases to the public announcing the names and telephone numbers of DOJ and FBI officials to contact on election day with complaints about voting or election irregularities and answer telephones on election day to receive these complaints; and supervise a team of Assistant U.S. Attorneys and FBI special agents who are appointed to handle election-related allegations while the polls are open on election day. *Department of Justice's Activities to Address Past Election-Related Voting Irregularities*: General Accounting Office, October 14, 2004, GAO-04-1041R

could not determine whether there was any action taken regarding the allegations, investigation or charges brought. Consequently, it is impossible to know if the article is just reporting on “talk” or what turns out to be a serious affront to the system. We recommend that follow up Nexis research be conducted to establish what, if any, resolutions or further activity there was in each case.

We also believe that in the second phase of this project, there should be a sampling of local newspapers from around the country to analyze for articles on voter fraud and voter intimidation. This will lead to a better idea of problems that occur on city and county levels that are often not reported statewide.

- **Conduct follow-up research to the literature reviews.** Similarly, many allegations are made in the reports and books that we analyzed and summarized. Those allegations are often not substantiated in any way and are inherently time limited by the date of the writing. Despite this, various interested parties frequently cite such reports and books as evidence of fraud or intimidation. Therefore, we recommend as a follow up to the literature review, an analysis of the resolution, if any, of specific instances of fraud and intimidation cited in the books and reports reviewed in the first phase.
- **Review a sampling of state district court cases.** In the first phase, we read and analyzed over 44,000 cases. Unfortunately, few of these were found to be on point. We therefore recommend that in the second phase, research should be concentrated on a national sampling of state district court level electoral cases. Often the district courts settle important issues that are not subsequently appealed. We believe that there could be a storehouse of information regarding vote fraud and intimidation in these cases.
- **Survey state election fraud and intimidation laws.** We recommend that there be a sampling of state electoral laws (including criminal penalty provisions), in order to aid in the development of model legislation that would address voter fraud and intimidation.
- **Review which states collect data on fraud and intimidation.** Evidently a few states, such as Arkansas and Georgia, collect and maintain data on complaints of fraud and intimidation and the disposition of those allegations at the state level. Phase two should examine what other states have such information and seek to obtain it for review and analysis. Policies and protocols on gathering such information in these states should also be looked at as possible models for the states that do not employ this practice.
- **Analyze data collected by various organizations in the 2006 election.** Several organizations, such as Election Protection, 1-800-MYVOTE1, and the parties will be setting up hotlines and sending people into the field during the upcoming mid-term elections both to assist voters and compile complete records of complaints and incidents from the period of voter registration through Election Day. Some of

these organizations have already agreed to share their data with the phase two EAC project consultants. We recommend that such data be used to the greatest extent possible to assess the incidence and the nature of the fraud and intimidation that occurred.

- **Obtain and analyze data retained by the Department of Justice.** Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice tracks complaints of voter intimidation in a variety of ways,<sup>i</sup> the Section was extremely reluctant to provide the consultants with useful information. Further attempts should be made to obtain relevant data. This includes the telephone logs of complaints the Section keeps and information from the database – the Interactive Case Management (ICM) system – the Section maintains on complaints received and the corresponding action taken. We also recommend that further research include a review and analysis of the observer and monitor field reports from Election Day that must be filed with the Section.
- **Obtain and analyze a sampling of DEO Reports.** Similarly, the consultants believe it would be useful for any further research to include a review of the reports that must be filed by every DEO to the Public Integrity Section of the Criminal Division of the Department of Justice. As noted above, the DEOs play a central role in receiving reports of voter fraud and investigating and pursuing them. Their reports would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or kept confidential.
- **Attend the Department of Justice’s Ballot Access and Voting Integrity Symposium.** The consultants also believe it would be useful for any further activity in this area to include attendance at the next Ballot Access and Voting Integrity Symposium.<sup>2</sup> According to the Department, DEOs are required to attend annual training conferences centered on combating election fraud and voting rights abuses. These conferences sponsored by the Voting Section of the Civil Rights Division and the Public Integrity Section of the Criminal Division, feature presentations by civil rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys’ Offices.<sup>ii</sup>
- **Consult with an academic/academic institution with unimpeachable political science statistical research credentials.** Included in this report is a summary of

---

<sup>2</sup> By attending the symposium researchers could learn more about the following:

How *DEOs* are trained, e.g. what they are taught to focus their resources on; How they are instructed to respond to various types of complaints; How information about previous elections and voting issues is presented; and, How the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants.

various methodologies political scientists and others suggested to measure voter fraud and intimidation. While we note the skepticism of the Working Group in this regard, we nonetheless recommend that in order to further the mission of providing unbiased data, further activity in this area include an academic institution and/or individual that focuses on sound, statistical methods for political science research.

- **Review and Assess Whether Current Federal Laws on Fraud and Intimidation are Adequate.** Finally, we recommend that phase two project researchers review federal laws to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threats.

According to Craig Donsanto, long-time director of the Public Integrity Section of the Criminal Division of the Department of Justice,

As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation which is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.<sup>iii</sup>

Mr. Donsanto reiterated these points to us on several occasions, including at the working group meeting.

The second phase of this project should examine if current laws can be revised or new laws drafted that would address voter intimidation that does not threaten the voter physically or financially, but rather threatens the voter's right to vote as *something of tangible value in itself*. Such legislation would penalize all forms of voter intimidation, regardless of the motivation. The law would, *for example*, potentially cover letters and postcards with contain language meant to deter voters from voting and pre-Election and Election Day challenges that are clearly illegitimate.

In the alternative to finding a way to penalize such behavior, researchers might examine ways to deter and punish voter intimidation under civil law. For example, there might be a private right of action created for voters or groups who have been subjected to intimidation tactics in the voting process. Such an action could be brought against individual offenders; any state or local actor where there is an unchecked pattern of repeated abuse; and organizations that intentionally engage in intimidating practices. Civil damage penalties and attorney fees should be included. Another, more modest measure, as has been suggested by Ana Henderson

and Christopher Edley,<sup>iv</sup> would be to bring fines for violations under the Voting Rights Act up to parity. Currently, the penalty for fraud is \$10,000 while the penalty for acts to deprive the right to vote is \$5,000.

## Working Group Recommendations

1. **Use the 2006 and/or 2008 elections as a laboratory by employing observers.** At the working group meeting, there was much discussion about using observers to collect data regarding fraud and intimidation at the polls in the upcoming elections. Mr. Ginsberg recommended using representatives of both parties for the task. Mr. Bauer and others objected to this, believing that using partisans as observers would be unworkable and would not be credible to the public.

There was even greater concern about the difficulties in getting access to poll sites for the purposes of observation. Most states strictly limit who can be in the polling place. In addition, there are already so many groups doing observation and monitoring at the polls, administrators might object. There was further concern that observers would introduce a variable into the process that would impact the outcome. The very fact that observers were present would influence behavior and skew the results.

Moreover, it was pointed out, many of the problems we see now with respect to fraud and intimidation does not take place at the polling place, e.g. absentee ballot fraud and deceptive practices. Poll site monitoring would not capture this activity. Moreover, with increased use of early voting, poll site monitoring might have to go on for weeks to be effective, which would require tremendous resources.

Mr. Weinberg suggested using observers in the way they are utilized in international elections. Such observers come into a jurisdiction prior to the election, and use standardized forms at the polling sites to collect data.

2. **Do a study on absentee ballot fraud.** The working group agreed that since absentee ballot fraud is the main form of fraud occurring, and is a practice that is great expanding throughout the country, it would make sense to do a stand-alone study of absentee ballot fraud. Such a study would be facilitated by the fact that there already is a great deal of information on how, when, where and why such practices are carried out based on cases successfully prosecuted. Researchers could look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing them.
3. **Use risk analysis methodology to study fraud.**<sup>1</sup> Working group members were supportive of one of the methodologies recommended for studying this issue, risk analysis. As Mr. Bauer put it, based on the assumption that people act rationally, do an examination of what types of fraud people are most likely to commit, given the relative costs and benefits. In that way, researchers can rank the types of fraud that are the easiest to commit at the least cost with the greatest effect, from

---

<sup>1</sup> See Appendix C, and section on methodology

most to least likely to occur. This might prove a more practical way of measuring the problems than trying to actually get a number of acts of fraud and/or intimidation occurring. Mr. Greenbaum added that one would want to examine what conditions surrounding an election would be most likely to lead to an increase in fraud. Mr. Rokita objected based on his belief that the passions of partisanship lead people to not act rationally in an election.

4. **Conduct research using a methodology of database comparison.** Picking up on a suggestion made by Spencer Overton and explained in the suggested methodology section, Mr. Hearne recommended studying the issue using statistical database matching. Researchers should compare the voter roll and the list of people who actually voted to see if there are “dead” and felon voters. Because of the inconsistent quality of the databases, however, a political scientist would need to work in an appropriate margin of error when using such a methodology.
5. **Conduct a study of deceptive practices.** The working group discussed the increasing use of deceptive practices, such as flyers with false and/or intimidating information, to suppress voter participation. A number of groups, including the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such practices, which may be available for review and analysis. This is also an area in which there is often tangible evidence, such as copies of the flyers and postcards themselves. All of this information should be reviewed and analyzed to see how such practices are being conducted and what can be done about them.
6. **Study use of HAVA’s administrative complaint procedure to see if it can be used to measure some forms of fraud and intimidation.** The EAC should study the extent to which states are actually utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.
7. **Examine the use of special election courts.** Given that many state and local judges are elected, it may be worth exploring whether special election courts that are running before, during and after election day would be an effective means of disposing with complaints and violations in an expeditious manner. Pennsylvania employs such a system, and the EAC should consider investigating how well it is working to deal with fraud and intimidation problems.

## **Defining Election Fraud**

*Note: The definition provided below is for the purposes of this EAC project. Most of the acts described come within the federal criminal definition of fraud, but some may not.*

Election fraud is any intentional action, or intentional failure to act when there is a duty to do so, that corrupts the election process in a manner that can impact on election outcomes. This includes interfering in the process by which persons register to vote; the way in which ballots are obtained, marked, or tabulated; and the process by which election results are canvassed and certified.

Examples include the following:

- falsifying voter registration information pertinent to eligibility to cast a vote, (e.g. residence, criminal status, etc).;
- altering completed voter registration applications by entering false information;
- knowingly destroying completed voter registration applications (other than spoiled applications) before they can be submitted to the proper election authority;
- knowingly removing eligible voters from voter registration lists, in violation of HAVA, NVRA, or state election laws;
- intentional destruction by election officials of voter registration records or balloting records, in violation of records retention laws, to remove evidence of election fraud;
- vote buying;
- voting in the name of another;
- voting more than once;
- coercing a voter's choice on an absentee ballot;
- using a false name and/or signature on an absentee ballot;
- destroying or misappropriating an absentee ballot;
- felons, or in some states ex-felons, who vote when they know they are ineligible to do so;
- misleading an ex-felon about his or her right to vote;
- voting by non-citizens who know they are ineligible to do so;
- intimidating practices aimed at vote suppression or deterrence, including the abuse of challenge laws;
- deceiving voters with false information (e.g.; deliberately directing voters to the wrong polling place or providing false information on polling hours and dates);

- knowingly failing to accept voter registration applications, to provide ballots, or to accept and count voted ballots in accordance with the Uniformed and Overseas Citizens Absentee Voting Act;
- intentional miscounting of ballots by election officials;
- intentional misrepresentation of vote tallies by election officials;
- acting in any other manner with the intention of suppressing voter registration or voting, or interfering with vote counting and the certification of the vote.

Voting fraud does not include mistakes made in the course of voter registration, balloting, or tabulating ballots and certifying results. For purposes of the EAC study, it also does not include violations of campaign finance laws.

## Key Working Group Comments and Observations

1. **The main problems today are structural barriers to voting and administrative error.** Mr. Perez observed that, in accordance with the research, the biggest issues today are structural barriers to voting, not stealing votes. Election administrators share this view. Election fraud is negligible, and to the extent it occurs, it needs to be prosecuted with stronger criminal laws. The biggest problem is properly preparing people, which is the responsibility of election administrators.
2. **Most fraud and intimidation is happening outside of the polling place.** Mr. Greenbaum observed that with respect to both voter fraud and voter suppression, such as deceptive practices and tearing up voter registration forms, most of that is taking place outside of the polling place.
3. **This issue cannot be addressed through one study or one methodology alone.** Mr. Weinberg observed that since there is such a variety in types of fraud and intimidation, one solution will not fit all. It will be impossible to obtain data or resolve any of these problems through a single method.
4. **The preliminary research conducted for this project is extremely valuable.** Several of the working group members complimented the quality of the research done and although it is only preliminary, thought it would be useful and informative in the immediate future.
5. **The Department of Justice is exploring expanding its reach over voter suppression activities.** In the context of the conversation about defining voter intimidation, Mr. Donsanto pointed out that while voter intimidation was strictly defined by the criminal law, his section is beginning to explore the slightly different concept of vote suppression, and how to pursue it. He mentioned the phone-jamming case in New Hampshire as an initial success in this effort. He noted that he believes that vote suppression in the form of deceptive practices ought to be a crime and the section is exploring ways to go after it within the existing statutory construct. Mr. Bauer raised the example of a party sending people dressed in paramilitary outfits to yell at people as they go to the polls, telling them they have to show identification. Mr. Donsanto said that under the laws he has to work with today, such activity is not considered corrupt. He said that his lawyers are trying to “bend” the current laws to address aggravated cases of vote suppression, and the phone-jamming case is an example of that. Mr. Donsanto said that within the Department, the term vote “suppression” and translating it into a crime is a “work in progress.”
6. **Registration fraud does not translate into vote fraud.** Ms. Rogers, Mr. Donsanto and others stated that although phony voter registration applications turned in by people being paid by the form was a problem, it has not been found

in their experience to lead to fraudulent voters at the polls. Ms. Rogers said such people were motivated by money, not defrauding the election.

7. **Handling of voter fraud and intimidation complaints varies widely across states and localities.** Ms. Rogers and others observed that every state has its own process for intake and review of complaints of fraud and intimidation, and that procedures often vary within states. The amount of authority secretaries of state have to address such problems also is different in every state. Mr. Weinberg stated he believed that most secretaries of state did not have authority to do anything about these matters. Participants discussed whether secretaries ought to be given greater authority so as to centralize the process, as HAVA has mandated in other areas.

### **Working Group Concerns**

1. Mr. Rokita questioned whether the purpose of the present project ought to be on assessing the level of fraud and where it is, rather than on developing methods for making such measurements. He believed that methodology should be the focus, "rather than opinions of interviewees." He was concerned that the EAC would be in a position of "adding to the universe of opinions."
2. Mr. Rokita questioned whether the "opinions" accumulated in the research "is a fair sampling of what's out there." Ms. Wang responded that one of the purposes of the research was to explore whether there is a method available to actually quantify in some way how much fraud there is and where it is occurring in the electoral process. Mr. Rokita replied that "Maybe at the end of the day we stop spending taxpayer money or it's going to be too much to spend to find that kind of data. Otherwise, we will stop it here and recognize there is a huge difference of opinion on that issue of fraud, when it occurs is obtainable, and that would possibly be a conclusion of the EAC." Ms. Sims responded that she thought it would be possible to get better statistics on fraud and there might be a way of "identifying at this point certain parts in the election process that are more vulnerable, that we should be addressing."
3. Mr. Rokita stated that, "We're not sure that fraud at the polling place doesn't exist. We can't conclude that."
4. Mr. Rokita expressed concern about working with a political scientist. He believes that the "EAC needs to be very careful in who they select, because all the time and effort and money that's been spent up to date and would be spent in the future could be invalidated by a wrong selection in the eyes of some group."

## Election Protection 2004

By the Election Protection Coalition

### **Election Protection – the Program**

Election Protection 2004 was the nation's most far-reaching effort to protect voter rights before and on Election Day. The historic nonpartisan program included:

- A toll-free number, 1-866-OUR-VOTE, with free, immediate and multi-lingual assistance to help voters with questions about registration and voting, and assist voters who encounter barriers to the ballot box.
- Distribution of more than five million "Voters' Bills of Rights" with state-specific information
- 25,000 volunteers, including 6,000 lawyers and law students, who watched for problems and assisted voters on the spot at more than 3,500 predominantly African-American and Latino precincts with a history of disenfranchisement in at least 17 states.
- Civil rights lawyers and advocates represented voters in lawsuits, preserved access to the polls, exposed and prevented voter intimidation, worked with election officials to identify and solve problems with new voting machines, technology and ballot forms, and protected voter rights in advance and on Election Day.

### **Voter Intimidation and Suppression Stories (Abridged)**

- An Associated Press story noted Election Protection's exposure of reported voter suppression tactics in Colorado: Officials with the Election Protection Coalition, a voter-rights group, also said some voters in a predominantly black neighborhood north of Denver found papers on their doorsteps giving them the wrong address for their precinct
- Election Protection received a report from Florissant County, Missouri from a voter who lives in predominantly white neighborhood. While waiting in line to vote, a Republican challenger challenged the black voters by requesting more proof of identification, residence, and signature match, while asking nothing from white voters. Also, the same voter reportedly asked a few questions about voting but an election officials refused to provide any meaningful answer, insisting that "it's very simple", but provided white voters with information when requested. There was one other black voter in line who was also singled out for same treatment while white voters were not.
- Election Protection received a report from Boulder County, Colorado that a poll worker made racist comments to Asian American voter and then told her she was not on the list and turned her away. The voter saw others filling out provisional ballots and asked for one but was denied. Another Asian American woman behind

her in line was also given trouble by the same poll worker (he questioned her nationality and also turned her away).

- The Election Protection hotline received reports from Pinellas County, Florida that individuals purporting to be from the Kerry campaign are going door-to-door handing out absentee ballots, and asking voters to fill them out, and then taking the ballots from them, saying "Vote here for Kerry. Don't bother going to the polls."
- The Election Protection Coalition received a report from a woman whose sister lives in Milwaukee and is on government assistance. Her sister was reportedly told by her "case manager" that if she voted for Kerry, she would stop receiving her checks.
- An illiterate, older and disabled voter in Miami-Dade asked for assistance reading the ballot and reported that a poll worker yelled at him and refused to assist him and also refused to allow him to bring a friend into the booth in order to read the ballot to him.
- The Election Protection Coalition have gathered reports that flyers are circulating in a black community in Lexington, South Carolina claiming they those who are behind on child support payments will be arrested as the polls.
- Minority voters from Palm Beach County, Florida reported to the hotline that they received middle-of-the-night, live harassing phone calls warning them away from the polls.
- A volunteer for Rock the Vote reported that two illiterate voters in Michigan requested assistance with their ballots but were refused and reportedly mocked by poll workers.
- The hotline received a call from a radio DJ in Hillsborough County, Florida, who stated that he has received many calls (most of which were from African-Americans) claiming that poll workers were turning voters away and not "letting" them vote.
- The hotline received a call from Pima County, Arizona, indicating that Democratic voters received calls throughout Monday evening, providing incorrect information about the precinct location. Voters have had to be transported en masse in order to correct the problem.
- A caller from Alabama claims that he was told at his polling place that he could vote there for everything but the President and that he would have to go elsewhere in order to vote for a presidential candidate.

- Poll monitors in Philadelphia reports groups of lawyers, traveling in threes, who pull voters out of line and challenge them to provide ID, but when challenged themselves, they hop into waiting cars or vans and leave. Similar activity by Republican lawyers in Philadelphia was reported in the 2002 election.
- In Cuyahoga, Ohio, a caller reported that all black voters are being asked to show ID, while white voters are not. Caller report that he is black and had to show ID while his girlfriend is white and did not have to show ID.
- Two months ago, suspicious phone calls to newly registered Democrats —telling them they weren't, in fact, registered to vote — were traced to the Republican headquarters in the Eastern Panhandle. On Monday, Democrats there said the calls have started again, even after the Berkeley County Clerk — a Republican — sent the party a cease-and-desist letter. The Berkeley prosecutor, who also is county Democratic chairman, has called on the U.S. attorney to investigate.
- In Tuscon, Arizona a misleading call informing voters that they should vote on November 3 has been traced back to the state GOP headquarters. The FBI is investigating.
- A man driving around in a big van covered in American flags and a big picture of a policeman was reportedly parked in front of a polling place; he then got out and moved within the 75 ft limit, until he was asked to leave; he then was found inside the polling place and was again asked to leave. Election Protection volunteers contacted officials and the man was eventually removed.
- The Election Protection hotline has received a report from individuals who claim to have received recorded telephone message coming from Bill Clinton and ACT and reminding them to vote on Nov. 3rd.
- In Massachusetts, the EP Hotline has received a report that a radio station (WILD) is broadcasting that voters will be arrested on the spot if they have outstanding parking tickets.
- In Richland, South Carolina Election Protection has received a report of a poll manager turning away individuals who do not have photo ID issued to the county or a driver's license; an EP lawyer spoke with the Poll Manager at 8:20 am and told her that people with other forms of ID should be allowed to vote by provisional ballot.
- In Greenville, a caller reported that a white poll worker was asking Blacks for multiple form of I.D. Fortunately, the voter who reported the problem did have a second I.D. but reported that some others were turned away. Election Protection attorneys have alerted election officials.

- In Allegheny County, Pennsylvania, an official looking flyer advises Democratic voters to "create a peaceful voting environment" by voting on Wednesday, November 3
- The week before the election, flyers were circulated in Milwaukee under the heading "Milwaukee Black Voters League" with some "warnings for election time." The flyer listed false reasons for which you would be barred from voting (such as a traffic ticket) and then warned that "If you violate any of these laws you can get ten years in prison and your children will get taken away from you."
- There is a Jefferson County flyer which tells voters "See you at the Poles![sic]"... on November 4.

The Long Shadow of Jim Crow, People for the American Way and the National Association for the Advancement of Colored People

This report describes the pervasive and repeated practices of voter intimidation and vote suppression that have taken place in very recent years and during contemporary American history. The most recent cases included in the report are the incident in which Florida law enforcement questioned elderly African American voters in Orlando regarding the 2003 mayoral race, which had already been resolved, shortly before the 2004 election; the 2004 Florida felon purge list; the case of South Dakota in 2004 in which Native Americans were improperly and illegally required to show photo identification at the polls or denied the right to vote, and similar improper demands for ID from minorities in other parts of the country; the use of challengers in minority districts in many locations; the challenge to the right of African American students to vote in Texas in 2004; the presence of men looking like law enforcement challenging African American voters at the polls in Philadelphia in 2003; the distribution of flyers in Louisiana and elsewhere in a number of elections over the last few years in minority areas telling them to vote on the wrong day; and the FBI investigation into thousands of Native American voters in South Dakota in 2002, which resulted in no showing of wrongdoing.

The report also points out that, "Over the past two decades, the Republican Party has launched a series of 'ballot security' and 'voter integrity' initiatives which have targeted minority communities. At least three times, these initiatives were successfully challenged in federal courts as illegal attempts to suppress voter participation based on race.

It goes on to describe the numerous instances of voter intimidation and suppression during the 2000 election, the 1990s, the 1980s and back through the civil rights movement of the 1960s, putting current efforts in historical perspective. Describing the chronology of events in this way demonstrates the developing patterns and strategic underpinnings of the tactics used over the last forty years.

## **The New Poll Tax: Republican-Sponsored Ballot-Security Measures are Being Used to Keep Minorities from Voting**

By Laughlin McDonald

McDonald argues that “the discriminatory use of so-called ‘ballot security’ programs” has been a reoccurring scandal since the passage of the Voting Rights Act of 1965. These programs are deceptively presented as preventing voter fraud and thereby furthering good government. However, McDonald states “but far too often they [the ballot security programs] are actually designed to suppress minority voting -- and for nakedly partisan purposes.”

McDonald blames the federal government as well as the states for use of suspect ballot security programs. He cites the implementation of the U.S. Department of Justice’s in “Voting Integrity Initiative” in South Dakota as the worst example of a joint federal-state effort to prevent voter fraud. Alleged voter fraud only in counties with significant Native American populations was targeted. South Dakota Attorney General Mark Barnett “working with the FBI, announced plans to send state and federal agents to question almost 2,000 new Native-American registrants, many of whom were participating in the political process for the first time.” However, statistics show that these efforts only served to increase Native American voter participation. Native Americans “were targeted based on fraud allegations that proved to be grossly exaggerated; at the end of the investigation, only one Native American was even charged with a voting-rules violation.”

McDonald cites several other ballot security efforts that were really disguised attempts at minority voter suppression:

In Pine Bluff, Ark., Democrats accused Republican poll watchers of driving away voters in predominantly black precincts by taking photos of them and demanding identification during pre-election day balloting. Democrats in Michigan charged that a plan by Republicans to station hundreds of “spotters” at heavily Democratic precincts was an effort to intimidate black voters and suppress Democratic turnout. In South Carolina, a lawsuit filed the day before the election alleged that officials in Beaufort County had adopted a new and unauthorized policy allowing them to challenge voters who gave rural route or box numbers for their registration address. According to the complaint, a disproportionate number of those affected by the new rule would be African-American voters who lived in the rural areas of the county.

McDonald is also critical of the Help America Vote Act (HAVA). He states that HAVA “contains other provisions that may enhance the opportunities for harassment and intimidation of minorities through ballot-security programs.” McDonald specifically attacks the photo ID requirement for anyone who registered by mail but has not previously voted. McDonald argues that the ID requirement will suppress minority voting because minorities are less likely than non-minorities to have a photo ID, a photo ID is expensive to obtain and all the alternatives to photo ID present similar obstacles to minority voters. He also argues that there is no evidence that photo ID will combat voter

fraud but it only really provides “another opportunity for aggressive poll officials to single out minority voters and interrogate them.”

McDonald lists some classic past ballot security efforts by the Republicans that have been abused: the 1981 gubernatorial election anti-fraud initiative leading to the well known consent decree prohibiting the Republicans from repeating this, a similar Republican effort in Louisiana in 1986 in Senator John Breaux’s race which again resulted in prohibition by a state court judge, and a similar effort by Republicans in Senator Jesse Helms 1990 reelection. This time the Department of Justice sued the Republican Party and Helm’s reelection committee, resulting in another consent decree prohibiting future ballot security programs without court approval.

McDonald indicates that the crux of the problem is lax enforcement of federal voters rights laws. He states, “there is no record of the purveyors of any ballot-security program being criminally prosecuted by federal authorities for interfering with the right to vote.” The only positive case law McDonald cited was a decision by the United States Court of Appeals for the Eighth Circuit that affirmed “an award of damages ranging from \$500 to \$2,000, payable by individual poll officials to each of seven black voters who had been unlawfully challenged, harassed, denied assistance in voting or purged from the rolls in the town of Crawfordsville [Arkansas].”

McDonald concludes by stating that Congress and the states should adopt “nondiscriminatory, evenly applied measures to ensure the integrity of the ballot.”

An Evaluation: Voter Registration Elections Board: Wisconsin Audit Report 05-12:  
September 2005

The Joint Legislative Audit Committee of the Wisconsin Legislature required the Wisconsin Audit Report. The Report obviously does not include the 2006 statistics for statewide voter registration as required by HAVA. Wisconsin voter registration is required by statute in only 172 municipalities---those with populations of 5,000 or more. Another 167 smaller municipalities opted to maintain voter registration lists. Currently, 28.9 % of the voting-age population is not required to register before voting.

According to the Report, great variation was found in the implementation of existing voter registration laws. For example, 46 % of municipalities that responded to the survey did not send address verification cards to individuals who registered by mail or at the polls on Election Day in November 2004. Further, only 85.3 % of survey respondents reported updating their voter registration lists to remove inactive voters, as required by law.

Current voter registration practices were determined to be insufficient to ensure the accuracy of voter registration lists used by poll workers or to prevent ineligible persons from registering to vote. The Report identified 105 instances of voting irregularities in six municipalities, including 98 ineligible felons who may have voted. The names of these individuals were forwarded to appropriate district attorneys for investigation.

Due to concerns about ineligible voting, stemming from the 2004 election, the Joint Legislative Audit Committee requested that voter registration procedures be evaluated. The following was investigated for this Report:

- \* voter registration requirements and the methods by which voters register, including requirements in other states;
- \* the address verification process, including the use of address verification cards to confirm the residency of those who register by mail or at the polls;
- \* procedures and practices for updating voter registration lists; and,
- \* the role of the Elections Board.

Wisconsin allows qualified electors to register in person, by mail, or with a special registration deputy before Election Day, and at the polls on Election Day. In municipalities where registration is required by statute, 20.3 % of Wisconsin voters registered at the polls on Election Day in November 2004. Municipal clerks rely on registrants to affirm their eligibility, including citizenship and age. However, requirements for providing identification or proof of residence vary depending on when an individual registers and by which method.

Address verification cards are the primary tool available to municipal clerks for verifying the residency of registered voters and detecting improper registrations by mail or at the polls. Statutes require that clerks send cards to everyone who registers by mail or on Election Day. However, only 42.7 % of the 150 municipalities surveyed sent cards to both groups, and 46 % did not send any address verification cards.

Statutes also require clerks to provide the local district attorney with the names of any Election Day registrants whose cards are undeliverable at the address provided. However, only 24.3 % of the clerks who sent cards also forwarded names from undeliverable cards to district attorneys. District attorneys surveyed indicated that they require more information than is typically provided to conduct effective investigations.

To ensure that voter registration lists contain only the names of qualified electors, municipal clerks are required by statute to remove or inactivate the names of individuals who have not voted in four years, to update registration information for individuals who move or change their names, and to remove or inactivate the names of deceased individuals. They are also required to notify registered voters before removing their names from registration lists. These statutory requirements are not consistently followed:

- \* 85.3 % of municipalities removed the names of inactive voters from their voter registration lists;

- \* 71.4 % sometimes or always notified registered voters before removing their names; and

- \* 54.0 % reported removing the names of ineligible felons.

Because of such inconsistencies, registration lists contain duplicate records and the names of ineligible individuals. For example, more than 348,000 electronic voter registration records from eight municipalities were reviewed, identifying 3,116 records that appear to show individuals who are registered more than once in the same municipality.

In six municipalities where sufficient information was available, there was 105 instances of potentially improper or fraudulent voting in the 2004 elections. These included: 98 ineligible felons who may have voted; 2 individuals who may have voted twice; 1 voter who may have been underage; and 4 absentee ballots that should not have been counted because the voters who cast them died before Election Day.

Recommendations:

- \* adjusting the early registration deadline to provide clerks more time to prepare registration lists;

- \* establishing more stringent requirements for special registration deputies, including prohibiting compensation based on the number of individuals registered;

- \* establishing uniform requirements for demonstrating proof of residence for all registrants;
- \* providing municipal clerks with more flexibility in the use of address verification cards;
- \* Authorizing civil penalties for local election officials and municipalities that fail to comply with election laws; and,
- \* implementing mandatory elections training requirements for municipal clerks.

The Report also recognized that the new HAVA registration procedures would help with existing registration problems.

**Interview with Tony Sirvello, Executive Director, IACREOT**

April 12, 2006

Biographical

Sirvello is currently the executive director of the International Association of Clerks, Recorders, Election Officials and Treasurers, an organization of 1700 members. Formerly, he ran elections in Harris County, Texas for 29 years.

Incidents of Election Fraud

Sirvello stated that one problem with election crimes is that they are not high on the priority list of either district attorneys or grand juries. Therefore, complaints of election crime very rarely are prosecuted or are indicted by the grand jury. In 1996 in Harris County, 14 people voted twice but the grand jury refused to indict. One woman voted twice, once during early voting and once on Election Day. She said she thought there were two elections. The jury believed her. Sirvello believes none of the people intentionally voted more than once. He said that he believes double voting is not as big of an issue as people make it out to be.

In 1986, it was found that there were 300 more ballots than voter signatures. It was clear that the elections officials stuffed the ballot boxes. The case was brought before a grand jury, but there was no indictment because all of the defendants were friends and relatives of each other and none would admit what had been done.

Sirvello stated that there have been isolated circumstances where a voter would show up at the poll and his name had already been signed and he had voted.

Finally, Sirvello indicated that some people who worked in Houston but did not live in Harris County were permitted to vote.

Specific Absentee Ballot/Vote By Mail Issues

Sirvello said that mail voting presents the largest problem. With mail voting there is too much opportunity to influence voters or to fraudulently request a ballot.

If one applied for an absentee ballot, their name and address was made available to candidates and political consultants who would often send people to collect the ballot. Many did not want to give up the ballot but wanted to mail it personally. The result was to discourage voting.

In Texas, a person could only apply for an absentee ballot if over 65 years of age. Parties, candidates and consultants would get the list of voters over 65 and send them a professional mail piece telling them they could vote by mail and a ballot with everything filled out except the signature. Problems ensued -- for example, voters would print their

names rather than sign them, and the ballot was rejected. In other cases, the elderly would give their absentee ballot to someone else.

If a person applied for an absentee ballot but then decided not to cast it but to vote in person, that person had to bring the non-voted absentee ballot to the poll and surrender it. If they did not they would not be permitted to vote at the polling place.

#### Incidents of Voter Intimidation

Sirvello only reported isolated cases of intimidation or suppression in Harris County. These mostly occurred in Presidential elections. Some people perceived intimidation when being told they were not eligible to vote under the law. Sirvello stated that the big issue in elections now is whether there should be a paper trail for touch screen voting.

#### Recommendations

District attorneys need to put more emphasis on election crime so people will not believe that it goes unpunished.

There should be either a national holiday for Election Day or a day should be given off of work without counting as a vacation day so that better poll workers are available and there can be more public education on election administration procedures.

**Interview with Craig Donsanto, Director, Public Integrity Section, U.S. Department of Justice**

January 13, 2006

Questions

*How are Prosecution Decisions Made?*

Craig Donsanto must approve all investigations that go beyond a preliminary stage, all charges, search warrant applications and subpoenas and all prosecutions. The decision to investigate is very sensitive because of the public officials involved. If a charge seems political, Donsanto will reject it. Donsanto gives possible theories for investigation. Donsanto and Noel Hillman will decide whether to farm out the case to an AUSA. Donsanto uses a concept called predication. In-other-words, there must be enough evidence to suggest a crime has been committed. The method of evaluation of this evidence depends on the type of evidence and its source. There are two types of evidence---factual (antisocial behavior) and legal (antisocial behavior leading to statutory violations). Whether an indictment will be brought depends on the likelihood of success before a jury. Much depends on the type of evidence and the source. Donsanto said he "knows it when he sees it." Donsanto will only indict if he is confident of a conviction assuming the worst case scenario – a jury trial.

A person under investigation will first receive a target letter. Often, a defendant who gets a target letter will ask for a departmental hearing. The defendant's case will be heard by Donsanto and Hillman. On occasion, the assistant attorney general will review the case. The department grants such hearings easily because such defendants are likely to provide information about others involved.

The Civil Rights Division, Voting Rights Section makes its own decisions on prosecution. The head of that division is John Tanner. There is a lot of cooperation between

*Does the Decision to Prosecute Incorporate Particular Political Considerations within a State Such as a One Party System or a System in which the Party in Power Controls the Means of Prosecution and Suppresses Opposition Complaints?*

Yes. Before, the department would leave it to the states. Now, if there is racial animus involved in the case, there is political bias involved, or the prosecutor is not impartial, the department will take it over.

*Does it Matter if the Complaint Comes from a Member of a Racial Minority?*

No. But if the question involves racial animus, that has also always been an aggravating factor, making it more likely the Department will take it over

*What Kinds of Complaints Would Routinely Override Principles of Federalism?*

Federalism is no longer big issue. DOJ is permitted to prosecute whenever there is a candidate for federal office.

*Are There Too Few Prosecutions?*

DOJ can't prosecute everything.

*What Should Be Done to Improve the System?*

The problem is asserting federal jurisdiction in non-federal elections. It is preferable for the federal government to pursue these cases for the following reasons: federal districts draw from a bigger and more diverse jury pool; the DOJ is politically detached; local district attorneys are hamstrung by the need to be re-elected; DOJ has more resources – local prosecutors need to focus on personal and property crimes---fraud cases are too big and too complex for them; DOJ can use the grand jury process as a discovery technique and to test the strength of the case.

In *U.S. v. McNally*, the court ruled that the mail fraud statute does not apply to election fraud. It was through the mail fraud statute that the department had routinely gotten federal jurisdiction over election fraud cases. 18 USC 1346, the congressional effort to “fix” *McNally*, did not include voter fraud.

As a result, the department needs a new federal law that allows federal prosecution whenever a federal instrumentality is used, e.g. the mail, federal funding, interstate commerce. The department has drafted such legislation, which was introduced but not passed in the early 1990s. A federal law is needed that permits prosecution in any election where any federal instrumentality is used.

*Other Information*

The Department has held four symposia for DEOs and FBI agents since the initiation of the Ballot Access and Voting Integrity Initiative. In 2003, civil rights leaders were invited to make speeches, but were not permitted to take part in the rest of the symposium. All other symposia have been closed to the public. (Peg will be sending us the complete training materials used at those sessions. These are confidential and are the subject of FOIA litigation).

There are two types of attorneys in the division: prosecutors, who take on cases when the jurisdiction of the section requires it; the US Attorney has recused him or herself; or when the US Attorney is unable to handle the case (most frequent reason) and braintrust attorneys who analyze the facts, formulate theories, and draft legal documents.

Cases:

Donsanto provided us with three case lists: Open cases (still being investigated) as of January 13, 2006 – confidential; election fraud prosecutions and convictions as a result of the Ballot Access and Voting Integrity Initiative October 2002-January 13, 2006 and cases closed for lack of evidence as of January 13, 2006

If we want more documents related to any case, we must get those documents from the states. The department will not release them to us.

Although the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate complaints of fraud, *the number of cases that the department is investigating and the number of indictments the department is pursuing are both up dramatically.*

Since 2002, the department has brought more cases against alien voters, felon voters, and double voters than ever before. Previously, cases were only brought when there was a pattern or scheme to corrupt the process. Charges were not brought against individuals – those cases went un-prosecuted. This change in direction, focus, and level of aggression was by the decision of the Attorney General. The reason for the change was for deterrence purposes.

The department is currently undertaking three pilot projects to determine what works in developing the cases and obtaining convictions and what works with juries in such matters to gain convictions:

Felon voters in Milwaukee.

Alien voters in the Southern District of Florida. FYI – under 18 USC 611, to prosecute for “alien voting” there is no intent requirement. Conviction can lead to deportation. Nonetheless, the department feels compelled to look at mitigating factors such as was the alien told it was OK to vote, does the alien have a spouse that is a citizen. Double voters in a variety of jurisdictions.

The department does not maintain records of the complaints that come in from DEOs, U.S attorneys and others during the election that are not pursued by the department. Donsanto asserted that U.S. attorneys never initiate frivolous investigations.

*According to the new handbook, the department can take on a case whenever there is a federal candidate on the ballot*

## **Interview with Douglas Webber, Assistant Indiana Attorney General**

February 15, 2006

### Background

Mr. Webber was an attorney for the Marion County Election Board and was also part of the Indianapolis Ballot Security Team (sometimes called the Goon Squad). This Team was a group of attorneys well trained in election law whose mission was to enforce ballot security.

### Litigation

Status of litigation in Indiana: On January 12 the briefing was completed. The parties are waiting for a decision from the U.S. district judge. The judge understood that one of the parties would seek a stay from the 7<sup>th</sup> Circuit Court of Appeals. The parties anticipate a decision in late March or early April. Mr. Webber did the discovery and depositions for the litigation. Mr. Webber feared the plaintiffs were going to state in their reply brief that HAVA's statewide database requirement would resolve the problems alleged by the state. However, the plaintiffs failed to do so, relying on a Motor Voter Act argument instead. Mr. Webber believes that the voter ID at issue will make the system much more user-friendly for the poll workers. The Legislature passed the ID legislation, and the state is defending it, on the basis of the problem of the *perception* of fraud.

### Incidents of fraud and intimidation

Mr. Webber thinks that no one can put his or her thumb on whether there has been voter fraud in Indiana. For instance, if someone votes in place of another, no one knows about it. There have been no prosecuted cases of polling place fraud in Indiana. There is no recorded history of documented cases, but it does happen. In the litigation, he used articles from around the country about instances of voter fraud, but even in those examples there were ultimately no prosecutions, for example the case of Milwaukee. He also stated in the litigation that there are all kinds of examples of dead people voting--totaling in the hundreds of thousands of votes across the country.

One interesting example of actual fraud in Indiana occurred when a poll worker, in a poll using punch cards, glued the chads back and then punched out other chads for his candidate. But this would not be something that would be addressed by an ID requirement.

He also believes that the perception that the polls are loose can be addressed by the legislature. The legislature does not need to wait to see if the statewide database solve the problems and therefore affect the determination of whether an ID requirement is necessary. When he took the deposition of the Republican Co-Director, he said he thought Indiana was getting ahead of the curve. That is, there have been problems around the country, and confidence in elections is low. Therefore Indiana is now in front of getting that confidence back.

Mr. Webber stated that the largest vote problem in Indiana is absentee ballots. Absentee ballot fraud and vote buying are the most documented cases. It used to be the law that applications for absentee ballots could be sent anywhere. In one, case absentee votes were exchanged for “a job on election day”---meaning one vote for a certain price. The election was contested and the trial judge found that although there was vote fraud, the incidents of such were less than the margin of victory and so he refused to overturn the election. Mr. Webber appealed the case for the state and argued the judge used the wrong statute. The Indiana Supreme Court agreed and reversed. Several people were prosecuted as a result – those cases are still pending.

### Process

In Indiana, voter complaints first come to the attorney for the county election board who can recommend that a hearing be held. If criminal activity was found, the case could be referred to the county prosecutor or in certain instances to the Indiana Attorney General’s Office. In practice, the Attorney General almost never handles such cases.

Mr. Webber has had experience training county of election boards in preserving the integrity and security of the polling place from political or party officials. Mr. Webber stated that the Indiana voter rolls need to be culled. He also stated that in Southern Indiana a large problem was vote buying while in Northern Indiana a large problem was based on government workers feeling compelled to vote for the party that gave them their jobs.

### Recommendations

- Mr. Webber believes that all election fraud and intimidation complaints should be referred to the Attorney General’s Office to circumvent the problem of local political prosecutions. The Attorney General should take more responsibility for complaints of fraud because at the local level, politics interferes. At the local level, everyone knows each other, making it harder prosecute.
- Indiana currently votes 6 am to 6 pm on a weekday. Government workers and retirees are the only people who are available to work the polls. Mr. Webber suggested that the biggest change should be to move elections to weekends. This would involve more people acting as poll workers who would be much more careful about what was going on.
- Early voting at the clerk’s office is good because the people there know what they are doing. People would be unlikely to commit fraud at the clerk’s office. This should be expanded to other polling places in addition to that of the county clerk.
- Finally, Mr. Webber believes polling places should be open longer, run more professionally but that there needs to be fewer of them so that they are staffed by only the best, most professional people.

**Interview Sharon Priest, former Secretary of State, Arkansas  
January 24, 2006**

Process:

When there is an allegation of election fraud or intimidation, the county clerk refers it to the local district attorney. Most often, the DA does not pursue the claim. There is little that state administrators can do about this because in Arkansas, county clerks are partisanly elected and completely autonomous. Indeed, county clerks have total authority to determine who is an eligible voter.

Data:

There is very little data collected in Arkansas on fraud and intimidation cases. Any information there might be stays at the county level. This again is largely because the clerks have so much control and authority, and will not release information. Any statewide data that does exist might be gotten from Susie Storms from the State Board of Elections.

Most Common Problems

The perception of fraud is much greater than the actual incidence of fraud.

- The DMV does not implement NVRA in that it does not take the necessary steps when providing the voter registration forms and does not process them properly. This leads to both ineligible voters potentially getting on the voting rolls (e.g. noncitizens, who have come to get a drivers license, fill out a voter registration form having no intention of actually voting) and voter thinking they are registered to vote to find they are not on the list on Election Day. Also, some people think they are automatically registered if they have applied for a drivers license.
- Absentee ballot fraud is the most frequent form of election fraud.
- In Arkansas, it is suspected that politicians pay ministers to tell their congregations to vote for them
- In 2003, the State Board documented 400 complaints against the Pulaski County Clerk for engaging in what was at least borderline fraud, e.g. certain people not receiving their absentee ballots. The case went to a grand jury but no indictment was brought.
- Transportation of ballot boxes is often insecure making it very easy for insiders to tamper with the ballots or stuff the ballot boxes. Priest has not actually witnessed this happen, but believes it may have.
- Intimidation at the poll sites in court houses. Many voters are afraid of the county judges or county employees and therefore will not vote. They justifiably believe

their ballots will be opened by these employees to see who they voted for, and if they voted against the county people, retribution might ensue.

- Undue challenges to minority language voters at the poll sites
- Paid registration collectors fill out phony names, but these individuals are caught before anyone is able to cast an ineligible ballot.

Suggested Reforms for Improvement:

- Nonpartisan election administration
- Increased prosecution of election crimes through greater resources to district attorneys. In addition, during election time, there should be an attorney in the DA's office who is designated to handle election prosecution.
- There should be greater centralization of the process, especially with respect to the statewide database. Arkansas has a "bottom up" system. This means the counties still control the list and there is insufficient information sharing. For example, if someone lives in one county but dies in another, the county in which the voter lived – and was registered to vote – will not be notified of the death.

**Interview with Heather Dawn Thompson, Director of Government Relations, National Congress of American Indians**

March 22, 2006

Background

Thompson is a member of the Cheyenne River Sioux tribe in South Dakota. For many years she worked locally on elections doing poll monitoring and legal work, from a nonpartisan perspective. In 2004, she headed the Native Vote Election Protection, a project run by the National Congress of American Indians, and was in charge of monitoring all Native American voting sites around the country, focusing on 10 or 15 states with the biggest Native populations. She is now permanently on staff of the National Congress of American Indians as the Director of Government relations. NCAI works jointly with NARF as well as the Election Protection Coalition.

Recent trends

Native election protection operations have intensified recently for several reasons. While election protection efforts in Native areas have been ongoing, leaders realized that they were failing to develop internal infrastructure or cultivate locally any of the knowledge and expertise which would arrive and leave with external protection groups.

Moreover, in recent years partisan groups have become more aware of the power of the native vote, and have become more active in native communities. This has partly resulted in an extreme increase in voter intimidation tactics. As native communities are easy to identify, easy to target, and generally dominated by a single party, they are especially vulnerable to such tactics.

Initially, reports of intimidation were only passed along by word of mouth. But it became such a problem in the past 5 to 6 years that tribal leaders decided to raise the issue to the national level. Thompson points to the Cantwell election in 2000 and the Johnson election in South Dakota in 2002 as tipping points where many began to realize the Indian vote could matter in Senate and national elections.

Thompson stressed that Native Vote places a great deal of importance on being nonpartisan. While a majority of native communities vote Democratic, there are notable exceptions, including communities in Oklahoma and Alaska, and they have both parties engaging in aggressive tactics. However, she believes the most recent increase in suppression and intimidation tactics have come from Republican Party organizations.

Nature of Suppression/Intimidation of Native Voters

Thompson categorizes suppression into judge related and poll-watcher related incidents, both of which may be purposeful or inadvertent, as well as longstanding legal-structural constraints.

### Structural problems

One example of inadvertent suppression built into the system stems from the fact that many Indian communities also include significant numbers of non-Indians due to allotment. Non-Indians tend to be most active in the state and local government while Indians tend to be more involved in the tribal government. Thus, the individuals running elections end up being non-Indian. Having Indians vote at polling places staffed by non-Indians often results in incidents of disrespect towards Native voters (Thompson emphasized the considerable racism which persists against Indians in these areas). Also, judges aren't familiar with Indian last names and are more dismissive of solving discrepancies with native voters.

Structural problems also arise from laws which mandate that the tribal government cannot run state or local elections. In places like South Dakota, political leaders used to make it intentionally difficult for Native Americans to participate in elections. For example, state, local and federal elections could not be held in the same location as tribal elections, leading to confusion when tribal and other elections are held in different locations. Also, it is common to have native communities with few suitable sites, meaning that a state election held in a secondary location can suddenly impose transportation obstacles.

### Photo ID Issues

Thompson believes both state level and HAVA photo ID requirements have a considerable negative impact. For a number of reasons, many Indian voters don't have photo ID. Poor health care and poverty on reservations means that many children are born at home, leading to a lack of birth certificates necessary to obtain ID. Also, election workers and others may assume they are Hispanic, causing additional skepticism due to citizenship questions. There is a cultural issue as well—historically, whenever Indians register with the federal government it has been associated with a taking of land or removal of children. Thus many Indians avoid registering for anything with the government, even for tribal ID.

Thompson also offered examples of how the impact of ID requirements had been worsened by certain rules and the discriminatory way they have been carried out. In the South Dakota special election of 2003, poll workers told Native American voters that if they did not have ID with them and they lived within sixty miles of the precinct, the voter had to come back with ID. The poll workers did not tell the voters that they could vote by affidavit ballot and not need to return, as required by law. This was exacerbated by the fact that the poll workers didn't know the voters—as would be the case with non-Indian poll workers and Indian voters. Many left the poll site without voting and did not return.

In Minnesota, the state tried to prohibit the use of tribal ID's for voting outside of a reservation, even though Minnesota has a large urban Native population. Thompson believes this move was very purposeful, and despite any reasonable arguments from the Secretary of State, they had to file a lawsuit to stop the rule. They were very surprised to find national party representatives in the courtroom when they went to deal with lawsuit, representatives who could only have been alerted through a discussion with the Secretary of State.

### Partisan Poll-Monitoring

Thompson believes the most purposeful suppression has been perpetrated by the party structures on an individual basis, of which South Dakota is a great example.

Some negative instances of poll monitoring are not purposeful. Both parties send in non-Indian, non-Western lawyers, largely from the East Coast, which can lead to uncomfortable cultural clashes. These efforts display a keen lack of understanding of these communities and the best way to negotiate within in them. But while it may be intimidating, it is not purposeful.

Yet there are also many instances of purposeful abuse of poll monitoring. While there were indeed problems during the 2002 Johnson election, it was small compared to the Janklow special election. Thompson says Republican workers shunned cultural understanding outreach, and had an extensive pamphlet of what to say at polls and were very aggressive about it. In one tactic, every time a voter would come up with no ID, poll monitors would repeat “You can’t vote” over and over again, causing many voters to leave. This same tactic appeared across reservations, and eventually they looked to the Secretary of State to intervene.

In another example, the head of poll watchers drove from poll to poll and told voters without IDs to go home, to the point where the chief of police was going to evict him from the reservation. In Minnesota, on the Red Lake reservation, police actually did evict an aggressive poll watcher—the fact that the same strategies are employed several hundred miles apart points to standardized instructions.

None of these incidents ever went to court. Thompson argues this is due to few avenues for legal recourse. In addition, it is inherently difficult to settle these things, as they are he said-she said incidents and take place amidst the confusion of Election Day. Furthermore, poll watchers know what the outline of the law is, and they are careful to work within those parameters, leaving little room for legal action.

Other seeming instances of intimidation may be purely inadvertent, such as when, in 2002, the U.S. Attorney chose Election Day to give out subpoenas, and native voters stayed in their homes. In all fairness, she believes this was a misunderstanding.

The effect of intimidation on small communities is especially strong and is impossible to ultimately measure, as the ripple effect of rumors in insular communities can’t be traced. In some communities, they try to combat this by using the Native radio to encourage people to vote and dispel myths.

She has suggestions for people who can describe incidents at a greater level of detail if interested.

### Vote Buying and Fraud

They haven’t found a great deal of evidence on vote-buying and fraud. When cash is offered to register voters, individuals may abuse this, although Thompson believes this is not necessarily

unique to the Native community, but a reflection of high rates of poverty. This doesn't amount to a concerted effort at conspiracy, but instead represents isolated incidents of people not observing the rules. While Thompson believes looking into such incidents is a completely fair inquiry, she also believes it has been exploited for political purposes and to intimidate. For example, large law enforcement contingents were sent to investigate these incidents. As Native voters tend not to draw distinctions between law enforcement and other officials, this made them unlikely to help with elections.

### Remedies

As far as voter suppression is concerned, Native Vote has been asking the Department of Justice to look into what might be done, and to place more emphasis on law enforcement and combating intimidation. They have been urging the Department to focus on this at least much as it is focusing on enforcement of Section 203. Native groups have complained to DOJ repeatedly and DOJ has the entire log of handwritten incident reports they have collected. Therefore, Thompson recommends more DOJ enforcement of voting rights laws with respect to intimidation. People who would seek to abuse the process need to believe a penalty will be paid for doing so. Right now, there is no recourse and DOJ does not care, so both parties do it because they can.

Certain states should rescind bars on nonpartisan poll watchers on Election Day; Thompson believes this is contrary to the nonpartisan, pro-Indian presence which would best facilitate voting in Native communities.

As discussed above, Thompson believes ID requirements are a huge impediment to native voters. At a minimum, Thompson believes all states should be explicit about accepting tribal ID on Election Day.

Liberalized absentee ballot rules would also be helpful to Native communities. As many Indian voters are disabled and elderly, live far away from their precinct, and don't have transportation, tribes encourage members to vote by absentee ballot. Yet obstacles remain. Some voters are denied a chance to vote if they have requested a ballot and then show up at the polls. Thompson believes South Dakota's practice of tossing absentee ballots if a voter shows up at the ED would serve as an effective built-in protection. In addition, she believes there should be greater scrutiny of GOTV groups requesting absentee ballots without permission. Precinct location is a longstanding issue, but Thompson recognizes that states have limited resources. In the absence of those resources, better absentee ballot procedures are needed.

Basic voter registration issues and access are also important in native communities and need to be addressed.

Thompson is mixed on what restrictions should be placed on poll watcher behavior, as she believes open elections and third party helpers are both important. However, she would be willing to explore some sort of stronger recourse and set of rules concerning poll watchers' behavior. Currently, the parties are aware that no recourse exists, and try to get away with what they will. This is not unique to a single party—both try to stay within law while shaking people up. The existing VRA provision is 'fluffy'—unless you have a consent decree, you have very

little power. Thompson thinks a general voter intimidation law that is left a bit broad but that nonetheless makes people aware of some sort of kickback could be helpful.

**Interview with Jason Torchinsky, former attorney with the Civil Rights Section of the Department of Justice, assistant general counsel for the American Center for Voting Rights (ACVR) and Robin DeJarnette, political consultant for C4 and C5 organizations and executive director for the ACVR.**

February 16, 2006

ACVR Generally

Other officers of the ACVR-Thor Hearne II-general counsel and Brian Lunde, former executive director of the Democratic National Committee.

Board of Directors of ACVR-Brian Lunde, Thor Hearne II, and Cameron Quinn

ACVR works with a network of attorneys around the country and has been recently involved with lobbying in PA and MO.

Regarding the August 2005 Report

ACVR has not followed up on any of the cases it cited in the 2005 report to see if the allegations had been resolved in some manner. Mr. Torchinsky stated that there are problems with allegations of fraud in the report and prosecution---just because there was no prosecution, does not mean there was no vote fraud. He believes that it is very hard to come up with a measure of voter fraud short of prosecution. Mr. Torchinsky does not have a good answer to resolve this problem.

P. 35 of the Report indicates that there were coordinated efforts by groups to coordinate fraudulent voter registrations. P. 12 of the Ohio Report references a RICO suit filed against organizations regarding fraudulent voter registrations. Mr. Torchinsky does not know what happened in that case. He stated that there was a drive to increase voter registration numbers regardless of whether there was an actual person to register. He stated that when you have an organization like ACORN involved all over the place, there is reason to believe it is national in scope. When it is the same groups in multiple states, this leads to the belief that it is a concerted effort.

Voting Problems

Mr. Torchinsky stated there were incidents of double voting---ex. a double voter in Kansas City, MO. If the statewide voter registration database requirement of HAVA is properly implemented, he believes it will stop multiple voting in the same state. He supports the HAVA requirement, if implemented correctly. Since Washington State implemented its statewide database, the Secretary of State has initiated investigations into felons who voted. In Philadelphia the major problem is permitting polling places in private homes and bars – even the homes of party chairs.

Mr. Torchinsky believes that voter ID would help, especially in cities in places like Ohio and Philadelphia, PA. The ACVR legislative fund supports the Real ID requirements suggested by the Carter-Baker Commission. Since federal real ID requirements will be in place in 2010, any objection to a voter ID requirement should be moot.

Mr. Torchinsky stated that there are two major poll and absentee voting problems--(1) fraudulent votes-ex. dead people voting in St. Louis and (2) people voting who are not legally eligible-ex. felons in most places. He also believes that problems could arise in places that still transport paper ballots from the voting location to a counting room. However, he does not believe this is as widespread a problem now as it once was.

#### Suggestions

Implement the Carter-Baker Commission recommendations because they represent a reasonable compromise between the political parties.

**Interview with Joe Rich, former Chief of the Voting Section,  
US Department of Justice  
February 7, 2006**

Background

Mr. Rich went to Yale undergraduate and received his law degree from the University of Michigan. He served as Chief of the Voting Section from 1999-2005. Prior to that he served in other leadership roles in the Civil Rights Division and litigated several civil rights cases.

Data Collection and Monitoring

The section developed a new database before the 2004 election to log complaint calls and what was done to follow up on them. They opened many investigations as a result of these complaints, including one on the long lines in Ohio (see DOJ letter on website, as well as critical commentary on the DOJ letter's analysis). DOJ found no Section 2 violation in Ohio. John Tanner should be able to give us this data. However, the database does not include complaints that were received by monitors and observers in the field.

All attorney observers in the field are required to submit reports after Election Day to the Department. These reports would give us a very good sense of the scope and type of problems that arose on that day and whether they were resolved on the spot or required further action.

The monitoring in 2004 was the biggest operation ever. Prior to 2000, only certain jurisdictions could be observed – a VRA covered jurisdiction that was certified or a jurisdiction that had been certified by a court, e.g. through a consent decree. Since that time, and especially in 2004, the Department has engaged in more informal “monitoring.” In those cases, monitors assigned to certain jurisdictions, as opposed to observers, can only watch in the polling place with permission from the jurisdiction. The Department picked locations based on whether they had been monitored in the past, there had been problems before, or there had been allegations in the past. Many problems that arose were resolved by monitors on the spot.

Processes for Cases not Resolved at the Polling Site

If the monitor or observer believes that a criminal act has taken place, he refers it to the Public Integrity Section (PIN). If it is an instance of racial intimidation, it is referred to the Civil Rights Criminal Division. However, very few such cases are prosecuted because they are very hard to prove. The statutes covering such crimes require actual violence or the threat of violence in order to make a case. As a result, most matters are referred to PIN because they operate under statutes that make these cases easier to prove. In general, there are not a high number of prosecutions for intimidation and suppression.

If the act is not criminal, it may be brought as a civil matter, but only if it violated the Voting Rights Act – in other words, only if there is a racial aspect to the case. Otherwise the only recourse is to refer it to PIN.

However, PIN tends not to focus on intimidation and suppression cases, but rather cases such as alleged noncitizen voting, etc. Public Integrity used to only go after systematic efforts to corrupt the system. Now they focus on scattered individuals, which is a questionable resource choice. Criminal prosecutors over the past 5 years have been given more resources and more leeway because of a shift in focus and policy toward noncitizens and double voting, etc.

There have been very few cases brought involving African American voters. There have been 7 Section 2 cases brought since 2001 – only one was brought on behalf of African American voters. That case was initiated under the Clinton administration. The others have included Latinos and discrimination against whites.

#### Types of Fraud and Intimidation Occurring

There is no evidence that polling place fraud is a problem. There is also no evidence that the NVRA has increased the opportunity for fraud. Moreover, regardless of NVRA's provisions, an election official can always look into a voter's registration if he or she believes that person should no longer be on the list. The Department is now suing Missouri because of its poor registration list.

The biggest problem is with absentee ballots. The photo ID movement is a vote suppression strategy. This type of suppression is a bigger problem than intimidation. There has been an increase in vote suppression over the last five years, but it has been indirect, often in the way that laws are interpreted and implemented. Unequal implementation of ID requirements at the polls based on race would be a VRA violation.

The most common type of intimidation occurring is open hostility by poll workers toward minorities. It is a judgment call whether this is a crime or not – Craig Donsanto of PIN decides if it rises to a criminal matter.

Election Day challenges at the polls could be a VRA violation but such a case has never been formally pursued. Such cases are often resolved on the spot. Development of a pre-election challenge list targeted at minorities would be a VRA violation but this also has never been pursued. These are choices of current enforcement policy.

Long lines due to unequal distribution of voting machines based on race, list purges based on race and refusal to offer a provisional ballot on the basis of race would also be VRA violations.

#### Recommendations

Congress should pass a new law that allows the Department to bring civil actions for suppression that is NOT race based, for example, deceptive practices or wholesale challenges to voters in jurisdictions that tend to vote heavily for one party.

Given the additional resources and latitude given to the enforcement of acts such as double voting and noncitizen voting, there should be an equal commitment to enforcement of acts of intimidation and suppression cases.

There should also be increased resources dedicated to expanded monitoring efforts. This might be the best use of resources since monitors and observers act as a deterrent to fraud and intimidation.

## **Interview with Justice Evelyn Stratton, Supreme Court of Ohio**

February 17, 2006

### The 2004 Election

Justice Stratton stated that usually in the period right before an election filings die down due to the Ohio expedited procedures for electoral challenges. However, the 2004 election was unusual because there were motions and cases decided up to the day of the election. Justice Stratton believed that most of the allegations were knee-jerk reactions without any substance. For example, without any factual claims, suit was brought alleging that all voter challengers posed a threat to voters. Thematically, allegations were either everyday voting problems or "conspiracies" depending on where the complaint came from. The major election cases in 2004 revolved around Secretary of State Blackwell.

Justice Stratton made a point that the Ohio Supreme Court bent over backwards in the 2004 election to be fair to both sides. There was never any discussion about a ruling helping one political party more than the other.

Justice Stratton cited two cases that summarize and refute the 2004 complaints---819 NE 2d 1125 (Ohio 2004) and 105 Ohio St. 3d 458 (2004).

### General Election Fraud Issues

Justice Stratton has seen very few fraud cases in Ohio. Most challenges are for technical statutory reasons. She remembered one instance where a man who assisted handicapped voters marked the ballot differently than the voter wanted. Criminal charges were brought against this man and the question that the Ohio Supreme Court had to decide was whether ballots could be opened and inspected to see how votes were cast.

Justice Stratton claimed she knew of isolated incidences of fictitious voter registration but these were not prosecuted. She has not seen any evidence of ballots being stuffed, dead people voting, etc.

### Suggestions for Changes in Voting Procedures

The Ohio Supreme Court is very strict about laches---if a person sits on their rights too long, they lose the right to file suit. The Ohio expedited procedures make election challenges run very smooth. Justice Stratton does not remember any suits brought on the day of the election. She supports a non-partisan head of state elections. Justice Stratton believes that last minute challenges should not be permitted and that lower courts need to follow the rules for the expedited procedures. Even given the anomalies with lower courts permitting late election challenges in 2004, the Ohio Supreme Court does not want to make a new rule unless this pattern repeats itself in 2008.

**Interview with John Tanner, Director, Civil Rights Division, U.S. Department of Justice**

February 24, 2006

Note: Mr. Tanner's reluctance to share data, information and his perspective on solving the problems presented an obstacle to conducting the type of interview that would help inform this project as much as we would have hoped. Mr. Tanner would not give us any information about or data from the section's election complaint in-take phone logs; data or even general information from the Interactive Case Management (ICM) system-its formal process for tracking and managing work activities in pursuing complaints and potential violations of the voting laws; and would give us only a selected few samples of attorney-observer reports, reports that every Voting Section attorney who is observing elections at poll sites on Election Day is required to submit. He would not discuss in any manner any current investigations or cases the section is involved in. He also did not believe it was his position to offer us recommendations as to how his office, elections, or the voting process might be improved.

Authority and Process

The Voting Section, in contrast to the Public Integrity section as Craig Donsanto described it, typically looks only at systemic problems, not problems caused by individuals. Indeed, the section never goes after individuals because it does not have the statutory authority to do so. In situations in which individuals are causing problems at the polls and interfering with voting rights, the section calls the local election officials to resolve it.

Federal voting laws only apply to state action, so the section only sues local governments – it does not have any enforcement power over individuals. Most often, the section enters into consent agreements with governments that focus on poll worker training, takes steps to restructure how polls are run, and deals with problems on Election Day on the spot. Doing it this way has been most effective – for example, while the section used to have the most observers in the South, systematic changes forced upon those jurisdictions have made it so now the section does not get complaints from the South.

The section can get involved even where there is no federal candidate on the ballot if there is a racial issue under the 14<sup>th</sup> and 15<sup>th</sup> Amendments.

When the section receives a complaint, attorneys first determine whether it is a matter of individuals or systemic. When deciding what to do with the complaint, the section errs on the side of referring it criminally because they do not want civil litigation to complicate a possible criminal case.

When a complaint comes in, the attorneys ask questions to see if there are even problems there that the complainant is not aware are violations of the law. For example, in the Boston case, the attorney did not just look at Spanish language cases under section 203, but also brought a Section 2 case for violations regarding Chinese and Vietnamese voters.

When looking into a case, the attorneys look for specificity, witnesses and supporting evidence.

Often, lawsuits bring voluntary compliance.

#### Voter Intimidation

Many instances of what some people refer to as voter intimidation are more unclear now. For example, photographing voters at the polls has been called intimidating, but now everyone is at the polls with a camera. It is hard to know when something is intimidation and it is difficult to show that it was an act of intimidation.

The fact that both parties are engaging in these tactics now makes it more complicated. It makes it difficult to point the finger at any one side.

The inappropriate use of challengers on the basis of race would be a violation of the law. Mr. Tanner was unaware that such allegations were made in Ohio in 2004. He said there had never been an investigation into the abusive use of challengers.

Mr. Tanner said a lot of the challenges are legitimate because you have a lot of voter registration fraud as a result of groups paying people to register voters by the form. They turn in bogus registration forms. Then the parties examine the registration forms and challenge them because 200 of them, for example, have addresses of a vacant lot.

However, Mr. Tanner said the Department was able to informally intervene in challenger situations in Florida, Atkinson County, Georgia and in Alabama, as was referenced in a February 23 Op-Ed in USA Today. Mr. Tanner reiterated the section takes racial targeting very seriously.

Refusal to provide provisional ballots would be a violation of the law that the section would investigate.

Deceptive practices are committed by individuals and would be a matter for the Public Integrity Section. Local government would have to be involved for the voting section to become involved.

Unequal implementation of ID rules, or asking minority voters only for ID would be something the section would go after. Mr. Tanner was unaware of allegations of this in 2004. He said this is usually a problem where you have language minorities and the poll workers cannot understand the voters when they say their names. The section has never formally investigated or solely focused a case based on abuse of ID provisions. However, implementation of ID rules was part of the Section 2 case in San Diego. Mr. Tanner reiterated that the section is doing more than ever before.

When asked about the section's references to incidents of vote fraud in the documents related to the new state photo identification requirements, Mr. Tanner said the section only looks at retrogression, not at the wisdom of what a legislature does. In Georgia, for

example, everyone statistically has identification, and more blacks have ID than whites. With respect to the letter to Senator Kit Bond regarding voter ID, the section did refer to the perception of concern about dead voters because of reporting by the Atlanta Journal-Constitution. It is understandable that when you have thousands of bogus registrations that there would be concerns about polling place fraud. Very close elections make this even more of an understandable concern. Putting control of registration lists in the hands of the states will be helpful because at this higher level of government you find a higher level of professionalism.

It is hard to know how much vote suppression and intimidation is taking place because it depends on one's definition of the terms – they are used very loosely by some people. However, the enforcement of federal law over the years has made an astounding difference so that the level of discrimination has plummeted. Registration of minorities has soared, as can be seen on the section's website. Mr. Tanner was unsure if the same was true with respect to turnout, but the gap is less. That information is not on the section's website.

The section is not filing as many Section 2 cases as compared to Section 203 cases because many of the jurisdictions sued under Section 2 in the past do not have issues anymore. Mr. Tanner said that race based problems are rare now.

NVRA has been effective in opening up the registration process. In terms of enforcement, Mr. Tanner said they do what they can when they have credible allegations. There is a big gap between complaints and what can be substantiated. Mr. Tanner stated that given the high quality of the attorneys now in the section, if they do not investigate it or bring action, that act complained of did not happen.

#### Recommendations

Mr. Tanner did not feel it was appropriate to make recommendations.

## **Interview with Lori Minnite, Barnard College**

February 22, 2006

### Background

Ms. Minnite is an assistant professor of political science at Barnard College. She has done substantial research on voter fraud and wrote the report "Securing the Vote." Ms. Minnite also did work related to an election lawsuit. The main question that she was asked to address in the lawsuit was---did election-day registration increase the possibility of fraud?

### Securing the Vote

In *Securing the Vote*, Ms. Minnite found very little evidence of voter fraud because the historical conditions giving rise to fraud have weakened over the past twenty years. She stated that for fraud to take root a conspiracy was needed with a strong local political party and a complicit voter administration system. Since parties have weakened and there has been much improvement in the administration of elections and voting technology, the conditions no longer exist for large scale incidents of polling place fraud.

Ms. Minnite concentrates on fraud committed by voters not fraud committed by voting officials. She has looked at this issue on the national level and also concentrated on analyzing certain specific states. Ms. Minnite stressed that it is important to keep clear who the perpetrators of the fraud are and where the fraud occurs because that effects what the remedy should be. Often, voters are punished for fraud committed by voting officials.

### Other Fraud Issues

Ms. Minnite found no evidence that NVRA was leading to more voter fraud. She supports non-partisan election administration. Ms. Minnite has found evidence that there is absentee ballot fraud. She can't establish that there is a certain amount of absentee ballot fraud or that it is the major kind of voter fraud.

### Recommendations

Assure there are accurate voter records and centralize voter databases

Reduce partisanship in electoral administration.

**Interview with Nina Perales, Counsel, Mexican American Legal Defense and Education Fund**

March 7, 2006

Background

Ms. Perales is an attorney with the Mexican American Legal Defense Fund (MALDEF). MALDEF's mission is to foster sound public policies, laws and programs to safeguard the civil rights of the 40 million Latinos living in the United States and to empower the Latino community to fully participate in our society. One of the areas MALDEF works in is electoral issues, predominately centered on the Voting Rights Act. Ms. Perales did not seem to have a sense of the overall electoral issues in her working region (the southwest) effecting Hispanic voters and did not seem to want to offer her individual experiences and work activities as necessarily a perfect reflection of the challenges Hispanic voters face.

Largest Election Problems Since 2000

Santa Anna County, New Mexico-2004-intimidated voters by video taping them.

San Antonio-One African American voter subjected to a racial slur.

San Antonio-Relocated polling places at the last minute without Section 5 pre-clearance.

San Antonio-Closed polls while voters were still in line.

San Antonio-2003-only left open early voting polls in predominantly white districts.

San Antonio-2005-racially contested mayoral run-off election switched from touch screen voting to paper ballots.

Voter Fraud and Intimidation

In Texas, the counties are refusing to open their records with respect to Section 203 compliance (bilingual voting assistance), and those that did respond to MALDEF's request submitted incomplete information. Ms. Perales believes this in itself is a form of voter intimidation.

Ms. Perales said it is hard to say if the obstacles minorities confront in voting are a result of intentional acts or not because the county commission is totally incompetent. There have continuously been problems with too few ballots, causing long lines, especially in places that had historically lower turnout. There is no formula in Texas for allocating ballots – each county makes these determinations.

When there is not enough language assistance at the polls, forcing a non-English speaker to rely on a family member to vote, that can suppress voter turnout.

Ms. Perales is not aware of deceptive practices or dirty tricks targeted at the Latino community.

There have been no allegations of illegal noncitizen voting in Texas. Indeed, the sponsor of a bill that would require proof of citizenship to vote could not provide any documentation of noncitizen voting in support of the bill. The bill was defeated in part because of the racist comments of the sponsor. In Arizona, such a measure was passed. Ms. Perales was only aware of one case of noncitizen voting in Arizona, involving a man of limited mental capacity who said he was told he was allowed to register and vote. Ms. Perales believes proof of citizenship requirements discriminate against Latinos.

### Recommendations

Ms. Perales feels the laws are adequate, but that her organization does not have enough staff to do the monitoring necessary. This could be done by the federal government. However, even though the Department of Justice is focusing on Section 203 cases now, they have not even begun to scratch the surface. Moreover, the choices DOJ has made with respect to where they have brought claims do not seem to be based on any systematic analysis of where the biggest problems are. This may be because the administration is so ideological and partisan.

Ms. Perales does not believe making election administration nonpartisan would have a big impact. In Texas, administrators are appointed in a nonpartisan manner, but they still do not always have a nonpartisan approach. Each administrator tends to promote his or her personal view regardless of party.

## **Interview with Pat Rogers, private attorney**

March 3, 2006

### Background

In addition to his legal practice with *Modrall, Sperling, Roehl, Harris & Sisk*, Rogers also does some state-level lobbying for Verizon Wireless, GM, Dumont and other companies. His experience in election law goes back to 1988, where his first elections case was a defense against Bill Richardson, who had sued to get another candidate tossed off a ballot because of petition fraud. Since 1988, he has been involved in election cases at least once every two years.

### 2004 Litigation

In a case that ended before the New Mexico Supreme Court, Rogers represented the Green Party and other plaintiffs against the New Mexico Secretary of State for sending a directive telling local boards not to require ID for first time voters registering by mail. He argued that this watered-down ID check conflicted with what seemed fairly clear statutory requirements for first time voters. In 2004 these requirements were especially important due to the large presence of 3<sup>rd</sup> party organizations registering voters such as a 527 funded by Governor Richardson, ACORN, and others.

Plaintiffs were seeking a temporary restraining order requiring Secretary of State to follow the law. Yet the Supreme Court ultimately decided that, whether the directive was right or wrong, it was too late to require ID lest Bush v. Gore issues be raised.

Today, the issue is moot as the state legislature has changed the law, and the Secretary of State will no longer be in office. It seems unlikely they will send any policy directives to county clerks lest they violate due process/public notice.

### Major issues in NM w/ regard to vote fraud

Registration fraud seems to be the major issue, and while the legislature has taken some steps, Rogers is skeptical of the effect they will have, considering the history of unequal application of election laws. He also believes there are holes in the 3<sup>rd</sup> party registration requirement deadlines.

Rogers views a national law requiring ID as the best solution to registration problems. Rather than imposing a burden he contends it will enhance public confidence in the simplest way possible.

### Registration Fraud in 2004 election

It came to light that ACORN had registered a 13 year old. The father was an APD officer and received the confirmation, but it was sent to the next door address, a vacant house.

They traced this to an ACORN employee and it was established that this employee had been registering others under 18.

Two weeks later, in a crack cocaine bust of Cuban nationals, one of those raided said his job was registering voters for ACORN, and the police found signatures in his possession for fictitious persons.

In a suspicious break-in at an entity that advertised itself as nonpartisan, only GOP registrations were stolen.

In another instance, a college student was allegedly fired for registering too many Republicans.

Rogers said he believed these workers were paid by the registration rather than hourly.

There have been no prosecution or convictions related to these incidents. In fact, there have been no prosecutions for election fraud in New Mexico in recent history. However, Rogers is skeptical that much action can be expected considering the positions of Attorney General, Governor, and Secretary of State are all held by Democrats. Nor has there been any interest from the U.S. attorney—Rogers heard that U.S. attorneys were given instruction to hold off until after the election in 2004 because it would seem too political.

As part of the case against the Secretary of State regarding the identification requirement, the parties also sued ACORN. At a hearing, the head of ACORN, and others aligned with the Democratic Party called as witnesses, took the 5<sup>th</sup> on the stand as to their registration practices.

#### Other incidents

Very recently, there have been reports of vote buying in the town of Espanola. Originally reported by the *Rio Grande Sun*, a resident of a low-income housing project is quoted as saying it has been going on for 10-12 years. The Albuquerque Journal is now reporting this as well. So far the investigation has been extremely limited.

In 1996, there were some prosecutions in Espanola, where a state district judge found registration fraud.

In 1991, the chair of Democratic Party of Bertolino County was convicted on fraud. Yet she was pardoned by Clinton on same day as Marc Rich.

#### Intimidation/Suppression

Rogers believes the most notable example of intimidation in the 2004 election was the discovery of a DNC Handbook from Colorado advising Democratic operatives to widely report intimidation regardless of confirmation in order to gain media attention.

### In-person polling place fraud

There have only been isolated instances of people reporting that someone had voted in their name, and Rogers doesn't believe there is any large scale conspiracy. Yet he contends that perspective misses the larger point of voter confidence. Although there has been a large public outcry for voter ID in New Mexico, it has been deflected and avoided by Democrats.

In 2004, there were more Democratic lawyers at the polls than there are lawyers in New Mexico. Rogers believes these lawyers had a positive impact because they deterred people from committing bad acts.

### Counting Procedures

The Secretary of State has also taken the position that canvassing of the vote should be done in private. In NM, they have a 'county canvas' where they review and certify, after which all materials—machine tapes, etc.—are centralized with the Secretary of State who does a final canvass for final certification. Conducting this in private is a serious issue, especially considering the margin in the 2000 presidential vote in New Mexico was only 366 votes. They wouldn't be changing machine numbers, but paper numbers are vulnerable.

On a related note, NM has adopted state procedures that will ensure their reports are slower and very late, considering the 2000 late discovery of ballots. In a close race, potential for fraud and mischief goes up astronomically in the period between poll closing and reporting. Rogers believes these changes are going to cause national embarrassment in the future.

Rogers attributes other harmful effects to what he terms the Secretary of State's incompetence and inability to discern a nonpartisan application of the law. In the 2004 election, no standards were issued for counting provisional ballots. Furthermore, the Secretary of State spent over \$1 million of HAVA money for 'voter education' in blatant self-promotional ads.

### Recommendations

Rogers believes it would be unfeasible to have nonpartisan election administration and favors transparency instead. To make sure people have confidence in the election, there must be transparency in the whole process. Then you don't have the 1960 vote coming down to Illinois, or the Espanola ballot or Dona Anna County (ballots found there in the 2000 election). HAVA funds should also be restricted when you have an incompetent, partisan Secretary of State.

There should be national standards for reporting voting results so there is less opportunity for fraud in a close race. Although he is not generally an advocate of national laws, he

does agree there should be more national uniformity into how votes are counted and recorded.

## **Interview with Rebecca Vigil-Giron, Secretary of State, New Mexico**

March 24, 2006

### Background

Vigil-Giron has been Secretary of State for twelve years and was the President of the National Association of Secretaries of State in 2004. Complaints of election fraud and intimidation are filed with the SOS office. She then decides whether to refer it to the local district attorney or the attorney general. Because the complaints are few and far between, the office does not keep a log of complaints; however, they do have all of the written complaints on file in the office.

### Incidents of Fraud and Intimidation

During the 2004 election, there were a couple of complaints of polling place observers telling people outside the polling place who had just voted, and then the people outside were following the voters to their cars and videotaping them. This happened in areas that are mostly second and third generation Latinos. The Secretary sent out the sheriff in one instance of this. The perpetrators moved to a different polling place. This was the only incident of fraud or intimidation Vigil-Giron was aware of in New Mexico.

There have not been many problems on Native reservations because, unlike in many other states, in New Mexico the polling place is on the reservation and is run by local Native Americans. Vigil-Giron said that it does not make sense to have non-Natives running those polls because it is necessary to have people there who can translate. Because most of the languages are unwritten, the HAVA requirement of accessibility through an audio device will be very helpful in this regard. Vigil-Giron said she was surprised to learn while testifying at the Voting Rights Act commission hearings of the lack of sensitivity to these issues and the common failure to provide assistance in language minority areas.

In 2004 the U.S. Attorney, a Republican, suddenly announced he was launching an investigation into voter fraud without consulting the Secretary of State's office. After all of that, there was maybe one prosecution. Even the allegations involving third party groups and voter registration are often misleading. People doing voter registration drives encourage voters to register if they are unsure if they are already registered, and the voter does not even realize that his or her name will then appear on the voter list twice. The bigger problem is where registrations do not get forwarded to election administrators and the voter does not end up on the voting list on Election Day. This is voter intimidation in itself, Vigil-Giron believes. It is very discouraging for that voter and she wonders whether he or she will try again.

Under the bill passed in 2004, third parties are required to turn around voter registration forms very quickly between the time they get them and when they must be returned. If

they fail to return them within 48 hours of getting them, they are penalized. This, Vigil-Giron believes, is unfair. She has tried to get the Legislature to look at this issue again. Regarding allegations of vote buying in Espanola, Vigil-Giron said that the Attorney General is investigating. The problem in that area of New Mexico is that they are still using rural routes, so they have not been able to properly district. There has, as a result, been manipulation of where people vote. Now they seem to have pushed the envelope too far on this. The investigation is not just about vote buying, however. There have also been allegations of voters being denied translators as well as assistance at the polls.

Vigil-Giron believes there was voter suppression in Ohio in 2004. County officials knew thirty days out how many people had registered to vote, they knew how many voters there would be. Administrators are supposed to use a formula for allocation of voting machines based on registered voters. Administrators in Ohio ignored this. As a result, people were turned away at the polls or left because of the huge lines. This, she believes, was a case of intentional vote suppression.

A few years ago, Vigil-Giron heard that there may have been people voting in New Mexico and a bordering town in Colorado. She exchanged information with Colorado administrators and it turned out that there were no cases of double voting.

#### Recommendations

Vigil-Giron believes that linking voter registration databases across states may be a way to see if people who are registered twice are in fact voting twice.

The key to improving the process is better trained poll workers, who are certified, and know what to look for on Election Day. These poll workers should then work with law enforcement to ensure there are no transgressions.

There should be stronger teeth in the voter fraud laws. For example, it should be more than a fourth degree felony, as is currently the case.

## **Interview with Tracy Campbell, author**

March 3, 2006

### Background

Campbell's first book on election fraud looked at Ed Pritchard, a New Deal figure who went to jail for stuffing ballot boxes. While his initial goal in writing that book was to find out why Pritchard had engaged in vote stealing, his growing understanding of a pervasive culture of electoral corruption led him to consider instead how it was that Pritchard was ever caught. In 1998, he started working on a book regarding fraud in Kentucky, which quickly became a national study. He hoped to convey the 'real politics' which he feels readers, not to mention academics, have little sense about. While less blatant than in previous eras, fraud certainly still occurs, and he mentions some examples in his book. The major trend of the past 60-70 years has been that these tactics have grown more subtle.

While he hasn't conducted any scientific study of the current state of fraud, his sense as a historian is that it seems naive, after generations of watching the same patterns and practices influence elections, to view suspect election results today as merely attributable to simple error.

### Vote-buying and absentee fraud

Campbell sees fraud by absentee ballot and vote buying as the greatest threats to fair elections today. He says vote fraud is like real estate: location, location, location—the closer you can keep the ballots to the courthouse the better. Absentee ballots create a much easier target for vote brokers who can manage voting away from the polling place, or even mark a ballot directly, in exchange for, say, \$50—or even more if an individual can bring their entire family. He has noted some small counties where absentee ballots outnumber in-person ballots.

However, few people engaged in this activity would call it 'purchasing' a vote. Instead, it is candidate Jones' way of 'thanking' you for a vote you would have cast in any event. The issue is what happens if candidate Smith offers you more. Likewise, the politicians who engage in vote fraud don't see it as a threat to the republic but rather as a game they have to play in order to get elected.

### Regional patterns

Campbell suggests such practices are more prevalent in the South than the Northern states, and even more so compared to the West. The South has long been characterized as particularly dangerous in intimidation and suppression practices—throughout history, one can find routine stories of deaths at the polls each year. While he maintains that fraud seems less likely in the Western states, he sees the explosion of mail in and absentee ballots there as asking for trouble.

### Poll site closings as a means to suppress votes

Campbell points to a long historical record of moving poll sites in order to suppress votes. Polling places in the 1800s were frequently set-up on rail cars and moved further down the line to suppress black votes.

He would include door-to-door canvassing practices here, as well as voting in homes, which was in use in Kentucky until only a few years ago. All of these practices have been justified as making polling places 'more accessible' while their real purpose has been to suppress votes.

#### Purge lists

Purge lists are, of course, needed in theory, yet Campbell believes the authority to mark names off the voter rolls presents extensive opportunity for abuse. For this reason, purging must be done in a manner that uses the best databases, and looks at only the most relevant information. When voters discover their names aren't on the list when they go to vote, for example, because they are "dead," it has a considerable demoralizing effect. Wrongful purging takes place both because of incompetence and as a tool to intentionally disenfranchise.

Campbell believes transparency is the real issue here. An hour after the polls close, we tend to just throw up our hands and look the other way, denying voters the chance to see that discrepancies are being rectified. He believes the cost in not immediately knowing election outcomes is a small price to pay for getting results right and showing the public a transparent process.

#### Deceptive practices

Today's deceptive practices have are solidly rooted in Reconstruction-era practices—i.e. phony ballots, the Texas 'elimination' ballot. The ability to confuse voters is a powerful tool for those looking to sway elections.

#### Language minorities

Campbell argues there is a fine line between offering help to non-English speakers and using that help against them. A related issue, particularly in the South, is taking advantage of the illiterate.

#### Current intimidation

Another tactic Campbell considers an issue today is polling place layout: the further vote suppressers can keep people away from the polls, the better. Practices such as photographing people leaving a polling place may also tie into vote-buying, where photos are used to intimidate and validate purchased votes. A good way to combat such practices is by keeping electioneering as far from the polls as possible.

#### Recommendations

Specific voting administration recommendations Campbell advocates would include reducing the use of absentee ballots and improving the protective zone around polling places.

Campbell would also like to see enforcement against fraud stepped up and stiffer penalties enacted, as current penalties make the risk of committing fraud relatively low. He compares the risk in election fraud similar to steroid use in professional sports—the potential value of the outcome is far higher than the risk of being caught or penalized for the infraction, so it is hard to prevent people from doing it. People need to believe they will pay a price for engaging in fraud or intimidation. Moreover, we need to have the will to kick people out of office if necessary.

He is skeptical of the feasibility of nonpartisan election administration, as he believes it would be difficult to find people who care about politics yet won't lean one way or the other—such an attempt would be unlikely to get very far before accusations of partisanship emerged. He considers the judiciary the only legitimate check on election fraud.

## **Interview with Joe Sandler, Counsel to the DNC**

February 24, 2006

### Background

Sandler is an election attorney. He worked for the DNC in 1986, was in-house counsel from 1993-1998, and currently is outside counsel to the DNC and most state Democratic Parties. Sandler was part of the recount team in Florida in both 2002 and 2004. He recruited and trained attorneys in voting issues---starting in 2002 Sandler recruited in excess of 15, 000 attorneys in twenty-two states. He is now putting together a national lawyers council in each state.

### 2004-Administrative Incompetence v. Fraud

Sandler believes the 2004 election was a combination of administrative incompetence and fraud. Sandler stated there was a deliberate effort by the Republicans to disenfranchise voters across the country. This was accomplished by mailing out cards to registered voters and then moving to purge from the voters list those whose cards were returned. Sandler indicated that in New Mexico there was a deliberate attempt by Republicans to purge people registered by third parties. He stated that there were intentional efforts to disenfranchise voters by election officials like Ken Blackwell in Ohio.

The problems with machine distribution in 2004 were not deliberate. However, Sandler believes that a large problem exists in the states because there are no laws that spell out a formula to allocate so many voting machines per voter.

Sandler was asked how often names were intentionally purged from the voter lists. He responded that there will be a lot of names purged as a result of the creation of the voter lists under HAVA. However, Sandler stated most wrongful purging results from incompetence. Sandler also said there was not much intimidation at the polls because most such efforts are deterred and that the last systematic effort was in Philadelphia in 2003 where Republicans had official looking cars and people with badges and uniforms, etc.

Sandler stated that deliberate dissemination of misinformation was more incidental, with individuals misinforming and not a political party. Disinformation did occur in small Spanish speaking communities.

Republicans point to instances of voter registration fraud but Sandler believes it did not occur, except for once in a blue moon. Sandler did not believe non-citizen voting was a problem. He also does not believe that there is voter impersonation at the polls and that Republicans allege this as a way of disenfranchising voters through restrictive voter identification rules.

## Fraud and Intimidation Trends

Sandler stated that over the years there has been a shift from organized efforts to intimidate minority voters through voter identification requirements, improper purging, failure to properly register voters, not allocating enough voting machines, failure to properly use the provisional ballot, etc., by voter officials as well as systematic efforts by Republicans to deregister voters.

At the federal level, Sandler said, the voting division has become so politicized that it is basically useless now on intimidation claims. At the local level, Sandler does not believe politics prevents or hinders prosecution for vote fraud.

## Sandler's Recommendations

Moving the voter lists to the state level is a good idea where carefully done

Provisional ballots rules should follow the law and not be over-used

No voter ID

Partisanship should be taken out of election administration, perhaps by giving that responsibility by someone other than the Secretary of State. There should at least be conflict of interest rules

Enact laws that allow private citizens to bring suit under state law

All suggestions from the DNC Ohio Report:

1. The Democratic Party must continue its efforts to monitor election law reform in all fifty states, the District of Columbia and territories.
2. States should be encouraged to codify into law all required election practices, including requirements for the adequate training of official poll workers.
3. States should adopt uniform and clear published standards for the distribution of voting equipment and the assignment of official pollworkers among precincts, to ensure adequate and nondiscriminatory access. These standards should be based on set ratios of numbers of machines and pollworkers per number of voters expected to turn out, and should be made available for public comment before being adopting.
4. States should adopt legislation to make clear and uniform the rules on voter registration.
5. The Democratic Party should monitor the processing of voter registrations by local election authorities on an ongoing basis to ensure the timely processing of registrations and changes, including both newly registered voters and voters who move within a jurisdiction or the state, and the Party should ask state Attorneys General to take action where necessary to force the timely updating of voter lists.
6. States should be urged to implement statewide voter lists in accordance with the Help America Vote Act ("HAVA"), the election reform law enacted by Congress in 2002 following the Florida debacle.
7. State and local jurisdictions should adopt clear and uniform rules on the use of, and the counting of, provisional ballots, and distribute them for public comment well in advance of each election day.

8. The Democratic Party should monitor the purging and updating of registered voter lists by local officials, and the Party should challenge, and ask state Attorneys General to challenge, unlawful purges and other improper list maintenance practices.
9. States should not adopt requirements that voters show identification at the polls, beyond those already required by federal law (requiring that identification be shown only by first time voters who did not show identification when registering.)
10. State Attorneys General and local authorities should vigorously enforce, to the full extent permitted by state law, a voter's right to vote without showing identification.
11. Jurisdictions should be encouraged to use precinct-tabulated optical scan systems with a computer assisted device at each precinct, in preference to touchscreen ("direct recording equipment" or "DRE") machines.
12. Touchscreen (DRE) machines should not be used until a reliable voter verifiable audit feature can be uniformly incorporated into these systems. In the event of a recount, the paper or other auditable record should be considered the official record.
13. Remaining punchcard systems should be discontinued.
14. States should ask state Attorneys General to challenge unfair or discriminatory distribution of equipment and resources where necessary, and the Democratic Party should bring litigation as necessary.
15. Voting equipment vendors should be required to disclose their source code so that it can be examined by third parties. No voting machine should have wireless connections or be able to connect to the Internet.
16. Any equipment used by voters to vote or by officials to tabulate the votes should be used exclusively for that purpose. That is particularly important for tabulating/aggregating computers.
17. States should adopt "no excuse required" standards for absentee voting.

18. States should make it easier for college students to vote in the jurisdiction in which their school is located.
19. States should develop procedures to ensure that voting is facilitated, without compromising security or privacy, for all eligible voters living overseas.
20. States should make voter suppression a criminal offense at the state level, in all states.
21. States should improve the training of pollworkers.
22. States should expend significantly more resources in educating voters on where, when and how to vote.
23. Partisan officials who volunteer to work for a candidate should not oversee or administer any elections.

**Interview with John Ravitz, Executive Director, New York City Board of Elections**  
February 16, 2006

Process

If there is an allegation of fraud or intimidation, the commissioners can rule to act on it. For example, in 2004 there were allegations in Queens that people had registered to vote using the addresses of warehouses and stores. The Board sent out teams of investigators to look into this. The Board then developed a challenge list that was to be used at the polls if any of the suspect voters showed up to vote.

If the allegation rises to a criminal level, the Board will refer it to the county district attorney. If a poll worker or election official is involved, the Board may conduct an internal investigation. That individual would be interviewed, and if there is validity to the claim, the Board would take action.

Incidences of Fraud and Intimidation

Mr. Ravitz says there have been no complaints about voter intimidation since he has been at the Board. There have been instances of over-aggressive poll workers, but nothing threatening. Voter fraud has also generally not been a problem.

In 2004, the problem was monitors from the Department of Justice intimidating voters. They were not properly trained, and were doing things like going into the booth with voters. The Board had to contact their Department supervisors to put a stop to it.

Charges regarding "ballot security teams" have generally just been political posturing.

The problem of people entering false information on voter registration forms is a problem. However, sometimes a name people allege is false actually turns out to be the voter's real name. Moreover, these types of acts do not involve anyone actually casting a fraudulent ballot.

With respect to the issue of voters being registered in both New York and Florida, the Board now compares its list with that of Florida and other places to address the problem. This will be less of an issue with the use of statewide voter registration databases, as information becomes easier to share. Despite the number of people who were on the voter registration lists of both jurisdictions, there was no one from those lists who voted twice.

Most of the problems at the polls have to do with poll workers not doing what they are supposed to do, not any sort of malfeasance. This indicates that improved training is the most important measure we can take.

There have been instances in which poll workers ask voters for identification when they shouldn't. However, the poll workers seem to do it when they cannot understand the name when the voter tells it to them. The Board has tried to train them that no matter what, the poll worker cannot ask for identification in order to get the person's name.

Absentee ballot fraud has also not been a problem in New York City. This is likely because absentee ballots are counted last – eight days after election day. This is so that they can be checked thoroughly and verified. This is a practice other jurisdictions might consider.

New York City has not had a problem with ex-felons voting or with ex-felons not knowing their voting rights. The City has not had any problems in recent years with deceptive practices, such as flyers providing misinformation about voting procedures.

Recommendations

- Better poll worker training
- Thorough inspection of absentee ballots subsequent to the election

## **Interview with Wendy Weiser, Deputy Director, Democracy Program, The Brennan Center**

### Brennan Center findings on fraud

The Brennan Center's primary work on fraud is their report for the Carter Baker Commission with commissioner Spencer Overton, written in response to the Commission's ID recommendations. Brennan reviewed all existing reports and election contests related to voter fraud. They believe the contests serve as an especially good record of whether or not fraud exists, as the parties involved in contested elections have a large incentive to root out fraudulent voters. Yet despite this, the incidence of voter impersonation fraud discovered is extremely low—something on the order 1/10000<sup>th</sup> of a percentage of voters. See also the brief Brennan filed on 11<sup>th</sup> circuit in Georgia photo ID case which cites sources in Carter Baker report and argues the incidence of voter fraud too low to justify countermeasures.

Among types of fraud, they found impersonation, or polling place fraud, is probably the least frequent type, although other types, such as absentee ballot fraud are also very infrequent. Weiser believes this is because impersonation fraud is more likely to be caught and is therefore not worth the risk. Unlike in an absentee situation, actual poll workers are present to disrupt impersonation fraud, for instance, by catching the same individual voting twice. She believes perhaps one half to one quarter of the time the person will be caught. Also, there is a chance the pollworker will have personal knowledge of the person. Georgia Secretary of State Cathy Cox has mentioned that there are many opportunities for discovery of in person fraud as well. For example, if one votes in the name of another voter, and that voter shows up at the polls, the fraud will be discovered.

Weiser believes court proceedings in election contests are especially useful. Some are very extensive, with hundreds of voters brought up by each side and litigated. In both pre-election challenges and post-election contests, parties have devoted extraordinary resources into 'smoking out' fraudulent voters. Justin Leavitt at Brennan scoured such proceedings for the Carter Baker report, which includes these citations. Contact him for answers to particular questions.

### Countermeasures/statewide databases

Brennan has also considered what states are doing to combat impersonation fraud besides photo ID laws, although again, it seems to be the rarest kind of fraud, beyond statistically insignificant. In the brief Brennan filed in the Georgia case, the Center detailed what states are already doing to effectively address fraud. In another on the web site includes measures that can be taken that no states have adopted yet. Weiser adds that an effort to look at strategies states have to prevent fraud, state variations, effectiveness, ease of enforcement would be very useful.

Weiser believes the best defense against fraud will be better voter lists—she argues the fraud debate is actually premature because states have yet to fully implement the HAVA database requirement. This should eliminate a great deal of 'deadwood' on voter rolls and undermine the

common argument that fraud is made possible by this deadwood. This was the experience for Michigan, which was able to remove 600,000 names initially, and later removed almost 1 million names from their rolls. It is fairly easy to cull deadwood from lists due to consolidation at the state level—most deadwood is due to individuals moving within the state and poor communication between jurisdictions. (Also discuss with Chris Thomas, who masterminded the Michigan database for more information and a historical perspective.)

Regarding the question of whether the effect of this maintenance on fraud in Michigan can be quantified, Weiser would caution against drawing direct lines between list problems and fraud. Brennan has found various groups abusing the existence of list deadwood to make claims about fraudulent voting. This is analyzed in greater detail in the Brennan Center's critique of a purge list produced by the NJ Republican party, and was illustrated by the purge list produced by the state of Florida. When compiling such lists and doing comparisons, sound statistical methods must be utilized, and often are not.

The NJ GOP created a list and asked NJ election officials to purge names of ineligible voters on it. Their list assumed that people appearing on the list twice had voted twice. Brennan found their assumptions shoddy and based on incorrect statistical practices, such as treating individuals with the same name and birthdays as duplicates, although this is highly unlikely according to proper statistical methods. Simply running algorithms on voter lists creates a number of false positives, does not provide an accurate basis for purging, and should not be taken as an indicator of fraud.

Regarding the Florida purge list, faulty assumptions caused the list to systematically exclude Hispanics while overestimating African Americans. Matching protocols required that race fields match exactly, despite inconsistent fields across databases.

The kinds of list comparisons that are frequently done to allege fraud are unreliable. Moreover, even if someone is on a voter list twice, that does not mean that voter has voted twice. That, in fact, is almost never the case.

Ultimately, even matching protocols without faulty assumptions will have a 4 percent to 35 percent error rate—that's simply the nature of database work. Private industry has been working on improving this for years. Now that HAVA has introduced a matching requirement, even greater skepticism is called for in judging the accuracy of list maintenance.

### Intimidation and Suppression

Brennan does not have a specific focus here, although they do come across it and have provided assistance on bills to prevent suppression and intimidation. They happen to have an extensive paper file of intimidating fliers and related stories from before the 2004 election. (They can supply copies after this week).

### Challengers

Brennan has analyzed cases where challenger laws have been beneficial and where they have been abused. See the decision and record from the 1982 NJ vs. RNC case for some of the history of these laws. Brennan is currently working on developing a model challenger law.

Weiser believes challenge laws with no requirement that the challenger have any specific basis for the challenge or showing of ineligibility are an invitation to blanket harassing challenges and have a range of pitfalls. State laws are vague and broad and often involve arcane processes such as where voters are required to meet a challenge within 5 days. There are incentives for political abuse, potential for delaying votes and disrupting the polls, and they are not necessarily directed toward the best result. Furthermore, when a voter receives a mailer alleging vote fraud with no basis, even the mere fact of a challenge can be chilling. A voter does not want to have to go through a quasi-court proceeding in order to vote.

Brennan recommends challenge processes that get results before election, minimize the burden for voters, and are restricted at polling place to challenges by poll workers and election officials, not voters. They believe limitless challenges can lead to pandemonium—that once the floodgates are open they won't stop.

### Recommendations

**Intimidation**— Weiser believes Sen. Barak Obama's bill is a good one for combating voter harassment and deceptive practices. Many jurisdictions do not currently have laws prohibiting voter harassment and deceptive practices.

**Fraud**— Current state and federal codes seem sufficient for prosecuting fraud. Weiser doesn't consider them under-enforced, and sees no need for additional laws.

**Voter lists**— New legislation or regulations are needed to provide clear guidance and standards for generating voter lists and purging voters, otherwise states could wrongfully disenfranchise eligible voters.

**Challengers**—Challenge laws need to be reformed, especially ones that allow for pre-election mass challenges with no real basis. There is no one size fits all model for challenger legislation, but some bad models involving hurdles for voters lead to abuse and should be reformed. There should be room for poll workers to challenge fraudulent voters, but not for abuse.

Also useful would be recommendations for prosecutors investigating fraudulent activity, How should they approach these cases? How should they approach cases of large scale fraud/intimidation? While there is sufficient legislative cover to get at any election fraud activity, questions remain about what proper approaches and enforcement strategies should be.

**Interview with Bill Groth, Attorney for the Plaintiffs in Indiana Identification Litigation**

February 22, 2006

Fraud in Indiana

Indiana has never charged or prosecuted anyone for polling place fraud. Nor has any empirical evidence of *voter impersonation* fraud or dead voter fraud been presented. In addition, there is no record of any credible complaint about *voter impersonation* fraud in Indiana. State legislators signed an affidavit that said there had never been impostor voting in Indiana. At the same time, the Indiana Supreme Court has not necessarily required evidence of voter fraud before *approving* legislative attempts to address fraud.

The state attorney general has conceded that there is no concrete fraud in Indiana, but has instead referred to instances of fraud in other states. Groth filed a detailed motion to strike evidence such as John Fund's book relating to other states, arguing that none of that evidence was presented to the legislature and that it should have been in the form of sworn affidavits, so that it would have some indicia of verifiability.

Photo ID law

By imposing restrictive ID measures, Groth contends you will discourage 1,000 times more legitimate voters than illegitimate voters you might protect against. He feels the implementation of a REAL ID requirement is an inadequate justification for the law, as it will not affect the upcoming 2006 election where thousands of registered voters will be left without proper ID. In addition, he questions whether REAL ID will be implemented as planned in 2008 considering the backlash against the law so far. He also feels ID laws are unconstitutional because of inconsistent application.

Statewide database as remedy

Groth believes many problems will be addressed by the statewide database required under HAVA. To the extent that the rolls in Indiana are bloated, it is because state officials have not complied with NVRA list maintenance requirements. Thus, it is somewhat disingenuous for them to use bloated voter rolls as a reason for imposing additional measures such as the photo ID law. Furthermore, the state has ceded to the counties the obligation to do maintenance programs, which results in a hit or miss process (see discussion in reply brief, p 26 through p. 28).

Absentee fraud

To the extent that there has been an incidence of fraud, these have all been confined to absentee balloting. Most notably the East Chicago mayoral election case where courts found absentee voting fraud had occurred. See: Pabey vs. Pastrick 816 NE 2<sup>nd</sup> 1138 Decision by the Indiana Supreme Court in 2004.

### Intimidation and vote suppression

Groth is only aware of anecdotal evidence supporting intimidation and suppression activities. While he considers the sources of this evidence credible, it is still decidedly anecdotal. Instances he is aware of include police cars parked in front of African American polling places. However, most incidents of suppression which are discussed occurred well in the past. Trevor Davidson claims a fairly large scale intimidation program in Louisville.

### Challengers

There was widespread information that the state Republican Party had planned a large scale challenger operation in Democratic precincts for 2004, but abandoned the plan at the last minute.

Last year the legislature made a crucial change to election laws which will allow partisan challengers to be physically inside the polling area next to members of the precinct board. Previously, challengers at the polling place have been restricted to the 'chute,' which provides a buffer zone between voting and people engaging in political activity. That change will make it much easier to challenge voters. As there is no recorded legislative history in Indiana, it is difficult to determine the justification behind this change. As both chambers and the governorship are under single-party control, the challenger statute was passed under the radar screen.

### Photo ID and Challengers

Observers are especially concerned about how this change will work in conjunction with the photo ID provision. Under the law, there are at least two reasons why a member of the precinct board or a challenger can raise object to an ID: whether a presented ID conforms to ID standards, and whether the photo on an ID is actually a picture of the voter presenting it. The law does not require bipartisan agreement that a challenge is valid. All it takes is one challenge to raise a challenge to that voter, and that will lead to the voter voting by provisional ballot.

Provisional ballot voting means that voter must make a second trip to the election board (located at the county seat) within 13 days to produce the conforming ID or to swear out an affidavit that they are who they claim to be. This may pose a considerable burden to voters. For example, Indianapolis and Marion County are coterminous—anyone challenged under the law will be required to make second trip to seat of government in downtown Indianapolis. If the voter in question did not have a driver's license in the first place, they will likely need to arrange transportation. Furthermore, in most cases the election result will already be known.

The law is vague about acceptable cause for challenging a voter's ID. Some requirements for valid photo ID include being issued by state or fed gov't, w/ expiration date, and the names must conform exactly. The League of Women Voters is concerned about voters

with hyphenated names, as the Indiana DMV fails to put hyphens on driver's licenses potentially leading to a basis for challenge. Misspelling of names would also be a problem. The other primary mode of challenge is saying the photo doesn't look like the voter, which could be happen in a range of instances. Essentially, the law gives unbridled discretion to challengers to decide what conforms and what does not.

Furthermore, there is no way to determine whether a challenge is in good or bad faith, and *there is* little penalty for making a bad faith challenge. The fact that there are no checks on the challenges at the precinct level, or even a requirement of concurrence from an opposing party challenger leads to the concern that challenge process will be abused. The voter on the other hand, will need to get majority approval of county election board members to defeat the challenge.

Groth suggests the political situation in Indianapolis also presents a temptation to abuse this process, as electoral margins are growing increasingly close due to shifting political calculus.

#### Other cases

Groth's other election law work has included a redistricting dispute, a dispute over ballot format, NVRA issues, and a case related to improper list purging, but nothing else related to fraud or intimidation. The purging case involved the election board attempting to refine its voter list by sending registration postcards to everyone on the list. When postcards didn't come back they wanted to purge those voters. Groth blames this error more on incompetence, than malevolence, however, as the county board is bipartisan. (The Indiana Election Commission and the Indiana election division are both bipartisan, but the 92 county election boards which will be administering photo id are controlled by one political party or the other—they are always an odd number, with the partisan majority determined by who controls the clerk of circuit court office.)

#### Recommendations

Supports nonpartisan administration of elections. Indiana specific recommendations including a longer voting day, time off for workers to vote, and an extended registration period.

He views the central problem of the Indiana photo ID law is that the list of acceptable forms of ID is too narrow and provides no fallback to voters without ID. At the least, he believes the state needs to expand the list so that most people will have at least one. If not, they should be allowed to swear an affidavit regarding their identity, under penalty of perjury/felony prosecution. This would provide sufficient deterrence for anyone considering impersonation fraud. He believes absentee ballot fraud should be addressed by requiring those voters to produce ID as well, as under HAVA.

His personal preference would be signature comparison. Indiana has never encountered an instance of someone trying to forge a name in the poll book, and while this leaves

open the prospect of dead voters, that danger will be substantially diminished by the statewide database. But if we are going to have some form of ID, he believes we should apply it to everyone and avoid disenfranchisement, provided they swear an affidavit.

## **Interview with Neil Bradley, February 21, 2004**

### Voter Impersonation Cases (issue the Georgia ID litigation revolves around)

Mr. Bradley asserted that Georgia Secretary of State Cox stated in the case at issue: that she clearly would know if there had been any instances of voter impersonation at the polls; that she works very closely with the county and local officials and she would have heard about voter impersonation from them if she did not learn about it directly; and that she said that she had not heard of "any incident"---which includes acts that did not rise to the level of an official investigation or charges.

Mr. Bradley said that it is also possible to establish if someone has impersonated another voter at the polls. Officials must check off the type of voter identification the voter used. Voters without ID may vote by affidavit ballot. One could conduct a survey of those voters to see if they in fact voted or not.

The type of voter fraud that involves impersonating someone else is very unlikely to occur. If someone wants to steal an election, it is much more effective to do so using absentee ballots. In order to change an election outcome, one must steal many votes. Therefore, one would have to have lots of people involved in the enterprise, meaning there would be many people who know you committed a felony. It's simply not an efficient way to steal an election.

Mr. Bradley is not aware of any instance of voter impersonation anywhere in the country except in local races. He does not believe it occurs in statewide elections.

### Voter fraud and intimidation in Georgia

Georgia's process for preventing ineligible ex-felons from casting ballots has been improved since the Secretary of State now has the power to create the felon purge list. When this was the responsibility of the counties, there were many difficulties in purging felons because local officials did not want to have to call someone and ask if he or she was a criminal.

The State Board of Elections has a docket of irregularity complaints. The most common involve an ineligible person mailing in absentee ballots on behalf of another voter.

In general, Mr. Bradley does not think voter fraud and intimidation is a huge problem in Georgia and that people have confidence in the vote. The biggest problems are the new ID law; misinformation put out by elections officials; and advertisements that remind people that vote fraud is a felony, which are really meant to be intimidating. Most fraud that does occur involves an insider, and that's where you find the most prosecutions. Any large scale fraud involves someone who knows the system or is in the courthouse.

### Prosecution of Fraud and Intimidation

Mr. Bradley stated that fraud and intimidation are hard to prosecute. However, Mr. Bradley made contradictory statements. When asked whether the decision to prosecute on the county level was politically motivated, he first said "no." Later, Mr. Bradley reversed himself stating the opposite.

Mr. Bradley also stated that with respect to US Attorneys, the message to them from the top is that this is not a priority. The Georgia ACLU has turned over information about violations of the Voting Rights Act that were felonies, and the US Attorney has done nothing with the information. The Department of Justice has never been very aggressive in pursuing cases of vote suppression, intimidation and fraud. But, the Georgia ACLU has not contacted Craig Donsanto in DC with information of voter fraud.

Mr. Bradley believes that voter fraud and intimidation is difficult to prove. It is very hard to collect the necessary factual evidence to make a case, and doing so is very labor-intensive.

### Recommendations

In Georgia, the Secretary of State puts a lot of work into training local officials and poll workers, and much of her budget is put into that work. Increased and improved training of poll workers, including training on how to respectfully treat voters, is the most important reform that could be made.

Mr. Bradley also suggested that increased election monitoring would be helpful.

**Interview with Commissioner Harry Van Sickle and Deputy Chief Counsel to the Secretary of State Larry Boyle, State of Pennsylvania**

March 1, 2006

As Commissioner Van Sickle has only been in office for about a year, Mr. Boyle answered most of our questions.

Fraud and Intimidation

Neither Van Sickle nor Boyle was aware of any fraud of any kind in the state of Pennsylvania over the last five years. They are not aware of the commission of any deceptive practices, such as flyers that intentionally misinform as to voting procedures. They also have never heard of any incidents of voter intimidation. With respect to the mayoral election of 2003, the local commission would know about that.

Since the Berks County case of 2003, where the Department of Justice found poll workers who treated Latino voters with hostility among other voting rights violations, the Secretary's office has brought together Eastern Pennsylvania election administrators and voting advocates to discuss the problems. As a result, other counties have voluntarily chosen to follow the guidance of the Berks County federal court order.

Regarding the allegations of fraud that surrounded the voter identification debate, Mr. Boyle said was not aware of any instances of fraud involving identity. He believes this is because Pennsylvania has laws in place to prevent this. For example, in 2002 the state legislature passed an ID law that is stricter than HAVA's – it requires all first time voters to present identification. In addition, the SURE System – the state's statewide voter registration database – is a great anti-fraud mechanism. The system will be in place statewide in the May 2006 election.

In addition, the state took many steps before the 2004 election to make sure it would be smooth. They had attorneys in the counties to consult on problems as well as staff at the central office to take calls regarding problems. In addition, in 2004 the state used provisional ballots for the first time. This resolved many of the problems that used to occur on Election Day.

Mr. Boyle is not aware of any voter registration fraud. This is because when someone registers to vote, the administrator does a duplicate check. In addition, under new laws a person registering to vote must provide their drivers license or Social Security number which are verified through the Department of Motor Vehicles and the Social Security Administration. Therefore, it would be unlikely that someone would be able to register to vote falsely.

Process

Most problems are dealt with at the local level and do not come within the review of the Secretary of State's office. For instance, if there is a complaint of intimidation, this is generally dealt with by the county courts which are specially designated solely to election cases on Election Day. The Secretary does not keep track of these cases. Since the passage of NVRA and HAVA counties will increasingly call the office when problems arise.

Recommendations

Mr. Boyle suggested we review the recommendations of the Pennsylvania Election Reform Task Force which is on the Secretary's website. Many of those recommendations have been introduced in the legislature.

## Interviews

### Common Themes

- There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.
- There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud, although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.
- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.
- Several people indicate – including representatives from DOJ -- that for various reasons, the Department of Justice is bringing fewer voter intimidation and suppression cases now and is focusing on matters such as noncitizen voting, double voting and felon voting. While the civil rights section continues to focus on systemic patterns of malfeasance, the public integrity section is focusing now on individuals, on isolated instances of fraud.
- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

Common Recommendations:

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed
- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
  - With respect to the civil rights section, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one’s definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and the section has not pursued any such cases.
  - Craig Donsanto of the public integrity section says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases the department is investigating and the number of indictments the section is pursuing are both up dramatically. Since 2002, the department has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so it can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.
- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.
- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.
- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud
- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment
- Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill
- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected nonpartisanly they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas is a problem that must be addressed in some fashion. Suggestions included moving

election responsibilities out of the secretary of states' office; increasing transparency in the process; and enacting conflict of interest rules.

- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.
- A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the scheme contemplated in the Carter-Baker Commission Report.
- A couple of interviewees indicated the need for clear standards for the distribution of voting machines

## **Interview with Wade Henderson, Executive Director, Leadership Conference for Civil Rights**

February 14, 2006

### Data Collection

Mr. Henderson had several recommendations as to how to better gather additional information and data on election fraud and intimidation in recent years. He suggested interviewing the following individuals who have been actively involved in Election Protection and other similar efforts:

- Jon Greenbaum, Lawyers Committee for Civil Rights
- Tanya Clay, People for the American Way
- Melanie, Campbell, National Coalition for Black Political Participation
- Larry Gonzalez, National Association of Latino Election Officers
- Jacqueline Johnson, National Congress of American Indians
- Chellie Pingree, Common Cause
- Jim Dickson, disability rights advocate
- Mary Berry, former Chair of the US Commission on Civil Rights, currently at the University of Pennsylvania
- Judith Browne and Eddie Hailes, Advancement Project (former counsel to the US Commission on Civil Rights)
- Robert Rubin, Lawyers Committee for Civil Rights – San Francisco Office
- Former Senator Tom Daschle (currently a fellow at The Center for American Progress)

He also recommended we review the following documents and reports:

- The 2004 litigation brought by the Advancement Project and SEIU under the 1981 New Jersey Consent Decree
- Forthcoming LCCR state-by-state report on violations of the Voting Rights Act
- Forthcoming Lawyers Committee report on violations of the Voting Rights Act (February 21)

### Types of Fraud and Intimidation Occurring

Mr. Henderson said he believed that the kinds of voter intimidation and suppression tactics employed over the last five years are ones that have evolved over many years. They are sometimes racially based, sometimes based on partisan motives. He believes the following types of activity have actually occurred, and are not just a matter of anecdote and innuendo, and rise to the level of either voter intimidation or vote suppression:

- Flyers with intentional misinformation, such as ones claiming that if you do not have identification, you cannot vote, and providing false dates for the election
- Observers with cameras, which people associate with potential political retribution or even violence

- Intimidating police presence at the polls
- Especially in jurisdictions that authorize challenges, the use of challenge lists and challengers goes beyond partisanship to racial suppression and intimidation
- Unequal deployment of voting equipment, such as occurred in Ohio. Also, he has seen situations in which historically Black colleges will have one voting machine while other schools will have more.

Mr. Henderson believes that these matters are not pursued formally because often they involve activities that current law does not reach. For example, there is no law prohibiting a Secretary of State from being the head of a political campaign, and then deploying voting machines in an uneven manner. There is no way to pursue that. Also, once the election is over, civil litigation becomes moot. Finally, sometimes upon reflection after the campaign, some of the activities are not as sinister as believed at the time.

Mr. Henderson believes government does not engage in a sustained investigation of these matters or pursue any kind of resolution to them. LCCR has filed a FOIA request with both the Civil Rights Division and the Criminal Division of the Department of Justice to examine this issue.

Election Protection activities will be intensified for the 2006 elections, although the focus may shift somewhat given the implementation of new HAVA requirements.

#### Recommendations for Reform

There was tremendous concern after the 2004 election about conflicts of interest – the “Blackwell problem” – whereby a campaign chair is also in charge of the voting system. We need to get away from that.

He also supports Senator Barak Obama’s bill regarding deceptive practices, and is opposed to the voter identification laws passing many state legislatures.

- States should adopt election-day registration, in order to boost turnout as well as to allow eligible voters to immediately rectify erroneous or improperly purged registration records
- Expansion of early voting & no-excuse absentee voting, to boost turnout and reduce the strain on election-day resources.
- Provisional ballot reforms:
  - Should be counted statewide – if cast in the wrong polling place, votes should still be counted in races for which the voter was eligible to vote (governor, etc.)
  - Provisional ballots should also function as voter registration applications, to increase the likelihood that voters will be properly registered in future elections
- Voter ID requirements: states should allow voters to use signature attestation to establish their identity

- The Department of Justice should increase enforcement of Americans with Disabilities Act and the accessibility requirements of the Help America Vote Act
- Statewide registration databases should be linked to social service agency databases
- Prohibit chief state election officials from simultaneously participating in partisan electoral campaigns within their states
- Create and enforce strong penalties for deceptive or misleading voting practices

## Prosecution Of Electoral Fraud Under United States Federal Law

By Craig Donsanto

In Prosecution of Electoral Fraud, Donsanto discusses what sort of conduct is currently considered to be actionable as vote fraud, the historical background for the role of the criminal prosecutor in this area, and the various federal laws and juridical precedents governing the prosecution of vote fraud. It is a very useful document for understanding the current Department of Justice's view of its mission in this area, its interpretation of the federal laws governing its work, and how the Department has and has not been able to utilize applicable provisions.

Donsanto stresses that because electoral administration is primarily a state rather than a federal matter, the federal government usually only has authority over electoral issues where: federal candidates are standing for election; a corrupt act occurs; a federal instrumentality is employed in the fraud; the fraud involves the participation of public officials "acting under color of law" in such a manner that the constitutional right to Due Process and/or Equal Protection is violated; and/or the fraud is motivated by an intent to deprive a class of voters who's rights have been specifically guaranteed by the United States Constitution.

Donsanto defines election fraud as "a substantive irregularity relating to the voting act--- such as bribery, intimidation, or forgery---which has the potential to taint the election itself." Specifically, this includes:

- \* Preventing voters from participating in elections where a federal candidate is on the ballot, or when done "under color of law" in any election—18 U.S.C. sections 241 & 242.
- \* Vote buying, 42 U.S.C. section 1973i(c).
- \* Voting more than once, 42 U.S.C. section 1973i(e).
- \* Fraudulent voting, 42 U.S.C. sections 1973i(c), 1973i(e) & 1973gg-10.
- \* Intimidating voters through physical duress in any election, 18 U.S.C. section 245(b)(1)(A), or through physical or economic threats in connection with their registering to vote or their voting in federal elections, 42 U.S.C. section 1973gg-10, or to vote for a federal candidate, 18 U.S.C. section 594.
- \* Malfeasance by election officials acting "under color of law" for actions such as ballot-box stuffing, falsely tabulating votes, or preventing valid voter registrations or votes from being given effect in any election, 18 U.S.C. sections 241 & 242, as well as in elections where federal candidates are on the ballot, 42 U.S.C. sections 1973i(c), 1973i(e) & 1973gg-10.

- \* Submitting fictitious names on voter registration roles, 42 U.S.C. sections 1973i(c) & 1973gg-10.
- \* Knowingly procuring eligibility to vote for federal office by persons who are not entitled to vote under applicable state law, 42 U.S.C. sections 1973i(c) & 1973gg-10 (criminal voting—prohibited in approximately 40 states) and 42 U.S.C. sections 1973i(c), 1972gg-10, 18 U.S.C. 1015(f) & 611 (non-citizen voting).
- \* Knowingly making a false claim of United States citizenship to register to vote in any election, 18 U.S.C. section 1015(f), or falsely claiming United States citizenship for registering or voting in any election, 18 U.S.C. section 911.
- \* Providing false information concerning a person's name, address or period of residence in a district in order to establish that person's eligibility to register or to vote in a federal election, 42 U.S.C. sections 1973i(c) & 1973gg-10.
- \* Causing the production of voter registrations that qualify alleged voters to vote for federal candidates, or the production of ballots in federal elections, that the actor knows are materially defective under applicable state law, 42 U.S.C. section 1973gg-10.
- \* Using the United States mails, or interstate wire facilities, to obtain the salary and emoluments of an elected official through any of the activities mentioned above, 18 U.S.C. sections 1341 & 1343.
- \* Ordering, keeping or having under one's authority or control any troops or armed men at any polling place in any election. The actor must be an active civilian or military officer or an employee of the United States government, 18 U.S.C. section 592.
- \* Intimidating or coercing a federal employee to induce or discourage "any political activity" by that employee, 18 U.S.C. section 610.

#### Other Points of Interest

- Most election fraud is aimed at corrupting elections for local offices, which control or influence patronage positions. Election fraud occurs most frequently where there are fairly equal political factions, and where the stakes involved in who controls public offices are weighty -- as is often the case where patronage jobs are a major source of employment, or where illicit activities are being protected from law enforcement scrutiny
- Vote buying offenses have represented a sizable segment of the federal election crime docket in modern times.
- Voter intimidation requires proof of a difficult element: the existence of physical or economic intimidation that is intended by the defendant and felt by the victim. The crime of voter "intimidation" normally requires evidence of threats, duress, economic coercion, or some other aggravating factor which tends to improperly induce conduct on the part of the victim. If such evidence is lacking, an

alternative prosecutive theory may apply to the facts, such as multiple voting in violation of 42 U.S.C. ' 1973i(e). As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation that is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.

- Section 1973gg-10(2) is a specific intent offense. This means that the offender must have been aware that citizenship is a requirement for voting and that the registrant did not possess United States citizenship. In most instances, proof of the first element is relatively easy because the citizenship requirement is stated on the voter registration form, and the form requires that the voter check a box indicating that he or she is a citizen. Proof of the second element, however, may be more problematic, since the technicalities of acquiring United States citizenship may not have existed in the culture of the registrant's country of birth, or otherwise been evident to him, and because the registrant may have received bad advice concerning the citizenship requirement. These issues can also usually be overcome by the fact that all voter registration forms now require a registrant to certify that he or she is a citizen. Section 611 is a relatively new statute that creates an additional crime for voting by persons who are not United States Citizens .It applies to voting by non-citizens in an election where a federal candidate is on the ballot, except when: (1) non-citizens are authorized to vote by state or local law on non-federal candidates or issues, and (2) the ballot is formatted in a way that the non-citizen has the opportunity to vote solely for the non-federal candidate or issues on which he is entitled to vote under state law. Unlike section 1015(f), section 611 is directed at the act of voting, rather than the act of lying. But unlike section 1015(f), Section 611 is a strict liability offense in the sense that the prosecution must only prove that the defendant was not a citizen when he registered or voted. Section 611 does not require proof that the offender be aware that citizenship is a prerequisite to voting.

**Interview with Douglas Webber, Assistant Attorney General, Indiana**

February 15, 2006

**Background**

Mr. Webber was an attorney for the Marion County Election Board and was also part of the Indianapolis Ballot Security Team (sometimes called the Goon Squad). This Team was a group of attorneys well trained in election law whose mission was to enforce ballot security.

**Litigation**

Status of litigation in Indiana: On January 12 the briefing was completed. The parties are waiting for a decision from the U.S. district judge. The judge understood that one of the parties would seek a stay from the 7<sup>th</sup> Circuit Court of Appeals. The parties anticipate a decision in late March or early April. Mr. Webber did the discovery and depositions for the litigation. Mr. Webber feared the plaintiffs were going to state in their reply brief that HAVA's statewide database requirement would resolve the problems alleged by the state. However, the plaintiffs failed to do so, relying on a Motor Voter Act argument instead. Mr. Webber believes that the voter ID at issue will make the system much more user-friendly for the poll workers. The Legislature passed the ID legislation, and the state is defending it, on the basis of the problem of the *perception* of fraud.

**Incidents of fraud and intimidation**

Mr. Webber thinks that no one can put his or her thumb on whether there has been voter fraud in Indiana. For instance, if someone votes in place of another, no one knows about it. There have been no prosecuted cases of polling place fraud in Indiana. There is no recorded history of documented cases, but it does happen. In the litigation, he used articles from around the country about instances of voter fraud, but even in those examples there were ultimately no prosecutions, for example the case of Milwaukee. He also stated in the litigation that there are all kinds of examples of dead people voting--totaling in the hundreds of thousands of votes across the country.

One interesting example of actual fraud in Indiana occurred when a poll worker, in a poll using punch cards, glued the chads back and then punched out other chads for his candidate. But this would not be something that would be addressed by an ID requirement.

He also believes that the perception that the polls are loose can be addressed by the legislature. The legislature does not need to wait to see if the statewide database solve the problems and therefore affect the determination of whether an ID requirement is necessary. When he took the deposition of the Republican Co-Director, he said he thought Indiana was getting ahead of the curve. That is, there have been problems around the country, and confidence in elections is low. Therefore Indiana is now in front of getting that confidence back.

Mr. Webber stated that the largest vote problem in Indiana is absentee ballots. Absentee ballot fraud and vote buying are the most documented cases. It used to be the law that applications for absentee ballots could be sent anywhere. In one case absentee votes were exchanged for "a job on election day"---meaning one vote for a certain price. The election was contested and the trial judge found that although there was vote fraud, the incidents of such were less than the margin of victory and so he refused to overturn the election. Mr. Webber appealed the case for the state and argued the judge used the wrong statute. The Indiana Supreme Court agreed and reversed. Several people were prosecuted as a result – those cases are still pending.

### Process

In Indiana, voter complaints first come to the attorney for the county election board who can recommend that a hearing be held. If criminal activity was found, the case could be referred to the county prosecutor or in certain instances to the Indiana Attorney General's Office. In practice, the Attorney General almost never handles such cases.

Mr. Webber has had experience training county of election boards in preserving the integrity and security of the polling place from political or party officials. Mr. Webber stated that the Indiana voter rolls need to be culled. He also stated that in Southern Indiana a large problem was vote buying while in Northern Indiana a large problem was based on government workers feeling compelled to vote for the party that gave them their jobs.

### Recommendations

- Mr. Webber believes that all election fraud and intimidation complaints should be referred to the Attorney General's Office to circumvent the problem of local political prosecutions. The Attorney General should take more responsibility for complaints of fraud because at the local level, politics interferes. At the local level, everyone knows each other, making it harder prosecute.
- Indiana currently votes 6 am to 6 pm on a weekday. Government workers and retirees are the only people who are available to work the polls. Mr. Webber suggested that the biggest change should be to move elections to weekends. This would involve more people acting as poll workers who would be much more careful about what was going on.
- Early voting at the clerk's office is good because the people there know what they are doing. People would be unlikely to commit fraud at the clerk's office. This should be expanded to other polling places in addition to that of the county clerk.
- Finally, Mr. Webber believes polling places should be open longer, run more professionally but that there needs to be fewer of them so that they are staffed by only the best, most professional people.

## **Interview with Kevin Kennedy, State Elections Director, State of Wisconsin**

April 11, 2006

### Background

Kennedy is a nonpartisan, appointed official. He has been in this position since 1983.

Complaints of fraud and intimidation do not usually come to Kennedy's office. Kennedy says that complainants usually take their allegations to the media first because they are trying to make a political point.

### 2004 Election Incidents of Fraud

The investigations into the 2004 election uncovered some cases of double voting and voting by felons who did not know they were not eligible to vote, but found no concerted effort to commit fraud. There have been a couple of guilty pleas as a result, although not a number in the double digits. The task force and news reports initially referred to 100 cases of double voting and 200 cases of felon voting, but there were not nearly that many prosecutions. Further investigation since the task force investigation uncovered that in some instances there were mis-marks by poll workers, fathers and sons mistaken for the same voter, and even a husband and wife marked as the same voter. The double votes that are believed to have occurred were a mixture of absentee and polling place votes. It is unclear how many of these cases were instances of voting in two different locations.

In discussing the case from 2000 in which a student claimed – falsely – that he had voted several times, Kennedy said that double voting can be done. The deterrent is that it's a felony, and that one person voting twice is not an effective way to influence an election. One would need to get a lot of people involved for it to work.

The task force set up to investigate the 2004 election found a small number of illegal votes but given the 7,000 alleged, it was a relatively small number. There was no pattern of fraud.

The one case Kennedy could recall of an organized effort to commit fraud was in the spring of 2003 or 2004. A community service agency had voters request that absentee ballots be sent to the agency instead of to the voters and some of those ballots were signed without the voters' knowledge. One person was convicted, the leader of the enterprise.

In Milwaukee, the main contention was that there were more ballots than voters. However, it was found that the 7,000 vote disparity was tied to poll worker error. The task force found that there was no concerted effort involved. Kennedy explained that there are many ways a ballot can get into a machine without a voter getting a number. These include a poll worker forgetting to give the voter one; someone does Election Day registration and fills out a registration form but does not get a number because the

transaction all takes place at one table; and in Milwaukee, 20,000 voters who registered were not put on the list in time and as a short term solution the department sent the original registration forms to the polling places to be used instead of the list to provide proof of registration. This added another element of confusion that might have led to someone not getting a voter number.

The Republican Party used this original list and contracted with a private vendor to do a comparison with the U.S. postal list. They found initially that there were 5,000 bad addresses, and then later said there were 35,000 illegitimate addresses. When the party filed a complaint, the department told them they could force the voters on their list to cast a challenge ballot. On Election Day, the party used the list but found no actually voting from those addresses. Kennedy suspects that the private vendor made significant errors when doing the comparison.

In terms of noncitizen voting, Kennedy said that there is a Russian community in Milwaukee that the Republican Party singles out every year but it doesn't go very far. Kennedy has not seen much in the way of allegations of noncitizen voting.

However, when applying for a drivers license, a noncitizen could register to vote. There is no process for checking citizenship at this point, and the statewide registration database will not address this. Kennedy is not aware of any cases of noncitizen voting as a result, but it might have happened.

Kennedy said that the biggest concern seemed to be suspicions raised when groups of people are brought into the polling site from group homes, usually homes for the disabled. There are allegations that these voters are being told how to vote.

#### Incidents of Voter Intimidation

In 2004, there was a lot of hype about challenges, but in Wisconsin, a challenger must articulate a basis under oath. This acts as a deterrent, but at the same time it creates the potential that someone might challenge everyone and create long lines, keeping people from voting. In 2004, the Republican Party could use its list of suspect addresses as a legitimate basis for challenges, so there is the potential for abuse. It is also hard to train poll workers on that process. In 2004, there were isolated cases of problems with challengers.

In 2002, a flyer was circulated only in Milwaukee claiming that you had vote by noon. This was taken as an intimidation tactic by the Democrats.

#### Reforms

Wisconsin has had difficulty with its database because 1) they have had a hard time getting a good product out of the vendor and 2) until now there was no registration record for one-quarter of the voters. Any jurisdiction with fewer than 5000 voters was not required to have a registration list.

In any case, once these performance issues are worked out, Kennedy does believe the statewide voter registration database will be very valuable. In particular, it will mean that people who move will not be on more than one list anymore. It should also address the double voting issue by identifying who is doing it, catching people who do it, and identifying where it could occur.

Recommendations

Better trained poll workers

Ensure good security procedures for the tabulation process and more transparency in the vote counting process

Conduct post-election audits

## **Interview with Sarah Bell Johnson Interview**

April 19, 2006

### Procedures for Handling Fraud

Fraud complaints are directed first to the state Board of Elections. Unlike boards in other states, Kentucky's has no investigative powers. Instead, they work closely with both the Attorney General and the U.S. Attorney. Especially since the current administration took office, they have found the U.S. Attorney an excellent partner in pursuing fraud cases, and have seen many prosecutions in the last six years. She believes that there has been no increase in the incidence of fraud, but rather the increase in prosecutions is related to increased scrutiny and more resources.

### Major Types of Fraud and Intimidation

Johnson says that vote buying and voter intimidation go hand in hand in Kentucky. While historically fraud activity focused on election day, in the last 20 years it has moved into absentee voting. In part, this is because new voting machines aren't easy to manipulate in the way that paper ballots were open to manipulation in the past, especially in distant rural counties. For this reason, she is troubled by the proliferation of states with early voting, but notes that there is a difference between absentee ballot and early voting on machines, which is far more difficult to manipulate.

Among the cases of absentee ballot fraud they have seen, common practice involves a group of candidates conspiring together to elect their specific slate. Nursing homes are an especially frequent target. Elderly residents request absentee ballots, and then workers show up and 'help' them vote their ballots. Though there have been some cases in the Eastern district of election day fraud, most have been absentee.

Johnson argues that it is hard to distinguish between intimidation and vote buying. They have also seen instances where civic groups and church groups intimidate members to vote in a specific manner, not for reward, but under threat of being ostracized or even telling them they will go to hell.

While she is aware of allegations of intimidation by the parties regarding minority precincts in Louisville, the board hasn't received calls about it and there haven't been any prosecutions.

### Challengers

Challengers are permitted at the polls in Kentucky. Each party is allowed two per location, and they must file proper paperwork. There is a set list of defined reasons for which they can challenge a voter, such as residency, and the challengers must also fill out paperwork to conduct a challenge.

As for allegations of challengers engaging in intimidation in minority districts, Johnson notes that challengers did indeed register in Jefferson County, and filed the proper paperwork, although they ultimately did not show up on election day.

She finds that relatively few challengers end up being officially registered, and that the practice has grown less common in recent years. This is due more to a change of fashion than anything. And after all, those wishing to affect election outcomes have little need for challengers in the precinct when they can target absentee voting instead.

In the event that intimidation is taking place, Kentucky has provisions to remove disruptive challengers, but this hasn't been used to her knowledge.

### Prosecutions

Election fraud prosecutions in Kentucky have only involved vote buying. This may be because that it is easier to investigate, by virtue of a cash and paper trail which investigators can follow. It is difficult to quantify any average numbers about the practice from this, due in part to the five year statute of limitations on vote buying charges. However, she does not believe that vote-buying is pervasive across the state, but rather confined to certain pockets.

### Vote-hauling Legislation

Vote hauling is a common form of vote buying by another name. Individuals are legally paid to drive others to the polls, and then divide that cash in order to purchase votes. Prosecutions have confirmed that vote hauling is used for this purpose. While the Secretary of State has been committed to legislation which would ban the practice, it has failed to pass in the past two sessions.

### Paying Voter Registration Workers Legislation

A law forbidding people to pay workers by the voter registration card or for obtaining cards with registrations for a specific party was passed this session. Individuals working as part of a registration campaign may still be paid by hour. Kentucky's experience in the last presidential election illustrates the problems arising from paying individuals by the card. That contest included a constitutional amendment to ban gay marriage on the ballot, which naturally attracted the attention of many national groups. One group paying people by the card resulted in the registrar being inundated with cards, including many duplicates in the same bundle, variants on names, and variants on addresses. As this practice threatens to overwhelm the voter registration process, Kentucky views it as constituting malicious fraud.

### Deceptive practices

Other than general reports in the news, Johnson hasn't received any separate confirmation or reports of deceptive practices, i.e., false and misleading information being distributed to confuse voters.

### Effect of Kentucky's Database

Johnson believes Kentucky's widely praised voter registration database is a key reason why the state doesn't have as much fraud as it might, especially the types alleged elsewhere like double and felon voting. While no database is going to be perfect, the connections with other state databases such as the DMV and vital statistics have been invaluable in allowing them to aggressively purge dead weight and create a cleaner list. When parties use their database list they are notably more successful. Johnson wonders how other states are able to conduct elections without a similar system.

Some factors have made especially important to their success. When the database was instituted in 1973, they were able to make everyone in the state re-register and thus start with a clean database. However, it is unlikely any state could get away with this today.

She is also a big supporter of a full Social Security number standard, as practiced in Kentucky. The full Social Security, which is compared to date of birth and letters in the first and last name, automatically makes matching far more accurate. The huge benefits Kentucky has reaped make Johnson skeptical of privacy concerns arguing for an abbreviated Social Security number. Individuals are willing to submit their Social Security number for many lesser purposes, so why not voting? And in any event, they don't require a Social Security number to register (unlike others such as Georgia). Less than a percent of voters in Kentucky are registered under unique identifiers, which the Board of Elections then works to fill in the number through cross referencing with the DMV.

### Recommendations

Johnson believes the backbone of effective elections administration must be standardized procedures, strong record keeping, and detailed statutes. In Kentucky, all counties use the same database and the same pre election day forms. Rather than seeing that as oppressive, county officials report that the uniformity makes their jobs easier.

This philosophy extends to the provisional ballot question. While they did not have a standard in place like HAVA's at the time of enactment, they worked quickly to put a uniform standard in place.

They have also modified forms and procedures based on feedback from prosecutors. Johnson believes a key to enforcing voting laws is working with investigators and prosecutors and ensuring that they have the information they need to mount cases.

She also believes public education is important, and that the media could do more to provide information about what is legal and what is illegal. Kentucky tries to fulfill this role by information in polling places, press releases, and high profile press conferences before elections. She notes that they deliberately use language focusing on fraud *and* intimidation.

Johnson is somewhat pessimistic about reducing absentee ballot fraud. Absentee ballots do have a useful function for the military and others who cannot get to the polling place, and motivated

individuals will always find a way to abuse the system if possible. At a minimum, however, she recommends that absentee ballots should require an excuse. She believes this has helped reduce abuse in Kentucky, and is wary of no-excuse practices in other states.

**Interview with Steve Ansolobhere and Chandler Davidson**

February 17, 2006

Methodology suggestions

In analyzing instances of alleged fraud and intimidation, we should look to criminology as a model. In criminology, experts use two sources: the Uniform Crime Reports, which are all reports made to the police, and the Victimization Survey, which asks the general public whether a particular incident has happened to them. After surveying what the most common allegations are, we should conduct a survey of the general public that asks whether they have committed certain acts or been subjected to any incidents of fraud or intimidation. This would require using a very large sample, and we would need to employ the services of an expert in survey data collection. Mr. Ansolobhere recommended Jonathan Krosnick, Doug Rivers, and Paul Sniderman at Stanford; Donald Kinder and Arthur Lupia at Michigan; Edward Carmines at Indiana; and Phil Tetlock at Berkeley. In the alternative, Mr. Ansolobhere suggested that the EAC might work with the Census Bureau to have them ask different, additional questions in their Voter Population Surveys.

Mr. Chandler further suggested it is important to talk to private election lawyers, such as Randall Wood, who represented Ciro Rodriguez in his congressional election in Texas. Mr. Ansolobhere also recommended looking at experiments conducted by the British Election Commission.

Incidents of Fraud and Intimidation

Mr. Davidson's study for the Lawyers Committee for Civil Rights on the Voting Rights Act documented evidence of widespread difficulty in the voting process. However, he did not attempt to quantify whether this was due to intentional, malevolent acts. In his 2005 report on ballot security programs, he found that there were many allegations of fraud made, but not very many prosecutions or convictions. He saw many cases that did go to trial and the prosecutors lost on the merits.

In terms of voter intimidation and vote suppression, Mr. Davidson said he believes the following types of activities do occur: videotaping of voters' license plates; poll workers asking intimidating questions; groups of officious-looking poll watchers at the poll sites who seem to be some sort of authority looking for wrongdoing; spreading of false information, such as phone calls, flyers, and radio ads that intentionally mislead as to voting procedures.

Mr. Ansolobhere believes the biggest problem is absentee ballot fraud. However, many of these cases involve people who do not realize what they are doing is illegal, for example, telling someone else how to vote. Sometimes there is real illegality occurring however. For example, vote selling involving absentee ballots, the filling out of absentee ballots en masse, people at nursing homes filling out the ballots of residents, and there are stories about union leaders getting members to vote a certain way by absentee ballot. This

problem will only get bigger as more states liberalize their absentee ballot rules. Mr. Chandler agreed that absentee ballot fraud was a major problem.

Recommendations

Go back to “for cause” absentee ballot rules, because it is truly impossible to ever ensure the security of a mail ballot. Even in Oregon, there was a study showing fraud in their vote by mail system.

False information campaigns should be combated with greater voter education. Los Angeles County’s voter education program should be used as a model.

Preliminary Findings of Joint Task Force Investigating Possible Election Fraud: May 10, 2005

On January 26, 2005, the Milwaukee Police Department, Milwaukee County District Attorney's Office, Federal Bureau of Investigation, and the United States Attorney's Office formed a task force to investigate alleged voting irregularities during the November 2004 elections. The purpose of the task force was to determine whether evidence of criminal fraud existed in the irregularities and, if evidence of fraud was found, to pursue criminal prosecutions.

The task force has made the following specific determinations based on evidence examined to date:

- \* evidence of more than 100 individual instances of suspected double-voting, voting in names of persons who likely did not vote, and/or voting in names believed to be fake. Those investigations continue;
- \* more than 200 felons voted when they were not eligible to do so. In order to establish criminal cases, the government must establish willful violations in individual instances;
- \* persons who had been paid to register voters as "deputy registrars" falsely listed approximately 65 names in order to receive compensation for the registrations. The evidence does not indicate that these particular false registrations were later used to cast votes; and,
- \* the number of votes counted from the City of Milwaukee exceeds the number of persons recorded as voting by more than 4,500.

The investigation concentrated on the 70,000+ same-day registrations. It found that a large majority of the reported errors were the result of data entry errors, such as street address numbers being transposed. However, the investigation also found more than 100 instances where votes were cast in a manner suggesting fraud. These include:

- \* persons with the same name and date of birth recorded as voting more than once;
- \* persons who live outside Milwaukee, but who used non-existent City addresses to register and vote in the City;
- \* persons who registered and voted with identities and addresses that cannot in any way be linked to a real person;
- \* persons listed as voting under a name and identity of a person known to be deceased; and
- \* persons whose identities were used to vote, but who in subsequent interviews told task force investigators that they did not, in fact, vote in the City of Milwaukee.

The investigation found persons who were paid money to obtain registrations allegedly falsified approximately 65 names on registration forms, allegedly to obtain more money for each name submitted. There is no evidence gathered to date that votes were cast under these specific false names. Also found were more than 200 felons who were not eligible to vote in the 2004 election, but who are recorded as having done so.

An additional finding of the task force was that the number of votes cast far exceeds the total number of recorded voters. The day after the 2004 election, the City of Milwaukee reported the total number of votes as 277,344. In late November an additional 191 previously uncounted absentee ballots were added, for a total of 277,535 votes cast. Still later, an additional 30 ballots were added, bringing the total number of counted votes to 277,565. City records, however, have been unable to match this total to a similar number of names of voters who cast ballots – either at the polls (under a prior registration or same day registration) or cast absentee ballots. At present, the records show a total of 272,956 voter names – for a discrepancy of 4,609. This part of the investigation was hampered by widespread record keeping errors with respect to recording the number of voters.

In the 2004 election, same-day registrations were accepted in which the card had incomplete information that would help establish identity. For example: 48 original cards for persons listed as voting had no name; 548 had no address; 28 did not have signatures; and another 23 cards had illegible information. These were part of approximately 1,300 same-day registrations for which votes were cast, but which election officials could not authenticate as proper voters within the City. Included in this 1,300 were 141 same-day registrants from addresses outside the City of Milwaukee, but who voted within the City of Milwaukee. In several instances, the voter explicitly listed municipality names other than Milwaukee on the registration cards.

Another record keeping procedure hampering the investigation appears to be the post-election misfiling or loss of original green registration cards that were considered duplicates, but that in fact corresponded to additional votes. These cards were used to record votes, but approximately 100 cards of interest to investigators can no longer be located. In addition, other original green registration cards continue to be found.

CONSOLIDATED WITH

No. 06AC-CC00587

Division 2

**AFFIDAVIT OF L. MARVIN OVERBY,**  
**IN SUPPORT OF INTERVENORS, DALE L. MORRIS AND**  
**MISSOURI SENATOR DELBERT SCOTT**

COMES NOW L. Marvin Overby, and having been sworn on his oath, deposes and states  
as follows:

1. I am over 21 years of age and competent to make this Affidavit. If called  
as a witness in this action, I could testify to the matters contained in this affidavit from  
personal knowledge and would testify as set forth herein.

2. I am currently a full professor of political science at the University of Missouri in Columbia and I have attached a current and accurate summary of my academic and professional experience which is attached as Exhibit "A".

3. I have had occasion to review and am familiar with the provisions of the Missouri Voter Protection Act in its final enacted form, especially as such provisions concern the requirement that certain persons present the specified forms of identification before casting a ballot and also those provisions of the Missouri Voter Protection Act providing photo identification without cost.

4. I have collaborated with Jeffrey Milyo and conducted additional research into the effect of the photo identification requirements contained in the Missouri Voter Protection Act upon voter participation. I have further researched the effect that such photo identification requirements will have upon the ability of Missourians to participate in an election.

5. The conclusions that I have reached and a description of the analysis undertaken are summarized on the report attached to this affidavit as Exhibit "B".

6. My research into the Missouri Voter Protection Act and the voter identification requirements and related provisions contained therein supports three essential conclusions.

A. Our best estimate of the number of eligible Missouri voters that do not possess a Missouri Department of Revenue-issued photo ID and that are not residents of a facility licensed under chapter 198 is about 19,000 persons. Of these, about 6,000 are likely to desire a photo ID for the purpose of voting, based upon historic voter participation patterns.

- B. The existing scholarly literature strongly suggests that voter photo ID requirements are not likely to have a significant effect on either voter participation or the outcome of elections, nor is such a photo ID requirement likely to have a significant or differential impact on poor, less educated or minority voters.
- C. The existing scholarly literature does demonstrate that a significant percentage of citizens -- in Missouri and nationally --- lack confidence on the election process, a significant percentage of voters are concerned about vote fraud, and that significant majorities of voters from all political parties and racial groups support the requirement that a person provide a government-issued photo ID before casting a ballot.

FURTHER Affiant sayeth not.

**Report on Kathleen Weinschenk et al. v. State of Missouri et al. and Jackson County, Missouri v. State of Missouri (Consolidated)**

Jeffrey Milyo  
University of Missouri

and

Marvin Overby  
University of Missouri

August 30, 2006

We have been asked by legal counsel in this case to i) evaluate the report by the Missouri Department of Revenue (DOR fiscal note 4947-01) on the number of eligible voters in Missouri who may not have a photo ID, ii) to discuss what the relevant scholarly literature implies about the effects of a photo ID requirement, and iii) to review the statistical analysis prepared by Dr. John Lott on the potential impact of the state of Missouri's new photo ID requirements on voter turnout.

A summary of the basic findings is as follows:

- 1) The DOR fiscal note likely overstates the number of eligible voters in Missouri without a photo ID. Our best estimate of the number of eligible voters who do not possess a DOR-issued photo ID and are not residents under chapter 198 is about 19,000 persons; of these, about 6,000 are likely to desire a photo ID for the purpose of voting, based upon voter turnout patterns. Adding in persons who are residents under chapter 198 and may be eligible to apply for a no cost nondriver license brings this number up to about 8,000 persons.
- 2) The existing scholarly literature does not examine photo ID laws, but existing findings strongly suggest that voter photo identification requirements are not likely to have a significant effect on either voter turnout or the outcome of elections, nor is such a requirement likely to have a significant or differential impact on poor, less educated, or minority voters. Moreover, a review of survey data shows strong public support for photo IDs, indicating the probability that such requirements would enhance public confidence in the voting process and, perhaps, even increase voter turnout.
- 3) Dr. Lott's analysis employs appropriate data and statistical methods; his findings accord with the relevant scholarly literature on voter turnout. Lott's analysis is the best existing estimate of the likely impact of the new photo ID law on eligible voters in Missouri.

027824

In the next section, we report on our qualifications. We then review the DOR fiscal note, the scholarly literature and the report by Dr. Lott, in turn.

## 1. Qualifications

Dr. Jeffrey Milyo is an associate professor in both the Truman School of Public Affairs and the Department of Economics at the University of Missouri in Columbia, Missouri. Dr. Milyo has been on the faculty of the Harris School of Public Policy at the University of Chicago, and has been a visiting scholar at the Massachusetts Institute of Technology, Yale University, and most recently, Stanford University. Milyo identifies himself as a Republican; his *curriculum vitae* is included in Appendix A.

Dr. Milyo's research specialty is in the area of statistical analyses of American political economy; his work has been published in a number of leading peer-reviewed journals, including, the *American Economic Review*, the *Quarterly Journal of Economics*, the *Journal of Law and Economics*, the *Journal of Public Policy Analysis and Management*, the *State Politics and Policy Quarterly* and the *Election Law Journal*. He frequently serves as a peer-reviewer for the leading journals in economics and political science, including the *American Political Science Review*, the *American Journal of Political Science*, the *Quarterly Journal of Political Science* and the *Journal of Politics*.

Dr. Marvin Overby is a professor in the Department of Political Science at the University of Missouri in Columbia, Missouri. He has also served on the faculties of Loyola University-Chicago and the University of Mississippi, and has held visiting appointments at the University of Szeged (Hungary) and the Johns Hopkins University-Nanjing University Center for Chinese and American Studies (China). Overby identifies himself as a Democrat and has worked for a Democratic member of the U. S. of Representatives; his *curriculum vitae* is included in Appendix A.

Dr. Overby's research focuses on statistical analyses of American politics, including issues of minority representation. His research has been published in a number of leading peer-reviewed journals, including the *American Political Science Review*, *American Journal of Political Science*, *The Journal of Politics*, *Legislative Studies Quarterly*, *Political Research Quarterly*, *American Politics Research*, *Polity*, *State Politics and Policy Quarterly*, and the *Journal of Legislative Studies*. He regularly reviews manuscripts for these journals, and his work and opinions have been cited in such media outlets as *The Wall Street Journal*, the *Washington Post*, *The Boston Globe*, the *National Journal*, the *Economist*, and *Congressional Quarterly Weekly Report*.

## 2. DOR Fiscal Note 4947-01

The Missouri Department of Revenue prepared a fiscal note estimating the anticipated cost of SB 1014 and undertook to estimate the number of eligible voters in Missouri who may be without photo ID as of June 14, 2006. (A copy of the fiscal note is attached as Appendix B.) The DOR fiscal note is an estimate of the cost of SB 1014 under a version of the legislation that was prior to the amendment providing an exemption from the photo

identification requirement for voters born before 1941. This analysis of the legislation prior to the incorporation of the exemption means that the version of the DOR's estimate of costs and voters likely affected by the ID requirements will be greater than those actually affected by the law as enacted.

The DOR started with the U.S. Census estimate of voting age population (VAP) in Missouri in 2000, then subtracted the number of persons who were at least 23 years of age as of 2006 and had a DOR-issued photo ID. This latter figure is 3,998,304 persons; it is meant to be an estimate of the number of persons age 18 and older in 2000 with photo ID's; however, this method ignores out-migration of younger persons and in-migration of older persons. It is unknown how these different sources of undercount and overcount net out. Further this estimate requires a projection of the photo-ID holding populations 5 years removed from the Census count. In general, the more distant the projected year from the base year, the less reliable will be any such projection.

As an alternative method of calculating the number of eligible voters not holding a DOR-issued photo ID, we prefer to make only a one-year out projection of VAP in 2006, and to utilize DOR's actual count of persons holding DOR photo ID on August 10, 2006.

On August 4, 2006 the U.S. census released its most current estimate of VAP in Missouri as of July 1, 2005; that figure is 4,422,078 persons.<sup>1</sup> However, this figure needs to be adjusted to match the August 10, 2006 date of the DOR count of persons with photo ID. We accomplish this by applying the annual growth rate from July 2004 to July 2005, which is approximately 0.0178, to yield an estimate of state VAP as of July 2006. We then pro-rate the annual growth rate to update this estimate to August 10, 2006; the resulting estimate of Missouri VAP is 4,509,790 persons. Subtracting the 4,458,726 persons known to hold DOR-issued photo ID as of August 10, 2006, yields an estimate of 51,064 voting age persons without DOR-issued photo-ID.

The DOR estimates that 31,152 VAP persons without photo-ID are also "residents under chapter 198 who are not likely to be physically able to ambulate to a polling place." Of these persons, the DOR estimates that 2,077 will apply for a no cost non-driver license. We have no basis to dispute this estimate, so we adopt this DOR figure without amendment.

Given the above, the number of VAP who are *not* residents under chapter 198 *and* do not possess DOR-issued photo ID's is (51,064 less 31,152), or 19,912 persons.

However, voting age population (VAP) overstates the voting eligible population (VEP) because it includes non-citizens, currently disenfranchised felons, persons who do not meet state residency requirements, and persons deemed mentally incompetent. For this reason, political scientists employ estimates of voting eligible state populations that exclude such ineligible voters; the best estimates of VEP that we know of are from the US Election Project and have been developed by Dr. Michael McDonald at George

---

<sup>1</sup> <http://www.census.gov/popest/datasets.html>.

Mason University in Fairfax, VA.<sup>2</sup> The estimated VEP from this source corrects for non-citizens and disenfranchised felons only.

Based on the most current US Election Project data for 2006, the average ratio of VEP to VAP is approximately 0.97 (it is lower in earlier years); so we multiply 19,912 persons by this ratio, to yield an estimate of 19,315 voting eligible persons without photo-ID and not residents under chapter 198. Even so, this figure certainly overstates the number of such persons who would choose to vote, even absent the photo ID requirement.

For this reason, the DOR fiscal note adjusts its estimate downward by assuming that the state-wide average voter turnout rate of 50% (based on VAP) is a proxy for the proportion of persons who would desire a photo ID under the new requirements for the purposes of voting. Applying this adjustment to the VAP of persons without DOR-issued photo ID and not residents under chapter 198, leaves just 9,956 such persons whom we estimate would desire a photo ID in order to vote.

However, the population of individuals that does not possess a DOR-issued photo ID is typically assumed to be poor, less educated, and disproportionately composed of racial and ethnic minorities. It is well known in political science research that after correcting for income and education, race has little impact on voter turnout. For this reason, we focus on the lowest quintile of family income or persons without a high school education. Both of these groups exhibit turnout rates in the range of 30%-40% of VAP.<sup>3</sup> Taking the midpoint of this range (*i.e.*, 35%) and multiplying it by the VAP not possessing DOR-issued photo ID and not resident under chapter 198 leaves just 6,969 persons.

Even this final estimate of just under 7,000 persons is likely to be an overestimate. We have not taken into consideration that some small number of these persons will not meet residency requirements or that some small number may be mentally incompetent. Further, we have not considered that those persons without photo ID may be disproportionately likely to be non-citizens or disenfranchised felons, or may have even lower turnout rates than the lowest quintile of family income earners. In addition, some fraction of these persons will already possess a military ID, passport, or some other government-issued photo ID (which are not accounted for in the DOR figures) and would not require any additional identification in order to vote.

Further, approximately 13.5% of Missourians are over age 65;<sup>4</sup> in 2006, persons age 65 and older may cast a provisional ballot without a photo ID. Therefore, as many as 941 persons (13.5% of 6,969) may feel no urgent need to obtain a new photo ID; this leaves about 6,028 persons who may be expected to desire a photo ID.

---

<sup>3</sup> Authors' calculation from Highton, Benjamin (2005). "Self-reported versus proxy-reported turnout in the Current Population Survey," *Public Opinion Quarterly*, 69(1): 113-123; also, Wilson, James Q. and John J. Dilulio (2004). *American Government*. Houghton-Mifflin (Boston: MA).

<sup>4</sup> Census 2000 Summary File 1 (SF 1) 100-Percent Data

Given this analysis, and adding back the DOR estimate of 2,077 persons who are residents under chapter 198 and may apply for a photo ID, we conclude that an upper-bound estimate for the number of persons who are eligible and may choose to obtain a new photo ID is 8,105 persons.

Recent news reports suggest that 1,400 persons have already received photo ID's from the DOR.<sup>5</sup> Given that this rate may increase as the election draws closer, the running count to date is reasonably in line with our estimate --- and stands in stark contrast to claims that hundreds of thousands of voters will need to obtain a photo ID. Such claims appear to be without a sound foundation.

## 2. Review of the Scholarly Literature

There are no systematic statistical studies of the effects of photo ID requirements for voting. This is despite the fact that most other countries both require such identification and experience higher rates of turnout than seen in the U.S. Comparative studies of voter turnout across countries focus on voter registration, the frequency of elections, non-compulsory voting, and single-member districts (as opposed to proportional representation) as reasons that turnout in the U.S. is low relative to other developed democracies.<sup>6</sup> The fact that such cross country studies do not even entertain the possibility that photo ID requirements reduce turnout is itself informative about the opinion of the profession regarding the likely unimportance of such laws for turnout.

There are many studies that analyze the effects of other voting institutions on turnout. In general this literature finds modest effects of post-registration laws (*e.g.*, time off work for voting, polls open early or late, mailing sample ballots, etc.).<sup>7</sup> This is because voter registration is a relatively higher hurdle for most persons; adding or removing some marginal costs of voting beyond registration has virtually no observable effect on turnout.

Several studies find some negative effect of voter registration laws; however, a well-known study published in the lead journal of the American Political Science Association casts serious doubt on such claims, even arguing that: "what was thought to be a fact, namely that poorly educated persons are more deterred from voting by registration laws than well-educated persons, is not a fact."<sup>8</sup> Further, recent work shows "even the most dramatic easing of voter registration costs" has only modest effects on number of voters and improvement in turnout among lower socioeconomic status groups.<sup>9</sup>

<sup>9</sup> Brians, Craig L. and Bernard Grofman (2001). "Election Day's Registration Effects on U. S. Voter Turnout," *Social Science Quarterly*, 82:170-183.

In addition, empirical studies generally show only very modest influence of voter turnout on election results. Even under the most extreme assumptions (*e.g.* if *everyone* voted), increased turnout would rarely affect the outcome of an election.<sup>10</sup>

In fact, scholars of American politics generally agree that voter turnout is determined largely by idiosyncratic factors, such as an individual's intrinsic value of voting (*i.e.*, does the individual feel a duty to vote).<sup>11</sup> For this reason, factors that influence trust and confidence in the integrity of the electoral process are generally thought to be important determinants of an individual's decision to vote.<sup>12</sup> Influential evidence on the importance of the intrinsic value of voting comes from field experiments in which individuals receive reminders about their civic duty to vote; the treatment effect of mailings and personal canvassing significantly increases voter turnout.<sup>13</sup> Finally, while there is some debate, the best evidence suggests that negative advertising reduces voter turnout, primarily because of its detrimental effect on public trust in the political process.<sup>14</sup>

The evidence that public trust in the integrity of the electoral process strongly suggests that concerns about voter fraud may reduce voter turnout. There is broad agreement that there have been problems with voter fraud in Missouri, particularly St. Louis City. The extent of the problem has been the focus of testimony in both Washington and Jefferson City, and has been discussed in the academic literature.<sup>15</sup> Furthermore, courts in Missouri have recognized the nature of this problem. In its decision in *Missouri, ex. rel. Bush-Cheney 2000 Inc. v Baker* the Missouri Court of Appeals held that “[c]ourts should not hesitate to vigorously enforce the election laws so that every properly registered voter has the opportunity to vote. But equal vigilance is required to ensure that only those entitled to vote are allowed to cast a ballot. Otherwise, the rights of those lawfully entitled to vote are inevitably diluted” (34 S.W. 3d 410, 413 [2000]).

Public opinion polls – both nationally and in Missouri – have consistently shown that a) a significant percentage of Americans lack confidence in the election process; and b) there

(2003-2004). “Picture Perfect: A Critical Analysis of the Debate on the 2002 Help America Vote Act.” *Fordham Urban Law Journal* 31:235-259.

is widespread public support, across demographic and partisan divides, for the use of photo identification at polling places.<sup>16</sup> Such findings have been reconfirmed recently by a survey by Rasmussen Poll, a copy of which is attached as Appendix C.

Relevant excerpts from the Rasmussen poll follow:

“A plurality of voters in each of 32 states agree that the political system in the U.S. is ‘badly broken.’ Percentages range from a high of 63% in Vermont to 47% in Nebraska, but all point in the same direction.”

“An earlier, national, survey found that just 48% of American adults believe that elections are generally fair to voters. That number has been fairly consistent since we began polling on the topic in the mid-90s.”

“There was little geographic difference on the question of whether individuals should be required to present photo identification (such as a driver’s license) when they go to the polls. Support for this approach ranged from 60% in Vermont to 92% in Florida....Maine was the only other state to register below the 73% level of support for requiring photo ID’s.”

“Discussions of voter fraud sometime revolve around assumptions of voter suppression—people who should be allowed to vote but are prevented from doing so. Other times, people express concern that people vote who are not eligible. In eighteen states, more voters are concerned to ineligible voters are allowed to cast ballots. In twelve states, more voters are concerned about people prevented from voting.”

“Voters in New York are more likely than in any other state to express a concern about voter suppression. Thirty-four percent (34%) of Empire State voters hold this view.”

“Washington and Arizona are tops when it comes to concerns about ineligible people casting ballots. In Washington, that may be the result of controversies in the election for Governor. In Arizona, it is more likely tied to concerns about illegal immigrants.”

Source: Rasmussen Poll (August 28, 2006); see Appendix C

Finally, a universal photo ID requirement would also obviate selective challenges that might be racially motivated, thereby increasing the equity of the voting experience.

---

<sup>16</sup> A *Wall Street Journal*/NBC News poll conducted in April 2006 shows 62% of respondents nationwide were “strongly in favor” and 19% “somewhat in favor” of laws requiring “a valid photo identification” to vote. In sharp contrast, a mere 7% of respondents were “mildly” or “strongly opposed.” See [online.wsj.com/public/resources/documents/poll20060426.pdf](http://online.wsj.com/public/resources/documents/poll20060426.pdf) [accessed August 30, 2006].

Among other localities, such challenges have been documented in recent years in Arkansas.<sup>17</sup> Some prominent African-American leaders (such as Andrew Young) have also supported mandatory photo IDs for voting because “‘requiring ID can help poor people’ who otherwise might be even more marginalized by not having one.”<sup>18</sup>

### 3. Report by Dr. John Lott

We have reviewed the report by Dr. Lott from August xx, 2006); we evaluated this work as we would do in the capacity of peer reviewers for a leading journal such as the *Journal of Politics* or the *Journal of Law and Economics*. Overall, we find the quality of the data and statistical analysis to be of the sort appropriate for a top academic journal. In addition, we note that the findings in Dr. Lott’s analysis are consistent with our understanding of the implications of the existing scholarly literature on state institutions, public trust and voter turnout.

**OVERVIEW-QUESTIONS**

**Bill No.:** SB 1014

Return to Worksheet (double-click link) For form assistance, press F1 or refer to worksheet instructions.

---

<b>Agency:</b>	Department of Revenue	<b>Date:</b>	02/10/06
<b>Preparer's Signature:</b>	Brad Brester	<b>Telephone:</b>	573-526-2723
<b>Approval Signature:</b>	Michael Morris	<b>E-Mail:</b>	<a href="mailto:Brad.Brester@dor.mo.gov">Brad.Brester@dor.mo.gov</a>

---

1. Is this legislation federally mandated?  Yes  No  
(If yes, cite specific law, court order or federal regulation.)
  
2. Does this proposal duplicate any other program? (Specify program and administering agency. Include applicable statutes or regulations.)  
  
No
  
3. Does this proposal affect any other state agency or political subdivision? If so, which ones?  
Yes, Secretary of State's Office
  
4. Will legislation result in a need for any additional capital improvements or rental space? (Give details for cost, square feet, location, etc.)  
No.
  
5. Are any costs related to this proposal included in your current budget request?  
No.
  
6. Will this legislation have an economic impact on small business?  
No.
  
7. If you are including any costs for information technology (computers, video, communications, bandwidth, SAM II hookups, programming, software, outside

027849

consulting, state data center charges, etc.) in the fiscal note response, have they been reviewed by the Office of Administration - Information Technology Services.

Yes  No (If no, why not?)

8. Will this legislation directly affect Total State Revenue? X Yes  No

(If yes, explain how.) Yes, see #12

9. Please summarize how this bill would affect your agency.

Section 115.427.7 -

- Requires DOR to issue a nondriver license and waive the fee required under subsection 7 of 302.181 to any applicant who signs an affidavit verifying they do not have any other form of photographic personal identification (nondriver license) that meets subsection 1, which basically requires the document to be issued by the United States or state of Missouri. In addition, DOR must design and provide the affidavit that is required.
- Requires DOR to provide access to a mobile voter processing system to obtain the photograph and signature to produce the nondriver license for individuals that are physically unable to otherwise visit contract offices, because they are residents of facilities licensed under chapter 198, RSMo and they a physician statement to that affect.
- The total cost for processing and issuing any nondriver license photo identification must be paid for by the state through an appropriation to the Department of Revenue.
- Local election authorities may assist the department in issuing nondriver license photo identifications.

10. Long-range implications.

N/A

11. If this is a REVISED Fiscal Estimate Worksheet, please explain reason for revision.

N/A

12. Assumptions and methodology used in arriving at state fiscal impact. (List all references, personnel, and expenses and equipment to be requested by program in the bill. Include specific duties and responsibilities for new employees listed.)

### ADMINISTRATIVE IMPACT

*Constitutional Amendment 3 (2004) authorizes 3% of highway funds to be used to offset the actual cost to collect such funds by the Department of Revenue.*

*For purposes of this fiscal note, the department of revenue assumes all costs will be appropriated from the general revenue fund. Through the appropriations process, the general assembly may appropriate the constitutionally permissible highway fund amount to offset the general revenue fund cost shown in this fiscal note.*

027850

# FISCAL NOTE WORKSHEET

Fiscal Note: 4947-01  
Bill Number: SB 1014

Agency: Department of Revenue  
Analyst: Brad Brester

Phone: 526-2723

The department assumes that based on the language as written it would affect residents of facilities licensed under chapter 198 and any individual who does not otherwise now have a nondriver license.

41,536	Residents of facilities licensed under chapter 198 who are not likely to be physically able to ambulate to a polling site. <i>(based on statistics from the Department of Health and Senior Services as of January 11, 2006)</i>
<u>x 5%</u>	Estimated number of citizens who are eligible and may apply for a no cost nondriver license
<b>2,077</b>	<b>Estimated annual nondriver licenses applicants</b>

DOR assumes that field coordinators will provide mobile service to individuals that are physically unable to otherwise visit contract offices, because they are residents of facilities licensed under chapter 198, RSMo, who request a nondriver license photo identification and provide a physician's statement to such affect. Based on the estimated volume of applicants the department assumes that current staff levels will be sufficient to provide this service.

The department currently does not have mobile equipment to create a nondriver license; therefore, will incur costs for purchasing cameras and scanners to obtain the photographs and signatures required to produce the nondriver license. The photograph and signature will be electronically transmitted to the central office to create the nondriver license and to be mailed to the resident.

\$ 300      Sony Cyber-Shot 7.2MP  
x 14      Field Coordinators  
\$4,200

\$ 200      Scanners  
x 14      Field Coordinators  
\$2,800

Based on the current language as written the number of individuals who currently do not have a photographic personal identification would now be eligible for one at no cost, in addition the language can be interpreted to allow individuals who simply sign the affidavit even though they had or have an acceptable photographic personal identification to now obtain a nondriver at no cost.

The department used the Census for Missouri that showed 4,167,519 individuals 18 or older, then ran a program that indicates there are 3,998,304 individuals currently on the DOR system. Therefore, there are approximately 169,215 individuals who do not have a photographic personal identification.

**FISCAL NOTE WORKSHEET**

**Fiscal Note: 4947-01  
Bill Number: SB 1014**

**Agency: Department of Revenue  
Analyst: Brad Brester**

**Phone: 526-2723**

138,063	Estimated number of individuals who do not currently have a photographic personal identification. <i>(based on the census population of individuals 18 and older, compared to the driver license system = 169,215 AND minus 75% of the individuals previously shown that are residents under chapter 198 = 41,536 x 75% = 31,152)</i>
<u>x 50%</u>	Estimated number of individuals who will apply for a nondriver license. <i>(based on a four average voter turnout for Missouri)</i>
<b>69,032</b>	<b>Potential nondriver license applicants first year of implementation only</b>

In addition, because the language allows a person to apply for a nondriver license to simply sign an affidavit indicating they do not have a photographic personal identification, applicants who apply for a new, renewal or duplicate nondriver license may do so at no cost.

88,989	Total number of nondriver (new, renewal, duplicate) transactions issued in 2005
<u>x 25%</u>	Estimated number of applicants that would utilize the affidavit indicating that they do not have any other form of photographic personal identification; therefore, would be eligible for a nondriver license at no fee
<b>22,247</b>	<b>Estimated annual nondriver license applicants</b>

The department will also incur forms, envelopes and postage cost for printing the license and mailing the license to individuals who are not physically able to ambulate to a polling site. In addition, the department will incur costs for providing an affidavit to individuals applying for nondriver license (no cost).

**FY07, FY08 & FY09**

2,077  
x \$ .43 (\$ .04 envelope & \$.39 postage, licensing material cost is shown in volume below)

<u>x \$.025</u>	Affidavit
\$ 556	

**REVENUE IMPACT**

Because the language requires the nondriver license to be provided by the department to an applicant who signs an affidavit stating that they do not have any other form of photographic personal identification at no cost there will be a potential loss in revenue as indicated below.

This proposal has an emergency clause; therefore, it becomes effective the date the Governor signs the bill. For purposes of this fiscal the revenue decrease is calculated for a full twelve months of FY07.

**FY07**

2,077	Annual applicants for nondriver license from a chapter 198 residents
69,032	Applicants that have never had a nondriver license the will only apply the first year of implementation

Rasmussen Reports is an electronic publishing firm specializing in the collection, publication, and distribution of public opinion polling information.

The Rasmussen Reports ElectionEdge<sup>TM</sup> Premium Service for Election 2006 offers the most comprehensive public opinion coverage ever provided for a mid-term election. We update the President's Job Approval Ratings daily and are polling every Senate and Governor's race at least once a month in 2006.

Rasmussen Reports was the nation's most accurate polling firm during the Presidential election and the only one to project both Bush and Kerry's vote total within half a percentage point of the actual outcome.

During Election 2004, RasmussenReports.com was also the top-ranked public opinion research site on the web. We had twice as many visitors as our nearest competitor and nearly as many as all competitors combined.

Scott Rasmussen, president of Rasmussen Reports, has been an independent pollster for more than a decade.

**Evidence of Voter Fraud and the Impact that Regulations to Reduce Fraud have on  
Voter Participation Rates**

John R. Lott, Jr.<sup>1</sup>  
Department of Economics  
SUNY Binghamton  
Binghamton, NY 13902

**Revised  
August 18, 2006**

**Abstract**

The results provide some evidence of vote fraud and that regulations that prevent fraud can actually increase the voter participation rate. It is hard to see any evidence that voting regulations differentially harm either minorities, the elderly, or the poor. While this study examines a broad range of voting regulations, it is still too early to evaluate any possible impact of mandatory photo IDs on U.S. elections. What can be said is that the non-photo ID regulations that are already in place have not had the negative impacts that opponents predicted. The evidence provided here also found that campaign finance regulations generally reduced voter turnout.

---

<sup>1</sup> The Dean's Visiting Professor. Michael Munger and Clark Bensen provided helpful comments. I would like to thank John Matsusaka for providing me with his Initiative and Referendum Institute's Initiatives Database. The data on voter turnout in general elections; the margin of victories by state for presidential, gubernatorial, and US Senate races; and per capita income by county were provided by Clark Bensen.

## Introduction

The regulations to ensure the integrity of the voting process can reduce the voter participation rate by making it more costly for people to vote. But to the extent that the regulations provide increase people's confidence that their votes will be properly counted, these regulations can actually encourage more people to vote. The trade-offs are everywhere. For example, absentee ballots make voting much more convenient, increasing the rate at which people vote, but some view them as "notorious" sources of voter fraud.<sup>2</sup> There has been some bi-partisan support for stricter registration and ID requirements (e.g., the Carter-Baker commission). Generally, Democrats are concerned that stricter rules will discourage voters, while Republicans think that stricter rules are needed to ensure confidence in the voting process.

Almost 100 countries require photo IDs to vote.<sup>3</sup> Many directly tie voter registration with provision of an ID and only allow an ID that is specifically issued for voting.<sup>4</sup> Some also either do not allow or greatly restrict absentee ballots.<sup>5</sup>

For example, all voters in Mexico must present voter IDs, which include not only a photo but also a thumbprint. The IDs themselves are essentially counterfeit-proof, with special holographic images, imbedded security codes, and a magnetic strip with still more security information. As an extra precaution, voters' fingers are dipped in indelible ink to prevent people from voting multiple times.

Mexican voters cannot register by mail — they have to personally go to their registration office and fill out forms for their voter ID. When a voter card is ready three months later, it is not mailed to the voter as it is in the U.S. Rather, the voter must make a second trip to a registration office to pick it up. The 2006 election was the first since the 1991 reforms in which absentee ballots were available, but only for voters who requested one at least six months before the election.<sup>6</sup>

In the U.S. during 2006, three states -- Georgia, Indiana and Missouri -- have adopted regulations requiring that photo IDs be presented before people can vote. Other states are considering following suit, generating heated debate as well as court cases. Some claim that such a requirement would prevent "many people" from voting,<sup>7</sup> but the evidence so far is scant. The primary evidence presented measures the portions of the population who do not possess driver's licenses (Overton, 2006 and Pawasarat, 2005). National Commission on Electoral Reform (2001, p. 77) claims that about 92 percent of

<sup>2</sup> Editorial, "Voter Suppression in Missouri," New York Times, August 10, 2006.

<sup>3</sup> Building Confidence in U.S. Elections, p. 5.

<sup>4</sup> Ibid.

<sup>5</sup> For example, as a result of fraud in their 1988 Presidential election, absentee ballots were not allowed in Mexico until (see Associated Press, "Mexican Senate approves mail-in absentee ballots for Mexicans living abroad," AZcentral.com, April 28, 2005

(<http://www.azcentral.com/specials/special03/articles/0428mexicovote-ON.html>).

<sup>6</sup> The United Kingdom faced claims of widespread vote fraud from "postal votes" during the 2005 election. Zoe Hughes, "Reform call after postal votes row," The Journal (Newcastle, UK), May 21, 2005, p. 4.

<sup>7</sup> Editorial, "Voter Suppression in Missouri," New York Times, August 10, 2006.

the voting age population have driver's licenses and that other photo IDs -- such as student IDs, military IDs, employee IDs, and passports -- "probably" only increases this percentage "slightly." Yet, this provides only a very crude measure of whether photo ID requirements will prevent people from voting. Some people without driver's licenses will not vote even when there are no photo ID requirements and others will go out to get a photo ID in order to vote. Just because they don't have a photo ID at some point in time (when they may not have any reason to have such an ID), doesn't imply that they won't get one when they have a good reason to do so.

A better measure of how difficult it is to meet the ID requirement is the percent of registered voters who have driver's licenses (Brace, 2005). But even this measure ignores that people can adjust their behavior and that some of those who currently don't have a photo ID might acquire one once it is required. Others have pointed out that even these estimates are unnecessarily alarmist because the lists of registered voters have not been updated to remove people who have died or moved away, and the statistics thus exaggerate the number of voters who are listed by motor vehicle bureaus as not currently having driver's licenses (Bensen, 2005).

There is also the question of the disparate impact on different groups. Would minorities or the elderly, people who are said to be less able to bear the costs of getting photo IDs be particularly discouraged? The courts, the media, as well as Democratic governors' veto messages have raised concerns over this impact.<sup>8</sup> Again, the existing evidence involves either comparing the percent of adults with photo IDs or the percent of registered voters with driver's licenses.

There is some evidence from other countries, such as Mexico, that strict anti-fraud regulations have actually been associated with increases in voter turnout.<sup>9</sup> Nevertheless, it is difficult to measure the effect of mandatory photo IDs in the United States, and for a simple reason: there has only been one primary election in just one state, Indiana, during 2006 using mandatory photo IDs. The Georgia and Missouri mandatory photo ID laws have not yet gone into effect. Florida, Hawaii, Louisiana, Oklahoma, and South Carolina all had non-mandatory photo ID laws by 2004, with South Dakota joining the group by 2006. In these states, people are asked for photo IDs, but if not available, a wide set of options range from providing non-photo IDs to signing a pledge that the voter is who they say that they are. It remains to be seen whether the mere threat of asking for a photo

---

<sup>8</sup> Wisconsin Democratic Governor Jim Doyle vetoed attempts at requiring photo IDs for voting three times and argued that "an ID requirement would keep poor people and the elderly who lack identification from the polls" (Associated Press, "Rule allow votes without license," *The Capital Times* (Madison, Wisconsin, August 5, 2006 <http://www.madison.com/tct/mad/topstories//index.php?ntid=93713>). See also Editorial, "Judge Blocks Requirement in Georgia for Voter ID," *New York Times*, July 8, 2006.

<sup>9</sup> Since the 1991 election reforms in Mexico, there have been three presidential and four congressional elections. In the three presidential elections since the 1991 reforms, 68 percent of eligible citizens have voted, compared to only 59 percent in the three elections prior to the rule changes. However, there is only a very trivial increase for congressional elections. Comparing the four congressional elections prior to the reforms with the four afterwards produces only a one percent increase from 56 to 57 percent. See Klesner (2003) for the turnout data up through the 2003 elections.

ID has any effect on voting behavior. So far no one has investigated the impact of these or other laws on voting participation rates.

Similar concerns that have been raised about regulations requiring non-photo IDs. For example, Tova Andrea Wang with The Century Foundation notes that “Furthermore, for those who do not have the kinds of up-to-date non-photo ID necessary—and many minority and urban voters, for example those who live in multiple family dwellings simply will not—getting identification from the government will present costs and burdens for voters who simply want to exercise their constitutional right to vote.”<sup>10</sup>

The general question remains to what extent other restrictions affect the voter participation rate and whether the impacts are different across different groups of voters. In the following sections, I will briefly discuss how to test how voting regulations affect turnout and then provide some empirical evidence.

### **Voter IDs on Voter Participation Rates**

Ensuring integrity of the voting process can either increase or decrease voter participation rates. There is an increased cost to voting, decreasing participation, but the increased integrity of the process can also increase the benefits to people voting. Eliminating fraud can also work to reduce the voter participation rate simply because there will be fewer “false” votes.

These three positions are as follows:

- 1) The Discouraging Voter Hypothesis: With little or no fraud to eliminate, the regulations discourage legitimate voters from voting, this hypothesis predicts that to the extent that regulations have any effect they will reduce the number of people who vote. Critics of stricter regulations argue that minorities, the elderly, and the poor are most affected.
- 2) The Eliminating Fraud Hypothesis: If there is indeed substantial fraud and that the regulations eliminate it, the measured voter participation rate will decline. Votes that shouldn't have been recorded will now no longer be recorded and voter participation will decline.
- 3) The Ensuring Integrity Hypothesis: Greater confidence that the election is fair and that votes will be counted accurately encourages additional voter participation.<sup>11</sup> (Similarly, if the regulations reduce confidence, depending on the extent of the

<sup>10</sup> Tova Andrea Wang, “ID and Voting Rights,” The Century Foundation, August 29, 2005 (<http://www.tcf.org/list.asp?type=TN&pubid=1084>).

<sup>11</sup> Sherry Swirsky, co-chair of Philadelphia Mayor Ed Rendell's Election Reform Task Force, noted in 1993 that “[But] the obsessive concern with fraud is what depresses voter turnout and registration in Philadelphia. It contributes to this ultimately destructive view that ‘My vote doesn't matter, the whole system is corrupt.’ The *Inquirer* has done a grave disservice to democracy to this city. They have exaggerated the pervasiveness of fraud in elections.” Scott Farnelant, “Dead Men Can Vote: Voting Fraud is alive and well in Philadelphia,” Philadelphia City Paper, October 12-19, 2005 (<http://www.citypaper.net/articles/101295/article009.shtml>).

drop in participation suggested by the two previous hypotheses, this hypothesis of greater participation may be true even if overall voter participation declines.

Any or all of these effects may be occurring at the same time, and the difficult task is how to disentangle the possible effects that voting regulations can have. Both the Discouraging Voter and Eliminating Fraud hypotheses predict that to the extent that voting regulations have any effect, they will reduce the voter participation rate. While the Ensuring Integrity hypothesis may exist even if voter participation declines after the regulations are enacted, it is the only hypothesis that can explain increased voter participation.

Obviously, the simplest test is whether different voting regulations alter voter participation rates. However, as just noted, this test can only disentangle the hypotheses if voter participation increases.

There are two other possible ways of analyzing the data. The first is whether there are systematic differences in who is affected by the voting regulations. Even if the total voting participation rate does not show a statistically significant change, it is possible that certain groups -- such as minorities, the elderly or the poor -- face declines in participation rates and whether such declines occur systematically. In other words, do African-Americans face reductions in voter participation or is it particular random segments of African-Americans that appear to be more related to randomness than to any type of systematic discrimination.

The second and more powerful test is to examine what happens to voter participation rates in those geographic areas where voter fraud is claimed to be occurring. If the laws have a much bigger impact in areas where fraud is said to be occurring, that would provide evidence for the Eliminating Fraud and/or Ensuring Integrity hypotheses. The point would be that the laws per se were not discouraging African-Americans or the elderly or the poor from participating, but that the change in participation in high fraud areas would indicate that any drop was primarily due to eliminating fraudulent votes rather than the general impact of the voting rules on certain types of citizens.

Over the 1996 to 2006 period studied here, there are a range of different regulations that can affect the cost of voting: photo IDs, non-photo IDs, same day registration, registration by mail, pre-election day in poll voting, absentee ballot obtained without requiring an excuse, whether there is a closed primary, provisional ballots, and voting by mail.<sup>12</sup> The existing ID requirements, while not as strict as the mandatory photo IDs recently enacted by Georgia, Indiana and Missouri, may still make it more difficult for some people to vote.

---

<sup>12</sup> Motor Voter was already adopted nationally prior to the 1996 general election. The timing for these laws were primarily obtained from the Republican National Committee's "Summary of State Voting Laws and Procedures" from November 1996 to July 2006. Electionline.org's Election Reform: What's Changed, What Hasn't and Why 2000-2006 (February 2006). Information on in-person absentee voting was obtained from a Nexis/Lexis search.

Other reforms, such as same day voter registration, absentee ballots without an excuse, and voting by mail, make it easier for people to vote and should increase voter participation rates, but they may also make fraud easier. Same day voter registration makes it more difficult to accurately determine whether people are who they claim to be. Both Democrats and Republicans agree that the problems of vote fraud involve absentee ballots and vote by mail are due to the difficulties in monitoring who ordered them and filled them out.<sup>13</sup> Election results have been overturned as a result of this type of fraud.<sup>14</sup> The New York Times has editorialized that "If the Legislature really wanted to deter fraud, it would have focused its efforts on absentee ballots, which are a notorious source of election fraud . . . ."<sup>15</sup>

Likewise, provisional ballots also make voting easier: in theory, they allow voters, who have been the victim of some type of bureaucratic error (where their registration information has been misplaced) to be allowed to vote. Yet, there is the potential for fraud, where provisional ballots are issued to people outside of where they are registered and possibly voting in many different precincts. Some, such as John Fund (2004), claims, "We might have a Florida-style dispute spilling into the courts in several states where the presidential race is close, with one side calling for all provisional ballots to be tabulated ('Count Every Vote') and the other demanding that the law be scrupulously observed."

Again, just as with IDs, all these other rules could either increase or decrease voter participation. For example, lax absentee ballot rules can make it easier for some people to vote, but they can also increase fraud and thus discourage others from participating.

Other factors that determine voter participation rates include the closeness of races, the presence of initiatives and major races on the ballot, and income and demographic characteristics (e.g., Cox and Munger, 1989; Matsusaka, 1992 and 1993; and Gerber and Green, 2002).<sup>16</sup> The closer the races and thus the greater the interest in races, the more

---

<sup>13</sup> Signatures are required on these mail-in ballots, but as the bi-partisan National Commission on Election Reform noted "But in fact, for practical reasons, most states do not routinely check signatures either on applications or on returned ballots, just as most states do not verify signatures or require proof of identity at the polls."

<sup>14</sup> "In 1993, a federal judge had to overturn a special state Senate election in which Democratic precinct workers had gone door to door with absentee ballot forms and "helped" voters fill them out." John Fund, "The Voter Integrity Project: How to stop fraud and suppression? Ashcroft showed the way in 2002." *Tuesday, September 30, 2003* (<http://www.opinionjournal.com/diary/?id=110004084>).

<sup>15</sup> Editorial, "Voter Suppression in Missouri," *New York Times*, August 10, 2006.

<sup>16</sup> This paper uses Matsusaka's distinction between initiatives and legislative measures. While I only have data on the initiatives on the ballot, presumably legislative measures matter also, though Matsusaka (1992) finds that initiatives are much more important in explaining voter turnout than are legislative measures. Matsusaka states that an "initiative" is a proposed law or constitutional amendment that has been put on the ballot by citizen petition. By contrast, a "legislative measure" or "legislative referendum" or "legislative proposition" is a proposed law or constitutional amendment that has been put on the ballot by the legislature.

The only variable that I did not follow Cox and Munger specification and use was campaign spending. In part I did this because they were examining turnout for only congressional races in a non-presidential election year. It is not clear how one would distribute presidential campaign spending across counties, especially since presidential campaigns target their expenditures. Given that I am using county level

likely people will be to participate. For the general election data, data has been collected on the absolute percentage point differential between the top two finishers of that state's presidential race as well as for any gubernatorial or U.S. senatorial races. The Initiative and Referendum Institute's Initiatives Database is used to identify the number and types of initiatives that have appeared on general and primary election ballots from 1996 through 2004. Twenty-five different types of initiatives are identified ranging from those on abortion to Veteran Affairs.<sup>17</sup>

## The Evidence

The data here constitute county level data for general and primary elections. The general election data goes from 1996 to 2004. For the primary election, the data go from 1996 to July 2006 for the Republican and Democratic primaries. However, the data do not go back to 1996 for all states since I relied for the primary data on data supplied by state Secretary of States. Because of this limit on primary data, most of the estimates here will focus on the general election data.

How did these laws impacted voter participation rates? As a first crude measure, I only considered states that had changed their laws over time to compare how the participation rates changed when the laws changed. Obviously this simple comparison ignores that many other factors are changing, but it at least compares only the same states over time. The simple mean voter participation rates, with and without photo IDs, indicate that adopting photo IDs produced a drop in voter participation of 1.5 percentage points, a statistically insignificant change. On the other hand, a similar breakdown for non-photo IDs, absentee ballots with no excuses, provisional ballots, pre-election day in-poll voting, same day registration, registration by mail, and voting by mail all show statistically significant increases in voter participation rates. These other changes are much larger and indicate an increase of at least 4 percentage points. For registration by mail, an increase of 11.5 percentage points. (The raw means for all the data are shown in the

---

turnout data, similar concerns exist for gubernatorial and senate campaign expenditures. I hope that the margin of victory that I am using for presidential, gubernatorial, and US Senate campaigns as well as county fixed effects will pick up much of what these expenditures would measure. This is partly true if only because the level of expenditures is related to the margin of victory.

<sup>17</sup> The source of the information related to the Voting Age Population and general elections is the master election files of Polidata ([www.polidata.org](http://www.polidata.org)). Polidata compiles election-related information from state and local election officials around the country, year-by-year, on an ongoing basis, but only for general elections. This information includes registration and turnout statistics when available and election results by party by office, by state and county. In cases in which the election officials do not collect, compile or report the actual number of voters who requested ballots, the turnout is determined by the partisan race in the state that generated the highest number of votes. In a handful of cases this turnout may be the result of non-statewide races, such as those for the U.S. House or the State Legislature. There are several projections and estimates for the Voting Age Population, some released before an election and some released long after the election year. The Voting Age Population numbers used here are estimates based upon methodology developed by Polidata reflecting annual state-level estimates of the population released by the Bureau of the Census.

County level data on per capita income were obtained from the Regional Economic Information System (REIS). Nominal values were converted to real values by using the consumer price index. State level unemployment rates were obtained from the Bureau of Labor Statistics. Poverty rate data was obtained from U.S. Department of Commerce.

appendix.)

Table 2 provides the first regression estimates. They are constructed to account for all the different types of voting regulations mentioned earlier; the closeness of presidential, gubernatorial, and U.S. Senate races; geographic and demographic differences; the number and types of voter initiatives; as well as national changes over time in voter participation rates. Six specifications are reported: three each examining the voter participation rate and the natural log of the voter participation rate. While all the estimates account for geographic and year fixed effects, the estimates report different combination of the other control variables. Specifications (1) and (4) examine only the ID requirements as well as the margin of victory for the presidential, gubernatorial, and U.S. Senate races. Specifications (2) and (5) include all the other variables except for information on the topics of individual initiatives. Finally, because of Matsusaka's (1992) evidence -- that the impact of initiatives on voter turnout vary dramatically with the issues that the initiative deals with -- specifications (3) and (6) include all dummy variables indicating the type of initiative being voted on. The regressions were run using ordinary least squares with clustering of counties by state and robust standard errors.

The results indicate only minimal support for the notion that IDs -- whether photo IDs with substitution or non-photo IDs -- reduce voting participation rates. Indeed, most of voting regulations, in the vast majority of estimates, seem to have no statistically significant effects. In only one of the six specifications does requiring non-photo IDs imply a statistically significant effect. In that one case, specification (4) with the most minimal use of control variables, non-photo IDs are associated with a 3.9 percent reduction in voting rates. Accounting for all the other factors in specification (6) drives this estimate down to about 2.2 percent.

Of the other laws, only one, pre-election day voting, is consistently and significantly related to voting rates is, and it implies about a 1.5 to 1.8 percentage point reduction in voting participation from the law. This result is consistent with the Ensuring Integrity Hypothesis. The Discouraging Voter or Eliminating Fraud Hypotheses would imply that pre-election day voting should increase voting participation rates, either because the cost of voting has been reduced or because there is more fraud. The Ensuring Integrity Hypothesis can explain the drop in voting rates because increased fraud discourages others voting. Only one of the laws implies a statistically significant impact and that is only for one specification. In that one specification same day registration implies a 2.4 percentage point increase in voting rates, and that result is consistent with all three hypotheses.

As to the other results, presidential election margins are most important of any of the races in explaining voter turnouts and that holds for all races. Among the initiatives, topics on abortion, animal rights, campaign finance, education, labor reform, and taxes get voters the most excited. By contrast, initiatives on business regulations almost put people to sleep, reducing voter participation by 12 percentage points. Hispanics vote at about a half of a percentage point lower rate than whites.

A few other specifications were also tried. For example, I included state specific time trends and squared values for the winning margins in presidential, gubernatorial, and senate races.<sup>18</sup> The results showed little change from those already presented.

In addition, I also tried using data that I had available up until 2002 on most campaign finance regulations. Proponents of campaign finance regulations worry that the perception of corruption created by campaign donation discourage people from voting.<sup>19</sup> If so, campaign finance regulations should increase voter participation rates. Yet, the results imply that the regulations reduce voter turnout and their inclusion does not change the estimated effects of voting regulations on voter participation shown in specifications (3) and (6) (see Table 3).<sup>20</sup> Limits on corporate donations to gubernatorial campaigns, political action committees, or political parties as well as limits on total gubernatorial campaign expenditures all reduce voter participation rates. Limits on these types of campaign expenditures by individuals are very highly correlated with the limits on corporations and unions and drop out of the specifications. Only limits on union donations to political parties are associated with high voter participation rates. Given previous work that campaign finance regulations lower the rate that incumbents are defeated, increase their win margins, and decrease the number of candidates running for office (Lott, 2006), it is not particularly surprising that these regulations also discourage people from voting.<sup>21</sup>

Tables 4 and 5 attempt to see whether the different voter regulations have a differential impact across African-Americans, Hispanics and whites. Table 4 shows the coefficient estimates for percentage of the voting age population represented by each of the races interacted with the various voting regulations. Table 5 examines whether the coefficients for any particular regulation are statistically different between the different races. With two exceptions, it is very difficult to see any differential impact across these racial groups. Voting by mail increases African-Americans' voting rates relative to whites and lowers Hispanics' voting rates relative to whites. Absentee ballots also increase the voting rate of African-Americans relative to Hispanics. But none of the other voting regulations impacts these different races differently.

Table 6 tries a similar breakdown by voter age and again it is difficult to see many significant differences between different age groups. The F-tests shown in the last

---

<sup>18</sup> See for example Cox and Munger (1989) for analogous specifications involving squared winning margins. I did also try including total county population (given that county size remains constant this will measure density as done by Cox and Munger) as well as the state poverty rate, but including these variables in specifications 3 and 6 did not cause any of the voting regulations to change from being significant to not significant nor cause the reverse to happen. The state level poverty rate will again be discussed later.

<sup>19</sup> Allan Cigler (2004) notes that "But the breakdown of the existing system of campaign finance regulation started to attract the attention of a number of additional interests, particularly foundations and think tanks disturbed by voter cynicism and concerned with the lack of voter participation in elections and the erosion of civic responsibility generally. Enhancing democracy through the lessening of the impact of money in politics was typically the goal of these organizations."

<sup>20</sup> See Lott (2006) for a detailed discussion of this data. Using these variables reduces the sample size by 23 percent so they are included separately and were not included in the regressions reported in Table 2.

<sup>21</sup> Matsusaka (1993), Matsusaka and Palda (1993), and Cox and Munger (1989) have recognized that the impact of campaign finance laws on how competitive races are could either increase or decrease turnout.

column compare age groups from 20 to 29, 30 to 39, 40 to 49, and 50 to 64 year olds with the estimates for 65 to 99 year olds. In all these estimates only the differences between 50 to 64 year olds and 65 to 99 year olds are significantly different from each other and that is true for non-photo IDs, absentee ballots without an excuse, provisional ballots, and pre-election day in-poll voting or in-person absentee voting regulations. But all these results are much more a result of 50 to 64 year olds being different from any of the other age groups than it is that 65 to 99 year olds. There is no evidence that any of these rules impact those over 65 years of age relative to voters from 20 to 50 years of age.

Figures 1 and 2 are a result of a regression that breaks down the estimates by both race, age and gender. The regression that generated these figures corresponded to specification (3) in Table 2 that interacts those factors with just photo ID requirements. Again it is hard to see these regulations as differentially harming either the elderly, African-Americans, Hispanics, or women. In Figure 1, the one stand-out estimate is African-American females 50 to 64 years of age, a group that shows a big drop in their share of the voting age population from photo IDs. But this contrasts sharply with African-American females who are 40 to 49 and 65 to 99 years of age. It does not appear that there is anything systematic about being either African-American, female or elderly that causes one to be adversely impacted by photo IDs. The estimates in Figure 2 similarly show a random pattern by race and age. Interestingly in this case it is white males between 65 and 99 who appear to be most adversely affected by photo IDs.

To test whether poor people are impacted differently from others by these different voting regulations, I tried interacting the voting regulations shown in specification (3) from Table 2 first by county income and then separately by state level poverty rates. In none of these cases were these coefficients statistically significant and implies that none of the regulations neither adversely affected nor improved poor people's voter participation rates.

Table 7 provides interesting results. The American Center for Voting Rights provides what appears to be the only comprehensive national list of voter fraud "hot spots." Their 2005 report lists six major "hot spots": Cuyahoga County, Ohio; St. Clair County, Illinois; St. Louis County, Missouri; Philadelphia, Pennsylvania; King County, Washington; and Milwaukee County, Wisconsin. Again I started with specification (3) in Table 2 but added in variables that interacted the voting regulations with a dummy variable equaling 1 for these six counties. Table 6 reports just the coefficients from this regression for these interactions and the voting regulations by themselves.

As shown earlier, ID requirements have no significant impact on voting participation rates when all the counties for which they are imposed are examined. However, most telling, non-photo IDs increased voting participation in the "hot spots," supporting the Ensuring Integrity hypothesis. Neither of the other theories can explain why requiring IDs increase voter participation. The same also holds true for increasing the length of the registration deadline: It, too, increases voter turnout despite making voting more difficult. The results for pre-election day in-poll voting also imply that vote fraud is occurring. In general, pre-election day in-poll voting is associated with reduced turnout,

consistent with the Ensuring Integrity hypothesis. The fact that turnout increases in the fraud “hot spots” when pre-election day in-polling is allowed implies that the “hot spots” are exploiting this rule for vote fraud.

Finally, Table 8 provides some simple estimates for U.S. Senate primaries by party.<sup>22</sup> The sample here was only a third of the size of the general election estimates. Overall, Democratic primary turnout rates seem to be much more affected by voting regulations than do Republican ones. However, the only results that are related to fraud involve provisional ballots. Both specifications for the Democratic primary produce coefficients that imply the Ensuring Integrity Hypothesis: despite the lower cost of voting from provisional ballots, there is a statistically significant 4.4 percentage point drop in the voting rate. For Republicans the coefficients are of the opposite sign and statistically significant. Thus, the results do not allow us to disentangle the alternative hypotheses.

### **Conclusion**

There is some evidence of vote fraud. Regulations meant to prevent fraud can actually increase the voter participation rate. It is hard to see any evidence that voting regulations differentially harm either minorities, the elderly, or the poor. While this study examines a broad range of voting regulations, it is still too early to evaluate any possible impact of mandatory photo IDs on U.S. elections. What can be said is that the non-photo ID regulations that are already in place have not had the negative impacts that opponents predicted.

One particularly valuable finding is that voting regulations have a different impact on turnout in counties where fraud is alleged to be rampant. These results indicate that while these voting regulations have little impact on turnout generally, certain regulations do significantly impact turnout in these so-called “hot spots.”

Contrary to the claims that campaign finance regulations will encourage voter participation by reducing the perception of political corruption, campaign finance regulations reduced voter participation rates.

Following other recent work showing that campaign finance regulations entrench incumbents, reduce the number of candidates running for office, and increase win margins (all factors associated with less exciting campaigns), these results find that campaign finance regulations usually reduce voter turnout.

---

<sup>22</sup> The county level on votes by U.S. Senate race was obtained by going online at the different Secretary of State websites (<http://www.nass.org/sos/sosflags.html>). Some states only had this data available back to 2000 and others did not have the data available by race at the county level.

**Increasing the Security of Elections:**  
**The Effect of Identification Requirements on Turnout of Minority Voters**

by

Hans A. von Spakovsky

Voter fraud is a well-documented and existing problem in the United States.<sup>1</sup> While it is safe to say that many elections are conducted without voter fraud affecting the outcome or representing a significant factor in the race, there are sufficient cases of proven fraud and convictions by both state and federal prosecutors to warrant taking the steps necessary to improve the security and integrity of elections. There were many cases reported in the press in 2004 of thousands of fraudulent voter registration forms submitted to election officials in a dozen states across the country.<sup>2</sup> Obviously, when such fraudulent registrations are not caught by registration clerks, these registrations become a possible source of fraudulent votes as do frauds caused by impersonations of registered voters. For example, a New Mexico voter was not allowed to vote in 2004 because when he appeared at his polling place, he was told that someone else had already voted in his place.<sup>3</sup> In addition, someone could vote under the name of voters still on the rolls but who have moved or died. In 2000, a review by two news organizations of Georgia's voter registration rolls for the previous 20 years found 5,412 votes had been cast by deceased voters – some on multiple occasions - and at least 15,000 dead people were still registered on the active voting rolls.<sup>4</sup>

Investigations by both the *Milwaukee Journal Sentinel* and a Joint Task force formed by the Milwaukee U.S. Attorney's Office and local law enforcement agencies found thousands of fraudulent and suspicious votes in that city, in a state that John Kerry won by only 11,384 votes in the 2004 election. Among the findings were that Milwaukee showed at least 4,500 more votes cast than the number of people listed as voting, as well as instances of suspected double voting, voting under fictitious names, and voting in the names of deceased voters.<sup>5</sup> As the *Milwaukee Journal Sentinel* noted, some of this voter fraud could have been prevented through photo identification since the Task Force had noted "cases of persons voting in the name of a dead person or as someone else...persons listed as voting who said they did not vote...people [who]

registered and voted with identities and addresses that cannot in any way be linked to a real person.”<sup>6</sup> These cases illustrate the need for requiring voters to show photo identification at the polls to authenticate their identity.<sup>7</sup>

A related and growing problem that also supports the need for requiring photo identification when voting is the increased number of noncitizens, both legal and illegal, who are registering to vote and voting in U.S. elections.<sup>8</sup> In the past four years alone, the Department of Justice has convicted more than a dozen noncitizens in Florida for registering and voting in elections in Broward, Miami-Dade, St. Lucie, Martin, and Palm Beach Counties, including one individual, Rafael Velasquez, who was a former candidate for the Florida legislature.<sup>9</sup> While this may seem to be a relatively small number of convictions, it is important to keep in mind that the Department of Justice has not conducted any comprehensive or systematic check of voter registration rolls in Florida to find noncitizens. There are at least 1.5 million noncitizens of voting age in Florida – “only 540 of them would have had to vote (or 540 more ineligible voters than may actually have voted) for Gore to reverse the presidential winner” in the 2004 election.<sup>10</sup> Could this many noncitizens vote in any one election? That question is succinctly answered by the findings of the Committee on House Oversight in the Dornan-Sanchez congressional election dispute in California in 1997. The Committee found 748 invalid votes due to noncitizens who had registered illegally in just one congressional district.<sup>11</sup>

According to Dan Stein of the Federation for American Immigration Reform, there were 11 states carried by President Bush in the 2000 election that “had small enough winning vote margins that voting by noncitizens could have tipped the results to Vice President Gore.”<sup>12</sup> As another example of the prevalence of this problem, in a February 8, 2005 report to the President of the Utah Senate, the Legislative Auditor General John Schaff found that more than 58,000 illegal immigrants had Utah drivers’ licenses and 37,000 had nondriver’s license identification cards. Almost 400 of these illegal aliens had registered to vote and at least 14 had actually voted

<sup>7</sup> Although this paper focuses on voting in polling places, the many reported cases of absentee ballot fraud make it clear that individuals submitting absentee ballots by mail should be required to include photo copies of identification documents with their ballots as well.

<sup>8</sup> Publius at 292-296. At least eight of the 9/11 hijackers were registered to vote. Diane Ravitch, “Were the Hijackers Registered to Vote?” October 29, 2001, Hoover Institute; “House Passes Strong Border Security,” Press Release of Cong. Sam Johnson, February 11, 2005.

<sup>9</sup> “Department of Justice to Hold Ballot Access and Voting Integrity Symposium,” Press Release of Department of Justice, August 2, 2005; “Election Fraud Prosecutions & Convictions, Ballot Access & Voting Integrity Initiative, October 2002 – September 2005,” Public Integrity Section, Criminal Division, United States Department of Justice.

<sup>10</sup> Testimony of Dan Stein, President, Federation for American Immigration Reform, Committee on House Administration, U.S. House of Representatives, Hearing on Non-Citizen Voting, June 22, 2006, <http://cha.house.gov/hearings/Testimony.aspx?TID=893>.

<sup>11</sup> Comm. on House Oversight, “Dismissing the Election Contest Against Loretta Sanchez,” H.R. Doc. No. 105-416, Feb. 12, 1998, p. 15.

<sup>12</sup> Testimony of Dan Stein (“[t]hose states were Colorado, Florida, Georgia, Missouri, Nevada, New Hampshire, North Carolina, Ohio, Tennessee, Texas, and Virginia. A switch of three votes in the Electoral College from Bush to Gore would have reversed the outcome of that election, so that voting of enough noncitizens to reverse the outcome in any one of those 11 states would have reversed the final outcome.”)

in Utah elections. In the ongoing lawsuit in Arizona over the state's new requirement that individuals registering to vote show proof of citizenship, the plaintiffs have apparently been forced to concede that Arizona has uncovered several hundred instances in which noncitizens were fraudulently registered to vote.<sup>13</sup> A review in 2005 by Paul Bettencourt, the Voter Registrar for Harris County, Texas, the third largest county in the country, found at least 35 cases in which noncitizens applied for or received a voter card, including a Brazilian woman who voted at least four times. As Bettencourt stated, "we regularly have elections decided by one, two, or just a handful of votes in any one of our more than 400 local government jurisdictions."<sup>14</sup>

It should be kept in mind that the federal government does not cooperate with inquiries by local election authorities on the immigration status of registered voters. Even if it did, it could only provide information on noncitizens that are in its files – individuals who are here legally and illegal immigrants who have been caught and a file created. Since the vast majority of illegal immigrants are not in its information system, the federal government could not provide accurate information on every registered voter even if it wanted to. Since more than half of the states do not require proof of legal presence in the U.S. to apply for a driver's license and the National Voter Registration Act (also known as Motor Voter) requires states to offer voter registration to persons who apply for a driver's license, voter rolls are guaranteed to become "inflated by non-citizens who are registered to vote... [t]he only question is the number."<sup>15</sup>

The solution to preventing fraudulent votes from being cast in polling places is to require all voters to present photo identification, a recommendation made by the bipartisan Carter-Baker Commission on Federal Election Reform. The Commission's recommendation was based on photo identifications issued under the REAL ID Act of 2005,<sup>16</sup> which requires states to verify each individual's full legal name, date of birth, address, social security number, and U.S. citizenship before the individual is issued a driver's license or personal identification card.<sup>17</sup> Similarly, the solution to preventing noncitizens from registering and voting in elections is to require all individuals registering to vote to provide proof of citizenship.

Those opposed to these requirements argue that they are unnecessary and discriminatory, and will lead to reduced turnout by minority voters. However, contrary to those claims, the documented history of fraudulent voter registrations and voter fraud, and increasing incidents of noncitizens registering and voting, show the need for such requirements. As former Congresswoman Susan Molinari pointed out, "[f]ar from discriminatory, a mandatory voter ID

<sup>15</sup> Testimony of Patrick Rogers.

<sup>16</sup> Pub. L. No. 109-13, 49 U.S.C. §30301.

<sup>17</sup> Report of the Commission on Federal Election Reform Building Confidence in U.S. Election, September 2005, pages 18-21, available at [http://www.american.edu/ia/cfer/report/full\\_report.pdf](http://www.american.edu/ia/cfer/report/full_report.pdf). The author was one of the experts consulted by the Commission.

provides means by which more Americans may obtain the identification already required for daily functions – such as cashing a check, entering a federal building, or boarding an airplane.”<sup>18</sup> There is also no evidence that minority voters have less access to identification documents than other voters, or that requiring proof of citizenship will disproportionately affect minority voters or lead to lower turnout of eligible voters if either requirement is implemented. As John Lott concluded in a recent study, “the non-photo ID regulations that are already in place have not had the negative impacts that opponents predicted.”<sup>19</sup>

On October 29, 2002, President George Bush signed into law the Help America Vote Act of 2002 (“HAVA”).<sup>20</sup> HAVA contained the first nationwide identification requirements for voters. It applies to first-time voters who register by mail and who have not previously voted in a federal election.<sup>21</sup> Under §303(b)(2)(A) of HAVA, when voting in person, such voters must present a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. Voters can avoid this requirement if they submit a copy of one of these documents with their voter registration form or if they drop off their registration form with an election official *instead* of mailing it in.<sup>22</sup> First-time registrants voting by mail using an absentee ballot must submit a copy of one of these documents with the absentee ballot. Any voter who does not have any of these documents can vote a provisional ballot that must be verified by local election officials to determine whether the voter is eligible to vote.<sup>23</sup> States and localities were required to comply with these provisions beginning January 1, 2004.<sup>24</sup> However, HAVA specifically provided that these identification requirements, as well as the other requirements in Title III of the law such as provisional voting and statewide computerized voter registration lists, were “minimum requirements” and nothing prevented a state from establishing requirements “that are more strict” so long as they are not inconsistent with other federal laws.<sup>25</sup>

Spurred in part by the passage of HAVA and the 2004 election, a number of states such as Georgia, Indiana, and Missouri passed legislation implementing photo identification requirements for voters that were stricter than the HAVA requirement. In addition to a voter identification requirement, Arizona also passed a requirement that an individual registering to vote show proof of citizenship. All of these state statutes have been attacked in court in litigation alleging violations of state law, the Voting Rights Act, Equal Protection, or the 24<sup>th</sup> Amendment (poll taxes). The objection to photo identification requirements is that they will reduce the turnout of black voters because fewer blacks possess identification documents than

<sup>25</sup> 42 U.S.C. §15484.

whites or that they will be intimidated by identification requirements and will not vote. These theories, however, are mostly anecdotal and not based on any objective evidence.<sup>26</sup> The new statutes passed by Georgia, Indiana, Missouri, and Arizona are either too recent to judge their possible effect on the turnout of voters or have not been implemented because of restraining orders. However, a number of states (including Georgia) have had less strict voter identification requirements in place for a number of years, and a review of turnout in those states reveals that they not only have no effect on the turnout of black voters, turnout actually increased after implementation of some requirements. Additionally, available information on photo identification possessed by individuals, particularly driver's licenses, shows no discrepancy between blacks and whites.

Driver's licenses, a primary form of picture identification, are possessed by a vast majority of Americans. According to an FEC report covering the 1995-96 period, approximately 87% of persons 18 years and older have driver's licenses while an additional 3% or 4% have a photo identification card issued by the State motor vehicle agency.<sup>27</sup> The Federal Highway Administration ("FHA") reported in 2004 that the number of licensed drivers age 18 and over was 195,432,072.<sup>28</sup> Since the total population of the U.S. age 18 and over in 2004 according to the Census Bureau was 215,694,000, the percentage of the U.S. voting age population ("VAP") with a driver's license was 90.6%. Using the FEC's 3% to 4% figure for additional non-driver's license identification cards, approximately 94 to 95% of the VAP has, at a minimum, photo identification documents issued by state motor vehicle authorities. The FHA does not have information on driver's licenses by race; however, these statistics show that the number of individuals of voting age who do not have photo identification is very small.

Claims have also been made, particularly in the litigation in Georgia, that photo identification requirements discriminate against the elderly. But according to the Federal Highway Administration, the number of older Americans who hold driver's licenses as a percentage of their age group is surprisingly high. For example, 90.7% of persons age 65 to 69 have a driver's license; 86.5% of persons age 70 to 74 have a license; and 82% of persons age 75

---

<sup>26</sup> The University of Wisconsin-Milwaukee released a study last year claiming that there is a racial disparity in the driver's licenses held by Wisconsin residents. John Pawasarat, "The Driver License Status of the Voting Age Population in Wisconsin," June 2005, available at [www.eti.uwm.edu](http://www.eti.uwm.edu). However, this study admits that the data it obtained from Wisconsin on "DOT photo ID utilization was only available at the state level by age and gender," and not by race. As John Lott points out, this type of study "provides only a very crude measure of whether photo ID requirements will prevent people from voting. Some people without driver's licenses will not vote even when there are no photo ID requirements and others will go out to get a photo ID in order to vote." Lott at 3.

<sup>27</sup> *The Impact of the National Voter Registration Act of 1993 on the Administration of Elections for Federal Office, 1995-1996*, Federal Elections Commission, page 5-6.

<sup>28</sup> *Licensed Drivers by Sex and Ratio to Population -2004*, U.S. Department of Transportation, Federal Highway Administration, Highway Statistics, 2004, available at <http://www.fhwa.dot.gov/polic/ohim/hs04/dl.htm> For this calculation and all other calculations on driver's licenses in this paper, the number of licensed drivers under the age of 18 as listed in the table, *Licensed Total Young Drivers, by Age, 2004*, are subtracted from the total numbers for the U.S. and individual states listed in the first table. That number is then compared to the voting age population provided by the Census Bureau reports on registration and turnout in the 2004 election. These tables will be cited throughout this paper collectively as "Federal Highway Administration, Highway Statistics, 2004."

to 79 have a license.<sup>29</sup>

The results of the 2004 election certainly do not support the claim that an identification requirement will decrease turnout. HAVA's national identification requirements, although limited, were in effect for the first time all across the country. However, turnout was 60.7% of the voting age eligible population,<sup>30</sup> an increase of 6.4 percentage points over the turnout of 54.3% of the eligible population in the 2000 presidential election. This was the largest increase in turnout since the 1948 to 1952 election, when turnout increased by 10.1 percentage points.<sup>31</sup> The Census Bureau publishes a report every two years on voting and registration in federal elections based on responses from surveys. A comparison of the 2000 and 2004 reports shows that in the 2000 election, 56.8% of the eligible black population reported voting in the election. In 2004, when HAVA's limited identification requirement was in effect, 60% of the eligible black population voted, an increase of 3.2 percentage points.<sup>32</sup>

Another revealing analysis is obtained by reviewing the experience of four states that imposed in-person identification requirements on voters at the precinct. South Carolina, Georgia, Virginia, and Louisiana, allow or allowed a voter to present either photo identification or one of a long list of other documents. All but South Carolina allowed a signed affirmation of the voter's identity if the voter does not have the required identification documents. Having an affirmation exception might prevent decreases in minority voter turnout if it is actually true that minorities do not have identification documents. Nevertheless, such an exception would probably not reduce the intimidation factor if it is correct that minorities are intimidated by the challenge of presenting identification or having to take the extra step of completing an affidavit. Turnout would also be reduced (even with an affirmation exception) if it is true that identification requirements are applied in a discriminatory manner against black voters as has been claimed.<sup>33</sup> However, an examination of the turnout figures in presidential elections in South Carolina, Virginia, Georgia, and Louisiana, states that require identification at the polls, refutes these claims, as does the experience of Alabama and Florida.<sup>34</sup>

2004	51.2%	56.6%	50.8%	58.3%	60.9%

***South Carolina***

Under South Carolina Code §7-13-710, a voter must present his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department

<sup>35</sup>Unless otherwise noted, national and state turnout figures are based on reports produced previously by the Federal Election Commission and now available on the website of the U.S. Election Assistance Commission; the EAC took over responsibility for maintaining election statistics when it was created by HAVA. Historical election turnout information is available at [www.eac.gov](http://www.eac.gov). The EAC changed the turnout analysis for the 2004 election to citizen voting age population from voting age population, as conducted by the FEC for the 2000 and prior elections. While CVAP is more accurate, this change would obviously makes comparisons between 2004 and prior years difficult. Therefore, the historical turnout provided in this chart from 1984 to 2000 is for the voting age population from historical data; however, the turnout information for 2004 for the VAP is taken from electionline.org, "Holding Form: Voter Registration 2006," July 2006, p. 15.

of Public Safety at the polls. Under an amendment passed in 1988, if the voter is not licensed, the voter can alternatively present the written registration notification received after registering to vote as required by §7-5-125. This exception was first effective for the 1988 general election.

An examination of South Carolina's turnout figures shows no effect from the state's identification requirements even with the state's significant minority population. According to the 2000 Census, South Carolina was 67.2% white and 29.5% black.<sup>36</sup> The percentage of the voting age population with driver's licenses in 2004 was 94.5%.<sup>37</sup>

South Carolina is one of the only states that provides turnout statistics by race. From 1984 to 2004, the total turnout broken out by the percentages of white/nonwhites voting in the general election was as follows.<sup>38</sup>

<u>Year</u>	<u>Total voting</u>	<u>White Turnout</u>	<u>Non-White Turnout</u>
1984	1,018,701	754,155 (74%)	264,546 (26%)
1988	1,041,846	796,542 (76.45%)	245,304 (23.55%)
1992	1,237,467	950,556 (76.8%)	286,911 (23.2%)
1996	1,203,486	908,503 (75.5%)	294,983 (24.5%)
2000	1,433,533	1,082,784 (75.5%)	350,749 (24.5%)
2004	1,631,148	1,197,416 (73.41%)	433,732 (26.59%)

<sup>36</sup>*State and County Quick Facts: South Carolina*, U.S. Census Bureau, <http://quickfacts.census.gov/qfd/states/45000.html>.

<sup>37</sup>Federal Highway Administration, *Highway Statistics*, 2004.

<sup>38</sup>*South Carolina General Election, Statewide Votes Cast, Demographics by Race*, [www.state.sc.us/cgi-bin/scs...countykey=ALL&regvot=VOT&demo=RACE](http://www.state.sc.us/cgi-bin/scs...countykey=ALL&regvot=VOT&demo=RACE).

These figures reveal that in 1988 there was a slight drop in the number of nonwhite voters when compared to the 1984 election. The percentage of such voters was down 2.45 percentage points in the year that voters could use the voter registration card sent to all voters after they register in place of a South Carolina driver's license. If nonwhite voters had experienced prior problems voting due to the lack of a license, turnout should have increased, not decreased, in the election year when the voter registration card issued to all voters could be used as an alternative. However, this did not occur. A Census survey shows that despite the voter identification requirement, the turnout percentage of the black VAP in South Carolina has steadily risen since 1988, with the exception of 2004, and a slightly *higher* percentage of the black VAP turned out to vote in the 2000 election than the white VAP: 60.7% vs. 58.7%.<sup>39</sup> The total number of nonwhites voting has steadily increased since 1988, rising from 245,304 voters to 433,732 voters in 2004.

**Census Survey of Turnout of VAP by Race**  
***South Carolina***

<i>Year</i>	<i>White</i>	<i>Black</i>
1988	52.3%	40.7%
1992	61.6%	48.8%
1996	56.2%	49.9%
2000	58.7%	60.7%
2004	63.4%	59.5%

Similarly, no conclusions can be drawn of any kind of negative effect from identification requirements on the general trend of South Carolina's turnout when compared to national turnout. South Carolina has generally had a lower turnout than the majority of states. However, there are other states without identification requirements with lower turnout. Although the 1988 turnout of VAP in South Carolina was below the national average of 50.11%, no significance can be attributed to this fact since other states without identification requirements have had lower turnout than South Carolina in different elections. In 2000, for example, South Carolina ranked 44<sup>th</sup> in terms of turnout.

In years that national turnout has declined, South Carolina's turnout has not decreased as much as the national decline; while in years that the national turnout has increased, South Carolina's turnout has generally increased at a greater rate (with the exception of 2004). For example, turnout declined nationally by 3 points from 1984 to 1988 but only declined 1.75 points in South Carolina. From 1988 to 1992, national turnout increased by 4.98 points from 50.11% to 55.09% yet turnout in South Carolina increased by 6.09 points, going from 38.91% to

<sup>39</sup>Table 4a. *Reported Voting and Registration of the Total Voting-Age Population by Sex, Race, and Hispanic Origin, for States: November 2000.* U.S. Census Bureau, at <http://www.census.gov/population/socdemo/voting/p20-542/tab04a.pdf>. All references in this paper to self-reported turnout of black and white voters come from these Census Bureau surveys of past presidential elections and will be referenced as "Census Bureau reports."

45%. This trend was repeated in 1992-1996 (national decline of 6.01 vs. decline of only 3.44 in South Carolina) and 1996-2000 (national increase of 2.22 vs. increase of 5.04 in South Carolina). If identification requirements affected voters, it would be logical to assume that national turnout trends would be offset in states with significant minority populations that arguably make it more difficult for an individual to vote by requiring identification. South Carolina's record does not support that assumption.

### **Virginia**

According to the 2000 Census, Virginia's population is 72.3% white and 19.6% black.<sup>40</sup> The percentage of the voting age population with driver's licenses in 2004 was 93.8%.<sup>41</sup> Virginia passed a voter identification requirement in 1999 that became effective for the 2000 Presidential election.<sup>42</sup> It requires a voter to present a voter registration card, a social security card, a driver's license, or any other photo identification issued by a government agency or employer. If the voter has none of these forms of identification, he can sign an affidavit attesting to his identity. Virginia does not keep statistics on the number of voters who complete such an affidavit in lieu of presenting a form of identification. Like South Carolina, however, Virginia's turnout does not substantiate any claim that having an identification or affidavit completion requirement intimidates voters and affects turnout.

In the 1996-2000 period when the national turnout increased 2.22 points from 49.08% to 51.3% and Virginia's identification requirement became effective, Virginia's overall turnout increased 5.46 points, going from 47.54% to 53%. Even after imposing a new identification requirement, Virginia's turnout increased at *twice* the rate of the national turnout. Virginia ranked 29<sup>th</sup> in turnout in the country. According to Census survey reports, the turnout of black voters in Virginia in comparison to the VAP of blacks dipped slightly, going from 53.3% in 1996 to 52.7% in 2000. The .5 difference between these numbers, however, is within the margin of error of the surveys. Although this study has only examined turnout in presidential elections, it should be noted that reported black turnout in the 1998 congressional election in Virginia according to the Census Bureau was 23.8%; yet in the 2002 congressional election, after implementation of the voter identification requirement, reported black turnout in the state was 27.2%, 3.4 percentage points higher.

### **Georgia**

According to 2000 Census figures, Georgia has a population that is 65.1% white and 28.7% black.<sup>43</sup> The percentage of the voting age population with driver's licenses in 2004 according to Federal Highway Administration statistics when compared to Census reports was

---

<sup>40</sup> *State and County Quick Facts: Virginia*, U.S. Census Bureau, <http://quickfacts.census.gov/qfd/states/51000.html>.

<sup>41</sup> Federal Highway Administration, *Highway Statistics*, 2004.

<sup>42</sup> VA. CODE §42.2-643.

<sup>43</sup> *State and County Quick Facts: Georgia*, U.S. Census Bureau, <http://quickfacts.census.gov/qfd/states/13000.html>.

89.8%.<sup>44</sup> Georgia's controversial 2005 photo identification law was actually an amendment to an existing state statute, reducing the number of acceptable forms of identification from 17 to six. In 1997, Georgia first imposed an identification requirement, including both photo identification and a lengthy list of acceptable non-photo identification documents with an affidavit exception.<sup>45</sup> It was effective for the 1998 Congressional election and was first effective for a presidential election in 2000. Under the 2005 amendment, permissible documents are a driver's license, a federal or state government photo identification, a passport, a military photo identification or a tribal photo identification. The affidavit exemption was eliminated. Discussion of the amended version of the statute will follow a discussion of the effect of the earlier identification law.

Turnout in Georgia has historically been amongst the lowest in the country. In the 1996-2000 period when the national turnout increased by 2.22 points and Georgia's identification requirement became effective, Georgia's turnout *increased* 1.37 points, going from 42.43% to 43.8%. In comparing that increase with the increase/decrease in turnout of all other states, Georgia ranked 37<sup>th</sup> in the country, ahead of Indiana which suffered a 3.73 point decline in turnout and behind Alaska with a 9.56 point increase in turnout from 1996 to 2000 (the largest increase in turnout of any state). Given Georgia's large minority population, a significant decrease in turnout in the 2000 election would have been expected if the assumptions underlying objections to identification requirements are valid. However, Georgia's turnout *increased* although not at as great a rate as the national increase.

---

<sup>44</sup>Federal Highway Administration, Highway Statistics, 2004.

<sup>45</sup>GA. CODE §21-2-417.

Additionally, according to a Census Bureau survey, a *higher* percentage of blacks than whites reported voting in the 2000 election: 51.6% vs. 48.3%.<sup>46</sup> This compares to a Census report for the 1996 election that shows 45.6% of blacks voted and 52.3% of whites voted.<sup>47</sup> Therefore, the percentage of blacks reporting voting in comparison to the black VAP actually increased by 6 points *after* identification requirements became effective. It appears that black voters were not affected by Georgia's identification requirements in the first presidential election after the law became effective. In the 2004 election, Georgia's total turnout rate increased 7 percentage points from the 2000 election, the tenth largest increase in the nation according to the Committee for the Study of the American Electorate. Even with the state's identification requirement, the Census Bureau survey shows that black voters again reported voting at a higher rate than whites in the 2004 election, 54.4% vs. 53.6%, an increase over their turnout in the 2000 election.

**Census Survey of Turnout of VAP by Race**  
***Georgia***

<i>Year</i>	<i>White</i>	<i>Black</i>
1996	52.3%	45.6%
2000	48.3%	51.6%
2004	53.6%	54.4%

Because Georgia is covered by Section 5 of the Voting Rights Act,<sup>48</sup> the state was required to submit the 2005 amendment requiring photo identification to the Department of Justice ("DOJ") before it became effective. DOJ reviews such submissions under a retrogression standard, i.e., will the voting change disproportionately affect minority voters and put them in a worse position than under the current law. DOJ precleared the law, finding no discriminatory effect on minority voters, and explained the reasons for its preclearance in a letter to Senator Christopher Bond on October 7, 2005.<sup>49</sup> This letter provides valuable information on the question of how many voters possess photo identification and whether there is any significant racial disparity. In fact, the letter states that on the primary claim that "African-American citizens in the State are less likely than white citizens to have the requisite photo identification," that assertion "is not true." DOJ made the following findings:

- Georgia's Department of Driver Services ("DDS") showed 6.4 million photo identification holders, very close to the 6.5 million VAP projected by the Census Bureau, far larger than the 4.5 million registered voters in Georgia. The Census

<sup>46</sup> Census Bureau reports.

<sup>47</sup> Census Bureau reports.

<sup>48</sup> 42 U.S.C. §1973c.

<sup>49</sup> Letter of October 7, 2005, from William E. Moschella, to Sen. Christopher S. Bond. This letter is available on DOJ's website at [http://www.usdoj.gov/crt/voting/misc/ga\\_id\\_bond\\_ltr.htm](http://www.usdoj.gov/crt/voting/misc/ga_id_bond_ltr.htm). The discussion of the preclearance in this paper is based solely on publicly available information and documents.

projection also included ineligible voters such as 50,000 prisoners and 228,000 illegal aliens.

- DDS had racial data for 60% of the card holders – the card holders who register to vote when they apply for a license. 28% of those card holders were black, slightly higher than the black percentage of the VAP in Georgia, indicating that of the DDS applicants who register to vote, blacks hold DDS identification at a *slightly higher* rate than white Georgians.
- Student photo identification issued by all Georgia state colleges are acceptable under the amended law and data from the university system showed that black students represented 26.8% of public college students, slightly more than their share of the state VAP in 2000.
- 2000 Census data showed that 19.4% of blacks worked for the government at the local, state, or federal level in Georgia, versus only 14.3% of whites. Blacks therefore have greater access to government employee identification.

Georgia also established a mobile bus system to provide DDS identification cards to locations remote from DDS offices and provided such cards to indigents for free. Despite all of these findings, a federal court issued an injunction against implementation of the law.<sup>50</sup> However, the court did *not* find any violation of the Voting Rights Act; the judge based his injunction on the Equal Protection clause due to problems the law would supposedly cause for elderly and poor voters (not minorities), and the 24<sup>th</sup> Amendment prohibition against poll taxes despite the state identification card being free for indigents. The judge granted a preliminary injunction against the statute in a 120-page slip opinion issued two days after the hearing on the matter. Since this paper is concerned with turnout results, an in-depth analysis of this court opinion will not be presented. However, the court's legal analysis is deeply flawed, particularly its view that incidental costs of obtaining a photo identification constitute a "poll tax." This is discussed at length in the Indiana decision cited later in this paper, where the court correctly noted that "the imposition of tangential burdens does not transform a regulation into a poll tax."<sup>51</sup>

The Georgia legislature amended the law in 2006 to make the state identification card free to any voter who requested one, without having to declare indigence, and authorized every county in the state (not just DDS offices) to issue photo identification cards. Despite these changes, the same federal judge issued a 193-page slip opinion again only two days after a hearing enjoining implementation of the amended statute.<sup>52</sup> However, this opinion was based on the short time

<sup>50</sup> *Common Cause v. Billups*, 406 F.Supp.2d 1326 (N.D. Ga. 2005). In what may have been forum shopping, this lawsuit was not filed in the state capitol of Atlanta where the law was passed by the legislature and signed by the governor. It was filed in Rome, Georgia, where there is only one federal judge. The named defendant, Secretary of State Cathy Cox, also stated on numerous occasions, including during her testimony, her opposition to the law. See Letter from Secretary of State Cathy Cox to Governor Sonny Perdue, April 8, 2005, available at <http://www.aclu.org/VotingRights/VotingRights.cfm?ID=18652&c=168>; 406 F.Supp.2d at 6-8.

<sup>51</sup> *Indiana Democratic Party v. Rokita*, No. 1:05-0634 (S.D. Ind. April 14, 2006), slip op. at 90.

<sup>52</sup> *Common Cause v. Billups*, No. 4:05-00201 (N.D. Ga. July 14, 2006).

remaining before the July 18<sup>th</sup> primary, the court holding that there was not sufficient time before the primary for individuals to obtain a photo identification or for the state to educate the public about this requirement.<sup>53</sup>

In June, the Secretary of State also released a statement claiming that a comparison of the state's voter registration roll with the state's driver's license list revealed 676,000 registered voters without a driver's license.<sup>54</sup> This analysis, however, was deeply flawed, suffering from many of the same shortcomings as the expert analysis submitted to a federal court in the Indiana voter identification lawsuit that is discussed below. Most importantly, despite her access to other state records, the Secretary of State only compared the voter registration list to driver's license records, and did not run a data matching program with other available state records on photo identification cards acceptable under the law such as student identification cards issued by the state university system or employee identification cards issued by the state and local governments.<sup>55</sup> Individuals on the list without a social security number were shown as "not having a valid Georgia driver's license or DDS-issued Photo ID card."<sup>56</sup> She also failed to eliminate the names of military and overseas voters who are not subject to the identification requirements – Georgia has several large military installations and local election officials can identify military and overseas voters from their past applications for absentee ballots under the Uniformed and Overseas Citizens Absentee Voting Act.<sup>57</sup> The problems with Secretary Cox's list of registered voters who supposedly did not have photo identification cards was vividly illustrated by the fact that it mistakenly included a member of the state election board, relatives of two other members of the board (all of whom have photo identification)<sup>58</sup> and, according to the testimony of the vice-chair of the state election board at the court hearing, included the federal judge in the voter identification case.

### *Louisiana*

According to the 2000 Census, Louisiana has a population that is 63.9% white and 32.5% black.<sup>59</sup> The percentage of the voting age population with driver's licenses in 2004 was 95.9%.<sup>60</sup> In 1997, Louisiana passed Act 779 amending the election code to require voters to identify

---

<sup>53</sup> *Id.* at 169. The court also changed its mind on the issue of a poll tax, adopting the analysis of the Indiana decision and holding that providing identification cards without charge eliminated the claim that it was a poll tax despite the incidental costs involved. *Id.* at 177.

<sup>54</sup> "Demographic Analysis Shows that Registered Voters Lacking a Driver's License or State-Issued Georgia ID Card are Disproportionately Elderly and Minority," Press Release of Secretary of State Cathy Cox, June 23, 2006, available at <http://www.sos.state.ga.us/pressrel/062306.htm>.

<sup>55</sup> *Billups*, slip op. at 129.

<sup>60</sup> Federal Highway Administration, Highway Statistics, 2004.

themselves with a driver's license, other photo identification, or by completing an affidavit.<sup>61</sup> It became effective on August 15, 1997.<sup>62</sup>

During the 1984-2000 period, Louisiana's turnout was higher than the national turnout. Turnout ranged from a low of 1.17 percentage points greater than the national turnout in 1988 to a high of 7.9 points greater in 1996. It was 2.9 points greater in 2000, after identification requirements became effective. Of the five elections, the 2.9 point increase was the third largest. Two other elections (1984 and 1988) had smaller increases. A Census survey reveals that in the 2000 election, 66.4% of the white VAP reported voting and 63.2% of the black VAP reported voting.<sup>63</sup> This compares to a Census report for the 1996 election that shows 62.6% of the white VAP voted and 60.9% of the black VAP voted.<sup>64</sup> Thus, reported turnout of black voters in comparison to the black VAP increased by 2.3 points *after* the identification requirement became effective.<sup>65</sup> Although Louisiana's turnout in the 2004 election as 2.6 points below the total national turnout rate, the 62.1% turnout reported by black voters was 5.8 points *above* the reported national rate of black turnout of 56.3%. One can conclude that black voters in Louisiana have not been detrimentally affected by the state's identification requirements.

**Census Survey of Turnout of VAP by Race**  
*Louisiana*

<i>Year</i>	<i>White</i>	<i>Black</i>
1996	62.6%	60.9%
2000	66.4%	63.2%
2004	64%	62.1%

***Other States – Alabama and Florida***

<sup>61</sup>LA. REV. STAT. ANN. §18:562.

<sup>62</sup>Louisiana Office of the Attorney General, Op. No. 97-0458, October 24, 1997.

<sup>63</sup> Census Bureau reports.

<sup>64</sup> Census Bureau reports.

<sup>65</sup>With a black voting rate of 60.9% in 1996, Louisiana was 10.3 points above the national black participation rate of 50.6% of black VAP as reported by the Census Bureau.

Although it has experienced only one presidential election since implementing a new identification requirement, the experience of Alabama, another Southern state with a large minority population covered under the special provisions of Section 5 of the Voting Rights Act, should be mentioned. Alabama implemented a new voter identification requirement in 2003 similar to HAVA.<sup>66</sup> According to Department of Transportation statistics, 105.5% of the VAP in Alabama hold driver's licenses.<sup>67</sup> In the 2000 election, the Census Bureau reports that 57.2% of blacks voted; in 2004, after the new identification requirement was effective, 63.9% of blacks reported voting, an increase of 6.7 percentage points. Florida, which implemented an identification requirement in 1998 with a variety of acceptable identification documents, also experienced a steady increase in black voter turnout after the effective date of the statute.<sup>68</sup> It went from a reported black voter turnout of 40.5% in 1996 before the identification requirement, to a black turnout of 42.3% in 2000 and 44.5% in 2004 after the identification requirement was effective. Florida also has a very high rate of driver's licenses being held by the VAP in 2004 – almost 99%.

### ***Recently Adopted Laws***

#### ***Indiana***

Indiana passed a photo identification requirement in 2005 as Senate Enrolled Act No. 483. It requires all voters to present a valid photo identification issued either by Indiana or the United States that has a picture of the voter, his name, and an expiration date that is either current or expires after the date of the most recent general election.<sup>69</sup> The law does not apply to absentee voters who send their ballot through the mail or to voters who reside in nursing homes.

A voter without identification can vote a provisional ballot and has until the second Monday following election day to appear before county officials either with a photo identification or with an affidavit stating that he is indigent or has a religious objection to being photographed.<sup>70</sup> The Indiana Democratic Party filed suit against the state, claiming the identification requirement violated the 1<sup>st</sup> and 14<sup>th</sup> Amendments, 42 U.S.C. §1971, and the portions of the Indiana Constitution.

In a ruling on April 14, 2006, a federal judge denied the plaintiffs' motions for summary judgment and granted judgment for the state, holding that the identification requirement is "a constitutionally-valid, reasonable time, place, and manner restriction on voting and on voters."<sup>71</sup> The judge's characterization of the plaintiffs' case was caustic. She stated that they had "not introduced evidence of a single, individual Indiana resident who will be unable to vote...or who

---

<sup>66</sup> ALA. CODE § 17-10A-1.

<sup>67</sup> This may be due to Alabama residents who hold both a personal and commercial driver's license.

<sup>68</sup> FLA. STAT. §101.043.

<sup>69</sup> IND. CODE §3-11-8-25.1 and §3-5-2-40.5.

<sup>70</sup> IND. CODE §§3-11.7-5-1; 3-11-7.5-2.5

<sup>71</sup> *Indiana Democratic Party v. Rokita*, No. 1:05-0634 (S.D. Ind. April 14, 2006), slip op. at 5.

will have his or her right to vote unduly burdened.”<sup>72</sup> The plaintiffs moved a political debate in the Indiana General Assembly into a judicial forum, having “failed to adapt their arguments to the legal arena” and basing their case “on little more than their own personal and political preferences.”<sup>73</sup>

The judge did not even allow the expert report prepared for the plaintiffs into evidence because she viewed “the analysis and conclusions set out in it as utterly incredible and unreliable.”<sup>74</sup> The report attempted to compare the voter registration list with driver’s license files, but the court held it failed to account for voter roll inflation, compared demographic data from different years without qualification or analysis, drew obviously inaccurate and illogical conclusions, and failed to qualify the statistical estimates based on socioeconomic data. To the extent any parts of the report could be considered reliable, they actually strengthened the state’s case since, for example, the report showed “an estimated 99% of Indiana’s voting age population already possesses the necessary photo identification to vote.”<sup>75</sup> That perhaps explains why, when Indiana held its federal primary in May after the court’s ruling, “[a]cross Indiana, there were no reports of problems caused by the new requirement, with most areas reporting they did not have to turn away a single voter.”<sup>76</sup>

The court also noted that the supposedly “common sense” claim that persons from lower socioeconomic levels will have a harder time obtaining photo identification because they do not drive or own cars, or have limited financial ability, is not true. To the extent the expert’s socioeconomic analysis was accurate, it actually indicated “that voters without photo identification are not significantly more likely to come from low income segments of society.”<sup>77</sup>

### *Arizona*

Arizona passed Proposition 200 in the 2004 general election. Because Arizona is covered by Section 5 of the Voting Rights Act, the law was also subject to review by DOJ as the Georgia identification law was - DOJ precleared the law without objection. In addition to requiring a voter to show either one identification card with his name, address and photo, or two identification documents with his name and address, Proposition 200 also amended Arizona Revised Statutes §16-166 to require anyone registering to vote to prove U.S. citizenship by providing certain documentation such as a driver’s license, birth certificate, passport, naturalization documents or any other “documents or methods of proof that are established pursuant to the Immigration Reform and Control Act of 1986.” This last standard is particularly

---

<sup>72</sup> *Id.* at 3.

<sup>73</sup> *Id.*

<sup>74</sup> *Id.* at 43. The report did not meet the reliability standard for expert opinions set out in Federal Rule of Evidence 702. As just one example of how flawed the report was, the expert claimed there were 989,000 registered voters in Indiana without driver’s licenses. When that number was added to the number of issued licenses (4,569,265), the total of 5,558,265 represents an “incredible 123% of Indiana’s entire voting age population as determined by the Census.” This was obviously wrong. *Id.* at 48.

<sup>75</sup> *Id.* at 51.

<sup>76</sup> Dan Stockman, “Election Day Calm as Voters Comply With Photo ID rule,” *Journal Gazette*, May 3, 2006.

<sup>77</sup> *Rokita* at 53.

noteworthy, since the state will accept any document that the federal government accepts as proof of citizenship. This is a reference to the Employment Eligibility Verification form (Form I-9), prepared by the Department of Homeland Security, which every employer in the United States is responsible for completing on every new employee to verify their employment eligibility as either a citizen or a noncitizen legally present and able to work in the U.S.<sup>78</sup> This requirement makes it difficult for litigants to argue that the state is acting unreasonably or somehow violating federal voting rights laws since Arizona is imposing the same requirement on individuals registering to vote that the federal government imposes on individuals who want to become employed.

However, a lawsuit was filed claiming the Arizona law violates the National Voter Registration Act. On June 19, 2006, a federal judge issued an order refusing to grant a preliminary injunction, correctly holding that “Arizona’s proof of citizenship requirement does not conflict with the plain language of the NVRA” and that “the NVRA does not act as a ceiling preventing states from enforcing their own laws regarding voter qualifications.”<sup>79</sup>

### **Missouri**

The Missouri Voter Protection Act, Senate bills 1014 & 730, requires voters to show photo identification issued by the state or the U.S. government, including the military. Voters with disabilities, sincerely held religious beliefs, and those born before January 1, 1941, are exempt if they execute an affidavit. All nondriver’s license identification cards are issued by the state for free and mobile units will go to nursing homes and other places accessible to the elderly and disabled. Two lawsuits that have been consolidated have been filed against the law in state court claiming violations of state law, but no significant rulings have occurred as this paper goes to print. *Weinschenk and Jackson County v. Missouri*, No. 06AC-00656 and 587 (Cir. Ct. of Cole County, Mo.).

In a very interesting analysis filed in the lawsuit in support of two intervenors, Jeffrey Milyo and Marvin Overby of the University of Missouri evaluated the number of eligible voters in Missouri who may not have photo identification. They estimate that the number of eligible voters out of a VAP of 4.5 million who do not have photo identification issued by Missouri’s motor vehicles department and who are not residents of a nursing home (and thus exempt) was only about 19,000 persons. Comparing the voting age population with the number of identification cards issued by the state yields an estimate of only 51,064 voting age persons without such identification. However, after correcting the Census VAP estimate by taking out ineligible voters such as felons, the mentally incompetent, and individuals who do not meet residency requirements, as well as applying Missouri’s statewide average voter turnout rate, they concluded that the “upperbound estimate for the number of persons who are eligible and may

---

<sup>78</sup> The I-9 Form and information about its use is available at <http://www.uscis.gov/graphics/formsfee/forms/i-9.htm>.

<sup>79</sup> *Gonzalez v. Arizona*, No. 06-1268 (D. Ariz. June 19, 2006), slip op. at 9, 12. When Arizona held its election in March, “[t]here were no widespread reports of problems Tuesday in the first elections held under the voter identification requirements of Proposition 200” Matthew Benson, “Proposition 200 Causes Few Headaches at Polls,” *Arizona Republic*, March 15, 2006

choose to obtain a new photo ID is 8,105 persons.”<sup>80</sup>

### ***Conclusion***

The turnout of voters in presidential elections in South Carolina, Virginia, Georgia and Louisiana, states with significant African-American populations, as well as in Alabama and Florida, reveals no evidence substantiating the claim that the turnout of minority voters is negatively affected by identification requirements for voters. Available data indicates that the overwhelming percentage of the voting age population, black and white, already have a form of photo identification. It is, therefore, highly unlikely that new and stricter identification requirements for voters will adversely affect the turnout of minority voters, especially given the fail-safe provisional voting requirements in affect across the country as required by HAVA. Many critics of HAVA’s identification requirements made exactly the same claims, and the turnout in the first presidential election after those requirements became effective saw an upsurge in black voting.

Given the numerous prosecutions for voter fraud that have occurred across the United States in recent years, the thousands of fraudulent voter registration forms submitted to election officials, the types of problems cited in the Wisconsin fraud investigation after the 2004 election, and registration and voting by noncitizens, requiring proof of citizenship to register and photo identification to vote is an important means of ensuring the integrity of our election process.<sup>81</sup> It is not a requirement that will prevent or deter minority voters from casting their ballots, but will help guarantee that their votes are not devalued by fraudulent or noncitizen voting.

*The opinions expressed in this article are those of the author and not those of his employer.*

---

<sup>80</sup> Affidavit of L. Marvin Overby, in Support of Intervenors, Dale L. Morris and Missouri Senator Delbert Scott, Exhibit B, “Report on Kathleen Weinschenk et al. v. State of Missouri et al. and Jackson County, Missouri v. State of Missouri (Consolidated),” p. 1, 3, and 5.

<sup>81</sup> Driver’s licenses should only be acceptable as voter identification if they are issued by a state in compliance with the REAL ID Act that requires proof of citizenship or a notation on the face of the card that the holder is not a citizen.

**ACT NUMBER E4019904; EAC CONTRACT NUMBER 06-04  
Personal Services Contract for Interim Expert Services**

**Background**

Section 241 of H.R. 1147 lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in elections for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

The EAC seeks to obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation. The EAC needs this expert to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two experts, who will work jointly to perform the work described below. This contract is a follow-on agreement to EAC Contract Number 05-66. That agreement for non-severable services expires February 15, 2006, without completion of the project. The originally estimated labor hours for this project were insufficient. As such, the EAC seeks to continue the work started in this previous contract but has changed the scope (or duties) of the contractor to limit project costs. This change is reflected in the scope of work section, below.

**Nature of the Appointment**

The EAC enters into this contract pursuant to its authority to contract for consultants and experts under 5 U.S.C. §3109 (See 42 U.S.C. §15324(b)). As such, this contract is for personal services and creates a limited employment relationship. (See 5 C.F.R. §304). The initial appointment under this agreement shall be for the intermittent employment of an expert as defined by 5 C.F.R. §304.102(d) and (e). The expert (hereinafter "contractor") shall work as required by the EAC, without a regularly scheduled tour of duty. Under no circumstances may contractor work more than 225 hours during the term of this agreement (5 C.F.R. §304.103(c)(2)(i)).

**Supervision and Management.**

The EAC Manager and Contracting Officer's Representative (COR) for this effort is Peggy Sims. Ms Sims will provide taskings, and authorize, supervise, review and approve all work and performance. She will also approve all labor hours on invoices and travel vouchers submitted for compensation under this agreement.

### **Period of Appointment.**

The appointment under this contract is temporary and shall be for a period of up to four months. The contract period shall begin February 26, 2006. The contract may be extended and contractor reappointed for an additional period (not exceed one year) upon agreement of both parties. (See 5 C.F.R. §304.103(c)).

### **Compensation**

The consultant shall be paid at a rate of \$111 per hour. Contractor shall perform the services prescribed by this agreement as directed by the COR on an intermittent basis. However, in any event, the contractor shall not work more than [41 hours] in either of the 2 two week periods that make up each four week pay period. Further, as aforementioned, the contractor may not work more than 225 hours during the term of this agreement. The dates of performance are flexible but shall be based upon the needs of the project and the EAC. COR shall provide contractor notice and authorization when performance under this agreement is required.

The consultant shall not incur overtime and is not eligible for premium pay under subchapter V of chapter 55 of title 5, United States Code. (5 C.F.R. §304.106(b)). The contractor, as an intermittent appointee, is also not entitled to sick or annual leave. Contractor will not receive compensation for Federal holidays when no work is performed. (5 C.F.R. §304.106(b)). The contractor shall not receive automatic adjustments of pay based upon 5 U.S.C. §5303. Contractor's pay rate may be increased at the sole discretion of the Contracting Officer, consistent with Federal regulations. Contractor may be reimbursed for other costs, such as local travel, consistent with this agreement if approved by the COR and submitted in writing via invoice.

### **Travel**

The contractor may be required to travel on a periodic, as needed basis, throughout the duration of their appointment. All travel must be pre-approved by the EAC COR. The contractor will be reimbursed for hotel and ground transportation costs, proper incidental expenses, and per diem while on official, pre-approved EAC travel. Compensation for travel shall be made in accordance with the rates set forth in the Federal Travel Regulation. The amount reimbursed for travel shall not exceed \$6,500 in Federal Fiscal Year 2006.

### **Release of Information**

As a result of the limited employment relationship created by this agreement, and pursuant to this agreement, you are required to follow all Federal laws and regulations as they relate to the release of agency documents and information. All research, information, documents and any other intellectual property (including but not limited to policies, procedures, manuals, and other work created at the request or otherwise while laboring for the EAC) shall be owned exclusively by the EAC, including copyright. All

such work product shall be turned over to the EAC upon completion of your appointment term or as directed by the EAC. The EAC shall have exclusive rights over this material. You may not release government information or documents without the express written permission of the EAC.

### **Compensation Procedures**

Compensation shall be made for work done (labor hours) by submitting invoices. Invoices shall be submitted every four weeks from the date of award. A week shall be from Sunday to Saturday. The first pay period shall begin February 26, 2006. Invoices must be submitted every 4 weeks when compensable work under this contract has been performed. The COR will provide the contractor with an invoice schedule, identifying each of the invoice periods, and model invoice forms. Invoices shall be delivered to the COR for review and approval. Each invoice shall:

- (1) Identify each day (by date) that work was performed and the number of labor hours performed that day. Briefly describe the nature of the work performed for that day;
- (2) State the total number of labor hours that have been expended under the agreement for the invoice period;
- (3) State the total number of hours worked for each of the two week periods that make up the total invoice time;
- (4) Provide a cumulative total of hours worked during the entire contract performance period (one year);
- (5) Submit, as a separate line item, all reimbursable travel costs for approval. The submission must provide dates of travel, receipts and other information as required by the Federal Travel Regulation.
- (6) Include the contractor's signature, affirming that information contained in the invoice is accurate.

### **Duty Location**

Contractor's duty station shall be his/her home or place of business. The contractor has access to and shall supply common office equipment to include telecommunications, internet access, a computer, office supplies, facsimile machine and common workplace software (including Microsoft Word, Project and Excel). All other resources will be provided by the EAC as needed and at its discretion.

### **Notices**

Any notice, given by any of the parties hereunder, shall be sufficient only if in writing and delivered in person or sent by telegraph, telegram, registered, or regular mail as follows:

To EAC: 1225 New York Avenue, Suite 1100, Washington, DC 20005,  
Attention: Contracting Officer Representative, Peggy Sims.

**To Contractor:** At EAC and at the Contractor's address shown on the Cover Page of this contract or to such other address as either of such parties shall designate by notice given as herein required. Notices hereunder shall be effective in accordance with this clause or on the effective date of the notice whichever is later.

**Areas of Responsibility (Statement of Work)**

1. Submit a revised work plan reflecting revised due dates for deliverables.
2. Develop a comprehensive description of what constitutes voting fraud and voter intimidation, in the context of Federal elections.
3. Using the description developed for 2 above, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
4. Work in consultation with other EAC staff and the Commissioners to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The Working Group will be provided with the results of the consultant's research (discussed in 2 and 3, above) as background information. The consultant will be responsible for developing a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.
5. The consultant shall be responsible for creating a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future EAC research resulting from this effort.

**Terms and Conditions**

The following additional terms and conditions shall apply to this personal services contract:

**a. Federal Acquisition Regulation Clauses Incorporated by Reference:**

This contract incorporates the following clauses by reference with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. These clauses may be obtained on the internet at <http://farsite.hill.af.mil/>.

- 52.252-4 Alterations in Contract (APR 1984)

**b. Federal Acquisition Regulation Clauses in Full Text:**

***Contract Termination (FAR 52.249-12)***

The Government may terminate this contract at any time upon at least 15 days' written notice by the Contracting Officer to the Contractor. The Contractor, with the written consent of the Contracting Officer, may terminate this contract upon at least 15 days' written notice to the Contracting Officer. (End of Clause)

***Site Visit (FAR 52.237-1)***

Offerors or quoters are urged and expected to inspect the site where services are to be performed and to satisfy themselves regarding all general and local conditions that may affect the cost of contract performance, to the extent that the information is reasonably obtainable. In no event shall failure to inspect the site constitute grounds for a claim after contract award. (End of Clause)

***Protection of Government Buildings, Equipment, and Vegetation (FAR 52.237-2)***

The Contractor shall use reasonable care to avoid damaging existing buildings, equipment, and vegetation on the Government installation. If the Contractor's failure to use reasonable care causes damage to any of this property, the Contractor shall replace or repair the damage at no expense to the Government as the Contracting Officer directs. If the Contractor fails or refuses to make such repair or replacement, the Contractor shall be liable for the cost, which may be deducted from the contract price. (End of Clause)

***Covenant Against Contingent Fees (FAR 52.203-5)***

(a) The Contractor warrants that no person or agency has been employed or retained to solicit or obtain this contract upon an agreement or understanding for a contingent fee, except a bona fide employee or agency. For breach or violation of this warranty,

the Government shall have the right to annul this contract without liability or, in its discretion, to deduct from the contract price or consideration, or otherwise recover, the full amount of the contingent fee.

(b) "Bona fide agency," as used in this clause, means an established commercial or selling agency maintained by a contractor for the purpose of securing business, that neither exerts nor proposes to exert improper influence to solicit or obtain Government contracts nor holds itself out as being able to obtain any Government contract or contracts through improper influence.

"Bona fide employee," as used in this clause, means a person, employed by a contractor and subject to the contractor's supervision and control as to time, place, and manner of performance, who neither exerts nor proposes to exert improper influence to solicit or obtain Government contracts nor holds itself out as being able to obtain any Government contract or contracts through improper influence.

"Contingent Fee," as used in this clause, means any commission, percentage, brokerage, or other fee that is contingent upon the success that a person or concern has in securing a Government contract.

"Improper influence," as used in this clause, means any influence that induces or tends to induce a Government employee or officer to give consideration or to act regarding a Government contract on any basis other than the merits of the matter.  
(End of Clause)

**Disputes (FAR 52.233-1), Alternate I**

(a) This contract is subject to the Contract Disputes Act of 1973, as amended (41 U.S.C. 601-613).

(b) Except as provided in the Act, all disputes arising under or relating to this contract shall be resolved under this clause.

(c) "Claim," as used in this clause, means a written demand or written assertion by one of the contracting parties seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of contract terms, or other relief arising under or relating to this contract. However, a written demand or written assertion by the Contractor seeking the payment of money exceeding \$100,000 is not a claim under the Act until certified. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

(d) (1) A claim by the Contractor shall be made in writing and, unless otherwise stated in this contract, submitted within 6 years after accrual of the claim to the Contracting Officer for a written decision. A claim by the Government against the Contractor shall be subject to a written decision by the Contracting Officer.

(2)

(i) The contractor shall provide the certification specified in paragraph (d)(2)(ii) of this clause when submitting any claim exceeding \$100,000.

(ii) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

(iii) The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Contractor believes the Government is liable; and that I am duly authorized to certify the claim on behalf of the Contractor."

(3) The certification may be executed by any person duly authorized to bind the Contractor with respect to the claim.

(e) For Contractor claims of \$100,000 or less, the Contracting Officer must, if requested in writing by the Contractor, render a decision within 60 days of the request. For Contractor-certified claims over \$100,000, the Contracting Officer must, within 60 days, decide the claim or notify the Contractor of the date by which the decision will be made.

(f) The Contracting Officer's decision shall be final unless the Contractor appeals or files a suit as provided in the Act.

(g) If the claim by the Contractor is submitted to the Contracting Officer or a claim by the Government is presented to the Contractor, the parties, by mutual consent, may agree to use alternative dispute resolution (ADR). If the Contractor refuses an offer for ADR, the Contractor shall inform the Contracting Officer, in writing, of the Contractor's specific reasons for rejecting the offer.

(h) The Government shall pay interest on the amount found due and unpaid from

(1) the date that the Contracting Officer receives the claim (certified, if required); or

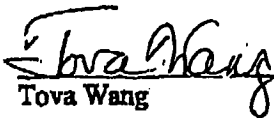

(2) the date that payment otherwise would be due, if that date is later, until the date of payment.

With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Contracting Officer initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury as provided in the Act, which is applicable to the period during which the Contracting Officer receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

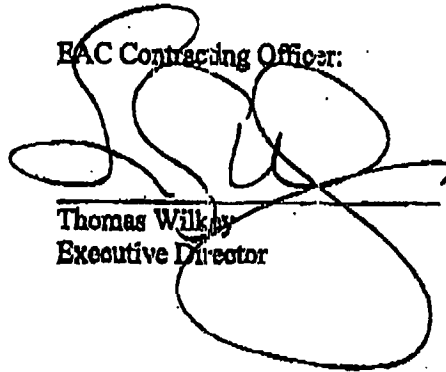

(i) The Contractor shall proceed diligently with performance of this contract, pending final resolution of any request for relief, claim, appeal, or action arising under or relating to the contract, and comply with any decision of the Contracting Officer.  
(End of Clause)

By signing below, contractor agrees to furnish the personal services set forth or otherwise identified, above, consistent with the conditions noted above and for the consideration stated herein.

Contractor:

  
Tova Wang

EAC Contracting Officer:

  
Thomas Wilkey  
Executive Director

**ACT NUMBER E4019905; EAC CONTRACT NUMBER 06-05**  
**Personal Services Contract for Interim Expert Services**

**Background**

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in elections for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

The EAC seeks to obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation. The EAC needs this expert to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two experts, who will work jointly to perform the work described below. This contract is a follow-on agreement to EAC Contract Number 05-67. That agreement for non-severable services expires February 25, 2006, without completion of the project. The originally estimated labor hours for the project were insufficient. As such, the EAC seeks to continue the work started in the previous contract but has changed the scope (or duties) of the contractor to limit project costs. This change is reflected in the scope of work section, below.

**Nature of the Appointment**

The EAC enters into this contract pursuant to its authority to contract for consultants and experts under 5 U.S.C. §3109 (See 42 U.S.C. §15324(b)). As such, this contract is for personal services and creates a limited employment relationship. (See 5 C.F.R. §304). The initial appointment under this agreement shall be for the intermittent employment of an expert as defined by 5 C.F.R. §304.102(d) and (e). The expert (hereinafter "contractor") shall work as required by the EAC, without a regularly scheduled tour of duty. Under no circumstances may contractor work more than 225 hours during the term of this agreement (5 C.F.R. §304.103(c)(2)(i)).

**Supervision and Management.**

The EAC Manager and Contracting Officer's Representative (COR) for this effort is Peggy Sims. Ms. Sims will provide taskings, and authorize, supervise, review and approve all work and performance. She will also approve all labor hours on invoices and travel vouchers submitted for compensation under this agreement.

### **Period of Appointment.**

The appointment under this contract is temporary and shall be for a period of up to four months. The contract period shall begin February 26, 2006. The contract may be extended and contractor reappointed for an additional period (not exceed one year) upon agreement of both parties. (See 5 C.F.R. §304.103(c)).

### **Compensation**

The consultant shall be paid at a rate of \$111 per hour. Contractor shall perform the services prescribed by this agreement as directed by the COR on an intermittent basis. **However, in any event, the contractor shall not work more that [41 hours] in either of the 2 two week periods that make up each four week pay period.** Further, as aforementioned, the contractor may not work more than 225 hours during the term of this agreement. The dates of performance are flexible but shall be based upon the needs of the project and the EAC. COR shall provide contractor notice and authorization when performance under this agreement is required.

The consultant shall not incur overtime and is not eligible for premium pay under subchapter V of chapter 55 of title 5, United States Code. (5 C.F.R. §304.106(b)). The contractor, as an intermittent appointee, is also not entitled to sick or annual leave. Contractor will not receive compensation for Federal holidays when no work is performed. (5 C.F.R. §304.106(b)). The contractor shall not receive automatic adjustments of pay based upon 5 U.S.C. §5303. Contractor's pay rate may be increased at the sole discretion of the Contracting Officer, consistent with Federal regulations. Contractor may be reimbursed for other costs, such as local travel, consistent with this agreement if approved by the COR and submitted in writing via invoice.

### **Travel**

The contractor may be required to travel on a periodic, as needed basis, throughout the duration of their appointment. All travel must be pre-approved by the EAC COR. The contractor will be reimbursed for hotel and ground transportation costs, proper incidental expenses, and per diem while on official, pre-approved EAC travel. Compensation for travel shall be made in accordance with the rates set forth in the Federal Travel Regulation. The amount reimbursed for travel shall not exceed \$3,500 in Federal Fiscal Year 2006.

### **Release of Information**

As a result of the limited employment relationship created by this agreement, and pursuant to this agreement, you are required to follow all Federal laws and regulations as they relate to the release of agency documents and information. All research, information, documents and any other intellectual property (including but not limited to policies, procedures, manuals, and other work created at the request or otherwise while laboring for the EAC) shall be owned exclusively by the EAC, including copyright. All

such work product shall be turned over to the EAC upon completion of your appointment term or as directed by the EAC. The EAC shall have exclusive rights over this material. You may not release government information or documents without the express written permission of the EAC.

### **Compensation Procedures**

Compensation shall be made for work done (labor hours) by submitting invoices. Invoices shall be submitted every four weeks from the date of award. A week shall be from Sunday to Saturday. The first pay period shall begin February 26, 2006. Invoices must be submitted every 4 weeks when compensable work under this contract has been performed. The COR will provide the contractor with an invoice schedule, identifying each of the invoice periods, and model invoice forms. Invoices shall be delivered to the COR for review and approval. Each invoice shall:

- (1) Identify each day (by date) that work was performed and the number of labor hours performed that day. Briefly describe the nature of the work performed for that day;
- (2) State the total number of labor hours that have been expended under the agreement for the invoice period;
- (3) State the total number of hours worked for each of the two week periods that make up the total invoice time;
- (4) Provide a cumulative total of hours worked during the entire contract performance period (one year);
- (5) Submit, as a separate line item, all reimbursable travel costs for approval. The submission must provide dates of travel, receipts and other information as required by the Federal Travel Regulation.
- (6) Include the contractor's signature, affirming that information contained in the invoice is accurate.

### **Duty Location**

Contractor's duty station shall be his/her home or place of business. The contractor has access to and shall supply common office equipment to include telecommunications, internet access, a computer, office supplies, facsimile machine and common workplace software (including Microsoft Word, Project and Excel). All other resources will be provided by the EAC as needed and at its discretion.

### **Notices**

Any notice, given by any of the parties hereunder, shall be sufficient only if in writing and delivered in person or sent by telegraph, telegram, registered, or regular mail as follows:

To EAC: 1225 New York Avenue, Suite 1100, Washington, DC 20005,  
Attention: Contracting Officer Representative, Peggy Sims.

**To Contractor:** At EAC and at the Contractor's address shown on the Cover Page of this contract or to such other address as either of such parties shall designate by notice given as herein required. Notices hereunder shall be effective in accordance with this clause or on the effective date of the notice whichever is later.

**Areas of Responsibility (Statement of Work)**

1. Submit a revised work plan reflecting revised due dates for deliverables.
2. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections.
3. Using the description developed for 2 above, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
4. Work in consultation with other EAC staff and the Commissioners to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The Working Group will be provided with the results of the consultant's research (discussed in 2 and 3, above) as background information. The consultant will be responsible for developing a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.
5. The consultant shall be responsible for creating a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future EAC research resulting from this effort.

**Terms and Conditions**

The following additional terms and conditions shall apply to this personal services contract:

a. Federal Acquisition Regulation Clauses Incorporated by Reference:

This contract incorporates the following clauses by reference with the same force and effect as if they were given in full text. Upon request, the Contracting Officer will make their full text available. These clauses may be obtained on the internet at <http://farsite.hill.af.mil/>.

52.203-7      Anti-Kickback Procedures (JUL 1995)

52.203-12    Limitation on Payments to Influence Certain Federal Transactions (Sept 2005)

- 52.215-2      Audit and Records -- Negotiation (Jun 1999)
- 52.224-1      Privacy Act Notification (APR 1984)
- 52.224-2      Privacy Act (APR 1984)
- 52.232-17     Interest (JUN 1996)
- 52.246-25     Limitation of Liability-Services (FEB 1997)
- 52.252-4      Alterations in Contract (APR 1984)

b. Federal Acquisition Regulation Clauses in Full Text:

*Contract Termination (FAR 52.249-12)*

The Government may terminate this contract at any time upon at least 15 days' written notice by the Contracting Officer to the Contractor. The Contractor, with the written consent of the Contracting Officer, may terminate this contract upon at least 15 days' written notice to the Contracting Officer. (End of Clause)

*Site Visit (FAR 52.237-1)*

Offerors or quoters are urged and expected to inspect the site where services are to be performed and to satisfy themselves regarding all general and local conditions that may affect the cost of contract performance, to the extent that the information is reasonably obtainable. In no event shall failure to inspect the site constitute grounds for a claim after contract award. (End of Clause)

*Protection of Government Buildings, Equipment, and Vegetation (FAR 52.237-2)*

The Contractor shall use reasonable care to avoid damaging existing buildings, equipment, and vegetation on the Government installation. If the Contractor's failure to use reasonable care causes damage to any of this property, the Contractor shall replace or repair the damage at no expense to the Government as the Contracting Officer directs. If the Contractor fails or refuses to make such repair or replacement, the Contractor shall be liable for the cost, which may be deducted from the contract price. (End of Clause)

*Covenant Against Contingent Fees (FAR 52.203-5)*

(a) The Contractor warrants that no person or agency has been employed or retained to solicit or obtain this contract upon an agreement or understanding for a contingent fee, expect a bona fide employee or agency. For breach or violation of this warranty,

the Government shall have the right to annul this contract without liability or, in its discretion, to deduct from the contract price or consideration, or otherwise recover, the full amount of the contingent fee.

(b) "Bona fide agency," as used in this clause, means an established commercial or selling agency, maintained by a contractor for the purpose of securing business, that neither exerts nor proposes to exert improper influence to solicit or obtain Government contracts nor holds itself out as being able to obtain any Government contract or contracts through improper influence.

"Bona fide employee," as used in this clause, means a person, employed by a contractor and subject to the contractor's supervision and control as to time, place, and manner of performance, who neither exerts nor proposes to exert improper influence to solicit or obtain Government contracts nor holds itself out as being able to obtain any Government contract or contracts through improper influence.

"Contingent Fee," as used in this clause, means any commission, percentage, brokerage, or other fee that is contingent upon the success that a person or concern has in securing a Government contract.

"Improper influence," as used in this clause, means any influence that induces or tends to induce a Government employee or officer to give consideration or to act regarding a Government contract on any basis other than the merits of the matter.  
(End of Clause)

*Disputes (FAR 52.233-1), Alternate I*

(a) This contract is subject to the Contract Disputes Act of 1978, as amended (41 U.S.C. 601-613).

(b) Except as provided in the Act, all disputes arising under or relating to this contract shall be resolved under this clause.

(c) "Claim," as used in this clause, means a written demand or written assertion by one of the contracting parties seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of contract terms, or other relief arising under or relating to this contract. However, a written demand or written assertion by the Contractor seeking the payment of money exceeding \$100,000 is not a claim under the Act until certified. A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

(d) (1) A claim by the Contractor shall be made in writing and, unless otherwise stated in this contract, submitted within 6 years after accrual of the claim to the Contracting Officer for a written decision. A claim by the Government against the Contractor shall be subject to a written decision by the Contracting Officer.

(2)

(i) The contractor shall provide the certification specified in paragraph (d)(2)(iii) of this clause when submitting any claim exceeding \$100,000.

(ii) The certification requirement does not apply to issues in controversy that have not been submitted as all or part of a claim.

(iii) The certification shall state as follows: "I certify that the claim is made in good faith; that the supporting data are accurate and complete to the best of my knowledge and belief; that the amount requested accurately reflects the contract adjustment for which the Contractor believes the Government is liable; and that I am duly authorized to certify the claim on behalf of the Contractor."

(3) The certification may be executed by any person duly authorized to bind the Contractor with respect to the claim.

(e) For Contractor claims of \$100,000 or less, the Contracting Officer must, if requested in writing by the Contractor, render a decision within 60 days of the request. For Contractor-certified claims over \$100,000, the Contracting Officer must, within 60 days, decide the claim or notify the Contractor of the date by which the decision will be made.

(f) The Contracting Officer's decision shall be final unless the Contractor appeals or files a suit as provided in the Act.

(g) If the claim by the Contractor is submitted to the Contracting Officer or a claim by the Government is presented to the Contractor, the parties, by mutual consent, may agree to use alternative dispute resolution (ADR). If the Contractor refuses an offer for ADR, the Contractor shall inform the Contracting Officer, in writing, of the Contractor's specific reasons for rejecting the offer.

(h) The Government shall pay interest on the amount found due and unpaid from

(1) the date that the Contracting Officer receives the claim (certified, if required); or

(2) the date that payment otherwise would be due, if that date is later, until the date of payment.

With regard to claims having defective certifications, as defined in FAR 33.201, interest shall be paid from the date that the Contracting Officer initially receives the claim. Simple interest on claims shall be paid at the rate, fixed by the Secretary of the Treasury as provided in the Act, which is applicable to the period during which the Contracting Officer receives the claim and then at the rate applicable for each 6-month period as fixed by the Treasury Secretary during the pendency of the claim.

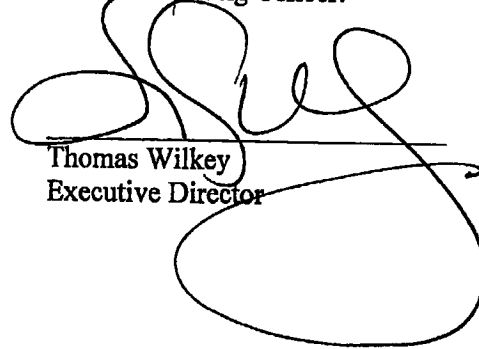

(i) The Contractor shall proceed diligently with performance of this contract, pending final resolution of any request for relief, claim, appeal, or action arising under or relating to the contract, and comply with any decision of the Contracting Officer.  
(End of Clause)

By signing below, contractor agrees to furnish the personal services set forth or otherwise identified, above, consistent with the conditions noted above and for the consideration stated herein.

**ACT NUMBER E4019697; EAC CONTRACT NUMBER 05-66**

**Consulting Services to Assist EAC in the Development of a Voting Fraud and Voter Intimidation Project**

**Background**

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in elections for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

The EAC seeks to obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation. The EAC needs this consultant to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. If so, the consultant would also be tasked to define the scope of the project and prepare a Statement of Work for the EAC to use for a subsequent competitive procurement. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two consultants, who will work jointly to perform the work described below.

**Nature of the Appointment**

The EAC enters into this contract pursuant to its authority to contract for consultants under 5 U.S.C. §3109 (See 42 U.S.C. §15324(b)). As such this contract is for personal services and creates a limited employment relationship. (See 5 C.F.R. §304). As a result of this unique relationship, and pursuant to this agreement, you are required to follow all Federal laws and regulations as they relate to the release of agency documents and information, travel and conduct. All research, information, documents and any other intellectual property, (including but not limited to policies, procedures, manuals, and other work created at the request or otherwise while laboring for the EAC) shall be owned exclusively by the EAC, including copyright. All such work product shall be turned over to the EAC upon completion of your appointment term or as directed by the EAC. The EAC shall have exclusive rights over this material. You may not release government information or documents without the express permission of the EAC.

**Supervision and Management.**

The EAC Project Manager for this effort is Margaret Sims, EAC Research Specialist. Ms. Sims will provide taskings, and supervise, review and approve all work and performance.

### **Period of Appointment, Compensation and Travel.**

The period of appointment under this contract is estimated at six months. The appointment shall constitute intermittent appointment (without a regularly scheduled tour of duty) per 5 C.F.R. §340.401(b). The consultant shall not incur overtime. The consultants shall not receive automatic adjustments of pay based upon 5 U.S.C. 5303. The consultants are not eligible for sick and annual leave, nor compensation for work performed on federal holidays. The Consultant is expected to work 450 hours during the estimated six month appointment period. These hours must be distributed evenly over the period so that the Consultant is working approximately, but no more than 20 hours per week. The consultant shall be paid at a rate of \$111 per hour. The dates of performance are flexible but shall be based upon the needs of the project and the EAC. The project at issue is sought to be completed within the sixth month period. The period of appointment shall continue until the project, outlined below, is completed.

Consultant's duty station shall be his/her home or place of business. The consultant has access to and shall supply common office equipment to include telecommunications, internet, a computer, office supplies, facsimile machine and common workplace software (including Microsoft Word and Excel). Other resources will be provided by the EAC as needed and at its discretion.

The Consultant is required to travel on a periodic, as needed basis, throughout the duration of their appointment. All travel must be pre-approved by the EAC per Federal Travel Regulations and EAC policy. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, proper incidental expenses, and per diem while on official, pre-approved EAC travel.

### **Areas of Responsibility**

1. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections.
2. Using the description developed above, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
3. Work in consultation with other EAC staff and the Commissioners to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The Working Group will be provided with the results of Tasks 1 and 2 as background information. The consultant will be responsible for developing a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.

4. The consultant shall be responsible for creating a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future research resulting from this effort.
5. Should the EAC decide to pursue one or more of the recommendations made in the report noted above, the consultant will be responsible for defining the appropriate project scope(s) and preparing Statement(s) of Work sufficient for use in a competitive procurement.

**Compensation Procedures**

Compensation shall be made for work done by submitting invoices. Invoices shall be submitted on a monthly basis. These invoices shall state the number of labor hours that have been expended. Invoices shall be delivered to Ms. Margaret Sims for review and Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005. Compensation for travel shall be submitted by travel voucher consistent with federal travel regulation and EAC requirements.

**Termination**

This consultant contract can be terminated without cause in advance of the current end date by two weeks' notice in writing by either of the parties.

**Estimated Project Timetable.**

Deliverable	Due Date
Project work plan	10 days after contract award
Progress reports	monthly
Description of voting fraud and voter intimidation	October 2005
Summary of background research and associated source documentation	January 2006
Convene working group	February 2006
Summary report describing findings and recommendations for future EAC research	March 2006
Statement(s) of Work for future research project(s)	TBD

U.S. ELECTION ASSISTANCE COMMISSION  
1225 NEW YORK AVENUE, N.W., SUITE 1100  
WASHINGTON, D.C. 20005

OFFICE OF THE CHAIR

November 8, 2005

Mr. Job Serebrov  
2110 South Spring Street  
Little Rock, AR 72206

Via U.S. Mail and Facsimile Transmission  
(202) 566-3117

Dear Mr. Serebrov:

Enclosed is a signed personal services contract (EAC 05-67) in the amount for the provision of services to the U.S. Election Assistance Commission (EAC) in researching and developing a plan for a voter fraud and intimidation study. On or about September 1, 2005, an EAC employee communicated to you that EAC agreed to enter this personal services agreement with you. You began work based upon this notice of award. Despite the fact that the agreement was entered and communicated by an unauthorized person, EAC has reviewed the contract and concluded that ratification of this agreement is appropriate. EAC has ratified the agreement made with you on September 1, 2005. EAC has also received your first invoice for the period September 1 through September 30. That invoice will be reviewed and placed in line for payment.

To acknowledge receipt of this contract, please countersign and date below and return one copy of this letter to the attention of Nicole Mortellito.

We appreciate your work on these important efforts.

Sincerely,

Gracia Hillman  
Chair

**ACT NUMBER E4019698; EAC CONTRACT NUMBER 05-67**

**Consulting Services to Assist EAC in the Development of a Voting Fraud and Voter Intimidation Project**

**Background**

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in elections for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

The EAC seeks to obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation. The EAC needs this consultant to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. If so, the consultant would also be tasked to define the scope of the project and prepare a Statement of Work for the EAC to use for a subsequent competitive procurement. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two consultants, who will work jointly to perform the work described below.

**Nature of the Appointment**

The EAC enters into this contract pursuant to its authority to contract for consultants under 5 U.S.C. §3109 (See 42 U.S.C. §15324(b)). As such this contract is for personal services and creates a limited employment relationship. (See 5 C.F.R. §304). As a result of this unique relationship, and pursuant to this agreement, you are required to follow all Federal laws and regulations as they relate to the release of agency documents and information, travel and conduct. All research, information, documents and any other intellectual property, (including but not limited to policies, procedures, manuals, and other work created at the request or otherwise while laboring for the EAC) shall be owned exclusively by the EAC, including copyright. All such work product shall be turned over to the EAC upon completion of your appointment term or as directed by the EAC. The EAC shall have exclusive rights over this material. You may not release government information or documents without the express permission of the EAC.

**Supervision and Management.**

The EAC Project Manager for this effort is Margaret Sims, EAC Research Specialist. Ms. Sims will provide taskings, and supervise, review and approve all work and performance.

### **Period of Appointment, Compensation and Travel.**

The period of appointment under this contract is estimated at six months. The appointment shall constitute intermittent appointment (without a regularly scheduled tour of duty) per 5 C.F.R. §340.401(b). The consultant shall not incur overtime. The consultants shall not receive automatic adjustments of pay based upon 5 U.S.C. 5303. The consultants are not eligible for sick and annual leave, nor compensation for work performed on federal holidays. The Consultant is expected to work 450 hours during the estimated six month appointment period. These hours must be distributed evenly over the period so that the Consultant is working approximately, but no more than 20 hours per week. The consultant shall be paid at a rate of \$111 per hour. The dates of performance are flexible but shall be based upon the needs of the project and the EAC. The project at issue is sought to be completed within the sixth month period. The period of appointment shall continue until the project, outlined below, is completed.

Consultant's duty station shall be his/her home or place of business. The consultant has access to and shall supply common office equipment to include telecommunications, internet, a computer, office supplies, facsimile machine and common workplace software (including Microsoft Word and Excel). Other resources will be provided by the EAC as needed and at its discretion.

The Consultant is required to travel on a periodic, as needed basis, throughout the duration of their appointment. All travel must be pre-approved by the EAC per Federal Travel Regulations and EAC policy. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, proper incidental expenses, and per diem while on official, pre-approved EAC travel.

### **Areas of Responsibility**

1. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections.
2. Using the description developed above, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
3. Work in consultation with other EAC staff and the Commissioners to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The Working Group will be provided with the results of Tasks 1 and 2 as background information. The consultant will be responsible for developing a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.

4. The consultant shall be responsible for creating a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future research resulting from this effort.
5. Should the EAC decide to pursue one or more of the recommendations made in the report noted above, the consultant will be responsible for defining the appropriate project scope(s) and preparing Statement(s) of Work sufficient for use in a competitive procurement.

**Compensation Procedures**

Compensation shall be made for work done by submitting invoices. Invoices shall be submitted on a monthly basis. These invoices shall state the number of labor hours that have been expended. Invoices shall be delivered to Ms. Margaret Sims for review and Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005. Compensation for travel shall be submitted by travel voucher consistent with federal travel regulation and EAC requirements.

**Termination**

This consultant contract can be terminated without cause in advance of the current end date by two weeks' notice in writing by either of the parties.

**Estimated Project Timetable.**

Deliverable	Due Date
Project work plan	10 days after contract award
Progress reports	monthly
Description of voting fraud and voter intimidation	October 2005
Summary of background research and associated source documentation	January 2006
Convene working group	February 2006
Summary report describing findings and recommendations for future EAC research	March 2006
Statement(s) of Work for future research project(s)	TBD

U.S. ELECTION ASSISTANCE COMMISSION  
1225 NEW YORK AVENUE, N.W., SUITE 1100  
WASHINGTON, D.C. 20005

OFFICE OF THE CHAIR

November 8, 2005

Ms. Tova Wang  
201 West 74<sup>th</sup> Street, Apt. 11F  
New York, NY 10023

Dear Ms. Wang:

Enclosed is a signed personal services contract (EAC 05-66) in the amount for the provision of services to the U.S. Election Assistance Commission (EAC) in researching and developing a plan for a voter fraud and intimidation study. On or about September 1, 2005, an EAC employee communicated to you that EAC agreed to enter this personal services agreement with you. You began work based upon this notice of award. Despite the fact that the agreement was entered and communicated by an unauthorized person, EAC has reviewed the contract and concluded that ratification of this agreement is appropriate. EAC has ratified the agreement made with you on September 1, 2005. EAC has also received your first invoice for the period September 1 through September 30. That invoice will be reviewed and placed in line for payment.

To acknowledge receipt of this contract, please countersign and date below and return one copy of this letter to the attention of Nicole Mortellito.

We appreciate your work on these important efforts.

Sincerely,

Gracia Hillman  
Chair

## The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

## **REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES**

---

### **Report Background**

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

### **EXECUTIVE SUMMARY AND RECOMMENDATIONS**

#### Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:<sup>1</sup> the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.<sup>2</sup> Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed.<sup>3</sup> As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible

---

<sup>1</sup> See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. Political Behavior, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

<sup>2</sup> The EAC has contracted with other researchers to study vote fraud issues.

<sup>3</sup> Appendix C: Tim Vercellotti, Eagleton Institute of Politics, *Analysis of Effects of Voter Identification Requirements on Turnout*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.<sup>4</sup> The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

---

<sup>4</sup> Even the most relaxed provisions for identification at the polls—anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a "minimum" requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a "maximum" requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a "minimum" requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>5</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls

---

<sup>5</sup> Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
  - I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
  - II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
  - III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors:

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the convenience of the voter, the total time allowed to evaluate ballots<sup>6</sup>, and the safe harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends.

Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more uncertain.

*What about  
Indiana  
case?*

## **SUMMARY OF RESEARCH**

### **Background and Approach of the Study**

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether to vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the

---

<sup>6</sup> Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly*. 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics*. 59:2 (May 1997); concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.
  
- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior*. 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review*. 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review*. 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.
  
- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review*. 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior*. 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior*. 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics*., 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>7</sup> The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.<sup>8</sup>

---

<sup>7</sup> As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

<sup>8</sup> Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.<sup>9</sup> Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter

---

<sup>9</sup> "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.<sup>10</sup> Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.<sup>11</sup> And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?<sup>12</sup>

---

<sup>10</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>11</sup> The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

<sup>12</sup> "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>13</sup>
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>14</sup>
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.<sup>15</sup> A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.
5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>16</sup>
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

<sup>13</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

<sup>14</sup> In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

<sup>15</sup> "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." *Harvard Law Review* 127:1144 (2006)

<sup>16</sup> For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," *62 Washington and Lee Law Review* 937 (2005).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

**Voter ID and Turnout**

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004. These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).<sup>17</sup> Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.<sup>18</sup>

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

---

<sup>17</sup> Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

<sup>18</sup> As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a "minimum" requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.<sup>19</sup> Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

<sup>19</sup> One state election official told us that, "We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is."

\* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

<sup>1</sup> Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

<sup>2</sup> Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

<sup>3</sup> Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

<sup>4</sup> Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

<sup>5</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>6</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>7</sup> Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

<sup>8</sup> Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ( $r = -.30, p < .05$ ). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ( $r = -.20, p = .16$ ). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	64.2 %	State Name	63.0 %
Sign Name	61.1 %	Sign Name	60.4 %
Match Signature	60.9 %	Match Signature	61.7 %
Provide Non-Photo ID	59.3 %	Provide Non-Photo ID	59.0 %
Provide Photo ID	58.1 %	Swear Affidavit	60.1 %
<i>Average Turnout (All States)</i>	60.9 %		

**This table displays the mean turnout using the aggregate county level data for each state in 2004.**

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.<sup>21</sup>

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American<sup>22</sup>
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

---

<sup>21</sup> The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

<sup>22</sup> The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.<sup>23</sup>

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

<sup>23</sup> This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.<sup>24</sup> Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

#### Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.<sup>25</sup> The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

<sup>24</sup> For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).<sup>24</sup> Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

<sup>25</sup> It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

influenced turnout in 2004.<sup>26</sup> The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.<sup>27</sup>

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.<sup>28</sup> Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.<sup>29</sup>

---

<sup>26</sup> The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

<sup>27</sup> The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

<sup>28</sup> A probit model is a popular specification of a generalized linear regression model, using the probit link function.

<sup>29</sup> In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

why?

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

<b>Table 3. Predicted probability of voter turnout – all voters</b>		
	<b>Maximum requirement</b>	<b>Minimum requirement</b>
<b>State name</b>	91.7%	91.5%
<b>Sign name</b>	89.9%	90.2%
<b>Match signature</b>	Not significant	Not significant
<b>Non-photo ID</b>	89.0%	89.0%
<b>Photo ID</b>	88.8%	----
<b>Affidavit</b>	----	87.5%
<b>Total difference from “state name” to “photo ID” or “affidavit”</b>	<b>2.9%</b>	<b>4.0%</b>
<b>N</b>	54,973	
<p>Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one's name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model.</p> <p>Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.</p>		

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.<sup>30</sup> In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

<sup>30</sup> The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Race and ethnicity have generated particular interest in the debate over voter ID requirements.<sup>31</sup> The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

---

<sup>31</sup> Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day , or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

#### **Litigation Over Voter ID Requirements**

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*). Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.<sup>32</sup> Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL

---

<sup>32</sup> Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public, which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

*Not true!*

**Developments since 2004**

027960

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

**State Voter Databases and Voter ID**

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

**Conclusions**

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.<sup>33</sup>

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents

---

<sup>33</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

## The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

## **REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES**

---

### **Report Background**

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

### **EXECUTIVE SUMMARY AND RECOMMENDATIONS**

#### Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:<sup>1</sup> the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.<sup>2</sup> Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed.<sup>3</sup> As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible

---

<sup>1</sup> See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. *Political Behavior*, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

<sup>2</sup> The EAC has contracted with other researchers to study vote fraud issues.

<sup>3</sup> Appendix C: Tim Vercellotti, Eagleton Institute of Politics, *Analysis of Effects of Voter Identification Requirements on Turnout*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.<sup>4</sup> The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

---

<sup>4</sup> Even the most relaxed provisions for identification at the polls—anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a "minimum" requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a "maximum" requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a "minimum" requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>5</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls

---

<sup>5</sup> Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
  - I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
  - II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
  - III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors:

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the convenience of the voter, the total time allowed to evaluate ballots<sup>6</sup>, and the safe harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends.

Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more uncertain.

## **SUMMARY OF RESEARCH**

### **Background and Approach of the Study**

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether the vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the

---

<sup>6</sup> Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly*. 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics*. 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.
  
- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior*. 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review*. 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review*. 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.
  
- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review*. 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior*. 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior*. 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics*., 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>7</sup> The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.<sup>8</sup>

---

<sup>7</sup> As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

<sup>8</sup> Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.<sup>9</sup> Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter

---

<sup>9</sup> "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.<sup>10</sup> Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.<sup>11</sup> And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?<sup>12</sup>

---

<sup>10</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>11</sup> The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

<sup>12</sup> "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>13</sup>
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>14</sup>
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.<sup>15</sup> A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.
5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>16</sup>
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

<sup>13</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

<sup>14</sup> In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

<sup>15</sup> "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

<sup>16</sup> For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

**Voter ID and Turnout**

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004. These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).<sup>17</sup> Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.<sup>18</sup>

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

---

<sup>17</sup> Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

<sup>18</sup> As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a “minimum” requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.<sup>19</sup> Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

<sup>19</sup> One state election official told us that, “We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is.”

\* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

<sup>1</sup> Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

<sup>2</sup> Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

<sup>3</sup> Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

<sup>4</sup> Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

<sup>5</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>6</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>7</sup> Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

<sup>8</sup> Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

027984

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

**Findings of the statistical analysis**

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ( $r = -.30, p < .05$ ). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ( $r = -.20, p = .16$ ). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	64.2 %	State Name	63.0 %
Sign Name	61.1 %	Sign Name	60.4 %
Match Signature	60.9 %	Match Signature	61.7 %
Provide Non-Photo ID	59.3 %	Provide Non-Photo ID	59.0 %
Provide Photo ID	58.1 %	Swear Affidavit	60.1 %
<i>Average Turnout (All States)</i>	<b>60.9 %</b>		

**This table displays the mean turnout using the aggregate county level data for each state in 2004.**

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.<sup>21</sup>

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American<sup>22</sup>
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

---

<sup>21</sup> The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

<sup>22</sup> The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.<sup>23</sup>

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

<sup>23</sup> This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.<sup>24</sup> Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

#### Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.<sup>25</sup> The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

<sup>24</sup> For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).<sup>24</sup> Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

<sup>25</sup> It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

influenced turnout in 2004.<sup>26</sup> The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.<sup>27</sup>

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.<sup>28</sup> Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.<sup>29</sup>

---

<sup>26</sup> The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

<sup>27</sup> The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

<sup>28</sup> A probit model is a popular specification of a generalized linear regression model, using the probit link function.

<sup>29</sup> In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

<b>Table 3. Predicted probability of voter turnout – all voters</b>		
	<b>Maximum requirement</b>	<b>Minimum requirement</b>
<b>State name</b>	91.7%	91.5%
<b>Sign name</b>	89.9%	90.2%
<b>Match signature</b>	Not significant	Not significant
<b>Non-photo ID</b>	89.0%	89.0%
<b>Photo ID</b>	88.8%	----
<b>Affidavit</b>	----	87.5%
<b>Total difference from “state name” to “photo ID” or “affidavit”</b>	<b>2.9%</b>	<b>4.0%</b>
<b>N</b>	54,973	
<p>Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one's name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model.</p> <p>Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.</p>		

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.<sup>30</sup> In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

<sup>30</sup> The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Race and ethnicity have generated particular interest in the debate over voter ID requirements.<sup>31</sup> The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

---

<sup>31</sup> Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day, or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

### **Litigation Over Voter ID Requirements**

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*). Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.<sup>32</sup> Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL

---

<sup>32</sup> Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

**Developments since 2004**

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

#### State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

**Conclusions**

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.<sup>33</sup>

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents

---

<sup>33</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

## The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

### **Peer Review Group**

A draft of this report and the statistical analysis in its appendix were critiqued by a Peer Review Group. The comments of its members improved the quality of our work. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in our recommendations.

## REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

---

### Report Background

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

### EXECUTIVE SUMMARY AND RECOMMENDATIONS

#### Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:<sup>1</sup> the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.<sup>2</sup> Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed.<sup>3</sup> As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible

---

<sup>1</sup> See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. Political Behavior, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

<sup>2</sup> The EAC has contracted with other researchers to study vote fraud issues.

<sup>3</sup> Appendix C: Tim Vercellotti, Eagleton Institute of Politics, *Analysis of Effects of Voter Identification Requirements on Turnout*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.<sup>4</sup> The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

---

<sup>4</sup> Even the most relaxed provisions for identification at the polls—anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a "minimum" requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a "maximum" requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a "minimum" requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>5</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls

---

<sup>5</sup> Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
  - I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
  - II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
  - III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors:

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the convenience of the voter, the total time allowed to evaluate ballots<sup>6</sup>, and the safe harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends.

Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more uncertain.

## **SUMMARY OF RESEARCH**

### **Background and Approach of the Study**

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether to vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the

---

<sup>6</sup> Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly*. 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics*. 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.
  
- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior*. 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review*. 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review*. 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.
  
- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review*. 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior*. 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.

028010

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior*. 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics*., 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>7</sup> The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.<sup>8</sup>

---

<sup>7</sup> As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

<sup>8</sup> Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

028011

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.<sup>9</sup> Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter

---

<sup>9</sup> "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.<sup>10</sup> Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.<sup>11</sup> And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?<sup>12</sup>

---

<sup>10</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>11</sup> The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

<sup>12</sup> "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." *Harvard Law Review* 127:1144 (2006)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>13</sup>
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>14</sup>
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.<sup>15</sup> A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.
5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>16</sup>
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

<sup>13</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

<sup>14</sup> In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

<sup>15</sup> "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

<sup>16</sup> For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

**REVISED FINAL D R A F T**

intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

**Voter ID and Turnout**

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004. These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).<sup>17</sup> Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.<sup>18</sup>

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

---

<sup>17</sup> Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

<sup>18</sup> As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a “minimum” requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.<sup>19</sup> Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

<sup>19</sup> One state election official told us that, “We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is.”

\* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

<sup>1</sup> Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

<sup>2</sup> Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

<sup>3</sup> Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

<sup>4</sup> Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

<sup>5</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>6</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>7</sup> Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

<sup>8</sup> Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ( $r = -.30, p < .05$ ). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ( $r = -.20, p = .16$ ). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	64.2 %	State Name	63.0 %
Sign Name	61.1 %	Sign Name	60.4 %
Match Signature	60.9 %	Match Signature	61.7 %
Provide Non-Photo ID	59.3 %	Provide Non-Photo ID	59.0 %
Provide Photo ID	58.1 %	Swear Affidavit	60.1 %
<i>Average Turnout (All States)</i>	<b>60.9 %</b>		

**This table displays the mean turnout using the aggregate county level data for each state in 2004.**

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.<sup>21</sup>

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American<sup>22</sup>
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

---

<sup>21</sup> The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

<sup>22</sup> The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.<sup>23</sup>

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

<sup>23</sup> This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.<sup>24</sup> Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

#### Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.<sup>25</sup> The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

<sup>24</sup> For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).<sup>24</sup> Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

<sup>25</sup> It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

influenced turnout in 2004.<sup>26</sup> The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.<sup>27</sup>

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.<sup>28</sup> Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.<sup>29</sup>

---

<sup>26</sup> The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

<sup>27</sup> The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

<sup>28</sup> A probit model is a popular specification of a generalized linear regression model, using the probit link function.

<sup>29</sup> In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

<b>Table 3. Predicted probability of voter turnout – all voters</b>		
	<b>Maximum requirement</b>	<b>Minimum requirement</b>
<b>State name</b>	91.7%	91.5%
<b>Sign name</b>	89.9%	90.2%
<b>Match signature</b>	Not significant	Not significant
<b>Non-photo ID</b>	89.0%	89.0%
<b>Photo ID</b>	88.8%	----
<b>Affidavit</b>	----	87.5%
<b>Total difference from “state name” to “photo ID” or “affidavit”</b>	<b>2.9%</b>	<b>4.0%</b>
<b>N</b>	54,973	
<p>Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one's name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model.</p> <p>Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.</p>		

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.<sup>30</sup> In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

<sup>30</sup> The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Race and ethnicity have generated particular interest in the debate over voter ID requirements.<sup>31</sup> The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

---

<sup>31</sup> Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day , or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

### **Litigation Over Voter ID Requirements**

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*).. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.<sup>32</sup> Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL

---

<sup>32</sup> Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

**Developments since 2004**

028028

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

#### State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

**Conclusions**

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.<sup>33</sup>

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents

---

<sup>33</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

This research report on Provisional Voting in the 2004 election is part of a broader analysis that also includes a study of Voter Identification Requirements, a report on which is forthcoming. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

### EXECUTIVE SUMMARY

#### Background and Methodology

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005.

The Help America Vote Act of 2002 (HAVA, (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient. Section 302(a) of HAVA required states to establish provisional balloting procedures by January 2004.<sup>1</sup> The process HAVA outlined left considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voter eligible to cast a provisional ballot that will be counted and in what jurisdiction (precinct or larger unit) the ballot must be cast in order to be counted.<sup>2</sup>

The general requirement for provisional voting is that, if a registered voter appears at a polling place to vote in an election for Federal office, but either the potential voter's name does not appear on the official list of eligible voters for the polling place, or an election official asserts that the individual is not eligible to vote, that potential voter must be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the EAC's Election Day Survey, "first-time voters who registered by mail without identification and cannot provide identification, as required under HAVA. . ."<sup>3</sup> HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. Election administrators are required by HAVA to notify individuals of their opportunity to cast a provisional ballot.

---

<sup>1</sup>The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions." See [www.electioncenter.org](http://www.electioncenter.org).

<sup>2</sup>The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell*, 387 F.3d565 (6<sup>th</sup> Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

<sup>3</sup>The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See <http://wired.com/news/evote/0,2645,63298,00.html>. (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004.)

1/2 report dedicated to best practices  
recommendations

### FINAL DRAFT

For Review by the Standards Board and Board of Advisors

Our research began in late May 2005. It focused on six key questions raised by the EAC.

1. How did the states prepare for the onset of the HAVA provisional ballot requirement? *Not effectively answered*
2. How did this vary between states that had previously had some form of provisional ballot and those that did not? *Hard to determine since no direct prep evidence presented*
3. How did litigation affect implementation? *Litigation only state 1/19*
4. How effective was provisional voting in enfranchising qualified voters? *No definitive answer*
5. Did state and local processes provide for consistent counting of provisional ballots? *No - variation*
6. Did local election officials have a clear understanding of how to implement provisional voting? *No credible evidence*

-wave sk

To answer those questions, we:

1. Surveyed 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Reviewed the EAC's Election Day Survey, news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.<sup>4</sup>
3. Analyzed statistically provisional voting data from the 2004 election to determine associations between the use of provisional voting and such variables as states' experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approaches to voter identification.
4. Collected and reviewed the provisional voting statutes and regulations in all 50 states.
5. Analyzed litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research is intended to provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states move forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly those states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

### KEY FINDINGS

#### Variation among the states

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63%, were counted. Provisional ballots accounted for a little more than 1% of the final vote tally. These totals obscure the wide variation in provisional voting among the states.<sup>5</sup>

<sup>4</sup> Attachment 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures. It also describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

<sup>5</sup> HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

- Six states accounted for two-thirds of all the provisional ballots cast.<sup>6</sup>
- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.
- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.
- States with voter registration databases counted, on average, 20% of the provisional ballots cast.
- States without databases counted ballots at more than twice that rate: 44%.<sup>7</sup>
- States that provided more time to evaluate provisional ballots counted a greater proportion of those ballots. Those that provided less than one week counted an average of 35.4% of their ballots, while states that permitted more than 2 weeks, counted 60.8%.

An important source of variation among states was a state's previous experience with provisional voting. ~~The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new.~~ In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.<sup>8</sup>

### Variation within states

Within states, too, there was little consistency among different jurisdictions. ~~Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.~~ This suggests that additional factors (including the training of election judges or poll workers) beyond statewide factors, such as experience or the existence of voter registration databases, also influence the use of provisional ballots.

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot.

Resources available to administer provisional voting varied considerably among and within states. Differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.

<sup>6</sup> California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

<sup>7</sup> As the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without." Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

<sup>8</sup> See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.

In precincts located in districts where many voters live in poverty and have low levels of income and education, the voting process, in general, may be managed poorly. Provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

### **The lessons of litigation**

Successful legal challenges highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. Most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots. This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right --the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

### **States move to improve their processes**

Shortly after the 2004 election, several states came to the conclusion that the administration of their provisional voting procedures needed to be improved, and they amended their statutes. The new legislation highlights areas of particular concern to states about their provisional voting process.

- Florida, Indiana, Virginia, and Washington have clarified or extended the timeline to evaluate the ballots.
- Colorado, New Mexico, North Carolina, and Washington have passed legislation focused on improving the efficacy and consistency of the voting and counting process.
- Colorado, Arkansas, and North Dakota took up the issue of counting provisional ballots cast in the wrong precinct.

~~The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes.~~ Research-based recommendations for best, or at least better, practices that draw on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting. The important effect of experience on the administration of the provisional ballot process indicates that the states have much they can learn from each other.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

### SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

#### Take a quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

#### Emphasize the importance of clarity

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendation section of this report could be helpful. Among those questions are:

- Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
- Do the procedural requirements of the system permit cost-efficient operation?
- How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

#### Court decisions suggest areas for action

The court decisions following the 2004 election also suggest procedures for states to incorporate into their procedures for provisional voting. EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide effective materials to be used by local jurisdictions in training poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

#### Assess each stage of the provisional voting process

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. ~~They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections.~~ The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

~~Avoiding error at the polling place~~ will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for best practices to avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.
- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.
- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Best practice would be for states should provide guidelines (as do Connecticut and Delaware) to estimate the supply of provisional ballots needed at each polling place.

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.
- ~~More provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct.~~ While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.
- If a state does require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers' advice is not always correct, and the voter should be protect against ministerial error.
- ~~Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected.~~ Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.

## **FINAL DRAFT**

For Review by the Standards Board and Board of Advisors

- The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

- Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

### Final observation

The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

### Provisional Voting in 2004

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.

These totals obscure the wide variation in provisional voting among the states.<sup>9</sup> Six states accounted for two-thirds of all the provisional ballots cast.<sup>10</sup> State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted provisional ballots at more than twice that rate, 44%.

An important source of variation was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.<sup>11</sup>

- The percentage of the total vote cast as provisional ballots averaged more than 2% in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.<sup>12</sup>
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states had their ballots counted more frequently than those in the new states. This experience effect is evidence that there is room for improvement in provisional balloting procedures, especially in those states new to the process.<sup>13</sup> That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

<sup>9</sup> HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.

<sup>10</sup> California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

<sup>11</sup> See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

<sup>12</sup> To compensate for the wide differences in vote turnout among the 50 states the average figures here are calculated as the mean of the percent cast or counted rather than from the raw numbers of ballots cast or counted.

<sup>13</sup> Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's "6-day time limit to process provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC can facilitate the exchange of experience among the states and can offer all states information on more effective administration of provisional voting.

*note*  
Concluding optimistically that experience will make all the difference, however, may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning curve. Two other possibilities exist. Our current understanding of how provisional voting worked in 2004 is not sufficient to determine unambiguously which view is correct.

1. "New" states may have a political culture different from "old" states. That is, underlying features of the "new" states political system may be the reason they had not adopted some form of provisional voting before HAVA. The "new" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. The training they offer poll workers about provisional ballots may not be as frequent or effective as in other states. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots -- as measured by intrastate consistency in administration--- will be harder and take longer to achieve.<sup>14</sup>
2. "Old" states may devote fewer resources to updating their registration files or databases because they consider provisional ballots as a reasonable fail safe way for voters with registration problems a way to cast a ballot. The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Other influences decreasing consistency among the states include:

<sup>14</sup> Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, "no state gave the voter the right to find out the status of their ballot after the election." Now all offer that opportunity. See Bali and Silver, "The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000," manuscript, Department of Political Science, Michigan State University. Resisting HAVA's mandates through foot-dragging lacks any legitimate foundation in law or policy.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

- The more rigorous the verification requirements, the smaller the percentage of provisional ballots that were counted. Some states verified provisional ballots by comparing the voter's signature to a sample, some matched such identifying data as address, birth date, or social security number, others required voters who lacked ID at the polling place to return later with the ID to evaluate the provisional ballot, and some required provisional voters to execute an affidavit.<sup>15</sup>
  - In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
  - In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
  - In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
  - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office
- Voter registration databases provided information that reduced the number of provisional ballots counted.<sup>16</sup> In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.
- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots.<sup>17</sup>

<sup>15</sup> See Table 2 in Appendix 2 for information on the verification method used in each state.

<sup>16</sup> The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.

<sup>17</sup> The Election Day Survey concluded that : "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

- In experienced states, the disparity was even more pronounced: 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
- If all states had counted out-of-precinct ballots, perhaps 290,000 more provisional ballots would have been counted across the country.<sup>18</sup>

- States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.<sup>19</sup>
  - Fourteen states permitted less than one week to evaluate provisional ballots, 15 states permitted between one and two weeks, and 14 states permitted greater than two weeks<sup>20</sup>.
  - Those states that permitted less than one week counted an average of 35.4% of their ballots.
  - States that permitted between one and two weeks counted 47.1%.
  - States that permitted more than 2 weeks, counted 60.8% of the provisional ballots cast<sup>21</sup>.
  - The effect of allowing more time for evaluation is felt most strongly in states where more than 1% of the overall turnout was of provisional ballots. In states where provisional ballots were used most heavily, those that permitted less than one week to evaluate ballots counted 58.6% while those that permitted one to two weeks counted 65.0% of ballots, and those states that permitted greater than three weeks verified the highest proportion of provisional ballots, at 73.8%.

### Variation Within States

Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors beyond statewide factors, such as verification requirements or the time provided for ballot evaluation, also influence the provisional voting process. Reacting to the lack of consistency within states, the Carter-Baker Commission recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."<sup>22</sup>

Election Line reported that:

<sup>18</sup> This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

<sup>19</sup> See Appendix \_\_\_\_, Relationship Between Time Allotted to Verify Provisional Ballots and the Level of Ballots that are Verified, David Andersen, The Eagleton Institute of Politics

<sup>20</sup> Many thanks to Ben Shepler, of the Moritz College of Law, for assembling complete data on the time requirements states permitted for the counting of provisional ballots.

<sup>21</sup> 43 states are included in this analysis, including Washington D.C. The 7 election-day registration states are omitted, as is Mississippi, which never provided data on provisional ballots. North Carolina is also omitted from the regressions, as it does not have a statewide policy on how it verifies provisional ballots.

<sup>22</sup> Recommendation 2.3.2 of the Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report also observed that, "... different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, and inadequately-staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important in such districts. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts where the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

### Effectiveness of Provisional Voting

The certainty of our conclusions about the effectiveness of provisional voting is limited because of the complexity of the problem and a lack of important information. An ideal assessment of how well provisional ballots worked in 2004 would require knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. Information needed about the eligibility or registration status of provisional voters is also not available.

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots allowed 1.2 million citizens to vote, citizens who would otherwise have been turned away from the polls.

Since we do not know the total number of registered voters who might have voted but could not makes a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

***Estimates of Votes Lost In 2000 Presidential Election***

<b><i>Votes Lost (Millions)</i></b>	<b><i>Cause</i></b>
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

***Table 1 Cal Tech – MIT Voting Technology Project Estimates***

4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. In 2004, about 1.2 million provisional voters were counted. A rough estimate, then, of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)<sup>23</sup>. Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

### **Legislative Response**

Indeed, several states<sup>24</sup> came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

<sup>23</sup> Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems. After each election the CPS asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or they were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

<sup>24</sup> Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.<sup>25</sup>

Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

### Litigation

Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right --the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to

<sup>25</sup> The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the *entire department's employees were mobilized to process provisional ballots.*" The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots." In a close, contested election, "duplicate" ballots would doubtless receive long and careful scrutiny." See Appendix 7, GAO, "Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," September 2005. (GAO Report-05-997)

## **FINAL DRAFT**

For Review by the Standards Board and Board of Advisors

determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

### **RECOMMENDATIONS**

Because every provisional ballot counted represents a voter who, if the system had worked perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use of provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have voted provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

#### **Recommendations for Best Practices**

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

#### **Self-evaluation of Provisional Voting –4 Key Questions**

The first need to achieve greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

### Best Practices For Each Step In The Process

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

### The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every ~~stage of provisional voting. As the Century Foundation's recent report observed,~~ "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result-- well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."<sup>26</sup>

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- ~~Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.~~ For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing.<sup>27</sup> Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.
- ~~States should provide poll workers standard information resources for the training of poll workers by local jurisdictions.~~ Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.<sup>28</sup>

- State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.<sup>29</sup> Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers may need appropriate training to understand their duty to give such voters a provisional ballot.<sup>30</sup>

### A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. ~~The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.~~ States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency." <sup>31</sup>
2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.<sup>32</sup>
3. State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

### B. At the Polling Place

---

wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

<sup>29</sup> *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6<sup>th</sup> Cir. 2004)

<sup>30</sup> *The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

<sup>31</sup> Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.

<sup>32</sup> The Century Foundation, *op. cit.*

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.<sup>33</sup> Many states require training of poll workers. In some states that requirement is recent: after the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school."<sup>34</sup> A state statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.
2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.
3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . . to photocopy official provisional ballots."<sup>35</sup> At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.<sup>36</sup> States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.
4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-of-custody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

### C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."<sup>37</sup> Nonetheless, the *Panio v. Sutherland*<sup>38</sup> decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.<sup>39</sup>
2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct.<sup>40</sup> While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the

<sup>37</sup> The Century Foundation, op. cit.

<sup>38</sup> 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

<sup>39</sup> In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama -- 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c)(1) Florida: until 5:00 P.M. on the third day following the election. Fla. Stat. Ann. § 101.048 (adopted after the 2004 election); Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (l); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(l). Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) (H).

<sup>40</sup> See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.

3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.<sup>41</sup> Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker's, and the voter should not be penalized.
4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.<sup>42</sup>

### Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who

<sup>41</sup> Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

<sup>42</sup> 8 CCR 1505-1, at 26.5.4, adopted August 4, 2005. See also 1-2-509(3) C.R.S.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.

RRD (Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

### **D. Verification of Provisional Ballots**

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections
2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

### **E. Post-election Information for Voters**

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

### **F. State Laws Governing Litigation over Provisional Voting**

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot

### **Broader Considerations**

#### **G. Integrity and the Appearance of Integrity**

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

### H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma<sup>43</sup> or the Baldrige Quality process<sup>44</sup> to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.
2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
  - Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
  - Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
  - Measures of variance among jurisdictions.
  - Number of poll workers trained in administration of provisional voting by polling place
  - Number of jurisdictions posting information on provisional voting in the polling place
  - Time required to evaluate ballots by jurisdiction

---

<sup>43</sup> Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process -- from manufacturing to transactional and from product to service.

<sup>44</sup> The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.

## **FINAL DRAFT**

For Review by the Standards Board and Board of Advisors

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

### ATTACHMENT 1 – Data Sources for Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state's use of provisional ballots:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and included it in our analysis.

#### New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting,<sup>45</sup> but condensed its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (UNA)

We included in the list of "Old States" all states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots. States in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they

<sup>45</sup> This study can be found at: <http://electionline.org/Portals/1/Publications/Provisional%20Voting.pdf>.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

<b>Old States</b>	<b>New States</b>	<b>HAVA Exempt or NA</b>
Alaska	Connecticut	Idaho

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

### Statewide List of Registered Voters

The Electionline preview of the 2004 Election<sup>46</sup> was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found it had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

### Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election<sup>2</sup>. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

<b>Table 2 CATEGORIZATION OF STATES -- Counting Out-Of-Precinct Ballots</b>		
<b>Out-of-Precinct</b>	<b>In-Precinct Only</b>	<b>HAVA EXEMPT OR NA</b>

<sup>47</sup> In Illinois, it is not clear that all counties followed this procedure. Some counties may not have counted out-of-precinct ballots.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

### Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

<b>Signature Match</b>	<b>Data Match</b>	<b>Affidavit</b>	<b>Return with ID</b>	<b>NA</b>
Alaska	Alabama	Connecticut	Indiana	Idaho
California	Arizona	Delaware	Iowa	Maine
Florida	Arkansas	Georgia	Kansas	Mississippi
Oregon	Colorado	Hawaii	Maryland	Minnesota
	DC	Illinois	Michigan	New Hampshire
	Louisiana	Kentucky	Montana	N. Carolina
	Missouri	Massachusetts	New Jersey	N. Dakota
	Ohio	Nebraska	New Mexico	Wisconsin
	Oklahoma	Nevada	Texas	Wyoming
	Pennsylvania	New York	Utah	
	Rhode Island	South Dakota

	West Virginia	Virginia		
<b>4</b>	<b>14</b>	<b>14</b>	<b>10</b>	<b>9</b>

\* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

## FINAL DRAFT

For Review by the Standards Board and Board of Advisors

### Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

<b>Received Updated Data</b>	<b>Did Not Receive Updated Data</b>
California	Alabama
District of Columbia	Alaska <sup>48</sup>
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut
Kansas	Delaware
Louisiana	Georgia
Maryland <sup>49</sup>	Idaho
Missouri	Illinois
Montana	Kentucky
Nebraska <sup>50</sup>	Maine
Nevada	Massachusetts
New Jersey	Michigan
New Mexico	Minnesota
Ohio	Mississippi
Oklahoma	New Hampshire
Oregon	New York
Pennsylvania	North Carolina
Rhode Island	North Dakota
South Dakota	South Carolina
Tennessee	Utah
Texas	Vermont
Virginia	Wisconsin
Washington	Wyoming
West Virginia	
<b>26 States</b>	<b>25 States</b>

<sup>48</sup> Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

<sup>49</sup> Maryland reported provisional ballots that were counted per county, but not number cast.

<sup>50</sup> Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

FY!  
DeGregorio

U. S. ELECTION ASSISTANCE COMMISSION  
OFFICE OF THE EXECUTIVE DIRECTOR  
1225 New York Avenue, NW, Suite 1100  
Washington, DC. 20005

June 15, 2006

John Weingart, Associate Director  
Eagleton Institute of Politics  
Rutgers University  
191 Ryders Lane  
New Brunswick NJ 08901-8557

Dear Mr. Weingart:

During a recent briefing by staff, the EAC discussed and reviewed possible next steps with the provisional voting and voter identification studies as well as the Eagleton contract which is scheduled to conclude on June 30, 2006.

We were in agreement that Eagleton's work on the EAC contract should conclude, as scheduled, by June 30, 2006. In preparation for this conclusion, the EAC requests that the comments and suggestions which were noted during the EAC's recent Board of Advisors and Standards Boards meeting (and were described in Mr. O'Neil's June 8, 2006 letter to Chairman DeGregorio) be included in the final draft report on provisional voting which Eagleton will deliver to the EAC on or about June 30, 2006. The Commissioners have determined that they will take this final draft report and, from it, may develop guidance and best practice recommendations that will be presented to the Board of Advisors and Standards Boards for further review.

The EAC Commissioners have also reviewed and considered next steps with the voter identification draft report which Eagleton has prepared. While the final disposition of the results and findings of this study, on the part of the EAC, are still unclear, the Commissioners have asked that the final draft report of this study also be prepared and submitted to the EAC not later than June 30, 2006.

We look forward to receiving these reports. On behalf of the EAC thank you for the considerable time and energy which the Eagleton/Moritz team has devoted to these critical election issues.

Sincerely,

Thomas R. Wilkey

Fax: (202) 566-3127

June 8, 2006

Dear Chairman DeGregorio:

Karen Lynn-Dyson relayed the Commission's decision in your meeting of June 1 to take more time to consider how to proceed with the delivery of EAC research reports on provisional voting and voter identification.

The Eagleton-Moritz research team, of course, encourages the Commission's thoughtful consideration of the two reports, but we are mindful of the need to deliver revised documents that respond to the Commission's comments by the close of our contract on June 30<sup>th</sup>. We believe that if we receive the Commission's final comments on the Provisional Voting report by June 19 we will be able to complete any additional work that the Commission might request and incorporate the results in our final reports before the end of the contract period.

Based on suggestions raised at the meetings, we already plan to supplement the Provisional Voting report with some brief, additional information about the influence of the fail-safe ballot provisions of the National Voting Rights Act on the experience with provisional voting in 2004.

We understand that the Commission must submit the final draft Voter ID report to the same review process by your advisory boards as was followed with the Provisional Voting paper. We understand that step is a prerequisite for wider release. We would appreciate your advice on how to handle this review, given the rapidly approaching end of our contract.

We hope the commission will use both reports, as intended from the outset of this project, as the basis for recommendations for better, if not best, practices to the states. If the Commission cannot decide to issue such recommendations to the states, we hope it will promptly release the reports to provide the states and the broader elections community with this information, analysis and perspective on the issues.

We recognize, based on the reactions at the meetings of the Standards Board and, particularly, the Board of Advisors, that some of the findings, conclusions, and recommendations of the reports will be controversial with some of the Commission's constituencies. But we also believe, based on the comments of the Peer Review Group, the advisors assembled by the Commission, and our response to their critiques, that the reports are grounded on solid research by a well-qualified, nonpartisan team and that the reports will provide new information for the policy process. We believe this information will contribute to achieving the EAC mission of providing helpful information that the states may or may not choose to implement.

August 18, 2005

Dear Commissioners:

At the meeting of the Board of Advisors in Portland, Oregon, our notebooks included an EAC Information Research Update, dated July 18, 2005. The Update indicates that the EAC has awarded a contract to the Eagleton Institute / Moritz College of Law ("Moritz") to conduct research into "Provisional Voting / ID Requirements."

Obviously, the duty of the EAC as outlined in Section 241 to conduct research on election issues is a very important one. That is why it is clearly an absolute necessity that the researchers who are awarded contracts to conduct that research be objective and nonpartisan in their work. It would be inappropriate and potentially very damaging and embarrassing to the EAC (and the Board of Advisors) if this research is conducted by entities that have a preconceived opinion or bias on the issue being researched or are, in fact, advocates on the issue. Any findings or recommendations such biased entities put in their final report would be open to question and could cause great harm.

Unfortunately, hiring the faculty at Moritz to conduct research on provisional balloting and voter identification provisions calls into question whether the research can be conducted in an objective manner and reach conclusions that are not pre-determined by the public and pre-existing views of the researchers. This is crystal clear from an easily-conducted review of the Moritz website.

The Associate Director of the Election Law program at Moritz, Daniel Tokaji, is an outspoken opponent of voter identification requirements and commentator on provisional voting. Here is a brief summary of some of his recent comments, taken from the Moritz website:

It's therefore questionable at best whether an ID requirement is really necessary to combat voting fraud. Supporters of the ID requirement have yet to make a convincing case that existing methods of discouraging and punishing fraud are insufficient. While the anti-fraud benefits of stricter ID laws are dubious, there is evidence that an ID requirement would impose a severe burden on many voters, particularly those of low income....In their present form, the ID bills presently on the table are likely unconstitutional.... (ID and the Right to Vote, April 12, 2005)

"Ohio's election reform is a mixed bag. Establishing a clear rule for provisional ballots is a good idea, but I don't think there's a good reason for refusing to count provisional ballots cast out of precinct, given that a statewide registration database (which should allow for easy verification of eligibility) has to be in place by 2006. It would be much better to move to in-precinct early voting than mail-in absentee voting, but it seems that Ohio doesn't want to spend the money." (Reform Comes to Ohio, May 20, 2005).

028070

"Nevertheless, DOJ seems likely to sign off on this [Arizona's proposition 200 implementing rules], given that they've take the position - quite clearly an erroneous one, in my view - that voters need not even be given a provisional ballot if they lack ID." (Arizona Voter ID, July 18, 2005).

"It remains to be seen, of course, whether DOJ will rigorously enforce Section 5 of the Voting Rights Act, when it comes to practices - like the Georgia ID law - that threaten to result in the denial of minority votes...." (Preclearance, Preclearance, Preclearance, July 20, 2005).

"...I tend to doubt that the preclearance process will prove to be an effective remedy for measures like the Georgia ID law. Even though this law will have a "retrogressive" effect, by serving as a barrier to minority voters' participation...." (The Voting Rights Act, Then and Now, July 31, 2005)

"We should remember that, at the turn of the 20th Century, allegations of "good government" were used by white Democrats in a remarkably successful strategy to suppress the black vote. The result of those very successful efforts was to impose barriers like the literacy test, which excluded African Americans from voting throughout the South for the better part of the century, until after the Voting Rights Act of 1965. If you go back and read some of the documents from the late 1800's and early 1900's, as I've recently been doing, the similarity to the sort of arguments being advanced now in support of photo ID laws is frightening. It is beyond unfortunate to see the same sort of tactics, albeit dressed up in more respectable garb, being employed at the start of the 21st Century." (Vote Suppression, Fraud and Voter ID, August 3, 2005)

In addition to these postings, Dr. Tokaji is acting as an advocate on voter identification issues, having submitted a comment letter to the Department of Justice dated August 18, 2005, along with a number of other professors, urging an objection to a voter identification provision currently before the Department for review under Section 5 of the Voting Rights Act. Obviously, this advocacy is occurring after the EAC awarded this contract and during the pendency of the research work.

The issue here is not whether Dr. Tokaji's opinions are correct or incorrect, or the appropriateness of his submitting a comment letter to the Department of Justice. The point is the strongly held, pre-existing notions about both provisional balloting and voter identification espoused by the Associate Director of Moritz's election law program and his advocacy on these issues. This raises serious concerns about the propriety of Moritz being provided with federal tax dollars to conduct non-partisan and impartial research into such a sensitive and high profile area of election law. We cannot be certain that data collected and conclusions reached by this research project will not be predetermined to comport with the views of Moritz's officials.

I would strongly recommend that this contract be reconsidered by the EAC. Under these circumstances, any report issued by Moritz will be open to serious questions as to its validity and objectivity.

August 19, 2005

Hans:

I'm currently at the Seattle airport awaiting a return flight to D.C., so I apologize if my response below is somewhat incomplete. I think the issue you raise certainly deserves our full consideration, so I will look forward to additional responses and dialogue from others included in this distribution list.

A couple of quick points in response to your concerns (and I am speaking for myself below, and not for the entire commission):

- (1) The RFP that was issued by the EAC pertaining to the research on provisional voting and voter ID requirements was widely advertised (as all our RFP's are). We did so because we wanted to receive a wide range of possible contractors to conduct this important research. This was a competitive RFP process which, if my memory serves me correct, produced a good number of responses from interested entities.
- (2) Carol Paquette assembled a review panel (I'm not sure how many persons were involved in the review panel) to score the responses to this RFP...the submission by the Eagleton Institute included, as a part of their proposal, the Moritz School of Law at Ohio State University as a partner in conducting the legal research required for Eagleton to provide a final report (due in October) to the EAC. The review panel scored the Eagleton submission as best, considering a variety of factors.
- (3) The lead entity in this project is the Eagleton Institute. While the project manager's name from Eagleton escapes me right now, the lead from Moritz is not Dan Tokagi, but Ned Foley, who directs the election law section (or something to that effect) at Moritz. Certainly it is true that Professor Tokagi is contributing to the work product being assemble by Moritz, which consists primarily of reviewing election and administrative codes from all 50 states to ascertain how each state deals with provisional voting and voter ID requirements.
- (4) As is the case with all federal contractors, both Eagleton Institute and Moritz are contractually obligated to produce objective, sound and unbiased research and analysis on this project. While it is certainly prudent to consider the potential bias of any prospective contractor(s), after receiving the recommendation from the review panel and Carol Paquette (at the time, the acting EAC Executive Director), we unanimously agreed among the commissioners that the recommendation was worthy of support. At the time, we were aware, for example, that the Eagleton Institute had been involved last year in some litigation involving provisional ballots. We were also aware, as you point out, of Professor Tokagi's personal views regarding the issue of voter ID and provisional voting. Nevertheless, there was unanimous agreement in supporting the staff (and review panel) recommendation to move forward with the proposal submitted by Eagleton Institute.
- (5) Finally, to ensure that the final workproduct from both Eagleton and Moritz is objective and representative of all view points on these important issues, Eagleton proposed early in the process -- and we enthusiastically agreed -- to the formation of a balanced peer review panel which will review the work, on an on-going basis, of Eagleton and Moritz. All EAC commissioners have had an opportunity to provide names to Eagleton to ensure appropriate political balance on this peer review panel and Eagleton has been responsive to our various suggestions.

By way of summary, let me say that I believe we have an obligation to closely scrutinize the conduct of all of our federal contractors. If things come to light that bring into question the

028073

objectivity of any of our contractors, I believe the EAC ought to conduct its due diligence and deal with such matters accordingly, including the possibility of contract termination.

I would be happy to conduct such due diligence with regard to this particular contract. However, I must say, with all due respect, that I do not think any breach has occurred, either by Eagleton or Moritz, which would necessitate termination of this contract. I think appropriate checks and balances have been accounted for in this contract, and I believe these checks and balances will ensure an objective and sound final product from Eagleton.

I welcome your continued feedback, Hans.

Kindest regards,

RAY MARTINEZ III  
Commissioner  
U.S. Election Assistance Commission  
1225 New York Avenue, N.W., Suite 1100  
Washington, D.C. 20005

028074

August 19, 2005

To Gracia, Ray, Donetta, Tom, Julie, Karen

In his note regarding the Eagleton contract, Hans has raised some of the same concerns I raised from the beginning of any discussions I had regarding this contract with our staff, and at our first formal meeting with Eagleton. In reviewing their work product from time to time, I continue to have concerns about a lack of balanced input and have repeatedly voiced them with staff and with Eagleton. I did this when the initial peer review group was proposed and again during their presentation at our meeting in Pasadena (the outreach slide in their public presentation showed outreach to seven groups, of which only one could be considered conservative-leaning). Now, as I have just had the opportunity to read their July progress report, it appears that Eagleton seems to be going into a larger analysis of the voter fraud issue than was authorized in the contract. My suspicion is that Dan Tokaji is injecting his views into this to dismiss or diminish the concerns some people may have about voter fraud. I could be wrong, but his previous writings lead me to believe otherwise.

I only found one mention of voter fraud in the contract with Eagleton. It is in Section 3.5 regarding provisional voting, where it discusses "minimizing opportunity for voter fraud." Yet, on page 4 of the July progress report from Eagleton, in describing their work plan for the next month it states: "we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms." This clearly seems to be going beyond the mandate we gave them as I thought they were going to be looking at voter fraud relating to provisional voting (as the contract calls for), not voter fraud as it relates to election reforms. While voter fraud was never mentioned in the contract regarding the voter ID issue, page 5 of their July report indicates that their narratives "will include an appraisal of the prevalence and nature of vote fraud." In addition to this, page 6 describes a look into the "relationship between voter ID regime and vote fraud."

Voter fraud is clearly an issue that is perceived differently from the Right and from the Left. I have struggled with determining what a clear definition of voter fraud is myself, and therefore want to obtain various perspectives and good analysis on this issue before I formulate a solid conclusion in my mind. It has been my understanding all along that the whole voter fraud/voter intimidation issue is going to be studied by the EAC using a balanced group of consultants--not Eagleton and Moritz, who are likely to focus on just on the number of prosecutions of voter fraud, rather than the complaints made or the fact that many election officials are frustrated that some prosecutors don't take their complaints about voter fraud seriously. I am not convinced at this point that we will get a balanced and objective study from Eagleton/Moritz on voter fraud. I am puzzled on why they seem to be expending a significant portion of their time on this and would want to know if we somehow authorized them to do more research into the voter fraud issue.

On page 7 of their July report Eagleton indicates that communications with the EAC on the Peer Review Group "were not clear or timely." I would like to know what this refers to. Also, I may have missed it, but I do not recall seeing the final list of who is serving as the Peer Review group.

The August 15th copy of the July report that I received from Karen did not include the attachment of the financial report of expenses incurred. I would like to see that attachment.

Outside of our NIST work, this contract represents our largest single outside expenditure of our operational funds. Any single expenditure of \$500,000+ needs to be closely monitored. I, for one, am not going to sign off on any report that appears to have been written from a biased viewpoint, especially one that doesn't appear to be interested in hearing from conservative organizations or right-leaning researchers, or seems to minimize any input from them. I've already had questions

028075

from congressional staff and others on why we picked Eagleton and Moritz, as they are perceived by some as biased against Republicans. I assured the critics that we have insisted all along on an objective study from Eagleton. An unbalanced or biased study from them will not only hurt my credibility, but also that of the EAC. I'm not suggesting that we stop their work, but I do want Tom and Julie to inform them in no uncertain terms that we will not accept a report that does not seriously consider all viewpoints on provisional voting and the voter ID issue, and that any study or interpretations they present to us reflect a diversity of opinions on these subjects. We also need for staff to determine whether their considerable work into the voter fraud area is authorized in the contract. We should not be paying for and receiving work we did not authorize.

The contract clearly calls for "alternative approaches" on voter ID requirements and "alternatives" on provisional voting. I agreed to support this contract to Eagleton because I was assured that we would receive a variety of approaches from their work, and not just those from a liberal perspective.

August 19, 2005

Paul:

I am directing this email only to the commissioners, because I don't think we should air our disagreements among staff until we have at least had a chance to discuss controversial issues with each other in person. It appears from Gracia's email that we will have a chance do so next week in Denver.

In the meantime, I feel compelled to respond to your email regarding Eagleton.

(1) As I stated last night in my email to Hans, we have an on-going responsibility to monitor the expenditure of all our federal funds, including to government contractors who are contractually obligated to deliver unbiased research. However, I will remind you that we did not contract with Eagleton merely to provide a compilation of state laws and procedures. Rather, we contracted with Eagleton (and indirectly with Moritz through Eagleton) to provide both research AND analysis of provisional voting and voter ID. Invariably, the analysis portion of their final product will be from a professional (and institutional) perspective, and will NOT represent any one researcher's personal point of view. If it does, then Eagleton and Moritz risk damaging their credibility not just with the EAC, but with other federal government agencies which undoubtedly contract with their respective institutions on other projects. I doubt seriously that either institution would risk such damage and allow one team member to inject bias into the work. Moreover, the peer review group that is (or has) been assembled by Eagleton is designed to cure any lingering concerns about potential insitutional or personal bias...Eagleton has been responsive to your feedback on this issue, to the point where they have removed all perspective representatives of the advocacy community on the peer review group (because they felt they could not achieve political "balance" from the advocacy groups). If there is some person (or persons) which you would like to see Eagleton include in the review group, it is my understanding that such inclusion is but a mere phone call away.

(2) You will recall that at our meeting last week, I raised the exact same concern about the Eagleton progress report, and asked for clarification from staff regarding the details of this particular work (i.e., fraud) on the part of Eagleton. I expect staff (or us directly) to ask questions of Eagleton (as we would any contractor) and determine if their work in this area is within the scope of work (and contract) we all agreed to. If it isn't then we re-direct them, just as we have done, for example with Kim Brace and EDS.

(3) Finally, I must express my disappointment, Paul, regarding your comments on Professor Tokagi that you chose to include in your email. While I may disagree with Hans on his particular analysis of the perceived personal bias of this contract, at least his allegations regarding Professor Tokagi's potential bias are grounded in fact (and he recited them as such in his email). You, on the other hand, have chosen to accuse Professor Tokagi of manipulating the work on this project based on your "suspicion." With all due respect, that unfortunate accusation borders, in my view, on a breach of professional decorum and I cannot let it go without response.

We clearly have some political issues that are increasingly being injected into nearly every discussion at the EAC table. I have stated both to you and Gracia individually that I believe this trend in part represents a "maturation" of the EAC and I am not uncomfortable with it. However, if we are going to bring accusations of subjectivity and bias to the table, then I will expect that such a filter will be applied across the board to ALL projects undertaken by the EAC, and that such a filter will be based solidly on fact, and not on innuendo, personal hunches or suspicions.

028077

I send this email, as always, with the highest degree of respect and friendship toward you. And yet, my disappointment is evident in your comments regarding an esteemed and respected member of the legal academic community (and someone whom I regard as a personal friend.)

I look forward to our continued discussion on this matter. And as for the substance of Hans' concern regarding Moritz, I stand by my email which I sent to everyone last night.

RE: October 18, 2006 Letter

Dear Mr. Neas:

Your letter of October 18, 2006 requests the release of EAC's Voter Fraud and Intimidation Report. I would like to take this opportunity to clarify the purpose and status of this study.

In late 2005, EAC hired two consultants for the purpose of assisting EAC with two things: 1) developing a uniform definition of the phrase voter fraud, and 2) making recommendations on how to further study the existence, prosecution, and means of deterring such voter fraud. In May 2006, a status report on this study was given to the EAC Standards Board and EAC Board of Advisors during their public meetings. During the same week, a working group convened to react to and provide comment on the progress and potential conclusions that could be reached from the work of the two consultants.

The conversation at the working group meeting was lively on the very points that we were trying to accomplish as a part of this study, namely what is voter fraud and how do we pursue studying it. Many of the proposed conclusions that were suggested by the consultants were challenged by the working group members. As such, the consultants were tasked with reviewing the concerns expressed at the working group meeting, conducting additional research as necessary, and providing a draft report to EAC that took into account the working group's concerns and issues.

That draft report is currently being vetted by EAC staff. EAC will release a final report from this study after it has conducted a review of the draft provided by the consultants. However, it is important to remember the purpose of this study – finding a uniform definition of voter fraud and making recommendations on how to study the existence, prosecution and deterrence of voter fraud -- as it will serve as the basis of the EAC report on this study.

Thank you for your letter. You can be assured that as soon as a final report on the fraud and intimidation study is available, a copy will be made available to the public.

Sincerely,

Paul S. DeGregorio  
Chairman

Washington, DC 20005  
Fax: (202) 566-3127

Dear Commissioners,

On October 11<sup>th</sup>, *USA Today* published an article describing the report commissioned by the EAC on voter fraud. We write today to urge the EAC to release this report.

As a 25 year old civil rights and civil liberties organization, People For the American Way Foundation (PFAWF) and our sister organization, People For the American Way (PFAW) have long been dedicated to ensuring the integrity of our elections. In particular in the years since the 2000 election, PFAWF and other principle partners such as the NAACP and the Lawyers' Committee for Civil Rights Under Law, have carried out a program called Election Protection to ensure that all eligible voters are able to vote and have that vote counted as cast.

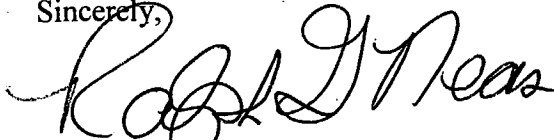

We know that voter fraud and intimidation occur— we've seen the long lines, the erroneous purges, the misleading flyers and phone calls. And yet there seems to be little attention to these matters on the state and federal level.

Instead, a disproportionate amount of time and energy are spent on measures that purport to curb voter fraud by requiring voters to produce proof of citizenship and identity to vote. In actuality, these measures do little to secure the elections and much to disenfranchise otherwise eligible voters. Indeed we are weeks away from an election where thousands of eligible voters may be disenfranchised by overly restrictive voter identification laws. That presents a real threat to the integrity of our elections and the health of our democracy.

The report that the EAC commissioned from voting experts would make a vitally important contribution to the national discourse on the reality of voter fraud. In light of the numerous claims regarding the prevalence of voter fraud, this report provides a much

needed analysis about the state of our electoral process. While media reports indicate that this tax-payer funded report is final, even if there are outstanding concerns within the EAC, we implore you to move forward with releasing the report as is, and to hold a public hearing to address any potential issues. Again, the importance of the information in this report is paramount and the public deserves such full disclosure. The report should be released immediately so that those who are concerned about ensuring the integrity of elections can benefit from its findings.

Sincerely,

Ralph G. Neas

Subject Fw: Peer Review Group

Commissioners-

Enclosed please find a preliminary list of Peer Review Group members, whom Eagleton is considering for their Peer Review Group. Tom Wilkey will be bringing this item to you for discussion and input at Monday's Commissioner's meeting.

Eagleton envisions this Peer Review Group as the body that will review the draft analysis that it will prepare on provisional voting and on voter identification. The Group would also provide comment on the development of alternative approaches to provisional voting and voter identification which Eagleton will develop for the EAC.

I have included the e-mail from the Eagleton Project Director, Tom O'Neil, so that you could get a feel for his approach/philosophy to assembling the Group.

Regards-  
K

"Tom O'Neill"

06/22/2005 03:29 PM

To klynndyson@eac.gov  
cc  
Subject Peer Review Group

Karen,

As you probably recall, one of the features of our proposal was the creation of a Peer Review Group to look over our findings, conclusions and draft reports before we prepare final drafts for the EAC's review. The EAC asked that before recruiting members of the PRG we submit names for EAC's review. The aim, course, is to assemble a panel that is experienced, informed, and balanced.

Attached is a list of potential PRG members drawn from academia, the law, and non-profit organizations with interests in this area. Please look it over.

We may conclude that the PRG should also include two or three former government officials now in academia or related fields. We have a conference call with our partners at Moritz planned for tomorrow or Friday to decide a) if former officials should be included in the PRG and b) if so, who they should be. I'll keep you informed of our thinking as it develops.

Tom

028099

## PROPOSED MEMBERS OF PEER REVIEW GROUP

**R. Michael Alvarez, Ph.D.**  
 Professor of Political Science  
 California Institute of Technology

[REDACTED]  
 Alvarez has taught political science at Caltech since 1992. He received his B.A. in political science from Carleton College; his M.A. and Ph.D. from Duke University. Alvarez focuses on the study of electoral politics. He has published many articles on electoral behavior and public opinion. Support for his research has come from the National Science Foundation, The IBM Corporation, the Carnegie Corporation, of New York, and the Knight Foundation. Alvarez edits the Analytical Methods for Social Research book series and is on the editorial boards of a number of academic journals. He is Co-Director of the Caltech-MIT Voting Technology Project

**Deborah Goldberg, Ph.D**  
 Program Director, Democracy Program  
 Brennan Center for Justice at NYU School of Law  
 [REDACTED]  
 New York, NY 10013

Goldberg supervises the Democracy Program's litigation, scholarship, and public education. She was the principal author of *Writing Reform: A Guide to Drafting State & Local Campaign Finance Laws*, and was lead counsel to the intervenor in the Supreme Court case *Nixon v. Shrink Missouri Government PAC*. She serves on the Steering Committee of a coalition to restore voting rights to persons with past felony convictions. Goldberg is a graduate of Harvard Law School. Before joining the Brennan Center, she was in private practice. She holds a Ph.D. in philosophy and taught ethics at Columbia University.

**Martha E. Kropf, Ph.D.**  
 Assistant Professor of Political Science  
 University of Missouri-Kansas City

Kropf has been on the faculty at Missouri since 1999. She received her BA Summa Cum Laude, Phi Beta Kappa from Kansas State University and her PhD in Political Science from American University. Her work concentrates on Research Methods, Urban Politics, American Government, and Political Behavior. Before joining the faculty at Missouri, she was Project Coordinator at the University of Maryland Survey Research Center. She has published recent on undervoting in presidential elections, and on invalidated ballots in the 1996 presidential election, and on the incremental process of election reform in Missouri.

**Wade Henderson, Esq.**  
 Executive Director  
 Leadership Conference on Civil Rights  
 [REDACTED]

Washington, DC 20006

Wade Henderson is the Executive Director of the LCCR and Counsel to the Leadership Conference on Civil Rights Education Fund (LCCREF), and leads the organizations' work on issues involving nationwide election reform. He is a graduate of Howard University and the Rutgers University School of Law. During its over 50 years of existence, LCCR has worked to redefine civil rights issues in broad and inclusive ways. Today, it includes over 180 national organizations. Previously Henderson served as Washington Bureau Director of the NAACP. He began his career as a legislative counsel of the ACLU.

**Kay Maxwell**  
 President  
 League of Women Voters of the U.S.  
 [REDACTED]

Washington, DC 20036-4508  
[REDACTED]

Kay J. Maxwell has been a member of the League since 1976. She attended Smith College and earned a B.A. in International Relations from the University of Pennsylvania. She has conducted civic participation training for women leaders in Bosnia, Israel, the West Bank, Rwanda, Kuwait and Jamaica. She has also served as vice president at the International Executive Service Corps (IESC), an international economic development organization. She is a board member of DC Vote, and the New Voters Project.

**Tim Storey**  
Program Principal  
Legislative Management Program  
National Conference of State Legislatures

[REDACTED]  
Denver, CO 80230  
[REDACTED]

or

[REDACTED]  
Washington, D.C. 20001  
[REDACTED]

**Peter G. Verniero, Esq.**  
Counsel  
Sills, Cummis, Epstein and Gross, PC

[REDACTED]  
Newark, New Jersey 07102  
[REDACTED]

Verniero chairs the firm's Appellate Practice Group. He earned his B.A. at Drew University, Phi Beta Kappa, and his J.D. (with honors) at the Duke University School of Law. In 1999, he was appointed a justice of the New Jersey Supreme Court, where he served for 7 years before re-entering private practice. Before his appointment to the Supreme Court, he served as New Jersey's Attorney General, and in that capacity oversaw the state's election laws. He also served as Chief of Staff and Chief Counsel to Governor Christine Todd Whitman.

Tim O'Rourke, Dean of the Fulton School of Liberal Arts at Salisbury University in Maryland, has agreed to serve on the Peer Review Committee.

Tom O'Neill

028104

**TIMOTHY G. O'ROURKE**  
 Dean of the Fulton School of Liberal Arts  
 Salisbury University

E-MAIL

In July 2002, Timothy G. O'Rourke became the Dean of the Fulton School of Liberal Arts at Salisbury University, a comprehensive public university with nearly 7,000 students located on Maryland's Eastern Shore. The largest of the university's four schools, the Fulton School has about 120 full-time faculty and more than 1,800 undergraduate and graduate majors in ten academic departments and accounts for more than two-fifths of the University's credit hour production.

In the seven years before his arrival at Salisbury, Dr. O'Rourke was at the University of Missouri-St. Louis, where he was the Teresa M. Fischer Professor in Citizenship Education, a position established in 1995 in order to promote the informed participation of youth in community and governmental affairs. The inaugural recipient of this professorship, Dr. O'Rourke held a joint appointment as Professor of Educational Leadership and Professor of Political Science. From 1998 to 2002, he served as Executive Director of Kids Voting Missouri, a program in which nearly 68,000 Missouri elementary and secondary students went to official polling sites and voted alongside their parents in the November 7, 2000 presidential election.

From 1992 to 1995, Dr. O'Rourke was professor and head of Political Science at Clemson University. Prior to that, Dr. O'Rourke was, for 14 years, a faculty member in the University of Virginia's Center for Public Service. From 1985 to 1992, Dr. O'Rourke served as the Executive Director of the Virginia Commission on the Bicentennial of the U.S. Constitution. Commission projects included the national opening of Montpelier, Madison's home (1987); the "Constitution Train" to Philadelphia to mark "Virginia Day" (1987); production of *Worth Fighting For*, an Emmy-Award-winning documentary on the ratification struggle in Virginia (1988); the celebration of the 200<sup>th</sup> anniversary of the first federal elections (1989); the Virginia visit of Hungarian President Árpád Göncz to mark the "Global Legacy of the Bill of Rights" (1990); and production of *What No Just Government Should Refuse*, an Emmy-nominated documentary on the writing of the Bill of Rights (1991). From 1983 through 1986, Dr. O'Rourke directed "The Virginia Court Days Forums," a series for Virginia public television featuring town meetings on constitutional issues.

Professor O'Rourke is the co-author of *State and Local Government: The Third Century of Federalism* (1988) and author of *The Impact of Reapportionment* (1980), named by *CHOICE* as one of the Outstanding Academic Books of 1980. His articles on the federal Voting Rights Act have appeared in such journals as the *Rutgers Law Journal*, the *Virginia Law Review* and the *Journal of Law & Politics*. He has testified before both U.S. House and Senate committees on various voting issues and has served as an expert witness in voting rights litigation. In addition, he has staffed electoral reform commissions, including the Virginia Beach Mayor's Committee for Reapportionment (1990) and the Charlottesville Citizens' Committee to Study Council Changes (1980-81). During 1996-97, he served as advisor to the St. Peters Charter Commission, which drafted a home rule charter for that city. Dr. O'Rourke's teaching interests include state politics, school law, and voting rights and representation. He is a *Phi Beta Kappa* graduate of the University of Pittsburgh (1970) and holds a Ph.D. in Political Science from Duke University (1977). In 2002, Dr. O'Rourke joined four others in the inaugural Class of Distinguished Alumni recognized by the Tyrone Area School District (PA). Dr. O'Rourke and his wife and family have five grown children and one grandchild and reside in Quantico, Maryland.

## Existing Research Analysis

There are many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. There is little research that is truly systematic or scientific. The most systematic look at fraud is the report written by Lori Minnite. The most systematic look at voter intimidation is the report by Laughlin McDonald. Books written about this subject seem to all have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists. It is hoped that this gap will be filled in the "second phase" of this EAC project.

Moreover, reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund's frequently cited book. Again, this is something that it is hoped will be addressed in the "second phase" of this EAC project by doing follow up research on allegations made in reports, books and newspaper articles.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate, but some reports say it is a major problem, albeit hard to identify.
- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

## EAC Voting Fraud-Voter Intimidation Preliminary Research

---

- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

*Peer Review Group  
Summary of Comments  
To the Eagleton/Moritz Group  
Under Contract to Provide Research Assistance to the EAC*

*October 15, 2005*

The Peer Review Group (PRG) met by telephone conference on September 21. Those participating included: Michael Alvarez, John C. Harrison, Martha Kropf, Dan Lowenstein, Peter Verniero, Brad Smith, and Tim Storey. This summary also includes additional written remarks submitted by Martha Kropf and additional remarks from a follow-up phone call with Timothy O'Rourke. We are now addressing all the comments including, in some cases, returning to members of the group to seek further elaboration or clarification.

We encouraged the members of the PRG to comment about any aspect of the project. We furnished them with these materials before the meeting.

1. Survey of local (mainly county) officials conducted in June 2005.
2. State-by-state narrative of developments in provisional voting
3. Statistical Analysis of state provisional voting
4. Memorandum on Provisional Voting Litigation
5. Memorandum on Provisional Ballot Litigation by State
6. July Memorandum on Provisional Ballot Litigation by Issue

We suggested that PRG members rank our draft responses to each of the six key questions posed by the EAC along these lines:

- 1- Research supports conclusions well.
- 2- Research supports some conclusions. Specific questions are:
- 3- Research does not support conclusions. Major problems are:

On the Alternatives paper, we asked PRG members to list up to three items they found questionable in light of the research and their own knowledge of provisional voting and election administration and to give us their thoughts on alternative policies that we had no included.

General Suggestions

1. Make transparently clear the meaning of 'old' versus 'new' states. It is not enough to categorize the states as such, we need to determine why specific states were considered 'old' or 'new' (i.e. clarify what conditions were met by old states).

2. Be **clear** in our report about the **data that we were unable to obtain** and perhaps speculate on why that data was not available. (For example, do we have the documentation the state election boards gave the localities regarding counting practices? If not, why not? Indicate the states for which it was difficult to obtain data.

3. Prescribe less and **describe more** (tell what voters/administrators have done, not what they should have done or ought to do).

4. Questioned our assumption about public trust – How do we know that decreases in disputes/challenges signify an increase in public trust? We need to explain this assertion.

#### Specific Review by Area of Analysis/Document

##### **Response to Statistical Review:**

- Challenged our emphasis on the number of provisional ballots counted as a percentage of those cast as an indication of success of Provisional Voting. Suggested alternative relationships to consider (PB v. Turnout, PB v. Registered Voters, and PB v. Voting age Population).
- Wanted the inclusion of variation within states among counties (and geographical considerations).
- The report needs to address the quality and validity of the data used in the analysis.
- On Page 8, cautioned using the estimate of 280,000 disenfranchised voters who would have voted if outside precinct voting was permitted.

##### **Response to Question Four:**

- Remove the comments in the footnote (p. 1) that offers an alternative way of analyzing the question relating to the possible increase in voter participation as a result of provisional voting because the margin of error in the Census survey does not support a conclusion at this level of significance.
- Address the alternative explanation for why old states may enfranchise more voters than new states (i.e. Kropf 's Failsafe option).
- Include a statistical summary of the relationship between the length of time a state has had PV and the rate at which votes are counted.

##### **Response to Question Five:**

- Is it possible to draw any conclusions about the local differences within and among states broken down by county (presumably 20 states worth)?

- Clarify what is meant by “design” and say how many states have/had provisional ballots that are designed differently and look different. Why is design important?
- Page 17 indicates that states with statewide voter databases end up validating fewer PVs. This is important & should be addressed in more detail.

#### **Response to Question Six:**

- On the usefulness of instructions, 98% said the instructions were useful. Make it clear that this represents 98% of the officials who got instruction.
- Is the passive voice the best means to communicate this information (for ex. "Second, objectively how well did the process appear to be managed?")

#### **Response to State Narratives:**

- When in doubt about whether we have data to support a sentence it is important to be careful about the language we use (say ‘doing XYZ would have revealed’ as opposed to ‘most of what we know about XYZ revealed’ ...)
- Clarify for the readers what is meant by "provisional vote/total vote". Does that mean provisional votes cast? Counted? Make it clear right at the beginning of every document?
- Footnote states that do not list poll sites or tell people where to vote with the fact that many cities/counties do have a poll finder.

#### **Election Official Survey**

- Clarify how we determined who to include in the sample and how we developed the questions in the survey (was a focus group an initial step?) Why were 3,800 election officials deemed eligible to participate (out of how many? 5,000 or so?)
- Clarify old and new states on pg. 2 in National Survey. Comment on how to assess fraud in provisional voting? What is the relationship between PV and turnout?
- Explore more issues about citizenship (18% non-citizen voting in CA)?
- Appendix A says survey was random, but it’s not. How was the data weighted for small, medium and large counties, and for other issues? Clarify this in the report.

- Why doesn't the total of new and old states equal 50 (25 and 18) and why does the National Survey of Election Officials have different numbers? Is FL an 'old' state?
- Are the New England states underrepresented in the survey? If so, why?
- Report should offer more information about the response rate.

#### **Alternatives Document**

- The importance of clarity in state processes for both administrators and voters needs to be better articulated.  
(Better training of poll workers, clarity whether failure to check boxes disqualifies voters, access to better info. at polling locations)
- Cautions the use of definitive statements (such as A-3, perhaps say "This raises the question of...").
- Have other EAC Guidelines been tested in court yet?
- On page 3: the 'tracking number' in # 6 is not feasible. Also, "the information" in # 12 should be changed to "the website and 800 numbers" for clarification.
- Page 6, there were disagreements about # 1 and # 2 of options in Sec. F regarding the installation of a separate body to rule on PV for the integrity process; a motion was made to get rid of them.
- Page 6, Sec. E option # 1 should be eliminated or clarified
- Add to Sec. F a '# 5' requiring states to provide detailed public info. on PV

- Provisional Voting
  - Task 3.5
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

## INTRODUCTION

This report describes our progress from September 1 through September 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

We focused in September on refining our Provisional Voting research. This refinement was necessary to prepare a strong final analysis paper and develop alternative approaches to Provisional Voting based on the analysis. An important part of this refinement involved reconciling sometimes conflicting data on Provisional Voting from different sources, including the Election Day Study, which finally became available in September. With a clearer understanding of our data, we began the critical work of selecting alternatives to recommend to the EAC as guidance or best practices responsive to both our research and the needs of the Commission.

Three meetings this month helped us accomplish the necessary refinement. We briefed the EAC on our work on September 6, held the first meeting of the Peer Review Group (PRG) on September 21, and gained the benefit of the EAC's reaction to the September 6 briefing in a conference call on September 30.

The completion of our work on Provisional Voting has been delayed by the time needed to absorb and incorporate the findings of the EAC Election Day Study, to recruit and receive the comments of the PRG, and to receive the Commission's comments on the September 6 briefing. The schedule called for the release of the Election Day Study last spring, the submission of the Preliminary Guidance Document to the EAC's advisory boards in mid-September, and a public hearing on the Guidance Document in late October. We now plan to submit to the EAC a final draft of our report, a preliminary guidance document, and draft

best practices before the end of October. And we understand that after review of those materials, the EAC will decide whether to issue a guidance document or recommend best practices. Projecting a late November date for those decisions seems reasonable. If the EAC does decide to issue a Guidance Document on Provisional Voting, the time needed for a review by the advisory boards is likely to delay a public hearing until January.

While we have made a good start on the Voter ID sections of our research, most time and resources this month were dedicated to resolving issues involved in Provisional Voting.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to Tom O'Neill at: [tom\\_oneill@verizon.net](mailto:tom_oneill@verizon.net) or (908) 794-1030.

## **PROVISIONAL VOTING**

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, and Task 3.5 is well underway.

**Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of Provisional Voting and develop alternative means to achieve the goals of Provisional Voting.**

### **LEGISLATION, REGULATIONS, AND LITIGATION**

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states' actual experience with Provisional Voting in 2004, for which the Eagleton team has lead responsibility.

**Description:** The Moritz team has created a 50-state chart to summarize information on Provisional Voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and is near completion with this research.

**Progress:** We have completed the memorandum outlining Provisional Voting legislative changes since the 2004 election and we are continuing to clarify the laws prior to these changes.

**Challenges:** The variety in the form and frequency of Provisional Voting legislation from state to state makes creating a snap-shot view across states a challenge.

**Work Plan:** The analysis of the information, data, and survey results concerning Provisional Voting was completed in September, on schedule. We are now revising it in response to comments by the Peer Review Group (PRG). We are also revising the alternatives document to reflect the critique of the PRG and the guidance from the EAC in response to the September 6 briefing.

### **PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING**

The Eagleton team has researched and compiled a narrative of each state's experience with Provisional Voting in 2004. The report findings from the survey of 400 local election officials are now complete. The survey results have proven to be instrumental in shaping our

understanding of actual practice in administering Provisional Voting, including the steps local officials took to prepare for the election.

### PROVISIONAL VOTING NARRATIVES

**Description:** To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with Provisional Voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to Provisional Voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

**Progress:** We completed a state-by-state narrative of developments in Provisional Voting and distributed it to the EAC and the PRG. This work has been helpful in understanding the context of the data collected on provisional voting from the states.

**Challenges:** The primary obstacle to constructing the narratives was difficulty in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent several revisions to incorporate up-to-date and reliable information. Now that so many other analyses, including the Election Day Survey, have been released, we were challenged by different interpretations of the same basic facts. But the reconciliation of interpretation and data collection has been invaluable in establishing rigor in our report.

**Work Plan:** We completed revisions of the narratives incorporating comments from the PRG.

### PROVISIONAL VOTING STATISTICAL ANALYSIS

**Description:** Throughout September the Eagleton research team revised and clarified its statistical analysis, and worked to reconcile the classifications of this analysis (such as states counting only those provisional ballots cast within the proper precinct versus states that counted ballots cast within the proper county) with the classification made in other parts of this study or in other studies (such as the Election Day Study or *Electionline* reports).

**Progress:** In response to comments from the PRG, we have clarified and sharpened the presentation on the methods used and results achieved in the statistical analysis. We have double checked the classification of variables upon which the study is based and reconciled differences in various areas of the overall study. This effort is nearing completion.

**Challenges:** The difficulties encountered have been a result of communication delays and time constraints. Overall, these are not problems or hindrances, but simply slow down the process.

**Work Plan:** In mid-October we aim to complete a final revision of the statistical analysis and a full reconciliation of all data within the study.

### **SURVEY OF COUNTY ELECTION OFFICIALS**

**Description:** The Eagleton Center for Public Interest Polling (CPIP) conducted a national survey of county election officials to measure several aspects of Provisional Voting.

**Progress:** The analysis of the survey results and findings report is complete. As a result of the critique by the PRG, the research team is revising and clarifying the descriptions of the survey design and sample selection process to make the research methods more transparent.

**Work Plan:** We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5. We will include necessary clarifications regarding survey design and sample selection in the final analysis and alternatives document.

### **Peer Review Group**

Most members of the PRG met by telephone conference on September 21 to comment on all the research described above. Participating in the meeting were Michael Alvarez, Martha Kropf, Dan Lowenstein, Peter Verniero, Brad Smith, and Tim Storey. Timothy O'Rourke contributed his comments separately. The group provided a detailed critique of our approach, methods, and conclusions, and we are now revising each document in response to the comments and suggestions. It praised the quality of the work and the rigor of much of the analysis. A summary of the suggestions from the members of the PRG is attached to this report.

### **Challenges and Work Plan**

Making arrangements for review of drafts by the PRG and by the EAC has taken longer than anticipated by the Work Plan. The schedule called for all research and analysis to have been completed and incorporated into a Draft Preliminary Guidance Document by mid September. The review process by the EAC and PRG took longer than contemplated by the Work Plan. And we now understand that the EAC will make a separate decision --that will require additional time-- whether to issue a Guidance Document or recommendations for best practices. It has not, therefore, been possible to schedule a public hearing or arrange for review of our work by the EAC's advisory boards, as called for in the Work Plan. We now aim to complete our reports and recommendations for guidance by the end of October, and to then await a response from the EAC before scheduling submission to the advisory boards or making arrangements for a hearing.

## VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is becoming the principal focus of our research.

### Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

**Description:** The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

**Progress:** The 50 State (plus the District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C.

**Challenges:** Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

**Work Plan:** Analysis of voter identification data will begin now.

### SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. We understand that the EAC has issued a

research contract that will focus on vote fraud and vote suppression. Our research in this area will be limited to developing an understanding of the tradeoffs between ballot security and access to the ballot. We have completed the basic database on voter identification issues has been completed, and the next key step will be drafting the first narratives.

### VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

**Description:** We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

**Progress:** The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also utilized exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout.

**Challenges:** The analysis of these data has been postponed until the data reconciliation of Provisional Voting is complete. The main challenge now is an issue of time management. As a result of the extensive revision and data reconciliation efforts aimed at the Provisional Voting section of our work VID has been temporarily placed on hold.

**Work Plan:** The analysis of the impact that voter identification requirements have upon voter turnout should be completed by early November.

## **PROJECT MANAGEMENT**

### **PEER REVIEW GROUP**

**Description:** A feature of our proposal was the creation of a PRG. It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

**Progress:** The research team held its first conference call with PRG members on September 19, 2005. The research team will hold a workshop meeting on October 19, 2005 to address the PRG's comments.

**Challenges:** To date we still have not heard back from two PRG Members.

**Projections:** Revisions and clarifications to our reports on Provisional Voting will be resolved by the end of October. We will need to schedule a second conference call to review our research with regard to Voter Identification Requirements in late November. As noted earlier, a summary of the comments we have received from the PRG is attached to this report.

### **COORDINATION AND INFORMATION MANAGEMENT**

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

#### **INFORMATION SYSTEM**

**Description:** The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

**Progress:** At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole.

**Projections:** The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

#### **INTRANET**

**Description:** All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

**Progress:** Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has helped team members and serves as an internal website with announcements and important documents readily available to all team members.

## FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project September 1- September 30, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

Then discuss

**Job Description**

**U.S. Election Assistance Commission (EAC) Voter Fraud and Voter Intimidation Project Consultant**

The U.S. Election Assistance Commission (EAC) seeks to identify a senior-level project consultant to develop various project activities and studies related to U.S. election voter fraud and voter intimidation.

*No. 6 241*

The consultant must have knowledge of voter fraud and intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and the law. The consultant must be able to demonstrate an ability to approach the issues of voter fraud and intimidation in a balanced, nonpartisan fashion.

This consultant, whose contract would run for the period June-November, 2005, would be responsible for:

Research

- Identifying and convening a working group of key individuals and organizations knowledgeable about the topics of voter fraud and intimidation;
- Developing a project scope of work and a project work plan related to voter fraud and intimidation;
- Authoring a report summarizing the key findings of this preliminary study of voter fraud and intimidation. The report will also include suggestions for specific activities the EAC may undertake around these topics.

*research*

*and X*

From this initial research and exploration of these topics the consultant may be retained to help oversee research projects and contracts EAC may develop on the topics of voter fraud and intimidation.

EAC's consultant fees are competitive and are awarded based on the candidate's relevant background and experience.

R. Michael Alvarez, Ph.D.  
Professor of Political Science  
Division of the Humanities and Social Sciences

[REDACTED]  
[REDACTED]  
[REDACTED]  
[REDACTED]

R. Michael Alvarez was selected by *Scientific American* magazine to be on the 2004 "Scientific American 50" for his outstanding scientific and technological contributions to help improve the U.S. voting system. He has taught political science at Caltech since December 1992. He received his B.A. in political science in 1986 from Carleton College; he received his M.A. and Ph.D. from Duke University in 1990 and 1992, respectively. Alvarez was named an Associate Professor in April 1995, received tenure in June 1997, and was promoted to Professor in March 2002. Alvarez has focused most of his research and teaching on the study of electoral politics in the United States. His first book, *Information and Elections*, was published in the spring of 1997: This project examined the question of how much American voters know about presidential candidates and how they obtain that information. His second book, *Hard Choices, Easy Answers* (with John Brehm), is a study of American public opinion about divisive social and political issues. His recent book (published January 2004), *Point, Click, and Vote: The Future of Internet Voting* (with Thad E. Hall), published by Brookings Institution Press, examines the controversies swirling around the Internet voting in the United States. He has also published many articles on electoral behavior and public opinion in the United States and other advanced industrial democratic nations.

Alvarez has received a number of honors and grants for his work. He was named the "Emerging Scholar" by the American Political Science Association's Voting Behavior and Public Opinion Section in 2002. He was a John M. Olin Faculty Fellow (1994-95) as well as a John Randolph Haynes and Dora Haynes Faculty Fellow (1994, 1997, 1999, 2002). Alvarez received the Sprague Award with John Brehm for their work on public opinion, and the Durr Award with Jonathan Nagler for their work on modeling elections. Also, Alvarez has received financial support for his research from the National Science Foundation, The IBM Corporation, the Carnegie Corporation of New York, and the Knight Foundation. Alvarez edits the Analytical Methods for Social Research book series and is on the editorial boards of a number of academic journals: *American Journal of Political Science*, *American Politics Quarterly*, *Election Law Journal*, *Political Behavior*, *The Journal of Politics* and *Political Research Quarterly*. He was the editor of *The Political Methodologist*, 1993-96.

Professor Alvarez is Co-Director of the Caltech-MIT Voting Technology Project, researching technological solutions to electoral problems, and is the Principal Investigator of the "Secure Electronic Registration and Voting Experiment" Evaluation. He has been an expert witness in a series of recent court cases, including California's defense of the blanket primary (*California Democratic Party v. Jones*), *Bradley v. Compton*, and *Cano v. Davis*. He has testified before a number of organizations, including the U.S. Senate. He was an outside consultant for Knight Ridder on their 2000 Hispanic Voter Poll, and in 2004 is a consultant to Greenberg, Quinlan, Rosner Research Inc. in their research on the Hispanic electorate. Alvarez is a frequent guest on Pasadena's National Public Radio affiliate, KPCC-FM, and writes opinion pieces for local newspapers. He has been interviewed for National Public Radio, Jim Lehrer's NewsHour, CNN, ABC, NBC News, and for many state, national and international newspapers.

THE GEORGE WASHINGTON UNIVERSITY LAW SCHOOL  
WASHINGTON DC

**Bradford R. Clark**  
Professor of Law

Email: [REDACTED]

Telephone: [REDACTED]

**Education:** B.A., Florida State University; J.D., Columbia University

**Biographical sketch:** Before coming to the Law School in 1993, Professor Clark spent several years practicing law in the Washington, D.C., office of Gibson, Dunn & Crutcher, where he specialized in appellate litigation. Previously, Professor Clark served as an attorney adviser in the Department of Justice's Office of Legal Counsel, where he provided legal advice to the president, the attorney general, and the heads of executive departments. Professor Clark also served as a law clerk to Judge Robert H. Bork of the U.S. Court of Appeals for the D.C. Circuit and to Supreme Court Justice Antonin Scalia. Professor Clark teaches and writes in the areas of civil procedure, constitutional law, and federal courts.

**Current Semester Courses:** Civil Procedure I , Law Review

**Grants/  
Contracts**

"Issue Advocacy and Soft Money in the 2004 Presidential Election in Missouri." Center for the Study of Elections and Democracy, Brigham Young University. Award: \$8,450. (May 2004-February 2005). This award funds research concerning campaign activity in the presidential race in Missouri.

"Public Opinion Toward the Library in the Community." Kansas City, Missouri Public Library. Contract: \$6,372. (January 2004-June 2004). This grant/contract funds the survey conducted by my class, "Survey Research and Analysis," which is a service learning class at UMKC.

"Explaining Unrecorded Votes in Elections." University of Missouri System Research Board Grant, Requested \$48,468, Awarded \$38,468 (with David Kimball).

"Issue Advocacy and Soft Money in the 2002 Missouri Senate Election." Center for the Study of Elections and Democracy, Brigham Young University. Award: \$4400. (August 2002-February 2003). This award funds research concerning campaign activity in the Carnahan/Talent Senate race (with Dale A. Neuman).

"Voting and the Media: A New Look at Public Journalism." University of Missouri-Kansas City Faculty Research Grant, Award: \$6,000. (December 2001-January 2003).

**Kropf Vitae, page 5 of 9**

**Grants/Contracts, continued...**

"Kansas City Consensus Issue Identification Survey." University of Missouri-Kansas City, Center for the City, Faculty Knowledge Fund, Award: \$5,815. (January 2002-May 2002). This award provided the funding for a survey conducted by my class "Survey Research and Analysis" for the Kansas City Consensus, a policy research and advocacy group.

"Invalidated Ballots in the 1996 Presidential Election: A County-Level Analysis." University of Missouri-Kansas City Research Incentive Fund, Award: \$350. (April 2001). This award allowed me to purchase data for the voting equipment project.

"Issue Advocacy and Soft Money in the 2000 Missouri Senate and Presidential Elections." Center for the Study of Elections and Democracy and the Pew Charitable Trust Fund, \$13,500, 1999-2000 (with Dale A. Neuman). This award funded research concerning issue advocacy and soft money spending in the 2000 Missouri Senate and presidential elections.

"Viewers Like You: Community Norms and Contributions to Public Broadcasting, Part II." Aspen Institution Nonprofit Sector Research Fund, Dissertation Grant, Award: \$5,915, January 1997-September 1997. (Grant #96-2-NSRF-06).

**Pending Grant Applications**

"Ballot Design and Unrecorded Votes." (With David Kimball).

- Application submitted to Smith Richardson Foundation Domestic Public Policy Research Fellowship Program, June 2004 (\$60,000).
- Letter of Inquiry submitted to Carnegie Corporation of New York, July 2004.
- Application submitted to National Science Foundation, August 2004.

**Conferences**

**Presentations**

"Going Negative in Competitive U.S. Senate Elections: Who Notices and So What?" Paper prepared for presentation at the 100<sup>th</sup> Annual Meeting of the American Political Science Association, September 2-5, 2004, Chicago, IL (with E. Terrence Jones, Jay Barth and Janine Parry).

"Giving People What They Want: Is Synchronicity Between Desired Political Communication and Campaign Activity Important in Shaping Voter Turnout?" Paper prepared for presentation at the 27<sup>th</sup> Scientific Meeting of the International Society of Political Psychologists, July 2004, Lund, Sweden (with Jay Barth, E. Terrence Jones and Janine Parry).

"Ballot Design and Unrecorded Votes in the 2002 Midterm Election." Paper prepared for presentation at the 2004 American Association for Public Opinion Research Meeting, May 13-16, 2004, Phoenix, AZ (with David Kimball).

"Public Opinion Toward the Library in the Community." Paper prepared for presentation at the 2004 American Association for Public Opinion Research Conference, May 13-16, 2004, Phoenix, AZ (with Linda Babcock, Brian Barton, Michael Joyce, Jennifer Lyon and Mendel Martin).

"Early and Absentee Voting and Unrecorded Votes in the 2002 Midterm Election." Paper prepared for presentation at the 2004 Midwest Political Science Association Meeting, April 15-18, 2004, Chicago, IL (with David Kimball).

**Conference Presentations, continued...**

"Floating Voters in Competitive U.S. Senate Elections: The 2002 Arkansas and Missouri Contests." Paper presented at the 2004 Western Political Science Association Meeting, March 11-13, 2004, Portland, OR (with E. Terrence Jones, Janine Parry and Jay Barth).

"Mobilizing Voters: A Dynamic Model of Campaign Effects." Paper prepared for Presentation at the 2003 Southern Political Science Association Meeting, January 8-11, 2004, New Orleans, LA (with Janine Parry, Jay Barth and E. Terrence Jones).

- "Coming into the Profession: The Professionalization and Socialization of Graduate Students in Political Science." Paper presented at the 1996 Northeast Political Science Association Meeting, November 14-16, 1996, Boston, MA (with Julie Dolan, Marni Ezra and Karen O'Connor).

**Conference Presentations, continued...**

"Overworked, Overwrought and Underpaid: Teaching Students to Teach." Paper presented at the 68th Annual Southern Political Science Meeting, November 6-9, 1996, Atlanta, GA (with Julie Dolan, Marni Ezra and Karen O'Connor).

"Why Do People Contribute to Public Broadcasting?" Paper presented at the 1996 Public Choice Society Meeting, April 12-14, 1996, Houston, TX (with Stephen Knack).

"The Electoral Glass Ceiling: The Effect of Media on Women Senate Candidates." Paper presented at the 54th Annual Midwest Political Science Association Meeting, April 18-20, 1996, Chicago, IL (Co-author: John A. Boiney).

**Other**

**Conference  
Participation**

Chair and Discussant, "U.S. Senate Campaigns and Elections." Annual Midwest Political Science Association Meeting, April 16, 2004.

Chair and Discussant, "Mandates and State Violence." 60<sup>th</sup> Annual Midwest Political Science Association Meeting, April 28, 2002.

Roundtable on "Soft Money and Issue Advocacy in the 2000 Elections." 2001 Western Political Science Association Meeting, March 15-17, 2001.

Discussant, "Structural Influences on Voter Turnout," 58<sup>th</sup> Annual Midwest Political Science Association Meeting, April 27-30, 2000.

Discussant, "Social Capital and Political Participation: National, Subnational and Cross-National Perspectives," 57<sup>th</sup> Annual Midwest Political Science Association Meeting, April 15-17, 1999.

**Expert**

**Testimony**

Offered Affidavit in *Working Families, et. al v. New York City Board of Elections* on behalf of the plaintiff (asked to participate by the Brennan Center for Justice, who was representing the plaintiff). (Summer 2003; case settled out of court. The NYC Board of Elections disabled the sensor latches on lever voting machines. The plaintiffs asked the Election Board to reconnect them.)

Offered Affidavit and Deposition in *Stewart v. Blackwell*, Ohio, on behalf of the plaintiffs, represented by the ACLU. (Fall 2003-present. In this lawsuit, the plaintiffs are asking the state and four counties to stop using punchcard ballots and optical scan voting equipment with central count ballots.)

Testified before the Blunt Commission on Electoral Reform, January 12, 2001, Hearings held at the University of Missouri-Kansas City

\*Special Note: My colleague Stephen Knack testified before two United States Congressional Committees about our paper, "Who Uses Inferior Voting Technology?" (Committee on Rules and Administration, Hearing on Election Reform, and Committee on Governmental Affairs, Hearing on Federal Election Practices and Procedures).

## ISSUES

---

### Equal Rights Amendment

#### Equal Rights Amendment

An amendment to guarantee equal rights to women has still never been ratified and added to the U.S. Constitution, even though it was first introduced in 1923. The Equal Rights Amendment passed Congress in 1972 but lapsed in 1982 when it fell three states short of ratification.

**Where we stand:** The National Women's Political Caucus supports the adoption of the Equal Rights Amendment to the United States Constitution. [more...](#)

---

### Health Care for Women

#### Long-Term Care Insurance

Long-term care is required for many Americans with permanent disabilities and illnesses. Assisted living, whether at home or in a nursing home,...

**Where we stand:** The National Women's Political Caucus supports long-term care insurance for women. [more...](#)

#### Equality of Insurance Benefits

A majority of insurance companies do not provide coverage for essential services, such as contraceptive drugs and devices. Contraceptives are a...

**Where we stand:** The National Women's Political Caucus supports mandatory coverage of family planning, including contraceptive drugs and devices. [more...](#)

#### Prescription Drug Coverage by Medicare

In December of 2003 Congress passed a law creating a Medicare prescription drug discount card, allowing those eligible for Medicare to receive...

**Where we stand:** The National Women's Political Caucus supports full coverage of prescription drugs by Medicare. [more...](#)

---

### Judicial Appointments

#### Pro-Choice Judicial Nominees

In January of 1973 the Supreme Court legalized abortion, giving women the right to choose. The right to choose has been attacked recently,...

**Where we stand:** The National Women's Political Caucus supports pro-choice judicial nominees who will uphold Roe v. Wade and continue to give women the right to choose. [more...](#)

---

### Reproductive Choice

#### Mandatory Waiting Periods for Abortions

028140

Mandatory waiting periods require women seeking abortions to wait for a period of time before the procedure may be performed. Generally, a...

**Where we stand:** The National Women's Political Caucus supports a woman's access to abortions without unnecessary hassle and delay. more...

#### **International Human Rights for Women**

Women are often the target of human rights violations specifically because they are women. Violence and sexual abuse in the home is still...

**Where we stand:** The National Women's Political Caucus supports human rights for all women across the globe, so that women may live in a free society. more...

#### **RU486**

In 2000, the Food and Drug Administration approved RU486, more commonly known as the abortion pill. RU486 is a non-surgical pill that enables...

**Where we stand:** The National Women's Political Caucus supports availability of RU486 and emergency contraception. The NWPC does not support pharmacists who determine who can and cannot receive them. more...

---

#### **Violence Against Women Act**

##### **Violence Against Women Act Reauthorization 2005**

The Violence Against Women Act (VAWA) of 2000 expires in 2005 and the remarkable gains we've made in ending domestic and sexual violence could come to a halt if Congress does not act quickly.

**Where we stand:** The National Women's Political Caucus supports the reauthorization and funding of the Violence Against Women Act. more...

---

#### **Women and Education**

##### **Sex Education**

Sex education provides accurate information on healthy relationships, peer pressure, contraception and abstinence in order for youth to use...

**Where we stand:** The National Women's Political Caucus supports comprehensive sex education that allows youth to know all of their options and make informed decisions. more..

##### **Equal Pay**

The Equal Pay Act of 1963 worked to end the pay differential that exists between men and women. The act made it illegal for employers to pay...

**Where we stand:** The National Women's Political Caucus supports equal pay for everyone, regardless of sex or race. more...

---

#### **Women and Politics**

##### **Campaign Finance Reform**

The total cost of the presidential and congressional campaigns in 2004 was just under \$4 billion dollars, up almost \$1 billion from 2000. In...

028141

**Where we stand:** The National Women's Political Caucus supports campaign finance reform that levels the playing field for candidates to run for office. more...

---

**Working Families**

**Family Leave Act**

The Family Leave Act mandated that an employer must allow an employee to take off up to 12 weeks of unpaid leave in a year in order to care for...

**Where we stand:** The National Women's Political Caucus supports the Family Leave Act and would like to see an expansion of its coverage. more...

**A Living Wage**

A living wage would increase the income of low wage earners so that they may be able to support their family without additional government...

**Where we stand:** The National Women's Political Caucus supports the adoption of a national living wage. more...

## Daniel Hays Lowenstein Biography

### Bibliography | Courses

#### **Daniel Hays Lowenstein**

*Professor of Law*

Born New York, New York, 1943

A.B. Yale, 1964

LL.B. Harvard, 1967

UCLA Law faculty since 1979

Daniel Lowenstein teaches *Election Law*, *Statutory Interpretation & Legislative Process*, *Political Theory*, and *Law & Literature*. A leading expert on election law, he has represented members of the House of Representatives in litigation regarding reapportionment and the constitutionality of term limits. He is a member of the Board of Directors of the award-winning theatre troupe Interact and regularly brings the company to the School of Law to perform plays with legal themes, such as Sophocles' *Antigone*, Ibsen's *Rosmerholm*, and Wouk's *The Caine Mutiny Court Martial*.

Professor Lowenstein worked as a staff attorney at California Rural Legal Assistance for two and one-half years. While working for California's Secretary of State, Edmund G. Brown Jr. in 1971, he specialized in election law, and was the main drafter of the *Political Reform Act*, an initiative statute that California voters approved in 1974, thereby creating a new Fair Political Practices Commission. Governor Brown appointed Professor Lowenstein as first chairman of the Commission. He has served on the national governing board of Common Cause and has been a board member and a vice president of Americans for Nonsmokers' Rights.

Professor Lowenstein's textbook, *Election Law* (1995), appears to be the first text on American election law since 1877. He has written on such topics as campaign finance, redistricting, bribery, initiative elections, political parties, commercial speech, and *The Merchant of Venice*.

For information on Interact, click on:

Professor Lowenstein represented certain plaintiffs in California ProLife Council PAC v. Scully, challenging California regulations of slate mail. For a pdf file containing the March 1, 2001, order of U.S. District Judge Lawrence K. Karlton declaring these regulations unconstitutional, use the following link:  
<http://www.law.ucla.edu/faculty/bios/lowenste/slatemalloorder.pdf>

Read Professor Lowenstein's 10/02/2003 Daily Journal article: "[Valid Ballot - Panel Exploited Precedent to Rationalize Postponement of Recall Vote](#)".

4. International Foundation for Electoral System - Current participant in international electoral exchanges. Member of an official U.S. delegation to observe the electoral process in the Soviet Union, March, 1990.
  
5. The Election Center - member of its Professional Education Committee.

### **Awards**

Election to the Springfield Sports Hall of Fame, May 2000.

**ABIGAIL THERNSTROM**

**VICE-CHAIR**

Senior Fellow, Manhattan Institute  
New York City, New York

Abigail Thernstrom is a Senior Fellow at the Manhattan Institute in New York, a member of the Massachusetts State Board of Education, and a commissioner on the United States Commission on Civil Rights. She received her Ph.D. from the Department of Government, Harvard University, in 1975.

Thernstrom and her husband, Harvard historian Stephan Thernstrom, are the co-authors of America in Black and White: One Nation, Indivisible (Simon & Schuster), which the New York Times Book Review, in its annual end-of-the-year issue, named as one of the notable books of 1997. They are currently working on a new book: Getting the Answers Right: The Racial Gap in Academic Achievement and How to Close It.

They are also the editors of a forthcoming volume, Beyond the Color Line: New Perspectives on Race and Ethnicity, and their lengthy review of William G. Bowen and Derek Bok's much-noticed book, The Shape of the River, appeared in the June 1999 issue of the UCLA Law Review.

Abigail Thernstrom's 1987 work, Whose Votes Count? Affirmative Action and Minority Voting Rights (Harvard University Press) won four awards, including the American Bar Association's Certificate of Merit, and the Anisfield-Wolf prize for the best book on race and ethnicity. It was named the best policy studies book of that year by the Policy Studies Organization (an affiliate of the American Political Science Association), and won the Benchmark Book Award from the Center for Judicial Studies.

Her frequent media appearances have included Fox News Sunday, Good Morning America, the Jim Lehrer News Hour, Both Sides with Jesse Jackson, and Black Entertainment Television. For some years, she was a stringer for The Economist, and continues to write frequently for a variety of journals and newspapers, including, Commentary, The Wall Street Journal, The New York Times, The Washington Post, and The Public Interest.

She serves on several boards: the Center for Equal Opportunity, and the Institute for Justice, among others. From 1992 to 1997 she was a member of the Aspen Institute's Domestic Strategy Group.

President Clinton chose her as one of three authors to participate in his first "town meeting" on race in Akron, Ohio, on December 3, 1997, and she was part of a small group that met with the President again in the Oval Office on December 19th.

**Bradley A. Smith**  
**Professor of Law**  
**B.A., cum laude, Kalamazoo College, 1980**  
**J.D., cum laude, Harvard Law School, 1990**

One of the nation's leading authorities on Election Law and Campaign Finance, Professor Smith returns to Capital after five years in Washington, D.C., where he served as Commissioner, Vice Chairman, and Chairman of the Federal Election Commission (FEC). Nominated by President Clinton in February of 2000 to fill a Republican-designated seat on the Commission, Professor Smith was confirmed by the Senate in May of 2000 and took his seat the following month. Prior to his nomination, Smith had become a fixture in the national discussion on campaign finance, and was called "the most sought after witness" when Congress considered campaign finance issues. His writings have appeared in such academic journals as the Yale Law Journal, Georgetown Law Journal, and Pennsylvania Law Review, and in popular publications such as the Wall Street Journal, USA Today, and National Review. In 2001, Princeton University Press published his book, "Unfree Speech: The Folly of Campaign Finance Reform," which was praised by syndicated columnist George Will as "the year's most important book on governance." The Times of London called it "a much needed dose of realism which has relevance far beyond America," and Publishers Weekly described it as "a marvelous contrarian view: moderate in tone, elegant in language, clever in argument." Named FEC Chairman in January 2004, Professor Smith oversaw implementation of the McCain-Feingold campaign finance bill, and successfully fought to increase due process protections for defendants in FEC enforcement actions. Professor Smith has spoken at over 30 of the nation's law schools, including Harvard, Yale, Columbia, Stanford, Chicago, Michigan, and NYU. His many media credits include national appearances on ABC, NBC, PBS, Fox, CNBC, MSNBC, C-Span, and Bloomberg Media, including such programs as *Hardball* with Chris Matthews, and the *O'Reilly Factor*. He has also appeared on numerous local and national radio programs, and made television appearances in Great Britain, Japan, and Canada.

Prior to joining Capital's faculty in 1993, he served as United States Vice Consul in Ecuador, and worked as an attorney for the law firm of Vorys, Sater, Seymour and Pease. He has also taught law at George Mason University. Professor Smith was the first Director of Capital's summer study abroad program in Greece, and from 1994 to 2000 served as co-Director of Capital's National Moot Court team with Professor Jeffrey Ferriell, winning six regional championships in the National Appellate Advocacy Competition or National Moot Court Competition. His teaching has included Election Law, Civil Procedure, Law & Economics, Jurisprudence, and Administrative Law.

Subject Chron memo on Job and Tova

Here is the revised memo.

Checked the files- Tally Vote was initiated September 16 and was due back on September 20.

Job and Tova asked about the status of their signed contract on September 20. A series of e-mails were exchanged around September 22 regarding who would be overseeing their contract-(Gavin, Peg, etc.)

Carol Paquette sent several internal e-mails with the altered Statement of Work on the voting fraud and intimidation project, starting on September 21.

Sorry you feel awful- this place just about does you in every October 1

:-)

Hang in there

Subject Finishing touches on the Statement of Work for the Voter  
Fraud/Intimidation consultants

All-

This morning the Commissioners approved the Statement of Work for the Voter Fraud/Voter Intimidation project consultants, with the caveat that some additional language would be added and the SOW polished up.

Tom, Peg and I are scheduled to interview the first candidate tomorrow morning at 10:00 am and will need your edits to this SOW by COB today.

I am attaching the item again, just in case you don't have a copy. Since I have an appointment out of the office and will be leaving at 4:00 today, I ask that you get your changes and edits to Nicole so that she may enter them and get the revised copy to the candidate first thing in the morning.

Thanks for your input on this.

## **Statement of Work**

### **Assistance with developing an Election Assistance Commission (EAC) Voter Fraud and Voter Intimidation Project**

#### **Background**

Section 241 of HAVA enumerates a number of periodic studies of Election Administrations issues in which the U.S. Election Assistance Commission may elect to engage. In general “On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b), with the goal of promoting methods of voting and administering elections....”

Specifically, Section 241b 6 and 7 describes Election administration issues such as:

6. Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices and
7. Identifying, deterring and investigation methods of voter intimidation.

Building on this HAVA reference to studies of voter fraud and voter intimidation, the EAC Board of Advisors has indicated a priority interest in further study of these issues to determine how the EAC might respond to them.

The U.S. Election Assistance Commission (EAC) seeks to identify senior-level project consultants to develop various project activities and studies related to U.S. election voter fraud and voter intimidation.

The consultant(s) must of have knowledge of voter fraud and intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voter fraud and intimidation in a balanced, nonpartisan fashion.

## **Duties**

The consultant (s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Performing background research, including a state-by state administrative and case law review related to voter fraud and intimidation, and a review of current voter fraud and intimidation activities taking place with key government agencies, civic and advocacy organizations. This review will be summarized and presented to the EAC.
2. Identifying and convening a working group of key individuals and organizations knowledgeable about the topics of voter fraud and intimidation. The list of working group members and the methods used to identify the groups members will be shared with EAC staff prior to the confirmation of the working group. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
3. Developing a project scope of work and a project work plan related to voter fraud and intimidation. Based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of the EAC's mission and agency objectives, the consultants will develop a draft scope of work and project work plan for the EAC's consideration.
4. Authoring a report summarizing the key findings of this preliminary study of voter fraud and intimidation. The report will also include suggestions for specific activities the EAC may undertake around these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may develop on the topics of voter fraud and intimidation.

## **Special Considerations**

Work for Hire Agreement (insert language)

## **Terms and Conditions**

The period of performance for this consulting contract is six months, with a fixed price ceiling of \$XXXXXX for labor. The consultant (s) is expected to work at least 200 hours in performing this work. The EAC estimates that the most efficient distribution of these hours would be as follows: XXXXX. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, as required.

## **Statement of Work**

### **Assistance with developing an Election Assistance Commission (EAC) Voter Fraud and Voter Intimidation Project**

#### **Background**

Section 241 of HAVA enumerates a number of periodic studies of Election Administrations issues in which the U.S. Election Assistance Commission may elect to engage. In general "On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b), with the goal of promoting methods of voting and administering elections...."

Specifically, Section 241b 6 and 7 describes Election administration issues such as:

6. Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices and

7. Identifying, deterring and investigation methods of voter intimidation.

Building on this HAVA reference to studies of voter fraud and voter intimidation, the EAC Board of Advisors has indicated a priority interest in further study of these issues to determine how the EAC might respond to them.

The U.S. Election Assistance Commission (EAC) seeks to identify senior-level project consultants to develop various project activities and studies related to U.S. election voter fraud and voter intimidation.

The consultant(s) must of have knowledge of voter fraud and intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voter fraud and intimidation in a balanced, nonpartisan fashion.

## **Duties**

The consultant (s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Performing background research, including a state-by state administrative and case law review related to voter fraud and intimidation, and a review of current voter fraud and intimidation activities taking place with key government agencies, civic and advocacy organizations. This review will be summarized and presented to the EAC.
2. Identifying and convening a working group of key individuals and organizations knowledgeable about the topics of voter fraud and intimidation. The list of working group members and the methods used to identify the groups members will be shared with EAC staff prior to the confirmation of the working group. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
3. Developing a project scope of work and a project work plan related to voter fraud and intimidation. Based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of the EAC's mission and agency objectives, the consultants will develop a draft scope of work and project work plan for the EAC's consideration.
4. Authoring a report summarizing the key findings of this preliminary study of voter fraud and intimidation. The report will also include suggestions for specific activities the EAC may undertake around these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may develop on the topics of voter fraud and intimidation.

Job-

Thanks ever so much for following up. Indeed, the Commissioners have reviewed the issue and have agreed in principle, to an approach that would entail hiring a consultant or consultants to help the EAC study and frame the issues of voter fraud and intimidation.

The idea would be that after a period of time, the consultants, and, perhaps, a working group of the EAC, would make a series of recommendations on next steps for the agency to take regarding voter fraud and intimidation.

Thanks for your patience; I hope to have a definitive answer for you by mid-July at the latest.

Subject Employing Tova Wang and others to start writing " Trends in Election Administration"

Tom and Jeannie-

At yesterday's research briefing, the Commissioners approved the concept of a series of scholarly articles that would cover various "Trends in Election Administration"

There was general agreement that the EAC would produce, by the end of this year, two of these articles that might be on topics such as early voting, restoration of felon rights, vote centers, etc.

I'd like to have a brief meeting the end of this week or the beginning of next with you, Jeannie and myself to go over some of the finer points of this idea and to put in place a process to get this project moving.

Shall we meet Friday morning at 11:00?

I'd like for us to identify the writers we want to use and the process we will use to determine the selection of topics for articles. As the Chair suggested, we should also discuss in some detail, the editorial guidelines we will use that will guide the work that our writers will do for us.

Thanks

I know that People For the American Way delivered petitions to EAC about release of the Fraud report but I need to know what other communications EAC has had with People For about the study.

Was it represented on the study's working group? If so, by whom? Did they write to us and did we answer? Did anybody from there talk with anybody at EAC about the study and our work? Thanks.

Subject RE: CIBER's ITA Position

Brian, nice to meet you yesterday. I am not yet sure on the direction our Practice will grow with e-voting...

The abnormal and unacceptable length of time to get turnarounds on our certification submissions, and the changing standards such that we have to certify to different levels of work than Systest or Wyle, to get their same level of certification, has interfered with our customer relationships and caused our employees to be very nervous, such that they sought our permission to join Wyle while continue to support us on the State of NY work.

The part-time auditor assigned by your group to us is conflicted and has other work. While I agree our July 2006 documentation was deficient to prove the work we were doing in due course met existing Federal standards, we have spent tens of thousands of dollars and many months to stand up to a new level of documentation, which we believe has been made fully compliant (with the standards sent down for others) by late last year and exceeded in February, which work is yet to be decided upon- 10 weeks after our early submission to your request. After over a decade of dedication to this important work, it is criminal what CIBER has had to endure compared to others to get interim certification.

Had our accreditation been handled as Systest and Wyle, I doubt yesterday's hearing would have been convened to vilify either of us. The inflection point was last December, and we are all paying a price for the inaction and slow action thereto.

The EACs process in this matter has unfairly hung CIBER out to dry and incur damages there from. To reduce further risk, I would encourage the EAC to reply to our February submission asap, accredit us as we have exceeded the levels of criteria Systest and Wyle were subjected to, and move on to the important business of higher standards with NIST on all future accreditations.

research that was presented at a public meeting in May to our Board of Advisors and the Standards Board, and the EAC provided it to him. This information was presented and discussed at a meeting that was open to the public, so we provided materials distributed at the meeting to anyone who requested it. The staff report about the fraud project was also distributed to the members of both advisory boards. Go [here](#) to view the Federal Register notice about the public meeting at which this project and many others were discussed.

The statement you attribute to one of the consultants is absolutely correct. As stated by their contract, these consultants were hired so that the EAC could "...obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation."

As for your reference to what's "missing compared to the earlier version," the report contains the summaries of every interview conducted by the consultants as well as every book, article, report or case that was reviewed. It does not contain the synopsis of those interviews, which were written by the consultants. EAC provided the individual summaries so readers could reach their own conclusions about the substance of the interviews.

EAC's interpretation of HAVA and its determination of what it will study and how it will use its resources to study it are matters of agency policy and decision. These are not, nor should they be, determinations or decisions made by consultants. The EAC has the ultimate responsibility for the reports it issues, and it is incumbent upon the agency to conduct due diligence to ensure reports, data or any other information is complete and accurate before it is adopted by the Commission.

As someone with a public platform who writes about matters regarding election administration, I would appreciate it if you would consider extending the same professional courtesy most journalists do and contact the agency if you have questions or concerns in the future about EAC policy or actions. You may reach me directly at 202-566-3103 if I can ever be of assistance. Thank you for your consideration in this matter.

Sincerely,

Subject Rick Hasen response-need your approval

History:  This message has been replied to.

Commissioners,

I want to respond to Rick Hasen's post regarding EAC and the fraud report. My suggested response is below, and his original post follows. Please let me know if you agree that I should attempt to correct the misinformation he posted. If so, please let me know if you approve of my suggested response. Thank you.

Mr. Hason,

I write to point out incorrect information you posted on your website on December 11, 2006. You wrote: "Note what's missing compared to the earlier version leaked to the USA Today Newspaper." No one at the EAC leaked anything to USA Today. The reporter asked for a copy of the staff report about the fraud resesarch that was presented at a public meeting in May to our Board of Advisors and the Standards Board, and the EAC provided it to him. This information was presented and discussed at a meeting that was open to the public, so we provided materials distributed at the meeting to anyone who requested it. The staff report about the fraud project was also distributed to every member of both advisory boards. Go [here](#) to view the Federal Register notice about the public meeting at which this project and many others were discussed.

The statement you attribute to one of the consultants is absolutely correct. As stated by their contract, these consultants were hired so that the EAC could "...obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation."

As for your reference to what's "missing compared to the earlier version," the report contains the complete summaries of every interview conducted by the consultants as well as every book, article, report or case that was reviewed. It does not contain the synopsis of those interviews, which were written by the consultants. EAC provided the individual summaries so readers could reach their own conclusions about the substance of the interviews.

EAC's interpretation of HAVA and its determination of what it will study and how it will use its resources to study it are matters of agency policy and decision. **More on FL-13, and a Role for the EAC?**

When I saw this headline on the *Sarasota Herald Tribune* web page, I thought it must have been about the FL-13 race.

Over on the election law listserv, Doug Johnson, responding to my commentary calling for the House to investigate the problems and declare a revote in the FL-13 race, suggested that perhaps the EAC is better situated to conduct an investigation than the House of the problems in the FL-13.

I'm afraid we might not be able to count on the EAC to conduct an investigation that is well-funded, tough, and fair. Politics appears to be creeping in to decisions of the EAC's advisory board, and there's real concern about the EAC's vote fraud report. Note what's missing compared to the earlier version leaked to the USA Today newspaper. Tova Wang, who authored the draft report for the EAC, issued the following statement to me: "My co-consultant and I provided the EAC with a tremendous amount of research and analysis for this project. The EAC released what is their report yesterday."

The EAC has also lost two commissioners, one Republican and one Democrat, who appeared to be tough-minded and fair. I am very worried about the fairness and non-partisanship of the new rumored nominees.

In short, the EAC has to prove it is up to the task of fair and serious inquiry before it could be trusted with something like an investigation of the FL-13.

Subject Commissioner approval (by 2/25) of contracting process for  
work on Provisional Voting and Voter ID projects

Commissioners-

As was discussed during our session on February 17, 2005, please *review and provide your approval , disapproval or amendments* to the following items by Friday, February, 25, 2005:

1. The attached Scope of Work which outlines the tasks related to contract work around projects relating to voluntary guidance on provisional voting and voter identification procedures.
2. The proposal will be advertised beginning **February 28, 2005**.
3. The deadline for submitting proposals will be **March 14, 2005**.
4. Proposal review will be completed by EAC staff by **March 17, 2005**
5. Staff will recommend a contractor to the Commissioners on **March 18, 2005**.
6. Commissioners will be asked for their decisions no later than **Tuesday, March 22, 2005**

Statement of Work - Provisional Voting, Voter ID.doc

Thank you for your help and attention to this matter.

February 14, 2005

**PROVIDING EAC ASSISTANCE IN DEVELOPING VOLUNTARY GUIDANCE ON PROVISIONAL VOTING AND VOTER IDENTIFICATION PROCEDURES**

0.0 Contract Title: Assistance to the U.S. Election Assistance Commission in the Development of Guidance on Provisional Voting and Voter Identification Procedures

1.0 Background: Sec. 302(a) of HAVA requires that all States allow the casting of provisional ballots in instances where a voter declares their eligibility to vote but their name does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. This section describes several requirements for implementation of provisional voting, but the States have considerable latitude in specifying how to carry out these requirements. The EAC seeks to examine how provisional voting was implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 Federal elections.

HAVA Sec. 303(b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents will result.

2.0 Objective: The objective of this contract is for EAC to obtain assistance with the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements for the purpose of drafting guidance on these topics for promulgation to the States in time for implementation for the 2006 Federal elections. The anticipated outcome of this activity is the generation of concrete policy recommendations to be issued as voluntary guidance for States.

3.0 Scope: In general the Contractor shall be responsible for all research and analysis activities, including the conduct of public hearings for fact finding and public comment purposes. However, in light of the urgent need to get this work underway, the EAC has scheduled a public hearing on February 23, 2005, on the topic of provisional voting.

An initial framework for provisional voting policy has been set by the court decisions rendered on the election procedures utilized in the 2004 election. The 6<sup>th</sup> Circuit decision, in particular, has drawn some boundaries which must be given due regard in the course of considering future policy alternatives for provisional voting.

Notice of public meetings and hearings is required to be published in the Federal Register. The Contractor shall be responsible for preparing the notice documents, and the EAC will submit the notices and cover the cost of publication. In addition, draft guidance documents must be published in the Federal Register to obtain public comment prior to their adoption. Again, the Contractor will work with the EAC to prepare the draft documents for publication, which the EAC will submit and cover the cost of publication. Comments received will be provided to the Contractor for analysis and incorporation into the final guidance documents, as appropriate.

#### 4.0 Specific Tasks

For ease of reference, following task 4.3 the remaining tasks are listed separately under the headings of Provisional Voting and Voter Identification Requirements. It is understood that the work on these two topics will be conducted essentially concurrently, with Voter Identification activities starting approximately one month after Provisional Voting.

- 4.1 Prepare a project work plan. The Contractor shall prepare and deliver a brief Project Plan not later than 10 days after contract award. This plan shall describe how the Contractor will accomplish each of the project tasks, including a timeline indicating major milestones. A single document will be prepared to include both provisional voting and voter identification tasks. The Plan shall be presented at a project kickoff meeting with the EAC Project Manager.
- 4.2 Submit monthly progress reports. The Contractor shall submit a monthly progress report within 2 weeks of the end of each month. This report shall provide a brief summary of activities performed and indicate progress against the timeline provided in the Project Plan. Any issues that could adversely affect schedule should be identified for resolution. Budget status should also be provided.
- 4.3 Conduct periodic briefings for the EAC. The Contractor shall periodically meet with the EAC Project Manager and the lead Commissioner for this work to discuss research findings and progress. The Project Plan should make allowance for this activity. The number and frequency of briefings will be determined by the Contractor Project Manager and the EAC Project Manager as the work progresses. The Contractor may also be required to periodically brief the full Commission on their work.

#### Provisional Voting

- 4.4 Collect and analyze State legislation, administrative procedures, and court cases. An understanding of the disparities and similarities of how provisional

voting was implemented around the country will provide a baseline for the consideration of future approaches. Seventeen States never had provisional voting before HAVA was enacted, while many other States did. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

- 4.5 Recommend alternative approaches for future implementation of provisional voting. The Contractor shall conduct a literature review to identify other research results and data available on this topic. The EAC Election Day Survey, for example, contained several questions on provisional voting. The EAC will make these survey data available to the Contractor. Based on their analysis of available research and the results of Task 4.5, the Contractor shall diagnose the problems and challenges of provisional voting implementation and hypothesize alternative approaches.

The Contractor shall assess the efficacy of these alternatives in relation to the following inter-related policy objectives: (1) enabling the maximum number of eligible voters to cast ballots that will be counted; (2) providing procedural simplicity for voters, poll workers, and election officials; (3) minimizing opportunity for voter fraud; and (4) maintaining a reasonable workload for election officials and poll workers. Additional policy considerations may be identified in the course of this research effort. The Contractor shall document and brief these alternatives to the Commission.

- 4.6 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board of Advisors meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.
- 4.7 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.
- 4.8 Arrange one public hearing for receiving public comment on draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the meeting
- 4.9 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

## Voter Identification Requirements

- 4.10 Collect and analyze State legislation, administrative procedures, and court cases. It is assumed that the collection of information for analysis of voter identification requirements will be performed concurrently with the research for Task 4.5. An understanding of the disparities and similarities of how voter identification requirements were implemented around the country will provide a baseline for the consideration of future approaches. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.
- 4.11 Convene a half day public hearing on the topic of voter identification requirements. The Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC. The Contractor shall identify three panels of three to four speakers each. The Contractor shall arrange for speaker attendance to include travel and per diem expenses. The EAC will provide publicity for the hearing. The Contractor shall prepare a document summarizing the proceedings and containing all testimony provided.
- 4.12 Recommend alternative approaches for future implementation of HAVA voter identification requirements. The Contractor shall conduct a literature review to identify other research results and data available on this topic. Based on their analysis of available research and the results of Task 5.11, the Contractor shall diagnose the problems and challenges of voter identification and hypothesize alternative approaches. The Contractor shall coordinate with the EAC to identify appropriate policy objectives by which to assess these alternatives. The Contractor shall document and brief these alternatives to the Commission.
- 4.13 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.
- 4.14 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.
- 4.15 Arrange one public hearing for receiving public comment on the draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the hearing.
- 4.16 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

Contract Type. The contract type will be Time and Materials with a ceiling of

6.0 Place of performance. The principal place of performance will be the Contractor's place of business. Meetings and occasional work efforts may be performed at the EAC offices.

7.0 Period of Performance. The period of performance is from date of award until October 28, 2005.

8.0 Schedule of Deliverables:

- Project plan – 10 days after contract award
- Progress reports – monthly
- Briefings – as required
- Analysis report on provisional voting - TBD
- Alternatives report on provisional voting – TBD
- Preliminary draft guidance on provisional voting - TBD
- Draft guidance on provisional voting for publication – 8/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on provisional voting for EAC adoption – 9/2005
- Analysis report on voter identification requirements – TBD
- Public hearing on voter identification requirements – TBD
- Summary of voter identification requirements hearing - TBD
- Alternatives report on voter identification requirements - TBD
- Preliminary draft guidance on voter identification requirements - TBD
- Draft guidance on voter identification requirements for publication – 9/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on voter identification requirements to EAC for adoption – 10/2005

REMAINING STANDARD CONTRACT TERMS TO BE PROVIDED.

FOR IMMEDIATE RELEASE

*Group Will Make Recommendations that Balance Ballot Integrity with Voting Rights and Accessibility*

March 23, 2005, New York City - In an effort to improve future elections, The Century Foundation has created a Post-2004 Working Group on Election Reform. This bipartisan group of prominent election law and voting reform experts will produce concrete policy options states can follow in order to improve the voting process.

The members of the working group are: Tova Wang, senior program officer and democracy fellow, The Century Foundation (executive director); Doug Chapin, director, Electionline.org; Norm Ornstein, resident scholar, American Enterprise Institute; Guy-Uriel E. Charles, associate professor of law, University of Minnesota Law School; Edward B. Foley, professor of law and director, Election Law@Moritz, Moritz College of Law, Ohio State University; Samuel Isacharoff, visiting professor at NYU School of Law and Harold R. Medina Professor in Procedural Jurisprudence, Columbia University School of Law; Martha Kropf, assistant professor of political science, University of Missouri, Kansas City; Roy Schotland, professor of law, Georgetown University Law Center; and Dan Tokaji, assistant professor of law and associate director, Election Law@Moritz, Moritz College of Law, Ohio State University. Download [working group member bios](#) (PDF).

The 2004 presidential election was the first big test of the 2002 Help America Vote Act (HAVA). Enacted in the wake of the deeply flawed 2000 election, the law was passed in an effort to both improve the voting process and to increase voter access. However, the results on Election Day were mixed at best. While there were improvements in the voting process in a number of jurisdictions, the ways in which many states carried out the law's mandates

028202

produced a number of unintended consequences, resulting in allegations of fraud and voter disenfranchisement.

The working group's mission is to promote an election system that balances ballot integrity with voting rights and accessibility. The group will assess the key provisions of HAVA, analyze the ways in which they were implemented in 2004, and provide guidelines for how they ought to be implemented by the states in the future. In addition, the working group will analyze how states are preparing to comply with HAVA requirements that have implementation deadlines at the end of this year. They plan to provide the best policy options for states to meet these mandates in a report scheduled for release in late spring.

"While the goals of HAVA were generally positive, the law turned out to be deficient in many areas and implementation by the states was flawed," said Tova Wang, executive director of the working group. She noted that a variety of lawsuits have been filed throughout the country about the implementation of HAVA, and advocates and government officials continue to spar over interpretations of the law's requirements and flaws in the voting process. "The disputes almost universally revolve around one core principle: the competing values of ensuring ballot integrity while maintaining wide voting accessibility. We will take a very practical approach to solving the problems that HAVA may have inadvertently created and provide realistic approaches the states can take in order to fulfill the promise that HAVA originally intended," she added.

The Century Foundation has been at the forefront of efforts to reform the voting system since the issue achieved national prominence following the 2000 presidential contest. In 2001, the foundation cosponsored The National Commission on Election Reform, cochaired by former Presidents Gerald Ford and Jimmy Carter. The final report of that commission served as the model for important measures in the Help America Vote Act. Information on issues related to election reform is available at [www.tcf.org](http://www.tcf.org).

# PURCHASE ORDER TERMS AND CONDITIONS

## 552.229-70 FEDERAL, STATE, AND LOCAL TAXES (APR 1984)

The contract price includes all applicable Federal, State, and local taxes. No adjustment will be made to cover taxes which may subsequently be imposed on this transaction or changes in the rates of currently applicable taxes. However, the Government will, upon the request of the Contractor, furnish evidence appropriate to establish exemption from any tax from which the Government is exempt and which was not included in the contract price.

## 552.210-79 PACKING LIST (DEC 1989)

(a) A packing list or other suitable shipping document shall accompany each shipment and shall indicate (1) Name and address of consignor; (2) Name and address of consignee; (3) Government order or requisition number; (4) Government bill of lading number covering the shipment (if any); and (5) Description of the material shipped, including item number, quantity, number of containers, and package number (if any).

(b) When payment will be made by Government commercial credit card, in addition to the information in (a) above, the packing list or shipping document shall include: (1) Cardholder name and telephone number and (2) the term "Credit Card".

## 52.232-1 PAYMENTS (APR 1984)

The Government shall pay the Contractor, upon the submission of proper invoices or vouchers, the prices stipulated in this contract for supplies delivered and accepted or services rendered and accepted, less any deductions provided in this contract. Unless otherwise specified in this contract, payment shall be made on partial deliveries accepted by the Government if: (a) The amount due on the deliveries warrants it; or (b) The Contractor requests it and the amount due on the deliveries is at least \$1,000 or 50 percent of the total contract price.

## 52.232-8 DISCOUNTS FOR PROMPT PAYMENT (APR 1989)

(a) Discounts for prompt payment will not be considered in the evaluation of offers. However, any offered discount will form a part of the award, and will be taken if payment is made within the discount period indicated in the offer by the offeror. As an alternative to offering a prompt payment discount in conjunction with the offer, offerors awarded contracts may include prompt payment discounts on individual invoices.

(b) In connection with any discount offered for prompt payment, time shall be computed from the date of the invoice. For the purpose of computing the discount earned, payment shall be considered to have been made on the date which appears on the payment check or the invoice on which an electronic funds transfer was made.

## PROMPT PAYMENT

Prompt Payment clause 52.232-25 is incorporated in this contract by reference. The clause contains information on payment due date, invoice requirements, constructive acceptance and interest penalties. Certain portions of the clause regarding payment due date, invoice requirements, and constructive acceptance have been extracted for your convenience. All days referred to in the extracts below are calendar days.

(a)(2) . . . The due date for making invoice payments by the designated payment office shall be the later of the following two events:

- (i) The 30th day after the designated billing office has received a proper invoice from the Contractor.
- (ii) The 30th day after Government acceptance of supplies delivered or services performed by the Contractor . . .

(a)(4) . . . An invoice shall be prepared and submitted to the designated billing office specified in the contract. A proper invoice must include the items listed in . . . (i) through . . . (viii) . . . If the invoice does not comply with these requirements, then the Contractor will be notified of the defect within 7 days after receipt of the invoice at the designated billing office . . . Untimely notification will be taken into account in the computation of any interest penalty owed the Contractor . . .

(i) Name and address of the Contractor.

(ii) Invoice date.

(iii) Contract number or other authorization for supplies delivered or services performed (including order number and contract line item number).

(iv) Description, quantity, unit of measure, unit price, and extended price of supplies delivered or services performed.

(v) Shipping and payment terms (e.g., shipment number and date of shipment, prompt payment discount terms), Bill of lading number and weight of shipment will be shown for shipments on Government bills of lading.

(vi) Name and address of Contractor official to whom payment is to be made (must be the same as that in the contract or in a proper notice of assignment).

(vii) Name (where practicable), title, phone number, and mailing address of person to be notified in event of a defective invoice.

NOTE: Invoices must include the ACT number (block 4) and shall be submitted in an original only, unless otherwise specified, to the billing office designated in block 24 to receive invoices. The "remittance to" address must correspond to the remittance address in block 12.

(a)(6)(i) For the sole purpose of computing an interest penalty that might be due the Contractor, Government acceptance shall be deemed to have occurred constructively on the 7th day (unless otherwise specified in block 20) after the Contractor delivered the supplies or performed the services in accordance with the terms and conditions of the contract, unless there is a disagreement over quantity, quality or contractor compliance with a contract provision . . .

## 52.222-40 SERVICE CONTRACT ACT OF 1965, AS AMENDED - - CONTRACTS OF \$2,500 OR LESS (MAY 1989)

Except to the extent that an exception, variation, or tolerance would apply if this contract were in excess of \$2,500, the Contractor and any subcontractor shall pay all employees working on the contract not less than the minimum wage specified under Section 6 a) (1) of the Fair Labor Standards Act of 1938, as amended (29 U.S.C. 201-206). Regulations and interpretations of the Service Contract Act of 1965 are contained in 29 CFR Part 4.

## 52.222-41 SERVICE CONTRACT ACT OF 1965, AS AMENDED (MAY 1989)

52.222-42 STATEMENT OF EQUIVALENT RATES FOR FEDERAL HIRES (MAY 1989)  
(52.222-41 and 52.222-42 apply to service contracts when the amount exceeds \$2,500).

The GSA Form 2166, Service Contract Act of 1965 and Statement of Equivalent Rates for Federal Hires is attached hereto and made a part hereof.

## 52.252-2 CLAUSES INCORPORATED BY REFERENCE (JUN 1988)

This contract incorporates the following clauses by reference with the same force and effect as if they were given in full text. Upon request the Contracting Officer will make their full text available:

## FEDERAL ACQUISITION REGULATION (48 CFR CHAPTER 1) CLAUSES

Applicable to purchase orders for supplies or services:

- 52.203-1 Officials Not to Benefit (APR 84)
- 52.203-3 Gratuities (APR 84)
- 52.203-5 Covenant Against Contingent Fees (APR 84)
- 52.203-6 Restriction on Subcontractor Sales to the Government (JUL 85)
- 52.203-7 Anti-Kickback Procedures (OCT 88)
- 52.212-9 Variation in Quantity (APR 84)  
(In the preceding clause, the permissible variations are stated in the schedule.)
- 52.222-3 Convict Labor (APR 84)
- 52.222-26 Equal Opportunity (APR 84)(Applies when amount exceeds \$10,000.)
- 52.222-35 Affirmative Action for Special Disabled and Vietnam Era Veterans (APR 84)(Applies when amount exceeds \$10,000.)
- 52.222-36 Affirmative Action for Handicapped Workers (APR 84)(Applies when amount exceeds \$2,500.)
- 52.222-37 Employment Reports on Special Disabled Veterans and Veterans of the Vietnam Era (JAN 88)(Applies whenever clause 52.222-35 is included.)
- 52.223-6 Drug Free Workplace (JUL 90)(Applies if contract is awarded to an individual.)
- 52.225-3 Buy American Act - Supplies (JAN 89)
- 52.225-11 Restrictions on Certain Foreign Purchases (MAY 92)
- 52.232-25 Prompt Payment (SEP 92)
- 52.233-1 Disputes (DEC 91)
- 52.233-3 Protest After Award (AUG 89)
- 52.246-1 Contractor Inspection Requirements (APR 84)
- 52.249-8 Default (Fixed-Price Supply and Service)(APR 84)

Applicable to purchase orders for supplies:

- 52.222-4 Contract Work Hours and Safety Standards Act - Overtime Compensation - (MAR 86)(Applies when amount is between \$2,500 and \$10,000.)
- 52.222-20 Walsh-Healey Public Contracts Act (APR 84)(Applies when amount exceeds \$10,000.)
- 52.243-1 Changes - Fixed Price (AUG 87)
- 52.249-1 Termination for Convenience of the Government (Fixed Price)(Short Form)(APR 84)

Applicable to purchase orders for services:

- 52.222-4 Contract Work Hours and Safety Standards Act - Overtime Compensation - (MAR 86)(Applies when amount exceeds \$2,500.)
- 52.243-1 Changes - Fixed Price (APR 84) - Alt. II
- 52.249-4 Termination for Convenience of the Government (Services)(Short Form)(APR 84)

028208

(i.e. state name, photo i.d., etc) and a maximum requirement (i.e., state name, photo i.d., etc.). It makes no sense to me how they could possibly arrive at a different percentage for these requirement levels.

- My third issue is the persistent use of the phrases "ballot access" and "ballot integrity" without some definition or some explanation of what those concepts are.

Commissioner Davidson also asked that I ask some questions related to the first bullet, above, specifically relating to the comparison of states without validation that the state's turn out for 2004 was "normal" for that state as opposed to an anomaly.

Last, Commissioner Davidson asked that you all coordinate your selected questions to avoid having two commissioners wanting to ask the same question.

Please let me know if you have any questions or concerns about these questions or if I can explain my reasoning behind the questions.

Juliet Thompson Hodgkins

Subject Questions for Eagleton

Commissioners,

Commissioner Davidson asked that I forward to each of you the following questions that I drafted at her request last week. She also asked that I let you know that she is interested in asking questions 3, 5, and 7.

1. What is meant by "statistically significant"? Please explain in plain language when a result is considered statistically significant. Also, please provide an academic definition of that term. How did you calculate the mean and standard deviations from the mean?
2. What data was used to derive these research findings?
3. Did you attempt to find information or data related to elections prior to 2004 in states that have voter identification requirements?
4. What other variables other than voter identification were tested? Contested race? Historical voter turnout? Weather? Media attention to the area? Candidate activities/campaign?
5. What was the impact (positive or negative) of these other factors on voter turnout?
6. How did you control these variables/factors when measuring the impact of voter ID on voter turnout or on prospective voter turnout? For example, did you only apply the factor to like circumstances – similar historical turnout, same level of contention in the races of the ballot, etc.
7. Would the study and your conclusions have been more reliable if additional data had been analyzed? Data such as voter turn out in states that have had voter ID in past Federal elections?
8. What data did you use to identify voter turnout?
9. What data did you use to identify whether people or groups of people were more or less likely to vote when identification is required?
10. Why did you use census data as opposed to data on registered voters? Doesn't census data also include information from people who are not registered voters and people who are not even eligible to be registered voters?

In addition to the questions above, I provided the following feedback to Commissioner Davidson concerning the draft report provided by Eagleton:

- I am troubled by the concept that Eagleton compared states as if they were equal. They assume that, all factors being equal, that the voter turn out in each state would be equal. I am not at all certain that this is the case. Further, there is no evidence that the statistician actually compared previous years' turnout in the same state to determine whether 2004 was some sort of anomaly for that state (high or low). Long story short, I am very skeptical of the data that they used to draw conclusions. We should ask questions about what data they used, how they parsed it, why they used the data, what other data could have been used to provide better, more reliable results.
- My second concern is how they (statistically speaking) differentiate between a minimum requirement

Subject Preparation for Vote Fraud Conference in Utah

History:

 This message has been replied to.

Matt (and Amy) are working on a speech for the Chairman to deliver at the Vote Fraud conference in Utah at the end of the week. Matt has asked for the consultants' definition of vote fraud/voter intimidation and the draft recommendations. As neither have been through full Commission review, I would like to speak with one or both of you before I drop this information in any one Commissioner's lap. Matt is looking for this information today. FYI, attached are copies of the consultants' definition and the draft recommendations from the consultants and others from the working group. Also attached is a summary of concerns expressed by the working group. --- Peggy

bcc:  
Subject: U.S. News & World Report

Jeannie

We suspect that someone from the Voting Fraud-Voter Intimidation Project Working Group has been talking to reporters, tipping them off about what we are finding in our preliminary study, and referring them to our consultants (although the information could have come from anyone on the EAC boards, too). Apparently, the U.S. News & World Report reporter who contacted me also contacted both consultants working on the project.

Based on my recommendation, Tova Wang and, possibly, Job Serebrov, who are on EAC personal services contracts for our voting fraud and voter intimidation research, will seek further clarification from you about what they can and cannot say to reporters and in public fora about vote fraud and voter intimidation and about EAC's research. I have previously advised Tova and Job not to discuss the work they are doing for us as this is EAC research, the Commissioners have not yet received and accepted the final report, and the Commission has not approved their speaking about the EAC research.

Tova plans to call you tomorrow (Tuesday, June 27) about the issue. In addition to the reporter's inquiry, she has been invited to speak on the subject at the summer conference of the National Association of State Legislatures. She has plenty of knowledge of the subject in her own right (apart from our study), but is having trouble differentiating between her own work and the work she is doing for us. Please, just let me know what you advise her to do.

--- Peggy

Subject Standards Board and Study on Voting Fraud

Dear Ms. Layson:

I have two questions about the 2005 Annual Report that you gave me.

(1) Who are, currently, the nine members of the Executive Board of the Standards Board?

(2) On p. 27 of the 2005 Annual Report, it states that EAC contracted with two consultants to conduct preliminary research on the issues of voting fraud and voter intimidation. Can you tell me who these organizations or individuals are, and when their reports might be available? If they are available now, how can I obtain them?

Regards,  
Roy Saltman

Collection Project--FY06 Budget

FYI-

On the budget figure for Improving Election Data Collection

Also, when you're ready let's go through more of the detail on your proposed agenda.

For example, I'd like for us to have some presentations (brief) on various subject areas, so that folks have a basis for their discussion and conclusions.

As we discussed, I think we also will want to have some breakout working groups which focus on particular issues/areas of concern.

Let me know when you're ready to pursue.

**Subject:** Call from Paul Vinovich

I took a telephone call this morning from Paul Vinovich. He had attempted to reach Gracia, but since she was not here, he asked Sheila if I was in the office so he spoke to me.

Paul was very upset with comments that Tova Wang had made at yesterday's AEI's meeting in which she basically indicated that voter fraud did not exist in the USA. He asked how a person who believes that voter fraud does not exist--or not seem at least willing to listen to both sides--can be hired by the EAC to do a study on voter fraud/voter intimidation. I explained to Paul (as I have now had to explain to many others) that Tova was "balanced" on the study with Job Severbrov. He did not know Job but was well-aware of Tova's positions and was concerned that her public comments indicate that she will not be fair in looking at this issue. I explained to Paul that we were monitoring the work of our consultants on this study and no report would be issued publicly without the support of at least three commissioners. I sent him some background information on Job. I think this study will need close monitoring.

Subject reference materials for vote count/recount RFP

Gaylin -

There are 3 files of reference materials for this RFP: the spreadsheet of vote definitions and two summaries of statutory provisions on recounts (which are not consistent in information provided, e.g., one provides statutory language without commentary - the other provides summarized commentary without statutory language). We need a brief paragraph to accompany each to explain what the Offeror can glean from it. For example, the spreadsheet on vote definitions has references in it such as "See pdf of Arkansas statutes in file.", "There is a pdf of the manual in the document folder", "See .doc in file." "I was not able to find copies of these manuals." So this is clearly an internal working draft, not really a final product. How would the Offeror use this in preparing their proposal? Similarly, the two disparate summaries of statutes on recounts - we need to explain that this is a preliminary collection of information and that the two files are different in terms of content. Again, how would the Offeror use this information in preparing their proposal? Also, the title that printed out on first file citing statutory language is not correct and needs to be changed. It currently reads "Voting System Certification by State as of April 22, 2005." There is no heading on the second file.

This is a voluminous amount of information. We need to think about whether it is needed for the preparation of proposals. I will be considering this point this evening when I review the SOW and proposal instructions. Would appreciate your thoughts on this tomorrow.

All-

Although Tom Wilkey and I are still working to process each of your contracts on this project, we would like to tentatively schedule an in-person meeting on September 12, here in Washington.

In the meantime, I'd like to propose that we all have a short teleconference call next Wednesday or Thursday at 1:00 PM to begin to talk through the scope of this project and the respective roles and responsibilities each of you might take on.

Could you let me know your availability for a 45 minute call on August 31 or September 1 at 1:00?

Thanks

Subject Steve's replacement

History:

↩ This message has been replied to.

Karen:

I want to put in my two cents on Steve's replacement. I am concerned with the timing of all of this and whether we will have to start the process all over. As I see it you can replace Steve with another politically neutral or you could have Tova and I do the project and place one or more of those Steve suggested as replacements on a working group.

One comment on the working group. I do not necessarily agree with Tova's suggested list. I indicated to Tova that I would need to see a bio on each of those she listed, stressing electoral experience and an indication of whether the person agreed to be on the working group. Upon reflection and given the need to keep all of these groups politically balanced, I think that those working on the project (Tova, me, and anyone else) should each pick two or three people for the working group and submit those names to the Commission for vetting and approval.

What do you think about all of this?

Subject Re: Consulting fees

Karen:

I sent Nicole, in response to her question on this issue, the information that before taking the federal judicial clerkship I was charging \$175 per hour but now would charge \$200 per hour. However, I did some calculations for her and figured that this may not be the way to arrive at a compensation figure because at 15 hrs per week for 4 months=\$48,000 and at 20 hrs per week for 4 months=\$60,000. If Tova's figures are similar, it could exceed the budget.

Additionally, both Tova and I feel we needed our travel costs covered given fuel prices for plane travel or gas prices for car travel, not to mention hotels and food. Travel costs would also have to be estimated for any interviews that we do with and for bringing the working group to a central location.

Have you and Tom decided to replace Steve or just to have Tova and I do this?

I hope this helps.

Regards,

Job

I hope you already caught this. We have similar problems in Arkansas.

Job

"Among Voters in New Jersey, G.O.P. Sees Dead People"  
The New York Times offers this report, which begins: "  
The joke has long been that dead people vote in Hudson  
County, New Jersey's legendary enclave of machine  
politics. But now the joke may be on New Jersey,  
according to a new analysis of voter records by the  
state's Republican Party.

Comparing information from county voter registration  
lists, Social Security death records and other public information,  
Republican officials announced on Thursday that 4,755 people who were listed  
as deceased appear to have voted in the 2004 general election. Another 4,397  
people who were registered to vote in more than one county appeared to have  
voted twice, while 6,572 who were registered in New Jersey and in one of  
five other states selected for analysis voted in each state."

Subject Re: Research Grants - Response 

History:  This message has been replied to.

Dear Hans:

I am writing in response to your email in which you took exception to our retaining Ms. Tova Wang as a part-time consultant to help EAC explore the issues of voter fraud and voter intimidation. I know that you have heard directly from Vice Chairman DeGregorio and Commissioner Martinez on the matter but I thought it important that I write back to make certain that everyone had the same information.

As you now know, Ms. Wang is only one consultant who is working with us on these issues. When EAC determined that we should explore our options on how to study the issues of voter fraud and voter intimidation, as required under HAVA Section 241 (b), we made a conscious decision to retain consultants who would work part-time for a defined and limited period of time to provide broad and diverse perspectives, across the political spectrum, from right to left and including the middle.

EAC conducted broad outreach to identify a strong pool of consultant candidates. We reached agreement to retain 3 highly qualified people -- Stephen Ansolabehere, Job Serebrov and Tova Wang -- to work with us as we try to determine the scope of any project we might do on these issues.

Unfortunately, Dr. Ansolabehere's teaching assignments unexpectedly precluded him from being able to work as a part-time consultant but he has expressed his desire and in fact has agreed to continue working with us in an unpaid capacity as we explore our options and frame the issues. In the meantime, Mr. Serebrov and Ms. Wang have agreed to provide the consultant services that we sought. We believe that all three individuals will bring great value, careful thought and important perspectives to our work on these issues.

I hope this clarifies this part of EAC's extensive research and study agenda. EAC engages thoughtful deliberation and undertakes careful consideration of all of its activities. We value inclusiveness and know that we are best served when we have broad and diverse perspectives to inform our work. I am happy to talk with you at any time that you might have questions or concerns about our work.

Best Regards,

Gracia M. Hillman

Importance: High

Hans,

I wish you would have shown us the decency to have spoken to someone at the EAC before you sent this e-mail. Had you done so, you might have discovered that Ms. Wang was paired with Job Serebrov, a conservative attorney who, like you, has served on a local election board (Washington, Co, AK -Fayetteville). He has also worked on voting issues and election law in his practice, including voter fraud. He was counsel to the Arkansas GOP on ballot integrity issues and was the ballot protection specialist for Mike Huckabee in his campaign for Lt. Governor. In addition, Job formed and ran "Arkansans for Fair Elections", a non-partisan group that looked to investigate and prevent voter fraud issues. He headed that group for 8 years. Job served the Republican Party of Arkansas as the Chairman of the Committee for the Revision of the State Constitution.

Thor Hearne called me last week to indicate that Job had called him to be on the working group that Job and Ms. Wang are putting together to look at the voter fraud/voter intimidation issues.

Job was recommended to the EAC for this work by Julie Thompson. His references included two US 8th Circuit judges appointed by GOP presidents: Morris Arnold and Lavenski Smith.

You may recall that the Advisory Board made it clear to the EAC that they thought the Voter Fraud/Voter Intimidation issues should be studied together. That's why Ms. Wang has been paired with Mr. Serebrov to do

028236

this study.

Julie tells me that she had a wide-ranging discussion with you last week but you never brought this issue up. It's too bad, as it may have prevented you from sending an e-mail to so many people that contains only half the story.

Subject  
Research Grants

Dear Commissioners:

On August 18 I sent you an email raising serious concerns over the awarding of a contract to the Moritz College of Law given its clearly demonstrated pre-existing opinions about provisional balloting and voter identification. Unfortunately, nothing was apparently done about this situation.

I have just learned that a similar situation has occurred. I understand that another research grant has been awarded to Tova Wang for research into "voter fraud and voter intimidation." Ms. Wang has an even more pronounced partisan and one-sided view of these issues than was present in the situation involving Moritz College. She has many posted opinions available on the Internet that make it clear that she will not be able to conduct research in an objective fashion on these issues. Just a few

028237

examples illustrate this:

"It is truly shocking how, given all the problems in the voting system and continued disenfranchisement, the terms of the debate have shifted to that of so-called 'ballot integrity.' It is reminiscent of how conservatives have misappropriated the concept of patriotism and the American flag, and used the power of language and messaging to distort the discussion, by using terms such as 'partial birth abortion' or death tax.'"

"This stands in stark contrast to the entire tenor of the Carter-Baker report, which presumes that fraud committed by voters is the biggest problem confronting our election system. There is simply no strong evidence of this, and some of the remedies proposed will take us backwards in the fight to increase voter participation."

"...voters are individually disenfranchised by continued, often race based, voter intimidation and deceptive practices..."

Carter-Baker Report: Some Bad Fixes for the Wrong Problem, 9/19/2005

"The data is also mounting that identification requirements have disproportionately disenfranchising impacts on certain communities...Given all this piling on of negative evidence, both in terms of the efficacy of ID requirements in fulfilling the goal their advocate's claim and their impact on voting rights, it is somewhat mind boggling that so many state officials, as well as other groups working on this issue, are still vigorously pushing for greater expansion of what seems to be a rather useless yet dangerous tool. Shouldn't the burden of proof now shift to the advocates of more voter ID to demonstrate the value of their cause?"

Voter ID and Fraud: Prove It, 7/28/2005

There are numerous more examples of her partisan opinions and attacks and demonstrably false claims against Republicans and election officials in general, such as her baseless charge in another article that "partisan election officials and party leaders usurped the process and manipulated the new federal voting law in ways that disenfranchised voters." Election 2004: A Report Card, 1/1/2005. The idea that she will write an objective report on issues that she has already expressed such strong opinions on ("there is no evidence that such election fraud is a serious problem") is hard to accept. I find it surprising that the EAC would award her a research grant or expect that election officials around the country would accept as valid a report written by an individual who asserts that "[a]t every step of the way, election officials in key states threw up unnecessary barriers to voting." Id. This gratuitous remark is an insult to the many hard-working election officials that we all know through our work who did everything they could during the last election to improve the election process and in large part succeeded.

Whatever procedures the EAC has set up to screen individuals and entities applying for research grants is obviously not working. I have no doubt that I could today, based on reading Ms. Wang's prior opinions, predict exactly what her report will conclude on the issues of voter fraud and voter intimidation. This situation needs to be corrected so that research is not being conducted by partisan individuals with preset opinions and views on issues. As with my prior email, I strongly recommend that the EAC reconsider the awarding of this contract.

Karen:

Do we have any idea what this is about? I have had regular email contact with her during the last few days and don't know of any unresolved issues regarding my work with her. I do know that she and Job were not happy when our lawyers told them that they need to keep records of hours worked and include the total hours worked (not to exceed 20) on their monthly invoices. Job claimed that he and Tova had previously received assurances that they would not have to do what he refers to as "billing for hours worked". Could this be a fishing expedition? --- Peg

**Subject:** Invoices and Payments

Job and Tova;

The attorneys have advised me that each of you should amend your invoice to indicate the total hours worked (20) during the first month. You should submit a letter ASAP to Diana Scott with that clarification.

I have been told that it takes our agent, the General Services Administration (GSA), two to three weeks to process our requests for payment. I understand that using the electronic funds transfer (EFT) process will reduce the time for payment by up to five days, because it takes additional time for GSA to cut and mail a paper check.

Diana does not have a completed EFT form from either of you, which would permit the electronic transfer of the funds directly to your chosen bank account. I can find no evidence that Karen suggested you should submit the form, so I have attached a blank form below. Please complete it and return it with the invoice amendment to Diana. If you have any questions about how to fill out the EFT form, let me know. I'll do my best to help you out.

I understand that the contract matters are moving forward. I hope to have more news for you on Monday afternoon.

Subject Fw: Question

History:  This message has been replied to.

Job asked me the question below. I didn't know how to answer it as I am not sure what the follow up to this work would be other than conducting the research set forth by the RFP that he and Tova will develop. It would seem somewhat self-serving to have the same people do the work that set up the RFP. I assume that any future work will be competitively let.

Let mw know when you have a chance what a reasonable response to this question is.

Hi again Peggy,

I just looked at the list, and I have to tell you that I'm a bit concerned. I know of ways to condense searching to encompass many of the terms in one session (example: vote% & fraud would bring up voter fraud, vote fraud, etc.). However, the list is still 9 pages long. I will do my best to start on it tomorrow, but it will take me more than a day to complete it given the other projects I have on my plate. I just want you to be aware that it will take me some time to complete the task given the current parameters.

Talk to you later.

Eagleton Institute of Politics  
Rutgers, The State University of New Jersey

028249

Introduction

Formatted: Font: 11 pt, Underline

Our report, submitted to the EAC last June, provided information on voter identification practices in the 2004 election. It made recommendations for best practices to evaluate future proposals for voter ID requirements. In particular, we recommended a concerted, systematic effort to collect and evaluate information on voter ID requirements and turnout from the states. This report was a companion to our report on Provisional Voting, submitted to the EAC in November 2005.

Deleted: , including in

Deleted:

The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. Unfortunately, our colleagues from Moritz could not be with us today because of teaching obligations.

Deleted: classroom

Our work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election.

Voter ID requirements are just one set of election rules that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen chooses whether to vote by comparing costs and benefits. The benefits of voting are fairly stable –and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit may be, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decreases.

Deleted: ¶

Deleted: ¶

Deleted: s

We conducted our research before last year's election, when the debate over voter ID requirements was sharp and polarized. We took seriously our charge from the EAC, which was not to enter the national debate, but rather to explore if an empirical study could suggest how we might estimate the effects of different voter ID requirements on turnout. That analysis, of course, would be a sensible first step to assess tradeoffs between ballot security and ballot access and provide valuable information for all parties to the debate.

Deleted: V

Deleted: We tried to avoid the polarization in

Deleted: by asking

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the net integrity of the ballot may not have been improved.

A key part of our work was a statistical analysis to examine how turnout may vary under different voter identification requirements. We used this statistical study to develop a model to illuminate the relationships between voter ID requirements and turnout. The model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

Tim Vercellotti led that phase of our research and will describe his methods and conclusions.

Results of Statistical Analysis

Deleted: INSERT VERCELLOTTI SUMMARY HERE

Our research included an examination of variation in turnout based on voter ID requirements in the 50 states and the District of Columbia. We examined this question using aggregate data at

Formatted: Underline

the county level gathered from the U.S. Census and other sources, and individual-level data from the November 2004 Current Population Survey.

Drawing from the research conducted by the Moritz College of Law, we were able to classify the states into one of five voter ID categories. Voters either had to:

1. state their name,
2. sign their name,
3. match their signatures to those already on file,
4. provide a non-photo ID,
5. provide a photo ID.

**Deleted:**  
**Formatted:** Numbered + Level: 1 +

at: 1 + Alignment: Left + Aligned at:  
18 pt + Tab after: 36 pt + Indent at:  
36 pt  
**Formatted:** Bullets and Numbering  
**Deleted:** or

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity. The five categories for minimum requirements were:

1. stating one's name,
2. signing one's name,
3. matching one's signature to a signature on file,
4. providing a non-photo identification, or
5. swearing an affidavit.

**Formatted:** Bullets and Numbering

Analysis of the aggregate data showed that the average turnout in states requiring photo identification as a maximum requirement was 58.1 percent compared to 64.2 percent in states that required voters to give their name as the maximum requirement. The differences were slightly smaller when we examined states in terms of their minimum requirements, with 60.1 percent of voters turning out in states that required an affidavit compared to 63 percent in states that required voters to give their name as the minimum requirement.

The analyses of aggregate data also included models that controlled for other factors that might influence turnout, such as whether a county was in a presidential battleground state, the length of time between the close of the registration period and Election Day, and the demographic composition of the county in terms of race and ethnicity, age, and household income. Controlling for those factors, the maximum requirements of providing a signature match or a non-photo identification showed a negative effect on voter turnout when compared to counties in states that only required voters to give their names. None of the voter identification requirements showed an effect on turnout, however, in the model that coded counties according to the states' minimum requirements.

**Deleted:** had  
**Deleted:**

Analyses of the individual-level data from the November 2004 Current Population Survey also indicated relationships between voter ID requirements and turnout. Controlling for contextual factors, such as whether a voter resided in a presidential battleground state, and demographic characteristics, such as a voter's gender, race, ethnicity, age, and education, the data showed that registered voters in states that require photo identification as a maximum requirement were 2.9 percent less likely to say they had voted compared to registered voters in states that required voters to state their names. Examining states within the context of minimum identification requirements showed that registered voters in states requiring affidavits were four

**Deleted:** revealed

percent less likely to say they had voted compared to registered voters in states that required individuals to give their names at the polling place.

Breaking down the Current Population Survey sample by race and ethnicity also revealed interesting patterns. Photo identification and affidavit requirements were negatively associated with whether white registered voters said they voted compared to their counterparts in states requiring registered voters to give their names. But African-American, Hispanic, and Asian-American registered voters in states that required photo identification as the maximum requirement or an affidavit as the minimum requirement were no less likely to say they had voted than their racial or ethnic counterparts in states that simply required voters to give their names.

The most consistent difference emerged in states that required non-photo identification as a maximum or a minimum requirement. In five of six statistical models, African-American, Hispanic, and Asian-American registered voters in non-photo identification states were less likely to say they had voted in November 2004 than their racial or ethnic counterparts in states that required voters to state their names as a maximum or minimum identification requirement.

That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements. This observation does not answer the question as to why photo identification requirements did not have a more uniform effect across groups in 2004. Of course, photo identification was a maximum requirement in only five states, and each of those states accepted another type of identification as a minimum requirement. But the finding that photo identification requirements were associated with a lower probability that white registered voters said they had voted, and the absence of a similar relationship within other racial and ethnic groups, runs counter to concerns expressed by some in the debate over voter ID. This finding points up the need for further research in this area, perhaps with a view to comparing turnout rates over time before and after a photo identification requirement takes effect, to further isolate potential relationships between photo ID requirements and turnout.

Deleted: begs

Deleted: It may have been due to the fact that

In examining the link between voter identification requirements and turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements.

### Conclusions from the Research

The statistical analysis suggests that stricter voter ID requirements can be associated with lower turnout. It was not designed, however, to look at the other side of the balance equation: do tighter ID requirements reduce multiple voting or voting by ineligible voters? The scope of our research as defined by the EAC excluded assessing the dynamics and incidence of vote fraud.

Deleted: reduce

We believe, however, that sound policy on voter ID should begin with an examination of the tradeoffs between ballot security and ballot access.

The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs. The EAC's recent study<sup>1</sup> of election crimes found, for example, that there has never been a comprehensive, nationwide study of voting fraud and intimidation.

Without a better understanding of the incidence of vote fraud and its relationship to voter ID, for now, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility. Election law should provide the clarity and certainty needed to forestall destabilizing challenges to election outcomes. Absent a sound, empirical basis for striking a wise balance between voter ID and ballot access, legal challenges may increase, not just to the process but to electoral outcomes.

Deleted: a  
Deleted: now m  
Deleted: electoral

The analysis of litigation conducted by the Moritz College of Law for our research suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting Social Security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents.

Deleted: s  
Deleted: s

To strike that balance requires a more precise understanding of how voter ID requirements affect turnout. A first step in that direction would be to encourage or require states to collect and report additional data, including:

- The reasons potential voters are required to cast a provisional ballot and
- The reasons for rejecting provisional ballots.

#### Recommendations for consideration and action by the EAC

1. Encourage or sponsor further research to clarify the connection between voter ID requirements and the number of potential voters able to cast a ballot that is counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements. The analysis will help focus the attention of the public and policy-makers on the tradeoff between ballot access and ballot security. A "Voter Impact Statement," to be drafted and offered for public review and comment before the adoption of new identity requirements, would estimate the number and demographics of:
  - Eligible, potential voters who may be kept from the polls or permitted to cast a provisional ballot by a stricter ID requirement; and
  - Assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

Deleted: V  
Deleted:  
Deleted: process  
Deleted: ¶  
Deleted: that  
Deleted:

The data collection and analysis recommended in this report would help make feasible an empirically-based assessment of the effects on voter participation of proposed identification requirements. That assessment could improve the quality of the debate on this polarizing topic.

<sup>1</sup> U. S. Election Assistance Commission, *Election Crimes: An Initial Review and Recommendations for Future Study*, December 2006.

3. Encourage or require the states to collect and report reliable, credible information on the relationship between ballot access and ballot security. A compilation by EAC of this information would provide a factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
4. Encourage or require states to sponsor surveys of voters to be conducted by local election officials. Such surveys would determine why those who cast a provisional ballot were found ineligible to cast a regular ballot and illuminate the frequency with which ID issues divert voters into the provisional ballot line. The connection between Voter ID requirements and provisional ballots is, of course, close. Voters who lack required ID will likely vote provisionally, thus placing greater demands on a system that may be hard pressed to meet those demands. Asking voters what they know about ID requirements would also provide useful context for evaluating the effect of those requirements on electoral participation.<sup>2</sup>
5. Recommend as a best practice that state election officials conduct spot checks on how the identification process actually works at polling places. These spot checks could provide information on how closely actual practice tracks statutory or regulatory requirements.
6. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In 11 states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots, and the safe harbor provision in presidential elections.

Deleted: should compile this information to

#### A final thought

A voting system that requires voters to produce an ID may prevent the ineligible from voting. It may also prevent some eligible voters from casting a ballot. If the ID requirements block a few ineligible voters from the polls at the cost of preventing an equal or greater number of eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Deleted: the

Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and what form that requirement should take) will weigh value judgments as well as available factual evidence. We did our work on the premise that increased understanding of the facts relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

<sup>2</sup> Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it.

Deleted: ¶

We hope that premise is realistic, and we also hope that this research has helped the Commissioners and the interested public to clarify their thinking on this polarizing topic.

Deleted:

On behalf of the Eagleton – Moritz research team, we thank you for the opportunity to contribute to the national debate.

U.S. Department of Justice  
Office of Legislative Affairs

Office of the Assistant Attorney General

Washington, D.C. 20530

January 27, 2000

The Honorable John Linder  
Chairman, Subcommittee on Rules and  
Organization of the House  
Committee on Rules  
U.S. House of Representatives  
Washington, D.C. 20515

Dear Mr. Chairman:

We have carefully reviewed the testimony presented to the Subcommittee on Rules and Organization of the House at its hearing on July 15, 1999, on "Cooperation, Comity, and Confrontation: Congressional Oversight of the Executive Branch." The Department of Justice appreciates the Subcommittee's interest in this area, and we would like to take this opportunity to present in this letter, for the benefit of both Members of Congress and the public at large, the approach we take to the issues raised at the hearing. As always, we are committed to cooperating with your Subcommittee, and all committees of Congress, with respect to the oversight process.

The testimony presented at the hearing suggests to us that there is a need for improved communication and sensitivity between the Executive and Legislative Branches regarding our respective institutional needs and interests. It also suggests that there is considerable misunderstanding about the principles that govern the Department's longstanding positions and practices on responding to congressional oversight requests. We hope that this discussion of those governing principles will be helpful to the Committee and foster an improved understanding of the Department's interests in responding to oversight requests.

#### General Approach

The oversight process is, of course, an important underpinning of the legislative process. Congressional committees need to gather information about how statutes are applied and funds are spent so that they can assess whether additional legislation is necessary either to rectify practical problems in current law or to address problems not covered by current law. By helping Congress be better informed when it makes legislative decisions, oversight promotes the accountability of government. The information that committees gather in this oversight capacity is also important for the Executive Branch in the future implementation of the law and its participation in the legislative process. We have found that the oversight process can shed

028257

valuable light on Department operations and assist our leadership in addressing problems that might not otherwise have been clear.

President Reagan's November 4, 1982 Memorandum for the Heads of Executive Departments and Agencies on "Procedures Governing Responses to Congressional Requests for Information" sets forth the longstanding Executive Branch policy on cooperating with Congressional oversight:

The policy of this Administration is to comply with Congressional requests for information to the fullest extent consistent with the constitutional and statutory obligations of the Executive Branch . . . [E]xecutive privilege will be asserted only in the most compelling circumstances, and only after careful review demonstrates that assertion of the privilege is necessary. Historically, good faith negotiations between Congress and the Executive Branch have minimized the need for invoking executive privilege, and this tradition of accommodation should continue as the primary means of resolving conflicts between the Branches.

The D.C. Circuit Court of Appeals has recognized the obligations of Congress and the Executive Branch to seek to accommodate the legitimate needs of the other:

The framers . . . expect[ed] that where conflicts in scope of authority arose between the coordinate branches, a spirit of dynamic compromise would promote resolution of the dispute in the manner most likely to result in efficient and effective functioning of our governmental system. Under this view, the coordinate branches do not exist in an exclusively adversary relationship to one another when a conflict in authority arises. Rather, each branch should take cognizance of an implicit constitutional mandate to seek optimal accommodation through a realistic evaluation of the needs of the conflicting branches in the particular fact situation.

United States v. American Tel. & Tel. Co., 567 F.2d 121, 127 (D.C. Cir. 1977). Attorney General William French Smith captured the essence of the accommodation process in a 1981 opinion: "The accommodation required is not simply an exchange of concessions or a test of political strength. It is an obligation of each branch to make a principled effort to acknowledge, and if possible to meet, the legitimate needs of the other branch." Opinion of the Attorney General for the President, Assertion of Executive Privilege in Response to a Congressional Subpoena, 5 Op. O.L.C. 27, 31 (1981).

In implementing the longstanding policy of the Executive Branch to comply with Congressional requests for information to the fullest extent consistent with the constitutional and statutory obligations of the Executive Branch, the Department's goal in all cases is to satisfy legitimate legislative interests while protecting Executive Branch confidentiality interests. Examples of confidential information include national security information, materials that are

protected by law (such as grand jury information pursuant to Rule 6(e) of the Federal Rules of Criminal Procedure and taxpayer information pursuant to 26 U.S.C. § 6103); information the disclosure of which might compromise open criminal investigations or prosecutions or civil cases or constitute an unwarranted invasion of personal privacy; and predecisional deliberative communications (such as internal advice and preliminary positions and recommendations).

We believe that it must be the Department's efforts to safeguard these important Executive Branch institutional interests that have led to the frustrations expressed during the Subcommittee's hearing. We hope that we can reduce those frustrations in the future by setting forth here our perspective on some of the more important institutional interests that are implicated during the course of Congressional oversight.

### Open Matters

Much of the testimony at the hearing addressed oversight of ongoing Department investigations and litigation. Although Congress has a clearly legitimate interest in determining how the Department enforces statutes, Congressional inquiries during the pendency of a matter pose an inherent threat to the integrity of the Department's law enforcement and litigation functions. Such inquiries inescapably create the risk that the public and the courts will perceive undue political and Congressional influence over law enforcement and litigation decisions. Such inquiries also often seek records and other information that our responsibilities for these matters preclude us from disclosing. Consequently, we have sought whenever possible to provide information about closed, rather than open, matters. This enables Congress to analyze and evaluate how statutory programs are handled and the Department conducts its business, while avoiding the potential interference that inquiries into open matters entail.

The open matters concern is especially significant with respect to ongoing law enforcement investigations. The Department's longstanding policy is to decline to provide Congressional committees with access to open law enforcement files. Almost 60 years ago, Attorney General Robert H. Jackson informed Congress that:

It is the position of the Department, restated now with the approval of and at the direction of the President, that all investigative reports are confidential documents of the executive department of the Government, to aid in the duty laid upon the President by the Constitution to "take care that the Laws be faithfully executed," and that congressional or public access to them would not be in the public interest . . . .

40 Op. Att'y. Gen. 45, 46 (1941). Attorney General Jackson's position was not new. His letter cited prior Attorney General letters taking the same position dating back to the beginning of the 20th century (*id.* at 47-48).

The rationale for this policy is set forth in a published opinion of the Office of Legal Counsel issued by Charles J. Cooper, Assistant Attorney General for the Office of Legal Counsel

during part of the Reagan Administration. See Response to Congressional Requests for Information Regarding Decisions made Under the Independent Counsel Act, 10 Op. O.L.C. 68, 76-77 (1986). Mr. Cooper noted that providing a Congressional committee with confidential information about active criminal investigations would place the Congress in a position to exert pressure or attempt to influence the prosecution of criminal cases. Id. at 76. Congress would become, "in a sense, a partner in the investigation," id., and could thereby attempt to second-guess tactical and strategic decisions, question witness interview schedules, debate conflicting internal recommendations, and generally attempt to influence the outcome of the criminal investigation. Such a practice would significantly damage law enforcement efforts and shake public and judicial confidence in the criminal justice system. Id. at 76-77.

Decisions about the course of an investigation must be made without reference to political considerations. As one Justice Department official noted 30 years ago, "the Executive cannot effectively investigate if Congress is, in a sense, a partner in the investigation. If a congressional committee is fully apprised of all details of an investigation as the investigation proceeds, there is a substantial danger that congressional pressures will influence the course of the investigation." Memorandum for Edward L. Morgan, Deputy Counsel to the President, from Thomas E. Kauper, Deputy Assistant Attorney General, Office of Legal Counsel, Re: Submission of Open CID Investigation Files 2 (Dec. 19, 1969).

In addition to the problem of Congressional pressure and the appearance of such pressure, the disclosure of documents from our open files could also provide a "road map" of the Department's ongoing investigations. The documents, or information that they contain, could come into the possession of the targets of the investigation through inadvertence or a deliberate act on the part of someone having access to them. The investigation would be seriously prejudiced by the revelation of the direction of the investigation, information about the evidence that the prosecutors have obtained, and assessments of the strengths and weaknesses of various aspects of the investigation. As Attorney General Jackson observed:

Disclosure of the [law enforcement] reports could not do otherwise than seriously prejudice law enforcement. Counsel for a defendant or a prospective defendant, could have no greater help than to know how much or how little information the Government has, and what witnesses or sources of information it can rely upon. This is exactly what these reports are intended to contain.

40 Op. Atty. Gen. at 46. The Department has similar interests in the confidentiality of internal documents relating to its representation of the United States in civil litigation. Our litigation files usually contain confidential correspondence with client agencies as well as the work product of our attorneys in suits that frequently seek millions of tax dollars. They also contain "road maps" of our litigation plans and preparations, as well as confidential reports from experts and consultants. Those plans could be seriously jeopardized and our positions in litigation compromised if we are obliged to disclose our internal deliberations including, but not limited to,

our assessments of the strengths and weaknesses of evidence or the law, before they are presented in court. That may result in an unfair advantage to those who seek public funds and deprive the taxpayers of confidential representation enjoyed by other litigants.

In addition, the reputations of individuals mentioned in internal law enforcement and litigation documents could be severely damaged by the public release of information about them, even though the case might ultimately not warrant prosecution or other legal action. The Department takes very seriously its responsibility to respect the privacy interests of individuals about whom information is developed during the law enforcement process or litigation.

### Internal Department Deliberations

With respect to oversight on closed matters, the Department has a broad confidentiality interest in materials that reflect its internal deliberative process. In particular, we have sought to ensure that all law enforcement and litigation decisions are products of open, frank and independent assessments of the pertinent law and facts -- uninhibited by political and improper influences that may be present outside the Department. We have long been concerned about the chilling effect that would ripple throughout government if prosecutors, policy advisors at all levels and line attorneys believed that their honest opinion -- be it "good" or "bad"-- may be the topic of debate in Congressional hearings or floor debates. These include assessments of evidence and law, candid advice on strengths and weaknesses of legal arguments, and recommendations to take or not to take legal action against individuals and corporate entities.

The Department must seek to protect this give-and-take process so that the participants in the process can vigorously debate issues before them and remain able to provide decisionmakers with complete and honest counsel regarding the conduct of the Department's business. If each participant's contribution can be dissected by Congress in a public forum, then the free and candid flow of ideas and recommendations would certainly be jeopardized. The Supreme Court has recognized the legitimacy of this "chilling effect" concern: "Human experience teaches that those who expect public dissemination of their remarks may well temper candor with a concern for appearances and for their own interests to the detriment of the decisionmaking process." United States v. Nixon, 418 U.S. 683, 705 (1974). Our experience indicates that the Department can develop accommodations with Congressional committees that satisfy their needs for information that may be contained in deliberative material while at the same time protecting the Department's interest in avoiding a chill on the candor of future deliberations.

The foregoing concerns apply with special force to Congressional requests for prosecution and declination memoranda and similar documents. These are extremely sensitive law enforcement materials. The Department's attorneys are asked to render unbiased, professional judgments about the merits of potential criminal and civil law enforcement cases. If their deliberative documents were made subject to Congressional challenge and scrutiny, we would face a grave danger that they would be chilled from providing the candid and independent analysis essential to just and effective law enforcement or, just as troubling, that

they might err on the side of prosecution simply to avoid public second-guessing. This in turn would undermine public and judicial confidence in our law enforcement processes, untoward consequences we are confident that Congress, like the Department, wishes to avoid.

### Privacy

In addition to these concerns, disclosure of declination memoranda would implicate significant individual privacy interests as well. Such documents discuss the possibility of bringing charges against individuals who are investigated but not prosecuted, and often contain unflattering personal information as well as assessments of witness credibility and legal positions. The disclosure of the contents of these documents could be devastating to the individuals they discuss. We try to accommodate Congressional needs for information about declinations whenever possible by making appropriate Department officials available to brief Committee Members and staff. This affords us an opportunity to answer their questions, which can be helpful because it can include the context and process that accompanied the decision. Hence, the discussion with staff may provide useful information and minimize the intrusion on individual privacy and the chill on our attorneys' preparation of future deliberative documents.

### Line Attorneys

The Department also has a strong institutional interest in ensuring that appropriate supervisory personnel, rather than line attorneys and agents, answer Congressional questions about Department actions. This is based in part upon our view that supervisory personnel, not line employees, make the decisions that are the subjects of congressional review, and therefore they should be the ones to explain the decisions. More fundamentally, however, we need to ensure that our attorneys and agents can exercise the independent judgment essential to the integrity of law enforcement and litigation functions and to public confidence in those decisions. Senator Orrin Hatch has recognized the legitimacy of the Department's practice in this area, observing that Congressional examination of line attorneys "could chill career Department of Justice lawyers in the exercise of their daily duties." See Letter to Attorney General Janet Reno from Senator Orrin Hatch, dated September 21, 1993. Representative Henry Hyde has likewise opposed Congressional interviews of line prosecutors. See Letter of Representative Hyde to Representative Carlos Moorhead, dated September 7, 1993. By questioning supervisors and ultimately the Department's Senate-confirmed leadership, Congress can fulfill its oversight responsibilities without undermining the independence of line attorneys and agents.

\* \* \*

In sum, the Department recognizes that the process of Congressional oversight is an important part of our system of government. We are committed to cooperating with oversight requests to the fullest extent consistent with our constitutional and statutory responsibilities.

We welcome your suggestions about how we should work together to accommodate the needs of our respective branches of government. Please do not hesitate to contact me if you would like to discuss these matters further. I intend at all times to work diligently with you toward satisfying the respective needs of our coordinate branches.

Sincerely,

Robert Raben

Assistant Attorney General

Subject RE: Search Results Example [REDACTED]

Tova and Job,

Thank you for your feedback. There are two factors that went into my decision to perform the search in the manner I indicated which may have a bearing on whether you want me to do each search individually.

First, I checked with the Lexis representative at my school, who suggested the search methodology I used. She indicated that I would get the same results if I did the searches separately or together.

Second, as I am in the midst of finals, as you can imagine, I have limited time to devote to work. I will only be in the office two days in the next two weeks and will not be able to do much work from home. As a result, I probably won't be able to do the majority of the searches until just after Christmas if I am to do the each term separately. If not, I should be able to get you results by the week before Christmas.

I will do whatever you and Peggy decide given your timelines, but wanted to let you know the factors that went into my decision.

Thank you,

Tamar:

028264

You are not going to be able to place all of these word searches together. We need you to take each term on the list and do a search on it. You can only merge terms when it will not add other terms and therefore affect the outcome. For instance, vote and voter could probable be merged. I know this creates much much more work but it can't be helped. I would like you to pull the first 50 cases for each set of terms and send them to us with a short case summary (I know Westlaw lets you do a short case summary). From there we will have to read the cases and decide if we need any others in that search term.

Regards,

Job

Tova and Job,

It was good to talk to you today. Hope you are doing well. I've attached my African American search results below. It encompasses all of the terms you suggested having to do with African Americans.

The following is a search I used to truncate words and combine terms, but I still got a large number of results:

Vot! and deny and black or vot! and black and challenge or vot! and black and reject or vot! and black or vot! And deny and African w/s American or vot! And African w/s American and reject or challenge or vot! And African w/s American or election and black and deny or challenge or reject or election and black or election and African w/s American and deny or challenge or reject or election and African w/s American or ballot and security and black or ballot and security and African w/s American or black and vot! And suppress! Or African w/s American and vot! And suppress or African w/s and disenfranchis! or black and disenfranchis!

If this search yields useful cases for you, I can continue searching using the same strategy. If not, please provide me with additional guidelines and I will do my best!

Please feel free to contact me should you have any questions or need additional information.  
Thank you,

Subject Interview Requests for Tomorrow

Mr. Chairman,  
Two more interview requests for tomorrow:

1. NPR's News and Notes would like to have you as a guest on their program tomorrow morning at 8 a.m. EST for five to eight minutes. Topic: Your thoughts on the states that are cracking down on voter fraud through voter ID laws, registration policies, etc. Also, they want your take on the Fed. Election Integrity Act, the bill sponsored by Hyde regarding voter ID which will be dropped this week. The interview would be taped, and it would run at 9 a.m. EST. News and Notes explores issues that impact the African American community. You will be interviewed by Farai Chideya (Fah-rah Chu-day-ah). Go here <http://www.npr.org/templates/story/story.php?storyId=11> to read more about the program and the host. You are to call 310-815-4302 from a land line. Backup: Producer Devin Robbins at 310-815-4379.

2. Mary Ann McGee of Information Week is working on a story about voting system security. I talked to her about our efforts to help election officials focus on the entire process, not just the voting machine. I sent her the Quick Start guide. She's interested in hearing more about this from you. This is a good opportunity to get the message out that the real challenges we face in Nov. are having enough people and making sure they are properly trained. She wants to talk to you at 10:30 am EST. You are to call her at 508-697-0083.

Please let me know if you will be able to accomodate these reporters, and I'll take it from there. Thank you.

Subject update - Huma Zaidi, NBC News

History: This message has been replied to.

Huma asked if testimony will include updates on the progress/status of current voter info websites and overseas voting programs and if we will discuss voter ID requirements.

I said it may be that voter ID requirements are discussed simply in terms of the overall content of the voter information websites. I distinguished between the morning panels on voter information websites and the afternoon panel on military and overseas voting. She asked what EAC can or will do regarding military and overseas voting before the election. I said EAC will hear testimony about the status, best practices and issues associated with UOCAVA voters and share the information with the public and election officials so they are better informed to help meet the challenge. In particular, I said Scott Wiedmann would provide information on new approaches by FVAP. I said that EAC has been working with state and local officials and experts to fine-tune the UOCAVA survey instrument and that Thursday's meeting comes two years to the day after EAC released the Best Practices UOCAVA report.

**To:** Jeannie Layson  
**Subject:** Request from Huma Zaid, NBC News

Huma Zaid, NBC News researcher asked "is there any information you can send me in advance pertaining to the discussions that are on the agenda? I'd like to include a brief preview of the event for MSNBC.com tomorrow morning." I pointed out the link to the agenda. If they approve the news release, I could send an embargo copy, right? Is it too much to send her any testimony or do we have to wait?

Subject Distribution of Voter ID Report Appendices to Tom Hicks

Commissioner Hillman has asked a follow-up question regarding the sharing of EAC's information, on the Eagleton study on Voter ID requirements, with Tom Hicks.

I have given Sheila the following appendices for possible distribution to Tom Hicks:

1. Summary of Voter ID Requirements by State
2. Court Decisions and Literature on Voter Identification and Related Issues Court decisions
3. Annotated bibliography on Voter Identification Issues

I have **not** given Sheila, for distribution, these Appendices or parts of the report:

1. Analysis of Effects of Voter ID Requirements on Turnout
2. The Executive Summary and Recommendations
3. Summary of Research
4. State Statutes and Regulations Affecting Voter Identification (electronic version only)

**\*\*You'll also recall that I 'm awaiting Tom 's approval to send to Mike McDonald , various appendices from the Eagleton Provisional Voting report**

Thanks

FYI-

Since this voter ID analysis ( linking voter ID to depressed turnout) is now public and attributed to a contract the EAC let, I think this significantly influences what we may want to write and say in a final report.

Last week Tom Hicks was given all of the report appendices except the statistical analysis, and the Eagleton summary report. Takaji's blog contains everything except the Eagleton summary report.

So, as near as I can determine everything except the Eagleton report on "Best Practices to Improve Voter Identification Requirements" and, of course, our report on voter ID, is out there.

I can tell Alvarez that while EAC has yet to release a statement or its findings on Voter ID, the material contained in Tokaji's blog should be used.

Hi -- hope all is well.

I've got a quick question for you. Vercellotti and Anderson have put out for public distribution what looks to be their work from their EAC report on voter identification (<http://www.law.eas.edu/brog> [redacted]).

Given that this piece of their research project is available, is the rest of their work available for public distribution yet (as you know the VTP is having a conference at the end of this week on voter identification and registration, it would be nice to have access to the EAC research at the conference, even at this late date).

Tom,

Regarding the FR notice, it can be short but it must be accurate and complete. We will also include this info in the newsletter on Thursday. Many people feel strongly about this issue and it may well generate news stories regardless of what we do. We must get it right at the beginning and be prepared to answer questions from the public and the media such as: How long have we had it ? Why are we discussing it now ? How much did it cost ? What will EAC do with it or what exactly are the next steps? If this is a report with preliminary research findings together with recommendations for future study, then could EAC acknowledge the findings without accepting them but instead accept recommendations for future study?

Subject Response Requested - EAC voter ID report

Karen,

We need to publish an FR notice early tomorrow regarding the next public meeting. In light of the recent matter regarding voter fraud, I want to be sure to accurately describe what's happening with the voter ID report item contained in the draft agenda. Please add some perspective about what will and will not be discussed and what, if any, action might be expected. The draft agenda says the following: "Presentation of Eagleton ID Report - "Best Practices to Improve Voter Identification Requirements," John Weingarten, Rutgers University (Time allotted 7-10 minutes; Q & A 5 min.)". What stage are we with this ? (preliminary, final, NOTA, etc.) Just trying to stay ahead of the curve,

Thanks,  
Bryan

Subject FYI - Today's media inquiries ( 2-16-07, Frid )

Commissioners:

Today we had the following media inquiries:

(1) The chair was interviewed by Rich Wolfe of USA Today about the voter ID research. She said we discussed the initial findings about voter ID at a public meeting b/c this is such an important issue that impacts voters in every corner of this country. She noted that the new voter ID laws have been enacted in many states in just a few short years, and that the initial work done by Eagleton only covered one election cycle, and she believed we must study this issue over at least two like elections (presidential) to determine if these new laws have had any impact. The chair said based on the initial work conducted by Eagleton, I've instructed staff to present to the commission w/n 30 days a plan for moving forward to continue studying the impact of voter ID. We will immediately release this plan to the public. He then asked about some of the election reform bills in Congress, specifically the points brought up during Sen. Feinstein's hearing. The chair pointed out that we need to make sure timelines are realistic -- election officials need to have time to make sure new laws will work. Implementation doesn't happen overnight. She said we need to make sure we can actually accomplish initiatives within the timeframes prescribed. She said states are always aware that they must first meet certification requirements, conduct mock elections and train staff before introducing new equipment.

(2) Dick Smolka of Election Administration Reports asked if EAC's meeting with voting equipment vendors on Tuesday was in response the Board of Advisors Resolution that EAC collect certain information from them. Brian Hancock replied that this was not the topic of the meeting and that he had not yet been instructed to collect the information requested in the resolution.

(3) Cara Matthews of Gannett News in Albany called to ask the latest about the possible loss of HAVA 102 funds by New York. We said that we are continuing to review the responses from all the states in the order they were received.

Subject Voter ID

Mr. Galloway,

Per your inquiry, we have been working with the Eagleton Institute to study issues related to voter ID. We held a public meeting earlier this month in which we discussed this project to provide an update on progress being made. At the meeting, EAC commissioners asked the researchers questions about what they'd found so far, methodology, etc. At the conclusion of the questions, EAC Chair Donetta Davidson instructed EAC staff to take a look at Eagleton's recommendations for moving forward and w/n 30 days present the commissioners with suggestions for further research about voter ID laws. She noted that she thought it was important to study more than one election cycle, since some of these ID laws are so new. Go [here](#) to view the testimony Eagleton presented at the meeting, and go [here](#) to read the Eagleton paper, in which they referenced some of the data they had collected on our behalf.

For your information, EAC is an independent bipartisan commission created by HAVA. It is charged with developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting test laboratories, certifying voting systems and serving as a national clearinghouse and resource of information regarding election administration. The Commission is also responsible for auditing the use of HAVA funds.

Let me know if I can be of further assistance. 202-566-3103.

Subject FYI - Today's media inquiries ( 2-21-07, Wed )

Commissioners:

Today we had the following media inquiries:

(1) Commissioner Hillman was interviewed by Charles Edwards of NPR in Atlanta about the Standards Bd. meeting. She explained the role of the board, talked about the agenda, including the visit to Kennesaw, and told him GA SOS Handel is on the board. She provided an overview of our voting system standards setting process and our programs to accredit labs and to test and certify systems. She also talked about the importance of gaining public confidence in the voting equipment they use, and talked about our responsibility to bring more accountability to the process.

(2) Jim Galloway of the Atlanta Journal Constitution wanted the report on voter ID. We explained that we had been working with the Eagleton Institute to study issues related to voter ID. We held a public meeting earlier this month in which we discussed this project to provide an update on progress being made. At the meeting, EAC commissioners asked the researchers questions about what they'd found so far, methodology, etc. At the conclusion of the questions, EAC Chair Donetta Davidson instructed EAC staff to take a look at Eagleton's recommendations for moving forward and w/n 30 days present the commissioners with suggestions for further research about voter ID laws. She noted that she thought it was important to study more than one election cycle, since some of these ID laws are so new. We sent him the Eagleton testimony. He requested info about the paper presented by Eagleton that referenced the statistics they collected for us, and we sent it to him.

(3) Josh Stager of Congressional Quarterly asked for the Eagleton report on voter ID. We referred him to the testimony on our website and explained that the presentation by Eagleton consisted of a briefing to EAC on their research. We said that the commissioners did not vote on or decide anything with regard to the research. We said that the chair asked the executive director to develop staff recommendations regarding the research to present to the commissioners within thirty days.

(4) Ken Vogel of Politico called Curtis and asked if the OIG had researched the qualifications of the two new commissioners. Curtis said no, that was part of the nomination process. The reporter asked if the OIG was looking into the Ciber issue, and Curtis said he could not comment on that.

Subject Re: Next draft of the Voter ID statement 

I am comfortable with the latest redraft. However, if there are any changes of substance, even a one word change can be substantive in this document, I will want to see a redraft before it is sent for tally vote.

The statement is well written but there remain some editing issues. Lack of commas, use of the words "which" versus "that." Typo - the word "this" when I think it is supposed to be "his." (I do not consider grammatical and spelling edits as substantive.)

Subject FYI - Today's media inquiries ( 3-13-07, Tues )

Commissioners:

Today we had the following media inquiries:

(1) Marie Cocco of the Washington Post Writers Group (syndicated columnists) called asking about our voter fraud report and the voter ID report. She wanted to know about reports that we had refused to release the voter fraud data. (This is prompted by accusations that refusals to aggressively pursue voter fraud was an issue in the recent firing of some federal prosecutors.) Regarding the voter ID project, we directed her to the testimony from the public meeting, and said that EAC Chair Donetta Davidson requested that staff review the initial research provided by Eagleton and produce a final report, which would include recommendations for further study on this subject. Currently, staff is working to finalize the voter ID report. Regarding the voter fraud and intimidation research, we said that at a May 2006 public meeting of our Standards Board and Board of Advisors, the EAC project manager for this research presented a staff update on the project, and we sent her the document and told her it was given to anyone who asked for it. we explained that the commissioners had adopted a final report, including four recommendations for further study, and sent it to her. we said that as a small agency of 23 employees, including the four commissioners, it is necessary for the agency to contract with consultants to gather the initial data for these projects. After EAC receives the initial data, the agency reviews the data for accuracy and then releases a final report.

(2) Chris Drew of the New York Times wanted to know the status of our voter fraud research, and we directed him to the report on the website.

(3) Steve Terrell of the Sante Fe New Mexican wanted to know what was going on with the NM audit. we checked with Curtis, then told him that our OIG was conducting an audit regarding the expenditure of HAVA funds, and that the audit was requested by the NM SOS.

Commissioners,

Attached below are two versions of the Voter ID statement. One shows the track changes and the other shows the document having accepted all of those changes (so that it would be easier to read). Jeannie and Tom have both taken a look at this document and we think that it captures what we discussed on Wednesday.

Please take a look and let me know if this meets with your understanding of what we discussed.

Subject Re: Project allotments

How about if we ask Eagleton for an estimate of the percent of costs they would attribute to the Voter ID portion of the study?

That way we can say the Voter ID study cost approximately X dollars.  
(And deductively, the Prov Vote study cost X dollars.)

Commissioner,

Per your question about how much of the contract was actually spent on voter ID research vs provisional voting... I have yet to find the answer. I have reviewed the RFP and the invoices, but so far, it does not appear that these tasks were tracked separately. Karen and I continue to look into this, but I wanted to let you know what we've found so far.

Commissioners,

I have incorporated your edits, so please take a look at the latest drafts of both documents and let me know if you have further changes. I recommend making this public on Thursday. If possible, please let me know by the end of the day on Wed. if you have additional edits. Press release edits were made in the first two paragraphs, including backing off calling this a "multi-year study," and a more direct description of the action you took -- you declined to adopt the report. The only edit in the memo is new language in the Q&A that points out that the \$500K included work for both prov. voting and voter ID.

Thank you, and let me know if you have any questions.

Subject: Voter ID

Per your request kind sir, I think this is what you were looking for (Page 14. Also see pages 7,8 of the Eagleton paper. ). Go here to view the full report: "The results presented here provide evidence that as voter identification requirements vary, voter turnout does as well. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant."

History:

✉ This message has been forwarded.

John, Based on the 6 article Layson sent and the others that I distributed over the weekend, I conclude this: We lost the battle, but won the war.

I am concerned about the news that Rush Holt's election reform bill would make the EAC permanent. Perhaps we could arrange to talk to him during the 2 week House Easter break and make some suggestions about how the EAC should be restructured before it is made permanent. (Ray Martinez would, I believe, have much to contribute on that topic.)

Tom

to the December EAC report. Is that correct?

4) If I'm correct on questions 2 and 3, would it be accurate to say that readers of the December report cannot tell how much of that report does and does not reflect the original Wang/Serebrov findings?

5) I called earlier today requesting the Wang/Serebrov report, and you sent me the December EAC report. I am concerned that if I had not already been researching this closely, I would have thought that you'd sent me the Wang/Serebrov report and would have reported incorrectly that you had. Does the EAC have any comment on this manner of replying to press inquiries? (I contacted you to request the report after I read in the Statesman Journal of Salem, Oregon, an article by Marie Cocco that says: "The bipartisan commission didn't widely release the consultants' review, but makes it available on request." Did the EAC indeed give Ms. Cocco a copy of the "consultants' review"? Or has she misunderstood you in the way I'm concerned about?)

6) I understood you to say that the EAC did not release the Wang/Serebrov report in its original form because the EAC has to do due diligence and its staff is small. Do I understand you correctly? What form of due diligence does the EAC's staff routinely conduct on research that is contracted out to experts before that research is released? You mentioned "vetting" the research. What does that vetting entail?

Thank you for your time.

Subject your questions

Laura,

The fraud and intimidation research contract was for \$147,106, and the voter ID and provisional voting research contract was \$560,002. Voter ID was only part of the contract. It also tasked Eagleton to provide information about provisional voting practices. In Oct. 2006, the Commission issued provisional voting best practices.

Please let me know if you need anything else, and I'll send you the statement as soon as it's ready to go.

Subject FYI - Today's media inquiries ( 4-11-07, Wed )

Commissioners:

Today we had the following media inquiries:

(1) Commissioner Hillman was interviewed by Allison Keyes of NPR about the fraud report. Commissioner Hillman explained the scope of the contract and that we asked the contractors to do two things: define voter fraud and intimidation and provide recommendations for future study on these topics. The commissioner pointed out that we did not ask them for conclusions. The reporter asked if it was true that EAC was trying to suppress information about voter intimidation among minorities. The commissioner said she had worked all her life to prevent minorities from being intimidated at the polls, and that she was very anxious to embark upon a more expansive study on this very topic. The commissioner said the agency was transparent, and talked about our public meetings and the transcripts and testimony that were available to the public through our website.

**NOTE:** The interview will be aired repeatedly this evening on the five minute newscast at the top and bottom of the hour. To listen, tune into WAMU 88.5 FM American University Radio or Listen Live.

(2) Laura Strickler of CBS News wanted to know how much we spent on the fraud report and the voter ID report. We told her the fraud and intimidation research contract was for \$147,106, and the voter ID and provisional voting research contract was \$560,002. We explained that voter ID was only part of the contract. It also tasked Eagleton to provide information about provisional voting practices. In Oct. 2006, the Commission issued provisional voting best practices.

(3) Rich Wolfe of USA Today is working on a story on what states will have to do if Rush Holt's bill is enacted. He asked for details on what states and vendors are currently facing in order to transition from the 2002 to the 2005 voting system guidelines which we provided. Brian Hancock also spoke with him on background about the testing and certification program. Mr. Wolf wanted to know more details regarding the differences in the VSS 2002 and the VVSG 2005. Brian explained that the most significant changes related to accessibility and usability. His real concern was what practical effect the VVSG would have on elections 2008. We noted that more than the VVSG, the changes brought about by the EAC implementation of our Testing and Certification Program might have just as big an impact. We noted that we would not be grandfathering any NASED systems, and that if State law required EAC certification, the manufacturers would need to bring their voting systems through the EAC program for full testing. We also explained the implementation date of December 2005 and that as of that date, no systems could apply for testing to the 2002 VSS. We also made sure that Mr. Wolf understood that the EAC program was voluntary and that participation in the EAC certification program would be driven ultimately by the statutes, regulations or procedures in each of the States.

(4) Paul DeGregorio called to let us know he was interviewed by Adam Stichko of the St. Louis Post Dispatch about the fraud report. The reporter wanted to know if the reaction was a major setback for the agency. Paul said no, and that as EAC noted in its statement, it was going to improve its internal operations. He pointed out that sometimes EAC makes tough decisions that both sides of the aisle might not agree upon. But regardless, he said the agency has a responsibility to conduct due diligence, and make the tough decisions. He talked about what we have accomplished and the assistance we provide -- best practices, quick starts, VVSG and certification program.

(5) Meg Cox a freelance writer in Chicago asked what prompted EAC's Statement Regarding Research &

028302

Contracting Policies and whether something new happened in Congress to prompt the statement. We said that the statement contains the information.

(6) Ross Tuttle of Los Angeles was in town today and is working on a documentary series titled "The Freedom Files" which includes an episode on voting rights. He asked for EAC's statement in response to the NYT article on the release of the report. We sent him today's statement.

(7) Kat Zambon of electionline.org asked if other states have a similar partnership arrangement that the Secretary of State in Georgia has with Kennesaw State University to provide technical support for the state's voting machines, as well as outreach, education, ballot design, training and consultation. We said this is the only one that we are aware of.

(8) John Gideon of Voters Unite and Brad Blog had the following questions, and Jeannie's responses follow:

A. How does the EAC see their position as a "clearinghouse" of information as required by HAVA? We follow the mandates of HAVA regarding our responsibilities to conduct studies about election administration issues. The results of those studies make up the "clearinghouse." B. What responsibility does the EAC have with regard to warning states about what may be security vulnerabilities in specific voting systems? The EAC certification program will collect anomaly reports (go here to view the form), which we will then investigate and share with election officials and the public. C. Chairwoman Davidson has said that the EAC's middle name is "Assistance". How does ignoring potential security issues fit into that theme? As I mentioned above, monitoring anomalies is part of our certification program. As we've discussed before, the system you are referring to was not certified by EAC. If the manufacturer of this system wants an EAC certification for this system, it would have to successfully complete our certification process and adhere to all of its rules. EAC did not grandfather any systems already in use (meaning that we did not automatically issue certifications or transfer NASED qualifications to existing systems), including the one you referenced. Mr. Gideon replied that he was amazed that instead of answering the questions I conflated the certification of voting systems with a security vulnerability that is in existence across the country. He asserted this issue had nothing to do with the EAC certification program. I replied that the very fact that we have set up a system to track voting system anomalies is evidence that we think monitoring performance is very important. Again, as we have discussed many times, we did not certify this voting system. If it successfully completes EAC's certification program in the future, then it would be subject to our rules and conditions, and if a problem occurs we would notify the election community and the public.

### **Snipe hunting in Jeff City**

*Tuesday, Apr. 17 2007*

The Missouri Legislature's dogged efforts to crack down on voter fraud call to mind the hallowed tradition of the snipe hunt.

In a snipe hunt, gullible kids are taken out to the woods, handed sticks and gunny sacks and told to track down the elusive snipe. Meanwhile, their pals, who know a snipe is a bird of marsh and shore generally found nowhere near the woods, yuck it up.

Voter fraud is about as rare as snipe in most parts of the country, including Missouri. As evidence of that we have the testimony of (a) a five-year study by the federal Election Assistance Commission; (b) a report from the Missouri Secretary of State showing nobody in the state tried to vote with a fake I.D. in 2006; (c) Department of Justice statistics showing only 86 people were convicted of voter fraud-related crimes in the last five years, many of them on trivial errors; and (d) a federal judge's ruling last week that the justice department had failed to demonstrate that voter fraud had occurred in Missouri

028306

last year.

Undaunted by these facts, Republicans in the Legislature lurk about like Elmer Fudd with their gunny sacks and sticks, promoting bills to require voters to present photo identification before they're allowed to cast a ballot. They passed such a bill last year, but the courts threw it out as unfair to those who couldn't afford the cost and hassle involved in getting a photo I.D. card.

This year's versions of the photo I.D. bills would allow voters without photo I.D. to cast "provisional ballots," which may or may not get counted. So, despite the fact that a photo I.D. requirement would disenfranchise many voters in the cause of solving a problem that doesn't exist, the Missouri House could pass such a bill this week.

Evidence continues to mount that the hunt master for the national voter I.D. snipe hunt is none other than Karl Rove, President George W. Bush's deputy chief of staff and political guru. As The New York Times suggested Sunday, "The more we learn about the White House purge of United States attorneys, the more a single thread runs through it: the Bush administration's campaign to transform the minor problem of voter fraud into a supposed national scourge."

Not only did the administration suggest that some of the eight fired prosecutors had been insufficiently aggressive in pursuing voter fraud cases, it changed the wording of the Election Assistance Commission's findings on the voter fraud issue. What originally read, "there is widespread but not unanimous agreement that there is little polling place fraud" became "there is a great deal of debate on the pervasiveness of fraud."

Moreover, the release of the commission's report was delayed for nine months, during which period eight states, including Missouri, dealt with voter I.D. laws. Since the 3 percent to 4 percent of the electorate who don't have photo I.D.s tend to be poor, disabled or elderly voters, suppressing their vote would tend to help Republican candidates.

Investigators looking for evidence of fraud need look no further than the e-mail messages emanating from Mr. Rove's offices. Alas, thousands, perhaps millions, of those messages are now "missing." Perhaps Attorney General Alberto Gonzales will shed some light on the problem when his testimony before the Senate Judiciary Committee is rescheduled. In the meantime, Missouri lawmakers should put down the sticks and gunny sacks and back slowly out of the woods before their constituents realize they've been snookered, too.

Subject RE: your interview with Donetta [REDACTED]

Eliza,

At the public meeting in February about the voter ID project, in which the consultants participated, Donetta instructed the executive director to provide recommendations on how to proceed with this project w/n 30 days. Here's her quote from the transcript: "And I'm going to request our executive director, within 30 days, to make a recommendation to the Commission on how we determine how to move forward and what the final outcome of this initial research will be, and we will notify everybody." Go here if you'd like to view the transcript.

The commission's decision to not adopt but to release all of the data was on March 30, which did occur after the March 7 hearing.

Subject RE: your interview with Donetta

Thanks.

I do have one question. Congressman Hinchey told me in an interview that the EAC had posted its Voter ID report on its web site shortly after he requested it at a March 7 Appropriations subcommittee hearing. The Brennan Center also pegs the posting of the Voter ID report to March 30, after the hearing. Chairwoman Davidson stated, however, that the Voter ID report had been released prior to the hearing. Can you clear up whether the report was posted before or after the March 7 hearing when it was requested?

Thanks for all your help with this.

-- Eliza.

Subject FYI - Today's media inquiries ( 4-30-07, Mon )

Commissioners,

(1) Leslie Clark of the Miami Herald plans to attend tomorrow's public meeting. Today she asked whether Florida is required to abide by EAC reply to their request. We said that EAC is the cognizant agency for most of the HAVA funding programs. We said that EAC therefore has the responsibility to advise and instruct states regarding the appropriate use of these funds consistent with the provisions of HAVA as well as circulars developed by OMB Circulars A-87 which governs the use of federal funds to purchase goods for state and local governments.

(2) Dana Burke, News Editor for the Citizen in Webster, TX is working on a story regarding voter identification requirements in Texas. She said Democrats opposed to the new legislation have referred to EAC's voter ID study and point to a correlation between more stringent voter id requirements and lower voter turnout, especially among minority groups. She noticed EAC's statement regarding a request for review, asked if the study is considered valid and whether the assessment by opponents of the legislation is correct. We sent her the following two links and replied that our Inspector General is currently reviewing the circumstances surrounding this research and that when that process is complete we'll be glad to discuss it further.

**04/16/07 - EAC Requests Review of Voter ID , Vote Fraud & Voter Intimidation Research Projects**

**News Release : 3/30/07 - EAC to Launch Comprehensive Study of Voter ID Laws**

## EAGLETON INSTITUTE OF POLITICS

---

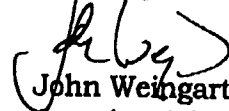

April 19, 2007

Donetta Davidson, Chair  
U.S. Election Assistance Commission  
1225 New York Avenue, NW  
Suite 1100  
Washington, D.C. 20005

Dear Chair Davidson:

I am attaching a copy of a memo I am sending to Adam Abroggi, Counsel for the Senate Committee on Rules and Administration, responding to his request for information about the Eagleton Institute of Politics' contract with the EAC. If you or your staff notice any errors or significant omissions in my summary of our work and coordination with you, please let me know. Also, please don't hesitate to contact us if there are any other ways in which we can help you to advance informed public consideration of provisional voting, voter identification and the other important issues within your purview.

Sincerely,

  
John Weingart  
Associate Director

Cc: Tom Wilkey, Executive Director  
U.S. EAC

From: John Weingart, Associate Director  
Eagleton Institute of Politics

April 19, 2007

Adam

In response to your April 10<sup>th</sup> request, I have pulled together some information about the Eagleton Institute of Politics' contract with the U.S. Election Assistance Commission. Although I did not have a chance to do the thorough review, including comparing notes with all the members of our research team, that would be necessary to compile a full chronology of our work, I hope the following will be useful to you. I will be giving a copy of this memo to EAC Chair Donetta Davidson and Executive Director Tom Wilkey for any assistance it may offer them in responding to Senators Feinstein and Durbin's April 12<sup>th</sup> letter.

By way of background, Rutgers University's Eagleton Institute of Politics submitted a proposal to the EAC on March 25, 2005 to provide "research assistance to the Election Assistance Commission for the development of voluntary guidance on provisional voting and voter identification procedures." The proposal was submitted after extensive discussions with EAC Commissioners and staff that had begun on Election Day, 2004 when Eagleton had received a phone call from the EAC's then-Executive Director asking if the Institute would be interested in undertaking this work.

The proposal was prepared and submitted in partnership with the Moritz College of Law at Ohio State University. At the EAC's request, we proposed to handle the two research topics in sequence, first submitting a report on Provisional Voting and then preparing and submitting the report on Voter Identification. In describing the Voter Identification portion of the study, the proposal stated:

"We propose to test the hypothesis that more stringent voter ID requirements depress voter participation in general or for the poor, minorities and older voters in particular."

The proposal also included a plan to form a peer review group composed of scholars and practitioners in the areas of elections and voting to examine and comment on the research

The following pages provide a preliminary summary of our major contacts with the EAC during the course of the contract, with a focus on our work on Voter Identification. More extensive review of our files, including the monthly progress reports we submitted to the EAC, may find other relevant discussions, but this list at a minimum should provide a good overview.

THE STATE UNIVERSITY OF NEW JERSEY

028314

**EAGLETON INSTITUTE OF POLITICS**

To: Adam Ambrogi, Counsel

---

**May 25, 2005 - Contract awarded**

**May 26, 2005 - First meeting of Eagleton-Moritz team with EAC Commissioners and staff in Washington.** After general discussion of EAC interest in both topics, Commissioner DiGregorio expresses concern that the composition of the project's peer review group was politically unbalanced. Eagleton had proposed including the following five individuals: R. Michael Alvarez, Professor of Political Science at California Institute of Technology; Martha E. Kropf, Assistant Professor of Political Science at the University of Missouri-Kansas City; Daniel H. Lowenstein, Professor of Law at UCLA; Tim Storey, Program Principal at the National Conference of State Legislatures; and Peter G. Verniero, former New Jersey Attorney General and Supreme Court Justice and current Counsel to Sills, Cummis, Epstein and Gross.

Commissioner DiGregorio subsequently suggests other names for our consideration. We are impressed by the list of people he provides and add three of them to the Peer Review Group: John C. Harrison, Professor of Law at the University of Virginia; Timothy G. O'Rourke, Dean of the Fulton School of Liberal Arts at Salisbury University; and Bradley Smith, Professor of Law at Capital University Law School. The Project Peer Review Group then had eight participants.

**July 28, 2005 - Brief EAC Commissioners at a public meeting at Cal Tech on progress on the research.** Briefing includes this status report on the Voter ID phase of the work: "statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters will be complete in late August."

**August 9, 2005 - First telephone conference with Peer Review Group. Focus is draft Provisional Voting report.**

**September 6, 2005 - Meet with the EAC in Washington. Brief the Commission on the status of the research on provisional voting.**

**September 21, 2005 - Second telephone meeting of Project Peer Review Group.**

**September 30, 2005 - Conference call with EAC Commissioner Martinez and three members of the staff.** Commissioner Martinez indicates EAC is generally more comfortable playing the role of a national clearinghouse and therefore prefers to issue reports as "Best Practices" than as "Provisional Guidance." Staff says Eagleton emphasis should be on what states should do as opposed to suggesting how they would do it. Commissioner Martinez concludes meeting saying, "We have been very well served by all the work you and Moritz have done."

**Feb. 22, 2006** - Conference call with Project Peer Review Group members after they have reviewed first draft of Voter Identification report. The Peer Reviewers suggest the statistical analysis: (1) Look at whether voter identification requirements are related to voter registration rates, as well as turnout; (2) Describe in further detail the basis for the aggregate and individual-level data analyses; (3) Clarify whether the report is examining turnout among citizens eligible to vote, or all individuals of voting age; (4) Stress in a footnote that Hispanics in the individual-level analysis are Hispanics who describe themselves as citizens who are eligible to vote; (5) Discuss in the Appendix the reasons why turnout rates appear to be higher in the Current Population Survey data than in other sources of data; and (6) Use predicted probabilities as opposed to odds ratios to describe the relationship between voter identification requirements and turnout.

*Eagleton subsequently revises draft of the statistical analysis to address all these issues.*

**March 28, 2006** - Conference call with EAC staff and Eagleton-Moritz research team in advance of team's scheduled briefings of EAC Commissioners in Washington, D.C. on Provisional Voting and Voter Identification reports.

**April 3, 2006** - Eagleton-Moritz morning meeting in Washington with EAC Commissioners Davidson and Hillman and staff members. Series of questions and responses on Voter ID methodology.

Commissioners ask whether respondents to the Current Population Survey might be non-citizens who said they were registered and voted. In a subsequent follow-up e-mail, Tim Vercellotti of Eagleton writes that the design of the CPS questionnaire skips non-citizens past questions about registration and voting. Commissioner Davidson asks if the team could examine the relationship between identification requirements and turnout over time. Team members respond that the information on state identification requirements for previous election cycles would require additional extensive research. Commissioner Hillman asks if the report could break out the relationship between voter identification and turnout for African-Americans with education levels of a high school diploma or less, or African-Americans below the poverty line.

*Subsequent analyses examined these subgroups as suggested.*

Eagleton-Moritz afternoon meeting with Commissioners DiGregorio and Martinez and EAC staff. Series of questions and answers. Commissioner DiGregorio concludes he is "disappointed" with the report. Commissioner Martinez says he "appreciates" it.

**April 13, 2006** - Conference call between Eagleton and EAC staff. EAC requests that Eagleton convene a conference call of the Project Peer Review Group with EAC staff and/or Commissioners to discuss the statistical analysis of the effects of various Voter Identification requirements on turnout.

EAC staff also reports that the EAC is going to convene its own second peer review group to seek feedback on review by the Project Peer Review Group.

**(April 13, 2006 continued)**

EAC staff also reports that Eagleton is on the preliminary schedule to present Voter ID findings to the EAC's Advisory Board May meeting but that the date and location have not yet been set. EAC staff say they are "unsure where Voter ID project is going. We're going to have to see. We saw lines really drawn politically over Voter ID piece. We'll have to see what statements the agency chooses to make over this topic. It is the topic - It has nothing to do with you. The timing is such that Voter ID is a hot topic."

**April 28, 2006** -Eagleton informs EAC by email of its understanding of status of Voter ID project: "We presented our Voter ID research to the commissioners in April and are now revising it in line with their comments; that revised research paper will be discussed in mid-May by reviewers selected by the Commission. That date was set specifically to allow us to prepare a final report that would be ready for review by the Advisory Board on May 24; ...The appropriate conclusion for our work is a presentation of findings and recommendations for both Provisional Voting and Voter ID, 2 closely related topics, to the Commission at its public meeting in late June..."

**May 1, 2006** - EAC informs Eagleton that it is on the schedule to brief EAC Advisory Boards on both Provisional Voting and Voter ID on May 23 and 24, but asks that we plan on making four separate presentations to the boards over the two days.

**May 11, 2006** - Conference call on Voter Identification draft with some of original Project Peer Review group, second group of peer reviewers assembled by EAC, and EAC staff. Second group includes the three individuals noted in entry above for May 26, 2005.

One of new reviewers says that using a five-category ordinal variable in the statistical models to characterize the five types of voter identification requirements might rest on unrealistic assumptions. He recommends using five dichotomous variables, also known as dummy variables, for the requirements instead. He also recommends using predicted probabilities to assess the relationship between identification requirements and turnout in the individual-level data. Two of the original Project Peer Review Group recommend including analyses using the ordinal-level variables in the appendix for comparative purposes.

*Subsequent drafts incorporate all these suggestions.*

Two of new reviewers also recommend that the models assume age has a curvilinear effect on turnout, with turnout rising, then falling, as voters age. They recommend using both age and age-squared in the models, or age broken down into dummy variables.

*Subsequent drafts use a series of dummy variables to capture the curvilinear relationship between age and turnout.*

**(May 11, 2006 continued)**

One of original peer reviewers recommends further explanation clarifying that the turnout rates for the states using aggregate data make clear the rates for each state reflect an average of the turnout across the counties in the state. Same reviewer also recommends expanding the discussion of maximum and minimum requirements to add more detail about the distinctions between the two types of requirements.

*Subsequent drafts of the statistical analysis incorporate all these changes.*

One of new reviewers expresses concern about the omission of two important contextual predictors of turnout - the number of days between the close of registration and Election Day, and a measure of which states have Election Day registration.

*Subsequent analyses examine the effects of these variables on aggregate turnout.*

New reviewer also recommends breaking out Asian-American voters when looking at the relationship between voter identification and turnout.

*Subsequent drafts incorporate this suggestion by including Asian-Americans in the individual-level analyses.*

**May 23-24, 2006** - Research team briefs EAC Standards Board and EAC Board of Advisers in Washington, D.C. regarding the Provisional Voting report. The Voter Identification report, originally on the agenda, is dropped before the meeting.

**June 6 (?), 2006** - Letter from Project Director Tom O'Neill to Commissioner Paul DiGregorio responding to the Commission's hesitancy to publish best practices recommendation on Provisional Voting and questions on how to handle research on Voter ID. Excerpt from letter: "We hope the commission will use the reports, as intended from the outset of this project, as the basis for recommendations for better, if not best, practices to the states. If the Commission cannot decide to issue such recommendations to the states, we hope it will release the reports to provide the states and the broader elections community with this information, analysis and perspective on the issues. We recognize, based on the reactions at the Standards Board and, particularly, the Board of Advisors, that some of the findings, conclusions, and recommendations of the reports will be controversial with some of the Commission's constituencies. But we also believe, based on the comments of the Peer Review Group, the advisors assembled by the Commission, and our response to their critiques, that the reports are grounded in solid research by a well-qualified, nonpartisan team and that the reports will provide new information for the policy process. We believe this information will contribute to achieving the EAC mission of providing helpful information that the states may or may not choose to implement. . . . We believe our reports will prove useful to the states as they complete preparations for the 2006 elections. "

**June 15, 2006** - EAC Executive Director writes to Eagleton saying "...The EAC Commissioners have reviewed and considered next steps with the voter identification draft report which Eagleton has prepared. While the final disposition of the results and findings of this study, on the part of the EAC, are still unclear, the Commissioners have asked that the final draft report of this study also be prepared and submitted to the EAC not later than June 30, 2006.

**June 29, 2006** - Eagleton-Moritz submits to the EAC its final reports on Provisional Voting and on Voter Identification referring to Voter ID paper as "final draft" at EAC request. First of five major recommendations on Voter ID from Eagleton-Moritz is:

The EAC should "encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted."

**August 16, 2006** - Eagleton writes to request that the EAC make "the two reports available for use by researchers, legislators, election officials and others interested in these topics." Letter notes: "That the EAC originally commissioned these studies to offer lessons for the 2006 elections based on experience in 2004 further supports the importance of quick action."

**August 31, 2006** - EAC Executive Director responds: "You may not release the draft report [on Voter ID]...as this report has not been finalized and has not been officially released by the EAC."

**February 8, 2007** - Eagleton presents voter identification findings to public meeting of the EAC in Washington. Transcript of the public meeting is available on the EAC web site.

**October 17, 2006** - EAC Executive Director responds to request from Brennan Center for Justice at NYU Law School sending "draft report on provisional voting, prepared by the Eagleton Institute of Politics and the Moritz College of Law." Letter notes, "EAC personnel are in the process of drafting a report about voter identification. The report will be made available upon completion."

**October 27, 2006** - Eagleton writes to EAC Executive Director saying, "We are...disappointed that you are not ready to do the same [release] our report on Voter Identification. We would appreciate knowing approximately when you expect to complete the review and consideration of advisory board concerns you mention to Ms. Weiser" [of the Brennan Center]

**March 30, 2007** - EAC posts Voter Identification paper on its web site and issues statement concluding of the report that "The Commission and our contractor agree that the research conducted for EAC raises more questions than provides answers."

U.S. ELECTION ASSISTANCE COMMISSION  
1225 NEW YORK AVENUE, N.W., SUITE 1100  
WASHINGTON, D.C. 20005

OFFICE OF THE CHAIR

November 23, 2005

Craig C. Donsanto  
Election Crimes Branch  
U.S. Department of Justice  
Bond Building  
1400 New York Avenue, NW, 12<sup>th</sup> Floor  
Washington, DC 20005

Dear Mr. Donsanto:

The U.S. Election Assistance Commission (EAC) has undertaken a short term project to research voting fraud and voter intimidation. As an expert in the prosecution of election crimes, your expertise and unique experience would be a valuable resource as we move forward. I am writing to ask if you will be available to advise and inform our efforts.

As you know, EAC is a federal agency established in accordance with section 201 of the Help America Vote Act of 2002 (HAVA), Public Law 107-252. HAVA requires EAC to conduct research regarding election administration issues. The election administration issues itemized in the statute include:

- Collecting nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for federal office [section 241(b)(6)]
- Identifying, deterring, and investigating methods of voter intimidation [section 241(b)(7)]

The EAC Board of Advisors, established in accordance with HAVA section 211, recommended that EAC place a high priority on these topics when initiating our research projects. Subsequently, EAC obtained the services of two consultants (Tova Wang and Job Serebrov) to:

- **Define Voting Fraud and Voter Intimidation** - develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of federal elections;
- **Research Available Resources** - perform background research (including federal and state administrative and case law review), identify

current activities of key government agencies, and civic and advocacy organizations regarding these topics, and summarize this research and all source documentation;

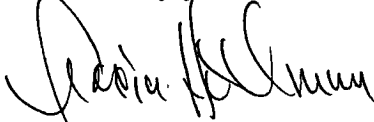

- **Establish a Project Working Group** - in consultation with EAC, establish a working group composed of key individuals and representatives of organizations knowledgeable about voting fraud and voter intimidation, provide a description of what constitutes voting fraud and voter intimidation and the results of the background research to the group, and convene the group to discuss potential avenues for future EAC research on this topic;
- **Produce a Report** - Provide a report to EAC summarizing the preliminary research and working group deliberations, including recommendations for future EAC research, if any;
- **Assist EAC in Initiating Future Research** - if EAC decides to pursue one or more recommendations for future research, draft the project scope and statement of work for the request for proposals.

The EAC manager for this project is Peggy Sims. It would be most helpful if you could offer your expertise to Ms. Sims and our team of consultants. Ms. Sims will contact you to follow up on this request. If you are able to assist us, she will set up an initial interview, which will focus on the identification and prosecution of offenses involving voting fraud and voter intimidation, as well as possible resources on these subjects for our consultants' review. Our consultants and project manager may have follow up questions as the research proceeds. It also would be helpful if you would be able to attend the working group meeting to contribute to its discussion. This meeting will likely be held in February 2006.

If you have any questions about the research or this request, please contact Peggy Sims by email at [psims@eac.gov](mailto:psims@eac.gov) or by phone at 202-566-3120.

Thank you so much for your consideration of this request.

Sincerely yours,

Gracia Hillman  
Chair

**U.S. Department of Justice**

**Criminal Division**

---

*Washington, D.C. 20530*

December 1, 2005

The Honorable Garcia Hillman  
Chair  
United States Election Assistance Commission  
1225 New York Avenue, N.W.  
Washington, DC 20005

Dear Madam Chair:

I am in receipt of your letter of November 23, 2005 requesting my assistance in the development of a statutorily mandated report on voter fraud and intimidation that the Commission is currently undertaking.

I would be pleased, indeed honored, to assist you and the Commission in this matter and invite Ms. Sims of your staff to contact me at her convenience to discuss this matter further with me.

Sincerely,

A handwritten signature in black ink, appearing to read "Craig C. Donsanto", written over a large, stylized flourish.

Craig C. Donsanto  
Director, Election Crimes Branch  
Public Integrity Section
