Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**63.1 %**	State Name	**61.3 %**
Sign Name	**58.6 %**	Sign Name	**60.4 %**
Match Signature	**62.1 %**	Match Signature	**59.2 %**
Provide Non-Photo ID	**57.8 %**	Provide Non-Photo ID	**57.6 %**
Provide Photo ID	**57.3 %**	Swear Affidavit	**58.7 %**
Average Turnout (All States)	**59.6 %**		

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political-- also affect voter participation. Multivariate models that take into account other predictors an place the effects of voter identification in a more accurate context. To consider that broader context, our multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground for president, governor or senate voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-

Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line.

In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line.

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. (Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting.) Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age in years, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note

that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis

The results presented here give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.

- Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.

- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.

- Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this analysis could not capture the dynamics of how identification requirements might lower turnout. Do these requirements dampen turnout because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most

effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

4. Litigation over Voter ID Requirements

There have been a handful of cases challenging identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether or not laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on cases challenging requirements that voters present some form of identifying documents if the photo identification is the only form accepted. In *Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups,*

Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer,* No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions

suggest that best practice may be to conform to the NVRA's limitation on requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

5. Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

This information would allow a more informed judgment to be brought to bear in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. [10] The dynamics of Voter ID requirements – how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That research might address that, so far as may be

---

[10] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." The exclusion of voters through restrictive ID requirements could affect election outcomes as much as fraud by voters at the polls. *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

necessary to reduce vote fraud, could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended by our colleague Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed. [11]

---

[11] "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. These electronic photos should satisfy the anti-fraud concerns of conservatives as much as printed photos that citizens would be required to bring to the polls. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier. "

APPENDIX –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
    - 14th Amendment EPC: no classification (applied strict scrutiny)
    - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
        - Compelling interests: preventing voter fraud (deemed compelling)
        - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
        - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
    - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
    - Substantive due process and equal protection
        - No improper discrimination

        - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
        - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
    - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
    - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
    - Substantive due process: ruled that internal use of SS# not a burden
    - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
    - P&I, Article IV: does not protect in-state citizens
    - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
    - VRA: ruled that race was not made a "qualification" for voting
    - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
    - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
    - VRA: ruled that it was not a "test or device" because it applied equally
    - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

***American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required <u>all</u> in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover,* 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.,* CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[12]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[12] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[13]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[14] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

[14] GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[15] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[15] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Best Practices to Improve Provisional Voting

CONTENTS

Executive Summary

Please provide an Executive Summary to provide background and summarize the key recommendations.

Background of the Research

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning provisional voting, a sample survey of local election officials, and a statistical analysis of provisional voting in the 2004 election. Also consulted as a basis for these recommendations were other studies, notably the EAC's Election Day Survey.[1] (Recommended as Research Methodology description)

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Section 302(a) of HAVA requires states to establish the process of provisional balloting by January 2004.[2] The process HAVA outlined leaves considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voters eligible to cast a provisional ballot that will be counted and, arguably, in what jurisdiction (precinct or larger unit) that where the ballot must be cast in order to be counted.[3]

The general requirement is that, if a registered voter appears at a polling place to vote in an election for Federal office, but the potential voter's name does not appear on the official list of eligible voters for the polling place, or if an election official asserts that the individual is not eligible to vote, that potential voter be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the Election Day Survey, first-time voters who cannot provide identification, as required under HAVA, and voters who were

---

[1] Appendix 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures and describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

[2] The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions." See www.electioncenter.org .

[3] The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell, 387 F.3d565* (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

challenged at the poll.[4] HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. HAVA also requires election administrators to notify individuals of their opportunity to cast a provisional ballot.

Provisional Ballots in the 2004 Election

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.[5] (This number does not match the EAC 2004 Election Day Survey. 64.5% counted)

These totals obscure the tremendous variation in provisional voting among the states. HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted. Six states accounted for two-thirds of all the provisional ballots cast.[6] State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000, from a high of 7% in Alaska's to Vermont's .006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted ballots at more than twice that rate: 44%. (Or, as the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without."[7])

The wide variations in the use of provisional ballots argue for the promulgation of best practices that states can use to determine how to make procedures clearer to both officials and voters could improve the implementation of provisional voting across the country. (Is this a best practices recommendation?)

One important source of variation among states was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.[8]

---

[4] The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State_ directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See http://wired.com/news/evote/0,2645,63298,00.html . (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004 .)

[5] These figures differ slightly from those in the Election Day Survey. Data used for this study include complete voting data for New Mexico, for which the Election Day Survey had only partial data, and vote totals for Pennsylvania, which was not included in the provisional voting analysis in the Election Day Survey. See the appendix to this report for a full explanation of the differences in data between this research and the Election Day Survey.

[6] California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

[7] Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

[8] See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

- The percentage of the total vote cast as provisional ballots averaged more than 2% (2.17%) in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots. (The average of provisional ballots cast was 64.5% counted. A third category had to account for a significant amount over 64.5%. What was that category?)

Formatted: Bullets and Numbering

- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states were enfranchised more frequently than those in the new states, another indication that there is room for improvement in provisional balloting procedures.[9] That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by

b

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning

b

---

[9] Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's " 6 day time frame for processing the provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

Best Practices to Improve Provisional Voting

CONTENTS

Executive Summary

Please provide an Executive Summary to provide background and summarize the key recommendations.

Background of the Research

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning provisional voting, a sample survey of local election officials, and a statistical analysis of provisional voting in the 2004 election. Also consulted as a basis for these recommendations were other studies, notably the EAC's Election Day Survey.[1] (Recommended as Research Methodology description)

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Section 302(a) of HAVA requires states to establish the process of provisional balloting by January 2004.[2] The process HAVA outlined leaves considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voters eligible to cast a provisional ballot that will be counted and, arguably, in what jurisdiction (precinct or larger unit) that where the ballot must be cast in order to be counted.[3]

The general requirement is that, if a registered voter appears at a polling place to vote in an election for Federal office, but the potential voter's name does not appear on the official list of eligible voters for the polling place, or if an election official asserts that the individual is not eligible to vote, that potential voter be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the Election Day Survey, first-time voters who cannot provide identification, as required under HAVA, and voters who were

---

[1] Appendix 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures and describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

[2] The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions." See www.electioncenter.org.

[3] The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell, 387 F.3d565* (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

challenged at the poll.[4] HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. HAVA also requires election administrators to notify individuals of their opportunity to cast a provisional ballot.

Provisional Ballots in the 2004 Election

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.[5] (This number does not match the EAC 2004 Election Day Survey. 64.5% counted)

These totals obscure the tremendous variation in provisional voting among the states. HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted. Six states accounted for two-thirds of all the provisional ballots cast.[6] State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000, from a high of 7% in Alaska's to Vermont's .006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted ballots at more than twice that rate: 44%. (Or, as the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without."[7])

The wide variations in the use of provisional ballots argue for the promulgation of best practices that states can use to determine how to make procedures clearer to both officials and voters could improve the implementation of provisional voting across the country. (Is this a best practices recommendation?)

One important source of variation among states was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.[8]

---

[4] The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State_ directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See http://wired.com/news/evote/0,2645,63298,00.html . (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004 .)

[5] These figures differ slightly from those in the Election Day Survey. Data used for this study include complete voting data for New Mexico, for which the Election Day Survey had only partial data, and vote totals for Pennsylvania, which was not included in the provisional voting analysis in the Election Day Survey. See the appendix to this report for a full explanation of the differences in data between this research and the Election Day Survey.

[6] California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

[7] Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

[8] See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

- The percentage of the total vote cast as provisional ballots averaged more than 2% (2.17%) in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots. (The average of provisional ballots cast was 64.5% counted. A third category had to account for a significant amount over 64.5%. What was that category?)
- Perhaps another reason provisional ballots must be cast in the correct precinct in order to be counted is that local races are also important and that allowing provisional ballots to be counted by voters who cast them outside of the precinct and only counting the ballots for the upper ballot races for outside of the precinct can disenfranchise voters from participating in local races. This argument has been used by many legislatures and in court castes to require that provisional ballots must be cast in the correct precinct in order to be counted.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Formatted: Bullets and Numbering

Those voting with provisional ballots in experienced states were enfranchised more frequently than those in the new states, another indication that there is room for improvement in provisional balloting procedures.[9] That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC should consider providing all states with information on more effective administration of provisional voting. EAC could also consider convening a national meeting for state and county election officials to share experiences and best practices from their own jurisdictions.

Deleted: the

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning

---

[9] Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's " 6-day time frame for processing the provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

curve. Two other possibilities exist. Current understanding of the provisional voting processes in use in 2004 is not sufficient to determine unambiguously which view is correct.

1. "New" states may have a political culture different from "old" states. That is, underlying features of the "new" states political system may be the reason they had not adopted some form of provisional voting before HAVA. The "new" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots – as measured by intrastate consistency in administration--- will be harder and take longer to achieve.[10] This ballot should mention something about election judges and their training.

Formatted: Outline numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Tab after: 0.5" + Indent at: 0.5", Tabs: -0.33", List tab + Not at 0.25"

2. "Old" states may devote fewer resources to updating their registration files or databases because they are comfortable with provisional ballots as a fail safe way for voters with registration problems a way to cast a ballot. (wording too strong) The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Formatted: Highlight

Other influences decreasing consistency among the states include:

- The more rigorous the verification requirements of the voter's identity and registration status, the smaller the percentage of provisional ballots that were counted. Some states merely require a voter's signature, some match signatures, some require identity documents, others require an affidavit, and a few require photo identification.[11]
    - In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
    - In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
    - In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
    - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half

---

[10] Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, "no state gave the voter the right to find out the status of their ballot after the election. " Now all offer that opportunity. See Bali and Silver, "The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000," manuscript, Department of Political Science, Michigan State University. Resisting HAVA's mandates through foot-dragging lacks any legitimate foundation in law or policy.

[11] See Table 2 in Appendix 2 for information on the verification method used in each state.

(52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office. (the voter was registered, than the ballot counted, the voter did not have to present identification).

This section needs a mention of the VR databases

Formatted: Highlight

Formatted: Bullets and Numbering

- Voter registration databases provided information that reduced the number of provisional ballots counted.[12] In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Tab after: 0.5" + Indent at: 0.5", Tabs: 0.21", List tab + Not at 0.25" + 0.5"

- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots.[13]
    - In experienced states, the disparity was even more pronounced; 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
    - If all states had counted out-of-precinct ballots, perhaps 290,000 more voters would have been enfranchised across the country.[14]

Deleted: :

Variation With-in States

Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors outside of the statewide factors analyzed here also influence the use of provisional ballots. Perhaps it is the judges training or it is, in part, because of different laws.[15]

Formatted: Highlight

Formatted: Highlight

---

[12] The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.

[13] The Election Day Survey concluded that : "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

[14] This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

[15] For example, The Election Day Survey also found that "the reported rate of provisional ballots cast increases with population size, from 0.10 percent for voter registration in jurisdictions under 1,000 voting age population (VAP), to 2.51 percent in jurisdictions over one million VAP. It also calculated that, "The highest reported rate of counting provisional ballots was also among predominantly Hispanic jurisdictions, 79.30 percent, followed by predominantly

Reacting to the lack of consistency within states, (not the Carter-Baker Commission) recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."[16]

Election Line reported that:

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.

- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.

- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.

- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, high mobility, (no previous mention of this factor. What research exists to back up naming high mobility as a factor?) and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts were the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader

---

non-Hispanic White areas, 62.60 percent; predominantly non-Hispanic Black communities, 58.60 percent; and predominantly non-Hispanic Native American jurisdictions, 48.70 percent.

[16] Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report observed that, ". . .different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."

measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

Effectiveness of Provisional Voting

The certainty of our conclusions about the effectiveness of provisional voting is limited because of a fundamental challenge of methodology (what is meant by this statement) and the lack of important information. An ideal assessment of how well provisional ballots served the needs of voters and the public interest requires knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. And information needed about the eligibility or registration status of provisional voters is also not available. (Are polling places posting their provisional voting signs? Are election judges doing their jobs?)

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect an accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots enfranchised 1.2 million citizens, who would otherwise have been turned away from the polls.

Not knowing the total number of registered voters who might have voted but could not makes a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Estimates of Votes Lost In 2000 Presidential Election

Votes Lost (Millions)	*Cause*
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

Table 1 Cal Tech – MIT Voting Technology Project Estimates
4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. A rough estimate of the effectiveness of provisional voting in 2004, then,

might be 40% to 50% (ballots counted/votes lost)[*]. (this is unclear. What is trying to be said? Is a comparison of the # of provisional ballots actually counted to the MIT estimate of lost ballots in 2000 being made? If so, would the MIT survey be influenced by the implementation of statewide voter registration databases or other interim measures that would improve the quality of voter registration lists?) Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

Legislative Response

Indeed, several states[17] came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.[18]

Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

The issue of counting provisional ballots cast in the wrong precinct was addressed by Colorado, Arkansas, and North Dakota. How was it addressed?

Litigation

Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

---

[*] Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems after each election when it asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

[17] Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.

[18] The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the *entire department's employees were mobilized to process provisional ballots*." The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots." In a close, contested election, "duplicate" ballots would doubtless receive long and careful scrutiny." See Appendix 7, GAO, "Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," September 2005. (GAO Report-05-997)

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right --the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

Need for Promulgation of Best Practices

Because every provisional ballot counted represents a voter who, if the system had worked really well, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. This is false. If they are registered (the voter registration database is checked as required by HAVA or restricted by state requirement) the provisional counts. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Recommendations for Best Practices

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity

among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

Self-evaluation of Provisional Voting –4 Key Questions (Best practice suggestion?)
The first recommendation is not for a specific procedure, but rather for a way of thinking about provisional voting. As legislators and election officials in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?

2. Is the system sufficiently robust (what system – the voting system or the procedures for provisional voting?) to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and with litigation looming?

3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?

4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

Best Practices For Each Step In The Process
We examined each step of the provisional voting process to identify specific areas where the states should focus their attention, and we offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process. (State how were these particular best practices chosen or arrived at?)

The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result-- well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of

the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."[19]

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing.[20] Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.

- States should provide poll workers the training and information resources they need, as for example, how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.[21] (does this mean that the state should provide poll workers training? Most provided by local election jurisdictions. Is the recommendation to deviate from current practice?)

- States should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. [22] Recent legislation in Arizona indicates that HAVA's recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot. [23]

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States

[19] The Century Foundation, Balancing Access and Integrity, Report of the Working Group on State Implementation of Election Reforms, July 2005.

[20] See *Washington State Republican Party v. King County Division of Records*, 103 P3d 725, 727-728 (Wash. 2004)

[21] See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

[22] *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6th Cir. 2004)

[23] *The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency." [24]

2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.[25]

3. A state website for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information. Why not recommend local websites to do the same as state sites?

B. At the Polling Place

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. It's the law. Do they understand that all have to do this? Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.[26] After the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school." [27] Most states require this. It is not new. In fact, Florida's statutory training provisions are among the highest in the nation. Such statutory direction could help other states ensure uniform instruction of poll workers.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.

---

[24] Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.

[25] The Century Foundation, op. cit.

[26] 8 Colo. Code Regs. § 1505-1, Rule 7.1.

[27] 2005 N.M. Laws 270 page no. 4-5.

3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . .to photocopy official provisional ballots." [28] At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.[29]

4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.[30] Seems like most states require training; do they have data on that? Florida's statutory training provisions among the strongest in the nation.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. The recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underline the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."[31] Nonetheless, the *Panio v. Sutherland*[32] decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the

---

[28] Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.

[29] Connecticut: "Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232j.Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).

[30] 10 Ill. Comp. Stat. Ann. 5/18A-10(b). Indiana requires that the precinct election board give the ballots to the Inspector, who takes the ballots to Circuit Court Clerk. Ind. Code Ann. Sec. 3-11.7-2-4

[31] The Century Foundation, op. cit.

[32] 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.[33]

2. More provisional voters are enfranchised in those states that count ballots cast outside the correct precinct. [34] The best practice may be to count provisional ballots even if they are cast in the wrong precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. See the experience in Los Angeles County with the difficulties in evaluating out-of-precinct ballots described earlier in this report. EAC Chairman: does not agree w/ this recommendation. It does not take into account for local offices that would not be voted upon w/ such practices. Voters would then not be directed or go to their correct polling place to cast a ballot.

3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot correct polling site even if at the wrong precinct within that location. [35] Can the best practice be to send voter to correct precinct – if its in the same building as suggested in this recommendation. Why disenfranchise voter from voting on a local race?

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed

---

[33] In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama – 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c)_(1) Florida: until 5:00 P.M. on the third day following the election . Fla. Stat. Ann. § 101.048 (adopted after the 2004 election);Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (l); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(i). Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) (H).

[34] See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

[35] Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.[36]

<u>Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):</u>

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections

2. The time by which election officials must complete their eligibility evaluations is critical, particularly in presidential elections. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to

---

[36] 8 ccr 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-509(3) C.R.S.

complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available. Why is it suggested that completing eligibility evaluations are more critical in presidential elections? What about gubernatorial elections?

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public. The process *not* the names since by law they cannot be revealed.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what constitutes a successful provisional voting system is difficult. As noted earlier, the most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations (what is meant by national quality organizations? Examples?) to evaluate the provisional ballot process within the broader context of the electoral system.

Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
   - -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
   - -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
   - -- Measures of variance among jurisdictions.
   - -- Number of poll workers trained in administration of provisional voting by polling place
   - -- Number of jurisdictions posting information on provisional voting in the polling place
   - -- Time required to_evaluate ballots by jurisdiction

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

Conclusion -- Research-based, continuing improvements for provisional voting are needed (This section should be the first part of the document)

The recommendations above are based on research that began in late May 2005. Our research focused on six key questions raised by the EAC. The answers to those questions provided the foundation for our policy recommendation. Those questions are:

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

(Should this section be put under a Research Methodology section at the beginning?)

To answer those questions, the Eagleton-Moritz team undertook the following research efforts:

1. Survey of 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Review of news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.

3. Statistical analysis of provisional voting to determine associations between the use of provisional voting and such variables as states' experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approached to voter identification
4. Collection and review of the provisional voting statutes and regulations in all 50 states.
5. Analysis of litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research-based recommendations provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states moved forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

ATTACHMENT 1 – Characteristics of the Provisional Voting Process

Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state's use of provisional ballots:

Deleted: categories analyzed here ar

Deleted: e

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.

New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting[37] and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as "old" states, because the states in all three categories would have been familiar with key aspects of provisional voting.. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

---

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[38] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

---

[38] "Election Preview 2004: What's changed, What Hasn't and Why". This study can be found at: http://electionline.org/Portals/1/Publications/Election.preview.2004.report.final.update.pdf

Table 2 (This table is no longer germane.)
CATEGORIZATION OF STATES -- Statewide Registration Database

Had Database 2004	No Database A-N	No Database N-W	HAVA Exempt or NA
Alaska	Alabama	Ohio	Iowa
Arizona	Arkansas	Oregon	Maine
Connecticut	California	Pennsylvania	Mississippi
Delaware	Colorado	Rhode Island	Minnesota
District of Columbia	Florida	Tennessee	New Hampshire
Georgia	Idaho	Texas	North Dakota
Hawaii	Illinois	Utah	Wisconsin
Kentucky	Indiana	Vermont	Wyoming
Louisiana	Kansas	Virginia	
Massachusetts	Maryland	Washington	
Michigan	Missouri		
New Mexico	Montana		
Oklahoma	Nebraska		
South Carolina	Nevada		
South Dakota	New Jersey		
West Virginia	New York		
	North Carolina		
16	27		8

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election[2]. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

Table 3
CATEGORIZATION OF STATES – Counting Out-Of-Precinct Ballots

Out-of-Precinct	**In-Precinct Only**	**HAVA EXEMPT OR NA**
Alaska	Alabama	Idaho
Arkansas	Arizona	Maine
California	Colorado (after the court case)	Mississippi
Delaware	Connecticut	New Hampshire
Georgia	District of Columbia	North Dakota
Illinois (Not sure the law is that clear. Please check different counties did it differently.)	Florida	Wisconsin
Kansas	Hawaii	Wyoming
Louisiana	Indiana	
Maryland	Iowa	
New Mexico	Kentucky	
North Carolina	Massachusetts	
Oregon	Michigan	
Pennsylvania	Missouri	
Rhode Island	Montana	
Utah	Nebraska	
Vermont	Nevada	
Washington	New Jersey	
	New York

	South Dakota	
	Tennessee	
	Texas	
	Virginia	
	West Virginia	
17	26	7

Voter Identification

We relied on Electionline studies, including the Voter Identification study[39] and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.[40] The five

---

[39] This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

[40] In 2004, ElelctionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.

different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

Table 4

CATEGORIZATION OF STATES – Forms of Identification Required

States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

Give Name	Sign Name	Match Signature	Provide ID	Photo ID
Maine	California	Illinois	Alabama	Florida
Massachusetts	DC	Nevada	Alaska	Hawaii
New Hampshire	*Idaho*	New Jersey	Arizona	Louisiana
North Carolina	Indiana	New York	Arkansas	South Carolina
Rhode Island	Iowa	Ohio	Colorado	South Dakota
Utah	Kansas	Oregon	Connecticut	
Vermont	Maryland	Pennsylvania	Delaware	
Wisconsin	Michigan	West Virginia	Georgia	
Wyoming	Minnesota		Kentucky	
	Mississippi		Missouri	
	Nebraska		Montana	
	New Mexico		*North Dakota*	
	Oklahoma		Tennessee	
	Washington		Texas	
			Virginia	
9	14	8	15	5

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Table 5

CATEGORIZATION OF STATES – Ballot Evaluation Methods

States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis. No states have been italicized. Is this correct?

Signature Match	Data Match	Affidavit	Return with ID	NA
Alaska	Alabama	Connecticut	Indiana	Idaho
California	Arizona	Delaware	Iowa	Maine
Florida	Arkansas	Georgia	Kansas	Mississippi
Oregon	Colorado	Hawaii	Maryland	Minnesota
	DC	Illinois	Michigan	New Hampshire
	Louisiana	Kentucky	Montana	N. Carolina[*]
	Missouri	Massachusetts	New Jersey	N. Dakota
	Ohio	Nebraska	New Mexico	Wisconsin
	Oklahoma	Nevada	Texas	Wyoming
	Pennsylvania	New York	Utah	
	Rhode Island	South Dakota		
	S. Carolina	Tennessee		
	Washington	Vermont		
	West Virginia	Virginia		
4	14	14	10	9

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

---

[*] North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Table 6
Updated information by State

Received Updated Data	Did Not Receive Updated Data
California	Alabama
District of Columbia	Alaska[41]
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut
Kansas	Delaware
Louisiana	Georgia
Maryland[42]	Idaho
Missouri	Illinois
Montana	Kentucky
Nebraska[43]	Maine
Nevada	Massachusetts
New Jersey	Michigan
New Mexico	Minnesota
Ohio	Mississippi
Oklahoma	New Hampshire
Oregon	New York
Pennsylvania	North Carolina
Rhode Island	North Dakota
South Dakota	South Carolina
Tennessee	Utah
Texas	Vermont
Virginia	Wisconsin
Washington	Wyoming
West Virginia	
26 States	**25 States**

---

[41] Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

[42] Maryland reported provisional ballots that were counted per county, but not number cast.

[43] Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

Data Differences

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.
Please explain the 0/8022 discrepancy under North Carolina "differences" since you indicate the info was not updated from the database.

State	EDS Numbers Cast/Counted	Our Numbers Cast/Counted	Differences	Updated Info from State?
Alabama	6,478/1,865	6560/1836	82/29	No
Alaska	23,285/22,498	23,275/22,498	10/0	No

When did Eagleton get the information for Missouri. Missouri enacted provisional voting in 2002 and it is likely it was in place for the November 2002 election Pre-HAVA.

Eagleton's PV, LPV, EDR notations are confusing. In the instance of Colorado, the LPV designation (in the PV Status row - HAVA column is incorrect.) In Colorado the voter did not have to vote in the precinct.

EXECUTIVE SUMMARY: NATIONAL SURVEY OF LOCAL ELECTION OFFICIALS' EXPERIENCES WITH PROVISIONAL VOTING

To assess and improve the experiences of local elections officials with provisional voting, the Eagleton Center for Public Interest Polling (ECPIP) at the Eagleton Institute of Politics, Rutgers University conducted a national survey of local elections officials. Telephone interviews were conducted between July 21 and August 4, 2005 with a random sample of 400 local election officials. The sample of local election officials were drawn from counties, or equivalent election jurisdictions such as boroughs, municipalities, parishes, towns or cities. The sample of local election officials was then stratified according to when the state had enacted provisional voting systems -- before or after the passage of the Help America Vote Act of 2002 (HAVA) -- as well as the population size of the voting jurisdiction. Those states that offered voters lost in the system the opportunity to cast a ballot pre-HAVA (2002) were considered "old provisional voting states"; and the states where voters not found on the registration list were not offered any recourse and thus, were not permitted to vote in the 2000 Election were labeled "new provisional voting states."

Further adjustments were made to take into consideration the population size of the voting jurisdiction. The "Old" and "New" states were separated into three categories – small, medium, and large – based on the population size of the voting jurisdiction. A voting jurisdiction with a population of 49,999 or less was considered small, 50,000 to 199,999 regarded as medium, and large consisted of 200,000 or more. This sampling frame yielded 400 cases (196 Old; 204 New)[1] consisting of six sample types: New Small (n=83), Old Small (n=71), New Medium (n=83), Old Medium (n=75), New Large (n=38), and Old Large (n=50).

The survey addressed the following topics: experience with the administration of provisional voting system, state guidance for implementing provisional voting, implementing provisional voting, general perceptions, and recommendations for the future. This Executive Summary provides an overview of key findings from the study.

Experiences with Provisional Voting System in Jurisdiction

Survey participants were asked a number of questions regarding their general experience with provisional voting.

- A majority of the "New" states' election officials (62%), and nearly twice as many as the "Old" (33%), indicated that "100 or less ballots" were cast in the election jurisdiction. A significantly larger percentage (14%) of the "Old" (28%) estimated that "between 100 to just under 500" provisional ballots were cast.
- Most (61%) of the "Old" states reported that "A lot" of these provisional ballots were counted compared to only 19 percent for the "New" states. A

---

[1] At the studies conclusion it was determined that Rhode Island's affidavit voting system did not meet the criteria for placement in the Old State status and thus, the state was reassigned as "New." The reassignment of local election respondents representing Rhode Island resulted in a 49 (Old)/51 (New) split, rather than half of the sample being drawn from "Old" and half from "New." Unlike the other states (AL, KY, MI, MS, TX) with affidavit voting systems in place pre-HAVA, Rhode Island did not offer voters any real recourse to cast a ballot if the individual's name was not listed on the registration rolls. Instead, the state allowed voter's claiming eligibility, but not found on the registration rolls, to sign an affidavit enabling the election official to call the central registrar to verify the voter's eligibility. Only if the voter's name was found on the list was he or she permitted to cast a ballot.

much larger percentage of the "New" subgroup felt that only "Some" (32%) or "Very Few" (32%) provisional ballots were actually counted.

- A sizeable majority of both subgroups (Old=64%, New=77%) attributed the <u>most</u> need for the use of provisional ballots in their jurisdiction to "individual's name not listed on the voter registration rolls."
- More than 7-in-10 in both subgroups agreed that "individuals who were not registered at the time of casting their provisional ballots" constituted the most important reason that these ballots were not validated and counted in their jurisdiction.

<u>State Guidance for Implementing Provisional Voting</u>

- A sizeable majority of both subgroups (Old=85%, New=83%) received provisional voting instruction from their state governments.
- Appreciable differences in the type of instruction received involved "whether the provisional ballot could be used as an application to update the voter's registration" (Old=74%; New 59%); "guidelines for determining which provisional ballots were to be counted" (Old=87%; New=94%); and "how to design the structure of the provisional ballot (Old=71%; New 57%)."
- Overall, 98 percent of both subgroups found the voting instructions they received from the state government useful.

<u>Implementing Provisional Voting in Jurisdiction</u>

- When asked to describe the instructions or information provided to poll workers to help determine voters correct precinct or polling place, both subgroups employed various strategies including access to a list of eligible voters (Old=81%; New 80%), dedicated telephone line for poll workers (Old=93%; New=91%), and additional staff such as "greeters" (Old=46%; New=42%). Very few election officials in both (Old=11%, New=12%) reported the existence of a statewide voter registration database.

- A much larger percentage (70%) of "Old" states' election officials compared with 50 percent of the "New" used maps to help identify correct polling locations.
- 14 percent of all the election officials said that they did not provide written procedures or training to poll workers for the counting of provisional ballots. However, overall both subgroups felt that the administration of provisional voting in their jurisdiction was a success on all accounts.
- A variety of measures were employed to enable voters to determine if their provisional ballots were counted. In both subgroups the most widely used method was "the main telephone for the local or county election office" with 66 percent of the New compared to 75% of the Old indicating this method was provided.
- The measure least cited for voters to determine if their provisional ballots were counted was "email notification." Only 10% reported that the election jurisdiction offered voters this opportunity.

General Perceptions

- Close to half (40%) of the election officials felt more training for poll workers was needed.

- 39 percent of the "New" states' election officials agreed that more information should have been provided to voters about the jurisdiction where provisional ballots must be cast in order to be counted compared to 28% of the "Old".
- 13 percent more of the election officials from "New" states (39%) reported that more time was needed to implement provisional voting procedures.
- Only about half (56%) of the "New" states' election officials reported the provisional voting system was easy to implement while 73 percent from the "Old" found this to be the case.
- Seventeen percent more of the "Old" states' election officials (75%) agreed that the provisional voting system in their polling jurisdiction enabled more people to vote.

Recommendations for the Future

Survey participants were asked a number of questions regarding their general level of agreement with several statements regarding provisional voting.

- More election officials from "Old" states agreed that provisional voting sped up and improved polling place operations on Election Day (Old=53%; New=41%); and that the process helped election officials maintain more accurate registration databases (Old=63%; New=38%).
- 60 percent of the "New" states' election officials agreed that provisional voting created unnecessary problems for election officials and poll workers, compared with only 42% of the "Old."

- A majority of both subgroups agreed that "there is a need to offer voters the opportunity to cast provisional ballots." However, a 19 percent differential exists between the two subgroups (Old=81%; New=62%).
- A slightly larger percentage (9%) of the "Old" states' election officials (93%) felt that the provisional voting system in their polling jurisdiction was a success.
- Forty percent of the local election officials felt that the most effective way to increase the number of provisional ballots validated and counted in an election would be to administer provisional voting in a central location rather than at individual polling places.
- When asked what would be <u>most effective</u> in reducing the number of provisional ballots cast in an election, most (28%) of the local election officials chose providing a state sponsored website for individuals to check registration status online before going to the polling place. A slightly smaller number (26%) favored having a statewide voter registration database available at polling places.

CHAPTER 1

INTRODUCTION

A. Project Background and Objectives

To assess and improve the experiences of local election officials with provisional voting, the Eagleton Center for Public Interest Polling (ECPIP) at the Eagleton Institute of Politics, Rutgers University conducted a national survey of local elections officials.

The study was designed to examine the experiences, attitudes, and general impressions of local election officials with implementing provisional voting. Specifically, the study sought to ascertain the type of information, guidance, and training local election officials received from the State government in administering provisional voting, and how the information, guidance, and training was then distributed to poll workers and voters.

B. Summary of the Research Methodology

The survey involved telephone interviews conducted between July 21 and August 4, 2005 with a random sample of 400 local election officials. The sampling error for this total sample of 400 is ±4.9 percent at a 95 percent confidence level. Of these local election officials, 196 were selected to represent "old provisional voting states" and 204 for "new provisional voting states."[2] These subgroups have a sampling error of ±6.9 percent for the "New" and ±7.0 for the "Old" at a 95 percent confidence level.

Sampling error is the probability difference in results between interviewing everyone in a population versus interviewing a scientific sample taken from that population. Sampling error does not take into account any other possible sources of error inherent in any study of

---

[2] See footnote 1.

public opinion. A more comprehensive description of the research methodology is included in Appendix A.

C. Profile of Survey Participants

Table 1.1 provides a profile of survey participants by status including the entire sample of counties or equivalent and the subgroups within the "Old" or "New" status. The subgroup definitions of "Old" and "New" were provided by a report released by Election Line titled "The Provisional Voting Challenge" (December, 2001). The "New" states include: Connecticut, Delaware, Georgia, Hawaii, Illinois, Indiana, Louisiana, Massachusetts, Missouri, Montana, Nevada, Oklahoma, Pennsylvania, South Dakota, Tennessee, Utah, and Vermont; and the "Old" states include: Alabama, Alaska, Arizona, Arkansas, California, Colorado, Washington D.C., Florida, Iowa, Kansas, Kentucky, Maryland, Michigan, Mississippi, Nebraska, New Jersey, New Mexico, New York, North Carolina, Ohio, Oregon, Rhode Island, South Carolina, Texas, Virginia, Washington, and West Virginia.

D. Organization of the Report

The next chapter of this report examines the substantive survey results illustrated by statistical tables. The exact question wording precedes the table summarizing the percentages of the actual responses provided by the local election officials. In most cases the percentages on the tables read from top to bottom with the total equal to a 100 percent. In instances where there is statistical rounding, the total may be more or less than 100 percent.

The tables will also report the sample size "(n)" for each group referenced in the table. The "(n)" is the actual number of people in the group upon which the percentages are based. Readers should be aware of the "(n)" when referencing the percentages on a table. Smaller subgroups will have a higher margin of sampling error. Therefore, in some cases what may appear to be a large difference between groups is a result of the larger sampling error and may not be statistically significant.

Following the statistical tables there are four appendices. Appendix A provides additional information about the survey methodology so that interested readers may have a better understanding of the process used to obtain the data. Appendix B consists of the pre-notification letter explaining the purpose of the study and inviting local election officials to participate in the study if called. The text of the questions asked in the survey and used in the analysis of the data is contained in Appendix C. The verbatim responses (as recorded by the interviewers) to open-end questions included in the survey are found in Appendix D.

TABLE 2.1
EXPERIENCE WITH PROVISIONAL VOTING SYSTEM IN JURISDICTION [Q.3-6]

3. What is your best estimate of the total number of provisional ballots cast in the 2004 election in your jurisdiction, whether they were ultimately counted or not? Your best estimate is fine.

	Old versus New		(n)
	Old	New	
1 to less than 100	33%	62%	(191)
Between 100 to just under 500	28	14	(82)
Between 500 to just under 1000	12	5	(35)
1000 or more	19	9	(57)
(VOL) None/Zero	7	9	(31)
(VOL) Don't Know	1	1	(4)
(VOL) Refused	---	---	(---)
	100	100	(400)

*****statistically significant at the .000 level.**

4. In your opinion, how many of these provisional ballots were counted – a lot, some, very few, or none at all?

	Old versus New		(n)
	Old	New	
A lot	61%	19%	(146)
Some	17	32	(90)
Very few	18	32	(91)
None at all	4	17	(38)
(VOL) Don't Know	1	1	(4)
(VOL) Refused	---	---	---
	101	101	(369)

*****statistically significant at the .000 level.**

5. In your opinion, which one of the following, if any, created the most need for the use of provisional ballots in your jurisdiction on Election Day, 2004?

	Old versus New		(n)
	Old	New	
Individual's name not listed on the voter registration rolls	64%	77%	(260)
FIRST TIME voters couldn't provide the proper identification	5	7	(21)
Voter's eligibility challenged	12	5	(30)
Registered voters could not provide the proper identification	4	7	(19)
(VOL) Other (SPECIFY)	14	4	(32)
(VOL) Don't Know	2	2	(6)
(VOL) Refused	1	---	(1)
	102	102	(369)

*****statistically significant at the .01 level.**

6. In your opinion, which one of the following, if any, was the most important reason that provisional ballots cast in your jurisdiction were not validated and ultimately not counted in the 2004 Election?

	Old versus New		(n)
	Old	New	
Individual failed to provide the identification required to validate the provisional ballot	2%	3%	(10)
Signature on the provisional ballot did not match the signature on the registration form	1	---	(1)
Provisional ballot cast in the incorrect voting precinct	16	10	(48)
Individual was not registered	75	76	(280)
(VOL) All provisional ballots were validated and counted in 2004 Election	2	4	(12)
(VOL) Other (SPECIFY)	3	4	(13)
(VOL) Don't Know	1	2	(5)
(VOL) Refused	---	---	(---)
	100	99	(369)

TABLE 2.2
PRE-ELECTION EXPERIENCE:
STATE INSTRUCTION AND INFORMATION [Q.7-13]

7. Were provisional voting instructions provided by the state government for the 2004 Election?

POST-ELECTION EXPERIENCE:
COUNTING BALLOTS [Q.22-25]

22. After the 2004 Election, which of the following, if any, did your jurisdiction offer voters to determine if their provisional ballot was counted?

(ACCEPT MULTIPLE RESPONSES; READ AND ROTATE LIST)

	Old versus New		(n=400)
	Old	New	
Notification by mail	50%	45%	(188)
Dedicated Toll-Free Telephone Hotline	42	36	(156)
Email notification	13	9	(43)
Website confirmation	21	24	(90)
Main telephone number for the local or county election office	75	66	(281)
All of the above (VOL)	**	**	**
None of the above (VOL)	3	6	(17)
Other (VOL)	1	1	(2)
Don't Know (VOL)	1	1	(3)
Refused (VOL)	---	---	(---)

**included in the totals above.

23. How confident are you that poll workers properly distributed provisional ballots to voters?

[Q23-25 - ASKED ONLY AMONG THOSE WHO GAVE BEST ESTIMATE OF TOTAL NUMBER OF PROVISIONAL BALLOTS CAST IN THE 2004 ELECTION (Q3=1-4)]

	Old versus New		(n)
	Old	New	
Not confident	4%	6%	(18)
Confident	93	93	(344)
(VOL) Don't Know	3	1	(7)
(VOL) Refused	---	---	(---)
	100	100	(369)

24. How confident are you that election officials accurately assessed and validated provisional ballots?

	Old versus New		(n)
	Old	New	
Not confident	2%	2%	(7)
Confident	95	95	(350)
(VOL) Don't Know	3	3	(10)
(VOL) Refused	1	1	(2)
	101	101	(369)

25. How confident are you that the validated provisional ballots were accurately included in the final vote count?

	Old versus New		(n)
	Old	New	
Not confident	1%	---	(1)
Confident	99	98	(363)
(VOL) Don't Know	1	2	(5)
(VOL) Refused	---	---	(---)
	101	100	(369)

TABLE 2.5
GENERAL PERCEPTIONS [Q.26-35]

26. Now I am going to read you a list of items, please tell me which one you believe presented the <u>biggest</u> challenge in implementing provisional voting in your jurisdiction for the 2004 Election. (POSSIBLY BIGGEST PROBLEM)

(READ AND ROTATE 1-4)

	Old versus New		(n)
	Old	New	
Training of poll workers	38%	42%	(160)
Length of time provided before the election to implement the provisional voting process	13	14	(53)
Clarity of instruction received from your State Government	5	8	(27)
Having enough staff at the polling place	9	14	(46)
(VOL) Other (SPECIFY)	5	3	(15)
(VOL) All of the above	2	3	(9)
(VOL) None of the above	26	16	(83)
(VOL) Don't Know	3	1	(7)
(VOL) Refused	---	---	(---)
	101	101	(400)

Please tell me how much you agree or disagree with the following statements about Provisional voting in your jurisdiction for the 2004 Election. [IF AGREE OR DISAGREE, ASK:] Would you say you agree/disagree strongly or agree/disagree somewhat?

(READ AND ROTATE Q.27 –Q.35)

27. More training was needed on how to administer the provisional voting process.

	Old versus New		(n)
	Old	New	
Disagree	54%	46%	(200)
Neither Agree nor Disagree	6	5	(22)
Agree	38	49	(174)
(VOL) Don't Know	2	---	(4)
(VOL) Refused	---	---	(---)
	100	100	(400)

28. More funding was needed to educate voters about their rights to cast a provisional ballot.

TABLE 2.6

RECOMMENDATIONS
FOR THE FUTURE [Q.36-46]

36. Now I am going to read you a list of items. Please tell me which one you believe is the <u>most</u> important change needed in the implementation of provisional voting.

(RANDOMLY ROTATE 1-4)

	Old versus New		(n)
	Old	New	
More funding for poll worker training	24%	34%	(116)
More time for poll worker training	18	18	(72)
Clearer instruction from the Federal Government	19	18	(75)
Clearer instruction from the State Government	14	9	(47)
(VOL) Other (SPECIFY)	6	3	(19)
(VOL) All of the above	1	3	(7)
(VOL) None of the above	15	12	(55)
(VOL) No changes needed	2	1	(6)
(VOL) Don't Know	---	2	(3)
(VOL) Refused	---	---	(---)
	99	100	(400)

In general, please tell me how much you agree or disagree with the following statements about provisional voting. [IF AGREE OR DISAGREE, ASK:] Would you say you agree/disagree strongly or agree/disagree somewhat?

(READ AND ROTATE Q.37–Q.44)

37. A statewide voter registration database, accessible to poll workers on Election Day, would decrease the need for voters to cast provisional ballots.

	Old versus New		(n)
	Old	New	
Disagree	43%	35%	(155)
Neither Agree nor Disagree	7	6	(26)
Agree	49	56	(210)
(VOL) Don't Know	2	3	(9)
(VOL) Refused	---	---	(---)
	101	100	(400)

38. A state-sponsored website designed for individuals to check registration status online, before going to the polling place on Election Day, would decrease the need for voters to cast provisional ballots.

	Old versus New		(n)
	Old	New	
Disagree	24%	23%	(93)
Neither Agree nor Disagree	6	5	(22)
Agree	68	70	(277)
(VOL) Don't Know	2	2	(7)
(VOL) Refused	1	---	(1)
	101	100	(400)

In general, please tell me how much you agree or disagree with the following statements about provisional voting. [IF AGREE OR DISAGREE, ASK:] Would you say you agree/disagree strongly or agree/disagree somewhat? (cont'd.)

39. Provisional voting speeds up and improves polling place operation on Election Day by resolving disputes between voters and poll workers.

	Old versus New		(n)
	Old	New	
Disagree	40%	55%	(190)
Neither Agree nor Disagree	6	3	(18)
Agree	53	41	(188)
(VOL) Don't Know	1	1	(3)
(VOL) Refused	1	---	(1)
	101	100	(400)

40. Provisional voting helps election officials maintain more accurate registration databases.

	Old versus New		(n)
	Old	New	
Disagree	31%	49%	(161)
Neither Agree nor Disagree	4	11	(31)
Agree	63	38	(201)
(VOL) Don't Know	2	2	(7)
(VOL) Refused	---	---	(---)
	100	100	(400)

*****statistically significant at the .000 level.**

41. Provisional voting creates unnecessary problems for election officials and poll workers.

	Old versus New		(n)
	Old	New	
Disagree	52%	34%	(171)
Neither Agree nor Disagree	5	5	(20)
Agree	42	60	(206)
(VOL) Don't Know	1	1	(3)
(VOL) Refused	---	---	(---)
	100	100	(400)

*****statistically significant at the .01 level.**

In general, please tell me how much you agree or disagree with the following statements about provisional voting. [IF AGREE OR DISAGREE, ASK:] Would you say you agree/disagree strongly or agree/disagree somewhat? (cont'd.)

42. Provisional voting can be avoided by simplifying registration procedures.

	Old versus New		(n)
	Old	New	
Disagree	55%	43%	(195)
Neither Agree nor Disagree	6	5	(23)
Agree	38	50	(176)
(VOL) Don't Know	2	2	(6)
(VOL) Refused	---	---	(---)
	101	100	(400)

43. There is a need to offer voters the opportunity to cast provisional ballots.

	Old versus New		(n)
	Old	New	
Disagree	17%	31%	(98)
Neither Agree nor Disagree	2	6	(15)
Agree	81	62	(285)
(VOL) Don't Know	---	1	(2)
(VOL) Refused	---	---	(---)
	100	100	(400)

*****statistically significant at the .001 level.**

44. The provisional voting system in my polling jurisdiction was a <u>success</u>.

	Old versus New		(n)
	Old	New	
Disagree	5%	8%	(27)
Neither Agree nor Disagree	2	7	(18)
Agree	93	84	(353)
(VOL) Don't Know	1	1	(2)
(VOL) Refused	---	---	(---)
	101	100	(400)

*****statistically significant at the .05 level.**

45. Which one of the following do you think would be the <u>most effective</u> in increasing the number of provisional ballots validated and ultimately <u>counted</u> in an election?

(RANDOMLY ROTATE 1-3)

	Old versus New		(n)
	Old	New	
In-precinct provisional voting only	21%	18%	(79)
Provisional voting from a central location rather than in individual polling places	37	44	(161)
In-jurisdiction provisional voting only	21	18	(77)
(VOL) Other (SPECIFY)	1	3	(7)
(VOL) All of the above	1	1	(2)
(VOL) None of the above	15	8	(47)
(VOL) Don't Know	4	9	(27)
(VOL) Refused	---	---	(---)
	100	101	(400)

46. Which one of the following do you think would be the <u>most effective</u> in reducing the number of provisional ballots <u>cast</u> in an election?

(RANDOMLY ROTATE 1-5)

	Old versus New		(n)
	Old	New	
Having a statewide voter registration database available at polling places	22%	30%	(105)
Providing additional staff such as "greeters" at polling places to direct voters to the correct polling location	6	6	(24)
Providing a state sponsored website to enable individuals to check registration status online before going to the polling place	30	27	(113)
Providing poll workers access to an updated printed list of eligible voters in the jurisdiction	5	5	(20)
Providing a dedicated telephone line for poll workers to speak immediately to an election official with access to the list of eligible voters in the jurisdiction	14	18	(63)
(VOL) Other (SPECIFY)	---	1	(2)
(VOL) All of the above	4	3	(14)
(VOL) None of the above	16	9	(51)
(VOL) Don't Know	2	2	(7)
(VOL) Refused	---	1	(1)
	99	102	(400)

APPENDIX A:

SURVEY METHODOLOGY

I. INTRODUCTION

This survey represents a joint venture of two programs – the Eagleton Institute of Politics, Rutgers University and the Eagleton Institute's Center for Public Interest Polling (ECPIP). This survey was designed to assess and improve the experiences of local elections officials with provisional voting.

II. QUESTIONNAIRE DEVELOPMENT

The questionnaire was developed for telephone administration by ECPIP researchers in consultation with Eagleton staff. The draft questionnaire was pretested with a random group of local election officials that yielded five completes. Only minor changes were made from that version and no further pretest was needed.

The questionnaire interview length averaged 18.4 minutes. An annotated version of the final survey instrument is included in this report (see Appendix C).

The questionnaire was programmed into a CATI (Computer Assisted Telephone Interviews) software system know as Quancept. The system facilitates the loops, rotations, randomization, and complex skip patterns found in this survey instrument. The programming was extensively checked and all logical errors were corrected.

III. SAMPLE DESIGN

A random national sample was compiled based on information acquired from the State Board of Elections in each of the 50 States and the District of Columbia. In all, 3,820 local election officials were eligible to participate in the study. To enhance compliance rates, pre-notification letters were sent to 2,471 of the local election officials. These letters explained the study's objectives and asked for the officials' participation in the study if contacted by an interviewer. Overall, 1,018 were contacted by telephone to participate in the study and among these, a total of 400 local election officials agreed to participate in the study.

The "Old" and "New" states were separated into three categories – small, medium, and large – based on the population size of the voting jurisdiction. A voting jurisdiction with a population of 49,999 or less was considered small, 50,000 to 199,999 regarded as medium, and large consisted of 200,000 or more. The sample was designed to make sure that each of the six sample types: New Small (n=83), Old Small (n=71), New Medium (n=83), Old Medium (n=75), New Large (n=38), and Old Large (n=50) were represented in the study. Overall, the survey yielded a response rate of 30 percent for the "Old" state sample and 53 percent for the "New" state sample.

APPENDIX B:

PRE-NOTIFICATION LETTER

DATE

NAME
TITLE
ADDRESS
CITY STATE ZIP

Dear NAME,

Rutgers, The State University of New Jersey, is conducting a national survey of elections officials' experiences with provisional voting in the 2004 national election. Through this survey we will learn the perspective of those who administer elections. It will improve our understanding of the process as we complete a broad research project on provisional voting in the context of effective election administration, voter access, and ballot security. The findings of the project will be the basis for recommendations to the U. S. Election Assistance Commission (EAC) to consider in the development of its guidance to the states in 2006.

The EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan, federal agency that provides federal funds to states to upgrade voting systems and improve election administration. The EAC publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration. The EAC is funding the research project.

Participants in this study will be selected randomly and asked to share their experiences administering the provisional voting process in the 2004 election. The study will be conducted July 18th through August 5th. During that period a survey researcher <u>may</u> call you if you are, in fact, chosen at random from a national list of election officials. The researcher will ask you questions about your experience with provisional voting, your evaluation of the process, and your recommendations to improve it. The survey will take approximately 10-15 minutes. All of your answers will be completely confidential, and no statement or comment you make will be ascribed to you.

At the conclusion of the research project, we will present a report to the EAC including analysis of provisional voting procedures as well as recommendations for future practices and procedures. The guidance document based on our research will be published by the EAC in the Federal Register for public review and comment, and the EAC will hold a hearing on the guidance document this fall before adopting it.

Your participation in the survey will assure that we understand the views of election officials who have direct experience with provisional voting. We hope you will participate if called. Thank you for your consideration and interest.

Sincerely,

[scanned signature]

Ruth B. Mandel
Director
Board of Governors Professor of Politics

APPENDIX C:

ANNOTATED QUESTIONNAIRE

PROVISIONAL VOTING SURVEY

Sample: Local Elections Officials
National sample: 400 telephone interviews

Draft Version: July 19, 2005

Initial Screener

Hello, my name is ________________ and I'm calling on behalf of the Eagleton Institute of Politics at Rutgers University. Rutgers University is conducting a study on provisional voting based on experiences from the 2004 election. May I please speak to [INSERT NAME FROM SAMPLE]?

[IF UNSURE WHO THIS INDIVIDUAL IS – ASK:]

May I please speak to the individual who was responsible for overseeing voting procedures for the 2004 election at the county, borough, municipality, or parish level such as the Registrar of Elections, County Clerk, Commissioner of Elections, Director of Elections, Administrator of Elections, or Clerk of Court?

[SKIP TO "CONSENT OF INDIVIDUAL DIFFERENT FROM SAMPLE CONTACT"]

Consent

Hello, my name is ________________ and I'm calling on behalf of the Eagleton Institute of Politics at Rutgers University. Rutgers University is conducting a study on provisional voting based on experiences from the 2004 election. We recently sent you a letter requesting your participation in the confidential survey we are conducting with elections officials. Your participation in the survey will assure that we understand the views of election officials who have direct experience with provisional voting. We would very much like to include your opinions and would really appreciate it if you could assist us by providing as much information as you can to the best of your knowledge. You were randomly selected for the survey from a nationally representative list of election officials. We are not selling anything, and not asking for money.

The information you will be sharing today will be the basis for recommendations to the U. S. Election Assistance Commission (EAC) to consider in the development of its guidance to the states in 2006. This information will be maintained at a secure site and your name will not be identified in the report. All your answers are completely confidential.

The survey should take no more than 10 or 15 minutes to complete.

Consent of Individual Different from Sample Contact

Hello, my name is ________________ and I'm calling on behalf of the Eagleton Institute of Politics at Rutgers University. Rutgers University is conducting a study on provisional voting based on experiences from the 2004 election. We recently sent a letter to your office requesting participation in a confidential survey we are conducting with elections officials. Your participation in the survey will assure that we understand the views of election officials who have direct experience with provisional voting. We would very much like to include your opinions and would really appreciate it if you could assist us by providing as much information as you can to the best of your knowledge. You were randomly selected for the survey from a nationally representative list of election officials. We are not selling anything, and not asking for money.

The information you will be sharing today will be the basis for recommendations to the U. S. Election Assistance Commission (EAC) to consider in the development of its guidance to the states in 2006. This information will be maintained at a secure site and your name will not be identified in the report. All your answers are completely confidential.

The survey should take no more than 10 or 15 minutes to complete.

IF NECESSARY: If you should have any questions about the study, you may contact the Research Project Coordinator, April Rapp, at the Eagleton Center for Public Interest Polling at 732-932-9384 ext. 261.

IF RESPONDENT DECLINES TO PARTICIPATE, ADDITIONAL PRODDING NEEDED:

--Your participation is very important because only 400 election officials have been randomly selected for this survey and your views will be used to provide provisional voting policy recommendations. We would be happy to fax you a letter outlining the study objectives. [If yes, can I please have your fax number?] (RECORD FAX NUMBER)

Screener

1. On Election Day, November 2nd, 2004 was it your responsibility to supervise the election at the county, borough, municipality, or parish level?

(n=400)

100%	YES	GO TO Q2
--	NO	GO TO Q1a
--	DON'T KNOW	TERMINATE
--	REFUSED	TERMINATE

1a. May I please have the name and phone number of the individual who was responsible for supervising the 2004 election at the county, borough, municipality, or parish level?

[RECORD NAME/PHONE NUMBER OF REFERRAL] (THANK AND TERMINATE)

Jurisdiction

2. What was your job title on Election Day, November 2nd, 2004?

(DO NOT READ – VOLUNTEER RESPONSE)

(n=400)

10%	Administrator of Elections
3	Chairman of Elections
2	Clerk of Court
7	Commissioner of Elections
17	County Clerk
16	Director of Elections
8	Registrar of Elections
3	Secretary of Elections
7	Supervisor of Elections
4	Town Clerk

--	Refused

General: Provisional Voting

Now, I would like to ask you some questions about provisional voting in your jurisdiction.

3. What is your best estimate of the total number of provisional ballots cast in the 2004 election in your jurisdiction, whether they were ultimately counted or not? Your best estimate is fine.

(n=400)

48%	Less than 100	
21	Between 100 to just under 500	
9	Between 500 to just under 1000	
14	1000 or more	
8	None/Zero	**(GO TO Q7)**
1	Don't Know	
--	Refused	

(ASK ONLY IF Q3=1-4)

4. In your opinion, how many of these provisional ballots were counted – a lot, some, very few, or none at all?

(n=400)

40%	A lot
24	Some
25	Very few
10	None at all
1	Don't Know
--	Refused

5. In your opinion, which one of the following, if any, created the <u>most</u> need for the use of provisional ballots in your jurisdiction on Election Day, 2004?

(READ AND ROTATE 1-4)

(n=369)

71%	Individual's name not listed on the voter registration rolls
6	<u>First time</u> voters couldn't provide the proper identification
8	Voter's eligibility challenged
5	Registered voters could not provide the proper identification
9	Other (specify)
2	Don't Know
--	Refused

6. In your opinion, which one of the following, if any, was the most important reason that provisional ballots cast in your jurisdiction were not validated and ultimately not counted in the 2004 Election?

(READ AND ROTATE 1-4)

(n=369)

3%	Individual failed to provide the identification required to validate the provisional ballot
--	Signature on the provisional ballot did not match the signature on the registration form
13	Provisional ballot cast in the incorrect voting precinct
76	Individual was not registered
3	All provisional ballots were validated and counted in 2004 election
4	Other (specify)
1	Don't Know
--	Refused

Pre-Election Experience: Instructions and Information Received (Content and Quality)

7. Were provisional voting instructions provided by the state government for the 2004 Election?

(n=400)

84%	Yes	**(GO TO Q8)**
16	No	**(GO TO Q14)**
1	Don't Know	**(GO TO Q14)**
--	Refused	

STATE GOVERNMENT INSTRUCTIONS AND INFORMATION

(ASK ONLY IF Q7=1)

8. Which of the following provisional voting instructions, if any, did you receive from the state government?

(ACCEPT MULTIPLE RESPONSES; ROTATE LIST)

(n=335)

	Yes	No
How to administer the provisional voting system	90%	10%
Who is eligible to vote using a provisional ballot	93	8
How individuals vote using a provisional ballot	87	13
The jurisdiction where individuals can vote by provisional ballot	79	21
Whether the provisional ballot could be used as an application to update the voter's registration	66	34
How to train poll workers to process provisional ballots	88	12
How to provide voters with the opportunity to verify if their provisional ballot was counted	91	9
Guidelines for determining which provisional ballots are to be counted	91	9
Strategies to reduce the need for voters to use provisional ballots	54	46
How to design the structure of the provisional ballot	64	37
Other (specify)	--	--
All of the above	7	93
None of the above	--	--
Don't know	2	99
Refused	--	--

(ASK ONLY IF Q8=4)

9. You said that you received provisional voting instructions from the state government. Please tell me how useful the instructions were on the jurisdiction where individuals can vote by provisional ballot -- very useful, somewhat useful, not very useful, or not useful at all?

(n=265)

73%	Very useful
23	Somewhat useful
2	Not very useful
--	Not useful at all
2	Don't know
--	Refused

(ASK ONLY IF Q8=7)

10. You said that you received provisional voting instructions from the state government. Please tell me how useful the instructions were on how to provide voters with the opportunity to verify if their provisional ballot was counted -- very useful, somewhat useful, not very useful, or not useful at all?

(n=304)

77%	Very useful
20	Somewhat useful
1	Not very useful
--	Not useful at all
2	Don't know
--	Refused

(ASK ONLY IF Q8=8)

11. You said that you received provisional voting instructions from the state government. Please tell me how useful the instructions were for establishing guidelines for determining which provisional ballots are to be counted -- very useful, somewhat useful, not very useful, or not useful at all?

(n=304)

80%	Very useful
16	Somewhat useful
2	Not very useful
1	Not useful at all
1	Don't know
--	Refused

(ASK ONLY IF Q8=9)

12. You said that you received provisional voting instructions from the state government. Please tell me how useful the instructions were for establishing strategies to reduce the need for voters to use provisional ballots -- very useful, somewhat useful, not very useful, or not useful at all?

(n=182)

60%	Very useful
31	Somewhat useful
5	Not very useful
2	Not useful at all
2	Don't know
--	Refused

(ASK ONLY IF Q8=1-10)

13. Thinking generally, overall how useful were the provisional voting instructions you received from the state government -- very useful, somewhat useful, not very useful, or not useful at all?

(n=330)

76%	Very useful
22	Somewhat useful
1	Not very useful
--	Not useful at all
1	Don't know
--	Refused

Implementation of Instructions and Distribution of Information to Election Employees

Now I'm going to ask you some questions about poll worker training.

14. Please tell me which of the following, if any, was provided in your jurisdiction for the 2004 Election to help poll workers determine voters' assigned precinct and polling place?

(ACCEPT MULTIPLE RESPONSES; READ EACH ITEM; AND ROTATE LIST)

(n=400)

	Yes	No
Access to a list of eligible voters in the jurisdiction	81%	20%
Telephone line for poll workers to speak immediately to an election official with access to the list of eligible voters in the jurisdiction	91	9
Maps of adjacent precincts for poll workers to help voters locate their resident and corresponding polling place	60	40
Additional staff such as "greeters" at polling places to direct voters to the correct polling location	44	56
Statewide voter registration database available at polling places	12	89
Other (specify)	--	--
None of the above	2	99
Don't know	--	--
Refused	--	--

When implementing provisional voting in your jurisdiction, please tell me how successfully you think the following activities were performed:

(READ AND ROTATE Q15-Q21)

[PROBE: Would you say that activity was performed very successfully, somewhat successfully, not very successfully, or not successfully at all?

15. Providing <u>training</u> to poll workers on how to <u>administer</u> provisional ballots.

(n=400)

69%	Very successfully
27	Somewhat successfully
1	Not very successfully
1	Not successfully at all
3	Didn't perform this activity
1	Don't Know
--	Refused

16. Providing <u>written</u> procedures to poll workers on how to <u>administer</u> provisional ballots.

(n=400)

71%	Very successfully
22	Somewhat successfully
1	Not very successfully
1	Not successfully at all
4	Didn't perform this activity
1	Don't Know
--	Refused

17. Providing your local election officials with <u>written</u> procedures on the <u>casting</u> of provisional ballots.

(n=400)

68%	Very successfully
27	Somewhat successfully
1	Not very successfully
--	Not successfully at all
3	Didn't perform this activity
1	Don't Know
--	Refused

18. Providing your local election officials with <u>written</u> procedures on the <u>counting</u> of provisional ballots.

(n=400)

65%	Very successfully
18	Somewhat successfully
1	Not very successfully
--	Not successfully at all
14	Didn't perform this activity
1	Don't Know
1	Refused

19. Providing your local election officials <u>training</u> for the <u>counting</u> of provisional ballots.

(n=400)

66%	Very successfully
17	Somewhat successfully
1	Not very successfully
1	Not successfully at all
14	Didn't perform this activity
1	Don't Know
--	Refused

20. Making <u>information</u> available to help poll workers determine voters' assigned precinct or polling place.

(n=400)

70%	Very successfully
22	Somewhat successfully
2	Not very successfully
1	Not successfully at all
5	Didn't perform this activity
1	Don't Know
--	Refused

21. Providing training to help poll workers determine voters' assigned precinct or polling place.

(n=400)

64%	Very successfully
26	Somewhat successfully
2	Not very successfully
--	Not successfully at all
7	Didn't perform this activity
2	Don't Know
--	Refused

Post-Election Experience: Counting Ballots

22. After the 2004 Election, which of the following, if any, did your jurisdiction offer voters to determine if their provisional ballot was counted?

(ACCEPT MULTIPLE RESPONSES;READ AND ROTATE LIST)

(n=400)

	Yes	No
Notification by mail	47%	54%
Dedicated Toll-Free Telephone Hotline	39	62
Email notification	10	90
Website confirmation	22	78
Main telephone number for the local or county election office	70	30
All of the above	--	--
None of the above	4	96
Other (specify)	1	99
Don't Know	--	--
Refused	--	--

023424

(ASK Q23-Q25 ONLY IF Q3=1-4)

23. How confident are you that poll workers properly distributed provisional ballots to voters?

(n=369)

63%	Very confident
30	Somewhat confident
4	Not very confident
1	Not at all confident
2	Don't Know
--	Refused

24. How confident are you that election officials accurately assessed and validated provisional ballots?

(n=369)

75%	Very confident
20	Somewhat confident
2	Not very confident
--	Not at all confident
3	Don't Know
1	Refused

25. How confident are you that the validated provisional ballots were accurately included in the final vote count?

(n=369)

95%	Very confident
3	Somewhat confident
--	Not very confident
--	Not at all confident
1	Don't Know
--	Refused

General Perceptions

26. Now I am going to read you a list of items, please tell me which one you believe presented the biggest challenge in implementing provisional voting in your jurisdiction for the 2004 Election. (POSSIBLY BIGGEST PROBLEM)

(READ AND ROTATE 1-4)

(n=400)

40%	Training of poll workers
13	Length of time provided before the election to implement the provisional voting process
7	Clarity of instruction received from your State Government
12	Having enough staff at the polling place
4	Other (specify)
2	All of the above
21	None of the above
2	Don't Know
--	Refused

Please tell me how much you agree or disagree with the following statements about Provisional voting in your jurisdiction for the 2004 Election.

(READ AND ROTATE Q27 –Q35)

[IF AGREE OR DISAGREE, ASK:] Would you say you agree/disagree strongly or agree/disagree somewhat?

27. More training was needed on how to administer the provisional voting process

(n=400)

18%	Agree strongly
25	Agree somewhat
6	Neither agree nor disagree
22	Disagree somewhat
29	Disagree strongly
1	Don't Know
--	Refused

28. More funding was needed to educate voters about their rights to cast a provisional ballot.

(n=400)

24%	Agree strongly
18	Agree somewhat
11	Neither agree nor disagree
22	Disagree somewhat
24	Disagree strongly
1	Don't Know
--	Refused

29. More information should have been provided to voters about the jurisdiction where provisional ballots must be cast in order to be counted.

(n=400)

16%	Agree strongly
17	Agree somewhat
8	Neither agree nor disagree
22	Disagree somewhat
33	Disagree strongly
3	Don't Know
--	Refused

30. More information was needed for poll workers to determine the voter's assigned precinct and polling place.

(n=400)

8%	Agree strongly
18	Agree somewhat
6	Neither agree nor disagree
26	Disagree somewhat
39	Disagree strongly
3	Don't Know
--	Refused

31. More time was needed to implement provisional voting procedures.

(n=400)

16%	Agree strongly
17	Agree somewhat
6	Neither agree nor disagree
27	Disagree somewhat
33	Disagree strongly
1	Don't Know
--	Refused

32. The provisional voting system was easy to implement.

(n=400)

33%	Agree strongly
32	Agree somewhat
6	Neither agree nor disagree
15	Disagree somewhat
14	Disagree strongly
--	Don't Know
--	Refused

33. The provisional voting system in my polling jurisdiction enabled more people to vote.

(n=400)

40%	Agree strongly
27	Agree somewhat
8	Neither agree nor disagree
9	Disagree somewhat
15	Disagree strongly
1	Don't Know
--	Refused

34. I feel that voters in my jurisdiction were provided adequate information to successfully cast a provisional ballot.

(n=400)

70%	Agree strongly
22	Agree somewhat
3	Neither agree nor disagree
3	Disagree somewhat
2	Disagree strongly
1	Don't Know
--	Refused

35. Adequate support was provided to me to assist in the implementation of provisional voting.

(n=400)

57%	Agree strongly
29	Agree somewhat
5	Neither agree nor disagree
6	Disagree somewhat
3	Disagree strongly
--	Don't Know
--	Refused

Recommendations for the Future

36. Now I am going to read you a list of items. Please tell me which one you believe is the most important change needed in the implementation of provisional voting.

(RANDOMLY ROTATE 1-4)

(n=400)

29%	More funding for poll worker training
18	More time for poll worker training
19	Clearer instruction from the Federal Government
12	Clearer instruction from the State Government
5	Other: specify
2	All of the above
14	None of the above
2	No changes needed
1	Don't Know
--	Refused

In general, please tell me how much you agree or disagree with the following statements about provisional voting.

(READ AND ROTATE Q37-Q44)

[IF AGREE OR DISAGREE, ASK:] Would you say you agree/disagree strongly or agree/disagree somewhat?

37. A statewide voter registration database, accessible to poll workers on Election Day, would decrease the need for voters to cast provisional ballots.

(n=400)

34%	Agree strongly
19	Agree somewhat
7	Neither agree nor disagree
20	Disagree somewhat
20	Disagree strongly
2	Don't Know
--	Refused

38. A state-sponsored website designed for individuals to check registration status online, before going to the polling place on Election Day, would decrease the need for voters to cast provisional ballots.

(n=400)

45%	Agree strongly
25	Agree somewhat
6	Neither agree nor disagree
9	Disagree somewhat
15	Disagree strongly
2	Don't Know
--	Refused

39. Provisional voting speeds up and improves polling place operation on Election Day by resolving disputes between voters and poll workers.

(n=400)

25%	Agree strongly
23	Agree somewhat
5	Neither agree nor disagree
18	Disagree somewhat
30	Disagree strongly
1	Don't Know
--	Refused

40. Provisional voting helps election officials maintain more accurate registration databases.

(n=400)

27%	Agree strongly
24	Agree somewhat
8	Neither agree nor disagree
16	Disagree somewhat
24	Disagree strongly
2	Don't Know
--	Refused

41. Provisional voting creates unnecessary problems for election officials and poll workers.

(n=400)

31%	Agree strongly
21	Agree somewhat
5	Neither agree nor disagree
19	Disagree somewhat
24	Disagree strongly
1	Don't Know
--	Refused

42. Provisional voting can be avoided by simplifying registration procedures.

(n=400)

28%	Agree strongly
16	Agree somewhat
6	Neither agree nor disagree
20	Disagree somewhat
29	Disagree strongly
2	Don't Know
--	Refused

43. There is a need to offer voters the opportunity to cast provisional ballots.

(n=400)

44%	Agree strongly
28	Agree somewhat
4	Neither agree nor disagree
8	Disagree somewhat
17	Disagree strongly
1	Don't Know
--	Refused

44. The provisional voting system in my polling jurisdiction was a <u>success</u>.

(n=400)

59%	Agree strongly
30	Agree somewhat
5	Neither agree nor disagree
3	Disagree somewhat
4	Disagree strongly
1	Don't Know
--	Refused

45. Which one of the following do you think would be the <u>most effective</u> in increasing the number of provisional ballots validated and ultimately <u>counted</u> in an election?

(RANDOMLY ROTATE 1-3)

(n=400)

20%	In-precinct provisional voting only
40	Provisional voting from a central location rather than in individual polling places
19	In-jurisdiction provisional voting only
2	Other (specify)
1	All of the above
12	None of the above
7	Don't Know
--	Refused

46. Which one of the following do you think would be the most effective in reducing the number of provisional ballots cast in an election?

(RANDOMLY ROTATE 1-5)

(n=400)

26%	Having a statewide voter registration database available at polling places
6	Providing additional staff such as "greeters" at polling places to direct voters to the correct polling location
28	Providing a state sponsored website to enable individuals to check registration status online before going to the polling place
5	Providing poll workers access to an updated printed list of eligible voters in the jurisdiction
16	Providing a dedicated telephone line for poll workers to speak immediately to an election official with access to the list of eligible voters in the jurisdiction
1	Other (specify)
4	All of the above
13	None of the above
2	Don't Know
--	Refused

Demographics (ASK ALL)

I only have a few more questions for statistical purposes....

D1. As election official were you hired, appointed, promoted, or elected to the position?

(n=400)

14%	Hired
42	Appointed
2	Promoted
42	Elected
1	Other/Specify
--	Don't know
--	Refused

D2. For how many years have you served as the election official? [CODE IN WHOLE NUMBERS – IF LESS THAN 1 YEAR RECORD AS "LESS THAN ONE YEAR"]

(n=400)

5. In your opinion, which one of the following, if any, created the most need for the use of provisional ballots in your jurisdiction on Election Day, 2004?

Q5 a lot of ppl have moved from one town to another and they weren't registered
Q5 ADDRESS CHANGES
Q5 change of address
Q5 college students (ellab) registered voters couldnt get home to vote!!
Q5 fail to change the address
Q5 FAILED TO REPORT ADDRESS CHANGE SO IN WRONG PRECINCT
Q5 inspector error
Q5 MOST HAD MOVED OUT OF A DIFERENT JURISDICTION
Q5 moved and no address change
Q5 MOVING FROM ONE PRECINCT TO ANOTHER
Q5 not registered
Q5 NOT REGISTERED IN PROPPER PLACE - ADDRESS CHANGES
Q5 NOT REGISTERED WITHIN 5 YEARS
Q5 OUT OF PRECINCT
Q5 they have moved within the county
Q5 they sd they didn't get their ballot and some were military
Q5 Unreported Move - their name does not show on their new address' voting precinct
Q5 voter fail to update their registration
Q5 Voter going to wrong polling place
Q5 VOTER WENT TO INCORECT POLLING PLACE
Q5 voters moved
Q5 VOTERS MOVED
Q5 VOTERS MOVING FROM ONE COUNTY TO ANOTHER OR WITHIN THE COUNTY AND NOT UPDATING THEIR REGISTRATION
Q5 voters not registered
Q5 voters showed up to wrong precinct
Q5 voters voting in the wrong precinct
Q5 voters were at wrong precinct
Q5 wrong precient

6. In your opinion, which one of the following, if any, was the most important reason that provisional ballots cast in your jurisdiction were not validated and ultimately not counted in the 2004 Election?

Q6	b/c they were not voters..
Q6	Combination of not being registered, also individual voted incorrect precinct (else)no
Q6	Individual registered in wrong county
Q6	individual was not registered in the right state
Q6	judge did not put provisional envelopes in ballot box
Q6	MEDIA DID NOT UNDERSTAND WHAT PROVISIONAL VOTING
Q6	NO SIGNATURE AT ALL
Q6	none
Q6	pirch for 10 year skip and voting
Q6	POLL WORKER DID NOT COMPLETE FORM CORRECTLY(ELSE)NO
Q6	There was confusion due to the newness of the provisional ballot procedure
Q6	THEY WERE IN THE WRONG COUNTY COLLEGE STUDENTS REGISTERED INOTHER COUNTIES
Q6	were not completed properly\

14. Please tell me which of the following, if any, was provided in your jurisdiction for the 2004 Election to help poll workers determine voters' assigned precinct and polling place?

Q14 NO POLL WORKERS IN OREGON

22. After the 2004 Election, which of the following, if any, did your jurisdiction offer voters to determine if their provisional ballot was counted?

Q22 THERE WAS ONLY ONE AND HE WAS INFORMED IN PERSON

Q22 voters were given written documents informing them on how to inquire about their votes

26. Now I am going to read you a list of items, please tell me which one you believe presented the biggest challenge in implementing provisional voting in your jurisdiction for the 2004 Election. (POSSIBLY BIGGEST PROBLEM)

Q26	
Q26	access to the voters after the election
Q26	age of the poll workers
Q26	getting the poll workers to understand what I was explaining. Implementing the provisional ballot and the purpose of a provisisional ballot was the biggest challenge in getting the poll workers to understand what this meant.
Q26	having enoug ballots
Q26	having the voter get and understand the information
Q26	lack of awareness of voter's opportunity for provisional voting
Q26	MISREPRESENTATION OF PROVISIONSL BALLOTING WAS THE KEY PROBLEM
Q26	NOT ENOUGH TIME TO VALIDATE THE BALLOT AFTER ELECTION OFFICE
Q26	people saying go anywhere and get a provisional ballot.. it was falsified information given through newspapers and political parties
Q26	POLL WORKERS MISUNDERSTOOD WHAT PROVISIONAL BALLOTS WERE FOR / PUBLIC EDUCATION
Q26	state worker getting back to us
Q26	the staff, not enough
Q26	to verify that they were a valid provisional voter after the election the research was quuite involved and time consuming
Q26	verification

36. Now I am going to read you a list of items. Please tell me which one you believe is the <u>most</u> important change needed in the implementation of provisional voting.

Q36	accessibilty for the voters
Q36	CHANGES IN STATE LAW
Q36	clearer instructions from both state and federal on who can vote provisional ballots
Q36	clearer intruction to the voter
Q36	Elimation of provisional voting should be dumped
Q36	ELIMINATE IT
Q36	MAKING THE FEDERAL AND STATE GOVERNMENTS TO AGREE ON WHO SHOULD AND WHERE THEY CAST PROVISIONAL BALLOTS
Q36	more correct information from the media
Q36	MORE EDUCATION FOR VOTERS...GENERAL INFO EDUCATION
Q36	more funding in every aspect in provisional voting, it has become very costly and time consuming (else) if the polls have to close for any reason, anyone who has not voted has to use a provisional vote, it is very costly, at 40
Q36	more simpler
Q36	more technical work force (ellab) if we could provide a laptop.. we did not have this, we need help in recruiting... what I would like to see is vote centers for provisional ballots..
Q36	NOT ENOUGH TIME TO VALIDATE VOTE AFTER THE ELECTION
Q36	PUBLIC EDUCATION ON PROVISIONAL VOTING
Q36	REGISTERATION OF THE VOTERS, AND THE VOTERS BEING MORE AWARE OF THE VOTING PROCESS
Q36	they need to look at the whole system... the system does not allow enough time from the time the provisional ballots are cast and the time they are actually counted is 3 days... therefore we dont have enough time to inquire more
Q36	VOTER AND PUBLIC EDUCATION - VOTER NEEDS TO KNOW WHAT A PROVISIONAL BALLOT IS
Q36	voters need to be trained
Q36	VOTERS SHOULD EDUCATE THEMSELVES BETTER. THE INFORMATION IS AVAILABLE TO THEM.

45. Which one of the following do you think would be the most effective in increasing the number of provisional ballots validated and ultimately counted in an election?

Q45	DON'T WANT TO INCREASE
Q45	how to correct provisional to educate the public.
Q45	INCREASE PROVISIONAL VOTING IN REGULAR VOTING PLACES (ELSE)NO
Q45	NOT ENOUGH TIME FOR VALIDATION AFTER ELECTION
Q45	they need to have provisional voting in BOTH a central location and in-precient location as well
Q45	UPDATE REGISTRATION BEFORE DEADLINE
Q45	VOTERS TAKE RESPONSIBILITY FOR REGISTRATION

46. Which one of the following do you think would be the <u>most effective</u> in reducing the number of provisional ballots <u>cast</u> in an election?

Q46	advanced voting
Q46	VOTERS UPDATE REGISTRATION

D1. As election official were you hired, appointed, promoted, or elected to the position?

D1 elected then turned out to be appointed

D1 I WAS ELECTED AS A PROBATE JUDGE PART OF THAT JOB IS SUPERVISING ELECTIONS

Subject Revised materials for Sept. 6 Meeting

Karen,

The hard copy of the materials you received on Friday may have been missing the response to Question 4 (the copy I received did not include it). Several other typographical and other errors also became apparent when I reviewed it today. .

Attached is a revised version of the package that corrects those errors. Please rely on this version to prepare for the meeting on Tuesday. I will bring sufficient copies to hand out before the meeting.

Sorry for the errors.

Tom O'Neill

EAGLETON INSTITUTE OF POLITICS

BRIEFING FOR THE EAC

PRELIMINARY FINDINGS ON PROVISIONAL VOTING

with

Summary responses to 6 Key Questions

September 6, 2005

Prepared by:
Eagleton Institute of Politics at Rutgers, The State University of New Jersey
Moritz College of Law at the Ohio State University

MEMORANDUM

TO: Commissioners and Staff of the EAC

FROM: Tom O'Neill, Eagleton Institute of Politics

DATE: September 3, 2005

RE: Briefing on Provisional Voting Research

The enclosed draft synthesizes our findings based on the research on provisional voting completed since the start of the project. It is organized as summary answers to the six key questions on topics of particular interest enumerated in the contract.

1) How did states prepare for the HAVA Provisional Voting requirement?
2) How did their preparation and performance vary between states that had previously had some form of Provisional Ballot and those that did not?
3) How did litigation affect the implementation of Provisional Voting?
4) How effective was Provisional Voting in enfranchising qualified voters?
5) Did states and local processes provide for consistent counting of Provisional Ballots?
6) Did local election officials have a clear understanding of how to implement Provisional Voting?

Our discussion on the 6th will revolve around these draft, summary answers. Your comments and reactions to the material will provide direction --a basis for us to complete work on the final report and the preliminary guidance document. We seek the EAC's response and comments to ensure that the research is meeting the needs of Commissioners and staff.

We will also ask for the comments of the Peer Review Group on this draft to provide independent analysis of our approach and methods.

The following materials are enclosed as background for the presentation:

Summary responses to 6 Key Questions regarding Provisional Voting

Appendices:

a) Statistical Review of Provisional Voting in the 2004 Election
b) State Narratives on Provisional Voting
c) Memorandum: Provisional Voting Litigation by Issue
d) Memorandum: Provisional Voting Litigation by State
e) Memorandum: Provisional Voting Litigation

Question 1: How did states prepare for HAVA's provisional voting requirements?

HAVA required all states to develop a process for permitting individuals who state they are registered, eligible to vote and in the proper jurisdiction for voting but are not on the official registration list to do so by provisional ballot. It also directed states to provide a way for provisional voters to find out if their ballots were counted.

For the 25 states that had some form of provisional ballots before HAVA, meeting the requirements meant reviewing and revising, if necessary, their process for provisional voting. The 18 states that were new to provisional voting had to provide for provisional ballots by a new statute or administrative regulation and had to design procedures for pre-election, Election Day and post-Election Day activity. Preparation at the state level is described exhaustively in the collection of state statutes and regulations compiled in this research.

In addition to devising the provisional voting process, states had the responsibility to define "jurisdiction," adopt rules regarding the use of voter identification, and prepare a system to decide which provisional ballots cast should be counted. The states also had the responsibility of providing training or instruction for local election officials who would actually manage the provisional voting process, including training poll workers. Interviews with local election officials, at the county level in most states, provided information to assess how they prepared to administer the process.

Most, but not all, (84 percent) county-level election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states:

- Almost all of those officials received instruction from their state government on how to determine a voter's eligibility to receive a provisional ballot, and they felt the instructions provided were useful.
- Nine out of ten received instruction for providing voters the opportunity to verify if the provisional ballot had been counted as well as instruction establishing guidelines for counting provisional ballots.
- Two out of three received information on using a provisional ballot as an application to update the voter's registration.
- Only about half of those local election officials received instruction on strategies to reduce the need for voters to use provisional ballots.

Although almost all county-level election officials provided training or written instruction to precinct-level poll workers on how to administer provisional ballots, wide disparities existed in other areas of instructions or resources.

- Nine out of ten provided a telephone line for poll workers to speak to an election official with access to a list of eligible voters to determine voters' assigned precinct and polling place.
- Eight in ten furnished local poll workers with access to a list of eligible voters in the jurisdiction.
- Only about 1 in 10 (12 percent) made available to poll workers a statewide voter

registration database.

- Almost equally rare (14%) were training and written procedures for poll workers on the counting of provisional ballots.

Wide variance existed in how the county-level officials prepared to comply with HAVA's requirement to provide voters a way to find out if their provisional ballots had been counted:

- Seven in ten of those officials provided the main telephone number for the local or county election office;
- About half (47 percent) used mail notification;
- Four in ten provided a dedicated toll-free telephone hotline;
- About 1 in 5 (22%) offered this information through a website, and about half that number offered email notification.

Question 2: How did their preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?

In the 2004 election, 18 states were new to the process of provisional voting, while 25 others had experience with similar methods of "fail-safe voting." Local election officials in the "old" states felt more confident in their ability to administer the provisional voting process:

- Almost three-quarters (74%) of local election officials in the "old" states found implementing the provisional voting system was "easy," but that was true of just over half (56%) of officials in the "new" states.
- About half (49%) of officials in the "new" states felt that more training was needed on how to administer the provisional voting system. Less than 40% of officials in the "old" states felt that way.
- Nine out of ten local officials in the "old" states felt that the support received from state government was adequate, compared to 8 in 10 in the "new" states.

In some functions there was little difference in the preparation for provisional voting by "old" and "new" states. For example, in both subgroups, about half (54%) of county-level officials received from their state governments little information about "strategies to reduce the need for voters to use provisional ballots." But for other functions, training varied widely in both type and amount between the two subgroups:

- More officials in "old" states (7 in 10) than "new" (6 in 10) received state instruction on the design of the provisional ballot.
- By a similar margin, more "old" state officials received instruction about using the provisional ballot as an application to update the voter's registration.

The "new" state officials believed that voters did not receive enough information about the jurisdiction in which to cast a provisional ballot in order to be counted, and they felt that more funding was needed to educate voters about their rights to cast a provisional ballot:

- Four out of ten officials in the "new" states, compared with 3 out of 10 in the "old" stated that more information should have been provided to voters about the jurisdiction in which the ballot had to be cast.
- Also, four out of ten in the "new" states felt that more time was needed compared with just over a quarter (26%) of those in "old" states.

When we move from preparation to performance, the importance of experience becomes sharply clear. In the "old" states, provisional ballots represented over 2% (2.11%) of the total vote. In the "new" states, that number was less than one-fourth of that, 0.47%. How the ballots were then evaluated also showed significant differences between "old" and "New." In ruling ballots legitimate and including them in the final vote, the "old" states averaged nearly double the number of the "new" states, 58% to 32%. In "old" states, 1.48% of the total vote came from provisional ballots, six times more than the 0.23% in the "new" states.

Question 3: How did litigation affect the implementation of Provisional Voting?

SUMMARY: Litigation just before the 2004 election upheld the principle that provisional ballots are available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes. This pre-election litigation also clarified that HAVA does not require states to count provisional votes cast in the wrong precinct. Otherwise, however, this pre-litigation occurred too late to shape significantly the way the states implemented provisional voting.

Lawsuits filed shortly after Election Day, which were designed to alter the outcome of a close election, were uniformly unsuccessful in this goal, although some of them had the ancillary effect of requiring the counting of some provisional ballots that would have been left uncounted. Thus, the experience of the 2004 election shows that litigation can be useful, not to change the outcome of a race, but to enhance the accuracy of the provisional voting process. This kind of accuracy-enhancing litigation is most beneficial the earlier it occurs in the process. The nation can anticipate more litigation before the 2006 and 2008 elections if states leave unaddressed some of the ambiguities and problems that surfaced in the 2004 election.

Although the enactment of HAVA in 2002 and its erratic implementation in the states during the ensuing two years provided ample opportunity for litigation designed to clarify its requirements concerning provisional voting, or otherwise challenge state laws and administrative procedures regarding provisional voting, such litigation did not develop until the eve of the November 2004 general election. By then, it was largely too late for litigation to affect the rules and procedures in place in advance of Election Day.

A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless. First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA. (It just so happened that a state's decision not to count wrong-precinct provisional ballots was not a HAVA violation). Second and significantly, the litigation clarified the right of voters to receive provisional ballots, even though they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional in the wrong precinct, they would be on notice that it would be a symbolic gesture only. Third, and relatedly, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

To a lesser extent there was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining whether these provisional voters already have voted an absentee ballot (in which case one would need to be ruled ineligible, in order to avoid double voting). But these decisions confirm the basic premise that provisional ballots are available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

After Election Day, there was litigation over provisional ballots in states where the outcome of specific races might turn on whether or not some of the provisional ballots cast were ruled eligible for counting. Moreover, the "placeholder" filing of similar lawsuits in Ohio – in anticipation that provisional ballots might have made a difference in the presidential election in that state – indicates that there would have been more litigation of this type had that race (or others) been closer. Although these placeholder lawsuits fizzled away once it was clear that provisional ballots in Ohio would not affect the result of the presidential election, the litigable issues remain capable of resurrection when they might make a difference in the future. Indeed, the League of Women Voters has already filed a major new lawsuit in Ohio, seeking proactive changes in the provisional voting system in advance of the next election in that state. (This effort to resolve these legal issues well before November 2006 is a salutary one, so that the judiciary does not struggle with complicated, sensitive questions at a frenzied pace, either in the last few weeks before Election Day or the first few weeks immediately after Election Day.)

The efficacy of these post-Election Day lawsuits was mixed. In New York, supporters of a Democratic candidate for a state senate seat prevailed in that state's highest court on the proposition that provisional ballots cast at the correct polling *site* but at the wrong precinct should be counted. (Many polling sites, particularly in urban locations, serve multiple precincts.) The New York high court, however, rejected the contention that provisional ballots at the wrong polling site must be counted. The court also rejected the proposition that a provisional ballot should count if another (regular) vote already had been cast in the name of the provisional voter (even if the provisional voter purported to offer proof that the other vote had been cast by an imposter). Finally, the court accepted the contention that a provisional ballot should count if the ballot's envelope was missing information as a result of a poll worker's clerical error. The upshot of these rulings was that the Democratic candidate reduced the Republican's margin of victory (from 58 to a mere 18 votes), but did not succeed in overturning the election result.

In North Carolina, post-election litigation over provisional ballots ultimately proved inconsequential as the state's legislature took matters into its own hands. The race for the state's Superintendent of Public Instruction turned on whether approximately 11,000 "wrong precinct" provisional ballots would be counted under state law. The state's Supreme Court ruled that they should not count, but the state's legislature disagreed and enacted a new law to supersede the supreme court's ruling. The election was finally resolved on August 23, 2005 – *43 weeks* after Election Day – making it the last settled statewide election from 2004. The length of time it took to resolve this dispute shows the dangers of leaving ambiguous provisions of state law concerning the counting of provisional ballots.

Washington suffered an even more celebrated, if slightly less protracted, dispute over the counting of provisional ballots in statewide race. Here, too, the effort to overturn the result of the race through a lawsuit was unsuccessful. Republicans went to court after their gubernatorial candidate, Dino Rossi, came up 129 votes short in the third (manual) count of the ballots (having come out ahead in the two previous – machine – counts). Among other problems, Republicans were able to show that this third count included 252 provisional ballots cast by individuals who could not be verified as registered voters. But because these provisional ballots had been mingled with regular ballots during the counting process, it no longer could be determined for which candidate these provisional ballots were cast. After a lengthy trial at which the Republicans attempted to show statistically that enough of these ineligible ballots would have been cast for the Democratic candidate to change the result of the election, the trial court rejected such statistical proof as improper under state law, and Rossi decided not to appeal the decision to state's supreme court. The ruling came on June 6, 2005 – 32 weeks after Election Day.

Perhaps Washington's plight was aberrational and uncontrollable: how were election officials supposed to predict – and, more important, how were they supposed to avoid – the problem of poll workers inappropriately feeding provisional ballots through the counting machines as if they were regular ballots? (For future elections, Washington has adopted a series of measure, including color-coding provisional ballots and making sure that their different shape and size prevents them from being read by the machines used to count regular ballots, in an effort to prevent a repeat of this particular problem.) The after-the-fact litigation certainly was unable to put the spilled milk back in the bottle. While the litigation put a spotlight on the failures of the electoral process in Washington in 2004, serving as a catalyst for future reforms, it did nothing to change the outcome of the 2004 election itself, except only to delay the conclusion of the process by more than six months. (The fact that the Democratic candidate, Christine Gregoire, who was certified the winner after the manual recount, was inaugurated as Governor and exercised the powers of the office during those six months evidently affected the willingness of a trial judge to overturn the results of the election.)

One earlier aspect of the litigation over provisional ballots in Washington did prove efficacious – and importantly so. In December 2004, during the recounting process (before certification of Gregoire as winner), it was discovered that 547 provisional ballots in King County had been rejected because they could not be matched with a signature in the county's current electronic database of registered voters, but that county officials had not attempted to match the signatures against original registration forms, older electronic files, or other available records. Upon this discovery, Democrats went to court arguing that state law required that the provisional ballots be verified against these additional records. The Washington Supreme Court unanimously agreed with this argument, vindicating the principle that provisional ballots are designed to protect voters against clerical errors affecting the accuracy of the state's updated registration list.

The state supreme court, however, rejected the Democrats' additional argument that different rates at which counties invalidated provisional ballots because the signature on the ballot did not match the signature on file was sufficient to establish an Equal Protection violation under the principles of *Bush v. Gore*. The different rates could be explained by factors other than the assumption that county officials were applying different standards when conducting signature matches. Since the counties were purporting to apply the same standard, and there was no definitive proof to the contrary, the court found no Equal Protection violation.

The Democrats did win another important procedural ruling early on in the post-election litigation in Washington. They sought – and obtained – public disclosure of the names of all individuals whose provisional ballots were rejected because their signatures did not match county records. This disclosure ultimately uncovered which provisional ballots had been rejected based on insufficient examination of county records.

CONCLUSIONS:

A review of all the litigation over provisional voting in connection with the 2004 election leads to the following tentative conclusions. First and foremost, litigation is more likely to be successful – and yield a public benefit – if its goal is simply to assure the accuracy of the provisional voting process, rather than seeking to undo the result of an election. Of course, as a practical reality, most litigation that actually occurs is likely to be motivated by a desire to affect the outcome of an election, rather than the altruistic, public-spirited motive of improving the accuracy of the process. For this reason, in the future, it will be useful for states to distinguish between (a) streamlined administrative remedial processes, which will enable individual voters to seek redress in the event they believe their provisional ballot rights were mistreated, and (b) a more burdensome judicial proceeding for the purpose of contesting an election result. In the meantime, in some states that have been the focus of widespread national attention because of past problems (for example, Florida and Ohio), citizen groups like the League of Women Voters may have sufficient resources and incentives to bring system-wide litigation that seeks structural reform of the provisional voting process.

Second, and related, the earlier that litigation occurs in the electoral process, the more likely it is to secure rights protected under provisional voting laws. If nothing else, early litigation (even when ruled unmeritorious) has the effect of clarifying the rules in advance. It can put people on notice of what rights they do and do not have. The EAC might be in a position to give guidance to states on how to encourage earlier, rather than later, litigation over provisional ballots. For example, EAC could consider whether it would be a "preferred practice" for states to preclude any post-election challenges that could have been filed in a pre-election lawsuit.

Third, the more narrow and specific the complaint (and thus the more narrow and specific the remedy sought by a lawsuit), the more receptive the court will be. It is easier for a court to order disclosure and the checking of additional records than it is for a court to sustain an amorphous Equal Protection claim about disparities in the signature verification process. Although it is too early to say that all Equal Protection challenges to the counting of provisional ballots will be unsuccessful, the speed with which the Washington Supreme Court rejected the Equal Protection claim over the signature matching process indicates that future Equal Protections claims will need to be much more specific about the disparities they allege in order to have a chance of success.

In sum, if litigation is to occur over provisional voting in 2006 or 2008, it would be better if the litigation were to occur as early as possible before Election Day, focused specifically on the ways state laws are allegedly deficient and should be remedied. Such litigation can have the virtue of clarifying the rules applicable to provisional voting and, where necessary, assuring that the rights protected by provisional voting laws are indeed enforced. Such pre-election lawsuits, of course, do not ask the court to change which candidate wins the election, and one lesson of the 2004 experience is that litigation is least valuable when it seeks that kind of outcome-altering decree.

Question 4: How effective was provisional voting in enfranchising qualified voters?

Answering this question poses a considerable challenge. To evaluate the decisions of local election officials' decisions on how to inform voters about the possibility of provisional voting and then whether to count a provisional ballot demands information about the eligibility or registration status of each provisional voter. That information is not available.

What is known, with reasonable confidence, is the number of provisional ballots cast and provisional ballots counted. Nationwide, 1,933,863 provisional ballots were cast, 1.6% of the total turnout. Of those ballots, 63.7% were subsequently verified and included in the final vote tally. Provisional ballots enfranchised 1,231,429 citizens, or 1.01% of the total turnout in 2004. These ballots were cast by voters who otherwise would have been turned away at the polls.

Not knowing the total number of registered voters who might have voted but could not makes estimating the effectiveness of provisional voting quantitatively impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes are lost in presidential elections due to the causes shown in the table below. The estimate is a rough approximation, but it may provide data good enough for at least a rough assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Votes Lost (Millions)	*Cause*
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting. Thus a rough-and-ready estimate of the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. A very rough estimate of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)*. Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

---

* Another interpretation of the data should be considered as well. The category of "registration mix-ups" was developed as a measure of the states' registration systems as included in the Census Bureau's Current Population Survey. The CPS after each election asks people if they were registered and if they voted. It gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000. Thus the arrival of provisional voting in the 18 "News" increased the number voting by only 0.1%.

Several states came to just that conclusion. Legislative activity is evidence that states were less than satisfied with the effectiveness of their processes. State legislation adopted since the election points to areas of concern.

- Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.

- Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

Another indication of lack of effectiveness is legal challenges to the process. Voters or other parties have sought court review of local officials' decisions, and those are described in the answer to Question 3.

Aggregate data from the states indicates that some states were more effective than others in enfranchising voters through the provisional ballot. In states that used a provisional ballot before HAVA ("old" states), a higher proportion of voters were enfranchised by provisional ballots than in "new" states. In the 25 states that had some experience with provisional voting before HAVA, a higher portion to the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.

A reasonable assumption is that potential voters in both the old states and new states encountered similar problems that made it impossible to cast a regular ballot. But they had different provisional systems to navigate, and consequently they experienced different outcomes. Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the new states. This provides more evidence that there is room for improvement.

If experience with provisional voting does turn out to be the key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further guidance from the EAC on best practices and more consistent management could sharpen the lessons learned from that experience.

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic. The other possibility is that the "new" states have a political culture different from the "old" states. That is, underlying characteristics of the "new" states political system may be the reason they had not adopted some form of provisional voting as the "old" states did.

The "new" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, re-registering after changing address. Or they may value keeping control at the local level, rather than ceding some authority to state or federal directives. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballot will he harder and take longer to achieve.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

HAVA gave states broad latitude in how to implement provisional voting, including who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted. Little consistency existed among and within states in the way provisional ballots were used in 2004.

The use of provisional ballots was not distributed evenly across the country. Indeed, 6 states (California, New York, Ohio, Arizona, Washington, and North Carolina) accounted for more than two-thirds of all the provisional ballots cast in the 2004 election. Wide variation was found across the nation, even when overall state size and turnout was taken into account.

- In Alaska, provisional votes accounted for 7% of all votes cast on Election Day. In 22 other states provisional ballots made up less than 0.5% of votes on Election Day.
- The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware.
- The range of ultimate inclusion of provisional ballots in final vote tallies was immense: The 7% of the total vote represented by Alaska's counted provisional ballots was more than 1,000 times greater than Vermont's 0.0058%.

The greatest source of this variation was the state's experience or lack of experience with provisional voting. In experienced states, a higher proportion of voters cast provisional ballots and a higher percentage of provisional ballots was counted than in "new" states. In the 25 states that had some experience with provisional voting before HAVA, a higher portion to the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.

- The 25 experienced states averaged about 2% (2.17%) of the total vote cast as provisional ballots. This was 4 times the rate as in states new to provisional, which averaged less than half a percent (0.47%).
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion of the new states, which counted just 33%, of cast provisional ballots.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states provisional ballots accounted for only 0.23% of the total vote.
- In short, the share of provisional ballots in the total vote was six times greater in experienced states than in new states.

Other influences on the variation among the states included:

- The more rigorous the verification requirements of the voter's identity and registration status, the smaller the percentage of provisional ballots that were counted.
- In the 4 states that simply matched signatures nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.

  - In the 14 States that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were certified
  - In the 14 states that required an affidavit just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted.
  - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were certified. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office.

- Voter registration databases provided information that reduced the number of provisional ballots counted. In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%).

- States that allowed out-of-precinct ballots counted 56% of the provisional ballots. States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.

  - In experienced states, this was even more pronounced. 52% of ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
  - If all states had counted out-of-precinct ballots, perhaps 280,000 more voters would have been enfranchised across the country.

High-Low rating of Percent of PV Ballots Cast as part of Turnout

Count

		High-Low rating of Percent of PV Ballots Cast that were Counted		
		Less than 50% Counted	More than 50% Counted	Total
High-Low rating of Percent of PV Ballots Cast as part of Turnout	Less than 1% of Total Turnout was PV	21	5	26
	More than 1% of Total Turnout was PV	1	16	17[*]
Total		22	21	43

As the table above shows, the nation can be divided into two groups of states: those that made significant use of provisional ballots (more than 1% of total turnout was cast as provisional ballots) and those that did not. The difference in how these two groups evaluated those ballots

---

[*] These states are: Alaska, Arizona, California, Colorado, District of Columbia, Iowa, Kansas, New York, Washington, Utah, Ohio, North Carolina, Nebraska, Maryland, New Mexico, New Jersey, and West Virginia.

that were cast was striking. In states where high levels of provisional ballots were cast, high levels were also counted. In states where low levels of provisional ballots were cast, low levels were typically counted.

The table shows the relationship between use of provisional ballots in the states and the determination by the state that a provisional ballot should be counted. The relationship is strong (Yule's Q = 0.97), clear, and significant. In 26 states less than 1% of voters cast a provisional ballot. In 21 of those states, less than half the ballots cast were counted. In 17 states, more than 1% of voters case a provisional ballot, and in 16 of those states more than half the ballots were counted.

No ready conclusions can be drawn about why these results occur. The data could suggest that states where high levels of ballots were cast were overwhelmed by the sheer volume of them, resulting in insufficient critique of each ballot, or conversely that they were simply more experienced in making evaluations and were better able to identify legitimate ballots. It is possible that states with few ballots cast did not invest the time and effort to properly evaluate them, because their were so few of them, or it is possible that they were better able to dedicate the time to such an investigation and properly weeded out invalid ballots. Further research is required to better ascertain the reasons for these disparities.

Variation within states

Even within states consistency was hard to find. Counties differed widely in the rate at which ballots were cast and counted, suggesting that other factors beyond statewide regulations or administrative requirements were at play. This was true in both new and old states.

Election Line, for example, found that:

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Of the 20 States for which we have gathered county-level provisional ballot data, the rate of counting these ballots frequently varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors outside of the statewide factors analyzed here also influence the use of provisional ballots.

Election Official's Perceptions

In addition to the statistical differences among states' handling of provisional voting, there were also differences in how election officials prepared for and evaluated the use of provisional ballots. The survey conducted by the Eagleton Institute at Rutgers University found that county election officials reported different perceptions of provisional balloting, depending upon whether they came from "old" or "new" States. Both groups reported gaining help from state election offices on how to implement provisional balloting, but in different ways.

- Officials from "new" states reported receiving more guidance on how to evaluate ballots once cast, while officials from "old" states reported receiving more guidance on how to design ballots. Both groups regarded the guidance they received as being helpful.
- Officials from "old" states were more likely to report that they counted more ballots, were better prepared to direct voters to their correct precincts with maps, and regarded provisional voting as easy to implement and enabling more people to vote.
- Officials from "new" states were more likely to report that more information should have been provided to voters about the jurisdiction where provisional ballots must be cast in order to be counted and that more time was needed to implement provisional voting procedures.
- Officials from "old" states were more likely to report that provisional voting sped up and improved polling place operations and that it helped officials to maintain more accurate registration databases.
- Officials from "new" states were more likely to agree that provisional voting created unnecessary problems for election officials and poll workers.

This data can be interpreted either of two ways. First, experience and familiarity with provisional voting may be the key factor in the degree to which provisional voting is used and in how election officials perceived provisional balloting. Those officials who were more familiar and experienced with the system had more positive reactions to provisional voting and its worth. Eight out of ten officials from experienced states reported that "there is a need to offer voters the opportunity to cast provisional ballots", while only 6 out of 10 from new states did so.

But another way of explaining the difference is less rosy for provisional ballots. It may be that the states new to provisional balloting have a political culture somewhat different from the states that had offered a provisional ballot before HAVA. The new states may have a history of striking a different balance among the competing voting objectives of access, security, and administrative practicality. Officials in those states may believe that the fail safe offered by provisional voting broadens access at the expense of security and burdens election administrators beyond any perceived benefit. Further survey research could help resolve this question.

Conclusion

States that previously had some form of provisional ballots and those that did not had different experiences in 2004. Those states that had used a provisional ballot before HAVA had more ballots cast, found higher levels of those ballots to be legitimate, and had much higher levels of provisional ballots in their final vote tallies. Election officials in those states also felt that provisional ballots were easier to administer and more worthwhile than did their counterparts in states new to provisional voting. The strongest influence noted in this study was simply that of experience with the process.

If the difference is mostly one of experience, in subsequent elections, officials will be more prepared for and comfortable with the implementation of provisional ballots. This should lead to greater consistency among the states and more positive ratings of it as a system. If, on the other hand, the different experiences with provisional ballots reflect different political cultures among the states, consistency among the states will prove more difficult to achieve.

Other factors, such as verification laws and requirements for whether out-of-precinct ballots may be counted, will continue to cause variance across the country. But as voters and election officials become more familiar with the system, that variance may stabilize. In sum, provisional balloting was applied inconsistently in 2004, returning a wide range of results. Since the states have considerable latitude in how they meet HAVA's requirements for provisional voting, a considerable degree of variation among the states is to be expected in the future. If that variation stems from differences in political culture among the states, it is likely to persist.

Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

This question demands two different kinds of answers. First, how do the local officials themselves characterize their understanding of their responsibilities to manage the provisional voting process? Second, objectively how well did the process appear to be managed?

While essentially all (98%) county-level local elections officials considered the instructions they received from their state governments to be "useful" or "very useful," the crucial question is how well did the process work on Election Day? The lack of consistency among and within states in the use of provisional ballots and evaluating those ballots indicates considerable variation in the understanding of the process by election officials.

Four out of ten local election officials felt poll workers needed more training to understand their responsibilities. One sign of dissatisfaction with the functioning of the provisional voting process is the number of states that have amended their statutes on provisional voting to include specific language about poll worker training. Among these states are Colorado, Indiana, New Mexico and Washington.

Statutes, of course, reflect only part of the story. For example, Alabama – a state new to provisional voting – undertook a concerted training effort on how to handle and count provisional ballots. It also created a notification system whereby voters could verify if their vote counted within 10 days of casting their ballots. These steps were not dictated by statute, but reflected the initiative of f local elections officials. Their leadership indicates a good understanding of their responsibilities under HAVA and the state statute.

More than 8 out of 10 county-level elections officials reported receiving instructions from their state government regarding the implementation of provisional voting. Topics covered in those instructions from the states included:

- How to administer the provisional voting system
- Who is eligible to vote using a provisional ballot
- How individuals vote using a provisional ballot
- The jurisdiction where individuals can vote by provisional ballot
- Whether the provisional ballot could be used as an application to update the voter's registration
- How to train poll workers to process provisional ballots
- How to provide voters with the opportunity to verify if their provisional ballot was counted
- Guidelines for determining which provisional ballots are to be counted
- Strategies to reduce the need for voters to use provisional ballots
- How to design the structure of the provisional ballot

Those local election officials believe the most effective efforts to improve the provisional voting process would be to reduce the use of provisional ballots as a failsafe by improving technology –

such as registration databases – available to voters and poll workers. Reflecting their understanding of the provisional voting process, local elections officials call for:

- State-sponsored websites where voters can verify their registration status before Election Day.
- Access by poll-workers to statewide voter registration databases at polling place.

While local election officials report that the instructions they received were "useful," the quality of the information they receive is not the only influence on their performance. They recognize that timing is critically important. They understand that they must receive clear instructions from their state election agencies early enough to absorb, understand, and pass it along as operational instructions to poll workers and voters.

Subject EAC Briefing Materials - Tues. 9/6

Hi Karen,

Attached please find a summary of answers to the questions guiding our Provisional Voting analysis in preparation for our meeting with the EAC on Tuesday, Sept. 9th. Please distribute this document in advance of the briefing to your colleagues who will be attending. There are several appendix documents that have been fedex'ed to you for delivery by tomorrow at noon. These documents form a large part of our original research, and are referred to in our summary responses to the 6 guiding questions. I am sending 3 copies of the appendix documents for you and your colleagues. Additionally, Mr. O'Neill will be bringing you a CD-rom with all of the enclosure documents for your convenience.

If you have any questions, please do not hesitate to call or email me. Enjoy the holiday weekend.

Best,
Lauren Vincelli

EAGLETON INSTITUTE OF POLITICS

BREIFING FOR THE EAC

PRELIMINARY FINDINGS ON PROVISIONAL VOTING

September 1, 2005

Prepared by:
Eagleton Institute of Politics at Rutgers, The State University of New Jersey
Moritz College of Law at the Ohio State University

MEMORANDUM

TO: Commissioners and Staff of the EAC

FROM: Tom O'Neill, Eagleton Institute of Politics

DATE: September 6, 2005

RE: Briefing on Provisional Voting Research

The enclosed draft synthesizes our findings to date based on the research on provisional voting completed since the start of the project. It is organized as summary answers to the six key questions on topics of particular interest enumerated in the contract.

1) How did states prepare for the HAVA Provisional Voting requirement?
2) How did their preparation and performance vary between states that had previously had some form of Provisional Ballot and those that did not?
3) How did litigation affect the implementation of Provisional Voting?
4) How effective was Provisional Voting in enfranchising qualified voters?
5) Did states and local processes provide for consistent counting of Provisional Ballots?
6) Did local election officials have a clear understanding of how to implement Provisional Voting?

Our discussion on the 6th will revolve around these draft, summary answers. Your comments and reactions to the material will provide direction a basis for us to complete work on the final report and the preliminary guidance document. We seek the EAC's response and comments to ensure that the research is meeting the needs of Commissioners and staff.

We will also ask for the comments of the Peer Review Group on this draft to provide independent analysis of our approach and methods.

The following materials are enclosed as background for the presentation:

Summary responses to 6 Key Questions regarding Provisional Voting

Appendices:
- a) Statistical Review of Provisional Voting in the 2004 Election
- b) State Narratives on Provisional Voting
- c) Memorandum: Provisional Voting Litigation by Issue
- d) Memorandum: Provisional Voting Litigation by State
- e) Memorandum: Provisional Voting Litigation

Question 1: How did states prepare for HAVA provisional voting requirements?

HAVA required all states to develop a process for permitting individuals who state they are registered, eligible to vote and in the proper jurisdiction for voting but are not on the official registration list to do so by provisional ballot. It also directed states to provide a way for provisional voters to find out if their ballots were counted.

For the 25 states that had some form of provisional ballots before HAVA, meeting the requirements meant reviewing and revising, if necessary, their process for provisional voting. The 18 states that were new to provisional voting had to provide for provisional ballots by a new statute or administrative regulation and had to design procedures for pre-election, election day and post-election day activity. Preparation at the state level is described exhaustively in the collection of state statutes and regulations compiled in this research.

In addition to devising the provisional voting process, states had the responsibility to define "jurisdiction," adopt rules regarding the use of voter identification, and prepare a system to decide which provisional ballots cast should be counted. The states also had the responsibility of providing training or instruction for local election officials who would actually manage the provisional voting process and the local and intermediary level of government. Interviews with local election officials, at the county level in most states, provided information to assess how they prepared to administer the process.

Most, but not all, (84 percent) county-level election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states:

- Almost all officials received instruction from their state government on how to determine a voter's eligibility to receive a provisional ballot and felt the instructions provided were useful.
- Nine out of ten received instruction for providing voters the opportunity to verify if the provisional ballot was counted as well as instruction for establishing guidelines for counting provisional ballots.
- Two out of three received information on using a provisional ballot as an application to update the voter's registration.
- Only about half of local election officials received instruction on strategies to reduce the need for voters to use provisional ballots.

Although almost all county-level election officials provided training or written instruction to precinct-level poll workers on how to administer provisional ballots, wide disparities existed in other areas of instructions or resources.

- Nine out of ten provided a telephone line for poll workers to speak to an election official with access to a list of eligible voters to determine voters' assigned precinct and polling place.
- Eight in ten furnished local poll workers with access to a list of eligible voters in the

jurisdiction.

- Only about 1 in 10 (12 percent) made available to poll workers a statewide voter registration database.
- Almost equally rare (14%) was training and written procedures for poll workers on the counting of provisional ballots.

Wide variance existed in how the county-level officials prepared to comply with HAVA's requirement of providing that voters have a way to find out if their provisional ballots counted:

- Seven in ten of those officials provided the main telephone number for the local or county election office;
- About half (47 percent) used mail notification;
- Four in ten provided a dedicated toll-free telephone hotline;
- About 1 in 5 (22%) offered this information through a website, and about half that number offered email notification.

Question 2: How did their preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?

In the 2004 election, 18 states were new to the process of provisional voting, while 25 others had experience with similar methods of "fail-safe voting." Local election officials in the "Old" states felt more confident in their ability to administer the provisional voting process:

- Almost three-quarters (74%) of local election officials in the "Old" states found implementing the provisional voting system was "easy," but that was true of just over half (56%) of officials in the "New" states.
- About half (49%) of officials in the "New" states felt that more training was needed on how to administer the provisional voting system. Less than 40% of officials in the "Old" states felt that way.
- Nine out of ten local officials in the "Old" states felt that the support received from state government was adequate, compared to 8 in 10 in the "New" states.

In some functions there was little difference in the preparation for provisional voting by "Old" and "New" states. For example, in both subgroups, about half (54%) of county-level officials received from their state governments little information about "strategies to reduce the need for voters to use provisional ballots." But for other functions, training varied widely in the type and amount between the two types of states:

- More officials in "Old" states (7 in 10) than "New" (6 in 10) received state instruction on the design of the provisional ballot.
- By a similar margin, more "Old" state officials received instruction about using the provisional ballot as an application to update the voter's registration.

The "New" state officials believed that voters did not receive enough information about the jurisdiction in which to cast a provisional ballot in order to be counted, and they felt that more funding was needed to educate voters about their rights to cast a provisional ballot:

- Four out of ten officials in the "New" states, compared with 3 out of 10 in the "Old" stated that more information should have been provided to voters about the jurisdiction in which the ballot had to be cast.
- Also, four out of ten in the "New" states felt that more time was needed compared with just over a quarter (26%) of those in "Old" states.

When we move from preparation to performance, the importance of experience becomes sharply clear. In the "Old" states, provisional ballots represented over 2% (2.11%) of the total vote. In the "New" states, that number was less than one-fourth of that, 0.47%. How the ballots were then evaluated also showed significant differences between "Old" and "New." In ruling ballots legitimate and including them in the final vote, the "Old" states averaged nearly double the number of the "New" states, 58% to 32%. In "Old" states, 1.48% of the total vote came from provisional ballots, six times more than the 0.23% in the "New" states.

Question 3: How did litigation affect the implementation of Provisional Voting?

SUMMARY: Litigation just before the 2004 election upheld the principle that provisional ballots are available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes. This pre-election litigation also clarified that HAVA does not require states to count provisional votes cast in the wrong precinct. Otherwise, however, this pre-litigation occurred too late to significantly shape the way the states implemented provisional voting.

Lawsuits filed shortly after Election Day, which were designed to alter the outcome of a close election, were uniformly unsuccessful in this goal, although some of them had the ancillary effect of requiring the counting of some provisional ballots that would have been left uncounted. Thus, the experience of the 2004 election shows that litigation can be useful, not to change the outcome of a race, but to enhance the accuracy of the provisional voting process. This kind of accuracy-enhancing litigation is most beneficial the earlier it occurs in the process, and the nation can anticipate more of it in advance of the 2006 and 2008 elections if states leave unaddressed some of the ambiguities and problems that surfaced in the 2004 election.

Although the enactment of HAVA in 2002 and its erratic implementation in the states during the ensuing two years provided ample opportunity for litigation designed to clarify its requirements concerning provisional voting, or otherwise challenge state laws and administrative procedures regarding provisional voting, such litigation did not develop until the eve of the November 2004 general election. By then, it was largely too late for litigation to affect the rules and procedures in place in advance of Election Day.

A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless. First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA. (It just so happened that a state's decision not to count wrong-precinct provisional ballots was not a HAVA violation). Second and significantly, the litigation clarified the right of voters to receive provisional ballots, even though they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional in the wrong precinct, they would be on notice that it would be a symbolic gesture only. Third, and relatedly, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

To a lesser extent there was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining whether these provisional voters already have voted an absentee ballot (in which case one would need to be ruled ineligible, in order to avoid double voting). But these decisions confirm the basic premise that provisional ballots are available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

After Election Day, there was litigation over provisional ballots in states where the outcome of specific races might turn on whether or not some of the provisional ballots cast were ruled eligible for counting. Moreover, the "placeholder" filing of similar lawsuits in Ohio – in anticipation that provisional ballots might have made a difference in the presidential election in that state – indicates that there would have been more litigation of this type had that race (or others) been closer. Although these placeholder lawsuits fizzled away once it was clear that provisional ballots in Ohio would not affect the result of the presidential election, the litigable issues remain capable of resurrection when they might make a difference in the future. Indeed, the League of Women Voters has already filed a major new lawsuit in Ohio, seeking proactive changes in the provisional voting system in advance of the next election in that state. (This effort to resolve these legal issues well before November 2006 is a salutary one, so that the judiciary does not struggle with complicated, sensitive questions at a frenzied pace, either in the last few weeks before Election Day or the first few weeks immediately after Election Day.)

The efficacy of these post-Election Day lawsuits was mixed. In New York, supporters of a Democratic candidate for a state senate seat prevailed in that state's highest court on the proposition that provisional ballots cast at the correct polling *site* but at the wrong precinct should be counted. (Many polling sites, particularly in urban locations, serve multiple precincts.) The New York high court, however, rejected the contention that provisional ballots at the wrong polling site must be counted. The court also rejected the proposition that a provisional ballot should count if another (regular) vote already had been cast in the name of the provisional voter (even if the provisional voter purported to offer proof that the other vote had been cast by an imposter). Finally, the court accepted the contention that a provisional ballot should count if the ballot's envelope was missing information as a result of a poll worker's clerical error. The upshot of these rulings was that the Democratic candidate reduced the Republican's margin of victory (from 58 to a mere 18 votes), but did not succeed in overturning the election result.

In North Carolina, post-election litigation over provisional ballots ultimately proved inconsequential as the state's legislature took matters into its own hands. The race for the state's Superintendent of Public Instruction turned on whether approximately 11,000 "wrong precinct" provisional ballots would be counted under state law. The state's Supreme Court ruled that they should not count, but the state's legislature disagreed and enacted a new law to supersede the supreme court's ruling. The election was finally resolved on August 23, 2005 – *43 weeks* after Election Day – making it the last settled statewide election from 2004. The length of time it took to resolve this dispute shows the dangers of leaving ambiguous provisions of state law concerning the counting of provisional ballots.

Washington suffered an even more celebrated, if slightly less protracted, dispute over the counting of provisional ballots in statewide race. Here, too, the effort to overturn the result of the race through a lawsuit was unsuccessful. Republicans went to court after their gubernatorial candidate, Dino Rossi, came up 129 votes short in the third (manual) count of the ballots (having come out ahead in the two previous – machine – counts). Among other problems, Republicans were able to show that this third count included 252 provisional ballots cast by individuals who could not be verified as registered voters. But because these provisional ballots had been mingled with regular ballots during the counting process, it no longer could be determined for which candidate these provisional ballots were cast. After a lengthy trial at which the Republicans attempted to show statistically that enough of these ineligible ballots would have been cast for the Democratic candidate to change the result of the election, the trial court rejected such statistical proof as improper under state law, and Rossi decided not to appeal the decision to state's supreme court. The ruling came on June 6, 2005 – 32 weeks after Election Day.

Perhaps Washington's plight was aberrational and uncontrollable: how were election officials supposed to predict – and, more important, how were they supposed to avoid – the problem of poll workers inappropriately feeding provisional ballots through the counting machines as if they were regular ballots? (For future elections, Washington has adopted a series of measure, including color-coding provisional ballots and making sure that their different shape and size prevents them from being read by the machines used to count regular ballots, in an effort to prevent a repeat of this particular problem.) The after-the-fact litigation certainly was unable to put the spilled milk back in the bottle. While the litigation put a spotlight on the failures of the electoral process in Washington in 2004, serving as a catalyst for future reforms, it did nothing to change the outcome of the 2004 election itself, except only to delay the conclusion of the process by more than six months. (The fact that the Democratic candidate, Christine Gregoire, who was certified the winner after the manual recount, was inaugurated as Governor and exercised the powers of the office during those six months evidently affected the willingness of a trial judge to overturn the results of the election.)

One earlier aspect of the litigation over provisional ballots in Washington did prove efficacious – and importantly so. In December 2004, during the recounting process (before certification of Gregoire as winner), it was discovered that 547 provisional ballots in King County has been rejected because they could not be matched with a signature in the county's current electronic database of registered voters, but that county officials had not attempted to match the signatures against original registration forms, older electronic files, or other available records. Upon this discovery, Democrats went to court arguing that state law required that the provisional ballots be verified against these additional records. The Washington Supreme Court unanimously agreed with this argument, vindicating the principle that provisional ballots are designed to protect voters against clerical errors affecting the accuracy of the state's updated registration list.

The state supreme court, however, rejected the Democrats' additional argument that different rates at which counties invalidated provisional ballots because the signature on the ballot did not match the signature on file was sufficient to establish an Equal Protection violation under the principles of *Bush v. Gore*. The different rates could be explained by factors other than the assumption that county officials were applying different standards when conducting signature matches. Since the counties were purporting to apply the same standard, and there was no definitive proof to the contrary, the court found no Equal Protection violation.

The Democrats did win another important procedural ruling early on in the post-election litigation in Washington. They sought – and obtained – public disclosure of the names of all individuals whose provisional ballots were rejected because their signatures did not match county records. This disclosure ultimately uncovered which provisional ballots had been rejected based on insufficient examination of county records.

CONCLUSIONS:

A review of all the litigation over provisional voting in connection with the 2004 election leads to the following tentative conclusions. First and foremost, litigation is more likely to be successful – and yield a public benefit – if its goal is simply to assure the accuracy of the provisional voting process, rather than seeking to undo the result of an election. Of course, as a practical reality, most litigation that actually occurs is likely to be motivated by a desire to affect the outcome of an election, rather than the altruistic, public-spirited motive of improving the accuracy of the process. For this reason, in the future, it will be useful for states to distinguish between (a) streamlined administrative remedial processes, which will enable individual voters to seek redress in the event they believe their provisional ballot rights were mistreated, and (b) a more burdensome judicial proceeding for the purpose of contesting an election result. In the meantime, in some states that have been the focus of widespread national attention because of past problems (for example, Florida and Ohio), citizen groups like the League of Women Voters may have sufficient resources and incentives to bring system-wide litigation that seeks structural reform of the provisional voting process.

Second, and related, the earlier that litigation occurs in the electoral process, the more likely it is to secure rights protected under provisional voting laws. If nothing else, early litigation (even when ruled unmeritorious) has the effect of clarifying the rules in advance. It can put people on notice of what rights they do and do not have. The EAC might be in a position to give guidance to states on how to encourage earlier, rather than later, litigation over provisional ballots. For example, EAC could consider whether it would be a "preferred practice" for states to preclude any post-election challenges that could have been filed in a pre-election lawsuit. [Tom: I'm not sure whether to include these last two sentences, but they are responsive to your question.]

Third, the more narrow and specific the complaint (and thus the more narrow and specific the remedy sought by a lawsuit), the more receptive the court will be. It is easier for a court to order disclosure and the checking of additional records than it is for a court to sustain an amorphous Equal Protection claim about disparities in the signature verification process. Although it is too early to say that all Equal Protection challenges to the counting of provisional ballots will be unsuccessful, the speed with which the Washington Supreme Court rejected the Equal Protection claim over the signature matching process indicates that future Equal Protections claims will need to be much more specific about the disparities they allege in order to have a chance of success.

In sum, if litigation is to occur over provisional voting in 2006 or 2008, it would be better if the litigation were to occur as early as possible before Election Day, focused specifically on the ways state laws are allegedly deficient and should be remedied. Such litigation can have the virtue of clarifying the rules applicable to provisional voting and, where necessary, assuring that the rights protected by provisional voting laws are indeed enforced. Such pre-election lawsuits, of course, do not ask the court to change which candidate wins the election, and one lesson of the 2004 experience is that litigation is least valuable when it seeks that kind of outcome-altering decree.

Question 4: How effective was provisional voting in enfranchising qualified voters?

Providing an answer to this question poses a considerable challenge. To evaluate the decisions of local election officials' decisions on how to inform voters about the possibility of provisional voting and then whether to count a provisional ballot demands information about the eligibility or registration status of each provisional voter. That information is not available.

What is known, with reasonable confidence, is the number of provisional ballots cast and provisional ballots counted. Provisional ballots enfranchised 1,231,429 citizens, or 1.01% of the total turnout in 2004. Nationwide, 1,933,863 provisional ballots were cast, 1.6% of the total turnout. Of those ballots, 63.7% were subsequently verified and included in the final vote tally. These ballots were cast by voters who otherwise would have been turned away at the polls.

Not knowing the total number of registered voters who might have voted but could not makes estimating the effectiveness of provisional voting quantitatively impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes are lost in presidential elections due to the causes shown in the table below. The estimate is a rough approximation, but may provide data that begins to assess the order of magnitude of the pool of potential voters who might have been helped by the provisional ballot process.

Votes Lost (Millions)	**Cause**
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting. Thus a rough-and-ready estimate of the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. A very rough estimate of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)[*]. Whatever the precise figure, concluding that

---

[*] Since this tentative conclusion is based on imprecise estimates, caution suggests another interpretation of the data be considered as well. The category of "registration mix-ups" was developed as a measure of the states' registration systems as included in the Census Bureau's Current Population Survey. The CPS after each asks people if they were registered and if they voted. It gives breakdowns of reasons why people did not vote.

Survey respondents tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states.

In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000. Thus the arrival of provisional voting in the 18 "News" increased the number voting by only 0.1%. We prefer the conclusion in the text, but this alternate interpretation may well be correct.

there is considerable room for improvement seems reasonable.

Several states came to just that conclusion. Legislative activity suggests that the states were less than satisfied with the effectiveness of their processes. State legislation adopted since the election points to areas of concern.

- <u>Not enough time to examine and count the provisional ballots:</u> Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.

- <u>Lack of uniform rules for counting ballots and effective training of the election officials</u> in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

Another indication of lack of effectiveness is legal challenges to the process. Voters or other parties have sought court review of local officials' decisions.

- In Washington State a long legal battle over the gubernatorial election resulted in calls for reform in the way provisional ballots are evaluated. But much of the furor was over provisional ballots that possibly should not have been counted rather than over ballots that were rejected in error.

- In North Carolina's much-disputed election for Superintendent of Public Instruction, the most contentious debate concerning provisional ballots hinged on the issue of ballots cast outside the correct precinct rather than the qualifications of the voter to cast the ballot.

In general, the courts have been clear that a voter's ballot should not be rejected when the invalidity was caused by a ministerial error by election officials. In New York, the court place upon election officials a duty to direct voters to the correct district once they are inside the correct polling place, but the voter has the obligation to arrive at the correct polling place.

The courts have also held that states cannot categorically deny provisional ballots to voters, a holding that broadens the concept of provisional voting beyond the fail-safe concept. Unfortunately, these decisions could operate to <u>decrease</u> the chance that a ballot will actually be counted. Even if a precinct worker determines that a potential voter is seeking to vote in the wrong precinct, the voter cannot be denied a provisional ballot and simply directed to the correct polling place. If the voter demands a provisional ballot, it must be provided, even if it will not be counted if cast in the wrong precinct. Clearer instructions to poll worker and voters could ameliorate the unintended consequences of these court decisions.

Ultimately, second-guessing the determinations of election officials on counting ballots is likely to be fruitless outside of a court hearing on particular ballots and specific decisions. Aggregate data from the states, however, indicates that some states were more effective than others in enfranchising voters through the provisional ballot.

In states that used a provisional ballot before HAVA ("Old" states), a higher proportion of voters were enfranchised by provisional ballots than in "New" states. In the 25 states that had some experience with provisional voting before HAVA, a higher portion to the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.

A reasonable assumption is that potential voters in both the old states and new states encountered similar problems that made it impossible to cast a regular ballot. But they had different provisional systems to navigate, and consequently they experienced different outcomes. Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the new states. This provides more evidence that there is considerable room for improvement.

If experience with provisional voting does turn out to be the key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further guidance from the EAC on best practices and more consistent management could sharpen the lessons learned from that experience.

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the "New" states was the result of administrative problems stemming from inexperience will improvement be automatic. The other possibility is that the "New" states have a political culture different from the "Old" states. That is, underlying characteristics of the "New" states political system may be the reason they had not adopted some form of provisional voting as the "Old" states did.

The "New" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, re-registering after changing address. Or they may value keeping control at the local level, rather than ceding some authority to state or federal directives. If the inconsistent performance in the "New" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballot will he harder and take longer to achieve.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

HAVA was designed to provide registered voters who found themselves absent from the voters' list at polling places a way to exercise their right to vote. It requires that certain voters be given provisional ballots and that those ballots be counted if they are later determined eligible under state law. The act gave states broad latitude in how to implement provisional voting, including who beyond the required categories of voters should receive provisional ballots and how to determine if provisional ballots that are cast should be counted.

There was considerable variation in how provisional ballots were distributed and counted in the 2004 election. Little consistency existed among <u>and</u> within states in the way provisional ballots were used.

The use of provisional ballots was not distributed evenly across the country. Indeed, 6 states (California, New York, Ohio, Arizona, Washington, and North Carolina) accounted for more than two-thirds of all the provisional ballots cast in the 2004 election. Wide variation was found across the nation, even when overall state size and turnout was taken into account.

- In Alaska, provisional votes accounted for 7% of all votes cast on Election Day. In 22 other states provisional ballots made up less than 0.5% of votes on Election Day.
- The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware.
- The range of ultimate inclusion of provisional ballots in final vote tallies was immense: The 7% of the total vote represented by Alaska's counted provisional ballots was more than 1,000 times greater than Vermont's 0.0058%.

The greatest source of this variation was the state's experience or lack of experience with provisional voting. In experienced states, a higher proportion of voters cast provisional ballots and a higher percentage of provisional ballots were counted than in states implementing provisional voting for the first time.

In the 25 states that had some experience with provisional voting before HAVA, a higher portion to the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.

- The 25 experienced states averaged about 2% (2.17%) of the total vote cast as provisional ballots. This was 4 times the rate as in states new to provisional, which averaged less than half a percent (0.47%).
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion of the new states, which counted just 33% of cast provisional ballots.

- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states provisional ballots accounted for only 0.23% of the total vote.
- In short, the share of provisional ballots in the total vote was six times greater in experienced states than in new states.

Other influences on the variation among the states included:

- The more rigorous the verification requirements of the voter's identity and registration status, the smaller the percentage of provisional ballots that were counted.
    - In the 4 states that simply matched signatures nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
    - In the 14 States that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were certified
    - In the 14 states that required an affidavit just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted.
    - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were certified. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office.

- Voter registration databases provided information that reduced the number of provisional ballots counted. In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%).

- States that allowed out-of-precinct ballots counted 56% of the provisional ballots. States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.
    - In experienced states, this was even more pronounced. 52% of ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
    - If all states counted out-of-precinct ballots, perhaps 280,000 more voters would have been enfranchised across the country.

A final word about the variation among the states:

High-Low rating of Percent of PV Ballots Cast as part of Turnout
* High-Low rating of Percent of PV Ballots Cast that were Counted Cross-tabulation

Count

		High-Low rating of Percent of PV Ballots Cast that were Counted		
		Less than 50% Counted	More than 50% Counted	Total
High-Low rating of Percent of PV Ballots Cast as part of Turnout	Less than 1% of Total Turnout was PV	21	5	26
	More than 1% of Total Turnout was PV	1	16	17[*]
Total		22	21	43

As the table above shows, the nation can be divided into two groups of states: those that made significant use of provisional ballots (more than 1% of total turnout was cast as provisional ballots) and those that did not. The difference in how these two groups evaluated those ballots that were cast was striking. In states where high levels of provisional ballots were cast, high levels were also counted. In states where low levels of provisional ballots were cast, low levels were typically counted.

The table shows the relationship between use of provisional ballots in the states and the determination by the state that a provisional ballot should be counted. The relationship is strong (Yule's Q = 0.97), clear, and significant. In 26 states less than 1% of voters cast a provisional ballot. In 21 of those states, less than half the ballots cast were counted. In 17 states, more than 1% of voters case a provisional ballot, and in 16 of those states more than half the ballots were counted.

No ready conclusions can be drawn about why these results occur. The data could suggest that states where high levels of ballots were cast were overwhelmed by the sheer volume of them, resulting in insufficient critique of each ballot, or conversely that they were simply more experienced in making evaluations and were better able to identify legitimate ballots. It is possible that states with few ballots cast did not invest the time and effort to properly evaluate them, because their were so few of them, or it is possible that they were better able to dedicate the time to such an investigation and properly weeded out invalid ballots. Further research is required to better ascertain the reasons for these disparities.

Variation within states

---

[*] These states are: Alaska, Arizona, California, Colorado, District of Columbia, Iowa, Kansas, New York, Washington, Utah, Ohio, North Carolina, Nebraska, Maryland, New Mexico, New Jersey, and West Virginia.

Even within states consistency was hard to find. Counties differed widely in the rate at which ballots were cast and counted, suggesting that other factors beyond statewide regulations or administrative requirements were at play. This was true in both new and old states.

Election Line, for example, found that:

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Of the 20 States for which we have gathered county-level provisional ballot data, the rate of counting these ballots frequently varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors outside of the statewide factors analyzed here also impact the use of provisional ballots.

Election Official's Perceptions

In addition to the statistical differences among how states handled provisional voting, there were also differences in how election officials prepared for and evaluated the use of provisional ballots. A survey conducted by the Eagleton Institute at Rutgers University found that county election officials reported different perceptions of provisional balloting, depending upon whether they came from "Old" or "New" States. Both groups reported gaining help from state election offices on how to implement provisional balloting, but in different ways.

- Officials from "new" states reported receiving more guidance on how to evaluate ballots once cast, while officials from "old" states reported receiving more guidance on how to design ballots. Both groups regarded the guidance they received as being helpful.
- Officials from "old" states were more likely to report that they counted more ballots, were better prepared to direct voters to their correct precincts with maps, and regarded provisional voting as easy to implement and enabling more people to vote.
- Officials from "new" states were more likely to report that more information should have been provided to voters about the jurisdiction where provisional ballots must be cast in order to be counted and that more time was needed to implement provisional voting procedures.
- Officials from "old" states were more likely to report that provisional voting sped up and improved polling place operations and that it helped officials to maintain more accurate registration databases.
- Officials from "new" states were more likely to agree that provisional voting created unnecessary problems for election officials and poll workers.

This data can be interpreted either of two ways. First, experience and familiarity with provisional voting may be the key factor in the degree to which provisional voting is used and in how election officials perceived provisional balloting. Those officials who were more familiar and experienced with the system had more positive reactions to provisional voting and its worth. 81% of officials from experienced states reported that "there is a need to offer voters the opportunity to cast provisional ballots", while only 62% from new states did so.

But another way of explaining the difference is less rosy for provisional ballots. It may be that the states new to provisional balloting have a political culture somewhat different from the states that had offered a provisional ballot before HAVA. The new states may have a history of striking a different balance among the competing voting objectives of access, security, and administrative practicality. Officials in those states may believe that the fail safe offered by provisional voting broadens access at the expense of security and burdens election administrators beyond any perceived benefit. Further survey research could help resolve this question.

Conclusion

States that had previously had some form of provisional ballots and those that did not had different experiences in 2004. Those states that had used a provisional ballot before HAVA states had more ballots cast, found higher levels of those ballots to be legitimate, and had much higher levels of provisional ballots in their final vote tallies. Election officials in those states also felt that provisional ballots were easier to administer and more worthwhile than did their counterparts in states new to provisional voting. The strongest influence noted in this study was simply that of experience with the process.

If the difference is mostly one of experience, in subsequent elections, officials will be more prepared for and comfortable with the implementation of provisional ballots. This should lead to greater consistency among the states and more positive ratings of it as a system. If, on the other hand, the different experiences with provisional ballots reflects different political cultures among the states, consistency among the states may take longer to increase.

Other factors, such as verification laws and requirements for whether out-of-precinct ballots may be counted, will continue to cause variance across the country, but as voters and election officials become more familiar with the system, that variance may stabilize. In sum, provisional balloting was applied inconsistently in 2004, returning a wide range of results. Since the states have considerable latitude in how they meet HAVA's requirements for provisional voting, a considerable degree of variation among the states is to be expected in the future. If that variation stems from differences in political culture among the states, it is likely to persist.

Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

This question demands two different kinds of answers. First, how do the local officials themselves characterize their understanding of their responsibilities to manage the provisional voting process? Second, objectively how well did the process appear to be managed?

While essentially all (98%) county-level local elections officials considered the instructions they received from their state governments to be "useful" or "very useful," the crucial question is how well did the process work on election day? The lack of consistency among and within states in the use of provisional ballots and evaluating those ballots indicates considerable variation in the understanding of the process by election officials.

Four out of ten local election officials felt poll workers needed more training to understand their responsibilities. One sign of dissatisfaction with the functioning of the provisional voting process is the number of states that have amended their statutes on provisional voting to include specific language about poll worker training. Among these states are Colorado, Indiana, New Mexico and Washington.

Statutes, of course, reflect only part of the story. For example, Alabama – a state new to provisional voting – undertook a concerted training effort on how to handle and count provisional ballots. It also created a notification system whereby voters could verify if their vote counted within 10 days of casting their ballots. These steps were not dictated by statute, but reflected the initiative of f local elections officials. Their leadership indicates a good understanding of their responsibilities under HAVA and the state statute.

More than 8 out of 10 county-level elections officials reported receiving instructions from their state government regarding the implementation of provisional voting. Topics covered in those instructions from the states included:

- How to administer the provisional voting system
- Who is eligible to vote using a provisional ballot
- How individuals vote using a provisional ballot
- The jurisdiction where individuals can vote by provisional ballot
- Whether the provisional ballot could be used as an application to update the voter's registration
- How to train poll workers to process provisional ballots
- How to provide voters with the opportunity to verify if their provisional ballot was counted
- Guidelines for determining which provisional ballots are to be counted
- Strategies to reduce the need for voters to use provisional ballots
- How to design the structure of the provisional ballot

Those local election officials believe the most effective efforts to improve the provisional voting process would be to reduce the use of provisional ballots as a failsafe by improving technology – such as registration databases – available to voters and poll workers. Reflecting their understanding of the provisional voting process, local elections officials call for:

- State-sponsored websites where voters can verify their registration status before Election Day.
- Access by poll-workers to statewide voter registration databases at polling place.

While local election officials report that the instructions they received were "useful," the quality of the information they receive is not the only influence on their performance. They recognize that timing is critically important. They understand that they must receive clear instructions from their state election agencies early enough to absorb, understand, and pass it along as operational instructions to poll workers and voters.

Subject Re: Schedule for completion of Prov. Voting and Voter ID research

I think that a number of months ago we envisioned the Eagleton project culminating with a presentation of both of the papers at a public meeting. We had tentatively scheduled that presentation for the June public meeting. Also, we must provide for a review of these studies to EAC's Standards Board and Board of Advisors.

Clearly, plans have changed although we need to figure out how we have Eagleton present its final papers on Provisional Voting (already planned)and Voter Identification (still in process) to the EAC Standards and Advisory Boards.

Look forward to your suggestions on how best to proceed with wrapping up these two efforts.

Subject Re: Eagleton/Moritz Next Steps

John and Tom-

A couple of items related to timing over the next several weeks:

1. Is it possible to get your final report on Provisional Voting by COB May 5? If so, I can get this to the four Commissioners for final review and approval. It will then be ready to present to the EAC Board of Advisors and Standards Board at the May 24 meeting.

2. As we discussed I have been working to identify a small group of academics(three or so) who will be available to review the Voter ID paper the week of May 8. The focus of the review will be on Tim's research methodology and statistical analysis. I am fairly certain that this review can be done via conference call , preferably on May 11 or May 12. This would assume each of the reviewers will have spent time reviewing the paper, taking extensive notes and summarizing his or her comments. I expect that you all, Tim, Mike Alvarez and any others from your peer review panel, who have an expertise in research and statistics, will be available for the conference call, as well?

3. While I expect you will be able to have your final Voter ID paper to me sometime during the week of May 15, it is not clear whether or not the paper will be presented to the EAC Standards and Advisory Boards the following week. As you know, the paper contains some controversial information, so the Commissioners may elect to spend additional time reviewing the findings among themselves, and before it is formally presented to our Boards.

Let me know if this schedule works for you all.

Subject Re: No cost extension paperwork

Hi John-

As with the last no-cost extension request, I'll need a brief memo/statement outlining why you are making the request for the extension. Included in the narrative should be statement about which tasks have not been completed and why.

I'm pressing ahead with the timeline we discussed last week. I think a May 5 teleconference may be too ambitious- I think it may be more likely that we'll get peer review comments during the week of May 8.

Other than that I think it's doable.

Thanks, as always, for your work.

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.7
    - Task 3.8
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from March 1 through March 31, 2006. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In March we revisited our research on Provisional Voting to respond to a question from the EAC's Executive Director. We found that the longer the time provided to evaluate provisional ballots, the greater the percentage that are counted. Based on the comments of the Peer Review Group, we revised our statistical analysis of the effects of voter ID requirements on turnout and distributed the revised draft to the PRG again. We received further comments from three PRG members, who expressed confidence in the analysis. Their comments are now reflected in the latest draft, as presented to the EAC on April 3.

We polished the draft report on Voter ID issues based on preliminary comments by the EAC. The results of that revision were incorporated in the briefing we prepared for delivery on April 3 to the EAC Commissioners in Washington. That meeting had originally been envisioned as a Closeout Conference. While we have met the schedule provided under the no-cost extension to the contract, the EAC has requested that we take additional time to revise the Voter ID report based on comments at the April meeting, arrange another meeting of the PRG, and, perhaps, undertake additional research on Voter ID over time. As this report is being prepared, we are exploring those options.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting. Please direct questions or comments about this rep[redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November. We received comments on the November draft report in a teleconference on February 22 with EAC Executive Director Tom Wilkey and Contract Manager Karen Lynn-Dyson. We are now revising and polishing the draft in accord with many of the comments by the Commissioners.

We have analyzed the effect of the different time periods for the evaluation of provisional ballots established by the states on the percentage of provisional ballots that end up being counted. The results indicate that longer time periods result in more ballots being counted. That finding will be incorporated in the revised, final draft report.

Time period	Number of States	% PB Counted
< 1 week	14	35.4%
1 – 2 weeks	15	47.1%
> 2 weeks	14	60.8%

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. The EAC has accepted that recommendation. Our final report will include recommendations for promulgation by the Commission as "Best Practices," but will not include a proposed "Guidance Document," referred to in Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance).

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is now the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has completed the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. The results of its work constitutes the compendium of legislation, administrative regulations, and case law called for under this task. This month the Moritz team reviewed state statutes and regulations on the time period allowed for the evaluation of provisional ballots. Its report provided the basis for the statistical analysis of the effect of greater time on the number of ballots counted.

Description: The Moritz team has compiled statutes on Voter Identification, and has provided a summary analysis of its research, including litigation, included in the draft of the Voter ID paper that has now been reviewed by the Peer Review Group.

Progress: The review of current voter identification litigation nationwide is now included in the draft report.

Work Plan: In the remaining month of the project, Moritz and Eagleton will continue to work together to develop best practices in the area of voter identification, based on our combined research and the case law.

RESEARCH EFFORTS

We continue to examine and categorize voter registration forms across the states to see what forms of identification are requested from mail-in registrants in order to highlight how easily accessible states make information about voter identification. The table displaying this data is challenging to complete.

VOTER ID AND TURNOUT ANALYSIS

We revised the analysis of the effect of different voter ID requirements on turnout following the meeting of the PRG in February. The revision was distributed to the PRG in March, and 3 members of the PRG commented on the revision at the end of the month. They pointed to a few areas to clarify the analysis and expressed overall confidence in the quality of the work.

Description: The analysis suggests that more stringent voter ID requirements reduce turnout by several percentage points. We reviewed the analysis, looking at participation compared to both the Voting Age Population and the Citizen Voting Age population.

Progress: The PRG review strengthened the analysis. We have incorporated the results in the revised draft of our report, as distributed to the EAC for the April 3 meeting. It is summarized in the PowerPoint presentation prepared in March for the April meeting.

Challenges: The models we are using, while sophisticated, are difficult to run and interpret. The analyses are time-consuming. The PRG's counsel has assisted in meeting this challenge.

Work Plan: We completed a draft of the Voter ID report for the EAC in March. Based on the EAC's comments at the April meeting, we are revising the paper once again for the final report.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: With its meeting to review the Voter ID paper, the PRG completed its work on this project. Several members of the PRG did comment on the revised statistical analysis of voter turnout. Members may be called together again for a review of our final revision, if changes to the schedule are approved by the EAC.

Challenges: No new challenges were encountered.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

As agreed in a telephone conversation with Karen Lynn-Dyson on April 13th, a detail of expenses incurred from the project during March and April will be sent under separate cover in early May to Ms. Dianna Scott, Administrative Officer at the EAC.

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. The contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

Sorry to have missed you on Monday, John.

I think all of the Commissioners found the sessions extremely helpful and are much clearer about the work that has been done on the Voter ID topic.

Shall you Tom and I have a conversation early next week about next steps- specifically what you anticipate doing on your end to create final reports for both Voter ID and Provisional Voting and what additional feedback, if any, you'd like to get from the EAC prior to submitting these final reports?

We have talked about the possibility of having you all present your final reports at our June public meeting; that idea is still under review, however.

Look forward to hearing from you about a call sometime next week.

Please be certain to thank all of the project staff for coming to DC and taking the time to meet with the Commissioners.

Subject FYI-Eagleton

Turns out that Eagleton was doing a brief conference call with their project staff this afternoon and they asked me to participate briefly. Looked for you guys and you were in the Commissioner Retreat. Basically shared some very general thoughts with them and framed it as a series of questions/issues that might arise when they make their presentations next week.

Spoke of the CVAP vs. VAP issue, exit polls and CPS data versus using our Election Day survey and speaking with Election Officials about these topics. Also framed the issue of possible bias in their report by suggesting that they start out explaining how and why they have arrived at their statement about voter Id (burdensome, onerous, etc). Also suggested framing this by speaking of African American and elderly voter ID attitudes that appear to contrast with attitudes expressed by Hispanic voters. Did also ask about why they didn't look at Asian voters and if they included the March 15 2006 Census Bureau report in their analysis.

They took these comments under advisement and will be ready to address these and other topics at Monday's meetings.

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns how such requirements affect voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics argue that requiring voters to produce some form of government-issued photo identification on Election Day is more demanding than requiring, for example, that they state their names at the polling place because of the various steps needed to procure a photo identification card. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

Deleted: , such as a driver's license.

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Each state is classified as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

Deleted: ID

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with voter identification requirements ($r = -.21$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.16$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

Differences in voter turnout at the state level in 2004 varied based on voter identification requirements.[2] Taking into account the maximum requirements, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can place the effects of voter identification in a more accurate context. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the

---

[2] Voter turnout is defined here as the percentage of the adult voting-age population that voted in November 2004, based on county vote totals reported by the states and U.S. Census population projections for the counties from 2003. McDonald and Popkin (2001) contend that using the voting-age population to calculate turnout understates turnout for a number of reasons. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county had no effect, but the percentage of Hispanic adults exerted a negative effect on voter turnout, as did the percentage of individuals living below the poverty line.

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] Thus voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data (p = 0.0003).

Comment [o1]:

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the intercept as a predictor generated an intraclass correlation of .40, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.36 [-0.04 (voter id) - 0.38 (Hispanic) + 0.06 (voter id X Hispanic)].

[Table 3 here]

The effects of the minimum requirements are not statistically significant (p = 0.15). The battleground state variable continues to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate has no statistically significant effect. As in the maximum identification requirements models, as the percentage of the population that is Hispanic or poor increases, turnout declines. As the percentage of elderly increases, so does turnout. The proportion of African-Americans in the population does not affect turnout. Adding interactive effects to the model results in a statistically significant and negative effect of minimum voter identification requirements on turnout. But one must interpret this estimate with caution. A chi-square test for the difference in fit between the two models shows no significant difference (p = 0.08), and thus no improvement to the fit when adding the interactions between voter identification requirements and the percentages of the county that is Hispanic or lives below the poverty line.

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991). Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm-Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[5] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the

Deleted:

---

[5] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S. citizens.

It is important to note here that the voter turnout rate for the CPS sample is much higher than the turnout rates presented in the aggregate data analysis. The U.S. Census Bureau reported that 89 percent of registered voters in the CPS sample said they voted (U.S. Census Bureau 2005). Turnout among the voting-age population was 58 percent in 2004, according to the aggregate data analysis. The difference is a result of several factors. One factor consists of the different denominators in calculating the turnout rate – registered voters versus the much larger voting-age population. Also, previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of a level of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be much higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

Deleted: [6]

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election. In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a competitive gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes). Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, and estimated robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[7] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Deleted: 025, or

Deleted:

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it was possible to break the sample into sub-samples along those demographic lines to explore

---

[7] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

variation in predicted probability by group. I disaggregated the sample by the variable of interest (such as race, for example), omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[8] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

Comment [o2]: The turnout figures shown in the analysis of the aggregate data range of 57.3% turnout to 63.1% turnout. When using the individual data, based on self-reports, the turnout figures approach 90%. I think a couple of sentences explaining the difference in the data between the two different analyses would be helpful here, even for readers comfortable with the statistical techniques used.

Deleted: was

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent if the maximum requirement would be to state one's name, and the probability drops 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Deleted: when

Deleted: as

Deleted: ing

Deleted: dropped

[Table 8 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify

---

[8] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

[9] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements).

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 9 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.

Deleted: ere

Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

Deleted: d

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[10] Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

Deleted: election judges

---

[10] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

Subject RE: Meeting with EAC April 1

Greetings All-

Tom O'Neill and I just had a good conversation in which I shared with him the Commissioners comments regarding Monday's meeting.

Long story short- they envision this meeting as one of a question and answer exchange, and not a close-out meeting per se.

They found the process used for the Provisional Voting paper quite satisfying and wish to repeat such a process with this piece of research. Once the Commissioner's have had an opportunity to participate in this exchange I will gather their feedback and share it with Tom and John.

We anticipate that we will have to extension to the Eagleton/Moritz contract in order to accommodate this process and to allow for incorporating these comments into a final draft which will be created.

Look forward to seeing all of you on Monday.

Subject Information requested by Commissioner Hillman

Karen:

It was good to meet with you, your colleagues, and the commissioners on Monday. The feedback has been very helpful as I revise my part of the voter identification study.

Commissioner Hillman asked during and after the meeting for some information from the Current Population Survey. She was curious about the percentage of non-citizens who said they were registered to vote, and the percentage of non-citizens who said they voted in the 2004 election.

I've looked at the questionnaire and the data. The question about citizenship preceded the questions about registration and voting in the survey. If a respondent said she or he was not a citizen of the United States, the respondent did not receive the questions on registration and voting. So, at least from this data set, I cannot discern the percentage of non-citizens who claimed to be registered or to have voted. (That would be fascinating information, indeed.)

Best regards,

Tim Vercellotti

Subject Re: Provisional Voting Report Status and Request for Advice

John-

Many thanks for getting this draft document to us.

Over the next day or so I will spend time with key EAC staff reviewing the document and considering your questions. As you may recall, Commissioner Martinez has taken a prominent role in the review of your initial work and I am certain he will continue to do so. Sadly, the Commissioner lost his mother two weeks ago and, consequently, will not return to the office until next week.

It is likely that EAC staff will not be able to give you a definitive answer on some of your questions until the Monday after Thanksgiving. I will, however, try to answer some of the administrative questions before that time.

Regards-

Subject Provisional Voting Report Status and Request for Advice

Karen - We would like to talk with you about the process and schedule for completing our work in a way that is most useful to the EAC. I am attaching a draft timeline for the completion of this work and listing below five specific questions we need to resolve as quickly as possible. I would appreciate it if you would call me to discuss how best to address these matters - whether by telephone or by coming to meet in Washington.

We are planning to submit our report on Provisional Voting to the EAC by November 18^th . Although it is not required in our contract, we will at the same time give copies to the members of the Peer Review Group offering them the opportunity to send us any additional corrections or other comments.

We are considering making all our recommendations for both Provisional Voting and Voter ID in the form of Best Practices. Some of them might well lend themselves to Guidance, but our discussion of the earlier draft with the EAC left us with the clear impression that on this topic the preference was for recommendations for Best Practices rather than a Guidance document. The calendar also argues for the Best Practices route to enable the EAC to give states advice they can use in 2006. (The attached draft timeline would need to be revised if the EAC prefers to propose some of the recommendations as Guidance.)

QUESTIONS:

1. Does the EAC agree with the approach described above to make all recommendations in the form of Best Practices rather than Guidance?

2. How long will it take the EAC to review and return comments on our draft Provisional Voting document? Is our attached revised schedule realistic in anticipating EAC comments no later than the week of December 12^th on the report we send you at the end of this week?

3. After we revise our report on Provisional Voting to reflect any comments we receive from the EAC, and follow a similar process for our report on Voter Identification, what further steps would the Commission like us to take? Would you want us to conduct a review with your Board of Advisors and/or hold public hearings even though these steps are, we understand, required only for a Guidance Document? A review by the Board of Advisors would offer the opportunity to solicit suggestions for Best Practices from its members, thus strengthening the document and building a constituency for their adoption. (The attached draft timeline does not include such additional reviews.)

4. In any case, we will need a no-cost extension to the contract to carry us past December 31^st . How do we make that request?

5. Assuming that we conduct fewer public hearings than we had anticipated, can we reallocate funds we had budgeted for that purpose to cover the higher than anticipated personnel and consultant costs we will be incurring after the first of the year?

We look forward to discussing these matters with you.

Thanks, John

Deliberative Process Privilege

DRAFT FOR DISCUSSION

REVISED SCHEDULE FOR EAC PROJECT

November 2005 – February 2006

November 10, 2005

Assumes no guidance document, only analysis and recommended best practices

DATE	Project Management	Provisional Voting	Voter ID
Week of 10/31		Review draft report to EAC (Team) Submit comments on report (Team)	Voter ID Research to TV
Week of 11/7	Status reports to JD for October tasks (all)	Redraft report (TON) Review and approve report (Team) Final draft report (TON)	Research continues (TV)
Week of 11/14	Submit monthly progress report (JD)	**Submit report to EAC for review** and to PRG for information Discuss with EAC use of Board of Advisors to expand "best practices." (TON, JW) EAC reviews report	Research continues (TV)
Week of 11/21		EAC review continues	Complete data collection for Voter ID analysis. (TV)
Week of 11/28		EAC review continues	Draft report on Voter ID analysis (TV)

Week of 12/5	Status reports to JD for November tasks (all)	EAC review continues	Internal review (PT)
Week of 12/12	Submit monthly progress report (JD)	Receive EAC comments on report Revise and PT review	Revise draft (TV) Draft alternatives (TON) Review and comment on alternatives (PT)
Week of 12/19		**Finalize analysis and best practices to EAC for publication**[1]	Complete draft report and alternatives (TV, TON)
Week of 12/26			Review draft report and alternatives (PT)
Week of 1/2/06	Status reports to JD for December tasks (all)		**Report and alternatives to PRG**
Week of 1/9/06			PRG meets and comments Revise (TV & TON)

Subject RESPONSE REQUESTED-Working Group for Voting Fraud and Voter Intimidation Project

Dear Commissioners:

The consultants' contracts for EAC's voting fraud and voter intimidation project require Tova Wang and Job Serebrov to work in consultation with EAC staff and the Commissioners "to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation". The contracts do not specify the number of working group members but, as EAC has to pay for the group's travel and we want the size of the group to be manageable, I recommend that we limit the number to 6 or 8. **Please let me know if you think that this limit is too conservative** .

Attached **for your review and comment** are two lists of potential working group members for this project. One list was submitted by Job, the other by Tova. Tova and Job have provided brief summaries of each candidate's relevant experience and have placed asterisks next to the names of the individuals whom they particularly recommend. I can provide more extensive biographies of these individuals, if you need them. If EAC agrees that the recommended working group members are acceptable, an equal number may be selected from each list in order to maintain a balanced perspective.

Absent from the attached lists is the name of a representative from the U.S. Department of Justice's Election Crimes Branch. At this time, I am working through the DOJ bureaucracy to determine to what degree Craig Donsanto will be permitted to participate. If he cannot be named as a working group member, we may still be able to use him as a resource.

Please provide your feedback to me no later than Monday , November 28. I am available to meet with you if you would like to discuss this matter further.

Possible Working Group Members -Serebrov.doc Possible Working Group Members- Wang.doc

Deliberative Process Privilege

Possible Working Group Members - Serebrov

I recommend the first four with an *

***Mark (Thor) Hearne II**-Counsel to Republican National Committee; National Counsel to American Center for Voting Rights; National election counsel to Bush-Cheney, '04; Testified before U.S. House Administration Committee hearings into conduct of Ohio presidential election; Academic Advisor to Commission on Federal Election Reform (Baker-Carter Commission).

***Todd Rokita**-Secretary of State, Indiana; Secretary Rokita strives to reform Indiana's election practices to ensure Indiana's elections are as fair, accurate and accessible as possible; Secretary Rokita serves on the nine-member Executive Board of the Election Assistance Commission Standards Board, charged by federal law to address election reform issues.

***Patrick J. Rogers**-Partner/Shareholder, Modrall, Sperling, Roehl, Harris and Sisk, P.A., Albuquerque, New Mexico; 1991-2003 General Counsel to the New Mexico Republican Party; Election cases: *The Coalition to Expose Ballot Deception, et al v. Judy N. Chavez, et al*; Second Judicial District Court of Bernalillo County, New Mexico (2005); represented plaintiffs challenging petition procedures; *Miguel Gomez v. Ken Sanchez and Judy Chaves*; Second Judicial District Court of Bernalillo County, New Mexico (2005); residency challenge; *Moises Griego, et al v. Rebecca Vigil-Giron v. Ralph Nader and Peter Miguel Camejo*, Supreme Court for the State of New Mexico (2004); represented Ralph Nader and Peter Camejo, ballot access issues; *Larry Larrañaga, et al v. Mary E. Herrera and Rebecca Vigil-Giron*, Supreme Court of New Mexico (2004); voter identification and fraudulent registration issues; *Decker, et al v. Kunko, et al*; District Court of Chaves County, New Mexico (2004); voter identification and fraudulent registration issues; *Kunko, et al v. Decker, et al*; Supreme Court of New Mexico (2004); voter identification and fraudulent registration issues; *In the Matter of the Security of Ballots Cast in Bernalillo County in the 2000 General Election*; Second Judicial District Court of Bernalillo County, New Mexico (2000); voting and counting irregularities and fraud.

***David A. Norcross**- Partner, Blank Rome LLP, Trenton NJ, Washington D.C; Chairman, New Jersey Republican State Committee, 1977 – 1981; General Counsel, Republican National Committee, 1993 – 1997; General Counsel, International Republican Institute; Counsel, The Center for Democracy; Vice Chairman, Commission on Presidential Debates;
Executive Director, New Jersey Election Law Enforcement Commission

Benjamin L. Ginsberg-Served as national counsel to the Bush-Cheney presidential campaign; He played a central role in the 2000 Florida recount; He also represents the campaigns and leadership PACs of numerous members of the Senate and House, as well as the Republican National Committee, National Republican Senatorial Committee and

National Republican Congressional Committee; His expertise is more in campaign finance.

Cleta Mitchell-Partner in the Washington, D.C. office of Foley & Lardner LLP; She advises corporations, nonprofit organizations, candidates, campaigns, and individuals on state and federal election and campaign finance law, and compliance issues related to lobbying, ethics and financial disclosure; Ms. Mitchell practices before the Federal Election Commission and similar federal and state enforcement agencies; Her expertise is more in campaign finance law.

Mark Braden-Of counsel at Baker & Hostetler; He concentrates his work principally on election law and governmental affairs, including work with Congress, the Federal Election Commission, state campaign finance agencies, public integrity issues, political broadcast regulation, contests, recounts, the Voting Rights Act, initiatives, referendums and redistricting; His expertise is mainly outside of the voter fraud area.

Deliberative Process Privilege

Re: Working Group Recommendations
Date: November 12, 2005

*Wendy R. Weiser, Associate Counsel in the Democracy Program at the Brennan Center for Justice at NYU School of Law and an expert in federal and constitutional law, has done a great deal of research, writing, speaking, and litigating on voting rights and election law issues. As part of the Brennan Center's wide ranging activities in the area of democracy, Ms. Weiser is currently overseeing an analysis and investigation of recent allegations of voter fraud throughout the country.

*Barbara Arnwine is Executive Director of the Lawyers Committee for Civil Rights Under Law, an organization that for four decades has been at the forefront of the legal struggle to secure racial justice and equal access to the electoral process for all voters. Notably, Ms. Arnwine and the organization have led the Election Protection program for the last several years, a nationwide grassroots education and legal effort deploying thousands of volunteers and using a nationally recognized voter hotline to protect voters' rights on election day.

*Daniel Tokaji, professor and associate director of the Election Law Center at the Moritz College of Law at the Ohio State University, is one of the nation's foremost experts in election law and reform and ensuring equality in the voting system. Professor Tokaji frequently writes and speaks on democracy related issues at academic and practitioner conferences, on such issues as voting technology, fraud, registration, and identification requirements, as well as the interplay between the election administration practices and voting rights laws.

Donna Brazile is Chair of the Democratic National Committee's Voting Rights Institute, the Democratic Party's major initiative to promote and protect the right to vote created in response to the irregularities of the 2000 election, and former Campaign Manager for Gore-Lieberman 2000 (the first African American to lead a major presidential campaign.) Brazile is a weekly contributor and political commentator on CNN's Inside Politics and American Morning, a columnist for Roll Call Newspaper and a contributing writer for Ms. Magazine.

Wade Henderson is the Executive Director of the Leadership Conference on Civil Rights (LCCR) and Counsel to the Leadership Conference on Civil Rights Education Fund (LCCREF), an organization at the forefront of defending voting rights for the last fifty years. Prior to his role with the Leadership Conference, Mr. Henderson was the Washington Bureau Director of the National Association for the Advancement of Colored People (NAACP)

Robert Bauer is the Chair of the Political Law Practice at the law firm of Perkins Coie, National Counsel for Voter Protection, Democratic National Committee, Counsel to the Democratic Senatorial and Congressional Campaign Committees and Co-Author, Report of Counsel to the Senate Rules and Administration Committee in the Matter of the United States Senate Seat from Louisiana in the 105th Congress of the United States, (March 27, 1997). He is the author of *United States Federal Election Law*, and one of the foremost attorneys in the country in the area of federal/state campaign finance and election laws.

Laughlin McDonald has been the executive director of the Southern Regional Office of the ACLU since 1972 and as the Director of the ACLU Voting Rights Project, McDonald has played a leading role eradicating discriminatory election practices and protecting the gains in political participation won by racial minorities since passage of the 1965 federal Voting Rights Act. During the past two decades, McDonald has broken new ground by expanding ACLU voting rights cases to include representation of Native Americans in various western states, and written innumerable publications on voting rights issues.

Joseph E. Sandler is a member of the firm of Sandler, Reiff & Young, P.C., in Washington, D.C., concentrating in campaign finance and election law matters, and general counsel to the Democratic National Committee. As an attorney he has handled campaign finance and election law matters for Democratic national and state party organizations, Members of Congress, candidates and campaigns. He served as general co-counsel of the Association of State Democratic Chairs, as general counsel for the Democratic Governors' Association and as counsel to several state Democratic parties.

Cathy Cox is serving her second term as Georgia's Secretary of State, having first been elected in 1998. In 2002 she earned re-election with over 61 percent of the vote, winning 146 out of 159 counties. Because of Secretary Cox's efforts Georgia has become a national leader in election reform. Her initiative made Georgia the first state in America to deploy a modern, uniform electronic voting system in every county

RECOMMENDA TrONS

Because every provisional ballot counted represents a voter who, if the system had worked .. perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have to vote provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within . states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greaterconsistency in the administration of provisional voting.

Self-evaluation of Provisional Voting -4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a Qualitv-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

Emphasize the importance of c1aritv

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendations section of this report could be helpful. Among those questions are:

```
PCL XL error

        Subsystem:  KERNEL

        Error:      IllegalOperatorSequence

        Operator:   SetPageScale

        Position:   642
```

DATE!!!!!!

EAC Advisory 2005-006: Provisional Voting and Identification Requirements

The U.S. Election Assistance Commission (EAC) has recently received an inquiry regarding whether a state may impose an identification requirement that would limit a potential voter's access to a provisional ballot to which he or she is otherwise entitled under Section 302 of the Help America Vote Act (HAVA) (42 U.S.C. §15482). After consideration of the matter, EAC has concluded that Section 302 of HAVA creates a voter right. Specifically, the section creates the right for a potential voter to utilize a provisional ballot in the event their name does not appear on the registration list or the voter's eligibility is challenged by an election official. While States may create voter identification standards that exceed those laid out in HAVA and effect whether a provisional ballot is counted, States may not take action that limits a voter's right to receive and submit a provisional ballot. In explaining this position, this advisory reviews the plain language of HAVA Section 302, examines the differences between traditional and provisional ballots and analyzes the implementation of provisional voting under HAVA Section 303(b). This advisory also addresses the impact of a state's authority to create stricter standards than prescribed by HAVA upon HAVA's provisional voting requirements.[1]

Plain Language of HAVA Section 302. The right to cast a provisional ballot is created in Section 302 of HAVA. Pursuant to HAVA, when an individual declares that he or she is a registered and eligible voter in a federal election, that individual "shall be permitted to cast a provisional ballot" if (1) their name does not appear on the official list of eligible voters or (2) "an election official asserts that the individual is not eligible to vote." (Section 302(a)). This right to receive a provisional ballot is contingent upon only one thing (per Section 302(a)(2)), the individual's execution of a written affirmation that he or she is both a registered and eligible voter for the election at issue.[2] See also, Sandusky County Democratic Party v. Blackwell, 387 F.3d 565, 574 (6th Cir. 2004). However, notwithstanding the above, HAVA goes on to recognize that the right to submit a provisional ballot constitutes neither a means to avoid State imposed voter eligibility requirements nor a vote. Instead, HAVA requires election officials at a polling place to

---

[1] The EAC is the Federal agency charged with the administration of HAVA. While the EAC does not have rulemaking authority in the area of provisional voting, HAVA does require the Commission to draft guidance to assist states in their implementation of HAVA's provisional voting requirements. Although EAC's administrative interpretations do not have the force of law associated with legislative rules, the Supreme Court has long held that the interpretations of agencies charged with the administration of a statute are to be given deferential treatment by Courts when faced with issues of statutory construction. York v. Secretary of Treasury, 774 F. 2d 417, 419 – 420 (10th Cir. 1985) (citing Compensation Commission of Alaska v. Aragon, 329 U.S. 143, 153 – 154 (1963)) See also Christian v. Harris County, 529 U.S. 576 (2000); Edelman v. Lynchburg College, 122 S. Ct. 1145 (2002).

[2] Moreover, a potential voter determined not to be eligible must be informed of their provisional voting rights per Section 302(a)(1) of HAVA.

transmit a provisional ballot (or information associated with the written affirmation) to appropriate election officials for verification. (Section 302(a)(4) of HAVA). These election officials ultimately determine the voter's eligibility based upon information presented to or gathered by it, in accordance with State law. In this way, the State determines whether any provisional ballot submitted will be counted as a vote. Id.

In simplest terms, provisional voting represents the right of an individual (whose eligibility to vote has been challenged), to reserve their right to vote and postpone the voter eligibility determination to a time when more perfect or complete information may be provided. See Sandusky County Democratic Party, 387 F.3d at 570 and Florida Democratic Party v. Hood, 342 F.Supp 1073, 1079-1080 (N.D. Fla. 2004). A provisional ballot does not represent a different way to vote, nor does it serve as a bypass to State laws governing voter eligibility. Rather, it is designed to prevent an individual from losing his or her right to vote due to the fact that a poll worker did not have all the information available or needed to accurately assess voter eligibility. Thus, based upon the plain language of Section 302(a) of HAVA, a challenge to an individual's eligibility to vote (such as a challenge based upon identification requirements) cannot serve as a bar to the receipt of a provisional ballot, because it is the election official's challenge that triggers the provisional ballot procedure in the first place. To hold otherwise would defeat the purpose of provisional voting. In the end, to understand this concept one must understand the differences between traditional and provisional ballots.

Traditional vs. Provisional Ballots. The nature and procedures associated with a provisional ballot are wholly distinct from those of a traditional ballot. Because of this fact, the two processes must be treated differently. While voter identification requirements may serve as a bar to the casting of a traditional ballot, they may not prevent the submission of a provisional ballot.

First, the nature and purpose of traditional and provisional ballots are essentially different. The purpose of a traditional ballot is to allow a confirmed, eligible voter to cast a vote. The purpose of a provisional ballot is to allow individuals whose voter eligibility is challenged to reserve the right to vote by memorializing both their intent to vote and their proposed vote. This is evident by the HAVA processes discussed above. The bottom line is that the casting of a proper, traditional ballot constitutes a vote, while the casting or submission of a provisional ballot does not. A traditional ballot is cast only after voter eligibility has been determined by the State. Hence, the moment it is cast, it becomes an individual's vote. On the other hand, the submission or casting of a provisional ballot is not a vote. Rather, it is a claim that the potential voter who submitted it has the right to vote and reserves that right. As the Sixth Circuit Court of Appeals stated:

> [T]he primary purpose of HAVA was to prevent on-the-spot denials of provisional ballots to voters deemed ineligible to vote by poll workers. Under HAVA, the only permissible requirement that may be imposed upon a would-be voter before permitting that voter to cast a provisional ballot is the affirmation contained in [42 U.S.C.] §15482(a): that the voter is a registered voter in the jurisdiction in which he or she desires to vote, and that the voter is eligible to vote in an election for federal office. Sandusky County Democratic Party, 387 F.3d at 574.

This goes to the very heart of provisional voting. If provisional voting is a right triggered by an election official's determination that an individual has not met a voter eligibility requirement, how can such a requirement also serve as a bar to that right? The concept of provisional voting works only if the right is always available when the application of voter eligibility requirements is in question.

Second, consistent with the differences in purpose between traditional and provisional ballots, the other major distinction between the two lies in the application of voter eligibility requirements. This difference is primarily one of procedural timing. States have the right to create voter eligibility requirements and these requirements must be applied to both traditional and provisional ballots. In casting a traditional ballot, one must meet all eligibility requirements prior to receiving the ballot. However, in the provisional process, the potential voter has already failed to meet these preliminary requirements and the application of State law must occur after the ballot has been received. State voter eligibility requirements should be applied after the provisional ballot and/or supporting affirmation has been transmitted pursuant to Section 302(a)(3) of HAVA. Provisional ballots are counted as votes only after election officials have determined that the individual can meet voter eligibility standards consistent with state law. Again, the purpose of the process is to allow election officials more time, so that they may have more perfect information when making a decision about voter eligibility. Provisional ballots are subject to the full effect of State law regarding the eligibility to vote and the opportunity the law provides provisional voters to supply additional information. Provisional ballots do not escape state or federal voter eligibility requirements, those provisional ballots that do not meet State standards will not be counted.

Provisional Voting Under HAVA Section 303(b). Congress provided an example of how provisional voting works by applying the right to a specific circumstance. Section 303(b)(2)(B) of HAVA, entitled *Fail-Safe Voting*, provides that when a first-time voter who registered by mail is required by HAVA Section 303(b) to show identification, that person must be given a provisional ballot if he or she fails to provide such identification at the polling place. This section is important as it clarifies Congressional intent regarding how provisional voting should function.

The *Fail-Safe Voting* provision of Section 303(b)(2)(B) grants clear insight into how provisional voting should be implemented. While Section 303(b) deals with a specific subset of voters (first-time voters who registered by mail), its application of Section 302(a) supports the concept that a provisional ballot must be given to a voter who is determined (at the polling place) not to meet voter identification requirements. A review of the section shows that in the one area where HAVA set a Federal voter identification requirement Congress made clear that an individual's failure to meet this eligibility requirement triggered the statute's provisional voting section. Congress saw no difference between an individual's failure to meet the voter identification requirements it issued in Section 303(b) and the failure to meet eligibility requirements which trigger provisional voting under Section 302. Section 303(b) makes it clear that Congress did not intend voter identification requirements to limit access to provisional voting. Instead, Congress viewed provisional voting as a right, or more specifically, as a fail-safe. The EAC strongly believes that HAVA provisions must be interpreted to bring about consistent and evenly applied results. In this case, if individuals who fail to meet Federal identification standards have the right to a provisional ballot, so must individuals who fail to meet similar State standards.

Stricter Eligibility Standards and Provisional Voting. HAVA specifically provides that States may create stricter voter eligibility standards than provided in HAVA.[3] Arizona's "Proposition 200" identification requirements are a prime example of this authority. However, the HAVA authority to create stricter eligibility standards does not grant the state authority to create standards that bar access to a provisional ballot. To interpret HAVA otherwise (i.e. allowing stricter state identification standards to bar access to provisional ballots) would render HAVA's provisional voting mandate (Section 302) void and meaningless. HAVA cannot be read to grant both (1) the right to a provisional ballot if an individual's voting eligibility is challenged by a State and, (2) the right of that State to deny an individual a provisional ballot if they do not meet voter eligibility standards. These concepts are mutually exclusive. HAVA cannot be interpreted to allow a State to create voter eligibility standards that bar the Section 302 right to cast a provisional ballot without nullifying the effect and intent of that provision. Any such interpretation of HAVA would run afoul of both HAVA Section 304 and longstanding principles of statutory construction.

First, HAVA notes in Section 304 that while States may create standards that are stricter that those established under HAVA, this authority is limited to the extent "such State requirements are not inconsistent with the Federal requirements under [HAVA]." Clearly, provisional voting is a requirement under HAVA. Section 302(a) notes that qualified individuals "**shall** be permitted to cast a provisional ballot." (Emphasis added). In this way, States may not create standards that are inconsistent or interfere with the provisional voting mandate.

Furthermore, long established principles of statutory construction further prohibit an interpretation of HAVA that would render any of its provisions meaningless. It is "'a cardinal principle of statutory construction' that 'a statute ought, upon the whole, to be so construed that, if it can be prevented, no clause, sentence, or word shall be superfluous, void, or insignificant.'" TRW Inc. v. Andrews, 534 U.S. 19, 31, 122 S.Ct. 441, 151 L.Ed.2d 339 (2001), (quoting Duncan v. Walker, 533 U.S. 167, 174, 121 S.Ct. 2120, 150 L.Ed.2d 251 (2001)).

A Stricter Provisional Voting Standard. As discussed above, States' have the right to impose stricter requirements than those laid out in HAVA. The EAC has already made it clear, above, that a stricter voter eligibility requirement cannot be read to bar an individual's right to a provisional ballot. However, could a stricter requirement regarding provisional voting serve to limit access to such ballots? No. A stricter State requirement for provisional voting would be a standard that enhances a person's access to a provisional ballot. As the Sixth Circuit noted, "HAVA is quintessentially about being able to cast a provisional ballot." Sandusky County Democratic Party, 387 F.3d at 576. "HAVA's requirements 'are minimum requirements' permitting deviation from its provisions provided that such deviation is 'more strict than the requirements established under' HAVA (**in terms of encouraging provisional voting)**...." Id., (quoting 42 U.S.C. §15484, emphasis added). Thus, in terms of provisional voting, a stricter standard is one that serves to further encourage provisional voting. When passing laws affecting provisional voting, States must ensure that their provisions are consistent with HAVA or otherwise serve to further an individual's access to a provisional ballot. EAC concludes that any policy asserting that States may pass laws limiting access to provisional ballots conflicts with HAVA.

---

[3] See 42 U.S.C. §§15485 – 15485, entitled *Minimum Requirements* and *Methods of Implementation Left to Discretion of State*, respectively.

Conclusion. A state may not impose an identification requirement that would limit a potential voter's access to and submission of a provisional ballot. However, such requirements (when coupled with a state's provisional ballot procedures) may prevent a provisional ballot from being counted.

Gracia Hillman Chair	Paul DeGregario Vice Chairman
Ray Martinez III Commissioner	Donetta Davidson Commissioner

U.S. Election Assistance Commission
1225 New York Ave. - Suite 1100
Washington, DC 20005

On September 13, 2005 the U.S.. Election Assistance Commission issued an advisory (2005-006) and, after consideration of the matter EAC concluded that Section 302 of HAVA creates a voter right. Specifically, the section creates the right for a potential voter to utilize a provisional ballot in the event his or her name does not appear on the registration list or the voter's eligibility is challenged by an election official. While States may create voter identification standards that exceed those laid out in HAVA and effect whether a provisional ballot is counted, States may not take action that limits a voter's right to receive and submit a provisional ballot.

The right to cast a provisional ballot is created in Section 302 of HAVA. Pursuant to HAVA, when an individual declares that he or she is a registered and eligible voter in a federal election, that individual "shall be permitted to cast a provisional ballot" if (1) their name does not appear on the official list of eligible voters or (2) "an election official asserts that the individual is not eligible to vote." (Section 302(a)). This right to receive a provisional ballot is contingent upon only one thing (per Section 302(a)(2)), the individual's execution of a written affirmation that he or she is both a registered and eligible voter for the election at issue.[1]

In simplest terms, provisional voting represents the right of an individual (whose eligibility to vote has been challenged), to reserve their right to vote and postpone the voter eligibility determination to a time when more perfect or complete information may be provided. A provisional ballot does not represent a different way to vote, nor does it serve as a bypass to State laws governing voter eligibility. Rather, it is designed to prevent an individual from losing his or her right to vote due to the fact that a poll worker did not have all the information available or needed to accurately assess voter eligibility. Thus, based upon the plain language of Section 302(a) of HAVA, a challenge to an individual's eligibility to vote (such as a challenge based upon identification requirements) cannot serve as a bar to the receipt of a provisional ballot, because it is the election official's challenge that triggers the provisional ballot procedure in the first place. To hold otherwise would defeat the purpose of provisional voting. In the end, to understand this concept one must understand the differences between traditional and provisional ballots.

The nature and procedures associated with a provisional ballot are wholly distinct from those of a traditional ballot. Because of this fact, the two processes must be treated differently. While voter identification requirements may serve as a bar to the casting of a traditional ballot, they may not prevent the submission of a provisional ballot.

First, the nature and purpose of traditional and provisional ballots are essentially different. The purpose of a traditional ballot is to allow a confirmed, eligible voter to cast a vote. The purpose of a provisional ballot is to allow individuals whose voter eligibility is challenged to reserve the right to vote by memorializing both their intent to vote and their proposed vote. This is

---

[1] Moreover, a potential voter determined not to be eligible must be informed of their provisional voting rights per Section 302(a)(1) of HAVA.

evident by the HAVA processes discussed above. The bottom line is that the casting of a proper, traditional ballot constitutes a vote, while the casting or submission of a provisional ballot does not. A traditional ballot is cast only after voter eligibility has been determined by the State. Hence, the moment it is cast, it becomes an individual's vote. On the other hand, the submission or casting of a provisional ballot is not a vote. Rather, it is a claim that the potential voter who submitted it has the right to vote and reserves that right.

This goes to the very heart of provisional voting. If provisional voting is a right triggered by an election official's determination that an individual has not met a voter eligibility requirement, how can such a requirement also serve as a bar to that right? The concept of provisional voting works only if the right is always available when the application of voter eligibility requirements is in question.

Section 303(b)(2)(B) of HAVA, entitled *Fail-Safe Voting*, provides that when a first-time voter who registered by mail is required by HAVA Section 303(b) to show identification, that person must be given a provisional ballot if he or she fails to provide such identification at the polling place. This section is important as it clarifies Congressional intent regarding how provisional voting should function.

The *Fail-Safe Voting* provision of Section 303(b)(2)(B) grants clear insight into how provisional voting should be implemented. While Section 303(b) deals with a specific subset of voters (first-time voters who registered by mail), its application of Section 302(a) supports the concept that a provisional ballot must be given to a voter who is determined (at the polling place) not to meet voter identification requirements. Congress saw no difference between an individual's failure to meet the voter identification requirements it issued in Section 303(b) and the failure to meet eligibility requirements which trigger provisional voting under Section 302. Section 303(b) makes it clear that Congress did not intend voter identification requirements to limit access to provisional voting. Instead, Congress viewed provisional voting as a right, or more specifically, as a fail-safe. The EAC strongly believes that HAVA provisions must be interpreted to bring about consistent and evenly applied results. In this case, if individuals who fail to meet Federal identification standards have the right to a provisional ballot, so must individuals who fail to meet similar State standards.

First, HAVA notes in Section 304 that while States may create standards that are stricter that those established under HAVA, this authority is limited to the extent "such State requirements are not inconsistent with the Federal requirements under [HAVA]." Clearly, provisional voting is a requirement under HAVA. Section 302(a) notes that qualified individuals "**shall** be permitted to cast a provisional ballot." (Emphasis added). In this way, States may not create standards that are inconsistent or interfere with the provisional voting mandate.

States' have the right to impose stricter requirements than those laid out in HAVA. The EAC has already made it clear, above, that a stricter voter eligibility requirement cannot be read to bar an individual's right to a provisional ballot. However, could a stricter requirement regarding provisional voting serve to limit access to such ballots? No. A stricter State requirement for provisional voting would be a standard that enhances a person's access to a provisional ballot. A state may not impose an identification requirement that would limit a potential voter's access to and submission of a provisional ballot. However, such requirements (when coupled with a state's provisional ballot procedures) may prevent a provisional ballot from being counted.

BACKGROUND

On September 13, 2005 the U.S. Election Assistance Commission issued an advisory (2005-006) and, after consideration of the matter, EAC concluded that Section 302 of HAVA creates a voter right. Specifically, the section creates the right for a potential voter to utilize a provisional ballot in the event his or her name does not appear on the registration list or the voter's eligibility is challenged by an election official. While States may create voter identification standards that exceed those laid out in HAVA and effect whether a provisional ballot is counted, States may not take action that limits a voter's right to receive and submit a provisional ballot.

The right to cast a provisional ballot is created in Section 302 of HAVA. Pursuant to HAVA, when an individual declares that he or she is a registered and eligible voter in a federal election, that individual "shall be permitted to cast a provisional ballot" if (1) their name does not appear on the official list of eligible voters or (2) "an election official asserts that the individual is not eligible to vote." (Section 302(a)). This right to receive a provisional ballot is contingent upon only one thing (per Section 302(a)(2)), the individual's execution of a written affirmation that he or she is both a registered and eligible voter for the election at issue.[1]

In simplest terms, provisional voting represents the right of an individual (whose eligibility to vote has been challenged), to reserve his or her right to vote and postpone the voter eligibility determination to a time when more perfect or complete information may be provided. A provisional ballot does not represent a different way to vote, nor does it serve as a bypass to State laws governing voter eligibility. Rather, it is designed to prevent an individual from losing his or her right to vote due to the fact that a poll worker did not have all the information available or needed to accurately assess voter eligibility. Thus, based upon the plain language of Section 302(a) of HAVA, a challenge to an individual's eligibility to vote (such as a challenge based upon identification requirements) cannot serve as a bar to the receipt of a provisional ballot, because it is the election official's challenge that triggers the provisional ballot procedure in the first place. To hold otherwise would defeat the purpose of provisional voting. In the end, to understand this concept one must understand the differences between traditional and provisional ballots.

The nature and procedures associated with a provisional ballot are wholly distinct from those of a traditional ballot. Because of this fact, the two processes must be treated differently. While voter identification requirements may serve as a bar to the casting of a traditional ballot, they may not prevent the submission of a provisional ballot.

First, the nature and purpose of traditional and provisional ballots are essentially different. The purpose of a traditional ballot is to allow a confirmed, eligible voter to cast a vote. The purpose of a provisional ballot is to allow individuals whose voter eligibility is challenged to reserve the right to vote by memorializing both their intent to vote and their proposed vote. This is evident by the HAVA processes discussed above. The bottom line is that the casting of a proper, traditional ballot constitutes a vote, while the casting or submission of a provisional ballot does not. A traditional ballot is cast only after voter eligibility has been determined by the State. Hence, the moment it is cast, it becomes an individual's vote. On the other hand, the submission or casting of a provisional ballot is not a vote. Rather, it is a claim that the potential voter who submitted it has the right to vote and reserves that right.

---

[1] Moreover, a potential voter determined not to be eligible must be informed of their provisional voting rights per Section 302(a)(1) of HAVA.

This goes to the very heart of provisional voting. If provisional voting is a right triggered by an election official's determination that an individual has not met a voter eligibility requirement, how can such a requirement also serve as a bar to that right? The concept of provisional voting works only if the right is always available when the application of voter eligibility requirements is in question.

Section 303(b)(2)(B) of HAVA, entitled *Fail-Safe Voting*, provides that when a first-time voter who registered by mail is required by HAVA Section 303(b) to show identification, that person must be given a provisional ballot if he or she fails to provide such identification at the polling place. This section is important as it clarifies Congressional intent regarding how provisional voting should function.

The *Fail-Safe Voting* provision of Section 303(b)(2)(B) grants clear insight into how provisional voting should be implemented. While Section 303(b) deals with a specific subset of voters (first-time voters who registered by mail), its application of Section 302(a) supports the concept that a provisional ballot must be given to a voter who is determined (at the polling place) not to meet voter identification requirements. Congress saw no difference between an individual's failure to meet the voter identification requirements it issued in Section 303(b) and the failure to meet eligibility requirements which trigger provisional voting under Section 302. Section 303(b) makes it clear that Congress did not intend voter identification requirements to limit access to provisional voting. Instead, Congress viewed provisional voting as a right, or more specifically, as a fail-safe. The EAC strongly believes that HAVA provisions must be interpreted to bring about consistent and evenly applied results. In this case, if individuals who fail to meet Federal identification standards have the right to a provisional ballot, so must individuals who fail to meet similar State standards.

HAVA notes in Section 304 that while States may create standards that are stricter that those established under HAVA, this authority is limited to the extent "such State requirements are not inconsistent with the Federal requirements under [HAVA]." Clearly, provisional voting is a requirement under HAVA. Section 302(a) notes that qualified individuals "**shall** be permitted to cast a provisional ballot." (Emphasis added). In this way, States may not create standards that are inconsistent or interfere with the provisional voting mandate.

States' have the right to impose stricter requirements than those laid out in HAVA. The EAC has made it clear, that a stricter voter eligibility requirement cannot be read to bar an individual's right to a provisional ballot. However, could a stricter requirement regarding provisional voting serve to limit access to such ballots? No. A stricter State requirement for provisional voting would be a standard that enhances a person's access to a provisional ballot. A state may not impose an identification requirement that would limit a potential voter's access to and submission of a provisional ballot. However, such requirements (when coupled with a state's provisional ballot procedures) may prevent a provisional ballot from being counted.

OVERVIEW OF RECOMMENDATIONS FOR SUCCESSFUL PRACTICES

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Self-evaluation of Provisional Voting -4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of sound practices should provide the starting point for a state's effort to improve its provisional voting system.

SUMMARY OF RECOMMENDATIONS FOR Sound PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a Quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

Emphasize the importance of clarity

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendations section of this report could be helpful. Among those questions are:

```
PCL XL error

    Subsystem:  KERNEL

    Error:      IllegalOperatorSequence

    Operator:   SetPageScale

    Position:   1528
```

BACKGROUND

On September 13, 2005 the U.S. Election Assistance Commission issued an advisory (2005-006) and, after consideration of the matter, EAC concluded that Section 302 of HAVA creates a voter right. Specifically, the section creates the right for a potential voter to utilize a provisional ballot in the event his or her name does not appear on the registration list or the voter's eligibility is challenged by an election official. While States may create voter identification standards that exceed those laid out in HAVA and effect whether a provisional ballot is counted, States may not take action that limits a voter's right to receive and submit a provisional ballot.

The right to cast a provisional ballot is created in Section 302 of HAVA. Pursuant to HAVA, when an individual declares that he or she is a registered and eligible voter in a federal election, that individual "shall be permitted to cast a provisional ballot" if (1) their name does not appear on the official list of eligible voters or (2) "an election official asserts that the individual is not eligible to vote." (Section 302(a)). This right to receive a provisional ballot is contingent upon only one thing (per Section 302(a)(2)), the individual's execution of a written affirmation that he or she is both a registered and eligible voter for the election at issue.[1]

In simplest terms, provisional voting represents the right of an individual (whose eligibility to vote has been challenged), to reserve his or her right to vote and postpone the voter eligibility determination to a time when more perfect or complete information may be provided. A provisional ballot does not represent a different way to vote, nor does it serve as a bypass to State laws governing voter eligibility. Rather, it is designed to prevent an individual from losing his or her right to vote due to the fact that a poll worker did not have all the information available or needed to accurately assess voter eligibility. Thus, based upon the plain language of Section 302(a) of HAVA, a challenge to an individual's eligibility to vote (such as a challenge based upon identification requirements) cannot serve as a bar to the receipt of a provisional ballot, because it is the election official's challenge that triggers the provisional ballot procedure in the first place. To hold otherwise would defeat the purpose of provisional voting. In the end, to understand this concept one must understand the differences between traditional and provisional ballots.

The nature and procedures associated with a provisional ballot are wholly distinct from those of a traditional ballot. Because of this fact, the two processes must be treated differently. While voter identification requirements may serve as a bar to the casting of a traditional ballot, they may not prevent the submission of a provisional ballot.

First, the nature and purpose of traditional and provisional ballots are essentially different. The purpose of a traditional ballot is to allow a confirmed, eligible voter to cast a vote. The purpose of a provisional ballot is to allow individuals whose voter eligibility is challenged to reserve the right to vote by memorializing both their intent to vote and their proposed vote. This is evident by the HAVA processes discussed above. The bottom line is that the casting of a proper, traditional ballot constitutes a vote, while the casting or submission of a provisional ballot does not. A traditional ballot is cast only after voter eligibility has been determined by the State. Hence, the moment it is cast, it becomes an individual's vote. On the other hand, the submission or casting of a provisional ballot is not a vote. Rather, it is a claim that the potential voter who submitted it has the right to vote and reserves that right.

---

[1] Moreover, a potential voter determined not to be eligible must be informed of their provisional voting rights per Section 302(a)(1) of HAVA.

This goes to the very heart of provisional voting. If provisional voting is a right triggered by an election official's determination that an individual has not met a voter eligibility requirement, how can such a requirement also serve as a bar to that right? The concept of provisional voting works only if the right is always available when the application of voter eligibility requirements is in question.

Section 303(b)(2)(B) of HAVA, entitled *Fail-Safe Voting*, provides that when a first-time voter who registered by mail is required by HAVA Section 303(b) to show identification, that person must be given a provisional ballot if he or she fails to provide such identification at the polling place. This section is important as it clarifies Congressional intent regarding how provisional voting should function.

The *Fail-Safe Voting* provision of Section 303(b)(2)(B) grants clear insight into how provisional voting should be implemented. While Section 303(b) deals with a specific subset of voters (first-time voters who registered by mail), its application of Section 302(a) supports the concept that a provisional ballot must be given to a voter who is determined (at the polling place) not to meet voter identification requirements. Congress saw no difference between an individual's failure to meet the voter identification requirements it issued in Section 303(b) and the failure to meet eligibility requirements which trigger provisional voting under Section 302. Section 303(b) makes it clear that Congress did not intend voter identification requirements to limit access to provisional voting. Instead, Congress viewed provisional voting as a right, or more specifically, as a fail-safe. The EAC strongly believes that HAVA provisions must be interpreted to bring about consistent and evenly applied results. In this case, if individuals who fail to meet Federal identification standards have the right to a provisional ballot, so must individuals who fail to meet similar State standards.

HAVA notes in Section 304 that while States may create standards that are stricter that those established under HAVA, this authority is limited to the extent "such State requirements are not inconsistent with the Federal requirements under [HAVA]." Clearly, provisional voting is a requirement under HAVA. Section 302(a) notes that qualified individuals "**shall** be permitted to cast a provisional ballot." (Emphasis added). In this way, States may not create standards that are inconsistent or interfere with the provisional voting mandate.

States' have the right to impose stricter requirements than those laid out in HAVA. The EAC has made it clear, that a stricter voter eligibility requirement cannot be read to bar an individual's right to a provisional ballot. However, could a stricter requirement regarding provisional voting serve to limit access to such ballots? No. A stricter State requirement for provisional voting would be a standard that enhances a person's access to a provisional ballot. A state may not impose an identification requirement that would limit a potential voter's access to and submission of a provisional ballot. However, such requirements (when coupled with a state's provisional ballot procedures) may prevent a provisional ballot from being counted.

OVERVIEW OF RECOMMENDATIONS FOR SUCCESSFUL PRACTICES

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Self-evaluation of Provisional Voting - 4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of sound practices should provide the starting point for a state's effort to improve its provisional voting system.

SUMMARY OF RECOMMENDATIONS FOR Sound PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a Quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. Guidance on Provisional Voting

Provisional voting can be defined as the right of an individual voter to reserve their right to vote and postpone the voter eligibility determination to a time when more perfect or complete information may be provided. The idea behind a provisional ballot is to maintain the person's intent to vote and their proposed vote until such time as it is determined that they do or do not have the right to cast a ballot in that area. The Help America Vote Act (HAVA) provides definitive protection of a person's right to receive a provisional ballot. Section 302 of HAVA mandates that in the event a person does not appear on the registration list or their eligibility is challenged by an election official the person shall be given a provisional ballot as long as they are willing to declare that: 1) he/she is a registered voter and 2) he/she is eligible to vote in the election at issue. If a voter will declare these two things in the form of a written affirmation then HAVA mandates that the voter must be given a chance to cast a provisional ballot. This means that States still maintain complete control over voter identification requirements and determination of which provisional ballots meet those ID requirements. However, before making the determination of whether a voter has the right to cast a ballot at that polling place or not, the State and local officials must first offer the person a provisional ballot in order to protect that person's right to vote. This means that a provisional ballot is neither a means to avoid State imposed voter eligibility requirements nor a vote itself. State voter eligibility requirements are applied and provisional ballots are subject to the full effect of State law regarding voter eligibility. However, States may not refuse to offer a provisional ballot to a voter who's right to vote is being challenged. To refuse to give a provisional ballot to such a voter would defeat the primary purpose of HAVA which has been Stated as "...to prevent on-the-spot denials of provisional ballots to voters deemed ineligible by poll workers."

Because much of the decision making as to provisional balloting is left up to the States many different approaches have been adopted. For instance in some States a voter can cast a provisional ballot in any precinct in the State regardless of where they are registered, where as in other States provisional ballots are only counted if they are cast in the precinct or county in which the voter was eligible to vote. The key is a consistent approach within the state so that all voters are treated the same. Also, many States choose to use the information provided on the provisional ballot to help register the voter for the next election. This takes advantage of the provisional voting system by preventing the same registration issues from arising in the next election. The most important thing to remember is provisional balloting was created in order to allow the greatest number of people the opportunity to vote. By so doing provisional balloting represents a positive step by the states to prevent the disenfranchisement of voters. It allows the voter a final opportunity to cast a vote even if their eligibility is in question. Where once a voter would not have been given a chance to vote thanks to a provisional ballot that right is maintained. Given the mandate by HAVA to offer a provisional ballot the following information is intended to guide States in the administration of the provisional balloting process and offer good practices in State's approach to provisional balloting.

BACKGROUND

There is wide variation in the implementation of provisional voting among and even within states. Nonetheless, recommendations for good or at least better practices based on the experience gained in the 2004 election can be useful in states' efforts to implement provisional voting policies and procedures that are fair, transparent and effective.

Every provisional ballot counted represents a voter who should have been able to vote by regular ballot. And while statewide registration databases are likely to reduce the use of provisional ballots, such databases are not likely to make this difference for those who did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that a person is registered but the voter will still have to vote provisionally. Provisional voting will remain an important failsafe method of voting, and voters should have confidence that the failsafe will operate correctly.

The EAC recommends that all States strive for best practices in provisional voting.

OVERVIEW OF RECOMMENDATIONS FOR SOUND PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending certain practices, the EAC offers informed advice while respecting diversity among the states.

Take a quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending that:

- Each state collect data systematically on the provisional voting process to permit consistent evaluation of its procedures and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate provisional ballots by jurisdiction.

Self-evaluation of Provisional Voting - 4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently structured to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?

3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative requirements of the system reasonable given the staff and other resource requirements available?

4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

Court decisions suggest areas for action

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots and provide training for the officials who will apply those standards. Clear direction by regulation or statute on what records to use in evaluating provisional ballots could save time and effort and increase the reliability of the provisional voting system.

- States should provide standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by administrative errors at the polling place.

- State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.

Assess each stage of the provisional voting process

Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for practices to help avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.

- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.

- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Good practice for states should include guidelines to estimate the supply of provisional ballots needed at each polling place.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.

- Research shows more provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct. While HAVA leaves this decision up to the states, EAC notes the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding whether or not to count the ballot. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots, are considered. Also, tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.

- If a state does require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While a good practice might be for poll workers to direct the voter to the correct precinct, poll workers' advice is not always correct and the voter should be protected against administrative error.

- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado's election rules offer particularly clear guidance to the official evaluating of a provisional ballot (see below).

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College.

- A good practice is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

- A good practice is for the states to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

SUCCESSFUL PRACTICES FOR EACH STEP IN THE PROCESS

The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system cause most voters to end up casting provisional ballots. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.

EAC has examined each step of the provisional voting process to identify specific areas where the states should focus their attention. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

Step 1. Registration and Pre-Election Information for Voters

Providing clear and accurate information to voters before the election is important to the success of the provisional voting process. The more voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Good practices in this area would include:

- If states require identification at the time of registration, the kind of ID required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency."
- The process to re-enfranchise felons should be clear and straightforward.
- State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

Step 2. At the Polling Place

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

- The layout and staffing of the polling place, particularly the multi-precinct polling place, are important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. A state statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.
- Voters should be able to find out why their provisional ballot wasn't counted. Voters should be given printed information explaining how to check to see if their ballot was counted. Because provisional ballots offer a fail-safe method of voting, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1 % of the voters in the district, Delaware at 6%. States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.
- To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain of custody requirements for clarity.

Step 3. Evaluating Voter Eligibility and Counting Provisional Ballots

State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. There may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot:

- A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. At least 11 states allow voters to provide ID or other information one to 13 days after voting.

- The signature match will also be able to be compared with motor vehicle records and other databases which are available to counties.

- More provisional ballots are counted in those states that verify ballots cast outside the correct precinct. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the district and local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.

- Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot counts so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.

- Ideally the voter would be directed to the correct precinct, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker's, and the voter should not be penalized.

- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match", "wrong precinct," etc.). Those forms should be disclosed publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

Colorado Rejection Codes (Any ballot with a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.

RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as ID deficient, and did not provide ID at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

Step 4. Verification of Provisional Ballots

States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.

- In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time constraints imposed in a presidential election by the safe-harbor provisions regarding certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time for challenges.

- If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. States may want to provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election.

States should make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

Step 5. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will allow challenges filed by the provisional voter to be completed in a timely manner to ensure that the vote is counted for the elections in which the ballot was cast before the elections are certified.

- States should establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered. In some states the act of casting a provisional ballot can capture the voters contact information and allow them to be registered from that time forward for future elections.

Step 6. State Laws Governing Litigation over Provisional Voting

- States should prominently post and widely distribute Provisional Voting and Administrative Complaint procedures before, during, and after each election to ensure that voters know their provisional voting rights and what they should do if they believe their right to vote was denied.

- States should establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

Broader Considerations

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes.

- State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
- State laws or regulation should require an evaluation process for provisional ballots while protecting the names of those who voted provisionally.
- Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes. Nor is the system with the greatest number counted or with the fewest counted necessarily better because the evaluation process could be flawed.
- Variations in state law can make it difficult in defining what makes for a successful provisional voting system. There must be equal consideration for all voters.

CONCLUSION

The EAC recommends that states take the following action:

- Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.
- Allowing the provisional ballot to be a procedure for a change of address for the voter or to register the voter for the next and future elections.
- Collect data systematically on the provisional voting process to enable ongoing evaluation of how well their voting procedures are working and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
  -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
  -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
  -- Measures of variance among jurisdictions.
  -- Number of poll workers trained in administration of provisional voting by polling place.
  -- Number of jurisdictions posting information on provisional voting in the polling place.
  -- Time required to evaluate ballots by jurisdiction.

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

OVERVIEW OF RECOMMENDATIONS FOR SUCCESSFUL PRACTICES

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Self-evaluation of Provisional Voting -4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of sound practices should provide the starting point for a state's effort to improve its provisional voting system.

SUMMARY OF RECOMMENDATIONS FOR Sound PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a Quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

Emphasize the importance of clarity

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendations section of this report could be helpful. Among those questions are:

ional voting system distribute, collect, record, and tally provisional
ficient accuracy to be seen as procedurally legitimate by both supporters
)f the winning candidate?

ral requirements of the system permit cost-efficient operation?

e variation in the use of provisional voting in counties or equivalent levels of
ion within the state? Is the variation great enough to cause concern that the
be administered uniformly across the state?

regulations should define a reasonable period for voters who lack the
d ID or other information bearing on their eligibility to provide it in order
state's ability to verify that the person casting the provisional ballot is the
egistered. At least 11 states allow voters to provide ID or other information
fter voting. Kansas allows voters to proffer their ID by electronic means or
as in person.

l voters have their ballots counted in those states that count ballots cast
ct precinct. While HAVA arguably leaves this decision up to the states,
effect of the narrower definition on the portion of ballots counted could be
es in deciding this question. States should be aware, however, of the

than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers' advice is not always correct, and the voter should be protect against ministerial error.

- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.

- The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

- Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

Final observation

The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.

Best Practices For Each Step In The Process

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots ... To avoid post election disputes over provisional ballots-disputes that will diminish public confidence in the accuracy and legitimacy of the result-- well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones
are counted."26

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant re-canvassing.[27] Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.
- States should provide standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.[28]
- State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. 29 Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll

26 The Century Foundation, Balancing Access and Integrity, Report of the Working Group on State Implementation of Election Reforms, July 2005.

27 See *Washington State Republican Party v. King County Division* of *Records*, 103 P3d 725, 727-728 (Wash. 2004) 28 See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, NO.04-4177-CV-CRED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

29 Sandusky County Democratic Party v. Blackwell, 387 F.3d 565, 774 (6th Cir. 2004) workers may need appropriate training to understand their duty to give such voters a provisional ballot. 30

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and

. by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an 10 card with your photograph on it and this 10 card must be issued by a government agency. „31
2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.[32]
3. State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

B. At the Polling Place

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, 10 requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.33 Many states require training of poll workers. In some states that requirement is recent: after the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school." 34 A state

---

30 The Florida Democratic Party v. Hood, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

31 Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website. 32 The Century Foundation, op. cit.

33$_8$ Colo. Code Regs. § 1505-1, Rule 7.1. 34$_{2005}$ N.M. Laws 270 page no. 4-5.

statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.
3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required ... to photocopy official provisional ballots." 35 At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1 % of the voters in the district, Delaware at 6%.36 States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.
4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-ofcustody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration-as with all others concerning provisional voting-is that they be clear and thus not susceptible to post-election manipulation and litigation."37 Nonetheless, the *Panio* v. *Sutherland*[38] decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

35 Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.

36 Connecticut: "Equal to or not less than 1 % of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232j.Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).

37 The Century Foundation, op. cit.

38 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante-Foley) Provisional Ballot Cases by State, July 19, 2005.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified 10 or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the 10 may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Oay. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks 10 on Election Oay to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with 10 rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide 10 or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their 10 by electronic means or by mail, as well as in person.[39]
2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct. 40 While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.
3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. 41 Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker's, and the voter should not be penalized.

---

39 In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. *25-1122(d)*. ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama -- 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(cL(1) Florida: until 5:00 P.M. on the third day following the election. Fla. Stat. Ann. § 101.048 (adopted after the 2004 election);Georgia-no later than 2 days after the election. GA ST § 21-2-417; 419. IIlinois- 2 days to submit additional information 10 III. Compo Stat. Ann. 5/18A-15(d); Indiana- in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (I); Maryland-until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey- until the close of business on the second day after the election 19:53C-3(i). Nevada- until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico-until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) (H).

40 See Andersen, op. cit, pgs. 23 - 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

41 Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.[42]

<u>Colorado Reiection Codes (Anv ballot !:liven a reiection code shall not be counted):</u>

RFS (Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS (Rejection not signed) Provisional Ballot Affidavit not signed.
RIN (Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR (Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE (Rejection envelope empty) Provisional ballot envelope is empty.
RAB (Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV (Rejection based on ballot cast in early voting) Voter voted early.
RIP (Rejection based on incorrect party) Incorrect Party in Primary Election. RFE (Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC (Rejection elector not registered in county or State of Colorado) Noncounty or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID (Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD (Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.
2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time constraints imposed in presidential election by the safe-harbor provisions regarding certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days

[42] 8 CCR 1505-1, at 26.5.4, adopted august 4,2005. See also 1-2-509(3) C.R.S.

following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma[43] or the Baldridge Quality

---

[43] Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process -- from manufacturing to transactional and from product to service.

process 44 to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.
2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
    -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
    -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report. -- Measures of variance among jurisdictions.
    -- Number of poll workers trained in administration of provisional voting by polling place.
    -- Number of jurisdictions posting information on provisional voting in the polling place.
    -- Time required to evaluate ballots by jurisdiction.

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

---

44 The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.

On

Best Practices to Improve Provisional Voting

Pursuant to the

HELP AMERICA VOTE ACT OF 2002

Public Law 107-252

November 23, 2005

Submitted by

The Eagleton Institute of Politics, Rutgers, The State University of New Jersey

The Moritz College of Law, The Ohio State University

Executive Summary

Please provide an Executive Summary to provide background and summarize the key recommendations.

Background of the Research

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning provisional voting, a sample survey of local election officials, and a statistical analysis of provisional voting in the 2004 election. Also consulted as a basis for these recommendations were other studies, notably the EAC's Election Day Survey.[1] (Recommended as Research Methodology description)

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Section 302(a) of HAVA requires states to establish the process of provisional balloting by January 2004.[2] The process HAVA outlined leaves considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voters eligible to cast a provisional ballot that will be counted and, arguably, in what jurisdiction (precinct or larger unit) that where the ballot must be cast in order to be counted.[3]

The general requirement is that, if a registered voter appears at a polling place to vote in an election for Federal office, but the potential voter's name does not appear on the official list of eligible voters for the polling place, or if an election official asserts that the individual is not eligible to vote, that potential voter be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the Election Day Survey, first-time voters who cannot provide identification, as required under HAVA, and voters who were

---

[1] Appendix 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures and describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

[2] The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions. " See www.electioncenter.org .

[3] The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell, 387 F.3d565* (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

- The percentage of the total vote cast as provisional ballots averaged more than 2% (2.17%) in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots. (The average of provisional ballots cast was 64.5% counted. A third category had to account for a significant amount over 64.5%. What was that category?)
- Perhaps another reason provisional ballots must be cast in the correct precinct in order to be counted is that local races are also important and that allowing provisional ballots to be counted by voters who cast them outside of the precinct and only counting the ballots for the upper ballot races for outside of the precinct can disenfranchise voters from participating in local races. This argument has been used by many legislatures and in court castes to require that provisional ballots must be cast in the correct precinct in order to be counted.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Formatted: Bullets and Numbering

Those voting with provisional ballots in experienced states were enfranchised more frequently than those in the new states, another indication that there is room for improvement in provisional balloting procedures.[9] That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC should consider providing all states with information on more effective administration of provisional voting. EAC could also consider convening a national meeting for state and county election officials to share experiences and best practices from their own jurisdictions.

Deleted: the

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning

---

[9] Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's " 6-day time frame for processing the provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

(52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office. (the voter was registered, than the ballot counted, the voter did not have to present identification).

- This section needs a mention of the VR databases

- Voter registration databases provided information that reduced the number of provisional ballots counted.[12] In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.

- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots.[13]
  - In experienced states, the disparity was even more pronounced; 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
  - If all states had counted out-of-precinct ballots, perhaps 290,000 more voters would have been enfranchised across the country.[14]

Deleted: :

Variation With-in States

Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors outside of the statewide factors analyzed here also influence the use of provisional ballots. Perhaps it is the judges training or it is, in part, because of different laws.[15]

Formatted: Highlight

---

[12] The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.

[13] The Election Day Survey concluded that : "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

[14] This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

[15] For example, The Election Day Survey also found that "the reported rate of provisional ballots cast increases with population size, from 0.10 percent for voter registration in jurisdictions under 1,000 voting age population (VAP), to 2.51 percent in jurisdictions over one million VAP. It also calculated that, "The highest reported rate of counting provisional ballots was also among predominantly Hispanic jurisdictions, 79.30 percent, followed by predominantly

measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

Effectiveness of Provisional Voting

The certainty of our conclusions about the effectiveness of provisional voting is limited because of a fundamental challenge of methodology (what is meant by this statement) and the lack of important information. An ideal assessment of how well provisional ballots served the needs of voters and the public interest requires knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. And information needed about the eligibility or registration status of provisional voters is also not available. (Are polling places posting their provisional voting signs? Are election judges doing their jobs?)

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect an accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots enfranchised 1.2 million citizens, who would otherwise have been turned away from the polls.

Not knowing the total number of registered voters who might have voted but could not makes a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Estimates of Votes Lost In 2000 Presidential Election

Votes Lost (Millions)	*Cause*
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

Table 1 Cal Tech – MIT Voting Technology Project Estimates

4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. A rough estimate of the effectiveness of provisional voting in 2004, then,

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.

- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.

- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

Need for Promulgation of Best Practices

Because every provisional ballot counted represents a voter who, if the system had worked really well, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. This is false. If they are registered (the voter registration database is checked as required by HAVA or restricted by state requirement) the provisional counts. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Recommendations for Best Practices

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity

the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."[19]

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing.[20] Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.

- States should provide poll workers the training and information resources they need, as for example, how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.[21] (does this mean that the state should provide poll workers training? Most provided by local election jurisdictions. Is the recommendation to deviate from current practice?)

- States should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. [22] Recent legislation in Arizona indicates that HAVA's recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot. [23]

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States

---

[19] The Century Foundation, Balancing Access and Integrity, Report of the Working Group on State Implementation of Election Reforms, July 2005.

[20] See *Washington State Republican Party v. King County Division of Records*, 103 P.3d 725, 727-728 (Wash. 2004)

[21] See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

[22] *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6th Cir. 2004)

[23] *The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . .to photocopy official provisional ballots." [28] At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.[29]

4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.[30] Seems like most states require training; do they have data on that? Florida's statutory training provisions among the strongest in the nation.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. The recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underline the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."[31] Nonetheless, the *Panio v. Sutherland*[32] decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the

[32] 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.[36]

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections

2. The time by which election officials must complete their eligibility evaluations is critical, particularly in presidential elections. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to

---

[36] 8 ccr 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-509(3) C.R.S.

Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
   - -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
   - -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
   - -- Measures of variance among jurisdictions.
   - -- Number of poll workers trained in administration of provisional voting by polling place
   - -- Number of jurisdictions posting information on provisional voting in the polling place
   - -- Time required to evaluate ballots by jurisdiction

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

Conclusion -- Research-based, continuing improvements for provisional voting are needed <u>(This section should be the first part of the document)</u>

The recommendations above are based on research that began in late May 2005. Our research focused on six key questions raised by the EAC. The answers to those questions provided the foundation for our policy recommendation. Those questions are:
1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

<u>(Should this section be put under a Research Methodology section at the beginning?)</u>
To answer those questions, the Eagleton-Moritz team undertook the following research efforts:
1. Survey of 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Review of news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[38] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Voter Identification

We relied on Electionline studies, including the Voter Identification study[39] and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.[40] The five

---

[39] This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

[40] In 2004, ElelctionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.

Table 5
CATEGORIZATION OF STATES -- Ballot Evaluation Methods
States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis. ***No states have been italicized. Is this correct?***

Signature Match	**Data Match**	**Affidavit**	**Return with ID**	**NA**

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

---

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Data Differences

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.
Please explain the 0/8022 discrepancy under North Carolina "differences" since you indicate the info was not updated from the database.

State	EDS Numbers Cast/Counted	Our Numbers Cast/Counted	Differences	Updated Info from State?
Alabama	6,478/1,865	6560/1836	82/29	No
Alaska	23,285/22,498	23,275/22,498	10/0	No

When did Eagleton get the information for Missouri. Missouri enacted provisional voting in 2002 and it is likely it was in place for the November 2002 election Pre-HAVA.

Eagleton's PV, LPV, EDR notations are confusing. In the instance of Colorado, the LPV designation (in the PV Status row - HAVA column is incorrect.) In Colorado the voter did not have to vote in the precinct.

Subject Conference Call/ Eagleton Institute

Good afternoon everyone,

This is to inform you of a time set-up for the conference call on May 11, 2006 regarding Eagleton Institute/Voter Identification Research Project: it will be at 11:30 am, if everyone is available for this time then its a go, if not please contact me at your earliest convenience.

Thanks!

Aletha Barrington
Contracts Assistant
U.S. Election Assistance Commission

Subject Re: Review of EAC research on Voter Identification

History: This message has been replied to.

I just got your phone message. I will still do the review, but I should note that I wont be able to do a full 90 minute phone call on the 11th -- perhaps we could schedule 30 minutes or so for me to be on the phone call.

At 05:36 PM 5/1/2006, you wrote:

> Dr. Berinsky-
>
> On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paperâ€™s findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:
>
> ℜ• The research methodology which was used to support the paperâ€™s conclusions
>
> ℜ• The specific statistical applications which were used to analyze the data and arrive at various conclusions
>
> If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.
>
> On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagletonâ€™s peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EACâ€™s Board of Advisors and Standards Boards in late May.
>
> While we are unable to offer financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Karen Lynn-Dyson

Subject May 11 teleconference

Karen,

Do you have a time for the May 11 teleconference? We're working to arrange the participation of members of our Peer Review Group and that is the key missing piece of information.

Thanks,

Tom O'Neill

Subject Re: E-mail to Voter ID peer reviewers

I am concerned about the statement that EAC policy precludes us paying them. It is an issue of correctly soliciting and entering into a contract for the procurement of services. Perhaps there is a better way to phrase this, or is it even necessary

Subject E-mail to Voter ID peer reviewers

Tom and Julie-

Please take a look at this draft e-mail and let me know if it captures all that it needs to.

Would like to get this out ASAP- appreciate your feedback..

Dear Jonathan Nagler
Dear Jan Leighley
Dear Adam Berinsky

On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paper's findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:

- The research methodology which was used to support the paper's conclusions
- The specific statistical applications which were used to analyze the data and arrive at various conclusions

If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.

On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagleton's peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EAC's Board of Advisors and Standards Boards in late May.

While EAC agency policy does not allow us to provide you with financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Karen,

I tried to reserve a room at the Hamilton Crown Plaza for the night of May 23, but found that nothing was available. Has EAC reserved a block of room for that evening? If so, can 2 of those be made available to the Rutgers-Moritz team in connection with our presentation to the advisory boards?

Deliberative Process Privilege

June 15, 2006

John Weingart:
Eagleton Institute of Politics
Rutgers University

Dear John:

During its bi-weekly meeting the four EAC Commissioners met, discussed and reviewed possible next steps with the provisional voting and voter identification studies as well as the Eagleton contract which is scheduled to conclude on June 30, 2006.

The four Commissioners were in agreement that Eagleton's work on the EAC contract should conclude, as scheduled, by June 30, 2006. In preparation for this conclusion the Commissioners have asked that the comments and suggestions which were noted during the EAC's recent Board of Advisors and Standards Boards meeting (and were described in your June xxx letter to Chairman DeGregorio) be included in the final report on provisional which Eagleton will deliver to the EAC on or about June 30, 2006. The Commissioners have determined that they will take this final report and, from it, develop guidance and best practice recommendations that will be presented to the Board of Advisors and Standards Boards for further review.

The EAC Commissioners have also reviewed and considered next steps with the voter identification draft report which Eagleton has prepared. While the final disposition of the results and findings of this study, on the part of the EAC, are still unclear, the Commissioners have asked that the final report of this study also be prepared and submitted to the EAC not later than June 30, 2006.

We look forward to receiving these reports. On behalf of the EAC thank you for the considerable time and energy which the Eagleton/Moritz team has devoted to these critical election issues during the last eighteen months.

Sincerely.

Thomas Wilkey

Subject Next steps

History: This message has been replied to and forwarded.

Karen,

While we were in Washington for the meetings of the advisory boards, you told me the Commissioners were to meet today, June 1, and would reconsider the Voter ID paper. As you can, no doubt, imagine, we are all interested in learning the outcome of that discussion.

We also look forward to your guidance concerning the next steps to complete the work on the Provisional Voting report that we presented to the advisory boards last week.

Subject RE: Presentations at the EAC Governing Boards

History: This message has been replied to.

Karen, I don't have the capacity to produce a PDF copy of the report. (I thought we discussed this last week and you agreed that the word document would suffice.) Someone at Eagleton could surely covert the DOC file to PDF, but since I just read your email now (4:50), we could not provide a PDF copy today. Please let me know if you want me to pursue this tomorrow.

Thanks for the schedule below. But it raises a question. Earlier this week you told me that the Commissioners asked that we limit our presentation to 10 minutes and leave the rest of the time for questions and comments. As I noted in my response, condensing our reports to 10 minutes poses a challenge. Is the 10 minute limit no longer operative?

Tom O'Neill

Tom-

Look forward to getting a PDF copy of the final versions of the Voter ID paper and the Provisional Voting Paper by COB today

Here is the timing breakdown for next week's presentations:

EAC Standards Board (137 members)

Tuesday, May 23, 2006
2:30-4:00 PM
Hamilton Ballroom
Provisional Voting
45 minutes for presentation
45 minutes for questions and answers

Wednesday, May 24, 2006
1:40-2:45 PM
Hamilton Ballroom

Voter Identification
40 minutes for presentation
25 minutes for questions and answers

EAC Board of Advisors (36 members)

Wednesday, May 24, 2006
8:30-9:15 AM
Lafayette Park Ballroom
Provisional Voting
20 minutes for presentation
25 minutes questions and answers

Wednesday, May 24, 2006
11:00-11:55 PM
Lafayette Ballroom
Voter Identification
30 minutes presentation
25 minutes questions and answers

EAC General Counsel Julie Thompson- Hodgkins will facilitate/moderate all of your sessions

Will be in touch tomorrow after the Commissioners have met.

e. Compendium of states' legislation, procedures, and litigation (available as an electronic document)

Appendix A
Summary of Voter Identification Requirements By State

Prepared by
Sara A. Sampson, Reference Librarian,
The Ohio State University Moritz College of Law.

Voter ID Requirements

State	Forms of ID Required 2004	Statutory Language	Statutory Citation
Alabama	Provide ID	(b) Each elector shall provide identification to an appropriate election official prior to voting. A voter required to show identification when voting in person shall present to the appropriate election official either of the following forms of identification: (1) A current valid photo identification. (2) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. The term "other government document" may include, but is not limited to, any of the following: a. A valid identification card issued by a branch, department, agency, or entity of the State of Alabama, any other state, or the United States authorized by law to issue personal identification. b. A valid United States passport. c. A valid Alabama hunting or fishing license. d. A valid Alabama permit to carry a pistol or revolver. e. A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States. f. A valid United States military identification card. g. A certified copy of the elector's birth certificate. h. A valid Social Security card. i. Certified naturalization documentation. j. A certified copy of court records showing adoption or name change. k. A valid Medicaid card, Medicare card, or an Electronic Benefits Transfer Card (formerly referred to as a "food stamp card"). (c) For voters required to show identification when voting by mail, the voter shall submit with the ballot a copy of one of the forms of identification listed in subsection (b). (e) An individual required to present identification in accordance with this section who is unable to meet the identification requirements of this section shall be permitted to vote by a challenged or provisional ballot, as provided for by law. (f) In addition, an individual who does not have identification in his or her possession at the polls shall be permitted to vote if the individual is positively identified by two election officials as a voter on the poll list who is eligible to vote and the election official signs the voters list by where the voter signs. Effective Date: June 24, 2003	Ala. Code § 17-11A-1
Alaska	Provide ID	(a) Before being allowed to vote, each voter shall exhibit to an election official one form of identification, including (1) an official voter registration card, driver's license, state identification card, current and valid photo identification, birth certificate, passport, or hunting or fishing license; or (2) an original or a copy of a current utility bill, bank statement, paycheck, government check, or other government document; an item exhibited under this	Alaska Stat. § 15.15.225

		paragraph must show the name and current address of the voter. (b) An election official may waive the identification requirement if the election official knows the identity of the voter. The identification requirement may not be waived for voters who are first-time voters who initially registered by mail or by facsimile or other electronic transmission approved by the director under AS 15.07.050, and did not provide identification as required in AS 15.07.060. (c) A voter who cannot exhibit a required form of identification shall be allowed to vote a questioned ballot. effective June 17, 2003	
Arizona	Provide ID	B. If a statewide voter registration database is not yet operational, for any person who has registered to vote by mail for the first time in this state after January 1, 2003 or who is reregistering by mail after January 1, 2003 after moving from one county to another county in this state, the person shall comply with the following in order to be issued a ballot: 1. The person shall present either one of the following: (a) A current form of identification that bears a photograph of the person and the name of the person. (b) A current utility bill, bank statement, paycheck, government issued check or other government document that shows the name and registration address of the person. 2. If the person does not present a document that complies with paragraph 1, the person is only eligible to vote a provisional ballot as prescribed by § 16-584. Effective Dec. 1, 2003	Ariz. Rev. Stat. Ann. § 16-579
Arkansas	Provide ID	7-5-305. Requirements. (a) Before a person is permitted to vote, the election official shall: (1) Request the voter to identify himself in order to verify the existence of his name on the precinct voter registration list; (2) Request the voter, in the presence of the election official, to state his address and state or confirm his date of birth; (3) Determine that the voter's date of birth and address are the same as those on the precinct voter registration list; (4) If the date of birth given by the voter is not the same as that on the precinct voter registration list, request the voter to provide identification as the election official deems appropriate; (5)(A) If the voter's address is not the same as that on the precinct voter registration list, verify with the county clerk that the address is within the precinct. (B) If the address is within the precinct, request the voter to complete a voter registration application form for the purpose of updating county voter registration record files. (C) If the address is not within the precinct, instruct the voter to contact the county clerk's office to determine the proper precinct; (6) If the voter's name is not the same as that on the precinct voter registration list, request the voter to complete a voter registration application form for purposes of updating county voter registration record files; (7) Request the voter, in the presence of the election official, to sign his name, including his given name, his middle name or initial, if any, and his last name in the space provided on the precinct voter registration list. If a person is unable to sign his signature or make his mark or cross, the election official shall enter his initials and the voter's date of birth in the space for the person's signature on the precinct voter registration list; and	Arkansas Code Annotated § 7-5-305

		(8)(A) Request the voter for purposes of identification to provide a valid driver's license, photo identification card issued by a governmental agency, voter card, social security card, birth certificate, United States passport, employee identification card issued by a governmental agency containing a photograph, employee identification card issued in the normal course of business of the employer, student identification card, Arkansas hunting license, or United States military identification card. (B)(i) If a voter is unable to provide this identification, the election official shall indicate on the precinct voter registration list that the voter did not provide identification. (ii) Following each election, the county board of election commissioners may review the precinct voter registration lists and may provide the information of the voters not providing identification at the polls to the prosecuting attorney. (iii) The prosecuting attorney may investigate possible voter fraud; and (9) Follow the procedures under §§ 7-5-310, 7-5-311, and 7-5-523, if the preson is a disabled voter and presents himself or herself to vote. Effective: July 16, 2003	
California	Sign Name	Any person desiring to vote shall announce his or her name and address in an audible tone of voice, and when one of the precinct officers finds the name in the index, the officer shall in a like manner repeat the name and address. The voter shall then write his or her name and residence address or, if the voter is unable to write, shall have the name and residence address written by another person on a roster of voters provided for that purpose, whereupon a challenge may be interposed as provided in this article. (Enacted in 1994, no amendments since)	Cal. Elec. Code § 14216
Colorado	Provide ID	(1) Except as provided in subsection (4) of this section, any eligible elector desiring to vote shall show his or her identification as defined in <u>section 1-1-104(19.5)</u>, write his or her name and address on the signature card, and give the signature card to one of the election judges, * * * (4) An eligible elector who is unable to produce identification may cast a provisional ballot in accordance with article 8.5 of this title. (19.5)(a) "Identification" means: (I) A valid Colorado driver's license; (II) A valid identification card issued by the department of revenue in accordance with the requirements of part 3 of article 2 of title 42, C.R.S.; (III) A valid United States passport; (IV) A valid employee identification card with a photograph of the eligible elector issued by any branch, department, agency, or entity of the United States government or of this state, or by any county, municipality, board, authority, or other political subdivision of this state; (V) A valid pilot's license issued by the federal aviation administration or other authorized agency of the United States; (VI) A valid United States military identification card with a photograph of the eligible elector; (VII) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the elector; (VIII) A valid medicare or medicaid card issued by the United States health care	Colo. Rev. Stat. Ann. § 1-7-110; Colo. Rev. Stat. Ann. § 1-1-104

		financing administration; (IX) A certified copy of a birth certificate for the elector issued in the United States; or (X) Certified documentation of naturalization. (b) Any form of identification indicated in paragraph (a) of this subsection (19.5) that shows the address of the eligible elector shall be considered identification only if the address is in the state of Colorado. Effective 5/28/2004	
Connecticut	Provide ID	(a) In each primary, election or referendum, when an elector has entered the polling place, the elector shall announce the elector's street address, if any, and the elector's name to the checkers in a tone sufficiently loud and clear as to enable all the election officials present to hear the same. Each elector who registered to vote by mail for the first time on or after January 1, 2003, and has a "mark" next to the elector's name on the official registry list, as required by section 9-23r, shall present to the checkers, before the elector votes, either a current and valid photo identification that shows the elector's name and address or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows the name and address of the elector. Each other elector shall (1) present to the checkers the elector's Social Security card or any other preprinted form of identification which shows the elector's name and either the elector's address, signature or photograph, or (2) on a form prescribed by the Secretary of the State, write the elector's residential address and date of birth, print the elector's name and sign a statement under penalty of false statement that the elector is the elector whose name appears on the official checklist. Such form shall clearly state the penalty of false statement. A separate such form shall be used for each elector. If the elector presents a preprinted form of identification under subdivision (1) of this subsection, the checkers shall check the name of such elector on the official checklist. If the elector completes the form under subdivision (2) of this subsection, the assistant registrar of voters shall examine the information on such form and either instruct the checkers to check the name of such elector on the official checklist or notify the elector that the form is incomplete or inaccurate. Effective May 10., 2004	Conn. Gen. Stat. Ann. § 9-261
Delaware	Provide ID	(a) A voter, upon entering the room where an election is being held, shall announce his or her name and address and provide proof of identity, whereupon the clerks shall place a mark or make a notation of his or her name upon the election district record. In the event the voter does not have proof of identity with them, he or she shall sign an affidavit of affirmation that he or she is the person listed on the election district record. Effective: July 9, 2002	15 Del. Code § 4937
D.C.	Sign Name	(i)(1) A person shall be entitled to vote in an election in the District of Columbia if he or she is a duly registered voter. A qualified elector shall be considered duly registered in the District if he or she has met the requirements for voter registration and, on the day of the election, either resides at the address listed on the Board's records or files an election day change of address pursuant to this subsection. (2) Each registered voter who changes his or her place of residence from that listed on the Board's records shall notify the Board, in writing, of the new residence address. A change of address shall be effective on the date the notification was mailed as shown by the United States Postal Service postmark. If not postmarked, the notification shall be effective on the date of receipt by the Board. Change of address notifications from registrants shall be accepted pursuant to subsection (g) of this section, except that any registrant who has not notified the Board of his or her current residence address by the deadline established by subsection (g) of this section may be permitted to vote at the	D.C. Code § 1-1001.07

		polling place that serves the current residence address by filing an election day change of address notice pursuant to paragraph (4) of this subsection. (3) Each registered voter who votes at a polling place on election day shall affirm his or her residence address as it appears on the official registration roll for the precinct. The act of signing a copy of the official registration roll for the precinct shall be deemed affirmation of the voter's address as it appears on the Board's registration records. (Effective April 3, 2001)(not added as part of 2005 amendment)	
Florida	Photo ID	101.043 (1) The precinct register, as prescribed in s. 98.461, shall be used at the polls in lieu of the registration books for the purpose of identifying the elector at the polls prior to allowing him or her to vote. The clerk or inspector shall require each elector, upon entering the polling place, to present a current and valid picture identification as provided in s. 97.0535(3)(a). If the picture identification does not contain the signature of the voter, an additional identification that provides the voter's signature shall be required. The elector shall sign his or her name in the space provided, and the clerk or inspector shall compare the signature with that on the identification provided by the elector and enter his or her initials in the space provided and allow the elector to vote if the clerk or inspector is satisfied as to the identity of the elector. (2) Except as provided in subsection (3), if the elector fails to furnish the required identification, or if the clerk or inspector is in doubt as to the identity of the elector, such clerk or inspector shall follow the procedure prescribed in s. 101.49. **97.0535** (3)(a) The following forms of identification shall be considered current and valid if they contain the name and photograph of the applicant and have not expired: 1. Florida driver's license. 2. Florida identification card issued by the Department of Highway Safety and Motor Vehicles. 3. United States passport. 4. Employee badge or identification. 5. Buyer's club identification. 6. Debit or credit card. 7. Military identification. 8. Student identification. 9. Retirement center identification. 10. Neighborhood association identification. 11. Entertainment identification. 12. Public assistance identification. (b) The following forms of identification shall be considered current and valid if they contain the name and current residence address of the applicant: 1. Utility bill.	West's Fla. Stat. Ann. § 101.043 & West's Fla. Stat. Ann. § 97.0535

		2. Bank statement. 3. Government check. 4. Paycheck. 5. Other government document (excluding voter identification card). Version effective 1/1/2005-12/31/2005	
Georgia	Provide ID	(a) Each elector shall present proper identification to a poll worker at or prior to completion of a voter's certificate at any polling place and prior to such person's admission to the enclosed space at such polling place. Proper identification shall consist of any one of the following: (1) A valid Georgia driver's license; (2) A valid identification card issued by a branch, department, agency, or entity of the State of Georgia, any other state, or the United States authorized by law to issue personal identification; (3) A valid United States passport; (4) A valid employee identification card containing a photograph of the elector and issued by any branch, department, agency, or entity of the United States government, this state, or any county, municipality, board, authority, or other entity of this state; (5) A valid employee identification card containing a photograph of the elector and issued by any employer of the elector in the ordinary course of such employer's business; (6) A valid student identification card containing a photograph of the elector from any public or private college, university, or postgraduate technical or professional school located within the State of Georgia; (7) A valid Georgia license to carry a pistol or revolver; (8) A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States; (9) A valid United States military identification card; (10) A certified copy of the elector's birth certificate; (11) A valid social security card; (12) Certified naturalization documentation; (13) A certified copy of court records showing adoption, name, or sex change; (14) A current utility bill, or a legible copy thereof, showing the name and address of the elector; (15) A bank statement, or a legible copy thereof, showing the name and address of the elector; (16) A government check or paycheck, or a legible copy thereof, showing the name and address of the elector; or (17) A government document, or a legible copy thereof, showing the name and address of the elector. (b) If an elector is unable to produce any of the items of identification listed in subsection (a) of this Code section, he or she shall sign a statement under oath in a form approved by the Secretary of State, separate and distinct from the elector's voter certificate, swearing or affirming that he or she is the person identified on the elector's voter certificate. Such person shall be allowed to vote without undue delay; provided, however, that an elector who registered for the first time in this state by mail and did not provide one of the forms of identification set forth in subsection (a) of this Code section at the time of registration and who is voting for the first time may vote a provisional ballot pursuant to Code Section 21-2-418 upon swearing or affirming that the elector is the person identified in the elector's voter certificate. Such provisional ballot shall only be counted if the registrars are able to verify current and valid identification of the elector as provided in this Code section within the time period for verifying provisional ballots pursuant to Code Section 21-2-419. Falsely swearing or affirming such statement under oath shall be punishable as a felony, and the penalty shall be distinctly set forth on the face of the statement." effective June, 2003	Ga. Code. Ann. § 21-2-417

Hawaii	Photo ID	(b) The voter shall present valid identification to the official in charge of the pollbook. ***Do I Need an I.D. to Vote on Election Day?*** **Yes.** Be sure to have an I.D. with a picture and signature (such as a Hawaii driver's license or state I.D. card) when you go to vote. The NVRAC card is not an acceptable form of identification. From the 2004 version of the administrative code. **§ 11-136 Poll book, identification, voting.** Every person upon applying to vote shall sign the person's name in the poll book prepared for that purpose. This requirement may be waived by the chairperson of the precinct officials if for reasons of illiteracy or blindness or other physical disability the voter is unable to write. Every person shall provide identification if so requested by a precinct official. A poll book shall not contain the social security number of any person. After signing the poll book and receiving the voter's ballot, the voter shall proceed to the voting booth to vote according to the voting system in use in the voter's precinct. The precinct official may, and upon request shall, explain to the voter the mode of voting. Last amended 2003.	Haw. Code. R. § 2-51-80 – (Paper ballots; voting procedure at the polls), § 2-51-83 (Punchcard ballots; voting procedure at polls), 2-51-85.1 (Marksense ballots; voting procedure at the polls.) – All have same subsection (b) Haw. Code. R. T. 2, SUBT. 4, CH. 51, Appendix HRS 11-136
Idaho	Sign Name	(1) An elector desiring to vote shall state his name and address to the judge or clerk in charge of the combination election record and poll book. (2) Before receiving his ballot, each elector shall sign his name in the combination election record and poll book following his name therein. (5) The elector shall then be given the appropriate ballots which have been stamped with the official election stamp and shall be given folding instructions for such ballots. (Last amended in 1972)	Id. St. §34-1106
Illinois	Give Name	Any person desiring to vote shall give his name and, if required to do so, his residence to the judges of election, one of whom shall thereupon announce the same in a loud and distinct tone of voice, clear, and audible; the judges of elections shall check each application for ballot against the list of voters registered in that precinct to whom absentee or early ballots have been issued for that election, which shall be provided by the election authority and which list shall be available for inspection by pollwatchers. A voter applying to vote in the precinct on election day whose name appears on the list as having been issued an absentee or early ballot shall not be permitted to vote in the precinct. All applicable provisions of Articles 4, 5 or 6 shall be complied with and if such name is found on the register of voters by the officer having charge thereof, he	10 Ill. Comp. Stat. 5/17-9

		shall likewise repeat said name, and the voter shall be allowed to enter within the proximity of the voting booths, as above provided. One of the judges shall give the voter one, and only one of each ballot to be voted at the election, on the back of which ballots such judge shall indorse his initials in such manner that they may be seen when each such ballot is properly folded, and the voter's name shall be immediately checked on the register list. In those election jurisdictions where perforated ballot cards are utilized of the type on which write-in votes can be cast above the perforation, the election authority shall provide a space both above and below the perforation for the judge's initials, and the judge shall endorse his or her initials in both spaces. Whenever a proposal for a constitutional amendment or for the calling of a constitutional convention is to be voted upon at the election, the separate blue ballot or ballots pertaining thereto shall, when being handed to the voter, be placed on top of the other ballots to be voted at the election in such manner that the legend appearing on the back thereof, as prescribed in Section 16-6 of this Act, shall be plainly visible to the voter. At all elections, when a registry may be required, if the name of any person so desiring to vote at such election is not found on the register of voters, he or she shall not receive a ballot until he or she shall have complied with the law prescribing the manner and conditions of voting by unregistered voters. If any person desiring to vote at any election shall be challenged, he or she shall not receive a ballot until he or she shall have established his right to vote in the manner provided hereinafter; and if he or she shall be challenged after he has received his ballot, he shall not be permitted to vote until he or she has fully complied with such requirements of the law upon being challenged. Besides the election officer, not more than 2 voters in excess of the whole number of voting booths provided shall be allowed within the proximity of the voting booths at one time. The provisions of this Act, so far as they require the registration of voters as a condition to their being allowed to vote shall not apply to persons otherwise entitled to vote, who are, at the time of the election, or at any time within 60 days prior to such election have been engaged in the military or naval service of the United States, and who appear personally at the polling place on election day and produce to the judges of election satisfactory evidence thereof, but such persons, if otherwise qualified to vote, shall be permitted to vote at such election without previous registration.	
Indiana	Sign Name		West's Annotated Indiana Code § 3-11-8-25
Iowa	Sign Name	1. The board members of their respective precincts shall have charge of the ballots and furnish them to the voters. Any person desiring to vote shall sign a voter's declaration provided by the officials, in substantially the following form: VOTER'S DECLARATION OF ELIGIBILITY I do solemnly swear or affirm that I am a resident of the .... precinct, ... ward or township, city of ...., county of ...., Iowa. I am a registered voter. I have not voted and will not vote in any other precinct in said election. I understand that any false statement in this declaration is a criminal offense punishable as provided by law. ____________________ Signature of Voter ____________________ Address ____________________ Telephone Approved:	Iowa Code § 49.77

		______________________________ Board Member 2. One of the precinct election officials shall announce the voter's name aloud for the benefit of any persons present pursuant to section 49.104, subsection 2, 3, or 5. Any of those persons may upon request view the signed declarations of eligibility and may review the signed declarations on file so long as the person does not interfere with the functions of the precinct election officials. 3. A precinct election official shall require any person whose name does not appear on the election register as an active voter to show identification. Specific documents which are acceptable forms of identification shall be prescribed by the state commissioner. A precinct election official may require of the voter unknown to the official, identification upon which the voter's signature or mark appears. If identification is established to the satisfaction of the precinct election officials, the person may then be allowed to vote. (From 2004 version of Iowa Annotated Code; effective January 1, 1995)	
Kansas	Sign Name	(b) A person desiring to vote shall provide to the election board: (1) the voter's name; (2) if required, the voter's address; and (3) the voter's signature on the registration or poll book. A signature may be made by mark, initials, typewriter, print, stamp, symbol or any other manner if by placing the signature on the document the person intends the signature to be binding. A signature may be made by another person at the voter's direction if the signature reflects such voter's intention. (Approved April 14, 2004, 2004 Kansas Laws Ch. 93)	Kan. Stat. Ann. § 25-2908(b)
Kentucky	Provide ID	117.227 Confirmation of voter's identity Election officers shall confirm the identity of each voter by personal acquaintance or by a document, such as a motor vehicle operator's license, Social Security card, or credit card. The election officer confirming the identity shall sign the precinct voter roster and list the method of identification. Effective: 7/15/02 31 KAR 4:010. Voter identification cards. Section 1. In addition to the forms of identification specifically provided for by KRS 117.227, any identification card that bears both the picture and signature of the voter, or any identification card that has been issued by the county, and which has been approved in writing by the State Board of Elections, shall be acceptable for confirmation of the voter's identity.	Ky Rev. Stat. Ann. 117.227 31 Ky. Admin. Regs. 4:010.
Louisiana	Photo ID	A. Identification of voters. (1) A person who desires to vote in a primary or general election shall give his name and address to a commissioner, who shall announce the applicant's name and address to the persons at the polling place. (2) Each applicant shall identify himself, in the presence and view of the bystanders, and present to the commissioners a Louisiana driver's license, a Louisiana special identification card issued pursuant to R.S. 40:1321, or other generally recognized picture identification card. If the applicant does not have a Louisiana driver's license, a Louisiana special identification card, or other generally recognized picture identification card, the applicant shall sign an affidavit, which is supplied by the secretary of state, to that effect before the commissioners who shall place the affidavit in the envelope marked "Registrar of Voters" and attach the envelope to the precinct register, and the applicant	La. Rev. Stat. Ann. 18:562

		shall provide further identification by presenting his current registration certificate, giving his date of birth or providing other information stated in the precinct register that is requested by the commissioners. However, an applicant that is allowed to vote without the picture identification required by this Paragraph is subject to challenge as provided in R.S. 18:565. Effective: 1/1/2002	
Maine	Give Name	The voting procedure is as follows. 1. Name announced. A voter who wishes to vote must state the voter's name and, upon request, residence address to an election clerk who shall announce the name in a loud, clear voice. (In effect at time of 2003 amendment: 2003, c. 584, § 9)	Me. Rev. Stat. Ann. tit. 21-A, § 671
Maryland	Sign Name	10-310. (a) For each individual who seeks to vote, an election judge, in accordance with instructions provided by the local board, shall: (1) locate the individual's name in the precinct register and locate the preprinted voting authority card and then authorize the individual to vote a regular ballot; (2)(i) if the individual's name is not found on the precinct register, search the inactive list and if the name is found, authorize the individual to vote a regular ballot; or (ii) if the individual's name is not on the inactive list, refer the individual for provisional ballot voting under § 9-404 of this article; (3) establish the identity of the voter by requesting the voter to state the month and day of the voter's birth and comparing the response to the information listed in the precinct register; (4) verify the address of the voter's residence; (5) if any changes to the voting authority card are indicated by a voter, make the appropriate changes in information on the card or other appropriate form; and (6) have the voter sign the voting authority card and either issue the voter a ballot or send the voter to a machine to vote.	Md. Elec. Law § 10-310
Mass.	Give Name	Each voter desiring to vote at a polling place shall give his name and, if requested, his residence to one of the officers at the entrance to the space within the guard rail, who shall thereupon distinctly announce the same. If such name is found on the voting list, the election officer shall check and repeat the name and shall admit the voter to the space enclosed by the guard rail and, in case official ballots, other than those marked "Challenged Ballots" as provided by section thirty-five A, are used, such voter shall be given one ballot. The use of electronic means such as tape recording equipment or radio broadcasting equipment for the recording or broadcasting of the names of voters not yet checked as having voted shall be prohibited. Last amended in 1981	Mass. Ann. Laws 54 § 76
		(5B) Identification. If so authorized by the city or town clerk or registrars of voters, an election officer may request any voter to present written identification. Such requests shall not discriminate in any way, but shall be entirely random, consistent, or based on reasonable suspicion. For the purpose of 950 CMR 52.03(5B), of M.G.L. c. 54, § 76B, and of 950 CMR 52.03(5)(b), suitable written identification includes a driver's license, recent utility bill, rent receipt on a landlord's printed letterhead, lease, duplicate copy of a voter registration affidavit, or any other printed identification which contains the voter's name and address. If voters fail to present suitable written identification when so requested, they must still be allowed to vote, but an election officer or any other person may challenge their right to vote under M.G.L. c. 54, § 85 and 950 CMR 52.03(23).	950 Mass. Code Regs. 52.03
Michigan	Sign Name	(1) At each election, before being given a ballot, each registered elector offering to vote shall identify himself or herself by presenting an official state	Mich. Comp. Laws Ann. §

		identification card issued to that individual pursuant to Act No. 222 of the Public Acts of 1972, being sections 28.291 to 28.295 of the Michigan Compiled Laws, an operator's or chauffeur's license issued to that individual pursuant to the Michigan Vehicle Code, Act No. 300 of the Public Acts of 1949, being sections 257.1 to 257.923 of the Michigan Compiled Laws, or other generally recognized picture identification card and by executing an application showing his or her signature or mark and address of residence in the presence of an election official. If the voter registration cards are used in the precinct, the election official in charge of the precinct registration file shall compare the signature upon the application with the signature upon the registration card. If voter registration lists are used in the precinct, the election inspector shall determine if the name on the application to vote appears on the voter registration list. If the name appears on the voter registration list, the elector shall provide further identification by giving his or her date of birth or other information stated upon the voter registration list. In precincts using voter registration lists, the date of birth may be required to be placed on the application to vote. If the signature or an item of information does not correspond, the vote of the person shall be challenged, and the same procedure shall be followed as provided in this act for the challenging of an elector. If the person offering to vote has signed the registration card or application by making a mark, the person shall identify himself or herself by giving his or her date of birth, which shall be compared with the date of birth stated upon the registration card or voter registration list, or shall give other identification as may be referred to upon the registration card or voter registration list. If the elector does not have an official state identification card, operator's or chauffeur's license as required in this subsection, or other generally recognized picture identification card, the individual shall sign an affidavit to that effect before an election inspector and be allowed to vote as otherwise provided in this act. However, an elector being allowed to vote without the identification required under this subsection is subject to challenge as provided in section 727. (2) If, upon a comparison of the signature or other identification, it is found that the applicant is entitled to vote, the election officer having charge of the registration list shall approve the application and write his or her initials on the application, after which the number on the ballot issued shall be noted on the application. The application shall serve as 1 of the 2 poll lists required to be kept as a record of a person who has voted. The application shall be filed with the township, city, or village clerk. If voter registration cards are used in the precinct, the date of the election shall be noted by 1 of the election officials upon the precinct registration card of each elector voting at an election. If voter registration lists are used in the precinct, the election official shall clearly indicate upon the list each elector voting at that election. The clerk of a city, village, or township shall maintain a record of voting participation for each registered elector. The Attorney General declared that this statute violated the Equal Protection Clause of the Fourteenth Amendment. Op. Atty. Gen. 1997, No. 6930. That decision is binding on all state agencies. (Effective March 31, 1997)	168.523
Minnesota	Sign Name	(a) An individual seeking to vote shall sign a polling place roster which states that the individual is at least 18 years of age, a citizen of the United States, has resided in Minnesota for 20 days immediately preceding the election, maintains residence at the address shown, is not under a guardianship in which the court order revokes the individual's right to vote, has not been found by a court of law to be legally incompetent to vote or convicted of a felony without having civil rights restored, is registered and has not already voted in the election. The roster must also state: "I understand that deliberately providing false information is a felony punishable by not more than five years imprisonment and a fine of not	Minn. Stat. § 204C.10

		more than $10,000, or both." (b) A judge may, before the applicant signs the roster, confirm the applicant's name, address, and date of birth. (c) After the applicant signs the roster, the judge shall give the applicant a voter's receipt. The voter shall deliver the voter's receipt to the judge in charge of ballots as proof of the voter's right to vote, and thereupon the judge shall hand to the voter the ballot. The voters' receipts must be maintained during the time for notice of filing an election contest. (Effective January 1, 2004)	
Mississippi	Sign Name	* * * When any person entitled to vote shall appear to vote, he shall first sign his name in a receipt book or booklet provided for that purpose and to be used at that election only and said receipt book or booklet shall be used in lieu of the list of voters who have voted formerly made by the managers or clerks; whereupon and not before, the initialing manager or, in his absence, the alternate initialing manager shall indorse his initials on the back of an official blank ballot, prepared in accordance with law, and at such place on the back of the ballot that the initials may be seen after the ballot has been marked and folded, and when so indorsed he shall deliver it to the voter, which ballot the voter shall mark in the manner provided by law, which when done the voter shall deliver the same to the initialing manager or, in his absence, to the alternate initialing manager, in the presence of the others, and the manager shall see that the ballot so delivered bears on the back thereof the genuine initials of the initialing manager, or alternate initialing manager, and if so, but not otherwise, the ballot shall be put into the ballot box; and when so done one (1) of the managers or a duly appointed clerk shall make the proper entry on the pollbook. If the voter is unable to write his name on the receipt book, a manager or clerk shall note on the back of the ballot that it was receipted for by his assistance. (Effective January 1, 1987)	Miss. Code Ann. § 23-15-541
Missouri	Provide ID	1. Before receiving a ballot, voters shall identify themselves by presenting a form of personal identification from the following list: (1) Identification issued by the state of Missouri, an agency of the state, or a local election authority of the state; (2) Identification issued by the United States government or agency thereof; (3) Identification issued by an institution of higher education, including a university, college, vocational and technical school, located within the state of Missouri; (4) A copy of a current utility bill, bank statement, government check, paycheck or other government document that contains the name and address of the voter; (5) Driver's license or state identification card issued by another state; or (6) Other identification approved by the secretary of state under rules promulgated pursuant to subsection 3 of this section other identification approved by federal law. Personal knowledge of the voter by two supervising election judges, one from each major political party, shall be acceptable voter identification upon the completion of a secretary of state-approved affidavit that is signed by both supervisory election judges and the voter that attests to the personal knowledge of the voter by the two supervisory election judges. The secretary of state may provide by rule for a sample affidavit to be used for such purpose. (Last amended in 2002)	Mo. Rev. Stat. §115.427.1

Montana	Provide ID	(1) (a) Before an elector is permitted to receive a ballot or vote, the elector shall present to an election judge a current photo identification showing the elector's name. If the elector does not present photo identification, including but not limited to a valid driver's license, a school district or postsecondary education photo identification, or a tribal photo identification, the elector shall present a current utility bill, bank statement, paycheck, notice of confirmation of voter registration issued pursuant to 13-2-207, government check, or other government document that shows the elector's name and current address. (From 2004 version of the Montana Code Annotated; No updates in 2004, only in 2005 [Unrelated section was amended in 2005])	Mont. Code. Ann. §13-13-114(1)(a)
Nebraska	Sign Name	(1) The clerks of election shall have a list of registered voters of the precinct and a sign-in register at the polling place on election day. The list of registered voters shall be used for guidance on election day and may be in the form of a computerized, typed, or handwritten list or precinct registration cards. Registered voters of the precinct shall place and record their signature in the sign-in register before receiving any ballot. The list of registered voters and the sign-in register may be combined into one document. (Last amended in 2003) Official ballots shall be used at all elections. No person shall receive a ballot or be entitled to vote unless and until he or she is registered as a voter except as provided in section 32-914.01, 32-914.02, 32-915, 32-915.01, or 32-936. Except as otherwise specifically provided, no ballot shall be handed to any registered voter at any election until (1) he or she announces his or her name and address to the clerk of election, (2) the clerk has found that he or she is a registered voter at the address as shown by the precinct list of registered voters unless otherwise entitled to vote in the precinct under section 32-328, 32-914.01, 32-914.02, 32-915, or 32-915.01, (3) if the voter registered by mail after January 1, 2003, and has not previously voted in an election for a federal office within the county, the clerk shall ask the registered voter to present a photographic identification which is current and valid or a copy of a utility bill, bank statement, government check, paycheck, or other government document that is current and that shows the name and address of the voter, (4) the clerk has instructed the registered voter to personally write his or her name in the precinct sign-in register on the appropriate line which follows the last signature of any previous voter, and (5) the clerk has listed on the precinct list of registered voters the corresponding line number and name of the registered voter. (Last updated in 2003)	Neb. Rev. Stat. § 32-913 Neb. Rev. Stat. § 32-914
Nevada	Match Sig.	1. Except as otherwise provided in NRS 293.541, if a person's name appears in the election board register or if he provides an affirmation pursuant to NRS 293.525, he is entitled to vote and must sign his name in the election board register when he applies to vote. His signature must be compared by an election board officer with the signature or a facsimile thereof on his original application to register to vote or one of the forms of identification listed in subsection 2. 2. Except as otherwise provided in NRS 293.2725, the forms of identification which may be used individually to identify a voter at the polling place are: (a) The card issued to the voter at the time he registered to vote; (b) A driver's license; (c) An identification card issued by the Department of Motor Vehicles; (d) A military identification card; or	Nev. Rev. Stat.§ 293.277

		(c) Any other form of identification issued by a governmental agency which contains the voter's signature and physical description or picture. Last Amendment Effective Jan. 1, 2004.	
NH	Give Name	A person desiring to vote shall, before being admitted to the enclosed space within the guardrail, announce his or her name to one of the ballot clerks who shall thereupon repeat the name; and, if the name is found on the checklist by the ballot clerk, the ballot clerk shall put a checkmark beside it and again repeat the name. The ballot clerk shall state the address listed on the checklist for the voter, and ask if the address is correct; if the address on the checklist is not correct, the ballot clerk shall correct the address in red on the checklist. The voter, if still qualified to vote in the town or ward and unless challenged as provided for in RSA 659:27-33, shall then be allowed to enter the space enclosed by the guardrail. After the voter enters the enclosed space, the ballot clerk shall give the voter one of each ballot to be voted on in that election which shall be folded as it was upon receipt from the secretary of state. Last Amendment Effective July 2, 2002.	N.H. Rev. Stat. Ann. 659:13
New Jersey	Match Sig.	19:15-17. Comparison of signatures or statements made openly; provisional ballots for newly registered voters without proper identification a. The comparison of signatures of a voter made upon registration and upon election day, and if the voter alleges his inability to write, the comparison of the answers made by such voter upon registration and upon election day, shall be had in full view of the challengers. b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 232 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the "Uniformed and Overseas Citizens Absentee Voting Act" (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote other than in person under section 3 of Pub.L.98-435, the "Voting Accessibility for the Elderly and Handicapped Act," or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery. c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5). Last Amendment Effective July 9, 2004	N.J. Stat. Ann. 19:15-17
New Mexico	Sign Name	D. The judge assigned to the voter list used for confirmation of registration and voting shall determine that each person offering to vote is registered and, in the	N.M. Stat. Ann §1-5-10

		case of a primary election, that the voter is registered in a party designated on the primary election ballot. If the person's registration is confirmed by the presence of his name on the voter list or if the person presents a certificate under the seal and signature of the county clerk showing that he is entitled to vote in the election and to vote in that precinct, the judge shall announce to the election clerks the list number and the name of the voter as shown on the voter list. E. The election clerk shall locate that list number and name on the signature roster and shall require the voter to sign his usual signature or, if unable to write, to make his mark opposite his printed name. If the voter makes his mark, it shall be witnessed by one of the judges of the precinct board. If the signature roster indicates that the voter is required to present a form of identification before voting, the election judge shall ask the voter for a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows and matches the name and address of the voter as indicated on the signature roster. If the voter does not provide the required identification, he shall be allowed to vote on a provisional paper ballot. G. A voter shall not be permitted to vote until he has properly signed his usual signature or made his mark in the signature roster. (From 2004 version of New Mexico Annotated Statutes, amended in 2005 to require presentation of ID)	(Recompiled as §1-12-7.1 by L. 2005, Ch. 270, §63, effective July 1, 2005)
New York	Match Sig.	1. A person before being allowed to vote shall be required, except as provided in this chapter, to sign his name on the back of his registration poll record on the first line reserved for his signature at the time of election which is not filled with a previous signature, or on the line of the computer generated registration list reserved for his signature. The two inspectors in charge shall satisfy themselves by a comparison of this signature with his registration signature and by comparison of his appearance with the descriptive material on the face of the registration poll record that he is the person registered. If they are so satisfied they shall enter the other information required for the election on the same line with the voter's latest signature, shall sign their names or initials in the spaces provided therefor, and shall permit the applicant to vote. Any inspector or inspectors not satisfied shall challenge the applicant forthwith. 2. If a person who alleges his inability to sign his name presents himself to vote, the board of inspectors shall permit him to vote, unless challenged on other grounds, provided he had been permitted to register without signing his name. The board shall enter the words "Unable to Sign" in the space on his registration poll record reserved for his signature or on the line of the computer generated registration list reserved for his signature at such election. If his signature appears upon his registration record or upon the computer generated registration list the board shall challenge him forthwith, except that if such a person claims that he is unable to sign his name by reason of a physical disability incurred since his registration, the board, if convinced of the existence of such disability, shall permit him to vote, shall enter the words "Unable to Sign" and a brief description of such disability in the space reserved for his signature at such election. At each subsequent election, if such disability still exists, he shall be entitled to vote without signing his name and the board of inspectors, without further notation, shall enter the words "Unable to Sign" in the space reserved for his signature at such election. 3. The voter's signature made by him upon registration and his signature made at subsequent elections shall be effectively concealed from the voter by a blotter or piece of opaque paper until after the voter shall have completed his signature. 4. In any case where a person who has heretofore voted has placed his voting signature on the back of his registration poll record on the first or any succeeding line or lines at the time or times of an election, instead of on the last line of the	N.Y. Law § 8-304 (McKinney)

		space thereon required to be reserved for such voting signatures and on any lines next running upward therefrom, the inspectors of election shall obliterate such misplaced signature or signatures, initial the obliteration and require such voter to sign his name again in the correct place on such registration poll record. 5. Any person who has heretofore registered and who at such time placed his or her registration signature on the back of the registration poll record otherwise than in the space required to be provided therefor at the bottom of such poll record, shall, before being permitted to vote at any election thereafter, subscribe a new registration signature for himself on the last line at the bottom of such poll record, and, at the same time, if the inspectors of election are satisfied that the signatures were made by the same person, obliterate his original registration signature placed elsewhere than on the bottom of such record. Such obliterations may be made by crossing out the signature so as to completely efface the same or by affixing thereover a piece of gummed tape of a size sufficient only to cover such signature and of a type adequate to fully conceal the same Last Amended 1986	
North Carolina	Give Name	(a) Checking Registration.--A person seeking to vote shall enter the voting enclosure through the appropriate entrance. A precinct official assigned to check registration shall at once ask the voter to state current name and residence address. The voter shall answer by stating current name and residence address. In a primary election, that voter shall also be asked to state, and shall state, the political party with which the voter is affiliated or, if unaffiliated, the authorizing party in which the voter wishes to vote. After examination, that official shall state whether that voter is duly registered to vote in that precinct and shall direct that voter to the voting equipment or to the official assigned to distribute official ballots. If a precinct official states that the person is duly registered, the person shall sign the pollbook, other voting record, or voter authorization document in accordance with subsection (c) of this section before voting.	N.C. Gen. Stat. Ann. § 163-166.7
North Dakota	Provide ID	16.1-05-07 Poll clerks to check identification and verify eligibility -- Poll clerks to request, correct, and update incorrect information contained in the pollbook. 1. Before delivering a ballot to an individual according to section 16.1-13- 22, the poll clerks shall request the individual to show a driver's license issued by the state, another form of identification displaying a photograph of the individual and the individual's date of birth, or another appropriate form of identification prescribed by the secretary of state. If an individual offering to vote fails or refuses to show an appropriate form of identification, the individual may be allowed to vote without being challenged according to section 16.1-05-06 if the individual provides to the election board the individual's date of birth and if a member of the election board or a clerk knows the individual and can personally vouch that the individual is a qualified elector of the precinct. After verifying that the individual's name is contained in the pollbook generated from the central voter file, poll clerks shall verify the individual's residential address and mailing address, if different from the individual's residential address. (From 2003 version of N.D. Century Code; only amendment to this statute that became effective in 2003 was in 2005)	N.D. Cent. Code § 16.1-05-07

Ohio	Match Sig.	When an elector appears in a polling place to vote he shall announce his full name and address to the precinct election officials. He shall then write his name and address at the proper place in the poll lists or signature pollbooks provided therefore, except that if, for any reason, an elector shall be unable to write his name and address in the poll list or signature pollbook, the elector may make his mark at the place intended for his name and a precinct official shall write the name of the elector at the proper place on the poll list or signature pollbook following the elector's mark, upon the presentation of proper identification. The making of such mark shall be attested by the precinct official who shall evidence the same by signing his name on the poll list or signature pollbook as a witness to such mark. The elector's signature in the poll lists or signature pollbooks shall then be compared with his signature on his registration form or a digitized signature list as provided for in section 3503.13 of the Revised Code, and if, in the opinion of a majority of the precinct election officials, the signatures are the signatures of the same person, the clerks shall enter the date of the election on the registration form or shall record the date by such other means as may be prescribed by the secretary of state. If the right of the elector to vote is not then challenged, or, if being challenged, he establishes his right to vote, he shall be allowed to proceed into the voting machine. If voting machines are not being used in that precinct, the judge in charge of ballots shall then detach the next ballots to be issued to the elector from Stub B attached to each ballot, leaving Stub A attached to each ballot, hand the ballots to the elector, and call his name and the stub number on each of the ballots. The clerk shall enter the stub numbers opposite the signature of the elector in the pollbook. The elector shall then retire to one of the voting compartments to mark his ballots. No mark shall be made on any ballot which would in any way enable any person to identify the person who voted the ballot. (Effective at time of last update, 1992 H 182, eff. 4-9-93)	Ohio Rev. Code Ann. § 3505.18
Oklahoma	Sign Name	Each person presenting himself to vote shall announce his name to the judge of the precinct, whereupon the judge shall determine whether said person's name is in the precinct registry. (Last amended in 1990) Persons who have been determined to be eligible to vote shall sign, in the presence of the clerk, the proper precinct registry. Said clerk shall thereupon issue proper ballots to said person. The voter's signature on said precinct registry shall be the best evidence of said voter's having voted at said election. Said precinct registry shall be retained in the office of the county election board for a period of twenty-two (22) months following the election and shall be subject to public inspection during regular office hours. (Last amended in 1990)	Okla. Stat. Ann. tit. 26, § 7-114 Okla. Stat. Ann. tit. 26, § 7-117
Oregon	Match Sig.	All elections in Oregon are Vote by Mail. An Elections Official will compare the signature on your ballot return envelope to the signature on your voter registration card to verify your identity (http://www.uhavavote.org/votingguide/votebymail.html) (unknown date, but use of wayback machine shows that this provision on site on following dates: 7/11/04, 10/20/04 and 10/29/04)	Or. Rev. Stat. § 254.385
Penn.	Match Sig.	(a.3) All electors, including any elector that shows identification pursuant to subsection (a), shall subsequently sign a voter's certificate, and, unless he is a State or Federal employee who has registered under any registration act without declaring his residence by street and number, he shall insert his address therein, and hand the same to the election officer in charge of the district register. Such election officer shall thereupon announce the elector's name so that it may be heard by all members of the election board and by all watchers present in the	25 Pa. Stat. Ann. § 3050

		polling place and shall compare the elector's signature on his voter's certificate with his signature in the district register. If, upon such comparison, the signature upon the voter's certificate appears to be genuine, the elector who has signed the certificate shall, if otherwise qualified, be permitted to vote: Provided, That if the signature on the voter's certificate, as compared with the signature as recorded in the district register, shall not be deemed authentic by any of the election officers, such elector shall not be denied the right to vote for that reason, but shall be considered challenged as to identity and required to make the affidavit and produce the evidence as provided in subsection (d) of this section. When an elector has been found entitled to vote, the election officer who examined his voter's certificate and compared his signature shall sign his name or initials on the voter's certificate, shall, if the elector's signature is not readily legible, print such elector's name over his signature, and the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes shall also be entered by one of the election officers or clerks. As each voter is found to be qualified and votes, the election officer in charge of the district register shall write or stamp the date of the election or primary, the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes, and shall sign his name or initials in the proper space on the registration card of such voter contained in the district register. (In effect at time of, and unaltered by: 2004, Oct. 8, P.L. 807, No. 97, § 5.1 (changes procedure for first time voters, not established voters))	
Rhode Island	Give Name	(a) Each person desiring to vote shall state his or her name and residence, including that person's street address, if he or she has any, to one of the first pair of bi-partisan supervisors, who shall then announce the name and residence in a loud and distinct voice, clear and audible. As each voter's name is announced, the voter shall be handed a ballot application in the following form: BALLOT APPLICATION (Poll List) Senatorial District ____________________ Representative District _____________ Voting District _________________________ Election Date ______________________________________ I hereby certify that I am a registered and qualified elector in the above voting district of City of and hereby make application for ballots to be voted at this election. ____ (Signature of Voter) ____ (Residence Address) Number Approved _________________________________ (Supervisor of Election)	R.I. Gen. Laws § 17-19-24

		(b) The voter shall sign the application in the presence and view of a bipartisan pair. They shall locate the voter's name on the certified voting list for the voting district. Upon finding the voter's name on the certified voting list for the district, they shall initial the ballot application in the place provided next to the word "Approved" and shall enter on the certified list of voters a proper notation that the applicant has voted in the election. They shall then return the ballot application to the voter who shall pass down the line and present it to the clerk. After the voter has handed the approved ballot application to the clerk, the clerk shall provide the voter with the appropriate computer ballot and security sleeve, the warden shall direct the voter to the voting booth which the voter shall use, and unless the voter needs instruction or assistance as provided in this chapter, the voter shall cast his or her vote, and if he or she desires place the voted computer ballot in a security sleeve, and shall proceed to the optical scan precinct count unit and shall personally place his or her voted ballot into the designated ballot slot on the unit, and after doing so, shall leave the enclosure at once. No voter shall remain within the voting booth longer than ten (10) minutes, and if the voter refuses to leave after the lapse of ten (10) minutes, the voter shall be removed from the voting booth by order of the warden. Except for the election officials and the election inspector, not more than two (2) voters in excess of the number of voting booths shall be permitted within the enclosed space at any time. (Last amended 2004, Current through January 2005 Session)	
South Carolina	Photo ID	**§ 7-13-710. Proof of right to vote; signing poll list; comparison of signatures.** When any person presents himself to vote, he shall produce his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department of Motor Vehicles, if he is not licensed to drive, or the written notification of registration provided for by §§ 7-5- 125 and 7-5-180 if the notification has been signed by the elector. If the elector loses or defaces his registration notification, he may obtain a duplicate notification from his county board of registration upon request in person, or by telephone or mail. After presentation of the required identification, his name must be checked by one of the managers on the margin of the page opposite his name upon the registration books, or copy of the books, furnished by the board of registration. The managers shall keep a poll list which must contain one column headed "Names of Voters". Before any ballot is delivered to a voter, the voter shall sign his name on the poll list, which must be furnished to the appropriate election officials by the State Election Commission. At the top of each page the voter's oath appropriate to the election must be printed. The signing of the poll list or the marking of the poll list is considered to be an affirmation of the oath by the voter. One of the managers shall compare the signature on the poll list with the signature on the voter's driver's license, registration notification, or other identification and may require further identification of the voter and proof of his right to vote under this title as he considers necessary. If the voter is unable to write or if the voter is prevented from signing by physical handicap, he may sign his name to the poll list by mark with the assistance of one of the managers. Last amended: 1968	S.C. Code Ann. § 7-13-710
South Dakota	Photo ID	When a voter is requesting a ballot, the voter shall present a valid form of personal identification. The personal identification that may be presented shall be either: (1) A South Dakota driver's license or nondriver identification card; (2) A passport or an identification card, including a picture, issued by an agency of the United States government; (3) A tribal identification card, including a picture; or (4) An identification card, including a picture, issued by a high school or an accredited institution of higher education, including a university, college, or	S.D. Codified Laws § 12-18-6.1

		technical school, located within the State of South Dakota. Last amended March 2004	
Tennessee	Provide ID	Identification of eligible voters (a)(1) A voter shall sign an application for ballot, indicate the primary in which the voter desires to vote, if any, and present it to a registrar. The application for ballot shall include thereon a space for the address of the voter's current residence, and the voter shall write or print such address on the application when the voter signs it. The registrar shall compare the signature and information on the application with the signature and information on the duplicate permanent registration record. The registrar shall make a determination whether the voter's address is different from the address on the voter's permanent registration record or if the registration is in inactive status. If the voter has changed residence, or the voter's registration is inactive, the registrar shall follow the procedures for voting pursuant to § 2-7-140. If, upon comparison of the signature and other identification, it is found that the applicant is entitled to vote, the registrar shall initial the application and shall note on the reverse side of the voter's duplicate permanent registration record the date of the election, the number of the voter's ballot application, and the elections in which the voter votes. If the applicant's signature is illegible, the registrar shall print the name on the application. The registrar shall give the voter the ballot application which is the voter's identification for a paper ballot or ballots or for admission to a voting machine. The voter shall then sign the duplicate poll lists without leaving any lines blank on any poll list sheet. (2) In any computerized county, the county election commission shall have the option of using an application for a ballot as provided in this section, or using the computerized voter signature list. A computerized voter signature list shall include the voter's name, current address of residence, social security number or registration number, birth date and spaces for the voter's signature, elections voted, ballot number and precinct registrar's initials. The following procedures shall be followed in the case of computerized voter signature lists: (A) The voter shall sign the signature list and indicate the election or elections the voter desires to vote in and verify the voter's address in the presence of the precinct registrar; (B) The registrar shall compare the voter's signature and information on the signature list with other evidence of identification supplied by the voter. If, upon comparison of the signature and other evidence of identification, it is found that the applicant is entitled to vote, the registrar shall initial the signature list; (C) If the applicant's signature is illegible, the registrar shall print the name of the applicant on the voter list; and (D) If a voter is unable to present any evidence of identification specified in subsection (c), the voter shall be required to execute an affidavit of identity on a form provided by the county election commission. Last amended 2003	Tenn. Code Ann. § 2-7-112
Texas	Provide ID	(b) On offering to vote, a voter must present the voter's voter registration certificate to an election officer at the polling place. (Last amended in 1997)	Tex. Elec. Code Ann. § 63.001
Utah	Give Name	(1)(a) Any registered voter desiring to vote shall give his name, and, if requested, his residence, to one of the election judges. (b) If an election judge does not know the person requesting a ballot and has reason to doubt that person's identity, the judge shall request identification or have the voter identified by a known registered voter of the district. (3) If the election judge determines that the voter is registered: (a) the election judge in charge of the official register shall: (i) write the ballot number opposite the name of the voter in the official register; and	Utah Code Ann. § 20A-3-104

		(ii) direct the voter to sign his name in the election column in the official register; (b) another judge shall list the ballot number and voter's name in the pollbook; and (c) the election judge having charge of the ballots shall: (i) endorse his initials on the stub; (ii) check the name of the voter on the pollbook list with the number of the stub; (iii) hand the voter a ballot; and (iv) allow the voter to enter the voting booth. (In effect at time of last update prior to 2005: Laws 2003, c. 37, § 1, eff. May 5, 2003)	
Vermont	Give Name	Before a person may be admitted to vote, he or she shall announce his or her name and if requested, his or her place of residence in a clear and audible tone of voice, or present his or her name in writing, or otherwise identify himself or herself by appropriate documentation. The election officials attending the entrance of the polling place shall then verify that the person's name appears on the checklist for the polling place. If the name does appear, and if no one immediately challenges the person's right to vote on grounds of identity or having previously voted in the same election, the election officials shall repeat the name of the person and: (1) If the checklist indicates that the person is a first-time voter in the municipality who registered by mail and who has not provided required identification before the opening of the polls, require the person to present any one of the following: a valid photo identification; a copy of a current utility bill; a copy of a current bank statement; or a copy of a government check, paycheck, or any other government document that shows the current name and address of the voter. If the person is unable to produce the required information, the person shall be afforded the opportunity to cast a provisional ballot, as provided in subchapter 6A of this chapter. The elections official shall note upon the checklist a first-time voter in the municipality who has registered by mail and who produces the required information, and place a mark next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting. (2) If the voter is not a first-time voter in the municipality, no identification shall be required, the clerk shall place a check next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting (Last amended in 2003)	Vt. Stat. Ann. tit. 17, § 2563
Virginia	Provide ID	§ 24.2-643. Qualified voter permitted to vote; procedures at polling place; voter identification A. After the polls are open, each qualified voter at a precinct shall be permitted to vote. The officers of election shall ascertain that a person offering to vote is a qualified voter before admitting him to the voting booth and furnishing an official ballot to him. B. An officer of election shall ask the voter for his full name and current residence address and repeat, in a voice audible to party and candidate representatives present, the full name and address stated by the voter. The officer shall ask the voter to present any one of the following forms of identification: his Commonwealth of Virginia voter registration card, his social security card, his valid Virginia driver's license, or any other identification card issued by a government agency of the Commonwealth, one of its political subdivisions, or the United States; or any valid employee identification card containing a photograph of the voter and issued by an employer of the voter in the ordinary course of the employer's business. If the voter's name is found on the pollbook, if he presents one of the forms of	Va. Code. Ann.

		identification listed above, if he is qualified to vote in the election, and if no objection is made, an officer shall enter, opposite the voter's name on the pollbook, the first or next consecutive number from the voter count form provided by the State Board, or shall enter that the voter has voted if the pollbook is in electronic form; an officer shall provide the voter with the official ballot; and another officer shall admit him to the voting booth. Except as provided in subsection E of this section, if a voter is entitled to vote except that he is unable to present one of the forms of identification listed above, he shall be allowed to vote after signing a statement, subject to felony penalties for false statements pursuant to § 24.2-1016, that he is the named registered voter who he claims to be. A voter who requires assistance in voting by reason of physical disability or inability to read or write, and who requests assistance pursuant to § 24.2-649, may be assisted in preparation of this statement in accordance with that section. The provisions of § 24.2-649 regarding voters who are unable to sign shall be followed when assisting a voter in completing this statement. (Version in effect as of 2004- effective 4/12/2004)	
Washington	Sign Name	29A.44.201. A voter desiring to vote shall give his or her name to the precinct election officer who has the precinct list of registered voters. This officer shall announce the name to the precinct election officer who has the copy of the inspector's poll book for that precinct. If the right of this voter to participate in the primary or election is not challenged, the voter must be issued a ballot or permitted to enter a voting booth or to operate a voting device. For a partisan primary in a jurisdiction using the physically separate ballot format, the voter must be issued a nonpartisan ballot and each party ballot. The number of the ballot or the voter must be recorded by the precinct election officers. If the right of the voter to participate is challenged, RCW 29A.08.810 and 29A.08.820 apply to that voter. (In effect at time of last update prior to 2005: 2004 c 271 § 136, eff. June 10, 2004) 29A.44.210. Any person desiring to vote at any primary or election is required to sign his or her name on the appropriate precinct list of registered voters. If the voter registered using a mark, or can no longer sign his or her name, the election officers shall require the voter to be identified by another registered voter. The precinct election officers shall then record the voter's name. Effective date: July 1, 2004	Wash. Rev. Code § 29A.44.201 & 29A.44.210
West Virginia	Match Sig.	(a) Any person desiring to vote in an election shall, upon entering the election room, clearly state his or her name and residence to one of the poll clerks who shall thereupon announce the same in a clear and distinct tone of voice. If that person is found to be duly registered as a voter at that precinct, he or she shall be required to sign his or her name in the space marked "signature of voter" on the pollbook prescribed and provided for the precinct. If that person is physically or otherwise unable to sign his or her name, his or her mark shall be affixed by one of the poll clerks in the presence of the other and the name of the poll clerk affixing the voter's mark shall be indicated immediately under the affixation. No ballot may be given to the person until he or she so signs his or her name on the pollbook or his or her signature is so affixed thereon. * * * (c) When the voter's signature is properly on the pollbook, the two poll clerks shall sign their names in the places indicated on the back of the official ballot and deliver the ballot to the voter to be voted by him or her without leaving the	W. Va. Code § 3-1-34 (a)

		election room. If he or she returns the ballot spoiled to the clerks, they shall immediately mark the ballot "spoiled" and it shall be preserved and placed in a spoiled ballot envelope together with other spoiled ballots to be delivered to the board of canvassers and deliver to the voter another official ballot, signed by the clerks on the reverse side required by this subsection. The voter shall thereupon retire alone to the booth or compartment prepared within the election room for voting purposes and there prepare his or her ballot using a ballpoint pen of not less than five inches in length or other indelible marking device of not less than five inches in length. In voting for candidates in general and special elections, the voter shall comply with the rules and procedures prescribed in section five, article six of this chapter. (In effect at time of last update prior to 2005: Acts 2003, c. 100, eff. 90 days after March 7, 2003)	
Wisconsin	Give Name	6.79(2)(a) Except as provided in sub. (6), where there is registration, each person, before receiving a voting number, shall state his or her full name and address. Upon the prepared registration list, after the name of each elector, the officials shall enter the serial number of the vote as it is polled, beginning with number one. Each elector shall receive a slip bearing the same serial number. A separate list shall be maintained for electors who are voting under s. 6.15, 6.29 or 6.55(2) or (3) and electors who are reassigned from another polling place under s. 5.25(5)(b). Each such elector shall have his or her full name, address and serial number likewise entered and shall be given a slip bearing such number. (In effect at time of last update prior to 2005: 2003 Act 327, § 4, eff. June 12, 2004)	Wis. Stat. § 6.79
Wyoming	Give Name	(a) Unless a voter is challenged pursuant to W.S. 22-15-101 through 22- 15-109, no identification shall be required when: (i) Voting in person or by mail after having registered in person; or (ii) Voting in person or by mail after having registered by mail and having previously voted in a Wyoming federal election. (In effect at time of last update prior to 2005: Effective dates. -- Laws 2004, ch. 94, § 5, makes the act effective immediately upon completion of all acts necessary for a bill to become law as provided by art. 4, § 8, Wyo. Const. Approved March 5, 2004.)	Wyo. Stat. Ann. § 22-3-118

APPENDIX B –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:
Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
    - 14th Amendment EPC: no classification (applied strict scrutiny)
    - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
        - Compelling interests: preventing voter fraud (deemed compelling)
        - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
        - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
    - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
    - Substantive due process and equal protection
        - No improper discrimination

    - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
    - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
    - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
    - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
    - Substantive due process: ruled that internal use of SS# not a burden
    - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
    - P&I, Article IV: does not protect in-state citizens
    - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
    - VRA: ruled that race was not made a "qualification" for voting
    - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
    - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
    - VRA: ruled that it was not a "test or device" because it applied equally
    - 15th Amendment: same reasons

<u>Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:</u>

***American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

<u>Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:</u>

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required <u>all</u> in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot." 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover,* 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.,* CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[1]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[1] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[2]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[3] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

[2] Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php

[3] GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[4] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[4] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Appendix C

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University
May 16, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen turnout among those eligible to vote. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater based on specific types of requirements. Critics argue that requiring voters to produce some form of government-issued photo identification on Election Day is more demanding than requiring, for example, that they state their names at the polling place because of the various steps needed to procure a photo identification card, such as a driver's license. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. This report draws from two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (10 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[5] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[5] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I also tested the array of minimum identification requirements to assess whether they posed increasing levels of demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[6]

Analysis of aggregate data

If one treats maximum voter identification requirements as a continuous variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter

---

[6] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

identification requirements (r = -.30, p < .05). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant (r= -.20, p = .16). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.2 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, I opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.[7]

Voter identification requirements alone do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county.

I coded the voter identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus I added a variable to reflect the number of days between each state's registration deadline and the election.[8]

---

[7] Treating maximum voter identification requirements as a continuous variable yielded results in which voter identification requirements were negatively related to aggregate turnout. Those results can be found in Table A-1 in the Appendix to this report.

[8] For states that had Election Day registration or no registration requirement (North Dakota), I assigned a value of zero to this variable.

Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the median household income for 2002 in each county.[9]

I estimated a series of random effects models to account for the likelihood that data from counties were correlated within each state (for further explanation of random effects and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[10] I allowed the median income variable to have both fixed and random effects in each state to take into account variation in the cost of living in each state. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, two of the four requirements had a small and negative effect on turnout in 2004: matching one's signature and providing a non-photo identification. Taking into account the reference variable of stating one's name, the results indicate that turnout was lower in states that required signature matches or a non-photo identification than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Two contextual factors -- whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate-- increased voter turnout. The time between the closing date for registration and the election had a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income had positive effects on turnout. The percentage of African-Americans in the county did not have a significant effect.

The effects of the minimum voter identification requirements were non-existent. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to have a negative effect on turnout, as did the number of days between the closing date for registration and the election.

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2),

---

[9] To bring the income figures into a scale comparable to those of the other variables, I used the natural log of median household income.

[10] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

showed no significant improvement by including the interactions ($p > 0.05$). I report the coefficients for the models with the interactions in the Appendix in tables A-2 and A-3.

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the identification requirements for voting vary, so does turnout. Specifically, in terms of the maximum requirements, the results suggest that requiring a signature match or non-photo identification is negatively related to turnout compared to requiring that a voter state his or her name. But the analysis showed that adding interactions between identification requirements and the percentage of the county that was African-American or Hispanic did not improve the fit of the model to the data.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[11] Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[12] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S. citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[13] As in the analysis of aggregate data, I coded the voter

---

[11] A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

[12] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

[13] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown

identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.[14]

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less.[15] At the individual level, I controlled for gender, household income, and dummy variables for race/ethnicity, age and education. In terms of race and ethnicity, I created dummy variables to represent whether a voter was Black/non-Hispanic, Hispanic, or Asian (with white/non-Hispanic/other voters as the omitted category for reference purposes). I separated education into five dummy variables: less than high school, high school diploma, some college, college graduate, and graduate training. I omitted the "less than high school" variable from the model for reference purposes. Regarding age, I created four dummy variables to represent 18 to 24 years of age, 29 to 44, 45 to 64, and 65 years and older. I omitted the 18-to-24 category as the reference variable in the model.

Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

---

that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[14] Earlier versions of this paper included an individual-level analysis that included the five maximum voter identification requirements combined into a continuous variable. The results of that analysis, which found that voter identification requirements had a negative relationship with turnout, can be found in table A-4 in the Appendix.

[15] Given that the individual-level analysis focused on registered voters (as opposed to the citizen voting-age population in the aggregate analysis), I did not include the closing date for registration as a predictor of turnout in the individual-level analysis.

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 3 here]

The two models in Table 3 use either the maximum or minimum voter identification requirements in each state. The two models generate similar results. In each model, three of the voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. In other words, compared to states that require voters only to state their names, the requirements to sign one's name, provide a non-photo identification, photo identification in the maximum requirements or affidavit in the minimum requires exert a negative influence on turnout.

Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had finished high school. Respondents who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[16] I calculated the probabilities taking into account both maximum and minimum requirements.

[Table 4 here]

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability appear to decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.[17] In terms of the

---

[16] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[17] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of

minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

Race and ethnicity have generated particular interest in the debate over voter identification requirements. But incorporating dummy variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, I divided the sample into sub-samples and re-ran the probit models.

[Table 5 here]

The effects of voter identification requirements were similar for white voters compared to the entire sample, which was not surprising given that white voters comprised 81 percent of the sample. Voters in states where the maximum requirement involved signing one's name, providing a non-photo identification or photo identification were less likely to vote than those in a state that required voters to give their names. Taking into consideration the minimum requirements, this was true only for voters in states that require a non-photo identification or an affidavit. White voters in photo identification states were 3.7 percent less likely to vote than were white voters in states where respondents gave their names. The difference in probability was 4.4 percent for voters in states where an affidavit was the minimum requirement.

Voter identification requirements also influenced turnout among Black voters, but to a lesser extent relative to white voters.

[Table 6 here]

Of the maximum voter identification requirements, only the non-photo identification requirement reduced turnout compared to turnout in states that required voters to state their names. The predicted probability of voting was 5.7 percent lower for Black respondents in states that required non-photo identification. In terms of age, only African-Americans age 65 and older were more likely to vote than respondents in the 18 to 24 referent group. Respondents in all levels of education were more likely to vote than respondents without a high school diploma. Gender, income, living in a battleground state, being a part of the workforce and having been born in the United States also were positive predictors. Recent mobility tended to lower the probability of voting. None of the minimum identification requirements had a significant effect on voting, while most of the remaining variables had effects similar to those in the maximum requirement model.

---

all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

Hispanic voters also were less likely to vote in states that required non-photo identification as opposed to stating one's name.

[Table 7 here]

Using the coefficients from Table 7 to calculate predicted probabilities, for both the maximum and minimum requirements, Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. Hispanic voters ages 45 to 64 and 65 and over were more likely to vote than their 18-to-24-year-old counterparts. Education and income also were positive predictors of voting. Interestingly, being a native-born citizen lowered the probability of voting, while native-born citizenship was a positive predictor for African-American voters and was not a predictor at all for white voters. It may be that naturalized citizens of Hispanic descent are more conscious of the value of voting rights than other groups.

Varying voter identification requirements influenced Asian-American voters as well. As with Hispanic and Black voters, Asian-American voters were less likely to turn out in states with non-photo identification requirements than in states where voters gave their names.

[Table 8 here]

Using the probit coefficients to calculate predicted probabilities, Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement. Asian-American voters also were 2.2 percent less likely to vote when signatures were the maximum requirement compared to stating one's name.

In terms of other predictors, there were no significant differences in terms of age or income. In contrast to Hispanic voters, where one was a naturalized or natural-born citizen did not affect the probability of voting. Those with high school or college diplomas or graduate training were more likely to turn out than those with less than a high school diploma. Women and married voters also were more likely to turn out than men and voters who were note married.

Discussion and conclusion

The results presented here provide evidence that as voter identification requirements vary, voter turnout does as well. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

In the aggregate data, requirements that voters match signatures on file, provide a non-photo identification or photo identification had negative effects on turnout compared to requiring that voters state their names. Interactions with specific groups – African-Americans and Hispanics – did not improve the fit of the aggregate data to the models. But differences emerged among specific groups in the individual-level data. The signature, non-photo identification and photo identification requirements all had negative effects compared to the requirement that voters simply state their names. These effects translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For

example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters (the gap widened to 3.7 percent for white voters when comparing photo identification to simply stating one's name).

That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements. This begs the question as to why photo identification requirements did not have a greater influence in 2004. It may have been due to the fact that photo identification was a maximum requirement in only five states, and each of those states accepted another type of identification as a minimum requirement.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[18] Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

[18] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using the November 2004 Current Population Survey data and voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not registered). Of all of the voter identification requirements, only requiring signatures or matching signatures had a significant effect on whether a respondent said he or she was registered to vote in 2004. In each instance the effect was negative.

APPENDIX D

Annotated Bibliography on Voter Identification Issues

Law Journals

- Angelo J. Genova & Rebecca Moll Freed, *The Right to Vote and Be Counted: A Liberty at Risk*, 233 N.J. LAW 44, Apr. 2005.
  - Discusses HAVA a lot
- George W. Grayson, *Registering and Identifying Voters: What the United States Can Learn From Mexico,* 3 ELECTION L.J. 513 (2004).
  - Benefits of US adopting Mexican system of identifying voters and voter registration
- Robert A. Pastor, *Improving the U.S. Electoral System: Lessons from Canada and Mexico,* 3 ELECTION L.J. 584 (2004).
  - Discusses HAVA, problems of 2000 election, discusses registration & identification
- Brian Kim, *Recent Development: Help America Vote Act,* 40 HARV. J. ON LEGIS. 579 (Summer 2003).
  - Discussion of HAVA requirements and voter ID, problems in 2000
- Robert L. McCurley, *Legislative Wrap-Up: Election Law Changes*, 64 ALA. LAW. 364, Nov. 2003.
  - Discusses changes in AL to their election law in 2003, including adding voter ID
  - HAVA discussed
- Clifford B. Levine, Esq. & David J. Montgomery, Esq., *Post-Election Litigation in Pennsylvania,* 41 Duq. L. Rev. 153 (Fall, 2002).
  - Discusses challenging elections based on voter fraud & illegal votes
- Rebecca Barrett, *Election,* 18 GA. ST. U. L. REV. 114 (Fall 2001).
  - Discusses a GA law in 2001 removing hunting & fishing licenses from list of acceptable ID and a failed amendment to limit acceptable ID to photo ID only
- Robert A. Junell, Curtis L. Seidlits, Jr. & Glen G. Shuffler, *Consideration of Illegal Votes in Legislative Election Contests,* 28 Tex. Tech L. Rev. 1095 (1997).
  - General discussion of ways voters are verified, what happens when voters are challenged as illegal voters
- John Victor Berry, *Take the Money and Run: Lame-Ducks "Quack" and Pass Voter Identification Provisions,* 74 U. DET. MERCY L. REV. 291 (Winter 1997).
  - discusses a photo ID law passed in Michigan in 1997 (later declared violated EPC of 14th amendment)
  - arguments against photo ID
- Deborah S. James, Note, *Voter Registration: A Restriction on the Fundamental Right to Vote,* 96 YALE L.J. 1615 (1987).
  - Discusses voter registration as a way to combat fraud & several different ways to do it

Historical articles:

- Gabrielle B. Ruda, Note, *Picture Perfect: A Critical Analysis of the Debate on the 2002 Help America Vote Act,* 31 FORDHAM URB. L.J. 235 (November 2003).
  - Lot of analysis on HAVA and voter ID
  - Little bit of historical
  - Arguments for and against certain types of voter ID laws

- Kimberly C. Delk, *What Will it Take to Produce Greater American Voter Participation? Does Anyone Really Know?*, 2 LOY. J. PUB. INT. L. 133 (Spring 2001).
    - History of voting & requirements & laws throughout time
    - Future: I-voting & e-registration – improvements in voter ID which would result

Marginally relevant/limited discussion of Voter ID issues

- Jeanne S. Zaino & Jeffrey T. Zaino, *The Changing Landscape of Election Disputes*, 59 DISP. RESOL. J. 11 (Aug. – Oct. 2004).
    - Discusses HAVA & implementation
- Symposium, *Disability Law, Equality, and Difference: American Disability Law and the Civil Rights Model, Alabama Section*, 55 ALA. L. REV. 1167 (Summer 2004).
    - Discusses an AL law expanding exemptions to ID requirement if 2 poll workers identify them
- Bryan Mercurio, *Democracy in Decline: Can Internet Voting Save the Electoral Process*, 22 J. MARSHALL J. COMPUTER & INFO. L. 409 (Winter 2004).
    - Internet voting
- Kristen E. Larson, Note, *Cast Your Ballot.com: Fulfill Your Civic Duty over the Internet*, 27 WM. MITCHELL L. REV. 1797 (2001).
    - Voter ID and Internet voting
    - Costs & Benefits of Internet voting
    - States using or examining Internet voting
- Hugh M. Lee, *An Analysis of State and Federal Remedies for Election Fraud, Learning from Florida's Presidential Election Debacle?*, 63 U. Pitt. L. Rev. 159 (Fall, 2001).
    - Discusses illegal ballots, fraudulent registration
- Katharine Hickel Barondeau & Terry M. Jarrett, *The Florida Election Debacle: Can it Happen in Missouri?*, 57 J. Mo. B. 294, Nov./Dec. 2001.
    - Anti fraud election reform in Missouri
- Priscilla L. Southwell & Justin Burchett, *Vote-by-Mail in the State of Oregon*, 34 Willamette L. Rev. 345 (Spring 1998).
    - Vote by mail and discusses fraud issues involved
- Jonathan E. Davis, *Comment: The National Voter Registration Act of 1993: Debunking States' Rights Resistance and the Pretense of Voter Fraud*, 6 Temp. Pol. & Civ. Rts. L. Rev. 117 (Fall 1996/Spring 1997).
    - Voter fraud arguments against NVRA
- James A. Gardner, *Consent, Legitimacy and Elections: Implementing Popular Sovereignty Under the Lockean Constitution*, 52 U. PITT. L. REV. 189 (Fall 1990).

The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891.It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

REVISED FINAL DRAFT
For review by the EAC Advisory Boards

REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

EXECUTIVE SUMMARY AND RECOMMENDATIONS

Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

- Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:[1] the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also consides some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.[2] Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed.[3] As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible

---

[1] See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. Political Behavior, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

[2] The EAC has contracted with other researchers to study vote fraud issues.

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.[4] The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

---

[4] Even the most relaxed provisions for identification at the polls –anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a "minimum" requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a

significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a "maximum" requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a "minimum" requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for

example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[5] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls

---

[5] Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
    I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
    II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
    III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors:

the convenience of the voter, the total time allowed to evaluate ballots[6], and the safe harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more uncertain.

SUMMARY OF RESEARCH

Background and Approach of the Study

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether the vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the

---

[6] Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly.* 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics.* 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.

- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior.* 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review.* 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review.* 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.
- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review.* 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior.* 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.

- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior.* 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics.*, 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [7] The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.[8]

---

[7] As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.
[8] Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.[9] Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter

---

[9] "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.[10] Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.[11] And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?[12]

---

[10] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

[11] The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

[12] "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[13]
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[14]
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.[15] A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.
5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[16]
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

[13] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

[14] In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

[15] "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

[16] For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

Voter ID and Turnout

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004.These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[17] Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.[18]

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

---

[17] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

[18] As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a "minimum" requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.[19] Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

[19] One state election official told us that, "We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is."

TABLE 1 – Voter ID Requirements[20]

State	Maximum Forms of ID Required 2004	Current ID Requirement for First-Time Voters	Current ID Requirements for All Other Voters	Verification Method for Provisional Ballots
Alabama	Provide ID	Provide ID	Provide ID	Address & Registration

* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

[1] Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

[2] Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

[3] Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

[4] Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

[5] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[6] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[7] Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

[8] Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .05$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ($r= -.20$, $p = .16$). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**64.2 %**	State Name	**63.0 %**
Sign Name	**61.1 %**	Sign Name	**60.4 %**
Match Signature	**60.9 %**	Match Signature	**61.7 %**
Provide Non-Photo ID	**59.3 %**	Provide Non-Photo ID	**59.0 %**
Provide Photo ID	**58.1 %**	Swear Affidavit	**60.1 %**
Average Turnout (All States)	***60.9 %***		

This table displays the mean turnout using the aggregate county level data for each state in 2004.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.[21]

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American [22]
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

---

[21] The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

[22] The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.[23]

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

[23] This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.[24] Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[25] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

[24] For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[24] Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

[25] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

influenced turnout in 2004.[26] The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[27]

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.[28] Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.[29] .

---

[26] The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

[27] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[28] A probit model is a popular specification of a generalized linear regression model, using the probit link function.

[29] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

Table 3. Predicted probability of voter turnout – all voters

	Maximum requirement	Minimum requirement
State name	91.7%	91.5%
Sign name	89.9%	90.2%
Match signature	Not significant	Not significant
Non-photo ID	89.0%	89.0%
Photo ID	88.8%	----
Affidavit	----	87.%5
Total difference from "state name" to "photo ID" or "affidavit"	**2.9%**	**4.0%**
N	54,973	

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one's name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.[30] In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

---

[30] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

Race and ethnicity have generated particular interest in the debate over voter ID requirements.[31] The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

---

[31] Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day , or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*).. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring <u>all</u> in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.[32] Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL

---

[32] Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at

the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

Conclusions

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.[33]

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents

---

[33] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

with them to the polls, while assuring that each voter who casts a ballot is eligible and votes only once.

Many thanks , Tom-

I will pass this schedule on to the Executive Director's office.

We will put final review of the Provisional Voting paper on the Commissioner's Tuesday meeting schedule (May 16) and the Voter ID paper on Thursday's meeting (May 18)

Karen: You will have the Provisional Voting paper tomorrow. Tim will rework his paper and have a new version to me (using the dummy variable approach) on Monday. I will have a report that incorporates the new work (with our original approach described in an appendix) to you late Tuesday. Does that work with the Commission's schedule for review of the paper?

Subject Briefings for advisory boards

Karen,

In our conversation last week, you mentioned 4 briefings that we would deliver on May 23 and 24: Separate briefings to the Board of Advisors on Voter ID and Provisional Voting, and separate briefings to the Standards Board on Voter ID and Provisional Voting. That's a total of 4 briefings.

Your email yesterday mentions just 2 briefings, one on voter ID and one on provisional voting. Does that mean that the two boards meet jointly for the briefings?

Subject Voter ID Report and Appendices

History: This message has been replied to and forwarded.

Karen,

Attached is the final draft report on our Voter ID analysis, revised to incorporate the comments made by the EAC at and after our meeting in Washington and the new statistical analysis performed by Tim Vercellotti, which I sent you last Friday. Included in the attached file are about 60 pages of appendices. You may or may not want to distribute all the appendices to the reviewers who will take part in Thursday's conference call. They might find Appendix A useful; it provides a detailed summary of the actual statutory language on Voter ID in each of the states. The other appendices, which are called for as deliverables in the contract, provide worthwhile information for the record, but are not likely to offer material for the reviewers to focus on.

When it comes time to distribute this material to the advisory boards before our meeting with them in May, once again you may want to exercise judgment about how much of it is likely to prove of interest to them.

We look forward to Thursday's teleconference.

Tom O'Neill

VoterIDReport0508.doc

REVISED FINAL DRAFT
05/08/06

REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background

This report to the United States Election Assistance Commission (EAC) analyzes the effects of voter identification requirements on turnout in the 2004 election and makes recommendations for best practices to evaluate proposals for voter ID requirements. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under a contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a draft report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

EXECUTIVE SUMMARY AND RECOMMENDATIONS

Methods

To explore the effects of voter ID requirements on electoral participation in 2004, as measured by turnout, we gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. We assigned each state to one of five categories based on its ID requirements. They are progressively more rigorous based on the demands they make on voters.[1] The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity,

---

[1] Even the most relaxed provisions for identification at the polls –anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, we drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided on this issue. The decisions so far suggest the constitutional and other constraints on voter ID requirements.

Findings

Our analysis of data from the 2004 election indicates that the form of identification required of voters affects turnout. Lack of ID can keep voters from the polls or prevent them from casting a regular ballot if they go to the polling place.[2] This finding emerged from both the analysis of aggregate, county-level data and the individual-level data of the Current Population Survey. The overall effect for all registered voters was fairly small, but statistically significant.

Voter turnout in 2004 was lower in states where voter identification requirements were more demanding. The data show a general movement toward lower turnout as voters are required to present levels of proof of their identify.

---

[2] It also seems reasonable to conclude that in states that require an identity document to vote, more voters –those lacking the required ID—will cast provisional ballots. This conclusion is a conjecture because we lack precise information on why voters must cast their ballots provisionally.

The aggregate data show that 60.9 percent of the estimated citizen voting age population turned out in 2004. An average of 64.6 percent turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification, a reduction of 6.5 percentage points. That figure, however, probably overstates the effect of voter ID requirements since the inclusion of other factors in the analysis diminishes the extent of influence of voter ID on turnout. After taking account of other factors, the analysis supports the hypothesis that as voter identification requirements increases, turnout declines.

The effects were more pronounced for some specific subgroups. Hispanic voters, the poor and those who did not graduate from high school appear to be less likely to vote as the identification requirement becomes more demanding. The analysis for some other demographic groups illustrate the range of effects predicted for more rigorous voter ID requirements:

Race or Ethnicity

- In the individual-level data for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of identification requirements.
- More rigorous ID requirements did not have a statistically significant effect when looking at all African-Americans, but
- African-American voters from households below the poverty line were 7.5 percent less likely to vote as the ID requirements varied from stating one's name to providing photo identification.

Income

- Citizens from poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit.

Education

- Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the requirements ranged from stating one's name to providing photo identification.

Age

- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.
- Turnout by young (18-24) African-American voters in states that required a government-issued photo ID was about 10% less likely to vote than in states where they had only to state their name.
- The elderly, while they would be slightly less likely to vote as the requirements changed from stating name to providing photo ID, would not necessarily be affected in the dramatic manner predicted by opponents of photo identification requirements.

Our analysis of litigation suggests that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not now sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity.[3] Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

The current lack of understanding of precisely how voter ID requirements affect turnout can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the

---

[3] The EAC has contracted with other researchers to study vote fraud issues.

2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[4] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

A voting system that requires voters to produce an identify document or documents may indeed prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements affect the decision by potential voters to go or stay away from the polls-- are not well understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

---

[4] Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections.
    I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
    II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
    III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots[5], and the safe harbor provision in presidential elections.
5. Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is

---

[5] Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional.

SUMMARY OF RESEARCH

Background and Approach of the Study

Establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [6] The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks broadly at voter ID issues and goes beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.[7]

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.[8]

---

[6] As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

[7] Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

[8] "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and , if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has informed us that it has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.[9] Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- can divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot

---

[9] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

rejected.[10] And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls. In conducting this analysis, we were sensitive to the observation that the problem with American elections may well be that too many people do not vote rather than that a few people may vote more than once.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here can best be described as the questions policy-makes should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?[11]
2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[12]
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[13]
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve

---

[10] The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

[11] "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

[12] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

[13] In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.[14] A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[15]
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. Does the Voter ID requirement have a neutral result on the composition of the qualified and eligible electorate? ID requirements should not be designed to, nor unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another.

Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex. Moving beyond the statutes and regulations,

---

[14] "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

[15] For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places.

Like any system run by fallible people, the voter ID process is subject to variation in practice.[16] Voters may be confronted with demands for identification different from the directives in state statutes or regulation. Under the pressures of Election Day, there is no sure way to report the wide variety of conditions each voter encounters. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. Nevertheless, we are satisfied that the categories used in this report provide a level of discrimination among voter identification regimes sufficient for the analysis that we have undertaken.

* States applies only HAVA's ID requirement, applicable for first-time voters who registered by mail and did not provide applicable ID at the time of registration.

[1] Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

[2] Florida required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

[3] Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

[4] Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

[5] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[6] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[7] Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

[8] Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Effect of Voter ID requirements on Turnout

We examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

The Voter ID category assigned to each state is shown in Table 1. We analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau. [18]

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 64.6 percent of the citizen voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis supports the hypothesis that as voter identification requirements become more stringent, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result: Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Methods

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had

---

[18] See Appendix for the full report: Tim Vercellotti, "Analysis of Voter Identification Requirements on Turnout," The Eagleton Institute of Politics, Rutgers University, May 4, 2006.

to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[19]

We coded the states according to these requirements to test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

Election laws in many states, however, offer exceptions to these requirements if potential voters lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). In recognition of this fact, we also categorized states based on the *minimum* requirement for voting with a regular ballot.

In 2004 none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states).

We treated the minimum ID in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

We examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the

---

[19] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

The aggregate data posed a greater challenge to determine percentage of the voting-age population that has U.S. citizenship. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue we estimated the 2004 citizen voting-age population for each county using a method reported. Therefore, we calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. This method was used in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission.

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous. In the statistical analysis, we coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification.

Findings

As the level of required ID proof increases, with photo identification as the most demanding requirement, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**64.6 %**	State Name	**63.0 %**
Sign Name	**61.1 %**	Sign Name	**60.8 %**
Match Signature	**60.9 %**	Match Signature	**61.7 %**
Provide Non-Photo ID	**59.3 %**	Provide Non-Photo ID	**59.0 %**
Provide Photo ID	**58.1 %**	Swear Affidavit	**60.1 %**
Average Turnout (All States)	***60.9 %***		

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone do not determine voter turnout. Other factors make a difference in turnout, often a greater difference than the ID requirements. Multivariate models can take into account other predictors of turnout and therefore paint a more complete picture of the relationship between voter identification requirements and turnout. The model used here also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The maximum ID requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. The more senior citizens and African-Americans in the county, the higher the turnout. The percentage of the population living below the poverty reduced turnout. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance ($p = .05$).

The analysis tested the hypothesis that stricter voter ID requirements dampen turnout among minorities. The data revealed no statistically significant effect on turnout for African-Americans in general. But it revealed a significant reduction in turnout for Hispanics and the poor. The analysis using the minimum ID categories produced similar results.

Analysis of the aggregate data at the county level supports the hypothesis that as voter ID requirements grow stricter, turnout declines. This effect is strongest in counties with concentrations of Hispanic residents or families below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout.[20] Married people are more likely to vote than those who are not married. To explore the effects of voter identification requirements on turnout, examining individual-level data is important.

Individual-level Analysis

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 60.9%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger citizen voting-age population for the

---

[20] Education is an important factor in predicting turnout. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

aggregate data. Also some survey respondents overstate their incidence of voting. Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[21] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. Excluded are those who said they were not registered to vote and those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Also excluded are respondents who said they were not U.S. citizens.[22]

The dependent variable in these analyses is whether a respondent reported voting in the November 2004 election. As in the aggregate analysis, stricter voter ID requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004.

Table 3 Predicted probability of voter turnout

ID Category	Maximum requirement	Minimum requirement
State name	91.2%	91.1%
Sign name	90.6%	90.3%
Match signature	90.0%	89.5%
ID	89.4%	88.7%
Photo ID	88.7%	----
Affidavit	----	87.8%
Difference from lowest to highest	**2.50%**	**3.30%**
N	54,973	

Predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

---

[21] The Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent.

[22] The CPS did not ask the voting questions of respondents who were not U.S. citizens. The design of the questionnaire skips those questions for non- citizens.

The influence of voter identification requirements, holding all other variables constant, is shown in Table 3 below. The probability of voting dropped with each level of voter identification requirement, with a total drop of 2.5 percent, across the five types of identification for the maximum requirement and 3.3% for the minimum requirements. [23]

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group.

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

- Turnout in states requiring photo ID was predicted as 8.9 percentage points lower than in states where voters simply stated their names.
- The strictest ID requirements reduced the probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out by 7.8 to 9.2 percentage points.
- For African-Americans in the 18- to 24-year-old age group the gap was 10.6 percentage points.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[24] Allowing the maximum voting requirement to

---

[23] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of <u>all</u> citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

[24] Respondents were coded as being above or below the U.S. Census Bureau's 2004 poverty line based on their reported annual household income and size of the household.

vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well. Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Conclusions of the Analysis

As the stringency of voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data.

- In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements.
- Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit.
- African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education.

- Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification.

- When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.

Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters.

- The effects on African-American voters were pronounced for two specific sub-samples, African-American voters living below the poverty line and those in the 18- to 24-year-old age group.
- The elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. Do potential voters who cannot or do not want to meet the identification requirements simply stay away from the polls? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? (Proponents of stricter voter ID requirements might argue that some part of the reduction comes from keeping the truly ineligible from voting.)

Our data alone cannot resolve these questions. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.
It is important to note that the 2004 data do not allow us to draw conclusions about the effect of laws such as those recently passed in Georgia and Indiana, which require government-issued

photo ID. No such laws were in place in 2004, and the five states that then required photo ID at the time allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction,

enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the

legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the

Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. [25]

---

[25] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal*

The dynamics of Voter ID requirements –how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. So far as it may be necessary to reduce vote fraud made possible by inadequate voter ID, the research could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended elsewhere by one of the authors of this report, Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed. [26]

Election Reform, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

[26] "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier. "

Summary of Voter Identification Requirements By State

Prepared by
Sara A. Sampson, Reference Librarian,
The Ohio State University Moritz College of Law.

Voter ID Requirements

State	Forms of ID Required 2004	Statutory Language	Statutory Citation
Alabama	Provide ID	(b) Each elector shall provide identification to an appropriate election official prior to voting. A voter required to show identification when voting in person shall present to the appropriate election official either of the following forms of identification: (1) A current valid photo identification. (2) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. The term "other government document" may include, but is not limited to, any of the following: a. A valid identification card issued by a branch, department, agency, or entity of the State of Alabama, any other state, or the United States authorized by law to issue personal identification. b. A valid United States passport. c. A valid Alabama hunting or fishing license. d. A valid Alabama permit to carry a pistol or revolver. e. A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States. f. A valid United States military identification card. g. A certified copy of the elector's birth certificate. h. A valid Social Security card. i. Certified naturalization documentation. j. A certified copy of court records showing adoption or name change. k. A valid Medicaid card, Medicare card, or an Electronic Benefits Transfer Card (formerly referred to as a "food stamp card"). (c) For voters required to show identification when voting by mail, the voter shall submit with the ballot a copy of one of the forms of identification listed in subsection (b). (e) An individual required to present identification in accordance with this section who is unable to meet the identification requirements of this section shall be permitted to vote by a challenged or provisional ballot, as provided for by law. (f) In addition, an individual who does not have identification in his or her possession at the polls shall be permitted to vote if the individual is positively identified by two election officials as a voter on the poll list who is eligible to vote and the election official signs the voters list by where the voter signs. Effective Date: June 24, 2003	Ala. Code § 17-11A-1
Alaska	Provide ID	(a) Before being allowed to vote, each voter shall exhibit to an election official one form of identification, including (1) an official voter registration card, driver's license, state identification card, current and valid photo identification, birth certificate, passport, or hunting or fishing license; or (2) an original or a copy of a current utility bill, bank statement, paycheck, government check, or other government document; an item exhibited under this	Alaska Stat. § 15.15.225

		paragraph must show the name and current address of the voter. (b) An election official may waive the identification requirement if the election official knows the identity of the voter. The identification requirement may not be waived for voters who are first-time voters who initially registered by mail or by facsimile or other electronic transmission approved by the director under AS 15.07.050, and did not provide identification as required in AS 15.07.060. (c) A voter who cannot exhibit a required form of identification shall be allowed to vote a questioned ballot. effective June 17, 2003	
Arizona	Provide ID	B. If a statewide voter registration database is not yet operational, for any person who has registered to vote by mail for the first time in this state after January 1, 2003 or who is reregistering by mail after January 1, 2003 after moving from one county to another county in this state, the person shall comply with the following in order to be issued a ballot: 1. The person shall present either one of the following: (a) A current form of identification that bears a photograph of the person and the name of the person. (b) A current utility bill, bank statement, paycheck, government issued check or other government document that shows the name and registration address of the person. 2. If the person does not present a document that complies with paragraph 1, the person is only eligible to vote a provisional ballot as prescribed by § 16-584. Effective Dec. 1, 2003	Ariz. Rev. Stat. Ann. § 16-579
Arkansas	Provide ID	7-5-305. Requirements. (a) Before a person is permitted to vote, the election official shall: (1) Request the voter to identify himself in order to verify the existence of his name on the precinct voter registration list; (2) Request the voter, in the presence of the election official, to state his address and state or confirm his date of birth; (3) Determine that the voter's date of birth and address are the same as those on the precinct voter registration list; (4) If the date of birth given by the voter is not the same as that on the precinct voter registration list, request the voter to provide identification as the election official deems appropriate; (5)(A) If the voter's address is not the same as that on the precinct voter registration list, verify with the county clerk that the address is within the precinct. (B) If the address is within the precinct, request the voter to complete a voter registration application form for the purpose of updating county voter registration record files. (C) If the address is not within the precinct, instruct the voter to contact the county clerk's office to determine the proper precinct; (6) If the voter's name is not the same as that on the precinct voter registration list, request the voter to complete a voter registration application form for purposes of updating county voter registration record files; (7) Request the voter, in the presence of the election official, to sign his name, including his given name, his middle name or initial, if any, and his last name in the space provided on the precinct voter registration list. If a person is unable to sign his signature or make his mark or cross, the election official shall enter his initials and the voter's date of birth in the space for the person's signature on the precinct voter registration list; and	Arkansas Code Annotated § 7-5-305

		(8)(A) Request the voter for purposes of identification to provide a valid driver's license, photo identification card issued by a governmental agency, voter card, social security card, birth certificate, United States passport, employee identification card issued by a governmental agency containing a photograph, employee identification card issued in the normal course of business of the employer, student identification card, Arkansas hunting license, or United States military identification card. (B)(i) If a voter is unable to provide this identification, the election official shall indicate on the precinct voter registration list that the voter did not provide identification. (ii) Following each election, the county board of election commissioners may review the precinct voter registration lists and may provide the information of the voters not providing identification at the polls to the prosecuting attorney. (iii) The prosecuting attorney may investigate possible voter fraud; and (9) Follow the procedures under §§ 7-5-310, 7-5-311, and 7-5-523, if the preson is a disabled voter and presents himself or herself to vote. Effective: July 16, 2003	
California	Sign Name	Any person desiring to vote shall announce his or her name and address in an audible tone of voice, and when one of the precinct officers finds the name in the index, the officer shall in a like manner repeat the name and address. The voter shall then write his or her name and residence address or, if the voter is unable to write, shall have the name and residence address written by another person on a roster of voters provided for that purpose, whereupon a challenge may be interposed as provided in this article. (Enacted in 1994, no amendments since)	Cal. Elec. Code § 14216
Colorado	Provide ID	(1) Except as provided in subsection (4) of this section, any eligible elector desiring to vote shall show his or her identification as defined in section 1-1-104(19.5), write his or her name and address on the signature card, and give the signature card to one of the election judges, * * * (4) An eligible elector who is unable to produce identification may cast a provisional ballot in accordance with article 8.5 of this title. (19.5)(a) "Identification" means: (I) A valid Colorado driver's license; (II) A valid identification card issued by the department of revenue in accordance with the requirements of part 3 of article 2 of title 42, C.R.S.; (III) A valid United States passport; (IV) A valid employee identification card with a photograph of the eligible elector issued by any branch, department, agency, or entity of the United States government or of this state, or by any county, municipality, board, authority, or other political subdivision of this state; (V) A valid pilot's license issued by the federal aviation administration or other authorized agency of the United States; (VI) A valid United States military identification card with a photograph of the eligible elector; (VII) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the elector; (VIII) A valid medicare or medicaid card issued by the United States health care	Colo. Rev. Stat. Ann. § 1-7-110; Colo. Rev. Stat. Ann. § 1-1-104

		financing administration; (IX) A certified copy of a birth certificate for the elector issued in the United States; or (X) Certified documentation of naturalization. (b) Any form of identification indicated in paragraph (a) of this subsection (19.5) that shows the address of the eligible elector shall be considered identification only if the address is in the state of Colorado. Effective 5/28/2004	
Connecticut	Provide ID	(a) In each primary, election or referendum, when an elector has entered the polling place, the elector shall announce the elector's street address, if any, and the elector's name to the checkers in a tone sufficiently loud and clear as to enable all the election officials present to hear the same. Each elector who registered to vote by mail for the first time on or after January 1, 2003, and has a "mark" next to the elector's name on the official registry list, as required by section 9-23r, shall present to the checkers, before the elector votes, either a current and valid photo identification that shows the elector's name and address or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows the name and address of the elector. Each other elector shall (1) present to the checkers the elector's Social Security card or any other preprinted form of identification which shows the elector's name and either the elector's address, signature or photograph, or (2) on a form prescribed by the Secretary of the State, write the elector's residential address and date of birth, print the elector's name and sign a statement under penalty of false statement that the elector is the elector whose name appears on the official checklist. Such form shall clearly state the penalty of false statement. A separate such form shall be used for each elector. If the elector presents a preprinted form of identification under subdivision (1) of this subsection, the checkers shall check the name of such elector on the official checklist. If the elector completes the form under subdivision (2) of this subsection, the assistant registrar of voters shall examine the information on such form and either instruct the checkers to check the name of such elector on the official checklist or notify the elector that the form is incomplete or inaccurate. Effective May 10., 2004	Conn. Gen. Stat. Ann. § 9-261
Delaware	Provide ID	(a) A voter, upon entering the room where an election is being held, shall announce his or her name and address and provide proof of identity, whereupon the clerks shall place a mark or make a notation of his or her name upon the election district record. In the event the voter does not have proof of identity with them, he or she shall sign an affidavit of affirmation that he or she is the person listed on the election district record. Effective: July 9, 2002	15 Del. Code § 4937
D.C.	Sign Name	(i)(1) A person shall be entitled to vote in an election in the District of Columbia if he or she is a duly registered voter. A qualified elector shall be considered duly registered in the District if he or she has met the requirements for voter registration and, on the day of the election, either resides at the address listed on the Board's records or files an election day change of address pursuant to this subsection. (2) Each registered voter who changes his or her place of residence from that listed on the Board's records shall notify the Board, in writing, of the new residence address. A change of address shall be effective on the date the notification was mailed as shown by the United States Postal Service postmark. If not postmarked, the notification shall be effective on the date of receipt by the Board. Change of address notifications from registrants shall be accepted pursuant to subsection (g) of this section, except that any registrant who has not notified the Board of his or her current residence address by the deadline established by subsection (g) of this section may be permitted to vote at the	D.C. Code § 1-1001.07

		polling place that serves the current residence address by filing an election day change of address notice pursuant to paragraph (4) of this subsection. (3) Each registered voter who votes at a polling place on election day shall affirm his or her residence address as it appears on the official registration roll for the precinct. The act of signing a copy of the official registration roll for the precinct shall be deemed affirmation of the voter's address as it appears on the Board's registration records. (Effective April 3, 2001)(not added as part of 2005 amendment)	
Florida	Photo ID	101.043 (1) The precinct register, as prescribed in s. 98.461, shall be used at the polls in lieu of the registration books for the purpose of identifying the elector at the polls prior to allowing him or her to vote. The clerk or inspector shall require each elector, upon entering the polling place, to present a current and valid picture identification as provided in s. 97.0535(3)(a). If the picture identification does not contain the signature of the voter, an additional identification that provides the voter's signature shall be required. The elector shall sign his or her name in the space provided, and the clerk or inspector shall compare the signature with that on the identification provided by the elector and enter his or her initials in the space provided and allow the elector to vote if the clerk or inspector is satisfied as to the identity of the elector. (2) Except as provided in subsection (3), if the elector fails to furnish the required identification, or if the clerk or inspector is in doubt as to the identity of the elector, such clerk or inspector shall follow the procedure prescribed in s. 101.49. **97.0535** (3)(a) The following forms of identification shall be considered current and valid if they contain the name and photograph of the applicant and have not expired: 1. Florida driver's license. 2. Florida identification card issued by the Department of Highway Safety and Motor Vehicles. 3. United States passport. 4. Employee badge or identification. 5. Buyer's club identification. 6. Debit or credit card. 7. Military identification. 8. Student identification. 9. Retirement center identification. 10. Neighborhood association identification. 11. Entertainment identification. 12. Public assistance identification. (b) The following forms of identification shall be considered current and valid if they contain the name and current residence address of the applicant: 1. Utility bill.	West's Fla. Stat. Ann. § 101.043 & West's Fla. Stat. Ann. § 97.0535

		2. Bank statement. 3. Government check. 4. Paycheck. 5. Other government document (excluding voter identification card). Version effective 1/1/2005-12/31/2005	
Georgia	Provide ID	(a) Each elector shall present proper identification to a poll worker at or prior to completion of a voter's certificate at any polling place and prior to such person's admission to the enclosed space at such polling place. Proper identification shall consist of any one of the following: (1) A valid Georgia driver's license; (2) A valid identification card issued by a branch, department, agency, or entity of the State of Georgia, any other state, or the United States authorized by law to issue personal identification; (3) A valid United States passport; (4) A valid employee identification card containing a photograph of the elector and issued by any branch, department, agency, or entity of the United States government, this state, or any county, municipality, board, authority, or other entity of this state; (5) A valid employee identification card containing a photograph of the elector and issued by any employer of the elector in the ordinary course of such employer's business; (6) A valid student identification card containing a photograph of the elector from any public or private college, university, or postgraduate technical or professional school located within the State of Georgia; (7) A valid Georgia license to carry a pistol or revolver; (8) A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States; (9) A valid United States military identification card; (10) A certified copy of the elector's birth certificate; (11) A valid social security card; (12) Certified naturalization documentation; (13) A certified copy of court records showing adoption, name, or sex change; (14) A current utility bill, or a legible copy thereof, showing the name and address of the elector; (15) A bank statement, or a legible copy thereof, showing the name and address of the elector; (16) A government check or paycheck, or a legible copy thereof, showing the name and address of the elector; or (17) A government document, or a legible copy thereof, showing the name and address of the elector. (b) If an elector is unable to produce any of the items of identification listed in subsection (a) of this Code section, he or she shall sign a statement under oath in a form approved by the Secretary of State, separate and distinct from the elector's voter certificate, swearing or affirming that he or she is the person identified on the elector's voter certificate. Such person shall be allowed to vote without undue delay; provided, however, that an elector who registered for the first time in this state by mail and did not provide one of the forms of identification set forth in subsection (a) of this Code section at the time of registration and who is voting for the first time may vote a provisional ballot pursuant to Code Section 21-2-418 upon swearing or affirming that the elector is the person identified in the elector's voter certificate. Such provisional ballot shall only be counted if the registrars are able to verify current and valid identification of the elector as provided in this Code section within the time period for verifying provisional ballots pursuant to Code Section 21-2-419. Falsely swearing or affirming such statement under oath shall be punishable as a felony, and the penalty shall be distinctly set forth on the face of the statement." effective June, 2003	Ga. Code. Ann. § 21-2-417

Hawaii	Photo ID	(b) The voter shall present valid identification to the official in charge of the pollbook. *Do I Need an I.D. to Vote on Election Day?* Yes: Be sure to have an I.D. with a picture and signature (such as a Hawaii driver's license or state I.D. card) when you go to vote. The NVRAC card is not an acceptable form of identification. From the 2004 version of the administrative code. **§ 11-136 Poll book, identification, voting.** Every person upon applying to vote shall sign the person's name in the poll book prepared for that purpose. This requirement may be waived by the chairperson of the precinct officials if for reasons of illiteracy or blindness or other physical disability the voter is unable to write. Every person shall provide identification if so requested by a precinct official. A poll book shall not contain the social security number of any person. After signing the poll book and receiving the voter's ballot, the voter shall proceed to the voting booth to vote according to the voting system in use in the voter's precinct. The precinct official may, and upon request shall, explain to the voter the mode of voting. Last amended 2003.	Haw. Code. R. § 2-51-80 (Paper ballots; voting procedure at the polls), § 2-51-83 (Punchcard ballots; voting procedure at polls), 2-51-85.1 (Marksense ballots; voting procedure at the polls.) – All have same subsection (b) Haw. Code. R. T. 2, SUBT. 4, CH. 51, Appendix HRS 11-136
Idaho	Sign Name	(1) An elector desiring to vote shall state his name and address to the judge or clerk in charge of the combination election record and poll book. (2) Before receiving his ballot, each elector shall sign his name in the combination election record and poll book following his name therein. (5) The elector shall then be given the appropriate ballots which have been stamped with the official election stamp and shall be given folding instructions for such ballots. (Last amended in 1972)	Id. St. §34-1106
Illinois	Give Name	Any person desiring to vote shall give his name and, if required to do so, his residence to the judges of election, one of whom shall thereupon announce the same in a loud and distinct tone of voice, clear, and audible; the judges of elections shall check each application for ballot against the list of voters registered in that precinct to whom absentee or early ballots have been issued for that election, which shall be provided by the election authority and which list shall be available for inspection by pollwatchers. A voter applying to vote in the precinct on election day whose name appears on the list as having been issued an absentee or early ballot shall not be permitted to vote in the precinct. All applicable provisions of Articles 4, 5 or 6 shall be complied with and if such name is found on the register of voters by the officer having charge thereof, he	10 Ill. Comp. Stat. 5/17-9

		shall likewise repeat said name, and the voter shall be allowed to enter within the proximity of the voting booths, as above provided. One of the judges shall give the voter one, and only one of each ballot to be voted at the election, on the back of which ballots such judge shall indorse his initials in such manner that they may be seen when each such ballot is properly folded, and the voter's name shall be immediately checked on the register list. In those election jurisdictions where perforated ballot cards are utilized of the type on which write-in votes can be cast above the perforation, the election authority shall provide a space both above and below the perforation for the judge's initials, and the judge shall endorse his or her initials in both spaces. Whenever a proposal for a constitutional amendment or for the calling of a constitutional convention is to be voted upon at the election, the separate blue ballot or ballots pertaining thereto shall, when being handed to the voter, be placed on top of the other ballots to be voted at the election in such manner that the legend appearing on the back thereof, as prescribed in Section 16-6 of this Act, shall be plainly visible to the voter. At all elections, when a registry may be required, if the name of any person so desiring to vote at such election is not found on the register of voters, he or she shall not receive a ballot until he or she shall have complied with the law prescribing the manner and conditions of voting by unregistered voters. If any person desiring to vote at any election shall be challenged, he or she shall not receive a ballot until he or she shall have established his right to vote in the manner provided hereinafter; and if he or she shall be challenged after he has received his ballot, he shall not be permitted to vote until he or she has fully complied with such requirements of the law upon being challenged. Besides the election officer, not more than 2 voters in excess of the whole number of voting booths provided shall be allowed within the proximity of the voting booths at one time. The provisions of this Act, so far as they require the registration of voters as a condition to their being allowed to vote shall not apply to persons otherwise entitled to vote, who are, at the time of the election, or at any time within 60 days prior to such election have been engaged in the military or naval service of the United States, and who appear personally at the polling place on election day and produce to the judges of election satisfactory evidence thereof, but such persons, if otherwise qualified to vote, shall be permitted to vote at such election without previous registration.	
Indiana	Sign Name	–	West's Annotated Indiana Code § 3-11-8-25
Iowa	Sign Name	1. The board members of their respective precincts shall have charge of the ballots and furnish them to the voters. Any person desiring to vote shall sign a voter's declaration provided by the officials, in substantially the following form: VOTER'S DECLARATION OF ELIGIBILITY I do solemnly swear or affirm that I am a resident of the .... precinct, ... ward or township, city of ...., county of ...., Iowa. I am a registered voter. I have not voted and will not vote in any other precinct in said election. I understand that any false statement in this declaration is a criminal offense punishable as provided by law. ____________________ Signature of Voter ____________________ Address ____________________ Telephone Approved:	Iowa Code § 49.77

		Board Member 2. One of the precinct election officials shall announce the voter's name aloud for the benefit of any persons present pursuant to section 49.104, subsection 2, 3, or 5. Any of those persons may upon request view the signed declarations of eligibility and may review the signed declarations on file so long as the person does not interfere with the functions of the precinct election officials. 3. A precinct election official shall require any person whose name does not appear on the election register as an active voter to show identification. Specific documents which are acceptable forms of identification shall be prescribed by the state commissioner. A precinct election official may require of the voter unknown to the official, identification upon which the voter's signature or mark appears. If identification is established to the satisfaction of the precinct election officials, the person may then be allowed to vote. (From 2004 version of Iowa Annotated Code; effective January 1, 1995)	
Kansas	Sign Name	(b) A person desiring to vote shall provide to the election board: (1) the voter's name; (2) if required, the voter's address; and (3) the voter's signature on the registration or poll book. A signature may be made by mark, initials, typewriter, print, stamp, symbol or any other manner if by placing the signature on the document the person intends the signature to be binding. A signature may be made by another person at the voter's direction if the signature reflects such voter's intention. (Approved April 14, 2004, 2004 Kansas Laws Ch. 93)	Kan. Stat. Ann. § 25-2908(b)
Kentucky	Provide ID	117.227 Confirmation of voter's identity Election officers shall confirm the identity of each voter by personal acquaintance or by a document, such as a motor vehicle operator's license, Social Security card, or credit card. The election officer confirming the identity shall sign the precinct voter roster and list the method of identification. Effective: 7/15/02 31 KAR 4:010. Voter identification cards. Section 1. In addition to the forms of identification specifically provided for by KRS 117.227, any identification card that bears both the picture and signature of the voter, or any identification card that has been issued by the county, and which has been approved in writing by the State Board of Elections, shall be acceptable for confirmation of the voter's identity.	Ky Rev. Stat. Ann. 117.227 31 Ky. Admin. Regs. 4:010.
Louisiana	Photo ID	A. Identification of voters. (1) A person who desires to vote in a primary or general election shall give his name and address to a commissioner, who shall announce the applicant's name and address to the persons at the polling place. (2) Each applicant shall identify himself, in the presence and view of the bystanders, and present to the commissioners a Louisiana driver's license, a Louisiana special identification card issued pursuant to R.S. 40:1321, or other generally recognized picture identification card. If the applicant does not have a Louisiana driver's license, a Louisiana special identification card, or other generally recognized picture identification card, the applicant shall sign an affidavit, which is supplied by the secretary of state, to that effect before the commissioners who shall place the affidavit in the envelope marked "Registrar of Voters" and attach the envelope to the precinct register, and the applicant	La. Rev. Stat. Ann. 18:562

		shall provide further identification by presenting his current registration certificate, giving his date of birth or providing other information stated in the precinct register that is requested by the commissioners. However, an applicant that is allowed to vote without the picture identification required by this Paragraph is subject to challenge as provided in R.S. 18:565. Effective: 1/1/2002	
Maine	Give Name	The voting procedure is as follows. 1. Name announced. A voter who wishes to vote must state the voter's name and, upon request, residence address to an election clerk who shall announce the name in a loud, clear voice. (In effect at time of 2003 amendment: 2003, c. 584, § 9)	Me. Rev. Stat. Ann. tit. 21-A, § 671
Maryland	Sign Name	10-310. (a) For each individual who seeks to vote, an election judge, in accordance with instructions provided by the local board, shall: (1) locate the individual's name in the precinct register and locate the preprinted voting authority card and then authorize the individual to vote a regular ballot; (2)(i) if the individual's name is not found on the precinct register, search the inactive list and if the name is found, authorize the individual to vote a regular ballot; or (ii) if the individual's name is not on the inactive list, refer the individual for provisional ballot voting under § 9-404 of this article; (3) establish the identity of the voter by requesting the voter to state the month and day of the voter's birth and comparing the response to the information listed in the precinct register; (4) verify the address of the voter's residence; (5) if any changes to the voting authority card are indicated by a voter, make the appropriate changes in information on the card or other appropriate form; and (6) have the voter sign the voting authority card and either issue the voter a ballot or send the voter to a machine to vote.	Md. Elec. Law § 10-310
Mass.	Give Name	Each voter desiring to vote at a polling place shall give his name and, if requested, his residence to one of the officers at the entrance to the space within the guard rail, who shall thereupon distinctly announce the same. If such name is found on the voting list, the election officer shall check and repeat the name and shall admit the voter to the space enclosed by the guard rail and, in case official ballots, other than those marked "Challenged Ballots" as provided by section thirty-five A, are used, such voter shall be given one ballot. The use of electronic means such as tape recording equipment or radio broadcasting equipment for the recording or broadcasting of the names of voters not yet checked as having voted shall be prohibited. Last amended in 1981 (5B) Identification. If so authorized by the city or town clerk or registrars of voters, an election officer may request any voter to present written identification. Such requests shall not discriminate in any way, but shall be entirely random, consistent, or based on reasonable suspicion. For the purpose of 950 CMR 52.03(5B), of M.G.L. c. 54, § 76B, and of 950 CMR 52.03(5)(b), suitable written identification includes a driver's license, recent utility bill, rent receipt on a landlord's printed letterhead, lease, duplicate copy of a voter registration affidavit, or any other printed identification which contains the voter's name and address. If voters fail to present suitable written identification when so requested, they must still be allowed to vote, but an election officer or any other person may challenge their right to vote under M.G.L. c. 54, § 85 and 950 CMR 52.03(23).	Mass. Ann. Laws 54 § 76 950 Mass. Code Regs. 52.03
Michigan	Sign Name	(1) At each election, before being given a ballot, each registered elector offering to vote shall identify himself or herself by presenting an official state	Mich. Comp. Laws Ann. §

		identification card issued to that individual pursuant to Act No. 222 of the Public Acts of 1972, being sections 28.291 to 28.295 of the Michigan Compiled Laws, an operator's or chauffeur's license issued to that individual pursuant to the Michigan Vehicle Code, Act No. 300 of the Public Acts of 1949, being sections 257.1 to 257.923 of the Michigan Compiled Laws, or other generally recognized picture identification card and by executing an application showing his or her signature or mark and address of residence in the presence of an election official. If the voter registration cards are used in the precinct, the election official in charge of the precinct registration file shall compare the signature upon the application with the signature upon the registration card. If voter registration lists are used in the precinct, the election inspector shall determine if the name on the application to vote appears on the voter registration list. If the name appears on the voter registration list, the elector shall provide further identification by giving his or her date of birth or other information stated upon the voter registration list. In precincts using voter registration lists, the date of birth may be required to be placed on the application to vote. If the signature or an item of information does not correspond, the vote of the person shall be challenged, and the same procedure shall be followed as provided in this act for the challenging of an elector. If the person offering to vote has signed the registration card or application by making a mark, the person shall identify himself or herself by giving his or her date of birth, which shall be compared with the date of birth stated upon the registration card or voter registration list, or shall give other identification as may be referred to upon the registration card or voter registration list. If the elector does not have an official state identification card, operator's or chauffeur's license as required in this subsection, or other generally recognized picture identification card, the individual shall sign an affidavit to that effect before an election inspector and be allowed to vote as otherwise provided in this act. However, an elector being allowed to vote without the identification required under this subsection is subject to challenge as provided in section 727. (2) If, upon a comparison of the signature or other identification, it is found that the applicant is entitled to vote, the election officer having charge of the registration list shall approve the application and write his or her initials on the application, after which the number on the ballot issued shall be noted on the application. The application shall serve as 1 of the 2 poll lists required to be kept as a record of a person who has voted. The application shall be filed with the township, city, or village clerk. If voter registration cards are used in the precinct, the date of the election shall be noted by 1 of the election officials upon the precinct registration card of each elector voting at an election. If voter registration lists are used in the precinct, the election official shall clearly indicate upon the list each elector voting at that election. The clerk of a city, village, or township shall maintain a record of voting participation for each registered elector. The Attorney General declared that this statute violated the Equal Protection Clause of the Fourteenth Amendment. Op. Atty. Gen. 1997, No. 6930. That decision is binding on all state agencies. (Effective March 31, 1997)	168.523
Minnesota	Sign Name	(a) An individual seeking to vote shall sign a polling place roster which states that the individual is at least 18 years of age, a citizen of the United States, has resided in Minnesota for 20 days immediately preceding the election, maintains residence at the address shown, is not under a guardianship in which the court order revokes the individual's right to vote, has not been found by a court of law to be legally incompetent to vote or convicted of a felony without having civil rights restored, is registered and has not already voted in the election. The roster must also state: "I understand that deliberately providing false information is a felony punishable by not more than five years imprisonment and a fine of not	Minn. Stat. § 204C.10

		more than $10,000, or both." (b) A judge may, before the applicant signs the roster, confirm the applicant's name, address, and date of birth. (c) After the applicant signs the roster, the judge shall give the applicant a voter's receipt. The voter shall deliver the voter's receipt to the judge in charge of ballots as proof of the voter's right to vote, and thereupon the judge shall hand to the voter the ballot. The voters' receipts must be maintained during the time for notice of filing an election contest. (Effective January 1, 2004)	
Mississippi	Sign Name	* * * When any person entitled to vote shall appear to vote, he shall first sign his name in a receipt book or booklet provided for that purpose and to be used at that election only and said receipt book or booklet shall be used in lieu of the list of voters who have voted formerly made by the managers or clerks; whereupon and not before, the initialing manager or, in his absence, the alternate initialing manager shall indorse his initials on the back of an official blank ballot, prepared in accordance with law, and at such place on the back of the ballot that the initials may be seen after the ballot has been marked and folded, and when so indorsed he shall deliver it to the voter, which ballot the voter shall mark in the manner provided by law, which when done the voter shall deliver the same to the initialing manager or, in his absence, to the alternate initialing manager, in the presence of the others, and the manager shall see that the ballot so delivered bears on the back thereof the genuine initials of the initialing manager, or alternate initialing manager, and if so, but not otherwise, the ballot shall be put into the ballot box; and when so done one (1) of the managers or a duly appointed clerk shall make the proper entry on the pollbook. If the voter is unable to write his name on the receipt book, a manager or clerk shall note on the back of the ballot that it was receipted for by his assistance. (Effective January 1, 1987)	Miss. Code Ann. § 23-15-541
Missouri	Provide ID	1. Before receiving a ballot, voters shall identify themselves by presenting a form of personal identification from the following list: (1) Identification issued by the state of Missouri, an agency of the state, or a local election authority of the state; (2) Identification issued by the United States government or agency thereof; (3) Identification issued by an institution of higher education, including a university, college, vocational and technical school, located within the state of Missouri; (4) A copy of a current utility bill, bank statement, government check, paycheck or other government document that contains the name and address of the voter; (5) Driver's license or state identification card issued by another state; or (6) Other identification approved by the secretary of state under rules promulgated pursuant to subsection 3 of this section other identification approved by federal law. Personal knowledge of the voter by two supervising election judges, one from each major political party, shall be acceptable voter identification upon the completion of a secretary of state-approved affidavit that is signed by both supervisory election judges and the voter that attests to the personal knowledge of the voter by the two supervisory election judges. The secretary of state may provide by rule for a sample affidavit to be used for such purpose. (Last amended in 2002)	Mo. Rev. Stat. §115.427.1

Montana	Provide ID	(1) (a) Before an elector is permitted to receive a ballot or vote, the elector shall present to an election judge a current photo identification showing the elector's name. If the elector does not present photo identification, including but not limited to a valid driver's license, a school district or postsecondary education photo identification, or a tribal photo identification, the elector shall present a current utility bill, bank statement, paycheck, notice of confirmation of voter registration issued pursuant to 13-2-207, government check, or other government document that shows the elector's name and current address. (From 2004 version of the Montana Code Annotated; No updates in 2004, only in 2005 [Unrelated section was amended in 2005])	Mont. Code Ann. §13-13-114(1)(a)
Nebraska	Sign Name	(1) The clerks of election shall have a list of registered voters of the precinct and a sign-in register at the polling place on election day. The list of registered voters shall be used for guidance on election day and may be in the form of a computerized, typed, or handwritten list or precinct registration cards. Registered voters of the precinct shall place and record their signature in the sign-in register before receiving any ballot. The list of registered voters and the sign-in register may be combined into one document. (Last amended in 2003) Official ballots shall be used at all elections. No person shall receive a ballot or be entitled to vote unless and until he or she is registered as a voter except as provided in section 32-914.01, 32-914.02, 32-915, 32-915.01, or 32-936. Except as otherwise specifically provided, no ballot shall be handed to any registered voter at any election until (1) he or she announces his or her name and address to the clerk of election, (2) the clerk has found that he or she is a registered voter at the address as shown by the precinct list of registered voters unless otherwise entitled to vote in the precinct under section 32-328, 32-914.01, 32-914.02, 32-915, or 32-915.01, (3) if the voter registered by mail after January 1, 2003, and has not previously voted in an election for a federal office within the county, the clerk shall ask the registered voter to present a photographic identification which is current and valid or a copy of a utility bill, bank statement, government check, paycheck, or other government document that is current and that shows the name and address of the voter, (4) the clerk has instructed the registered voter to personally write his or her name in the precinct sign-in register on the appropriate line which follows the last signature of any previous voter, and (5) the clerk has listed on the precinct list of registered voters the corresponding line number and name of the registered voter. (Last updated in 2003)	Neb. Rev. Stat. § 32-913 Neb. Rev. Stat. § 32-914
Nevada	Match Sig.	1. Except as otherwise provided in NRS 293.541, if a person's name appears in the election board register or if he provides an affirmation pursuant to NRS 293.525, he is entitled to vote and must sign his name in the election board register when he applies to vote. His signature must be compared by an election board officer with the signature or a facsimile thereof on his original application to register to vote or one of the forms of identification listed in subsection 2. 2. Except as otherwise provided in NRS 293.2725, the forms of identification which may be used individually to identify a voter at the polling place are: (a) The card issued to the voter at the time he registered to vote; (b) A driver's license; (c) An identification card issued by the Department of Motor Vehicles; (d) A military identification card; or	Nev. Rev. Stat.§ 293.277

		(e) Any other form of identification issued by a governmental agency which contains the voter's signature and physical description or picture. Last Amendment Effective Jan. 1, 2004.	
NH	Give Name	A person desiring to vote shall, before being admitted to the enclosed space within the guardrail, announce his or her name to one of the ballot clerks who shall thereupon repeat the name; and, if the name is found on the checklist by the ballot clerk, the ballot clerk shall put a checkmark beside it and again repeat the name. The ballot clerk shall state the address listed on the checklist for the voter, and ask if the address is correct; if the address on the checklist is not correct, the ballot clerk shall correct the address in red on the checklist. The voter, if still qualified to vote in the town or ward and unless challenged as provided for in RSA 659:27-33, shall then be allowed to enter the space enclosed by the guardrail. After the voter enters the enclosed space, the ballot clerk shall give the voter one of each ballot to be voted on in that election which shall be folded as it was upon receipt from the secretary of state. Last Amendment Effective July 2, 2002.	N.H. Rev. Stat. Ann. 659:13
New Jersey	Match Sig.	19:15-17. Comparison of signatures or statements made openly; provisional ballots for newly registered voters without proper identification a. The comparison of signatures of a voter made upon registration and upon election day, and if the voter alleges his inability to write, the comparison of the answers made by such voter upon registration and upon election day, shall be had in full view of the challengers. b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 232 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the "Uniformed and Overseas Citizens Absentee Voting Act" (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote other than in person under section 3 of Pub.L.98-435, the "Voting Accessibility for the Elderly and Handicapped Act," or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery. c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5). Last Amendment Effective July 9, 2004	N.J. Stat. Ann. 19:15-17
New Mexico	Sign Name	D. The judge assigned to the voter list used for confirmation of registration and voting shall determine that each person offering to vote is registered and, in the	N.M. Stat. Ann §1-5-10

		case of a primary election, that the voter is registered in a party designated on the primary election ballot. If the person's registration is confirmed by the presence of his name on the voter list or if the person presents a certificate under the seal and signature of the county clerk showing that he is entitled to vote in the election and to vote in that precinct, the judge shall announce to the election clerks the list number and the name of the voter as shown on the voter list. E. The election clerk shall locate that list number and name on the signature roster and shall require the voter to sign his usual signature or, if unable to write, to make his mark opposite his printed name. If the voter makes his mark, it shall be witnessed by one of the judges of the precinct board. If the signature roster indicates that the voter is required to present a form of identification before voting, the election judge shall ask the voter for a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows and matches the name and address of the voter as indicated on the signature roster. If the voter does not provide the required identification, he shall be allowed to vote on a provisional paper ballot. G. A voter shall not be permitted to vote until he has properly signed his usual signature or made his mark in the signature roster. (From 2004 version of New Mexico Annotated Statutes, amended in 2005 to require presentation of ID)	(Recompiled as §1-12 -7.1 by L. 2005, Ch. 270, §63, effective July 1, 2005)
New York	Match Sig.	1. A person before being allowed to vote shall be required, except as provided in this chapter, to sign his name on the back of his registration poll record on the first line reserved for his signature at the time of election which is not filled with a previous signature, or on the line of the computer generated registration list reserved for his signature. The two inspectors in charge shall satisfy themselves by a comparison of this signature with his registration signature and by comparison of his appearance with the descriptive material on the face of the registration poll record that he is the person registered. If they are so satisfied they shall enter the other information required for the election on the same line with the voter's latest signature, shall sign their names or initials in the spaces provided therefor, and shall permit the applicant to vote. Any inspector or inspectors not satisfied shall challenge the applicant forthwith. 2. If a person who alleges his inability to sign his name presents himself to vote, the board of inspectors shall permit him to vote, unless challenged on other grounds, provided he had been permitted to register without signing his name. The board shall enter the words "Unable to Sign" in the space on his registration poll record reserved for his signature or on the line of the computer generated registration list reserved for his signature at such election. If his signature appears upon his registration record or upon the computer generated registration list the board shall challenge him forthwith, except that if such a person claims that he is unable to sign his name by reason of a physical disability incurred since his registration, the board, if convinced of the existence of such disability, shall permit him to vote, shall enter the words "Unable to Sign" and a brief description of such disability in the space reserved for his signature at such election. At each subsequent election, if such disability still exists, he shall be entitled to vote without signing his name and the board of inspectors, without further notation, shall enter the words "Unable to Sign" in the space reserved for his signature at such election. 3. The voter's signature made by him upon registration and his signature made at subsequent elections shall be effectively concealed from the voter by a blotter or piece of opaque paper until after the voter shall have completed his signature. 4. In any case where a person who has heretofore voted has placed his voting signature on the back of his registration poll record on the first or any succeeding line or lines at the time or times of an election, instead of on the last line of the	N.Y. Law § 8-304 (McKinney)

		space thereon required to be reserved for such voting signatures and on any lines next running upward therefrom, the inspectors of election shall obliterate such misplaced signature or signatures, initial the obliteration and require such voter to sign his name again in the correct place on such registration poll record. 5. Any person who has heretofore registered and who at such time placed his or her registration signature on the back of the registration poll record otherwise than in the space required to be provided therefor at the bottom of such poll record, shall, before being permitted to vote at any election thereafter, subscribe a new registration signature for himself on the last line at the bottom of such poll record, and, at the same time, if the inspectors of election are satisfied that the signatures were made by the same person, obliterate his original registration signature placed elsewhere than on the bottom of such record. Such obliterations may be made by crossing out the signature so as to completely efface the same or by affixing thereover a piece of gummed tape of a size sufficient only to cover such signature and of a type adequate to fully conceal the same Last Amended 1986	
North Carolina	Give Name	(a) Checking Registration. --A person seeking to vote shall enter the voting enclosure through the appropriate entrance. A precinct official assigned to check registration shall at once ask the voter to state current name and residence address. The voter shall answer by stating current name and residence address. In a primary election, that voter shall also be asked to state, and shall state, the political party with which the voter is affiliated or, if unaffiliated, the authorizing party in which the voter wishes to vote. After examination, that official shall state whether that voter is duly registered to vote in that precinct and shall direct that voter to the voting equipment or to the official assigned to distribute official ballots. If a precinct official states that the person is duly registered, the person shall sign the pollbook, other voting record, or voter authorization document in accordance with subsection (c) of this section before voting.	N.C. Gen. Stat. Ann. § 163-166.7
North Dakota	Provide ID	16.1-05-07 Poll clerks to check identification and verify eligibility -- Poll clerks to request, correct, and update incorrect information contained in the pollbook. 1. Before delivering a ballot to an individual according to section 16.1-13- 22, the poll clerks shall request the individual to show a driver's license issued by the state, another form of identification displaying a photograph of the individual and the individual's date of birth, or another appropriate form of identification prescribed by the secretary of state. If an individual offering to vote fails or refuses to show an appropriate form of identification, the individual may be allowed to vote without being challenged according to section 16.1-05-06 if the individual provides to the election board the individual's date of birth and if a member of the election board or a clerk knows the individual and can personally vouch that the individual is a qualified elector of the precinct. After verifying that the individual's name is contained in the pollbook generated from the central voter file, poll clerks shall verify the individual's residential address and mailing address, if different from the individual's residential address. (From 2003 version of N.D. Century Code; only amendment to this statute that became effective in 2003 was in 2005)	N.D. Cent. Code § 16.1-05-07

Ohio	Match Sig.	When an elector appears in a polling place to vote he shall announce his full name and address to the precinct election officials. He shall then write his name and address at the proper place in the poll lists or signature pollbooks provided therefore, except that if, for any reason, an elector shall be unable to write his name and address in the poll list or signature pollbook, the elector may make his mark at the place intended for his name and a precinct official shall write the name of the elector at the proper place on the poll list or signature pollbook following the elector's mark, upon the presentation of proper identification. The making of such mark shall be attested by the precinct official who shall evidence the same by signing his name on the poll list or signature pollbook as a witness to such mark. The elector's signature in the poll lists or signature pollbooks shall then be compared with his signature on his registration form or a digitized signature list as provided for in section 3503.13 of the Revised Code, and if, in the opinion of a majority of the precinct election officials, the signatures are the signatures of the same person, the clerks shall enter the date of the election on the registration form or shall record the date by such other means as may be prescribed by the secretary of state. If the right of the elector to vote is not then challenged, or, if being challenged, he establishes his right to vote, he shall be allowed to proceed into the voting machine. If voting machines are not being used in that precinct, the judge in charge of ballots shall then detach the next ballots to be issued to the elector from Stub B attached to each ballot, leaving Stub A attached to each ballot, hand the ballots to the elector, and call his name and the stub number on each of the ballots. The clerk shall enter the stub numbers opposite the signature of the elector in the pollbook. The elector shall then retire to one of the voting compartments to mark his ballots. No mark shall be made on any ballot which would in any way enable any person to identify the person who voted the ballot. (Effective at time of last update, 1992 H 182, eff. 4-9-93)	Ohio Rev. Code Ann.-§ 3505.18
Oklahoma	Sign Name	Each person presenting himself to vote shall announce his name to the judge of the precinct, whereupon the judge shall determine whether said person's name is in the precinct registry. (Last amended in 1990) Persons who have been determined to be eligible to vote shall sign, in the presence of the clerk, the proper precinct registry. Said clerk shall thereupon issue proper ballots to said person. The voter's signature on said precinct registry shall be the best evidence of said voter's having voted at said election. Said precinct registry shall be retained in the office of the county election board for a period of twenty-two (22) months following the election and shall be subject to public inspection during regular office hours. (Last amended in 1990)	Okla. Stat. Ann. tit. 26, § 7-114 Okla. Stat. Ann. tit. 26, § 7-117
Oregon	Match Sig.	All elections in Oregon are Vote by Mail. An Elections Official will compare the signature on your ballot return envelope to the signature on your voter registration card to verify your identity (http://www.uhavavote.org/votingguide/votebymail.html) (unknown date, but use of wayback machine shows that this provision on site on following dates: 7/11/04, 10/20/04 and 10/29/04)	Or. Rev. Stat. § 254.385
Penn.	Match Sig.	(a.3) All electors, including any elector that shows identification pursuant to subsection (a), shall subsequently sign a voter's certificate, and, unless he is a State or Federal employee who has registered under any registration act without declaring his residence by street and number, he shall insert his address therein, and hand the same to the election officer in charge of the district register. Such election officer shall thereupon announce the elector's name so that it may be heard by all members of the election board and by all watchers present in the	25 Pa. Stat. Ann. § 3050

		polling place and shall compare the elector's signature on his voter's certificate with his signature in the district register. If, upon such comparison, the signature upon the voter's certificate appears to be genuine, the elector who has signed the certificate shall, if otherwise qualified, be permitted to vote: Provided, That if the signature on the voter's certificate, as compared with the signature as recorded in the district register, shall not be deemed authentic by any of the election officers, such elector shall not be denied the right to vote for that reason, but shall be considered challenged as to identity and required to make the affidavit and produce the evidence as provided in subsection (d) of this section. When an elector has been found entitled to vote, the election officer who examined his voter's certificate and compared his signature shall sign his name or initials on the voter's certificate, shall, if the elector's signature is not readily legible, print such elector's name over his signature, and the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes shall also be entered by one of the election officers or clerks. As each voter is found to be qualified and votes, the election officer in charge of the district register shall write or stamp the date of the election or primary, the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes, and shall sign his name or initials in the proper space on the registration card of such voter contained in the district register. (In effect at time of, and unaltered by: 2004, Oct. 8, P.L. 807, No. 97, § 5.1 (changes procedure for first time voters, not established voters))	
Rhode Island	Give Name	(a) Each person desiring to vote shall state his or her name and residence, including that person's street address, if he or she has any, to one of the first pair of bi-partisan supervisors, who shall then announce the name and residence in a loud and distinct voice, clear and audible. As each voter's name is announced, the voter shall be handed a ballot application in the following form: BALLOT APPLICATION (Poll List) Senatorial District ____________________ Representative District ____________ Voting District ________________________ Election Date ____ I hereby certify that I am a registered and qualified elector in the above voting district of City of and hereby make application for ballots to be voted at this election. ____ (Signature of Voter) ____ (Residence Address) Number Approved ____________________________________ (Supervisor of Election)	R.I. Gen. Laws § 17-19-24

		(b) The voter shall sign the application in the presence and view of a bipartisan pair. They shall locate the voter's name on the certified voting list for the voting district. Upon finding the voter's name on the certified voting list for the district, they shall initial the ballot application in the place provided next to the word "Approved" and shall enter on the certified list of voters a proper notation that the applicant has voted in the election. They shall then return the ballot application to the voter who shall pass down the line and present it to the clerk. After the voter has handed the approved ballot application to the clerk, the clerk shall provide the voter with the appropriate computer ballot and security sleeve, the warden shall direct the voter to the voting booth which the voter shall use, and unless the voter needs instruction or assistance as provided in this chapter, the voter shall cast his or her vote, and if he or she desires place the voted computer ballot in a security sleeve, and shall proceed to the optical scan precinct count unit and shall personally place his or her voted ballot into the designated ballot slot on the unit, and after doing so, shall leave the enclosure at once. No voter shall remain within the voting booth longer than ten (10) minutes, and if the voter refuses to leave after the lapse of ten (10) minutes, the voter shall be removed from the voting booth by order of the warden. Except for the election officials and the election inspector, not more than two (2) voters in excess of the number of voting booths shall be permitted within the enclosed space at any time. (Last amended 2004, Current through January 2005 Session)	
South Carolina	Photo ID	**§ 7-13-710. Proof of right to vote; signing poll list; comparison of signatures.** When any person presents himself to vote, he shall produce his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department of Motor Vehicles, if he is not licensed to drive, or the written notification of registration provided for by §§ 7-5- 125 and 7-5-180 if the notification has been signed by the elector. If the elector loses or defaces his registration notification, he may obtain a duplicate notification from his county board of registration upon request in person, or by telephone or mail. After presentation of the required identification, his name must be checked by one of the managers on the margin of the page opposite his name upon the registration books, or copy of the books, furnished by the board of registration. The managers shall keep a poll list which must contain one column headed "Names of Voters". Before any ballot is delivered to a voter, the voter shall sign his name on the poll list, which must be furnished to the appropriate election officials by the State Election Commission. At the top of each page the voter's oath appropriate to the election must be printed. The signing of the poll list or the marking of the poll list is considered to be an affirmation of the oath by the voter. One of the managers shall compare the signature on the poll list with the signature on the voter's driver's license, registration notification, or other identification and may require further identification of the voter and proof of his right to vote under this title as he considers necessary. If the voter is unable to write or if the voter is prevented from signing by physical handicap, he may sign his name to the poll list by mark with the assistance of one of the managers. Last amended: 1968	S.C. Code Ann. § 7-13-710
South Dakota	Photo ID	When a voter is requesting a ballot, the voter shall present a valid form of personal identification. The personal identification that may be presented shall be either: (1) A South Dakota driver's license or nondriver identification card; (2) A passport or an identification card, including a picture, issued by an agency of the United States government; (3) A tribal identification card, including a picture; or (4) An identification card, including a picture, issued by a high school or an accredited institution of higher education, including a university, college, or	S.D. Codified Laws § 12-18-6.1

		technical school, located within the State of South Dakota. Last amended March 2004	
Tennessee	Provide ID	Identification of eligible voters (a)(1) A voter shall sign an application for ballot, indicate the primary in which the voter desires to vote, if any, and present it to a registrar. The application for ballot shall include thereon a space for the address of the voter's current residence, and the voter shall write or print such address on the application when the voter signs it. The registrar shall compare the signature and information on the application with the signature and information on the duplicate permanent registration record. The registrar shall make a determination whether the voter's address is different from the address on the voter's permanent registration record or if the registration is in inactive status. If the voter has changed residence, or the voter's registration is inactive, the registrar shall follow the procedures for voting pursuant to § 2-7-140. If, upon comparison of the signature and other identification, it is found that the applicant is entitled to vote, the registrar shall initial the application and shall note on the reverse side of the voter's duplicate permanent registration record the date of the election, the number of the voter's ballot application, and the elections in which the voter votes. If the applicant's signature is illegible, the registrar shall print the name on the application. The registrar shall give the voter the ballot application which is the voter's identification for a paper ballot or ballots or for admission to a voting machine. The voter shall then sign the duplicate poll lists without leaving any lines blank on any poll list sheet. (2) In any computerized county, the county election commission shall have the option of using an application for a ballot as provided in this section, or using the computerized voter signature list. A computerized voter signature list shall include the voter's name, current address of residence, social security number or registration number, birth date and spaces for the voter's signature, elections voted, ballot number and precinct registrar's initials. The following procedures shall be followed in the case of computerized voter signature lists: (A) The voter shall sign the signature list and indicate the election or elections the voter desires to vote in and verify the voter's address in the presence of the precinct registrar; (B) The registrar shall compare the voter's signature and information on the signature list with other evidence of identification supplied by the voter. If, upon comparison of the signature and other evidence of identification, it is found that the applicant is entitled to vote, the registrar shall initial the signature list; (C) If the applicant's signature is illegible, the registrar shall print the name of the applicant on the voter list; and (D) If a voter is unable to present any evidence of identification specified in subsection (c), the voter shall be required to execute an affidavit of identity on a form provided by the county election commission. Last amended 2003	Tenn. Code Ann. § 2-7-112
Texas	Provide ID	(b) On offering to vote, a voter must present the voter's voter registration certificate to an election officer at the polling place. (Last amended in 1997)	Tex. Elec. Code Ann. § 63.001
Utah	Give Name	(1)(a) Any registered voter desiring to vote shall give his name, and, if requested, his residence, to one of the election judges. (b) If an election judge does not know the person requesting a ballot and has reason to doubt that person's identity, the judge shall request identification or have the voter identified by a known registered voter of the district. (3) If the election judge determines that the voter is registered: (a) the election judge in charge of the official register shall: (i) write the ballot number opposite the name of the voter in the official register; and	Utah Code Ann. § 20A-3-104

		(ii) direct the voter to sign his name in the election column in the official register; (b) another judge shall list the ballot number and voter's name in the pollbook; and (c) the election judge having charge of the ballots shall: (i) endorse his initials on the stub; (ii) check the name of the voter on the pollbook list with the number of the stub; (iii) hand the voter a ballot; and (iv) allow the voter to enter the voting booth. (In effect at time of last update prior to 2005: Laws 2003, c. 37, § 1, eff. May 5, 2003)	
Vermont	Give Name	Before a person may be admitted to vote, he or she shall announce his or her name and if requested, his or her place of residence in a clear and audible tone of voice, or present his or her name in writing, or otherwise identify himself or herself by appropriate documentation. The election officials attending the entrance of the polling place shall then verify that the person's name appears on the checklist for the polling place. If the name does appear, and if no one immediately challenges the person's right to vote on grounds of identity or having previously voted in the same election, the election officials shall repeat the name of the person and: (1) If the checklist indicates that the person is a first-time voter in the municipality who registered by mail and who has not provided required identification before the opening of the polls, require the person to present any one of the following: a valid photo identification; a copy of a current utility bill; a copy of a current bank statement; or a copy of a government check, paycheck, or any other government document that shows the current name and address of the voter. If the person is unable to produce the required information, the person shall be afforded the opportunity to cast a provisional ballot, as provided in subchapter 6A of this chapter. The elections official shall note upon the checklist a first-time voter in the municipality who has registered by mail and who produces the required information, and place a mark next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting. (2) If the voter is not a first-time voter in the municipality, no identification shall be required, the clerk shall place a check next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting (Last amended in 2003)	Vt. Stat. Ann. tit. 17, § 2563
Virginia	Provide ID	§ 24.2-643. Qualified voter permitted to vote; procedures at polling place; voter identification A. After the polls are open, each qualified voter at a precinct shall be permitted to vote. The officers of election shall ascertain that a person offering to vote is a qualified voter before admitting him to the voting booth and furnishing an official ballot to him. B. An officer of election shall ask the voter for his full name and current residence address and repeat, in a voice audible to party and candidate representatives present, the full name and address stated by the voter. The officer shall ask the voter to present any one of the following forms of identification: his Commonwealth of Virginia voter registration card, his social security card, his valid Virginia driver's license, or any other identification card issued by a government agency of the Commonwealth, one of its political subdivisions, or the United States; or any valid employee identification card containing a photograph of the voter and issued by an employer of the voter in the ordinary course of the employer's business. If the voter's name is found on the pollbook, if he presents one of the forms of	Va. Code. Ann.

		identification listed above, if he is qualified to vote in the election, and if no objection is made, an officer shall enter, opposite the voter's name on the pollbook, the first or next consecutive number from the voter count form provided by the State Board, or shall enter that the voter has voted if the pollbook is in electronic form; an officer shall provide the voter with the official ballot; and another officer shall admit him to the voting booth. Except as provided in subsection E of this section, if a voter is entitled to vote except that he is unable to present one of the forms of identification listed above, he shall be allowed to vote after signing a statement, subject to felony penalties for false statements pursuant to § 24.2-1016, that he is the named registered voter who he claims to be. A voter who requires assistance in voting by reason of physical disability or inability to read or write, and who requests assistance pursuant to § 24.2-649, may be assisted in preparation of this statement in accordance with that section. The provisions of § 24.2-649 regarding voters who are unable to sign shall be followed when assisting a voter in completing this statement. (Version in effect as of 2004- effective 4/12/2004)	
Washington	Sign Name	29A.44.201. A voter desiring to vote shall give his or her name to the precinct election officer who has the precinct list of registered voters. This officer shall announce the name to the precinct election officer who has the copy of the inspector's poll book for that precinct. If the right of this voter to participate in the primary or election is not challenged, the voter must be issued a ballot or permitted to enter a voting booth or to operate a voting device. For a partisan primary in a jurisdiction using the physically separate ballot format, the voter must be issued a nonpartisan ballot and each party ballot. The number of the ballot or the voter must be recorded by the precinct election officers. If the right of the voter to participate is challenged, RCW 29A.08.810 and 29A.08.820 apply to that voter. (In effect at time of last update prior to 2005: 2004 c 271 § 136, eff. June 10, 2004) 29A.44.210. Any person desiring to vote at any primary or election is required to sign his or her name on the appropriate precinct list of registered voters. If the voter registered using a mark, or can no longer sign his or her name, the election officers shall require the voter to be identified by another registered voter. The precinct election officers shall then record the voter's name. Effective date: July 1, 2004	Wash. Rev. Code § 29A.44.201 & 29A.44.210
West Virginia	Match Sig.	(a) Any person desiring to vote in an election shall, upon entering the election room, clearly state his or her name and residence to one of the poll clerks who shall thereupon announce the same in a clear and distinct tone of voice. If that person is found to be duly registered as a voter at that precinct, he or she shall be required to sign his or her name in the space marked "signature of voter" on the pollbook prescribed and provided for the precinct. If that person is physically or otherwise unable to sign his or her name, his or her mark shall be affixed by one of the poll clerks in the presence of the other and the name of the poll clerk affixing the voter's mark shall be indicated immediately under the affixation. No ballot may be given to the person until he or she so signs his or her name on the pollbook or his or her signature is so affixed thereon. * * * (c) When the voter's signature is properly on the pollbook, the two poll clerks shall sign their names in the places indicated on the back of the official ballot and deliver the ballot to the voter to be voted by him or her without leaving the	W. Va. Code § 3-1-34 (a)

		election room. If he or she returns the ballot spoiled to the clerks, they shall immediately mark the ballot "spoiled" and it shall be preserved and placed in a spoiled ballot envelope together with other spoiled ballots to be delivered to the board of canvassers and deliver to the voter another official ballot, signed by the clerks on the reverse side required by this subsection. The voter shall thereupon retire alone to the booth or compartment prepared within the election room for voting purposes and there prepare his or her ballot using a ballpoint pen of not less than five inches in length or other indelible marking device of not less than five inches in length. In voting for candidates in general and special elections, the voter shall comply with the rules and procedures prescribed in section five, article six of this chapter. (In effect at time of last update prior to 2005: Acts 2003, c. 100, eff. 90 days after March 7, 2003)	
Wisconsin	Give Name	6.79(2)(a) Except as provided in sub. (6), where there is registration, each person, before receiving a voting number, shall state his or her full name and address. Upon the prepared registration list, after the name of each elector, the officials shall enter the serial number of the vote as it is polled, beginning with number one. Each elector shall receive a slip bearing the same serial number. A separate list shall be maintained for electors who are voting under s. 6.15, 6.29 or 6.55(2) or (3) and electors who are reassigned from another polling place under s. 5.25(5)(b). Each such elector shall have his or her full name, address and serial number likewise entered and shall be given a slip bearing such number. (In effect at time of last update prior to 2005: 2003 Act 327, § 4, eff. June 12, 2004)	Wis. Stat. § 6.79
Wyoming	Give Name	(a) Unless a voter is challenged pursuant to W.S. 22-15-101 through 22- 15-109, no identification shall be required when: (i) Voting in person or by mail after having registered in person; or (ii) Voting in person or by mail after having registered by mail and having previously voted in a Wyoming federal election. (In effect at time of last update prior to 2005: Effective dates. -- Laws 2004, ch. 94, § 5, makes the act effective immediately upon completion of all acts necessary for a bill to become law as provided by art. 4, § 8, Wyo. Const. Approved March 5, 2004.)	Wyo. Stat. Ann. § 22-3-118

APPENDIX B –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail.

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

  - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
  - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

***American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover,* 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.,* CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[27]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[27] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[28]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[29] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

[29] <u>GA Legislature May Revisit Voter ID Law</u>, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[30] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[30] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

I assume you got verification from Jonathan Nagler, Adam Berinsky and Jan Leighley that they received the paper last Friday.

Also assume you will have a conference call in number to them and to Tom O'Neill by tomorrow, latest.

Thanks

K

History: This message has been replied to.

Karen,

I plan to send you late today or early tomorrow the revised Voter ID report that will be included in our teleconference on Thursday. Once that is in your hands, I will turn my attention to the Provisional Voting report, and will have that to you before the end of the week.

Has 11:30 been confirmed as the time for the teleconference?

Tom O'Neill

Tom-

I'd like to be able to include the final report on Provisional Voting in the materials going to EAC Standards Board and Board of Advisors in advance of their meetings.

It cannot be included unless it has been reviewed and approved by the four Commissioners.

I believe you said I would have the final copy of it sometime this week?

Thanks

Deliberative Process Privilege

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University

May 4, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater for some specific types of requirements. For example, critics argue that requiring voters to produce government-issued photo identification on Election Day is more demanding than, say, requiring that they state their names at the polling place. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I treated the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[2]

---

[2] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. I coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the

dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county exerted a positive effect on voter turnout, and the percentage of individuals living below the poverty line had a negative effect. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance ($p = .05$).

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] In addition, adding the interactions to the model resulted in the percentage of Hispanics in the population having a direct and negative effect on turnout. The interactions suggest that voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data ($p < 0.005$).

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

[Table 3 here]

The effects of the minimum requirements fell short of statistical significance ($p = 0.08$). The battleground state variable continued to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate had no statistically significant effect. As in the maximum identification requirement model, as the percentage of the population that is poor increased, turnout declined. As the percentage of elderly increased, so did turnout. The proportion of African-Americans in the population had a positive effect on turnout, while the percentage of Hispanics did not affect turnout.

---

intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.13 [-0.03 (voter id) - 0.13 (Hispanic) + 0.03 (voter id X Hispanic)].

citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[7] As in the analysis of aggregate data, I coded voter identification requirements for each respondent's state of residence on a scale of one to five, with one representing the least demanding requirement (stating one's name) and five representing the most demanding requirement (photo identification or affidavit).

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes).[8] Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which

---

[7] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[8] Asian-Americans are included in the "other non-white races" category. In response to a request from officials at the U.S. Election Assistance Commission who had read an earlier version of this paper and were curious about the experiences of Asian-Americans, I ran models using Asian-Americans as a separate category in addition to the models presented here. Voter identification requirements did not have a statistically significant effect on whether Asian-American voters said they turned out in the 2004 election.

calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[9] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 0.912 for stating one's name to 0.887 for photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of .025, or 2.5 percent, across the five types of identification.[10] When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it

---

[9] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[10] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of <u>all</u> citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group. I disaggregated the sample by the variable of interest, omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[11] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of Black/Non-Hispanics voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent when the maximum requirement was stating one's name, and the probability dropped 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Breaking down the 18- to 24-year-old age group by race shed additional light on the effects of voter identification requirements on specific groups.

[Table 8 here]

The gap in predicted probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out was 9.2 percent when the identification requirements varied from stating one's name to providing photo identification. The gap was 7.8 percent when taking into account the minimum requirements. The effects of maximum voter identification requirements also were statistically significant for African-Americans in the 18- to 24-year-old age group, with a gap in

---

[11] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

the predicted probability of voting of 10.6 percent. Maximum and minimum voter identification requirements were not a significant predictor of voting among Hispanics ages 18 to 24.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[12]

[Table 9 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements). Given that political discourse about voter identification requirements includes concerns about the effects of the requirements on poor and minority voters, I also ran probit analyses for sub-samples of white and minority voters who fell below the poverty line. The voter identification requirements did not exert statistically significant effects on turnout among poor White/Non-Hispanic and Hispanic voters, but did have a significant effect on Black/Non-Hispanic voters who were below the poverty line.[13] Allowing the maximum voting requirement to vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 10 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

---

[12] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

[13] The lack of significant effects for poor Hispanic voters is in contrast to the results from the aggregate data analysis. The sub-sample of poor Hispanic voters was small (n = 491), which may have contributed to the lack of statistical significance.

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit. African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification. When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters. The effects on African-American voters were pronounced for two specific sub-samples: African-American voters living below the poverty line and those in the 18- to 24-year-old age group. Also, the elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[14] Or, do the requirements result in some voters

---

[14] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not

being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

Subject Revised Voter ID Analysis

History: This message has been forwarded.

Karen,

Attached is Tim Vercellotti's Voter ID analysis revised to use Citizen Voting Age population as the base for turnout calculations and to take account of comments or issues raised by the EAC and our Peer Review Group. This draft is for distribution to the reviewers who will meet by teleconference on May 11, at, we understand, 11:30 a.m.

You are receiving this at the same time that it is being distributed to the Eagleton-Moritz team so that the new reviewers will have a week to prepare for our conversation on the 11th. Early next week you will receive a revised summary paper on Voter ID that incorporates the new data and findings in Tim's revised analysis. That too will be for distribution to the new reviewers.

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University
May 4, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater for some specific types of requirements. For example, critics argue that requiring voters to produce government-issued photo identification on Election Day is more demanding than, say, requiring that they state their names at the polling place. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I treated the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[2]

---

[2] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. I coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the

dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county exerted a positive effect on voter turnout, and the percentage of individuals living below the poverty line had a negative effect. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance ($p = .05$).

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] In addition, adding the interactions to the model resulted in the percentage of Hispanics in the population having a direct and negative effect on turnout. The interactions suggest that voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data ($p < 0.005$).

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

[Table 3 here]

The effects of the minimum requirements fell short of statistical significance ($p = 0.08$). The battleground state variable continued to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate had no statistically significant effect. As in the maximum identification requirement model, as the percentage of the population that is poor increased, turnout declined. As the percentage of elderly increased, so did turnout. The proportion of African-Americans in the population had a positive effect on turnout, while the percentage of Hispanics did not affect turnout.

---

intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.13 [-0.03 (voter id) - 0.13 (Hispanic) + 0.03 (voter id X Hispanic)].

Adding interactive effects to the model resulted in a statistically significant and negative effect of minimum voter identification requirements on turnout. The percentage of Hispanic adults in the county had a significant and negative effect on turnout, and the percentage of individuals below the poverty line continued to have a negative effect. Interactions between the percentages of Hispanics and those below the poverty line and minimum voter identification requirements also were significant. The percentage of African-Americans in the county and the interaction between African-Americans and voter identification requirements were not significant. A chi-square test for the difference in fit between the two models showed that the model with interactions provides a better fit to the data ($p < .025$).

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the demands of voter identification requirements increase, turnout declines. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[5] Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[6] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S.

---

[5] A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

[6] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[7] As in the analysis of aggregate data, I coded voter identification requirements for each respondent's state of residence on a scale of one to five, with one representing the least demanding requirement (stating one's name) and five representing the most demanding requirement (photo identification or affidavit).

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes).[8] Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which

---

[7] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[8] Asian-Americans are included in the "other non-white races" category. In response to a request from officials at the U.S. Election Assistance Commission who had read an earlier version of this paper and were curious about the experiences of Asian-Americans, I ran models using Asian-Americans as a separate category in addition to the models presented here. Voter identification requirements did not have a statistically significant effect on whether Asian-American voters said they turned out in the 2004 election.

calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[9] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 0.912 for stating one's name to 0.887 for photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of .025, or 2.5 percent, across the five types of identification.[10] When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it

---

[9] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[10] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of <u>all</u> citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group. I disaggregated the sample by the variable of interest, omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[11] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of Black/Non-Hispanics voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent when the maximum requirement was stating one's name, and the probability dropped 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Breaking down the 18- to 24-year-old age group by race shed additional light on the effects of voter identification requirements on specific groups.

[Table 8 here]

The gap in predicted probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out was 9.2 percent when the identification requirements varied from stating one's name to providing photo identification. The gap was 7.8 percent when taking into account the minimum requirements. The effects of maximum voter identification requirements also were statistically significant for African-Americans in the 18- to 24-year-old age group, with a gap in

---

[11] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

the predicted probability of voting of 10.6 percent. Maximum and minimum voter identification requirements were not a significant predictor of voting among Hispanics ages 18 to 24.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[12]

[Table 9 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements). Given that political discourse about voter identification requirements includes concerns about the effects of the requirements on poor and minority voters, I also ran probit analyses for sub-samples of white and minority voters who fell below the poverty line. The voter identification requirements did not exert statistically significant effects on turnout among poor White/Non-Hispanic and Hispanic voters, but did have a significant effect on Black/Non-Hispanic voters who were below the poverty line.[13] Allowing the maximum voting requirement to vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 10 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

---

[12] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

[13] The lack of significant effects for poor Hispanic voters is in contrast to the results from the aggregate data analysis. The sub-sample of poor Hispanic voters was small (n = 491), which may have contributed to the lack of statistical significance.

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit. African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification. When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters. The effects on African-American voters were pronounced for two specific sub-samples: African-American voters living below the poverty line and those in the 18- to 24-year-old age group. Also, the elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[14] Or, do the requirements result in some voters

---

[14] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not

being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

Subject Conference Call/ Eagleton Institute

Good afternoon everyone,

This is to inform you of a time set-up for the conference call on May 11, 2006 regarding Eagleton Institute/Voter Identification Research Project: it will be at 11:30 am, if everyone is available for this time then its a go, if not please contact me at your earliest convenience.

Thanks!

Aletha Barrington

Subject Re: Review of EAC research on Voter Identification

History: This message has been replied to.

I just got your phone message. I will still do the review, but I should note that I wont be able to do a full 90 minute phone call on the 11th -- perhaps we could schedule 30 minutes or so for me to be on the phone call.

At 05:36 PM 5/1/2006, you wrote:

> Dr. Berinsky-
>
> On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paperâ€™s findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:
>
> ℜ• The research methodology which was used to support the paperâ€™s conclusions

Subject E-mail to Voter ID peer reviewers

Tom and Julie-

Please take a look at this draft e-mail and let me know if it captures all that it needs to.

Would like to get this out ASAP- appreciate your feedback..

Dear Jonathan Nagler
Dear Jan Leighley
Dear Adam Berinsky

On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paper's findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:

- The research methodology which was used to support the paper's conclusions
- The specific statistical applications which were used to analyze the data and arrive at various conclusions

If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.

On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagleton's peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EAC's Board of Advisors and Standards Boards in late May.

While EAC agency policy does not allow us to provide you with financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Subject Hamilton Crown Plaza

History: This message has been replied to.

Karen,

I tried to reserve a room at the Hamilton Crown Plaza for the night of May 23, but found that nothing was available. Has EAC reserved a block of room for that evening? If so, can 2 of those be made available to the Rutgers-Moritz team in connection with our presentation to the advisory boards?

Subject Schedule for completion of Prov. Voting and Voter ID research

History: This message has been replied to.

Karen,

John and I reviewed your recent email today, and he asked me to respond.

Important to us is a clear commitment now by the EAC to schedule a presentation of our Voter ID research at the May meeting of the Advisory Board, if its review is required before the paper is published and presented at the EAC's public meeting in June. Your email made no mention of that June public meeting. Our schedule (submitted with the request for the no-cost extension) –and our previous discussion with you—treats that meeting as the key event that will conclude our research under this contract. Therefore, we also look for an explicit understanding that a presentation of our reports will be included in the agenda for that public meeting.

We can deliver a final report on Provisional Voting by May 5 and will be prepared for whatever role we might play at the May 24 meeting of the Advisory Board.

The team is looking forward to a discussion of Tim Vercellotti's revised statistical analysis of Voter ID with the academic reviewers you are in the process of identifying during the week of May 8. Knowing the specific date and time of that discussion in the next day or so would facilitate the participation of appropriate members of our Peer Review Group in that conversation.

Subject: Re: Eagleton/Moritz Next Steps

John and Tom-

A couple of items related to timing over the next several weeks:

1. Is it possible to get your final report on Provisional Voting by COB May 5? If so, I can get this to the four Commissioners for final review and approval. It will then be ready to present to the EAC Board of Advisors and Standards Board at the May 24 meeting.

2. As we discussed I have been working to identify a small group of academics(three or so) who will be available to review the Voter ID paper the week of May 8. The focus of the review will be on Tim's research methodology and statistical analysis. I am fairly certain that this review can be done via conference call , preferably on May 11 or May 12. This would assume each of the reviewers will have spent

time reviewing the paper, taking extensive notes and summarizing his or her comments. I expect that you all, Tim, Mike Alvarez and any others from your peer review panel, who have an expertise in research and statistics, will be available for the conference call, as well?

3. While I expect you will be able to have your final Voter ID paper to me sometime during the week of May 15, it is not clear whether or not the paper will be presented to the EAC Standards and Advisory Boards the following week. As you know, the paper contains some controversial information, so the Commissioners may elect to spend additional time reviewing the findings among themselves, and before it is formally presented to our Boards.

Let me know if this schedule works for you all.

Hey Karen,

Once John signs and faxes back the document, we need to get it to Tom with the memo to file (attached) for his signature. I believe that is all we need to do for the no-cost modification.

Thanks,

Tamar Nedzar

Subject Re: No-Cost Extension Request

U.S. ELECTION ASSISTANCE COMMISSION
1225 New York Ave. NW – Suite 1100
Washington, DC 20005

To: File
From: Tamar Nedzar, Law Clerk
Date: April 21, 2006
Re: No-Cost Extension to contract number E4014127 with the Eagleton Institute of Politics at Rutgers University

---

Background:
Contract E4014127 with the Eagleton Institute of Politics at Rutgers University ("contractor") was originally scheduled to be concluded on March 31, 2006. The contract's final products include a report on Voter Identification and a report on Provisional Voting. The contractor has vetted the reports with a Peer Review Group, pursuant to the terms of the contract.

Justification for No-Cost Extension:
The EAC wishes to supplement the contractor's Peer Review of the reports by adding another review process with some of the EAC's key stakeholders. The EAC proposes to assemble a panel of researchers during the week of May 8th to conduct the second review.

Following the second review, the contractor will revise its draft reports based on the comments it receives. The contractor will present its draft reports on Provisional Voting and Voter Identification to the EAC Advisory Board at its May 25th meeting in Washington, DC. The contractor will revise both draft reports, taking into account the EAC's Advisory Board's comments and submit the final reports to the EAC toward the end of June.

Recommendation:
The EAC recommends that contract E4014127 be modified at no cost to allow the contractor to complete their work by June 30, 2006.

Thanks, John.

I'm passing this on to our legal staff , who will be preparing the documents.

Will let you know if I need additional information and/or clarification.

Subject No-Cost Extension Request

Karen - We are requesting a no-cost extension on the EAC contract to the Eagleton Institute of Politics at Rutgers University to have the contract's concluding date move from March 31, 2006 to June 30, 2006. As I indicated earlier, it would be very helpful if we could receive approval of this request no later than April 28th.

This extension is necessary to enable the following activities:

1. The EAC has informed us that it will assemble a panel of researchers the week of May 8th to review the Eagleton/Moritz draft background report on Voter Identification. The EAC wishes to supplement the review of this draft
already conducted by the Peer Review Group called for in the contract. The Eagleton/Moritz research team, as well as at least some of the Peer Review Group will participate in the conference call or meeting of the EAC's reviewers;

2. Eagleton/Moritz will revise the draft Voter Identification report based upon comments made by the two sets of reviewers, and distribute the revised report to the EAC and its Advisory Board in mid-May.

3. Eagleton/Moritz will present its draft reports on Provisional Voting and Voter Idenfitication to the EAC Advisory Board at its May 25th meeting in Washington, D.C.;

4. Eagleton/Moritz will revise both draft reports to take into account comments made by the EAC Advisory Board, and submit printed final reports to the EAC before June 23rd. Eagleton/Moritz will also prepare a PowerPoint presentation for both reports.

5. Eagleton/Moritz will present both reports at the EAC public meeting

in Washington, D.C. on June 23rd, thus concluding its work under this contract.

Please let me know if you need any additional information.

Thanks,

John

Subject March Progress Report

History: This message has been forwarded.

Karen,

Attached is the Progress Report for March. I think our conversation earlier this week laid out a clear path to a successful conclusion of the project.

Tom O'Neill

Progress ReportMarch06.doc

EAGLETON INSTITUTE OF POLITICS

Contract to Provide Research Assistance to the EAC For the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
March 2006

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

April 14, 2006

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
  - Task 3.7
  - Task 3.8
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from March 1 through March 31, 2006. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In March we revisited our research on Provisional Voting to respond to a question from the EAC's Executive Director. We found that the longer the time provided to evaluate provisional ballots, the greater the percentage that are counted. Based on the comments of the Peer Review Group, we revised our statistical analysis of the effects of voter ID requirements on turnout and distributed the revised draft to the PRG again. We received further comments from three PRG members, who expressed confidence in the analysis. Their comments are now reflected in the latest draft, as presented to the EAC on April 3.

We polished the draft report on Voter ID issues based on preliminary comments by the EAC. The results of that revision were incorporated in the briefing we prepared for delivery on April 3 to the EAC Commissioners in Washington. That meeting had originally been envisioned as a Closeout Conference. While we have met the schedule provided under the no-cost extension to the contract, the EAC has requested that we take additional time to revise the Voter ID report based on comments at the April meeting, arrange another meeting of the PRG, and, perhaps, undertake additional research on Voter ID over time. As this report is being prepared, we are exploring those options.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting. Please direct questions or comments about this report to [redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November. We received comments on the November draft report in a teleconference on February 22 with EAC Executive Director Tom Wilkey and Contract Manager Karen Lynn-Dyson. We are now revising and polishing the draft in accord with many of the comments by the Commissioners.

We have analyzed the effect of the different time periods for the evaluation of provisional ballots established by the states on the percentage of provisional ballots that end up being counted. The results indicate that longer time periods result in more ballots being counted. That finding will be incorporated in the revised, final draft report.

Time period	Number of States	% PB Counted
< 1 week	14	35.4%
1 – 2 weeks	15	47.1%
> 2 weeks	14	60.8%

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. The EAC has accepted that recommendation. Our final report will include recommendations for promulgation by the Commission as "Best Practices," but will not include a proposed "Guidance Document," referred to in Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance).

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is now the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has completed the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. The results of its work constitutes the compendium of legislation, administrative regulations, and case law called for under this task. This month the Moritz team reviewed state statutes and regulations on the time period allowed for the evaluation of provisional ballots. Its report provided the basis for the statistical analysis of the effect of greater time on the number of ballots counted.

Description: The Moritz team has compiled statutes on Voter Identification, and has provided a summary analysis of its research, including litigation, included in the draft of the Voter ID paper that has now been reviewed by the Peer Review Group.

Progress: The review of current voter identification litigation nationwide is now included in the draft report.

Work Plan: In the remaining month of the project, Moritz and Eagleton will continue to work together to develop best practices in the area of voter identification, based on our combined research and the case law.

RESEARCH EFFORTS

We continue to examine and categorize voter registration forms across the states to see what forms of identification are requested from mail-in registrants in order to highlight how easily accessible states make information about voter identification. The table displaying this data is challenging to complete.

VOTER ID AND TURNOUT ANALYSIS

We revised the analysis of the effect of different voter ID requirements on turnout following the meeting of the PRG in February. The revision was distributed to the PRG in March, and 3 members of the PRG commented on the revision at the end of the month. They pointed to a few areas to clarify the analysis and expressed overall confidence in the quality of the work.

Description: The analysis suggests that more stringent voter ID requirements reduce turnout by several percentage points. We reviewed the analysis, looking at participation compared to both the Voting Age Population and the Citizen Voting Age population.

Progress: The PRG review strengthened the analysis. We have incorporated the results in the revised draft of our report, as distributed to the EAC for the April 3 meeting. It is summarized in the PowerPoint presentation prepared in March for the April meeting.

Challenges: The models we are using, while sophisticated, are difficult to run and interpret. The analyses are time-consuming. The PRG's counsel has assisted in meeting this challenge.

Work Plan: We completed a draft of the Voter ID report for the EAC in March. Based on the EAC's comments at the April meeting, we are revising the paper once again for the final report.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: With its meeting to review the Voter ID paper, the PRG completed its work on this project. Several members of the PRG did comment on the revised statistical analysis of voter turnout. Members may be called together again for a review of our final revision, if changes to the schedule are approved by the EAC.

Challenges: No new challenges were encountered.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

As agreed in a telephone conversation with Karen Lynn-Dyson on April 13th, a detail of expenses incurred from the project during March and April will be sent under separate cover in early May to Ms. Dianna Scott, Administrative Officer at the EAC.

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to <u>actual expenses</u> that have been incurred during the reporting period. The contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

Subject Information requested by Commissioner Hillman

History: This message has been replied to.

Karen:

It was good to meet with you, your colleagues, and the commissioners on Monday. The feedback has been very helpful as I revise my part of the voter identification study.

Commissioner Hillman asked during and after the meeting for some information from the Current Population Survey. She was curious about the percentage of non-citizens who said they were registered to vote, and the percentage of non-citizens who said they voted in the 2004 election.

I've looked at the questionnaire and the data. The question about citizenship preceded the questions about registration and voting in the survey. If a respondent said she or he was not a citizen of the United States, the respondent did not receive the questions on registration and voting. So, at least from this data set, I cannot discern the percentage of non-citizens who claimed to be registered or to have voted. (That would be fascinating information, indeed.)

Best regards,

Tim Vercellotti

Hi -- nice to meet you in person, finally!

And thanks for inviting me to your gathering, I enjoyed it and hope I was helpful. Of course, any time you want anything, you do know where to track me down.

As to the potential reviewers of the Eagleton Voter ID study, here are my suggestions, in order:
Jonathan Nagler, New York University
Jan Leighley, University of Arizona
Ben Highton, UC-Davis
Adam Berinsky, MIT
Bernard Grofman, UC-Irvine

All have worked with the CPS turnout/registration data, and are very familiar with this research literature.

If these don't work, or you want more recommendations, let me know.

Subject Powerpoint presentation for EAC

History: This message has been forwarded.

Karen,

Attached is the Powerpoint presentation we will use as the basis for our presentation tomorrow. I will be bringing a copy on a portable drive to install on the computer to be used for the presentation, but thought it might be convenient to have a copy in advance that you could review and that might be loaded onto the presentation computer before we arrive.

See you about 11. Hope you're having (had?) a good weekend.

Tom O'Neill

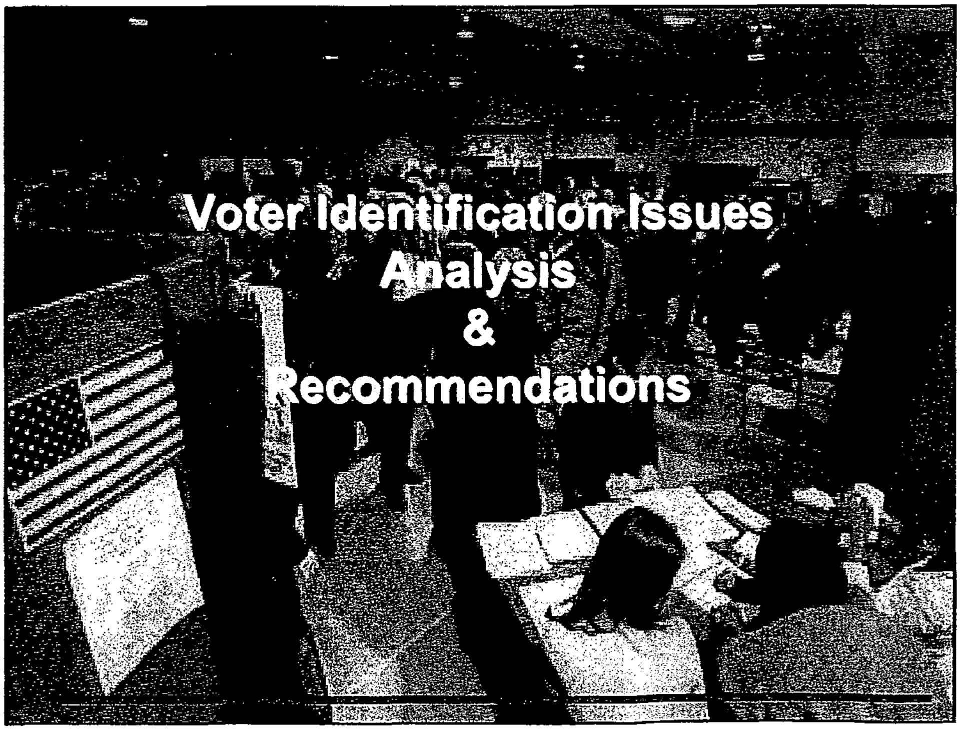
April 3, 2006



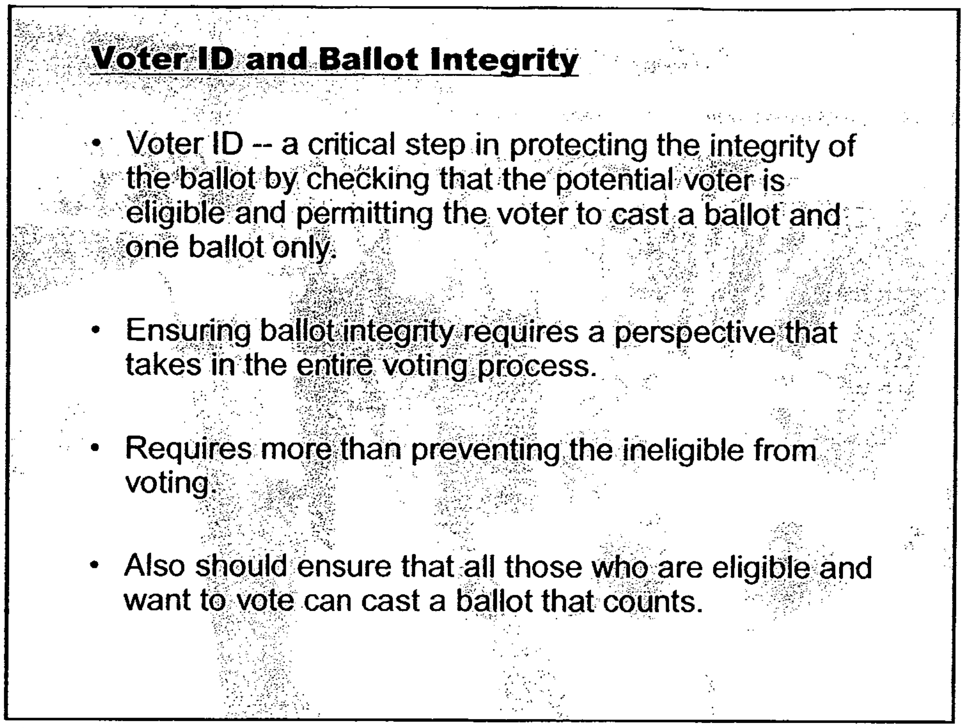
Voter Identification Issues Analysis & Recommendations

Analytic Tasks

- •Identify how voter ID requirements were implemented around the county to provide a baseline for consideration of other approaches
- •Diagnose the problems and challenges of voter ID and hypothesize alternative approaches.
- •Recommend alternative approaches
- •Identify appropriate policy objectives by which to assess alternative approaches to voter ID

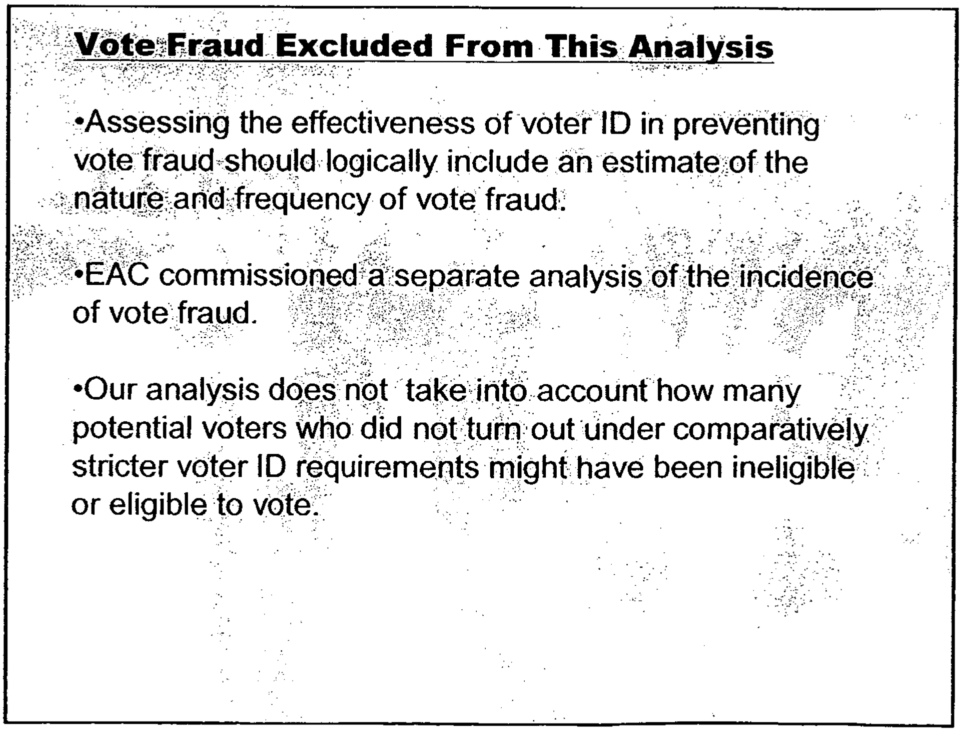
Focus

- •HAVA's narrow ID requirements drew attention to the issue and helped spark the current debate.
- •National debate now goes beyond HAVA to focus on stricter ID for all would-be voters
- •Therefore our work takes a broad view of the issue.



Voter ID and Ballot Integrity

- Voter ID -- a critical step in protecting the integrity of the ballot by checking that the potential voter is eligible and permitting the voter to cast a ballot and one ballot only.
- Ensuring ballot integrity requires a perspective that takes in the entire voting process.
- Requires more than preventing the ineligible from voting.
- Also should ensure that all those who are eligible and want to vote can cast a ballot that counts.

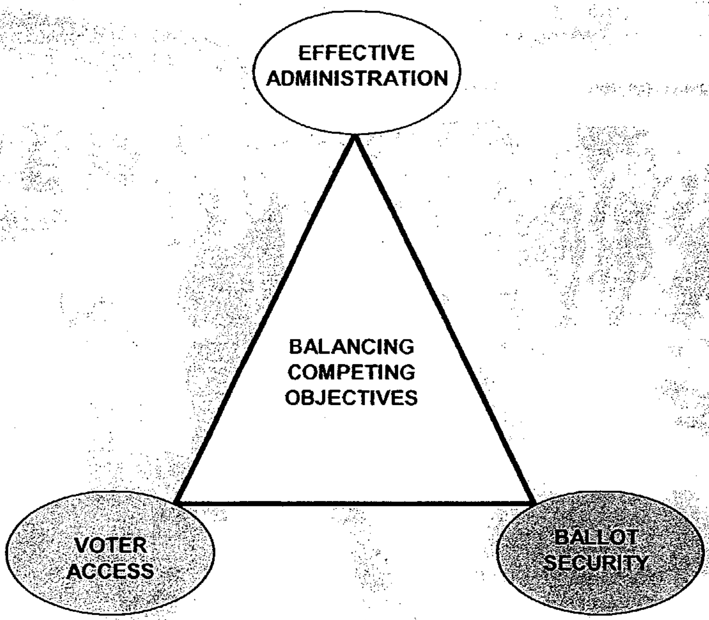


Vote Fraud Excluded From This Analysis

•Assessing the effectiveness of voter ID in preventing vote fraud should logically include an estimate of the nature and frequency of vote fraud.

•EAC commissioned a separate analysis of the incidence of vote fraud.

•Our analysis does not take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.



EFFECTIVE ADMINISTRATION

BALANCING COMPETING OBJECTIVES

VOTER ACCESS

BALLOT SECURITY

Method of analysis

- Collected and analyzed state statutes and regulations & classified states by their ID requirements in 2004.
- Tested the assumption that voter ID requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous.
- County-level turnout data and Current Population Survey results
- Analyzed litigation for trends in judicial decisions
- Revised our work based on comments of PRG

Categories of Voter ID in the states, 2004

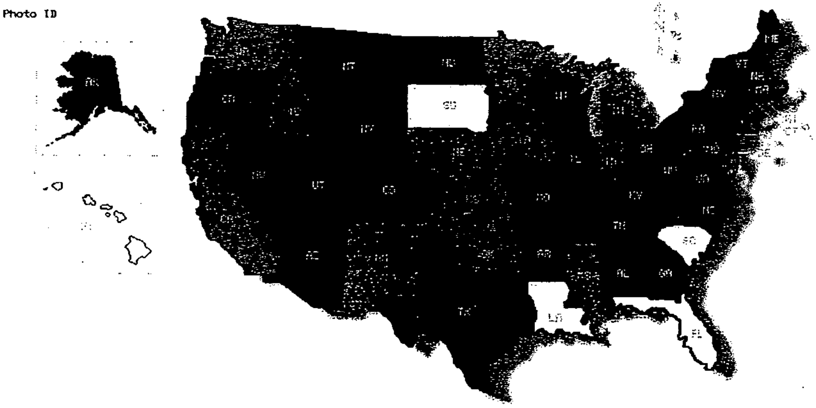
1. Give Name
2. Sign Name
3. Match Signature
4. Present ID

In 2004 no states required photo ID as the only ID to cast regular ballot.

May not reflect actual practice at the polling place.

● - Give Name
● - Sign Name
● - Match Signature
● - ID
- Photo ID

Voter ID Requirements 2004



3-27-06

Limitations of the data

- 2004 data do not permit conclusions about the effect of stricter photo ID laws such as those recently passed in Georgia and Indiana.
- The 5 states that required photo ID in 2004 allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.

Analysis of Turnout and Voter ID Requirements

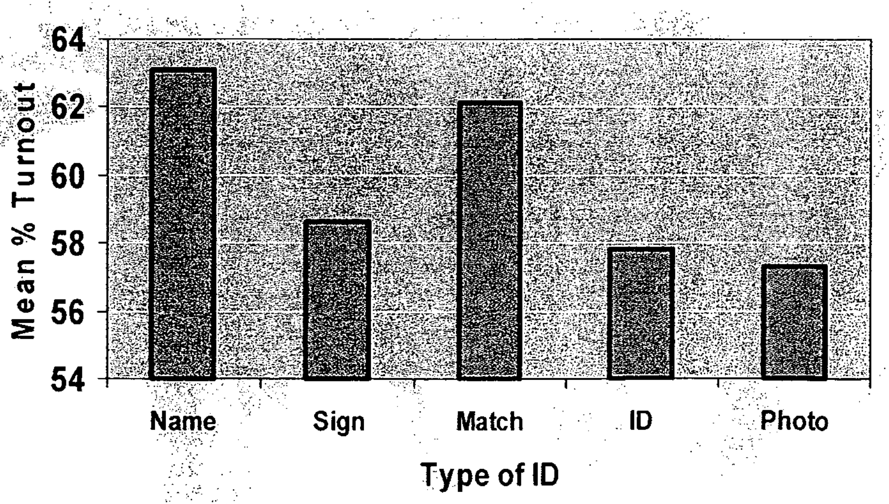
Tim Vercellotti

ID requirements affect turnout

Turnout declined with stricter voter ID requirements

- 63.1% of the voting age population turned out in states that required voters to state their names.
- 57.3% turned out in states that required photo ID.
- Including other factors beyond voter ID requirements diminishes the influence of voter ID on turnout.
- Reduction most noticeable in counties with many Hispanic residents or people below the poverty line.

State Voter ID and Turnout



Variation in Turnout Based on Voter ID Requirements

Maximum Requirement		*Minimum Requirement*	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	*Voter Identification Required in the States*	*Mean Voter Turnout for States in that Category*
State Name	**63.1 %**	*State Name*	***61.3 %***
Sign Name	**58.6 %**	*Sign Name*	***60.4 %***

Average Turnout (All States)	**59.6 %**		

Reports from the voters

- CPS in November 2004 asked respondents about their experience voting.
- Stricter ID requirements exert a negative effect on whether survey respondents said they voted.
- Decline from *Stating Name* to *Photo ID* was 2.5%.
- Small, negative effect persists when controlling for other variables, such as battleground state and demographics.

Effect of Stricter Voter ID requirements

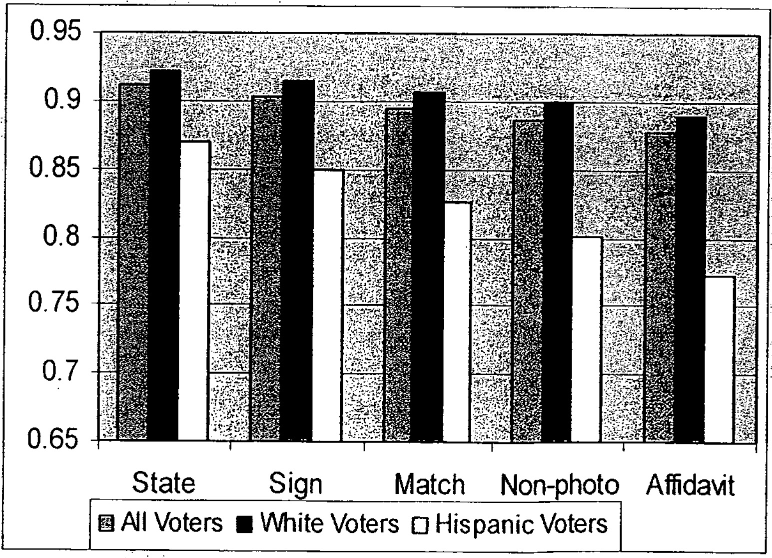
Significant reduction in probability of voting by:

- Hispanic Voters (minus 9.7%)
- Voters below the poverty line
- Voters with less than a high-school education (-7.4%)
- Young voters (18 -24)

No effect on the probability of voting by:

- African-American voters
- Voters with some college education

Voter Turnout By Minimum ID Requirement



Trends in Litigation

Dan Tokaji

Summary

- Requirements that voters provide some identifying documentation have been upheld where photo ID is *not* the only acceptable form.
- Laws requiring photo ID may not be upheld. In *Common Cause v. Billups* the court concluded that a photo ID requirement is likely unconstitutional.
- Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Rulings on Forms of ID

Non-photo ID

- *Colorado Common Cause v. Davidson,* Upheld requirement that all in-person voters show identification.

- *League of Women Voters v. Blackwell,* rejected a challenge to Ohio requirement that first-time mail-registrants provide HAVA-ID.

Photo ID

- Georgia and Indiana laws requiring photo ID have been challenged in court. In Georgia, the District Court enjoined application of photo ID requirement on constitutional grounds. In January, Georgia enacted a modified version of the law, on which the court has not yet ruled.

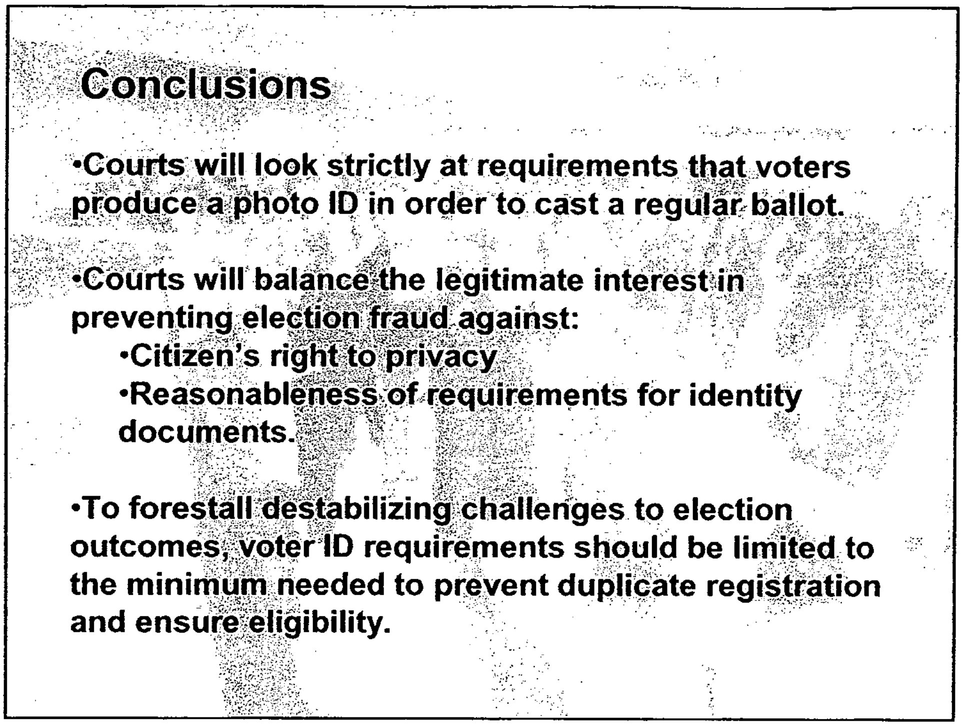
- *ACLU of Minnesota v. Kiffmeyer,* Enjoined Minnesota law that allowed the use of tribal photo ID cards only for an Indian who lived on the reservation. The decision indicates courts are likely to look strictly on photo ID requirements.

Privacy

- *Greidinger v. Davis*, (4th Cir. 1993), struck down on due process grounds a Virginia requirement that voters provide Social Security numbers to register. Public disclosure of the social security numbers was not necessary to prevent fraud.

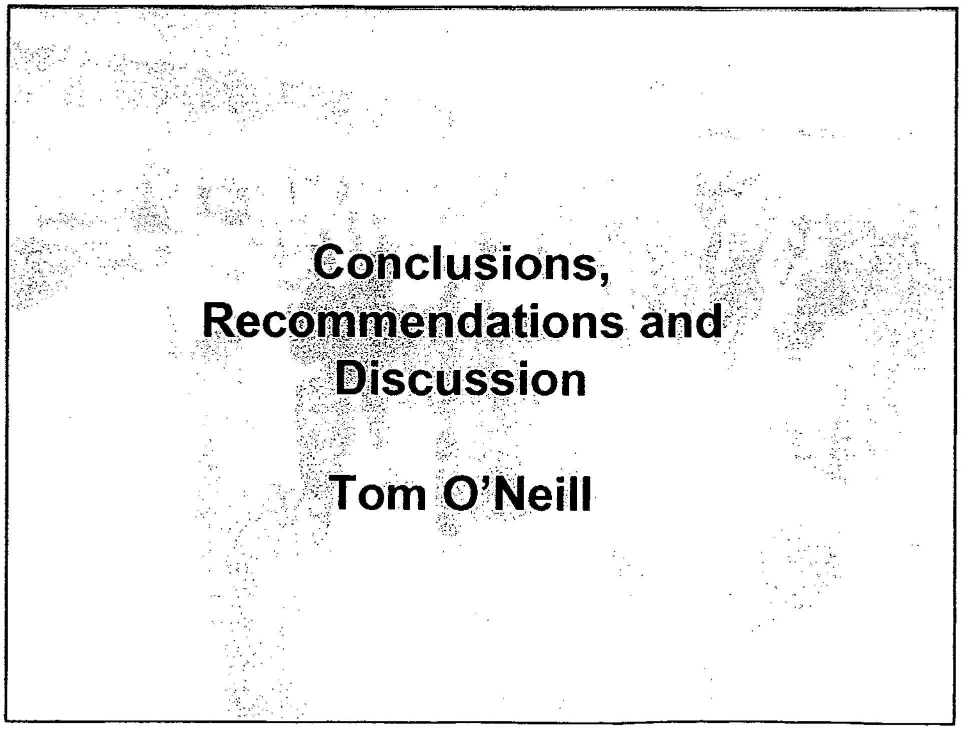
- BUT *McKay v. Thompson*, (6th Cir. 2000) rejected privacy challenges based to a Tennessee law requiring Social Security numbers for voter registration.

- NVRA permits requiring only the minimum information needed to prevent duplicate voter registration and determine eligibility. The distinction between the two cases appears to be between the use of Social Security numbers for internal purposes, which was deemed permissible, and the disclosure of those numbers to the public, which took place in Virginia.



Conclusions

- Courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot.
- Courts will balance the legitimate interest in preventing election fraud against:
  - Citizen's right to privacy
  - Reasonableness of requirements for identity documents.
- To forestall destabilizing challenges to election outcomes, voter ID requirements should be limited to the minimum needed to prevent duplicate registration and ensure eligibility.



Conclusions, Recommendations and Discussion

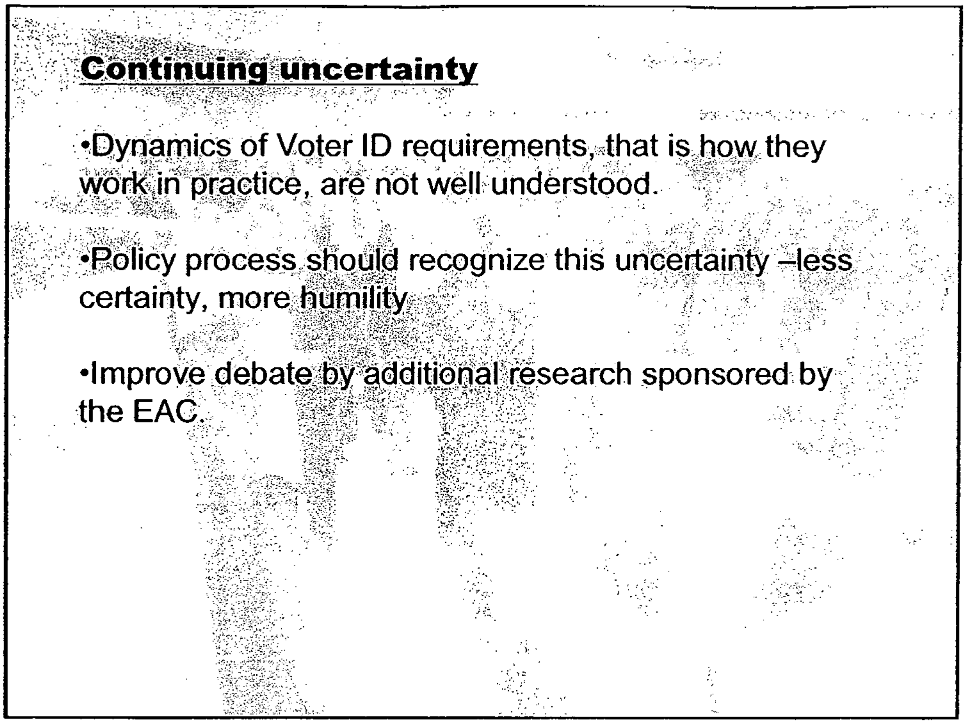
Tom O'Neill

Policy Perspective

If the ID requirements that block ineligible voters from the polls also prevent eligible voters from casting a ballot because they lack ID, the integrity of the ballot may not have been improved.

Policy Perspective Questions

- Are voter ID requirements based on valid studies of the incidence of the vote fraud they aim to prevent?
- Is the increase in ballot security promised by stricter ID requirements reasonably proportional to the cost, measured in both monetary and other terms?
- Can all citizens comply with the requirements easily?
- If a requirement is likely to reduce turnout of eligible voters, what steps can or will be taken to ameliorate the adverse consequences?
- Do the requirements have a neutral result on the composition of the qualified electorate?

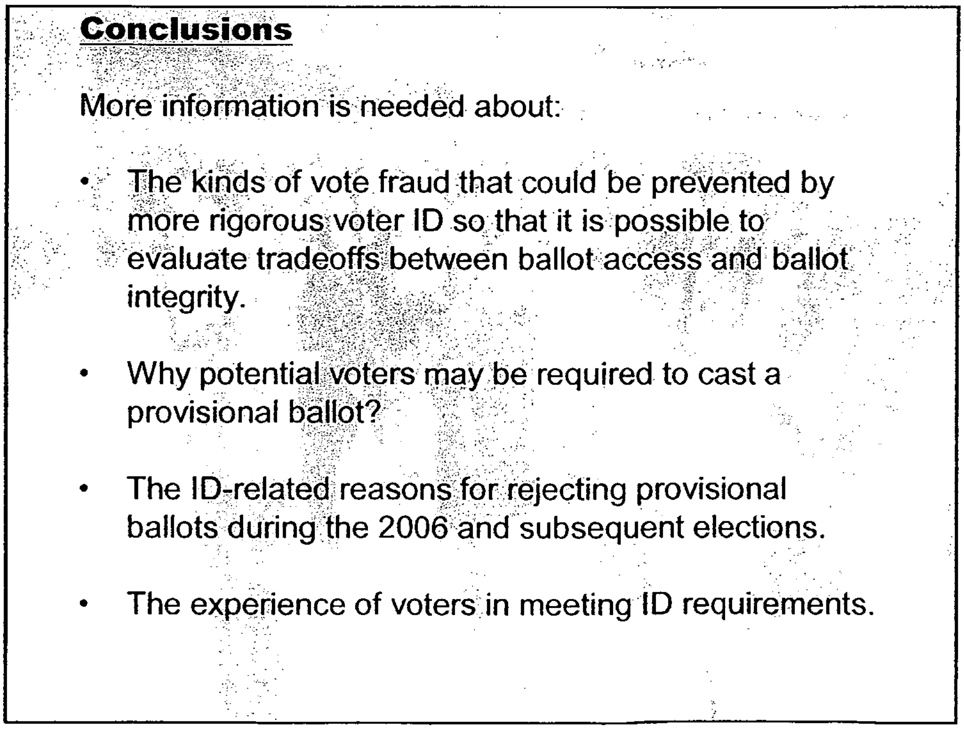


Continuing uncertainty

•Dynamics of Voter ID requirements, that is how they work in practice, are not well understood.

•Policy process should recognize this uncertainty –less certainty, more humility

•Improve debate by additional research sponsored by the EAC.



Conclusions

More information is needed about:

- The kinds of vote fraud that could be prevented by more rigorous voter ID so that it is possible to evaluate tradeoffs between ballot access and ballot integrity.
- Why potential voters may be required to cast a provisional ballot?
- The ID-related reasons for rejecting provisional ballots during the 2006 and subsequent elections.
- The experience of voters in meeting ID requirements.

The EAC should:

A. Recommend the publication of a "Voting Impact Statement" by states considering changing their voter ID requirements. It would estimate the number and demographics of

1. Eligible, potential voters that a proposed stricter ID requirement may keep away from the polls or be permitted to cast only a provisional ballot; and

2. Assess the number of ineligible voters who will be prevented from voting by stricter ID requirements.

The EAC should:

B. Encourage or require the states to:

1. Collect and report reliable, credible information on the relationship between ballot access and ballot security.

2. Survey provisional voters (anonymously) to determine why they were unable to cast a regular ballot.

3. Conduct pre-election polling to ask voters what they know about the voter ID requirements.

4. Examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. Consider 3 factors:
   a. Convenience of voters
   b. Total time allowed to evaluate ballots
   c. Safe harbor provision in presidential elections.

Time period	Number of States	% PB Counted
< 1 week	14	35.4%
1 – 2 weeks	15	47.1%
> 2 weeks	14	60.8%

C. Advise the states that to forestall destabilizing challenges to election outcomes, voter ID requirements should be limited to the minimum needed to prevent duplicate registration and ensure eligibility.

Briefing for

U. S. Election Assistance Commission

Subject Monday Meeting

Karen - I learned late Friday that I will not be able to attend Monday's meeting. My wife is recovering from abdominal surgery and is doing fine, but I need to take her back to visit the surgeon. I am very disappointed to miss the meeting, but know that our team will be well represented. Tom O'Neill will be leading a delegation that will include Dan Tokaji from Moritz, amd Ingrid Reed and Tim Vercellotti from Eagleton as well as our two most involved graduate students, Dave Andersen and John Harris. Tom and I will talk Monday evening or Tuesday and be able to quickly resolve any questions that cannot be fully resolved during the meetings.

One procedural item is that we clearly need another no-cost extension since our first one expired yesterday. Assuming the amount of revision the Commissioners request on Monday is relatively minimal, I assume we would be able to complete all remaining work during April and would, therefore, need another 30 days. Perhaps, to be on the safe side though, we should extend until the end of May. In any case, if you could let me or Tom know what we need to do to put that in motion, we will do so once we hear the Commissioners' comments on Monday.

Also, in response to the question you asked during the week, our hope is to submit one more invoice at the end of April for the remaining funds. Let me know if that works from your end.

Finally, one other procedural question is that several of the participants in this project are interested in writing papers for academic journals or conferences stemming from their work on this project. Are there any applicable restrictions, specific attribution requirements or other limits or provisions? I couldn't find anything in our contract with the EAC that addresses this matter one way or the other.

Thanks. Again, my apologies for missing the meeting.

Subject Revised Voter ID Paper

History: This message has been forwarded.

Karen,

Attached is a new draft of the Voter ID paper, revised to take into account the comments you gave us on Tuesday as well as some points raised recently by other reviewers. We'll be bringing hard copies of this draft with us to Monday's briefing. If you could distribute the new "Executive Summary" (pages 1 – 5) in advance to those who will take part in the meeting on Monday, I think the discussion would be improved.

Our train is scheduled to get into Union Station at 10:30 on Monday. Barring Amtrak delays, we should arrive at your offices shortly before 11.

Tom O'Neill

VoterIDReport0330.doc

FINAL DRAFT REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background

This report to the United States Election Assistance Commission (EAC) presents an analysis of voter identification requirements across the country and makes recommendations for best practices to improve implementation of voter ID requirements at the polls. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under a contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Executive Summary

Methods

To explore the effects of voter ID requirements on electoral participation in 2004, as measured by turnout, we gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. We assigned each state to one of five categories based on its ID requirements. The five categories are progressively more rigorous based on the demands they make on both voters[1] (and, to some extent) on election workers. The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample,

---

[1] Even the most relaxed provisions for identification at the polls — anything stricter than the honor system used in North Dakota — will impose some burden on particular voters. *Harvard Law Review* 119:1146

which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents are not uniformly and conveniently available to all voters.

We collected data on turnout in all counties to permit an estimate of the relationship between the rigor of the ID requirements and the level of turnout. This aggregate analysis is useful, but does not provide valid estimates on the effects of different kinds of ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates.) To allow that analysis, we used the Census Bureau's Current Population Survey from November 2004, which asked a large sample of Americans about their experience in the election. It has the disadvantage of relying on self reports by respondents about their registration status, citizenship, and experience in the polling place, but it provides the demographic data needed to supplement the aggregate analysis.

To understand the legal issues raised by voter ID requirements, we collected and analyzed the few major cases that have been decided on this issue. The decisions so far suggest the constitutional and other constraints to policies on voter ID requirements.

Findings

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack precise information on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.

Voter turnout at the state level in 2004 was lower in states where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Those figures, however, probably overstate the effect since the inclusion of other factors beyond voter ID requirements in the analysis diminishes the extent of influence of voter ID on turnout. After taking account of the other factors, the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents orf people living below the poverty line.

Our analysis of litigation suggests that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not now sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[2] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

A voting system that requires voters to produce an identify document or documents may indeed prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the

---

[2] Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.

ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous Voter ID requirements affect the decision by potential voters to go or stay away from the polls– are not well understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice the publication of a "Voting Impact Statement" by states considering changing their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that a proposed stricter ID requirement may keep away from the polls or be permitted to cast only a provisional ballot; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should analyze this publish an analysis of this information to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. The states should also be encouraged to use this information to increase the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections.
  - Useful information could be supplied by exit polling or surveys of voters by local election officials. It would make clear why those who cast a provisional ballot

were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.

  - Polling to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.

- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots[3], and the safe harbor provision in presidential elections.
- Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional.

Background and Approach of the Study

Establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The stress on voters to provide required ID documents may be greater at the polls on Election Day than when registering. The pressures arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may be faced with long lines and limited time.

---

[3] Our research on provisional voting reveals that states that provide more than week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [4] The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks broadly at voter ID issues and goes beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures on voter ID goes ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. The controversy in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.[5]

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.[6] Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and , if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

---

[4] As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

[5] Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

[6] "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy,* cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has informed us that it has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.[7] Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- can divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.[8] And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the

---

[7] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

[8] The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

polls. In conducting this analysis, we were sensitive to the observation that the problem with American elections may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes can be more effective if based on clear standards --legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?[9]
2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[10]
3. How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[11]
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.[12] A thorough, objective

---

[9] "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

[10] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

[11] In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

[12] "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at

impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[13]
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. Does the Voter ID requirement have a neutral result on the composition of the qualified and eligible electorate? ID requirements should not be designed to, or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another. Whatever the requirement may be, can all citizens comply with it easily and at no or minimal cost?

Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID.

This neat assignment in the following table and map of each state to one category no doubt fails to reflect actual practice at many polling places. Like any system run by fallible people, the voter ID process is subject to wide variation in practice. Voters may be confronted with demands for identification different from the directives in state statutes or regulation. Some voters may be waved through the process without a look at any document, no matter what the regulations say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters actually encounter.

---

administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

[13] For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen Hasen's has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

TABLE 1 -- Voter ID Requirements

State	Forms of ID Required 2004	Current ID Requirement for First-Time Voters	Current ID Requirements for All Other Voters	Verification Method for Provisional Ballots

^In Florida and Louisiana, states that required a photo id in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

^^In these states in 2004, voters lacking a photo ID could vote by providing other ID.

*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

**State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

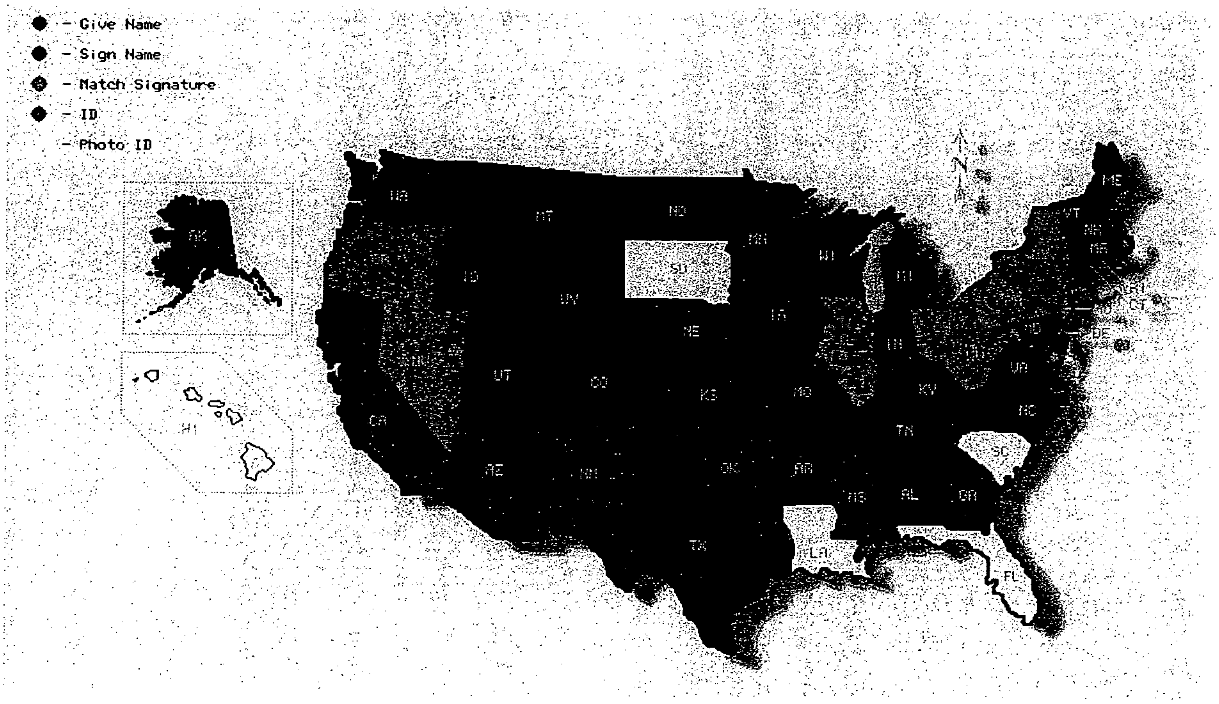
***Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

****Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

*****Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compare to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

******Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Figure 1



Voter ID Requirements 2004

Since it is not practical to attempt to capture the wide variety of how voter ID requirements are actually implemented across the nation's tens of thousands of polling places, the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

Effect of Voter ID requirements on Turnout

We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau. [14]

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

---

[14] See Appendix ___ for the full report on voter ID and turnout.

Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit is regarded as the most rigorous.

Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**63.1 %**	State Name	**61.3 %**
Sign Name	**58.6 %**	Sign Name	**60.4 %**
Match Signature	**62.1 %**	Match Signature	**59.2 %**
Provide Non-Photo ID	**57.8 %**	Provide Non-Photo ID	**57.6 %**
Provide Photo ID	**57.3 %**	Swear Affidavit	**58.7 %**
Average Turnout (All States)	**59.6 %**		

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political-- also affect voter participation. Multivariate models that take into account other predictors can place the effects of voter identification in a more accurate context. The multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line. In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. The decline in turnout is particularly noticeable in counties with concentrations of Hispanic residents or individuals who live below the poverty line. Determining if the reduction in turnout is, in fact, among the Hispanic or poor residents of those counties requires further research at the individual level.

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting. Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis

The results give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.

- Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.

- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.

- Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the self-reports of elderly voters, while indicating that they would be slightly less likely to vote as ID requirements become stricter, do not show a dramatic effect.

The data examined in this analysis could not capture the dynamics of how identification requirements lower turnout. Do know the voter ID and stay away from the polls because they cannot or do not want to meet them? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

It is important to note that the 2004 data do not allow us to draw conclusions about the effect of laws such as those recently passed in Georgia and Indiana, which require government-issued photo ID. No such laws were in place in 2004, and the five states that then required photo ID at the time allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups,*

Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer,* No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions

suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. [15]

The dynamics of Voter ID requirements –how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in

---

[15] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

the states would be improved by additional research sponsored by the EAC. So far as it may be necessary to reduce vote fraud made possible by inadequate voter ID, the research could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended elsewhere by one of the authors of this report, Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed. [16]

---

[16] "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier. "

APPENDIX –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

    - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
    - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
    - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
    - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
    - Substantive due process: ruled that internal use of SS# not a burden
    - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
    - P&I, Article IV: does not protect in-state citizens
    - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
    - VRA: ruled that race was not made a "qualification" for voting
    - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
    - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
    - VRA: ruled that it was not a "test or device" because it applied equally
    - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

***American Civil Liberties Union of Minnesota v. Kiffmeyer,* No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required <u>all</u> in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover,* 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.,* CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[17]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[17] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[18]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[19] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

[19] GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[20] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[20] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Subject Census Bureau report on Voting and Registration

History: This message has been replied to.

Karen,

To the extent that the Census report you mention is based on the Current Population Survey data from November 2004, it is taken into account in the analysis of the effect of voter id requirements on turnout that is included in our report. The specific report, dated March 15 2006, was issued after our analysis was complete, and it is not cited in our research.

Tim Vercellotti is taking a look at the recent Census report and can comment on it generally at the briefing on April 3, if the subject comes up.

After our very useful discussion yesterday, I took a close look at Thor Hern's site at the American Center for Voter Rights. Its focus is on compiling reports of vote fraud, a topic we were asked to exclude from our research. It does include references to publications touching in part on voter identification, and the works Hern cites, most prominently the recent Harvard Law Review devoted to voting issues, is already reflected in our paper.

Subject Comments regarding the Eagleton Report on Voter ID

History: This message has been replied to.

Karen,

As you requested, here are my comments regarding the final draft Eagleton report on Voter ID.

While the report is generally acceptable, I don't believe the current draft is ready to be released.

I found some parts of the report to be misleading and, at times, appearing biased to support a view that imposing ID requirements at the polls should be discouraged. As an example, on the first page they write about poll workers facing "long lines and limited time," suggesting that may be a problem for the workers to check ID. I am not sure what their point may be, as poll workers in states that require ID checking will still have to do so, no matter how long the voter lines they have. Many states and their polling places may not have long lines at the polls, and thus voters may not have the "limited time" suggested in the report. They don't support their suggestion with hard data on long voter lines and time limits on poll workers.

They selectively quote the Carter-Baker Commission study to suggest that "photographic ID requirements for in-person voting do little to address the problem of registration by mail" even though the Carter-Baker study actually promotes the idea of a photographic ID requirement at the polls. To be fair, they need to state that fact and the reasons why the Carter-Baker Commission comes to that conclusion.

Their table on page 7 indicates that Missouri's current ID requirement for first-time voters relies on HAVA requirements. It is my understanding that Missouri law requires that all voters must show some type of ID at the polls (therefore it should state "Provide ID" as they did in listing CO, CN and LA requirements).

On page 9 and on subsequent pages they make reference to "voting age population" (VAP) data issued by the Census Bureau. Is all the data they represent in their analysis based on the VAP or do they take into consideration the Citizen Voting Age Population (CVAP), which takes into account the number of non-citizens who may be included in the VAP? It is not clear from the report. You may remember that Kim Brace discussed the VAP vs. CVAP issue with us extensively, and he indicated that the CVAP figure is always the better one to use when analyzing Census Bureau data against voting data. He also said that many of the non-citizens included in the VAP figures tend to be Hispanic. And since the Eagleton study is making conclusions that indicate that more stringent ID requirements may tend to reduce Hispanic voter turnout, it becomes important to understand which figures Eagleton uses, as Kim told us that VAP figures do not compensate for the non-citizen Hispanic voters that are included at a higher rate in the VAP (because as Kim stated most of the non-citizen population in the USA tends to be Hispanic).

I would like to know if the new Census report data on the 2004 election released on March 15, 2006 changes any of their perspectives. http://www.census.gov/prod/2006pubs/p20-556.pdf

On page 12 they make reference to the CPS data and indicate that it reported a voter turnout rate of 89%, which is much higher than other data reported (which is also explained in their narrative). However, while the report indicates that the CPS data is "widely-accepted," it does make clear by whom. I think for credibility reasons they need more supporting language since there is a significant difference between a self-reported turnout of 89% and the reality of 63%.

Considering that the beginning of the document reveals a bias towards lesser ID requirements, I believe that it is important to highlight earlier in the report the conclusion found on page 14 that concerns by critics of voter identification requirements for African-American and elderly voters "are not borne out by the results." This will provide at least some balance to the reader.

On page 20 they indicate they lack good data on why voters must cast their ballots provisionally. I thought that our Election Day Survey captured some of that data.

It appears that a preponderance of their citations are from organizations or groups that support liberal positions on election issues, or take selective information from reports to support a more liberal interpretation of views on voter ID issues. Examples would include: Carter-Baker on page 1; Tova Wang on page 4; Carter-Baker on page 4; Brennan Center page 20. While many of published articles cited on pages 30 and 31 provide relatively neutral information, those that appear to take positions (read from the description of the articles) appear to favor a liberal position on most ID issues. I would have hoped they would have provided a more balanced approach. I don't see conservative writers, such as Thor Hearne, of the American Center for Voting Rights, quoted or cited once in the report. Mr. Hearne has testified before Congress and has had several articles that address voter identification issues.

I was pleased that they cited (on page 5) a recent March 15, 2006 article from the Arizona Republic that indicated that their stricter voter ID law went smoothly in its first use.

They might want to be aware (and perhaps mention) that the recommendation from Edward Foley cited on the bottom of page 21 was actually used in Haiti's recent February 7, 2006 presidential election. In addition to each voter being provided a picture ID by the election commission, that same picture was found next to the voters' name on the voter rolls that were used at the polling places. Perhaps they want to contact Scott Lansell of IFES for confirmation. The picture ID project for Haiti's election was financed and implemented by the Organization for American States (OAS). I believe turnout for that election was over 60% of those eligible.

Please let me know if you or anyone from Eagleton has questions regarding these comments. Thanks.

Subject Re: Eagleton/MoritzVoter ID Report

History: This message has been replied to and forwarded.

Karen - Here is a reply to your question. Sorry not to have gotten it to you more quickly.

There are a couple of reasons why we used the CPS. Most importantly, it is a survey of individual voters, as opposed to election officials. The CPS allows us to make inferences about individual-level charactertistics (such as the age, race, education and income of each registered voter who responded to the survey), and how those characteristics combine with voter ID requirements to influence turnout. Also, the sample size is large, allowing for reliable analysis of sub-populations (just Hispanic voters, for example). Because of those two factors, most of the scholarly studies of voter turnout and the institutional and individual-level factors that go into turnout use the CPS.

The EAC also might ask why we collected our own aggregate data as opposed to using the results of the Election Day survey. We could provide greater detail if needed, but, in brief, the EAC Election Day Survey draws data from the jurisdiction that handles elections. In many states that is the county, but in the New England states the EAC Election Day Survey uses towns as its unit of analysis. Our aggregate data atempts to match voter turnout data to Census data, which we have gathered at the county level.

Conceivably, we could have gone through and matched Census data to towns for the New England states, but that would have been very time-consuming. Moreover, it would also have posed a problem with the statistical analysis of the aggregate data, which assumes a two-level statistical model with counties as the first level and states as the second level. Inserting a third level of towns just for the New England states would require that each town in each county be coded with vote totals and Census data for each. That would take months.

Let me know if you need additional information of would like to discuss.

Thanks, John

Subject Voter ID Paper --Final Draft

Karen,

Attached is the final draft of the Voter ID paper, with recommendations for the EAC to consider promulgating as best practices. Two appendices are included as part of the draft and a third, the statistical analysis of the effects of different voter ID requirements on turnout, is attached separately to this email.

We look forward to discussing this final draft with you and with the commissioners on April 3. I'll be preparing a Powerpoint presentation for that meeting. Any guidance you can give me later this month on particular questions that briefing should address would be appreciated.

The Moritz-Eagleton team will be meeting next Tuesday at 9:30 a.m.. If you have preliminary comments you would like us to consider, that meeting would be a most convenient occasion to discuss them.

191 Ryders Lane
New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
  - Task 3.7
  - Task 3.8
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from February 1 through February 28, 2006. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In February we refined our analytic work on the effect of various voter ID regimes on turnout and benefited from the review of our draft analysis by the Peer Review Group. The PRG pointed out several areas where the analysis should be strengthened. Much of our time since that teleconference on February 22 has been devoted to undertaking the additional work along the lines suggested by the PRG's review.

We held a teleconference with EAC Executive Director Tim Wilkey and contract manager Karen Lynn-Dyson on February 28 to discuss the Commission's comments on the draft of the draft Provisional Ballot paper. As a result, we are now polishing the draft. In addition, at Mr. Wilkey's request, we are examining the effect of the different time periods established by the states for the evaluation of provisional ballots on the percentage of provisional ballots that end up being counted. As a result of the teleconference, a close out meeting on this contract has been set for April 3 at the EAC's offices in Washington.

We are meeting the schedule provided with the request for the no-cost extension granted last month..

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting. Please direct questions or comments about this report to [redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November. We received comments on the November draft report in a teleconference on February 22 with EAC Executive Director Tom Wilkey and Contract Manager Karen Lynn-Dyson. We are now revising and polishing the draft in accord with many of the comments by the Commissioners. In addition, we are analyzing the effect of the different time periods for the evaluation of provisional ballots established by the states on the percentage of provisional ballots that end up being counted. Preliminary results suggest that longer time periods result in more ballots being counted. That finding will be incorporated into the revised, final draft report.

Eagleton's Project Director took part in the joint Brookings Institution – American Enterprise Institute conference on Provisional Voting in Washington on February 8.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. The EAC has accepted that recommendation. Our final report will include recommendations for promulgation by the Commission as "Best Practices," but will not include a proposed "Guidance Document," referred to in Taska 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance).

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, which is now the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has completed the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. The results of its work constitutes the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and has provided a summary analysis of its research, including litigation, included in the draft of the Voter ID paper that has now been reviewed by the Peer Review Group.

Progress: The review of current voter identification litigation nationwide is now included in the draft report.

Work Plan: In the remaining month of the project, Moritz and Eagleton will continue to work together to develop best practices in the area of voter identification, based on our combined research and the case law. work with the EAC to finalize our report on provisional voting.

RESEARCH EFFORTS

We continue to examine and categorize voter registration forms across the states to see what forms of identification are requested from mail-in registrants in order to highlight how easily accessible states make information about voter identification.

VOTER ID AND TURNOUT ANALYSIS

On February 22, the Peer Review Group reviewed the draft report on Voter ID issues, with a particular focus on the statistical analysis of the effects of different voter id requirements on turnout. We followed up that teleconference with further conversations with several members of the Peer Review Group. The PRG identified some problems with the analysis, and the bulk of our effort in the remainder of the month has been devoted to resolving the issues identified by the PRG. That work continues as this report is being written, and the resulting analysis appears to be clearer and more reliable than the previous draft.

Description: We have refined the database on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. We have also used the Current Population Survey's reports on electoral participation in 2004 to evaluate the effect of voter ID requirements at the level of the individual voter. This analysis suggests that more stringent voter ID requirements reduce turnout by several percentage points.

Progress: The PRG review of our work has strengthened the analysis considerably. The results will be seen in the revised draft of our report on this topic, which is nearing completion as this report is being filed.

Challenges: The models we are using, while sophisticated, are difficult to run and interpret. The analyses are time-consuming. The PRG's counsel has assisted in meeting this challenge.

Work Plan: We will complete a draft of the Voter ID report for the EAC in March.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: With its meeting to review the Voter ID paper, the PRG has completed its work on this project.

Challenges: No new challenges were encountered.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

A detail of expenses incurred from the project during the period January 1- February 28, 2006, will be sent in March under separate cover to Ms. Dianna Scott, Administrative Officer at the EAC.

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. The contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

History: This message has been forwarded.

Karen,

Glad the paper arrived. Sorry it was a bit later than promised, but we reworked the statistical analysis on the basis of some insightful suggestions by the Peer Review Group. . .that took a few extra days (and nights). Looking back at my email to you, I realize the full statistical analysis was not attached as it should have been. It is appendix to the paper that will be of interest to those who want the details of our methodology. It is attached to this email.

I will be away, without access to email, until late Monday afternoon, but if you need to, you can reach me by cell phone [redacted]

Deliberative Process Privilege

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns how such requirements affect voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics argue that requiring voters to produce some form of government-issued photo identification on Election Day is more demanding than requiring, for example, that they state their names at the polling place because of the various steps needed to procure a photo identification card. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

Deleted: , such as a driver's license.

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Each state is classified as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

Deleted: ID

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with voter identification requirements ($r = -.21$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.16$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

Differences in voter turnout at the state level in 2004 varied based on voter identification requirements.[2] Taking into account the maximum requirements, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can place the effects of voter identification in a more accurate context. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the

---

[2] Voter turnout is defined here as the percentage of the adult voting-age population that voted in November 2004, based on county vote totals reported by the states and U.S. Census population projections for the counties from 2003. McDonald and Popkin (2001) contend that using the voting-age population to calculate turnout understates turnout for a number of reasons. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county had no effect, but the percentage of Hispanic adults exerted a negative effect on voter turnout, as did the percentage of individuals living below the poverty line.

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] Thus voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data (p = 0.0003).

Comment [o1]:

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the intercept as a predictor generated an intraclass correlation of .40, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.36 [-0.04 (voter id) - 0.38 (Hispanic) + 0.06 (voter id X Hispanic)].

[Table 3 here]

The effects of the minimum requirements are not statistically significant ($p = 0.15$). The battleground state variable continues to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate has no statistically significant effect. As in the maximum identification requirements models, as the percentage of the population that is Hispanic or poor increases, turnout declines. As the percentage of elderly increases, so does turnout. The proportion of African-Americans in the population does not affect turnout. Adding interactive effects to the model results in a statistically significant and negative effect of minimum voter identification requirements on turnout. But one must interpret this estimate with caution. A chi-square test for the difference in fit between the two models shows no significant difference ($p = 0.08$), and thus no improvement to the fit when adding the interactions between voter identification requirements and the percentages of the county that is Hispanic or lives below the poverty line.

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991). Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm-Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[5] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the

Deleted:

---

[5] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S. citizens.

It is important to note here that the voter turnout rate for the CPS sample is much higher than the turnout rates presented in the aggregate data analysis. The U.S. Census Bureau reported that 89 percent of registered voters in the CPS sample said they voted (U.S. Census Bureau 2005). Turnout among the voting-age population was 58 percent in 2004, according to the aggregate data analysis. The difference is a result of several factors. One factor consists of the different denominators in calculating the turnout rate – registered voters versus the much larger voting-age population. Also, previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of a level of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be much higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election. In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a competitive gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes). Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Deleted: 6

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, and estimated robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[7] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Deleted: .025, or

Deleted: ,

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it was possible to break the sample into sub-samples along those demographic lines to explore

---

[7] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

variation in predicted probability by group. I disaggregated the sample by the variable of interest (such as race, for example), omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[8] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

Comment [o2]: The turnout figures shown in the analysis of the aggregate data range of 57.3% turnout to 63.1% turnout. When using the individual data, based on self-reports, the turnout figures approach 90%. I think a couple of sentences explaining the difference in the data between the two different analyses would be helpful here, even for readers comfortable with the statistical techniques used.

Deleted: was

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent if the maximum requirement would be to state one's name, and the probability drops 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Deleted: when

Deleted: as

Deleted: ing

Deleted: dropped

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[9]

[Table 8 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify

---

[8] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

[9] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements).

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 9 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election.

Deleted: n

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.

Deleted: ed

Deleted: as

Deleted: ere

Deleted: s

Deleted: ied

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.

Deleted: ere

Deleted: say they

Deleted: d

Deleted: as the maximum requirements ranged from stating one's name to providing photo identification.

Deleted: ere

Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

Deleted: d

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[10] Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

Deleted: is

Deleted: election judges

---

[10] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

Moved within past 6 months	-0.27**	0.03	-0.27**	0.03
Constant	-4.48**	0.20	-4.46**	0.20
Pseudo-R-Squared	0.09		0.09	

Notes:

N = 54,973 registered voters

p < .05** p < .01** (two-tailed tests)

Models were estimated with robust standard errors to correct for correlated error terms within each state.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Table 5. Predicted probability of voter turnout – full model

	Maximum requirement	Minimum requirement
State name	0.912	0.911
Sign name	0.906	0.903
Match signature	0.900	0.895
Non-photo ID	0.894	0.887
Photo ID	0.887	----
Affidavit	----	0.878
Total difference from lowest to highest	0.025	0.033
N	54,973	

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Table 6. Predicted probability of voter turnout – White and Hispanic voters

	White voters		Hispanic voters
	Maximum requirement	**Minimum requirement**	**Minimum requirement**
State name	0.920	0.922	0.870
Sign name	0.915	0.915	0.849
Match signature	0.909	0.907	0.826
Non-photo ID	0.902	0.899	0.800
Photo ID	0.895	----	----
Affidavit	----	0.890	0.773
Total difference from lowest to highest	0.025	0.032	0.097
N	44,760		2,860

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Maximum voter identification requirements were not a significant predictor of voting for Hispanic voters. Maximum and minimum voter identification requirements were not a significant predictor for African-American voters.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Table 7. Predicted probability of voter turnout – Age groups

	18 - 24		25 - 44		45 - 64	65 and older
	Maximum requirements	Minimum requirements	Maximum requirements	Minimum requirements	Minimum requirements	Minimum requirements
State name	0.839	0.831	0.831	0.831	0.936	0.916
Sign name	0.819	0.814	0.820	0.817	0.932	0.910
Match signature	0.797	0.759	0.808	0.803	0.927	0.904
Non-photo ID	0.774	0.775	0.796	0.788	0.923	0.898
Photo ID	0.750	----	0.783	----	----	----
Affidavit	----	0.754	----	0.773	0.918	0.892
Total difference -- lowest to highest	0.089	0.077	0.048	0.058	0.018	0.024
N	5,065		20,066		20,758	9,084

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Maximum voter identification requirements were not a significant predictor of voting for voters ages 45 to 64 and 65 and older.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Comment [o3]: Can you add something to this footnote to once again clarify the difference between the very high turnout figures derived from the CPS respondents self-reports and actual measures of turnout which tend to be in the 50% -- 65% range.

Table 8. Predicted probability of voter turnout – Voters above and below the poverty line

	Voters above the poverty line		Voters below the poverty line
	Maximum requirement	**Minimum requirement**	**Minimum requirement**
State name	0.920	0.922	0.784
Sign name	0.915	0.915	0.772
Match signature	0.909	0.907	0.758
Non-photo ID	0.903	0.899	0.745
Photo ID	0.897	----	----
Affidavit	----	0.891	0.731
Total difference from lowest to highest	0.023	0.031	0.053
N	49,935		5,038

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Maximum voter identification requirements were not a significant predictor of voting for voters who were below the poverty line.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Table 9. Predicted probability of voter turnout – By education

	Less than high school		High school		College		Graduate school	
	Maximum requirement	Minimum requirement	Maximum requirement	Minimum requirement	Maximum requirement	Minimum requirement	Maximum requirement	Minimum requirement
State name	0.775	0.779	0.866	0.869	0.960	0.959	0.977	0.979
Sign name	0.759	0.762	0.858	0.859	0.956	0.954	0.973	0.973
Match signature	0.743	0.743	0.850	0.848	0.951	0.950	0.968	0.967
Non-photo ID	0.725	0.724	0.842	0.836	0.945	0.945	0.963	0.959
Photo ID	0.708	----	0.833	----	0.939	----	0.957	----
Affidavit	-----	0.705	----	0.824	----	0.940	-----	0.950
Total difference -- lowest to highest	0.067	0.074	0.033	0.045	0.021	0.019	0.020	0.029
N	4,903		16,361		11,017		5,739	

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Maximum and minimum voter identification requirements were not a significant predictor of voting for those with some college education.
Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Subject Conference Call/ Eagleton Institute

Good afternoon everyone,

This is to inform you of a time set-up for the conference call on May 11, 2006 regarding Eagleton Institute/Voter Identification Research Project: it will be at 11:30 am, if everyone is available for this time then its a go, if not please contact me at your earliest convenience.

Thanks!

Aletha Barrington

Subject Re: Review of EAC research on Voter Identification

History: This message has been replied to.

I just got your phone message. I will still do the review, but I should note that I wont be able to do a full 90 minute phone call on the 11th -- perhaps we could schedule 30 minutes or so for me to be on the phone call.

At 05:36 PM 5/1/2006, you wrote:

> Dr. Berinsky-
>

Subject May 11 teleconference

Karen,

Do you have a time for the May 11 teleconference? We're working to arrange the participation of members of our Peer Review Group and that is the key missing piece of information.

Thanks,

Tom O'Neill

Subject Re: E-mail to Voter ID peer reviewers

I am concerned about the statement that EAC policy precludes us paying them. It is an issue of correctly soliciting and entering into a contract for the procurement of services. Perhaps there is a better way to phrase this, or is it even necessary

Subject E-mail to Voter ID peer reviewers

Tom and Julie-

Please take a look at this draft e-mail and let me know if it captures all that it needs to.

Would like to get this out ASAP- appreciate your feedback..

Dear Jonathan Nagler
Dear Jan Leighley
Dear Adam Berinsky

On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paper's findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:

- The research methodology which was used to support the paper's conclusions
- The specific statistical applications which were used to analyze the data and arrive at various conclusions

If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.

On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagleton's peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EAC's Board of Advisors and Standards Boards in late May.

While EAC agency policy does not allow us to provide you with financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Hey Karen,

Once John signs and faxes back the document, we need to get it to Tom with the memo to file (attached) for his signature. I believe that is all we need to do for the no-cost modification.

Thanks,

Subject Re: No-Cost Extension Request

U.S. ELECTION ASSISTANCE COMMISSION
1225 New York Ave. NW – Suite 1100
Washington, DC 20005

To:	File
From:	Tamar Nedzar, Law Clerk
Date:	April 21, 2006
Re:	No-Cost Extension to contract number E4014127 with the Eagleton Institute of Politics at Rutgers University

---

Background:
Contract E4014127 with the Eagleton Institute of Politics at Rutgers University ("contractor") was originally scheduled to be concluded on March 31, 2006. The contract's final products include a report on Voter Identification and a report on Provisional Voting. The contractor has vetted the reports with a Peer Review Group, pursuant to the terms of the contract.

Justification for No-Cost Extension:
The EAC wishes to supplement the contractor's Peer Review of the reports by adding another review process with some of the EAC's key stakeholders. The EAC proposes to assemble a panel of researchers during the week of May 8th to conduct the second review.

Following the second review, the contractor will revise its draft reports based on the comments it receives. The contractor will present its draft reports on Provisional Voting and Voter Identification to the EAC Advisory Board at its May 25th meeting in Washington, DC. The contractor will revise both draft reports, taking into account the EAC's Advisory Board's comments and submit the final reports to the EAC toward the end of June.

Recommendation:
The EAC recommends that contract E4014127 be modified at no cost to allow the contractor to complete their work by June 30, 2006.

Thanks, John.

I'm passing this on to our legal staff, who will be preparing the documents.

Will let you know if I need additional information and/or clarification.

Subject No-Cost Extension Request

Karen - We are requesting a no-cost extension on the EAC contract to the Eagleton Institute of Politics at Rutgers University to have the contract's concluding date move from March 31, 2006 to June 30, 2006. As I indicated earlier, it would be very helpful if we could receive approval of this request no later than April 28th.

This extension is necessary to enable the following activities:

1. The EAC has informed us that it will assemble a panel of researchers the week of May 8th to review the Eagleton/Moritz draft background report on Voter Identification. The EAC wishes to supplement the review of this draft already conducted by the Peer Review Group called for in the contract. The Eagleton/Moritz research team, as well as at least some of the Peer Review Group will participate in the conference call or meeting of the EAC's reviewers;

2. Eagleton/Moritz will revise the draft Voter Identification report based upon comments made by the two sets of reviewers, and distribute the revised report to the EAC and its Advisory Board in mid-May.

3. Eagleton/Moritz will present its draft reports on Provisional Voting and Voter Idenfitication to the EAC Advisory Board at its May 25th meeting in Washington, D.C.;

4. Eagleton/Moritz will revise both draft reports to take into account comments made by the EAC Advisory Board, and submit printed final reports to the EAC before June 23rd. Eagleton/Moritz will also prepare a PowerPoint presentation for both reports.

5. Eagleton/Moritz will present both reports at the EAC public meeting

in Washington, D.C. on June 23rd, thus concluding its work under this contract.

Please let me know if you need any additional information.

Thanks,

John

Subject RE: Peer Review Group

Tom-

Had a very good review and discussion of the PRG at this morning's Commissioner meeting.

Also, the Commissioners have marked their calendars for a conference call with the Eagleton/Moritz team on July 12 at 9:30 AM.

Several concerns were raised about the composition of the PRG and, after some discussion, I indicated that Eagleton will provide the EAC with a revised participant list, and with a more detailed description of the PRG's mission, goals, objectives, workplan and timelines for accomplishing its work.

The Vice Chair is concerned that there is not sufficient conservative representation on the PRG. I would suggest the team do more research to identify well-recognized conservative academics to put on the Group.

Further, the Commissioners recommend a tiered process in which the PRG will prepare a "dispassionate" analysis of the issues and draw some tentative conclusions. This analysis and these conclusions will then be vetted with a defined/select group of local election officials, and then, with a defined/select group of advocacy organizations.

It was also suggested that a final round of focus group meetings be held with a cross-section of these election officials, advocates and academics for an overall interactive reaction to the analysis and recommendations.

Hope this helps clarify concerns; I look forward to sharing your revisions to the PRG with them.

Karen, Tom -

I am not taking any action on the email Tom sent a few days ago regarding the Peer Review Group because the Eagleton project is not my responsibility. As I indicated earlier to Karen, I didn't know why this was sent to me since Karen is the Project Manager. I endorse her comment below regarding the need for including her in all correspondence with anyone at the EAC regarding the project.

When I was the Interim Executive Director it was part of my job to stay on top of all EAC project work. I now have other responsibilities at the EAC, and while I am happy to continue involvement in other projects for continuity and transition purposes as needed, that needs to be very limited. My involvement with the Eagleton work has only been from the contracting perspective, and that is the only continuing role I have. Any substantive project activities have to be taken up with Karen.

Subject Peer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG
Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:
A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.
B. PRG's analysis would be vetted by a defined/select group of local election officials.
C. A defined/select group of advocacy organizations would review the comments of the local election officials
D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response
Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research
We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:

A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.

B. PRG's analysis would be vetted by a defined/select group of local election officials.

C. A defined/select group of advocacy organizations would review the comments of the local election officials

D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

Subject RE: Peer Review Group

History: This message has been replied to.

Carol,

I sent you the email on the Peer Review Group because you asked me to. When we discussed the issue in New York, you told me to send to you in writing our response to the Commission's suggestions for a new, more elaborate review process. I believe I copied Karen on that email.

Learning now, almost a week later, that you have taken no action is disheartening. As you know, our schedule is tight, and we need the counsel the Peer Review Group can provide. I hope, therefore, that Karen will take immediate action to resolve the situation so we can begin to recruit the review group in time to assure the quality of the resource design.

Tom O'Neill

Subject: Re: Peer Review Group

Karen, Tom -

I am not taking any action on the email Tom sent a few days ago regarding the Peer Review Group because the Eagleton project is not my responsibility. As I indicated earlier to Karen, I didn't know why this was sent to me since Karen is the Project Manager. I endorse her comment below regarding the need for including her in all correspondence with anyone at the EAC regarding the project.

When I was the Interim Executive Director it was part of my job to stay on top of all EAC project work. I now have other responsibilities at the EAC, and while I am happy to continue involvement in other projects for continuity and transition purposes as needed, that needs to be very limited. My involvement with the Eagleton work has only been from the contracting perspective, and that is the only continuing role I have. Any substantive project activities have to be taken up with

Karen.

Tom-

I trust you are in contact with Carol and Julie regarding the information on the Peer Review Group and the July 28 hearing at Cal/Tech that you have requested of them, respectively.

While the EAC is a small agency with relatively few reporting layers, I suggest that for all future items requiring feedback and decisions from the EAC, that you are certain to carbon copy me on all e-mails.

This will ensure, that as your primary point of contact, I have a record of all communication that has taken place between the contractor and the agency.

Thanks

SubjectPeer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:

A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.

B. PRG's analysis would be vetted by a defined/select group of local election officials.
C. A defined/select group of advocacy organizations would review the comments of the local election officials
D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:
A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.
B. PRG's analysis would be vetted by a defined/select group of local election officials.
C. A defined/select group of advocacy organizations would review the comments of the local election officials
D. Empanel a final focus group of local election officials, advocates and academics for an overall,

interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

Subject Voter ID Paper --Final Draft

History: This message has been replied to and forwarded.

Karen,

Attached is the final draft of the Voter ID paper, with recommendations for the EAC to consider promulgating as best practices. Two appendices are included as part of the draft and a third, the statistical analysis of the effects of different voter ID requirements on turnout, is attached separately to this email.

We look forward to discussing this final draft with you and with the commissioners on April 3. I'll be preparing a Powerpoint presentation for that meeting. Any guidance you can give me later this month on particular questions that briefing should address would be appreciated.

The Moritz-Eagleton team will be meeting next Tuesday at 9:30 a.m.. If you have preliminary comments you would like us to consider, that meeting would be a most convenient occasion to discuss them.

Tom O'Neill

ReportFinalDraft.doc

REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

1. Introduction and Report Background

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve implementation of the requirements for voters to show identification pursuant to [statute or regulation citation] It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

2. Voter Identification –Background and Approach of the Study

Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The burden of providing required ID documents on the voter may be greater at the polls on Election Day than at the time of registration. The burden of checking ID, even as simple as a signature match, can be much greater on election workers at the polls than on those registering voters. Poll workers may be faced with long lines and limited time. This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [1] The emphasis here is on Voter ID on Election Day and afterwards as election judges evaluate provisional

---

[1] As the Carter-Baker Commission noted, photographic ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify identification. Commission on Federal Election Reform, pp 46-47.

ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

This analysis takes a view of voter ID issues broader than the rather narrow identification requirements in HAVA. Much of the national ferment over voter ID goes beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those casting a ballot for the first time who had not registered in person. The controversy in the states over voter ID stems from the HAVA requirements, goes beyond those requirements, and sets the context for the analysis here.[2]

Identification is often described as the critical step in protecting the integrity of the ballot, the process that ensures that the potential voter is eligible and permitted to cast a ballot and one ballot only. In fact, ensuring ballot integrity requires a perspective that takes in the entire voting process. Protecting the integrity of the ballot requires more than preventing the ineligible from voting. It also should ensure that all those who are eligible and want to vote can cast a ballot that counts, and that they can effectively cast a ballot for the candidate of their choice. The protection effort must take into account all forms of voting, including absentee ballots, and embrace each step in the process. A voting system that establishes onerous requirements for voters to identify themselves may prevent the ineligible from voting, but it may also prevent the eligible from casting a ballot. If the ID requirements of a ballot protection system block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or forget to bring to the polls the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This analysis does not include consideration of the incidence of vote fraud, the forms that it takes, nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. The EAC has commissioned a separate study of vote fraud and instructed us not to address that issue in this research.

---

[2] Harvard Law Review 119:1127. "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA. . . . HAVA makes explicit that it shall not 'be construed to prevent a State from establishing election technology and administration requirements that are more strict than' HAVA itself provides. The states have accepted the invitation. "

Nonetheless, a broad view of ballot integrity is needed to appreciate the background and context of this narrower study. We explore the inter-relationships between Voter ID requirements and Provisional Voting and estimate the effects of various voter id requirements on turnout and on the casting of provisional ballots.

Voters lacking required ID, or who have ID that does not reflect their current address, may be able to vote only by casting a provisional ballot.[3] To the extent that stricter voter ID requirements divert more voters to the provisional ballot, voter ID requirements can put stress on the already pressured management of the polling place. Administering provisional ballots is more expensive than the normal ballot. Scrutiny of ID can create lines at the polling places, lines made longer as voters are diverted to the provisional voting line. Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle that will keep more citizens from the polls. A review of voter identification practices should keep in mind that America's problem may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes will be more effective if based on clear standards --legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

- Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?
- How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[4]
- How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity

---

[3] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

[4] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[5]

- How cost-effective is the system? Does it increase the security of the ballot at an affordable cost, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.
- If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[6]
- Does it comply with the letter and spirit of Voting Rights Act?
- The seventh question is more difficult to measure than those described in the 6 questions outlined above. The Voter ID requirements should have a neutral result on the composition of the qualified electorate. That is, those requirements should not be designed to reduce the turnout of particular groups of voters who may have a propensity to support one party over another. Whatever the requirement may be, all citizens should be able to comply with it easily and at no or minimal cost.

Summary of findings and conclusions

Voter turnout at the state level in 2004 declined where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Including other factors beyond voter id requirements diminishes the influence of voter ID on turnout. But the analysis still offers some support for the hypothesis that as the burden of voter identification

---

[5] In New York, in 2004, disparities in training and voting information were made all too apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

[6] For example, the Carter-Baker Commission accompanied its recommendation for a national voter ID card with a recommendations for an affirmative effort by the states to reach out and register the unregistered, to use the new Voter ID regime as a means to enroll more voters.

requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[7] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice that before states adopt a change described as increasing ballot security, states should publish an analysis of the number of eligible, potential voters that the new requirement may keep away from the polls or be permitted to cast only a provisional ballot as well as an estimate of the number of ineligible voters who will be prevented from voting.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. The data should be analyzed to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent and should describe the dynamics of voter ID in preserving the security of the ballot?

---

[7] Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.

  - Useful information could be supplied by exit polling. It would identify those who had cast a provisional ballot and ask why they were unable to cast a regular ballot. Answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
  - Polling to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter id requirements on electoral participation.
- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three criteria: the convenience of the voter, the total time allowed to evaluate ballots[8], and the safe harbor provision in presidential elections.

---

[8] Our research on provisional voting reveals that states that provide more than week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

3. Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility.

TABLE 1 -- Voter ID Requirements

State	Forms of ID Required 2004	Current ID Requirement for First-Time Voters	Current ID Requirements for All Other Voters	Verification Method for Provisional Ballots
Alabama	Provide ID	Provide ID	Provide ID	Address & Registration
Alaska	Provide ID	Provide ID	Provide ID	Signature
Arizona	Provide ID	Gov-issued Photo ID	Gov-issued Photo ID*	Address & Registration

^In Florida and Louisiana, states that required a photo id in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

^^In these states in 2004, voters lacking a photo ID could vote by providing other ID.

*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

**State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

***Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

****Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

*****Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compare to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

******Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

In 9 states, voters were required merely to state their names so that poll workers could locate them in the registration book. In 14 states, voters signed their names. In 8 states, voters' signatures were matched with a specimen signature. In 15 states voters had to show some form of ID, not necessarily an official picture ID. And in 5 states, voters were required to show an official photo ID, although in 2004 voters who lacked a picture ID could execute an affidavit and vote a regular ballot.

This neat assignment of each state to one of a few categories may fail to reflect actual practice at a polling place. Like any system run by fallible people it is subject to wide variation in practice. Voters may be confronted with demands for identification at variance with state statutes or legislation. Other voters may be waved through the process without a look at any document, no matter what the regulations may say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters may encounter.

It is not practical to attempt to capture the wide variety of how voter ID requirements may be actually implemented across the nation's tens of thousands of polling places. Recognizing that means that the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

Effect of Voter ID requirements on Turnout

Summary of Findings and Conclusions

We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau. [9]

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each

---

[9] See Appendix ___ for the full report on voter ID and turnout.

level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous. a form of identification, and providing a form of photo identification.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**63.1 %**	State Name	**61.3 %**
Sign Name	**58.6 %**	Sign Name	**60.4 %**
Match Signature	**62.1 %**	Match Signature	**59.2 %**
Provide Non-Photo ID	**57.8 %**	Provide Non-Photo ID	**57.6 %**
Provide Photo ID	**57.3 %**	Swear Affidavit	**58.7 %**
Average Turnout (All States)	**59.6 %**		

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political-- also affect voter participation. Multivariate models that take into account other predictors an place the effects of voter identification in a more accurate context. To consider that broader context, our multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground for president, governor or senate voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-

Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line.
In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line.

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. (Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting.) Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age in years, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note

that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Discussion and Conclusions of the Analysis

The results presented here give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.

- Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.

- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.

- Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this analysis could not capture the dynamics of how identification requirements might lower turnout. Do these requirements dampen turnout because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most

effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

4. Litigation over Voter ID Requirements

There have been a handful of cases challenging identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether or not laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on cases challenging requirements that voters present some form of identifying documents if the photo identification is the only form accepted. In *Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups,*

Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer,* No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions

suggest that best practice may be to conform to the NVRA's limitation on requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

5. Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

This information would allow a more informed judgment to be brought to bear in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. [10] The dynamics of Voter ID requirements – how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That research might address that, so far as may be

---

[10] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." The exclusion of voters through restrictive ID requirements could affect election outcomes as much as fraud by voters at the polls. *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

necessary to reduce vote fraud, could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended by our colleague Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed. [11]

---

[11] "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. These electronic photos should satisfy the anti-fraud concerns of conservatives as much as printed photos that citizens would be required to bring to the polls. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier. "

APPENDIX –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

  - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
  - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

***American Civil Liberties Union of Minnesota v. Kiffmeyer,* No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required <u>all</u> in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover,* 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.,* CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[12]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[12] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[13]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[14] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

[14] GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[15] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[15] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Karen,

I think we should continue with our plan to have a teleconference on Feb. 28. My quick review of the written comments tells me some further give-and-take is needed. I believe we agreed on 4:00 p.m. as the time for this conversation, a change from the original hour of 3.

The call in number will be 877-805-0964, ID# is 869580. Best wishes for a good weekend.

Tom O'Neill

Tom-

It occurs to me that perhaps a conference call is no longer necessary? Have the team take a look at the Provisional Voting Best Practice EAC edits and let me know.

Perhaps it would be better to schedule a brief conversation after I've received the Voter ID document. Such a conversation could focus on the close-out meeting at the end of March and the issues we wish to cover at that meeting.

Your call.

K

SubjectRE: January Progress Report

Karen, I'll survey the group about the best time for a conference call. The 24th does not look like a good time. We have a teleconference with the Peer Review Group on the Voter ID paper scheduled for Feb. 22, and therefore would be hard-pressed to review the précis of your comments in time for a discussion on the 24th. The next week would be more promising, perhaps Tuesday, Feb 28 in the afternoon.

We still plan to deliver the Voter ID paper to you the first week in March.

Tom O'Neill

Subject: Re: January Progress Report

Tom-

I have now received comments back on the Provisional Voting Best Practices document, from all of EAC's senior staff. I am in the process of combining these comments into one document, and will get the copy to you by mid-week next week.

By-and-large the comments are not major. The comment of greatest magnitude relates to the fact-checking process and the overall accuracy of regarding Eagleton's/Moritz' recording of States' previous experiences with provisional voting.

Overall, the Commission is continuing to review its option of issuing guidance on this topic, along with best practices.

Shall we schedule a conference call for Friday, February 24 at 10:00 AM to go over the EAC's comments and Eagleton putting the finishing touches on its report?

Also, when should the EAC expect the Voter ID document?

Regards-

Report to the
U. S. Election Assistance Commission

Best Practices to Improve Provisional Voting

CONTENTS

Executive Summary

Please provide an Executive Summary to provide background and summarize the key recommendations.

Background of the Research

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning provisional voting, a sample survey of local election officials, and a statistical analysis of provisional voting in the 2004 election. Also consulted as a basis for these recommendations were other studies, notably the EAC's Election Day Survey.[1] (Recommended as Research Methodology description)

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

Section 302(a) of HAVA requires states to establish the process of provisional balloting by January 2004.[2] The process HAVA outlined leaves considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voters eligible to cast a provisional ballot that will be counted and, arguably, in what jurisdiction (precinct or larger unit) that where the ballot must be cast in order to be counted.[3]

The general requirement is that, if a registered voter appears at a polling place to vote in an election for Federal office, but the potential voter's name does not appear on the official list of eligible voters for the polling place, or if an election official asserts that the individual is not eligible to vote, that potential voter be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the Election Day Survey, first-time voters who cannot provide identification, as required under HAVA, and voters who were

---

[1] Appendix 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures and describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

[2] The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions. " See www.electioncenter.org .

[3] The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell, 387 F.3d565* (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

challenged at the poll.[4] HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. HAVA also requires election administrators to notify individuals of their opportunity to cast a provisional ballot.

Provisional Ballots in the 2004 Election

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.[5] (This number does not match the EAC 2004 Election Day Survey. 64.5% counted)

These totals obscure the tremendous variation in provisional voting among the states. HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted. Six states accounted for two-thirds of all the provisional ballots cast.[6] State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000, from a high of 7% in Alaska's to Vermont's .006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted ballots at more than twice that rate: 44%. (Or, as the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without."[7])

The wide variations in the use of provisional ballots argue for the promulgation of best practices that states can use to determine how to make procedures clearer to both officials and voters could improve the implementation of provisional voting across the country. (Is this a best practices recommendation?)

One important source of variation among states was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.[8]

---

[4] The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See http://wired.com/news/evote/0,2645,63298,00.html . (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004 .)

[5] These figures differ slightly from those in the Election Day Survey. Data used for this study include complete voting data for New Mexico, for which the Election Day Survey had only partial data, and vote totals for Pennsylvania, which was not included in the provisional voting analysis in the Election Day Survey. See the appendix to this report for a full explanation of the differences in data between this research and the Election Day Survey.

[6] California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

[7] Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

[8] See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

- The percentage of the total vote cast as provisional ballots averaged more than 2% (2.17%) in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots. (The average of provisional ballots cast was 64.5% counted. A third category had to account for a significant amount over 64.5%. What was that category?)
- Perhaps another reason provisional ballots must be cast in the correct precinct in order to be counted is that local races are also important and that allowing provisional ballots to be counted by voters who cast them outside of the precinct and only counting the ballots for the upper ballot races for outside of the precinct can disenfranchise voters from participating in local races. This argument has been used by many legislatures and in court castes to require that provisional ballots must be cast in the correct precinct in order to be counted.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Formatted: Bullets and Numbering

Those voting with provisional ballots in experienced states were enfranchised more frequently than those in the new states, another indication that there is room for improvement in provisional balloting procedures.[9] That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC should consider providing all states with information on more effective administration of provisional voting. EAC could also consider convening a national meeting for state and county election officials to share experiences and best practices from their own jurisdictions.

Deleted: the

But the optimistic conclusion that experience will make all the difference may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning

---

[9] Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's " 6-day time frame for processing the provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

curve. Two other possibilities exist. Current understanding of the provisional voting processes in use in 2004 is not sufficient to determine unambiguously which view is correct.

1. "New" states may have a political culture different from "old" states. That is, underlying features of the "new" states political system may be the reason they had not adopted some form of provisional voting before HAVA. The "new" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots -- as measured by intrastate consistency in administration--- will be harder and take longer to achieve.[10] This ballot should mention something about election judges and their training.

Formatted: Outline numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.25" + Tab after: 0.5" + Indent at: 0.5", Tabs: -0.33", List tab + Not at 0.25"

2. "Old" states may devote fewer resources to updating their registration files or databases because they are comfortable with provisional ballots as a fail safe way for voters with registration problems a way to cast a ballot. (wording too strong) The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Formatted: Highlight

Other influences decreasing consistency among the states include:

- The more rigorous the verification requirements of the voter's identity and registration status, the smaller the percentage of provisional ballots that were counted. Some states merely require a voter's signature, some match signatures, some require identity documents, others require an affidavit, and a few require photo identification. [11]
    - In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
    - In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
    - In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
    - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half

---

[10] Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, "no state gave the voter the right to find out the status of their ballot after the election. " Now all offer that opportunity. See Bali and Silver, "The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000," manuscript, Department of Political Science, Michigan State University. Resisting HAVA's mandates through foot-dragging lacks any legitimate foundation in law or policy.

[11] See Table 2 in Appendix 2 for information on the verification method used in each state.

(52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office. (the voter was registered, than the ballot counted, the voter did not have to present identification).

- This section needs a mention of the VR databases

- Voter registration databases provided information that reduced the number of provisional ballots counted.[12] In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.

- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted ballots cast only in the proper precinct counted an average of 42% of provisional ballots.[13]
    - In experienced states, the disparity was even more pronounced, 52% of provisional ballots cast were counted in states requiring in-district ballots, while 70% were counted in those allowing out-of-precinct ballots.
    - If all states had counted out-of-precinct ballots, perhaps 290,000 more voters would have been enfranchised across the country.[14]

Deleted: :

Variation With-in States

Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors outside of the statewide factors analyzed here also influence the use of provisional ballots. Perhaps it is the judges training or it is, in part, because of different laws.[15]

Formatted: Highlight

---

[12] The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.

[13] The Election Day Survey concluded that : "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

[14] This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

[15] For example, The Election Day Survey also found that "the reported rate of provisional ballots cast increases with population size, from 0.10 percent for voter registration in jurisdictions under 1,000 voting age population (VAP), to 2.51 percent in jurisdictions over one million VAP. It also calculated that, "The highest reported rate of counting provisional ballots was also among predominantly Hispanic jurisdictions, 79.30 percent, followed by predominantly

Reacting to the lack of consistency within states, (not the Carter-Baker Commission) recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."[16]

Election Line reported that:

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, high mobility, (no previous mention of this factor. What research exists to back up naming high mobility as a factor?) and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts were the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader

---

non-Hispanic White areas, 62.60 percent; predominantly non-Hispanic Black communities, 58.60 percent; and predominantly non-Hispanic Native American jurisdictions, 48.70 percent.

[16] Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report observed that, ". . .different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."

measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

Effectiveness of Provisional Voting
The certainty of our conclusions about the effectiveness of provisional voting is limited because of a fundamental challenge of methodology (what is meant by this statement) and the lack of important information. An ideal assessment of how well provisional ballots served the needs of voters and the public interest requires knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. And information needed about the eligibility or registration status of provisional voters is also not available. (Are polling places posting their provisional voting signs? Are election judges doing their jobs?)

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect an accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots enfranchised 1.2 million citizens, who would otherwise have been turned away from the polls.

Not knowing the total number of registered voters who might have voted but could not makes a precise, quantitative estimate of the effectiveness of provisional voting impossible. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the 2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Estimates of Votes Lost In 2000 Presidential Election

Votes Lost (Millions)	*Cause*
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

Table 1 Cal Tech – MIT Voting Technology Project Estimates
4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. A rough estimate of the effectiveness of provisional voting in 2004, then,

might be 40% to 50% (ballots counted/votes lost)[*]. (this is unclear. What is trying to be said? Is a comparison of the # of provisional ballots actually counted to the MIT estimate of lost ballots in 2000 being made? If so, would the MIT survey be influenced by the implementation of statewide voter registration databases or other interim measures that would improve the quality of voter registration lists?) Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

Legislative Response

Indeed, several states[17] came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.[18]

Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

The issue of counting provisional ballots cast in the wrong precinct was addressed by Colorado, Arkansas, and North Dakota. How was it addressed?

Litigation

Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

---

[*] Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of"registration mix-ups" to assess the states' registration systems after each election when it asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

[17] Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.

[18] The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the *entire department's employees were mobilized to process provisional ballots.*" The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots." In a close, contested election, "duplicate" ballots would doubtless receive long and careful scrutiny. See Appendix 7, GAO, "Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," September 2005. (GAO Report-05-997)

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.

- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.

- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted an absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

Need for Promulgation of Best Practices
Because every provisional ballot counted represents a voter who, if the system had worked really well, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. This is false. If they are registered (the voter registration database is checked as required by HAVA or restricted by state requirement) the provisional counts. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Recommendations for Best Practices
Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity

among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

Self-evaluation of Provisional Voting –4 Key Questions (Best practice suggestion?)
The first recommendation is not for a specific procedure, but rather for a way of thinking about provisional voting. As legislators and election officials in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?

2. Is the system sufficiently robust (what system – the voting system or the procedures for provisional voting?) to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and with litigation looming?

3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?

4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

Best Practices For Each Step In The Process
We examined each step of the provisional voting process to identify specific areas where the states should focus their attention, and we offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process. (State how were these particular best practices chosen or arrived at?)

The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result-- well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of

the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."[19]

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant recanvassing.[20] Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.

- States should provide poll workers the training and information resources they need, as for example, how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.[21] (does this mean that the state should provide poll workers training? Most provided by local election jurisdictions. Is the recommendation to deviate from current practice?)

- States should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. [22] Recent legislation in Arizona indicates that HAVA's recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot. [23]

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States

[19] The Century Foundation, Balancing Access and Integrity, Report of the Working Group on State Implementation of Election Reforms, July 2005.

[20] See *Washington State Republican Party v. King County Division of Records*, 103 P3d 725, 727-728 (Wash. 2004)

[21] See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

[22] *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6th Cir. 2004)

[23] *The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency. "[24]

2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.[25]

3. A state website for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information. Why not recommend local websites to do the same as state sites?

B. At the Polling Place

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. It's the law. Do they understand that all have to do this? Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.[26] After the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school." [27] Most states require this. It is not new. In fact, Florida's statutory training provisions are among the highest in the nation.. Such statutory direction could help other states ensure uniform instruction of poll workers.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.

---

[24] Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.

[25] The Century Foundation, op. cit.

[26] 8 Colo. Code Regs. § 1505-1, Rule 7.1.

[27] 2005 N.M. Laws 270 page no. 4-5.

3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . .to photocopy official provisional ballots." [28] At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.[29]

4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.[30] Seems like most states require training; do they have data on that? Florida's statutory training provisions among the strongest in the nation.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. The recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underline the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."[31] Nonetheless, the *Panio v. Sutherland*[32] decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the

[30] 10 Ill. Comp. Stat. Ann. 5/18A-10(b). Indiana requires that the precinct election board give the ballots to the Inspector, who takes the ballots to Circuit Court Clerk. Ind. Code Ann. Sec. 3-11.7-2-4

[31] The Century Foundation, op. cit.

[32] 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.[33]

2. More provisional voters are enfranchised in those states that count ballots cast outside the correct precinct.[34] The best practice may be to count provisional ballots even if they are cast in the wrong precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. See the experience in Los Angeles County with the difficulties in evaluating out-of-precinct ballots described earlier in this report. EAC Chairman: does not agree w/ this recommendation. It does not take into account for local offices that would not be voted upon w/ such practices. Voters would then not be directed or go to their correct polling place to cast a ballot.

3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot correct polling site even if at the wrong precinct within that location.[35] Can the best practice be to send voter to correct precinct – if its in the same building as suggested in this recommendation. Why disenfranchise voter from voting on a local race?

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed

---

[33] In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama -- 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c)(1) Florida: until 5:00 P.M. on the third day following the election . Fla. Stat. Ann. § 101.048 (adopted after the 2004 election);Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (l); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(i). Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) (H).

[34] See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

[35] Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.[36]

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections

2. The time by which election officials must complete their eligibility evaluations is critical, particularly in presidential elections. States should consider in particular how to divide the time allowed them by the safe-harbor provisions that apply in presidential elections to the certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to

---

[36] 8 ccr 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-509(3) C.R.S.

complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available. Why is it suggested that completing eligibility evaluations are more critical in presidential elections? What about gubernatorial elections?

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public. The process *not* the names since by law they cannot be revealed.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what constitutes a successful provisional voting system is difficult. As noted earlier, the most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations (what is meant by national quality organizations? Examples?) to evaluate the provisional ballot process within the broader context of the electoral system.

Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.

2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
    -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
    -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
    -- Measures of variance among jurisdictions.
    -- Number of poll workers trained in administration of provisional voting by polling place
    -- Number of jurisdictions posting information on provisional voting in the polling place
    -- Time required to evaluate ballots by jurisdiction

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

Conclusion -- Research-based, continuing improvements for provisional voting are needed (This section should be the first part of the document)

The recommendations above are based on research that began in late May 2005. Our research focused on six key questions raised by the EAC. The answers to those questions provided the foundation for our policy recommendation. Those questions are:

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

(Should this section be put under a Research Methodology section at the beginning?)
To answer those questions, the Eagleton-Moritz team undertook the following research efforts:

1. Survey of 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Review of news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.

3. Statistical analysis of provisional voting to determine associations between the use of provisional voting and such variables as states' experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approached to voter identification
4. Collection and review of the provisional voting statutes and regulations in all 50 states.
5. Analysis of litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research-based recommendations provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states moved forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

ATTACHMENT 1 -- Characteristics of the Provisional Voting Process Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state's use of provisional ballots:

Deleted: categories analyzed here ar

Deleted: e

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.

New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting[37] and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as "old" states, because the states in all three categories would have been familiar with key aspects of provisional voting.. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[38] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

New Mexico	Montana		
Oklahoma	Nebraska		
South Carolina	Nevada		
South Dakota	New Jersey		
West Virginia	New York		
	North Carolina		
16	**27**		**8**

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election[2]. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

Table 3
CATEGORIZATION OF STATES -- Counting Out-Of-Precinct Ballots

Out-of-Precinct	In-Precinct Only	HAVA EXEMPT OR NA
Alaska	Alabama	Idaho
Arkansas	Arizona	Maine
California	Colorado (after the court case)	Mississippi
Delaware	Connecticut	New Hampshire
Georgia	District of Columbia	North Dakota
Illinois (Not sure the law is that clear. Please check different counties did it differently.)	Florida	Wisconsin
Kansas	Hawaii	Wyoming

	West Virginia	
17	**26**	**7**

Voter Identification

We relied on Electionline studies, including the Voter Identification study[39] and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.[40] The five

---

[39] This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

[40] In 2004, ElelctionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.

different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

Table 4

CATEGORIZATION OF STATES -- Forms of Identification Required

States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

Give Name	**Sign Name**	**Match Signature**	**Provide ID**	**Photo ID**
Maine	California	Illinois	Alabama	Florida
Massachusetts	DC	Nevada	Alaska	Hawaii
New Hampshire	*Idaho*	New Jersey	Arizona	Louisiana
North Carolina	Indiana	New York	Arkansas	South Carolina
Rhode Island	Iowa	Ohio	Colorado	South Dakota
Utah	Kansas	Oregon	Connecticut	
Vermont	Maryland	Pennsylvania	Delaware	
Wisconsin	Michigan	West Virginia	Georgia	
Wyoming	Minnesota		Kentucky	
	Mississippi		Missouri	
	Nebraska		Montana	
	New Mexico		*North Dakota*	
	Oklahoma		Tennessee	
	Washington		Texas	
			Virginia	
9	14	8	15	5

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Table 5

CATEGORIZATION OF STATES -- Ballot Evaluation Methods

States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis. No states have been italicized. Is this correct?

Signature Match	Data Match	Affidavit	Return with ID	NA
Alaska	Alabama	Connecticut	Indiana	Idaho

Florida	Arkansas	Georgia	Kansas	Mississippi
Oregon	Colorado	Hawaii	Maryland	Minnesota
	DC	Illinois	Michigan	New Hampshire
	Louisiana	Kentucky	Montana	N. Carolina*
	Missouri	Massachusetts	New Jersey	N. Dakota
	Ohio	Nebraska	New Mexico	Wisconsin
	Oklahoma	Nevada	Texas	Wyoming
	Pennsylvania	New York	Utah	
	Rhode Island	South Dakota		
	S. Carolina	Tennessee		
	Washington	Vermont		
	West Virginia	Virginia		
4	14	14	10	9

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

---

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Table 6
Updated information by State

Received Updated Data	Did Not Receive Updated Data
California	Alabama
District of Columbia	Alaska[41]
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut
Kansas	Delaware
Louisiana	Georgia
Maryland[42]	Idaho
Missouri	Illinois
Montana	Kentucky
Nebraska[43]	Maine
Nevada	Massachusetts
New Jersey	Michigan
New Mexico	Minnesota
Ohio	Mississippi
Oklahoma	New Hampshire
Oregon	New York
Pennsylvania	North Carolina
Rhode Island	North Dakota
South Dakota	South Carolina
Tennessee	Utah
Texas	Vermont
Virginia	Wisconsin
Washington	Wyoming
West Virginia	
26 States	**25 States**

---

[41] Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

[42] Maryland reported provisional ballots that were counted per county, but not number cast.

[43] Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

Data Differences

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.
Please explain the 0/8022 discrepancy under North Carolina "differences" since you indicate the info was not updated from the database.

State	EDS Numbers Cast/Counted	Our Numbers Cast/Counted	Differences	Updated Info from State?
Alabama	6,478/1,865	6560/1836	82/29	No
Alaska	23,285/22,498	23,275/22,498	10/0	No
Colorado	51,529/39,086	51,477/39,163	52/77	No
Georgia	12,893/4,489	12,893/3,839	0/650	No

When did Eagleton get the information for Missouri. Missouri enacted provisional voting in 2002 and it is likely it was in place for the November 2002 election Pre-HAVA.

Eagleton's PV, LPV, EDR notations are confusing. In the instance of Colorado, the LPV designation (in the PV Status row - HAVA column is incorrect.) In Colorado the voter did not have to vote in the precinct.

Subject: Re: Meeting with EAC in March

Tom-

I will begin to poll the Commissioners to get a sense of when they might be available to do a "close out " meeting with Eagleton.

Subject Meeting with EAC in March

Karen,

The Eagleton-Moritz team would like to schedule a meeting with the EAC in March. It would be the final substantive meeting on our contract, which expires at the end of March.

The agenda would include:

1. Brief the Commission on the principal findings and recommendations of the Voter ID research and hear questions and comments on that work.
2. Discuss the changes we made to the Provisional Voting paper as a result of comments and questions from the Commission.
3. Explore the Commission's intentions for the use of our work as recommendations for best practices or otherwise.

I believe the meeting should take place after you receive the Voter ID paper from us in the first week of March, and ideally after the Commission staff has had enough time for a preliminary review of it.

The earlier we could set a date for this meeting, the more key members of the team would be able to participate.

Karen, I'll survey the group about the best time for a conference call. The 24th does not look like a good time. We have a teleconference with the Peer Review Group on the Voter ID paper scheduled for Feb. 22, and therefore would be hard-pressed to review the précis of your comments in time for a discussion on the 24th. The next week would be more promising, perhaps Tuesday, Feb 28 in the afternoon.

We still plan to deliver the Voter ID paper to you the first week in March.

Tom-

I have now received comments back on the Provisional Voting Best Practices document, from all of EAC's senior staff. I am in the process of combining these comments into one document, and will get the copy to you by mid-week next week.

By-and-large the comments are not major. The comment of greatest magnitude relates to the fact-checking process and the overall accuracy of regarding Eagleton's/Moritz' recording of

States' previous experiences with provisional voting.

Overall, the Commission is continuing to review its option of issuing guidance on this topic, along with best practices.

Shall we schedule a conference call for Friday, February 24 at 10:00 AM to go over the EAC's comments and Eagleton putting the finishing touches on its report?

Also, when should the EAC expect the Voter ID document?

New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.7
    - Task 3.8
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from January 1 through January 31, 2006. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In January we completed the analytic work on the effect of various voter ID regimes on turnout and produced a draft of the report of that work, which continues to be refined. It will form a critical part of the report to the EAC on voter identification requirements, as will the legal research that has been completed by the Moritz team. We have been in regular contact with the Peer Review Group to arrange a date for it to comment on the draft of the Voter ID analysis and recommendations. (That meeting has now been set for February 22.)

We continued to await the EAC's comments on our Provisional Voting analysis paper (general comments accepting the paper were received on February 10). Since the submission of our Provisional Voting report to the EAC on November 28, 2005, our efforts have been entirely aimed at the completion of the voter identification research.

During the month, we made good progress on the revised schedule for the project. Our request for a non-cost extension through March was approved by the EAC, and we are tracking the schedule provided with the request for that extension. As a result of such unanticipated delays we have revised the schedule for the project.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting. Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November. In January, we awaitedcomments from EAC on the draft report.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we await the EAC's decision on how to proceed.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, which is now the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is now complete. It constitutes the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: In January, we focused on reviewing and analyzing current voter identification litigation nationwide. We drafted a memo summarizing the two most significant cases, *Common Cause/Georgia v. Billups,* and *Indiana Democratic Party v. Rokita*, which challenged new voter id laws in Georgia and Indiana, respectively. We also wrote a memo summarizing the dismissed 9th circuit case, *Friendly House, et al. v. Janet Napolitano, et al.*, which challenged the voter ID provisions of Arizona Proposition 200. Moritz and Eagleton continued to work closely together to identify and analyze the most important issues and best practices in the area of voter identification. Moritz and Eagleton have reviewed all research, clarified the categorization of that research on our charts, and reconciled the research categories used in the two different analyses. Some states continue to resist easy categorization. We continue to wrestle, for example, classifying Florida, which has a photo ID requirement, but allows a prospective voter lacking ID to execute an affidavit and cast a regular, not a provisional, ballot.

Work Plan: In the remaining two months of the project, Moritz and Eagleton will continue to work together to develop policy guidance and best practices in the area of voter identification, based on our combined research and the case law. We will work closely with Eagleton and our Peer Review Group to produce a document for the EAC summarizing voter identification and suggesting best practices. We will work with the EAC to finalize our report on provisional voting.

RESEARCH EFFORTS

We continued to examine and categorize voter registration forms across the states to see what forms of identification are requested from mail-in registrants in order to highlight how easily accessible states make information about voter identification. We resolved many, but not yet all, of the difficulties involved in determining the 2004 status of the states, especially because most of this material is gathered from state websites which at this point have been updated since 2004.

VOTER ID AND TURNOUT ANALYSIS

The statistical analysis to gauge the effect of a state's voter ID regime on turnout was reviewed and refined in January. The refinement included a re-categorization of the states according to different levels of ID requirements. The critical difficulty was in determining which forms of ID must be shown and which could merely be requested. After reviewing summaries of the statutes, we revised our classification in order to allow the statistical researchers to get a more leverage on the analysis of the impact of voter identification requirements both on the casting of provisional ballots and on turnout.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: Our findings continue to suggest that voter ID requirements have their greatest effect at the registration stage, as opposed to the turnout stage. In January we added a number of control variables to the analysis and continue to examine and reflect on the results. We look forward to a discussion of our methodology and findings with the Peer Review Group.

Challenges: The models we are using, while sophisticated, are difficult to run and interpret. The analyses are time-consuming.

Work Plan: We will complete a draft of the Voter ID report for the EAC in February.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: We updated PRG members on the progress of our research and canvassed them to set a date in February for review and comment on our Voter ID analysis. We also plan to share with the group the EAC's comments on the Provisional Voting paper due to the delays in getting the EAC's feedback on our report. We have asked the PRG

Challenges: No new challenges were encountered.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added. During December we rearranged the folders on the hard drive and created a master document detailing which folder each report, memo, or data source could be found in.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

As we advised the EAC in our request for a no-cost extension to the contract, which EAC approved January, we will not submit an invoice for expenses for January, but rather will submit a combined invoice in early March for January and February.

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. The contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from the project during the period January 1- February 28,, 2006, will be sent in early March under separate cover to Ms. Dianna Scott, Administrative Officer at the EAC.

Subject EAgleton Comments

History: This message has been replied to.

Karen,

I have reviewed the Eagleton final report and have a couple of questions for clarification:

1. On page 8, in the paragraph after the bulleted information, they list ?high mobility? as a factor for the effective operation of provisional voting factors. There is no previous mention of this as a factor. What research do they have to back up naming this as a factor?
2. On page 10, line 2, the sentence begins ?A rough estimate?? I have no idea what they are trying to say here. Is it that they are trying to compare the number of provisional ballots actual counted to the estimate that MIT made of lost ballots in 2000? If so, then they need to consider in making this statement whether the MIT survey would be influenced by the onset of statewide voter registration databases and interim measures that have been instituted by election officials that would improve the quality of the voter registration list and thus limit the need for provisional ballots.
3. On page 13, second bullet, do they literally mean that the state should provide poll workers training? Most of this training is provided in actuality by the local election jurisdiction (county, municipality). Are they deviating from the current practice?

I have many other comments that are more appropriately directed to the Commissioners in considering what has been provided by Eagleton in terms of what they desire to make ?guidance? or ?best practices?.

Subject RE: Schedule for review of Provisional Voting paper

John, I did talk about the review with Ray Martinez and Paul DeGregorio yesterday, and they assured me the topic was on their agenda for the meeting this morning. Karen called this morning to tell me she was going into the meeting, and she asked about the schedule for our completion of the Voter ID paper. I told her she'd have it by the end of the month. (I think we should schedule now a meeting in March to brief the Commissioners on Voter ID and –in effect—bring the project to a close. Ray told me we should schedule that meeting soon since their agenda is filling up.)

So, I will take credit for breaking the logjam only if I get no blame for not having done it sooner.

Tom O'Neill

Late breaking news-

By next Tuesday I will get, to you, a series of clarifying questions that the Commissioners will have provided me regarding the Provisional Voting Best Practices Document.

They approved the format of the document, but did suggest an Executive Summary at the beginning, which would explain the process, including how the best practices criteria and recommended best practices were arrived at by the Project Working Group.

The conclusions on Page 19 should be at the front, rather than the back of the document.

The format used for this document is a good and acceptable one that should be followed for your forthcoming Voter ID Best Practices document. The Commissioners look forward to receipt of this in early March.

Subject Re: no-cost extension

History: This message has been replied to.

Karen - Basically, we feel it would be more efficient to combine the January and February invoices. Now that the EAC has agreed to the no-cost extension, we have to extend the time table and dollars attached to the subcontract Eagleton has with Ohio and the consulting agreement we have with Tom O'Neill. Until that paperwork has been processed by all the necessary parties, Rutgers will not allow us to pay invoices submitted by Ohio or O'Neill beyond the original terms (which ended on December 31st). In addition, because we did not receive the no-cost extension paperwork back from the EAC until the end of January, Eagleton did not directly bill various expenses that were incurred in January and must now be transferred to the EAC account for that period.

I hope this provides the explanation you need. Thanks.

Subject no-cost extension

History: This message has been replied to.

Karen - I just received a fax of the no-cost extension request. The last line of section14 refers to a completion date of February 13. Is it possible to change that to the date we had requested, March 31? If the answer to that question will take some time, we could process this paper through the University (Our Office of Research and Sponsored Programs has to provide the requested signatures) and then process a subsequent page extending from Feb 13 to the end of March.

Thanks, John

Karen,

Faxed the SF30 to Weingart to sign and fax back to us. After that, I'll give that piece of it to Tom to sign, but he won't be back in the office until Monday. Once he signs, Aime will give all the paperwork to the Chairman for his signature. When everything is signed, it will come back to you to send out or do whatever else needs to be done. My feeling is that the earliest the work can get done is by Tuesday.

This is a fun excercise!

Eagleton Institute of Politics, Rutgers The State University of New Jersey
US Election Assistance Commission Project Budget (3/22/05)

Description	Budget	
Personnel		
Eagleton faculty/senior staff	35,000	Mandel, Weingart, Reed, Linky (various percentages)
Eagleton staff: logistics/administrative/clerical	15,000	(various percentages)
Fringe (32.5%)	16,250	
	66,250	
Hourly Personnel		
Research Coordinator	21,250	1250 hours at $17 per hour
Logistics/Admin Coordinator	12,325	725 hours at $17 per hour
Research assistants	7,200	300 hours at $12 per hour for two researchers
Fringe on Hourly (9%)	3,670	
	44,445	
Subtotal Personnel Expenses	**$110,695**	
Honoraria		
Honoraria for Peer Review Group	**10,000**	10 at $1,000
Public Hearings (3 in 3 cities)		
Public Hearings	75,000	3 hearings at $25K per EAC figures
2 Hearings in DC- train, ground, lodging, meals*	3,480	attended by 3 staff
1 Hearings in St. Louis- air, ground, lodging, meals**	2,640	attended by 3 staff
	81,120	
Briefings/Meetings with EAC		
Train, ground, lodging, meals***	**5,200**	5 briefings in DC, attended by 2 staff
General Operations		
Office supplies, software, telephone, copying, postage	10,000	
Desktop computers, laptop, printer	10,000	
	20,000	
Subcontract		
Project Director- O'Neill	**79,500**	80% time April – Aug., 60% Sept. – Oct.
Ohio State University- Legal Analysis	**84,744**	Partner institution, Moritz College of Law, OSU
Subtotal Non Personnel Expenses	**$280,564**	
Subtotal All Direct Cost	**391,259**	
Modified Total Direct Cost $277,015****		
F&A on Modified Total Direct Cost (55.5%)	153,743	Rutgers University federally approved rate.
TOTAL Project Budget	**$545,002**	
Optional Surveys		
State Election Officials	15,000	Eagleton
Young Voters	25,000	Eagleton
Provisional Voting, 1st state	116,000	OSU Political Science
Provisional Voting, 1st additional state	75,000	OSU Political Science
Provisional Voting, 2nd additional state	60,000	OSU Political Science
Total Optional Surveys (no F&A)	**$291,000**	

* Travel and lodging to two hearings in DC includes $260 for train fare to DC, $200 for hotel/lodging, and $60 per day for two days for meals= $580 per person per trip for three people.

** Travel and lodging to one hearing in St. Louis includes $500 airfare to St. Louis, 2 nights hotel/lodging at $100, and $60 per day for three days for meals= $880 per person for three people.

*** Travel and lodging to five Briefings/Meetings with EAC includes $260 for train fare to DC, $200 for hotel/lodging, and $60 for meals= $520 per person per trip for two people.

**** Modified total direct cost is equivalent to total direct cost except for two items - F&A included only on first $25K of subcontract with Project Director ($79,500) and first $25K of subcontract with OSU ($84,744).

New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.7
    - Task 3.8
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from December 1 through December 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In December we continued to make progress in the research needed for the draft report on voter identification requirements. We completed a careful review of data on the effect of various voter id regimes on turnout and worked to reconcile that information other sources and identified the latest, most reliable information to use in the analysis.

We still await the EAC's comments on our Provisional Voting analysis paper, which included our recommendations to the EAC for best practices. Since the submission of our Provisional Voting report to the EAC on November 28, 2005, our efforts have been entirely aimed at the completion of the voter identification research. We have been advised that EAC will take several weeks to review and react to our final draft on provisional voting.

As a result of such unanticipated delays we have revised the schedule for the project. Early in this reporting period, we requested from EAC a no-cost extension of the contract through the end of February. At this point, we have extended the no-cost extension request through March, so that we will have adequate time to revise our report once we receive feedback from the EAC.

In the meantime, as we await a response from the EAC, we are moving ahead quickly on the statistical analysis of voter identification data and summarizing the legal research that was completed earlier. We are working with the Peer Review Group to arrange a date for it to comment on the draft of the Voter ID analysis and recommendations.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November. We await comments from EAC on the draft report.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. That recommendation followed agreement by the EAC with that course of action. The submission of that report and recommendations, however, constitutes the document required under this task. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we await the EAC's decision on how to proceed.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is the principal focus of our research at this time.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: We have completed: the 50 state (plus D.C.) chart, the collection of voter identification statutes for all states and D.C., and summaries of the existing voter identification statutes. Moritz has completed its review of voter identification litigation and has summarized the results in a memo. Moritz and Eagleton have reviewed all research, clarified the categorization of that research on our charts, and reconciled the research categories used in the two different analyses.

Challenges: The biggest challenge in the reconciliation process is understanding the comparative strengths of different primary source materials. Despite the necessity this has created to reconcile conflicting data from time to time, the collaboration has strengthened the rigor of our efforts by shining a light on the raw data.

Work Plan: During January, we will continue our analysis of our voter identification research, and we will complete the memo summarizing the major litigation surrounding voter identification requirements. We will identify the most important issues and best practices in the area of voter identification, and to develop our voter identification document for the EAC.

RESEARCH EFFORTS

To complement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of

HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

In the upcoming month, Eagleton will continue to examine and categorize voter registration forms across the states to see what forms of identification are requested from mail-in registrants in order to highlight how easily accessible states make information about voter identification. The difficulty will be determining the 2004 status of the states, especially because most of this material is gathered from state websites which at this point have been updated since 2004.

VOTER ID AND TURNOUT ANALYSIS

The statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters, as projected, was completed during the month of December.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. In November, we have analyzed both aggregate- and individual-level data to determine whether there is any relationship between voter turnout and the various forms of voter identification states require.

Progress: During December, the analysis was completed for two data sets: County-level data that includes registration and turnout rates for 2000 and 2004, as well as Census measures and indicators of the type of voter identification requirements that were in existence at the time of the 2004 presidential election. The second data set consists of the voter supplement to the November 2004 Current Population Survey. This data set allows for testing of the same hypotheses at the individual level. The findings from the aggregate data set suggest that voter ID requirements have their greatest effect at the registration stage, as opposed to the turnout stage. A number of control variables were added to the analysis and the results of these efforts will be summarized in our report.

Challenges: These analyses use hierarchical linear modeling. Because voter identification requirements vary by state, one must pay special attention to other, unseen state-level influences on the data. The models are difficult to run and interpret, so the analyses are time-consuming

Work Plan: We will draft the findings from the statistical analyses by the end of January. The report will tie these findings to the research findings summarized in the litigation memos to create our first draft Voter Identification report.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: During the month of December, Eagleton contacted the PRG Members to reschedule the potential conference call session for mid-February due to the delays in getting the EAC's feedback on our report. We have asked the PRG members to reserve a couple of dates in mid-February for a conference call meeting to review the Provisional Voting report with the EAC's comments and the first draft of our Voter Identification Report.

Challenges: No new challenges were encountered during December.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added. During December we rearranged the folders on the hard drive and created a master document detailing which folder each report, memo, or data source could be found in.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project December 1- December 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

Subject: October Progress Report

Karen,

Attached is the Progress Report for October. Please note that this report includes at attachment showing how our study classifies each state on key variables, such as counting out-of-precinct ballots, requirements for ballot evaluation, and other variables. It also displays how the data we used differs for some states for the vote counts reported by the Election Day Survey. We believe that our data is more accurate and complete (see for example the data for New Mexico and Pennsylvania).

I look forward to responding to any questions or concerns you or others at the EAC may have.

Tom O'Neill

New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.5
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from October 1 through October 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In October we focused on finalizing our Provisional Voting analysis paper, including the development of recommendations to the EAC for a draft guidance document and best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. (See the attachment to this Progress Report for the details.) The importance of this demanding effort was described in September's Progress Report.

Also in October we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We will seek a meeting with the EAC in the next several weeks to confer about the schedule to complete the project and alternative approaches that could speed the conclusion of our work.

We will submit to the EAC a final draft of our report, a preliminary guidance document, and draft best practices before Thanksgiving. We project that EAC will take 3 to 4 weeks to review and react to that final draft. And we understand that after its review, the EAC will decide if it should move towards issuing a Guidance Document or recommending best practices. If the EAC does decide to issue a Guidance Document on Provisional Voting, the time needed for a review by the advisory boards is likely to delay a public hearing until early February.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, Tasks 3.5 and 3.6 are nearing completion.

Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of Provisional Voting and develop alternative means to achieve the goals of Provisional Voting.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states' actual experience with Provisional Voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on Provisional Voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and has completed this research.

Progress: We have completed the memorandum outlining Provisional Voting legislative changes since the 2004 election and we are continuing to clarify the laws prior to these changes.

Challenges: The variety in the form and frequency of Provisional Voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The final analysis will be sent to the EAC by Thanksgiving.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with Provisional Voting in 2004. The report findings from the survey of 400 local election officials are now complete. The survey results have proven to be instrumental in shaping our understanding of actual practice in administering Provisional Voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with Provisional Voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to Provisional Voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: We completed a state-by-state narrative of developments in Provisional Voting and distributed it to the EAC and the PRG. This work has been helpful in understanding the context of the data collected on provisional voting from the states.

Challenges: The primary obstacle to constructing the narratives was difficultdy in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent several revisions to incorporate up-to-date and reliable information. Now that so many other analyses, including the Election Day Survey, have been released, we were challenged by different interpretations of the same basic facts. But the reconciliation of interpretation and data collection has been invaluable in establishing rigor in our report.

Work Plan: We completed revisions of the narratives incorporating comments from the PRG and addressing any discrepancies between our findings and other interpretations of similar information included in other studies.

PROVISIONAL VOTING STATISTICAL ANALYSIS

Description: During October the Eagleton research team continued to check its statistical analysis, and worked to reconcile the classifications of this analysis (such as states counting only those provisional ballots cast within the proper precinct versus states that counted ballots cast within the proper county) with the classification made in other parts of this study or in other studies (such as the Election Day Study or *Electionline* reports).

Progress: The effort to double check all of the classifications used in the study is complete. The results of this effort are displayed in the attachment to this progress report, "Characteristics of the Provisional Voting Process -- Classification of the States," beginning on page 9. Only Delaware and Arkansas remain unclear in regard to one of the measures, and both states have been contacted to receive clarification in this area..

Challenges: The difficulties encountered have been a result of communication delays and time constraints. Some states have been more responsive to our inquires about their practices than others. Overall, this is not an irresolvable problem but it does slow the process of completion down.

Work Plan: By early-November the final revision of the statistical analysis, which includes full reconciliation of all data within the study, will be complete. The reconciliation of data is displayed in the attachment to this progress report.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Eagleton Center for Public Interest Polling (CPIP) conducted a national survey of county election officials to measure several aspects of Provisional Voting.

Progress: The analysis of the survey results and findings report is complete. As a result of the critique by the PRG, the research team is revising and clarifying the descriptions of the survey design and sample selection process to make the research methods more transparent.

Work Plan: We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5. We will include necessary clarifications regarding survey design and sample selection in the final analysis and alternatives document.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations now nearing completion constitutes the draft preliminary guidance document. Based on our conversation with the EAC, the draft gives the EAC the option of proceeding with a guidance document or issuing recommendations to the state for best practices, recommendations that would not constitute voluntary guidance. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we will await the EAC's decision on how to proceed.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is becoming the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 State (plus the District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: Analysis of voter identification data has begun and will increasingly become the central focus of our work.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also used exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout.

Challenges: The analysis of these data had been postponed until the data reconciliation of Provisional Voting is complete. As a result of the extensive revision and data reconciliation efforts aimed at the Provisional Voting section of our work VID had been temporarily placed on hold. We are now beginning data analysis on the impact of voter identification requirements on voter turnout.

Work Plan: The analysis of the impact that voter identification requirements have upon voter turnout should be completed by early December. Early January is our target to deliver the draft report and outline of alternative policies to the Peer Review Group. In mid January, the EAC would receive a draft report and recommendations that take into account the comments of the PRG.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: Eagleton has stayed in touch with members of the Peer Review Group since the September 21st conference call, and has solicited their final comments on the Provisional Voting research. During October, we telephoned two members who did not participate in the conference call to confirm their commitment to serving as members of the Peer Review Group. Profess Guy Charles affirmed his interest. Professor Pamela Karlan did not return the call. The revisions in the schedule for the project have now made it possible to begin the process of scheduling a meeting of the PRG to consider our draft report and recommendations on Voter Identification Issues. We anticipate that meeting will take place the second week of January.

Challenges: No new challenges were encountered during October.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project October 1- October 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

ATTACHMENT TO OCTOBER PROGRESS REPORT
Characteristics of the Provisional Voting Process
Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The categories analyzed here are:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.

New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting[1] and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as "old" states, because the states in all three categories would have been familiar with key aspects of provisional voting.. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

---

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[2] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases

---

[2] "Election Preview 2004: What's changed, What Hasn't and Why". This study can be found at: http://electionline.org/Portals/1/Publications/Election.preview.2004.report.final.update.pdf

because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Table 2
CATEGORIZATION OF STATES -- Statewide Registration Database

Had Database 2004	No Database A-N	No Database N-W	HAVA Exempt or NA
Alaska	Alabama	Ohio	Idaho
Arizona	Arkansas	Oregon	Maine
Connecticut	California	Pennsylvania	Mississippi
Delaware	Colorado	Rhode Island	Minnesota
District of Columbia	Florida	Tennessee	New Hampshire
Georgia	Iowa	Texas	North Dakota
Hawaii	Illinois	Utah	Wisconsin
Kentucky	Indiana	Vermont	Wyoming
Louisiana	Kansas	Virginia	
Massachusetts	Maryland	Washington	
Michigan	Missouri		
New Mexico	Montana		
Oklahoma	Nebraska		
South Carolina	Nevada		
South Dakota	New Jersey		
West Virginia	New York		
	North Carolina		
16	27		8

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election[2]. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

Table 3
CATEGORIZATION OF STATES -- Counting Out-Of-Precinct Ballots

Out-of-Precinct	In-Precinct Only	HAVA EXEMPT OR NA
Alaska	Alabama	Idaho
Arkansas	Arizona	Maine
California	Colorado	Mississippi
Delaware	Connecticut	New Hampshire
Georgia	District of Columbia	North Dakota
Illinois	Florida	Wisconsin
Kansas	Hawaii	Wyoming
Louisiana	Indiana	
Maryland	Iowa	
New Mexico	Kentucky

Vermont	Nevada	
Washington	New Jersey	
	New York	
	Ohio	
	Oklahoma	
	South Carolina	
	South Dakota	
	Tennessee	
	Texas	
	Virginia	
	West Virginia	
17	**26**	**7**

Voter Identification

We relied on Electionline studies, including the Voter Identification study[3] and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.[4] The five different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

---

[3] This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

[4] In 2004, ElelctionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.

Table 4
CATEGORIZATION OF STATES -- Forms of Identification Required
States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

Give Name	Sign Name	Match Signature	Provide ID	Photo ID
Maine	California	Illinois	Alabama	Florida
Massachusetts	DC	Nevada	Alaska	Hawaii
New Hampshire	*Idaho*	New Jersey	Arizona	Louisiana
North Carolina	Indiana	New York	Arkansas	South Carolina
Rhode Island	Iowa	Ohio	Colorado	South Dakota
Utah	Kansas	Oregon	Connecticut	
Vermont	Maryland	Pennsylvania	Delaware	
Wisconsin	Michigan	West Virginia	Georgia	
Wyoming	Minnesota		Kentucky	
	Mississippi		Missouri	
	Nebraska		Montana	
	New Mexico		*North Dakota*	
	Oklahoma		Tennessee	
	Washington		Texas	
			Virginia	
9	**14**	**8**	**15**	**5**

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Table 5

CATEGORIZATION OF STATES – Ballot Evaluation Methods

States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

Signature Match	Data Match	Affidavit	Return with ID	NA
Alaska	Alabama	Connecticut	Indiana	Idaho
California	Arizona	Delaware	Iowa	Maine

Oregon	Colorado	Hawaii	Maryland	Minnesota
	DC	Illinois	Michigan	New Hampshire
	Louisiana	Kentucky	Montana	N. Carolina[*]
	Missouri	Massachusetts	New Jersey	N. Dakota
	Ohio	Nebraska	New Mexico	Wisconsin
	Oklahoma	Nevada	Texas	Wyoming
	Pennsylvania	New York	Utah	
	Rhode Island	South Dakota		
	S. Carolina	Tennessee		
	Washington	Vermont		
	West Virginia	Virginia		
4	14	14	10	9

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

---

[*] North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Table 6
Updated information by State

Received Updated Data	Did Not Receive Updated Data
California	Alabama
District of Columbia	Alaska[5]
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut
Kansas	Delaware
Louisiana	Georgia
Maryland[6]	Idaho
Missouri	Illinois
Montana	Kentucky
Nebraska[7]	Maine
Nevada	Massachusetts

New Mexico	Minnesota
Ohio	Mississippi
Oklahoma	New Hampshire
Oregon	New York
Pennsylvania	North Carolina
Rhode Island	North Dakota
South Dakota	South Carolina
Tennessee	Utah
Texas	Vermont
Virginia	Wisconsin
Washington	Wyoming
West Virginia	
26 States	**25 States**

---

[5] Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

[6] Maryland reported provisional ballots that were counted per county, but not number cast.

[7] Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

Data Differences with Election Day Study

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

State	EDS Numbers Cast/Counted	Our Numbers Cast/Counted	Differences	Updated Info from State?
Alabama	6,478/1,865	6560/1836	82/29	No
Alaska	23,285/22,498	23,275/22,498	10/0	No
Colorado	51,529/39,086	51,477/39,163	52/77	No
Georgia	12,893/4,489	12,893/3,839	0/650	No
Hawaii	346/25	348/25	2/0	Yes
Iowa	15,406/8,038	15,454/8,048	48/10	Yes
Kansas	45,535/32,079	45,563/31,805	28/274	Yes
Montana	688/378	653/357	35/21	Yes
Nebraska	17,421/13,788	17,003/13,298	418/490	Yes
Nevada	6,153/2,446	6,154/2,447	1/1	Yes
New Mexico	6,410/2,914	15,360/8,767	8,950/5,853	Yes
N. Carolina	77,469/50,370	77,469/42,348	0/8,022	No
Ohio	157,714/123,902	158,642/123,548	928/354	Yes
Pennsylvania	No data	53,698/26,092	N/A	Yes
Texas	35,282/7,156	36,193/7,770	911/614	Yes
Vermont	121/30	101/37	20/7	No
Virginia	4,608/728	4,609/728	1/0	Yes
Washington	92,402/73,806	86,239/69,273	6,163/4,533	Yes
Wisconsin	374/119	373/120	1/1	No

Subject Re: EAC Conference Call - Friday 9/30

History: This message has been replied to and forwarded.

Karen - For our conference call this Friday at 1:30, participants should dial (877) 805-0964 and then when prompted enter: 869580#. Could you relay this information to Commissioner Martinez and the others from the EAC who will be on the call. At our end will be Tom O'Neill, Ingrid Reed and me.

Thanks, John

Subject August Progress Report - Eagleton Institute of Politics

History: This message has been forwarded.

Hi Karen,

Attached is the August progress report in fulfillment of our Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures. Please note, as per your instructions earlier this month, that the financial report will be sent via Fedex under separate cover to: Ms. Dianna Scott, Administrative Officer, EAC. Also attached to the progress report is a finalized list of our Peer Review Group members. If you have any questions regarding this report, please contact Tom O'Neill at (908) 794-1030 or tom_oneill@verizon.net.

Have a great day,
Lauren Vincelli

OUTLINE

- Introduction
- Provisional Voting
  - Task 3.5
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from August 1 through August 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

Research on Provisional Voting and a draft of reports on the analysis and alternatives were substantially completed in preparation for the September 6 briefing for the EAC. Important reports such as the National Survey of Local Election Officials' Experience with Provisional Voting; Statistical Review Provisional Voting in the 2004 Election; State-by-state Narrative of Developments in Provisional Voting; and the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states, were all completed in August.

We made further progress on recruiting a balanced and authoritative Peer Review Group (which, as this report is written, is receiving all the documents listed above for review). Ingrid Reed of Eagleton will coordinate the work of the Peer Review Group. A list of the members of the Peer Review Group is attached.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to Tom O'Neill at:
[redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, and Task 3.5 is well underway.

Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of provisional voting and develop alternative means to achieve the goals of provisional voting.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states' actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and is near completion with this research.

Progress: We completed the state by state summaries of provisional voting in August Also complete is a memorandum outlining provisional voting legislative changes since the 2004 election. This material was sent to the EAC as part of the package for briefing on September 6.

Challenges: The variety in the form and frequency of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The analysis of all the information, data, and survey results concerning provisional voting data will be completed in September, on schedule. The alternatives document should also be complete in September, pending response from the EAC on which direction those alternatives should follow.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with provisional voting in 2004. The report findings from the survey of 400 local election officials is now complete. The survey results improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: A state-by-state narrative of developments in Provisional Voting is complete and has been distributed to the EAC and the Peer Review Group. This work has been crucial to the process of constructing our draft analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Challenges: The primary obstacle to constructing the narratives was difficultly in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent multiple revisions in order to incorporate the most up-to-date material available. Had the Election Day Study been available, this task would probably have been simplified considerably.

Work Plan: We completed revisions of the narratives.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting.

Progress: The analysis of the survey results and findings report are complete.

Work Plan: We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting, and is becoming the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: We are refining the 50 state (plus District of Columbia) chart of data on voter identification. So far collected are voter identification statutes for 35 states. Summaries of the existing voter identification statutes have been written for forty states.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The state by state voter identification statute summaries will be completed for the remaining ten states and D.C. and the review of the chart will be completed. Analysis of voter identification data will begin.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern, and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also utilized exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout. The analysis of that data is underway.

Challenges: The main challenges to this task include gathering the complete set of changes to Voter ID laws over the past 5 years, and then incorporating those changes into a sound statistical methodology.

Projection: We will continue to work towards resolving the methodology issue, and ultimately produce a final report on this subject. The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-September.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The Peer Review Group will review our research and methodology and provide valuable feedback and suggestions for the direction of our work.

Progress: The composition of the Peer Review Group has been determined and the membership has been submitted to the EAC. Additionally, as of the date of this report all PRG members have received their first mailing, which included several reports from our research, and a draft of our analysis and alternatives outline for their review.

Challenges: Our timeline for circulating and discussing our research with the PRG has been compromised due to delays in completing the recruitment of members of the group.

Projections: We are in the process of scheduling our first conference call with PRG members for the week of Sept. 19, 2005.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. As we near the end of the Provisional Voting research and move into the Voter Identification research, we will re-evaluate the volume of files contained in the Information System and update the system.

Projections: The entire project team continues to review all project drafts, and will staff members combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

Progress: Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project August 1 - August 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer, EAC .

Subject Materials for Sept. 6 Meeting

History: This message has been forwarded.

Karen:

Attached are 3 documents that will be topics of discussion at our meeting tomorrow. The Power Point presentation is included so you will have a complete file (and as a backup in case something goes wrong with the version I am bringing.)

The "Script" document is a simple, MS Word version of the Power Point presentation. You might want to print out copies for those who would like to follow along and make notes on the slides as they are discussed.

The third document is the "Alternatives" paper we will discuss after the Power Point presentation. It outlines alternative points that might be included in the preliminary guidance document, which is the next deliverable in the project. We hope to learn which alternatives are preferred by the EAC so that we will know which ones should be developed further for the Preliminary Guidance Document. I hope you might be able to have this duplicated and distributed to those attending the meeting.

Thanks. I look forward to seeing you tomorrow.

Subject Revised materials for Sept. 6 Meeting

History: This message has been replied to and forwarded.

Karen,

The hard copy of the materials you received on Friday may have been missing the response to Question 4 (the copy I received did not include it). Several other typographical and other errors also became apparent when I reviewed it today. .

Attached is a revised version of the package that corrects those errors. Please rely on this version to prepare for the meeting on Tuesday. I will bring sufficient copies to hand out before the meeting.

Sorry for the errors.

Subject September 6 Meeting

Karen,

As we discussed in our phone call earlier today, I will have a PowerPoint presentation for use at our meeting next Tuesday. I hope it will be possible for you to arrange for a projector and a computer with a USB port for our use that day. Have a good Labor Day weekend. See you at 1:30 on the 6th.

Tom O'Neill

DRAFT FOR COMMENT **Deliberative Process Privilege**

OUTLINE OF ALTERNATIVES

For Consideration In Drafting Preliminary Guidance on Provisional Voting
September 6, 2005

This outline identifies 7 areas where guidance from EAC could improve the provisional voting process.

EAC's guidance should strike a rational balance among the three competing objectives of ballot access, ballot security, and procedural reliability and practicality. The outline sketches a range of alternatives for the EAC. Based on the EAC's judgment about which alternatives it can embrace, we will develop appropriate recommendations for the guidance document.

Possible Criteria for evaluating alternatives and choosing among alternatives:

1. The electoral system must be able to collect, record, and tally the votes of the electorate with sufficient accuracy to declare a winning candidate whose victory is procedurally legitimate in the eyes of supporters and opponents alike. Second, no well-functioning electoral system would fail to provide or count a ballot cast by a properly registered voter who correctly completed all steps required to receive one. (Century Foundation/10)
2. Margin of Litigation – need a system robust enough to perform well under the pressure of a close election.
3. Enfranchisement rate –the percentage of eligible voters who are able to participate.
4. Voter satisfaction standard – degree to which voters believe the system meets their needs and provides an avenue of participation.

Elements influencing the performance of the provisional voting system

THE PROCESS

A. Registration

B. Pre-Election Information For Voters

C. At The Polling Place

D. Evaluating The Ballot

E. Post-Election Information For Voters

BROADER CONSIDERATIONS

F. Integrity And The Appearance Of Integrity

G. Continuous Assessment Of The Provisional Ballot -- Process And Performance (Quality Improvement Model)

INTRODUCTION
THE IMPORTANCE OF CLARITY AND IDENTIFICATION OF BEST PRACTICES

The guidance document should emphasize above all else the importance of clarity in the rules governing every stage and process of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."

State efforts to improve the provisional voting process are already underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from guidance that includes concrete descriptions of best practices. A best practice approach in the guidance document is likely to advance the adoption of provisional voting practices that should be standard across the country while recognizing diversity among the states.

ALTERNATIVES FOR EACH STEP IN THE PROCESS

A. Registration

Improving the registration system can forestall the need to cast a provisional ballot, and is therefore among the most important possible reforms.

1. Registration rules should be clear and to forestall post-election disputes about their interpretation.

2. If states require identification at the time of registration, the kind of IDs required should be stated precisely, in plain English, and be publicly available in a graphical form that all voters can understand, for example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency. "

3. If there is one place to sign an affirmation of citizenship and age (and/or mental capacity), and that is signed, the failure to check any box that refers to the aforementioned should not be deemed a material omission.

4. States should consider testing a modified system of voter registration. A voter who registers earlier than 60 days before Election Day would be guaranteed that administrators will . That voter will be able to vote by regular ballot. For those who register within 30 days of the election, administrators would still be expected to ensure the orderly processing of the registration, but such voters will not be guaranteed that if there is a problem with their application that they will be able to vote by a regular ballot. This two-tiered registration system could reduce post-election disputes.[1]

---

[1] See: http://moritzlaw.osu.edu/electionlaw/comments/2005/comment0322.html. This suggestion relates directly to California's experience after shortening the deadline for registration to 15 days from 29, which contributed to the state's overwhelming reliance on provisional ballots. Had the election in California been close, the contention over provisional ballots could have been destabilizing.

5. States should issue a receipt with a tracking number to each person submitting a registration form. The tracking number will allow the voter to check on registration status through the use of that numbe. r and a publicly available registration list. The receipt could serve as an "admission ticket" to a regular ballot, even if the voter's name was not on the poll worker's list. [2]
6. States should have clear rules with respect to whether registration forms collected by third parties are processed as mail-in or in-person registrations.

7. Registration forms submitted by third-party groups should be considered mail-in registrations subject to those ID requirements. But if giving a registration form to a third-party group is considered equivalent to giving the form to a Board of Elections, or DMV, official then the law should say so explictly.

8. The re-enfranchisement process should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic or no more burdensome than the process required for any new registrant.[3]

9. A provisional ballot should seek from the voter all the information necessary to constitute registration and be filed by local officials with the proper office to complete the registration process.

B. Pre-Election Information For Voters

The better voters understand their rights and obligations, the easier the system will be to manage and the more legitimate the appearance of the process.

1. A state website for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate the casting of a regular nallot.

2. This same information should be Included on sample ballots

3. Publish this information shortly before the election in prominent newspaper announcements and, if feasible, through broadcast media.

C. At the Polling Place

Avoiding error at the polling place will allow more voters to cast a regular ballot.

1. The organization of the polling place, particularly the multi-precinct polling place is important. Guidance should provide best practices on the Importance of greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and relation topics.

---

[2] There could be two different kinds of receipts: one would be simply confirm that an individual submitted a registration form by the required deadline; the other, more robust, would confirm that the voter was officially registered

[3] From The Century Foundation Report

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting.

3. Offer a best practice on estimating the number of provisional ballots that should be made available at each precinct, so that they don't run out on Election Day

4. Offer a best practice on the handling of provisional ballots between the time they are cast to when they are examined afterward

5. Offer best practices in training and scripting poll workers so that they ask the right questions, offer the right information, and make provisional ballots available appropriately – particularly important when a voter shows up at the wrong precinct.

D. Evaluating the Ballot

The clarity of criteria is critical to a sound evaluation process and to the legitimacy of the system as a whole.

1. The experience in 2004 in North Carolina, Washington, Ohio underline the importance of clarity in the criteria to be used in deciding if a provisional ballot should be counted. Rushed litigation over the evaluation of provisional ballitng could erode the legitimacy of a presidential election. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation." Nonetheless, the NY *Panio v. Sutherland* case shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

2. Recent legislation in Arizona indicates that this guidance should reiterate HAVA's requirement that persons appearing claiming to be registered voters cannot be denied a ballot because they do not have identification with them.

3. Voters who lack ID should have up to three days to provide either the HAVA-specified forms of ID or other documentation that will facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered by mail. This research has shown that voters seem to feel returning with ID is less onerous that signing an affidavit.

4. More provisional voters are enfranchised in those states that count ballots cast outside the correct precinct. The best practice may be to define "jurisdiction" more broadly than the precinct. Or, more modestly, If a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count as long as the voter appears at the correct polling site. [4]

---

[4] Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

5. The best practice for election officials to evaluate a provisional ballot includes a check of existing records, including the original registration form, in order to match signatures.

6. Public confidence in the process of evaluating and counting provisional ballots requires that the process be open to the public and conducted by a team of election officials whose decision will be reviewed by a Board of Elections (or similar body) if the decisions was not unanimous.

7. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed publicly when completed.

8. The standards used for eligibility of provisional voters should be made clear in state law that specifies the "burden of proof" to be met. For example, a provisional ballot will not be rejected unless officials find *by clear and convincing evidence* that voter is ineligible; or provisional ballot will not be counted unless all available evidence shows that voter *more likely than not* is eligible

9. Clear standards are needed for the essential information that must be appear on provisional ballot envelope: name, address, signature, etc. The standards should indicate that a provisional ballot does not count if it lacks this information. The standards should provide voters a reasonable opportunity provide the missing information. (For example, election officials have no duty to inform the voter of the error, but if voters appear at the Board of Elections within 72 hours on their own initiative they can supply the missing info.)

10. Sates that use the information on the provisional ballot to permit voters whohave changed their addresses to update their registrations, should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections

11. The time by which election officials must complete their eligibility evaluations is critical, particularly in presidential elections. The guidance document should specify a range of time periods as a best practice (for example: 7 days, 10 days, 14 days, 21 days).

F. Post-election Information for Voters

Timely information for voters provides a final quality control on the system by giving the voter an opportunity to correct mistakes that may cause a legitimate ballot not to be counted.

1. Recommend best practices to improve the use of websites, phone lines, or mail to inform provisional voters about the evaluation of their ballots. The date by which this occurs is critical if voters are to have a reasonable opportunity to correct errors.

2. Specify the administrative review procedures, if any, that are available to a voter who has been told that her provisional ballot was rejected. May she appeal to a higher administrative authority? if so, under what timetable? What evidence may she offer in an effort to demonstrate eligibility?

G. State Laws Governing Litigation Over Provisional Voting

1. State law could foreclose litigation where the purpose is to change the outcome of the election, but a better option appears below.
2. Provide for expedited, streamlined litigation – administrative decisions regarding the eligibility of provisional ballots can be overturned only if *clearly erroneous* based on documentary evidence or a violation of the clearly specified procedures concerning the processing of such ballots
3. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot

BROADER CONSIDERATIONS

H. Integrity and the Appearance Of Integrity

1. Non or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system?
2. Transparency – require the purging process for registration to be public and with an opportunity to for voters to correct an erroneous determination that they should be purged.
3. Transparency – require the evaluation process for provisional ballots to be public.
4. Training poll workers – provide guidance on how to provide information to potential voters on their options if their names do not appear not on the registration list.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance (Quality Improvement Model)

Defining what constitutes a successful provisional voting systemis difficult. The most successful system is probably not the one with the most provisional votes cast (which may indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted (the evaluation process is likely to be flawed).

Defining quality here requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes.

The first step to improving quality is to recognize the provisional voting process as a system and the consequent need to take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.[5]

But a clear first step is to recommend to the states the metrics they can establish, collect and monitor to evaluate the quality of the provisional voting process and other aspects of the system. Among them might be:

---

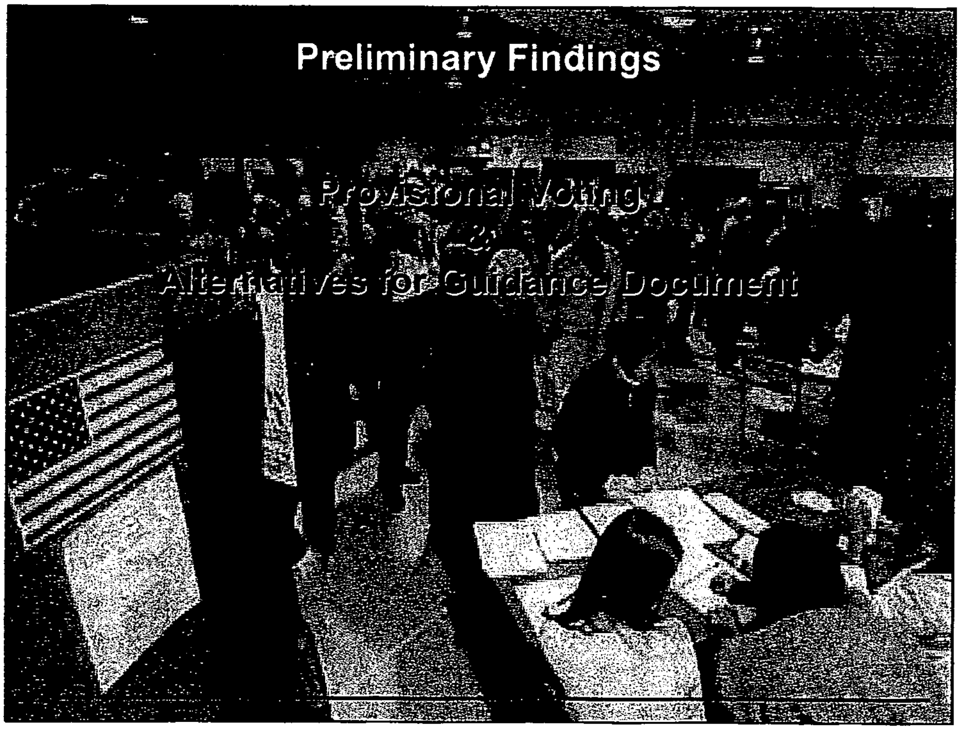
[5] Perhaps the EAC should engage one of the national quality organizations to evaluate the provisional ballot process within the broader context of the electoral system.

DRAFT

1. Standard deviation of % of provisional ballots counted by county to estimate the consistency of the evaluation system within the state.
2. Set targets to reduce the number of provisional ballots cast as a measure of the quality of the registration system.
3. Election complaints by jurisdiction, from precinct to the state level.

Briefing for

September 6 , 2005



Preliminary Findings

Provisional Voting

&

Alternatives for Guidance Document

QUESTIONS –TOPICS OF SPECIAL INTEREST

1. How did states prepare for HAVA's provisional voting requirements?
2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?
3. How did litigation affect the implementation of Provisional Voting?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did State and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

---

1. How did states prepare for HAVA's provisional voting requirements?

Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.

- Only about 1 in 10 made available to poll workers a voter registration database.
- Almost equally rare were training and written procedures for poll workers on the counting of provisional ballots.

Wide variance existed in preparation to give voters a way to find out if their provisional ballots had been counted:

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

18 states were new to provisional voting; 25 others had experience.

Local election officials in the "old" states felt more confident.

9 out of 10 local officials in the "old" states felt that the support received from state government was adequate, compared to 8 in 10 in the "new" states.

<u>"New" state officials felt:</u>

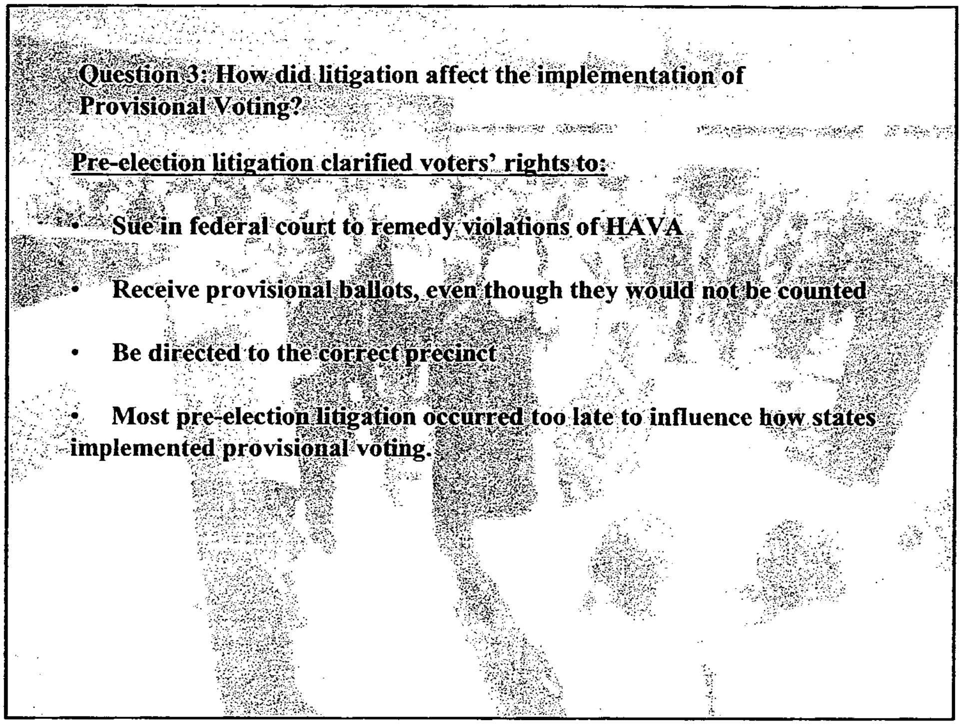
- Voters did not receive enough information about the jurisdiction in which to cast a provisional ballot in order to be counted.
- More funding was needed to educate voters about their rights to cast a provisional ballot.

---

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

<u>Difference in performance even more marked:</u>

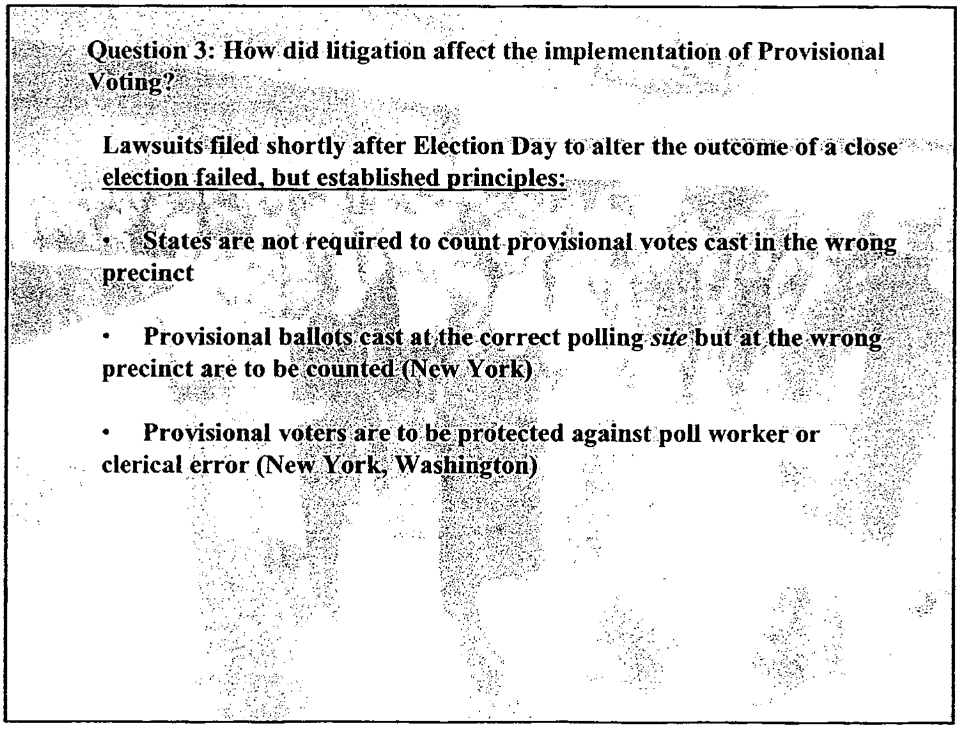
- Provisional ballots in "old states" = more than 2% of the total vote, 4 times the proportion in "new" states.
- Counting provisional ballots in the final vote, the "old" states averaged nearly double the number of the "new" states.
- In "old" states, 1.48% of the total vote came from provisional ballots, six times more than the 0.23% in the "new" states.



Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

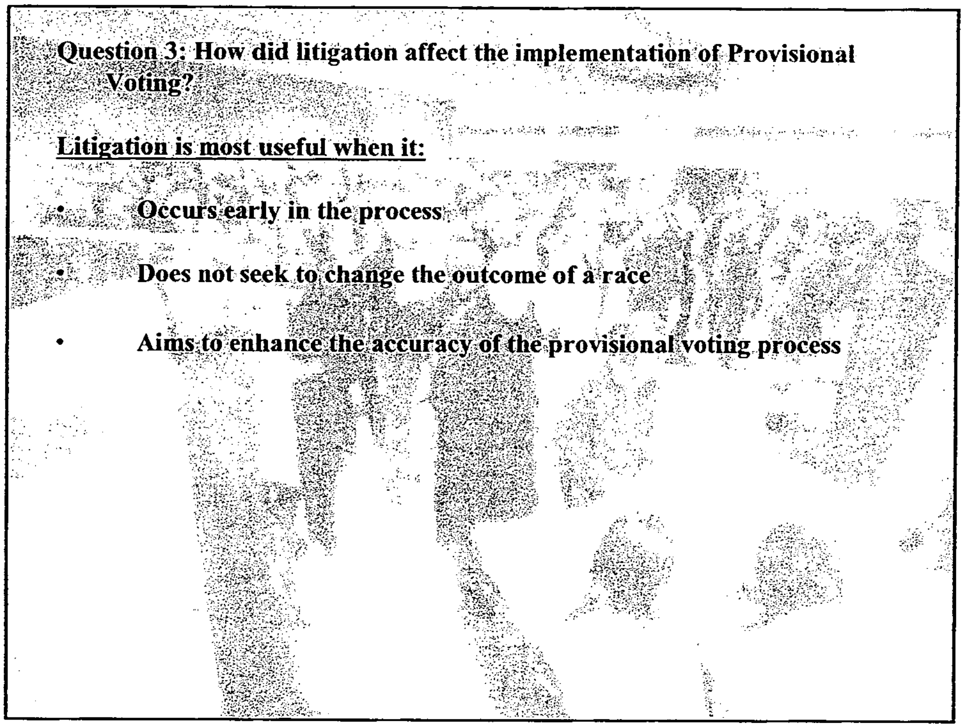
- **Sue in federal court to remedy violations of HAVA**
- **Receive provisional ballots, even though they would not be counted**
- **Be directed to the correct precinct**
- **Most pre-election litigation occurred too late to influence how states implemented provisional voting.**



Question 3: How did litigation affect the implementation of Provisional Voting?

Lawsuits filed shortly after Election Day to alter the outcome of a close election failed, but established principles:

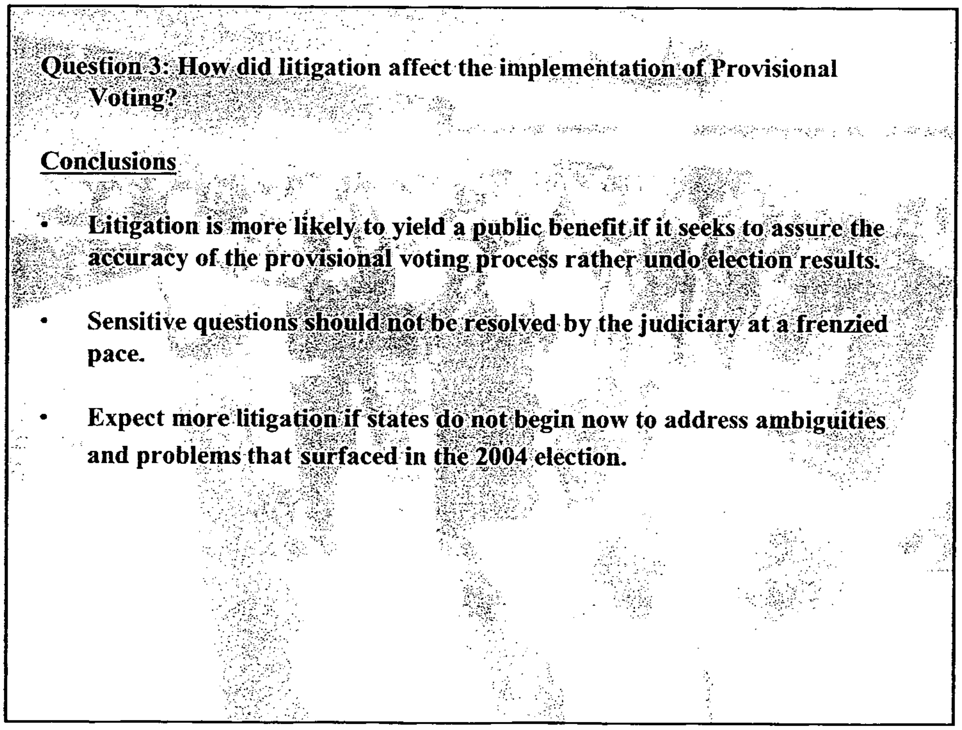
- **States are not required to count provisional votes cast in the wrong precinct**
- **Provisional ballots cast at the correct polling *site* but at the wrong precinct are to be counted (New York)**
- **Provisional voters are to be protected against poll worker or clerical error (New York, Washington)**



Question 3: How did litigation affect the implementation of Provisional Voting?

Litigation is most useful when it:

- **Occurs early in the process**
- **Does not seek to change the outcome of a race**
- **Aims to enhance the accuracy of the provisional voting process**



Question 3: How did litigation affect the implementation of Provisional Voting?

Conclusions

- **Litigation is more likely to yield a public benefit if it seeks to assure the accuracy of the provisional voting process rather undo election results.**
- **Sensitive questions should not be resolved by the judiciary at a frenzied pace.**
- **Expect more litigation if states do not begin now to address ambiguities and problems that surfaced in the 2004 election.**

Question 3: How did litigation affect the implementation of Provisional Voting?

Policy Implications

Guidance to the states on how to encourage earlier litigation

"Preferred practice" for states to preclude post-election challenges that could have been filed in a pre-election lawsuit.

States can distinguish between the two kinds of suits by providing a streamlined administrative remedial process for voters who believe their provisional ballot rights were mistreated and a more burdensome judicial proceeding to contest an election result.

Focus litigation on the ways state laws are allegedly deficient to:

Clarify the rules applicable to provisional voting

Assure that the rights protected by provisional voting laws are enforced

4. How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout. These voters otherwise would have been turned away at the polls.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

Whatever the precise figure, there is room for improvement.

Legislative activity gives evidence that states were not satisfied with the effectiveness of their provisional voting systems.

Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the "new" states.

Experience factor: mechanical or cultural?

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Little consistency existed among and within states.

The use of provisional ballots was not distributed evenly across the country. A few states accounted for most of the ballots cast.

The 7% of the total vote represented by Alaska's counted provisional ballots was more than 1,000 times greater than Vermont's 0.006%.

Share of provisional ballots in the total vote was six times greater in experienced states than in new states.

More rigorous the Voter ID requirements the smaller the percentage of provisional ballots that were counted.

"New" states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

In-precinct versus out-of-precinct states had different outcomes.

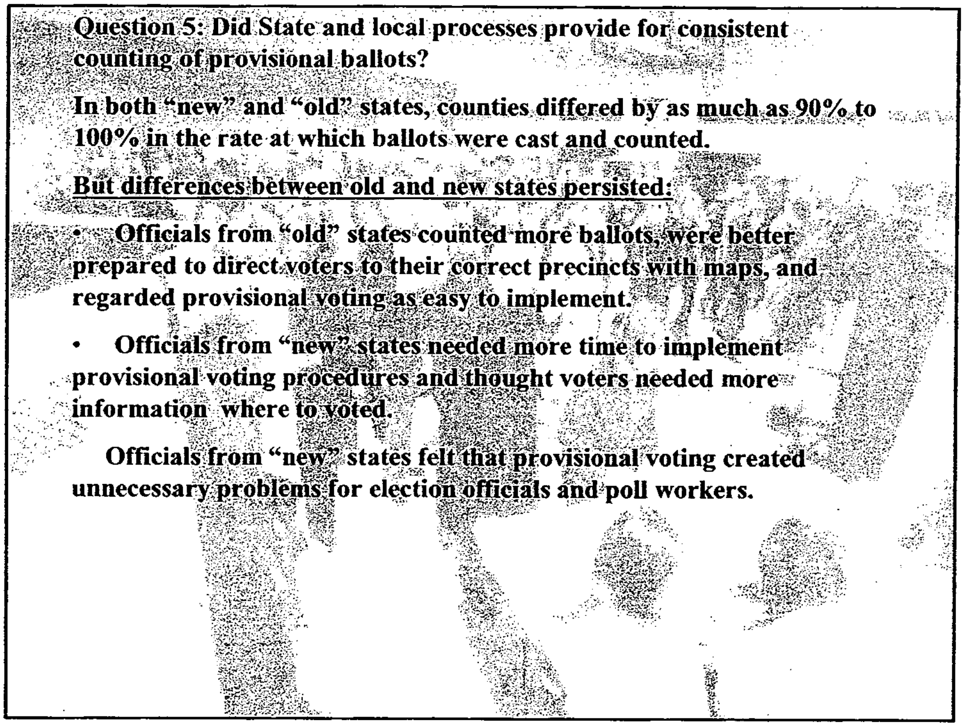
States that allowed out-of-precinct ballots counted 56% of the provisional ballots.

States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.

In "old" states, this difference was greater.

52% of ballots cast were counted in states requiring in-district ballots, 70% were counted in those allowing out-of-precinct ballots.

If all states had counted out-of-precinct ballots, perhaps 280,000 more voters would have been enfranchised across the country.



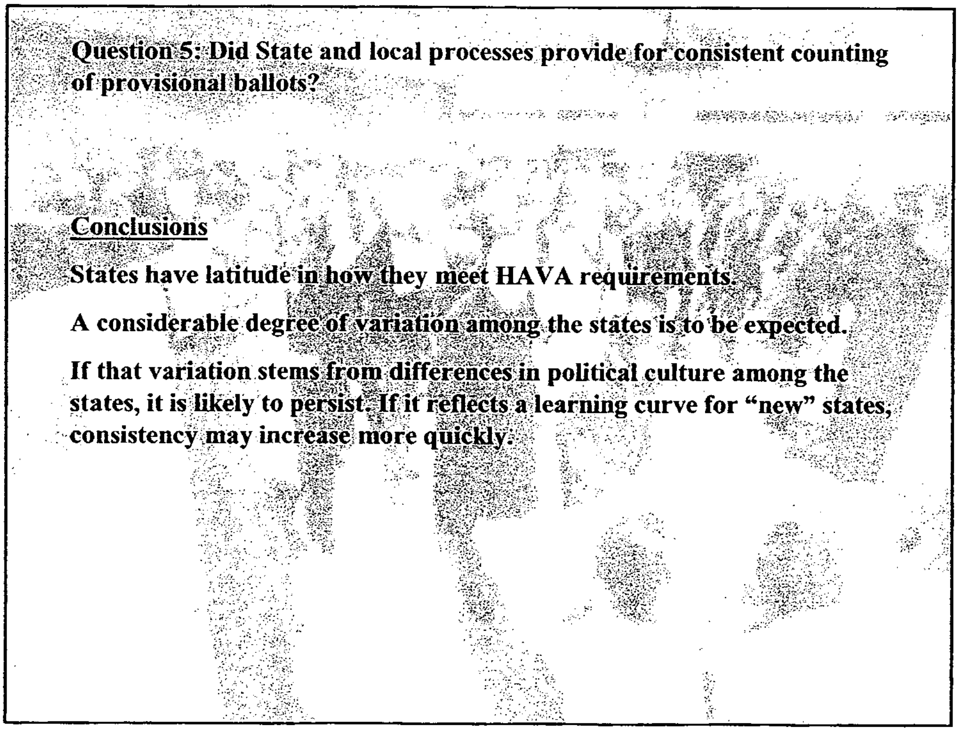
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

In both "new" and "old" states, counties differed by as much as 90% to 100% in the rate at which ballots were cast and counted.

<u>But differences between old and new states persisted:</u>

- Officials from "old" states counted more ballots, were better prepared to direct voters to their correct precincts with maps, and regarded provisional voting as easy to implement.
- Officials from "new" states needed more time to implement provisional voting procedures and thought voters needed more information where to voted.

Officials from "new" states felt that provisional voting created unnecessary problems for election officials and poll workers.



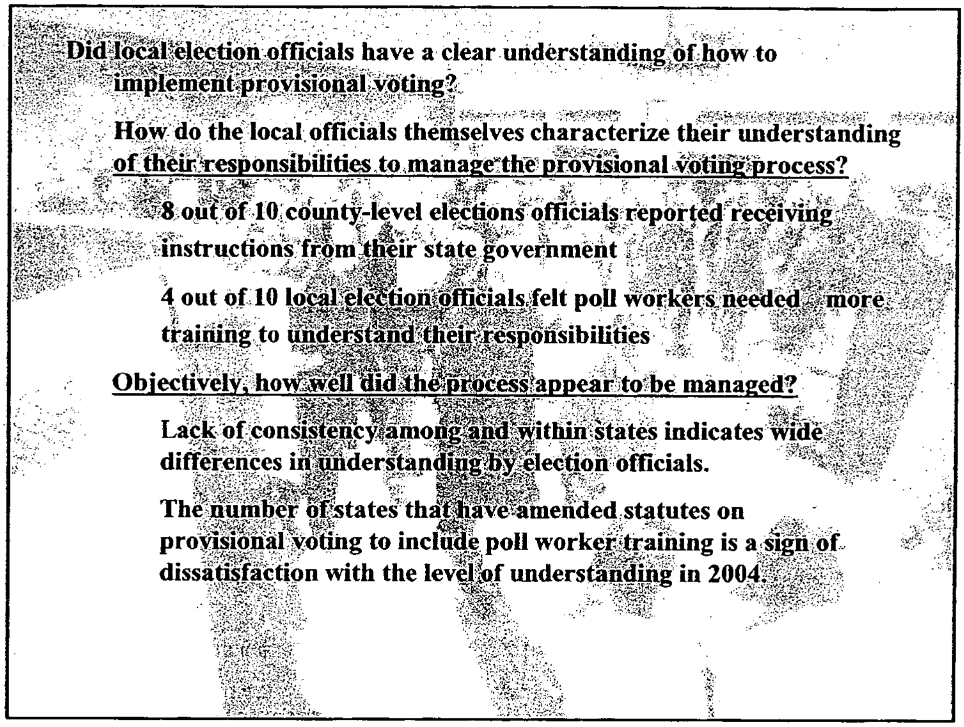
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

<u>Conclusions</u>

States have latitude in how they meet HAVA requirements.

A considerable degree of variation among the states is to be expected.

If that variation stems from differences in political culture among the states, it is likely to persist. If it reflects a learning curve for "new" states, consistency may increase more quickly.



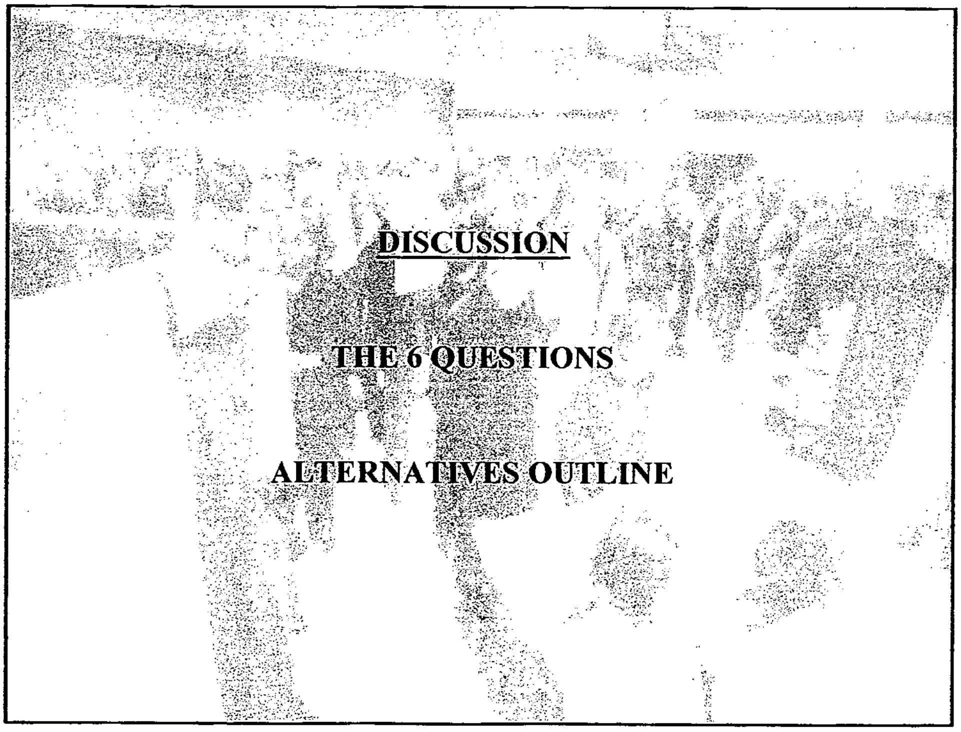
Did local election officials have a clear understanding of how to implement provisional voting?

How do the local officials themselves characterize their understanding of their responsibilities to manage the provisional voting process?

- 8 out of 10 county-level elections officials reported receiving instructions from their state government
- 4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities

Objectively, how well did the process appear to be managed?

- Lack of consistency among and within states indicates wide differences in understanding by election officials.
- The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.



DISCUSSION

THE 6 QUESTIONS

ALTERNATIVES OUTLINE

Briefing for

September 26, 2005

Briefing for

U. S. Election Assistance Commission

September 6, 2005

QUESTIONS –TOPICS OF SPECIAL INTEREST

1. How did states prepare for HAVA's provisional voting requirements?
2. How did their preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?
3. How did litigation affect the implementation of Provisional Voting?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did State and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

1. How did states prepare for HAVA's provisional voting requirements?

Interviews told us how election officials prepared to administer the process.

Most received provisional voting instructions from state government.

The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.

- Only about 1 in 10 made available to poll workers a voter registration database.
- Almost equally rare were training and written procedures for poll workers on the counting of provisional ballots.

Wide variance existed in preparation to give voters a way to find out if their provisional ballots had been counted.

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

18 states were new to provisional voting; 25 others had experience.

Local election officials in the "old" states felt more confident.

9 out of 10 local officials in the "old" states felt that the support received from state government was adequate, compared to 8 in 10 in the "new" states.

"New" state officials felt:

- **Voters did not receive enough information about the jurisdiction in which to cast a provisional ballot in order to be counted.**
- **More funding was needed to educate voters about their rights to cast a provisional ballot.**

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

Difference in performance even more marked:

- **Provisional ballots in "old states" = more than 2% of the total vote, 4 times the proportion in "new" states.**
- **Counting provisional ballots in the final vote, the "old" states averaged nearly double the number of the "new" states.**
- **In "old" states, 1.48% of the total vote came from provisional ballots, six times more than the 0.23% in the "new" states.**

Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

- **Sue in federal court to remedy violations of HAVA**
- **Receive provisional ballots, even though they would not be counted**
- **Be directed to the correct precinct**
- **Most pre-election litigation occurred too late to influence how states implemented provisional voting.**

Question 3: How did litigation affect the implementation of Provisional Voting?

Lawsuits filed shortly after Election Day to alter the outcome of a close election failed, but established principles:

- **States are not required to count provisional votes cast in the wrong precinct**
- **Provisional ballots cast at the correct polling *site* but at the wrong precinct are to be counted (New York)**
- **Provisional voters are to be protected against poll worker or clerical error (New York, Washington)**

Question 3: How did litigation affect the implementation of Provisional Voting?

Litigation is most useful when it:

- **Occurs early in the process**
- **Does not seek to change the outcome of a race**
- **Aims to enhance the accuracy of the provisional voting process**

Question 3: How did litigation affect the implementation of Provisional Voting?

Conclusions

- Litigation is more likely to yield a public benefit if it seeks to assure the accuracy of the provisional voting process, rather undo election results.
- Sensitive questions should not be resolved by the judiciary at a frenzied pace.
- Expect more litigation if states do not begin now to address ambiguities and problems that surfaced in the 2004 election.

Question 3: How did litigation affect the implementation of Provisional Voting?

Policy Implications

Guidance to the states on how to encourage earlier, rather than later, litigation

"Preferred practice" for states to preclude post-election challenges that could have been filed in a pre-election lawsuit.

States can distinguish between the two kinds of suits by providing a streamlined administrative remedial process for voters who believe their provisional ballot rights were mistreated and a more burdensome judicial proceeding to contest an election result.

Focus litigation on the ways state laws are allegedly deficient to:

- **Clarify the rules applicable to provisional voting**
- **Assure that the rights protected by provisional voting laws are enforced**

How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1,2 million voters, or 1.01% of turnout. These voters otherwise would have been turned away at the polls.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

Whatever the precise figure, there is room for improvement.

Legislative activity gives evidence that states were not satisfied with the effectiveness of their provisional voting systems.

Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the “new" states.

Experience factor: mechanical or cultural?

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Little consistency existed among and within states.

The use of provisional ballots was not distributed evenly across the country.

A few states accounted for most of the ballots cast.

- The 7% of the total vote represented by Alaska's counted provisional ballots was more than 1,000 times greater than Vermont's 0.0058%.
- Share of provisional ballots in the total vote was six times greater in experienced states than in new states.

More rigorous the Voter ID requirements and registration status, the smaller the percentage of provisional ballots that were counted.

"New" states with registration databases counted 20% of the ballots cast.

Those without databases counted more than double that rate (44%).

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

In-precinct versus out-of-precinct states had different outcomes.

States that allowed out-of-precinct ballots counted 56% of the provisional ballots.

States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.

In "old" states, this difference was greater.

52% of ballots cast were counted in states requiring in-district ballots, 70% were counted in those allowing out-of-precinct ballots.

If all states had counted out-of-precinct ballots, perhaps 280,000 more voters would have been enfranchised across the country.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

In both "new" and "old" states, counties differed by as much as 90% to 100% in the rate at which ballots were cast and counted.

But differences between old and new states persisted:

- **Officials from "old" states counted more ballots, were better prepared to direct voters to their correct precincts with maps, and regarded provisional voting as easy to implement and enabling more people to vote.**
- **Officials from "new" states needed more information for voters about the jurisdiction where provisional ballots must be cast in order to be counted and needed more time to implement provisional voting procedures.**

- **Officials from "new" states felt that provisional voting created unnecessary problems for election officials and poll workers.**

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Conclusions

States have considerable latitude in how they meet HAVA requirements.

A considerable degree of variation among the states is to be expected.

If that variation stems from differences in political culture among the states, it is likely to persist. If it reflects a learning curve for "new" states, consistency may increase more quickly.

Did local election officials have a clear understanding of how to implement provisional voting?

How do the local officials themselves characterize their understanding <u>of their responsibilities to manage the provisional voting process?</u>

8 out of 10 county-level elections officials reported receiving instructions from their state government

4 out of 10 felt poll workers needed more training to understand their responsibilities.

<u>Second, objectively how well did the process appear to be managed?</u>

Lack of consistency among and within states indicates wide differences in understanding by election officials.

The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.

Karen,

I haven't received the fax about the potential new recruit for the Peer Review Group that you mentioned to me yesterday.

We have now completed the materials to be distributed to those attending the meeting at the EAC on September 6. You will receive a hard copy of all the material by express delivery tomorrow. The most important material to get to those attending in advance is the document with the answers to the 6 questions about topics of special interest on provisional voting outlined in our contract. The bulk of the material is backup to this summary report.

Subject Eagleton Peer Review Group

Karen,

I have reviewed the Eagleton Peer Review Group recruitment list that you recently provided. Based on what I or Amie can determine from the bio's provided or an Internet search, it appears that at least 4 of the 7 people who have said yes to be on the group seem to have a liberal perspective, or have had a history of working on that side of the political spectrum. I could only identify one as being a Republican, and a moderate one at that (Verniero). Mike Alvarez has conducted a lot of research into election issues and generally seems to do it in a neutral way. I have been unable to obtain a bio or background information on Tim Storey, who is not an academic. The only person that I could identify on their list as being conservative was Brad Clark, who has declined to participate.

Therefore, based on this information regarding the Peer Review Group, I am not satisfied that they will provide Eagleton with the balanced review that I thought they would receive from such a group. I would urge you to ask them to seek the input of more conservative academics so that whatever study we receive from them will have the benefit of a balanced review. I am going to have Amie provide you with the background sheet on Professor Tim O'Rourke of Salisbury University in Maryland, whom they may want to consider for this panel. We have some calls into others who could suggest some conservative academics for this review panel.

Thanks.

Subject: Eagleton

In his note regarding the Eagleton contract, Hans has raised some of the same concerns I raised from the beginning of any discussions I had regarding this contract with our staff, and at our first formal meeting with Eagleton. In reviewing their work product from time to time, I continue to have concerns about a lack of balanced input and have repeatedly voiced them with staff and with Eagleton. I did this when the initial peer review group was proposed and again during their presentation at our meeting in Pasadena (the outreach slide in their public presentation showed outreach to seven groups, of which only one could be considered conservative-leaning). Now, as I have just had the opportunity to read their July progress report, it appears that Eagleton seems to be going into a larger analysis of the voter fraud issue than was authorized in the contract. My suspicion is that Dan Tokaji is injecting his views into this to dismiss or diminish the concerns some people may have about voter fraud. I could be wrong, but his previous writings lead me to believe otherwise.

I only found one mention of voter fraud in the contract with Eagleton. It is in Section 3.5 regarding provisional voting, where it discusses "minimizing opportunity for voter fraud." Yet, on page 4 of the July progress report from Eagleton, in describing their work plan for the next month it states: "we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms." This clearly seems to be going beyond the mandate we gave them as I thought they were going to be looking at voter fraud relating to provisional voting (as the contract calls for), not voter fraud as it relates to election reforms. While voter fraud was never mentioned in the contract regarding the voter ID issue, page 5 of their July report indicates that their narratives "will include an appraisal of the prevalence and nature of vote fraud." In addition to this, page 6 describes a look into the "relationship between voter ID regime and vote fraud."

Voter fraud is clearly an issue that is perceived differently from the Right and from the Left. I have struggled with determining what a clear definition of voter fraud is myself, and therefore want to obtain various perspectives and good analysis on this issue before I formulate a solid conclusion in my mind. It has been my understanding all along that the whole voter fraud/voter intimidation issue is going to studied by the EAC using a balanced group of consultants--not Eagleton and Moritz, who are likely to focus on just on the number of prosecutions of voter fraud, rather than the complaints made or the fact that many election officials are frustrated that some prosecutors don't take their complaints about voter fraud seriously. I am not convinced at this point that we will get a balanced and objective study from Eagleton/Moritz on voter fraud. I am puzzled on why they seem to be expending a significant portion of their time on this and would want to know if we somehow authorized them to do more research into the voter fraud issue.

On page 7 of their July report Eagleton indicates that communications with the EAC on the Peer Review

Group "were not clear or timely." I would like to know what this refers to. Also, I may have missed it, but I do not recall seeing the final list of who is serving as the Peer Review group.

The August 15th copy of the July report that I received from Karen did not include the attachment of the financial report of expenses incurred. I would like to see that attachment.

Outside of our NIST work, this contract represents our largest single outside expenditure of our operational funds. Any single expenditure of $500,000+ needs to be closely monitored. I, for one, am not going to sign off on any report that appears to have been written from a biased viewpoint, especially one that doesn't appear to be interested in hearing from conservative organizations or right-leaning researchers, or seems to minimize any input from them. I've already had questions from congressional staff and others on why we picked Eagleton and Moritz, as they are perceived by some as biased against Republicans. I assured the critics that we have insisted all along on an objective study from Eagleton. An unbalanced or biased study from them will not only hurt my credibility, but also that of the EAC. I'm not suggesting that we stop their work, but I do want Tom and Julie to inform them in no uncertain terms that we will not accept a report that does not seriously consider all viewpoints on provisional voting and the voter ID issue, and that any study or interpretations they present to us reflect a diversity of opinions on these subjects. We also need for staff to determine whether their considerable work into the voter fraud area is authorized in the contract. We should not be paying for and receiving work we did not authorize.

The contract clearly calls for "alternative approaches" on voter ID requirements and "alternatives" on provisional voting. I agreed to support this contract to Eagleton because I was assured that we would receive a variety of approaches from their work, and not just those from a liberal perspective.

Subject Two items

Hi-

Two items, one professional, one social:

1. By contract, Eagleton is to arrange a public meeting to receive public comment on the draft guidance for provisional voting they have helped draft for the EAC. Could you let me know what work they have performed for the EAC in preparation for next week's public meeting on provisional voting? Could you also let me know how, if at all, you envision the presentations from next week's meeting informing Eagleton's work and EAC's preparation of guidance on provisional voting?

Thanks

2. Tomorrow I'm going to go to Brooke Rental in Vienna to order the table and chairs for the EAC picnic. How many tables and chairs to you want me to order? Also, let me know the precise date, time and location to where I should have the items delivered. Can you think of anything else you'd like me to order from them? (e.g. tablecloths, large containers to hold cold beverages, disco dancing balls, tacky champagne fountains, etc.)

SubjectInvitation to Tom Wilkey

Karen,

For your information, Ruth Mandel, Director of the Eagleton Institute of Politics, sent the letter below to Tom Wilkey this afternoon. It is an invitation for him to meet with the project team in August at Rutgers.

Have a good weekend.

Tom O'Neill

I'm writing on behalf of my colleagues at the Eagleton Institute of Politics to send congratulations on your appointment as Executive Director of the Election Assistance Commission and to extend a warm invitation for you to visit the Institute to meet our research team The Eagleton Institute and our partners at the Moritz College of Law are delighted to have been selected to provide research services to the EAC for developing guidance to the states on provisional voting and voter identification requirements.

The Eagleton and Moritz team conducting the research and analysis would appreciate an opportunity to discuss the project with you so that we can gain a full understanding of your perspective on this work and make our research as useful as possible for you, the EAC, the states, and eventually the voters.

I understand that you continue to travel between New York and Washington, which would make a visit to Eagleton simple to arrange. Since the Rutgers campus in New Brunswick is not far from the Metropark Amtrak station, we could easily pick you up at Metropark and return you at the end of the visit. Our Moritz partners would also attend.

The agenda for such a meeting could include a briefing on our progress, discussion of challenges to be met, and a conversation about your goals for this research. We believe that the earlier in the research process we can arrange to meet, the better for the project.

I hope you agree that a meeting in the near future would be useful, and that you like the idea of a visit to the research site. If so, we can search for convenient dates in the next few weeks, perhaps starting with the possibility that you would be available on August 12, 15, or 16.

We all look forward to continuing our work together on this worthwhile project.

Ruth B. Mandel

Director, The Eagleton Institute of Politics

Board of Governors Professor of Politics

Subject Eagleton Institute June 2005 Progress Report

History: This message has been forwarded.

Ms. Dyson,

Attached please find the June 2005 Progress Report for the project entitled, "Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures." If you have any questions regarding any part of this document please direct them to Tom O'Neill at: [redacted].

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex'ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli

Subject DRAFT Agenda for July 12 Teleconference

Karen

Attached is a draft agenda for tomorrow's teleconference. You should be receiving later today information from Lauren Vincelli at Rutgers on what number to call to participate in the conference.

Please let me know if there are topics you would like to add to the agenda.

Agenda712.doc

DRAFT AGENDA

EAC CONTRACT PROJECT TEAM
Eagleton Institute of Politics
July 12, 2005
9:30 – 11:30 A.M.

Teleconference with the EAC Commissioners and staff

1. Introductions
2. Summary of current status of the project – Tom O'Neill
3. Questions and comments by EAC
4. Status Reports
    a. Moritz research on statutes, cases, and administrative regulations --- Ned Foley
    b. Experience with provisional voting and voter ID in 2004 –John Harris
    c. Voter ID requirements and turnout – Dave Andersen
    d. Information system – Lauren Vincelli
    e. Intranet – Don Linkly
    f. July 28 meeting and panels – Tom O'Neill
    g. Selecting and recruiting the Peer Review Group – Tom O'Neill
5. Questions and comments by EAC
6. Date and time for next meeting: July 19, 2005 at 9:30 a.m.

Subject EAC Conference Call - Tues. 7/12 at 9:30 am

History: This message has been replied to.

Hello everyone,

To follow are the instructions for the upcoming conference call with Eagleton & Moritz team members and EAC commissioners. The instructions below apply to anyone calling in for this call. Anyone interested in tomorrow's discussion can use this access number for the call – please pass the information on to any of your colleagues that wish to participate or listen to the conference call.

From any phone, dial: (877) 805-0964
When prompted, enter: 869580 and #.

I will initiate the call here at Eagleton. If you happen to call in before we have called in, you will be placed on hold until we call in. If anyone has any questions, please email me or call me at the telephone number below.

Have a great day.

Best,
Lauren

Subject Conference Call Tuesday

Lauren:

Our team meeting on Tuesday will include EAC staff and commissioners, the Moritz group, and, of course, the Eagleton group. I think we should provide a call-in number for a true conference call for this session.

Please set the conference call up and let the EAC know via an email to Karen-Lynn Dyson.

Hope you had a pleasant weekend.

Tom

Subject Progress and Status reports

History: This message has been replied to.

Karen,

Since I was puzzled by the distinction you drew in your last email about progress and status reports, I checked the contract. Please confirm my interpretation of Section 3.2.

I read it to require a "progress report," within 2 weeks of the end of each month. "Budget status shall also be provided," the section concludes.

That would mean, I believe, that we owe you a progress report by July 14, and it should include a status report on the budget.

Please let me know if I have misread this section or if you interpret it differently.

Tom

Subject RE: Peer Review Group

Tom-

Had a very good review and discussion of the PRG at this morning's Commissioner meeting.

Also, the Commissioners have marked their calendars for a conference call with the Eagleton/Moritz team on July 12 at 9:30 AM.

Several concerns were raised about the composition of the PRG and, after some discussion, I indicated that Eagleton will provide the EAC with a revised participant list, and with a more detailed description of the PRG's mission, goals, objectives, workplan and timelines for accomplishing its work.

The Vice Chair is concerned that there is not sufficient conservative representation on the PRG. I would suggest the team do more research to identify well-recognized conservative academics to put on the Group.

Further, the Commissioners recommend a tiered process in which the PRG will prepare a "dispassionate" analysis of the issues and draw some tentative conclusions. This analysis and these conclusions will then be vetted with a defined/select group of local election officials, and then, with a defined/select group of advocacy organizations.

It was also suggested that a final round of focus group meetings be held with a cross-section of these election officials, advocates and academics for an overall interactive reaction to the analysis and recommendations.

Hope this helps clarify concerns; I look forward to sharing your revisions to the PRG with them.

Subject Peer Review Group

Karen,

As you probably recall, one of the features of our proposal was the creation of a Peer Review Group to look over our findings, conclusions and draft reports before we prepare final drafts for the EAC's review. The EAC asked that before recruiting members of the PRG twe submit names for EAC's review. The aim, course, is to assemble a panel that is experienced, informed, and balanced.

Attached is a list of potential PRG members drawn from academia, the law, and non-profit organizations with interests in this area. Please look it over.

We may conclude that the PRG should also include two or three former government officials now in academia or related fields. We have a conference call with our partners at Moritz planned for tomorrow or Friday to decide a) if former officials should be included in the PRG and b)if so, who they should be. I'll keep you informed of our thinking as it develops.

Subject July 12 and Peer Review Group

History: This message has been forwarded.

Karen:

The Eagleton project team usually meets on Tuesdays from 9:30 – 11. At tomorrow's meeting I'll confirm with the group that we will meet on July 12, if that will fit your schedule. If that is a bad time for you, we have moved our meeting time before and can do so again if we can align participants' calendars. This week for the first time, Laura Williams --representing Moritz-- will join the session by telephone. For the meeting on the 12th I'll try to arrange for Ned Foley and Dan Tokaji to participate as well.

On the Peer Review Group
Your request to include the election officials on the group caused us to think anew about its purpose and composition. We agreed that election officials would add a useful dose of real world experience to the research. One of them could be Peter Veniero, who as AG (where he served before appointment to our Supreme Court) was New Jersey's chief election official. We would like Tom Wilkey to suggest a couple of former, senior election officials who could contribute to the PRG's work. While the PRG needs the experience of election administrators, we believe that perspective can be conveyed best by a senior, former official who is not appointed to represent a group of such officials –only to represent him or herself. We believe the group's advice would be most useful if came from people with the perspective provided by now being some distance from the daily fray.

This analysis emerged from a Friday conference call in which Ingrid Reed, Ned Foley, Laura Williams and I rethought the composition of the PRG. We concluded that the group should not, after all, include members from organizations that have taken advocacy positions on the issues we are researching. We agreed that the PRG should focus on methodologies and research findings rather than debate policy outcomes. PRG members should be free to represent themselves, rather than argue from an existing institutional position on policy. The PRG is not an advisory committee or a group of stakeholders to vet and take some ownership of policy recommendations. We'll consult the stakeholders separately, beginning with the list of groups in the proposal.

To replace those from advocacy organizations, we believe it would be preferable to add more members(from academia and the law, such as Pam Karlan, Guy-Uriel Charles, or Dan Lowenstein, whose CVs are summarized on the attachment. Finally, I will draft a mission statement for the PRG. Attached is a revised list of proposed PRG members, showing 2 slots to be filled by senior, former election officials.

Hope you have received the Gantt chart by now and that it fits your needs.

Ingrid Reed and I will attend the meeting in New York on Thursday and look forward to seeing you there.

Subject RE: Election Day Study & Survey of Local Officials

Karen:

Yes, thanks. I did receive it.

The Peer Review Group and update on the panels for the July hearing will be there by week's end, as will, with any luck, the Gantt chart.

The design of the survey of local (i.e., county) election officials is proceeding rapidly. We will send a letter to the officals chosen in the random sample process before they receive a call from the company that actually conducts the interviews. Attached is a very preliminary draft of the letter, and I'd appreciate your comments. I took much of the language that describes the research from the approved language in the recent news release.

Deliberative Process
Privilege

DRAFT LETTER TO LOCAL ELECTION OFFICIALS

The U.S. Election Assistance Commission (EAC) has awarded the Rutgers, The State University of New Jersey, a contract to study provisional voting based on experiences from the 2004 election. The research will address key questions related to provisional voting in the context of effective election administration, voter access and ballot security. The study will develop recommendations for EAC to consider in the development of its guidance to the states for the 2006 elections.

As you know, EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency that provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

An important part of our research will be a survey of local election officials across the country. You have been randomly selected to participate in the survey, which will ask about your experiences in administering the provisional voting process in the federal election that took place in November 2004.

A survey researcher from _______________ will call you during the week of _______________. The researcher will ask you several questions about your experience with provisional voting your evaluation of the process, and your recommendations to improve it. The survey will take about 15 minutes, and you need do nothing to prepare for it. You will not be identified as having participated in the study and no statement or comment you make will be ascribed to you in our report or in the project files.

At the contract's conclusion, we will present a report to the EAC including an analysis of provisional voting procedures as well as potential alternatives to existing practices and procedures. The EAC will publish its proposed guidance document in the Federal Register for public review and comment, and the EAC will hold a hearing on the guidance document this fall before adopting it.

Your participation in the study will be important in assuring that it reflects the views of election officials who have direct experience with provisional voting.

DRAFT FOR APPROVAL

EDITOR'S NOTE: ATTENTION POLITICAL, ASSIGNMENT EDITORS

EAGLETON INSTITUTE OF POLITICS WINS $560,000 CONTRACT FROM U.S. ELECTION ASSISTANCE COMMISSION

Rutgers Institute to Study Provisional Voting, Voter Identification Procedures

NEW BRUNSWICK/PISCATAWAY, N.J. – The U.S. Election Assistance Commission (EAC) has awarded the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a $560,000 contract to study provisional voting and voter identification procedures based on experiences from the 2004 election.

Under the national contract, the institute will develop recommendations for EAC to consider in the development of its guidance to the states for the 2006 elections, according to Eagleton Director Ruth B. Mandel, the study's principal investigator. She added that the Moritz College of Law at Ohio State University, Eagleton's partner in the contract application, will be responsible for the legal analysis of the competitively bid, seven-month project.

Eagleton already is home to an extensive civic education and political participation program, with several projects aimed at increasing voter turnout, political participation and Americans' involvement in civic life.

EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency and provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security.

Eagleton will examine the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public hearings to be held in conjunction with the project.

At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of potential alternatives to existing practices and procedures.

Karen, Tom -

I am not taking any action on the email Tom sent a few days ago regarding the Peer Review Group because the Eagleton project is not my responsibility. As I indicated earlier to Karen, I didn't know why this was sent to me since Karen is the Project Manager. I endorse her comment below regarding the need for including her in all correspondence with anyone at the EAC regarding the project.

When I was the Interim Executive Director it was part of my job to stay on top of all EAC project work. I now have other responsibilities at the EAC, and while I am happy to continue involvement in other projects for continuity and transition purposes as needed, that needs to be very limited. My involvement with the Eagleton work has only been from the contracting perspective, and that is the only continuing role I have. Any substantive project activities have to be taken up with Karen.

SubjectPeer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:

A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.

B. PRG's analysis would be vetted by a defined/select group of local election officials.

C. A defined/select group of advocacy organizations would review the comments of the local election officials

D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments
We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

Subject RE: Peer Review Group

History: This message has been replied to.

Carol,

I sent you the email on the Peer Review Group because you asked me to. When we discussed the issue in New York, you told me to send to you in writing our response to the Commission's suggestions for a new, more elaborate review process. I believe I copied Karen on that email.

Learning now, almost a week later, that you have taken no action is disheartening. As you know, our schedule is tight, and we need the counsel the Peer Review Group can provide. I hope, therefore, that Karen will take immediate action to resolve the situation so we can begin to recruit the review group in time to assure the quality of the resource design.

Tom O'Neill

Subject: Re: Peer Review Group

Karen, Tom -

I am not taking any action on the email Tom sent a few days ago regarding the Peer Review Group because the Eagleton project is not my responsibility. As I indicated earlier to Karen, I didn't know why this was sent to me since Karen is the Project Manager. I endorse her comment below regarding the need for including her in all correspondence with anyone at the EAC regarding the project.

When I was the Interim Executive Director it was part of my job to stay on top of all EAC project work. I now have other responsibilities at the EAC, and while I am happy to continue involvement in other projects for continuity and transition purposes as needed, that needs to be very limited. My involvement with the Eagleton work has only been from the contracting perspective, and that is the only continuing role I have. Any substantive project activities have to be taken up with

Karen.

SubjectPeer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:

A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.

B. PRG's analysis would be vetted by a defined/select group of local election officials.

C. A defined/select group of advocacy organizations would review the comments of the local election officials

D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks– to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Subject Re: Eagleton draft press release

I have some concerns about the press release. In paragraph two, I am not comfortable with the following language in what I believe is paragraph two: Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006.

It seems to me that EAC will develop the guidance based on Eagleton's findings.

Also, I do not think the press release should contain the list of questions. Are they/we trying to float a trial balloon and elicit initial reaction at this early stage of the study??

Commissioners,
Below is a draft of a press release Eagleton wants to distribute regarding the EAC contract. (It's also

attached.) Please let me know if you have edits/changes. Also, take a close look at the language regarding the scope for the voter ID study to make sure it is acceptable.

DRAFT FOR APPROVAL

EAGLETON INSTITUTE OF POLITICS WINS $560,000 CONTRACT FROM U.S. ELECTION ASSISTANCE COMMISSION

Rutgers Institute to Study Provisional Voting, Voter Identification Procedures

NEW BRUNSWICK/PISCATAWAY, N.J. – The U.S. Election Assistance Commission (EAC) has awarded the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a $560,000 contract to study provisional voting and voter identification procedures based on experiences from the 2004 election.

Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006, according to Eagleton Director Ruth B. Mandel, the study's principal investigator. She added that the Moritz College of Law at Ohio State University, Eagleton's partner in the contract application, will be responsible for the legal analysis of the competitively bid, seven-month project.

Eagleton already is home to an extensive civic education and political participation program, with several projects aimed at increasing voter turnout, political participation and Americans' involvement in civic life.

EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency and provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security. Questions include:

- Did the states have in place clear and uniform written procedures, guidelines and instructions to govern the casting and counting of provisional ballots?

- Did local procedures reflect the state's uniform procedures?
- Did all states and election jurisdictions make these procedures available to the public, political parties and candidates before the election?

- To what extent were poll workers appropriately trained on how to administer provisional ballots, including establishing the identity of the potential voter seeking a provisional ballot?

- How were federal funds under the Help America Vote Act used to educate voters about their rights to cast a provisional ballot and where such provisional ballots must be cast to be counted?

- In states where a provisional ballot had to be cast at the voter's assigned polling place or precinct, was information available to poll workers to allow them to determine the voter's assigned precinct and polling place?

- Did states have mechanisms in place to inform voters casting provisional ballots whether their vote was counted and whether they are now registered for subsequent elections?

Eagleton will address these questions by examining the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public hearings to be held in conjunction with the project.
At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of alternatives to existing practices and procedures.

EAGLETON INSTITUTE OF POLITICS WINS $560,000 CONTRACT FROM U.S. ELECTION ASSISTANCE COMMISSION

Rutgers Institute to Study Provisional Voting, Voter Identification Procedures

NEW BRUNSWICK/PISCATAWAY, N.J. – The U.S. Election Assistance Commission (EAC) has awarded the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a $560,000 contract to study provisional voting and voter identification procedures based on experiences from the 2004 election.

Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006, according to Eagleton Director Ruth B. Mandel, the study's principal investigator. She added that the Moritz College of Law at Ohio State University, Eagleton's partner in the contract application, will be responsible for the legal analysis of the competitively bid, seven-month project.

Eagleton already is home to an extensive civic education and political participation program, with several projects aimed at increasing voter turnout, political participation and Americans' involvement in civic life.

EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency and provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security. Questions include:

- Did the states have in place clear and uniform written procedures, guidelines and instructions to govern the casting and counting of provisional ballots?

- Did local procedures reflect the state's uniform procedures?
- Did all states and election jurisdictions make these procedures available to the public, political parties and candidates before the election?

- To what extent were poll workers appropriately trained on how to administer provisional ballots, including establishing the identity of the potential voter seeking a provisional ballot?

- How were federal funds under the Help America Vote Act used to educate voters about their rights to cast a provisional ballot and where such provisional ballots must be cast to be counted?

- In states where a provisional ballot had to be cast at the voter's assigned polling place or precinct, was information available to poll workers to allow them to determine the voter's assigned precinct and polling place?

- Did states have mechanisms in place to inform voters casting provisional ballots whether their vote was counted and whether they are now registered for subsequent elections?

Eagleton will address these questions by examining the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public hearings to be held in conjunction with the project.

At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of alternatives to existing practices and procedures.

Subject Re: Fw: Press Release on Research Contract Award

I know this is a silly question... but do they have to issue a press release?

My edits are attached. But per my earlier email, the chair and the other commissioners should sign off on this. One question I had that wasn't answered by the press release: Who are they surveying? The public? Election officials? What's the methodology? Sample size? In other words, if a reporter asked me those questions, I could not get the info from this press release. Subject June 30 Hearing Panelists

History: This message has been forwarded.

Julie:

Thanks for you call. Our conversation helped me crystallize further the recommendations we will make to the Commission about the material to be covered at the hearing.

I believe we will recommend two panels of 3 or 4 people each for the June 30 hearing. One will cover the relatively narrow HAVA Voter ID requirements with presentations by 2 state-level voting administrators with contrasting experiences. The contrast between Michigan and Pennsylvania might prove especially instructive because it would demonstrate the relationship between the quality of the data base and requirements for voter identification. Since the hearing is being held in Manhattan, perhaps inviting a speaker from New York instead of Pennsylvania would make sense. I'd appreciate your thoughts on that.

Two other speakers could address the issue of broader Voter ID requirements to reduce vote fraud by requiring some form of identification for each voter at the polling place. The experience in Mississippi over the past 5 years has been particularly dramatic, as illustrated by the attached news article from the local press last year. As we discussed, inviting the 2 legislators profiled in the article might make for powerful testimony.

The final 2 speakers we believe should be academics who have studied the relationship between Voter ID regimes, voter participation and vote fraud and who have conflicting evidence and conclusions to offer. We have found at least two university based researchers who can present the view that stricter Voter ID requirement do not reduce vote fraud and do dampen participation. We have not yet identified a researcher from the other end of the spectrum, but we are looking actively. Your suggestions would be most welcome.

Below is our current list of possibilities for your review.

Tom

JUNE 30 HEARING
<u>POSSIBLE PANELISTS OR TOPICS</u>

Possible States to be represented by one or more panelists

Mississippi
Debate over voter id issues has been dramatic. The resonance of Mississippi on voting issues would lend interest to the testimony. Voter id legislation was not approved in the current legislative session and has been a source of contention at least since 1999.

Michigan
Strong database state; lax Voter ID requirements don't seem to present as much of a problem (although one hears rumors about Detroit); interesting contrast to NY. With Pennsylvania would present contrasts in the importance of the Statewide Voter Data Base

New York
Had a significant problem with provisional ballots, suggesting that their relatively lax ID rules might be problematic; also Tom Wilkey will have good contacts there. The hearing is there.

Pennsylvania
Relatively lax ID rules and apparently quite a few problems with provisional ballots in 2004. Had start up problems with its data base and would offer comparisons between counties where the data base was well established and those where is new. Should be weighed against New York for inclusion as a contrast with Michigan

Wisconsin
Governor Doyle vetoed the legislature's first attempt at tightening voter ID requirements, and instead offered a package to recruit and train more qualified poll workers and calls for improvements in voter registration procedures.

Academics on Voter ID, Turnout, and Vote Fraud

Spencer Overton
Professor, GWU Law School. Has written op-eds arguing that the empirical research is insufficient to support the need for more ID to reduce fraud. He is working on a book on the topic.

John Fortier
Research Fellow at the American Enterprise Institute. Recommended by Norm Ornstein. Google revealed no publications on this topic by Fortier.

Lorraine C. Minnite
Assistant Professor of Political Science, Barnard College. Lead researcher of the Demos election fraud study and researcher in immigrant voting patterns. Found that the incidence of fraud perpetrated by individual voters in the United States was very low and had a minimal impact on election outcomes.

Guy-UrielCharles
Associate Professor of Law, Center for the Study of Political Psychology University of Minnesota. His areas of interest incoude Election Law and Election Law Disputes and African American Voting Concerns. He is a member of the National Research Commission on Elections and Voting of the Social Science Research Council

Subject Re: Arrangements for June 30 Meeting

Tom,

The following answers, I hope, your questions. I am happy to discuss this further.

1. Does the EAC have a preference for a venue for the meeting? Have any arrangements --preliminary or otherwise-- been made to secure that facility? If not, I assume EAC would prefer a public building or an academic setting such as the auditorium you used at the law school in Columbus.

EAC has a meeting location for this meeting and the hearing that will follow. The meeting and hearing will be held at the Marriot Marquis Hotel. I will have staff provide the adddress and room.

2. Has the EAC made arrangements for a transcriber to record the meeting of the Commissioners? If so, is it the EAC's intention that we will use the same transcriber for the panel? If not, should we arrange for a transcriber for the entire day? Are there federal rules on payments for transcription services that we should follow?

While EAC has not yet made arrangements for a transcriber, we will as we will need one for the meeting and the hearing.

3. Will EAC support staff attend the hearing to sign in those attending, issue name tags, etc., or are these duties that we should be prepared to carry out?

Yes, EAC will have staff available for this function.

4. Will the EAC issue the news release about the meeting and the panel?

Yes.

5. What do federal regulation indicate that I may offer speakers we bring in from these states in terms of travel, accommodations, meals, etc? Will speakers have to pay for their travel and accommodations and then request reimbursement or can we pay their bills directly?

Federal travel regulations apply. However, once you have made recommendations on panelists and the Commission has approved those panelists, we will take care of their travel arrangements and accommodations.

Arizona, California, Mississippi, .Michigan, New York, Pennsylvania, and Wisconsin.

I can imagine that the Commission will not want to use Arizona. There is a great deal of controversy around some proposed legislation that was introduced and passed by the Arizona legislature last year. EAC has not yet taken a position on that controversy, but may. Until such time as EAC has formalized its opinion on this, EAC will not want to invite a public debate on this issue.

I will call you later to discuss any questions or concerns. I am in a meeting from 1 - 3 (EDT)

Juliet E. Thompson

Subject Arrangements for June 30 Meeting

Julie,

Karen Lynn-Dyson suggested I consult directly with you about arrangements for the Commission's June 30 meeting in New York. As I understood our discussions in Washington last week, as your consultants we will be responsible for organizing the portion of the meeting that will cover the Voter Identification issue, while EAC staff will organize the regular meeting of the Commissioners. Is that understanding correct?

Because time is short, we know we must move quickly on the arrangements.

1. Does the EAC have a preference for a venue for the meeting? Have any arrangements --preliminary or otherwise-- been made to secure that facility? If not, I assume EAC would prefer a public building or an academic setting such as the auditorium you used at the law school in Columbus.

2. Has the EAC made arrangements for a transcriber to record the meeting of the Commissioners? If so, is it the EAC's intention that we will use the same transcriber for the panel? If not, should we arrange for a transcriber for the entire day? Are there federal rules on payments for transcription services that we should follow?

3. Will EAC support staff attend the hearing to sign in those attending, issue name tags, etc., or are these duties that we should be prepared to carry out?

4. Will the EAC issue the news release about the meeting and the panel?

5. What do federal regulation indicate that I may offer speakers we bring in from these states in terms of travel, accommodations, meals, etc? Will speakers have to pay

for their travel and accommodations and then request reimbursement or can we pay their bills directly?

These are the states we are currently evaluating for the Voter ID presentations: Arizona, California, Mississippi, .Michigan, New York, Pennsylvania, and Wisconsin. We may pick 4 of these, or fewer if we determine that one state should have two panelists representing different viewpoints: Karen tells me you have been working with several of these, and your counsel would sharpen the judgment we bring to bear on our selection. I am particularly interested in the Mississippi experience and would like to discuss that with you. . .perhaps by phone. The project team is aiming to agree on a panel of speakers to submit to the the EAC early next week. Panelists should receive their invitations at least two weeks in advance (more would be better), especially if we want to get onto their schedules.

I will be in a meeting tomorrow from 10:30 -- 1:00 p.m. but will be available the rest of the day for a phone conversation. My cell phone --on which you can always reach me-- is [redacted]

Subject project kickoff meeting with EAgleton Institute

History: ✉ This message has been forwarded.

Commissioners -

We have tentatively scheduled May 26 at 2:30 for a kickoff meeting here with Eagleton Institute. What will happen at this meeting is Eagleton will introduce their key people and make a brief presentation on their approach to performing the provisional voting and voter ID studies. It will be an opportunity to ask questions, raise any concerns, and/or provide guidance as they begin this work. Please advise if you wish to attend this meeting. I expect it will last about an hour.

EAC Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document[1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[3]

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Declines to Adopt Draft Report

---

[1] In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

[2] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. These data did not differentiate between citizens and non-citizens; because these numbers include non-citizens, the Contractor applied the percentage of citizens included in voting age population statistics in 2000 to the U.S. Census Bureau estimated voting age population in 2004. Thus, 2004 estimates of voting age population include persons who are not registered to vote.

[3] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The Contractor used a single election's statistics to conduct this analysis. The two sets of data came from the Census Bureau and included persons who were not eligible to and did not vote. The first analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. So, a second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced only some evidence of correlation between voter identification requirements and turnout. Furthermore, the initial categorization of voter identification requirements included classifications that actually require no identification at all, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by independent working and peer review groups comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached.

Further EAC Study on Voter Identification Requirements

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

---

[4] See Transcript of EAC Public Meeting, February 8, 2007, page 109.

- In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC Statement on Future Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005 EAC entered into a contract with Rutgers, The State University of New Jersey through its Eagleton Institute of Politics to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data--aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.

Comment [GH1]: th respect to the last sentence in paragraph one above, it is my opinion that it would have been reasonable for Eagleton to have considered the statistical analysis they conducted as being covered by that task. Therefore, I recommend striking the word "also" from this sentence.

The contractor presented testimony summarizing its findings from this statistical and data analysis at a February 8, 2007 public meeting of the U.S. Election Assistance Commission. The contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website: www.EAC.gov.

EAC Recommendations for further study and next steps

EAC finds the contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be an important first step in the Commission's consideration of voter identification requirements.

However, EAC has concerns regarding the research and statistical methodology the contractor chose to employ in order to analyze voter identification requirements. Therefore, EAC is not adopting the contractor's full report that was submitted and is not releasing this report. EAC will engage in a longer-term, more systematic review of voter identification requirements and the potential variation in turnout rates based on the types of voter identification requirements. EAC's additional study on the topic will include more than one Federal election cycle, examine additional environmental and political

factors that effect voter participation, and consider the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities.

- An ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Using some of the information collected by Eagleton and assembling data from states, EAC will establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors.

Comment [GH2]: I cannot craft the word

- Convening, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include specific issues to be covered in the study, research and statistical methodologies to be employed and timelines for completing an EAC study on voter identification.

- A study of how certain voter identification provisions that have been in place for two or more Federal elections have had an impact on voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and race and gender.

Deleted: ould

- Publication of a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating pollworkers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform pollworkers and voters.

Deleted: ould

Deleted: ;

- A state-by-state tracking of early voting, absentee voting, and vote-by-mail policies and procedures. The data collected through this tracking will then be compared to various state voter identification policies and procedures.

Karen - I understand you will be a panelist on the Eagleton/Moritz Voter ID study along with Tom O'Neill and Tim Vercellotti at next Thursday's EAC meeting. Could you let us know what you will be covering so we prepare comments that will not be redundant.

Thanks. I hope your new year is off to a good start.

John

Subject Re: Response Requested - EAC voter ID report

Eagleton is submitting it's report as written. There will be a SHORT Executive Summary prepared by staff which will incorporate. Recommenations for. Future study which the Commissioners will be asked to adopt.
The report itself will be presented but not formally adopted but merlely released and recommendations adopted.

Subject: Re: Response Requested - EAC voter ID report

Is Eagleton submitting a report to the EAC or is Eagleton assisting us the development of an EAC report...? I suspect it is the latter. Any statement should reflect this... as should the "briefing."

Subject Response Requested - EAC voter ID report

Karen,

We need to publish an FR notice early tomorrow regarding the next public meeting. In light of the recent matter regarding voter fraud, I want to be sure to accurately describe what's happening with the voter ID report item contained in the draft agenda. Please add some perspective about what will and will not be discussed and what, if any, action might be expected. The draft agenda says the following: "Presentation of Eagleton ID Report - "Best Practices to Improve Voter Identification Requirements,"John Weingarten, Rutgers University (Time allotted 7-10 minutes; Q & A 5 min.)". What stage are we with this ? (preliminary, final, NOTA, etc.) Just trying to stay ahead of the curve,

Thanks,
Bryan

Hi -- hope all is well.

I've got a quick question for you. Vercellotti and Anderson have put out for public distribution what looks to be their work from their EAC report on voter identification (http://moritzlaw.osu.edu/blogs/tokaji/voter%20id%20and%20turnout%20study.pdf).
Given that this piece of their research project is available, is the rest of their work available for public distribution yet (as you know the VTP is having a conference at the end of this week on voter identification and registration, it would be nice to have access to the EAC research at the conference, even at this late date).

Subject Re: Eagleton letter in response to the Chairman

We can wrap this up in the morning. In my discussions with the Chairman his view is that botrts h reports be labeled as final draft reports rather than final reports but I will double check with him.
Also any letter needs to relect the term briefing rather than meeting.

June 8, 2006

Dear Chairman DeGregorio:

Karen Lynn-Dyson relayed the Commission's decision in your meeting of June 1 to take more time to consider how to proceed with the delivery of EAC research reports on provisional voting and voter identification.

The Eagleton-Moritz research team, of course, encourages the Commission's thoughtful consideration of the two reports, but we are mindful of the need to deliver revised documents that respond to the Commission's comments by the close of our contract on June 30th. We believe that if we receive the Commission's final comments on the Provisional Voting report by June 19 we will be able to complete any additional work that the Commission might request and incorporate the results in our final reports before the end of the contract period.

Based on suggestions raised at the meetings, we already plan to supplement the Provisional Voting report with some brief, additional information about the influence of the fail-safe ballot provisions of the National Voting Rights Act on the experience with provisional voting in 2004.

We understand that the Commission must submit the final draft Voter ID report to the same review process by your advisory boards as was followed with the Provisional Voting paper. We understand that step is a prerequisite for wider release. We would appreciate your advice on how to handle this review, given the rapidly approaching end of our contract.

We hope the commission will use both reports, as intended from the outset of this project, as the basis for recommendations for better, if not best, practices to the states. If the Commission cannot decide to issue such recommendations to the states, we hope it will promptly release the reports to provide the states and the broader elections community with this information, analysis and perspective on the issues.

We recognize, based on the reactions at the meetings of the Standards Board and, particularly, the Board of Advisors, that some of the findings, conclusions, and recommendations of the reports will be controversial with some of the Commission's constituencies. But we also believe, based on the comments of the Peer Review Group, the advisors assembled by the Commission, and our response to their critiques, that the reports are grounded on solid research by a well-qualified, nonpartisan team and that the reports will provide new information for the policy process. We believe this information will contribute to achieving the EAC mission of providing helpful information that the states may or may not choose to implement.

E-mail: eagleton@rci.rutgers.edu
Web: www.eagleton.rutgers.edu

The information in the reports can improve the policy process by raising the level of debate over increasingly volatile issues related to election administration. We believe our reports will prove useful to the states as they complete preparations for the 2006 elections. Moreover, the elections community is aware of this work, and awaits the analysis and conclusions.

We look forward to working with you to conclude this research in a way that will serve the public interest.

Very truly yours,

Tom O'Neill
