The Eagleton-Moritz research team, of course, encourages the Commission's thoughtful consideration of the two reports, but we are mindful of the need to deliver revised documents that respond to the Commission's comments by the close of our contract on June 30th. We believe that if we receive the Commission's final comments on the Provisional Voting report by June 19 we will be able to complete any additional work that the Commission might request and incorporate the results in our final reports before the end of the contract period.

Based on suggestions raised at the meetings, we already plan to supplement the Provisional Voting report with some brief, additional information about the influence of the fail-safe ballot provisions of the National Voting Rights Act on the experience with provisional voting in 2004.

We understand that the Commission must submit the final draft Voter ID report to the same review process by your advisory boards as was followed with the Provisional Voting paper. We understand that step is a prerequisite for wider release. We would appreciate your advice on how to handle this review, given the rapidly approaching end of our contract.

We hope the commission will use both reports, as intended from the outset of this project, as the basis for recommendations for better, if not best, practices to the states. If the Commission cannot decide to issue such recommendations to the states, we hope it will promptly release the reports to provide the states and the broader elections community with this information, analysis and perspective on the issues.

We recognize, based on the reactions at the meetings of the Standards Board and, particularly, the Board of Advisors, that some of the findings, conclusions, and recommendations of the reports will be controversial with some of the Commission's constituencies. But we also believe, based on the comments of the Peer Review Group, the advisors assembled by the Commission, and our response to their critiques, that the reports are grounded on solid research by a well-qualified, nonpartisan team and that the reports will provide new information for the policy process. We believe this information will contribute to achieving the EAC mission of providing helpful information that the states may or may not choose to implement.

191 RYDERS LANE, NEW BRUNSWICK, NJ 08901-8557

Fax: (732) 932-6778

THE STATE UNIVERSITY OF NEW JERSEY
RUTGERS

E-mail: eagleton@rci.rutgers.edu
Web: www.eagleton.rutgers.edu

The information in the reports can improve the policy process by raising the level of debate over increasingly volatile issues related to election administration. We believe our reports will prove useful to the states as they complete preparations for the 2006 elections. Moreover, the elections community is aware of this work, and awaits the analysis and conclusions.

We look forward to working with you to conclude this research in a way that will serve the public interest.

Very truly yours,

Thomas M. O'Neill
Project Director

Hi Tom-

Just checking to see if your Power Point slides might be ready.

When they are, please send them on to me and hit Reply to All as Julie Hodgkins and Amie Sherrill (the Chairman's Special Assistant) would like copies before the presentation.

Thanks

QUESTIONS RAISED BY THE EAC

1. How did states prepare for HAVA's provisional voting requirements?
2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?
3. How did litigation affect the implementation of Provisional Voting?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did State and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

TO ANSWER THOSE QUESTIONS

☐Surveyed 400 local election officials

☐Reviewed the EAC's Election Day Survey

☐Analyzed states' experience with provisional voting:

--use of statewide registration database

--treatment of out-of-precinct ballots

--use of different approaches to voter ID

--consistency

--time period allowed for ballot evaluation

☐Collected provisional voting statutes and regulations

☐Analyzed litigation

Variation among the states

- In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million , or just over 63%, were counted.
- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.
- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.

Some sources of variation among states

Experience

Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

Administrative Arrangements

Time to evaluate ballots

--States that provided less than one week counted an average of 35.4% of their ballots.

--States that permitted more than 2 weeks counted 60.8%.

Voter registration data bases

-- States with voter registration databases counted an average of 20% of the provisional ballots cast.

-- States without databases counted 44%.

Variation within states

Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.

Resources available to administer provisional voting varied considerably among and within states.

The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.

---

1. How did states prepare for HAVA's provisional voting requirements?

Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

18 states were new to provisional voting; 25 others had experience.

Local election officials in the "old" states felt more confident.

Provisional ballots in "old states" : more than 2% of the total vote, 4 times the proportion in "new" states.

Counting provisional ballots in the final vote, the "old" states averaged 58% nearly double the average (33%) in "new" states.

Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

- Sue in federal court to remedy violations of HAVA
- Receive provisional ballots, even though they would not be counted
- Be directed to the correct precinct
- Most pre-election litigation occurred too late to influence how states implemented provisional voting.

4. How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

There is room for improvement.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

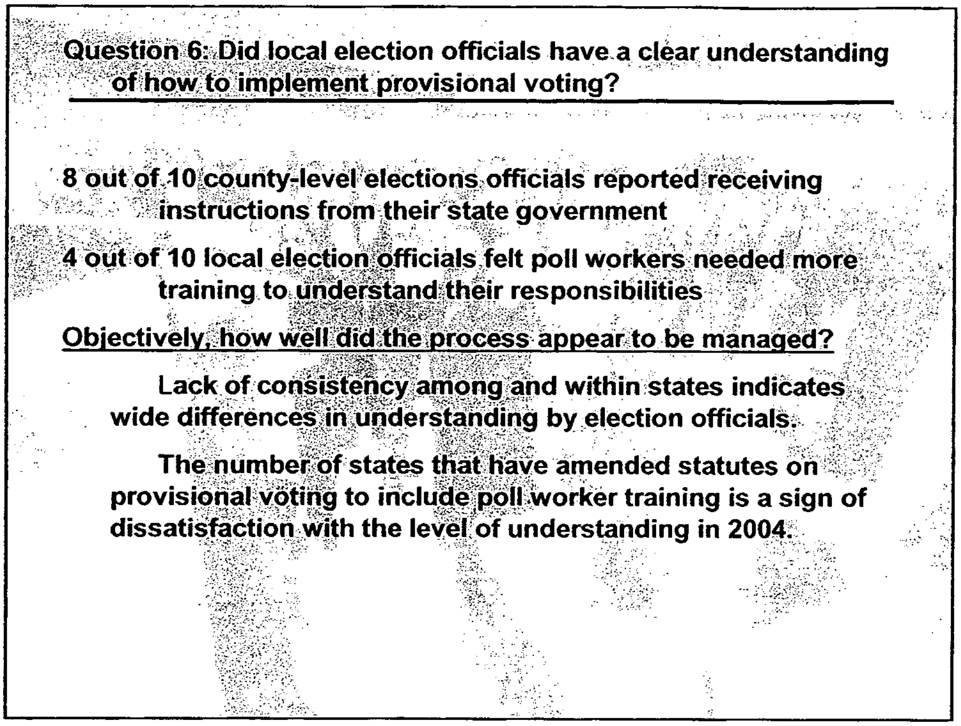
Little consistency existed among <u>and</u> within states.

"New" states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).

States that allowed out-of-precinct ballots counted 56% of the provisional ballots, 42% for in-precinct states.

States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.

Less than 1 week:	58.6%
1 – 2 weeks:	65.0%
More than 2 weeks:	73.8%.



Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

8 out of 10 county-level elections officials reported receiving instructions from their state government

4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities

Objectively, how well did the process appear to be managed?

Lack of consistency among and within states indicates wide differences in understanding by election officials.

The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.

BEST PRACTICES

The importance of clarity

EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. Does the provisional ballot system:

1. Distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
2. Place administrative demands on local jurisdictions that are realistically related to the staff and other resources available?
3. Display variation within the state great enough to cause concern that the system may not be administered uniformly from county to county?

Lessons of litigation for achieving clarity

Look to litigation from the 2004 election to shape new statutes or regulations that will increase the clarity of provisional voting procedures, increase predictability, and bolster confidence in the system.

1. Litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted.
2. Lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

EAC should recommend to the states that they:

☐Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.

☐Provide materials for local jurisdictions to train poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.

☐Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.

-- Provide poll workers the training they need to understand their duty to give those voters a provisional ballot.

Assess each stage of the provisional voting process

Before the election

- Clear information for voters on websites and in sample ballots.
- Training materials in every jurisdiction make poll workers familiar with the options available to voters.

At the polling place

- Design of provisional ballot
- Estimate supply of provisional ballots needed at polling places

Evaluating provisional ballots

- Define and adopt a reasonable period for voters who lack ID or other eligibility information bearing to provide it.
- A voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.
- Follow written procedure or checklist to record why a provisional ballot is rejected.

Assess each stage of the provisional voting process

Post-election

Best practice is for states to consider how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available in presidential elections.

Provide timely information to voters about the disposition of their provisional ballot.

- Are they now registered for future elections?
- If not, what they need to do to become registered?

Conclusion

This systematic analysis constitutes a quality improvement program for provisional voting, one that holds promise for every state.

3. How did litigation affect the implementation of Provisional Voting?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did State and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

TO ANSWER THOSE QUESTIONS

☐Surveyed 400 local election officials

☐Reviewed the EAC's Election Day Survey

☐Analyzed states' experience with provisional voting:

--use of statewide registration database

--treatment of out-of-precinct ballots

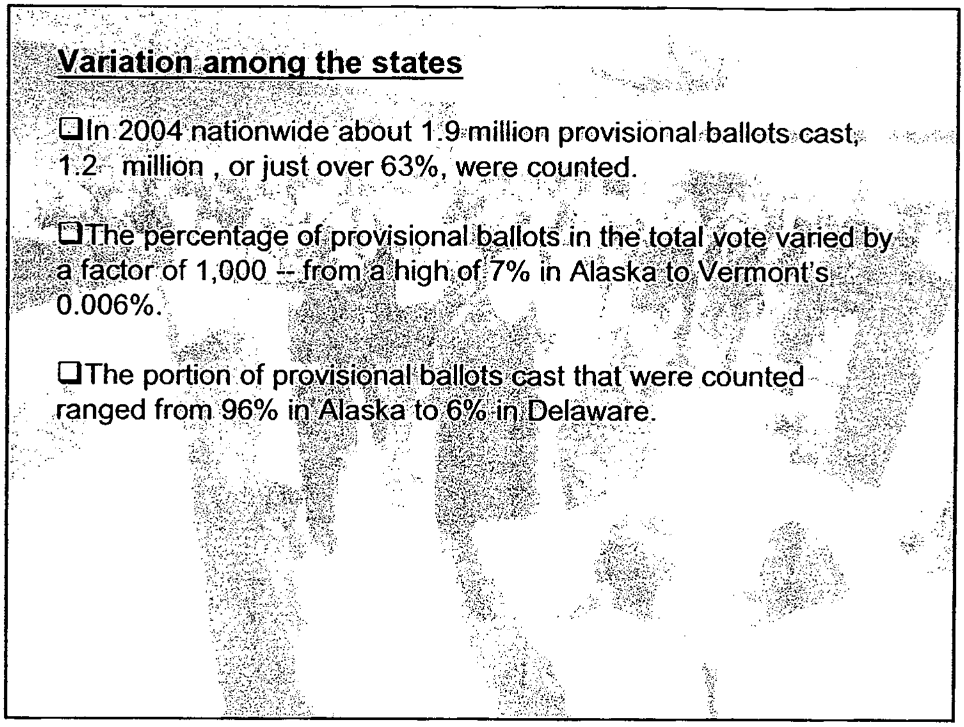
--use of different approaches to voter ID

--consistency

--time period allowed for ballot evaluation

☐Collected provisional voting statutes and regulations

☐Analyzed litigation

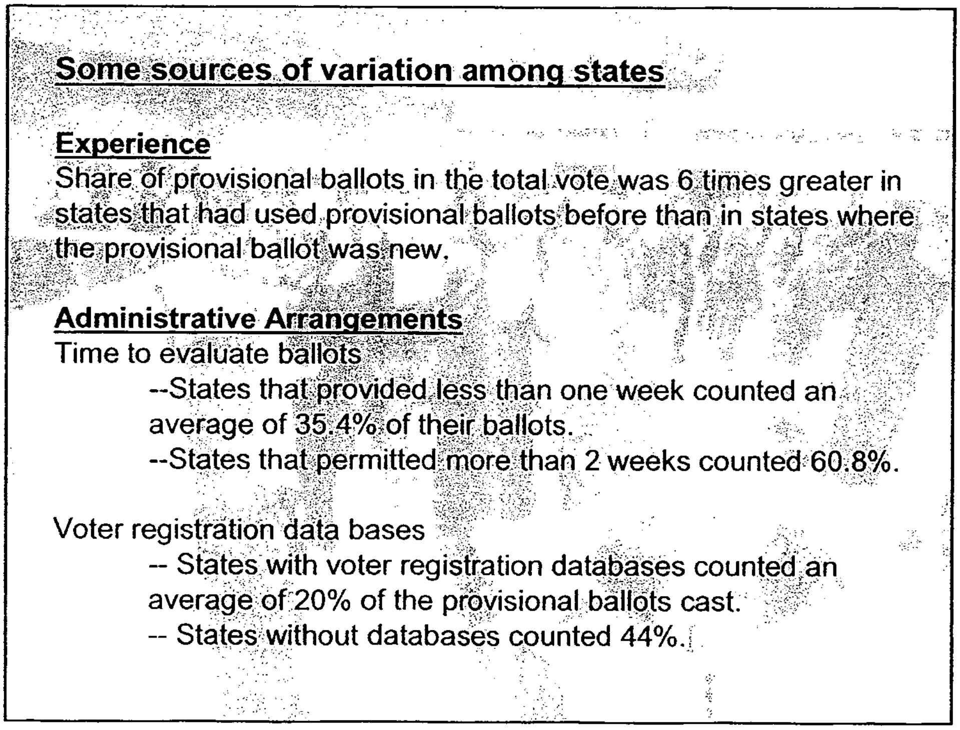


Variation among the states

❑In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million , or just over 63%, were counted.

❑The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.

❑The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.



Some sources of variation among states

Experience

Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

Administrative Arrangements

Time to evaluate ballots

--States that provided less than one week counted an average of 35.4% of their ballots.

--States that permitted more than 2 weeks counted 60.8%.

Voter registration data bases

-- States with voter registration databases counted an average of 20% of the provisional ballots cast.

-- States without databases counted 44%.

Variation within states

Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.

Resources available to administer provisional voting varied:

--The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.

--Small, rural jurisdictions and large, urban jurisdictions reported higher rates of an inadequate number of poll workers.

--Jurisdictions in poor areas reported more inactive voter registrations and more provisional ballots cast.

--Richer areas had more poll workers per polling place and reported lower rates of staffing problems per precinct.

---

1. How did states prepare for HAVA's provisional voting requirements?

Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.

- **Only about 1 in 10 made available to poll workers a voter registration database.**
- **Almost equally rare were training and written procedures for poll workers on the counting of provisional ballots.**

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

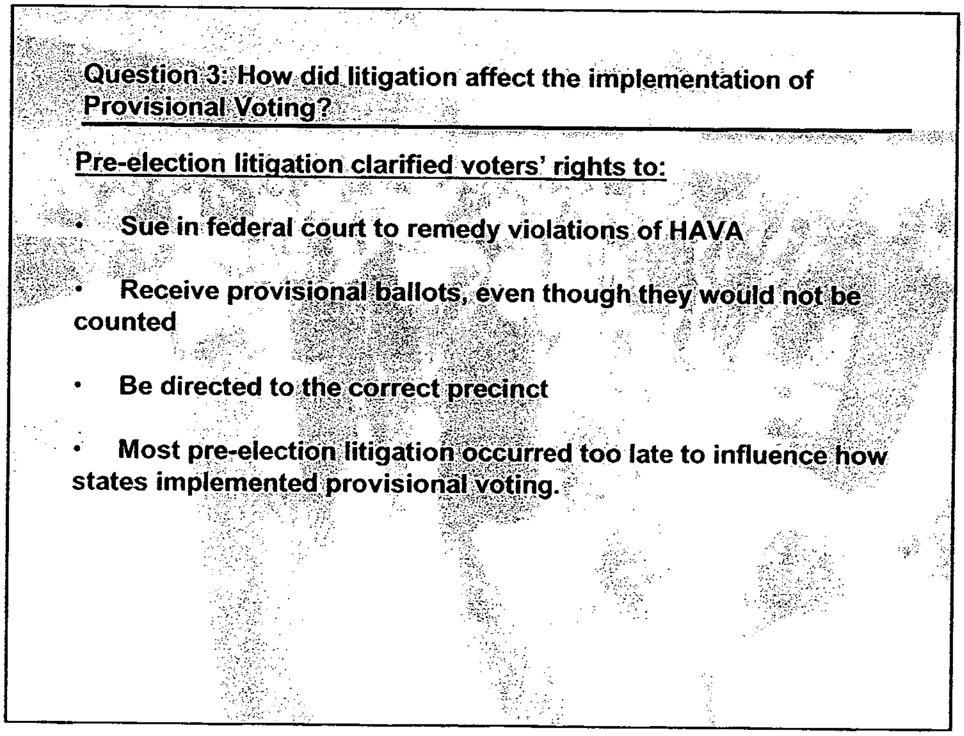
Local election officials in the "old" states felt more confident.

18 states were new to provisional voting; 25 others had experience.

"New" state officials felt:
-- Voters did not receive enough information about where to cast a provisional ballot in order to be counted.
-- More funding was needed to educate voters about their rights to cast a provisional ballot.

Provisional ballots in "old states" : more than 2% of the total vote, 4 times the proportion in "new" states.

Counting provisional ballots in the final vote, the "old" states averaged 58% nearly double the average (33%) in "new" states.



Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

- Sue in federal court to remedy violations of HAVA
- Receive provisional ballots, even though they would not be counted
- Be directed to the correct precinct
- Most pre-election litigation occurred too late to influence how states implemented provisional voting.

4. How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

There is room for improvement.

Legislative activity gives evidence that states were not satisfied with the effectiveness of their provisional voting systems.

Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the "new" states.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

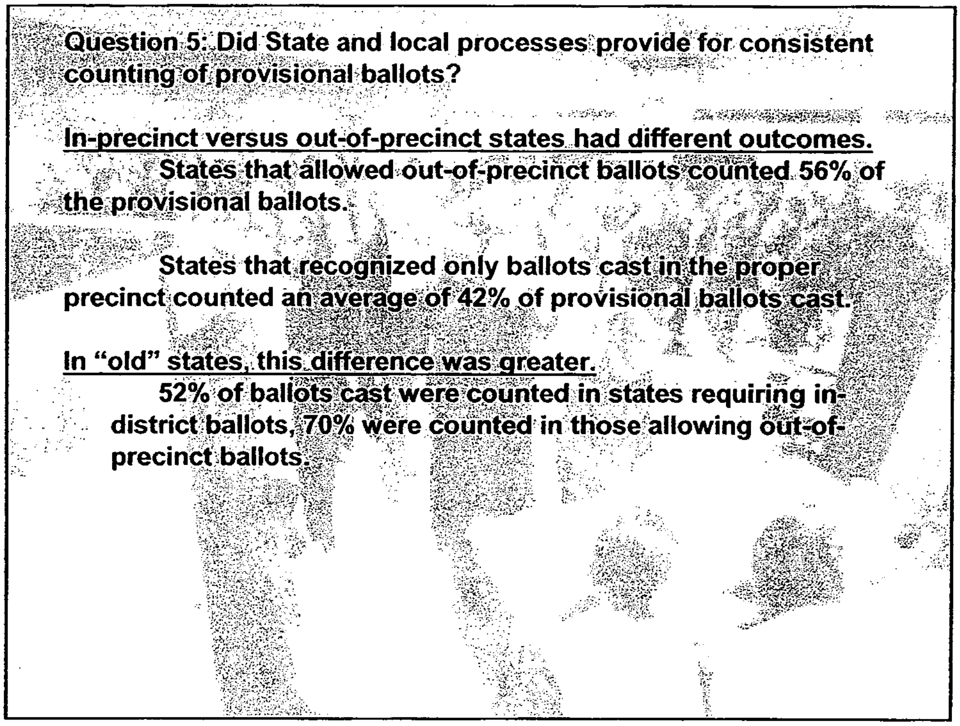
Little consistency existed among and within states.

The use of provisional ballots was not distributed evenly across the country. A few states accounted for most of the ballots cast.

Share of provisional ballots in the total vote was six times greater in experienced states than in new states.

More rigorous the state's Voter ID requirements the smaller the percentage of provisional ballots that were counted.

"New" states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).



Question 5: Did State and local processes provide for consistent counting of provisional ballots?

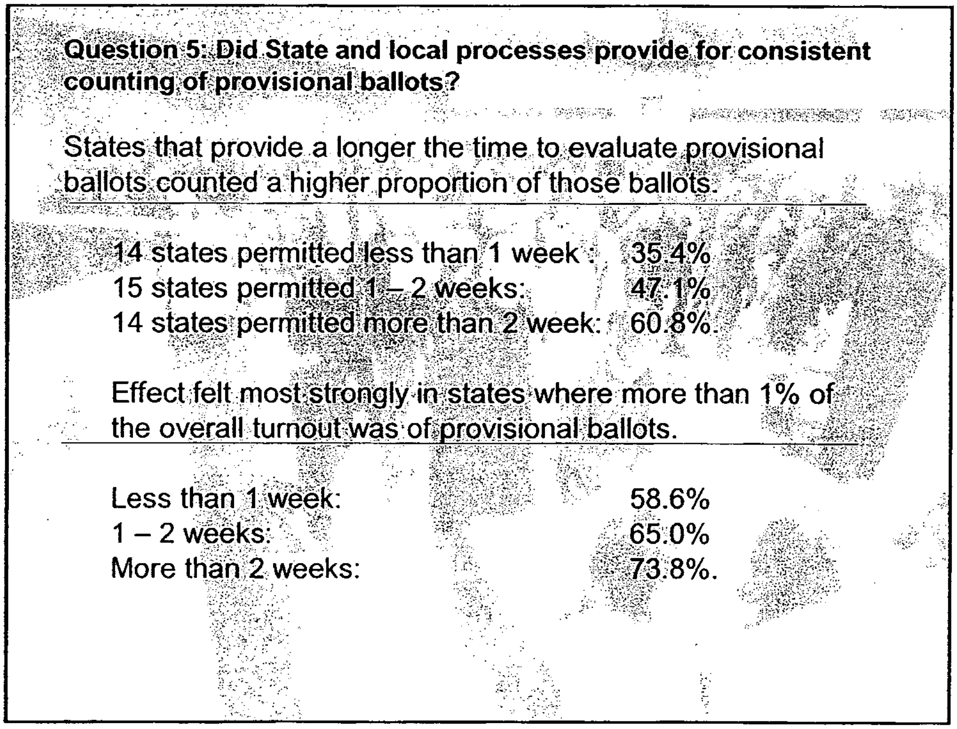
<u>In-precinct versus out-of-precinct states had different outcomes.</u>

States that allowed out-of-precinct ballots counted 56% of the provisional ballots.

States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.

<u>In "old" states, this difference was greater.</u>

52% of ballots cast were counted in states requiring in-district ballots, 70% were counted in those allowing out-of-precinct ballots.



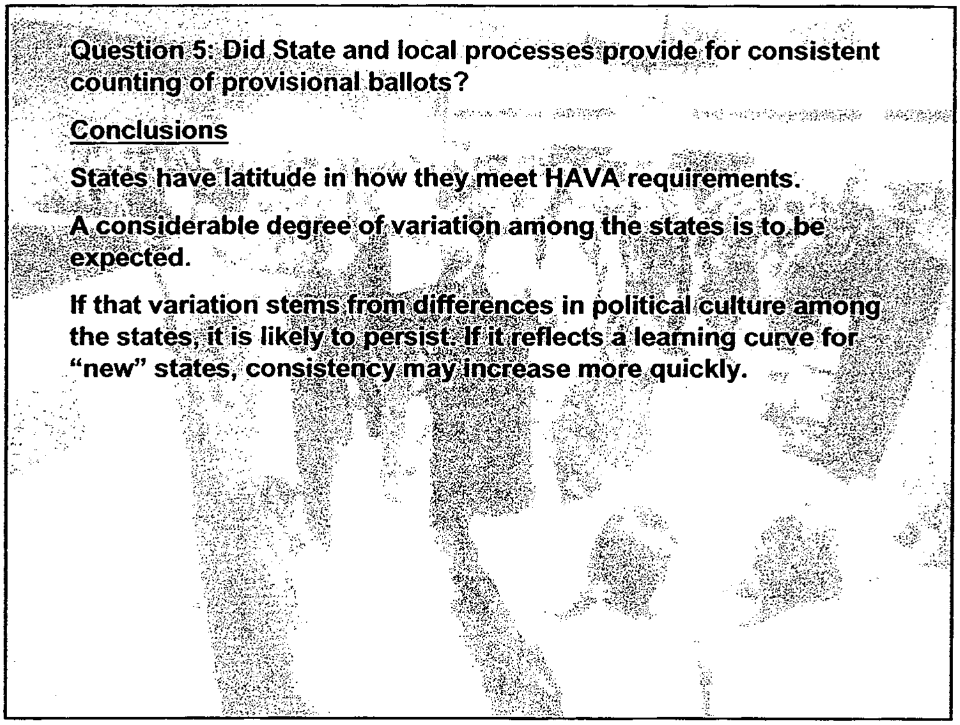
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

<u>States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.</u>

14 states permitted less than 1 week :	35.4%
15 states permitted 1 – 2 weeks:	47.1%
14 states permitted more than 2 week:	60.8%.

<u>Effect felt most strongly in states where more than 1% of the overall turnout was of provisional ballots.</u>

Less than 1 week:	58.6%
1 – 2 weeks:	65.0%
More than 2 weeks:	73.8%.



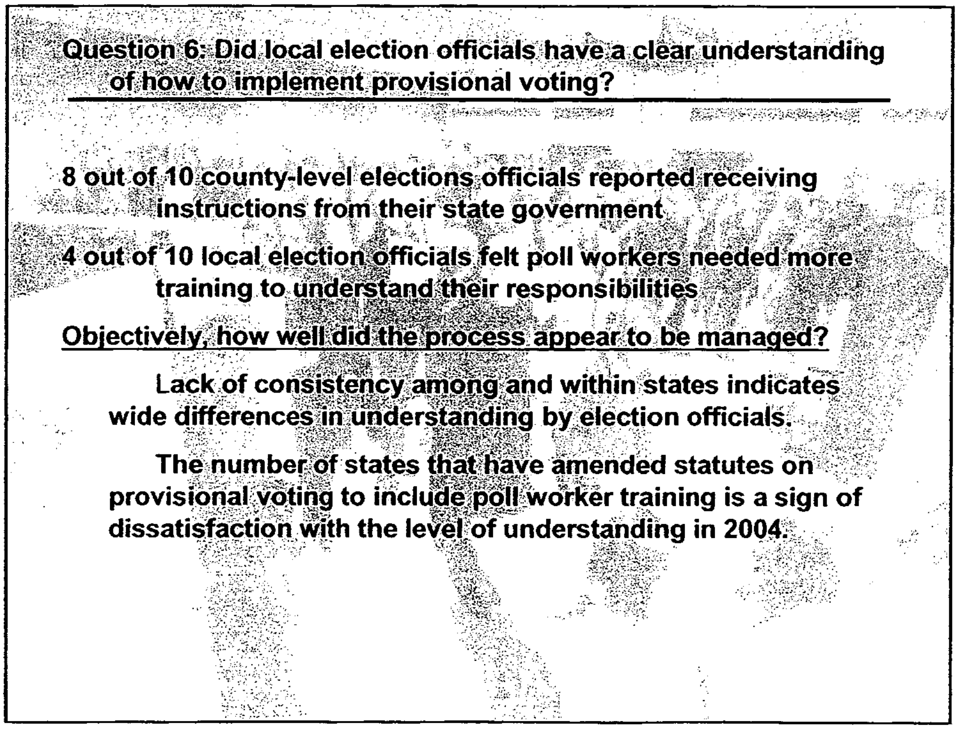
Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Conclusions

States have latitude in how they meet HAVA requirements.

A considerable degree of variation among the states is to be expected.

If that variation stems from differences in political culture among the states, it is likely to persist. If it reflects a learning curve for "new" states, consistency may increase more quickly.



Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

8 out of 10 county-level elections officials reported receiving instructions from their state government

4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities

Objectively, how well did the process appear to be managed?

Lack of consistency among and within states indicates wide differences in understanding by election officials.

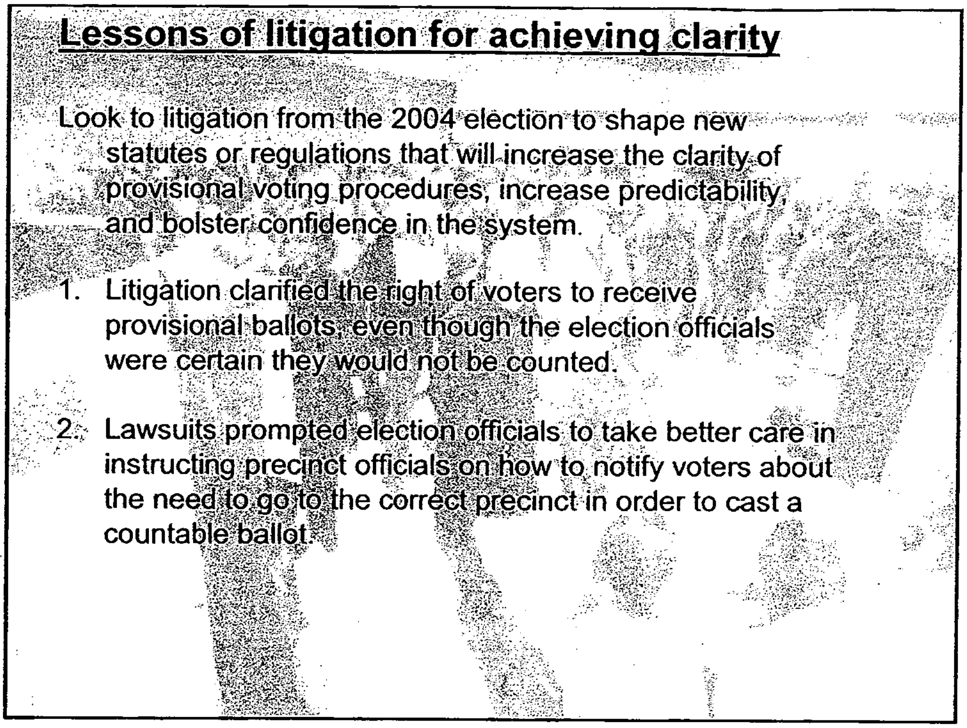
The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.

BEST PRACTICES

The importance of clarity

EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. Does the provisional ballot system:

1. Distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
2. Place administrative demands on local jurisdictions that are realistically related to the staff and other resources available?
3. Display variation within the state great enough to cause concern that the system may not be administered uniformly from county to county?

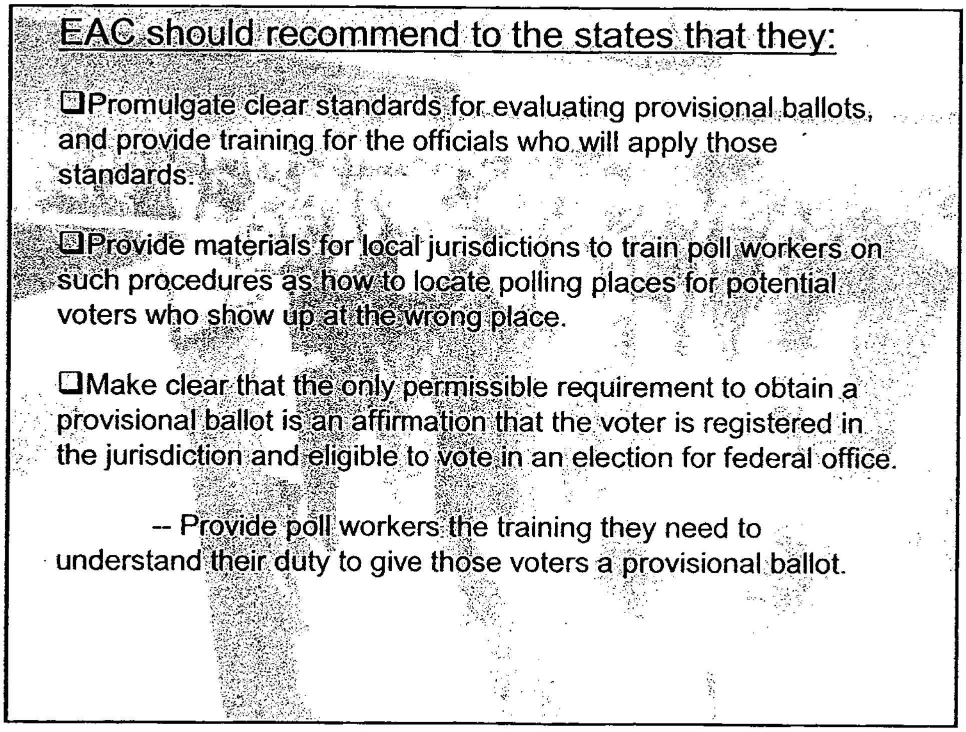


Lessons of litigation for achieving clarity

Look to litigation from the 2004 election to shape new statutes or regulations that will increase the clarity of provisional voting procedures, increase predictability, and bolster confidence in the system.

1. Litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted.

2. Lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.



EAC should recommend to the states that they:

☐Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.

☐Provide materials for local jurisdictions to train poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.

☐Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.

-- Provide poll workers the training they need to understand their duty to give those voters a provisional ballot.

024375

EAC should recommend quality improvement

Begin a systematic quality improvement program by collecting data on the provisional voting process. Data collected should include:

- ☐Specific reasons why provisional ballots were not counted
- ☐Measures of variance among jurisdiction
- ☐Time required to evaluate ballots by jurisdiction
- ☐Provisional votes cast and counted by jurisdiction

Assess each stage of the provisional voting process

Before the election

•Clear information for voters on websites and in sample ballots.

•Training materials in every jurisdiction make poll workers familiar with the options available to voters.

At the polling place

•Design of provisional ballot

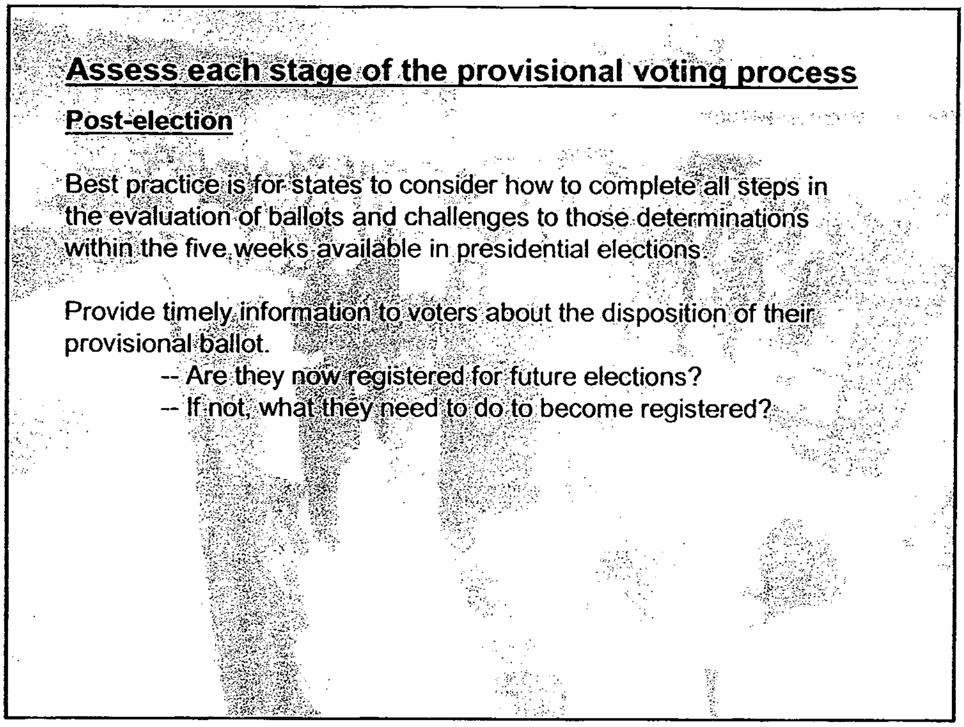
•Estimate supply of provisional ballots needed at polling places

Evaluating provisional ballots

•Define and adopt a reasonable period for voters who lack ID or other eligibility information bearing to provide it.

•A voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.

•Follow written procedure or checklist to record why a provisional ballot is rejected.



Assess each stage of the provisional voting process

Post-election

Best practice is for states to consider how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available in presidential elections.

Provide timely information to voters about the disposition of their provisional ballot.

- -- Are they now registered for future elections?
- -- If not, what they need to do to become registered?

> Subject RE: Presentations at the EAC Governing Boards

Karen, I don't have the capacity to produce a PDF copy of the report. (I thought we discussed this last week and you agreed that the word document would suffice.) Someone at Eagleton could surely covert the DOC file to PDF, but since I just read your email now (4:50), we could not provide a PDF copy today. Please let me know if you want me to pursue this tomorrow.

Thanks for the schedule below. But it raises a question. Earlier this week you told me that the Commissioners asked that we limit our presentation to 10 minutes and leave the rest of the time for questions and comments. As I noted in my response, condensing our reports to 10 minutes poses a challenge. Is the 10 minute limit no longer operative?

Tom O'Neill

Subject: Re:Presentations at the EAC Governing Boards

Tom-

Look forward to getting a PDF copy of the final versions of the Voter ID paper and the Provisional Voting Paper by COB today

Here is the timing breakdown for next week's presentations:

EAC Standards Board (137 members)

Tuesday, May 23, 2006
2:30-4:00 PM
Hamilton Ballroom
Provisional Voting
45 minutes for presentation
45 minutes for questions and answers

Wednesday, May 24, 2006
1:40-2:45 PM
Hamilton Ballroom
Voter Identification

40 minutes for presentation
25 minutes for questions and answers

EAC Board of Advisors (36 members)

Wednesday, May 24, 2006
8:30-9:15 AM
Lafayette Park Ballroom
Provisional Voting
20 minutes for presentation
25 minutes questions and answers

Wednesday, May 24, 2006
11:00-11:55 PM
Lafayette Ballroom
Voter Identification
30 minutes presentation
25 minutes questions and answers

EAC General Counsel Julie Thompson- Hodgkins will facilitate/moderate all of your sessions

Will be in touch tomorrow after the Commissioners have met.

Subject RE: Travel arrangement for the EAC Board of Advisors and Standards Board meeting

History: This message has been replied to.

Karen,

As we discussed last week, the Eagleton-Moritz team making the presentations at the advisory board meetings will include others in addition to Ned and me. While Ned and I will handle the briefing on the provisional voting report, the team for the briefing on the Voter ID report will include Dan Tokaji and Tim Vercellotti.

Just to understand what Adventure Travel is to provide: will its services include hotel reservations and travel, or does it have a more limited mission?

Thanks,

Tom O'Neill

Subject RE: Voter ID Report and Appendices

Thanks, Karen. I received both your emails and also had a telephone conversation with Aletha Barrington to fill me in on the details.

Also participating in the conference call on Thursday will be 3 members of our Peer Review Group: Mike Alvarez, Martha Kropf, and Tim O'Rourke.

The Eagleton-Moritz team on the call will include: John Weingart, Dan Tokaji, Tim Vercellotti, Ingrid Reed, and me.

I'm assuming you will guide the conversation and keep us all on time and topic.

Thanks for the schedule with the details of the EAC's review of our work.

Tom O'Neill

Subject Re: Review of EAC research on Voter Identification

History: This message has been replied to.

hello:

I just got your message by phone:

It would be best to send it to my home address:

61 Clay Street
Cambridge, MA 02140

Also, in your original phone message you said that there would be an honorarium associated with the review process, but this e-mail states that there will be no compensation for the review. I of course did not expect to be compensated at my market rate for consulting jobs (which is $225 an hour) but I was led to believe that I would be compensated in some manner for my time.

best

adam berinsky

Subject: E-mail to Voter ID peer reviewers

Tom and Julie-

Please take a look at this draft e-mail and let me know if it captures all that it needs to.

Would like to get this out ASAP- appreciate your feedback..

Dear Jonathan Nagler
Dear Jan Leighley
Dear Adam Berinsky

On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paper's findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:

- The research methodology which was used to support the paper's conclusions
- The specific statistical applications which were used to analyze the data and arrive at various conclusions

If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.

On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagleton's peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EAC's Board of Advisors and Standards Boards in late May.

While EAC agency policy does not allow us to provide you with financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Tom-

You'll recall that we discussed the fact that the peer review group who Eagleton has assembled do not have the sufficient technical expertise to give us the expert/technical advice we need on the statistical analysis of the Voter ID piece. Only two persons on Eagleton's peer review group have a requisite research and statistical background
and knowledge.

You may also remember that Mike told me that he thought that the paper needed an additional set of eyes and review by academics with a background and expertise in election statistics and analysis. When I initially proposed a review panel of six you said that was too many; we agreed that I would find three persons to do the review and that we would pay them a small honoraria for doing the review.

Subject: Re: Voter ID Paper --Final Draft

Tim, Tom, John, et.al--

The EAC has identified three academics who are going to serve as peer reviewers of the Eagleton Voter ID paper and research.

They are Jonathan Nagler of New York University, Jan Leighley, University of Arizona, and Adam Berinsky of MIT.
They are ready to review the documents as soon as they are available.

I would like to them one week to review the material and then have a joint conference call on **Thursday, May 11**, in which we would all have an opportunity to discuss the research methodology and statistical analysis, along with general comments and suggestions.

If you are able to get to me the paper and the supporting data analysis, I will distribute to the documents ASAP.
Also let me know, if you would, your availability on May 11 to do this conference all.

I anticipate that it will last approximately 90 minutes.

Subject: Re: Schedule for completion of Prov. Voting and Voter ID research

I think that a number of months ago we envisioned the Eagleton project culminating with a presentation of both of the papers at a public meeting. We had tentatively scheduled that presentation for the June public meeting. Also, we must provide for a review of these studies to EAC's Standards Board and Board of Advisors.

Clearly, plans have changed although we need to figure out how we have Eagleton present its final papers on Provisional Voting (already planned)and Voter Identification (still in process) to the EAC Standards and Advisory Boards.

Look forward to your suggestions on how best to proceed with wrapping up these two efforts.

Subject Re:

History: This message has been replied to.

Glad to help. I don't want to step on toes, but I'd recommend that you think about some sort of single-blind peer review, of the sort that is employed by many research journals and other organizations (like the NSF or National Academies of Science). I think that if you offer them a modest honoraria (perhaps $100) I think you'll find that the folks on that list would be likely to provide quick and thorough feedback to you.

Again, let me know if there is more that I can do to help.

I'm also willing to do a review for you myself. The issue is that I feel somewhat conflicted, given that I'm on their "peer review" panel. But on the other hand that does mean that I'm very well aware of the background of this project. I'd leave it up to you as to whether you think that a review from me would be appropriate or not.

Mike

EAGLETON INSTITUTE OF POLITICS

Contract to Provide Research Assistance to The EAC For the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
JULY 2005

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

August 15, 2005

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.4
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from July 1 through July 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The effort this month continued to focus on research for the analysis and alternatives paper, including the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states. We also prepared and delivered testimony at the EAC's regular monthly meeting in Pasadena on July 28.

The data collection, analysis, and compilation are all on schedule. Because of delays in agreeing on the composition of the Peer Review Group with EAC, however, the actual completion and submission of the analysis and alternatives paper to the EAC will most likely be delayed about a week beyond the target date in the work plan. We are scheduled to discuss the draft paper and guidance document prior to submission, with the EAC on September 6, and the final draft cannot be completed until several days after that date.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O'Neill at: tom_oneill@verizon.net or (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed this month.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states' actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting.

Progress: The 50-state (plus District of Columbia) chart created to collect data on provisional voting is complete. We have collected the statutes for all states. State by state summaries of provisional voting have been written for 47 states and D.C. A memorandum summarizing provisional voting litigation is complete. The collection of the documents associated with the litigation is nearing completion.

Challenges: The variety in the form of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The remaining 3 state summaries of provisional voting will be completed by August 8. Analysis of all the information, data, and survey results concerning provisional voting data will be performed in August.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with provisional voting in 2004. At the end of July the survey of 400 local election officials was nearing its end, and – as of this writing – is now complete with an analysis and report in draft form. We will rely on the survey results to improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: The state-by-state database is complete, as is a first draft of all state narratives. This work has been shared with the larger team and is being reviewed currently in preparation for constructing analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Work Plan: In the next month, revisions of the narratives will be complete. In addition to this research, we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting. The survey was designed to determine the following factors related to provisional voting at the county (or equivalent election jurisdiction) level:

- The content and quality of instructions provided to county officials by the states;
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting.

Progress: The fielding and initial analysis of the survey results are complete.

Work Plan: The information derived from the survey will be considered in drafting the analysis and alternatives document required under Task 3.5.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have completed tasks 3.10 and 3.11. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The chart created to collect data on voter identification is complete and is now being reviewed. Voter identification statutes are being collected.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: Review of the voter identification chart, the collection of the voter identification statutes, and the writing of the state by state summaries will be completed by the end of August.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of voter ID requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. It also contains exit poll data from the 50 states, providing demographic data of voter turnout. The analysis of that data is well underway.

Challenges: The initial methodology that was devised to investigate the questions involved in this part of the study proved insufficient, as the necessary data was unobtainable (the Census Bureau has not yet released their 2004 data). After re-developing an appropriate methodology, the necessary data has been assembled, we have resumed the analysis of this data.

Projection: The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-August.

Task 3.11 Public meeting on Voter Identification Requirements

Description: In early July, we continued our efforts to identify specific Voter ID topics or issues and panelists who could shed light on them. We recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we recommended that one panel include specific legislators on opposite sides of the issue from two different states, Mississippi and Wisconsin. We also discussed adding a researcher to the panel in order to place the debate in a national or historical context. We also recommended a panel of two academic researchers with contrasting points of view, to address the effects of Voter ID provisions under HAVA. In response to our suggestions, EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA.

By mid-July, the EAC had decided which topics and speakers should be invited, however most of those speakers proved unable to attend.

Progress: Tom O'Neill and Dan Tokaji attended the EAC Public Meeting held in Pasadena on July 28. Their presentations at the meeting described the progress of the research and our developing perspective on how to assess the quality of the provisional voting process in the states and identify possible steps for improvement.

Challenges: The changes in the scheduling of the July meeting delayed and ultimately made it impossible to assemble a panel, from which we could derive substantive insight into voter identification issues as they are playing out in the states. Additionally, due to the date of the hearing, the information from the hearing was not available as early in the research process as contemplated in the contract.

Projection: Preparation of the hearing summary will likely be delayed, due to the team's focus on preparation of the analysis and alternatives paper.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded that as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations might be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to the EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG's membership and the creation of additional committees to review our work. We provided an analysis of the cost and time involved in adopting the EAC's suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. In the end, the EAC determined that Eagleton should appoint a balanced Peer Review Group of its own choosing. Initial phone calls were made to all members of that group by the end of July, and written invitations and descriptions of the process have gone to all possible members who had indicated their interest in serving.

Challenges: Communications on this issue with the EAC were not clear or timely. The purpose of the PRG is to review our work, and to comment on our research design, which is well underway. We had planned to have the PRG in place early enough in the project to enable them to provide feedback, including the research design. While we are confident in the quality of our work, the experience and perspective of the Peer Review Group will strengthen our analysis and recommendations as we find a way to receive its critique in the more limited time now available. The delay in creating the Peer Review Group will result in a delay in the completion of the final draft of the analysis and alternatives paper and in the preliminary guidance document.

Projections: The work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: The Moritz team has provided Eagleton staff with all completed work. An Eagleton staff member reviews the content and formats of data from all supporting research and will (re-)format once the work has been completed for the compendium and reports submitted to the EAC. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

Projections: By the end of July 2005, much of the above referenced research has been completed. The entire project team has begun the process of reviewing all work, and will combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

Progress: Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.

Subject Re: Peer Review Group

Tom-

Thank you for sharing this list of your Peer Review Group members, to-date. I will share this list with the Commissioners and will be certain to let your know of their feedback, if any.

I will also be back in touch regarding Eagleton's research around voter fraud and the research project EAC will be undertaking,this fall, around voting fraud and voter intimidation. The EAC is presently in the process of finalizing a work and staff plan for this project and once it is completed, I will be certain to brief you on it.

In the meantime, EAC staff and several of the Commissioners looks forward to meeting with the Eagleton/Moritz team on September 6 at 1:30 PM.

Subject Peer Review Group

Karen,

Attached is a report on the status of recruitment of members of the Peer Review Group. We extended 9 invitations. We have four confirmed members, one reluctant turn-down, one who has yet to respond to an initial inquiry, and are awaiting confirmation from 3 others who initially agreed. Please let me know if you need additional information.

EAC CONTRACT #05-66 Consulting Services to Assist EAC in the Development of a Voting Fraud and Voter Intimidation Project

Background

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

Due to the unavailability of internal staff, EAC needs to obtain consulting services to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. If so, the consultant would also be tasked to define the scope of the project and prepare a Statement of Work for the EAC to use for a subsequent competitive procurement. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two consultants, who will work jointly to perform the work described below and produce the required deliverables.

Tasks

1. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections. Submit this description to the EAC for review and approval.

2. Using the description developed in Task 1, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.

3. In consultation with EAC, identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. Provide the Working Group with the results of Tasks 1 and 2 as background information. Develop a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.

4. Prepare a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future research resulting from this effort.

5. Should the EAC decide to pursue one or more of the Task 4 recommendations, Consultant shall define appropriate project scope(s) and prepare Statement(s) of Work sufficient to issue for competitive procurement.

Special Considerations

Work for Hire. The services performed under the terms of this agreement are considered " work for hire," and any intellectual property or deliverables, including but not limited to research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

Acceptance of Work Product. The EAC Project Manager for this effort is Karen Lynn-Dyson, EAC Research Manager, who will review and approve all work.

Period of Performance and Compensation

The period of performance for this contract is six months, with a fixed price ceiling of $50,000 for labor. The Consultant is expected to work at least 450 hours during this period. The EAC suggests that these hours be distributed evenly over the period so that the Consultant is working approximately 20 hours per week. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, if required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. A total of $5,000 has been allocated for reimbursement for travel and other allowable expenses.

Invoicing

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

Contract Termination

This contract can be terminated in advance of the current end date by two weeks' notice in writing by either of the parties.

Deliverables and Timetable

Deliverable	Due Date
Project work plan	10 days after contract award
Progress reports	monthly
Description of voting fraud and voter intimidation	October 2005
Summary of background research and associated source documentation	January 2006
Convene working group	February 2006
Summary report describing findings and recommendations for future EAC research	March 2006
Statement(s) of Work for future research project(s)	TBD

Karen,

Thanks. We are aiming to complete drafting the recommendations for Guidance and Best Practice for Provisional Voting in the next 10 days, so the written comments will be most helpful if they arrive in that time. And, of course, we will be revising the analysis documents in line with the comments from the EAC and the PRG during that time period as well.

Subject Re: Provisional Voting Report Status and Request for Advice

John-

Many thanks for getting this draft document to us.

Over the next day or so I will spend time with key EAC staff reviewing the document and considering your questions. As you may recall, Commissioner Martinez has taken a prominent role in the review of your initial work and I am certain he will continue to do so. Sadly, the Commissioner lost his mother two weeks ago and, consequently, will not return to the office until next week.

It is likely that EAC staff will not be able to give you a definitive answer on some of your questions until the Monday after Thanksgiving. I will, however, try to answer some of the administrative questions before that time.

Subject Provisional Voting Report Status and Request for Advice

Karen - We would like to talk with you about the process and schedule for completing our work in a way that is most useful to the EAC. I am attaching a draft timeline for the completion of this work and listing below five specific questions we need to resolve as quickly as possible. I would appreciate it if you would call me to discuss how best to address these matters - whether by telephone or by coming to meet in Washington.

We are planning to submit our report on Provisional Voting to the EAC by November 18^th . Although it is not required in our contract, we will at the same time give copies to the members of the Peer Review Group offering them the opportunity to send us any additional corrections or other comments.

We are considering making all our recommendations for both Provisional Voting and Voter ID in the form of Best Practices. Some of them might well lend themselves to Guidance, but our discussion of the earlier draft with the EAC left us with the clear impression that on this topic the preference was for recommendations for Best Practices rather than a Guidance document. The calendar also argues for the Best Practices route to enable the EAC to give states advice they can use in 2006. (The attached draft timeline would need to be revised if the EAC prefers to propose some of the recommendations as Guidance.)

QUESTIONS:

1. Does the EAC agree with the approach described above to make all recommendations in the form of Best Practices rather than Guidance?

2. How long will it take the EAC to review and return comments on our draft Provisional Voting document? Is our attached revised schedule realistic in anticipating EAC comments no later than the week of December 12^th on the report we send you at the end of this week?

3. After we revise our report on Provisional Voting to reflect any comments we receive from the EAC, and follow a similar process for our report on Voter Identification, what further steps would the Commission like us to take? Would you want us to conduct a review with your Board of Advisors and/or hold public hearings even though these steps are, we understand, required only for a Guidance Document? A review by the Board of Advisors would offer the opportunity to solicit suggestions for Best Practices from its members, thus strengthening the document and building a constituency for their adoption. (The attached draft timeline does not include such additional reviews.)

4. In any case, we will need a no-cost extension to the contract to carry us past December 31^st . How do we make that request?

5. Assuming that we conduct fewer public hearings than we had anticipated, can we reallocate funds we had budgeted for that purpose to cover the higher than anticipated personnel and consultant costs we will be incurring after the first of the year?

We look forward to discussing these matters with you.

Thanks, John

Deliberative Process Privilege

DRAFT FOR DISCUSSION

REVISED SCHEDULE FOR EAC PROJECT
November 2005 – February 2006

November 10, 2005
Assumes no guidance document, only analysis and recommended best practices

DATE	Project Management	Provisional Voting	Voter ID
Week of 10/31		Review draft report to EAC (Team) Submit comments on report (Team)	Voter ID Research to TV
Week of 11/7	Status reports to JD for October tasks (all)	Redraft report (TON) Review and approve report (Team) Final draft report (TON)	Research continues (TV)
Week of 11/14	Submit monthly progress report (JD)	**Submit report to EAC for review** and to PRG for information Discuss with EAC use of Board of Advisors to expand "best practices." (TON, JW) EAC reviews report	Research continues (TV)
Week of 11/21		EAC review continues	Complete data collection for Voter ID analysis. (TV)
Week of 11/28		EAC review continues	Draft report on Voter ID analysis (TV)

Week of 12/5	Status reports to JD for November tasks (all)	EAC review continues	Internal review (PT)
Week of 12/12	Submit monthly progress report (JD)	Receive EAC comments on report Revise and PT review	Revise draft (TV) Draft alternatives (TON) Review and comment on alternatives (PT)
Week of 12/19		**Finalize analysis and best practices to EAC for publication**[1]	Complete draft report and alternatives (TV, TON)
Week of 12/26			Review draft report and alternatives (PT)
Week of 1/2/06	Status reports to JD for December tasks (all)		**Report and alternatives to PRG**
Week of 1/9/06			PRG meets and comments Revise (TV & TON)

---

[1] If the EAC chooses not to issue a Guidance Document on provisional voting but only to recommend "best practices," the register publication, hearing and comment period may not be required, which would shorten the process by at least 30 days.

DRAFT FOR DISCUSSION

Week of 1/16/06	Submit monthly progress report (JD)	[redacted]	**Submit draft report, alternatives and compendium to EAC** EAC reviews
Week of 1/23/06			EAC review continues
Week of 1/30/06			Comments from EAC Revise (TV & TON)
Week of 2/6/06	Status reports to JD for January tasks (all)		Review and approve revised report and recommendations for best practices (PT)
Week of 2/13/06	Submit monthly progress report (JD)		**Submit report and best practices to EAC**
Week of 2/20/06	FINAL status reports to JD for all tasks (all) Final project and fiscal report to EAC **PROJECT ENDS**

Subject: October Progress Report

Karen,

Attached is the Progress Report for October. Please note that this report includes at attachment showing how our study classifies each state on key variables, such as counting out-of-precinct ballots, requirements for ballot evaluation, and other variables. It also displays how the data we used differs for some states for the vote counts reported by the Election Day Survey. We believe that our data is more accurate and complete (see for example the data for New Mexico and Pennsylvania).

I look forward to responding to any questions or concerns you or others at the EAC may have.

Tom O'Neill

EAGLETON INSTITUTE OF POLITICS

Contract to Provide Research Assistance to the EAC For the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
October 2005

For
UNITED STATES ELECTION ASSISTANCE COMMISSION
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005

November 15, 2005

Prepared by:
Eagleton Institute of Politics
Rutgers, The State University of New Jersey
191 Ryders Lane
New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.5
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from October 1 through October 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In October we focused on finalizing our Provisional Voting analysis paper, including the development of recommendations to the EAC for a draft guidance document and best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. (See the attachment to this Progress Report for the details.) The importance of this demanding effort was described in September's Progress Report.

Also in October we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We will seek a meeting with the EAC in the next several weeks to confer about the schedule to complete the project and alternative approaches that could speed the conclusion of our work.

We will submit to the EAC a final draft of our report, a preliminary guidance document, and draft best practices before Thanksgiving. We project that EAC will take 3 to 4 weeks to review and react to that final draft. And we understand that after its review, the EAC will decide if it should move towards issuing a Guidance Document or recommending best practices. If the EAC does decide to issue a Guidance Document on Provisional Voting, the time needed for a review by the advisory boards is likely to delay a public hearing until early February.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to tom_oneill@verizon.net or by telephone at (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, Tasks 3.5 and 3.6 are nearing completion.

Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of Provisional Voting and develop alternative means to achieve the goals of Provisional Voting.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states' actual experience with Provisional Voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on Provisional Voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and has completed this research.

Progress: We have completed the memorandum outlining Provisional Voting legislative changes since the 2004 election and we are continuing to clarify the laws prior to these changes.

Challenges: The variety in the form and frequency of Provisional Voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The final analysis will be sent to the EAC by Thanksgiving.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with Provisional Voting in 2004. The report findings from the survey of 400 local election officials are now complete. The survey results have proven to be instrumental in shaping our understanding of actual practice in administering Provisional Voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with Provisional Voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to Provisional Voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: We completed a state-by-state narrative of developments in Provisional Voting and distributed it to the EAC and the PRG. This work has been helpful in understanding the context of the data collected on provisional voting from the states.

Challenges: The primary obstacle to constructing the narratives was difficultly in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent several revisions to incorporate up-to-date and reliable information. Now that so many other analyses, including the Election Day Survey, have been released, we were challenged by different interpretations of the same basic facts. But the reconciliation of interpretation and data collection has been invaluable in establishing rigor in our report.

Work Plan: We completed revisions of the narratives incorporating comments from the PRG and addressing any discrepancies between our findings and other interpretations of similar information included in other studies.

PROVISIONAL VOTING STATISTICAL ANALYSIS

Description: During October the Eagleton research team continued to check its statistical analysis, and worked to reconcile the classifications of this analysis (such as states counting only those provisional ballots cast within the proper precinct versus states that counted ballots cast within the proper county) with the classification made in other parts of this study or in other studies (such as the Election Day Study or *Electionline* reports).

Progress: The effort to double check all of the classifications used in the study is complete. The results of this effort are displayed in the attachment to this progress report, "Characteristics of the Provisional Voting Process -- Classification of the States," beginning on page 9. Only Delaware and Arkansas remain unclear in regard to one of the measures, and both states have been contacted to receive clarification in this area..

Challenges: The difficulties encountered have been a result of communication delays and time constraints. Some states have been more responsive to our inquires about their practices than others. Overall, this is not an irresolvable problem but it does slow the process of completion down.

Work Plan: By early-November the final revision of the statistical analysis, which includes full reconciliation of all data within the study, will be complete. The reconciliation of data is displayed in the attachment to this progress report.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Eagleton Center for Public Interest Polling (CPIP) conducted a national survey of county election officials to measure several aspects of Provisional Voting.

Progress: The analysis of the survey results and findings report is complete. As a result of the critique by the PRG, the research team is revising and clarifying the descriptions of the survey design and sample selection process to make the research methods more transparent.

Work Plan: We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5. We will include necessary clarifications regarding survey design and sample selection in the final analysis and alternatives document.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations now nearing completion constitutes the draft preliminary guidance document. Based on our conversation with the EAC, the draft gives the EAC the option of proceeding with a guidance document or issuing recommendations to the state for best practices, recommendations that would not constitute voluntary guidance. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we will await the EAC's decision on how to proceed.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is becoming the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 State (plus the District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: Analysis of voter identification data has begun and will increasingly become the central focus of our work.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also used exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout.

Challenges: The analysis of these data had been postponed until the data reconciliation of Provisional Voting is complete. As a result of the extensive revision and data reconciliation efforts aimed at the Provisional Voting section of our work VID had been temporarily placed on hold. We are now beginning data analysis on the impact of voter identification requirements on voter turnout.

Work Plan: The analysis of the impact that voter identification requirements have upon voter turnout should be completed by early December. Early January is our target to deliver the draft report and outline of alternative policies to the Peer Review Group. In mid January, the EAC would receive a draft report and recommendations that take into account the comments of the PRG.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: Eagleton has stayed in touch with members of the Peer Review Group since the September 21st conference call, and has solicited their final comments on the Provisional Voting research. During October, we telephoned two members who did not participate in the conference call to confirm their commitment to serving as members of the Peer Review Group. Profess Guy Charles affirmed his interest. Professor Pamela Karlan did not return the call. The revisions in the schedule for the project have now made it possible to begin the process of scheduling a meeting of the PRG to consider our draft report and recommendations on Voter Identification Issues. We anticipate that meeting will take place the second week of January.

Challenges: No new challenges were encountered during October.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project October 1- October 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

ATTACHMENT TO OCTOBER PROGRESS REPORT

Characteristics of the Provisional Voting Process
Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The categories analyzed here are:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

Please note that:

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and did include it in our analysis.

New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting[1] and condensing its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We collapsed all of the states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots as "old" states, because the states in all three categories would have been familiar with key aspects of provisional voting.. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

---

Table 1
CATEGORIZATION OF STATES -- Old vs New

Old States	New States	HAVA Exempt or NA
Alaska	Connecticut	Idaho
Alabama	Delaware	Maine
Arkansas	Georgia	Minnesota
California	Hawaii	New Hampshire
Colorado	Illinois	North Dakota
DC	Indiana	Wisconsin
Florida	Louisiana	Wyoming
Iowa	Massachusetts	
Kansas	Missouri	
Kentucky	Montana	
Maryland	Nevada	
Michigan	Oklahoma	
Mississippi	Pennsylvania	
Nebraska	Rhode Island	
New Jersey	South Dakota	
New Mexico	Tennessee	
New York	Utah	
North Carolina	Vermont	
Ohio		
Oregon		
South Carolina		
Texas		
Virginia		
Washington		
West Virginia		
26	**18**	**7**

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[2] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases

---

[2] "Election Preview 2004: What's changed, What Hasn't and Why". This study can be found at: http://electionline.org/Portals/1/Publications/Election.preview.2004.report.final.update.pdf

because we found they had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Table 2
CATEGORIZATION OF STATES -- Statewide Registration Database

Had Database 2004	No Database A-N	No Database N-W	HAVA Exempt or NA
Alaska	Alabama	Ohio	Idaho
Arizona	Arkansas	Oregon	Maine
Connecticut	California	Pennsylvania	Mississippi
Delaware	Colorado	Rhode Island	Minnesota
District of Columbia	Florida	Tennessee	New Hampshire
Georgia	Iowa	Texas	North Dakota
Hawaii	Illinois	Utah	Wisconsin
Kentucky	Indiana	Vermont	Wyoming
Louisiana	Kansas	Virginia	
Massachusetts	Maryland	Washington	
Michigan	Missouri		
New Mexico	Montana		
Oklahoma	Nebraska		
South Carolina	Nevada		
South Dakota	New Jersey		
West Virginia	New York		
	North Carolina		
16	**27**		**8**

Minnesota has a statewide database but was excluded from the analysis because it did not offer provisional ballots and was exempt from the HAVA requirements.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election[2]. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-
of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

Table 3
CATEGORIZATION OF STATES -- Counting Out-Of-Precinct Ballots

Out-of-Precinct	In-Precinct Only	HAVA EXEMPT OR NA
Alaska	Alabama	Idaho
Arkansas	Arizona	Maine
California	Colorado	Mississippi
Delaware	Connecticut	New Hampshire
Georgia	District of Columbia	North Dakota
Illinois	Florida	Wisconsin
Kansas	Hawaii	Wyoming
Louisiana	Indiana

	Ohio	
	Oklahoma	
	South Carolina	
	South Dakota	
	Tennessee	
	Texas	
	Virginia	
	West Virginia	
17	26	7

Voter Identification

We relied on Electionline studies, including the Voter Identification study[3] and the 2004 Election Preview, to classify the states on their requirements for voter identification. Each state's categorization is taken directly from the Electionline studies except Hawaii.[4] The five different, and increasingly rigorous, categories are: Give Name (8 states), Sign Name (14 states), Match Signature (8 states), Provide ID (15 states), and Photo ID (5 states).

---

[3] This study can be found at: http://electionline.org/Portals/1/Publications/Voter%20Identification.pdf

[4] In 2004, ElelctionLine listed Hawaii as requiring identification. Our review of statutes revealed that Hawaii could require photo ID. Since that is the most rigorous form of identification that may be required of voters, we classified Hawaii under this category.

Table 4
CATEGORIZATION OF STATES -- Forms of Identification Required
States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

Give Name	Sign Name	Match Signature	Provide ID	Photo ID
Maine	California	Illinois	Alabama	Florida
Massachusetts	DC	Nevada	Alaska	Hawaii
New Hampshire	*Idaho*	New Jersey	Arizona	Louisiana
North Carolina	Indiana	New York	Arkansas	South Carolina
Rhode Island	Iowa	Ohio	Colorado	South Dakota
Utah	Kansas	Oregon	Connecticut	
Vermont	Maryland	Pennsylvania	Delaware	
Wisconsin	Michigan	West Virginia	Georgia	
Wyoming	Minnesota		Kentucky	
	Mississippi		Missouri	
	Nebraska		Montana	
	New Mexico		*North Dakota*	
	Oklahoma		Tennessee	
	Washington		Texas	
			Virginia	
9	**14**	**8**	**15**	**5**

South Dakota complicates the effort to assign each state to a category. It permits voters to sign an affidavit that would allow them to vote without presenting photo ID. While Hawaii did not normally require photo ID, its statutes gave challenged voters the opportunity to respond by producing a photo ID.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Table 5
CATEGORIZATION OF STATES – Ballot Evaluation Methods
States in italics are exempt from HAVA or did not report Provisional Ballot data and are not included in the analysis.

Signature Match	Data Match	Affidavit	Return with ID	NA
Alaska	Alabama	Connecticut	Indiana	Idaho
California	Arizona	Delaware	Iowa	Maine
Florida	Arkansas	Georgia	Kansas	Mississippi
Oregon	Colorado	Hawaii	Maryland	Minnesota
	DC	Illinois	Michigan	New Hampshire
	Louisiana	Kentucky	Montana	N. Carolina[*]
	Missouri	Massachusetts	New Jersey	N. Dakota
	Ohio	Nebraska	New Mexico	Wisconsin
	Oklahoma	Nevada	Texas	Wyoming
	Pennsylvania	New York	Utah	
	Rhode Island	South Dakota		
	S. Carolina	Tennessee		
	Washington	Vermont		
	West Virginia	Virginia		
4	14	14	10	9

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

---

[*] North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Table 6
Updated information by State

Received Updated Data	Did Not Receive Updated Data
California	Alabama
District of Columbia	Alaska[5]
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut
Kansas	Delaware
Louisiana	Georgia
Maryland[6]	Idaho
Missouri	Illinois
Montana	Kentucky
Nebraska[7]	Maine
Nevada	Massachusetts
New Jersey	Michigan
New Mexico	Minnesota
Ohio	Mississippi
Oklahoma	New Hampshire
Oregon	New York
Pennsylvania	North Carolina
Rhode Island	North Dakota
South Dakota	South Carolina
Tennessee	Utah
Texas	Vermont
Virginia	Wisconsin
Washington	Wyoming
West Virginia	
26 States	**25 States**

---

[5] Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

[6] Maryland reported provisional ballots that were counted per county, but not number cast.

[7] Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

Data Differences with Election Day Study

The data used in this study differs from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished, on the schedule laid out in our work plan. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

State	EDS Numbers Cast/Counted	Our Numbers Cast/Counted	Differences	Updated Info from State?
Alabama	6,478/1,865	6560/1836	82/29	No
Alaska	23,285/22,498	23,275/22,498	10/0	No
Colorado	51,529/39,086	51,477/39,163	52/77	No
Georgia	12,893/4,489	12,893/3,839	0/650	No
Hawaii	346/25	348/25	2/0	Yes
Iowa	15,406/8,038	15,454/8,048	48/10	Yes
Kansas	45,535/32,079	45,563/31,805	28/274	Yes
Montana	688/378	653/357	35/21	Yes
Nebraska	17,421/13,788	17,003/13,298	418/490	Yes
Nevada	6,153/2,446	6,154/2,447	1/1	Yes
New Mexico	6,410/2,914	15,360/8,767	8,950/5,853	Yes
N. Carolina	77,469/50,370	77,469/42,348	0/8,022	No
Ohio	157,714/123,902	158,642/123,548	928/354	Yes
Pennsylvania	No data	53,698/26,092	N/A	Yes
Texas	35,282/7,156	36,193/7,770	911/614	Yes
Vermont	121/30	101/37	20/7	No
Virginia	4,608/728	4,609/728	1/0	Yes
Washington	92,402/73,806	86,239/69,273	6,163/4,533	Yes
Wisconsin	374/119	373/120	1/1	No

Subject Re: Provisional Voting Report Status and Request for Advice

John-

Many thanks for getting this draft document to us.

Over the next day or so I will spend time with key EAC staff reviewing the document and considering your questions. As you may recall, Commissioner Martinez has taken a prominent role in the review of your initial work and I am certain he will continue to do so. Sadly, the Commissioner lost his mother two weeks ago and, consequently, will not return to the office until next week.

It is likely that EAC staff will not be able to give you a definitive answer on some of your questions until the Monday after Thanksgiving. I will, however, try to answer some of the administrative questions before that time.

Regards-

Subject Provisional Voting Report Status and Request for Advice

Karen - We would like to talk with you about the process and schedule for completing our work in a way that is most useful to the EAC. I am attaching a draft timeline for the completion of this work and listing below five specific questions we need to resolve as quickly as possible. I would appreciate it if you would call me to discuss how best to address these matters - whether by telephone or by coming to meet in Washington.

We are planning to submit our report on Provisional Voting to the EAC by November 18^th . Although it is not required in our contract, we will at the same time give copies to the members of the Peer Review Group offering them the opportunity to send us any additional corrections or other comments.

We are considering making all our recommendations for both Provisional Voting and Voter ID in the form of Best Practices. Some of them might well lend themselves to Guidance, but our discussion of the earlier draft with the EAC left us with the clear impression that on this topic the preference was for recommendations for Best Practices rather than a Guidance document. The calendar also argues for the Best Practices route to enable the EAC to give states advice they can use in 2006. (The attached draft timeline would need to be revised if the EAC prefers to propose some of the recommendations as Guidance.)

QUESTIONS:

1. Does the EAC agree with the approach described above to make all recommendations in the form of Best Practices rather than Guidance?

2. How long will it take the EAC to review and return comments on our draft Provisional Voting document? Is our attached revised schedule realistic in anticipating EAC comments no later than the week of December 12^th on the report we send you at the end of this week?

3. After we revise our report on Provisional Voting to reflect any comments we receive from the EAC, and follow a similar process for our report on Voter Identification, what further steps would the Commission like us to take? Would you want us to conduct a review with your Board of Advisors and/or hold public hearings even though these steps are, we understand, required only for a Guidance Document? A review by the Board of Advisors would offer the opportunity to solicit suggestions for Best Practices from its members, thus strengthening the document and building a constituency for their adoption. (The attached draft timeline does not include such additional reviews.)

4. In any case, we will need a no-cost extension to the contract to carry us past December 31^st . How do we make that request?

5. Assuming that we conduct fewer public hearings than we had anticipated, can we reallocate funds we had budgeted for that purpose to cover the higher than anticipated personnel and consultant costs we will be incurring after the first of the year?

We look forward to discussing these matters with you.

Thanks, John

Subject Re: voter ID research

Yes, I concur with your assessment of combining the work.

I do, however, think there are some particular research questions we'll want to probe related to the voter ID requirements piece. For instance, I think we'll want to gather some state-by-state data regarding their voter ID requirements, and will want to learn more about the State's experiences with voter ID requirements in the last election. Certainly, these inquiries can be folded into the research work a firm will do on provisional balloting.

Hope the NIST meeting is going well..

Karen -

Now that I've read again the voter ID section of HAVA, here's my recommendation for the research plan. I think this study should be combined with the provisional voting work because unacceptable voter ID is a reason for a voter receiving a provisional ballot. The impact of the HAVA voter ID requirements is somewhat broader but still the two are closely linked. Since the provisional voting research team is going to look at state law requirements and procedures anyhow, this would fit right in. So it would make sense to me to meld topics 4, 6 and 7 into a single research project with multiple products. What do you think? I'll run this approach by Commissioner Martinez at NIST tomorrow to get his view.

STATEMENT OF WORK FOR EAC VOLUNTARY GUIDANCE ON PROVISONAL VOTING AND VOTER IDENTIFICATION PROCEDURES

1.0 Contract Title: Data Analysis and Development of Guidance on Provisional Voting and Voter Identification Procedures for the U.S. Election Commission

2.0 Background: HAVA stipulates that in an election for Federal office each registered voter whose name does not appear on the official list of eligible voters, or an election official asserts is not eligible to vote, is permitted to cast a provisional ballot. The EAC seeks to examine the current state of provisional voting regarding how states prepared for the onset of HAVA provisional ballot requirements, how litigation affected the implementation of state requirements for provisional voting, how effective provisional balloting was at increasing the franchisement of qualified voters, and if the processes states and localities used consistently and accurately provided for the counting of provisional ballots.

HAVA also notes that voters meet the proper identification requirements if, in the case of an individual who votes in person, he or she presents to the appropriate State or local election official a current and valid photo identification or presents to the appropriate State or local election official a copy of various specified documents. In the case of the individual who votes by mail, he or she meet the proper identification requirements if, submitted with the ballot, is a copy of the voter's current and valid photo identification or other various specified documents. The EAC seeks to examine the current state of voter identification requirements including understanding the states' current rules, laws and requirements regarding voter identification (ID), how states have handled voter ID requirements in the past, what challenges states faced with enforcing voter ID requirements in the last election, and what changes, if any, states plan on implementing regarding voter ID requirements.

3.0 Key objectives of this contract include obtaining assistance with the analysis and interpretation of various data related to provisional balloting and voter identification activities which occurred in the last Federal election and obtaining assistance with the development of a guidance document regarding provisional voting and voter identification procedures.

4.0 Scope: The contractor will identify and perform analyses of various states' legislation, administrative procedures and court cases related to the implementation of provisional voting procedures that took place during the November 2004 Federal election. These initial analyses will help inform the EAC's February, 2005, public hearing on provisional voting.

From these data gathered and findings from the public hearing, the contractor will then draft a preliminary guidance document that will be reviewed and revised by the EAC's Board of Advisors. Once reviewed and subsequently published in the Federal Register, the Contractor will then arrange a public hearing to allow for public comment on the document. The contractor will synthesize and integrate the findings of the public hearing into the final guidance document that it develops and presents to the EAC.

The contractor will also examine, on a state-by-state basis, the voter identification processes and procedures required in that state. The contractor will examine states' experiences with voter identification with the November 2004 election, through a review of the EAC's Election Day and NVRA Surveys. Information gathered from the states, regarding the implementation of voter ID requirements will be incorporated into the public hearings the EAC will conduct as well as the subsequent guidance that is developed.

5.0 Specific Tasks

5.1 Prepare a project work plan. The Contractor will prepare and deliver to the EAC, no later than 10 days after the contract has been awarded, a brief project work plan outlining the project activities and tasks, the products to be delivered and, the timelines in which tasks and products will be delivered.

5.2 Analyze information gathered from a variety of identified sources (including data form EAC's Election Day survey) regarding provisional voting. Diagnose problems and challenges to provisional voting implementation and, hypothesize various alternatives to this implementation. Prepare report/memorandum summarizing research methodology and findings

5.3 Analyze information gathered from a variety of identified sources (including data from EAC's NVRA survey) regarding voter ID requirements. Diagnose problems and challenges to implementing voter ID requirements in the November 2004 election. Hypothesize/analyze the relationship between voter ID requirements and use of provisional voting in the November 2004 election. Prepare report/memorandum summarizing research methodology and findings.

5.4 Develop a "quick look" memorandum summarizing beginning findings of tasks 5.2 and 5.3 for use at the February 23, 2005 EAC hearing on provisional voting.

5.5 Prepare summary report of February 23, 2005 EAC hearing.

5.6 Use analyses and summaries from tasks 5.2, 5.3, and 5.5 to develop draft guidance on provisional voting. Submit draft guidance to EAC Commissioners and Advisory Board for review.

5.7 Use analyses and summaries from tasks 5.2, 5.3 and 5.5 to develop draft guidance on voter identification requirements. Submit draft guidance to EAC Commissioners and Advisory Board for review.

5.8 Incorporate EAC reviews and comments into draft guidance on provisional voting and on voter ID requirements. Prepare guidance for submission to the Federal Register . Collect comment from Federal Register review and incorporate into guidance document.

5.8 In consultation with EAC staff, plan and execute a public hearing on provisional voting and voter identification to present guidance developed by the EAC on these topics.

6.0 Contract Type. The contract types will be firm fixed price in the amount of XXXXX

7.0 Place of performance. The principal place of performance will be the Contract's place of business. Meetings and occasional work efforts may be performed at the EAC,

8.0 Period of Performance. The period of performance is from date of award until September, 2005.

9.0 Deliverables/Delivery Schedule:

- Project work plan - 2/11/05
- "Quick look" memo on provisional voting and voter ID requirements - 2/21/05
- Participation in provisional voting public hearing - 2/23/05
- Summary of public hearing - 3/16/05
- Report summarizing analysis of provisional voting - 4/29/05
- Report summarizing analysis of voter ID requirements - 4/29/05
- Draft guidance on provisional voting - 5/20/05
- Draft guidance on voter ID requirements - 5/27/05
- Submission for provisional voting guidance to Federal Register-6/20/05
- Submission of voter ID requirement to Federal Register-6/20/05
- Public hearing on provisional voting-7/27/05
- Public hearing on voter ID requirements -7/28/05
- Final guidance on provisional voting submitted to EAC- 9/01/05
- Final guidance on voter ID requirements submitted to EAC-9/-1/05

10.0 Inspection and Acceptance.

Subject Commissioner approval (by 2/25) of contracting process for work on Provisional Voting and Voter ID projects

Commissioners-

As was discussed during our session on February 17, 2005, please *review and provide your approval, disapproval or amendments* to the following items by **Friday, February, 25, 2005**:

1. The attached Scope of Work which outlines the tasks related to contract work around projects relating to voluntary guidance on provisional voting and voter identification procedures.

2. The proposal will be advertised beginning **February 28, 2005.**

3. The deadline for submitting proposals will be **March 14, 2005.**

4. Proposal review will be completed by EAC staff by **March 17, 2005**

5. Staff will recommend a contractor to the Commissioners on **March 18, 2005.**

6. Commissioners will be asked for their decisions no later than **Tuesday, March 22, 2005**

STatement of Work - Provisional Voting,Voter ID.doc

Thank you for your help and attention to this matter.

PROVIDING EAC ASSISTANCE IN DEVELOPING VOLUNTARY GUIDANCE ON PROVISONAL VOTING AND VOTER IDENTIFICATION PROCEDURES

0.0 Contract Title: Assistance to the U.S. Election Assistance Commission in the Development of Guidance on Provisional Voting and Voter Identification Procedures

1.0 Background: Sec. 302(a) of HAVA requires that all States allow the casting of provisional ballots in instances where a voter declares their eligibility to vote but their name does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. This section describes several requirements for implementation of provisional voting, but the States have considerable latitude in specifying how to carry out these requirements. The EAC seeks to examine how provisional voting was implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 Federal elections.

HAVA Sec. 303(b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents will result.

2.0 Objective: The objective of this contract is for EAC to obtain assistance with the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements for the purpose of drafting guidance on these topics for promulgation to the States in time for implementation for the 2006 Federal elections. The anticipated outcome of this activity is the generation of concrete policy recommendations to be issued as voluntary guidance for States.

3.0 Scope: In general the Contractor shall be responsible for all research and analysis activities, including the conduct of public hearings for fact finding and public comment purposes. However, in light of the urgent need to get this work underway, the EAC has scheduled a public hearing on February 23, 2005, on the topic of provisional voting.

An initial framework for provisional voting policy has been set by the court decisions rendered on the election procedures utilized in the 2004 election. The 6th Circuit decision, in particular, has drawn some boundaries which must be given due regard in the course of considering future policy alternatives for provisional voting.

Notice of public meetings and hearings is required to be published in the Federal Register. The Contractor shall be responsible for preparing the notice documents, and the EAC will submit the notices and cover the cost of publication. In addition, draft guidance documents must be published in the Federal Register to obtain public comment prior to their adoption. Again, the Contractor will work with the EAC to prepare the draft documents for publication, which the EAC will submit and cover the cost of publication. Comments received will be provided to the Contractor for analysis and incorporation into the final guidance documents, as appropriate.

4.0 Specific Tasks

For ease of reference, following task 4.3 the remaining tasks are listed separately under the headings of Provisional Voting and Voter Identification Requirements. It is understood that the work on these two topics will be conducted essentially concurrently, with Voter Identification activities starting approximately one month after Provisional Voting.

4.1 Prepare a project work plan. The Contractor shall prepare and deliver a brief Project Plan not later than 10 days after contract award. This plan shall describe how the Contractor will accomplish each of the project tasks, including a timeline indicating major milestones. A single document will be prepared to include both provisional voting and voter identification tasks. The Plan shall be presented at a project kickoff meeting with the EAC Project Manager.

4.2 Submit monthly progress reports. The Contractor shall submit a monthly progress report within 2 weeks of the end of each month. This report shall provide a brief summary of activities performed and indicate progress against the timeline provided in the Project Plan. Any issues that could adversely affect schedule should be identified for resolution. Budget status should also be provided.

4.3 Conduct periodic briefings for the EAC. The Contractor shall periodically meet with the EAC Project Manager and the lead Commissioner for this work to discuss research findings and progress. The Project Plan should make allowance for this activity. The number and frequency of briefings will be determined by the Contractor Project Manager and the EAC Project Manager as the work progresses. The Contractor may also be required to periodically brief the full Commission on their work.

Provisional Voting

4.4 Collect and analyze State legislation, administrative procedures, and court cases. An understanding of the disparities and similarities of how provisional voting was implemented around the country will provide a baseline for the consideration of future approaches. Seventeen States never had provisional voting before HAVA was enacted, while many other States did. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.5 Recommend alternative approaches for future implementation of provisional voting. The Contractor shall conduct a literature review to identify other research results and data available on this topic. The EAC Election Day Survey, for example, contained several questions on provisional voting. The EAC will make these survey data available to the Contractor. Based on their analysis of available research and the results of Task 4.5, the Contractor shall diagnose the problems and challenges of provisional voting implementation and hypothesize alternative approaches.

The Contractor shall assess the efficacy of these alternatives in relation to the following inter-related policy objectives: (1) enabling the maximum number of eligible voters to cast ballots that will be counted; (2) providing procedural simplicity for voters, poll workers, and election officials; (3) minimizing opportunity for voter fraud; and (4) maintaining a reasonable workload for election officials and poll workers. Additional policy considerations may be identified in the course of this research effort. The Contractor shall document and brief these alternatives to the Commission.

4.6 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board of Advisors meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.7 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.8 Arrange one public hearing for receiving public comment on draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the meeting

4.9 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

Voter Identification Requirements

4.10 Collect and analyze State legislation, administrative procedures, and court cases. It is assumed that the collection of information for analysis of voter identification requirements will be performed concurrently with the research for Task 4.5. An understanding of the disparities and similarities of how voter identification requirements were implemented around the country will provide a baseline for the consideration of future approaches. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.11 Convene a half day public hearing on the topic of voter identification requirements. The Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC. The Contractor shall identify three panels of three to four speakers each. The Contractor shall arrange for speaker attendance to include travel and per diem expenses. The EAC will provide publicity for the hearing. The Contractor shall prepare a document summarizing the proceedings and containing all testimony provided.

4.12 Recommend alternative approaches for future implementation of HAVA voter identification requirements. The Contractor shall conduct a literature review to identify other research results and data available on this topic. Based on their analysis of available research and the results of Task 5.11, the Contractor shall diagnose the problems and challenges of voter identification and hypothesize alternative approaches. The Contractor shall coordinate with the EAC to identify appropriate policy objectives by which to assess these alternatives. The Contractor shall document and brief these alternatives to the Commission.

4.13 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.14 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.15 Arrange one public hearing for receiving public comment on the draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the hearing.

4.16 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

Contract Type. The contract type will be Time and Materials with a ceiling of

6.0 Place of performance. The principal place of performance will be the Contractor's place of business. Meetings and occasional work efforts may be performed at the EAC offices.

7.0 Period of Performance. The period of performance is from date of award until October 28, 2005.

8.0 Schedule of Deliverables:

- Project plan – 10 days after contract award
- Progress reports – monthly
- Briefings – as required
- Analysis report on provisional voting - TBD
- Alternatives report on provisional voting – TBD
- Preliminary draft guidance on provisional voting - TBD
- Draft guidance on provisional voting for publication – 8/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on provisional voting for EAC adoption – 9/2005
- Analysis report on voter identification requirements – TBD
- Public hearing on voter identification requirements – TBD
- Summary of voter identification requirements hearing - TBD
- Alternatives report on voter identification requirements - TBD
- Preliminary draft guidance on voter identification requirements - TBD
- Draft guidance on voter identification requirements for publication – 9/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on voter identification requirements to EAC for adoption – 10/2005

REMAINING STANDARD CONTRACT TERMS TO BE PROVIDED.

Subject Evaluation Criteria, Provisional Voting RFP

Carol-

Here is my take on the evaluation criteria for the RFP.
Feel free to revise.
Let me know next steps in the review process, when you can.

K

EVALUATION CRITERIA Provisional voting.doc Karen Lynn-Dyson
Director, Help America Vote College Program
U.S. Election Assistance Commission
1225 New York Avenue , NW Suite 1100
Washington, DC 20005
tel:202-566-3123

EVALUATION CRITERIA

Request for Proposal-Development of voluntary guidance on provisional voting and voter identification procedures

These are the criteria and possible point values that will be sued to evaluate proposals.

1. Appropriateness of research methodology and adequacy of analytical strategy (15 points)
2. Principal Investigator's relevant experience (10 points)
3. Relevant organizational experience (10 points)
4. Compliance with proposal instructions (5 points)
5. Reasonableness of allocation of resources to work components (10 points)
6. Results of reference checks (5 points)

ELECTION ASSISTANCE COMMISSION
UNITED STATES OF AMERICA

Technical Evaluation Criteria
for
Development of Guidance on Provisional Voting and Voter Identification Procedures

Evaluator: Date:

Bidder:

1. Demonstrated understanding of the issues of provisional voting and voter identification. (30 points)

Factors: Grasp of major issues and subtle complexities of provisional voting (15 points), grasp of major issues and subtle complexities of Voter ID requirements (15 points)

2. Well-defined and organized research and analysis methodology. (20 points)

Factors: Demonstrated understanding of legal and legislative analysis (12 points), clearly delineated research methodology and plan for conducting analysis (8 points)

3. Principal Investigator's relevant experience. (20 points)

Factors: knowledge of and experiences with the elections process (8 points), knowledge of and experiences with public administration, legal and legislative analysis (8 points), conduct of project work similar to this effort (e.g., reporting to Congress, similar subject matter, (4 points)

4. Relevant organizational experience with this type of research. (15 points)

5. Compliance with proposal instructions. (5 points)

Factors: followed instructions (1), presented a clear proposal (2), overall quality of proposal (2)

6. Results of reference checks. (10 points)

Questions for reference checks:

1. Was work done on schedule?
2. Was work done within budget?
3. What was quality of work product?
4. Describe and characterize the working relationship.
5. Did contractor produce any unique insights, any value-added results?

Subject RE: Survey of local election officials

Greetings-

I checked in with my colleagues and they agree that the best approach for you to use is to purchase a list from a commercial publisher. While the EAC has been working on such a list it is a monumental task and a difficult list to assemble and keep current.

Also, I have just reviewed your project workplan. I'd like to receive it in a GANTT chart format.

I'm having difficulty getting a sense of the timeframes and various tasks that must be accomplished; a landscape rather than horizontal format will make this easier to grasp.

Thanks

K

Subject Survey of local election officials

Karen,

A survey of county election officials to learn their experience with provisional voting in 2004 is an important part of our research. To construct a sample of the local officials, we must begin with a complete list of all county election officials. We have reached out to the following organizations to obtain one.

International Association of Clerks, Recorders, Election Officials and Treasurers (IACREOT)

National Association of County Recorders, Election Officials and Clerks (NACRC)

National Association of County Officials (NACO)

IACREOT & NACRC do not offer their directories to non-member. Rutgers is not eligible for membership to either organization. NACO offers a list, but it includes only 695 officials, which would exclude about 2300 counties from the universe from which we will select a sample.

Does EAC have access to, or can it gain access to, a list of county election officials for all US counties?

If that is not possible, we can purchase a list from a commercial publisher (Carroll), but I don't know how regularly it is updated.

The first action step in the survey process will be to select the sample. Each official selected will receive a letter describing the study and its purpose. The actual interview will follow some days later and will be conducted by telephone. Ideally, the list would include a mailing address and telephone contact information.

Tom

Subject Revised Work Plan --Gantt Chart

Karen,

Attached is the Gantt chart that you and Carol requested. I think it is most useful if used in conjunction with the work plan table that I sent originally, but whether you use it as freestanding guide to the project or as a supplement, I hope it meets your needs.

The narrative to complement the Gantt chart will be along early next week.

Tom-

I checked with our staff and they indicated that we don't have such a list. This is the kind of work that one your research project interns would/will have to do.

Good luck with creating a good, representative sample population.

Subject Peer Review Group

Karen,

As you probably recall, one of the features of our proposal was the creation of a Peer Review Group to look over our findings, conclusions and draft reports before we prepare final drafts for the EAC's review. The EAC asked that before recruiting members of the PRG twe submit names for EAC's review. The aim, course, is to assemble a panel that is experienced, informed, and balanced.

Attached is a list of potential PRG members drawn from academia, the law, and non-profit organizations with interests in this area. Please look it over.

We may conclude that the PRG should also include two or three former government officials now in academia or related fields. We have a conference call with our partners at Moritz planned for tomorrow or Friday to decide a) if former officials should be included in the PRG and b)if so, who they should be. I'll keep you informed of our thinking as it develops.

Tom

Subject Re: Peer Review Group

Tom-

I will be back to you early next week with EAC's feedback on this.

Our initial reaction is that the group needs to include some local and/or state-level election officials, who have first-hand experience with these issues.

We will get you additional names and reactions by mid-week next week.

Thanks

Subject Peer Review Group

Karen,

As you probably recall, one of the features of our proposal was the creation of a Peer Review Group to look over our findings, conclusions and draft reports before we prepare final drafts for the EAC's review. The EAC asked that before recruiting members of the PRG twe submit names for EAC's review. The aim, course, is to assemble a panel that is experienced, informed, and balanced.

Attached is a list of potential PRG members drawn from academia, the law, and non-profit organizations with interests in this area. Please look it over.

We may conclude that the PRG should also include two or three former government officials now in academia or related fields. We have a conference call with our partners at Moritz planned for tomorrow or Friday to decide a) if former officials should be included in the PRG and b)if so, who they should be. I'll keep you informed of our thinking as it develops.

Tom

PROPOSED MEMBERS OF PEER REVIEW GROUP.doc

PROPOSED MEMBERS OF PEER REVIEW GROUP

R. Michael Alvarez, Ph.D.
Professor of Political Science
California Institute of Technology
rma@hss.caltech.edu
626-395-4422
Alvarez has taught political science at Caltech since 1992. He received his B.A. in political science from Carleton College; his M.A. and Ph.D. from Duke University. Alvarez focuses on the study of electoral politics. He has published many articles on electoral behavior and public opinion. Support for his research has come from the National Science Foundation, The IBM Corporation, the Carnegie Corporation, of New York, and the Knight Foundation. Alvarez edits the Analytical Methods for Social Research book series and is on the editorial boards of a number of academic journals. He is Co-Director of the Caltech-MIT Voting Technology Project

Deborah Goldberg, Ph.D
Program Director, Democracy Program
Brennan Center for Justice at NYU School of Law
161 Avenue Of The Americas, 12th Floor
New York, NY 10013
212-998-6730
Goldberg supervises the Democracy Program's litigation, scholarship, and public education. She was the principal author of *Writing Reform: A Guide to Drafting State & Local Campaign Finance Laws*, and was lead counsel to the intervenor in the Supreme Court case *Nixon v. Shrink Missouri Government PAC*. She serves on the Steering Committee of a coalition to restore voting rights to persons with past felony convictions. Goldberg is a graduate of Harvard Law School. Before joining the Brennan Center, she was in private practice. She holds a Ph.D. in philosophy and taught ethics at Columbia University.

Martha E. Kropf, Ph.D.
Assistant Professor of Political Science
University of Missouri-Kansas City
816-235-5948; KropfM@umkc.edu
Kropf has been on the faculty at Missouri since 1999. She received her BA Summa Cum Laude, Phi Beta Kappa from Kansas State University and her PhD in Political Science from American University. Her work concentrates on Research Methods, Urban Politics, American Government, and Political Behavior. Before joining the faculty at Missouri, she was Project Coordinator at the University of Maryland Survey Research Center. She has published recent on undervoting in presidential elections, and on invalidated ballots in the 1996 presidential election, and on the incremental process of election reform in Missouri.

Wade Henderson, Esq.
Executive Director
Leadership Conference on Civil Rights
1629 K Street, NW, 10th Floor
Washington, DC 20006
Wade Henderson is the Executive Director of the LCCR and Counsel to the Leadership Conference on Civil Rights Education Fund (LCCREF), and leads the organizations' work on issues involving nationwide election reform. He is a graduate of Howard University and the Rutgers University School of Law. During its over 50 years of existence, LCCR has worked to redefine civil rights issues in broad and inclusive ways. Today, it includes over 180 national organizations. Previously Henderson served as Washington Bureau Director of the NAACP. He began his career as a legislative counsel of the ACLU.

Subject Fw: Peer Review Group

Commissioners-

Enclosed please find a preliminary list of Peer Review Group members, whom Eagleton is considering for their Peer Review Group. **Tom Wilkey will be bringing this item to you for discussion and input at Monday's Commissioner's meeting.**

Eagleton envisions this Peer Review Group as the body that will review the draft analysis that it will prepare on provisional voting and on voter identification. The Group would also provide comment on the development of alternative approaches to provisional voting and voter identification which Eagleton will develop for the EAC.

I have included the e-mail from the Eagleton Project Director, Tom O'Neil, so that you could get a feel for his approach/philosophy to assembling the Group.

Subject RE: Peer Review Group

Tom-

Had a very good review and discussion of the PRG at this morning's Commissioner meeting.

Also, the Commissioners have marked their calendars for a conference call with the Eagleton/Moritz team on July 12 at 9:30 AM.

Several concerns were raised about the composition of the PRG and, after some discussion, I indicated that Eagleton will provide the EAC with a revised participant list, and with a more detailed description of the PRG's mission, goals, objectives, workplan and timelines for accomplishing its work.

The Vice Chair is concerned that there is not sufficient conservative representation on the PRG. I would suggest the team do more research to identify well-recognized conservative academics to put on the Group.

Further, the Commissioners recommend a tiered process in which the PRG will prepare a "dispassionate" analysis of the issues and draw some tentative conclusions. This analysis and these conclusions will then be vetted with a defined/select group of local election officials, and then, with a defined/select group of advocacy organizations.

It was also suggested that a final round of focus group meetings be held with a cross-section of these election officials, advocates and academics for an overall interactive reaction to the analysis and recommendations.

Hope this helps clarify concerns; I look forward to sharing your revisions to the PRG with them.

Karen,

Since I was puzzled by the distinction you drew in your last email about progress and status reports, I checked the contract. Please confirm my interpretation of Section 3.2.

I read it to require a "progress report," within 2 weeks of the end of each month. "Budget status shall also be provided," the section concludes.

That would mean, I believe, that we owe you a progress report by July 14, and it should include a status report on the budget.

Please let me know if I have misread this section or if you interpret it differently.

Subject Peer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:
   - A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.
   - B. PRG's analysis would be vetted by a defined/select group of local election officials.
   - C. A defined/select group of advocacy organizations would review the comments of the local election officials
   - D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the

Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

PROPOSED MEMBERSJuly6.doc

REVISED
PROPOSED MEMBERS OF PEER REVIEW GROUP
July 6, 2005

Role of the Peer Review Group

Members of the Peer Review Group will review the research design for the project, including the survey of local election officials, the analysis of Voter ID regime on turnout, the state-by-state narrative of developments in provisional voting and voter identification, and the compilation and analysis of statutes, administrative regulations, and case law affecting provisional voting and voter identification. They will also review the report on Analysis and Alternatives. They may review the draft of the Preliminary Guidance Document before it goes to the Board of Advisors for comment.

Members of the group will be respected authorities in their fields and represent a range of opinions and perspectives, although their views on policy will be less important to the study than their views on the quality of the research on which policy recommendations are based.

Ideally, the group would meet once, but even that may not be possible to arrange given the tight time period for the project, the demanding schedules of the members, and their wide dispersal across the county. They will function largely by reviewing written work and making written comments on it. The timing of their involvement is indicated on the work plan.

R. Michael Alvarez, Ph.D.
Professor of Political Science
California Institute of Technology
rma@hss.caltech.edu
626-395-4422
Alvarez has taught political science at Caltech since 1992. He received his B.A. in political science from Carleton College, his M.A. and Ph.D. from Duke University. Alvarez focuses on the study of electoral politics. He has published many articles on electoral behavior and public opinion. Support for his research has come from the National Science Foundation, The IBM Corporation, the Carnegie Corporation, of New York, and the Knight Foundation. Alvarez edits the Analytical Methods for Social Research book series and is on the editorial boards of a number of academic journals. He is Co-Director of the Caltech-MIT Voting Technology Project

Guy-Uriel E. Charles
Associate Professor
School of Law
University of Minnesota
342 Mondale Hall
229-19th Avenue South
Minneapolis, MN 55455
612-626-9154
gcharles@umn.edu

Charles teaches and writes on election law, law and politics, and race. He received his B.A. degree in Political Science, *cum laude* from Spring Arbor University and his J.D. from the University of Michigan Law School, where he was Editor-in-Chief of the *Michigan Journal of Race & Law*. He is completing a PhD in political science from the University of Michigan.

Brad Clark
Professor of Law
George Washington University School of Law

Clark received his B.A. in Political Science from Florida State University and his J.D. from Columbia Law School in 1985. He served as a law clerk to the Judge Robert H. Bork on the US Court of Appeals and went on to clerk for Justice Antonin Scalia on the Supreme Court. He has been on the faculty at George Washington University Law School for 12 years, where he has taught Constitutional Law, Federal Courts, and Civil Procedure.

Pamela Susan Karlan
Montgomery Professor of Public Interest Law
Stanford Law School
559 Nathan Abbott Way
Stanford, CA 94305-8610
(650) 725-4851
karlan@stanford.edu

Formatted

Karlan's principal subjects include legal regulation of the political process. She earned her BA, MA, and JD at Yale University, and was previously a Professor at the University of Virginia. She serves on the California Fair Political Practices Commission and is a Cooperating Attorney with the NAACP Legal Defense and Education Fund. She has also been a lecturer at the FBI National Academy. Among her publications, she is a co-author of When Elections Go Bad: The Law of Democracy and the Presidential Election of 2000.

Martha E. Kropf, Ph.D.
Assistant Professor of Political Science
University of Missouri-Kansas City
816-235-5948; KropfM@umkc.edu
Kropf has been on the faculty at Missouri since 1999. She received her BA Summa Cum Laude, Phi Beta Kappa from Kansas State University and her PhD in Political Science from American University. Her work concentrates on Research Methods, Urban Politics, American Government, and Political Behavior. Before joining the faculty at Missouri, she was Project Coordinator at the University of Maryland Survey Research Center. She has published recent on undervoting in presidential elections, and on invalidated ballots in the 1996 presidential election, and on the incremental process of election reform in Missouri.

Subject RE: Peer Review Group

Carol,

I sent you the email on the Peer Review Group because you asked me to. When we discussed the issue in New York, you told me to send to you in writing our response to the Commission's suggestions for a new, more elaborate review process. I believe I copied Karen on that email.

Learning now, almost a week later, that you have taken no action is disheartening. As you know, our schedule is tight, and we need the counsel the Peer Review Group can provide. I hope, therefore, that Karen will take immediate action to resolve the situation so we can begin to recruit the review group in time to assure the quality of the resource design.

Tom O'Neill

Subject: Re: Peer Review Group

Karen, Tom -

I am not taking any action on the email Tom sent a few days ago regarding the Peer Review Group because the Eagleton project is not my responsibility. As I indicated earlier to Karen, I didn't know why this was sent to me since Karen is the Project Manager. I endorse her comment below regarding the need for including her in all correspondence with anyone at the EAC regarding the project.

When I was the Interim Executive Director it was part of my job to stay on top of all EAC project work. I now have other responsibilities at the EAC, and while I am happy to continue involvement in other projects for continuity and transition purposes as needed, that needs to be very limited. My involvement with the Eagleton work has only been from the contracting perspective, and that is the only continuing role I have. Any substantive project activities have to be taken up with Karen.

Tom-

I trust you are in contact with Carol and Julie regarding the information on the Peer Review Group and the July 28 hearing at Cal/Tech that you have requested of them, respectively.

While the EAC is a small agency with relatively few reporting layers, I suggest that for all future items requiring feedback and decisions from the EAC, that you are certain to carbon copy me on all e-mails.

This will ensure, that as your primary point of contact, I have a record of all communication that has taken place between the contractor and the agency.

Thanks

SubjectPeer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced

Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:

A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.

B. PRG's analysis would be vetted by a defined/select group of local election officials.

C. A defined/select group of advocacy organizations would review the comments of the local election officials

D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

Karen:

As we discussed on Tuesday morning in the teleconference, we would like to reallocate within the current budget $9,500 to the survey of local election officials. This will raise the budget for the survey to $24,500 from $15,000.

The additional funding will permit us to double the sample of local election officials from 200 to 400. The larger sample will allow more detailed comparisons between the experience of local election officials in states that offered some form of provisional ballot before HAVA and those that did not. This comparison is a topic of special interest identified in the contract.

The increase of $9,500 is based on an estimate made by SRBI, the contractor that will actually administer the interviews. I can furnish you with a copy of the estimate if you like. We believe the additional funds will improve significantly our ability to provide relevant analysis to EAC on this important issue.

Subject Re: Composition of the Eagleton Peer Review Group

Tom-

This e-mail will reiterate our conversation of this morning.

After a close review of your e-mail of July 12th, EAC staff determined that it is appropriate for the Eagleton/Moritz team to proceed with the composition of its Peer Review Group as it deems suitable and necessary. EAC staff will assume that your team is satisfied that it has created a politically and ideologically balanced group to review your work.

EAC staff, the Commissioners, the Advisory and Standards Boards will, we are certain, have opportunities to review the findings and analyses that your team creates, at critical junctures during the process.

Enjoy your weekend.

Subject Invitation to Tom Wilkey

Karen,

For your information, Ruth Mandel, Director of the Eagleton Institute of Politics, sent the letter below to Tom Wilkey this afternoon. It is an invitation for him to meet with the project team in August at Rutgers.

Have a good weekend.

Tom O'Neill

I'm writing on behalf of my colleagues at the Eagleton Institute of Politics to send congratulations on your appointment as Executive Director of the Election Assistance Commission and to extend a warm invitation for you to visit the Institute to meet our research team. The Eagleton Institute and our partners at the Moritz College of Law are delighted to have been selected to provide research services to the EAC for developing guidance to the states on provisional voting and voter identification requirements.

The Eagleton and Moritz team conducting the research and analysis would appreciate an opportunity to discuss the project with you so that we can gain a full understanding of your perspective on this work and make our research as useful as possible for you, the EAC, the states, and eventually the voters.

I understand that you continue to travel between New York and Washington, which would make a visit to Eagleton simple to arrange. Since the Rutgers campus in New Brunswick is not far from the Metropark Amtrak station, we could easily pick you up at Metropark and return you at the end of the visit. Our Moritz partners would also attend.

The agenda for such a meeting could include a briefing on our progress, discussion of challenges to be met, and a conversation about your goals for this research. We believe that the earlier in the research process we can arrange to meet, the better for the project.

I hope you agree that a meeting in the near future would be useful, and that you like the idea of a visit to the research site. If so, we can search for convenient dates in the next few weeks, perhaps starting with the possibility that you would be available on August 12, 15, or 16.

We all look forward to continuing our work together on this worthwhile project.

Ruth B. Mandel

Subject Re: Request for reallocation within existing budget

Tom-

EAC contract staff indicate that the reallocation you propose can occur and that all other such reallocations that are made from your project budget for this contract budget can be done at your own discretion.

From a contractual standpoint, EAC's only concern is that Eagleton is able to accomplish all of the activities and provide all of the deliverables that have been set forth in your contract.

EAGLETON INSTITUTE OF POLITICS

Contract to Provide Research Assistance to The EAC For the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures

MONTHLY PROGRESS REPORT
JUNE 2005

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.4
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from the start of the project on May 26 through June 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The objective of the contract is to assist the EAC in the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements on which to base policy recommendations as guidance for the states in the conduct of the 2006 elections. The work has begun well, thanks to the clarity of the EAC's expectations and the strong collaboration by the scholars and staff at the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, and the Moritz College of Law at the Ohio State University.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O'Neill at: tom_oneill@verizon.net or (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. The work plan provides for two months to complete Task 3.4. Work on this task is on schedule.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states' actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team includes faculty, an executive administrator, a reference librarian, and several research assistants. It began immediately to compile statutes, case law and administrative procedures regarding Provisional Voting. The team has created a 50 state chart to summarize information on provisional voting. Categories for which state statutes and administrative procedures are being reviewed include:

- *When did the state create a system compliant with the HAVA provisional ballot requirements?*
- *Who may be eligible to cast a provisional ballot?* and
- *What is the process for discovering whether your provisional ballot was counted in the election?*

Progress: Initial research for 27 states, including the collection of provisional voting statutes is complete. This phase of the work is on schedule for completion by August 1. By the beginning of the week of July 11, Moritz's full time research assistant will move from voter identification research to gathering and organizing case law on provisional voting.

Challenges: Identifying the relevant statutes has been challenging; states use different terminology to codify provisional voting issues. Many states have scattered election law provisions throughout their codes. This variation from state to state makes creating a snap-shot view across states a challenge. The team is meeting this challenge, and the work is on schedule.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team is constructing a narrative description for each state of the 50 states and the District of Columbia. It is also surveying a stratified random sample of county election officials to improve its understanding of actual practice in administering provisional voting.

Description: To construct the narratives, a researcher is examining newspaper accounts, state websites, and reports from third-party organizations to determine what information is publicly available about these issues during the 2004 election. To organize the information derived from this examination, we are creating an information system that will make it possible to catalog the basic information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combine it with Moritz's collection and analysis of statutes, regulations and litigation. The information system will make it possible to provide answers to such topics of particular interest listed in the contract as: How did preparation for provisional voting vary between states that had some form of provisional voting and those that did not?" and "How did litigation affect implementation?"

Progress: The researcher in this area has identified sources of information for every state and the collection process is well underway. Verified database entries for 24 states are complete, as are two state narrative summaries. This phase of the research is on schedule for completion by the end of July.

Challenges: A key challenge is determining just what states actually did in practice to verify and count provisional ballots. A second challenge has been determining the variations in policy within individual states. We are still wrestling with resolving this challenge, but the work is on schedule.

Work Plan: By the end of the July, the compilation of statutes, administrative regulations, and litigation will be complete and ready to be combined with the state-by-state narrative compiled by Eagleton. That will form the basis for the analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

SURVEY OF COUNTY ELECTION OFFICIALS

This survey will help the research team understand more about such key topics of interest as:

- "How did the experience of provisional voting vary between states that previously had some form of provisional voting and those where provisional voting was new in 2004?"
- "Did state and local processes provide for consistent counting of provisional ballots?"
- "Did local officials have a clear understanding of how to implement provisional voting?"

The survey results will supplement the information on these topics from the compilation of statutes, regulations and cases and from the narrative we are constructing for each state.

Description: The Center for Public Interest Polling (CPIP) at Eagleton is conducting a national survey of county election officials to measure several aspects of provisional voting. The survey is designed to determine the following factors related to provisional voting at the county level:

- The content and quality of instructions provided to county officials by the states
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting

Progress: The survey instrument is complete. CPIP has compiled a list of election officials at the county level and at the municipal or regional level for states that do not assign the election responsibility to counties. It was forwarded to the call center, Schulman, Ronca & Bucuvalas Inc., (SRBI) the week of July 5, 2005. A sample will be drawn the week of July 12. Human Subjects Approval from Rutgers University was granted July 12. Pre-notification letters will be sent to election officials around July 12-13, 2005. The EAC has reviewed a draft of this letter, which we have now revised to make clear that the survey will increase our understanding of the provisional voting process, but is not being conducted on behalf of the EAC.

Challenges: We made special efforts to expedite Human Subject Approval to meet the schedule in the work plan. In the absence of an existing, reliable database of local election officials, we had to create one especially for this project. In order to provide a valid comparison between the states new to provisional voting with those that previously had some form of provisional ballot we doubled the sample size from 200 to 400. This increase will require an increase in the budget for the survey from $15,000 to about $24,000. We intend to reallocate costs within the existing budget to make this improvement possible, and will submit a letter describing the reallocation to the EAC in mid-July.

The sample has been, and will continue to represent the biggest challenge in this survey. Compiling the sample required substantial coordination and research to determine the accuracy of the identity and contact information for potential respondents. The difficulty in determining the appropriate contact is attributed to variation in county election officials' titles, jurisdiction types, and state and county election structures across the country. In addition to the potential pitfalls of reaching the appropriate county official, another factor in actually making contact with this special population will be dependent upon the hours that they keep, and may be hindered by the summer season.

Work Plan: This questionnaire will be pre-tested by July 15, and will field July 18 through August 5, 2005. This is somewhat later than projected in the revised work plan, but the information will arrive in time to be considered in drafting the analysis and alternatives document required under Task 3.5.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have made substantial progress in the first two tasks, which constitute the information-gathering phase of the work on Voter ID. The research of Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: A team of Election Law@Moritz faculty, executive administrator, a reference librarian, and several research assistants is compiling statutes on Voter Identification, and providing a summarized analysis of this research.

Progress: The Moritz team has created a 50-state chart to record data on voter identification. Categories for which state statutes and administrative regulations are being reviewed include: "*Who is required to present ID*", "*Types of ID required*", and "*Consequences of having no ID*". We have completed the initial research for 45 states and have collected the voter identification statutes for those states. An *Election Law@Moritz* Fellow is conducting an academic literature review on voter identification. This literature review will help shape the analytical framework that will guide us when the compendium of statutes and administrative regulations is complete.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Projections: At the current rate, a draft of the voter identification chart should be complete on schedule, by the end of July. Work on the literature review will continue into August, but will be available to inform the analysis of alternative approaches for voter identification called for by Task 3.12 of the contract.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter in the states; and second, estimating the effect on turnout of voter id requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. This work is on schedule to be completed by the end of July. The next key milestones will be the completion of the state database and drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. Analysis on the county-level will enable us to estimate the influence of ID requirements on various age groups, races, ethnicities and gender groups. We are compiling data from both the 2000 and 2004 Presidential elections to measure the effect that changes in ID requirements may have had on voter turnout through two national election cycles.

Progress: The structure of the database is complete. It contains demographic information from the Census, and turnout data from various sources. The researcher assigned to this task is devising the syntax that will be required to run the statistics when the dataset is complete. The methodology for this part of the study is complete, and the actual data collection will soon be finished.

Projection: We are waiting for the Census Bureau to release the 2004 County Demographic Estimates. We have ordered and await the arrival of 2 datasets that contain voter turnout and voter registration numbers on the county-level for both the 2000 and 2004 elections. Once these two sources of information are received, the researcher will insert this information into the existing database, clean up the dataset, and begin to run the statistics. By that point, the researcher will have separated the states into various ID-requirement groupings that have been determined by the team, which will require coordination with several other parts of the study. This work is on schedule. By the end of July, the researcher should have county-level and state-level statistics on the impact of each ID system upon turnout, analyzed through various demographic features on the county-level.

Task 3.11 Public meeting on Voter Identification Requirements

Description: We are working closely with EAC staff, particularly the General Counsel, to plan a half day public meeting on Voter ID requirements. Presentations at the meeting will form an important part of the information we are compiling about Voter ID requirements and the strengths and shortcomings of a range of alternative approaches.

Progress: We have recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we have recommended that one panel include legislators on opposite sides of the issue from two different states. Our research identified Mississippi and Wisconsin as two states to focus on, and we have recommended specific legislators from each. We have discussed with staff adding a researcher to the panel to put the debate in Wisconsin and Mississippi in either a national or historic context. We also recommended two researchers from contrasting points of view, to address the effects of Voter ID provisions under HAVA and broader provisions that are now the subject of national debate. EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA. We are awaiting a decision on our recommendations from EAC staff. We have no reason not to believe that the work is on schedule to be completed in time to organize a productive meeting on July 28.

Challenges: The date and location of this hearing has been changed twice since the beginning of the project. It was originally scheduled to take place in late June, but was rescheduled for July to allow the June hearing to focus on voting machine technology. The regular meeting was rescheduled for July 26 in Minneapolis, and was recently changed to July 28 in Pasadena. The changes in the scheduling of the July meeting have complicated our choice of panelists. More seriously, the changes mean that information from the hearing will not be available as early in the research process as contemplated in the contract. This timeframe will now require the team to summarize the hearing events at the same time that we are drafting the analysis and alternatives paper in early August.

Additionally, while our contract states that the "Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC," we have been asked only to make recommendations of topics and panelists, and the arrangements for the organization of the hearing are in other hands. This lack of clarity has caused some confusion and has delayed invitations to panelists. Thanks to frequent communication with members of the EAC, the process now seems to be working smoothly.

Projection: We believe the work is on schedule for completion in time to recruit the panelists for the July 28 hearing. Preparation of the hearing summary will likely be delayed because of the need to complete the analysis and alternatives paper.

PROJECT MANAGEMENT

Immediately after announcement of the award of the contract, Eagleton and Moritz began supplementing the core group that had prepared to proposal to building a highly qualified team to undertake the work. That team was in place by mid June, just a few weeks after the contract award.

As described in the proposal, the direction of the project is the responsibility of a five-person committee of faculty and staff from Eagleton and Moritz, chaired by Dr. Ruth Mandel, Director of the Eagleton Institute of Politics. Project Director Thomas O'Neill, a consultant to Eagleton, reports to this team and provides day-to-day guidance and coordination for the research. A weekly meeting of all the researchers engaged in the project if the primary means of coordinating the work. We have recently added an internal website to facilitate the review and revision of written materials.

Task 3.1 Update the Work Plan

The first task was completed on time with the submission of a detailed work plan and timeline. EAC staff requested that the work plan be supplemented with a Gantt chart created on MS Project, and we submitted that a few days later.

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded, as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations should be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG's membership and the creation of additional committees to review our work. We answered with an analysis of the cost and time involved adopting the EAC's suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. We have not received response on this correspondence from the EAC, and the recruitment of the group is on hold.

Challenges: Communications on this issue with the EAC have not been clear or timely. The PRG should be in place now to comment on our research design while there is still time to refine it. While we are confident in the quality of our work, the wisdom and perspective of the outstanding candidates we have proposed for membership would strengthen the analysis and reports of our work.

Projections: We have effectively brought these challenges to the attention of EAC staff and look forward to a resolution speedy enough to allow recruitment of the PRG's members before the end of the month. If we meet that goal, the work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and a website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: The Moritz team has provided Eagleton staff with samples of the work that they are performing. An Eagleton staff member will be reviewing the content and formats of data from all supporting research and (re-)formatting once the work has been completed. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

Challenges: There are no evident challenges to this task at this time.

Projections: By the end of July 2005, much of the above referenced research will have been completed with respective materials and charts near completion. At that time, staff at Eagleton will review, combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: A trial Intranet for the project became available during the week of June 26. The Intranet will facilitate the exchange of information and collaboration among project participants.

Progress: After meetings with staff members of Rutgers University Computer Services (RUCS) and subsequent submission of a proposal by RUCS for technical support and hosting of the Intranet and the evaluation of alternative commercial services, the project team decided at its June 28th meeting to publish the Intranet through www.intranets.com, one of the leading commercial services. This decision was based on lower costs and earlier publication schedules than offered under the RUCS proposal. The Intranet services were evaluated during a free trial period, which demonstrated the ease of design and navigation of the proposed service.

Challenges: There are no immediate challenges to completion of this task by the timeframe specified below.

Projections: Design, testing and publication of initial content of the Intranet service is continuing, with all participants expected to be provided access by July 8, 2005.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to <u>actual expenses</u> that have been incurred during the reporting period. Given that the report reflects the first month of the project, several procedures for payment of subcontractors on the project were initiated. Expenses related to those members of the team are not reflected in this report because they have not yet been incurred.

Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.

Subject Two items

Hi-

Two items, one professional, one social:

1. By contract, Eagleton is to arrange a public meeting to receive public comment on the draft guidance for provisional voting they have helped draft for the EAC. Could you let me know what work they have performed for the EAC in preparation for next week's public meeting on provisional voting? Could you also let me know how, if at all, you envision the presentations from next week's meeting informing Eagleton's work and EAC's preparation of guidance on provisional voting?

Thanks

2. Tomorrow I'm going to go to Brooke Rental in Vienna to order the table and chairs for the EAC picnic. How many tables and chairs to you want me to order? Also, let me know the precise date, time and location to where I should have the items delivered. Can you think of anything else you'd like me to order from them? (e.g. tablecloths, large containers to hold cold beverages, disco dancing balls, tacky champagne fountains, etc.)

Subject Eagleton Institute June 2005 Progress Report

Ms. Dyson,

Attached please find the June 2005 Progress Report for the project entitled, "Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures." If you have any questions regarding any part of this document please direct them to Tom O'Neill at: [redacted]

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex'ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.4
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from the start of the project on May 26 through June 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The objective of the contract is to assist the EAC in the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements on which to base policy recommendations as guidance for the states in the conduct of the 2006 elections. The work has begun well, thanks to the clarity of the EAC's expectations and the strong collaboration by the scholars and staff at the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, and the Moritz College of Law at the Ohio State University.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O'Neill at: tom_oneill@verizon.net or (908) 794-1030.

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. The work plan provides for two months to complete Task 3.4. Work on this task is on schedule.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states' actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team includes faculty, an executive administrator, a reference librarian, and several research assistants. It began immediately to compile statutes, case law and administrative procedures regarding Provisional Voting. The team has created a 50 state chart to summarize information on provisional voting. Categories for which state statutes and administrative procedures are being reviewed include:

- *When did the state create a system compliant with the HAVA provisional ballot requirements?*
- *Who may be eligible to cast a provisional ballot?* and
- *What is the process for discovering whether your provisional ballot was counted in the election?*

Progress: Initial research for 27 states, including the collection of provisional voting statutes is complete. This phase of the work is on schedule for completion by August 1. By the beginning of the week of July 11, Moritz's full time research assistant will move from voter identification research to gathering and organizing case law on provisional voting.

Challenges: Identifying the relevant statutes has been challenging; states use different terminology to codify provisional voting issues. Many states have scattered election law provisions throughout their codes. This variation from state to state makes creating a snap-shot view across states a challenge. The team is meeting this challenge, and the work is on schedule.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team is constructing a narrative description for each state of the 50 states and the District of Columbia. It is also surveying a stratified random sample of county election officials to improve its understanding of actual practice in administering provisional voting.

Description: To construct the narratives, a researcher is examining newspaper accounts, state websites, and reports from third-party organizations to determine what information is publicly available about these issues during the 2004 election. To organize the information derived from this examination, we are creating an information system that will make it possible to catalog the basic information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combine it with Moritz's collection and analysis of statutes, regulations and litigation. The information system will make it possible to provide answers to such topics of particular interest listed in the contract as: How did preparation for provisional voting vary between states that had some form of provisional voting and those that did not?" and "How did litigation affect implementation?"

Progress: The researcher in this area has identified sources of information for every state and the collection process is well underway. Verified database entries for 24 states are complete, as are two state narrative summaries. This phase of the research is on schedule for completion by the end of July.

Challenges: A key challenge is determining just what states actually did in practice to verify and count provisional ballots. A second challenge has been determining the variations in policy within individual states. We are still wrestling with resolving this challenge, but the work is on schedule.

Work Plan: By the end of the July, the compilation of statutes, administrative regulations, and litigation will be complete and ready to be combined with the state-by-state narrative compiled by Eagleton. That will form the basis for the analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

SURVEY OF COUNTY ELECTION OFFICIALS

This survey will help the research team understand more about such key topics of interest as:

- "How did the experience of provisional voting vary between states that previously had some form of provisional voting and those where provisional voting was new in 2004?"
- "Did state and local processes provide for consistent counting of provisional ballots?"
- "Did local officials have a clear understanding of how to implement provisional voting?"

The survey results will supplement the information on these topics from the compilation of statutes, regulations and cases and from the narrative we are constructing for each state.

Description: The Center for Public Interest Polling (CPIP) at Eagleton is conducting a national survey of county election officials to measure several aspects of provisional voting. The survey is designed to determine the following factors related to provisional voting at the county level:

- The content and quality of instructions provided to county officials by the states
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting

Progress: The survey instrument is complete. CPIP has compiled a list of election officials at the county level and at the municipal or regional level for states that do not assign the election responsibility to counties. It was forwarded to the call center, Schulman, Ronca & Bucuvalas Inc., (SRBI) the week of July 5, 2005. A sample will be drawn the week of July 12. Human Subjects Approval from Rutgers University was granted July 12. Pre-notification letters will be sent to election officials around July 12-13, 2005. The EAC has reviewed a draft of this letter, which we have now revised to make clear that the survey will increase our understanding of the provisional voting process, but is not being conducted on behalf of the EAC.

Challenges: We made special efforts to expedite Human Subject Approval to meet the schedule in the work plan. In the absence of an existing, reliable database of local election officials, we had to create one especially for this project. In order to provide a valid comparison between the states new to provisional voting with those that previously had some form of provisional ballot we doubled the sample size from 200 to 400. This increase will require an increase in the budget for the survey from $15,000 to about $24,000. We intend to reallocate costs within the existing budget to make this improvement possible, and will submit a letter describing the reallocation to the EAC in mid-July.

The sample has been, and will continue to represent the biggest challenge in this survey. Compiling the sample required substantial coordination and research to determine the accuracy of the identity and contact information for potential respondents. The difficulty in determining the appropriate contact is attributed to variation in county election officials' titles, jurisdiction types, and state and county election structures across the country. In addition to the potential pitfalls of reaching the appropriate county official, another factor in actually making contact with this special population will be dependent upon the hours that they keep, and may be hindered by the summer season.

Work Plan: This questionnaire will be pre-tested by July 15, and will field July 18 through August 5, 2005. This is somewhat later than projected in the revised work plan, but the information will arrive in time to be considered in drafting the analysis and alternatives document required under Task 3.5.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have made substantial progress in the first two tasks, which constitute the information-gathering phase of the work on Voter ID. The research of Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: A team of Election Law@Moritz faculty, executive administrator, a reference librarian, and several research assistants is compiling statutes on Voter Identification, and providing a summarized analysis of this research.

Progress: The Moritz team has created a 50-state chart to record data on voter identification. Categories for which state statutes and administrative regulations are being reviewed include: *"Who is required to present ID"*, *"Types of ID required"*, and *"Consequences of having no ID"*. We have completed the initial research for 45 states and have collected the voter identification statutes for those states. An *Election Law@Moritz* Fellow is conducting an academic literature review on voter identification. This literature review will help shape the analytical framework that will guide us when the compendium of statutes and administrative regulations is complete.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Projections: At the current rate, a draft of the voter identification chart should be complete on schedule, by the end of July. Work on the literature review will continue into August, but will be available to inform the analysis of alternative approaches for voter identification called for by Task 3.12 of the contract.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter in the states; and second, estimating the effect on turnout of voter id requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. This work is on schedule to be completed by the end of July. The next key milestones will be the completion of the state database and drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. Analysis on the county-level will enable us to estimate the influence of ID requirements on various age groups, races, ethnicities and gender groups. We are compiling data from both the 2000 and 2004 Presidential elections to measure the effect that changes in ID requirements may have had on voter turnout through two national election cycles.

Progress: The structure of the database is complete. It contains demographic information from the Census, and turnout data from various sources. The researcher assigned to this task is devising the syntax that will be required to run the statistics when the dataset is complete. The methodology for this part of the study is complete, and the actual data collection will soon be finished.

Projection: We are waiting for the Census Bureau to release the 2004 County Demographic Estimates. We have ordered and await the arrival of 2 datasets that contain voter turnout and voter registration numbers on the county-level for both the 2000 and 2004 elections. Once these two sources of information are received, the researcher will insert this information into the existing database, clean up the dataset, and begin to run the statistics. By that point, the researcher will have separated the states into various ID-requirement groupings that have been determined by the team, which will require coordination with several other parts of the study. This work is on schedule. By the end of July, the researcher should have county-level and state-level statistics on the impact of each ID system upon turnout, analyzed through various demographic features on the county-level.

Task 3.11 Public meeting on Voter Identification Requirements

Description: We are working closely with EAC staff, particularly the General Counsel, to plan a half day public meeting on Voter ID requirements. Presentations at the meeting will form an important part of the information we are compiling about Voter ID requirements and the strengths and shortcomings of a range of alternative approaches.

Progress: We have recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we have recommended that one panel include legislators on opposite sides of the issue from two different states. Our research identified Mississippi and Wisconsin as two states to focus on, and we have recommended specific legislators from each. We have discussed with staff adding a researcher to the panel to put the debate in Wisconsin and Mississippi in either a national or historic context. We also recommended two researchers from contrasting points of view, to address the effects of Voter ID provisions under HAVA and broader provisions that are now the subject of national debate. EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA. We are awaiting a decision on our recommendations from EAC staff. We have no reason not to believe that the work is on schedule to be completed in time to organize a productive meeting on July 28.

Challenges: The date and location of this hearing has been changed twice since the beginning of the project. It was originally scheduled to take place in late June, but was rescheduled for July to allow the June hearing to focus on voting machine technology. The regular meeting was rescheduled for July 26 in Minneapolis, and was recently changed to July 28 in Pasadena. The changes in the scheduling of the July meeting have complicated our choice of panelists. More seriously, the changes mean that information from the hearing will not be available as early in the research process as contemplated in the contract. This timeframe will now require the team to summarize the hearing events at the same time that we are drafting the analysis and alternatives paper in early August.

Additionally, while our contract states that the "Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC," we have been asked only to make recommendations of topics and panelists, and the arrangements for the organization of the hearing are in other hands. This lack of clarity has caused some confusion and has delayed invitations to panelists. Thanks to frequent communication with members of the EAC, the process now seems to be working smoothly.

Projection: We believe the work is on schedule for completion in time to recruit the panelists for the July 28 hearing. Preparation of the hearing summary will likely be delayed because of the need to complete the analysis and alternatives paper.

PROJECT MANAGEMENT

Immediately after announcement of the award of the contract, Eagleton and Moritz began supplementing the core group that had prepared to proposal to building a highly qualified team to undertake the work. That team was in place by mid June, just a few weeks after the contract award.

As described in the proposal, the direction of the project is the responsibility of a five-person committee of faculty and staff from Eagleton and Moritz, chaired by Dr. Ruth Mandel, Director of the Eagleton Institute of Politics. Project Director Thomas O'Neill, a consultant to Eagleton, reports to this team and provides day-to-day guidance and coordination for the research. A weekly meeting of all the researchers engaged in the project if the primary means of coordinating the work. We have recently added an internal website to facilitate the review and revision of written materials.

Task 3.1 Update the Work Plan

The first task was completed on time with the submission of a detailed work plan and timeline. EAC staff requested that the work plan be supplemented with a Gantt chart created on MS Project, and we submitted that a few days later.

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded, as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations should be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG's membership and the creation of additional committees to review our work. We answered with an analysis of the cost and time involved adopting the EAC's suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. We have not received response on this correspondence from the EAC, and the recruitment of the group is on hold.

Challenges: Communications on this issue with the EAC have not been clear or timely. The PRG should be in place now to comment on our research design while there is still time to refine it. While we are confident in the quality of our work, the wisdom and perspective of the outstanding candidates we have proposed for membership would strengthen the analysis and reports of our work.

Projections: We have effectively brought these challenges to the attention of EAC staff and look forward to a resolution speedy enough to allow recruitment of the PRG's members before the end of the month. If we meet that goal, the work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and a website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: The Moritz team has provided Eagleton staff with samples of the work that they are performing. An Eagleton staff member will be reviewing the content and formats of data from all supporting research and (re-)formatting once the work has been completed. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

Challenges: There are no evident challenges to this task at this time.

Projections: By the end of July 2005, much of the above referenced research will have been completed with respective materials and charts near completion. At that time, staff at Eagleton will review, combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: A trial Intranet for the project became available during the week of June 26. The Intranet will facilitate the exchange of information and collaboration among project participants.

Progress: After meetings with staff members of Rutgers University Computer Services (RUCS) and subsequent submission of a proposal by RUCS for technical support and hosting of the Intranet and the evaluation of alternative commercial services, the project team decided at its June 28th meeting to publish the Intranet through www.intranets.com, one of the leading commercial services. This decision was based on lower costs and earlier publication schedules than offered under the RUCS proposal. The Intranet services were evaluated during a free trial period, which demonstrated the ease of design and navigation of the proposed service.

Challenges: There are no immediate challenges to completion of this task by the timeframe specified below.

Projections: Design, testing and publication of initial content of the Intranet service is continuing, with all participants expected to be provided access by July 8, 2005.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Given that the report reflects the first month of the project, several procedures for payment of subcontractors on the project were initiated. Expenses related to those members of the team are not reflected in this report because they have not yet been incurred.

Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.

Karen:

As we discussed on Tuesday morning in the teleconference, we would like to reallocate within the current budget $9,500 to the survey of local election officials. This will raise the budget for the survey to $24,500 from $15,000.

The additional funding will permit us to double the sample of local election officials from 200 to 400. The larger sample will allow more detailed comparisons between the experience of local election officials in states that offered some form of provisional ballot before HAVA and those that did not. This comparison is a topic of special interest identified in the contract.

The increase of $9,500 is based on an estimate made by SRBI, the contractor that will actually administer the interviews. I can furnish you with a copy of the estimate if you like. We believe the additional funds will improve significantly our ability to provide relevant analysis to EAC on this important issue.

Subject: RE: Meeting with EAC

Karen,

Thanks for the email. No need to resend the original email from Washington. I received that shortly after you sent it. That email let us know that EAC would not need the research on ballot design that Tom Wilkey suggested we undertake and that you asked us to submit a proposal for. But the ballot-design issue was only one of the two topics raised by my email to you. The other question concerned a date to meet with EAC staff to discuss the forthcoming draft of our Analysis and Alternatives paper and an outline for the Preliminary Guidance Document. From our conversation yesterday, I understand that August 26, the date suggested, will not work because of the EAC's travel schedule. Please let me know if August 30, 31 or September 1 are possible for a meeting between the project team and EAC in Washington. The meeting would require perhaps 2 hours.

Tom-

I will be in touch shortly with possible dates in very late August or early September, when EAC staff might be available to meet with Eagleton to discuss the project's research results and next steps.

In the meantime, I thought it was important to follow up on the issues Vice Chair DeGregorio raised while we were in Pasadena.

To be certain that I have the latest information, could you send to me the final list of the Eagleton/Moritz Peer Review Group and the list of organizations that Eagleton will be contacting for input?

Subject No Cost Extension Request

Karen - I am attaching a spreadsheet providing the information you have requested (Attachment 1), but I want to highlight a few points which may not be immediately self-evident.

First, the original budget (Attachment 2) we submitted to the EAC, dated March 22^nd , did not itemize personnel expenses by each person. In addition, when we actually began work two months after submitting that budget, we decided to reallocate more time to people within Eagleton and hire fewer outside hourlies.

Second, in the figures I sent you in late December we tried to account for all the expenses and projections but overlooked a few things including neglecting to include the honoraria for our peer review team. Hence, the figures we're now sending are different than what I sent in December.

Lastly, we originally discussed a no-cost extension through February, but since we don't yet have the EAC comments on our draft Provisional Voting material nor an estimate of when they are likely to be ready, I think it is prudent to extend the no-cost extension through March 31^st . We would still like to conclude by the end of February, but if you can approve the extension for another month we could avoid going through this process again if everything is not complete six weeks from now.

It is my understanding that Rutgers will soon be sending our December invoice. At this time, I would also like to request that we combine January and February an invoice the EAC once for that time period.

As you can see, we are currently projecting an ending balance of approximately $10,000. If additional expenses are incurred beyond what is currently projected, we're confident they will not exceed the original budget of $560,002.

Thanks and I look forward to hearing from you.

  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from December 1 through December 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In December we continued to make progress in the research needed for the draft report on voter identification requirements. We completed a careful review of data on the effect of various voter id regimes on turnout and worked to reconcile that information other sources and identified the latest, most reliable information to use in the analysis.

We still await the EAC's comments on our Provisional Voting analysis paper, which included our recommendations to the EAC for best practices. Since the submission of our Provisional Voting report to the EAC on November 28, 2005, our efforts have been entirely aimed at the completion of the voter identification research. We have been advised that EAC will take several weeks to review and react to our final draft on provisional voting.

As a result of such unanticipated delays we have revised the schedule for the project. Early in this reporting period, we requested from EAC a no-cost extension of the contract through the end of February. At this point, we have extended the no-cost extension request through March, so that we will have adequate time to revise our report once we receive feedback from the EAC.

In the meantime, as we await a response from the EAC, we are moving ahead quickly on the statistical analysis of voter identification data and summarizing the legal research that was completed earlier. We are working with the Peer Review Group to arrange a date for it to comment on the draft of the Voter ID analysis and recommendations.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to [redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November. We await comments from EAC on the draft report.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. That recommendation followed agreement by the EAC with that course of action. The submission of that report and recommendations, however, constitutes the document required under this task. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we await the EAC's decision on how to proceed.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is the principal focus of our research at this time.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: We have completed: the 50 state (plus D.C.) chart, the collection of voter identification statutes for all states and D.C., and summaries of the existing voter identification statutes. Moritz has completed its review of voter identification litigation and has summarized the results in a memo. Moritz and Eagleton have reviewed all research, clarified the categorization of that research on our charts, and reconciled the research categories used in the two different analyses.

Challenges: The biggest challenge in the reconciliation process is understanding the comparative strengths of different primary source materials. Despite the necessity this has created to reconcile conflicting data from time to time, the collaboration has strengthened the rigor of our efforts by shining a light on the raw data.

Work Plan: During January, we will continue our analysis of our voter identification research, and we will complete the memo summarizing the major litigation surrounding voter identification requirements. We will identify the most important issues and best practices in the area of voter identification, and to develop our voter identification document for the EAC.

RESEARCH EFFORTS

To complement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of

HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

In the upcoming month, Eagleton will continue to examine and categorize voter registration forms across the states to see what forms of identification are requested from mail-in registrants in order to highlight how easily accessible states make information about voter identification. The difficulty will be determining the 2004 status of the states, especially because most of this material is gathered from state websites which at this point have been updated since 2004.

VOTER ID AND TURNOUT ANALYSIS

The statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters, as projected, was completed during the month of December.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. In November, we have analyzed both aggregate- and individual-level data to determine whether there is any relationship between voter turnout and the various forms of voter identification states require.

Progress: During December, the analysis was completed for two data sets: County-level data that includes registration and turnout rates for 2000 and 2004, as well as Census measures and indicators of the type of voter identification requirements that were in existence at the time of the 2004 presidential election. The second data set consists of the voter supplement to the November 2004 Current Population Survey. This data set allows for testing of the same hypotheses at the individual level. The findings from the aggregate data set suggest that voter ID requirements have their greatest effect at the registration stage, as opposed to the turnout stage. A number of control variables were added to the analysis and the results of these efforts will be summarized in our report.

Challenges: These analyses use hierarchical linear modeling. Because voter identification requirements vary by state, one must pay special attention to other, unseen state-level influences on the data. The models are difficult to run and interpret, so the analyses are time-consuming

Work Plan: We will draft the findings from the statistical analyses by the end of January. The report will tie these findings to the research findings summarized in the litigation memos to create our first draft Voter Identification report.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: During the month of December, Eagleton contacted the PRG Members to reschedule the potential conference call session for mid-February due to the delays in getting the EAC's feedback on our report. We have asked the PRG members to reserve a couple of dates in mid-February for a conference call meeting to review the Provisional Voting report with the EAC's comments and the first draft of our Voter Identification Report.

Challenges: No new challenges were encountered during December.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added. During December we rearranged the folders on the hard drive and created a master document detailing which folder each report, memo, or data source could be found in.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project December 1- December 31, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

Subject no-cost extension

Karen - I just received a fax of the no-cost extension request. The last line of section14 refers to a completion date of February 13. Is it possible to change that to the date we had requested, March 31? If the answer to that question will take some time, we could process this paper through the University (Our Office of Research and Sponsored Programs has to provide the requested signatures) and then process a subsequent page extending from Feb 13 to the end of March.

Thanks, John

Karen, I'll survey the group about the best time for a conference call. The 24th does not look like a good time. We have a teleconference with the Peer Review Group on the Voter ID paper scheduled for Feb. 22, and therefore would be hard-pressed to review the précis of your comments in time for a discussion on the 24th. The next week would be more promising, perhaps Tuesday, Feb 28 in the afternoon.

We still plan to deliver the Voter ID paper to you the first week in March.

Tom O'Neill

Subject Meeting with EAC in March

Karen,

The Eagleton-Moritz team would like to schedule a meeting with the EAC in March. It would be the final substantive meeting on our contract, which expires at the end of March.

The agenda would include:

1. Brief the Commission on the principal findings and recommendations of the Voter ID research and hear questions and comments on that work.
2. Discuss the changes we made to the Provisional Voting paper as a result of comments and questions from the Commission.
3. Explore the Commission's intentions for the use of our work as recommendations for best practices or otherwise.

I believe the meeting should take place after you receive the Voter ID paper from us in the first week of March, and ideally after the Commission staff has had enough time for a preliminary review of it.

The earlier we could set a date for this meeting, the more key members of the team would be able to participate.

Tom O'Neill

EAC Advisory 2005-006: Provisional Voting and Identification Requirements

The U.S. Election Assistance Commission (EAC) has recently received an inquiry regarding whether a state may impose an identification requirement that would limit a potential voter's access to a provisional ballot to which he or she is otherwise entitled under Section 302 of the Help America Vote Act (HAVA) (42 U.S.C. §15482). After consideration of the matter, EAC has concluded that Section 302 of HAVA creates a voter right. Specifically, the section creates the right for a potential voter to utilize a provisional ballot in the event their name does not appear on the registration list or the voter's eligibility is challenged by an election official. While States may create voter identification standards that exceed those laid out in HAVA and effect whether a provisional ballot is counted, States may not take action that limits a voter's right to receive and submit a provisional ballot. In explaining this position, this advisory reviews the plain language of HAVA Section 302, examines the differences between traditional and provisional ballots and analyzes the implementation of provisional voting under HAVA Section 303(b). This advisory also addresses the impact of a state's authority to create stricter standards than prescribed by HAVA upon HAVA's provisional voting requirements.[1]

Plain Language of HAVA Section 302. The right to cast a provisional ballot is created in Section 302 of HAVA. Pursuant to HAVA, when an individual declares that he or she is a registered and eligible voter in a federal election, that individual "shall be permitted to cast a provisional ballot" if (1) their name does not appear on the official list of eligible voters or (2) "an election official asserts that the individual is not eligible to vote." (Section 302(a)). This right to receive a provisional ballot is contingent upon only one thing (per Section 302(a)(2)), the individual's execution of a written affirmation that he or she is both a registered and eligible voter for the election at issue.[2] See also, Sandusky County Democratic Party v. Blackwell, 387 F.3d 565, 574 (6th Cir. 2004). However, notwithstanding the above, HAVA goes on to recognize that the right to submit a provisional ballot constitutes neither a means to avoid State imposed voter eligibility requirements nor a vote. Instead, HAVA requires election officials at a polling place to

---

[1] The EAC is the Federal agency charged with the administration of HAVA. While the EAC does not have rulemaking authority in the area of provisional voting, HAVA does require the Commission to draft guidance to assist states in their implementation of HAVA's provisional voting requirements. Although EAC's administrative interpretations do not have the force of law associated with legislative rules, the Supreme Court has long held that the interpretations of agencies charged with the administration of a statute are to be given deferential treatment by Courts when faced with issues of statutory construction. York v. Secretary of Treasury, 774 F. 2d 417, 419 – 420 (10th Cir. 1985) (citing Compensation Commission of Alaska v. Aragon, 329 U.S. 143, 153 – 154 (1963)) See also Christian v. Harris County, 529 U.S. 576 (2000); Edelman v. Lynchburg College, 122 S. Ct. 1145 (2002).

[2] Moreover, a potential voter determined not to be eligible must be informed of their provisional voting rights per Section 302(a)(1) of HAVA.

transmit a provisional ballot (or information associated with the written affirmation) to appropriate election officials for verification. (Section 302(a)(4) of HAVA). These election officials ultimately determine the voter's eligibility based upon information presented to or gathered by it, in accordance with State law. In this way, the State determines whether any provisional ballot submitted will be counted as a vote. Id.

In simplest terms, provisional voting represents the right of an individual (whose eligibility to vote has been challenged), to reserve their right to vote and postpone the voter eligibility determination to a time when more perfect or complete information may be provided. See Sandusky County Democratic Party, 387 F.3d at 570 and Florida Democratic Party v. Hood, 342 F.Supp 1073, 1079-1080 (N.D. Fla. 2004). A provisional ballot does not represent a different way to vote, nor does it serve as a bypass to State laws governing voter eligibility. Rather, it is designed to prevent an individual from losing his or her right to vote due to the fact that a poll worker did not have all the information available or needed to accurately assess voter eligibility. Thus, based upon the plain language of Section 302(a) of HAVA, a challenge to an individual's eligibility to vote (such as a challenge based upon identification requirements) cannot serve as a bar to the receipt of a provisional ballot, because it is the election official's challenge that triggers the provisional ballot procedure in the first place. To hold otherwise would defeat the purpose of provisional voting. In the end, to understand this concept one must understand the differences between traditional and provisional ballots.

Traditional vs. Provisional Ballots. The nature and procedures associated with a provisional ballot are wholly distinct from those of a traditional ballot. Because of this fact, the two processes must be treated differently. While voter identification requirements may serve as a bar to the casting of a traditional ballot, they may not prevent the submission of a provisional ballot.

First, the nature and purpose of traditional and provisional ballots are essentially different. The purpose of a traditional ballot is to allow a confirmed, eligible voter to cast a vote. The purpose of a provisional ballot is to allow individuals whose voter eligibility is challenged to reserve the right to vote by memorializing both their intent to vote and their proposed vote. This is evident by the HAVA processes discussed above. The bottom line is that the casting of a proper, traditional ballot constitutes a vote, while the casting or submission of a provisional ballot does not. A traditional ballot is cast only after voter eligibility has been determined by the State. Hence, the moment it is cast, it becomes an individual's vote. On the other hand, the submission or casting of a provisional ballot is not a vote. Rather, it is a claim that the potential voter who submitted it has the right to vote and reserves that right. As the Sixth Circuit Court of Appeals stated:

> [T]he primary purpose of HAVA was to prevent on-the-spot denials of provisional ballots to voters deemed ineligible to vote by poll workers. Under HAVA, the only permissible requirement that may be imposed upon a would-be voter before permitting that voter to cast a provisional ballot is the affirmation contained in [42 U.S.C.] §15482(a): that the voter is a registered voter in the jurisdiction in which he or she desires to vote, and that the voter is eligible to vote in an election for federal office. Sandusky County Democratic Party, 387 F.3d at 574.

This goes to the very heart of provisional voting. If provisional voting is a right triggered by an election official's determination that an individual has not met a voter eligibility requirement, how can such a requirement also serve as a bar to that right? The concept of provisional voting works only if the right is always available when the application of voter eligibility requirements is in question.

Second, consistent with the differences in purpose between traditional and provisional ballots, the other major distinction between the two lies in the application of voter eligibility requirements. This difference is primarily one of procedural timing. States have the right to create voter eligibility requirements and these requirements must be applied to both traditional and provisional ballots. In casting a traditional ballot, one must meet all eligibility requirements prior to receiving the ballot. However, in the provisional process, the potential voter has already failed to meet these preliminary requirements and the application of State law must occur after the ballot has been received. State voter eligibility requirements should be applied after the provisional ballot and/or supporting affirmation has been transmitted pursuant to Section 302(a)(3) of HAVA. Provisional ballots are counted as votes only after election officials have determined that the individual can meet voter eligibility standards consistent with state law. Again, the purpose of the process is to allow election officials more time, so that they may have more perfect information when making a decision about voter eligibility. Provisional ballots are subject to the full effect of State law regarding the eligibility to vote and the opportunity the law provides provisional voters to supply additional information. Provisional ballots do not escape state or federal voter eligibility requirements, those provisional ballots that do not meet State standards will not be counted.

Provisional Voting Under HAVA Section 303(b). Congress provided an example of how provisional voting works by applying the right to a specific circumstance. Section 303(b)(2)(B) of HAVA, entitled *Fail-Safe Voting*, provides that when a first-time voter who registered by mail is required by HAVA Section 303(b) to show identification, that person must be given a provisional ballot if he or she fails to provide such identification at the polling place. This section is important as it clarifies Congressional intent regarding how provisional voting should function.

The *Fail-Safe Voting* provision of Section 303(b)(2)(B) grants clear insight into how provisional voting should be implemented. While Section 303(b) deals with a specific subset of voters (first-time voters who registered by mail), its application of Section 302(a) supports the concept that a provisional ballot must be given to a voter who is determined (at the polling place) not to meet voter identification requirements. A review of the section shows that in the one area where HAVA set a Federal voter identification requirement Congress made clear that an individual's failure to meet this eligibility requirement triggered the statute's provisional voting section. Congress saw no difference between an individual's failure to meet the voter identification requirements it issued in Section 303(b) and the failure to meet eligibility requirements which trigger provisional voting under Section 302. Section 303(b) makes it clear that Congress did not intend voter identification requirements to limit access to provisional voting. Instead, Congress viewed provisional voting as a right, or more specifically, as a fail-safe. The EAC strongly believes that HAVA provisions must be interpreted to bring about consistent and evenly applied results. In this case, if individuals who fail to meet Federal identification standards have the right to a provisional ballot, so must individuals who fail to meet similar State standards.

Stricter Eligibility Standards and Provisional Voting. HAVA specifically provides that States may create stricter voter eligibility standards than provided in HAVA.[3] Arizona's "Proposition 200" identification requirements are a prime example of this authority. However, the HAVA authority to create stricter eligibility standards does not grant the state authority to create standards that bar access to a provisional ballot. To interpret HAVA otherwise (i.e. allowing stricter state identification standards to bar access to provisional ballots) would render HAVA's provisional voting mandate (Section 302) void and meaningless. HAVA cannot be read to grant both (1) the right to a provisional ballot if an individual's voting eligibility is challenged by a State and, (2) the right of that State to deny an individual a provisional ballot if they do not meet voter eligibility standards. These concepts are mutually exclusive. HAVA cannot be interpreted to allow a State to create voter eligibility standards that bar the Section 302 right to cast a provisional ballot without nullifying the effect and intent of that provision. Any such interpretation of HAVA would run afoul of both HAVA Section 304 and longstanding principles of statutory construction.

First, HAVA notes in Section 304 that while States may create standards that are stricter that those established under HAVA, this authority is limited to the extent "such State requirements are not inconsistent with the Federal requirements under [HAVA]." Clearly, provisional voting is a requirement under HAVA. Section 302(a) notes that qualified individuals "**shall** be permitted to cast a provisional ballot." (Emphasis added). In this way, States may not create standards that are inconsistent or interfere with the provisional voting mandate.

Furthermore, long established principles of statutory construction further prohibit an interpretation of HAVA that would render any of its provisions meaningless. It is "'a cardinal principle of statutory construction' that 'a statute ought, upon the whole, to be so construed that, if it can be prevented, no clause, sentence, or word shall be superfluous, void, or insignificant.'" TRW Inc. v. Andrews, 534 U.S. 19, 31, 122 S.Ct. 441, 151 L.Ed.2d 339 (2001), (quoting Duncan v. Walker, 533 U.S. 167, 174, 121 S.Ct. 2120, 150 L.Ed.2d 251 (2001)).

A Stricter Provisional Voting Standard. As discussed above, States' have the right to impose stricter requirements than those laid out in HAVA. The EAC has already made it clear, above, that a stricter voter eligibility requirement cannot be read to bar an individual's right to a provisional ballot. However, could a stricter requirement regarding provisional voting serve to limit access to such ballots? No. A stricter State requirement for provisional voting would be a standard that enhances a person's access to a provisional ballot. As the Sixth Circuit noted, "HAVA is quintessentially about being able to cast a provisional ballot." Sandusky County Democratic Party, 387 F.3d at 576. "HAVA's requirements 'are minimum requirements' permitting deviation from its provisions provided that such deviation is 'more strict than the requirements established under' HAVA **(in terms of encouraging provisional voting)**…." Id., (quoting 42 U.S.C. §15484, emphasis added). Thus, in terms of provisional voting, a stricter standard is one that serves to further encourage provisional voting. When passing laws affecting provisional voting, States must ensure that their provisions are consistent with HAVA or otherwise serve to further an individual's access to a provisional ballot. EAC concludes that any policy asserting that States may pass laws limiting access to provisional ballots conflicts with HAVA.

---

[3] See 42 U.S.C. §§15485 – 15485, entitled *Minimum Requirements* and *Methods of Implementation Left to Discretion of State*, respectively.

Conclusion. A state may not impose an identification requirement that would limit a potential voter's access to and submission of a provisional ballot. However, such requirements (when coupled with a state's provisional ballot procedures) may prevent a provisional ballot from being counted.

Hi -- hope all is well.

I've got a quick question for you. Vercellotti and Anderson
have put out for public distribution what looks to be their
work from their EAC report on voter identification
(http://moritzlaw.osu.edu/blogs/tokaji/voter%20id%20and%20turnout%20study.pdf
).
Given that this piece of their research project is
available, is the rest of their work available for public
distribution yet (as you know the VTP is having a conference
at the end of this week on voter identification and registration,
it would be nice to have access to the EAC research at the
conference, even at this late date).

Subject Eagleton/ FOIA request

Matt-

I'm somewhat concerned that perhaps I haven't given Jeannie every piece of Eagleton documentation needed for the FOIA request.

I have literally hundreds of e-mails from Eagleton; the most germane of which are included in the big contract close-out binders (#2,#3).

However, I 'm not certain if I should print out all "300" of them.

If you are working on this project, let me know how I should proceed.

Subject Re: Eagleton/MoritzVoter ID Report

History: This message has been replied to and forwarded.

Karen - Here is a reply to your question. Sorry not to have gotten it to you more quickly.

There are a couple of reasons why we used the CPS. Most importantly, it is a survey of individual voters, as opposed to election officials. The CPS allows us to make inferences about individual-level charactertistics (such as the age, race, education and income of each registered voter who responded to the survey), and how those characteristics combine with voter ID requirements to influence turnout. Also, the sample size is large, allowing for reliable analysis of sub-populations (just Hispanic voters, for example). Because of those two factors, most of the scholarly studies of voter turnout and the institutional and individual-level factors that go into turnout use the CPS.

The EAC also might ask why we collected our own aggregate data as opposed to using the results of the Election Day survey. We could provide greater detail if needed, but, in brief, the EAC Election Day Survey draws data from the jurisdiction that handles elections. In many states that is the county, but in the New England states the EAC Election Day Survey uses towns as its unit of analysis. Our aggregate data attempts to match voter turnout data to Census data, which we have gathered at the county level.

Conceivably, we could have gone through and matched Census data to towns for the New England states, but that would have been very time-consuming. Moreover, it would also have posed a problem with the statistical analysis of the aggregate data, which assumes a two-level statistical model with counties as the first level and states as the second level. Inserting a third level of towns just for the New England states would require that each town in each county be coded with vote totals and Census data for each. That would take months.

Let me know if you need additional information of would like to discuss.

Thanks, John

Karen, I'll survey the group about the best time for a conference call. The 24th does not look like a good time. We have a teleconference with the Peer Review Group on the Voter ID paper scheduled for Feb. 22, and therefore would be hard-pressed to review the précis of your comments in time for a discussion on the 24th. The next week would be more promising, perhaps Tuesday, Feb 28 in the afternoon.

We still plan to deliver the Voter ID paper to you the first week in March.

Tom O'Neill

Tom-

I have now received comments back on the Provisional Voting Best Practices document, from all of EAC's senior staff. I am in the process of combining these comments into one document, and will get the copy to you by mid-week next week.

By-and-large the comments are not major. The comment of greatest magnitude relates to the fact-checking process and the overall accuracy of regarding Eagleton's/Moritz' recording of States' previous experiences with provisional voting.

Overall, the Commission is continuing to review its option of issuing guidance on this topic, along with best practices.

Shall we schedule a conference call for Friday, February 24 at 10:00 AM to go over the EAC's comments and Eagleton putting the finishing touches on its report?

Also, when should the EAC expect the Voter ID document?

History: This message has been replied to.

Karen, It looks like 3:45 would be better for the group. If that fits your needs, I'll confirm with the participants from Eagleton and Moritz.

SubjectRE: January Progress Report

Karen, I'll survey the group about the best time for a conference call. The 24th does not look like a good time. We have a teleconference with the Peer Review Group on the Voter ID paper scheduled for Feb. 22, and therefore would be hard-pressed to review the précis of your comments in time for a discussion on the 24th. The next week would be more promising, perhaps Tuesday, Feb 28 in the afternoon.

We still plan to deliver the Voter ID paper to you the first week in March.

Tom O'Neill

Subject No Cost Extensions (with extensions)

History: This message has been forwarded.

Karen - I am attaching a spreadsheet providing the information you have requested (Attachment 1), but I want to highlight a few points which may not be immediately self-evident.

First, the original budget (Attachment 2) we submitted to the EAC, dated March 22^nd , did not itemize personnel expenses by each person. In addition, when we actually began work two months after submitting that budget, we decided to reallocate more time to people within Eagleton and hire fewer outside hourlies.

Second, in the figures I sent you in late December we tried to account for all the expenses and projections but overlooked a few things including neglecting to include the honoraria for our peer review team. Hence, the figures we're now sending are different than what I sent in December.

Lastly, we originally discussed a no-cost extension through February, but since we don't yet have the EAC comments on our draft Provisional Voting material nor an estimate of when they are likely to be ready, I think it is prudent to extend the no-cost extension through March 31st . We would still like to conclude by the end of February, but if you can approve the extension for another month we could avoid going through this process again if everything is not complete six weeks from now.

It is my understanding that Rutgers will soon be sending our December invoice. At this time, I would also like to request that we combine January and February an invoice the EAC once for that time period.

As you can see, we are currently projecting an ending balance of approximately $10,000. If additional expenses are incurred beyond what is currently projected, we're confident they will not exceed the original budget of $560,002.

Thanks and I look forward to hearing from you.

U.S. ELECTION ASSISTANCE COMMISSION
1225 New York Ave. NW – Suite 1100
Washington, DC 20005

December 9, 2005

MEMORANDUM FOR THE RECORD

On May 24, 2005 the U.S. Election Assistance Commission awarded an eight month contract (December 30, 2005) in the amount of $560,002.00 to the Eagleton Institute of Politics (Rutgers, The State University of New Jersey) to provide research assistance to support development of guidelines on the topics of provisional voting and voter identification procedures.

On November 15, 2005, John Weingart, Associate Director of the Eagleton Institute of Politics, requested via e-mail, a no–cost extension on this contract (E4014127). Mr. Weingart has requested an extension to complete the work of this contract to February 28, 2006.

In subsequent correspondence, Mr. Weingart notes the following as the reason for the request:

"The original work schedule called for EAC to publish in mid-October, voluntary guidance and/or recommended best practices for provisional voting, based on Eagleton's research. In making that time estimate, we did not provide sufficient time for the EAC to review and consider the draft reports that would form the basis for that publication….. The additional time required to complete the work on provisional voting has delayed the completion of our analysis of Voter Identification issues. The draft report of that topic will be submitted to the EAC in mid-January".

He further notes:

"If EAC does not object, funds originally allocated for the hearings would be available for transfer to support the additional staff and consultant time necessary to complete the work…"The total project budget is $560,002. As of October 31st, the EAC has been invoiced for $259,081.79; the balance remaining is $300,920.21. We anticipate that the project will be complete and the balance of funds fully expended by February 28, 2006. The final invoice for the contract will be submitted to the EAC within 75 days of the close of the project".

Karen Lynn-Dyson, the EAC's Contracting Officer Representative assigned to this contract has reviewed this request, the rationale and authority for it (FAR 43.103(a)(3)) and finds it to be appropriate. To-date the Eagleton Institute has consistently met its deadlines for major project deliverables and stayed within the project budget. To grant the Eagleton Institute a two month extension on this contract in order to obtain the necessary feedback on major documents it has produced will be within the best interests of the Election Assistance Commission, and thus, the federal government.

EAC's Contracting Officer Representative finds that to grant the Eagleton Institute a no-cost extension for the modification of its contract with the EAC is within the scope of the original agreement and is recommending that this modification to the contract be made.

Signed

Karen Lynn-Dyson
Contracting Officer Representative

OUTLINE

- Introduction
- Provisional Voting
    - Task 3.7
    - Task 3.8
- Voter Identification Requirements
    - Task 3.10
    - Task 3.11
- Project Management
    - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from November 1 through November 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

In November we completed and submitted our Provisional Voting analysis paper, including recommendations to the EAC for best practices. These policy prescriptions are based on our research and the comments of the Peer Review Group on that research. We completed a careful review of our data to reconcile it with other sources and identify the latest, most reliable information to use in the analysis. The importance of this demanding effort was described in October's Progress Report. We continue to await the EAC's comments on that final draft.

Also in November we revised the schedule for the project in light of the additional time that has been needed for review of earlier drafts by the EAC and the late completion of the Election Day Study. We made a written request to the EAC for a no-cost extension of the contract through the end of February which we understand is likely to be approved before Christmas.

Since the submission of our Provisional Voting report to the EAC on November 28, 2005, our efforts have been entirely aimed at the completion of the voter identification research. We have been advised that EAC will take several weeks to review and react to our final draft on provisional voting. As we await a January meeting on that topic, we are moving ahead quickly on the statistical analysis of voter identification data and summarizing the legal research that was completed earlier.

This Monthly Progress Report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to [redacted] [redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Task 3.4 was completed in August, and Tasks 3.5 and 3.6 were completed in November.

Task 3.6: Prepare preliminary draft guidance document.

The report and recommendations which were sent to the EAC on November 28, 2005 recommends against the adoption of a guidance document per se and advises that the EAC adopt its recommendations as best practices. That recommendation followed agreement by the EAC with that course of action. The submission of that report and recommendations, however, constitutes the document required under this task. Before proceeding to Task 3.7 (revise the guidance document for publication) or 3.8 (arrange a public hearing on the draft guidance), we await the EAC's decision on how to proceed.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is the principal focus of our research at this time.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 state (plus District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C. Moritz has completed its review of voter identification litigation. Moritz and Eagleton have worked together to review the research, clarify the categorization of that research on our charts, and reconcile the data developed in our two different research techniques categorizations.

Challenges: The biggest challenge facing the reconciliation process of research findings, descriptions and categorizations is that it is being done by two different teams (Moritz and Eagleton) who rely on different primary source materials. Despite the necessity this has created to reconcile conflicting data from time to time, the collaboration has also been very beneficial because it has made our research efforts more rigorous.

Work Plan: During December we will conclude our reconciliation and continue analysis of voter identification research, including an analysis of the most important issues and trends in voter identification litigation.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

During the month of November, we developed narratives to establish how laws were passed, looking at when they were proposed and when they were eventually enacted. In the upcoming month, Eagleton will examine voter registration forms across the states to see what forms of identification are requested from mail-in registrants. The difficulty will be determining the 2004 status of the states.

VOTER ID AND TURNOUT ANALYSIS

Now under way is a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election. In November, we have analyzed both aggregate- and individual-level data to determine whether there is any relationship between voter turnout and the various forms of voter identification states require.

Progress: Analysis is under way for two data sets: County-level data that includes registration and turnout rates for 2000 and 2004, as well as Census measures and indicators of the type of voter identification requirements that were in existence at the time of the 2004 presidential election. The second data set consists of the voter supplement to the November 2004 Current Population Survey. This data set allows for testing of the same hypotheses at the individual level. Preliminary findings from the aggregate data set suggest that voter ID requirements have their greatest effect at the registration stage, as opposed to the turnout stage. This is a first cut at the data, however, and we will be adding a number of control variables to the analysis to see if the relationship holds.

Challenges: These analyses use hierarchical linear modeling. Because voter identification requirements vary by state, one must pay special attention to other, unseen state-level influences on the data. The models are difficult to run and interpret, so the analyses are time-consuming

Work Plan: The statistical analyses will continue during the month of December, and a draft of the findings is anticipated by the end of the month.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: During the month of November, Eagleton contacted the PRG Members on two occasions. First, all members received the final draft provisional voting report that was submitted to the EAC. Further comments are welcome but not expected from the PRG. Second, we have asked PRG members to reserve two dates in mid-January for potential conference call sessions to review the voter identification report.

Challenges: No new challenges were encountered during November.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole. Upon their completion, new documents continue to be added.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site, and. regularly post drafts, completed materials and spreadsheets online for internal review. The Intranet facilitates the exchange of information and collaboration among project participants.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project November 1- November 30, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

Subject Provisional Voting Report Status and Request for Advice

History: This message has been replied to and forwarded.

Karen - We would like to talk with you about the process and schedule for completing our work in a way that is most useful to the EAC. I am attaching a draft timeline for the completion of this work and listing below five specific questions we need to resolve as quickly as possible. I would appreciate it if you would call me to discuss how best to address these matters - whether by telephone or by coming to meet in Washington.

We are planning to submit our report on Provisional Voting to the EAC by November 18^th . Although it is not required in our contract, we will at the same time give copies to the members of the Peer Review Group offering them the opportunity to send us any additional corrections or other comments.

We are considering making all our recommendations for both Provisional Voting and Voter ID in the form of Best Practices. Some of them might well lend themselves to Guidance, but our discussion of the earlier draft with the EAC left us with the clear impression that on this topic the preference was for recommendations for Best Practices rather than a Guidance document. The calendar also argues for the Best Practices route to enable the EAC to give states advice they can use in 2006. (The attached draft timeline would need to be revised if the EAC prefers to propose some of the recommendations as Guidance.)

QUESTIONS:

1. Does the EAC agree with the approach described above to make all recommendations in the form of Best Practices rather than Guidance?

2. How long will it take the EAC to review and return comments on our draft Provisional Voting document? Is our attached revised schedule realistic in anticipating EAC comments no later than the week of December 12^th on the report we send you at the end of this week?

3. After we revise our report on Provisional Voting to reflect any comments we receive from the EAC, and follow a similar process for our report on Voter Identification, what further steps would the Commission like us to take? Would you want us to conduct a review with your Board of Advisors and/or hold public hearings even though these steps are, we understand, required only for a Guidance Document? A review by the Board of Advisors would offer the opportunity to solicit suggestions for Best Practices from its members, thus strengthening the document and building a constituency for their adoption. (The attached draft timeline does not include such additional reviews.)

4. In any case, we will need a no-cost extension to the contract to carry us past December 31^st . How do we make that request?

5. Assuming that we conduct fewer public hearings than we had anticipated, can we reallocate funds we had budgeted for that purpose to cover the higher than anticipated personnel and consultant costs we will

be incurring after the first of the year?

We look forward to discussing these matters with you.

Thanks, John

Subject October Progress Report

Karen,

Attached is the Progress Report for October. Please note that this report includes at attachment showing how our study classifies each state on key variables, such as counting out-of-precinct ballots, requirements for ballot evaluation, and other variables. It also displays how the data we used differs for some states for the vote counts reported by the Election Day Survey. We believe that our data is more accurate and complete (see for example the data for New Mexico and Pennsylvania).

I look forward to responding to any questions or concerns you or others at the EAC may have.

Tom O'Neill

Subject Eagleton's September Progress Report

History: This message has been forwarded.

Dear Ms. Karen Lynn Dyson:

My name is Johanna Dobrich and I have taken over the responsibility of sending the Eagleton Institute of Politics Monthly Progress Reports to you, in place of Lauren Vincelli.

Attached in this email you will find the Eagleton Institute of Politics monthly Progress Report for September 2005. Also attached, is a document called "PRG Summary Comments" which is an attachment to September's Progress Report.

Please email me at jdobrich@eden.rutgers.edu to confirm that you have received this email. If you prefer I send a hard copy of these documents, in addition to the electronic version, please let me know.

Sincerely,

Johanna Dobrich

New Brunswick, NJ 08901-8557

OUTLINE

- Introduction
- Provisional Voting
  - Task 3.5
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from September 1 through September 30, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

We focused in September on refining our Provisional Voting research. This refinement was necessary to prepare a strong final analysis paper and develop alternative approaches to Provisional Voting based on the analysis. An important part of this refinement involved reconciling sometimes conflicting data on Provisional Voting from different sources, including the Election Day Study, which finally became available in September. With a clearer understanding of our data, we began the critical work of selecting alternatives to recommend to the EAC as guidance or best practices responsive to both our research and the needs of the Commission.

Three meetings this month helped us accomplish the necessary refinement. We briefed the EAC on our work on September 6, held the first meeting of the Peer Review Group (PRG) on September 21, and gained the benefit of the EAC's reaction to the September 6 briefing in a conference call on September 30.

The completion of our work on Provisional Voting has been delayed by the time needed to absorb and incorporate the findings of the EAC Election Day Study, to recruit and receive the comments of the PRG, and to receive the Commission's comments on the September 6 briefing. The schedule called for the release of the Election Day Study last spring, the submission of the Preliminary Guidance Document to the EAC's advisory boards in mid-September, and a public hearing on the Guidance Document in late October. We now plan to submit to the EAC a final draft of our report, a preliminary guidance document, and draft best practices before the end of October. And we understand that after review of those materials, the EAC will decide whether to issue a guidance document or recommend best practices. Projecting a late November date for those decisions seems reasonable. If the EAC does decide to issue a Guidance Document on Provisional Voting, the time needed for a review by the advisory boards is likely to delay a public hearing until January.

While we have made a good start on the Voter ID sections of our research, most time and resources this month were dedicated to resolving issues involved in Provisional Voting.

This report is divided into 3 sections: Provisional Voting, Voter Identification Requirements, and Project Management. Each section references specific tasks described in paragraph 3 of the contract. The Financial Report will be sent separately by the Rutgers Division of Grant and Contract Accounting.

Please direct questions or comments about this report to Tom O'Neill at:
[redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to Provisional Voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed in August, and Task 3.5 is well underway.

Task 3.5: Analysis and Alternative Approaches. Assess the potential, problems, and challenges of Provisional Voting and develop alternative means to achieve the goals of Provisional Voting.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It has provided a base of understanding for the analysis of states' actual experience with Provisional Voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on Provisional Voting, compiled statutes, case law and administrative procedures regarding Provisional Voting and is near completion with this research.

Progress: We have completed the memorandum outlining Provisional Voting legislative changes since the 2004 election and we are continuing to clarify the laws prior to these changes.

Challenges: The variety in the form and frequency of Provisional Voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The analysis of the information, data, and survey results concerning Provisional Voting was completed in September, on schedule. We are now revising it in response to comments by the Peer Review Group (PRG). We are also revising the alternatives document to reflect the critique of the PRG and the guidance from the EAC in response to the September 6 briefing.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with Provisional Voting in 2004. The report findings from the survey of 400 local election officials are now complete. The survey results have proven to be instrumental in shaping our understanding of actual practice in administering Provisional Voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with Provisional Voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to Provisional Voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: We completed a state-by-state narrative of developments in Provisional Voting and distributed it to the EAC and the PRG. This work has been helpful in understanding the context of the data collected on provisional voting from the states.

Challenges: The primary obstacle to constructing the narratives was difficultly in communicating and obtaining necessary information from various state officials. As a result, the narratives underwent several revisions to incorporate up-to-date and reliable information. Now that so many other analyses, including the Election Day Survey, have been released, we were challenged by different interpretations of the same basic facts. But the reconciliation of interpretation and data collection has been invaluable in establishing rigor in our report.

Work Plan: We completed revisions of the narratives incorporating comments from the PRG.

PROVISIONAL VOTING STATISTICAL ANALYSIS

Description: Throughout September the Eagleton research team revised and clarified its statistical analysis, and worked to reconcile the classifications of this analysis (such as states counting only those provisional ballots cast within the proper precinct versus states that counted ballots cast within the proper county) with the classification made in other parts of this study or in other studies (such as the Election Day Study or *Electionline* reports).

Progress: In response to comments from the PRG, we have clarified and sharpened the presentation on the methods used and results achieved in the statistical analysis. We have double checked the classification of variables upon which the study is based and reconciled differences in various areas of the overall study. This effort is nearing completion.

Challenges: The difficulties encountered have been a result of communication delays and time constraints. Overall, these are not problems or hindrances, but simply slow down the process.

Work Plan: In mid-October we aim to complete a final revision of the statistical analysis and a full reconciliation of all data within the study.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Eagleton Center for Public Interest Polling (CPIP) conducted a national survey of county election officials to measure several aspects of Provisional Voting.

Progress: The analysis of the survey results and findings report is complete. As a result of the critique by the PRG, the research team is revising and clarifying the descriptions of the survey design and sample selection process to make the research methods more transparent.

Work Plan: We used the information from the survey in drafting the analysis and alternatives document required under Task 3.5. We will include necessary clarifications regarding survey design and sample selection in the final analysis and alternatives document.

Peer Review Group

Most members of the PRG met by telephone conference on September 21 to comment on all the research described above. Participating in the meeting were Michael Alvarez, Martha Kropf, Dan Lowenstein, Peter Verniero, Brad Smith, and Tim Storey. Timothy O'Rourke contributed his comments separately. The group provided a detailed critique of our approach, methods, and conclusions, and we are now revising each document in response to the comments and suggestions. It praised the quality of the work and the rigor of much of the analysis. A summary of the suggestions from the members of the PRG is attached to this report.

Challenges and Work Plan

Making arrangements for review of drafts by the PRG and by the EAC has taken longer than anticipated by the Work Plan. The schedule called for all research and analysis to have been completed and incorporated into a Draft Preliminary Guidance Document by mid September. The review process by the EAC and PRG took longer than contemplated by the Work Plan. And we now understand that the EAC will make a separate decision –that will require additional time-- whether to issue a Guidance Document or recommendations for best practices. It has not, therefore, been possible to schedule a public hearing or arrange for review of our work by the EAC's advisory boards, as called for in the Work Plan. We now aim to complete our reports and recommendations for guidance by the end of October, and to then await a response from the EAC before scheduling submission to the advisory boards or making arrangements for a hearing.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. The research on Voter ID requirements is proceeding concurrently with our work on the experience of Provisional Voting, and is becoming the principal focus of our research.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. This collection of material is nearing completion. It will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The 50 State (plus the District of Columbia) chart has been completed, the voter identification statutes have been collected for all states and D.C., and summaries of the existing voter identification statutes have been written for all states and D.C.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: Analysis of voter identification data will begin now.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of different voter ID regimes. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern and a sharp political debate over rigorous identification requirements for all voters. The research follows these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. We understand that the EAC has issued a research contract that will focus on vote fraud and vote suppression. Our research in this area will be limited to developing an understanding of the tradeoffs between ballot security and access to the ballot. We have completed the basic database on voter identification issues has been completed, and the next key step will be drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We have created a database and gathered statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. We have also utilized exit poll data collected on Election Day 2004 as a resource for understanding the demographics of voter turnout.

Challenges: The analysis of these data has been postponed until the data reconciliation of Provisional Voting is complete. The main challenge now is an issue of time management. As a result of the extensive revision and data reconciliation efforts aimed at the Provisional Voting section of our work VID has been temporarily placed on hold.

Work Plan: The analysis of the impact that voter identification requirements have upon voter turnout should be completed by early November.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a PRG. It reviews our research and methodology and provides valuable feedback and suggestions for the direction of our work.

Progress: The research team held its first conference call with PRG members on September 19, 2005. The research team will hold a workshop meeting on October 19, 2005 to address the PRG's comments.

Challenges: To date we still have not heard back from two PRG Members.

Projections: Revisions and clarifications to our reports on Provisional Voting will be resolved by the end of October. We will need to schedule a second conference call to review our research with regard to Voter Identification Requirements in late November. As noted earlier, a summary of the comments we have received from the PRG is attached to this report.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law is being merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding Provisional Voting and voter identification.

Progress: At this point in the research process, many documents are complete after a lengthy process of circulating drafts among team members. We have reorganized our system by separating final drafts from earlier versions of documents, discarding dated files contained in the Information System, and updating the system as a whole.

Projections: The entire project team continues to use the Information System which contains the above referenced research, in working toward the preparation for our final reports to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

Progress: Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has helped team members and serves as an internal website with announcements and important documents readily available to all team members.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project September 1- September 30, 2005, will be sent under separate cover to: Ms. Dianna Scott, Administrative Officer at the EAC.

Peer Review Group
Summary of Comments
To the Eagleton/Moritz Group
Under Contract to Provide Research Assistance to the EAC

October 15, 2005

The Peer Review Group (PRG) met by telephone conference on September 21. Those participating included: Michael Alvarez, John C. Harrison, Martha Kropf, Dan Lowenstein, Peter Verniero, Brad Smith, and Tim Storey. This summary also includes additional written remarks submitted by Martha Kropf and additional remarks from a follow-up phone call with Timothy O'Rourke. We are now addressing all the comments including, in some cases, returning to members of the group to seek further elaboration or clarification.

We encouraged the members of the PRG to comment about any aspect of the project. We furnished them with these materials before the meeting.

1. Survey of local (mainly county) officials conducted in June 2005.
2. State-by-state narrative of developments in provisional voting
3. Statistical Analysis of state provisional voting
4. Memorandum on Provisional Voting Litigation
5. Memorandum on Provisional Ballot Litigation by State
6. July Memorandum on Provisional Ballot Litigation by Issue

We suggested that PRG members rank our draft responses to each of the six key questions posed by the EAC along these lines:

1- Research supports conclusions well.
2- Research supports some conclusions. Specific questions are:
3- Research does not support conclusions. Major problems are:

On the Alternatives paper, we asked PRG members to list up to three items they found questionable in light of the research and their own knowledge of provisional voting and election administration and to give us their thoughts on alternative policies that we had no included.

General Suggestions

1. Make transparently clear the meaning of **'old' versus 'new' states**. It is not enough to categorize the states as such, we need to determine why specific states were considered 'old' or 'new' (i.e. clarify what conditions were met by old states).

2. Be **clear** in our report about the **data that we were unable to obtain** and perhaps speculate on why that data was not available. (For example, do we have the documentation the state election boards gave the localities regarding counting practices? If not, why not? Indicate the states for which it was difficult to obtain data.

3. Prescribe less and **describe more** (tell what voters/administrators have done, not what they should have done or ought to do).

4. Questioned our assumption about public trust – How do we know that decreases in disputes/challenges signify an increase in public trust? We need to explain this assertion.

<u>Specific Review by Area of Analysis/Document</u>

Response to Statistical Review:

- Challenged our emphasis on the number of provisional ballots counted as a percentage of those cast as an indication of success of Provisional Voting. Suggested alternative relationships to consider (PB v. Turnout, PB v. Registered Voters, and PB v. Voting age Population).
- Wanted the inclusion of variation within states among counties (and geographical considerations).
- The report needs to address the quality and validity of the data used in the analysis.
- On Page 8, cautioned using the estimate of 280,000 disenfranchised voters who would have voted if outside precinct voting was permitted.

Response to Question Four:

- Remove the comments in the footnote (p. 1) that offers an alternative way of analyzing the question relating to the possible increase in voter participation as a result of provisional voting because the margin of error in the Census survey does not support a conclusion at this level of significance.
- Address the alternative explanation for why old states may enfranchise more voters than new states (i.e. Kropf 's Failsafe option).
- Include a statistical summary of the relationship between the length of time a state has had PV and the rate at which votes are counted.

Response to Question Five:

- Is it possible to draw any conclusions about the local differences within and among states broken down by county (presumably 20 states worth)?

- Clarify what is meant by "design" and say how many states have/had provisional ballots that are designed differently and look different. Why is design important?

- Page 17 indicates that states with statewide voter databases end up validating fewer PVs. This is important & should be addressed in more detail.

Response to Question Six:

- On the usefulness of instructions, 98% said the instructions were useful. Make it clear that this represents 98% of the officials who got instruction.

- Is the passive voice the best means to communicate this information (for ex. "Second, objectively how well did the process appear to be managed?")

Response to State Narratives:

- When in doubt about whether we have data to support a sentence it is important to be careful about the language we use (say 'doing XYZ would have revealed' as opposed to 'most of what we know about XYZ revealed'…)

- Clarify for the readers what is meant by "provisional vote/total vote". Does that mean provisional votes cast? Counted? Make it clear right at the beginning of every document?

- Footnote states that do not list poll sites or tell people where to vote with the fact that many cities/counties do have a poll finder.

Election Official Survey

- Clarify how we determined who to include in the sample and how we developed the questions in the survey (was a focus group an initial step?) Why were 3,800 election officials deemed eligible to participate (out of how many? 5,000 or so?)

- Clarify old and new states on pg. 2 in National Survey. Comment on how to assess fraud in provisional voting? What is the relationship between PV and turnout?

- Explore more issues about citizenship (18% non-citizen voting in CA)?

- Appendix A says survey was random, but it's not. How was the data weighted for small, medium and large counties, and for other issues? Clarify this in the report.

- Why doesn't the total of new and old states equal 50 (25 and 18) and why does the National Survey of Election Officials have different numbers? Is FL an 'old' state?

- Are the New England states underrepresented in the survey? If so, why?

- Report should offer more information about the response rate.

. **Alternatives Document**

- The importance of clarity in state processes for both administrators and voters needs to be better articulated.
  (Better training of poll workers, clarity whether failure to check boxes disqualifies voters, access to better info. at polling locations)

- Cautions the use of definitive statements (such as A-3, perhaps say "This raises the question of…").

- Have other EAC Guidelines been tested in court yet?

- On page 3: the 'tracking number' in # 6 is not feasible. Also, "the information" in # 12 should be changed to "the website and 800 numbers" for clarification.

- Page 6, there were disagreements about # 1 and # 2 of options in Sec. F regarding the installation of a separate body to rule on PV for the integrity process; a motion was made to get rid of them.

- Page 6, Sec. E option # 1 should be eliminated or clarified

- Add to Sec. F a '# 5' requiring states to provide detailed public info. on PV

Subject Re: EAC Conference Call - Friday 9/30

History: This message has been replied to.

Karen - Let's do it on Friday at 1:30. From my initial polling, at least Tom O'Neill, Ingrid Reed and I will be available. Since we will not all be at the same location, would you like us to initiate a conference call from here and give you a number to call in to?

Subject EAC comments on Alternatives Outline

Karen,

Sorry I missed your calls today. Your message was good news. We will look forward to learning from you the Commissioners' reactions to the Alternatives Outline next Friday. In the meantime, we continue to flesh out the analysis, sharpen the alternatives, and move the research on Voter ID to the stage of drafting the of our analysis of those issues. And, of course, our work will finally benefit from the critique of the Peer Review Group at its first teleconference next week.

Subject Eagleton Institute of Politics - July 2005 - Monthly Progress Report

History: This message has been forwarded.

Ms. Dyson,

Attached please find the July 2005 Progress Report for the project entitled, "Contract to Provide Research Assistance to the EAC for the Development of Voluntary Guidance on Provisional Voting and Voter Identification Procedures." If you have any questions regarding any part of this document please contact Tom O'Neill at: [redacted]

The financial reporting for this project is performed by the Division of Grant and Contract Accounting at Rutgers University. A copy of this report was not made available to us in an electronic format. Hard copies of the Progress Report and Financial Report have been Fedex'ed to you this afternoon and should arrive to your attention tomorrow morning. Please let me know if you do not receive this package by tomorrow afternoon.

Thank you for your time, have a great evening.

Best,
Lauren Vincelli

OUTLINE

- Introduction
- Provisional Voting
  - Task 3.4
- Voter Identification Requirements
  - Task 3.10
  - Task 3.11
- Project Management
  - Task 3.1
- Financial Report

INTRODUCTION

This report describes our progress from July 1 through July 31, 2005. It includes brief descriptions of key tasks; progress made; challenges encountered or anticipated; milestones reached; and projections for work to be completed in the coming month.

The effort this month continued to focus on research for the analysis and alternatives paper, including the compilation of Provisional Voting statutes, regulations, and litigation from the 50 states. We also prepared and delivered testimony at the EAC's regular monthly meeting in Pasadena on July 28.

The data collection, analysis, and compilation are all on schedule. Because of delays in agreeing on the composition of the Peer Review Group with EAC, however, the actual completion and submission of the analysis and alternatives paper to the EAC will most likely be delayed about a week beyond the target date in the work plan. We are scheduled to discuss the draft paper and guidance document prior to submission, with the EAC on September 6, and the final draft cannot be completed until several days after that date.

The document report is divided into 4 sections that cover: Provisional Voting, Voter Identification Requirements, Project Management, and the Financial Report. Each section references the specific tasks described in paragraph 3 of the contract.

Please direct any questions or comments about this report to Tom O'Neill at:
[redacted]

PROVISIONAL VOTING

Tasks 3.4 – 3.9 in our contract relate to provisional voting. Work on the first of these must be complete before proceeding to later tasks. Task 3.4 was completed this month.

Task 3.4: Collect and analyze state legislation, administrative procedures, and court cases. Understand the disparities and similarities of how provisional voting was implemented around the country.

LEGISLATION, REGULATIONS, AND LITIGATION

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation. This information constitutes the compendium of legislation, administrative regulations, and case law called for under this task. It also will provide a base of understanding for the analysis of states' actual experience with provisional voting in 2004, for which the Eagleton team has lead responsibility.

Description: The Moritz team has created a 50-state chart to summarize information on provisional voting, compiled statutes, case law and administrative procedures regarding Provisional Voting.

Progress: The 50-state (plus District of Columbia) chart created to collect data on provisional voting is complete. We have collected the statutes for all states. State by state summaries of provisional voting have been written for 47 states and D.C. A memorandum summarizing provisional voting litigation is complete. The collection of the documents associated with the litigation is nearing completion.

Challenges: The variety in the form of provisional voting legislation from state to state makes creating a snap-shot view across states a challenge.

Work Plan: The remaining 3 state summaries of provisional voting will be completed by August 8. Analysis of all the information, data, and survey results concerning provisional voting data will be performed in August.

PREPARATION FOR AND EXPERIENCE WITH PROVISIONAL VOTING

The Eagleton team has researched and compiled a narrative of each state's experience with provisional voting in 2004. At the end of July the survey of 400 local election officials was nearing its end, and – as of this writing – is now complete with an analysis and report in draft form. We will rely on the survey results to improve our understanding of actual practice in administering provisional voting, including the steps local officials took to prepare for the election.

PROVISIONAL VOTING NARRATIVES

Description: To construct the narratives, a researcher examined newspaper accounts, state websites, and reports from third-party organizations to gather information on the experience with provisional voting in the 2004 election. To organize the information derived from this examination, we created an information system that catalogues information about the states (i.e. whether a state was new to provisional voting, the percentage of provisional votes counted, the method of notifying voters if their vote was counted, etc.) and combined it with Moritz's collection and analysis of statutes, regulations and litigation.

Progress: The state-by-state database is complete, as is a first draft of all state narratives. This work has been shared with the larger team and is being reviewed currently in preparation for constructing analysis and recommendation of alternative approaches for provisional voting required under Task 3.5.

Work Plan: In the next month, revisions of the narratives will be complete. In addition to this research, we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms.

SURVEY OF COUNTY ELECTION OFFICIALS

Description: The Center for Public Interest Polling (CPIP) at Eagleton conducted a national survey of county election officials to measure several aspects of provisional voting. The survey was designed to determine the following factors related to provisional voting at the county (or equivalent election jurisdiction) level:

- The content and quality of instructions provided to county officials by the states;
- The steps taken by county officials to pass information on to poll workers;
- Differences in experience between states new to provisional voting and those that had some form of provisional ballot before HAVA; and
- Recommendations to improve and/or reduce the need for provisional voting.

Progress: The fielding and initial analysis of the survey results are complete.

Work Plan: The information derived from the survey will be considered in drafting the analysis and alternatives document required under Task 3.5.

VOTER IDENTIFICATION REQUIREMENTS

The contract lists 7 tasks (3.10 – 3.16) related to Voter Identification Requirements. During the reporting period, we have completed tasks 3.10 and 3.11. The research on Voter ID requirements is proceeding concurrently with our work on the experience of provisional voting.

Task 3.10: Legislation, regulations, and litigation

The research team at the Moritz College of Law has the lead responsibility for the collection and analysis of legislation, administrative procedures and litigation with regard to Voter Identification Requirements. When complete, this information will constitute the compendium of legislation, administrative regulations, and case law called for under this task.

Description: The Moritz team has compiled statutes on Voter Identification, and will provide a summarized analysis of this research to the project team for review.

Progress: The chart created to collect data on voter identification is complete and is now being reviewed. Voter identification statutes are being collected.

Challenges: Identifying the relevant statutes has been challenging because of the different terminology used from state to state to codify voter identification issues, and because many states have scattered election law provisions throughout their codes. This variety from state to state makes creating a snap-shot view across states a challenge.

Work Plan: Review of the voter identification chart, the collection of the voter identification statutes, and the writing of the state by state summaries will be completed by the end of August.

SUPPLEMENTS TO LEGAL ANALYSIS

To supplement the legal analysis, the Eagleton team is undertaking two research efforts: First, compiling information on the debate over voter ID in the states; and second, estimating the effect on turnout of voter ID requirements. Tracking the continuing political debate over voter identification reveals that the relatively narrow HAVA requirements for voter identification have apparently sparked in many states a broader concern with more rigorous identification requirements for all voters. We are following these developments both to monitor possible secondary effects of HAVA on voter ID, and to provide a rich collection of alternative approaches for consideration.

Individual narratives for the states with significant activity in voter ID will provide a resource for understanding the wide range of experience in the 2004 election. The narratives will include an appraisal of the prevalence and nature of vote fraud, a focus of the concern with increasing the rigor of voter ID requirements. The next key milestones will be the completion of the state database and drafting the first narratives.

VOTER ID AND TURNOUT ANALYSIS

The second supplemental analysis will provide objective information on a contentious feature of the debate over voter ID in the states: the effects of more rigorous voter ID regimes on voter turnout and the relationship between the voter ID regime and vote fraud. As part of this effort, Eagleton is undertaking a statistical analysis to gauge the effect of a state's voter ID regime on turnout, especially turnout by minority and elderly voters.

Description: We are creating a database and gathering statistics on the effects of state-level voter identification requirements on voter turnout at the county-level in the 2004 election.

Progress: The collection of data for the Voter ID-Turnout analysis is complete. The assembled database contains population demographic data, voter registration data and voter turnout data from all 50 states, 3113 Counties, and the District of Columbia. It also contains exit poll data from the 50 states, providing demographic data of voter turnout. The analysis of that data is well underway.

Challenges: The initial methodology that was devised to investigate the questions involved in this part of the study proved insufficient, as the necessary data was unobtainable (the Census Bureau has not yet released their 2004 data). After re-developing an appropriate methodology, the necessary data has been assembled, we have resumed the analysis of this data.

Projection: The analysis of the impact that voter identification requirements have upon voter turnout should be completed around mid-August.

Task 3.11 Public meeting on Voter Identification Requirements

Description: In early July, we continued our efforts to identify specific Voter ID topics or issues and panelists who could shed light on them. We recommended a focus on the debate over Voter ID now underway in the states. To provide a vivid picture of the debate, we recommended that one panel include specific legislators on opposite sides of the issue from two different states, Mississippi and Wisconsin. We also discussed adding a researcher to the panel in order to place the debate in a national or historical context. We also recommended a panel of two academic researchers with contrasting points of view, to address the effects of Voter ID provisions under HAVA. In response to our suggestions, EAC staff recommended a panel of two state election directors to address the interaction of Voter ID with HAVA.

By mid-July, the EAC had decided which topics and speakers should be invited, however most of those speakers proved unable to attend.

Progress: Tom O'Neill and Dan Tokaji attended the EAC Public Meeting held in Pasadena on July 28. Their presentations at the meeting described the progress of the research and our developing perspective on how to assess the quality of the provisional voting process in the states and identify possible steps for improvement.

Challenges: The changes in the scheduling of the July meeting delayed and ultimately made it impossible to assemble a panel, from which we could derive substantive insight into voter identification issues as they are playing out in the states. Additionally, due to the date of the hearing, the information from the hearing was not available as early in the research process as contemplated in the contract.

Projection: Preparation of the hearing summary will likely be delayed, due to the team's focus on preparation of the analysis and alternatives paper.

PROJECT MANAGEMENT

PEER REVIEW GROUP

Description: A feature of our proposal was the creation of a Peer Review Group (PRG). The EAC indicated at our first meeting in May that it would review our recommendations for members of the PRG. Our initial vision of the PRG was a small group of scholars and representatives of advocacy organizations that would comment on the research design, review drafts of our analyses and reports, and, in general, identify areas of the research that should be strengthened and help us improve the breadth, depth and clarity of reports based on that research.

Progress: Upon reflection, the project team agreed that the PRG should not include representatives of advocacy groups. We concluded that as representatives they would feel obligated to act as advocates for positions already taken by their groups. While advocacy organizations might be consulted as stakeholders during the course of our work, they were unlikely to achieve the goals we had in mind for the PRG as a source of advice on research design, methodology, and analysis. We submitted a revised list of potential members, substantially comprised of academics, to the EAC for review.

The EAC responded with suggestions concerning both the balance of the PRG's membership and the creation of additional committees to review our work. We provided an analysis of the cost and time involved in adopting the EAC's suggestions as well as with suggestions for a balanced selection of academics for the Peer Review Group. In the end, the EAC determined that Eagleton should appoint a balanced Peer Review Group of its own choosing. Initial phone calls were made to all members of that group by the end of July, and written invitations and descriptions of the process have gone to all possible members who had indicated their interest in serving.

Challenges: Communications on this issue with the EAC were not clear or timely. The purpose of the PRG is to review our work, and to comment on our research design, which is well underway. We had planned to have the PRG in place early enough in the project to enable them to provide feedback, including the research design. While we are confident in the quality of our work, the experience and perspective of the Peer Review Group will strengthen our analysis and recommendations as we find a way to receive its critique in the more limited time now available. The delay in creating the Peer Review Group will result in a delay in the completion of the final draft of the analysis and alternatives paper and in the preliminary guidance document.

Projections: The work of the PRG will be about 2 weeks behind the milestones indicated in the work plan.

COORDINATION AND INFORMATION MANAGEMENT

Collecting and merging information and data from myriad sources is a demanding requirement of this research. We have developed two principal mechanisms to facilitate the analysis of the material collected or created in the project: an information system and an internal website for easy access to drafts and reports.

INFORMATION SYSTEM

Description: The statutory data and reports prepared by the Moritz College of Law will be merged with the political and procedural data and analysis prepared by the Eagleton Institute of Politics to provide a cohesive final product to the EAC, which will include a compendium of case law and statutes regarding provisional voting and voter identification.

Progress: The Moritz team has provided Eagleton staff with all completed work. An Eagleton staff member reviews the content and formats of data from all supporting research and will (re-)format once the work has been completed for the compendium and reports submitted to the EAC. The researchers and staff at Eagleton have created a shared folder on the Institute's server for the safe storage of work and access for those staff members. All of this work is being reviewed by the project team to ensure that a broad survey is being performed.

Projections: By the end of July 2005, much of the above referenced research has been completed. The entire project team has begun the process of reviewing all work, and will combine and format all documents and materials in preparation for our final reporting to the EAC.

INTRANET

Description: All project team members have signed on to the Intranet site. The Intranet facilitates the exchange of information and collaboration among project participants.

Progress: Project team members regularly post drafts, completed materials and spreadsheets online for internal review. The intranet has been extremely helpful to team members and serves as an internal website with announcements and important documents readily available to all team members.

FINANCIAL REPORT

The financial reporting for this project is supervised and prepared by the Division of Grant and Contract Accounting (DGCA) at Rutgers. Financial reporting on grant accounts is limited to actual expenses that have been incurred during the reporting period. Our contact at DGCA is: Constance Bornheimer, (732) 932-0165, EXT. 2235.

A detail of expenses incurred from project inception through June 30, 2005, is attached.

Karen,

A received a call from Rutgers Univ. regarding the nonpayment of an invoice (submitted on the Form 1034) in July for work done in June. I do not have this invoice, but Joyce's mail logs shows correspondence coming in from Eagleton Inst., in July, addressed to Tom Wilkey which apparently was passed on to you. Is this so? Plz. advise. I'd like to return the call to Rutgers, at least to acknowledge that the invoice was received by us.

Tom-

I trust you are in contact with Carol and Julie regarding the information on the Peer Review Group and the July 28 hearing at Cal/Tech that you have requested of them, respectively.

While the EAC is a small agency with relatively few reporting layers, I suggest that for all future items requiring feedback and decisions from the EAC, that you are certain to carbon copy me on all e-mails.

This will ensure, that as your primary point of contact, I have a record of all communication that has taken place between the contractor and the agency.

Thanks

Subject Peer Review Group

Carol,

After our discussion in New York, you asked me to put in writing our response to the EAC's suggestions for expanding the number and kinds of groups that would review and comment on our work. I hope after your review of this response, we will be able to quickly recruit a balanced Peer Review Group (PRG) and move ahead as the schedule in our work plan indicates. Attached is a revised list of the members we propose for appointment to the PRG. We will probably not be able to persuade all of them to serve, but the number and range of views included on the proposed list should ensure that the resulting group is well-balanced.

Tom

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG

Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:

A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.

B. PRG's analysis would be vetted by a defined/select group of local election officials.

C. A defined/select group of advocacy organizations would review the comments of the local election officials

D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response

Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

RESPONSE TO EAC RECOMMENDATIONS FOR ADDITIONAL REVIEW GROUPS

EAC's Recommendations for the PRG
Karen Lynn-Dyson reported this response from the EAC commissioners to our proposal for the composition of the PRG.

1. Not sufficient conservative representation on the PRG

2. Create a "tiered process" of review in which:
   A. The PRG will prepare a dispassionate analysis of the issues and draw some tentative conclusions.
   B. PRG's analysis would be vetted by a defined/select group of local election officials.
   C. A defined/select group of advocacy organizations would review the comments of the local election officials
   D. Empanel a final focus group of local election officials, advocates and academics for an overall, interactive reaction to the analysis and recommendations.

Project Team Response
Creating three new committees to the review process to supplement the work of the Peer Review Group (PRG) is possible, but would add at least 8 weeks –and possibly 12 weeks-- to our completion of the guidance document on provisional voting. We believe this delay would risk limiting the value of this project for the 2006 election. In addition, the change would add at least $30,000 to the cost of our work. (See the attached table showing the possible effect on our work plan, and note the optimistic assumptions such as the ability to hold a hearing the week after Christmas.). If the same groups were to be engaged in reviewing our work on Voter ID, the time for that work would also have to be stretched at a similar increased cost.

This additional cost and the added time might be worthwhile. . . if the new layers of review were to produce a consensus on how to strengthen the research, sharpen the analysis, and increase the relevance of the Guidance Document. Our team concluded, however, that additional review groups were unlikely to achieve these results.

PRG focuses on quality of research

We believe that our research would be strengthened by a balanced Peer Review Group that will focus on the design of the research and our conduct of it. Based on the EAC's recommendation, we have revised the composition of the PRG to include additional, well-recognized authorities in the field whose perspective is generally agreed to be conservative.

The PRG will focus on the strength of the research design and the quality of our analysis, not on the politics of our recommendations for the guidance document. The PRG will critique the research design and suggest how to strengthen it. Members of the group will review the quality of our analysis so that we can fill holes and correct errors before we make policy recommendations to the EAC. The PRG may or may not meet as a group. The likelihood is that most comments will come in writing from individual members, most of whose schedules would not permit attendance at meetings. In any case, the PRG members will not gather around a table to come to consensus on the study's recommendations.

While using the PRG as a forum to reach consensus on the knotty issues involved does not appear practical, the EAC can benefit from the work of other groups in this regard. It is not necessary for this project to duplicate the deliberative processes of the Carter-Baker Commission, the Century Foundation and the Election Center. The EAC itself as well as the project team can get the benefit of these reports without duplicating this "policy evaluation board" structure as part of this contract.

Project Team focuses on analysis and recommendations

Karen reported that the Commissioners believed that the PRG would "prepare a dispassionate analysis of the issues and draw some tentative conclusions." As we see it, the PRG will neither analyze data nor draw conclusions, tentative or otherwise. Its members will review and comment on how the Project Team has designed and carried out the research. Analysis, conclusions and recommendations are the responsibility of the Project Team. We have all seen in the preface to books or articles a sentence or two that read something like this, "The author thanks Mr. X, Ms. Y, and Dr. Z for their review and comment on the manuscript. Their analysis has strengthened the work, but they are in no way responsible for errors or for my conclusions." That is the way we think about the Peer Review Group.

In short, the PRG will help ensure that EAC's Guidance Document is founded on a solid base of data and analysis. The review and comment on the Preliminary Guidance Document by the EAC's Board of Advisors and Standards Board will provide participation by important stakeholder groups without the need for the other review committees. This Board is broad-based and represents a key stakeholder group. It also enjoys a significant advantage over a "defined/select" group we might empanel. Any group we define will be open to criticism or charges of bias by representatives of interest groups not represented.

The criticism and charges of bias might be tolerable, but only if we could expect consensus from the "defined/select" group we would appoint. We believe that consensus would be elusive. In empanelling a "defined/select" group, we would naturally look for balance and would appoint members to represent a point of view or an institutional interest. As representatives they would likely feel that they had little choice but to be strong advocates. They would have little incentive to compromise. Our research, as opposed to our policy recommendations, would be better served by the analysis of scholars than by the advocacy of interests.

Policy judgments

We regard the EAC itself as responsible for the policy judgments involved in shaping the Guidance Document. We plan, of course, to respond to the EAC's comments on our preliminary draft, so that the EAC's comments will shape the Preliminary Guidance Document before it is released for public comment. And further revision will follow the public hearing and comments. The EAC and individual Commissioners can always seek comment informally on our analysis or recommendations. That course appears to us preferable to the creation of a new, more elaborate review process.

PROPOSED MEMBERSJuly6.doc

REVISED
PROPOSED MEMBERS OF PEER REVIEW GROUP

July 6, 2005

Role of the Peer Review Group

Members of the Peer Review Group will review the research design for the project, including the survey of local election officials, the analysis of Voter ID regime on turnout, the state-by-state narrative of developments in provisional voting and voter identification, and the compilation and analysis of statutes, administrative regulations, and case law affecting provisional voting and voter identification. They will also review the report on Analysis and Alternatives. They may review the draft of the Preliminary Guidance Document before it goes to the Board of Advisors for comment.

Members of the group will be respected authorities in their fields and represent a range of opinions and perspectives, although their views on policy will be less important to the study than their views on the quality of the research on which policy recommendations are based.

Ideally, the group would meet once, but even that may not be possible to arrange given the tight time period for the project, the demanding schedules of the members, and their wide dispersal across the county. They will function largely by reviewing written work and making written comments on it. The timing of their involvement is indicated on the work plan.

R. Michael Alvarez, Ph.D.
Professor of Political Science
California Institute of Technology
rma@hss.caltech.edu

Subject RE: Revised Work Plan --Gantt Chart

History: This message has been replied to and forwarded.

Karen:

I just downloaded the same file I sent you. It is formatted for printing at 11x17, and I had no difficulty magnifying it to that size on my computer screen. I don't have a printer than handles paper that size so I can't print it myself. The only other format I have available is a Microsoft project file, and that is attached. (Although in my experience pdf files are the easiest to handle.)

Tom

Subject: Re: Revised Work Plan --Gantt Chart

Happy Monday, Tom

The EAC Research Associate and I are having difficulty reading the Gantt chart you sent and need it sent in a format in which we can enlarge it to at least 11X 17.

I'd like to be able to share this with the Commissioners later on this afternoon, but understand if your not able to convert it by then.
Thanks

Karen Lynn-Dyson

Subject Revised Work Plan –Gantt Chart

History: This message has been replied to and forwarded.

Karen,

Attached is the Gantt chart that you and Carol requested. I think it is most useful if used in conjunction with the work plan table that I sent originally, but whether you use it as freestanding guide to the project or as a supplement, I hope it meets your needs.

The narrative to complement the Gantt chart will be along early next week.

Tom GanttChartFinal.pdf

Subject Re: Eagleton draft press release

History: This message has been forwarded.

I have some concerns about the press release. In paragraph two, I am not comfortable with the following language in what I believe is paragraph two: Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006.

It seems to me that EAC will develop the guidance based on Eagleton's findings.

Also, I do not think the press release should contain the list of questions. Are they/we trying to float a trial balloon and elicit initial reaction at this early stage of the study??

Subject: Eagleton draft press release

Commissioners,
Below is a draft of a press release Eagleton wants to distribute regarding the EAC contract. (It's also attached.) Please let me know if you have edits/changes. Also, take a close look at the language regarding the scope for the voter ID study to make sure it is acceptable.

DRAFT FOR APPROVAL

EAGLETON INSTITUTE OF POLITICS WINS $560,000 CONTRACT FROM U.S. ELECTION ASSISTANCE COMMISSION

Rutgers Institute to Study Provisional Voting, Voter Identification Procedures

NEW BRUNSWICK/PISCATAWAY, N.J. – The U.S. Election Assistance Commission (EAC) has awarded the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a

$560,000 contract to study provisional voting and voter identification procedures based on experiences from the 2004 election.

Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006, according to Eagleton Director Ruth B. Mandel, the study's principal investigator. She added that the Moritz College of Law at Ohio State University, Eagleton's partner in the contract application, will be responsible for the legal analysis of the competitively bid, seven-month project.

Eagleton already is home to an extensive civic education and political participation program, with several projects aimed at increasing voter turnout, political participation and Americans' involvement in civic life.

EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency and provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security.

Questions include:

- Did the states have in place clear and uniform written procedures, guidelines and instructions to govern the casting and counting of provisional ballots?

- Did local procedures reflect the state's uniform procedures?
- Did all states and election jurisdictions make these procedures available to the public, political parties and candidates before the election?

- To what extent were poll workers appropriately trained on how to administer provisional ballots, including establishing the identity of the potential voter seeking a provisional ballot?

- How were federal funds under the Help America Vote Act used to educate voters about their rights to cast a provisional ballot and where such provisional ballots must be cast to be counted?

- In states where a provisional ballot had to be cast at the voter's assigned polling place or precinct, was information available to poll workers to allow them to determine the voter's assigned precinct and polling place?

- Did states have mechanisms in place to inform voters casting provisional ballots whether their vote was counted and whether they are now registered for subsequent elections?

Eagleton will address these questions by examining the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public

hearings to be held in conjunction with the project.
At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of alternatives to existing practices and procedures.

Subject Revised work plan

History: This message has been forwarded.

Karen,

Attached is a schedule that constitutes our revised work plan.

The revisions take into account the need not just to compile and draft the material, but also to provide sufficient time for review of major documents by the EAC staff, our peer review group, and for consideration of key deliverables by the EAC's Boards of Advisors, and then to revise the material appropriately. As a result, the deadlines are slightly longer than reflected in the contract, but all work will be completed by year's end.

The revision also attempts, not with complete success, to stagger the deadlines for the reports and guidance concerning provisional voting with those on voter id. Preparing major documents on both topics simultaneously would strain our abilities, with consequences for the quality of the work.

The work plan will be in constant evolution, with more detail and precision to be added to the months of September through December as we gain experience with the pace of the work. We all look forward with working closely with you to monitor and sharpen the schedule.

Tom

Subject Re: Tally vote document on Eagleton Institute

History: This message has been replied to and forwarded.

I've taken a brief look at this. Seems pretty straightforward. However, you might want to talk to Carol about the level of detail (not a whole lot in the memo re other bidders)-- maybe it's not needed. Once you've settled on a final, work with DeAnna to get the other docs necessary for a tally vote.

Deliberative Process Privilege

April 20, 2005

MEMORANDUM

TO: EAC Commissioners

FROM: Ray Martinez, Commissioner
U.S. Election Assistance Commission

SUBJECT: Identification of a contractor to perform research and help the EAC prepare policy guidance related to provisional voting and voter identification procedures.

Sec. 302 (a) of the Help America Vote Act of 2002 (HAVA) requires that all states allow the casting of provisional ballots in instances where a voter declares his/her eligibility to vote but his/her names does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. The U.S. Election Assistance Commission (EAC) seeks to examine how provisional voting was implemented in the 2004 election cycle and to prepare guidance on this topic for the 2006 election.

HAVA Sec. 303 (b) mandates that first time voters who register by mail are required to show proof of identify before being allowed to cast a ballot. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 election cycle and to prepare guidance on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents around these issues, would be created.

The EAC issued a Request for Proposal to obtain research assistance that would support the EAC in its development of guidance on provisional voting and on voter identification requirements. Six proposals were received and reviewed by a panel comprised of EAC staff and an election expert.

RECOMMENDATION:

Approve the award of a contract to the Eagleton Institute of Politics, Rutgers, The State University of New Jersey in collaboration with the Moritz College of Law, The Ohio State University in the amount of $XXX, XXX to provide, to the EAC, research services and assistance with developing policy guidance on provisional voting and voter identification procedures.

Subject Provisional Voting and Voter ID Project

Carol - Ingrid Reed, Tom O'Neill and I met today to outline the proposal we will prepare in response to the revised SOW. We will have the proposal to you by no later than next Monday. I hope that timetable is acceptable. In addition, I want to request your comments on two ideas that have emerged since we talked last week.

First, following your suggestion, Ingrid had a good conversation with Ned Foley at OSU which could lead to Rutgers subcontracting to OSU. More specifically, we plan to include a task that would occur early in the contract calling for a systemic collection of relevant laws and court decisions in the 50 states coupled with an analysis of the material with an eye towards commonalities and distinct features as well as aspects that may warrant further exploration as possible models or pitfalls for other states. Our thought is to include both provisional voting and voter ID in this task.

Second, we are considering budgeting approximately $40,000 towards two public opinion surveys. One, suggested by OSU, would be a survey of provisional voters in Franklin County (where OSU is located) and perhaps several Ohio counties. We estimate this would cost about $20,000. The other would be a nationwide survey of college students conducted by Eagleton to gain a comprehensive understanding of student voting experiences in 2004. For this second survey, we believe we will obtain approximately $20,000 from the Carnegie Foundation and do it well if we allocated an additional $20,000 in the EAC budget.

I look forward to hearing from you by e-mail or phone. I am teaching tomorrow (Tuesday) morning but will be in my office from about 1:30 on.

Thanks, John

Subject Statement of Work - Provisional Voting, Voter ID

History: This message has been forwarded.

John et al. -

Here's a revised SOW for this work. I apologize for the formatting; I'm not the greatest at word processing and couldn't figure out how to undo the Microsoft automatic formatting that kicked in part way through the document. But thought it more important to get you the content and have someone make it pretty later. As indicated earlier, the government cost estimate is preliminary; we're open to discussion with appropriate rationale for another figure. Looking forward to working with you!

January 30, 2005

PROVIDING EAC ASSISTANCE IN DEVELOPING VOLUNTARY GUIDANCE ON PROVISONAL VOTING AND VOTER IDENTIFICATION PROCEDURES

0.0 Contract Title: Assistance in the Development of Guidance on Provisional Voting and Voter Identification Procedures for the U.S. Election Commission

1.0 Background: Sec. 302(a) of HAVA requires that all States allow the casting of provisional ballots in instances where a voter declares their eligibility to vote but their name does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. This section describes several requirements for implementation of provisional voting, but the States have considerable latitude in specifying how to carry out these requirements. The EAC seeks to examine how provisional voting was implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 Federal elections.

HAVA Sec. 303(b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents will result.

2.0 Objective: The objective of this contract is for EAC to obtain assistance with the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements for the purpose of drafting guidance on these topics for promulgation to the States in time for implementation for the 2006 Federal elections. The anticipated outcome of this activity is the generation of concrete policy recommendations to be issued as voluntary guidance for States.

3.0 Scope: In general the Contractor shall be responsible for all research and analysis activities, including the conduct of public hearings for fact finding and public comment purposes. However, in light of the urgent need to get this work underway, the EAC has scheduled a public hearing on February 23, 2005, on the topic of provisional voting. The EAC will organize and conduct this hearing, as well as handle the logistics planning and cost. The

Contractor may be requested to comment on the agenda and the invited presenters in advance of this meeting.

An initial framework for provisional voting policy has been set by the court decisions rendered on the election procedures utilized in the 2004 election. The 6th Circuit decision, in particular, has drawn some boundaries which must be given due regard in the course of considering future policy alternatives for provisional voting.

Notice of public meetings and hearings is required to be published in the Federal Register. The Contractor shall be responsible for preparing the notice documents, and the EAC will submit the notices and cover the cost of publication. In addition, draft guidance documents must be published in the Federal Register to obtain public comment prior to their adoption. Again, the Contractor will work with the EAC to prepare the draft documents for publication, which the EAC will submit and cover the cost of publication. Comments received will be provided to the Contractor for analysis and incorporation into the final guidance documents, as appropriate.

4.0 Specific Tasks

For ease of reference, following task 5.3 the remaining tasks are listed separately under the headings of Provisional Voting and Voter Identification Requirements. It is understood that the work on these two topics will be conducted essentially concurrently, with Voter Identification activities starting approximately one month after Provisional Voting.

4.1 Prepare a project work plan. The Contractor shall prepare and deliver a brief Project Plan not later than 10 days after contract award. This plan shall describe how the Contractor will accomplish each of the project tasks, including a timeline indicating major milestones. A single document will be prepared to include both provisional voting and voter identification tasks. The Plan shall be presented at a project kickoff meeting with the EAC Project Manager.

4.2 Submit monthly progress reports. The Contractor shall submit a monthly progress report within 2 weeks of the end of each month. This report shall provide a brief summary of activities performed and indicate progress against the timeline provided in the Project Plan. Any issues that could adversely affect schedule should be identified for resolution. Budget status should also be provided.

4.3 Conduct periodic briefings for the EAC. The Contractor shall periodically meet with the EAC Project Manager and the lead Commissioner for this work to discuss research findings and progress. The Project Plan should make allowance for this activity. The number and frequency of briefings will be determined by the Contractor Project Manager and the EAC Project Manager as the work progresses.

Provisional Voting

4.4 Participate in February 23, 2005, public hearing in Columbus, Ohio, and brief the Project Plan. Prepare document summarizing the proceedings and containing all testimony provided.

4.5 Collect and analyze State legislation, administrative procedures, and court cases. An understanding of the disparities and similarities of how provisional voting was implemented around the country will provide a baseline for the consideration of future approaches. Seventeen States never had provisional voting before HAVA was enacted, while many other States did. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.6 Recommend alternative approaches for future implementation of provisional voting. The Contractor shall conduct a literature review to identify other research results and data available on this topic. The EAC Election Day Survey, for example, contained several questions on provisional voting. The EAC will make these survey data available to the Contractor. Based on their analysis of available research and the results of Task 5.5, the Contractor shall diagnose the problems and challenges of provisional voting implementation and hypothesize alternative approaches.

The Contractor shall assess the efficacy of these alternatives in relation to the following inter-related policy objectives: (1) enabling the maximum number of eligible voters to cast ballots that will be counted; (2) providing procedural simplicity for voters, poll workers, and election officials; (3) minimizing opportunity for voter fraud; and (4) maintaining a reasonable workload for election officials and poll workers. Additional policy considerations may be identified in the course of this research effort. The Contractor shall document and brief these alternatives to the Commission.

4.7 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board of Advisors meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.8 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.9 Arrange one public hearing for receiving public comment on draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the meeting

4.10 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

Voter Identification Requirements

4.11 Collect and analyze State legislation, administrative procedures, and court cases. It is assumed that the collection of information for analysis of voter identification requirements will be performed concurrently with the research for Task 5.5. An understanding of the disparities and similarities of how voter identification requirements were implemented around the country will provide a baseline for the consideration of future approaches. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

4.12 Convene a half day public hearing on the topic of voter identification requirements. The Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC. The Contractor shall identify three panels of three to four speakers each. The Contractor shall arrange for speaker attendance to include travel and per diem expenses. The EAC will provide publicity for the hearing. The Contractor shall prepare a document summarizing the proceedings and containing all testimony provided.

4.13 Recommend alternative approaches for future implementation of HAVA voter identification requirements. The Contractor shall conduct a literature review to identify other research results and data available on this topic. Based on their analysis of available research and the results of Task 5.11, the Contractor shall diagnose the problems and challenges of voter identification and hypothesize alternative approaches. The Contractor shall coordinate with the EAC to identify appropriate policy objectives by which to assess these alternatives. The Contractor shall document and brief these alternatives to the Commission.

4.14 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.

4.15 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.

4.16 Arrange one public hearing for receiving public comment on the draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the hearing.

4.17 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

5.0 Contract Type. The contract type will be Time and Materials with a ceiling of $700,000.

6.0 Place of performance. The principal place of performance will be the Contractor's place of business. Meetings and occasional work efforts may be performed at the EAC offices.

7.0 Period of Performance. The period of performance is from date of award until October 28, 2005.

8.0 Schedule of Deliverables:

- Project plan – 10 days after contract award
- Progress reports – monthly
- Briefings – as required
- Summary of provisional voting public hearing - 3/11/05
- Analysis report on provisional voting - TBD
- Alternatives report on provisional voting – TBD
- Preliminary draft guidance on provisional voting - TBD
- Draft guidance on provisional voting for publication – 8/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on provisional voting for EAC adoption – 9/2005
- Analysis report on voter identification requirements – TBD
- Public hearing on voter identification requirements – TBD
- Summary of voter identification requirements hearing - TBD
- Alternatives report on voter identification requirements - TBD
- Preliminary draft guidance on voter identification requirements - TBD
- Draft guidance on voter identification requirements for publication – 9/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on voter identification requirements to EAC for adoption – 10/2005

REMAINING STANDARD CONTRACT TERMS TO BE PROVIDED.

Subject Revised Voter ID Analysis

Good morning Tanisha,

To my understanding Dr. Nagler is out of the office today and I been informed to contact you with any information for him. I am attaching a copy of the Revised Voter ID Analysis. Will you please see that he receives it today? If you have any questions regarding this document feel free to contact me.

Thanks!

Deliberative Process
Privilege

June 15, 2006

John Weingart:
Eagleton Institute of Politics
Rutgers University

Dear John:

During its bi-weekly meeting the four EAC Commissioners met, discussed and reviewed possible next steps with the provisional voting and voter identification studies as well as the Eagleton contract which is scheduled to conclude on June 30, 2006.

The four Commissioners were in agreement that Eagleton's work on the EAC contract should conclude, as scheduled, by June 30, 2006. In preparation for this conclusion the Commissioners have asked that the comments and suggestions which were noted during the EAC's recent Board of Advisors and Standards Boards meeting (and were described in your June xxx letter to Chairman DeGregorio) be included in the final report on provisional which Eagleton will deliver to the EAC on or about June 30, 2006. The Commissioners have determined that they will take this final report and, from it, develop guidance and best practice recommendations that will be presented to the Board of Advisors and Standards Boards for further review.

The EAC Commissioners have also reviewed and considered next steps with the voter identification draft report which Eagleton has prepared. While the final disposition of the results and findings of this study, on the part of the EAC, are still unclear, the Commissioners have asked that the final report of this study also be prepared and submitted to the EAC not later than June 30, 2006.

We look forward to receiving these reports. On behalf of the EAC thank you for the considerable time and energy which the Eagleton/Moritz team has devoted to these critical election issues during the last eighteen months.

Sincerely.

Thomas Wilkey

Subject Voter ID Report and Appendices

History: This message has been replied to and forwarded.

Karen,

Attached for review by the Commissioners is the Voter ID Report and its appendices. The appendices are lengthy, but I believe Appendix A should be included in the report sent to the Advisory Boards for review.

Thanks for your forbearance.

Tom O'Neill

Appendices517.doc VoterIDReport05170910.doc

Karen,

John and I reviewed your recent email today, and he asked me to respond.

Important to us is a clear commitment now by the EAC to schedule a presentation of our Voter ID research at the May meeting of the Advisory Board, if its review is required before the paper is published and presented at the EAC's public meeting in June. Your email made no mention of that June public meeting. Our schedule (submitted with the request for the no-cost extension) –and our previous discussion with you—treats that meeting as the key event that will conclude our research under this contract. Therefore, we also look for an explicit understanding that a presentation of our reports will be included in the agenda for that public meeting.

We can deliver a final report on Provisional Voting by May 5 and will be prepared for whatever role we might play at the May 24 meeting of the Advisory Board.

The team is looking forward to a discussion of Tim Vercellotti's revised statistical analysis of Voter ID with the academic reviewers you are in the process of identifying during the week of May 8. Knowing the specific date and time of that discussion in the next day or so would facilitate the participation of appropriate members of our Peer Review Group in that conversation.

Tom O'Neill

Subject: Re: Eagleton/Moritz Next Steps

John and Tom-

A couple of items related to timing over the next several weeks:

1. Is it possible to get your final report on Provisional Voting by COB May 5? If so, I can get this to the four Commissioners for final review and approval. It will then be ready to present to the EAC Board of Advisors and Standards Board at the May 24 meeting.

2. As we discussed I have been working to identify a small group of academics(three or so) who will be available to review the Voter ID paper the week of May 8. The focus of the review will be on Tim's research methodology and statistical analysis. I am fairly certain that this review can be done via conference call , preferably on May 11 or May 12. This would assume each of the reviewers will have spent time reviewing the paper, taking extensive notes and summarizing his or her comments. I expect that you all, Tim, Mike Alvarez and any others from your peer review panel, who have an expertise in research and statistics, will be available for the conference call, as well?

3. While I expect you will be able to have your final Voter ID paper to me sometime during the week of May 15, it is not clear whether or not the paper will be presented to the EAC Standards and Advisory Boards the following week. As you know, the paper contains some controversial information, so the Commissioners may elect to spend additional time reviewing the findings among themselves, and before it is formally presented to our Boards.

Let me know if this schedule works for you all.

Regards-

Subject RE: Schedule for completion of Prov. Voting and Voter ID research

History: This message has been replied to and forwarded.

Thanks, Karen.

Just to be sure that our expectations are clear, I'll summarize the perspective behind the schedule we submitted for the recent extension.

A. Provisional Voting

1. We presented our Provisional Voting report to the commissioners several months ago, revised its organization and clarified findings and recommendations in line with the comments of staff and commissioners, and we researched Tom Wilkey's additional question of the effect of the time for review on the evaluation of provisional ballots, which will be included in the final revision.
2. The final draft will be completed by May 5 .
3. Based on discussions with you and the commissioners we look forward to presenting that revised, final report to the Advisory Board on May 24, following whatever additional review the Commission finds appropriate.
4. Our discussions with Commissioners and staff anticipated that we would make some presentation of the provisional voting work at the Commission's public meeting in June, a presentation that might include revisions occasioned by the comments of the Advisory Board.

B. Voter ID

1. We presented our Voter ID research to the Commissioners in April and are now revising it in line with their comments.
2. That revised research paper will be discussed in mid May by reviewers selected by the Commission. That date was set specifically to allow us to prepare a final report that would be ready for review by the Advisory Board on May 24.
3. We anticipate that the Commission will want the comments of its Advisory Board on the Voter ID report before it receives it in June. (Indeed, we were advised that the Advisory Board members would be most interested in the accuracy of observations or findings specific to their individual states.)
4. The appropriate conclusion for our work is a presentation of findings and recommendations for both Provisional Voting and Voter ID, 2 closely related topics, to the Commission at its public meeting in late June, just a week before the termination of our contract under the extended schedule.

I hope you'll share this outline of our expectations with the others at the Commission involved in assuring a successful completion of this research and analysis.

Tom O'Neill

Subject Review of new Voter ID Analysis

History: This message has been replied to.

Karen,

Tim Vercellotti and I have a proposal to meet your schedule for a conference call on May 11 with Jonathan Nagler, Jan Leighley, and Adam Berinsky, as well as a few members of our Peer Review Group.

Tim's revision will not be complete until May 4. We propose to send this new analysis immediately to you for distribution to the reviewers that day. I will need several days more to incorporate Tim's new data in our summary report.

Since the reviewers will be focused on our methodology, they will need several days to digest the new statistical analysis. In the meantime, I will plug the the new statistical conclusions into our report. We will send the revised summary report to you for distribution to the reviewers on May 9, after our team has looked it over to ensure that it reflects Tim's work accurately and that its policy conclusions and recommendations are well supported by the statistical analysis.

The reviewers will then have a couple of days to satisfy themselves about those same issues, and we can meet the tight time schedule.

This schedule is demanding, but meeting it is important to us so that our report is ready to be discussed with the Advisory Board at its meeting on May 24.

Please let me know if this timetable works for you.

Tom O'Neill

Subject: Close-out with Eagleton

In anticipation of the conclusion of the Eagleton contract ,Darrell and I are going over contract items which may be outstanding (monthly reports, key deliverables, invoices, etc).

You may recall that the contract called for guidance to be issued on provisional voting and voter identification and for a public hearing to be held on each of these topics.

We possess e-mails and written correspondence which document that EAC elected not to issue guidance or to conduct public hearings on these matters.

In your opinion, is such correspondence sufficient documentation that the contractor was not required to deliver these deliverables?

Thanks for your guidance.

Subject Final Provisional Voting and Voter ID reports

History: This message has been replied to and forwarded.

Karen,

Attached are our final reports on Provisional Voting and Voter Identification in PDF format. The hard copies with all attachments are on their way to you via Fed Ex.

I understand from your email today that we will be receiving a letter from Tom Wilkey on the final steps to wrap up the contract. All of us are eager to see the Commission move forward with recommendations to the states for best practices on provisional voting and to take the next step on voter id issues by submitting our report to the advisory boards.

Thanks for your long effort to help us see this research through to submission. I hope we'll have a further chance to work together as our recommendations approach implementation.

Hope you enjoy some time off during the coming long weekend and July 4 celebration.

Best Practices to Improve Voter Identification Requirements

CONTENTS

The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891.It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

EXECUTIVE SUMMARY AND RECOMMENDATIONS

Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

- Opponents seek to forestall more stringent identification requirements, such as government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate. It inquires whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout. That analysis would constitute an important first step in assessing tradeoffs between ballot security and ballot access. The aim of this research is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis examined the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information (such as the specific reasons some potential voters are not allowed to cast a regular ballot) that that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on

turnout and on vote fraud is to collect more information on both topics systematically and regularly.

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:[1] the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.[2] Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, the different statistical methods and two different sets of data on turnout in 2004 election used in the study point to the same general finding. Stricter voter identification requirements (for example, requiring voters to present non-photo ID compared to simply stating their names) were correlated with reduced turnout in the models employed, as described in detail in Appendix C. [3] As explained below, these models find that a statistically

---

[1] See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. Political Behavior, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

[2] The EAC has contracted with other researchers to study vote fraud issues.

[3] Appendix C: Tim Vercellotti, Eagleton Institute of Politics, *Analysis of Effects of Voter Identification Requirements on Turnout.* Using the aggregate data, photo ID did not have a significant effect on turnout, possibly because in the

significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. (But note that in the model using the aggregate data, photo ID did not have a significant effect on turnout. The reason may have been that in this election, each state with a photo ID requirement provided an alternate way for those without a photo ID to cast a regular ballot.) Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible voters, however, the tradeoffs between ballot security and ballot access cannot be assessed.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.[4] The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state

---

2004 election every state requiring photo ID provided an alternative way to cast a regular ballot for those voters who lacked photo identification. The individual data from the Current Population Survey did show a significant effect, but only for the overall sample and for white voters, which may be an artifact of the large sample size.

[4] Even the most relaxed provisions for identification at the polls –anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a "minimum" requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always

for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, for the maximum ID requirements, the match-signature requirement and the provide-a- non-photo-ID requirement, but not the photo ID requirement, were all correlated with lower turnout compared to requiring that voters state their names. When the registration closing deadline was added as an independent variable in the aggregate analysis, signature match and non-photo id remained significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a "maximum" requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a "minimum" requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such

knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[5] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

---

[5] Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. A "Voter Impact Statement" would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.
3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC might also use the information reported by the states to encourage further assessment by the states of the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
    I. Useful information could be supplied by state-sponsored surveys of voters conducted by local election officials. Such surveys would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
    II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
    III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks

statutory or regulatory requirements. Such reports should be available to the public.

4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots[6], and the safe harbor provision in presidential elections.
5. Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is less certain.

SUMMARY OF RESEARCH

Background and Approach of the Study

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether to vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

---

[6] Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review.* 61:2 (June 1967) found that local variations in the rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.
- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly.* 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics.* 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.

- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior.* 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review.* 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review.* 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.

- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review.* 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior.* 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.
- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior.* 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics.*, 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [7] The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

---

[7] As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.[8]

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.[9] Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that

---

[8] Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

[9] "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.[10] Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.[11] And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

---

[10] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

[11] The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest seven questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?[12]
2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[13]
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[14]
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.[15] A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

---

[12] "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

[13] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

[14] In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

[15] "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[16]
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it, intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

Voter ID and Turnout

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004.These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[17] Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.[18]

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the

---

[16] For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

[17] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

[18] As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a "minimum" requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.[19] Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

[19] One state election official told us that, "We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is."

* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

[1] Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

[2] Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

[3] Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

[4] Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

[5] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[6] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[7] Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

[8] Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements (r = -.30, p < .05). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant (r= -.20, p = .16). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**64.2 %**	State Name	**63.0 %**
Sign Name	**61.1 %**	Sign Name	**60.4 %**
Match Signature	**60.9 %**	Match Signature	**61.7 %**
Provide Non-Photo ID	**59.3 %**	Provide Non-Photo ID	**59.0 %**
Provide Photo ID	**58.1 %**	Swear Affidavit	**60.1 %**
Average Turnout (All States)	***60.9 %***		

This table displays the mean turnout using the aggregate county level data for each state in 2004.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables.[21](Dichotomous variables reflect either the presence or absence of a characteristic. In the dummy variable for non-photo ID, a state would be coded as 1 if it required non-photo ID, and 0 otherwise.)

Voter identification requirements are just one factor that might affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American [22]
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering

---

[21] The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

[22] The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

The dependent variable in each model using the aggregate data was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that the stricter voter identification requirements of matching one's signature to a signature on file with election authorities or presenting a non-photo ID are associated with lower turnout compared to turnout in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. (A "dummy variable" represents a particular attribute and has the value zero or one for each observation, e.g. 1 for male and 0 for female.) Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election. [23]

---

[23] This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum requirements, a signature match and non-photo identification –but not photo identification-- were correlated at a significant level with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.[24] Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[25] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens, who in this survey were not asked the voter registration and turnout questions. In

---

[24] For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[24] Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

[25] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have influenced turnout in 2004.[26] The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[27]

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.[28] Table 3 below shows predicted probabilities (calculated from the probit

---

[26] The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

[27] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[28] A probit model is a popular specification of a generalized linear regression model, using the probit link function.

coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.[29]

Table 3. Predicted probability of voter turnout – all voters

	Maximum requirement	Minimum requirement
State name	91.7%	91.5%
Sign name	89.9%	90.2%
Match signature	Not significant	Not significant
Non-photo ID	89.0%	89.0%
Photo ID	88.8%	----
Affidavit	----	87.%5
Total difference from "state name" to "photo ID" or "affidavit"	**2.9%**	**4.0%**
N	54,973	

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from stating one's name to providing photo identification or an affidavit , with all other variables held constant.

Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.[30] In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those with fewer years of education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum

---

[29] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[30] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

requirement compared to states where stating one's name was the maximum or minimum requirement.

Race and ethnicity have generated particular interest in the debate over voter ID requirements.[31] The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

More rigorous voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data,

---

[31] Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

In the aggregate data, the match-signature requirement and the provide-a-non-photo ID requirement were correlated with lower turnout compared to requiring that voters state their names. But the photo-ID requirement did not have an effect that was statistically significant, possibly because in 2004 each state requiring a photo-ID provided an alternative way to cast a regular ballot for voters who lacked that document.

In the model using the individual-level data the signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names (in the entire sample and for white voters, but the statistical significance may be an artifact of the very large sample size). That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day , or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*).. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.[32] Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a

---

[32] Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a

balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgement in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the

Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

Conclusions

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.[33]

---

[33] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents with them to the polls, while assuring that each voter who casts a ballot is eligible and votes only once.

---

difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

Best Practices to Improve Provisional Voting

CONTENTS

The Research Team

This research report on Provisional Voting in the 2004 election is part of a broader analysis that also includes a study of Voter Identification Requirements, a report on which is forthcoming. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891.It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

The Peer Review Group improved the quality of our work by critiquing drafts of our analysis, conclusions and recommendations. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in the policy recommendations of the report.

EXECUTIVE SUMMARY

Background and Methodology

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005.

The Help America Vote Act of 2002 (HAVA, (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient. Section 302(a) of HAVA required states to establish provisional balloting procedures by January 2004.[1] The process HAVA outlined left considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voter eligible to cast a provisional ballot that will be counted and in what jurisdiction (precinct or larger unit) the ballot must be cast in order to be counted.[2]

The general requirement for provisional voting is that, if a registered voter appears at a polling place to vote in an election for Federal office, but either the potential voter's name does not appear on the official list of eligible voters for the polling place, or an election official asserts that the individual is not eligible to vote, that potential voter must be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the EAC's Election Day Survey, "first-time voters who registered by mail without identification and cannot provide identification, as required under HAVA. . ." [3] HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. Election administrators are required by HAVA to notify individuals of their opportunity to cast a provisional ballot.

---

[1] The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions. " See www.electioncenter.org .

[2] The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell, 387 F.3d565* (6th Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

[3] The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See http://wired.com/news/evote/0,2645,63298,00.html . (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004 .)

Our research began in late May 2005. It focused on six key questions raised by the EAC.

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

To answer those questions, we:

1. Surveyed 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Reviewed the EAC's Election Day Survey, news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.[4]
3. Analyzed statistically provisional voting data from the 2004 election to determine associations between the use of provisional voting and such variables as states' experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approaches to voter identification.
4. Collected and reviewed the provisional voting statutes and regulations in all 50 states.
5. Analyzed litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research is intended to provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states move forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly those states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

KEY FINDINGS

Variation among the states

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63%, were counted. Provisional ballots accounted for a little more than 1% of the final vote tally. These totals obscure the wide variation in provisional voting among the states.[5]

---

[4] Attachment 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures. It also describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

[5] HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.

- Six states accounted for two-thirds of all the provisional ballots cast.[6]
- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.
- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.
- States with voter registration databases counted, on average, 20% of the provisional ballots cast.
- States without databases counted ballots at more than twice that rate: 44%.[7]
- States that provided more time to evaluate provisional ballots counted a greater proportion of those ballots. Those that provided less than one week counted an average of 35.4% of their ballots, while states that permitted more than 2 weeks, counted 60.8%.

An important source of variation among states was a state's previous experience with provisional voting and with the fail-safe voting provision of the National Voting Rights Act. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.[8] Part of that difference was due to how states had implemented the National Voting Rights Act, particularly in regard to voters who changed address within weeks of the election. Voters in California, for example, who moved within their county must cast a provisional ballot, the information from which is used to update the voter's address. Other states, Tennessee for example, found that some fail-safe voters were reluctant to vote by provisional ballot. As a result, Tennessee abandoned provisional voting for those who moved within counties and allows failsafe voters cast a regular ballot. Relatively fewer provisional ballots would tend to be cast in such states.

Variation within states

Within states, too, there was little consistency among different jurisdictions. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This variation suggests that additional factors (including the training of election judges or poll workers) beyond statewide factors, such as experience or the existence of voter registration databases, also influence the use of provisional ballots.

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot.

---

[6] California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

[7] As the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without." Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

[8] See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

Resources available to administer provisional voting varied considerably among and within states. Differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.

In precincts located in districts where many voters live in poverty and have low levels of income and education, the voting process, in general, may be managed poorly. Provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

The lessons of litigation

Successful legal challenges highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. Most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots. This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right – the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

States move to improve their processes

Shortly after the 2004 election, several states came to the conclusion that the administration of their provisional voting procedures needed to be improved, and they amended their statutes. The new legislation highlights areas of particular concern to states about their provisional voting process.

- Florida, Indiana, Virginia, and Washington have clarified or extended the timeline to evaluate the ballots.

- Colorado, New Mexico, North Carolina, and Washington have passed legislation focused on improving the efficacy and consistency of the voting and counting process.
- Colorado, Arkansas, and North Dakota took up the issue of counting provisional ballots cast in the wrong precinct.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices that draw on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting. The important effect of experience on the administration of the provisional ballot process indicates that the states have much they can learn from each other.

SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

Emphasize the importance of clarity

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendations section of this report could be helpful. Among those questions are:

- Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
- Do the procedural requirements of the system permit cost-efficient operation?
- How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

Court decisions suggest areas for action

The court decisions following the 2004 election also suggest procedures for states to incorporate into their procedures for provisional voting. EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide effective materials to be used by local jurisdictions in training poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

Assess each stage of the provisional voting process

Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for best practices to avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.
- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.
- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Best practice for states should provide guidelines (as do Connecticut and Delaware) to estimate the supply of provisional ballots needed at each polling place.

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.
- More provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots

are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.

- If a state does require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers' advice is not always correct, and the voter should be protect against ministerial error.
- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.

- The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

- Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

Final observation

The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.

Provisional Voting in 2004

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.

These totals obscure the wide variation in provisional voting among the states.[9] Six states accounted for two-thirds of all the provisional ballots cast.[10] State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000 – from a high of 7% in Alaska to Vermont's 0.006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted provisional ballots at more than twice that rate, 44%.

An important source of variation was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.[11]

- The percentage of the total vote cast as provisional ballots averaged more than 2% in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%. [12]
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states had their ballots counted more frequently than those in the new states. This experience effect is evidence that there is room for improvement in provisional balloting procedures, especially in those states new to the process.[13] That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

---

[9] HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.

[10] California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

[11] See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

[12] To compensate for the wide differences in vote turnout among the 50 states the average figures here are calculated as the mean of the percent cast or counted rather than from the raw numbers of ballots cast or counted.

[13] Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's " 6-day time limit to process provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from "new" states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC can facilitate the exchange of experience among the states and can offer all states information on more effective administration of provisional voting.

Concluding optimistically that experience will make all the difference, however, may be unwarranted. Only if the performance of the "new" states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning curve. Two other possibilities exist. Our current understanding of how provisional voting worked in 2004 is not sufficient to determine unambiguously which view is correct.

1. "New" states may have a political culture different from "old" states. That is, underlying features of the "new" states political system may be the reason they had not adopted some form of provisional voting before HAVA. The "new" states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. The training they offer poll workers about provisional ballots may not be as frequent or effective as in other states. If the inconsistent performance in the "new" states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots -- as measured by intrastate consistency in administration--- will be harder and take longer to achieve.[14]
2. "Old" states may devote fewer resources to updating their registration files or databases because they consider provisional ballots as a reasonable fail safe way for voters with registration problems a way to cast a ballot. The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Other influences decreasing consistency among the states include:

---

[14] Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, "no state gave the voter the right to find out the status of their ballot after the election. " Now all offer that opportunity. See Bali and Silver, "The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000," manuscript, Department of Political Science, Michigan State University. Resisting HAVA's mandates through foot-dragging lacks any legitimate foundation in law or policy.

- The more rigorous the verification requirements, the smaller the percentage of provisional ballots that were counted. Some states verified provisional ballots by comparing the voter's signature to a sample, some matched such identifying data as address, birth date, or social security number, others required voters who lacked ID at the polling place to return later with the ID to evaluate the provisional ballot, and some required provisional voters to execute an affidavit. [15]
    - In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
    - In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
    - In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
    - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office
- Voter registration databases provided information that reduced the number of provisional ballots counted.[16] In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.
- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted only ballots cast in the proper precinct counted an average of 42% of provisional ballots. [17]
    - In experienced states, the disparity was even more pronounced: just over half of provisional ballots cast were counted in states requiring in-district ballots, while more than two-thirds were counted in those allowing out-of-precinct ballots.
    - If all states had counted out-of-precinct ballots, perhaps 290,000 more provisional ballots would have been counted across the country.[18]

---

[15] See Table 2 in Appendix 2 for information on the verification method used in each state.

[16] The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.

[17] The Election Day Survey concluded that : "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

- States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots. [19]
    - Fourteen states permitted less than one week to evaluate provisional ballots, 15 states permitted between one and two weeks, and 14 states permitted greater than two weeks[20].
    - Those states that permitted less than one week counted an average of 35.4% of their ballots.
    - States that permitted between one and two weeks counted 47.1%.
    - States that permitted more than 2 weeks, counted 60.8% of the provisional ballots cast[21].
    - The effect of allowing more time for evaluation is felt most strongly in states where more than 1% of the overall turnout was of provisional ballots. In states where provisional ballots were used most heavily, those that permitted less than one week to evaluate ballots counted 58.6% while those that permitted one to two weeks counted 65.0% of ballots, and those states that permitted greater than three weeks verified the highest proportion of provisional ballots, at 73.8%.

Variation Within States

Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors beyond statewide factors, such as verification requirements or the time provided for ballot evaluation, also influence the provisional voting process. Reacting to the lack of consistency within states, the Carter-Baker Commission recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."[22]

Electionline reported that:

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the

---

[18] This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

[19] See Appendix, Relationship Between Time Allotted to Verify Provisional Ballots and the Level of Ballots that are Verified, David Andersen, The Eagleton Institute of Politics

[20] Many thanks to Ben Shepler, of the Moritz College of Law, for assembling complete data on the time requirements states permitted for the counting of provisional ballots.

[21] 43 states are included in this analysis, including Washington D.C. The 7 election-day registration-states are omitted, as is Mississippi, which never provided data on provisional ballots. North Carolina is also omitted from the regressions, as it does not have a statewide policy on how it verifies provisional ballots.

[22] Recommendation 2.3.2 of the Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report also observed that, ". . .different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."

provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important in such districts. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts where the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

Effectiveness of Provisional Voting

The certainty of our conclusions about the effectiveness of provisional voting is limited because of the complexity of the problem and a lack of important information. An ideal assessment of how well provisional ballots worked in 2004 would require knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. Information needed about the eligibility or registration status of provisional voters is also not available.

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots allowed 1.2 million citizens to vote, citizens who would otherwise have been turned away from the polls.

Since we do not know how many registered voters who might have voted but could not, we cannot estimate with any precision how effective provisional voting was in 2004. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the

2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

Estimates of Votes Lost In 2000 Presidential Election

Votes Lost (Millions)	***Cause***
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

Table 1 Cal Tech – MIT Voting Technology Project Estimates
4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. In 2004, about 1.2 million provisional voters were counted. A rough estimate of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)[23]. Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

Legislative Response

Indeed, several states[24] came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

- Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.[25]

---

[23] Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems. After each election the CPS asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or they were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

[24] Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.

[25] The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the *entire department's employees were mobilized to process provisional ballots.*" The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when

- Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

Litigation
Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second --and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted by absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

---

voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots." In a close, contested election, "duplicate" ballots would doubtless receive long and careful scrutiny." See Appendix 7, GAO, "Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," September 2005. (GAO Report-05-997)

RECOMMENDATIONS

Because every provisional ballot counted represents a voter who, if the system had worked perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have to vote provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Recommendations for Best Practices

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

Self-evaluation of Provisional Voting –4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

Best Practices For Each Step In The Process

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result-- well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."[26]

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant re-canvassing.[27] Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.
- States should provide standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.[28]
- State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. [29] Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll

[26] The Century Foundation, Balancing Access and Integrity, Report of the Working Group on State Implementation of Election Reforms, July 2005.

[27] See *Washington State Republican Party v. King County Division of Records*, 103 P3d 725, 727-728 (Wash. 2004)

[28] See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

[29] *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6th Cir. 2004)

statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.
3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . .to photocopy official provisional ballots." [35] At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.[36] States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.
4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-of-custody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."[37] Nonetheless, the *Panio v. Sutherland*[38] decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

[35] Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.

[36] Connecticut: "Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights..Conn. Gen. Stat. Ann. § 9-232j.Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).

[37] The Century Foundation, op. cit.

[38] 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.[39]
2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct.[40] While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.
3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.[41] Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker's, and the voter should not be penalized.

---

[39] In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama -- 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c)(1) Florida: until 5:00 P.M. on the third day following the election . Fla. Stat. Ann. § 101.048 (adopted after the 2004 election);Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (l); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(i). Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) (H)..

[40] See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

[41] Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.[42]

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.
2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time constraints imposed in presidential election by the safe-harbor provisions regarding certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days

---

[42] 8 CCR 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-509(3) C.R.S.

following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma[43] or the Baldridge Quality

---

[43] Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process -- from manufacturing to transactional and from product to service.

process [44] to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.
2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
   - -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
   - -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
   - -- Measures of variance among jurisdictions.
   - -- Number of poll workers trained in administration of provisional voting by polling place.
   - -- Number of jurisdictions posting information on provisional voting in the polling place.
   - -- Time required to evaluate ballots by jurisdiction.

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

---

[44] The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.

ATTACHMENT 1 – Data Sources for Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state's use of provisional ballots were:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and included it in our analysis.

New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting,[45] but condensed its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We included in the list of "Old States" all states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots. States in all three categories would have been familiar with key aspects of provisional voting.. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

---

[45] This study can be found at: http://electionline.org/Portals/1/Publications/Provisional%20Voting.pdf.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

Statewide List of Registered Voters

The Electionline preview of the 2004 Election[46] was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline's criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found it had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election[2]. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as "out-of-precinct." States that invalidated such ballots were categorized as "In-precinct only."

[47] In Illinois, it is not clear that all counties followed this procedure. Some counties may not have counted out-of-precinct ballots.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

Table 3
CATEGORIZATION OF STATES – Ballot Evaluation Methods

Signature Match	Data Match	Affidavit	Return with ID	NA

* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

Table 4
Updated information by State

Received Updated Data	Did Not Receive Updated Data
California	Alabama
District of Columbia	Alaska[48]
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut

West Virginia	
26 States	**25 States**

---

[48] Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

[49] Maryland reported provisional ballots that were counted per county, but not number cast.

[50] Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

Data Differences

The data used in this study differ from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

Table 5
Data Differences with the Election Day Study

State	EDS Numbers Cast/Counted	Our Numbers Cast/Counted	Differences	Updated Info from State?[51]
Alabama	6,478/1,865	6560/1836	82/29	No
Alaska	23,285/22,498	23,275/22,498	10/0	No
Colorado	51,529/39,086	51,477/39,163	52/77	No

RECOMMENDATIONS

Because every provisional ballot counted represents a voter who, if the system had worked perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have to vote provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

Self-evaluation of Provisional Voting -4 Key Questions

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

Take a quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

Emphasize the importance of clarity

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendations section of this report could be helpful. Among those questions are:

- Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
- Do the procedural requirements of the system permit cost-efficient operation?
- How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

Court decisions suggest areas for action

The court decisions following the 2004 election also suggest procedures for states to incorporate into their procedures for provisional voting. EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide effective materials to be used by local jurisdictions in training poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

Assess each state of the provisional voting process

Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for best practices to avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.
- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.
- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Best practice for states should provide guidelines (as do Connecticut and Delaware) to estimate the '. supply of provisional ballots needed at each polling place.

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.
- More provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots, are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.
- If a state does require voters to appear at their assigned precinct, where the same polling site serves more

than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers' advice is not always correct, and the voter should be protect against ministerial error.

- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.

- The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

- Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

Final observation

The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.

Best Practices For Each Step In The Process

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result-- well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."[26]

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant re-canvassing.[27] Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.
- States should provide standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.[28]
- State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. [29] Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll

[26] The Century Foundation, Balancing Access and Integrity, Report of the Working Group on State Implementation of Election Reforms, July 2005.

[27] See *Washington State Republican Party v. King County Division of Records*, 103 P3d 725, 727-728 (Wash. 2004)

[28] See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

[29] *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6th Cir. 2004)

workers may need appropriate training to understand their duty to give such voters a provisional ballot.[30]

A. Registration and Pre-Election Information for Voters

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency."[31]
2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.[32]
3. State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

B. At the Polling Place

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.[33] Many states require training of poll workers. In some states that requirement is recent: after the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school."[34] A state

---

[30] *The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

[31] Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.

[32] The Century Foundation, op. cit.

[33] 8 Colo. Code Regs. § 1505-1, Rule 7.1.

[34] 2005 N.M. Laws 270 page no. 4-5.

statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.
3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . .to photocopy official provisional ballots." [35] At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.[36] States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.
4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-of-custody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."[37] Nonetheless, the *Panio v. Sutherland*[38] decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

---

[35] Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.

[36] Connecticut: "Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232j.Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).

[37] The Century Foundation, op. cit.

[38] 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.[39]
2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct. [40] While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.
3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. [41] Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker's, and the voter should not be penalized.

---

[39] In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama -- 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c)(1) Florida: until 5:00 P.M. on the third day following the election . Fla. Stat. Ann. § 101.048 (adopted after the 2004 election);Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (l); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(i). Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) ~~(H)~~.

[40] See Andersen, op. cit, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

[41] Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box "unregistered voter"; "lack of signature match" "wrong precinct," etc.) Those forms should be disclosed publicly when completed. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.[42]

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter's eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10). C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter's eligibility cannot be established.

D. Verification of Provisional Ballots

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.
2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time constraints imposed in presidential election by the safe-harbor provisions regarding certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days

---

[42] 8 CCR 1505-1, at 26.5.4, adopted august 4, 2005. See also 1-2-509(3) C.R.S.

following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

E. Post-election Information for Voters

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

F. State Laws Governing Litigation over Provisional Voting

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

Broader Considerations

G. Integrity and the Appearance of Integrity

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

H. Continuous Assessment of the Provisional Ballot -- Process and Performance

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma[43] or the Baldridge Quality

---

[43] Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process -- from manufacturing to transactional and from product to service.

process [44] to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.
2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
   - -- Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
   - -- Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
   - -- Measures of variance among jurisdictions.
   - -- Number of poll workers trained in administration of provisional voting by polling place.
   - -- Number of jurisdictions posting information on provisional voting in the polling place.
   - -- Time required to evaluate ballots by jurisdiction.

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

---

[44] The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.

APPENDIX C: PROVISIONAL BALLOT LITIGATION BY ISSUE

Moritz College of Law
June 28, 2006

Overview:

- **Wrong precinct**
    - *League of Latin American Citizens (LULAC) v. Arizona Secretary of State Jan Brewer*
    - *Colorado Common Cause v. Donetta Davidson*, No. 04CV7709, 2004 WL 2360485 (Colo. Dist. Ct. Oct. 18, 2004)
    - *AFL-CIO v. Hood,* 885 So. 2d 373 (Fla. 2004)
    - *The Florida Democratic Party v. Hood,* 342 F. Supp. 2d 1073 (N.D. Fla. 2004)
    - *Dean Brooks et al. v. Attorney General Tom Miller*
    - *Bay County Democratic Party, et al v. Land et al,* 347 F. Supp. 2d 404 (E.D. Mich. 2004)
    - *Claude Hawkins, Brian Morahan, Susan Schilling and the Missouri Democratic Party v. Matt Blunt*
      U.S. District Court Western District of Missouri, Case No. 2:04-cv-04177
    - *Panio v. Sunderland,* 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)
    - *James v. Bartlet*, 607 S.E. 2d 638, 359 N.C. 260 (N.C. 2005)
    - *The League of Women Voters of Ohio et al v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004)
    - *Sandusky County Democratic Party v. Blackwell, 387 F.3d 565 (6th Cir. 2004) – Opinion in Sixth Circuit case, 10/23/04*
      Sandusky County Democratic Party v. Blackwell, 361 F. Supp. 2d 688 (6th Cir. 2005) – Opinion in District Court in Plaintiff's request for attorney's fees, which was granted, 3/3/05
    - *State of Ohio ex rel. Mackey et al v. Blackwell et al,* No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)
- **Absentee voters who did not receive a ballot who wish to vote provisionally**
    - *Colorado Common Cause v. Donetta Davidson,* No. 04CV7709, 2004 WL 2360485 (Colo. Dist. Ct. Oct. 18, 2004)
    - *White v. Blackwell, et al.*
      U.S. District Court for the Northern District of Ohio, Case No. 3:04CV 7689
- **Equal protection – inconsistent treatment or distribution of provisional ballots**
    - *Schering v. Blackwell*
      U.S. District Court for the Southern District of Ohio, Case No. 1:04-cv-755.
    - *State of Ohio ex rel. Mackey et al v. Blackwell et al,* No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)
- **Provisional ballots which were incomplete in some way (not signed, do not display election district, etc.)**
    - *Panio v. Sunderland,* 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)
    - *Borders v. King County*
      Superior Court, Chelan County, No. 05-2-00027-3
- **Requirement for provisional ballot to be counted – ID required**

  - *Bay County Democratic Party, et al v. Land et al,* 347 F. Supp. 2d 404 (E.D. Mich. 2004)
  - *The League of Women Voters of Ohio et al v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004)
- **Verification procedure for provisional ballots**
  - *State of Ohio ex rel. Mackey et al v. Blackwell et al,* No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)
  - *Borders v. King County*
    Superior Court, Chelan County, No. 05-2-00027-3
  - *McDonald, et al v. Secretary of State,* 103 P.3d 722 (Wash. 2004)
  - *Washington State Democratic Party v. King County Records, Elections & Licensing Services Division*
    Superior Court, King County, 04-2-36048-0 SEA
- **Provisional v. regular ballot for voter who properly registered but was left off election rolls**
  - *Citizens Alliance for Secure Elections v. Michael Vu*
    U.S. District Court for the Northern District of Ohio, Case No. 1:04CV2147
- **Voters who have moved and not updated their registration**
  - *Citizens Alliance for Secure Elections v. Michael Vu*
    U.S. District Court for the Northern District of Ohio, Case No. 1:04CV2147
- **Provisional ballots cast by voters who claimed that someone else voted in their place and signed precinct record**
  - *Panio v. Sunderland,* 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)
- **Disclosure to a political party of provisional votes in danger of being rejected**
  - *Washington State Democratic Party v. King County Records, Elections & Licensing Services Division*
    Superior Court, King County, 04-2-36048-0 SEA
- **Provisional ballots incorrectly tabulated with regular ballots**

    Superior Court, Chelan County, No. 05-2-00027-3
- **Re-canvassing ballots previously rejected**
  - *McDonald, et al v. Secretary of State,* 103 P.3d 722 (Wash. 2004)
  - *Washington State Republican Party v. King County Division of Records,* 103 P.3d 725 (Wash. 2004)

Full Summaries:

Wrong Precinct

- *League of Latin American Citizens (LULAC) v. Arizona Secretary of State Jan Brewer*
    - ISSUE: wrong precinct
        - Lawsuit claims Arizona state policy to not count provisional ballots that were cast in the wrong precinct violates HAVA and the Equal Protection Clause of the 14th Amendment. Electionline.org – Litigation Summary (Feb. 14, 2005), http://www.electionline.org/Portals/1/Publications/litigation.update.Feb.14.05.pdf.
    - RESULT: N/A
    - RATIONALE: N/A
- ***Colorado Common Cause v. Donetta Davidson*, No. 04CV7709, 2004 WL 2360485 (Colo. Dist. Ct. Oct. 18, 2004)**
    - ISSUE: wrong precinct; absentee voters getting provisional ballots
        - Lawsuit challenges a state guideline that prohibits anyone voting in the wrong precinct from casting a ballot in any race but the presidential election based on HAVA and the Constitution (fundamental rights challenge). 2004 WL 2360485, at *1.
        - Challenges state guideline that provisional ballots will not be counted if the voter applied for an absentee ballot based on HAVA and the Constitution (fundamental rights challenge). 2004 WL 2360485, at *1.
    - RESULT: votes cast in the wrong precinct may only count for president and vice president; provisional votes cast by voters who applied for absentee ballots must be counted.
    - RATIONALE:
        - Court felt that Congress had no intent to eliminate precinct-based voting, a constitutional form of organizing voting; therefore, votes cast in the wrong precinct may not be counted for county-wide issues. 2004 WL 2360485, at *11. Court also felt that the legislative history behind HAVA's passage supported this notion. *Id.*
        - Court felt that requiring voters to vote in the correct precinct is not an unconstitutional infringement on the right to vote. 2004 WL 2360485, at *14. The impact of the requirement is further lessened by the fact that poll workers will direct the voter to the correct precinct. *Id.* In addition, the Court felt that there was a compelling interest in preventing voter fraud furthered by the precinct system. *Id.*
            - The Court left the door open to the possibility that state-wide voting may be possible after a state-wide computerized database is established in 2006. *Id.*
        - Court felt that not allowing voters who requested an absentee ballot to vote provisionally would conflict with the purpose of HAVA to ensure that registered and eligible voters are allowed to vote provisionally. 2004 WL 2360485, at *11, 12.

- ***AFL-CIO v. Hood,* 885 So. 2d 373 (Fla. 2004)**
  - ISSUE: wrong precinct
    - Lawsuit claimed that the precinct system was an unnecessary and unconstitutional infringement on the right to vote under the Florida and U.S. Constitutions. 885 So.2d at 374.
  - RESULT: votes cast in the wrong precinct may be rejected and not counted.
  - RATIONALE: Precinct based system is a regulation of the voting process not a qualification placed on the voter and could have been reasonably deemed necessary to protect the integrity of the voting process. 885 So.2d at 376.
- ***The Florida Democratic Party v. Hood,* 342 F. Supp. 2d 1073 (N.D. Fla. 2004)**
  - ISSUE: wrong precinct
    - Right to provisional ballot if in the wrong precinct (conceded by Florida prior to Order Granting Preliminary Injunction)
    - Right for vote to be counted if cast in the wrong precinct based on interpretation of HAVA language.
    - 342 F. Supp. 2d at 1074.
  - RESULT: voters in the wrong precinct are entitled to a provisional ballot, but are not entitled to have that vote counted if cast in the wrong precinct. 342 F. Supp. 2d at 1083.
  - RATIONALE:
    - Reading the statute to mean that a voter must be eligible at that polling place is consistent with HAVA's purpose, to allow voters to vote when they appear at the polling place, not to eliminate precinct voting. 342 F. Supp. 2d at 1079.
    - Reading is also consistent with votes being counted "in accordance with State law." 342 F. Supp. 2d at 1080.
    - Reading consistent with legislative history which says that poll workers should direct voters to the correct precinct not allow voters to vote at any polling site. 342 F. Supp. 2d at 1080.
    - "Eligible" in HAVA language means registered, 18 years of age, has lived in State for at least 30 days. 342 F. Supp. 2d at 1080.
    - HAVA intended to safeguard voter's right to vote but allow state law to determine whether that vote counts. 342 F. Supp. 2d at 1080.
    - Because election workers may make mistakes with on-the-spot determinations of the voter's polling place, a voter may not be denied a provisional ballot because an election official determined that he/she is at the wrong polling place. 342 F. Supp. 2d at 1081.
- ***Dean Brooks et al. v. Attorney General Tom Miller***
  - ISSUE: wrong precinct
    - Challenge Attorney General decision that votes cast in the correct county but wrong precinct should be counted for Congress and President and Vice President only. Electionline.org – Litigation Summary (Feb. 14, 2005), http://www.electionline.org/Portals/1/Publications/litigation.update.Feb.14.05.pdf.

  - RESULT: N/A
  - RATIONALE: N/A
- ***Bay County Democratic Party, et al v. Land et al,* 347 F. Supp. 2d 404 (E.D. Mich. 2004)**
  - ISSUE: wrong precinct; identification requirement for ballot to count
    - Lawsuit challenges Secretary of State's directive that votes cast in the wrong precinct but correct township, city, or village should not be counted based on HAVA. 347 F. Supp. 2d at 427-34.
    - Lawsuit challenges Secretary of State's directive that first time voters should be required to provided identification within six days of election day in order for their votes to count under HAVA, the Fourteenth Amendment to the Constitution, Michigan election law, and the Equal Protection Clause of the Michigan Constitution. 347 F. Supp. 2d at 434-35.
  - RESULT [but later overruled by Sixth Circuit]: votes cast in the wrong precinct but correct city, village, or township should be counted; identification may be required of provisional voters after the election in order for their votes to count. 347 F. Supp. 2d at 438.
  - RATIONALE:
    - With regard to the wrong precinct issue, the Court relies on the District Court decision in *Sandusky County Democratic Party v. Blackwell,* 339 F. Supp. 2d 975, 992-93 (N.D. Ohio 2004). *Bay County*, 347 F. Supp. 2d at 431-32.
    - The Court also relies on the "plain language" of HAVA – votes are to be counted in accordance with state law (dictates the *procedure* of counting); whether or not votes are counted is decided under HAVA; votes under HAVA are counted if the voter is "eligible" to vote. 347 F. Supp. 2d at 431-32.
    - With regard to the identification requirement, the Court found that the requirement was reasonable; that preventing voter fraud is a compelling interest; and that the requirement is applied uniformly and in a nondiscriminatory manner. 347 F. Supp. 2d at 435.
  - **OVERRULED**: 6th Circuit ruled that votes in the wrong precinct should not be counted and interpreted "jurisdiction," "eligible," and the HAVA provision concerning provisional ballots differently. *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565 (6th Cir. 2004).
- ***Claude Hawkins, Brian Morahan, Susan Schilling and the Missouri Democratic Party v. Matt Blunt***
  U.S. District Court Western District of Missouri, Case No. 2:04-cv-04177
  - ISSUE: wrong precinct
    - Plaintiffs claim that not counting provisional votes cast in the wrong precinct is in violation of HAVA (preemption argument). Order denying Plaintiffs' Motion for Summary Judgment, granting Defendants' Motion for Summary Judgment 3.
      - But the Secretary of State later decided to count those provisional ballots in which the voter was not directed to the

correct polling place, so this issue was considered moot. Order 11.

    - Plaintiffs also disputed a provision of Missouri law which states that a voter should be directed to the correct polling place in lieu of receiving a provisional ballot. Order 10, 12. The provision has been interpreted to mean that if a voter refuses to go to the correct polling place, he shall be given a provisional ballot, which will not be counted (allege it is inconsistent with HAVA - preemption). Order 10, 12.
        - Allege that the Missouri law implementing HAVA "frustrates the intent" of HAVA. Order 13.
    - Plaintiffs also allege that the Missouri law violates the Equal Protection Clause because the decision not to count ballots cast at an incorrect polling place is arbitrary. Order 21.
  - RESULT: Provisional ballots cast in the wrong precinct should be thrown out provided that the voter was directed to correct precinct. Order.
  - RATIONALE:
    - HAVA was intended to be flexible in the way in which states could implement it, evidenced by use of the phrase "eligible under state law to vote." Order 14.
        - This reference to state law gives states the power to define voter qualifications for provisional ballots including where they can be cast in order to be counted. *Id.*
    - Court relies on statements of Sen. Bond and other HAVA supporters, stating that they did not intend to overturn State law regarding the jurisdiction in which a ballot must be cast and that poll workers should direct the voter to the correct polling place in the event of confusion. Order 15-16.
    - The laws do not violate the Equal Protection Clause because the goals and objectives of the precinct system are legitimate, and it guarantees those eligible to vote may do so. Order 22. The system is rationally related to ensuring a fair election. *Id.*
- ***Panio v. Sunderland*, 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)**
  - ISSUES: wrong precinct; voters who voted provisionally because other voters had signed poll ledger in their place; provisional ballots in which the envelope did not identify the election district of the voter
    - Claims all based on N.Y. election law – once case got to Supreme Court, no claims based on Constitution or HAVA.
  - RESULT:
    - Provisional votes in which the voter was in the correct polling place, but wrong district should be counted; voters in the wrong polling place and wrong district should not be counted. 4 N.Y. 3d at 128.
    - Provisional ballots cast by voters who claimed that another voter voted in his/her place and signed the precinct ledger should not be counted. 4 N.Y. 3d at 129.

    - Provisional ballots in which the election district was not identified on the envelope should be counted. 4 N.Y. 3d at 129.
  - RATIONALE: provisional ballots should be counted if the ballots were in dispute only as a result of ministerial errors by the election board. 4 N.Y. 3d at 129.
    - Ballots cast in the correct polling place but wrong district were counted because they were assumed to be the result of ministerial error; the election officers should have directed the voter to the correct voting table. 4 N.Y. 3d at 128. Ballots cast in the wrong polling place and district were not counted because it would be unreasonable to require poll workers to ensure that voters are at the correct polling site. *Id.*
    - Provisional votes cast by voters who claimed another voter had voted in their place earlier were not counted because of the possibility of fraud. 4 N.Y. 3d at 129.
    - Provisional ballots lacking the election district on the envelope were counted because they were cast in the correct election district, and mishandling by election officials caused the ballots to become unidentifiable with a district (election officials placed post-it notes on the ballots containing the missing information, but the notes later fell off). 4 N.Y. 3d at 129.
  - DISPOSITION: application for rehearing denied – 2/7/05
- ***James v. Bartlet*, 607 S.E. 2d 638, 359 N.C. 260 (N.C. 2005)**
  - ISSUE: wrong precinct
    - Whether or not ballots cast outside the voter's home precinct should be counted as long as the voter casts a ballot for races in his home precinct. 607 S.E. 2d at 640.
  - RESULT: NC state law requires voters to vote in the correct precinct; therefore, votes cast in the wrong precinct were not counted for state and local elections (did not discuss federal elections). 607 S.E. 2d at 645.
  - RATIONALE:
    - Plain language of state statute requires that the voter be a resident of the precinct he votes in and registers in (refers to "the precinct" versus "a precinct"). 607 S.E. 2d at 642.
    - No intent to enable voters to vote outside their precincts by Congress or state legislature in enacting provisional ballot statutes. 607 S.E. 2d at 643.
    - Administrative Code sets out precise circumstances under which a voter may vote a provisional ballot and specifies that the voter must reside in the precinct. 607 S.E. 2d at 643.
    - Court may not remedy Election Board's decision to give provisional ballots to voters in a manner not authorized by State law. 607 S.E. 2d at 644.
    - Advantages of the precinct system: caps number of voters at one polling place; allows there to be one uniform ballot for all voters at that polling place; ballots may list only those elections a voter may

vote for (less confusing); easier to monitor fraud; and it puts polling places closer to people's homes. 607 S.E. 2d at 644-45.

- ***The League of Women Voters of Ohio et al v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004)**
    - ISSUES: wrong precinct & identification requirement for ballot to count
        - Wrong precinct issue. 340 F. Supp. 2d at 824.
        - Whether identification provided on election day should be required of provisional voters (voting provisionally because of ID requirement) in order for ballot to count. 340 F. Supp. 2d at 828.
            - Claim that it will cause provisional ballots voted by voters without identification (who cannot remember their numerical identifier, do not have a numerical identifier, or cannot return to the polls prior to closing) to be rejected.
                - Fourteenth Amendment fundamental rights claim.
                - Claim under HAVA based on interpretation of the "eligible" language.
    - RESULT:
        - Wrong precinct issue decided already in *Sandusky County Democratic Party,* and even though it was on appeal at the time of the decision, the Judge decided that the relief granted (or not) from that case would be sufficient to serve the interests of these plaintiffs as well (he did not reach a decision on the issue). 340 F. Supp. 2d at 824.
        - Identification or oral recitation of identification number (DL or SS) may be required before the polls close in order for a provisional ballot to count. 340 F. Supp. 2d at 831.
    - RATIONALE:
        - Identification may be required to preserve the integrity of elections and prevent voter fraud, which outweighs the interest in ensuring that every ballot count. 340 F. Supp. 2d at 829. Further, there is no less burdensome way to detect and prevent election fraud. *Id.*
        - Identification may be required because HAVA allows it; the requirement affects a small number of voters (registered by mail, voting for the first time, have no identification, cannot recite a numerical identifier); it is easy to obtain the identification information (telephone, quick return home); and notice is given of the requirement on the registration form. 340 F. Supp. 2d at 830.
        - Identification may be required because HAVA's language about "eligible under State law to vote" only means that the name on the registration form is eligible to vote. 340 F. Supp. 2d at 831. A voter must still prove that he/she is the same person as the person on the registration form, who is "eligible" to vote under State law, and proving identity is a reasonable burden. *Id.*

- ***Sandusky County Democratic Party v. Blackwell*, 339 F. Supp. 2d 975 (N.D. Ohio 2004)** – Order in District Court case, 10/14/04
  ***Sandusky County Democratic Party v. Blackwell*, 340 F. Supp. 2d 815 (N.D. Ohio 2004)** – Order in District Court case, 10/20/04

  ***Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565 (6th Cir. 2004)** – Opinion in Sixth Circuit case, 10/23/04
  ***Sandusky County Democratic Party v. Blackwell*, 361 F. Supp. 2d 688 (6th Cir. 2005)** – Opinion in District Court in Plaintiff's request for attorney's fees, which was granted, 3/3/05
  - ISSUE: wrong precinct
    - Plaintiffs claim that a Directive by the Secretary of State denies provisional ballots to voters inadvertently purged from voter lists or to those who go to the wrong precinct and only allows provisional ballots to voters who have moved and not updated their registration. Complaint 2-3.
      - Claim that this violates the purpose of HAVA – to ensure that all electors are eligible to vote provisionally. 339 F. Supp. 2d 975.
      - Claim that "jurisdiction" means the same as the geographic unit which maintains voter registration rolls and the same as its meaning in the NVRA. 387 F.3d at 574-75.
    - Statutory claim that HAVA provides an absolute right to cast a provisional ballot which counts provided that the voter is registered and eligible. Complaint 6-7.
      - Provisional ballots should be given to every voter who attempts to vote in the correct county but not necessarily the correct precinct. Complaint 10-11.
    - Claim that a voter (who has moved) who goes to one polling place attempting to vote and then goes to the other later should be allowed a provisional ballot. Complaint 12, 14.
  - RESULT: Votes cast in the wrong precinct may not be counted by a state, but voters must be permitted to cast them. 386 F.3d at 816. HAVA secures the right to cast a provisional ballot; the legality of the ballot must be determined under state law. 386 F.3d at 576.
  - RATIONALE:
    - Precinct system rooted in tradition; no indication Congress wished to completely overhaul the voting system of most states. 387 F.3d at 568; 387 F.3d at 576.
    - Advantages of precinct system: caps the number of voters at one place; allows ballot for all voters at one precinct to be the same for all elections; ballot lists only elections the voter may vote for (less confusing); easier to monitor and prevent fraud; and puts polling places closer to voter's homes. 387 F.3d at 569.

    - Court believes that the totality of the legislative history supports the notion that jurisdiction equals precinct, and votes cast outside the voter's precinct should not be counted under HAVA. 387 F.3d at 575.
    - The District Court's broad reading of "eligible under state law to vote" leads to the conclusion that a voter could vote multiple times in one election, and all of the provisional ballots would count if state law is not used to determine eligibility (since it is Ohio not federal law that specifies that a voter can vote only once).
    - Court relies on the presumption that Congress must be clear in order to alter the state-federal balance; thus, Congress would have been more clear if it intended to eliminate state control over polling location. 387 F.3d at 578.
    - But a provisional ballot must be provided to a voter, as HAVA's purpose was to prevent on-the-spot denials of ballots to voters determined ineligible by precinct workers. 387 F.3d at 574.
        - Court believes that HAVA's provisional voting was designed to compensate for the impossibility of having election officials with "perfect knowledge." 387 F.3d at 570. Under this rationale, provisional voting is used when a voter's eligibility in that precinct cannot be verified, but the voter insists that he/she is eligible because it is possible that the election officials do not have perfect information. *Id.*
- ***State of Ohio ex rel. Mackey et al v. Blackwell et al*, No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)**
  - ISSUES: equal protection issue & wrong precinct issue & how verification (against registration records) procedure should be conducted
    - Equal protection issue from different treatment on whether a voter should have a provisional ballot and different treatment on whether a provisional vote should be counted.
        - Claim that there were inconsistent standards for determining whether or not a voter received a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2.
        - Claim that there were inconsistent standards for determining whether or not to count a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2, 9.
    - Claim that votes cast in the wrong precinct should be counted given that many voters did not receive assistance to correct precinct, as required by Secretary of State's directive. Original Action in Mandamus 3, 16-17.
    - Claim that provisional ballots lacking a signature, HAVA sticker, or other required information on the envelope were wrongfully rejected – allege that these are nonmaterial errors in violation of VRA. Original Action in Mandamus 6-7, 11, 14.

        - Claim that provisional ballots should be verified by hand against registration records rather than only against computerized records. Original Action in Mandamus 12-13.
            - Allege that database was incomplete – some registration forms were not indexed and accessible to poll workers. *Id.*
            - Allege that registration forms were erroneously processed. *Id.*
    - RESULT: Dismissed for failure to state a claim upon which relief can be granted. 2004 WL 2973976, at *2.

<u>**Absentee voters who did not receive a ballot who wish to vote provisionally**</u>

- ***Colorado Common Cause v. Donetta Davidson*, No. 04CV7709, 2004 WL 2360485 (Colo. Dist. Ct. Oct. 18, 2004)**
    - ISSUE: wrong precinct; absentee voters getting provisional ballots.
        - Lawsuit challenges a state guideline that prohibits anyone voting in the wrong precinct from casting a ballot in any race but the presidential election based on HAVA and the Constitution (fundamental rights challenge). 2004 WL 2360485, at *1.
        - Challenges state guideline that provisional ballots will not be counted if the voter applied for an absentee ballot based on HAVA and the Constitution (fundamental rights challenge). 2004 WL 2360485, at *1.
    - RESULT: votes cast in the wrong precinct may only count for president and vice president; provisional votes cast by voters who applied for absentee ballots must be counted.
    - RATIONALE:
        - Court felt that Congress had no intent to eliminate precinct-based voting, a constitutional form of organizing voting; therefore, votes cast in the wrong precinct may not be counted for county-wide issues. 2004 WL 2360485, at *11. Court also felt that the legislative history behind HAVA's passage supported this notion. *Id.*
        - Court felt that requiring voters to vote in the correct precinct is not an unconstitutional infringement on the right to vote. 2004 WL 2360485, at *14. The impact of the requirement is further lessened by the fact that poll workers will direct the voter to the correct precinct. *Id.* In addition, the Court felt that there was a compelling interest in preventing voter fraud furthered by the precinct system. *Id.*
            - The Court left the door open to the possibility that state-wide voting may be possible after a state-wide computerized database is established in 2006. *Id.*
        - Court felt that not allowing voters who requested an absentee ballot to vote provisionally would conflict with the purpose of HAVA to ensure that registered and eligible voters are allowed to vote provisionally. 2004 WL 2360485, at *11, 12.
- ***White v. Blackwell, et al.***
  U.S. District Court for the Northern District of Ohio, Case No. 3:04CV 7689
    - ISSUE: absentee voters getting provisional ballots

        - Absentee voters who failed to receive absentee ballots in the mail who wish to vote provisionally at the polls under HAVA.
            - Claim under HAVA that the Secretary of State and Board of Elections interpreted HAVA incorrectly. Complaint 8.
    - RESULT: Anyone who shows up to the polls and asserts eligibility to vote shall be permitted to cast a provisional ballot, including those who previously requested an absentee ballot. Memorandum Opinion and Order 3-4.
    - RATIONALE: HAVA, as interpreted in *Sandusky County Democratic Party*, is clear, anyone who asserts eligibility to vote is able to receive a provisional ballot under HAVA. Memorandum Opinion 3-4.

Equal protection – inconsistent treatment or distribution of provisional ballots

- ***Schering v. Blackwell***
  U.S. District Court for the Southern District of Ohio, Case No. 1:04-cv-755.
    - ISSUE: equal protection issue
        - Plaintiffs allege that the process for evaluating provisional ballots in Ohio violates the Equal Protection Clause; want uniform standards for evaluating provisional ballots
    - RESULT: Plaintiffs filed a stipulated dismissal. 3/15/05
    - Case never reached opinion.
- ***State of Ohio ex rel. Mackey et al v. Blackwell et al*, No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)**
    - ISSUES: equal protection issue & wrong precinct issue & how verification (against registration records) procedure should be conducted
        - Equal protection issue from different treatment on whether a voter should have a provisional ballot and different treatment on whether a provisional vote should be counted.
            - Claim that there were inconsistent standards for determining whether or not a voter received a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2.
            - Claim that there were inconsistent standards for determining whether or not to count a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2, 9.
        - Claim that votes cast in the wrong precinct should be counted given that many voters did not receive assistance to correct precinct, as required by Secretary of State's directive. Original Action in Mandamus 3, 16-17.
        - Claim that provisional ballots lacking a signature, HAVA sticker, or other required information on the envelope were wrongfully rejected – allege that these are nonmaterial errors in violation of VRA. Original Action in Mandamus 6-7, 11, 14.
        - Claim that provisional ballots should be verified by hand against registration records rather than only against computerized records. Original Action in Mandamus 12-13.

            - Allege that database was incomplete – some registration forms were not indexed and accessible to poll workers. *Id.*
            - Allege that registration forms were erroneously processed. *Id.*
    - RESULT: Dismissed for failure to state a claim upon which relief can be granted. 2004 WL 2973976, at *2.

Provisional ballots which were incomplete in some way (not signed, do not display election district, etc.)

- ***Panio v. Sunderland*, 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)**
    - ISSUES: wrong precinct; voters who voted provisionally because other voters had signed poll ledger in their place; provisional ballots in which the envelope did not identify the election district of the voter
        - Claims all based on N.Y. election law – once case got to Supreme Court, no claims based on Constitution or HAVA.
    - RESULT:
        - Provisional votes in which the voter was in the correct polling place, but wrong district should be counted; voters in the wrong polling place and wrong district should not be counted. 4 N.Y. 3d at 128.
        - Provisional ballots cast by voters who claimed that another voter voted in his/her place and signed the precinct ledger should not be counted. 4 N.Y. 3d at 129.
        - Provisional ballots in which the election district was not identified on the envelope should be counted. 4 N.Y. 3d at 129.
    - RATIONALE: provisional ballots should be counted if the ballots were in dispute only as a result of ministerial errors by the election board. 4 N.Y. 3d at 129.
        - Ballots cast in the correct polling place but wrong district were counted because they were assumed to be the result of ministerial error; the election officers should have directed the voter to the correct voting table. 4 N.Y. 3d at 128. Ballots cast in the wrong polling place and district were not counted because it would be unreasonable to require poll workers to ensure that voters are at the correct polling site. *Id.*
        - Provisional votes cast by voters who claimed another voter had voted in their place earlier were not counted because of the possibility of fraud. 4 N.Y. 3d at 129.
        - Provisional ballots lacking the election district on the envelope were counted because they were cast in the correct election district, and mishandling by election officials caused the ballots to become unidentifiable with a district (election officials placed post-it notes on the ballots containing the missing information, but the notes later fell off). 4 N.Y. 3d at 129.
    - DISPOSITION: application for rehearing denied – 2/7/05

- ***Borders v. King County***
  Superior Court, Chelan County, No. 05-2-00027-3 [election contest filed 1/7/05 contesting the certification of the results of the election, decision 6/6/05]
  - ISSUES: provisional ballots incorrectly tabulated with regular ballots before being verified; verification for provisional ballots; provisional ballots without labels. Court's Oral Decision 6/6.
    - Provisional ballots cast directly into electronic voting machine or ballot tabulated before it was verified. Court's Oral Decision 6/6.
    - No signature or registration verification conducted for certain provisional ballots. Court's Oral Decision 6/6.
  - RESULT: election not overturned – even though illegal votes cast – no proof who they were cast for or whether the voter voted in the particular race at all. Court's Oral Decision 6/6.
  - RATIONALE:
    - Cannot prove whether a voter voted for a particular race; do not know which ballots were illegal. Court's Oral Decision 6/6.
    - No evidence of actual ballot stuffing. Court's Oral Decision 6/6.
    - Reconciliation issues and irregularities are common in elections. Court's Oral Decision 6/6.
    - No evidence the irregularities were intentional. Court's Oral Decision 6/6.
    - Probability techniques (proportional deduction) used to predict who an illegal voter voted for are not generally accepted scientific techniques. Court's Oral Decision 6/6.
    - Judicial restraint from interfering with elections. Court's Oral Decision 6/6.
    - Precedent – challenge under a WA statute, which previously had been interpreted to require direct or indirect wrongdoing by someone intending for the irregularity to help one candidate. Court's Oral Decision 6/6.

Requirement for provisional ballot to be counted – ID required

- ***Bay County Democratic Party, et al v. Land et al*, 347 F. Supp. 2d 404 (E.D. Mich. 2004)**
  - ISSUE: wrong precinct; identification requirement for ballot to count
    - Lawsuit challenges Secretary of State's directive that votes cast in the wrong precinct but correct township, city, or village should not be counted based on HAVA. 347 F. Supp. 2d at 427-34.
    - Lawsuit challenges Secretary of State's directive that first time voters should be required to provided identification within six days of election day in order for their votes to count under HAVA, the Fourteenth Amendment to the Constitution, Michigan election law, and the Equal Protection Clause of the Michigan Constitution. 347 F. Supp. 2d at 434-35.
  - RESULT [but later overruled by Sixth Circuit]: votes cast in the wrong precinct but correct city, village, or township should be counted;

identification may be required of provisional voters after the election in order for their votes to count. 347 F. Supp. 2d at 438.

  - RATIONALE:
    - With regard to the wrong precinct issue, the Court relies on the District Court decision in *Sandusky County Democratic Party v. Blackwell,* 339 F. Supp. 2d 975, 992-93 (N.D. Ohio 2004). *Bay County*, 347 F. Supp. 2d at 431-32.
    - The Court also relies on the "plain language" of HAVA – votes are to be counted in accordance with state law (dictates the *procedure* of counting); whether or not votes are counted is decided under HAVA; votes under HAVA are counted if the voter is "eligible" to vote. 347 F. Supp. 2d at 431-32.
    - With regard to the identification requirement, the Court found that the requirement was reasonable; that preventing voter fraud is a compelling interest; and that the requirement is applied uniformly and in a nondiscriminatory manner. 347 F. Supp. 2d at 435.
  - **<u>OVERRULED</u>**: 6th Circuit ruled that votes in the wrong precinct should not be counted and interpreted "jurisdiction," "eligible," and the HAVA provision concerning provisional ballots differently. *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565 (6th Cir. 2004).

- ***The League of Women Voters of Ohio et al v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004)**
  - ISSUES: wrong precinct & identification requirement for ballot to count
    - Wrong precinct issue. 340 F. Supp. 2d at 824.
    - Whether identification provided on election day should be required of provisional voters (voting provisionally because of ID requirement) in order for ballot to count. 340 F. Supp. 2d at 828.
      - Claim that it will cause provisional ballots voted by voters without identification (who cannot remember their numerical identifier, do not have a numerical identifier, or cannot return to the polls prior to closing) to be rejected.
        - Fourteenth Amendment fundamental rights claim.
        - Claim under HAVA based on interpretation of the "eligible" language.
  - RESULT:
    - Wrong precinct issue decided already in *Sandusky County Democratic Party,* and even though it was on appeal at the time of the decision, the Judge decided that the relief granted (or not) from that case would be sufficient to serve the interests of these plaintiffs as well (he did not reach a decision on the issue). 340 F. Supp. 2d at 824.
    - Identification or oral recitation of identification number (DL or SS) may be required before the polls close in order for a provisional ballot to count. 340 F. Supp. 2d at 831.

    - RATIONALE:
        - Identification may be required to preserve the integrity of elections and prevent voter fraud, which outweighs the interest in ensuring that every ballot count. 340 F. Supp. 2d at 829. Further, there is no less burdensome way to detect and prevent election fraud. *Id.*
        - Identification may be required because HAVA allows it; the requirement affects a small number of voters (registered by mail, voting for the first time, have no identification, cannot recite a numerical identifier); it is easy to obtain the identification information (telephone, quick return home); and notice is given of the requirement on the registration form. 340 F. Supp. 2d at 830.
        - Identification may be required because HAVA's language about "eligible under State law to vote" only means that the name on the registration form is eligible to vote. 340 F. Supp. 2d at 831. A voter must still prove that he/she is the same person as the person on the registration form, who is "eligible" to vote under State law, and proving identity is a reasonable burden. *Id.*

Verification procedure for provisional ballots

- ***State of Ohio ex rel. Mackey et al v. Blackwell et al,* No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)**
    - ISSUES: equal protection issue & wrong precinct issue & how verification (against registration records) procedure should be conducted
        - Equal protection issue from different treatment on whether a voter should have a provisional ballot and different treatment on whether a provisional vote should be counted.
            - Claim that there were inconsistent standards for determining whether or not a voter received a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2.
            - Claim that there were inconsistent standards for determining whether or not to count a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2, 9.
        - Claim that votes cast in the wrong precinct should be counted given that many voters did not receive assistance to correct precinct, as required by Secretary of State's directive. Original Action in Mandamus 3, 16-17.
        - Claim that provisional ballots lacking a signature, HAVA sticker, or other required information on the envelope were wrongfully rejected – allege that these are nonmaterial errors in violation of VRA. Original Action in Mandamus 6-7, 11, 14.
        - Claim that provisional ballots should be verified by hand against registration records rather than only against computerized records. Original Action in Mandamus 12-13.
            - Allege that database was incomplete – some registration forms were not indexed and accessible to poll workers. *Id.*
            - Allege that registration forms were erroneously processed. *Id.*

  - RESULT: Dismissed for failure to state a claim upon which relief can be granted. 2004 WL 2973976, at *2.
- ***Borders v. King County***
  Superior Court, Chelan County, No. 05-2-00027-3 [election contest filed 1/7/05 contesting the certification of the results of the election, decision 6/6/05]
  - ISSUES: provisional ballots incorrectly tabulated with regular ballots before being verified; verification for provisional ballots; provisional ballots without labels. Court's Oral Decision 6/6.
    - Provisional ballots cast directly into electronic voting machine or ballot tabulated before it was verified. Court's Oral Decision 6/6.
    - No signature or registration verification conducted for certain provisional ballots. Court's Oral Decision 6/6.
  - RESULT: election not overturned – even though illegal votes cast – no proof who they were cast for or whether the voter voted in the particular race at all. Court's Oral Decision 6/6.
  - RATIONALE:
    - Cannot prove whether a voter voted for a particular race; do not know which ballots were illegal. Court's Oral Decision 6/6.
    - No evidence of actual ballot stuffing. Court's Oral Decision 6/6.
    - Reconciliation issues and irregularities are common in elections. Court's Oral Decision 6/6.
    - No evidence the irregularities were intentional. Court's Oral Decision 6/6.
    - Probability techniques (proportional deduction) used to predict who an illegal voter voted for are not generally accepted scientific techniques. Court's Oral Decision 6/6.
    - Judicial restraint from interfering with elections. Court's Oral Decision 6/6.
    - Precedent – challenge under a WA statute, which previously had been interpreted to require direct or indirect wrongdoing by someone intending for the irregularity to help one candidate. Court's Oral Decision 6/6.
- ***McDonald, et al v. Secretary of State,* 103 P.3d 722 (Wash. 2004)** [First Supreme Court review 12/14/04]
  - ISSUE: signature comparison; request for recanvassing of previously rejected ballots
    - Equal Protection Clause claim based on a disparity between signature-checking standards. 153 P.3d at 724.
    - Procedure for comparing signatures used in first canvass did not comport with Washington's statutory and regulatory scheme. 153 P.3d at 724.
  - RESULT: signature verification procedure in first canvass ok; no equal protection violation based on disparity between rejected provisional ballots; ballots may only be retabulated if they were counted or tallied in the previous count.

- RATIONALE:
  - Signature verification procedure used in first canvass was sufficient, as voters were permitted to correct or update signatures until the day prior to the canvass (Nov. 16). 153 P.3d at 724.
  - No equal protection violation, as the petitioners only established a disparity in ballots rejected, not actual disparity in procedures. Also because they did not allege any particular procedure was faulty. 153 P.3d at 724.

- ***Washington State Democratic Party v. King County Records, Elections & Licensing Services Division***
  Superior Court, King County, 04-2-36048-0 SEA [Decision 11/16/04]
  - ISSUE: verifying ballots/disclosure of voters in risk of rejection for signature problems
    - King County elections officials ordered to give the State Democratic Party the names of 929 voters whose provisional ballots may be discarded because of signature problems. Memorandum Opinion 2.
      - Challenge under Public Disclosure Act. Memorandum Opinion 2-3.
        - County argued that HAVA prevented disclosure. *Id.*
      - Challenge under Equal Protection Clause. Memorandum Opinion 4.
    - Republican Party intervened and wanted provisional votes submitted by third parties (such as the Democratic Party) to be rejected, requiring voters to come down to the county board to verify their questioned signature. Memorandum Opinion 5.
  - RESULT: Democrats were entitled to disclosure of the names so that the voters could be contacted to verify their ballots; equal protection claim dismissed. Votes brought in by third parties should be counted.
  - RATIONALE:
    - Identity of voter or disposition of provisional ballots, but not votes cast, are subject to Public Disclosure Act. Memorandum Opinion 4.
    - Disclosure of voters' names leads to greater notice, which is the goal. Memorandum Opinion 4.
    - Equal protection claim – dispute is premature, and the evidence is hypothetical. Memorandum Opinion 4.
    - There is no evidence of fraud, no showing that King County is acting illegally, best protection against fraud is public disclosure, so Republicans' claim is dismissed. Memorandum Opinion 6.

<u>Provisional v. regular ballot for voter who properly registered but was left off election rolls</u>

- ***Citizens Alliance for Secure Elections v. Michael Vu***
  U.S. District Court for the Northern District of Ohio, Case No. 1:04CV2147
  - ISSUE: whether voters who have moved but not updated their registration should receive a provisional ballot or a regular ballot; whether voters inadvertently left off registration rolls should receive a regular or provisional ballot.

        - Plaintiffs claim that voters who have moved within the state but not updated their registration should not have to vote a provisional ballot at their new voting location but should instead vote a regular ballot. (Challenge guideline as in conflict with Ohio statute). Order Denying Plaintiffs' Motion for Temporary Restraining Order 2.
        - Claim that Board of Elections violated the NVRA when they failed to properly process voter registration applications and properly notify applicants of the status of their incomplete (yet timely) applications. Motion for a Temporary Restraining Order, Memorandum in Support 2-3.
            - Allege clerical errors were made in transcribing registration cards to computer records, which resulted in applications being considered incomplete (and thus, will force those voters to vote a provisional ballot rather than a regular ballot).
            - Allege that Board neglected to register voters whose applications were timely submitted.
        - Claim that the Board of Elections actions concerning these "incomplete" and lost registrations disenfranchise voters in violation of the Voting Rights Act. Motion Memorandum in Support 7.
    - RESULT: Provisional ballot procedure is sufficient to allow voters who were inadvertently removed from the registration list or should be on the registration list an opportunity to vote – so voters who have moved or were erroneously left off the list are permitted to vote provisionally.
    - RATIONALE: Provisional voting system seems reasonably calculated to remedy any situation in which a voter was left off the registered voter lists. Order 4.
    - Plaintiffs dismissed their case without prejudice after their request for a temporary restraining order was rejected. Plaintiff's Notice Of Voluntary Dismissal Without Prejudice.

Voters who have moved and not updated their registration

- ***Citizens Alliance for Secure Elections v. Michael Vu***
  U.S. District Court for the Northern District of Ohio, Case No. 1:04CV2147
    - ISSUE: whether voters who have moved but not updated their registration should receive a provisional ballot or a regular ballot; whether voters inadvertently left off registration rolls should receive a regular or provisional ballot.

        - Plaintiffs claim that voters who have moved within the state but not updated their registration should not have to vote a provisional ballot at their new voting location but should instead vote a regular ballot. (Challenge guideline as in conflict with Ohio statute). Order Denying Plaintiffs' Motion for Temporary Restraining Order 2.
        - Claim that Board of Elections violated the NVRA when they failed to properly process voter registration applications and properly notify applicants of the status of their incomplete (yet timely) applications. Motion for a Temporary Restraining Order, Memorandum in Support 2-3.

        - Allege clerical errors were made in transcribing registration cards to computer records, which resulted in applications being considered incomplete (and thus, will force those voters to vote a provisional ballot rather than a regular ballot).
        - Allege that Board neglected to register voters whose applications were timely submitted.
      - Claim that the Board of Elections actions concerning these "incomplete" and lost registrations disenfranchise voters in violation of the Voting Rights Act. Motion Memorandum in Support 7.
  - RESULT: Provisional ballot procedure is sufficient to allow voters who were inadvertently removed from the registration list or should be on the registration list an opportunity to vote – so voters who have moved or were erroneously left off the list are permitted to vote provisionally.
  - RATIONALE: Provisional voting system seems reasonably calculated to remedy any situation in which a voter was left off the registered voter lists. Order 4.
  - Plaintiffs dismissed their case without prejudice after their request for a temporary restraining order was rejected. Plaintiff's Notice Of Voluntary Dismissal Without Prejudice.

<u>Provisional ballots cast by voters who claimed that someone else voted in their place and signed precinct record</u>

- ***Panio v. Sunderland*, 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)**
  - ISSUES: wrong precinct; voters who voted provisionally because other voters had signed poll ledger in their place; provisional ballots in which the envelope did not identify the election district of the voter
    - Claims all based on N.Y. election law – once case got to Supreme Court, no claims based on Constitution or HAVA.
  - RESULT:
    - Provisional votes in which the voter was in the correct polling place, but wrong district should be counted; voters in the wrong polling place and wrong district should not be counted. 4 N.Y. 3d at 128.
    - Provisional ballots cast by voters who claimed that another voter voted in his/her place and signed the precinct ledger should not be counted. 4 N.Y. 3d at 129.
    - Provisional ballots in which the election district was not identified on the envelope should be counted. 4 N.Y. 3d at 129.
  - RATIONALE: provisional ballots should be counted if the ballots were in dispute only as a result of ministerial errors by the election board. 4 N.Y. 3d at 129.
    - Ballots cast in the correct polling place but wrong district were counted because they were assumed to be the result of ministerial error; the election officers should have directed the voter to the correct voting table. 4 N.Y. 3d at 128. Ballots cast in the wrong polling place and district were not counted because it would be unreasonable to require poll workers to ensure that voters are at the correct polling site. *Id.*

        - Provisional votes cast by voters who claimed another voter had voted in their place earlier were not counted because of the possibility of fraud. 4 N.Y. 3d at 129.
        - Provisional ballots lacking the election district on the envelope were counted because they were cast in the correct election district, and mishandling by election officials caused the ballots to become unidentifiable with a district (election officials placed post-it notes on the ballots containing the missing information, but the notes later fell off). 4 N.Y. 3d at 129.
    - DISPOSITION: application for rehearing denied – 2/7/05

Disclosure to a political party of provisional votes in danger of being rejected

- ***Washington State Democratic Party v. King County Records, Elections & Licensing Services Division***
  Superior Court, King County, 04-2-36048-0SEA [Decision 11/16/04]
    - ISSUE: verifying ballots/disclosure of voters in risk of rejection for signature problems
        - King County elections officials ordered to give the State Democratic Party the names of 929 voters whose provisional ballots may be discarded because of signature problems. Memorandum Opinion 2.
            - Challenge under Public Disclosure Act. Memorandum Opinion 2-3.
                - County argued that HAVA prevented disclosure. *Id.*
            - Challenge under Equal Protection Clause. Memorandum Opinion 4.
        - Republican Party intervened and wanted provisional votes submitted by third parties (such as the Democratic Party) to be rejected, requiring voters to come down to the county board to verify their questioned signature. Memorandum Opinion 5.
    - RESULT: Democrats were entitled to disclosure of the names so that the voters could be contacted to verify their ballots; equal protection claim dismissed. Votes brought in by third parties should be counted.
    - RATIONALE:
        - Identity of voter or disposition of provisional ballots, but not votes cast, are subject to Public Disclosure Act. Memorandum Opinion 4.
        - Disclosure of voters' names leads to greater notice, which is the goal. Memorandum Opinion 4.
        - Equal protection claim – dispute is premature, and the evidence is hypothetical. Memorandum Opinion 4.
        - There is no evidence of fraud, no showing that King County is acting illegally, best protection against fraud is public disclosure, so Republicans' claim is dismissed. Memorandum Opinion 6.

Provisional ballots incorrectly tabulated with regular ballots

- ***Borders v. King County***
  Superior Court, Chelan County, No. 05-2-00027-3 [election contest filed 1/7/05 contesting the certification of the results of the election, decision 6/6/05]
    - ISSUES: provisional ballots incorrectly tabulated with regular ballots before being verified; verification for provisional ballots; provisional ballots without labels. Court's Oral Decision 6/6.
        - Provisional ballots cast directly into electronic voting machine or ballot tabulated before it was verified. Court's Oral Decision 6/6.
        - No signature or registration verification conducted for certain provisional ballots. Court's Oral Decision 6/6.
    - RESULT: election not overturned – even though illegal votes cast – no proof who they were cast for or whether the voter voted in the particular race at all. Court's Oral Decision 6/6.
    - RATIONALE:
        - Cannot prove whether a voter voted for a particular race; do not know which ballots were illegal. Court's Oral Decision 6/6.
        - No evidence of actual ballot stuffing. Court's Oral Decision 6/6.
        - Reconciliation issues and irregularities are common in elections. Court's Oral Decision 6/6.
        - No evidence the irregularities were intentional. Court's Oral Decision 6/6.
        - Probability techniques (proportional deduction) used to predict who an illegal voter voted for are not generally accepted scientific techniques. Court's Oral Decision 6/6.
        - Judicial restraint from interfering with elections. Court's Oral Decision 6/6.
        - Precedent – challenge under a WA statute, which previously had been interpreted to require direct or indirect wrongdoing by someone intending for the irregularity to help one candidate. Court's Oral Decision 6/6.

Re-canvassing ballots previously rejected

- ***McDonald, et al v. Secretary of State,* 103 P.3d 722 (Wash. 2004)** [First Supreme Court review 12/14/04]
    - ISSUE: signature comparison; request for recanvassing of previously rejected ballots
        - Equal Protection Clause claim based on a disparity between signature-checking standards. 153 P.3d at 724.
        - Procedure for comparing signatures used in first canvass did not comport with Washington's statutory and regulatory scheme. 153 P.3d at 724.
    - RESULT: signature verification procedure in first canvass ok; no equal protection violation based on disparity between rejected provisional ballots; ballots may only be retabulated if they were counted or tallied in the previous count.
    - RATIONALE:

        - Signature verification procedure used in first canvass was sufficient, as voters were permitted to correct or update signatures until the day prior to the canvass (Nov. 16). 153 P.3d at 724.
        - No equal protection violation, as the petitioners only established a disparity in ballots rejected, not actual disparity in procedures. Also because they did not allege any particular procedure was faulty. 153 P.3d at 724.
- ***Washington State Republican Party v. King County Division of Records*, 103 P.3d 725 (Wash. 2004)** [Second Supreme Court review 12/22/04]
    - ISSUE: decision to recanvass ballots previously rejected to see if their rejection was erroneous
        - County canvassing board wished to recanvass provisional ballots coded "no signature on file" because the ballots had only been checked against the electronic database, not the paper records, the old system of registration, and records at the Secretary of State. 103 P.3d at 725-26. Challenge under state recanvassing statute. *Id.*
    - RESULT: The ballots incompletely canvassed may be recanvassed pursuant to Washington law. 103 P.3d at 728.
    - RATIONALE:
        - The ballots were never fully canvassed (because the secondary signature checks against other sources were never done), and the Board can correct this error through recanvassing. 103 P.3d at 727-28. This type of error is what the recanvassing statute is designed for. *Id.*

APPENDIX D: PROVISIONAL BALLOT LITIGATION BY STATE

Moritz College of Law
June 28, 2006

Arizona

- ***League of Latin American Citizens (LULAC) v. Arizona Secretary of State Jan Brewer***
    - ISSUE: wrong precinct
        - Lawsuit claims Arizona state policy to not count provisional ballots that were cast in the wrong precinct violates HAVA and the Equal Protection Clause of the 14th Amendment. Electionline.org – Litigation Summary (Feb. 14, 2005), http://www.electionline.org/Portals/1/Publications/litigation.update.Feb.14.05.pdf.
    - RESULT: N/A
    - RATIONALE: N/A

Colorado

- ***Colorado Common Cause v. Donetta Davidson*, No. 04CV7709, 2004 WL 2360485 (Colo. Dist. Ct. Oct. 18, 2004)**
    - ISSUE: wrong precinct; absentee voters getting provisional ballots
        - Lawsuit challenges a state guideline that prohibits anyone voting in the wrong precinct from casting a ballot in any race but the presidential election based on HAVA and the Constitution (fundamental rights challenge). 2004 WL 2360485, at *1.
        - Challenges state guideline that provisional ballots will not be counted if the voter applied for an absentee ballot based on HAVA and the Constitution (fundamental rights challenge). 2004 WL 2360485, at *1.
    - RESULT: votes cast in the wrong precinct may only count for president and vice president; provisional votes cast by voters who applied for absentee ballots must be counted.
    - RATIONALE:
        - Court felt that Congress had no intent to eliminate precinct-based voting, a constitutional form of organizing voting; therefore, votes cast in the wrong precinct may not be counted for county-wide issues. 2004 WL 2360485, at *11. Court also felt that the legislative history behind HAVA's passage supported this notion. *Id.*
        - Court felt that requiring voters to vote in the correct precinct is not an unconstitutional infringement on the right to vote. 2004 WL 2360485, at *14. The impact of the requirement is further lessened by the fact that poll workers will direct the voter to the correct precinct. *Id.* In addition, the Court felt that there was a compelling interest in preventing voter fraud furthered by the precinct system. *Id.*
            - The Court left the door open to the possibility that state-wide voting may be possible after a state-wide computerized database is established in 2006. *Id.*
        - Court felt that not allowing voters who requested an absentee ballot to vote provisionally would conflict with the purpose of HAVA to ensure that registered and eligible voters are allowed to vote provisionally. 2004 WL 2360485, at *11, 12.

Florida

- ***AFL-CIO v. Hood*, 885 So. 2d 373 (Fla. 2004)**
    - ISSUE: wrong precinct
        - Lawsuit claimed that the precinct system was an unnecessary and unconstitutional infringement on the right to vote under the Florida and U.S. Constitutions. 885 So.2d at 374.
    - RESULT: votes cast in the wrong precinct may be rejected and not counted.
    - RATIONALE: Precinct based system is a regulation of the voting process not a qualification placed on the voter and could have been reasonably deemed necessary to protect the integrity of the voting process. 885 So.2d at 376.
- ***The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073 (N.D. Fla. 2004)**
    - ISSUE: wrong precinct
        - Right to provisional ballot if in the wrong precinct (conceded by Florida prior to Order Granting Preliminary Injunction)
        - Right for vote to be counted if cast in the wrong precinct based on interpretation of HAVA language.
        - 342 F. Supp. 2d at 1074.
    - RESULT: voters in the wrong precinct are entitled to a provisional ballot, but are not entitled to have that vote counted if cast in the wrong precinct. 342 F. Supp. 2d at 1083.
    - RATIONALE:
        - Reading the statute to mean that a voter must be eligible at that polling place is consistent with HAVA's purpose, to allow voters to vote when they appear at the polling place, not to eliminate precinct voting. 342 F. Supp. 2d at 1079.
        - Reading is also consistent with votes being counted "in accordance with State law." 342 F. Supp. 2d at 1080.
        - Reading consistent with legislative history which says that poll workers should direct voters to the correct precinct not allow voters to vote at any polling site. 342 F. Supp. 2d at 1080.
        - "Eligible" in HAVA language means registered, 18 years of age, has lived in State for at least 30 days. 342 F. Supp. 2d at 1080.
        - HAVA intended to safeguard voter's right to vote but allow state law to determine whether that vote counts. 342 F. Supp. 2d at 1080.
        - Because election workers may make mistakes with on-the-spot determinations of the voter's polling place, a voter may not be denied a provisional ballot because an election official determined that he/she is at the wrong polling place. 342 F. Supp. 2d at 1081.

Iowa

- ***Dean Brooks et al. v. Attorney General Tom Miller***
    - ISSUE: wrong precinct
        - Challenge Attorney General decision that votes cast in the correct county but wrong precinct should be counted for Congress and President and Vice President only. Electionline.org – Litigation

Summary (Feb. 14, 2005), http://www.electionline.org/Portals/1/ Publications/litigation.update.Feb.14.05.pdf.
    - RESULT: N/A
    - RATIONALE: N/A

Michigan

- ***Bay County Democratic Party, et al v. Land et al,* 347 F. Supp. 2d 404 (E.D. Mich. 2004)**
    - ISSUE: wrong precinct; identification requirement for ballot to count
        - Lawsuit challenges Secretary of State's directive that votes cast in the wrong precinct but correct township, city, or village should not be counted based on HAVA. 347 F. Supp. 2d at 427-34.
        - Lawsuit challenges Secretary of State's directive that first time voters should be required to provided identification within six days of election day in order for their votes to count under HAVA, the Fourteenth Amendment to the Constitution, Michigan election law, and the Equal Protection Clause of the Michigan Constitution. 347 F. Supp. 2d at 434-35.
    - RESULT [but later overruled by Sixth Circuit]: votes cast in the wrong precinct but correct city, village, or township should be counted; identification may be required of provisional voters after the election in order for their votes to count. 347 F. Supp. 2d at 438.
    - RATIONALE:
        - With regard to the wrong precinct issue, the Court relies on the District Court decision in *Sandusky County Democratic Party v. Blackwell,* 339 F. Supp. 2d 975, 992-93 (N.D. Ohio 2004). *Bay County,* 347 F. Supp. 2d at 431-32.
        - The Court also relies on the "plain language" of HAVA – votes are to be counted in accordance with state law (dictates the *procedure* of counting); whether or not votes are counted is decided under HAVA; votes under HAVA are counted if the voter is "eligible" to vote. 347 F. Supp. 2d at 431-32.
        - With regard to the identification requirement, the Court found that the requirement was reasonable; that preventing voter fraud is a compelling interest; and that the requirement is applied uniformly and in a nondiscriminatory manner. 347 F. Supp. 2d at 435.
    - **<u>OVERRULED</u>**: 6th Circuit ruled that votes in the wrong precinct should not be counted and interpreted "jurisdiction," "eligible," and the HAVA provision concerning provisional ballots differently. *Sandusky County Democratic Party v. Blackwell,* 387 F.3d 565 (6th Cir. 2004).

Missouri

- ***Claude Hawkins, Brian Morahan, Susan Schilling and the Missouri Democratic Party v. Matt Blunt***
  U.S. District Court Western District of Missouri, Case No. 2:04-cv-04177
    - ISSUE: wrong precinct
        - Plaintiffs claim that not counting provisional votes cast in the wrong precinct is in violation of HAVA (preemption argument). Order

denying Plaintiffs' Motion for Summary Judgment, granting Defendants' Motion for Summary Judgment 3.

      - But the Secretary of State later decided to count those provisional ballots in which the voter was not directed to the correct polling place, so this issue was considered moot. Order 11.
    - Plaintiffs also disputed a provision of Missouri law which states that a voter should be directed to the correct polling place in lieu of receiving a provisional ballot. Order 10, 12. The provision has been interpreted to mean that if a voter refuses to go to the correct polling place, he shall be given a provisional ballot, which will not be counted (allege it is inconsistent with HAVA - preemption). Order 10, 12.
      - Allege that the Missouri law implementing HAVA "frustrates the intent" of HAVA. Order 13.
    - Plaintiffs also allege that the Missouri law violates the Equal Protection Clause because the decision not to count ballots cast at an incorrect polling place is arbitrary. Order 21.
  - RESULT: Provisional ballots cast in the wrong precinct should be thrown out provided that the voter was directed to correct precinct. Order.
  - RATIONALE:
    - HAVA was intended to be flexible in the way in which states could implement it, evidenced by use of the phrase "eligible under state law to vote." Order 14.
      - This reference to state law gives states the power to define voter qualifications for provisional ballots including where they can be cast in order to be counted. *Id.*
    - Court relies on statements of Sen. Bond and other HAVA supporters, stating that they did not intend to overturn State law regarding the jurisdiction in which a ballot must be cast and that poll workers should direct the voter to the correct polling place in the event of confusion. Order 15-16.
    - The laws do not violate the Equal Protection Clause because the goals and objectives of the precinct system are legitimate, and it guarantees those eligible to vote may do so. Order 22. The system is rationally related to ensuring a fair election. *Id.*

<u>New York</u>

- ***Panio v. Sunderland*, 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005)**
  - ISSUES: wrong precinct; voters who voted provisionally because other voters had signed poll ledger in their place; provisional ballots in which the envelope did not identify the election district of the voter
    - Claims all based on N.Y. election law – once case got to Supreme Court, no claims based on Constitution or HAVA.
  - RESULT:

    - Provisional votes in which the voter was in the correct polling place, but wrong district should be counted; voters in the wrong polling place and wrong district should not be counted. 4 N.Y. 3d at 128.
    - Provisional ballots cast by voters who claimed that another voter voted in his/her place and signed the precinct ledger should not be counted. 4 N.Y. 3d at 129.
    - Provisional ballots in which the election district was not identified on the envelope should be counted. 4 N.Y. 3d at 129.
  - RATIONALE: provisional ballots should be counted if the ballots were in dispute only as a result of ministerial errors by the election board. 4 N.Y. 3d at 129.
    - Ballots cast in the correct polling place but wrong district were counted because they were assumed to be the result of ministerial error; the election officers should have directed the voter to the correct voting table. 4 N.Y. 3d at 128. Ballots cast in the wrong polling place and district were not counted because it would be unreasonable to require poll workers to ensure that voters are at the correct polling site. *Id.*
    - Provisional votes cast by voters who claimed another voter had voted in their place earlier were not counted because of the possibility of fraud. 4 N.Y. 3d at 129.
    - Provisional ballots lacking the election district on the envelope were counted because they were cast in the correct election district, and mishandling by election officials caused the ballots to become unidentifiable with a district (election officials placed post-it notes on the ballots containing the missing information, but the notes later fell off). 4 N.Y. 3d at 129.
  - DISPOSITION: application for rehearing denied – 2/7/05

North Carolina

- ***James v. Bartlet*, 607 S.E. 2d 638, 359 N.C. 260 (N.C. 2005)**
  - ISSUE: wrong precinct
    - Whether or not ballots cast outside the voter's home precinct should be counted as long as the voter casts a ballot for races in his home precinct. 607 S.E. 2d at 640.
  - RESULT: NC state law requires voters to vote in the correct precinct; therefore, votes cast in the wrong precinct were not counted for state and local elections (did not discuss federal elections). 607 S.E. 2d at 645.
  - RATIONALE:
    - Plain language of state statute requires that the voter be a resident of the precinct he votes in and registers in (refers to "the precinct" versus "a precinct"). 607 S.E. 2d at 642.
    - No intent to enable voters to vote outside their precincts by Congress or state legislature in enacting provisional ballot statutes. 607 S.E. 2d at 643.

    - Administrative Code sets out precise circumstances under which a voter may vote a provisional ballot and specifies that the voter must reside in the precinct. 607 S.E. 2d at 643.
    - Court may not remedy Election Board's decision to give provisional ballots to voters in a manner not authorized by State law. 607 S.E. 2d at 644.
    - Advantages of the precinct system: caps number of voters at one polling place; allows there to be one uniform ballot for all voters at that polling place; ballots may list only those elections a voter may vote for (less confusing); easier to monitor fraud; and it puts polling places closer to people's homes. 607 S.E. 2d at 644-45.

Ohio

- *Citizens Alliance for Secure Elections v. Michael Vu*
  U.S. District Court for the Northern District of Ohio, Case No. 1:04CV2147
  - ISSUE: whether voters who have moved but not updated their registration should receive a provisional ballot or a regular ballot; whether voters inadvertently left off registration rolls should receive a regular or provisional ballot.
    - Plaintiffs claim that voters who have moved within the state but not updated their registration should not have to vote a provisional ballot at their new voting location but should instead vote a regular ballot. (Challenge guideline as in conflict with Ohio statute). Order Denying Plaintiffs' Motion for Temporary Restraining Order 2.
    - Claim that Board of Elections violated the NVRA when they failed to properly process voter registration applications and properly notify applicants of the status of their incomplete (yet timely) applications. Motion for a Temporary Restraining Order, Memorandum in Support 2-3.
      - Allege clerical errors were made in transcribing registration cards to computer records, which resulted in applications being considered incomplete (and thus, will force those voters to vote a provisional ballot rather than a regular ballot).
      - Allege that Board neglected to register voters whose applications were timely submitted.
    - Claim that the Board of Elections actions concerning these "incomplete" and lost registrations disenfranchise voters in violation of the Voting Rights Act. Motion Memorandum in Support 7.
  - RESULT: Provisional ballot procedure is sufficient to allow voters who were inadvertently removed from the registration list or should be on the registration list an opportunity to vote – so voters who have moved or were erroneously left off the list are permitted to vote provisionally.
  - RATIONALE: Provisional voting system seems reasonably calculated to remedy any situation in which a voter was left off the registered voter lists. Order 4.

  - Plaintiffs dismissed their case without prejudice after their request for a temporary restraining order was rejected. Plaintiff's Notice Of Voluntary Dismissal Without Prejudice.
- ***The League of Women Voters of Ohio et al v. Blackwell,*** **340 F. Supp. 2d 823 (N.D. Ohio 2004)**
  - ISSUES: wrong precinct & identification requirement for ballot to count
    - Wrong precinct issue. 340 F. Supp. 2d at 824.
    - Whether identification provided on election day should be required of provisional voters (voting provisionally because of ID requirement) in order for ballot to count. 340 F. Supp. 2d at 828.
      - Claim that it will cause provisional ballots voted by voters without identification (who cannot remember their numerical identifier, do not have a numerical identifier, or cannot return to the polls prior to closing) to be rejected.
        - Fourteenth Amendment fundamental rights claim.
        - Claim under HAVA based on interpretation of the "eligible" language.
  - RESULT:
    - Wrong precinct issue decided already in *Sandusky County Democratic Party,* and even though it was on appeal at the time of the decision, the Judge decided that the relief granted (or not) from that case would be sufficient to serve the interests of these plaintiffs as well (he did not reach a decision on the issue). 340 F. Supp. 2d at 824.
    - Identification or oral recitation of identification number (DL or SS) may be required before the polls close in order for a provisional ballot to count. 340 F. Supp. 2d at 831.
  - RATIONALE:
    - Identification may be required to preserve the integrity of elections and prevent voter fraud, which outweighs the interest in ensuring that every ballot count. 340 F. Supp. 2d at 829. Further, there is no less burdensome way to detect and prevent election fraud. *Id.*
    - Identification may be required because HAVA allows it; the requirement affects a small number of voters (registered by mail, voting for the first time, have no identification, cannot recite a numerical identifier); it is easy to obtain the identification information (telephone, quick return home); and notice is given of the requirement on the registration form. 340 F. Supp. 2d at 830.
    - Identification may be required because HAVA's language about "eligible under State law to vote" only means that the name on the registration form is eligible to vote. 340 F. Supp. 2d at 831. A voter must still prove that he/she is the same person as the person on the registration form, who is "eligible" to vote under State law, and proving identity is a reasonable burden. *Id.*

***Sandusky County Democratic Party v. Blackwell*, 361 F. Supp. 2d 688 (6th Cir. 2005)** – Opinion in District Court in Plaintiff's request for attorney's fees, which was granted, 3/3/05

- ISSUE: wrong precinct
  - Plaintiffs claim that a Directive by the Secretary of State denies provisional ballots to voters inadvertently purged from voter lists or to those who go to the wrong precinct and only allows provisional ballots to voters who have moved and not updated their registration. Complaint 2-3.
    - Claim that this violates the purpose of HAVA – to ensure that all electors are eligible to vote provisionally. 339 F. Supp. 2d 975.
    - Claim that "jurisdiction" means the same as the geographic unit which maintains voter registration rolls and the same as its meaning in the NVRA. 387 F.3d at 574-75.
  - Statutory claim that HAVA provides an absolute right to cast a provisional ballot which counts provided that the voter is registered and eligible. Complaint 6-7.
    - Provisional ballots should be given to every voter who attempts to vote in the correct county but not necessarily the correct precinct. Complaint 10-11.
  - Claim that a voter (who has moved) who goes to one polling place attempting to vote and then goes to the other later should be allowed a provisional ballot. Complaint 12, 14.
- RESULT: Votes cast in the wrong precinct may not be counted by a state, but voters must be permitted to cast them. 386 F.3d at 816. HAVA secures the right to cast a provisional ballot; the legality of the ballot must be determined under state law. 386 F.3d at 576.
- RATIONALE:
  - Precinct system rooted in tradition; no indication Congress wished to completely overhaul the voting system of most states. 387 F.3d at 568; 387 F.3d at 576.
  - Advantages of precinct system: caps the number of voters at one place; allows ballot for all voters at one precinct to be the same for all elections; ballot lists only elections the voter may vote for (less confusing); easier to monitor and prevent fraud; and puts polling places closer to voter's homes. 387 F.3d at 569.
  - Court believes that the totality of the legislative history supports the notion that jurisdiction equals precinct, and votes cast outside the

voter's precinct should not be counted under HAVA. 387 F.3d at 575.

    - The District Court's broad reading of "eligible under state law to vote" leads to the conclusion that a voter could vote multiple times in one election, and all of the provisional ballots would count if state law is not used to determine eligibility (since it is Ohio not federal law that specifies that a voter can vote only once).
    - Court relies on the presumption that Congress must be clear in order to alter the state-federal balance; thus, Congress would have been more clear if it intended to eliminate state control over polling location. 387 F.3d at 578.
    - But a provisional ballot must be provided to a voter, as HAVA's purpose was to prevent on-the-spot denials of ballots to voters determined ineligible by precinct workers. 387 F.3d at 574.
      - Court believes that HAVA's provisional voting was designed to compensate for the impossibility of having election officials with "perfect knowledge." 387 F.3d at 570. Under this rationale, provisional voting is used when a voter's eligibility in that precinct cannot be verified, but the voter insists that he/she is eligible because it is possible that the election officials do not have perfect information. *Id.*
- ***Schering v. Blackwell***
  U.S. District Court for the Southern District of Ohio, Case No. 1:04-cv-755.
  - ISSUE: equal protection issue
    - Plaintiffs allege that the process for evaluating provisional ballots in Ohio violates the Equal Protection Clause; want uniform standards for evaluating provisional ballots
  - RESULT: Plaintiffs filed a stipulated dismissal. 3/15/05
  - Case never reached opinion.
- ***State of Ohio ex rel. Mackey et al v. Blackwell et al,* No. 85597, 2004 WL 2973976 (Ohio App. 8 Dist. Dec. 22, 2004)**
  - ISSUES: equal protection issue & wrong precinct issue & how verification (against registration records) procedure should be conducted
    - Equal protection issue from different treatment on whether a voter should have a provisional ballot and different treatment on whether a provisional vote should be counted.
      - Claim that there were inconsistent standards for determining whether or not a voter received a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2.
      - Claim that there were inconsistent standards for determining whether or not to count a provisional ballot in violation of the Equal Protection Clause. Original Action in Mandamus 2, 9.
    - Claim that votes cast in the wrong precinct should be counted given that many voters did not receive assistance to correct precinct, as

required by Secretary of State's directive. Original Action in Mandamus 3, 16-17.

    - Claim that provisional ballots lacking a signature, HAVA sticker, or other required information on the envelope were wrongfully rejected – allege that these are nonmaterial errors in violation of VRA. Original Action in Mandamus 6-7, 11, 14.
    - Claim that provisional ballots should be verified by hand against registration records rather than only against computerized records. Original Action in Mandamus 12-13.
      - Allege that database was incomplete – some registration forms were not indexed and accessible to poll workers. *Id.*
      - Allege that registration forms were erroneously processed. *Id.*
  - RESULT: Dismissed for failure to state a claim upon which relief can be granted. 2004 WL 2973976, at *2.
- ***White v. Blackwell, et al.***
  U.S. District Court for the Northern District of Ohio, Case No. 3:04CV 7689.
  - ISSUE: absentee voters getting provisional ballots
    - Absentee voters who failed to receive absentee ballots in the mail who wish to vote provisionally at the polls under HAVA.
      - Claim under HAVA that the Secretary of State and Board of Elections interpreted HAVA incorrectly. Complaint 8.
  - RESULT: Anyone who shows up to the polls and asserts eligibility to vote shall be permitted to cast a provisional ballot, including those who previously requested an absentee ballot. Memorandum Opinion and Order 3-4.
  - RATIONALE: HAVA, as interpreted in *Sandusky County Democratic Party*, is clear, anyone who asserts eligibility to vote is able to receive a provisional ballot under HAVA. Memorandum Opinion 3-4.

Washington

- ***Borders v. King County***
  Superior Court, Chelan County, No. 05-2-00027-3 [election contest filed 1/7/05 contesting the certification of the results of the election, decision 6/6/05]
  - ISSUES: provisional ballots incorrectly tabulated with regular ballots before being verified; verification for provisional ballots; provisional ballots without labels. Court's Oral Decision 6/6.
    - Provisional ballots cast directly into electronic voting machine or ballot tabulated before it was verified. Court's Oral Decision 6/6.
    - No signature or registration verification conducted for certain provisional ballots. Court's Oral Decision 6/6.
  - RESULT: election not overturned – even though illegal votes cast – no proof who they were cast for or whether the voter voted in the particular race at all. Court's Oral Decision 6/6.
  - RATIONALE:
    - Cannot prove whether a voter voted for a particular race; do not know which ballots were illegal. Court's Oral Decision 6/6.
    - No evidence of actual ballot stuffing. Court's Oral Decision 6/6.

        - Reconciliation issues and irregularities are common in elections. Court's Oral Decision 6/6.
        - No evidence the irregularities were intentional. Court's Oral Decision 6/6.
        - Probability techniques (proportional deduction) used to predict who an illegal voter voted for are not generally accepted scientific techniques. Court's Oral Decision 6/6.
        - Judicial restraint from interfering with elections. Court's Oral Decision 6/6.
        - Precedent – challenge under a WA statute, which previously had been interpreted to require direct or indirect wrongdoing by someone intending for the irregularity to help one candidate. Court's Oral Decision 6/6.
- ***McDonald, et al v. Secretary of State,* 103 P.3d 722 (Wash. 2004)** [First Supreme Court review 12/14/04]
    - ISSUE: signature comparison; request for recanvassing of previously rejected ballots
        - Equal Protection Clause claim based on a disparity between signature-checking standards. 153 P.3d at 724.
        - Procedure for comparing signatures used in first canvass did not comport with Washington's statutory and regulatory scheme. 153 P.3d at 724.
    - RESULT: signature verification procedure in first canvass ok; no equal protection violation based on disparity between rejected provisional ballots; ballots may only be retabulated if they were counted or tallied in the previous count.
    - RATIONALE:
        - Signature verification procedure used in first canvass was sufficient, as voters were permitted to correct or update signatures until the day prior to the canvass (Nov. 16). 153 P.3d at 724.
        - No equal protection violation, as the petitioners only established a disparity in ballots rejected, not actual disparity in procedures. Also because they did not allege any particular procedure was faulty. 153 P.3d at 724.
- ***Washington State Democratic Party v. King County Records, Elections & Licensing Services Division***
  Superior Court, King County, 04-2-36048-0 SEA [Decision 11/16/04]
    - ISSUE: verifying ballots/disclosure of voters in risk of rejection for signature problems
        - King County elections officials ordered to give the State Democratic Party the names of 929 voters whose provisional ballots may be discarded because of signature problems. Memorandum Opinion 2.
            - Challenge under Public Disclosure Act. Memorandum Opinion 2-3.
                - County argued that HAVA prevented disclosure. *Id.*

            - Challenge under Equal Protection Clause. Memorandum Opinion 4.
        - Republican Party intervened and wanted provisional votes submitted by third parties (such as the Democratic Party) to be rejected, requiring voters to come down to the county board to verify their questioned signature. Memorandum Opinion 5.
    - RESULT: Democrats were entitled to disclosure of the names so that the voters could be contacted to verify their ballots; equal protection claim dismissed. Votes brought in by third parties should be counted.
    - RATIONALE:
        - Identity of voter or disposition of provisional ballots, but not votes cast, are subject to Public Disclosure Act. Memorandum Opinion 4.
        - Disclosure of voters' names leads to greater notice, which is the goal. Memorandum Opinion 4.
        - Equal protection claim – dispute is premature, and the evidence is hypothetical. Memorandum Opinion 4.
        - There is no evidence of fraud, no showing that King County is acting illegally, best protection against fraud is public disclosure, so Republicans' claim is dismissed. Memorandum Opinion 6.
- ***Washington State Republican Party v. King County Division of Records*, 103 P.3d 725 (Wash. 2004)** [Second Supreme Court review 12/22/04]
    - ISSUE: decision to recanvass ballots previously rejected to see if their rejection was erroneous
        - County canvassing board wished to recanvass provisional ballots coded "no signature on file" because the ballots had only been checked against the electronic database, not the paper records, the old system of registration, and records at the Secretary of State. 103 P.3d at 725-26. Challenge under state recanvassing statute. *Id.*
    - RESULT: The ballots incompletely canvassed may be recanvassed pursuant to Washington law. 103 P.3d at 728.
    - RATIONALE:
        - The ballots were never fully canvassed (because the secondary signature checks against other sources were never done), and the Board can correct this error through recanvassing. 103 P.3d at 727-28. This type of error is what the recanvassing statute is designed for. *Id.*

APPENDIX E: STATE SUMMARIES

June 28, 2006

Alabama

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
6560	1836	28	0.10

All data in the tables are drawn from information in the Election Day Survey, Chapter 6, and the Electionline document "Election Reform Briefing 10: Solution or Problem? Provisional Ballots in 2004."

This was the first general election in which Alabama allowed full provisional ballots to be cast, switching from a previous affidavit ballot system that had allowed voters whose names were not on the rolls to cast a ballot if they signed an affidavit to verify their identity and registration status. The number of ballots cast was unusually low for a state without a statewide voter registration database. The percentage counted put Alabama in the bottom quarter of the country. It did not count ballots cast outside the correct precinct. Ballots were verified by county election boards that checked the registration and address reported on the provisional ballot.

The percent counted in the general election was much lower than in the primary elections held earlier in the year, in which about half of the provisional ballots were counted. The general election also had more than 6 times as many provisional ballots cast as the primaries. Provisional ballots were supposed to be distributed if the voter had applied for an absentee ballot but not received it, lacked valid ID (not photo ID necessarily), was not on the registration rolls, or was challenged by a poll watcher.

The percentage of provisional ballots counted was lower in urban counties, such as Jefferson County (Birmingham), than in rural counties. Areas with the greatest concentration of African-American voters were less likely than other areas to have provisional ballots counted.[1] Problems with access to provisional ballots were concentrated in Birmingham and Montgomery, affecting blacks and students most severely.[2] The cause of these problems seems to have been that newly registered voters were not always listed on the current rolls.

The only outcome that appears to have depended on provisional ballots was the vote on proposed Amendment 2. This effort to strike segregation-era provisions from the state constitution failed, by a margin smaller than the number of provisional ballots.[3] If a higher percentage of provisional ballots had been counted, the likelihood of the amendment's passage would have increased dramatically.

Election officials received specific training in how to handle and count provisional ballots.[4] Whether this training will be provided regularly in the future remains to be determined. Alabama had a very efficient system whereby voters could see if their vote counted, using a toll-free number that has results within 10 days, much faster than in most other states. But this notification system is based solely on policy and depends heavily on efficient county officials; it has no legal backing to make sure that it continues in other elections.

[4] Birmingham News (Alabama), October 24, 2004 Sunday, NEWS, 388 words, METRO BRIEFS

Alaska

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
23275	22498	97.00	7.20

Elections in Alaska allow what are called "questioned ballots," similar to the provisional ballots mandated by HAVA. This practice is not new, giving Alaska an experience different from other states that are new to fail-safe forms of voting. Alaska led the nation in provisional balloting in two different ways: It had the highest percentage of provisional ballots cast, as those ballots accounted for 7.2% of the total votes in the state. Provisional ballots were counted at the highest rate in the country, 97% of those cast. This is nearly 30 percent higher than the national average of 68%. Alaska probably had such a high percentage of provisional ballots cast because it has a fairly strict ID regime. It requires all voters to show one of the HAVA-approved forms of identification, at the polling place in order to cast a regular ballot. The application of ID requirements to all voters means that those without ID will boost the number of provisional ballots cast by properly registered voters who failed to bring their ID with them. This ID requirement can be waived if the polling place workers know the voter.

Provisional ballots are available to a wide range of individuals. Anyone without ID can cast a provisional ballot, even if the voter is not in the proper precinct. These ballots are sent to a bipartisan review board that determines if the voter was registered in the state and if the signature on the ballot matches the signature on record. After the review board verifies the ballots, the Elections Division informs the voter if the vote counted by a hotline within 30 days of the election and by letter within 60 days. (This notification system will change by the 2006 midterm elections, when a website will be used to inform voters if their votes were counted.) Any vote cast within the correct jurisdiction, defined quite broadly in this state that lacks counties, is eligible to be counted. Nevertheless, the state made precinct verification possible through the Elections Division's website in an attempt to minimize the difficulty of having people vote outside their correct precinct. It also informed voters of ID requirements in an attempt to reduce questioned voting. Even outside the precinct, voter registration could still be verified through the state's voter registration database.

States with statewide registration databases might be expected to have recourse to fewer provisional ballots because the process of on-the-spot verification would be more efficient. In Alaska, this was not the case because the ID regime seems to trump the efficiency of a database. Provisional balloting attracted almost no media coverage inside the state, suggesting that the process lacked controversy. This is probably attributable either to the high percentage of votes counted or because provisional balloting was not new for the 2004 election.

Arizona

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
101536	73658	73.00	3.66

Arizona was fourth in the nation in provisional ballots cast, and, at 3.66%, third in the portion of its total vote. The state counted 73% of the provisional ballots cast, second highest among states with a statewide voter registration database and third highest among states that disqualified votes cast outside the correct precinct. The Number of provisional ballots is probably large because of its large Hispanic population. The Election Day Study found that "predominantly Hispanic jurisdiction had the highest rate of casting provisional ballots.[5]

Provisional ballots were given to voters whose names were not on the registration rolls at the polling location. They are later verified by confirming the voter's registration information and polling location as printed on the ballot envelope.

The state website disseminated little information about provisional voting, the state's ID requirements (not photo), or the location of precincts. Groups like the National Council of La Raza and the Mexican American Legal Defense and Education Fund informed Latino voters about provisional opportunities. The League of United Latin American Citizens sued after the election seeking to have votes cast in the incorrect precinct counted. It lost in U.S. District Court.[6]

The electoral system in Arizona is changing dramatically with the passage of Proposition 200, which modifies the state's voter ID laws. Passed in November 2004, it requires all voters to provide identification before voting. The Proposition did not exempt provisional ballots from this requirement. Provisional voters in the future will have to display ID in order to cast something less than a regular ballot.

The state Attorney General delayed implementing the law because he believed that it violated federal voting regulations like HAVA and the Voting Rights Act of 1965, under which certain Arizona counties receive greater scrutiny for failing part of the Section 4 formula that determines "covered jurisdictions" under Section 5.[7] Nevertheless, the Department of Justice approved the bill's ID measures, saying that it did not violate the VRA by placing minority groups, 25.3% Latino, 5% American Indian, and 25.9% that speak a language other than English at home, in a worse position that they had been previous to its enactment, the so-called non-retrogression principle. The Governor vetoed a later bill to implement the law, saying that the bill violated HAVA's provisional ballot clauses. An agreement has finally been reached. It exempts Native Americans from the new ID requirements, but all other voters, including provisional voters, must produce ID.[8]

---

[5] See Election Day Survey, Chapter 6, p. 10.

[6] *League of United Latin American Citizens (LULAC) v. Arizona Secretary of State Jan Brewer*

[7] The Section 4 Formula, as described by the US Department of Justice, http://www.usdoj.gov/crt/voting/sec_5/about.htm, "The first element in the formula was that the state or political subdivision of the state maintained on November 1, 1964, a "test or device," restricting the opportunity to register and vote. The second element of the formula would be satisfied if the Director of the Census determined that less than 50 percent of persons of voting age were registered to vote on November 1, 1964, or that less than 50 percent of persons of voting age voted in the presidential election of November 1964." Amendments since the original passage of the bill have updated the dates used to decide which jurisdictions receive stricter scrutiny.

Arkansas

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
7675	3678	48.00	0.35

Arkansas had no statewide registration database, counted ballots cast outside the proper precinct, and was not new to provisional voting. The state's election website provided information about provisional balloting, but it did not describe the state's ID requirements (non-photo). Nor could voters verify their registration or find their proper polling place on the website.

The state's low percentage of ballots counted might suggest problems in the system. Pulaski County (Little Rock) is the state's most populous. Its supply of provisional ballots did not arrive until a short time before the election.[9] The county then ran out of provisional ballots on Election Day.[10] Similar problems of timing and resources affected other counties Arkansas left notification about whether or not provisional votes counted up to the individual counties.

California

PB Cast	PB Counted	Percent Counted	Provisional Vote/Total Vote
66, 408	491,765	74%	3.96%

California's provisional ballots made up approximately 1/3 of the total cast in the country. They accounted for 3.96% of the total votes cast in the state, second highest in the country behind Alaska. Its Percent Counted was 6% higher than the national average, which put in the top quarter of states without a statewide voter registration database.

Reliance on provisional ballots was heavy for several reasons.

- The registration deadline was only 15 days before the election (in previous years it had been 29 days). The short time between the close of registration and the election would have stretched the capacity of election officials to handle the paperwork and increased the number of voters left off registration rolls.[11] Since California lacks a statewide voter registration database, poll workers unable to verify registration would have to give out provisional ballots.
- The state counted votes cast outside the correct precinct, likely increasing counting rates.
- The large Latino population was well-informed about the possibilities of provisional voting and took advantage of the opportunity.[12]
- Local poll workers received training at the county level.[13] That the training process was overhauled after the election indicates that it may have proved insufficient. State officials have now created stricter standards for poll worker training.

Counties were responsible for notifying voters if their provisional votes were counted. The California elections website informed voters about the possibilities of provisional voting, a system that was not new in California, and helped voters verify their precinct location. Nevertheless, state law still required that provisional ballots cast in an incorrect precinct be counted so long as they were within the proper county.

The state had only minimal ID requirements, asking only for the HAVA-mandated identification for first-time voters who did not present it while registering, though this requirement was not spelled out on the state's elections website. Similarly, because of the lack of a registration database, voters were incapable of verifying their registration before going to the polls through a website.

Since the election, demands for election reform have been few (the state is consumed by the debate over redistricting). In San Diego there is an effort to tighten voter ID laws, a move initiated by the former mayor.[14]

Colorado

PB Cast	PB Counted	Percent Counted	Provisional Vote/Total Vote
51,477	39,163	76%	1.84%

The counting rate in Colorado ranks it fifth among states without a statewide registration database and places it solidly above the national average. Provisional ballots accounted for 1.84% of the total vote, in the top quarter nationwide.

Provisional ballots were open to voters who were not on the registration rolls. The lack of a registration database made it impossible to verify registration at the polling place. The provisional ballot was also open to first-time voters who lacked proper ID. Notification about ballot status was left up to individual counties.

Colorado used a new provisional balloting system in 2004, replacing an older system in which provisional ballots could be obtained under limited circumstances, essentially for voters who had recently moved. Colorado required provisional ballots be cast in the correct precinct. The state elections website provided information about provisional ballots and the state's ID requirements (non-photo), but did not help voters confirm their correct polling place. The website made a critical mistake about the state's ID requirements, presenting the registration ID requirements for first-time voters as stricter than they in fact were.[15] Despite the accessibility of information, the election was fraught with uncertainty and suspicion.

A poll taken a week before the November election found that 46% of those surveyed considered voter fraud likely.[16] One voter in five thought it likely his vote would not be counted. One in three thought she would be prevented from voting by legal technicalities. Contributing to this uncertainty were well-publicized reports that the official training manual for election judges had been released only one week before the election, after approximately half of all poll workers had been trained.[17] This atmosphere of anxiety and suspicion led to discussion of election reform measures after the election. In fact, the system seems to have worked well in the November 2004 elections.[18]

Connecticut

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
1573	498	32.00	0.03

Connecticut's low percentage of provisional votes counted puts it into the lower half of states with statewide registration databases. Provisional ballots accounted for a small percentage of the final vote, in the bottom third nationwide. The 2004 general election was Connecticut's first attempt at a provisional voting system. The state's website provided voters with information about the new system and also explained the state's ID requirement (non-photo).

Voters given provisional ballots are required to sign an affidavit that they are registered and are the person they are claiming to be. In this way, the Connecticut system resembles affidavit voting systems, formerly used in Alabama, Kentucky, Michigan, Mississippi, and Texas. Provisional ballots are given to voters whose names do not appear on registration rolls. If the provisional ballots are cast outside the correct precinct, they are not counted. The validation process involves acceptance of the affidavit's veracity by election officials after it is compared to state registration records. A toll-free phone can be used to determine if a ballot was counted.

Elections in Connecticut are centralized. Counties have no role and cities and towns are merely distributors of ballots. This system makes HAVA primarily relevant to the state government, while local administrators are not concerned with the federal legislation except as it is interpreted for them by state officials. Inconsistent application of procedures across jurisdictions is not an issue in Connecticut.

Delaware

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
384	24	6.00	0.01

Delaware was last in the country in percentage of provisional ballots counted and third lowest in the country in the number cast. Delaware's statewide registration database minimized the number of people who needed provisional ballots and it was accurate enough to increase the likelihood that those who did receive them were not actually registered. Delaware counted provisional ballots cast outside the correct precinct. The state's elections website provided information about provisional voting and helped voters find their precinct. It did not explain the state's ID requirements (non-photo) nor did it allow voters to verify registration, odd in a state with a statewide database.

The statewide voter registration database reduced the number of people who received provisional ballots because they were not of local rolls. Thus most of those who voted were, in fact, not actually registered. Their votes were not counted.

District of Columbia

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
11212	7977	71.00	3.51

The District counted a high percentage of provisional ballots cast, placing it third in the country among areas with voter registration databases. These ballots accounted for 3.51% of the total vote, fourth in the nation. D.C. counted provisional ballots cast outside the correct precinct.

Provisional ballots were distributed to voters not on the rolls, voters in the hospital, voters who could not get absentee ballots, and others who were similarly disadvantaged. The District o had one of the most comprehensive elections websites in the country, with a wealth of information to help voters. The site spelled out provisional balloting, even though the system was not new in DC. It allowed voters to verify their registration, possible because of the registration database, and helped voters find their precincts. By combining all of this information in one place, it is no surprise that DC could have so many voters who were knowledgeable enough to obtain provisional ballots and fill them out in such a way as to avoid disqualification.

Ballots were evaluated verifying the registration information listed on the provisional ballot envelope. Voters could check the DC elections website to discover if their vote was counted.

Florida

PB Cast	PB Counted	Percent Counted	Provisional Vote/Total Vote
27742	10017	36.00	0.13

Florida counted provisional ballots at the seventh lowest rate of states without a voter registration database. Among states that disqualified ballots cast in the wrong precinct, it was much closer to the median. The state's disqualification of votes cast in improper precincts came after a lengthy court battle over the definition of "jurisdiction."[19] Its elections website informed voters of the state's photo ID requirement, but it did not provide information about provisional voting or give voters the ability to verify registration or locate the precinct in which they were required to vote.

Provisional ballots were given to first-time voters without ID, voters not on registration rolls, and challenged voters, a sizable demographic in this battleground state. The County Canvass Board of each county used signature matching to verify provisional ballots against registration records. Voters were then informed by these same boards as to the status of their provisional ballot, though how this was done varied from county to county.

Election reform efforts in Florida are inextricably tied up with views about the 2000 election. As questions about purge lists and voting machines dominated the headlines, those issues became critical in the passage of HAVA. At the same time, the provisional ballot system that did exist in Florida prior to HAVA attracted little attention as to why it did not serve as a fail-safe for registered voters whose name did not appear on the rolls. Florida experienced much litigation leading up to the 2004 election. This litigation, much more than legislation, shaped Florida's voting rules by delineating the counting principles that would apply across the state.[20] Among other rules, this litigation caused courts to rule that voters in an incorrect precinct were entitled to a provisional ballot, but they were not entitled to have it counted.[21]

Georgia

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
12893	3839	30.00	0.12

Even though Georgia counted ballots cast outside the correct precinct, its number of provisional ballots counted is low. It has a voter registration database. Among similar states, Georgia's 30% counting rate is only slightly below the median, but it is next to last among states that count provisional ballots cast outside the correct precinct. Provisional ballots made up .12% of the total vote in Georgia, below the national median.

Georgia, a state using provisional ballots for the first time, counted provisional ballots by verifying the information given by voters on sworn affidavits signed at the polling precinct. Voters were then informed by county officials if their vote counted. The reliance on the counties increased the variety of notification procedures across the state. The state had an informative elections website, helping voters verify registration, locate precincts, and discover the states ID requirements (non-photo).

Despite little evidence of complaints about vote fraud in 2004, the state enacted tighter ID requirements. These new standards gave Georgia one of the highest ID barriers in the nation by requiring all voters to show government-issued photo ID in order to vote. This new law is now awaiting pre-clearance by the Department of Justice's Civil Rights Division.[22] This clearance process is opposed by a variety of groups that represent minorities, including NAACP and MALDEF, individual rights groups like the ACLU, and labor unions, including the AFL-CIO.[23]

Hawaii

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
346	25	7.00	0.01

Hawaii's percent counted was second lowest in the nation. Provisional ballots accounted for .01% of the total vote in the state, also second lowest nationwide. Hawaii has a voter registration database. It did not count provisional ballots cast outside the correct precinct. Provisional balloting is new to Hawaii. Hawaii's elections website did not provide easily accessible information about provisional balloting, though it did explain the state's photo ID requirements and helped voters find their precinct.

Those who cast a provisional ballot in Hawaii were not on the rolls or were first-time voters that did not meet the HAVA ID requirements. These voters filled out an affidavit to attest to their identity and registration status. Officials then verified these affidavits with the state's registration database in order to see which votes should count. Voters could call a phone number to see if their vote counted. Only 25 were counted out of the 346 cast. Hawaii's database was effective in limiting the number of provisional ballots cast. One factor that surprisingly did not raise the percent counted in the state was the confluence of the ID requirement with provisional ballots. Though the state required photo ID from voters, those who lacked ID could vote provisionally, without the requirement to return later and show ID. In this situation, it appears that the success of the database in solving provisional ballot-inducing problems ahead of time trumps the state's leniency about voters returning later with the proper identification required to cast a regular ballot.

Illinois

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
43464	22167	51.00	0.42

Illinois' number of provisional ballots cast was just out of the top 10 nationwide. Illinois was a first-time provisional ballot state, it lacked a statewide voter registration database, and it counted provisional ballots cast outside the correct precinct. Verification standards that were easier to meet than those employed by many other states probably encouraged poll workers to be more helpful in passing out provisional ballots. The state's elections website also offered information about provisional ballots, and voters could visit the site to determine if their ballots had been counted.

Illinois used affidavits in the verification process, allowing vote counters to check the information about which the voter had sworn in order to count the vote. Voters could check a website to determine if their votes counted.

Illinois offers an instructive lesson in the relationship between ID requirements and allegations of fraud. East St. Louis has generated voting-related criminal conspiracy convictions, while Chicago remains plagued with accusations that the dead continue to be politically active.[24] Nevertheless, state ID requirements remain lax, only asking for HAVA requirements for first-time voters, requiring other voters to sign in. For a state lacking a registration database, the possibilities of multiple voting seem high. Provisional ballots have not been linked to fraud in Illinois; the relatively low percent counted makes them appear, at least on the surface, to be relatively secure.

---

[24] Voting problems alive, well in heart of Illinois, The Pantagraph (Bloomington, Illinois), January 11, 2005 Tuesday, EDITORIAL; Pg. A8, 346 words

Indiana

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
4029	598	15.00	0.02

Indiana lacked a statewide database and did not count ballots cast outside the correct precinct, which held down the verification rate. Provisional ballots are new to Indiana. The state's website provided little information for voters, especially about the state's new provisional voting system or the state's ID requirements.

Provisional ballots were given to those not on registration rolls or lacking ID. Also, those who lacked identification were required to return to the precinct later. The ballots of all those who did not return were disqualified automatically. After returning with ID, voters then had to have their registration verified, through comparison with local records. At this point, Indiana provisional voters were able to call a toll-free phone number in order to discover if their ballot had been counted. Since the election, the state has overhauled parts of its system related to voter identification, though the basic provisional ballot structure remains intact.

The state has adopted a requirement of photo ID.[25]

[25] Daniels signs voter ID bill; ICLU plans lawsuit, The Associated Press State & Local Wire, April 28, 2005, Thursday, BC cycle, State and Regional, 350 words, INDIANAPOLIS

Iowa

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
15406	8038	52.00	0.53

Iowa's percent counted was near the median for states without a voter registration database and slightly above the median for states that disqualified ballots cast outside the correct precinct. Iowa enacted provisional voting before the passage of HAVA. The state's elections website provided information about provisional voting and ID requirements, but the lack of registration database made it impossible for voters to verify their registration or find their polling place online.

Provisional ballots were chiefly available to voters not on the registration rolls, though challenged voters, relatively common in this battleground state, also could vote provisionally. Provisional voters brought ID later in order for their ballots to count, if they were first-time voters who still needed to provide ID. They were then notified by mail if the ballot had been counted.

Iowa can be considered a fairly typical state, representative of most procedures and most outcomes nationally.

Kansas

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
45563	31805	70.00	2.68

Kansas' percent counted placed it fifth among states that did not count votes cast outside the correct precinct. It was also in the top ten among states that did not have a statewide voter registration database. Provisional ballots accounted for 2.68% of the final vote, sixth in the nation. All of the states with higher percentages were also states that previously had provisional systems.

Provisional ballots in Kansas were widely distributed, going to first-time voters without ID, those not on registration rolls, voters who recently moved or changed names, challenged voters, and others. Provisional voters in Kansas who lacked ID were required to return to the polling place later with proper identification. After the ballots had been tallied, counties contacted provisional voters in their own way; there was no unified notification system across the state. Given the wide distribution of provisional ballots to a range of voters who give all appearances of proper registration, it is not surprising that Kansas had so many provisional ballots, nor is it unusual that such a high percentage were part of the final tally.

On the whole, questions of ID and provisional voting attracted little attention in Kansas, and for that matter, most of the Midwest is unconcerned with the issue. The lack of close presidential races in states like Kansas, Nebraska, and Oklahoma is a possible explanation of this unconcern.

Kentucky

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
1494	221	15.00	0.01

Kentucky's percent counted and the percentage of the final vote accounted for by provisional ballots both ranked near the bottom in the nation, fifth and sixth lowest respectively. For Kentucky, provisional balloting is a slight switch, as the state shifted away from an affidavit voting system after HAVA. Also after HAVA, the state created a statewide voter registration database. It chose not to count provisional ballots cast outside the correct precinct. The state's election website allowed voters to determine where the correct precinct was, also allowing voters to verify registration and gain information about provisional voting procedures.

Provisional ballots only went to the HAVA-mandated primary target, voters not on registration rolls. The statewide registration database meant that these voters were likely never registered, and the process' results back that conclusion. The state still used affidavits in the verification process, making its provisional balloting system similar to what was previously in place. The state informed voters about the status of their provisional ballots through a website.

Louisiana

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
5971	2411	40.00	0.12

The low number of provisional ballots and the relatively low percentage counted places Louisiana toward the middle of states with a statewide voter registration database. Provisional ballots made up .12% of the final vote in the state, slightly below the national median. The state's elections website located precincts and gave information about provisional voting, but it did not describe the state's photo ID requirement.

Provisional ballots went to those not on the rolls and to first-time voters without ID. Officials later verified these voters' date-of-birth and address to determine identity and vote status. After the counting ended, voters could call a phone number to find out if their vote counted.

The Secretary of State predicted before the election that most provisional votes would not be counted.[26] The election in New Orleans was characterized as a "catastrophe."[27] Problems mostly centered around inoperable voting machines, but there were also charges that poll workers told all first-time voters had to vote provisionally. These charges were raised by Louisiana Association of Community Organizations for Reform Now, ACORN, and the Election Protection Coalition.

[26] McKeithen: most provisional ballots won't count, The Associated Press State & Local Wire, November 1, 2004, Monday, BC cycle, State and Regional, 644 words, By BRETT MARTEL, Associated Press Writer, NEW ORLEANS

[27] Nov. 2 N.O. election called 'catastrophe', New Orleans CityBusiness (New Orleans, LA), November 15, 2004 Monday, NEWS, 1091 words, Richard A. Webster

Maryland

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
48936	31860	65.00	1.33

The percent counted put the state almost exactly at the national average, though slightly below the average for states that had did not have registration databases and counted votes cast outside the correct precinct. Provisional balloting was not new to Maryland, further distinguishing it from the one-third of states that began the procedure in 2004. The state's elections website disseminated information about provisional voting and identification.

First-time voters without ID and those not on the rolls could vote provisionally. These voters were required to return later with ID for their vote to count. They could check the website or call a phone number to learn if their provisional ballot counted or not.

Massachusetts

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
10060	2319	23.00	0.08

The state had a voter registration database and did not count votes cast outside the correct precinct. 2004 was the state's first attempt at provisional balloting. The state's elections website provided information about provisional voting and gave voters the means to verify the location of precincts.

Massachusetts administers elections from the top-down. HAVA implementation is decided exclusively at the state level, removing counties completely from the process. This system is common throughout New England. Uniformly election administration increases consistency across the state. Provisional ballots went to voters whose names were not on registration rolls, though the database helped to limit the number somewhat. Provisional voters filled out an affidavit, whose information was later compared with the database. Voters could call a phone number to determine if their vote counted or not.

Massachusetts was one of the many states that did not have much public discussion about provisional voting.

Michigan

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
5610	3277	58.00	0.07

Michigan had the voter registration database that inspired the HAVA requirement, and it recently switched from affidavit balloting to provisional balloting in fail-safe situations. It did not count provisional ballots cast outside the correct precinct, surviving court challenges that sought to change the counting standards for the state.

Provisional voters were required to return to polling places later with ID and were notified by mail if their ballots counted or not. Michigan's system had two striking features, one of the nation's best databases and an outstanding website.

Michigan's voter registration database, known as the Qualified Voter File, was conceived in 1994, under Public Act 441, as an answer to the highly decentralized registration process in the state. Implemented in time for the 1998 midterm elections, the system was intended to serve five goals (as stated by Secretary of State Candice S. Miller):

- "The elimination of all duplicate voter registration records in the system.
- The streamlining of the state's voter registration cancellation process.
- The elimination of time-consuming record maintenance activities.
- The elimination of registration forwarding errors and duplicative tasks.
- Sizable cost gains on the local level."[28]

For comparison, Louisiana, despite a much smaller population and a similar database, had 5,971 ballots cast. Because local officials can more easily and accurately determine voter registration, the number of provisional ballots cast is lowered instantly. This database served as the model for the HAVA requirement of databases in each state and was awarded by the CalTech/MIT Voting Technology Project as the Best Practice in Managing Voter Registration.[29]

On September 5, 2002, Michigan unveiled its path-breaking Voter Information Center. This built upon previous efforts to create a statewide voter registration database, allowing the public to access voter registration information, precinct and polling locations, and other crucial election resources through a single source. By combining all of these features, the Michigan website allows voters to know that mail-in registration was received, to overcome the difficulties of locating the correct polling place, and to access information about races that are being decided in the election. Because of this central location for information, Michigan considers it acceptable to disqualify provisional ballots cast outside the correct precinct, assuming that voters should not have nearly as much difficulty determining their correct precinct as do those in other states.

Mississippi

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
25,975	Not Reported	Cannot be known	Cannot be known

Mississippi did not report its provisional vote totals. Though the state has had public and contentious debates about voter ID requirements,[30] its provisional voting has flown beneath the radar. There has been no vocal Republican-Democratic split on the issue, as has been true with ID, nor has there been a similar Governor-Legislature clash. Instead, provisional voting in Mississippi has gone unnoticed, and its non-reporting of vital statistics has drawn no press. Rather, the state stands as a large blank spot in national coverage of the issue, and until numbers allow some insight into the process' successes and failures, we are unable even to speculate about what really happened on Election Day in Mississippi.

---

[30] Special sessions appear to fuel dissension at Capitol; srb/stf/ew, The Associated Press State & Local Wire, November 22, 2004, Monday, BC cycle, State and Regional, 563 words, By SHELIA HARDWELL BYRD, Associated Press Writer

Missouri

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
8183	3292	40.00	0.12

Missouri did not have a statewide voter registration database, and it did not count provisional ballots cast in an incorrect precinct. It was using provisional ballots for the first time, complying with the newly established HAVA requirements. The state's election website provided information about provisional voting and voter ID requirements, though voters could not verify their registration status or easily locate their polling place.

Provisional ballots were given out to first-time voters who lacked ID (the state had a non-photo ID requirement) and to voters who were not on the registration rolls. After the provisional ballots had been cast, officials checked a voter's registration records to determine if the ballot should count. Voters could call a toll-free phone number to find out if his or her vote counted. Considering the state's percent counted, surprisingly low in a state without a database but in line with the correct precinct standard, most of the phone calls revealed that the ballot did not count in the final tally.

Accusations of vote fraud have lingered in Missouri – particularly concerning St. Louis - since the 2000 election, when several figures involved in the city's electoral administration were convicted of conspiracy to commit vote fraud.[31] These problems have created calls for electoral reform, particularly from Republican officials in the state.

---

[31] VOTER RIGHTS AND VOTER FRAUD, St. Louis Post-Dispatch (Missouri), May 24, 2002 Friday Five Star Lift Edition, EDITORIAL; Pg. C18.

Montana

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
653	357	55.00	0.08

Montana used provisional voting only lightly. The state did not have a voter registration database, nor did it count votes cast outside the correct precinct. The state was using provisional ballots for the first time. Its elections website gave voters information about the state's ID requirements, though it did not provide precinct locations, give a mechanism for verifying registration status, nor provide information about the new provisional voting system.

Provisional ballots are given to voters who are not on the registration rolls, are challenged, or chose not to vote absentee despite applying for the ballots. County officials then verify the voter's registration, and the voter must bring ID later. After the verification process, the state informed voters by mail if their provisional ballots counted or not.

Montana has recently shifted to an Election Day registration system. This change aligns Montana with Wisconsin, Wyoming, Idaho, Maine, New Hampshire, and Minnesota. These EDR states have different approaches to provisional balloting. Idaho, New Hampshire, and Minnesota are exempt completely under Section 302(a)(5) of HAVA, while the other three allow provisional voting under some narrow circumstances but are still basically exempt. The federal government has not yet indicated into which category Montana will fall.

Nebraska

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
17003	13298	78.00	1.71

Nebraska's provisional ballots made up an unusually high percentage of the final vote for a state that disqualified provisional ballots cast in an incorrect precinct. The state also lacked a voter registration database, which tends to increase the number of ballots cast provisionally. The current system replaced an earlier limited provisional ballot system. Its elections website provided little information for voters, especially about provisional voting and ID requirements and did not offer information to verify registration or determine precinct locations.

Provisional ballots went to those who were not on the registration rolls. The high percentage counted implies that a great number of registration errors had been made by elections officials in the state, especially since votes in the wrong precinct were automatically disqualified. The state requires provisional voters to complete an affidavit which is verified in order to determine if a vote should count. Voters can check the status of their votes through either a website or a phone number.

Nevada

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
6154	2447	40.00	0.29

Nevada was new to provisional balloting, having no similar system before HAVA. The state lacked a registration database and did not count votes cast outside the correct precinct. Its elections website did not give easy access to information about the new provisional voting system or about the state's ID requirements. Similarly, voters could not verify their registration nor locate their precinct.

Provisional votes went to first-time voters without ID and to those not on registration rolls. These voters filled out an affidavit in order to cast a provisional ballot. The affidavit was later verified to determine if the ballot should be counted. Voters could either call a phone number or check the state's website to find out if their vote counted.

Nevada has passed election reform measures since November 2004, trying to correct public perceptions of a flawed process.[32] The state is trying to learn from its mistakes in its first attempt with provisional ballots. The new reforms hope to finish the creation of the HAVA-mandated database, decrease the number of provisional ballots via pre-emptive use of the database, and inject confidence into the counting process by clarifying verification procedures. The state has not emphasized questions of ballot security, arguing that the current system already did a good job sifting out those who were not actually registered. (In the case of Las Vegas, the problem was sorting out large numbers of out-of-state tourists who attempted to vote locally.)

---

[32] Nevada committees take up election reform, The Associated Press State & Local Wire, May 5, 2005, Thursday, BC cycle, State and Regional, 636 words, By ELIZABETH WHITE, Associated Press Writer, CARSON CITY, Nev

New Jersey

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
64217	35485	55.26	1.96

The state was extending and revamping an earlier provisional system. It lacked a registration database and did not count ballots cast in an incorrect precinct. The state's elections website contained information on ID requirements and provisional voting, though it did not allow voters to verify registration or locate precincts.

Provisional ballots were given to first-time voters without ID and voters whose names were not on local registration rolls. Provisional voters brought ID later in order for their votes to count. After the counting process ended, voters could check a website or call a phone number in order to discover if their vote counted or not.

Complaints were reported in both Essex and Middlesex Counties, home to two of Rutgers University's campuses. Students argued that their registrations, completed in recent campus drives, had not been processed by elections officials in a timely manner, shunting many students to provisional ballots.[33] In response to these problems, some have called for Election Day Registration in New Jersey.[34] As of yet, EDR has not generated reform bills in the state legislature.

New Mexico

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
15360	8767	57.00	1.16

New Mexico's percentage of ballots cast provisionally places it in the top third in the nation. The state counted votes cast outside the correct precinct, after changing its previous policy following a suit brought by Latino civil rights groups, most prominently the Mexican American Legal Defense and Education Fund.[35] The state had a voter registration database and was following in a previous tradition of provisional balloting. New Mexico's elections website explained the state's ID requirements and how provisional balloting worked, emphasizing how open the possibility was to voters who lacked other options.

Provisional ballots were offered to voters left off registration rolls and to first-time voters who could not meet the HAVA ID requirement. Provisional voters were required to bring ID later in order to verify their ballots. Voters could then call a phone number to discover if their ballot counted or not.

Since the election, the state has passed an important election reform bill.[36] This new act tightens up the state's ID requirements, requiring voters to either present a driver's license, a bank statement, or recite their name, date of birth, and last four digits of their social security number. Opponents of the legislation argued that it did not go far enough to insure ballot security. Supporters responded that the measure was sufficient to guarantee the integrity of the ballot without denying access to those less likely to be able to produce photo identification. This bill was passed in response to complaints about the counting of provisional ballots after the election. By front-loading the ID process, state elections officials hope to avoid future complaints by preempting possibilities of later partisan manipulation.

[36] Gov. Signs Voting Standards Bill, Albuquerque Journal (New Mexico), April 7, 2005 Thursday, FINAL; Pg. C3, 424 words, Andy Lenderman Journal Politics Writer

New York

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
243450	98003	40.30	3.27

New Yorkers cast the second highest number of provisional ballots in the nation, though the percentage of the final vote only ranked fifth. The state did not have a voter registration database and did not count votes cast outside the correct precinct. New York was not new to provisional balloting, having had a fail-safe system before HAVA. The elections website provided little information to voters, especially about provisional voting possibilities and voter identification.

Provisional ballots went to first-time voters without ID, voters not on rolls, and those who had recently moved. These voters filled out affidavits that were later verified by elections officials. The verification rate was probably low because of the exclusion of votes cast in an incorrect precinct, a particular problem in New York City. With multiple polling places in a single large room, voting in an incorrect precinct was a common occurrence. The state website did not make it easy to verify precinct location. After the provisional votes were counted, voters received mail reporting if their provisional ballot counted.

New York's provisional ballots received extra attention in a state Senate race in Westchester County.[37] After months of litigation, the election was settled, but the attention to provisional ballots did not die away. Likely election reform to clarify verification rules and solve public outcry about the precinct requirement is imminent. Though proposals have not yet passed, New York is likely to change its election laws in response to the experience in 2004.

North Carolina

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
77469	42348	55.00	1.21

The state lacked a voter registration database, but it did count votes cast outside the correct precinct. Of course, legal developments since the November election make the above facts and figures somewhat debatable because of arguments about rules for counting provisional ballots. As the state struggled with the issue of counting out-of-precinct provisional ballots, the number counted listed above is open to revision. The state's elections website allowed voters to verify registration and locate precincts, although it did not disseminate information about provisional ballots or identification requirements.

North Carolina's electoral system was the subject of a major suit about how provisional ballots should be counted. The state's Supreme Court argued that pre-Election Day law required ballots cast in incorrect precincts be disqualified, while the state legislature demurred. The suit arose because a race fell within the margin of provisional ballots cast, allowing questions to be raised that would otherwise have been ignored given a larger margin of victory. The race in question was for the position of State Superintendent of Schools, a race was finally decided in favor of Democratic candidate June Atkinson.[38] The state legislature took the position that eventually secured Atkinson's victory by counting provisional ballots cast in an incorrect precinct[39], while the state Supreme Court backed the disqualification of those ballots.[40] This debate over separation of powers, the integrity of the electoral process, and the independence of the courts, raises questions about how robust the North Carolina system is. Simply put, the November election has two sides in North Carolina, and neither can even agree on what happened, let alone how it should be interpreted. In a state where the counting of provisional ballots is widely reported to have varied from jurisdiction to jurisdiction, the resulting unequal and fraud-ridden election should not be any surprise.

Ohio

PB Cast	PB Counted	Percent Counted	Provisional Vote/Total Vote
158,642	123,548	78%	2.2%

Ohio did not have a statewide voter registration database, and --after several court tests-- did not count ballots cast outside the voter's assigned precinct. The state adopted a new provisional voting system after the passage of HAVA to replace its previously limited provisional system. Its elections website provided information about provisional balloting and ID requirements, information circulated heavily by third-parties in get-out-the-vote efforts in this most contentious of battleground states.

Provisional ballots in Ohio went to voters whose names did not appear on registration rolls. These ballots were verified by county elections officials checking registration records to see if the voter was ever actually registered. Voters were able to call a phone number in order to determine if their ballots were counted.

The vote in Ohio was the subject of much litigation. Before the election, litigation challenged procedures for counting provisional ballots cast outside the correct precinct and the status of poll observers. Hanging over all of this was the lingering shadow of *Bush v. Gore* and its holding that states must have uniform counting procedures. In the critical case of *Sandusky County Democratic Party v. Blackwell*, a federal circuit court ruled that voters could cast a provisional ballot in an incorrect precinct, but the ballot did not have to be counted.[41] The court heavily deferred to state prerogatives to determined what constituted an eligible ballot in that state. This provided the basis for the position already advocated by Secretary of State Kenneth Blackwell, the plaintiff, who opposed counting provisional ballots cast in an improper precinct. HE was also the subject of other controversy because of his close ties to the Bush campaign. Since the election, the League of Women Voters has filed a suit that seeks changes in the state's electoral machinery. As a result of the controversies and scrutiny in 2004, Ohio is likely to experience changes in its elections procedures, but the nature of those changes is still unclear.

Ohio was the target of accusations of vote fraud from the right and voter suppression from the left. The American Center for Voting Rights released a report alleging voter fraud in Cleveland and Columbus, the two most Democratic urban centers in the state.[42] At the same time the Democratic Party released a report arguing that inequities in the distribution of voting machines and other problems put "democracy at risk."[43] Despite the allegations, the controversy has so far been limited to an exchange of charges and suspicions that has lacked conclusive evidence.

Oklahoma

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
2615	201	8.00	0.01

Oklahoma counted provisional ballots at the third lowest rate in the nation. These ballots constituted a low enough percentage of the final vote to place the state in the bottom ten nationally. Oklahoma has a voter registration database, and it did not count votes cast outside the correct precinct. The state was new to provisional balloting in 2004. The elections website provided information only about the state's ID requirements, not helping voters verify registration status, locate precincts, nor did it explain the details of the new system of provisional voting.

Provisional ballots were given to first-time voters without proper ID and people not on local registration rolls. The state's database helped keep the latter group to a minimum. After the ballots were cast, elections officials verified registration status using the database, and voters can call a phone number to learn if their ballot counted. The preemptive usage of the database probably means that most callers, because they were never really registered, would have discovered that their provisional ballots did not contribute to the final tally.

Oregon

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
8298	7077	85.00	0.39

Provisional votes were tallied at the second highest percentage in the nation. Oregon lacked a registration database, but it did count votes cast outside the correct precinct. The Oregon system continued its earlier versions of provisional voting.

Provisional ballots in Oregon are unusual because the state uses an all-mail voting system. Provisional ballots, then, are even more of an exception in the state than they are elsewhere. Laws in Oregon open provisional voting up widely, allowing first-time voters without ID, challenged voters, voters not on the rolls, voters who applied for absentee ballots, and others to vote provisionally. Voters must go to the county elections office in order to cast a provisional ballot. Verification involved a simple signature comparison between ballot envelopes and records. Voters learned by calling a phone number if their vote counted.

Oregon is an interesting example of provisional ballots in an uncommon electoral environment. With an all-mail voting system, the need for fail-safe forms of voting seems less likely; after all, voters are already able to avoid problems with finding the correct polling place and the ability to cast a ballot without being on a particular polling place's registration roll. But in the end, a state dependent on the mail, and the attendant problems of voters losing ballots, needs more than most a "fail-safe" outlet. Provisional voting in Oregon suffices to cover a great host of voting sins by allowing voters to correct their mistakes on Election Day.

Pennsylvania

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
53698	26092	49.00	0.45

The state had some failed attempts with a voter registration database that are discussed below, attempts that both increased the numbers of ballots cast provisionally while decreasing the number counted. The state did count votes cast outside the correct precinct. Pennsylvania, as its struggles with the implementation of HAVA made clear, was new to fail-safe voting after the passage of HAVA. The state's election website did provide information about the new system, and it provided information about the state's ID requirements, which were only the HAVA minimums.

Pennsylvania voters were given provisional votes if their names were not on registration rolls, though the state's database was supposed to fix this problem. Its failure in the election has led to broad calls for reform since the election, and it increased provisional vote totals in the state. It also probably decreased turnout in Philadelphia where the system had its biggest problems, making the entire voting process in the city slower than in other regions of the state. But nonetheless, if provisional voters were able to vote, officials would verify their registration by comparing the envelope's information with the state's database. Voters could call a phone number to find out if their vote counted.

Pennsylvania began its push toward a statewide voter registration database in 2001. In June 2001, the Statewide Uniform Registry of Electors (SURE) was passed in reaction to the Florida controversy of 2000. Pennsylvania had its own election problems in 2000, as its implementation of motor voter statutes confused voters while depressing registration and turnout. In January 2002, the new governor, Mark Schweiker, signed a law that specifically implemented the database portion of the earlier election reform package signed into law by Tom Ridge. On July 24, 2002, the Department of State awarded the contract to create the database to Accenture, Ltd., hoping to link registration in all 67 counties by the following fall. All of this activity led many in the state to believe they were "ahead of the curve," as Secretary of State C. Michael Weaver said before a legislative panel in October 2002. But the system proceeded to fall apart.

The system was slow and ineffective, with glitches that undermined its performance.[44] The key problem with the system has been the integration of large urban areas into the statewide database. Philadelphia generates enough registration traffic that it freezes up the system, making it inefficient both there and for all other counties at the same time. On January 26, 2005, following the system's abysmal performance in the 2004 election, 33 eastern Pennsylvania county election offices petitioned the state to end the contract with Accenture, hoping that a different company could correct the problems generated by SURE.[45] The program was faulty enough that 11 counties had already been granted a reprieve from using it until the errors in the system were corrected. These concerns were raised again on February 1, 2005, when county officials publicly objected

[45] Pamela Lehman. "Counties want state to scrap voter registry; Lehigh, Northampton among those protesting SURE as slow and difficult." The Morning Call, Inc. Morning Call (Allentown, Pennsylvania) January 26, 2005.

to the system at Gov. Ed Rendell's Election Reform Task Force meeting, calling for a new company to complete the system before January 1, 2006.

Rhode Island

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
2147	984	46.00	0.23

The Provisional Vote/Total Vote in Rhode Island is slightly below the median nationwide as is the overall percent counted. The state counted votes cast outside the correct precinct but lacked a registration database. Counting outside the precinct makes the state's percent counted look lower comparatively, though it remains near the median for states without a database. The state was new to provisional balloting. Its elections website gave information about ID requirements and provisional voting, though it did not help with registration verification or precinct location.

Voters whose names were not on the rolls received provisional ballots. After the election, state officials checked the information on the provisional ballot with registration records in order to verify the voter's status. After this process ran its course, voters could check the state's website to discover if their provisional ballot was counted in the final tally. Slightly less than half of the time, the answer was yes.

While this may sound redundant, Rhode Island exhibits all of the hallmarks of New England, excepting the Election Day Registration states of Maine and New Hampshire. Election administration is centralized at the state level. Counties are cut out of the process, while towns and cities administer the nuts and bolts of Election Day itself.

South Carolina

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
4930	3207	65.00	0.20

The state had a voter registration database, and it disqualified provisional ballots cast in an incorrect precinct. The state was not new to provisional balloting, instead building on a previous system. The state's election website allowed voters to verify their registration status, get information about provisional ballots, and know the state's ID requirements (strict photo ID, often described as the strictest in the nation.)[46] The website did not help voters locate their precinct, a problem in a state that disqualified provisional ballots for being cast in an improper location.

Provisional voters in the state were chiefly peoples whose names were not on registration rolls. After casting a ballot, officials verified the voter's registration status using the state's database. Then a voter was able to check the state's website to see if his or her vote counted in the election. In South Carolina, these voters would have seen their votes collectively counted at almost exactly the rate of the national average.

---

[46] For example, see http://www.jsonline.com/news/state/apr05/322607.asp. Recent legal changes in Indiana and Georgia have increased the number of states with similar photo ID laws.

South Dakota

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
533	66	12.00	0.02

South Dakota was new to provisional balloting, but it did have a voter registration database. It did not count ballots cast outside the correct precinct, and among such states it had the third lowest percent counted. The state's elections website helped voters find their precinct and gave information about provisional voting, though it did not discuss the state's photo ID requirement.

Most provisional ballots went to voters whose names were not on local registration rolls. The existence of a database probably contributed to why these voters ended up having votes that did not count, as they were most likely not registered in the first place. Provisional voters filled out an affidavit, which was verified against the state's database. Voters were sent letters explaining whether their provisional ballot had counted or not. Most of these letters indicated that the vote did not count.

South Dakota's voter ID laws generated some controversy, with lawmakers arguing that they kept Native Americans from voting.[47] These complaints were turned into bills, some to repeal the requirement entirely and others to exempt those living on the state's large reservations. These bills did not pass before the 2004 election.

---

[47] Lawmakers asked to repeal voter identification law, The Associated Press State & Local Wire, July 15, 2004, Thursday, BC cycle, State and Regional, 862 words, By CHET BROKAW, Associated Press Writer, PIERRE, S.D.

Tennessee

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
8778	3298	38.00	0.14

The state lacked a registration database and did not count ballots cast outside the correct precinct. It was new to provisional balloting, having no such system prior to the implementation of HAVA. The state's elections website provided little information to voters, not informing them of the possibilities of provisional voting, the state's ID requirements, the location of precincts, nor the voter's registration status.

Provisional ballots were widely distributed, going to those in the hospital, first-time voters without ID, those not on registration rolls, and others. These voters filled out an affidavit as to their identity and registration status, and these affidavits were verified with registration records to determine their veracity. After the verification process concluded, Tennessee voters received a letter informing them of whether or not their vote had been counted.

Texas

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
36193	7770	21.00	0.10

Texas modified a previous affidavit balloting system to comply with HAVA's requirements of a more complete provisional voting system. The new system, however, still used affidavits. The state did not have a registration database, nor did it count provisional ballots cast outside the correct precinct. The disqualification of ballots cast in the wrong precinct was a critical factor in lowering the percent counted in the state. Its elections website disseminated information about ID requirements and provisional voting, but the lack of database made it impossible to verify registration or precinct location.

Provisional ballots went to voters who were not on registration rolls or voted for the first time but lacked ID. These voters filled out an affidavit as to their identity and registration status, which was later cross-checked by officials with registration records. After this process played out, voters were notified by mail if their vote had counted or not.

Texas has several large urban areas: seven among the fifty largest cities in the country are in the state. But only thirteen of the top fifty cities have registration databases, meaning we are uncertain of the impact of databases on large urban areas. We know that the Pennsylvania database failed in Philadelphia, the nation's fifth largest city, because of the large number of changes being made right up to Election Day. But adding a database to Texas will have an unknown effect on the electoral process. The state already has remarkably low numbers of provisional votes.

Utah

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
26389	18575	70.00	2.00

Both percentages reported above are greater than the national average. The state lacked a voter registration database, and it counted provisional votes cast outside the correct precinct. The combination of these two factors make it understandable why Utah's amount of provisional ballots and rate of counting was higher than would otherwise be expected, using averages to inform our expectations. Utah was new to provisional balloting, beginning the system only after the passage of HAVA. The state's elections website was well-prepared to disseminate information about the changes to the system, providing information on provisional voting, ID requirements, and the location of precincts.

People not on local registration rolls were eligible to receive provisional ballots. After casting provisional ballots, voters had to return later with necessary ID. This ID was used in the verification process, after which voters could call a phone number in order to find out if their vote had counted. The notification system will change before the next election, by which time Utah plans to convert to a website.

The presidential election in Utah was not close, and it generated little electoral controversy.

Vermont

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
101	37	37.00	0.01

The state lacked a statewide voter registration database, and it counted provisional ballots cast in an incorrect precinct. Vermont was new to provisional balloting in the 2004 election. Its elections website provided voters with information about the state's ID requirements and provisional voting, along with having a mechanism that enables voters to find their precinct on Election Day.

Voters whose names were not on local registration rolls could vote provisionally. Provisional voters in Vermont signed an affidavit attesting to their identity and registration status. These affidavits were compared with registration records to determine which votes to count and which to disqualify. Voters could then call a phone number to learn whether their provisional ballot made up part of the final vote tally.

Vermont falls into the New England system of top-down election administration, which removes variance from HAVA implementation. In Vermont, this system reduced the number of provisional voters dramatically, quite an achievement for a state without a database. But its percent counted was in the bottom quarter for such states, making Vermont an unusual example that combines few votes with few counted.

Virginia

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
4172	728	17.00	0.02

Virginia did not have a voter registration database, nor did it count provisional ballots cast in improper precincts. Its percent counted was next to last among states without a voting database and in the lowest quarter among those who disqualified provisional ballots cast in an improper precinct. Virginia in 2004 was not new to provisional balloting, already having a system prior to the passage of HAVA. The state's elections website disseminated information about provisional voting, ID requirements, and the location of precincts.

Virginia gave out provisional ballots to first-time voters without ID and those whose names were not on local registration rolls. These voters submitted an affidavit, later verified by elections officials. After the verification process, voters could call a phone number to see if their provisional ballot was counted.

Since the election, allegations of vote fraud surfaced in southwestern Virginia. Specifically, the former mayor of Gate City, population slightly over 2,000, has been indicted on 37 counts of vote fraud.[48] He is accused of using absentee ballots to perpetrate his fraud and get himself elected. In this case, ID requirements would be ineffective in preventing this form of fraud.

Washington

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
87393	69645	80.00	2.44

Washington lacked a registration database, and it counted provisional ballots cast outside the correct precinct. Though Washington was not new to provisional voting, the process generated a massive amount of controversy across the state, setting up multiple controversial recounts in the gubernatorial race.[49] The state's elections website explained ID requirements, though it did not discuss provisional voting.

Washington voters could easily obtain provisional ballots, for reasons varying from hospitalization to absence from local rolls. Official procedure called for verification by comparing the information on the provisional envelope with registration records. Notification was left up to counties. But as future lawsuits clarified, official verification procedure was not always followed.

King County, home of Seattle, had poll workers mistakenly run provisional ballots through voting machines as if they were regular ballots, skipping the verification stage.[50] The problem was so severe that the Election Commissioner for the county stated that we "may never know the number of illegal ballots." This problem, and other accusations of vote fraud, were appealed to numerous state courts by eventual loser Dino Rossi. While the judge allowed for a wide range of possible accusations,[51] in the end there was no justiciable solution to electoral problems.[52]

West Virginia

PB Cast	PB Counted	Percent counted	Provisional Vote/Total Vote
13367	8378	63.00	1.11

West Virginia had a registration database, and it did not count provisional ballots cast outside the correct precinct. The state was continuing its previous provisional system from before the passage of HAVA. The state's elections website gave information about provisional balloting but little else.

West Virginia, like Washington, widely distributed provisional ballots. These were counted by comparison to official records to verify the information given by the voter. Voters could call a phone number to discover the status of their provisional ballot.

Subject Brennan Center FOIA request

Karen,
I still do not have the RFPs we received for the voter fraud/ID project. I need that information ASAP. I this was a sole source contract and there were no other RFPs received, please indicate this in your reply. Please see language from original request below:

"In the event that the EAC denies my renewed request for the voter ID and voting fraud reports or delays another week in providing those materials, we respectfully request copies of (1) all requests for proposals and contracts relating to the voter ID and voting fraud reports; and (2) all written and electronic communications concerning the voter ID and voting fraud reports between the EAC and (a) the Eagleton Institute of Politics, (b) the Moritz College of Law, (c) Tova Wang, (d) Job Serebrov, and (e) any other individuals or entities, including but not limited to outside reviewers."

Commissioners,

Attached below are two versions of the Voter ID statement. One shows the track changes and the other shows the document having accepted all of those changes (so that it would be easier to read). Jeannie and Tom have both taken a look at this document and we think that it captures what we discussed on Wednesday.

Please take a look and let me know if this meets with your understanding of what we discussed.

EAC Statement on Future Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. The contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states with a photo identification requirement was compared to the turnout rate in 2004 in states with a requirement that voters sign their name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[1] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[2]

Deleted: The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data– aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau– the Contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.¶

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Recommendations for further study and next steps

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

Deleted: consideration of

---

[1] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population include persons who are not registered to vote.

[2] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The Contractor used a single election's statistics to conduct this analysis. The two sets of data came from the Census Bureau and included persons who were not eligible to and did not vote. The first analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. So, a second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced only some evidence of correlation between voter identification requirements and turnout. Furthermore, the initial categorization of voter identification requirements included classifications that actually require no identification at all, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by independent working and peer review groups comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers.[3] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. EAC, however, is releasing the data and analysis conducted by Contractor.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the Contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election- November 2004. For example, the turnout rate in 2004 in states that required the voter to provide an identify document [1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. The Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2], and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau[3]

Comment [MSOffice1]: Some states compare signatures. Our base case was giving name –either orally or by signing without any attempt to verify the signature. "Give" is therefore a more precise word here than "sign."

Footnotes:

1. In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked a photo ID to vote a regular ballot by swearing an affidavit.

2. The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population includes persons who are not registered to vote.

3. The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S citizens.

Subject Re: Revised Voter ID statement with Eagleton comments to paragraph 2

Several thoughts on formatting:

Does the title of the document still work?

I still think that the two paragraphs, the one that precedes the Julie paragraph and the one that follows, should be set apart and titled "conclusion" or "finding" or something that recognizes it was the subject of an action by the EAC.

and then i ask if the title of the next section still works--do we make recommendations to ourselves?

The Contractor and the EAC agree that the report raises more questions than provides answers.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. EAC, however, is releasing the data and analysis conducted by Contractor.

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

---

[4] See EAC Public Testimony, February 8, 2007, page 109.

- Convene, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Subject Re: Revised Voter ID statement with Eagleton comments to paragraph 2

I think Comm Rodriquez makes a good point about the document needing a different title. Also, it is my understanding that Jeannie has not yet edited the draft and therefore has not yet considered layout, subtitles, typos, etc.

I have raised three concerns/questions in Footnotes 2 and 4 and in the bullet that address the working group meeting.

Lastly, I have lost track of where we are with consideration of releasing the full report. The draft document does not do that, however I thought there was a suggestion that we should consider releasing the full report?

Voter ID edited 31507- changes accepted with Eagleton comments.doc

EAC Statement on Future Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document[1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[3]
The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

Comment [GH1]: In Footnote #2 Regarding the estimate of non-citizens. Perhaps this could be clarified to say whether the % of non-citizens was in the VAP or of the US population as whole. It is not clear to me

EAC Recommendations for further study and next steps

---

[1] In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

[2] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population include persons who are not registered to vote.

[3] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The Contractor used a single election's statistics to conduct this analysis. The two sets of data came from the Census Bureau and included persons who were not eligible to and did not vote. The first analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. So, a second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced only some evidence of correlation between voter identification requirements and turnout. Furthermore, the initial categorization of voter identification requirements included classifications that actually require no identification at all, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by independent working and peer review groups comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. EAC, however, is releasing the data and analysis conducted by Contractor.

Comment [GH2]: There is no page 109 in the Eagleton Testimony that was presented on 2/8/07 so I am not clear what document the public is being directed to see.

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

---

[4] See EAC Public Testimony, February 8, 2007, page 109.

- Convene, by mid 2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

Comment [GH3]: Is it realistic that this meeting will be convened by June 30? Perhaps we should say, "Convene in 2007, a working"

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Subject Re: Review of Voter ID Statement

History: This message has been replied to.

Karen:

The estimate of citizens of voting-age population controls for the percentage of the voting-age population that might have been non-citizens in 2004. We calculated the citizens of voting-age population using the following approach (this is a direct quote from Appendix C to our final Voter Identification report to the EAC):

"In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000."

I hope this addresses the issue. If it doesn't, let us know and Tim Vercellotti
or I will be happy to elaborate.

Thanks,

John

Deliberative Process Privilege

EAC Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document[1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[3]
The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Declines to Adopt Draft Report

---

[1] In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.
[2] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. These data did not differentiate between citizens and non-citizens; because these numbers include non-citizens, the Contractor applied the percentage of citizens included in voting age population statistics in 2000 to the U.S. Census Bureau estimated voting age population in 2004. Thus, 2004 estimates of voting age population include persons who are not registered to vote.
[3] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The Contractor used a single election's statistics to conduct this analysis. The two sets of data came from the Census Bureau and included persons who were not eligible to and did not vote. The first analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. So, a second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced only some evidence of correlation between voter identification requirements and turnout. Furthermore, the initial categorization of voter identification requirements included classifications that actually require no identification at all, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by independent working and peer review groups comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached.

Further EAC Study on Voter Identification Requirements

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

---

[4] See Transcript of EAC Public Meeting, February 8, 2007, page 109.

- In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

U.S. ELECTION ASSISTANCE COMMISSION
1225 New York Ave. NW – Suite 1100
Washington, DC 20005

Deliberative Process Privilege

EAC to Launch Comprehensive Study of Voter ID Laws

Releases Initial Research

For Immediate Release
March 23, 2007

Contact: Jeannie Layson
Bryan Whitener
(202) 566-3100

WASHINGTON – The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive, multi-year study focused on voter identification laws after concluding that researching only one election cycle was not sufficient to draw any conclusions. The Commission declined to issue a report based upon the initial research conducted by Rutgers, the State University of New Jersey, through its Eagleton Institute of Politics, but voted to make all of the research available. The information is available at www.eac.gov.

"Many new voter identification laws have been enacted recently, and the Commission began working to determine the impact of these new laws," said EAC Chair Donetta Davidson. "However, after careful consideration of the initial research conducted by our contractor, the Commission decided this important issue deserves a more in-depth research approach and that it should be examined beyond only one election cycle."

EAC's strategy for moving forward is based upon an examination of the initial research and the testimony and discussion about this research project at the Commission's February 8, 2007 public meeting. For more information about the public meeting agenda, transcript, and testimony go to http://www.eac.gov/Public_Meeting_020807.asp.

EAC's future research on this topic will be expanded to include more than one election cycle, environmental and political factors, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC comprehensive research approach will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.
- Convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. Deliberative Process Privilege

EAC to Launch Comprehensive Study of Voter ID Laws

Deleted: *Releases Initial Research*¶

For Immediate Release
March 23, 2007

Contact: Jeannie Layson
Bryan Whitener
(202) 566-3100

WASHINGTON – The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive, multi-year study focused on voter identification laws after concluding that researching only one election cycle was not sufficient to draw any conclusions. The Commission declined to adopt the report. The information is available at www.eac.gov.

Comment [C1]: I would add some of the language from the other document on this topic that we already approved. The action we took was to not adopt the report due to our concerns but to release all info to the public – "The Contractor and the EAC agree that the report raises more questions than provides answers.[1] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached."

Deleted: issue a report based upon the initial research conducted by Rutgers, the State University of New Jersey, through its Eagleton Institute of Politics, but voted to make all of the research available.

"Many new voter identification laws have been enacted recently, and the Commission began working to determine the impact of these new laws," said EAC Chair Donetta Davidson. "However, after careful consideration of the initial research conducted by our contractor, the Commission decided this important issue deserves a more in-depth research approach and that it should be examined beyond only one election cycle."

EAC's strategy for moving forward is based upon an examination of the initial research and the testimony and discussion about this research project at the Commission's February 8, 2007 public meeting. For more information about the public meeting agenda, transcript, and testimony go to http://www.eac.gov/Public_Meeting_020807.asp.

EAC's future research on this topic will be expanded to include more than one election cycle, environmental and political factors, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC comprehensive research approach will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.
- Convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.
- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification

Comment [C2]: A minor change was made in the other document to make this more clear.

provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. The four EAC commissioners are Donetta Davidson, chair; Rosemary Rodriguez, Caroline Hunter and Gracia Hillman.

Subject Project allotments

Commissioner,
Per your question about how much of the contract was actually spent on voter ID research vs provisional voting... I have yet to find the answer. I have reviewed the RFP and the invoices, but so far, it does not appear that these tasks were tracked separately. Karen and I continue to look into this, but I wanted to let you know what we've found so far.

History: This message has been replied to.

How about if we ask Eagleton for an estimate of the percent of costs they would attribute to the Voter ID portion of the study?

That way we can say the Voter ID study cost approximately X dollars.
(And deductively, the Prov Vote study cost X dollars.)

Well, I certainly wouldn't want us to do anything inappropriate. And I don't know the regs and rules on what we can and cannot ask.

What do you suppose the problem might be with our asking that question?

We received 2 distinct products and we find that it would be helpful for us to know what we spent on each effort. We aren't questioning their record keeping, we aren't asking them to reconstruct or research their records, we aren't asking them for an itemization, just an estimate.

The problem is that EAC is saying we spent 500 thou on the Voter ID study. That is wrong info. We need to stop saying that and I hope that has not been said publically, otherwise we need to correct the record ASAP.

And we also did not spend 500 thou on the Provisional Voting study. So, I guess we just have to say we spent 500 thou for both and when asked what we spent for one, we say we don't know. ??

Subject Re: FOR YOUR APPROVAL: VoterID Draft Press Release

I agree that 2007-2009 can be described as multi-year however, I think that multi-year sounds like we will study 2006, 2008 and 2010, or something extravagant like that.

I think I would be more comfortable if we quantified the timeline so it doesn't sound like the study is open ended and that we are punting on this.

MEMORANDUM

To: Commissioners Davidson, Rodriguez, Hunter and Hillman
Fr: Jeannie Layson
Cc: Tom Wilkey, Julie Hodgkins, Karen Lynn-Dyson, Bryan Whitener
RE: Communications Strategy for Release of Voter ID Tally Vote Results

In anticipation of the release of the results of the tally vote and all of the information provided by the contractor, I suggest taking the following steps to effectively communicate your decision. Taking this approach will help us control how the information is distributed, how it is framed, and how to focus the discussion on the positive outcome of your decision.

The bottom line is that we want to try our best to make this a story about EAC's decision to conduct a thorough and in-depth look into the subject of voter ID, and we have decided to release the preliminary research. We do not want this to evolve into a storyline about squabbling between EAC and Eagleton.

I have provided a suggested overall message that reflects the action taken, as well as questions we should be prepared to answer.

Please let me know if you have any questions about my proposal, and I look forward to your input.

PRELIMINARY ACTIVIES

Prior to the completion of the tally vote and the subsequent release of the results and the contractor's materials, I suggest taking the following steps:

1. Discuss EAC's decision with the contractors in advance of distributing the press release and discussions with reporters so that they have an opportunity to respond and also so they will be well informed and prepared to discuss the facts with reporters or others who will most likely contact them.
2. Prior to release of EAC's decision, reach out to key Hill staffers who have been following this issue, including those members who have requested this data in the past. This should include staffers for the House Appropriations Committee Subcommittee on Financial Services and General Government since the Committee requested this information a few weeks ago. It should be made clear to committee staffers that the tally vote is the culmination of a directive made by the EAC chair in Feb. that the agency move forward to complete this project. These staffers should also be included on our list of key stakeholders.
3. Executive director should determine whether there are other key stakeholders that should be made aware of this decision from EAC personally, not from a press release. Possible candidates include members of Congress, NASS, individual secretaries of state, DOJ, and NASED.

PUBLIC ROLL-OUT

Once the above preliminary steps have been completed, EAC Communications will:

1. Post the press release and the related data on the website, with a link from the home page.
2. Prior to release of the tally vote decision and related data, call Richard Whitt of USA Today, Will Lester of AP, Chris Drew of the NYT, and Zach Goldfarb of the WaPo and let them know we are about to release the information. Offer interviews with the chair or other commissioners.
3. Send the press release (with a link to the research) to all recipients in the media database. This includes national dailies, as well as wire services such as the Associated Press.
4. Send the press release (with a link to the research) to all recipients in the stakeholder database. The database consists of election officials, advocates, and other interested parties, including representatives from organizations who have been critical of EAC, including VoteTrust USA and the People for the American Way.

OVERALL MESSAGE

Voter identification at the polling place is an important issue that affects voters in jurisdictions throughout the country. Understanding that this issue deserves a more in-depth approach, EAC has decided to move forward with a thorough, multi-year research project that will examine everything from turnout to voter education.

The findings of the preliminary research, which focused exclusively on the 2004 general elections, was insufficient to provide meaningful conclusions and raises more questions than provides answers. Future research will be expanded to include more than one election cycle and will examine environmental and political factors including, the many changes in state laws and regulations that have occurred since the 2004.

Q&A

We should be prepared to answer the following questions:

Q: Why not release the draft fraud report, too?
A: EAC issued a final Voting Fraud and Voter Intimidation Report in December 2006, which included recommendations adopted by the Commission to conduct a comprehensive assessment of all claims, charges and prosecutions of voting crimes.

In the case of the voter ID report, the Commission chose not to adopt a final report because it was determined that there was insufficient data to provide meaningful conclusions.

Q: You cited concerns with the contractor's methodology and analysis. Didn't your contract with Eagleton include specific language regarding these issues?
A: Yes, but in retrospect, perhaps we could have done a better job articulating how we wanted this research to be conducted.

Q: During the course of the project, did you see draft reports? If so, why didn't these concerns get addressed at that time?
A: We did receive progress reports, and when we identified areas of concern, we discussed it with the contractor. It was because of these concerns that EAC decided to revisit the methodologies used so that we could provide a more in-depth look at the subject matter.

Q: During the course of the contract, did you ever express these concerns with Eagleton?
A: Yes, and as a result of these conversations, EAC decided to revisit the methodologies used so that we could provide a more in-depth look at the subject matter.

Q: You spent more than $500,000 for a report the Commission doesn't think should be adopted – so basically you're flushing a lot of money down the drain. Is this a wise use of taxpayer dollars?
A: There is value in what Eagleton provided, and this included work they did for us regarding provisional voting. As a result of the research on provisional voting, EAC

issued a set of best practices last fall. The voter ID data will help provide a baseline for how to move forward. And even though their research raised many questions, contemplating the answers to those questions has informed us on how to move forward.

Q: If you were not satisfied with the final product, why did you pay for it?
A: We adhered to the terms of the contract.

Q: EAC received this data in June of last year. What has taken so long to bring it to a conclusion?
A: This is an important issue, one that deserves careful deliberation and a thorough approach. Yes, we like to get things done quickly, but it is more important to take the time to get things right.

TRANSITION PHRASES

To stay on message and avoid being dragged into discussions about anything other than the action taken, employ the following phrases and transition back to the overall message.

Overall Message

Voter identification at the polling place is an important issue that affects voters in jurisdictions throughout the country. Understanding that this issue deserves a more in-depth approach, EAC has decided to move forward with a thorough, multi-year research project that will examine everything from turnout to voter education.

The findings of the preliminary research, which focused exclusively on the 2004 general elections, were insufficient to provide meaningful conclusions and raises more questions than provides answers. Future research will be expanded to include more than one election cycle and will examine environmental and political factors, including the many changes in state laws and regulations that have occurred since 2004.

Bridge/Transition Phrases

- What's really important here...
- The bottom line is...
- The point is...
- We have a responsibility to...
- I'll let others speak to that, but let me tell you what's important to EAC...
- Everyone agrees that...

U.S. ELECTION ASSISTANCE COMMISSION
1225 New York Ave. NW – Suite 1100
Washington, DC 20005

EAC to Launch Comprehensive Study of Voter ID Laws

For Immediate Release
DATE, 2007

Contact: Jeannie Layson
Bryan Whitener
(202) 566-3100

WASHINGTON – The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive study focused on voter identification laws. The initial research on voter identification laws are available at www.eac.gov, but because this research focused exclusively on the 2004 general elections, included populations that are not eligible to vote, and did not take into account influential factors such as the competitiveness of campaigns, it was insufficient to provide meaningful conclusions and thus the Commission declined to adopt a report based on it.

"New voter identification laws have been enacted recently, and the Commission began working to determine the possible impact of these new laws," said EAC Chair Donetta Davidson. "After careful consideration of the initial research conducted by our contractor, the Commission decided this important issue deserves a more in-depth research approach and that it should be examined beyond only one election cycle. The bottom line is that the research raises more questions than provides answers.

EAC's strategy for moving forward is based upon an examination of the initial research and the testimony and discussion about this research project at the Commission's February 8, 2007, public meeting. For more information about the public meeting agenda, transcript, and testimony go to http://www.eac.gov/Public_Meeting_020807.asp.

EAC's future research on this topic will be expanded to include more than one election cycle and to examine environmental and political factors and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC's comprehensive research approach will undertake the following activities:

- Convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements that require a voter to state his or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identity.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information already collected as well as additional data from the states to develop this baseline.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. The four EAC commissioners are Donetta Davidson, chair; Rosemary Rodriguez, Caroline Hunter and Gracia Hillman.

Subject Comments on Eagleton's response

Karen will present our discussion and conclusions tomorrow. However, when we left the briefing, I think everyone believed that I would provide comments since I will not be able to be on the phone. As such, I am transmitting my comments through this email. I will respond or address Eagleton's numbered paragraphs (note that there is no paragraph 4).

1. There is no need to address this as Eagleton agrees that they only reviewed one election's statistics. The statement of work for the contract told them to review the status of the law in 2004, but in no way limited their analysis to a single year.

2. I believe that Eagleton's issue here is one of semantics. They don't like the phraseology of this sentence. However, the sentence is true and is demonstrated by the sentenced in paragraph 2 of the statement that they reviewed and to which they provided comments. That paragraph specifically contains the following information: "Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates(FN2) and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.(FN3)" Eagleton made two sets of comments to Footnote 2, which is imbedded in the sentence that was just quoted. They explained their methodology in those comments and that methodology was captured in footnote 2. That footnote specifically contains the following sentences: "These data did not differentiate between citizens and non-citizens;... Thus, 2004 estimates of voting age population include person who are not registered to vote."

3. Eagleton objects to the use of the word "so" in the second sentence. They believe that this creates an inference that they only used the second set of data because the first did not show significant correlations. While generally speaking, I believe that this inference is at least partially true, since researchers are always searching for a set of data that will show a statistically significant correlation and will proceed to a different set of data if the first does not show it, it is not the intended inference of these two sentences. The point is to show that of the two data sets that they used one showed no significant correlation and the second showed some correlations (however not all variables showed correlation). And, that the second set of data -- the one that showed correlation was questionable because of the unusually high turnout rate that was reported. As such, we have agreed to remove the words "so" at the beginning of the second sentence and "only" in the middle of the second sentence -- see #9).

4. There is no number 4.

5. I believe that the statement as contained in the EAC statement is TRUE. Stating one's name is not an independently verifiable form of identification, and I think those are the forms of identification that we are talking about. I can walk into any polling place in the country and state the name of any person. Unless the poll worker knows me or knows the person whose name I have used, there is no way to independently verify whether my statement is true. Conversely, my signature can be compared, my address can be verified, or my driver's license can be scrutinized to determine if I am the person that I purport to be. While it is true that I identify myself on the phone or in person all the time by stating my name, it is not for the purpose of determining my eligibility to vote in a particular precinct, etc. I believe that when the term identification is used in the context of voting that it must mean that the voter provides some independently verifiable form of identification. Having said this, I understand that this may be a point of disagreement for others. But, as for me, this statement is true.

6. Based on conversations with Karen concerning the two groups-- one assembled by Eagleton and one assembled by EAC -- both "questioned" the methodology and statistical analysis employed by Eagleton.

The group assembled by Eagleton was referred to by them in their report as their "peer review group." Karen feels that "working group" is not an accurate description of the group assembled by EAC, so she has language to use to replace "independent working group" that captures the essence of that group.

7. See response to #2, above.

8. See response to #1, above.

9. See response to #3, above.

10. See response to #6, above.

11. I believe that the Commission must act on this report. Merely stating what we will do in the future will not distance us from this work and will result in media and others quoting Eagleton's work as an "EAC" report. It has been my understanding that the consensus of the group is to "decline to adopt." I believe that this is the right action.

My flight departs at 9:20 a.m. (EDT) and I do not arrive until 12:15 p.m. (EDT). However, if you have questions concerning my comments, I will be around tonight and will be available tomorrow afternoon by Blackberry.

U.S. ELECTION ASSISTANCE COMMISSION
1225 New York Ave. NW – Suite 1100
Washington, DC 20005

MEMORANDUM

TO: Commissioners Davidson, Hillman, Hunter, and Rodgriguez

FROM: Thomas R. Wilkey
Executive Director

DATE: March 29, 2007

RE: Draft Voter Identification Report, Research and Future Study of Voter Identification Requirements

In 2005, EAC contracted with the Eagleton Institute of Politics to conduct a study of the voter identification requirements that were in existence in the 50 states and 5 territories during the 2004 election. As a part of that study, Eagleton conducted research concerning the status of laws in the states and also conducted statistical analysis regarding the impact of the existence of voter identification requirements on the turnout of voters.

A draft statement capturing proposed action on the draft report as well as recommended next steps for research and analysis of voter identification requirements has been attached to this memorandum.

I recommend approval of this statement.

EAC Statement on Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document[1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[3]

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Declines to Adopt Draft Report

---

[1] In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

[2] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. These data did not differentiate between citizens and non-citizens; because these numbers include non-citizens, the Contractor applied the percentage of citizens included in voting age population statistics in 2000 to the U.S. Census Bureau estimated voting age population in 2004. Thus, 2004 estimates of voting age population include persons who are not registered to vote.

[3] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The study only focused on one federal election. An analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. A second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced some evidence of correlation between voter identification requirements and turnout. The initial categorization of voter identification requirements included classifications that, actually, require no identification documentation, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by an EAC review group comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers and both agree the study should have covered more than one federal election.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached.

Further EAC Study on Voter Identification Requirements

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state his or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

---

[4] See Transcript of EAC Public Meeting, February 8, 2007, page 109.

- In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Subject FOR YOUR APPROVAL: VoterID press release and Q&A

Commissioners,
Based upon the revised tally vote language, I have made edits to the press release and to the Q&A. Please let me know if you have any edits. I plan to release this tomorrow if the tally vote is completed by then. Also, please pay special attention to the following answer I have composed, which is in the Q&A document. I will notify you before issuing the press release.

Q: What are your specific objections/concerns with the methodologies utilized by Eagleton?
A: First of all, we agree with the contractor that we should examine more than one federal election. Regarding the methodologies, the contractor conducted two analyses that had different outcomes. The first analysis showed no statistically significant correlations. The second analysis, based on statistics from the Current Population Survey, showed some evidence of a correlation. Also, the categorization of voter identification requirements included classifications that do not require identification documentation, such as "state your name." The bottom line is that the research produced more questions than answers, and that's why EAC is expanding its efforts to examine this important issue.

Phone: 202-566-3100
www.eac.gov EAGLETONQ&A.doc VoterID release 3-30-07.doc

OVERALL MESSAGE

Voter identification at the polling place is an important issue that affects voters in jurisdictions throughout the country. Understanding that this issue deserves a more in-depth approach, EAC has decided to move forward with a thorough, multi-year research project that will examine everything from turnout to voter education.

The preliminary research focused exclusively on the 2004 election, was insufficient to provide meaningful conclusions and raises more questions than provides answers. Future research will be expanded to include more than one election cycle and will examine environmental and political factors including, the many changes in state laws and regulations that have occurred since the 2004.

Q&A

Q: Why not release the draft fraud report, too?
A: EAC issued a final Voting Fraud and Voter Intimidation Report in December 2006, which included recommendations adopted by the Commission to conduct a comprehensive assessment of all claims, charges and prosecutions of voting crimes.

In the case of the voter ID report, the Commission chose not to adopt a final report because it was determined that there was insufficient data to provide meaningful conclusions.

Q: You cited concerns with the contractor's methodology and analysis. Didn't your contract with Eagleton include specific language regarding these issues?
A: Yes, but in retrospect, perhaps we could have done a better job articulating how we wanted this research to be conducted.

Q: What are your specific objections/concerns with the methodologies utilized by Eagleton?
A: First of all, we agree with the contractor that we should examine more than one federal election. Regarding the methodologies, the contractor conducted two analyses that had different outcomes. The first analysis showed no statistically significant correlations. The second analysis, based on statistics from the Current Population Survey, showed some evidence of a correlation. Also, the categorization of voter identification requirements included classifications that do not require identification documentation, such as "state your name." The bottom line is that the research produced more questions than answers, and that's why EAC is expanding its efforts to examine this important issue.

Q: During the course of the project, did you see draft reports? If so, why didn't these concerns get addressed at that time?
A: We did receive progress reports, and when we identified areas of concern, we discussed it with the contractor. It was because of these concerns that EAC decided to revisit the methodologies used so that we could provide a more in-depth look at the subject matter.

Q: During the course of the contract, did you ever express these concerns with Eagleton?
A: Yes, and as a result of these conversations, EAC decided to revisit the methodologies used so that we could provide a more in-depth look at the subject matter.

Q: You spent more than $500,000 for a report the Commission doesn't think should be adopted – so basically you're flushing a lot of money down the drain. Is this a wise use of taxpayer dollars?
A: There is value in what Eagleton provided, and this included work they did for us regarding provisional voting. As a result of the research on provisional voting, EAC issued a set of best practices last fall. The voter ID data will help provide a baseline for how to move forward. And even though their research raised many questions, contemplating the answers to those questions has informed us on how to move forward.

Q: If you were not satisfied with the final product, why did you pay for it?
A: We adhered to the terms of the contract.

Q: EAC received this data in June of last year. What has taken so long to bring it to a conclusion?
A: This is an important issue, one that deserves careful deliberation and a thorough approach. Yes, we like to get things done quickly, but it is more important to take the time to get things right.

TRANSITION PHRASES

To stay on message and avoid being dragged into discussions about anything other than the action taken, employ the following phrases and transition back to the overall message.

Overall Message

Voter identification at the polling place is an important issue that affects voters in jurisdictions throughout the country. Understanding that this issue deserves a more in-depth approach, EAC has decided to move forward with a thorough, multi-year research project that will examine everything from turnout to voter education.

The preliminary research focused exclusively on the 2004 election, was insufficient to provide meaningful conclusions and raises more questions than provides answers. Future research will be expanded to include more than one election cycle and will examine environmental and political factors including, the many changes in state laws and regulations that have occurred since the 2004.

Bridge/Transition Phrases

- What's really important here…
- We are focused on moving forward, not going back…
- The bottom line is…
- The point is…
- We have a responsibility to…
- I'll let others speak to that, but let me tell you what's important to EAC…
- Everyone agrees that…

Washington, DC 20005

EAC to Launch Comprehensive Study of Voter ID Laws

For Immediate Release
March 30, 2007

Contact: Jeannie Layson
Bryan Whitener
(202) 566-3100

WASHINGTON – The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive study focused on voter identification laws after concluding that initial research focusing on only one election cycle was not sufficient to draw any conclusions. The Commission declined to adopt the report, but is releasing all of the data to the public. The information is available at www.eac.gov, and the Commission's statement regarding its decision is attached.

"After careful consideration of the initial research, the Commission decided this important issue deserves a more in-depth research approach, and that it should be examined beyond only one election cycle," said EAC Chair Donetta Davidson. "The Commission and our contractor agree that the research raises more questions than provides answers."

EAC's strategy for moving forward is based upon an examination of the initial research and the testimony and discussion about this research project at the Commission's February 8, 2007 public meeting. For more information about the public meeting, including the agenda, transcript, and testimony go to http://www.eac.gov/Public_Meeting_020807.asp.

EAC's future research on this topic will be expanded to include more than one federal election, environmental and political factors, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC's comprehensive research approach will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.
- In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification.
- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. The four EAC commissioners are Donetta Davidson, chair; Rosemary Rodriguez, Caroline Hunter and Gracia Hillman.

###

EAC Statement on Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document[1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[3]

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Declines to Adopt Draft Report

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

---

[1] In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

[2] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. These data did not differentiate between citizens and non-citizens; because these numbers include non-citizens, the Contractor applied the percentage of citizens included in voting age population statistics in 2000 to the U.S. Census Bureau estimated voting age population in 2004. Thus, 2004 estimates of voting age population include persons who are not registered to vote.

[3] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The study only focused on one federal election. An analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. A second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced some evidence of correlation between voter identification requirements and turnout. The initial categorization of voter identification requirements included classifications that, actually, require no identification documentation, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by an EAC review group comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers and both agree the study should have covered more than one federal election.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached.

Further EAC Study on Voter Identification Requirements

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state his or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

- In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

---

[4] See Transcript of EAC Public Meeting, February 8, 2007, page 109.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

###

EAC Statement on Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document[1] was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[2] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[3]

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Declines to Adopt Draft Report

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

---

[1] In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

[2] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. These data did not differentiate between citizens and non-citizens; because these numbers include non-citizens, the Contractor applied the percentage of citizens included in voting age population statistics in 2000 to the U.S. Census Bureau estimated voting age population in 2004. Thus, 2004 estimates of voting age population include persons who are not registered to vote.

[3] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The study only focused on one federal election. An analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. A second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced some evidence of correlation between voter identification requirements and turnout. The initial categorization of voter identification requirements included classifications that, actually, require no identification documentation, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by an EAC review group comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers and both agree the study should have covered more than one federal election.[4] Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached.

Further EAC Study on Voter Identification Requirements

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state his or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

- In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

---

[4] See Transcript of EAC Public Meeting, February 8, 2007, page 109.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Subject Voter ID update

Commissioners,
The press release, the statement, and the draft report has been posted on our site. The press release is being distributed, and is on the way to all of you and the entire EAC staff. The following activities have occurred:

1. Press release was sent in advance to Eagleton.
2. I called Wendy Weiser of the Brennan Center and sent her the info.
3. I called and sent the info to Ray M. and Paul D.
4. I sent the info to Tom Hicks and Adam A.
5. Tom called Dan Tokaji, Dan Oak, and Rep. Hinchey's office.
6. Karen gave the three EAC experts a heads up.
7. Comm. Rodriguez was interviewed by NPR (the only outlet that showed any interest), as was Eagleton. Eagleton told NPR they are glad we are expanding the scope. Interview will run on affiliates today at approximately 5:44 pm EST.
8. I offered interviews to USA Today, WaPo, NYT, and AP but none were interested.
9. I have kept Eagleton apprised of our activities.

I'll continue to keep you apprised as the day goes on, and please let me know if there's anyone else you'd like me to contact.

April 17, 2007

The Honorable Donetta Davidson
Chair
United States Election Assistance Commission
1225 New York Avenue Northwest, Suite 1100
Washington, DC 20005

Dear Chairwoman Davidson:

I am writing to urge the Election Assistance Commission to publicly release the full draft version of its commissioned report on provisional voting. Given the concern by members of this subcommittee, as well as other members of Congress, over the issue of transparency at the EAC, I believe that it is in the best interest of the taxpayers that they be able to see the full draft report on this topic.

As you know, the EAC commissioned a report from the Eagleton Institute of Politics at Rutgers on both voter identification and provisional voting. At some point, these two reports were split from one another. On March 30, 2007, the EAC released the draft report on voter identification, entitled "Best Practices to Improve Voter Identification Requirements."

I was pleased with the positive precedent set by the EAC with the release of the draft report on voter identification. Although I was disappointed that the Commission did not endorse the results of the study, I strongly believe that releasing the full draft helped dispel concerns of transparency and partisanship, and allowed the public at large to help identify areas that need more in depth review. I also believe that you have made the right decision in asking the Inspector General to conduct a review of the Commission's contracting procedures with respect to recent reports. I am hopeful that the review will conclude that greater openness and transparency is of utmost importance.

Given your request to the Inspector General and the recent controversies over the release of the draft voter identification report, as well as the draft voter fraud and intimidation report, it would be in the best interest of the Commission to release the draft report on provisional voting. Releasing the full draft version of this report would help to ensure that the EAC remains a transparent organization and dispel concerns that the Commission has been acting in a partisan manner.

Should the Commission decide not to release the draft report, I would then request an update as to the status of this report, a timeline for its release, as well as any compelling reasons as to why the EAC should deviate from the precedent you have now set. The public deserves the opportunity to decide whether the report is both rigorous and accurate.

As I mentioned in the hearing we held just over a month ago, I strongly believe that the EAC will be one of the most important government entities in the run up to the 2008 elections. It is of vital importance that we ensure that the EAC remains, in appearance and in fact, a bipartisan, independent agency- so that voters and election administrators across the country can trust its efforts to ensure that federal elections are safe, secure, accurate, and fair. Releasing the provisional voting report would go a long way towards that goal, and I look forward to your response.

Sincerely,

José E. Serrano
Chairman, Financial Services and General
Government Appropriations Subcommittee

Subject Revised Voter ID Analysis

History: This message has been forwarded.

Karen,

Attached is Tim Vercellotti's Voter ID analysis revised to use Citizen Voting Age population as the base for turnout calculations and to take account of comments or issues raised by the EAC and our Peer Review Group. This draft is for distribution to the reviewers who will meet by teleconference on May 11, at, we understand, 11:30 a.m.

You are receiving this at the same time that it is being distributed to the Eagleton-Moritz team so that the new reviewers will have a week to prepare for our conversation on the 11th. Early next week you will receive a revised summary paper on Voter ID that incorporates the new data and findings in Tim's revised analysis. That too will be for distribution to the new reviewers.

Tom O'Neill

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University
May 4, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater for some specific types of requirements. For example, critics argue that requiring voters to produce government-issued photo identification on Election Day is more demanding than, say, requiring that they state their names at the polling place. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I treated the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[2]

---

[2] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. I coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the

dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county exerted a positive effect on voter turnout, and the percentage of individuals living below the poverty line had a negative effect. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance ($p = .05$).

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] In addition, adding the interactions to the model resulted in the percentage of Hispanics in the population having a direct and negative effect on turnout. The interactions suggest that voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data ($p < 0.005$).

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

[Table 3 here]

The effects of the minimum requirements fell short of statistical significance ($p = 0.08$). The battleground state variable continued to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate had no statistically significant effect. As in the maximum identification requirement model, as the percentage of the population that is poor increased, turnout declined. As the percentage of elderly increased, so did turnout. The proportion of African-Americans in the population had a positive effect on turnout, while the percentage of Hispanics did not affect turnout.

---

intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.13 [-0.03 (voter id) - 0.13 (Hispanic) + 0.03 (voter id X Hispanic)].

Adding interactive effects to the model resulted in a statistically significant and negative effect of minimum voter identification requirements on turnout. The percentage of Hispanic adults in the county had a significant and negative effect on turnout, and the percentage of individuals below the poverty line continued to have a negative effect. Interactions between the percentages of Hispanics and those below the poverty line and minimum voter identification requirements also were significant. The percentage of African-Americans in the county and the interaction between African-Americans and voter identification requirements were not significant. A chi-square test for the difference in fit between the two models showed that the model with interactions provides a better fit to the data ($p < .025$).

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the demands of voter identification requirements increase, turnout declines. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[5] Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[6] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S.

---

[5] A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

[6] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[7] As in the analysis of aggregate data, I coded voter identification requirements for each respondent's state of residence on a scale of one to five, with one representing the least demanding requirement (stating one's name) and five representing the most demanding requirement (photo identification or affidavit).

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes).[8] Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which

---

[7] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[8] Asian-Americans are included in the "other non-white races" category. In response to a request from officials at the U.S. Election Assistance Commission who had read an earlier version of this paper and were curious about the experiences of Asian-Americans, I ran models using Asian-Americans as a separate category in addition to the models presented here. Voter identification requirements did not have a statistically significant effect on whether Asian-American voters said they turned out in the 2004 election.

calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[9] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 0.912 for stating one's name to 0.887 for photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of .025, or 2.5 percent, across the five types of identification.[10] When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it

---

[9] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[10] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group. I disaggregated the sample by the variable of interest, omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[11] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of Black/Non-Hispanics voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent when the maximum requirement was stating one's name, and the probability dropped 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Breaking down the 18- to 24-year-old age group by race shed additional light on the effects of voter identification requirements on specific groups.

[Table 8 here]

The gap in predicted probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out was 9.2 percent when the identification requirements varied from stating one's name to providing photo identification. The gap was 7.8 percent when taking into account the minimum requirements. The effects of maximum voter identification requirements also were statistically significant for African-Americans in the 18- to 24-year-old age group, with a gap in

---

[11] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

the predicted probability of voting of 10.6 percent. Maximum and minimum voter identification requirements were not a significant predictor of voting among Hispanics ages 18 to 24.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[12]

[Table 9 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements). Given that political discourse about voter identification requirements includes concerns about the effects of the requirements on poor and minority voters, I also ran probit analyses for sub-samples of white and minority voters who fell below the poverty line. The voter identification requirements did not exert statistically significant effects on turnout among poor White/Non-Hispanic and Hispanic voters, but did have a significant effect on Black/Non-Hispanic voters who were below the poverty line.[13] Allowing the maximum voting requirement to vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 10 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

---

[12] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

[13] The lack of significant effects for poor Hispanic voters is in contrast to the results from the aggregate data analysis. The sub-sample of poor Hispanic voters was small (n = 491), which may have contributed to the lack of statistical significance.

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit. African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification. When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters. The effects on African-American voters were pronounced for two specific sub-samples: African-American voters living below the poverty line and those in the 18- to 24-year-old age group. Also, the elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[14] Or, do the requirements result in some voters

---

[14] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not

being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

EAC Report on Voter Identification

Executive Summary

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. HAVA Section 303 (b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain minimum requirements concerning voter identificaiton, but also leaves considerable discretion to the States for implementation of voter identification requirements. The EAC sought to examine how these voter identification requirements were implemented in the 2004 general elections and to prepare guidance for the states on this topic.

Deleted: this section

Deleted: its

In May 2005, EAC entered into a contract with the Eagleton Institute of Politics at Rutgers, the State University of New Jersey and the Moritz College of Law at the Ohio State University to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor also performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data, aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau, the contractor found the overall relationship between the stringency of ID requirements and turnout to be fairly small, but statistically significant.

Comment [J1]: Description of what data is included in census data

Comment [J2]: Need a definition of what is statistically significant – both technical and plain language

Based on The Eagleton Institute year-long inquiry into voter identification requirements EAC will implement one or more of the following recommendations:

- Further research into the connection between voter ID requirements and the number of ballots cast and counted;
- A state-by-state review of the impact that voter ID requirements are having on voter's participation;
- A state-by-state review of the relationship between ballot access and ballot security and the number of voters whose ballot is counted;

Comment [J3]: What does this mean?

Comment [J4]: Not sure what this would entail. These are buzz words, but there needs to be some specific meaning assigned to them and communicated with any recommendations

- A state-by-state review of time periods between voters casting of provisional ballots and the time allowed to return with an ID as well as a review of acceptable forms of identification other than photo ID.

Introduction

This study was conducted at a time in which considerable attention is being paid to the issue of voter identification. Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for multiple voting or voting by those who are not eligible. The goal is to ensure that only those legally entitled to vote do so, and do so only once at each election. Opponents of stricter ID requirements seek to ensure board access to a regular ballot. There is a fear that some voters -- racial and ethnic minorities, young and elderly voters -- lack convenient access to required ID documents, or that these voters may be fearful of submitting their ID documents for official scrutiny.

This report considers policy issues associated with the voter ID debate. It examines the relationships between voter ID requirements and voter turnout along with the various policy implications of the issue.

(NEED TO ADD SOME LANGUAGE ABOUT THE TIME FRAME OF THE STUDY – I.E. THAT IT REVIEWED ONLY DATA FROM THE NOVEMBER 2004 ELECTION.)

Methodology of the Study

In May 2005, under contract with the EAC, the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University undertook a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. The contract also included research and study related to provisional voting requirements. These research findings were submitted and reviewed by the EAC as a separate study.

The Eagleton Institute of Politics gathered information on the voter identification requirements in 50 states and the District of Columbia for 2004. Based on interpretations of state statutes and supplemental information provided through conversations with state election officials, state ID requirements were divided into five categories, with each category of identification more rigorous than the one preceding: stating name, signing name, signature match, presenting an ID, and the most rigorous, presenting a government photo ID. The Eagleton Institute also categorized and identified each state according to maximum and minimum identification requirements. Maximum requirements refer to the most that voters may be asked to do or show at the polling place. Minimum requirements refer to the most that voters can be required to do or show in order to cast a regular ballot. These definitions and the subsequent state-by-state analysis of voter identification requirements omitted those cases in which a particular voter's eligibility might be questioned using a state's voter ballot challenge process.

(ADD A TABLE OF THE LAWS FROM EACH STATE)

Two data sets were used to apply the criteria (variables) that were developed above: aggregate voter turnout data at the county level which was gathered from the EAC's 2004 Election Day Survey and; reports of individual voters collected through the November 2004 Current Population Survey administered by the U.S. Census Bureau. Use of EAC survey data and Census Bureau CPS data provided a way to cross-check the validity of the analysis and conclusions that would be drawn regarding the effect of voter ID requirements on voter turnout.

Study Oversight and Methodological Review

A draft of the Eagleton Institute report and findings on voter identification requirements was critiqued by a peer review group convened by the Eagleton Institute. A second review of the study's research and statistical methodologies was conducted using a group of research and statistical experts independently convened by the EAC. Comments and insights of the peer review group members were taken into account in the drafting of a study report although there was not unanimous agreement among the individual reviewers regarding the study findings and recommendations.

Comment [J5]: Do we need this section. It seems to suggest that we are adopting the Eagleton report. I am not sure that is where we will end up.

Summary of the Research

Maximum and Minimum Voter Identification Requirements

In order to analyze what, if any, correlation may exist between a State's voter identification requirements and voter turnout, the Eagleton Institute first coded a state according to how demanding its voter ID requirement was. The voter ID requirement, ranked from lowest to highest was as follows: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification and, providing a form of photo identification. Several possible caveats to this ranking system were noted. For all states which had photo identification requirements in 2004, voters without a photo ID were permitted to cast a regular ballot after signing an affidavit regarding his or her identity and eligibility. These voters were also allowed to provide other forms of ID. The researchers also noted that while each state may be assigned to a category, that categorization may not reflect the actual practice related to voter identification that may or may not have taken place at many polling places.

Research performed for this study by the Moritz College of Law found that states had five different types of **maximum** identification requirements in place on Election Day 2004. For the purposes of this study a requirement that called for a signed affidavit or the provision of other forms of ID was considered the most rigorous or the "maximum" requirement. At the polling place voters were asked to:

- State his or her name (10 states)
- Sign his or her name (13 states and the District of Columbia)
- Sign his or her name, which would be matched to a signature on file (seven states)
- Provide a form of identification that did not necessarily include a photo (15 states)
- Provide a photo identification (five states)

Using the same criteria, but applying them as **minimum** rather than maximum criteria for voting the research showed: **(check this section–it doesn't really make sense)**

- State his or her name (12 states)
- Sign his or her name (14 states and the District of Columbia)
- Matching the voter's signature to the signature on file (6 states)
- Provide a non-photo identification (14 states)
- Swear by an affidavit (4 states)

The results of the research are summarized in Table 1.

Election laws in several states offer exceptions to these ID requirements if potential voters lack the necessary form of identification. Laws in these states set a minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. In 2004 none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID were allowed to vote in all states, if he or she was able to meet another ID requirement.

The Relationship of Voter Identification Requirements to Voter Turnout

A statistical analysis examining the variation in turnout rates based on the type of voter ID required by each state in the 2004 election was conducted using two sets of data: 1) aggregate turnout data at the county level for each state (compiled by the Eagleton Institute of Politics-**footnote about how they collected the data)** and 2) individual level survey data included in the November 2004 Current Population Survey (CPS), conducted by the U.S. Census Bureau.

The analysis looked at the voter identification requirements as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements were ranked according to how demanding they were judged to be, with photo identification considered to be the most demanding requirement **(what about affidavit?????).** Used as discrete variable, the statistical analysis considered stating the name as the least demanding ID requirement; the other ID requirements were then compared to that requirement.

Aggregate-level statistical analysis

Comment [J6]: We need a simpler version as well as one suited to academics

The statistical analysis performed by the Eagleton Institute of Politics found that when averaging across counties in each state, statewide turnout is negatively correlated to maximum voter identification requirements ($r=-.30$, p less than .05). When a statistical analysis is performed on the other minimum voter ID requirements (with affidavit being the most demanding requirement), the correlation between voter identification and turnout is negative, but not statistically significant ($r=-.20$, $p=.16$). These findings would suggest that the relationship between turnout rates and minimum requirements may not be linear.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend was found when analyzing minimum ID requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their name, compared to 60.1 percent in states that required an affidavit from voters. This analysis showed there was not a clear, consistent linear relationship between turnout and minimum identification requirements.

(insert table 2- Variation in 2004 State Turnout Based on Voter Identification Requirements)

Multivariate models of analysis using aggregate-level data

Comment [J7]: Same as previous comment

The Eagleton Institute of Politics performed an additional analysis that would estimate the effects of voter identification requirements, that took into account the electoral context in 2004 and, the demographic characteristics of the population in each county. The model also considers such variables as whether or not the county was 1) in a presidential battleground state, 2) if the county was in a state with a competitive race for government and/or the U.S. Senate, 3) the percentage of voting-age population in each county that was Hispanic or African-American 4) the percentage of county residents age 65 and older, 5) the percent of county residents below the poverty line, and 6) the number of days between each state's registration deadline and the election.

The results of this statistical modeling and subsequent analysis indicated that the stricter voter ID requirements of matching a voter's signature to a signature on file or with presenting a non-photo identification are associated with lower voter turnout when compared to voter turnout in states that required voters to simply state his or her name. These conclusions were reached when variables 1-5 listed above were held constant.

Other results from the Eagleton Institute analysis of stricter voter identification requirements showed that:

- Increased voter turnout was associated with whether the county was in a battleground state or whether that state have a competitive race for governor and/or U.S.Senate.

- A slight negative effect on turnout was correlated with those state's with a longer time between the closing date for registration and the election.

- Voter turnout declined as the percentage of Hispanics in a county's population increased.

- Higher turnout (and a positive correlation) was associated with a higher percentage of senior citizens and household median income.

- The percentage of African-Americans in the county did not have a significant effect on turnout.

DO WE HAVE ANY CHARTS/GRAPHS THAT REFLECT THESE?

The Eagleton Institute analysis of minimum voter identification requirements showed that:

Comment [J8]: What does this mean?

- A relationship between minimum voter ID requirements and turnout was not demonstrated.

- Battleground states and those with competitive state races had a significant and positive correlation to turnout.

- A higher percentage of senior citizens in the county and higher household median income were associated with higher turnout and showed a positive correlation to turnout.

- The percentage of Hispanics in the county was associated with reduced turnout.

- The increased number of days between the closing date for registration was associated with reduced turnout.

The analysis of these aggregate, county-level data showed a significant correlation between maximum voter identification requirements (a signature match and non-photo identification, but not a photo identification) and lower turnout in the 2004 election. This correlation was also significant when compared to the minimum voter ID requirement of the voter simply having to state his or her name.

Comment [J9]: What does this mean?

Multivariate analysis using individual level turnout data

This analysis which used November 2004 Current Population Survey data conducted by the U.S. Census Bureau is based on reports from self-described registered voters. Not included in the analysis are persons who said they are not registered to vote, those who said they cast absentee ballots and those who said they were not U.S. citizens. The CPS' Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents. **(why is the N is Table 3 54,973?)**

In addition to the five maximum voter identification requirements (enumerated on page XX) the analysis performed included other socioeconomic, demographic and political factors that could have influenced turnout in the 2004 election. These independent variables were analyzed against the dependent variable of whether or not the respondent said he or she voted in the November 2004 election.

In this analysis three of the voter identification requirements were shown to have a statistically significant correlation with whether or not the survey respondents said they have voted in 2004. Lower voter turnout was associated with:

- those states with maximum voter requirements to sign one's name,
- those states with maximum voter requirements to provide a non-photo ID or photo ID, or
- those states with the minimum voter requirement to swear by an affidavit in order to cast a ballot without the state-required identification

Increased voter turnout showed:

- A significant correlation with the competitiveness of the Presidential race **(explain).**
- African-American voters were more likely than white or other voters to say they have voted.
- Income and marital status were positive predictors of voting **(high income or low income, single, married?),**
- Women were more likely to say they voted than men.

- Those ages 45 to 64 and 65 and older were more likely to say they voted than those ages 18 to 24.
- Those who earned a high school diploma, attended some college, graduated from college or attended graduate school were more likely to say they have voted than those who had not finished high school.

Analysis of the predicted probability of voter turnout using the individual data

Using this Census Bureau Current Population Survey data the Eagleton Institute of Politics performed an additional statistical analysis in which they calculated the effect of various independent variables on the probability that a respondent said he or she voted. This analysis, involving 54,973 voters cross-tabulated the maximum and minimum voter identification requirements in each state with the five levels of voting requirements: stating name, signing name, matching the signature, a non-photo ID, photo-ID signing an affidavit. The results of these **Predicted Probability of Voter Turnout for all Voter** tabulations are summarized in Table 3 below:

From this analysis, the Eagleton Institute of Politics found that three of the voter identification requirements **(which ones?)** exerted a statistically significant, negative effect on whether or not the CPS survey respondents said they had voted in 2004. That is, compared to states that require voters to only state their name, those states which require the voter to sign his or her name, to provide a non-photo ID, or to provide a photo ID as a maximum requirement, were shown to have a negative influence on turnout. Also, a negative influence on turnout was found when comparing those states that require voters to only state their name, as compared to those states which have as a minimum requirement for verifying voter ID, signing an affidavit.

This probability analysis also found that the competitiveness of the presidential race had a significant effect on turnout as well as some significant demographic and educational effects. For the entire voting population signature, non-photo identification and photo identification requirements were all associated with lower turnout rates compared to the requirements that voter simply state their names. The analysis further found that:

Deleted: lover

- The predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names and that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to only having to state one's name.

Comment [J10]: How was this derived? What was it based on? How were other variables controlled/ What were the other variables?

Comment [J11]: How do these figures compare to the other variables such as a hotly contested race or a "no interest" race.

- Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. African

American and Asian-American voters were about 6 percent less likely, while white voters were about 2 percent less likely.

- Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, while they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

- For those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in those states that required an affidavit as the minimum requirement. These percentages were arrived at when comparing these states to ones that use as a minimum or maximum requirement, the voter to merely state his or her name.

Conclusions from the statistical analysis

The statistical analysis found that as voter identification requirements vary, so do voter turnout rates. These findings were borne out through analyses conducted on aggregate data and individual–level data. There were, however, some distinctions found depending upon whether or not the state's particular voter identification requirements were set as minimums or maximums.

- The overall relationship between voter identification requirements and turnout for all registered voters was found to be small but statistically significant.

- Using the aggregate data the signature match and the non-photo identification requirement correlated with lower turnout. The photo identification requirement did not have a statistically significant effect.

- In the individual-level data the signature, no-photo identification and photo identification requirement were all correlated with lower turnout when compared to the requirements that voter simply state their names.

- Across various demographic groups (African-Americans, Asian-Americans and Hispanics) a statistically significant relationship was found between the non-photo identification requirement and voter turnout

Caveats to the Analysis

The Eagleton Institute for Politics and the EAC make note that while this analysis is a good beginning, significant questions remain regarding the relationship between voter identification requirements and turnout. These analyses are unable, for example, to capture how or why identification requirements might lower turnout. That is, is it because voters are aware of the identification requirements and stay away from the polls because of them? Alternatively, do the requirements result in some voters being turned away when they cannot provide the identification, or must cast a provisional ballot? Knowing more about the "on the ground" experience of voters regarding various identification requirements will guide state and local level policy makers in their efforts to educate voters about the requirements. These experiences could also help instruct poll workers on how to handle questions and possible disputes over voter identification requirements.

Deleted: r

Deleted: election judges

Public Policy and Administrative Considerations

Voter Identification, often described as the critical step in protecting the integrity of the ballot, is a process which can ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot. A voting system that requires voters to produce an identification document or documents may prevent the ineligible from voting, but also may prevent the eligible from casting a ballot.

Evaluating the effect of different voter identification regimes can be most effective when based on clear legal, equitable and practical standards. The questions outlined below might point policymakers to standards that can be created around voter identification requirements.

1. Is the voter ID system designed on the basis of valid and reliable empirical studies the will address concerns regarding certain types of voting fraud?
2. Does the voter ID requirement comply with the letter and sprit of the Voting Rights Act?
3. How effective is the voter ID requirement on increasing the security of the ballot and can it be coordinated with the statewide voter registration database?
4. How feasible is the voter identification requirement? That is, are there administrative or budgetary considerations or concerns? How easy or difficult will it be for pollworkers who must administer the requirement?
5. How cost effective is the voter ID system? That is, what are the monetary and non-monetary costs to the voter and to the state for implementing the ID system?
6. If voter ID requirements are shown to reduce voter turnout (generally, or with some particular groups), what possible steps should be taken to ameliorate this problem?

Recommendations and Next Steps

As the Federal agency charged with informing election officials and the public about various issues related to the administration of elections EAC believes it should, in its capacity as a supporter of elections research, undertake additional study into the topic of voter identification requirements and the implementation of them in the following ways:

- Longitudinal studies of jurisdictions that have changed voter identification requirements.
- State-by-state and precinct-level analyses that will examine the correlations between various voter identification requirements and voter registration and turnout
- Alternative forms and methods for verifying a voter's identity.
- Continuing research into the connection between various voter identification requirements and the number of ballots cast and counted
- A continuing state-by-state update on changes to voter identification requirements.
- Continued collection of state-by-state data which will help examine the impact that voter identification requirements are having on the number of voters who are casting provisional ballots because of voter identification verification issues.

Subject Questions for the public meeting

History: This message has been replied to.

Donetta,

Below are some questions that I have compiled in reading through the summary that Karen developed. I have not re-evaluated the draft report provided by Eagleton. As soon as I have the opportunity to revisit that document, I will send any additional questions that I would suggest asking.

QUESTIONS FOR EAGLETON:

1. What is meant by "statistically significant"? Please explain in plain language when a result is considered statistically significant. Also, please provide an academic definition of that term. How did you calculate the mean and standard deviations from the mean?
2. What data was used to derive these research findings?
3. Did you attempt to find information or data related to elections prior to 2004 in states that have voter identification requirements?
4. What other variables other than voter identification were tested? Contested race? Historical voter turnout? Weather? Media attention to the area? Candidate activities/campaign?
5. What was the impact (positive or negative) of these other factors on voter turnout?
6. How did you control these variables/factors when measuring the impact of voter ID on voter turnout or on prospective voter turnout? For example, did you only apply the factor to like circumstances – similar historical turnout, same level of contention in the races of the ballot, etc.
7. Would the study and your conclusions have been more reliable if additional data had been analyzed? Data such as voter turn out in states that have had voter ID in past Federal elections?
8. What data did you use to identify voter turnout?
9. What data did you use to identify whether people or groups of people were more or less likely to vote when identification is required?

Why did you use census data as opposed to data on registered voters? Doesn't census data also include information from people who are not registered voters and people who are not even eligible to be registered voters?

Subject More thoughts on Eagleton draft report

After having read the Eagleton draft report, I have some thoughts and questions:

I am troubled by the concept that Eagleton compared states as if they were equal. They assume that, all factors being equal, that the voter turn out in each state would be equal. I am not at all certain that this is the case. Further, there is no evidence that the staticians actually compared previous years' turnout in the same state to determine whether 2004 was some sort of anomally for that state (high or low). Long story short, I am very skeptical of the data that they used to draw conclusions. We should ask questions about what data they used, how they parsed it, why they used the data, what other data could have been used to provide better, more reliable results.

My second concern is how they (statistically speaking) differentiate between a minimum requirement (i.e. state name, photo i.d., etc) and a maximum requirement (i.e., state name, photo i.d., etc.). It makes no sense to me how they could possibly arrive at a different percentage for these requirement levels.

My third issue is the persistent use of the phrases "ballot access" and "ballot integrity" without some definition or some explanation of what those concepts are.

Subject Eagleton documents

History: This message has been replied to.

Hello everyone,
I am trying to get my arms around exactly what information from either the Eagleton voter ID or provisional voting report was sent from this office to outside parties. Please note that I have had several FOIA requests for both reports, so I need to know exactly what has been released to make sure that I have responded to these requests accurately. In other words, I want to make sure that I have not refused to provide data or information that has been provided to third parties. If you do not find any records regarding this request, please respond to this email "no records found." Thank you.

Subject Voter ID

History: This message has been replied to.

Mr. Galloway,
Per your inquiry, we have been working with the Eagleton Institute to study issues related to voter ID. We held a public meeting earlier this month in which we discussed this project to provide an update on progress being made. At the meeting, EAC commissioners asked the researchers questions about what they'd found so far, methodology, etc. At the conclusion of the questions, EAC Chair Donetta Davidson instructed EAC staff to take a look at Eagleton's recommendations for moving forward and w/n 30 days present the commissioners with suggestions for further research about voter ID laws. She noted that she thought it was important to study more than one election cycle, since some of these ID laws are so new. Go here to view the testimony Eagleton presented at the meeting, and go here to read the Eagleton paper, in which they referenced some of the data they had collected on our behalf.

For your information, EAC is an independent bipartisan commission created by HAVA. It is charged with developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting test laboratories, certifying voting systems and serving as a national clearinghouse and resource of information regarding election administration. The Commission is also responsible for auditing the use of HAVA funds.

Let me know if I can be of further assistance. 202-566-3103.

Subject Feedback on Draft Statement

Karen:

Following up on yesterday's briefing about the Draft Statement on the Voter ID study, here is my feedback.

1. I agree that we should send out all of the appendices. I think EAC needs to send out as much information as we have available at this time from the Eagleton study..

2. The statement should clarify that at a minimum we are looking to compare 2008 voter participation stats with the 2004 stats used in the Eagleton report. (FYI - The term voter participation includes registration and turnout.)

Perhaps that explanation should be the fourth paragraph on Page 1, explaining why EAC decided to not perform an analysis at this time of the impact of voter id requirements on turnout.

3. I agree that the last section of the statement should include EAC's intention to convene a (one) large working group of advocates, academics (statisticians included) and election officials to discuss what the next EAC study on this topic should cover and what the time frame for such study should be.

Lastly, I read this as a draft and "assume" it will be edited to take care of grammatical and spelling errors.

Thanks,
Gracia M. Hillman

All-

Commissioner Hunter just stopped by my office and has asked me to insert stronger language into the statement that speaks to EAC's problems with the research and statistical methodology that Eagleton employed. This is language on which she believes she and Commissioner Hillman have been able to agree.

I will draft a sentence or two to this effect and insert it into paragraph four first thing tomorrow morning.

Subject Re: Revised EAC Statement

History: This message has been replied to.

I prefer the second option with respect to release all of the appendices and wish we could reference timing for the convening of the working group but if that is impossible then I guess I will live with that. Also "disclaimer" paragraph re methodology is okay with me.

Is it possible to date or number drafts in the future so that I can keep them straight?

Thanks.

Subject Re: Next draft of the Voter ID statement

I am comfortable with the latest redraft. However, if there are any changes of substance, even a one word change can be substantive in this document, I will want to see a redraft before it is sent for tally vote.

The statement is well written but there remain some editing issues. Lack of commas, use of the words "which" versus "that." Typo - the word "this" when I think it is supposed to be "his." (I do not consider grammatical and spelling edits as substantive.)

Thanks,

Subject Re: Latest draft of the EAC Voter ID statement

History: This message has been replied to.

Attached, please find my edits. My intention was to try to explain in English how the Contractor conducted the study in the 2nd graph of the background statement. I realize I left some information out; for example, how he ran the numbers based on maximum and minimum id requirements. I am open to any suggestions on how to better describe what they did; however, despite reading the report and Appendix C many times, I am still do not understand exactly how the study was conducted. I think we should run the 2nd graph by the Contractor to ensure its accuracy.

EAC Statement on Future Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. The contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states with a photo identification requirement was compared to the turnout rate in 2004 in states with a requirement that voters sign their name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates[1] and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.[2] The contractor and the EAC agree that the report raises more questions than provides answers.[3]

Deleted: Using two sets of data– aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau– the Contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.¶

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Recommendations for further study and next steps

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the

---

[1] The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population include persons who are not registered to vote.

[2] The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

[3] See EAC Public Testimony, February 8, 2007, page 109.

implementation of voter identification requirements, to be a first step in the Commission's consideration of voter identification requirements.

However, EAC has concerns regarding the research and statistical methodology the Contractor chose to employ in order to analyze voter identification requirements and the potential variation in turnout rates based on the type of voter identification requirements. EAC is not adopting the report submitted by the Contractor and, therefore, is not releasing the report.

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

- Convene, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Study the effects, including voter turnout, voter registration, and fraud, of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

Deleted: , s

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC Statement on Future Study of Voter Identification Requirements

Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data-- aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the Contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, www.eac.gov.

EAC Recommendations for further study and next steps

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's consideration of voter identification requirements.

However, EAC has concerns regarding the research and statistical methodology the Contractor chose to employ in order to analyze voter identification requirements and the potential variation in turnout rates based on the type of voter identification requirements. EAC is not adopting the report submitted by the Contractor and, therefore, is not releasing the report.

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

- Convene, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Tom-

I am certain the provisional voting paper will be presented. The Chairman has asked that the Commissioners have an opportunity to review your corrected and final draft of that document prior to it being presented to the EAC Boards, preferably next week.

Because of the issues surrounding voter identification, I am less certain about the protocol that will be followed. I will ask Tom Wilkey and Julie Hodgkins to offer insights on that matter.

I will also ask them about the protocol to be followed regarding the formal submission and acceptance of both the papers.

Tom-

Just had a good conversation with our folks in the legal department, who as you know, are responsible for coordinating our public meetings.

Original plans had slotted Eagleton for the presentation of its final reports on provisional voting and voter id, at a June public meeting. Those plans have been revised to have Eagleton, instead, present its findings to the EAC Board of Advisors and Standards Board on May 24th.

The details of the Board of Advisors and Standards Board meetings are being finalized this week and early next. I will be certain to get your more details, as I learn of them.

Also, I will get you the details on who will provide the EAC peer review of the Voter ID work, as soon as I have them.

Subject RE: Schedule for completion of Prov. Voting and Voter ID research

Thanks, Karen.

Just to be sure that our expectations are clear, I'll summarize the perspective behind the schedule we submitted for the recent extension.

A. Provisional Voting

1. We presented our Provisional Voting report to the commissioners several months ago, revised its organization and clarified findings and recommendations in line with the comments of staff and commissioners, and we researched Tom Wilkey's additional question of the effect of the time for review on the evaluation of provisional ballots, which will be included in the final revision.
2. The final draft will be completed by May 5 .
3. Based on discussions with you and the commissioners we look forward to presenting that revised, final report to the Advisory Board on May 24, following whatever additional review the Commission finds appropriate.
4. Our discussions with Commissioners and staff anticipated that we would make some presentation of the provisional voting work at the Commission's public meeting in June, a presentation that might include revisions occasioned by the comments of the Advisory Board.

B. Voter ID

1. We presented our Voter ID research to the Commissioners in April and are now revising it in line with their comments.
2. That revised research paper will be discussed in mid May by reviewers selected by the Commission. That date was set specifically to allow us to prepare a final report that would be ready for review by the Advisory Board on May 24.
3. We anticipate that the Commission will want the comments of its Advisory Board on the Voter ID report before it receives it in June. (Indeed, we were advised that the Advisory Board members would be most interested in the accuracy of observations or findings specific to their individual states.)
4. The appropriate conclusion for our work is a presentation of findings and recommendations for both Provisional Voting and Voter ID, 2 closely related topics, to the Commission at its public meeting in late June, just a week before the termination of our contract under the extended schedule.

I hope you'll share this outline of our expectations with the others at the Commission involved in assuring a successful completion of this research and analysis.

Tom O'Neill

Tim, Tom, John, et.al--

The EAC has identified three academics who are going to serve as peer reviewers of the Eagleton Voter ID paper and research.

They are Jonathan Nagler of New York University, Jan Leighley, University of Arizona, and Adam Berinsky of MIT.
They are ready to review the documents as soon as they are available.

I would like to them one week to review the material and then have a joint conference call on **Thursday, May 11**, in which we would all have an opportunity to discuss the research methodology and statistical analysis, along with general comments and suggestions.

If you are able to get to me the paper and the supporting data analysis, I will distribute to the documents ASAP.
Also let me know, if you would, your availability on May 11 to do this conference all.

I anticipate that it will last approximately 90 minutes.

Tom-

You'll recall that we discussed the fact that the peer review group who Eagleton has assembled do not have the sufficient technical expertise to give us the expert/technical advice we need on the statistical analysis of the Voter ID piece. Only two persons on Eagleton's peer review group have a requisite research and statistical background
and knowledge.

You may also remember that Mike told me that he thought that the paper needed an additional set of eyes and review by academics with a background and expertise in election statistics and analysis. When I initially proposed a review panel of six you said that was too many; we agreed that I would find three persons to do the review and that we would pay them a small honoraria for doing the review.

Subject: Re: Voter ID Paper --Final Draft

Tom-

You'll recall that we discussed the fact that the peer review group who Eagleton has assembled do not have the sufficient technical expertise to give us the expert/technical advice we need on the statistical analysis of the Voter ID piece. Only two persons on Eagleton's peer review group have a requisite research and statistical background
and knowledge.

You may also remember that Mike told me that he thought that the paper needed an additional set of eyes and review by academics with a background and expertise in election statistics and analysis. When I initially proposed a review panel of six you said that was too many; we agreed that I would find three persons to do the review and that we would pay them a small honoraria for doing the review.

If we get that many varying opinions from such experts, probably says this work is too controversial to take to a level of serious public review and discussion. That would be a good thing to know, and would save us the embarrassment, I think.

Get some rest. You missed my daughter yesterday- I wanted her to meet my boss.

Subject E-mail to Voter ID peer reviewers

Tom and Julie-

Please take a look at this draft e-mail and let me know if it captures all that it needs to.

Would like to get this out ASAP- appreciate your feedback..

Dear Jonathan Nagler
Dear Jan Leighley
Dear Adam Berinsky

On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paper's findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:

- The research methodology which was used to support the paper's conclusions
- The specific statistical applications which were used to analyze the data and arrive at various conclusions

If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.

On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagleton's peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EAC's Board of Advisors and Standards Boards in late May.

While EAC agency policy does not allow us to provide you with financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Karen Lynn-Dyson

Subject Fw: Revised Voter ID Analysis

Colleagues-

Attached please find the data analysis on voter identification requirements which the Eagleton Institute of Politics has prepared for the U.S. Election Assistance Commission.

As you will note from Eagleton's Project Manager, Tom O'Neill, the voter id paper which incorporates this analysis, and will be presented to the public in June, is forthcoming early next week.

EAC's Contract's Assistant, Aletha Barrington, will be in touch with each of you to provide specifics regarding the May 11, 11:30 am conference call, in which we will discuss the papers.

In the meantime, many thanks again for agreeing, on such short notice, to lend your expertise to this effort.

Regards-

Subject Revised Voter ID Analysis

Karen,

Attached is Tim Vercellotti's Voter ID analysis revised to use Citizen Voting Age population as the base for turnout calculations and to take account of comments or issues raised by the EAC and our Peer Review Group. This draft is for distribution to the reviewers who will meet by teleconference on May 11, at, we understand, 11:30 a.m.

You are receiving this at the same time that it is being distributed to the Eagleton-Moritz team so that the new reviewers will have a week to prepare for our conversation on the 11th. Early next week you will receive a revised summary paper on Voter ID that incorporates the new data and findings in Tim's revised analysis. That too will be for distribution to the new reviewers.

Tom O'Neill

VoterIDAnalysis VercRev0504.doc

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University

May 4, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater for some specific types of requirements. For example, critics argue that requiring voters to produce government-issued photo identification on Election Day is more demanding than, say, requiring that they state their names at the polling place. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I treated the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[2]

---

[2] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. I coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the

dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county exerted a positive effect on voter turnout, and the percentage of individuals living below the poverty line had a negative effect. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance ($p = .05$).

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] In addition, adding the interactions to the model resulted in the percentage of Hispanics in the population having a direct and negative effect on turnout. The interactions suggest that voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data ($p < 0.005$).

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

[Table 3 here]

The effects of the minimum requirements fell short of statistical significance ($p = 0.08$). The battleground state variable continued to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate had no statistically significant effect. As in the maximum identification requirement model, as the percentage of the population that is poor increased, turnout declined. As the percentage of elderly increased, so did turnout. The proportion of African-Americans in the population had a positive effect on turnout, while the percentage of Hispanics did not affect turnout.

---

intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.13 [-0.03 (voter id) - 0.13 (Hispanic) + 0.03 (voter id X Hispanic)].

Adding interactive effects to the model resulted in a statistically significant and negative effect of minimum voter identification requirements on turnout. The percentage of Hispanic adults in the county had a significant and negative effect on turnout, and the percentage of individuals below the poverty line continued to have a negative effect. Interactions between the percentages of Hispanics and those below the poverty line and minimum voter identification requirements also were significant. The percentage of African-Americans in the county and the interaction between African-Americans and voter identification requirements were not significant. A chi-square test for the difference in fit between the two models showed that the model with interactions provides a better fit to the data ($p < .025$).

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the demands of voter identification requirements increase, turnout declines. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[5] Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[6] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S.

---

[5] A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

[6] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[7] As in the analysis of aggregate data, I coded voter identification requirements for each respondent's state of residence on a scale of one to five, with one representing the least demanding requirement (stating one's name) and five representing the most demanding requirement (photo identification or affidavit).

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes).[8] Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which

---

[7] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[8] Asian-Americans are included in the "other non-white races" category. In response to a request from officials at the U.S. Election Assistance Commission who had read an earlier version of this paper and were curious about the experiences of Asian-Americans, I ran models using Asian-Americans as a separate category in addition to the models presented here. Voter identification requirements did not have a statistically significant effect on whether Asian-American voters said they turned out in the 2004 election.

calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[9] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 0.912 for stating one's name to 0.887 for photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of .025, or 2.5 percent, across the five types of identification.[10] When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it

---

[9] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[10] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of <u>all</u> citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group. I disaggregated the sample by the variable of interest, omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[11] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of Black/Non-Hispanics voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent when the maximum requirement was stating one's name, and the probability dropped 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Breaking down the 18- to 24-year-old age group by race shed additional light on the effects of voter identification requirements on specific groups.

[Table 8 here]

The gap in predicted probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out was 9.2 percent when the identification requirements varied from stating one's name to providing photo identification. The gap was 7.8 percent when taking into account the minimum requirements. The effects of maximum voter identification requirements also were statistically significant for African-Americans in the 18- to 24-year-old age group, with a gap in

---

[11] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

the predicted probability of voting of 10.6 percent. Maximum and minimum voter identification requirements were not a significant predictor of voting among Hispanics ages 18 to 24.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[12]

[Table 9 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements). Given that political discourse about voter identification requirements includes concerns about the effects of the requirements on poor and minority voters, I also ran probit analyses for sub-samples of white and minority voters who fell below the poverty line. The voter identification requirements did not exert statistically significant effects on turnout among poor White/Non-Hispanic and Hispanic voters, but did have a significant effect on Black/Non-Hispanic voters who were below the poverty line.[13] Allowing the maximum voting requirement to vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 10 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

---

[12] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

[13] The lack of significant effects for poor Hispanic voters is in contrast to the results from the aggregate data analysis. The sub-sample of poor Hispanic voters was small (n = 491), which may have contributed to the lack of statistical significance.

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit. African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification. When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters. The effects on African-American voters were pronounced for two specific sub-samples: African-American voters living below the poverty line and those in the 18- to 24-year-old age group. Also, the elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[14] Or, do the requirements result in some voters

---

[14] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not

being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Maximum and minimum voter identification requirements were not a significant predictor of voting for those with some college education.

REVISED FINAL DRAFT
05/08/06

REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background

This report to the United States Election Assistance Commission (EAC) analyzes the effects of voter identification requirements on turnout in the 2004 election and makes recommendations for best practices to evaluate proposals for voter ID requirements. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under a contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a draft report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

EXECUTIVE SUMMARY AND RECOMMENDATIONS

Methods

To explore the effects of voter ID requirements on electoral participation in 2004, as measured by turnout, we gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. We assigned each state to one of five categories based on its ID requirements. They are progressively more rigorous based on the demands they make on voters.[1] The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity,

---

[1] Even the most relaxed provisions for identification at the polls –anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, we drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided on this issue. The decisions so far suggest the constitutional and other constraints on voter ID requirements.

Findings

Our analysis of data from the 2004 election indicates that the form of identification required of voters affects turnout. Lack of ID can keep voters from the polls or prevent them from casting a regular ballot if they go to the polling place.[2] This finding emerged from both the analysis of aggregate, county-level data and the individual-level data of the Current Population Survey. The overall effect for all registered voters was fairly small, but statistically significant.

Voter turnout in 2004 was lower in states where voter identification requirements were more demanding. The data show a general movement toward lower turnout as voters are required to present levels of proof of their identify.

---

[2] It also seems reasonable to conclude that in states that require an identity document to vote, more voters –those lacking the required ID—will cast provisional ballots. This conclusion is a conjecture because we lack precise information on why voters must cast their ballots provisionally.

The aggregate data show that 60.9 percent of the estimated citizen voting age population turned out in 2004. An average of 64.6 percent turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification, a reduction of 6.5 percentage points. That figure, however, probably overstates the effect of voter ID requirements since the inclusion of other factors in the analysis diminishes the extent of influence of voter ID on turnout. After taking account of other factors, the analysis supports the hypothesis that as voter identification requirements increases, turnout declines.

The effects were more pronounced for some specific subgroups. Hispanic voters, the poor and those who did not graduate from high school appear to be less likely to vote as the identification requirement becomes more demanding. The analysis for some other demographic groups illustrate the range of effects predicted for more rigorous voter ID requirements:

Race or Ethnicity

- In the individual-level data for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of identification requirements.
- More rigorous ID requirements did not have a statistically significant effect when looking at all African-Americans, but
- African-American voters from households below the poverty line were 7.5 percent less likely to vote as the ID requirements varied from stating one's name to providing photo identification.

Income

- Citizens from poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit.

Education

- Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the requirements ranged from stating one's name to providing photo identification.

Age

- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.
- Turnout by young (18-24) African-American voters in states that required a government-issued photo ID was about 10% less likely to vote than in states where they had only to state their name.
- The elderly, while they would be slightly less likely to vote as the requirements changed from stating name to providing photo ID, would not necessarily be affected in the dramatic manner predicted by opponents of photo identification requirements.

Our analysis of litigation suggests that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not now sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity.[3] Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

The current lack of understanding of precisely how voter ID requirements affect turnout can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the

---

[3] The EAC has contracted with other researchers to study vote fraud issues.

2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[4] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

A voting system that requires voters to produce an identify document or documents may indeed prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements affect the decision by potential voters to go or stay away from the polls-- are not well understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

---

[4] Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections.
    I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
    II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
    III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots[5], and the safe harbor provision in presidential elections.
5. Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is

---

[5] Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional.

SUMMARY OF RESEARCH

Background and Approach of the Study

Establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [6] The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks broadly at voter ID issues and goes beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.[7]

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.[8]

---

[6] As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

[7] Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

[8] "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud.*

Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and , if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has informed us that it has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.[9] Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- can divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot

---

[9] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

rejected.[10] And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls. In conducting this analysis, we were sensitive to the observation that the problem with American elections may well be that too many people do not vote rather than that a few people may vote more than once.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here can best be described as the questions policy-makes should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?[11]
2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[12]
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[13]
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve

---

[10] The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

[11] "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

[12] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

[13] In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.[14] A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[15]
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. Does the Voter ID requirement have a neutral result on the composition of the qualified and eligible electorate? ID requirements should not be designed to, nor unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another.

Voter ID and Turnout

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex. Moving beyond the statutes and regulations,

---

[14] "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

[15] For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places.

Like any system run by fallible people, the voter ID process is subject to variation in practice.[16] Voters may be confronted with demands for identification different from the directives in state statutes or regulation. Under the pressures of Election Day, there is no sure way to report the wide variety of conditions each voter encounters. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. Nevertheless, we are satisfied that the categories used in this report provide a level of discrimination among voter identification regimes sufficient for the analysis that we have undertaken.

TABLE 1 -- Voter ID Requirements[17]

State	Forms of ID Required 2004	Current ID Requirement for First-Time Voters	Current ID Requirements for All Other Voters	Verification Method for Provisional Ballots

* States applies only HAVA's ID requirement, applicable for first-time voters who registered by mail and did not provide applicable ID at the time of registration.

[1] Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

[2] Florida required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

[3] Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

[4] Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

[5] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[6] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[7] Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

[8] Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Effect of Voter ID requirements on Turnout

We examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

The Voter ID category assigned to each state is shown in Table 1. We analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau. [18]

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 64.6 percent of the citizen voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis supports the hypothesis that as voter identification requirements become more stringent, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Methods

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had

---

[18] See Appendix for the full report: Tim Vercellotti, "Analysis of Voter Identification Requirements on Turnout," The Eagleton Institute of Politics, Rutgers University, May 4, 2006.

to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[19]

We coded the states according to these requirements to test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

Election laws in many states, however, offer exceptions to these requirements if potential voters lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). In recognition of this fact, we also categorized states based on the *minimum* requirement for voting with a regular ballot.

In 2004 none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states).

We treated the minimum ID in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

We examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the

---

[19] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

The aggregate data posed a greater challenge to determine percentage of the voting-age population that has U.S. citizenship. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue we estimated the 2004 citizen voting-age population for each county using a method reported. Therefore, we calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. This method was used in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission.

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous. In the statistical analysis, we coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification.

Findings

As the level of required ID proof increases, with photo identification as the most demanding requirement, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30, p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20, p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**64.6 %**	State Name	**63.0 %**
Sign Name	**61.1 %**	Sign Name	**60.8 %**
Match Signature	**60.9 %**	Match Signature	**61.7 %**
Provide Non-Photo ID	**59.3 %**	Provide Non-Photo ID	**59.0 %**
Provide Photo ID	**58.1 %**	Swear Affidavit	**60.1 %**
Average Turnout (All States)	*60.9 %*		

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone do not determine voter turnout. Other factors make a difference in turnout, often a greater difference than the ID requirements. Multivariate models can take into account other predictors of turnout and therefore paint a more complete picture of the relationship between voter identification requirements and turnout. The model used here also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The maximum ID requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. The more senior citizens and African-Americans in the county, the higher the turnout. The percentage of the population living below the poverty reduced turnout. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance (p = .05).

The analysis tested the hypothesis that stricter voter ID requirements dampen turnout among minorities. The data revealed no statistically significant effect on turnout for African-Americans in general. But it revealed a significant reduction in turnout for Hispanics and the poor. The analysis using the minimum ID categories produced similar results.

Analysis of the aggregate data at the county level supports the hypothesis that as voter ID requirements grow stricter, turnout declines. This effect is strongest in counties with concentrations of Hispanic residents or families below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout.[20] Married people are more likely to vote than those who are not married. To explore the effects of voter identification requirements on turnout, examining individual-level data is important.

Individual-level Analysis

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 60.9%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger citizen voting-age population for the

---

[20] Education is an important factor in predicting turnout. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

aggregate data. Also some survey respondents overstate their incidence of voting. Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[21] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. Excluded are those who said they were not registered to vote and those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Also excluded are respondents who said they were not U.S. citizens.[22]

The dependent variable in these analyses is whether a respondent reported voting in the November 2004 election. As in the aggregate analysis, stricter voter ID requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004.

Table 3 Predicted probability of voter turnout

ID Category	Maximum requirement	Minimum requirement
State name	91.2%	91.1%
Sign name	90.6%	90.3%
Match signature	90.0%	89.5%
ID	89.4%	88.7%
Photo ID	88.7%	----
Affidavit	----	87.8%
Difference from lowest to highest	**2.50%**	**3.30%**
N	54,973	

Predicted probability of registered voters saying they voted as the identification requirement varies from the lowest to the highest point in the scale, with all other variables held constant. Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.

---

[21] The Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent.

[22] The CPS did not ask the voting questions of respondents who were not U.S. citizens. The design of the questionnaire skips those questions for non- citizens.

The influence of voter identification requirements, holding all other variables constant, is shown in Table 3 below. The probability of voting dropped with each level of voter identification requirement, with a total drop of 2.5 percent, across the five types of identification for the maximum requirement and 3.3% for the minimum requirements. [23]

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group.

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

- Turnout in states requiring photo ID was predicted as 8.9 percentage points lower than in states where voters simply stated their names.
- The strictest ID requirements reduced the probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out by 7.8 to 9.2 percentage points.
- For African-Americans in the 18- to 24-year-old age group the gap was 10.6 percentage points.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[24] Allowing the maximum voting requirement to

---

[23] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

[24] Respondents were coded as being above or below the U.S. Census Bureau's 2004 poverty line based on their reported annual household income and size of the household.

vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well. Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

Conclusions of the Analysis

As the stringency of voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data.

- In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements.
- Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit.
- African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education.

- Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification.

- When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.

Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters.

- The effects on African-American voters were pronounced for two specific sub-samples, African-American voters living below the poverty line and those in the 18- to 24-year-old age group.
- The elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. Do potential voters who cannot or do not want to meet the identification requirements simply stay away from the polls? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? (Proponents of stricter voter ID requirements might argue that some part of the reduction comes from keeping the truly ineligible from voting.)

Our data alone cannot resolve these questions. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.
It is important to note that the 2004 data do not allow us to draw conclusions about the effect of laws such as those recently passed in Georgia and Indiana, which require government-issued

photo ID. No such laws were in place in 2004, and the five states that then required photo ID at the time allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction,

enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the

legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the

Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased. [25]

---

[25] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal*

The dynamics of Voter ID requirements –how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. So far as it may be necessary to reduce vote fraud made possible by inadequate voter ID, the research could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended elsewhere by one of the authors of this report, Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed.[26]

Election Reform, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

[26] "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier. "

Appendix A
Summary of Voter Identification Requirements By State

Prepared by
Sara A. Sampson, Reference Librarian,
The Ohio State University Moritz College of Law.

Voter ID Requirements

State	Forms of ID Required 2004	Statutory Language	Statutory Citation
Alabama	Provide ID	(b) Each elector shall provide identification to an appropriate election official prior to voting. A voter required to show identification when voting in person shall present to the appropriate election official either of the following forms of identification: (1) A current valid photo identification. (2) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. The term "other government document" may include, but is not limited to, any of the following: a. A valid identification card issued by a branch, department, agency, or entity of the State of Alabama, any other state, or the United States authorized by law to issue personal identification. b. A valid United States passport. c. A valid Alabama hunting or fishing license. d. A valid Alabama permit to carry a pistol or revolver. e. A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States. f. A valid United States military identification card. g. A certified copy of the elector's birth certificate. h. A valid Social Security card. i. Certified naturalization documentation. j. A certified copy of court records showing adoption or name change. k. A valid Medicaid card, Medicare card, or an Electronic Benefits Transfer Card (formerly referred to as a "food stamp card"). (c) For voters required to show identification when voting by mail, the voter shall submit with the ballot a copy of one of the forms of identification listed in subsection (b). (e) An individual required to present identification in accordance with this section who is unable to meet the identification requirements of this section shall be permitted to vote by a challenged or provisional ballot, as provided for by law. (f) In addition, an individual who does not have identification in his or her possession at the polls shall be permitted to vote if the individual is positively identified by two election officials as a voter on the poll list who is eligible to vote and the election official signs the voters list by where the voter signs. Effective Date: June 24, 2003	Ala. Code § 17-11A-1
Alaska	Provide ID	(a) Before being allowed to vote, each voter shall exhibit to an election official one form of identification, including (1) an official voter registration card, driver's license, state identification card, current and valid photo identification, birth certificate, passport, or hunting or fishing license; or (2) an original or a copy of a current utility bill, bank statement, paycheck, government check, or other government document; an item exhibited under this	Alaska Stat. § 15.15.225

		paragraph must show the name and current address of the voter. (b) An election official may waive the identification requirement if the election official knows the identity of the voter. The identification requirement may not be waived for voters who are first-time voters who initially registered by mail or by facsimile or other electronic transmission approved by the director under AS 15.07.050, and did not provide identification as required in AS 15.07.060. (c) A voter who cannot exhibit a required form of identification shall be allowed to vote a questioned ballot. effective June 17, 2003	
Arizona	Provide ID	B. If a statewide voter registration database is not yet operational, for any person who has registered to vote by mail for the first time in this state after January 1, 2003 or who is reregistering by mail after January 1, 2003 after moving from one county to another county in this state, the person shall comply with the following in order to be issued a ballot: 1. The person shall present either one of the following: (a) A current form of identification that bears a photograph of the person and the name of the person. (b) A current utility bill, bank statement, paycheck, government issued check or other government document that shows the name and registration address of the person. 2. If the person does not present a document that complies with paragraph 1, the person is only eligible to vote a provisional ballot as prescribed by § 16-584. Effective Dec. 1, 2003	Ariz. Rev. Stat. Ann. § 16-579
Arkansas	Provide ID	7-5-305. Requirements. (a) Before a person is permitted to vote, the election official shall: (1) Request the voter to identify himself in order to verify the existence of his name on the precinct voter registration list; (2) Request the voter, in the presence of the election official, to state his address and state or confirm his date of birth; (3) Determine that the voter's date of birth and address are the same as those on the precinct voter registration list; (4) If the date of birth given by the voter is not the same as that on the precinct voter registration list, request the voter to provide identification as the election official deems appropriate; (5)(A) If the voter's address is not the same as that on the precinct voter registration list, verify with the county clerk that the address is within the precinct. (B) If the address is within the precinct, request the voter to complete a voter registration application form for the purpose of updating county voter registration record files. (C) If the address is not within the precinct, instruct the voter to contact the county clerk's office to determine the proper precinct; (6) If the voter's name is not the same as that on the precinct voter registration list, request the voter to complete a voter registration application form for purposes of updating county voter registration record files; (7) Request the voter, in the presence of the election official, to sign his name, including his given name, his middle name or initial, if any, and his last name in the space provided on the precinct voter registration list. If a person is unable to sign his signature or make his mark or cross, the election official shall enter his initials and the voter's date of birth in the space for the person's signature on the precinct voter registration list; and	Arkansas Code Annotated § 7-5-305

		(8)(A) Request the voter for purposes of identification to provide a valid driver's license, photo identification card issued by a governmental agency, voter card, social security card, birth certificate, United States passport, employee identification card issued by a governmental agency containing a photograph, employee identification card issued in the normal course of business of the employer, student identification card, Arkansas hunting license, or United States military identification card. (B)(i) If a voter is unable to provide this identification, the election official shall indicate on the precinct voter registration list that the voter did not provide identification. (ii) Following each election, the county board of election commissioners may review the precinct voter registration lists and may provide the information of the voters not providing identification at the polls to the prosecuting attorney. (iii) The prosecuting attorney may investigate possible voter fraud; and (9) Follow the procedures under §§ 7-5-310, 7-5-311, and 7-5-523, if the preson is a disabled voter and presents himself or herself to vote. Effective: July 16, 2003	
California	Sign Name	Any person desiring to vote shall announce his or her name and address in an audible tone of voice, and when one of the precinct officers finds the name in the index, the officer shall in a like manner repeat the name and address. The voter shall then write his or her name and residence address or, if the voter is unable to write, shall have the name and residence address written by another person on a roster of voters provided for that purpose, whereupon a challenge may be interposed as provided in this article. (Enacted in 1994, no amendments since)	Cal. Elec. Code § 14216
Colorado	Provide ID	(1) Except as provided in subsection (4) of this section, any eligible elector desiring to vote shall show his or her identification as defined in section 1-1-104(19.5), write his or her name and address on the signature card, and give the signature card to one of the election judges, * * * (4) An eligible elector who is unable to produce identification may cast a provisional ballot in accordance with article 8.5 of this title. (19.5)(a) "Identification" means: (I) A valid Colorado driver's license; (II) A valid identification card issued by the department of revenue in accordance with the requirements of part 3 of article 2 of title 42, C.R.S.; (III) A valid United States passport; (IV) A valid employee identification card with a photograph of the eligible elector issued by any branch, department, agency, or entity of the United States government or of this state, or by any county, municipality, board, authority, or other political subdivision of this state; (V) A valid pilot's license issued by the federal aviation administration or other authorized agency of the United States; (VI) A valid United States military identification card with a photograph of the eligible elector; (VII) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the elector; (VIII) A valid medicare or medicaid card issued by the United States health care	Colo. Rev. Stat. Ann. § 1-7-110; Colo. Rev. Stat. Ann. § 1-1-104

		financing administration; (IX) A certified copy of a birth certificate for the elector issued in the United States; or (X) Certified documentation of naturalization. (b) Any form of identification indicated in paragraph (a) of this subsection (19.5) that shows the address of the eligible elector shall be considered identification only if the address is in the state of Colorado. Effective 5/28/2004	
Connecticut	Provide ID	(a) In each primary, election or referendum, when an elector has entered the polling place, the elector shall announce the elector's street address, if any, and the elector's name to the checkers in a tone sufficiently loud and clear as to enable all the election officials present to hear the same. Each elector who registered to vote by mail for the first time on or after January 1, 2003, and has a "mark" next to the elector's name on the official registry list, as required by section 9-23r, shall present to the checkers, before the elector votes, either a current and valid photo identification that shows the elector's name and address or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows the name and address of the elector. Each other elector shall (1) present to the checkers the elector's Social Security card or any other preprinted form of identification which shows the elector's name and either the elector's address, signature or photograph, or (2) on a form prescribed by the Secretary of the State, write the elector's residential address and date of birth, print the elector's name and sign a statement under penalty of false statement that the elector is the elector whose name appears on the official checklist. Such form shall clearly state the penalty of false statement. A separate such form shall be used for each elector. If the elector presents a preprinted form of identification under subdivision (1) of this subsection, the checkers shall check the name of such elector on the official checklist. If the elector completes the form under subdivision (2) of this subsection, the assistant registrar of voters shall examine the information on such form and either instruct the checkers to check the name of such elector on the official checklist or notify the elector that the form is incomplete or inaccurate. Effective May 10., 2004	Conn. Gen. Stat. Ann. § 9-261
Delaware	Provide ID	(a) A voter, upon entering the room where an election is being held, shall announce his or her name and address and provide proof of identity, whereupon the clerks shall place a mark or make a notation of his or her name upon the election district record. In the event the voter does not have proof of identity with them, he or she shall sign an affidavit of affirmation that he or she is the person listed on the election district record. Effective: July 9, 2002	15 Del. Code § 4937
D.C.	Sign Name	(i)(1) A person shall be entitled to vote in an election in the District of Columbia if he or she is a duly registered voter. A qualified elector shall be considered duly registered in the District if he or she has met the requirements for voter registration and, on the day of the election, either resides at the address listed on the Board's records or files an election day change of address pursuant to this subsection. (2) Each registered voter who changes his or her place of residence from that listed on the Board's records shall notify the Board, in writing, of the new residence address. A change of address shall be effective on the date the notification was mailed as shown by the United States Postal Service postmark. If not postmarked, the notification shall be effective on the date of receipt by the Board. Change of address notifications from registrants shall be accepted pursuant to subsection (g) of this section, except that any registrant who has not notified the Board of his or her current residence address by the deadline established by subsection (g) of this section may be permitted to vote at the	D.C. Code § 1-1001.07

		polling place that serves the current residence address by filing an election day change of address notice pursuant to paragraph (4) of this subsection. (3) Each registered voter who votes at a polling place on election day shall affirm his or her residence address as it appears on the official registration roll for the precinct. The act of signing a copy of the official registration roll for the precinct shall be deemed affirmation of the voter's address as it appears on the Board's registration records. (Effective April 3, 2001)(not added as part of 2005 amendment)_	
Florida	Photo ID	101.043 (1) The precinct register, as prescribed in s. 98.461, shall be used at the polls in lieu of the registration books for the purpose of identifying the elector at the polls prior to allowing him or her to vote. The clerk or inspector shall require each elector, upon entering the polling place, to present a current and valid picture identification as provided in s. 97.0535(3)(a). If the picture identification does not contain the signature of the voter, an additional identification that provides the voter's signature shall be required. The elector shall sign his or her name in the space provided, and the clerk or inspector shall compare the signature with that on the identification provided by the elector and enter his or her initials in the space provided and allow the elector to vote if the clerk or inspector is satisfied as to the identity of the elector. (2) Except as provided in subsection (3), if the elector fails to furnish the required identification, or if the clerk or inspector is in doubt as to the identity of the elector, such clerk or inspector shall follow the procedure prescribed in s. 101.49. **97.0535** (3)(a) The following forms of identification shall be considered current and valid if they contain the name and photograph of the applicant and have not expired: 1. Florida driver's license. 2. Florida identification card issued by the Department of Highway Safety and Motor Vehicles. 3. United States passport. 4. Employee badge or identification. 5. Buyer's club identification. 6. Debit or credit card. 7. Military identification. 8. Student identification. 9. Retirement center identification. 10. Neighborhood association identification. 11. Entertainment identification. 12. Public assistance identification. (b) The following forms of identification shall be considered current and valid if they contain the name and current residence address of the applicant: 1. Utility bill.	West's Fla. Stat. Ann. § 101.043 & West's Fla. Stat. Ann. § 97.0535

		2. Bank statement. 3. Government check. 4. Paycheck. 5. Other government document (excluding voter identification card). Version effective 1/1/2005-12/31/2005	
Georgia	Provide ID	(a) Each elector shall present proper identification to a poll worker at or prior to completion of a voter's certificate at any polling place and prior to such person's admission to the enclosed space at such polling place. Proper identification shall consist of any one of the following: (1) A valid Georgia driver's license; (2) A valid identification card issued by a branch, department, agency, or entity of the State of Georgia, any other state, or the United States authorized by law to issue personal identification; (3) A valid United States passport; (4) A valid employee identification card containing a photograph of the elector and issued by any branch, department, agency, or entity of the United States government, this state, or any county, municipality, board, authority, or other entity of this state; (5) A valid employee identification card containing a photograph of the elector and issued by any employer of the elector in the ordinary course of such employer's business; (6) A valid student identification card containing a photograph of the elector from any public or private college, university, or postgraduate technical or professional school located within the State of Georgia; (7) A valid Georgia license to carry a pistol or revolver; (8) A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States; (9) A valid United States military identification card; (10) A certified copy of the elector's birth certificate; (11) A valid social security card; (12) Certified naturalization documentation; (13) A certified copy of court records showing adoption, name, or sex change; (14) A current utility bill, or a legible copy thereof, showing the name and address of the elector; (15) A bank statement, or a legible copy thereof, showing the name and address of the elector; (16) A government check or paycheck, or a legible copy thereof, showing the name and address of the elector; or (17) A government document, or a legible copy thereof, showing the name and address of the elector. (b) If an elector is unable to produce any of the items of identification listed in subsection (a) of this Code section, he or she shall sign a statement under oath in a form approved by the Secretary of State, separate and distinct from the elector's voter certificate, swearing or affirming that he or she is the person identified on the elector's voter certificate. Such person shall be allowed to vote without undue delay; provided, however, that an elector who registered for the first time in this state by mail and did not provide one of the forms of identification set forth in subsection (a) of this Code section at the time of registration and who is voting for the first time may vote a provisional ballot pursuant to Code Section 21-2-418 upon swearing or affirming that the elector is the person identified in the elector's voter certificate. Such provisional ballot shall only be counted if the registrars are able to verify current and valid identification of the elector as provided in this Code section within the time period for verifying provisional ballots pursuant to Code Section 21-2-419. Falsely swearing or affirming such statement under oath shall be punishable as a felony, and the penalty shall be distinctly set forth on the face of the statement." effective June, 2003	Ga. Code. Ann. § 21-2-417

Hawaii	Photo ID	(b) The voter shall present valid identification to the official in charge of the pollbook. ***Do I Need an I.D. to Vote on Election Day?*** **Yes.** Be sure to have an I.D. with a picture and signature (such as a Hawaii driver's license or state I.D. card) when you go to vote. The NVRAC card is not an acceptable form of identification. From the 2004 version of the administrative code. **§ 11-136 Poll book, identification, voting.** Every person upon applying to vote shall sign the person's name in the poll book prepared for that purpose. This requirement may be waived by the chairperson of the precinct officials if for reasons of illiteracy or blindness or other physical disability the voter is unable to write. Every person shall provide identification if so requested by a precinct official. A poll book shall not contain the social security number of any person. After signing the poll book and receiving the voter's ballot, the voter shall proceed to the voting booth to vote according to the voting system in use in the voter's precinct. The precinct official may, and upon request shall, explain to the voter the mode of voting. Last amended 2003.	Haw. Code. R. § 2-51-80 (Paper ballots; voting procedure at the polls), § 2-51-83 (Punchcard ballots; voting procedure at polls), 2-51-85.1 (Marksense ballots; voting procedure at the polls.) – All have same subsection (b) Haw. Code. R. T. 2, SUBT. 4, CH. 51, Appendix HRS 11-136
Idaho	Sign Name	(1) An elector desiring to vote shall state his name and address to the judge or clerk in charge of the combination election record and poll book. (2) Before receiving his ballot, each elector shall sign his name in the combination election record and poll book following his name therein. (5) The elector shall then be given the appropriate ballots which have been stamped with the official election stamp and shall be given folding instructions for such ballots. (Last amended in 1972)	Id. St. §34-1106
Illinois	Give Name	Any person desiring to vote shall give his name and, if required to do so, his residence to the judges of election, one of whom shall thereupon announce the same in a loud and distinct tone of voice, clear, and audible; the judges of elections shall check each application for ballot against the list of voters registered in that precinct to whom absentee or early ballots have been issued for that election, which shall be provided by the election authority and which list shall be available for inspection by pollwatchers. A voter applying to vote in the precinct on election day whose name appears on the list as having been issued an absentee or early ballot shall not be permitted to vote in the precinct. All applicable provisions of Articles 4, 5 or 6 shall be complied with and if such name is found on the register of voters by the officer having charge thereof, he	10 Ill. Comp. Stat. 5/17-9

		shall likewise repeat said name, and the voter shall be allowed to enter within the proximity of the voting booths, as above provided. One of the judges shall give the voter one, and only one of each ballot to be voted at the election, on the back of which ballots such judge shall indorse his initials in such manner that they may be seen when each such ballot is properly folded, and the voter's name shall be immediately checked on the register list. In those election jurisdictions where perforated ballot cards are utilized of the type on which write-in votes can be cast above the perforation, the election authority shall provide a space both above and below the perforation for the judge's initials, and the judge shall endorse his or her initials in both spaces. Whenever a proposal for a constitutional amendment or for the calling of a constitutional convention is to be voted upon at the election, the separate blue ballot or ballots pertaining thereto shall, when being handed to the voter, be placed on top of the other ballots to be voted at the election in such manner that the legend appearing on the back thereof, as prescribed in Section 16-6 of this Act, shall be plainly visible to the voter. At all elections, when a registry may be required, if the name of any person so desiring to vote at such election is not found on the register of voters, he or she shall not receive a ballot until he or she shall have complied with the law prescribing the manner and conditions of voting by unregistered voters. If any person desiring to vote at any election shall be challenged, he or she shall not receive a ballot until he or she shall have established his right to vote in the manner provided hereinafter; and if he or she shall be challenged after he has received his ballot, he shall not be permitted to vote until he or she has fully complied with such requirements of the law upon being challenged. Besides the election officer, not more than 2 voters in excess of the whole number of voting booths provided shall be allowed within the proximity of the voting booths at one time. The provisions of this Act, so far as they require the registration of voters as a condition to their being allowed to vote shall not apply to persons otherwise entitled to vote, who are, at the time of the election, or at any time within 60 days prior to such election have been engaged in the military or naval service of the United States, and who appear personally at the polling place on election day and produce to the judges of election satisfactory evidence thereof, but such persons, if otherwise qualified to vote, shall be permitted to vote at such election without previous registration.	
Indiana	Sign Name	–	West's Annotated Indiana Code § 3-11-8-25
Iowa	Sign Name	1. The board members of their respective precincts shall have charge of the ballots and furnish them to the voters. Any person desiring to vote shall sign a voter's declaration provided by the officials, in substantially the following form: VOTER'S DECLARATION OF ELIGIBILITY I do solemnly swear or affirm that I am a resident of the .... precinct, ... ward or township, city of ...., county of ...., Iowa. I am a registered voter. I have not voted and will not vote in any other precinct in said election. I understand that any false statement in this declaration is a criminal offense punishable as provided by law. ____________________ Signature of Voter ____________________ Address ____________________ Telephone Approved:	Iowa Code § 49.77

		Board Member 2. One of the precinct election officials shall announce the voter's name aloud for the benefit of any persons present pursuant to section 49.104, subsection 2, 3, or 5. Any of those persons may upon request view the signed declarations of eligibility and may review the signed declarations on file so long as the person does not interfere with the functions of the precinct election officials. 3. A precinct election official shall require any person whose name does not appear on the election register as an active voter to show identification. Specific documents which are acceptable forms of identification shall be prescribed by the state commissioner. A precinct election official may require of the voter unknown to the official, identification upon which the voter's signature or mark appears. If identification is established to the satisfaction of the precinct election officials, the person may then be allowed to vote. (From 2004 version of Iowa Annotated Code; effective January 1, 1995)	
Kansas	Sign Name	(b) A person desiring to vote shall provide to the election board: (1) the voter's name; (2) if required, the voter's address; and (3) the voter's signature on the registration or poll book. A signature may be made by mark, initials, typewriter, print, stamp, symbol or any other manner if by placing the signature on the document the person intends the signature to be binding. A signature may be made by another person at the voter's direction if the signature reflects such voter's intention. (Approved April 14, 2004, 2004 Kansas Laws Ch. 93)	Kan. Stat. Ann. § 25-2908(b)
Kentucky	Provide ID	117.227 Confirmation of voter's identity Election officers shall confirm the identity of each voter by personal acquaintance or by a document, such as a motor vehicle operator's license, Social Security card, or credit card. The election officer confirming the identity shall sign the precinct voter roster and list the method of identification. Effective: 7/15/02 31 KAR 4:010. Voter identification cards. Section 1. In addition to the forms of identification specifically provided for by KRS 117.227, any identification card that bears both the picture and signature of the voter, or any identification card that has been issued by the county, and which has been approved in writing by the State Board of Elections, shall be acceptable for confirmation of the voter's identity.	Ky Rev. Stat. Ann. 117.227 31 Ky. Admin. Regs. 4:010.
Louisiana	Photo ID	A. Identification of voters. (1) A person who desires to vote in a primary or general election shall give his name and address to a commissioner, who shall announce the applicant's name and address to the persons at the polling place. (2) Each applicant shall identify himself, in the presence and view of the bystanders, and present to the commissioners a Louisiana driver's license, a Louisiana special identification card issued pursuant to R.S. 40:1321, or other generally recognized picture identification card. If the applicant does not have a Louisiana driver's license, a Louisiana special identification card, or other generally recognized picture identification card, the applicant shall sign an affidavit, which is supplied by the secretary of state, to that effect before the commissioners who shall place the affidavit in the envelope marked "Registrar of Voters" and attach the envelope to the precinct register, and the applicant	La. Rev. Stat. Ann. 18:562

		shall provide further identification by presenting his current registration certificate, giving his date of birth or providing other information stated in the precinct register that is requested by the commissioners. However, an applicant that is allowed to vote without the picture identification required by this Paragraph is subject to challenge as provided in R.S. 18:565. Effective: 1/1/2002	
Maine	Give Name	The voting procedure is as follows. 1. Name announced. A voter who wishes to vote must state the voter's name and, upon request, residence address to an election clerk who shall announce the name in a loud, clear voice. (In effect at time of 2003 amendment: 2003, c. 584, § 9)	Me. Rev. Stat. Ann. tit. 21-A, § 671
Maryland	Sign Name	10-310. (a) For each individual who seeks to vote, an election judge, in accordance with instructions provided by the local board, shall: (1) locate the individual's name in the precinct register and locate the preprinted voting authority card and then authorize the individual to vote a regular ballot; (2)(i) if the individual's name is not found on the precinct register, search the inactive list and if the name is found, authorize the individual to vote a regular ballot; or (ii) if the individual's name is not on the inactive list, refer the individual for provisional ballot voting under § 9-404 of this article; (3) establish the identity of the voter by requesting the voter to state the month and day of the voter's birth and comparing the response to the information listed in the precinct register; (4) verify the address of the voter's residence; (5) if any changes to the voting authority card are indicated by a voter, make the appropriate changes in information on the card or other appropriate form; and (6) have the voter sign the voting authority card and either issue the voter a ballot or send the voter to a machine to vote.	Md. Elec. Law § 10-310
Mass.	Give Name	Each voter desiring to vote at a polling place shall give his name and, if requested, his residence to one of the officers at the entrance to the space within the guard rail, who shall thereupon distinctly announce the same. If such name is found on the voting list, the election officer shall check and repeat the name and shall admit the voter to the space enclosed by the guard rail and, in case official ballots, other than those marked "Challenged Ballots" as provided by section thirty-five A, are used, such voter shall be given one ballot. The use of electronic means such as tape recording equipment or radio broadcasting equipment for the recording or broadcasting of the names of voters not yet checked as having voted shall be prohibited. Last amended in 1981 (5B) Identification. If so authorized by the city or town clerk or registrars of voters, an election officer may request any voter to present written identification. Such requests shall not discriminate in any way, but shall be entirely random, consistent, or based on reasonable suspicion. For the purpose of 950 CMR 52.03(5B), of M.G.L. c. 54, § 76B, and of 950 CMR 52.03(5)(b), suitable written identification includes a driver's license, recent utility bill, rent receipt on a landlord's printed letterhead, lease, duplicate copy of a voter registration affidavit, or any other printed identification which contains the voter's name and address. If voters fail to present suitable written identification when so requested, they must still be allowed to vote, but an election officer or any other person may challenge their right to vote under M.G.L. c. 54, § 85 and 950 CMR 52.03(23).	Mass. Ann. Laws 54 § 76 950 Mass. Code Regs. 52.03
Michigan	Sign Name	(1) At each election, before being given a ballot, each registered elector offering to vote shall identify himself or herself by presenting an official state	Mich. Comp. Laws Ann. §

		identification card issued to that individual pursuant to Act No. 222 of the Public Acts of 1972, being sections 28.291 to 28.295 of the Michigan Compiled Laws, an operator's or chauffeur's license issued to that individual pursuant to the Michigan Vehicle Code, Act No. 300 of the Public Acts of 1949, being sections 257.1 to 257.923 of the Michigan Compiled Laws, or other generally recognized picture identification card and by executing an application showing his or her signature or mark and address of residence in the presence of an election official. If the voter registration cards are used in the precinct, the election official in charge of the precinct registration file shall compare the signature upon the application with the signature upon the registration card. If voter registration lists are used in the precinct, the election inspector shall determine if the name on the application to vote appears on the voter registration list. If the name appears on the voter registration list, the elector shall provide further identification by giving his or her date of birth or other information stated upon the voter registration list. In precincts using voter registration lists, the date of birth may be required to be placed on the application to vote. If the signature or an item of information does not correspond, the vote of the person shall be challenged, and the same procedure shall be followed as provided in this act for the challenging of an elector. If the person offering to vote has signed the registration card or application by making a mark, the person shall identify himself or herself by giving his or her date of birth, which shall be compared with the date of birth stated upon the registration card or voter registration list, or shall give other identification as may be referred to upon the registration card or voter registration list. If the elector does not have an official state identification card, operator's or chauffeur's license as required in this subsection, or other generally recognized picture identification card, the individual shall sign an affidavit to that effect before an election inspector and be allowed to vote as otherwise provided in this act. However, an elector being allowed to vote without the identification required under this subsection is subject to challenge as provided in section 727. (2) If, upon a comparison of the signature or other identification, it is found that the applicant is entitled to vote, the election officer having charge of the registration list shall approve the application and write his or her initials on the application, after which the number on the ballot issued shall be noted on the application. The application shall serve as 1 of the 2 poll lists required to be kept as a record of a person who has voted. The application shall be filed with the township, city, or village clerk. If voter registration cards are used in the precinct, the date of the election shall be noted by 1 of the election officials upon the precinct registration card of each elector voting at an election. If voter registration lists are used in the precinct, the election official shall clearly indicate upon the list each elector voting at that election. The clerk of a city, village, or township shall maintain a record of voting participation for each registered elector. The Attorney General declared that this statute violated the Equal Protection Clause of the Fourteenth Amendment. Op. Atty. Gen. 1997, No. 6930. That decision is binding on all state agencies. (Effective March 31, 1997)	168.523
Minnesota	Sign Name	(a) An individual seeking to vote shall sign a polling place roster which states that the individual is at least 18 years of age, a citizen of the United States, has resided in Minnesota for 20 days immediately preceding the election, maintains residence at the address shown, is not under a guardianship in which the court order revokes the individual's right to vote, has not been found by a court of law to be legally incompetent to vote or convicted of a felony without having civil rights restored, is registered and has not already voted in the election. The roster must also state: "I understand that deliberately providing false information is a felony punishable by not more than five years imprisonment and a fine of not	Minn. Stat. § 204C.10

		more than $10,000, or both." (b) A judge may, before the applicant signs the roster, confirm the applicant's name, address, and date of birth. (c) After the applicant signs the roster, the judge shall give the applicant a voter's receipt. The voter shall deliver the voter's receipt to the judge in charge of ballots as proof of the voter's right to vote, and thereupon the judge shall hand to the voter the ballot. The voters' receipts must be maintained during the time for notice of filing an election contest. (Effective January 1, 2004)	
Mississippi	Sign Name	* * * When any person entitled to vote shall appear to vote, he shall first sign his name in a receipt book or booklet provided for that purpose and to be used at that election only and said receipt book or booklet shall be used in lieu of the list of voters who have voted formerly made by the managers or clerks; whereupon and not before, the initialing manager or, in his absence, the alternate initialing manager shall indorse his initials on the back of an official blank ballot, prepared in accordance with law, and at such place on the back of the ballot that the initials may be seen after the ballot has been marked and folded, and when so indorsed he shall deliver it to the voter, which ballot the voter shall mark in the manner provided by law, which when done the voter shall deliver the same to the initialing manager or, in his absence, to the alternate initialing manager, in the presence of the others, and the manager shall see that the ballot so delivered bears on the back thereof the genuine initials of the initialing manager, or alternate initialing manager, and if so, but not otherwise, the ballot shall be put into the ballot box; and when so done one (1) of the managers or a duly appointed clerk shall make the proper entry on the pollbook. If the voter is unable to write his name on the receipt book, a manager or clerk shall note on the back of the ballot that it was receipted for by his assistance. (Effective January 1, 1987)	Miss. Code Ann. § 23-15-541
Missouri	Provide ID	1. Before receiving a ballot, voters shall identify themselves by presenting a form of personal identification from the following list: (1) Identification issued by the state of Missouri, an agency of the state, or a local election authority of the state; (2) Identification issued by the United States government or agency thereof; (3) Identification issued by an institution of higher education, including a university, college, vocational and technical school, located within the state of Missouri; (4) A copy of a current utility bill, bank statement, government check, paycheck or other government document that contains the name and address of the voter; (5) Driver's license or state identification card issued by another state; or (6) Other identification approved by the secretary of state under rules promulgated pursuant to subsection 3 of this section other identification approved by federal law. Personal knowledge of the voter by two supervising election judges, one from each major political party, shall be acceptable voter identification upon the completion of a secretary of state-approved affidavit that is signed by both supervisory election judges and the voter that attests to the personal knowledge of the voter by the two supervisory election judges. The secretary of state may provide by rule for a sample affidavit to be used for such purpose. (Last amended in 2002)	Mo. Rev. Stat. §115.427.1

Montana	Provide ID	(1) (a) Before an elector is permitted to receive a ballot or vote, the elector shall present to an election judge a current photo identification showing the elector's name. If the elector does not present photo identification, including but not limited to a valid driver's license, a school district or postsecondary education photo identification, or a tribal photo identification, the elector shall present a current utility bill, bank statement, paycheck, notice of confirmation of voter registration issued pursuant to 13-2-207, government check, or other government document that shows the elector's name and current address. (From 2004 version of the Montana Code Annotated; No updates in 2004, only in 2005 [Unrelated section was amended in 2005])	Mont. Code. Ann. §13-13-114(1)(a)
Nebraska	Sign Name	(1) The clerks of election shall have a list of registered voters of the precinct and a sign-in register at the polling place on election day. The list of registered voters shall be used for guidance on election day and may be in the form of a computerized, typed, or handwritten list or precinct registration cards. Registered voters of the precinct shall place and record their signature in the sign-in register before receiving any ballot. The list of registered voters and the sign-in register may be combined into one document. (Last amended in 2003) Official ballots shall be used at all elections. No person shall receive a ballot or be entitled to vote unless and until he or she is registered as a voter except as provided in section 32-914.01, 32-914.02, 32-915, 32-915.01, or 32-936. Except as otherwise specifically provided, no ballot shall be handed to any registered voter at any election until (1) he or she announces his or her name and address to the clerk of election, (2) the clerk has found that he or she is a registered voter at the address as shown by the precinct list of registered voters unless otherwise entitled to vote in the precinct under section 32-328, 32-914.01, 32-914.02, 32-915, or 32-915.01, (3) if the voter registered by mail after January 1, 2003, and has not previously voted in an election for a federal office within the county, the clerk shall ask the registered voter to present a photographic identification which is current and valid or a copy of a utility bill, bank statement, government check, paycheck, or other government document that is current and that shows the name and address of the voter, (4) the clerk has instructed the registered voter to personally write his or her name in the precinct sign-in register on the appropriate line which follows the last signature of any previous voter, and (5) the clerk has listed on the precinct list of registered voters the corresponding line number and name of the registered voter. (Last updated in 2003)	Neb. Rev. Stat. § 32-913 Neb. Rev. Stat. § 32-914
Nevada	Match Sig.	1. Except as otherwise provided in NRS 293.541, if a person's name appears in the election board register or if he provides an affirmation pursuant to NRS 293.525, he is entitled to vote and must sign his name in the election board register when he applies to vote. His signature must be compared by an election board officer with the signature or a facsimile thereof on his original application to register to vote or one of the forms of identification listed in subsection 2. 2. Except as otherwise provided in NRS 293.2725, the forms of identification which may be used individually to identify a voter at the polling place are: (a) The card issued to the voter at the time he registered to vote; (b) A driver's license; (c) An identification card issued by the Department of Motor Vehicles; (d) A military identification card; or	Nev. Rev. Stat.§ 293.277

		(e) Any other form of identification issued by a governmental agency which contains the voter's signature and physical description or picture. Last Amendment Effective Jan. 1, 2004.	
NH	Give Name	A person desiring to vote shall, before being admitted to the enclosed space within the guardrail, announce his or her name to one of the ballot clerks who shall thereupon repeat the name; and, if the name is found on the checklist by the ballot clerk, the ballot clerk shall put a checkmark beside it and again repeat the name. The ballot clerk shall state the address listed on the checklist for the voter, and ask if the address is correct; if the address on the checklist is not correct, the ballot clerk shall correct the address in red on the checklist. The voter, if still qualified to vote in the town or ward and unless challenged as provided for in RSA 659:27-33, shall then be allowed to enter the space enclosed by the guardrail. After the voter enters the enclosed space, the ballot clerk shall give the voter one of each ballot to be voted on in that election which shall be folded as it was upon receipt from the secretary of state. Last Amendment Effective July 2, 2002.	N.H. Rev. Stat. Ann. 659:13
New Jersey	Match Sig.	19:15-17. Comparison of signatures or statements made openly; provisional ballots for newly registered voters without proper identification a. The comparison of signatures of a voter made upon registration and upon election day, and if the voter alleges his inability to write, the comparison of the answers made by such voter upon registration and upon election day, shall be had in full view of the challengers. b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 232 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the "Uniformed and Overseas Citizens Absentee Voting Act" (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote other than in person under section 3 of Pub.L.98-435, the "Voting Accessibility for the Elderly and Handicapped Act," or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery. c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5). Last Amendment Effective July 9, 2004	N.J. Stat. Ann. 19:15-17
New Mexico	Sign Name	D. The judge assigned to the voter list used for confirmation of registration and voting shall determine that each person offering to vote is registered and, in the	N.M. Stat. Ann §1-5-10

		case of a primary election, that the voter is registered in a party designated on the primary election ballot. If the person's registration is confirmed by the presence of his name on the voter list or if the person presents a certificate under the seal and signature of the county clerk showing that he is entitled to vote in the election and to vote in that precinct, the judge shall announce to the election clerks the list number and the name of the voter as shown on the voter list. E. The election clerk shall locate that list number and name on the signature roster and shall require the voter to sign his usual signature or, if unable to write, to make his mark opposite his printed name. If the voter makes his mark, it shall be witnessed by one of the judges of the precinct board. If the signature roster indicates that the voter is required to present a form of identification before voting, the election judge shall ask the voter for a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows and matches the name and address of the voter as indicated on the signature roster. If the voter does not provide the required identification, he shall be allowed to vote on a provisional paper ballot. G. A voter shall not be permitted to vote until he has properly signed his usual signature or made his mark in the signature roster. (From 2004 version of New Mexico Annotated Statutes, amended in 2005 to require presentation of ID)	(Recompiled as §1-12 -7.1 by L. 2005, Ch. 270, §63, effective July 1, 2005)
New York	Match Sig.	1. A person before being allowed to vote shall be required, except as provided in this chapter, to sign his name on the back of his registration poll record on the first line reserved for his signature at the time of election which is not filled with a previous signature, or on the line of the computer generated registration list reserved for his signature. The two inspectors in charge shall satisfy themselves by a comparison of this signature with his registration signature and by comparison of his appearance with the descriptive material on the face of the registration poll record that he is the person registered. If they are so satisfied they shall enter the other information required for the election on the same line with the voter's latest signature, shall sign their names or initials in the spaces provided therefor, and shall permit the applicant to vote. Any inspector or inspectors not satisfied shall challenge the applicant forthwith. 2. If a person who alleges his inability to sign his name presents himself to vote, the board of inspectors shall permit him to vote, unless challenged on other grounds, provided he had been permitted to register without signing his name. The board shall enter the words "Unable to Sign" in the space on his registration poll record reserved for his signature or on the line of the computer generated registration list reserved for his signature at such election. If his signature appears upon his registration record or upon the computer generated registration list the board shall challenge him forthwith, except that if such a person claims that he is unable to sign his name by reason of a physical disability incurred since his registration, the board, if convinced of the existence of such disability, shall permit him to vote, shall enter the words "Unable to Sign" and a brief description of such disability in the space reserved for his signature at such election. At each subsequent election, if such disability still exists, he shall be entitled to vote without signing his name and the board of inspectors, without further notation, shall enter the words "Unable to Sign" in the space reserved for his signature at such election. 3. The voter's signature made by him upon registration and his signature made at subsequent elections shall be effectively concealed from the voter by a blotter or piece of opaque paper until after the voter shall have completed his signature. 4. In any case where a person who has heretofore voted has placed his voting signature on the back of his registration poll record on the first or any succeeding line or lines at the time or times of an election, instead of on the last line of the	N.Y. Law § 8-304 (McKinney)

		space thereon required to be reserved for such voting signatures and on any lines next running upward therefrom, the inspectors of election shall obliterate such misplaced signature or signatures, initial the obliteration and require such voter to sign his name again in the correct place on such registration poll record. 5. Any person who has heretofore registered and who at such time placed his or her registration signature on the back of the registration poll record otherwise than in the space required to be provided therefor at the bottom of such poll record, shall, before being permitted to vote at any election thereafter, subscribe a new registration signature for himself on the last line at the bottom of such poll record, and, at the same time, if the inspectors of election are satisfied that the signatures were made by the same person, obliterate his original registration signature placed elsewhere than on the bottom of such record. Such obliterations may be made by crossing out the signature so as to completely efface the same or by affixing thereover a piece of gummed tape of a size sufficient only to cover such signature and of a type adequate to fully conceal the same Last Amended 1986	
North Carolina	Give Name	(a) Checking Registration. --A person seeking to vote shall enter the voting enclosure through the appropriate entrance. A precinct official assigned to check registration shall at once ask the voter to state current name and residence address. The voter shall answer by stating current name and residence address. In a primary election, that voter shall also be asked to state, and shall state, the political party with which the voter is affiliated or, if unaffiliated, the authorizing party in which the voter wishes to vote. After examination, that official shall state whether that voter is duly registered to vote in that precinct and shall direct that voter to the voting equipment or to the official assigned to distribute official ballots. If a precinct official states that the person is duly registered, the person shall sign the pollbook, other voting record, or voter authorization document in accordance with subsection (c) of this section before voting.	N.C. Gen. Stat. Ann. § 163-166.7
North Dakota	Provide ID	16.1-05-07 Poll clerks to check identification and verify eligibility -- Poll clerks to request, correct, and update incorrect information contained in the pollbook. 1. Before delivering a ballot to an individual according to section 16.1-13- 22, the poll clerks shall request the individual to show a driver's license issued by the state, another form of identification displaying a photograph of the individual and the individual's date of birth, or another appropriate form of identification prescribed by the secretary of state. If an individual offering to vote fails or refuses to show an appropriate form of identification, the individual may be allowed to vote without being challenged according to section 16.1-05-06 if the individual provides to the election board the individual's date of birth and if a member of the election board or a clerk knows the individual and can personally vouch that the individual is a qualified elector of the precinct. After verifying that the individual's name is contained in the pollbook generated from the central voter file, poll clerks shall verify the individual's residential address and mailing address, if different from the individual's residential address. (From 2003 version of N.D. Century Code; only amendment to this statute that became effective in 2003 was in 2005)	N.D. Cent. Code § 16.1-05-07

Ohio	Match Sig.	When an elector appears in a polling place to vote he shall announce his full name and address to the precinct election officials. He shall then write his name and address at the proper place in the poll lists or signature pollbooks provided therefore, except that if, for any reason, an elector shall be unable to write his name and address in the poll list or signature pollbook, the elector may make his mark at the place intended for his name and a precinct official shall write the name of the elector at the proper place on the poll list or signature pollbook following the elector's mark, upon the presentation of proper identification. The making of such mark shall be attested by the precinct official who shall evidence the same by signing his name on the poll list or signature pollbook as a witness to such mark. The elector's signature in the poll lists or signature pollbooks shall then be compared with his signature on his registration form or a digitized signature list as provided for in section 3503.13 of the Revised Code, and if, in the opinion of a majority of the precinct election officials, the signatures are the signatures of the same person, the clerks shall enter the date of the election on the registration form or shall record the date by such other means as may be prescribed by the secretary of state. If the right of the elector to vote is not then challenged, or, if being challenged, he establishes his right to vote, he shall be allowed to proceed into the voting machine. If voting machines are not being used in that precinct, the judge in charge of ballots shall then detach the next ballots to be issued to the elector from Stub B attached to each ballot, leaving Stub A attached to each ballot, hand the ballots to the elector, and call his name and the stub number on each of the ballots. The clerk shall enter the stub numbers opposite the signature of the elector in the pollbook. The elector shall then retire to one of the voting compartments to mark his ballots. No mark shall be made on any ballot which would in any way enable any person to identify the person who voted the ballot. (Effective at time of last update, 1992 H 182, eff. 4-9-93)	Ohio Rev. Code Ann. § 3505.18
Oklahoma	Sign Name	Each person presenting himself to vote shall announce his name to the judge of the precinct, whereupon the judge shall determine whether said person's name is in the precinct registry. (Last amended in 1990) Persons who have been determined to be eligible to vote shall sign, in the presence of the clerk, the proper precinct registry. Said clerk shall thereupon issue proper ballots to said person. The voter's signature on said precinct registry shall be the best evidence of said voter's having voted at said election. Said precinct registry shall be retained in the office of the county election board for a period of twenty-two (22) months following the election and shall be subject to public inspection during regular office hours. (Last amended in 1990)	Okla. Stat. Ann. tit. 26, § 7-114 Okla. Stat. Ann. tit. 26, § 7-117
Oregon	Match Sig.	All elections in Oregon are Vote by Mail. An Elections Official will compare the signature on your ballot return envelope to the signature on your voter registration card to verify your identity (http://www.uhavavote.org/votingguide/votebymail.html) (unknown date, but use of wayback machine shows that this provision on site on following dates: 7/11/04, 10/20/04 and 10/29/04)	Or. Rev. Stat. § 254.385
Penn.	Match Sig.	(a.3) All electors, including any elector that shows identification pursuant to subsection (a), shall subsequently sign a voter's certificate, and, unless he is a State or Federal employee who has registered under any registration act without declaring his residence by street and number, he shall insert his address therein, and hand the same to the election officer in charge of the district register. Such election officer shall thereupon announce the elector's name so that it may be heard by all members of the election board and by all watchers present in the	25 Pa. Stat. Ann. § 3050

		polling place and shall compare the elector's signature on his voter's certificate with his signature in the district register. If, upon such comparison, the signature upon the voter's certificate appears to be genuine, the elector who has signed the certificate shall, if otherwise qualified, be permitted to vote: Provided, That if the signature on the voter's certificate, as compared with the signature as recorded in the district register, shall not be deemed authentic by any of the election officers, such elector shall not be denied the right to vote for that reason, but shall be considered challenged as to identity and required to make the affidavit and produce the evidence as provided in subsection (d) of this section. When an elector has been found entitled to vote, the election officer who examined his voter's certificate and compared his signature shall sign his name or initials on the voter's certificate, shall, if the elector's signature is not readily legible, print such elector's name over his signature, and the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes shall also be entered by one of the election officers or clerks. As each voter is found to be qualified and votes, the election officer in charge of the district register shall write or stamp the date of the election or primary, the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes, and shall sign his name or initials in the proper space on the registration card of such voter contained in the district register. (In effect at time of, and unaltered by: 2004, Oct. 8, P.L. 807, No. 97, § 5.1 (changes procedure for first time voters, not established voters))	
Rhode Island	Give Name	(a) Each person desiring to vote shall state his or her name and residence, including that person's street address, if he or she has any, to one of the first pair of bi-partisan supervisors, who shall then announce the name and residence in a loud and distinct voice, clear and audible. As each voter's name is announced, the voter shall be handed a ballot application in the following form: BALLOT APPLICATION (Poll List) Senatorial District ____________ Representative District ____________ Voting District ____________ Election Date ____________ I hereby certify that I am a registered and qualified elector in the above voting district of City of and hereby make application for ballots to be voted at this election. ____________ (Signature of Voter) ____________ (Residence Address) Number Approved ____________ (Supervisor of Election)	R.I. Gen. Laws § 17-19-24

		(b) The voter shall sign the application in the presence and view of a bipartisan pair. They shall locate the voter's name on the certified voting list for the voting district. Upon finding the voter's name on the certified voting list for the district, they shall initial the ballot application in the place provided next to the word "Approved" and shall enter on the certified list of voters a proper notation that the applicant has voted in the election. They shall then return the ballot application to the voter who shall pass down the line and present it to the clerk. After the voter has handed the approved ballot application to the clerk, the clerk shall provide the voter with the appropriate computer ballot and security sleeve, the warden shall direct the voter to the voting booth which the voter shall use, and unless the voter needs instruction or assistance as provided in this chapter, the voter shall cast his or her vote, and if he or she desires place the voted computer ballot in a security sleeve, and shall proceed to the optical scan precinct count unit and shall personally place his or her voted ballot into the designated ballot slot on the unit, and after doing so, shall leave the enclosure at once. No voter shall remain within the voting booth longer than ten (10) minutes, and if the voter refuses to leave after the lapse of ten (10) minutes, the voter shall be removed from the voting booth by order of the warden. Except for the election officials and the election inspector, not more than two (2) voters in excess of the number of voting booths shall be permitted within the enclosed space at any time. (Last amended 2004, Current through January 2005 Session)	
South Carolina	Photo ID	**§ 7-13-710. Proof of right to vote; signing poll list; comparison of signatures.** When any person presents himself to vote, he shall produce his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department of Motor Vehicles, if he is not licensed to drive, or the written notification of registration provided for by §§ 7-5- 125 and 7-5-180 if the notification has been signed by the elector. If the elector loses or defaces his registration notification, he may obtain a duplicate notification from his county board of registration upon request in person, or by telephone or mail. After presentation of the required identification, his name must be checked by one of the managers on the margin of the page opposite his name upon the registration books, or copy of the books, furnished by the board of registration. The managers shall keep a poll list which must contain one column headed "Names of Voters". Before any ballot is delivered to a voter, the voter shall sign his name on the poll list, which must be furnished to the appropriate election officials by the State Election Commission. At the top of each page the voter's oath appropriate to the election must be printed. The signing of the poll list or the marking of the poll list is considered to be an affirmation of the oath by the voter. One of the managers shall compare the signature on the poll list with the signature on the voter's driver's license, registration notification, or other identification and may require further identification of the voter and proof of his right to vote under this title as he considers necessary. If the voter is unable to write or if the voter is prevented from signing by physical handicap, he may sign his name to the poll list by mark with the assistance of one of the managers. Last amended: 1968	S.C. Code Ann. § 7-13-710
South Dakota	Photo ID	When a voter is requesting a ballot, the voter shall present a valid form of personal identification. The personal identification that may be presented shall be either: (1) A South Dakota driver's license or nondriver identification card; (2) A passport or an identification card, including a picture, issued by an agency of the United States government; (3) A tribal identification card, including a picture; or (4) An identification card, including a picture, issued by a high school or an accredited institution of higher education, including a university, college, or	S.D. Codified Laws § 12-18-6.1

		technical school, located within the State of South Dakota. Last amended March 2004	
Tennessee	Provide ID	Identification of eligible voters (a)(1) A voter shall sign an application for ballot, indicate the primary in which the voter desires to vote, if any, and present it to a registrar. The application for ballot shall include thereon a space for the address of the voter's current residence, and the voter shall write or print such address on the application when the voter signs it. The registrar shall compare the signature and information on the application with the signature and information on the duplicate permanent registration record. The registrar shall make a determination whether the voter's address is different from the address on the voter's permanent registration record or if the registration is in inactive status. If the voter has changed residence, or the voter's registration is inactive, the registrar shall follow the procedures for voting pursuant to § 2-7-140. If, upon comparison of the signature and other identification, it is found that the applicant is entitled to vote, the registrar shall initial the application and shall note on the reverse side of the voter's duplicate permanent registration record the date of the election, the number of the voter's ballot application, and the elections in which the voter votes. If the applicant's signature is illegible, the registrar shall print the name on the application. The registrar shall give the voter the ballot application which is the voter's identification for a paper ballot or ballots or for admission to a voting machine. The voter shall then sign the duplicate poll lists without leaving any lines blank on any poll list sheet. (2) In any computerized county, the county election commission shall have the option of using an application for a ballot as provided in this section, or using the computerized voter signature list. A computerized voter signature list shall include the voter's name, current address of residence, social security number or registration number, birth date and spaces for the voter's signature, elections voted, ballot number and precinct registrar's initials. The following procedures shall be followed in the case of computerized voter signature lists: (A) The voter shall sign the signature list and indicate the election or elections the voter desires to vote in and verify the voter's address in the presence of the precinct registrar; (B) The registrar shall compare the voter's signature and information on the signature list with other evidence of identification supplied by the voter. If, upon comparison of the signature and other evidence of identification, it is found that the applicant is entitled to vote, the registrar shall initial the signature list; (C) If the applicant's signature is illegible, the registrar shall print the name of the applicant on the voter list; and (D) If a voter is unable to present any evidence of identification specified in subsection (c), the voter shall be required to execute an affidavit of identity on a form provided by the county election commission. Last amended 2003	Tenn. Code Ann. § 2-7-112
Texas	Provide ID	(b) On offering to vote, a voter must present the voter's voter registration certificate to an election officer at the polling place. (Last amended in 1997)	Tex. Elec. Code Ann. § 63.001
Utah	Give Name	(1)(a) Any registered voter desiring to vote shall give his name, and, if requested, his residence, to one of the election judges. (b) If an election judge does not know the person requesting a ballot and has reason to doubt that person's identity, the judge shall request identification or have the voter identified by a known registered voter of the district. (3) If the election judge determines that the voter is registered: (a) the election judge in charge of the official register shall: (i) write the ballot number opposite the name of the voter in the official register; and	Utah Code Ann. § 20A-3-104

		(ii) direct the voter to sign his name in the election column in the official register; (b) another judge shall list the ballot number and voter's name in the pollbook; and (c) the election judge having charge of the ballots shall: (i) endorse his initials on the stub; (ii) check the name of the voter on the pollbook list with the number of the stub; (iii) hand the voter a ballot; and (iv) allow the voter to enter the voting booth. (In effect at time of last update prior to 2005: Laws 2003, c. 37, § 1, eff. May 5, 2003)	
Vermont	Give Name	Before a person may be admitted to vote, he or she shall announce his or her name and if requested, his or her place of residence in a clear and audible tone of voice, or present his or her name in writing, or otherwise identify himself or herself by appropriate documentation. The election officials attending the entrance of the polling place shall then verify that the person's name appears on the checklist for the polling place. If the name does appear, and if no one immediately challenges the person's right to vote on grounds of identity or having previously voted in the same election, the election officials shall repeat the name of the person and: (1) If the checklist indicates that the person is a first-time voter in the municipality who registered by mail and who has not provided required identification before the opening of the polls, require the person to present any one of the following: a valid photo identification; a copy of a current utility bill; a copy of a current bank statement; or a copy of a government check, paycheck, or any other government document that shows the current name and address of the voter. If the person is unable to produce the required information, the person shall be afforded the opportunity to cast a provisional ballot, as provided in subchapter 6A of this chapter. The elections official shall note upon the checklist a first-time voter in the municipality who has registered by mail and who produces the required information, and place a mark next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting. (2) If the voter is not a first-time voter in the municipality, no identification shall be required, the clerk shall place a check next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting (Last amended in 2003)	Vt. Stat. Ann. tit. 17, § 2563
Virginia	Provide ID	§ 24.2-643. Qualified voter permitted to vote; procedures at polling place; voter identification A. After the polls are open, each qualified voter at a precinct shall be permitted to vote. The officers of election shall ascertain that a person offering to vote is a qualified voter before admitting him to the voting booth and furnishing an official ballot to him. B. An officer of election shall ask the voter for his full name and current residence address and repeat, in a voice audible to party and candidate representatives present, the full name and address stated by the voter. The officer shall ask the voter to present any one of the following forms of identification: his Commonwealth of Virginia voter registration card, his social security card, his valid Virginia driver's license, or any other identification card issued by a government agency of the Commonwealth, one of its political subdivisions, or the United States; or any valid employee identification card containing a photograph of the voter and issued by an employer of the voter in the ordinary course of the employer's business. If the voter's name is found on the pollbook, if he presents one of the forms of	Va. Code. Ann.

		identification listed above, if he is qualified to vote in the election, and if no objection is made, an officer shall enter, opposite the voter's name on the pollbook, the first or next consecutive number from the voter count form provided by the State Board, or shall enter that the voter has voted if the pollbook is in electronic form; an officer shall provide the voter with the official ballot; and another officer shall admit him to the voting booth. Except as provided in subsection E of this section, if a voter is entitled to vote except that he is unable to present one of the forms of identification listed above, he shall be allowed to vote after signing a statement, subject to felony penalties for false statements pursuant to § 24.2-1016, that he is the named registered voter who he claims to be. A voter who requires assistance in voting by reason of physical disability or inability to read or write, and who requests assistance pursuant to § 24.2-649, may be assisted in preparation of this statement in accordance with that section. The provisions of § 24.2-649 regarding voters who are unable to sign shall be followed when assisting a voter in completing this statement. (Version in effect as of 2004- effective 4/12/2004)	
Washington	Sign Name	29A.44.201. A voter desiring to vote shall give his or her name to the precinct election officer who has the precinct list of registered voters. This officer shall announce the name to the precinct election officer who has the copy of the inspector's poll book for that precinct. If the right of this voter to participate in the primary or election is not challenged, the voter must be issued a ballot or permitted to enter a voting booth or to operate a voting device. For a partisan primary in a jurisdiction using the physically separate ballot format, the voter must be issued a nonpartisan ballot and each party ballot. The number of the ballot or the voter must be recorded by the precinct election officers. If the right of the voter to participate is challenged, RCW 29A.08.810 and 29A.08.820 apply to that voter. (In effect at time of last update prior to 2005: 2004 c 271 § 136, eff. June 10, 2004) 29A.44.210. Any person desiring to vote at any primary or election is required to sign his or her name on the appropriate precinct list of registered voters. If the voter registered using a mark, or can no longer sign his or her name, the election officers shall require the voter to be identified by another registered voter. The precinct election officers shall then record the voter's name. Effective date: July 1, 2004	Wash. Rev. Code § 29A.44.201 & 29A.44.210
West Virginia	Match Sig.	(a) Any person desiring to vote in an election shall, upon entering the election room, clearly state his or her name and residence to one of the poll clerks who shall thereupon announce the same in a clear and distinct tone of voice. If that person is found to be duly registered as a voter at that precinct, he or she shall be required to sign his or her name in the space marked "signature of voter" on the pollbook prescribed and provided for the precinct. If that person is physically or otherwise unable to sign his or her name, his or her mark shall be affixed by one of the poll clerks in the presence of the other and the name of the poll clerk affixing the voter's mark shall be indicated immediately under the affixation. No ballot may be given to the person until he or she so signs his or her name on the pollbook or his or her signature is so affixed thereon. * * * (c) When the voter's signature is properly on the pollbook, the two poll clerks shall sign their names in the places indicated on the back of the official ballot and deliver the ballot to the voter to be voted by him or her without leaving the	W. Va. Code § 3-1-34 (a)

		election room. If he or she returns the ballot spoiled to the clerks, they shall immediately mark the ballot "spoiled" and it shall be preserved and placed in a spoiled ballot envelope together with other spoiled ballots to be delivered to the board of canvassers and deliver to the voter another official ballot, signed by the clerks on the reverse side required by this subsection. The voter shall thereupon retire alone to the booth or compartment prepared within the election room for voting purposes and there prepare his or her ballot using a ballpoint pen of not less than five inches in length or other indelible marking device of not less than five inches in length. In voting for candidates in general and special elections, the voter shall comply with the rules and procedures prescribed in section five, article six of this chapter. (In effect at time of last update prior to 2005: Acts 2003, c. 100, eff. 90 days after March 7, 2003)	
Wisconsin	Give Name	6.79(2)(a) Except as provided in sub. (6), where there is registration, each person, before receiving a voting number, shall state his or her full name and address. Upon the prepared registration list, after the name of each elector, the officials shall enter the serial number of the vote as it is polled, beginning with number one. Each elector shall receive a slip bearing the same serial number. A separate list shall be maintained for electors who are voting under s. 6.15, 6.29 or 6.55(2) or (3) and electors who are reassigned from another polling place under s. 5.25(5)(b). Each such elector shall have his or her full name, address and serial number likewise entered and shall be given a slip bearing such number. (In effect at time of last update prior to 2005: 2003 Act 327, § 4, eff. June 12, 2004)	Wis. Stat. § 6.79
Wyoming	Give Name	(a) Unless a voter is challenged pursuant to W.S. 22-15-101 through 22- 15-109, no identification shall be required when: (i) Voting in person or by mail after having registered in person; or (ii) Voting in person or by mail after having registered by mail and having previously voted in a Wyoming federal election. (In effect at time of last update prior to 2005: Effective dates. -- Laws 2004, ch. 94, § 5, makes the act effective immediately upon completion of all acts necessary for a bill to become law as provided by art. 4, § 8, Wyo. Const. Approved March 5, 2004.)	Wyo. Stat. Ann. § 22-3-118

APPENDIX B –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:

Challenges Prevailed:

American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14th Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:

League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

  - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
  - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15th Amendment: same reasons

<u>Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:</u>

***American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).**

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:

***League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required <u>all</u> in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover,* 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.,* CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[27]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[27] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[28]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[29] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

[28] Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php

[29] GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[30] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[30] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University

May 4, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen voter turnout. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater for some specific types of requirements. For example, critics argue that requiring voters to produce government-issued photo identification on Election Day is more demanding than, say, requiring that they state their names at the polling place. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. It draws on two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research performed for this study by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to: state their names (nine states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (eight states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[1] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[1] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I treated the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[2]

---

[2] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

Analysis of aggregate data

If one treats maximum voter identification requirements as an ordinal variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ($r = -.30$, $p < .0001$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, voter identification also is negatively correlated with turnout ($r = -.20$, $p < .0001$). Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters.

Voter identification requirements alone, however, do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. I coded the voter identification requirements on a scale of one to five, with one representing the least demanding form of identification and five representing the most demanding form of identification. To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the percentage of individuals who fell below the poverty line in each county in the 2000 Census.

I estimated a series of random intercept models to account for the likelihood that data from counties were correlated within each state (for further explanation of random intercept and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[3] The

---

[3] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the

dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements; those requirements had a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. Both contextual factors (whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate) increased voter turnout. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county exerted a positive effect on voter turnout, and the percentage of individuals living below the poverty line had a negative effect. The effect of the percentage of Hispanic adults in the county on turnout fell just short of statistical significance ($p = .05$).

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities and the poor, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum voter identification requirements and the percentage of African-Americans, Hispanics, and poor individuals in the counties. The interaction involving African-Americans was not significant, but those involving Hispanics and poor individuals were significant.[4] In addition, adding the interactions to the model resulted in the percentage of Hispanics in the population having a direct and negative effect on turnout. The interactions suggest that voter identification requirements have a greater effect for Hispanics and those living below the poverty line. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2), shows that the model with interactions provides a better fit to the data ($p < 0.005$).

I also estimated the effects of the minimum voter identification requirements holding constant the effects of electoral context and the demographic variables.

[Table 3 here]

The effects of the minimum requirements fell short of statistical significance ($p = 0.08$). The battleground state variable continued to exert a positive influence on turnout, while the presence of a competitive race for governor and/or U.S. Senate had no statistically significant effect. As in the maximum identification requirement model, as the percentage of the population that is poor increased, turnout declined. As the percentage of elderly increased, so did turnout. The proportion of African-Americans in the population had a positive effect on turnout, while the percentage of Hispanics did not affect turnout.

---

intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

[4] The interactions are labeled in Tables 2 and 3 as VID*African-American, VID*Hispanic, and VID*Poverty. To calculate the effects of voter identification requirements for a specific group, one must add the estimates for voter identification, the group, and the interaction. Doing so for Hispanic adults results in an estimate of -0.13 [-0.03 (voter id) - 0.13 (Hispanic) + 0.03 (voter id X Hispanic)].

Adding interactive effects to the model resulted in a statistically significant and negative effect of minimum voter identification requirements on turnout. The percentage of Hispanic adults in the county had a significant and negative effect on turnout, and the percentage of individuals below the poverty line continued to have a negative effect. Interactions between the percentages of Hispanics and those below the poverty line and minimum voter identification requirements also were significant. The percentage of African-Americans in the county and the interaction between African-Americans and voter identification requirements were not significant. A chi-square test for the difference in fit between the two models showed that the model with interactions provides a better fit to the data ($p < .025$).

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the demands of voter identification requirements increase, turnout declines. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line. But aggregate data cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[5] Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[6] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S.

---

[5] A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

[6] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[7] As in the analysis of aggregate data, I coded voter identification requirements for each respondent's state of residence on a scale of one to five, with one representing the least demanding requirement (stating one's name) and five representing the most demanding requirement (photo identification or affidavit).

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less. At the individual level, I controlled for gender, age in years, education, household income, and dummy variables representing whether a voter was Black/non-Hispanic, Hispanic, or another non-white race (with white/non-Hispanic voters as the omitted category for reference purposes).[8] Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which

---

[7] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[8] Asian-Americans are included in the "other non-white races" category. In response to a request from officials at the U.S. Election Assistance Commission who had read an earlier version of this paper and were curious about the experiences of Asian-Americans, I ran models using Asian-Americans as a separate category in addition to the models presented here. Voter identification requirements did not have a statistically significant effect on whether Asian-American voters said they turned out in the 2004 election.

calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 4 here]

The two models in Table 4 use either the maximum or minimum voter identification requirements in each state. The two models generate virtually identical results. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters to say they had cast a ballot, while those of other non-white races were less likely than white voters to say they had turned out. Hispanic voters were not statistically different from white voters in terms of reported turnout. Consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[9] I calculated the probabilities taking into account both maximum and minimum requirements, with photo identification serving as the most demanding of the maximum requirements and affidavits as the most demanding minimum requirement.

[Table 5 here]

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 0.912 for stating one's name to 0.887 for photo identification under the maximum requirements. In other words, the probability of voting dropped with each level of voter identification requirement, with a total drop of .025, or 2.5 percent, across the five types of identification.[10] When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Among the key variables of interest in the debate over voter identification requirements are race, age, income, and education. Given the large sample size (54,973 registered voters), it

---

[9] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[10] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of <u>all</u> citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

was possible to break the sample into sub-samples along those demographic lines to explore variation in predicted probability by group. I disaggregated the sample by the variable of interest, omitting that variable while I re-ran the probit model with the remaining predictors of voter turnout, including the voter identification requirements.[11] If the analysis showed that the voter identification requirements had a statistically significant effect on turnout, I used the probit coefficients from the model to calculate the predicted probability of voting for each group across the five requirements while holding the other variables in the model constant.

[Table 6 here]

Both the maximum and minimum identification requirements had negative and statistically significant effects for White/Non-Hispanic voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.2 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of Black/Non-Hispanics voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name was the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent.

The effects of voter identification requirements also varied by age, with the greatest variation occurring among voters ages 18 to 24.

[Table 7 here]

Voters in that age group had a predicted probability of 83.9 percent when the maximum requirement was stating one's name, and the probability dropped 8.9 percentage points if voters would have to provide photo identification. The range was from 83.1 percent to 75.4 percent under the minimum requirements. The gap in probability narrowed in older age groups (4.8 percent for the maximum requirements and 5.8 percent for the minimum requirements for those ages 25 to 44; 1.8 percent for the minimum requirements for those ages 45 to 64, and 2.4 percent for the minimum requirements for those ages 65 and older).

Breaking down the 18- to 24-year-old age group by race shed additional light on the effects of voter identification requirements on specific groups.

[Table 8 here]

The gap in predicted probability that White/Non-Hispanic voters in the 18- to 24-year-old category would turn out was 9.2 percent when the identification requirements varied from stating one's name to providing photo identification. The gap was 7.8 percent when taking into account the minimum requirements. The effects of maximum voter identification requirements also were statistically significant for African-Americans in the 18- to 24-year-old age group, with a gap in

---

[11] See Nagler 1991 for a similar approach in analyzing the effects of registration closing dates broken down by education levels.

the predicted probability of voting of 10.6 percent. Maximum and minimum voter identification requirements were not a significant predictor of voting among Hispanics ages 18 to 24.

Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.[12]

[Table 9 here]

While the maximum set of requirements did not have a statistically significant effect for voters living below the poverty line, the minimum set of requirements had a significant and negative effect. The probability of voting was .784 for poor voters if they would have to identify themselves by giving their name, and the probability declined to .731 if they would have to provide an affidavit attesting to their identity. Both the maximum and minimum sets of requirements had a significant and negative effect on voters living above the poverty line, but the difference in probability across the effects was narrower (2.3 percent for the maximum requirements and 3.1 percent for the minimum requirements). Given that political discourse about voter identification requirements includes concerns about the effects of the requirements on poor and minority voters, I also ran probit analyses for sub-samples of white and minority voters who fell below the poverty line. The voter identification requirements did not exert statistically significant effects on turnout among poor White/Non-Hispanic and Hispanic voters, but did have a significant effect on Black/Non-Hispanic voters who were below the poverty line.[13] Allowing the maximum voting requirement to vary from the least to the most demanding, the probability that African-American voters below the poverty line said they had voted dropped by 7.5 percent.

The effects of voter identification requirements varied across education levels as well, with those lowest in education demonstrating the widest variation in probabilities as identification requirements ranged from least to most demanding.

[Table 10 here]

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The difference from the lowest to the highest requirement among the minimum requirements was 7.4 percent. The difference in probabilities ranged from 3.3 percent for the maximum requirements to 4.5 percent for the minimum requirements for voters with a high school diploma. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

---

[12] I coded respondents as being above or below the U.S. Census Bureau's 2004 poverty line based on respondents' reported annual household income and size of the household.

[13] The lack of significant effects for poor Hispanic voters is in contrast to the results from the aggregate data analysis. The sub-sample of poor Hispanic voters was small (n = 491), which may have contributed to the lack of statistical significance.

Discussion and conclusion

The results presented here provide evidence that as the level of demand associated with voter identification requirements increases, voter turnout declines. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

The effects of voter identification requirements were more pronounced for specific subgroups. Hispanic voters and the poor appeared to be less likely to vote as the level of required identification became more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households were 5.3 percent less likely to vote as the requirements varied from stating one's name to attesting to one's identity in an affidavit. African-American voters from households below the poverty line were 7.5 percent less likely to vote as the maximum requirements varied from stating one's name to providing photo identification.

Effects of voter requirements also varied with education. Registered voters who had not graduated from high school were 6.7 percent less likely to say they voted as the maximum requirements ranged from stating one's name to providing photo identification. When considering the minimum requirements, those with less than a high school education were 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name. Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit. Breaking down the age group by race, the effects were significant for young White/Non-Hispanic and Black/Non-Hispanic voters.

The results shed additional light on the effects of voter identification requirements on two groups often projected as being particularly sensitive to such requirements: African-American voters and elderly voters. The effects on African-American voters were pronounced for two specific sub-samples: African-American voters living below the poverty line and those in the 18- to 24-year-old age group. Also, the elderly, while they would be slightly less likely to vote as requirements ranged from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[14] Or, do the requirements result in some voters

---

[14] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not

being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

registered). Neither the maximum nor minimum array of voter identification requirements had a statistically significant effect on the probability that a survey respondent was registered to vote.

Thanks, Tom.

Assume you just got the e-mail I sent to the EAC review team that included the paper, the analysis and the call-in information

Thursday at 11:30
1-866-222-9044
Passcode 62209#

A few items on timelines and materials for May 23-24 meetings:

The Commissioners will review the final Eagleton Voter ID and Provisional Voting reports at their **Tuesday, May 16** meeting. At this meeting they will decide how they wish to present these reports to the EAC Board of Advisors and Standards Boards.

Your materials that will be distributed to the EAC Board of Advisors and Standards Boards must be finalized and ready for our Xeroxing process by **Thursday, May 18.** I will be in touch along the way to provide input/guidance on what these materials should be, based on the Commissioner's review and decisions

Subject Materials for Thursday's 11:30 conference call

All-

Attached please find the complete packet of materials that will serve as the basis for our conference call on Thursday. You have already received the statistical analysis; the voter ID report was submitted this morning.

The Eagleton staff have noted that you may find the material contained in Appendix A useful to your review; the other appendices are likely to be less germane .

The call in information for Thursday:

Subject RE: Travel arrangements for the EAC Board of Advisors and Standards Board meeting

Tom-

It is my understanding that Adam Ambrogi has been in touch with Ned Foley and, in turn, Dan Tokaji to indicate that you and Dan will present the information on the Voter ID project, while you and Ned will present the information on the Provisional Voting project.

Adam Ambrogi can also clarify your presentations. As I understand it, you will present your Voter ID and Provisional Voting projects to the Standards Board. You will then present your Voter ID and Provisional Voting Projects to the Board of Advisors.

I believe Adventure Travel handles hotel and travel arrangements.

I do not believe accommodations have been made for other members of the project team to attend. I will ask Adam Ambrogi, who is the principal point of contact on these meetings, to clarify this.

Subject RE: Travel arrangement for the EAC Board of Advisors and Standards Board meeting

Karen,

As we discussed last week, the Eagleton-Moritz team making the presentations at the advisory board meetings will include others in addition to Ned and me. While Ned and I will handle the briefing on the provisional voting report, the team for the briefing on the Voter ID report will include Dan Tokaji and Tim Vercellotti.

Just to understand what Adventure Travel is to provide: will its services include hotel reservations and travel, or does it have a more limited mission?

Thanks,

Tom O'Neill

Tom O' Neill and Ned Foley-

As you know you are scheduled to make two presentations to the EAC Board of Advisors and Standards Board on Tuesday May 23, 2006 from 2:30-4:00 PM (on Provisional Voting) and on Wednesday ,May 24th from 1:40-2:45 PM (on Voter Identification)

If you have not already done so, please make your hotel and travel arrangements through Adventure Travel, Judy Mays 205-444-4833[redacted]

These reservations should be made no later than tomorrow COB.

Please indicate to Judy Mays that you are a contractor, who is scheduled to make a presentation at the meeting.

Karen,

hi. My own take on this is that we would get a much better idea of the impact of reforms if we had a database of how those reforms changed over time. Looking across states is always going to be problematic.

Tom-

To reiterate the details of our discussion:

By May 17 I will have received all of the materials you wish distributed to the EAC Board of Advisors and Standards Boards. You have indicated that this will be the Provisional Voting paper and the Voter ID paper, only.

On Tuesday, May 23 from 2:30-4:00 PM, Tom O'Neill and Ed Foley will present the Provisional Voting report to the EAC Standards Board. Julie Thompson-Hodgkins will be the resource person for that session
On Wednesday, May 24 from 1:40-2:45 PM, Tom O'Neill, Dan Tokaji, and Tim Vercellotti will present the Voter Identification report to the EAC Standards Board. Julie Thompson-Hodgkins will be the resource person for that session.

On Wednesday , May 24 from 8:30-9:15 am, Tom O'Neill and Ed Foley will present the Provisional Voting report to the EAC Board of Advisors. Julie Thompson-Hodgkins will be the resource person for that session.
On Wednesday, May 24 from 11:00-11:55 am, Tom O'Neill, Dan Takaji and Tim Vercellotti will present the Voter Identification report to the EAC Board of Advisors. Julie Thompson-Hodgkins will be the resource person for that session.

If you have further questions regarding the details of these sessions, please do not hesitate to contact me.

Tom-

Have just completed the Commissioner's review and discussion of the Provisional Voting paper.

They are ready for it to be presented to the EAC Boards and it will be considered as a consultant's report to the EAC. Several typos/grammatical errors were found in the report; you may want to do a final check before you send it to me for final distribution.

Also, the Commissioner's have requested that you all plan to do a 10 minute presentation of this report, leaving the remainder of the time for questions and answers from the Boards.

Thanks

Subject Voter ID Report and Appendices

Karen,

Attached for review by the Commissioners is the Voter ID Report and its appendices. The appendices are lengthy, but I believe Appendix A should be included in the report sent to the Advisory Boards for review.

Thanks for your forbearance.

Tom O'Neill

Appendices517.doc VoterIDReport05170910.doc

Appendices

a. Summary of Voter ID Requirements by State

b. Summary of case law on Voter ID issues

c. Vercellotti --Analysis of Effects of Voter ID Requirements on Turnout

d. Indexed database of major articles on Voter ID Requirements and related topics

e. Compendium of states' legislation, procedures, and litigation (available as an electronic document)

Appendix A

Summary of Voter Identification Requirements By State

Prepared by
Sara A. Sampson, Reference Librarian,
The Ohio State University Moritz College of Law.

Voter ID Requirements

State	Forms of ID Required 2004	Statutory Language	Statutory Citation
Alabama	Provide ID	(b) Each elector shall provide identification to an appropriate election official prior to voting. A voter required to show identification when voting in person shall present to the appropriate election official either of the following forms of identification: (1) A current valid photo identification. (2) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. The term "other government document" may include, but is not limited to, any of the following: a. A valid identification card issued by a branch, department, agency, or entity of the State of Alabama, any other state, or the United States authorized by law to issue personal identification. b. A valid United States passport. c. A valid Alabama hunting or fishing license. d. A valid Alabama permit to carry a pistol or revolver. e. A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States. f. A valid United States military identification card. g. A certified copy of the elector's birth certificate. h. A valid Social Security card. i. Certified naturalization documentation. j. A certified copy of court records showing adoption or name change. k. A valid Medicaid card, Medicare card, or an Electronic Benefits Transfer Card (formerly referred to as a "food stamp card"). (c) For voters required to show identification when voting by mail, the voter shall submit with the ballot a copy of one of the forms of identification listed in subsection (b). (e) An individual required to present identification in accordance with this section who is unable to meet the identification requirements of this section shall be permitted to vote by a challenged or provisional ballot, as provided for by law. (f) In addition, an individual who does not have identification in his or her possession at the polls shall be permitted to vote if the individual is positively identified by two election officials as a voter on the poll list who is eligible to vote and the election official signs the voters list by where the voter signs. Effective Date: June 24, 2003	Ala. Code § 17-11A-1
Alaska	Provide ID	(a) Before being allowed to vote, each voter shall exhibit to an election official one form of identification, including (1) an official voter registration card, driver's license, state identification card, current and valid photo identification, birth certificate, passport, or hunting or fishing license; or (2) an original or a copy of a current utility bill, bank statement, paycheck, government check, or other government document; an item exhibited under this	Alaska Stat. § 15.15.225

		paragraph must show the name and current address of the voter. (b) An election official may waive the identification requirement if the election official knows the identity of the voter. The identification requirement may not be waived for voters who are first-time voters who initially registered by mail or by facsimile or other electronic transmission approved by the director under AS 15.07.050, and did not provide identification as required in AS 15.07.060. (c) A voter who cannot exhibit a required form of identification shall be allowed to vote a questioned ballot. effective June 17, 2003	
Arizona	Provide ID	B. If a statewide voter registration database is not yet operational, for any person who has registered to vote by mail for the first time in this state after January 1, 2003 or who is reregistering by mail after January 1, 2003 after moving from one county to another county in this state, the person shall comply with the following in order to be issued a ballot: 1. The person shall present either one of the following: (a) A current form of identification that bears a photograph of the person and the name of the person. (b) A current utility bill, bank statement, paycheck, government issued check or other government document that shows the name and registration address of the person. 2. If the person does not present a document that complies with paragraph 1, the person is only eligible to vote a provisional ballot as prescribed by § 16-584. Effective Dec. 1, 2003	Ariz. Rev. Stat. Ann. § 16-579
Arkansas	Provide ID	7-5-305. Requirements. (a) Before a person is permitted to vote, the election official shall: (1) Request the voter to identify himself in order to verify the existence of his name on the precinct voter registration list; (2) Request the voter, in the presence of the election official, to state his address and state or confirm his date of birth; (3) Determine that the voter's date of birth and address are the same as those on the precinct voter registration list; (4) If the date of birth given by the voter is not the same as that on the precinct voter registration list, request the voter to provide identification as the election official deems appropriate; (5)(A) If the voter's address is not the same as that on the precinct voter registration list, verify with the county clerk that the address is within the precinct. (B) If the address is within the precinct, request the voter to complete a voter registration application form for the purpose of updating county voter registration record files. (C) If the address is not within the precinct, instruct the voter to contact the county clerk's office to determine the proper precinct; (6) If the voter's name is not the same as that on the precinct voter registration list, request the voter to complete a voter registration application form for purposes of updating county voter registration record files; (7) Request the voter, in the presence of the election official, to sign his name, including his given name, his middle name or initial, if any, and his last name in the space provided on the precinct voter registration list. If a person is unable to sign his signature or make his mark or cross, the election official shall enter his initials and the voter's date of birth in the space for the person's signature on the precinct voter registration list; and	Arkansas Code Annotated § 7-5-305

		(8)(A) Request the voter for purposes of identification to provide a valid driver's license, photo identification card issued by a governmental agency, voter card, social security card, birth certificate, United States passport, employee identification card issued by a governmental agency containing a photograph, employee identification card issued in the normal course of business of the employer, student identification card, Arkansas hunting license, or United States military identification card. (B)(i) If a voter is unable to provide this identification, the election official shall indicate on the precinct voter registration list that the voter did not provide identification. (ii) Following each election, the county board of election commissioners may review the precinct voter registration lists and may provide the information of the voters not providing identification at the polls to the prosecuting attorney. (iii) The prosecuting attorney may investigate possible voter fraud; and (9) Follow the procedures under §§ 7-5-310, 7-5-311, and 7-5-523, if the preson is a disabled voter and presents himself or herself to vote. Effective: July 16, 2003	
California	Sign Name	Any person desiring to vote shall announce his or her name and address in an audible tone of voice, and when one of the precinct officers finds the name in the index, the officer shall in a like manner repeat the name and address. The voter shall then write his or her name and residence address or, if the voter is unable to write, shall have the name and residence address written by another person on a roster of voters provided for that purpose, whereupon a challenge may be interposed as provided in this article. (Enacted in 1994, no amendments since)	Cal. Elec. Code § 14216
Colorado	Provide ID	(1) Except as provided in subsection (4) of this section, any eligible elector desiring to vote shall show his or her identification as defined in section 1-1-104(19.5), write his or her name and address on the signature card, and give the signature card to one of the election judges, * * * (4) An eligible elector who is unable to produce identification may cast a provisional ballot in accordance with article 8.5 of this title. (19.5)(a) "Identification" means: (I) A valid Colorado driver's license; (II) A valid identification card issued by the department of revenue in accordance with the requirements of part 3 of article 2 of title 42, C.R.S.; (III) A valid United States passport; (IV) A valid employee identification card with a photograph of the eligible elector issued by any branch, department, agency, or entity of the United States government or of this state, or by any county, municipality, board, authority, or other political subdivision of this state; (V) A valid pilot's license issued by the federal aviation administration or other authorized agency of the United States; (VI) A valid United States military identification card with a photograph of the eligible elector; (VII) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the elector; (VIII) A valid medicare or medicaid card issued by the United States health care	Colo. Rev. Stat. Ann. § 1-7-110; Colo. Rev. Stat. Ann. § 1-1-104

		financing administration; (IX) A certified copy of a birth certificate for the elector issued in the United States; or (X) Certified documentation of naturalization. (b) Any form of identification indicated in paragraph (a) of this subsection (19.5) that shows the address of the eligible elector shall be considered identification only if the address is in the state of Colorado. Effective 5/28/2004	
Connecticut	Provide ID	(a) In each primary, election or referendum, when an elector has entered the polling place, the elector shall announce the elector's street address, if any, and the elector's name to the checkers in a tone sufficiently loud and clear as to enable all the election officials present to hear the same. Each elector who registered to vote by mail for the first time on or after January 1, 2003, and has a "mark" next to the elector's name on the official registry list, as required by section 9-23r, shall present to the checkers, before the elector votes, either a current and valid photo identification that shows the elector's name and address or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows the name and address of the elector. Each other elector shall (1) present to the checkers the elector's Social Security card or any other preprinted form of identification which shows the elector's name and either the elector's address, signature or photograph, or (2) on a form prescribed by the Secretary of the State, write the elector's residential address and date of birth, print the elector's name and sign a statement under penalty of false statement that the elector is the elector whose name appears on the official checklist. Such form shall clearly state the penalty of false statement. A separate such form shall be used for each elector. If the elector presents a preprinted form of identification under subdivision (1) of this subsection, the checkers shall check the name of such elector on the official checklist. If the elector completes the form under subdivision (2) of this subsection, the assistant registrar of voters shall examine the information on such form and either instruct the checkers to check the name of such elector on the official checklist or notify the elector that the form is incomplete or inaccurate. Effective May 10., 2004	Conn. Gen. Stat. Ann. § 9-261
Delaware	Provide ID	(a) A voter, upon entering the room where an election is being held, shall announce his or her name and address and provide proof of identity, whereupon the clerks shall place a mark or make a notation of his or her name upon the election district record. In the event the voter does not have proof of identity with them, he or she shall sign an affidavit of affirmation that he or she is the person listed on the election district record. Effective: July 9, 2002	15 Del. Code § 4937
D.C.	Sign Name	(i)(1) A person shall be entitled to vote in an election in the District of Columbia if he or she is a duly registered voter. A qualified elector shall be considered duly registered in the District if he or she has met the requirements for voter registration and, on the day of the election, either resides at the address listed on the Board's records or files an election day change of address pursuant to this subsection. (2) Each registered voter who changes his or her place of residence from that listed on the Board's records shall notify the Board, in writing, of the new residence address. A change of address shall be effective on the date the notification was mailed as shown by the United States Postal Service postmark. If not postmarked, the notification shall be effective on the date of receipt by the Board. Change of address notifications from registrants shall be accepted pursuant to subsection (g) of this section, except that any registrant who has not notified the Board of his or her current residence address by the deadline established by subsection (g) of this section may be permitted to vote at the	D.C. Code § 1-1001.07

		polling place that serves the current residence address by filing an election day change of address notice pursuant to paragraph (4) of this subsection. (3) Each registered voter who votes at a polling place on election day shall affirm his or her residence address as it appears on the official registration roll for the precinct. The act of signing a copy of the official registration roll for the precinct shall be deemed affirmation of the voter's address as it appears on the Board's registration records. (Effective April 3, 2001)(not added as part of 2005 amendment)	
Florida	Photo ID	101.043 (1) The precinct register, as prescribed in s. 98.461, shall be used at the polls in lieu of the registration books for the purpose of identifying the elector at the polls prior to allowing him or her to vote. The clerk or inspector shall require each elector, upon entering the polling place, to present a current and valid picture identification as provided in s. 97.0535(3)(a). If the picture identification does not contain the signature of the voter, an additional identification that provides the voter's signature shall be required. The elector shall sign his or her name in the space provided, and the clerk or inspector shall compare the signature with that on the identification provided by the elector and enter his or her initials in the space provided and allow the elector to vote if the clerk or inspector is satisfied as to the identity of the elector. (2) Except as provided in subsection (3), if the elector fails to furnish the required identification, or if the clerk or inspector is in doubt as to the identity of the elector, such clerk or inspector shall follow the procedure prescribed in s. 101.49. **97.0535** (3)(a) The following forms of identification shall be considered current and valid if they contain the name and photograph of the applicant and have not expired: 1. Florida driver's license. 2. Florida identification card issued by the Department of Highway Safety and Motor Vehicles. 3. United States passport. 4. Employee badge or identification. 5. Buyer's club identification. 6. Debit or credit card. 7. Military identification. 8. Student identification. 9. Retirement center identification. 10. Neighborhood association identification. 11. Entertainment identification. 12. Public assistance identification. (b) The following forms of identification shall be considered current and valid if they contain the name and current residence address of the applicant: 1. Utility bill.	West's Fla. Stat. Ann. § 101.043 & West's Fla. Stat. Ann. § 97.0535

		2. Bank statement. 3. Government check. 4. Paycheck. 5. Other government document (excluding voter identification card). Version effective 1/1/2005-12/31/2005	
Georgia	Provide ID	(a) Each elector shall present proper identification to a poll worker at or prior to completion of a voter's certificate at any polling place and prior to such person's admission to the enclosed space at such polling place. Proper identification shall consist of any one of the following: (1) A valid Georgia driver's license; (2) A valid identification card issued by a branch, department, agency, or entity of the State of Georgia, any other state, or the United States authorized by law to issue personal identification; (3) A valid United States passport; (4) A valid employee identification card containing a photograph of the elector and issued by any branch, department, agency, or entity of the United States government, this state, or any county, municipality, board, authority, or other entity of this state; (5) A valid employee identification card containing a photograph of the elector and issued by any employer of the elector in the ordinary course of such employer's business; (6) A valid student identification card containing a photograph of the elector from any public or private college, university, or postgraduate technical or professional school located within the State of Georgia; (7) A valid Georgia license to carry a pistol or revolver; (8) A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States; (9) A valid United States military identification card; (10) A certified copy of the elector's birth certificate; (11) A valid social security card; (12) Certified naturalization documentation; (13) A certified copy of court records showing adoption, name, or sex change; (14) A current utility bill, or a legible copy thereof, showing the name and address of the elector; (15) A bank statement, or a legible copy thereof, showing the name and address of the elector; (16) A government check or paycheck, or a legible copy thereof, showing the name and address of the elector; or (17) A government document, or a legible copy thereof, showing the name and address of the elector. (b) If an elector is unable to produce any of the items of identification listed in subsection (a) of this Code section, he or she shall sign a statement under oath in a form approved by the Secretary of State, separate and distinct from the elector's voter certificate, swearing or affirming that he or she is the person identified on the elector's voter certificate. Such person shall be allowed to vote without undue delay; provided, however, that an elector who registered for the first time in this state by mail and did not provide one of the forms of identification set forth in subsection (a) of this Code section at the time of registration and who is voting for the first time may vote a provisional ballot pursuant to Code Section 21-2-418 upon swearing or affirming that the elector is the person identified in the elector's voter certificate. Such provisional ballot shall only be counted if the registrars are able to verify current and valid identification of the elector as provided in this Code section within the time period for verifying provisional ballots pursuant to Code Section 21-2-419. Falsely swearing or affirming such statement under oath shall be punishable as a felony, and the penalty shall be distinctly set forth on the face of the statement." effective June, 2003	Ga. Code. Ann. § 21-2-417

Hawaii	Photo ID	(b) The voter shall present valid identification to the official in charge of the pollbook. ***Do I Need an I.D. to Vote on Election Day?*** **Yes.** Be sure to have an I.D. with a picture and signature (such as a Hawaii driver's license or state I.D. card) when you go to vote. The NVRAC card is not an acceptable form of identification. From the 2004 version of the administrative code. **§ 11-136 Poll book, identification, voting.** Every person upon applying to vote shall sign the person's name in the poll book prepared for that purpose. This requirement may be waived by the chairperson of the precinct officials if for reasons of illiteracy or blindness or other physical disability the voter is unable to write. Every person shall provide identification if so requested by a precinct official. A poll book shall not contain the social security number of any person. After signing the poll book and receiving the voter's ballot, the voter shall proceed to the voting booth to vote according to the voting system in use in the voter's precinct. The precinct official may, and upon request shall, explain to the voter the mode of voting. Last amended 2003.	Haw. Code. R. § 2-51-80 (Paper ballots; voting procedure at the polls), § 2-51-83 (Punchcard ballots; voting procedure at polls), 2-51-85.1 (Marksense ballots; voting procedure at the polls.) – All have same subsection (b) Haw. Code. R. T. 2, SUBT. 4, CH. 51, Appendix HRS 11-136
Idaho	Sign Name	(1) An elector desiring to vote shall state his name and address to the judge or clerk in charge of the combination election record and poll book. (2) Before receiving his ballot, each elector shall sign his name in the combination election record and poll book following his name therein. (5) The elector shall then be given the appropriate ballots which have been stamped with the official election stamp and shall be given folding instructions for such ballots. (Last amended in 1972)	Id. St. §34-1106
Illinois	Give Name	Any person desiring to vote shall give his name and, if required to do so, his residence to the judges of election, one of whom shall thereupon announce the same in a loud and distinct tone of voice, clear, and audible; the judges of elections shall check each application for ballot against the list of voters registered in that precinct to whom absentee or early ballots have been issued for that election, which shall be provided by the election authority and which list shall be available for inspection by pollwatchers. A voter applying to vote in the precinct on election day whose name appears on the list as having been issued an absentee or early ballot shall not be permitted to vote in the precinct. All applicable provisions of Articles 4, 5 or 6 shall be complied with and if such name is found on the register of voters by the officer having charge thereof, he	10 Ill. Comp. Stat. 5/17-9

		shall likewise repeat said name, and the voter shall be allowed to enter within the proximity of the voting booths, as above provided. One of the judges shall give the voter one, and only one of each ballot to be voted at the election, on the back of which ballots such judge shall indorse his initials in such manner that they may be seen when each such ballot is properly folded, and the voter's name shall be immediately checked on the register list. In those election jurisdictions where perforated ballot cards are utilized of the type on which write-in votes can be cast above the perforation, the election authority shall provide a space both above and below the perforation for the judge's initials, and the judge shall endorse his or her initials in both spaces. Whenever a proposal for a constitutional amendment or for the calling of a constitutional convention is to be voted upon at the election, the separate blue ballot or ballots pertaining thereto shall, when being handed to the voter, be placed on top of the other ballots to be voted at the election in such manner that the legend appearing on the back thereof, as prescribed in Section 16-6 of this Act, shall be plainly visible to the voter. At all elections, when a registry may be required, if the name of any person so desiring to vote at such election is not found on the register of voters, he or she shall not receive a ballot until he or she shall have complied with the law prescribing the manner and conditions of voting by unregistered voters. If any person desiring to vote at any election shall be challenged, he or she shall not receive a ballot until he or she shall have established his right to vote in the manner provided hereinafter; and if he or she shall be challenged after he has received his ballot, he shall not be permitted to vote until he or she has fully complied with such requirements of the law upon being challenged. Besides the election officer, not more than 2 voters in excess of the whole number of voting booths provided shall be allowed within the proximity of the voting booths at one time. The provisions of this Act, so far as they require the registration of voters as a condition to their being allowed to vote shall not apply to persons otherwise entitled to vote, who are, at the time of the election, or at any time within 60 days prior to such election have been engaged in the military or naval service of the United States, and who appear personally at the polling place on election day and produce to the judges of election satisfactory evidence thereof, but such persons, if otherwise qualified to vote, shall be permitted to vote at such election without previous registration.	
Indiana	Sign Name		West's Annotated Indiana Code § 3-11-8-25
Iowa	Sign Name	1. The board members of their respective precincts shall have charge of the ballots and furnish them to the voters. Any person desiring to vote shall sign a voter's declaration provided by the officials, in substantially the following form: VOTER'S DECLARATION OF ELIGIBILITY I do solemnly swear or affirm that I am a resident of the .... precinct, ... ward or township, city of ...., county of ...., Iowa. I am a registered voter. I have not voted and will not vote in any other precinct in said election. I understand that any false statement in this declaration is a criminal offense punishable as provided by law. ____________________ Signature of Voter ____________________ Address ____________________ Telephone Approved:	Iowa Code § 49.77

		Board Member 2. One of the precinct election officials shall announce the voter's name aloud for the benefit of any persons present pursuant to section 49.104, subsection 2, 3, or 5. Any of those persons may upon request view the signed declarations of eligibility and may review the signed declarations on file so long as the person does not interfere with the functions of the precinct election officials. 3. A precinct election official shall require any person whose name does not appear on the election register as an active voter to show identification. Specific documents which are acceptable forms of identification shall be prescribed by the state commissioner. A precinct election official may require of the voter unknown to the official, identification upon which the voter's signature or mark appears. If identification is established to the satisfaction of the precinct election officials, the person may then be allowed to vote. (From 2004 version of Iowa Annotated Code; effective January 1, 1995)	
Kansas	Sign Name	(b) A person desiring to vote shall provide to the election board: (1) the voter's name; (2) if required, the voter's address; and (3) the voter's signature on the registration or poll book. A signature may be made by mark, initials, typewriter, print, stamp, symbol or any other manner if by placing the signature on the document the person intends the signature to be binding. A signature may be made by another person at the voter's direction if the signature reflects such voter's intention. (Approved April 14, 2004, 2004 Kansas Laws Ch. 93)	Kan. Stat. Ann. § 25-2908(b)
Kentucky	Provide ID	117.227 Confirmation of voter's identity Election officers shall confirm the identity of each voter by personal acquaintance or by a document, such as a motor vehicle operator's license, Social Security card, or credit card. The election officer confirming the identity shall sign the precinct voter roster and list the method of identification. Effective: 7/15/02 31 KAR 4:010. Voter identification cards. Section 1. In addition to the forms of identification specifically provided for by KRS 117.227, any identification card that bears both the picture and signature of the voter, or any identification card that has been issued by the county, and which has been approved in writing by the State Board of Elections, shall be acceptable for confirmation of the voter's identity.	Ky Rev. Stat. Ann. 117.227 31 Ky. Admin. Regs. 4:010.
Louisiana	Photo ID	A. Identification of voters. (1) A person who desires to vote in a primary or general election shall give his name and address to a commissioner, who shall announce the applicant's name and address to the persons at the polling place. (2) Each applicant shall identify himself, in the presence and view of the bystanders, and present to the commissioners a Louisiana driver's license, a Louisiana special identification card issued pursuant to R.S. 40:1321, or other generally recognized picture identification card. If the applicant does not have a Louisiana driver's license, a Louisiana special identification card, or other generally recognized picture identification card, the applicant shall sign an affidavit, which is supplied by the secretary of state, to that effect before the commissioners who shall place the affidavit in the envelope marked "Registrar of Voters" and attach the envelope to the precinct register, and the applicant	La. Rev. Stat. Ann. 18:562

		shall provide further identification by presenting his current registration certificate, giving his date of birth or providing other information stated in the precinct register that is requested by the commissioners. However, an applicant that is allowed to vote without the picture identification required by this Paragraph is subject to challenge as provided in R.S. 18:565. Effective: 1/1/2002	
Maine	Give Name	The voting procedure is as follows. 1. Name announced. A voter who wishes to vote must state the voter's name and, upon request, residence address to an election clerk who shall announce the name in a loud, clear voice. (In effect at time of 2003 amendment: 2003, c. 584, § 9)	Me. Rev. Stat. Ann. tit. 21-A, § 671
Maryland	Sign Name	10-310. (a) For each individual who seeks to vote, an election judge, in accordance with instructions provided by the local board, shall: (1) locate the individual's name in the precinct register and locate the preprinted voting authority card and then authorize the individual to vote a regular ballot; (2)(i) if the individual's name is not found on the precinct register, search the inactive list and if the name is found, authorize the individual to vote a regular ballot; or (ii) if the individual's name is not on the inactive list, refer the individual for provisional ballot voting under § 9-404 of this article; (3) establish the identity of the voter by requesting the voter to state the month and day of the voter's birth and comparing the response to the information listed in the precinct register; (4) verify the address of the voter's residence; (5) if any changes to the voting authority card are indicated by a voter, make the appropriate changes in information on the card or other appropriate form; and (6) have the voter sign the voting authority card and either issue the voter a ballot or send the voter to a machine to vote.	Md. Elec. Law § 10-310
Mass.	Give Name	Each voter desiring to vote at a polling place shall give his name and, if requested, his residence to one of the officers at the entrance to the space within the guard rail, who shall thereupon distinctly announce the same. If such name is found on the voting list, the election officer shall check and repeat the name and shall admit the voter to the space enclosed by the guard rail and, in case official ballots, other than those marked "Challenged Ballots" as provided by section thirty-five A, are used, such voter shall be given one ballot. The use of electronic means such as tape recording equipment or radio broadcasting equipment for the recording or broadcasting of the names of voters not yet checked as having voted shall be prohibited. Last amended in 1981 (5B) Identification. If so authorized by the city or town clerk or registrars of voters, an election officer may request any voter to present written identification. Such requests shall not discriminate in any way, but shall be entirely random, consistent, or based on reasonable suspicion. For the purpose of 950 CMR 52.03(5B), of M.G.L. c. 54, § 76B, and of 950 CMR 52.03(5)(b), suitable written identification includes a driver's license, recent utility bill, rent receipt on a landlord's printed letterhead, lease, duplicate copy of a voter registration affidavit, or any other printed identification which contains the voter's name and address. If voters fail to present suitable written identification when so requested, they must still be allowed to vote, but an election officer or any other person may challenge their right to vote under M.G.L. c. 54, § 85 and 950 CMR 52.03(23).	Mass. Ann. Laws 54 § 76 950 Mass. Code Regs. 52.03
Michigan	Sign Name	(1) At each election, before being given a ballot, each registered elector offering to vote shall identify himself or herself by presenting an official state	Mich. Comp. Laws Ann. §

		identification card issued to that individual pursuant to Act No. 222 of the Public Acts of 1972, being sections 28.291 to 28.295 of the Michigan Compiled Laws, an operator's or chauffeur's license issued to that individual pursuant to the Michigan Vehicle Code, Act No. 300 of the Public Acts of 1949, being sections 257.1 to 257.923 of the Michigan Compiled Laws, or other generally recognized picture identification card and by executing an application showing his or her signature or mark and address of residence in the presence of an election official. If the voter registration cards are used in the precinct, the election official in charge of the precinct registration file shall compare the signature upon the application with the signature upon the registration card. If voter registration lists are used in the precinct, the election inspector shall determine if the name on the application to vote appears on the voter registration list. If the name appears on the voter registration list, the elector shall provide further identification by giving his or her date of birth or other information stated upon the voter registration list. In precincts using voter registration lists, the date of birth may be required to be placed on the application to vote. If the signature or an item of information does not correspond, the vote of the person shall be challenged, and the same procedure shall be followed as provided in this act for the challenging of an elector. If the person offering to vote has signed the registration card or application by making a mark, the person shall identify himself or herself by giving his or her date of birth, which shall be compared with the date of birth stated upon the registration card or voter registration list, or shall give other identification as may be referred to upon the registration card or voter registration list. If the elector does not have an official state identification card, operator's or chauffeur's license as required in this subsection, or other generally recognized picture identification card, the individual shall sign an affidavit to that effect before an election inspector and be allowed to vote as otherwise provided in this act. However, an elector being allowed to vote without the identification required under this subsection is subject to challenge as provided in section 727. (2) If, upon a comparison of the signature or other identification, it is found that the applicant is entitled to vote, the election officer having charge of the registration list shall approve the application and write his or her initials on the application, after which the number on the ballot issued shall be noted on the application. The application shall serve as 1 of the 2 poll lists required to be kept as a record of a person who has voted. The application shall be filed with the township, city, or village clerk. If voter registration cards are used in the precinct, the date of the election shall be noted by 1 of the election officials upon the precinct registration card of each elector voting at an election. If voter registration lists are used in the precinct, the election official shall clearly indicate upon the list each elector voting at that election. The clerk of a city, village, or township shall maintain a record of voting participation for each registered elector. The Attorney General declared that this statute violated the Equal Protection Clause of the Fourteenth Amendment. Op. Atty. Gen. 1997, No. 6930. That decision is binding on all state agencies. (Effective March 31, 1997)	168.523
Minnesota	Sign Name	(a) An individual seeking to vote shall sign a polling place roster which states that the individual is at least 18 years of age, a citizen of the United States, has resided in Minnesota for 20 days immediately preceding the election, maintains residence at the address shown, is not under a guardianship in which the court order revokes the individual's right to vote, has not been found by a court of law to be legally incompetent to vote or convicted of a felony without having civil rights restored, is registered and has not already voted in the election. The roster must also state: "I understand that deliberately providing false information is a felony punishable by not more than five years imprisonment and a fine of not	Minn. Stat. § 204C.10

		more than $10,000, or both." (b) A judge may, before the applicant signs the roster, confirm the applicant's name, address, and date of birth. (c) After the applicant signs the roster, the judge shall give the applicant a voter's receipt. The voter shall deliver the voter's receipt to the judge in charge of ballots as proof of the voter's right to vote, and thereupon the judge shall hand to the voter the ballot. The voters' receipts must be maintained during the time for notice of filing an election contest. (Effective January 1, 2004)	
Mississippi	Sign Name	* * * When any person entitled to vote shall appear to vote, he shall first sign his name in a receipt book or booklet provided for that purpose and to be used at that election only and said receipt book or booklet shall be used in lieu of the list of voters who have voted formerly made by the managers or clerks; whereupon and not before, the initialing manager or, in his absence, the alternate initialing manager shall indorse his initials on the back of an official blank ballot, prepared in accordance with law, and at such place on the back of the ballot that the initials may be seen after the ballot has been marked and folded, and when so indorsed he shall deliver it to the voter, which ballot the voter shall mark in the manner provided by law, which when done the voter shall deliver the same to the initialing manager or, in his absence, to the alternate initialing manager, in the presence of the others, and the manager shall see that the ballot so delivered bears on the back thereof the genuine initials of the initialing manager, or alternate initialing manager, and if so, but not otherwise, the ballot shall be put into the ballot box; and when so done one (1) of the managers or a duly appointed clerk shall make the proper entry on the pollbook. If the voter is unable to write his name on the receipt book, a manager or clerk shall note on the back of the ballot that it was receipted for by his assistance. (Effective January 1, 1987)	Miss. Code Ann. § 23-15-541
Missouri	Provide ID	1. Before receiving a ballot, voters shall identify themselves by presenting a form of personal identification from the following list: (1) Identification issued by the state of Missouri, an agency of the state, or a local election authority of the state; (2) Identification issued by the United States government or agency thereof; (3) Identification issued by an institution of higher education, including a university, college, vocational and technical school, located within the state of Missouri; (4) A copy of a current utility bill, bank statement, government check, paycheck or other government document that contains the name and address of the voter; (5) Driver's license or state identification card issued by another state; or (6) Other identification approved by the secretary of state under rules promulgated pursuant to subsection 3 of this section other identification approved by federal law. Personal knowledge of the voter by two supervising election judges, one from each major political party, shall be acceptable voter identification upon the completion of a secretary of state-approved affidavit that is signed by both supervisory election judges and the voter that attests to the personal knowledge of the voter by the two supervisory election judges. The secretary of state may provide by rule for a sample affidavit to be used for such purpose. (Last amended in 2002)	Mo. Rev. Stat. §115.427.1

Montana	Provide ID	(1) (a) Before an elector is permitted to receive a ballot or vote, the elector shall present to an election judge a current photo identification showing the elector's name. If the elector does not present photo identification, including but not limited to a valid driver's license, a school district or postsecondary education photo identification, or a tribal photo identification, the elector shall present a current utility bill, bank statement, paycheck, notice of confirmation of voter registration issued pursuant to 13-2-207, government check, or other government document that shows the elector's name and current address. (From 2004 version of the Montana Code Annotated; No updates in 2004, only in 2005 [Unrelated section was amended in 2005])	Mont. Code. Ann. §13-13-114(1)(a)
Nebraska	Sign Name	(1) The clerks of election shall have a list of registered voters of the precinct and a sign-in register at the polling place on election day. The list of registered voters shall be used for guidance on election day and may be in the form of a computerized, typed, or handwritten list or precinct registration cards. Registered voters of the precinct shall place and record their signature in the sign-in register before receiving any ballot. The list of registered voters and the sign-in register may be combined into one document. (Last amended in 2003) Official ballots shall be used at all elections. No person shall receive a ballot or be entitled to vote unless and until he or she is registered as a voter except as provided in section 32-914.01, 32-914.02, 32-915, 32-915.01, or 32-936. Except as otherwise specifically provided, no ballot shall be handed to any registered voter at any election until (1) he or she announces his or her name and address to the clerk of election, (2) the clerk has found that he or she is a registered voter at the address as shown by the precinct list of registered voters unless otherwise entitled to vote in the precinct under section 32-328, 32-914.01, 32-914.02, 32-915, or 32-915.01, (3) if the voter registered by mail after January 1, 2003, and has not previously voted in an election for a federal office within the county, the clerk shall ask the registered voter to present a photographic identification which is current and valid or a copy of a utility bill, bank statement, government check, paycheck, or other government document that is current and that shows the name and address of the voter, (4) the clerk has instructed the registered voter to personally write his or her name in the precinct sign-in register on the appropriate line which follows the last signature of any previous voter, and (5) the clerk has listed on the precinct list of registered voters the corresponding line number and name of the registered voter. (Last updated in 2003)	Neb. Rev. Stat. § 32-913 Neb. Rev. Stat. § 32-914
Nevada	Match Sig.	1. Except as otherwise provided in NRS 293.541, if a person's name appears in the election board register or if he provides an affirmation pursuant to NRS 293.525, he is entitled to vote and must sign his name in the election board register when he applies to vote. His signature must be compared by an election board officer with the signature or a facsimile thereof on his original application to register to vote or one of the forms of identification listed in subsection 2. 2. Except as otherwise provided in NRS 293.2725, the forms of identification which may be used individually to identify a voter at the polling place are: (a) The card issued to the voter at the time he registered to vote; (b) A driver's license; (c) An identification card issued by the Department of Motor Vehicles; (d) A military identification card; or	Nev. Rev. Stat.§ 293.277

		(e) Any other form of identification issued by a governmental agency which contains the voter's signature and physical description or picture. Last Amendment Effective Jan. 1, 2004.	
NH	Give Name	A person desiring to vote shall, before being admitted to the enclosed space within the guardrail, announce his or her name to one of the ballot clerks who shall thereupon repeat the name; and, if the name is found on the checklist by the ballot clerk, the ballot clerk shall put a checkmark beside it and again repeat the name. The ballot clerk shall state the address listed on the checklist for the voter, and ask if the address is correct; if the address on the checklist is not correct, the ballot clerk shall correct the address in red on the checklist. The voter, if still qualified to vote in the town or ward and unless challenged as provided for in RSA 659:27-33, shall then be allowed to enter the space enclosed by the guardrail. After the voter enters the enclosed space, the ballot clerk shall give the voter one of each ballot to be voted on in that election which shall be folded as it was upon receipt from the secretary of state. Last Amendment Effective July 2, 2002.	N.H. Rev. Stat. Ann. 659:13
New Jersey	Match Sig.	19:15-17. Comparison of signatures or statements made openly; provisional ballots for newly registered voters without proper identification a. The comparison of signatures of a voter made upon registration and upon election day, and if the voter alleges his inability to write, the comparison of the answers made by such voter upon registration and upon election day, shall be had in full view of the challengers. b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 232 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the "Uniformed and Overseas Citizens Absentee Voting Act" (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote other than in person under section 3 of Pub.L.98-435, the "Voting Accessibility for the Elderly and Handicapped Act," or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery. c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31- 6.4). shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5). Last Amendment Effective July 9, 2004	N.J. Stat. Ann. 19:15-17
New Mexico	Sign Name	D. The judge assigned to the voter list used for confirmation of registration and voting shall determine that each person offering to vote is registered and, in the	N.M. Stat. Ann §1-5-10

		case of a primary election, that the voter is registered in a party designated on the primary election ballot. If the person's registration is confirmed by the presence of his name on the voter list or if the person presents a certificate under the seal and signature of the county clerk showing that he is entitled to vote in the election and to vote in that precinct, the judge shall announce to the election clerks the list number and the name of the voter as shown on the voter list. E. The election clerk shall locate that list number and name on the signature roster and shall require the voter to sign his usual signature or, if unable to write, to make his mark opposite his printed name. If the voter makes his mark, it shall be witnessed by one of the judges of the precinct board. If the signature roster indicates that the voter is required to present a form of identification before voting, the election judge shall ask the voter for a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows and matches the name and address of the voter as indicated on the signature roster. If the voter does not provide the required identification, he shall be allowed to vote on a provisional paper ballot. G. A voter shall not be permitted to vote until he has properly signed his usual signature or made his mark in the signature roster. (From 2004 version of New Mexico Annotated Statutes, amended in 2005 to require presentation of ID)	(Recompiled as §1-12-7.1 by L. 2005, Ch. 270, §63, effective July 1, 2005)
New York	Match Sig.	1. A person before being allowed to vote shall be required, except as provided in this chapter, to sign his name on the back of his registration poll record on the first line reserved for his signature at the time of election which is not filled with a previous signature, or on the line of the computer generated registration list reserved for his signature. The two inspectors in charge shall satisfy themselves by a comparison of this signature with his registration signature and by comparison of his appearance with the descriptive material on the face of the registration poll record that he is the person registered. If they are so satisfied they shall enter the other information required for the election on the same line with the voter's latest signature, shall sign their names or initials in the spaces provided therefor, and shall permit the applicant to vote. Any inspector or inspectors not satisfied shall challenge the applicant forthwith. 2. If a person who alleges his inability to sign his name presents himself to vote, the board of inspectors shall permit him to vote, unless challenged on other grounds, provided he had been permitted to register without signing his name. The board shall enter the words "Unable to Sign" in the space on his registration poll record reserved for his signature or on the line of the computer generated registration list reserved for his signature at such election. If his signature appears upon his registration record or upon the computer generated registration list the board shall challenge him forthwith, except that if such a person claims that he is unable to sign his name by reason of a physical disability incurred since his registration, the board, if convinced of the existence of such disability, shall permit him to vote, shall enter the words "Unable to Sign" and a brief description of such disability in the space reserved for his signature at such election. At each subsequent election, if such disability still exists, he shall be entitled to vote without signing his name and the board of inspectors, without further notation, shall enter the words "Unable to Sign" in the space reserved for his signature at such election. 3. The voter's signature made by him upon registration and his signature made at subsequent elections shall be effectively concealed from the voter by a blotter or piece of opaque paper until after the voter shall have completed his signature. 4. In any case where a person who has heretofore voted has placed his voting signature on the back of his registration poll record on the first or any succeeding line or lines at the time or times of an election, instead of on the last line of the	N.Y. Law § 8-304 (McKinney)

		space thereon required to be reserved for such voting signatures and on any lines next running upward therefrom, the inspectors of election shall obliterate such misplaced signature or signatures, initial the obliteration and require such voter to sign his name again in the correct place on such registration poll record. 5. Any person who has heretofore registered and who at such time placed his or her registration signature on the back of the registration poll record otherwise than in the space required to be provided therefor at the bottom of such poll record, shall, before being permitted to vote at any election thereafter, subscribe a new registration signature for himself on the last line at the bottom of such poll record, and, at the same time, if the inspectors of election are satisfied that the signatures were made by the same person, obliterate his original registration signature placed elsewhere than on the bottom of such record. Such obliterations may be made by crossing out the signature so as to completely efface the same or by affixing thereover a piece of gummed tape of a size sufficient only to cover such signature and of a type adequate to fully conceal the same Last Amended 1986	
North Carolina	Give Name	(a) Checking Registration. --A person seeking to vote shall enter the voting enclosure through the appropriate entrance. A precinct official assigned to check registration shall at once ask the voter to state current name and residence address. The voter shall answer by stating current name and residence address. In a primary election, that voter shall also be asked to state, and shall state, the political party with which the voter is affiliated or, if unaffiliated, the authorizing party in which the voter wishes to vote. After examination, that official shall state whether that voter is duly registered to vote in that precinct and shall direct that voter to the voting equipment or to the official assigned to distribute official ballots. If a precinct official states that the person is duly registered, the person shall sign the pollbook, other voting record, or voter authorization document in accordance with subsection (c) of this section before voting.	N.C. Gen. Stat. Ann. § 163-166.7
North Dakota	Provide ID	16.1-05-07 Poll clerks to check identification and verify eligibility -- Poll clerks to request, correct, and update incorrect information contained in the pollbook. 1. Before delivering a ballot to an individual according to section 16.1-13- 22, the poll clerks shall request the individual to show a driver's license issued by the state, another form of identification displaying a photograph of the individual and the individual's date of birth, or another appropriate form of identification prescribed by the secretary of state. If an individual offering to vote fails or refuses to show an appropriate form of identification, the individual may be allowed to vote without being challenged according to section 16.1-05-06 if the individual provides to the election board the individual's date of birth and if a member of the election board or a clerk knows the individual and can personally vouch that the individual is a qualified elector of the precinct. After verifying that the individual's name is contained in the pollbook generated from the central voter file, poll clerks shall verify the individual's residential address and mailing address, if different from the individual's residential address. (From 2003 version of N.D. Century Code; only amendment to this statute that became effective in 2003 was in 2005)	N.D. Cent. Code § 16.1-05-07

Ohio	Match Sig.	When an elector appears in a polling place to vote he shall announce his full name and address to the precinct election officials. He shall then write his name and address at the proper place in the poll lists or signature pollbooks provided therefore, except that if, for any reason, an elector shall be unable to write his name and address in the poll list or signature pollbook, the elector may make his mark at the place intended for his name and a precinct official shall write the name of the elector at the proper place on the poll list or signature pollbook following the elector's mark, upon the presentation of proper identification. The making of such mark shall be attested by the precinct official who shall evidence the same by signing his name on the poll list or signature pollbook as a witness to such mark. The elector's signature in the poll lists or signature pollbooks shall then be compared with his signature on his registration form or a digitized signature list as provided for in section 3503.13 of the Revised Code, and if, in the opinion of a majority of the precinct election officials, the signatures are the signatures of the same person, the clerks shall enter the date of the election on the registration form or shall record the date by such other means as may be prescribed by the secretary of state. If the right of the elector to vote is not then challenged, or, if being challenged, he establishes his right to vote, he shall be allowed to proceed into the voting machine. If voting machines are not being used in that precinct, the judge in charge of ballots shall then detach the next ballots to be issued to the elector from Stub B attached to each ballot, leaving Stub A attached to each ballot, hand the ballots to the elector, and call his name and the stub number on each of the ballots. The clerk shall enter the stub numbers opposite the signature of the elector in the pollbook. The elector shall then retire to one of the voting compartments to mark his ballots. No mark shall be made on any ballot which would in any way enable any person to identify the person who voted the ballot. (Effective at time of last update, 1992 H 182, eff. 4-9-93)	Ohio Rev. Code Ann. § 3505.18
Oklahoma	Sign Name	Each person presenting himself to vote shall announce his name to the judge of the precinct, whereupon the judge shall determine whether said person's name is in the precinct registry. (Last amended in 1990) Persons who have been determined to be eligible to vote shall sign, in the presence of the clerk, the proper precinct registry. Said clerk shall thereupon issue proper ballots to said person. The voter's signature on said precinct registry shall be the best evidence of said voter's having voted at said election. Said precinct registry shall be retained in the office of the county election board for a period of twenty-two (22) months following the election and shall be subject to public inspection during regular office hours. (Last amended in 1990)	Okla. Stat. Ann. tit. 26, § 7-114 Okla. Stat. Ann. tit. 26, § 7-117
Oregon	Match Sig.	All elections in Oregon are Vote by Mail. An Elections Official will compare the signature on your ballot return envelope to the signature on your voter registration card to verify your identity (http://www.uhavavote.org/votingguide/votebymail.html) (unknown date, but use of wayback machine shows that this provision on site on following dates: 7/11/04, 10/20/04 and 10/29/04)	Or. Rev. Stat. § 254.385
Penn.	Match Sig.	(a.3) All electors, including any elector that shows identification pursuant to subsection (a), shall subsequently sign a voter's certificate, and, unless he is a State or Federal employee who has registered under any registration act without declaring his residence by street and number, he shall insert his address therein, and hand the same to the election officer in charge of the district register. Such election officer shall thereupon announce the elector's name so that it may be heard by all members of the election board and by all watchers present in the	25 Pa. Stat. Ann. § 3050

		polling place and shall compare the elector's signature on his voter's certificate with his signature in the district register. If, upon such comparison, the signature upon the voter's certificate appears to be genuine, the elector who has signed the certificate shall, if otherwise qualified, be permitted to vote: Provided, That if the signature on the voter's certificate, as compared with the signature as recorded in the district register, shall not be deemed authentic by any of the election officers, such elector shall not be denied the right to vote for that reason, but shall be considered challenged as to identity and required to make the affidavit and produce the evidence as provided in subsection (d) of this section. When an elector has been found entitled to vote, the election officer who examined his voter's certificate and compared his signature shall sign his name or initials on the voter's certificate, shall, if the elector's signature is not readily legible, print such elector's name over his signature, and the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes shall also be entered by one of the election officers or clerks. As each voter is found to be qualified and votes, the election officer in charge of the district register shall write or stamp the date of the election or primary, the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes, and shall sign his name or initials in the proper space on the registration card of such voter contained in the district register. (In effect at time of, and unaltered by: 2004, Oct. 8, P.L. 807, No. 97, § 5.1 (changes procedure for first time voters, not established voters))	
Rhode Island	Give Name	(a) Each person desiring to vote shall state his or her name and residence, including that person's street address, if he or she has any, to one of the first pair of bi-partisan supervisors, who shall then announce the name and residence in a loud and distinct voice, clear and audible. As each voter's name is announced, the voter shall be handed a ballot application in the following form: BALLOT APPLICATION (Poll List) Senatorial District ____________________ Representative District ____________ Voting District ________________________ Election Date ____________________________________ I hereby certify that I am a registered and qualified elector in the above voting district of City of and hereby make application for ballots to be voted at this election. ____ (Signature of Voter) ____ (Residence Address) Number Approved __________________________ (Supervisor of Election)	R.I. Gen. Laws § 17-19-24

		(b) The voter shall sign the application in the presence and view of a bipartisan pair. They shall locate the voter's name on the certified voting list for the voting district. Upon finding the voter's name on the certified voting list for the district, they shall initial the ballot application in the place provided next to the word "Approved" and shall enter on the certified list of voters a proper notation that the applicant has voted in the election. They shall then return the ballot application to the voter who shall pass down the line and present it to the clerk. After the voter has handed the approved ballot application to the clerk, the clerk shall provide the voter with the appropriate computer ballot and security sleeve, the warden shall direct the voter to the voting booth which the voter shall use, and unless the voter needs instruction or assistance as provided in this chapter, the voter shall cast his or her vote, and if he or she desires place the voted computer ballot in a security sleeve, and shall proceed to the optical scan precinct count unit and shall personally place his or her voted ballot into the designated ballot slot on the unit, and after doing so, shall leave the enclosure at once. No voter shall remain within the voting booth longer than ten (10) minutes, and if the voter refuses to leave after the lapse of ten (10) minutes, the voter shall be removed from the voting booth by order of the warden. Except for the election officials and the election inspector, not more than two (2) voters in excess of the number of voting booths shall be permitted within the enclosed space at any time. (Last amended 2004, Current through January 2005 Session)	
South Carolina	Photo ID	**§ 7-13-710. Proof of right to vote; signing poll list; comparison of signatures.** When any person presents himself to vote, he shall produce his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department of Motor Vehicles, if he is not licensed to drive, or the written notification of registration provided for by §§ 7-5- 125 and 7-5-180 if the notification has been signed by the elector. If the elector loses or defaces his registration notification, he may obtain a duplicate notification from his county board of registration upon request in person, or by telephone or mail. After presentation of the required identification, his name must be checked by one of the managers on the margin of the page opposite his name upon the registration books, or copy of the books, furnished by the board of registration. The managers shall keep a poll list which must contain one column headed "Names of Voters". Before any ballot is delivered to a voter, the voter shall sign his name on the poll list, which must be furnished to the appropriate election officials by the State Election Commission. At the top of each page the voter's oath appropriate to the election must be printed. The signing of the poll list or the marking of the poll list is considered to be an affirmation of the oath by the voter. One of the managers shall compare the signature on the poll list with the signature on the voter's driver's license, registration notification, or other identification and may require further identification of the voter and proof of his right to vote under this title as he considers necessary. If the voter is unable to write or if the voter is prevented from signing by physical handicap, he may sign his name to the poll list by mark with the assistance of one of the managers. Last amended: 1968	S.C. Code Ann. § 7-13-710
South Dakota	Photo ID	When a voter is requesting a ballot, the voter shall present a valid form of personal identification. The personal identification that may be presented shall be either: (1) A South Dakota driver's license or nondriver identification card; (2) A passport or an identification card, including a picture, issued by an agency of the United States government; (3) A tribal identification card, including a picture; or (4) An identification card, including a picture, issued by a high school or an accredited institution of higher education, including a university, college, or	S.D. Codified Laws § 12-18-6.1

		technical school, located within the State of South Dakota. Last amended March 2004	
Tennessee	Provide ID	Identification of eligible voters (a)(1) A voter shall sign an application for ballot, indicate the primary in which the voter desires to vote, if any, and present it to a registrar. The application for ballot shall include thereon a space for the address of the voter's current residence, and the voter shall write or print such address on the application when the voter signs it. The registrar shall compare the signature and information on the application with the signature and information on the duplicate permanent registration record. The registrar shall make a determination whether the voter's address is different from the address on the voter's permanent registration record or if the registration is in inactive status. If the voter has changed residence, or the voter's registration is inactive, the registrar shall follow the procedures for voting pursuant to § 2-7-140. If, upon comparison of the signature and other identification, it is found that the applicant is entitled to vote, the registrar shall initial the application and shall note on the reverse side of the voter's duplicate permanent registration record the date of the election, the number of the voter's ballot application, and the elections in which the voter votes. If the applicant's signature is illegible, the registrar shall print the name on the application. The registrar shall give the voter the ballot application which is the voter's identification for a paper ballot or ballots or for admission to a voting machine. The voter shall then sign the duplicate poll lists without leaving any lines blank on any poll list sheet. (2) In any computerized county, the county election commission shall have the option of using an application for a ballot as provided in this section, or using the computerized voter signature list. A computerized voter signature list shall include the voter's name, current address of residence, social security number or registration number, birth date and spaces for the voter's signature, elections voted, ballot number and precinct registrar's initials. The following procedures shall be followed in the case of computerized voter signature lists: (A) The voter shall sign the signature list and indicate the election or elections the voter desires to vote in and verify the voter's address in the presence of the precinct registrar; (B) The registrar shall compare the voter's signature and information on the signature list with other evidence of identification supplied by the voter. If, upon comparison of the signature and other evidence of identification, it is found that the applicant is entitled to vote, the registrar shall initial the signature list; (C) If the applicant's signature is illegible, the registrar shall print the name of the applicant on the voter list; and (D) If a voter is unable to present any evidence of identification specified in subsection (c), the voter shall be required to execute an affidavit of identity on a form provided by the county election commission. Last amended 2003	Tenn. Code Ann. § 2-7-112
Texas	Provide ID	(b) On offering to vote, a voter must present the voter's voter registration certificate to an election officer at the polling place. (Last amended in 1997)	Tex. Elec. Code Ann. § 63.001
Utah	Give Name	(1)(a) Any registered voter desiring to vote shall give his name, and, if requested, his residence, to one of the election judges. (b) If an election judge does not know the person requesting a ballot and has reason to doubt that person's identity, the judge shall request identification or have the voter identified by a known registered voter of the district. (3) If the election judge determines that the voter is registered: (a) the election judge in charge of the official register shall: (i) write the ballot number opposite the name of the voter in the official register; and	Utah Code Ann. § 20A-3-104

		(ii) direct the voter to sign his name in the election column in the official register; (b) another judge shall list the ballot number and voter's name in the pollbook; and (c) the election judge having charge of the ballots shall: (i) endorse his initials on the stub; (ii) check the name of the voter on the pollbook list with the number of the stub; (iii) hand the voter a ballot; and (iv) allow the voter to enter the voting booth. (In effect at time of last update prior to 2005: Laws 2003, c. 37, § 1, eff. May 5, 2003)	
Vermont	Give Name	Before a person may be admitted to vote, he or she shall announce his or her name and if requested, his or her place of residence in a clear and audible tone of voice, or present his or her name in writing, or otherwise identify himself or herself by appropriate documentation. The election officials attending the entrance of the polling place shall then verify that the person's name appears on the checklist for the polling place. If the name does appear, and if no one immediately challenges the person's right to vote on grounds of identity or having previously voted in the same election, the election officials shall repeat the name of the person and: (1) If the checklist indicates that the person is a first-time voter in the municipality who registered by mail and who has not provided required identification before the opening of the polls, require the person to present any one of the following: a valid photo identification; a copy of a current utility bill; a copy of a current bank statement; or a copy of a government check, paycheck, or any other government document that shows the current name and address of the voter. If the person is unable to produce the required information, the person shall be afforded the opportunity to cast a provisional ballot, as provided in subchapter 6A of this chapter. The elections official shall note upon the checklist a first-time voter in the municipality who has registered by mail and who produces the required information, and place a mark next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting. (2) If the voter is not a first-time voter in the municipality, no identification shall be required, the clerk shall place a check next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting (Last amended in 2003)	Vt. Stat. Ann. tit. 17, § 2563
Virginia	Provide ID	§ 24.2-643. Qualified voter permitted to vote; procedures at polling place; voter identification A. After the polls are open, each qualified voter at a precinct shall be permitted to vote. The officers of election shall ascertain that a person offering to vote is a qualified voter before admitting him to the voting booth and furnishing an official ballot to him. B. An officer of election shall ask the voter for his full name and current residence address and repeat, in a voice audible to party and candidate representatives present, the full name and address stated by the voter. The officer shall ask the voter to present any one of the following forms of identification: his Commonwealth of Virginia voter registration card, his social security card, his valid Virginia driver's license, or any other identification card issued by a government agency of the Commonwealth, one of its political subdivisions, or the United States; or any valid employee identification card containing a photograph of the voter and issued by an employer of the voter in the ordinary course of the employer's business. If the voter's name is found on the pollbook, if he presents one of the forms of	Va. Code. Ann.

		identification listed above, if he is qualified to vote in the election, and if no objection is made, an officer shall enter, opposite the voter's name on the pollbook, the first or next consecutive number from the voter count form provided by the State Board, or shall enter that the voter has voted if the pollbook is in electronic form; an officer shall provide the voter with the official ballot; and another officer shall admit him to the voting booth. Except as provided in subsection E of this section, if a voter is entitled to vote except that he is unable to present one of the forms of identification listed above, he shall be allowed to vote after signing a statement, subject to felony penalties for false statements pursuant to § 24.2-1016, that he is the named registered voter who he claims to be. A voter who requires assistance in voting by reason of physical disability or inability to read or write, and who requests assistance pursuant to § 24.2-649, may be assisted in preparation of this statement in accordance with that section. The provisions of § 24.2-649 regarding voters who are unable to sign shall be followed when assisting a voter in completing this statement. (Version in effect as of 2004- effective 4/12/2004)	
Washington	Sign Name	29A.44.201. A voter desiring to vote shall give his or her name to the precinct election officer who has the precinct list of registered voters. This officer shall announce the name to the precinct election officer who has the copy of the inspector's poll book for that precinct. If the right of this voter to participate in the primary or election is not challenged, the voter must be issued a ballot or permitted to enter a voting booth or to operate a voting device. For a partisan primary in a jurisdiction using the physically separate ballot format, the voter must be issued a nonpartisan ballot and each party ballot. The number of the ballot or the voter must be recorded by the precinct election officers. If the right of the voter to participate is challenged, RCW 29A.08.810 and 29A.08.820 apply to that voter. (In effect at time of last update prior to 2005: 2004 c 271 § 136, eff. June 10, 2004) 29A.44.210. Any person desiring to vote at any primary or election is required to sign his or her name on the appropriate precinct list of registered voters. If the voter registered using a mark, or can no longer sign his or her name, the election officers shall require the voter to be identified by another registered voter. The precinct election officers shall then record the voter's name. Effective date: July 1, 2004	Wash. Rev. Code § 29A.44.201 & 29A.44.210
West Virginia	Match Sig.	(a) Any person desiring to vote in an election shall, upon entering the election room, clearly state his or her name and residence to one of the poll clerks who shall thereupon announce the same in a clear and distinct tone of voice. If that person is found to be duly registered as a voter at that precinct, he or she shall be required to sign his or her name in the space marked "signature of voter" on the pollbook prescribed and provided for the precinct. If that person is physically or otherwise unable to sign his or her name, his or her mark shall be affixed by one of the poll clerks in the presence of the other and the name of the poll clerk affixing the voter's mark shall be indicated immediately under the affixation. No ballot may be given to the person until he or she so signs his or her name on the pollbook or his or her signature is so affixed thereon. * * * (c) When the voter's signature is properly on the pollbook, the two poll clerks shall sign their names in the places indicated on the back of the official ballot and deliver the ballot to the voter to be voted by him or her without leaving the	W. Va. Code § 3-1-34 (a)

		election room. If he or she returns the ballot spoiled to the clerks, they shall immediately mark the ballot "spoiled" and it shall be preserved and placed in a spoiled ballot envelope together with other spoiled ballots to be delivered to the board of canvassers and deliver to the voter another official ballot, signed by the clerks on the reverse side required by this subsection. The voter shall thereupon retire alone to the booth or compartment prepared within the election room for voting purposes and there prepare his or her ballot using a ballpoint pen of not less than five inches in length or other indelible marking device of not less than five inches in length. In voting for candidates in general and special elections, the voter shall comply with the rules and procedures prescribed in section five, article six of this chapter. (In effect at time of last update prior to 2005: Acts 2003, c. 100, eff. 90 days after March 7, 2003)	
Wisconsin	Give Name	6.79(2)(a) Except as provided in sub. (6), where there is registration, each person, before receiving a voting number, shall state his or her full name and address. Upon the prepared registration list, after the name of each elector, the officials shall enter the serial number of the vote as it is polled, beginning with number one. Each elector shall receive a slip bearing the same serial number. A separate list shall be maintained for electors who are voting under s. 6.15, 6.29 or 6.55(2) or (3) and electors who are reassigned from another polling place under s. 5.25(5)(b). Each such elector shall have his or her full name, address and serial number likewise entered and shall be given a slip bearing such number. (In effect at time of last update prior to 2005: 2003 Act 327, § 4, eff. June 12, 2004)	Wis. Stat. § 6.79
Wyoming	Give Name	(a) Unless a voter is challenged pursuant to W.S. 22-15-101 through 22- 15-109, no identification shall be required when: (i) Voting in person or by mail after having registered in person; or (ii) Voting in person or by mail after having registered by mail and having previously voted in a Wyoming federal election. (In effect at time of last update prior to 2005: Effective dates. -- Laws 2004, ch. 94, § 5, makes the act effective immediately upon completion of all acts necessary for a bill to become law as provided by art. 4, § 8, Wyo. Const. Approved March 5, 2004.)	Wyo. Stat. Ann. § 22-3-118

APPENDIX B –Court Decisions and Literature on Voter Identification and Related Issues

Court Decisions

Summary of Relevant Cases:
Challenges Prevailed:
American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to "complete" a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14th Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14th Amendment EPC: likely to prevail

Greidinger v. Davis, 1993

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
    - 14th Amendment EPC: no classification (applied strict scrutiny)
    - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
        - Compelling interests: preventing voter fraud (deemed compelling)
        - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
        - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

Challenges Rejected:
League of Women Voters v. Blackwell, 2004.

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

Colorado Common Clause v. Davidson, 2004

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
    - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
    - Substantive due process and equal protection
        - No improper discrimination

    - Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
    - Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

McKay v. Thompson, 2000

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
    - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
    - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
    - Substantive due process: ruled that internal use of SS# not a burden
    - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
    - P&I, Article IV: does not protect in-state citizens
    - P&I, 14th Amend.: no protection for privilege where Congress authorized its infringement

Kemp v. Tucker, 1975

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
    - VRA: ruled that race was not made a "qualification" for voting
    - 15th Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
    - 14th Amendment EPC: ruled there was no distinction among voters

Perez v. Rhiddlehoover, 1966

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
    - VRA: ruled that it was not a "test or device" because it applied equally
    - 15th Amendment: same reasons

Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:

American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at *1 (D. Minn. Oct. 28, 2004).

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at *1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at *3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at *1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at *6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at *10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover*, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.*, CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

Current Litigation Concerning Voter ID Issues[1]

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

[1] As of January 2, 2006

Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)[2]. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.[3] As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

Indiana (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

---

[2] Litigation documents are available at the Election Law @ Moritz website. http://moritzlaw.osu.edu/electionlaw/litigation/index.php

[3] GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.[4] The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves theses decisions to state law. 42 U.S.C. § 15482(a).

---

[4] According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti
Eagleton Institute of Politics
Rutgers University
May 16, 2006

Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen turnout among those eligible to vote. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater based on specific types of requirements. Critics argue that requiring voters to produce some form of government-issued photo identification on Election Day is more demanding than requiring, for example, that they state their names at the polling place because of the various steps needed to procure a photo identification card, such as a driver's license. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. This report draws from two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

Types of voter identification requirements

Based on research by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (10 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[5] It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

[5] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I also tested the array of minimum identification requirements to assess whether they posed increasing levels of demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

Estimating turnout among citizens in the voting-age population

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.[6]

Analysis of aggregate data

If one treats maximum voter identification requirements as a continuous variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter

---

[6] McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

identification requirements ($r = -.30$, $p < .05$). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ($r = -.20$, $p = .16$). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.2 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, I opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.[7]

Voter identification requirements alone do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county.

I coded the voter identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus I added a variable to reflect the number of days between each state's registration deadline and the election.[8]

---

[7] Treating maximum voter identification requirements as a continuous variable yielded results in which voter identification requirements were negatively related to aggregate turnout. Those results can be found in Table A-1 in the Appendix to this report.

[8] For states that had Election Day registration or no registration requirement (North Dakota), I assigned a value of zero to this variable.

Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the median household income for 2002 in each county.[9]

I estimated a series of random effects models to account for the likelihood that data from counties were correlated within each state (for further explanation of random effects and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).[10] I allowed the median income variable to have both fixed and random effects in each state to take into account variation in the cost of living in each state. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, two of the four requirements had a small and negative effect on turnout in 2004: matching one's signature and providing a non-photo identification. Taking into account the reference variable of stating one's name, the results indicate that turnout was lower in states that required signature matches or a non-photo identification than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Two contextual factors -- whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate-- increased voter turnout. The time between the closing date for registration and the election had a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income had positive effects on turnout. The percentage of African-Americans in the county did not have a significant effect.

The effects of the minimum voter identification requirements were non-existent. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to have a negative effect on turnout, as did the number of days between the closing date for registration and the election.

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2),

---

[9] To bring the income figures into a scale comparable to those of the other variables, I used the natural log of median household income.

[10] The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

showed no significant improvement by including the interactions ($p > 0.05$). I report the coefficients for the models with the interactions in the Appendix in tables A-2 and A-3.

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the identification requirements for voting vary, so does turnout. Specifically, in terms of the maximum requirements, the results suggest that requiring a signature match or non-photo identification is negatively related to turnout compared to requiring that a voter state his or her name. But the analysis showed that adding interactions between identification requirements and the percentage of the county that was African-American or Hispanic did not improve the fit of the model to the data.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[11] Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[12] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S. citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[13] As in the analysis of aggregate data, I coded the voter

---

[11] A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

[12] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

[13] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown

identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.[14]

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less.[15] At the individual level, I controlled for gender, household income, and dummy variables for race/ethnicity, age and education. In terms of race and ethnicity, I created dummy variables to represent whether a voter was Black/non-Hispanic, Hispanic, or Asian (with white/non-Hispanic/other voters as the omitted category for reference purposes). I separated education into five dummy variables: less than high school, high school diploma, some college, college graduate, and graduate training. I omitted the "less than high school" variable from the model for reference purposes. Regarding age, I created four dummy variables to represent 18 to 24 years of age, 29 to 44, 45 to 64, and 65 years and older. I omitted the 18-to-24 category as the reference variable in the model.

Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

Results

---

that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[14] Earlier versions of this paper included an individual-level analysis that included the five maximum voter identification requirements combined into a continuous variable. The results of that analysis, which found that voter identification requirements had a negative relationship with turnout, can be found in table A-4 in the Appendix.

[15] Given that the individual-level analysis focused on registered voters (as opposed to the citizen voting-age population in the aggregate analysis), I did not include the closing date for registration as a predictor of turnout in the individual-level analysis.

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 3 here]

The two models in Table 3 use either the maximum or minimum voter identification requirements in each state. The two models generate similar results. In each model, three of the voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. In other words, compared to states that require voters only to state their names, the requirements to sign one's name, provide a non-photo identification, photo identification in the maximum requirements or affidavit in the minimum requires exert a negative influence on turnout.

Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had finished high school. Respondents who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.[16] I calculated the probabilities taking into account both maximum and minimum requirements.

[Table 4 here]

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability appear to decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.[17] In terms of the

---

[16] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

[17] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of

minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

Race and ethnicity have generated particular interest in the debate over voter identification requirements. But incorporating dummy variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, I divided the sample into sub-samples and re-ran the probit models.

[Table 5 here]

The effects of voter identification requirements were similar for white voters compared to the entire sample, which was not surprising given that white voters comprised 81 percent of the sample. Voters in states where the maximum requirement involved signing one's name, providing a non-photo identification or photo identification were less likely to vote than those in a state that required voters to give their names. Taking into consideration the minimum requirements, this was true only for voters in states that require a non-photo identification or an affidavit. White voters in photo identification states were 3.7 percent less likely to vote than were white voters in states where respondents gave their names. The difference in probability was 4.4 percent for voters in states where an affidavit was the minimum requirement.

Voter identification requirements also influenced turnout among Black voters, but to a lesser extent relative to white voters.

[Table 6 here]

Of the maximum voter identification requirements, only the non-photo identification requirement reduced turnout compared to turnout in states that required voters to state their names. The predicted probability of voting was 5.7 percent lower for Black respondents in states that required non-photo identification. In terms of age, only African-Americans age 65 and older were more likely to vote than respondents in the 18 to 24 referent group. Respondents in all levels of education were more likely to vote than respondents without a high school diploma. Gender, income, living in a battleground state, being a part of the workforce and having been born in the United States also were positive predictors. Recent mobility tended to lower the probability of voting. None of the minimum identification requirements had a significant effect on voting, while most of the remaining variables had effects similar to those in the maximum requirement model.

<u>all</u> citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

Hispanic voters also were less likely to vote in states that required non-photo identification as opposed to stating one's name.

[Table 7 here]

Using the coefficients from Table 7 to calculate predicted probabilities, for both the maximum and minimum requirements, Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. Hispanic voters ages 45 to 64 and 65 and over were more likely to vote than their 18-to-24-year-old counterparts. Education and income also were positive predictors of voting. Interestingly, being a native-born citizen lowered the probability of voting, while native-born citizenship was a positive predictor for African-American voters and was not a predictor at all for white voters. It may be that naturalized citizens of Hispanic descent are more conscious of the value of voting rights than other groups.

Varying voter identification requirements influenced Asian-American voters as well. As with Hispanic and Black voters, Asian-American voters were less likely to turn out in states with non-photo identification requirements than in states where voters gave their names.

[Table 8 here]

Using the probit coefficients to calculate predicted probabilities, Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement. Asian-American voters also were 2.2 percent less likely to vote when signatures were the maximum requirement compared to stating one's name.

In terms of other predictors, there were no significant differences in terms of age or income. In contrast to Hispanic voters, where one was a naturalized or natural-born citizen did not affect the probability of voting. Those with high school or college diplomas or graduate training were more likely to turn out than those with less than a high school diploma. Women and married voters also were more likely to turn out than men and voters who were note married.

Discussion and conclusion

The results presented here provide evidence that as voter identification requirements vary, voter turnout does as well. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

In the aggregate data, requirements that voters match signatures on file, provide a non-photo identification or photo identification had negative effects on turnout compared to requiring that voters state their names. Interactions with specific groups – African-Americans and Hispanics – did not improve the fit of the aggregate data to the models. But differences emerged among specific groups in the individual-level data. The signature, non-photo identification and photo identification requirements all had negative effects compared to the requirement that voters simply state their names. These effects translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For

example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters (the gap widened to 3.7 percent for white voters when comparing photo identification to simply stating one's name).

That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements. This begs the question as to why photo identification requirements did not have a greater influence in 2004. It may have been due to the fact that photo identification was a maximum requirement in only five states, and each of those states accepted another type of identification as a minimum requirement.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?[18] Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

[18] The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using the November 2004 Current Population Survey data and voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not registered). Of all of the voter identification requirements, only requiring signatures or matching signatures had a significant effect on whether a respondent said he or she was registered to vote in 2004. In each instance the effect was negative.

State Statutes and Regulations Affecting Voter Identification

Compiled by The Moritz College of Law, The Ohio State University

Available in electronic form

FINAL DRAFT
For Review by the Standards Board and Board of Advisors

Report to the
U. S. Election Assistance Commission
On
Best Practices to Improve Voter Identification Requirements
Pursuant to the
HELP AMERICA VOTE ACT OF 2002
Public Law 107-252

May 16, 2006

Submitted by

The Eagleton Institute of Politics, Rutgers, The State University of New Jersey

The Moritz College of Law, The Ohio State University

The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

The Eagleton Institute explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

The Moritz College of Law has served the citizens of Ohio and the nation since its establishment in 1891.It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

Peer Review Group

A draft of this report and the statistical analysis in its appendix were critiqued by a Peer Review Group. The comments of its members improved the quality of our work. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in our recommendations.

REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

Report Background

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

EXECUTIVE SUMMARY AND RECOMMENDATIONS

Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

- Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:[1] the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also consides some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.[2] Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed.[3] As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible

---

[1] See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. Political Behavior, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

[2] The EAC has contracted with other researchers to study vote fraud issues.

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.[4] The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding that the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

---

[4] Even the most relaxed provisions for identification at the polls –anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a "minimum" requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a

significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a "maximum" requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a "minimum" requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for

example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.[5] And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls

---

[5] Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
    I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
    II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
    III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors:

the convenience of the voter, the total time allowed to evaluate ballots[6], and the safe harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more uncertain.

SUMMARY OF RESEARCH

Background and Approach of the Study

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether the vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the

---

[6] Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly.* 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with <u>medium levels of income</u> and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics.* 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in <u>lower</u> socio-economic status.

- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior.* 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review.* 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review.* 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.
- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review.* 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior.* 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.

- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior.* 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics.*, 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related. [7] The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.[8]

---

[7] As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

[8] Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.[9] Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter

---

[9] "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.[10] Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.[11] And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards –legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?[12]

---

[10] For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

[11] The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

[12] "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?[13]
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?[14]
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.[15] A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.
5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?[16]
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

[13] See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

[14] In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

[15] "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

[16] For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

Voter ID and Turnout

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004.These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).[17] Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.[18]

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

---

[17] Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

[18] As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a "minimum" requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.[19] Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

[19] One state election official told us that, "We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is."

* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

[1] Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

[2] Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

[3] Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

[4] Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

[5] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[6] Voters lacking a photo ID could vote by providing another form of ID in 2004.

[7] Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

[8] Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements (r = -.30, p < .05). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant (r= -.20, p = .16). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	**64.2 %**	State Name	**63.0 %**
Sign Name	**61.1 %**	Sign Name	**60.4 %**
Match Signature	**60.9 %**	Match Signature	**61.7 %**
Provide Non-Photo ID	**59.3 %**	Provide Non-Photo ID	**59.0 %**
Provide Photo ID	**58.1 %**	Swear Affidavit	**60.1 %**
Average Turnout (All States)	***60.9 %***		

This table displays the mean turnout using the aggregate county level data for each state in 2004.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.[21]

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American [22]
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

---

[21] The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

[22] The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election. [23]

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

[23] This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.[24] Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.[25] The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

[24] For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).[24] Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

[25] It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

influenced turnout in 2004.[26] The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.[27]

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.[28] Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.[29] .

---

[26] The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

[27] The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

[28] A probit model is a popular specification of a generalized linear regression model, using the probit link function.

[29] In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

Table 3. Predicted probability of voter turnout – all voters		
	Maximum requirement	**Minimum requirement**
State name	91.7%	91.5%
Sign name	89.9%	90.2%
Match signature	Not significant	Not significant
Non-photo ID	89.0%	89.0%
Photo ID	88.8%	---
Affidavit	---	87.%5
Total difference from "state name" to "photo ID" or "affidavit"	**2.9%**	**4.0%**
N	54,973	
Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one's name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model. Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.		

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.[30] In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

---

[30] The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

Race and ethnicity have generated particular interest in the debate over voter ID requirements.[31] The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

---

[31] Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day , or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*).. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

Non-photo identification. For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is <u>not</u> the only form accepted. In *Colorado Common Cause v. Davidson,* No. 04CV7709, 2004 WL 2360485, at *1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell,* 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

Photo ID. Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.[32] Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups,* Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer,* No. 04-CV-4653, 2004 WL

---

[32] Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

2428690, at *1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at *1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at *1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

Privacy. In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at

the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

Conclusions

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased. [33]

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents

---

[33] In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

with them to the polls, while assuring that each voter who casts a ballot is eligible and votes only once.

Subject Re:Presentations at the EAC Governing Boards

Tom-

Look forward to getting a PDF copy of the final versions of the Voter ID paper and the Provisional Voting Paper by COB today

Here is the timing breakdown for next week's presentations:

EAC Standards Board (137 members)

Tuesday, May 23, 2006
2:30-4:00 PM
Hamilton Ballroom
Provisional Voting
45 minutes for presentation
45 minutes for questions and answers

Wednesday, May 24, 2006
1:40-2:45 PM
Hamilton Ballroom
Voter Identification
40 minutes for presentation
25 minutes for questions and answers

EAC Board of Advisors (36 members)

Wednesday, May 24, 2006
8:30-9:15 AM
Lafayette Park Ballroom
Provisional Voting
20 minutes for presentation
25 minutes questions and answers

Wednesday, May 24, 2006
11:00-11:55 PM
Lafayette Ballroom
Voter Identification
30 minutes presentation
25 minutes questions and answers

EAC General Counsel Julie Thompson- Hodgkins will facilitate/moderate all of your sessions

Will be in touch tomorrow after the Commissioners have met.

Karen Lynn-Dyson

Research Manager
U.S. Election Assistance Commission
1225 New York Avenue , NW Suite 1100
Washington, DC 20005

Subject RE: Presentations at the EAC Governing Boards

I am told that a Wordperfect copy of the Provisional document will be fine.

EAC staff will convert it to a PDF file. Please sent the final drafts of the reports ASAP.

Also, you are correct to note the changes in the time allotments Please divide the time among your staff as you deem appropriate.

Subject RE: Presentations at the EAC Governing Boards

Karen, I don't have the capacity to produce a PDF copy of the report. (I thought we discussed this last week and you agreed that the word document would suffice.) Someone at Eagleton could surely covert the DOC file to PDF, but since I just read your email now (4:50), we could not provide a PDF copy today. Please let me know if you want me to pursue this tomorrow.

Thanks for the schedule below. But it raises a question. Earlier this week you told me that the Commissioners asked that we limit our presentation to 10 minutes and leave the rest of the time for questions and comments. As I noted in my response, condensing our reports to 10 minutes poses a challenge. Is the 10 minute limit no longer operative?

Subject: Re:Presentations at the EAC Governing Boards

Tom-

Look forward to getting a PDF copy of the final versions of the Voter ID paper and the Provisional Voting Paper by COB today

Here is the timing breakdown for next week's presentations:

EAC Standards Board (137 members)

Tuesday, May 23, 2006
2:30-4:00 PM
Hamilton Ballroom
Provisional Voting
45 minutes for presentation
45 minutes for questions and answers

Wednesday, May 24, 2006
1:40-2:45 PM
Hamilton Ballroom
Voter Identification
40 minutes for presentation
25 minutes for questions and answers

EAC Board of Advisors (36 members)

Wednesday, May 24, 2006
8:30-9:15 AM
Lafayette Park Ballroom
Provisional Voting
20 minutes for presentation
25 minutes questions and answers

Wednesday, May 24, 2006
11:00-11:55 PM
Lafayette Ballroom
Voter Identification
30 minutes presentation
25 minutes questions and answers

EAC General Counsel Julie Thompson- Hodgkins will facilitate/moderate all of your sessions

Will be in touch tomorrow after the Commissioners have met.

I am told that a Wordperfect copy of the Provisional document will be fine.

EAC staff will convert it to a PDF file. Please sent the final drafts of the reports ASAP.

Also, you are correct to note the changes in the time allotments Please divide the time among your staff as you deem appropriate.

Subject RE: Presentations at the EAC Governing Boards

Karen, I don't have the capacity to produce a PDF copy of the report. (I thought we discussed this last week and you agreed that the word document would suffice.) Someone at Eagleton could surely covert the DOC file to PDF, but since I just read your email now (4:50), we could not provide a PDF copy today. Please let me know if you want me to pursue this tomorrow.

Thanks for the schedule below. But it raises a question. Earlier this week you told me that the Commissioners asked that we limit our presentation to 10 minutes and leave the rest of the time for questions and comments. As I noted in my response, condensing our reports to 10 minutes poses a challenge. Is the 10 minute limit no longer operative?

Tom O'Neill

Tom-

As was just discussed, the EAC's Commissioners have elected to delay a presentation of Eagleton's report on Voter Identification to the EAC Board of Advisors and Standards Board, at this time.

The Commissioners will spend time over the next several weeks reviewing and considering this report in great detail and will make a determination, shortly thereafter, regarding how they wish to proceed with the issuance of an EAC report on this study.

Many thanks to you and your staff for the work that has been done. We look forward to next week's presentation of the Eagleton/Moritz study of provisional voting.

Subject Re: Next steps

Tom-

Indeed, the Commissioners were to review next steps with the Voter Identification research paper and next steps with the Provisional Voting report during yesterday's meeting.

As you are aware, your Provisional Voting report stimulated a great deal of discussion at last week's Standard Board and Board of Advisors meetings. Given this fact and the various political exigencies which surround the topic of voter identification, the Commissioners wish to take more time to consider thoroughly and carefully, how they wish to proceed with the delivery of an EAC research report on provisional voting and voter identification.

I will let you know in the next week to ten days, the outcome of the Commissioner's discussion on how they wish to proceed with Eagleton's studies on these topics.

Deliberative Process Privilege

EAGLETON INSTITUTE OF POLITICS

Paul S. DeGregorio
United States Election Assistance Commission
1225 New York Avenue N.W., Suite - 1100
Washington, DC 20005
Fax: (202) 566-3127

June 8, 2006

Dear Chairman DeGregorio:

Karen Lynn-Dyson relayed the Commission's decision in your meeting of June 1 to take more time to consider how to proceed with the delivery of EAC research reports on provisional voting and voter identification.

The Eagleton-Moritz research team, of course, encourages the Commission's thoughtful consideration of the two reports, but we are mindful of the need to deliver revised documents that respond to the Commission's comments by the close of our contract on June 30th. We believe that if we receive the Commission's final comments on the Provisional Voting report by June 19 we will be able to complete any additional work that the Commission might request and incorporate the results in our final reports before the end of the contract period.

Based on suggestions raised at the meetings, we already plan to supplement the Provisional Voting report with some brief, additional information about the influence of the fail-safe ballot provisions of the National Voting Rights Act on the experience with provisional voting in 2004.

We understand that the Commission must submit the final draft Voter ID report to the same review process by your advisory boards as was followed with the Provisional Voting paper. We understand that step is a prerequisite for wider release. We would appreciate your advice on how to handle this review, given the rapidly approaching end of our contract.

We hope the commission will use both reports, as intended from the outset of this project, as the basis for recommendations for better, if not best, practices to the states. If the Commission cannot decide to issue such recommendations to the states, we hope it will promptly release the reports to provide the states and the broader elections community with this information, analysis and perspective on the issues.

We recognize, based on the reactions at the meetings of the Standards Board and, particularly, the Board of Advisors, that some of the findings, conclusions, and recommendations of the reports will be controversial with some of the Commission's constituencies. But we also believe, based on the comments of the Peer Review Group, the advisors assembled by the Commission, and our response to their critiques, that the reports are grounded on solid research by a well-qualified, nonpartisan team and that the reports will provide new information for the policy process. We believe this information will contribute to achieving the EAC mission of providing helpful information that the states may or may not choose to implement.

191 RYDERS LANE, NEW BRUNSWICK, NJ 08901-8557

Fax: (732) 932-6778

THE STATE UNIVERSITY OF NEW JERSEY
RUTGERS

E-mail: eagleton@rci.rutgers.edu
Web: www.eagleton.rutgers.edu

The information in the reports can improve the policy process by raising the level of debate over increasingly volatile issues related to election administration. We believe our reports will prove useful to the states as they complete preparations for the 2006 elections. Moreover, the elections community is aware of this work, and awaits the analysis and conclusions.

We look forward to working with you to conclude this research in a way that will serve the public interest.

Very truly yours,

Thomas M. O'Neill

Subject Close-out with Eagleton

In anticipation of the conclusion of the Eagleton contract ,Darrell and I are going over contract items which may be outstanding (monthly reports, key deliverables, invoices, etc).

You may recall that the contract called for guidance to be issued on provisional voting and voter identification and for a public hearing to be held on each of these topics.

We possess e-mails and written correspondence which document that EAC elected not to issue guidance or to conduct public hearings on these matters.

In your opinion, is such correspondence sufficient documentation that the contractor was not required to deliver these deliverables?

Thanks for your guidance.

I've taken a brief look at this. Seems pretty straightforward. However, you might want to talk to Carol about the level of detail (not a whole lot in the memo re other bidders)-- maybe it's not needed. Once you've settled on a final, work with DeAnna to get the other docs necessary for a tally vote.

Subject Re: Eagleton draft press release

I have some concerns about the press release. In paragraph two, I am not comfortable with the following language in what I believe is paragraph two: Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006.

It seems to me that EAC will develop the guidance based on Eagleton's findings.

Also, I do not think the press release should contain the list of questions. Are they/we trying to float a trial balloon and elicit initial reaction at this early stage of the study??

Subject: Eagleton draft press release

Commissioners,
Below is a draft of a press release Eagleton wants to distribute regarding the EAC contract. (It's also attached.) Please let me know if you have edits/changes. Also, take a close look at the language regarding the scope for the voter ID study to make sure it is acceptable.

Deliberative Process Privilege

DRAFT FOR APPROVAL

EAGLETON INSTITUTE OF POLITICS WINS $560,000 CONTRACT FROM U.S. ELECTION ASSISTANCE COMMISSION

Rutgers Institute to Study Provisional Voting, Voter Identification Procedures

NEW BRUNSWICK/PISCATAWAY, N.J. – The U.S. Election Assistance Commission (EAC) has awarded the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a $560,000 contract to study provisional voting and voter identification procedures based on experiences from the 2004 election.

Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006, according to Eagleton Director Ruth B. Mandel, the study's principal investigator. She added that the Moritz College of Law at Ohio State University, Eagleton's partner in the contract application, will be responsible for the legal analysis of the competitively bid, seven-month project.

Eagleton already is home to an extensive civic education and political participation program, with several projects aimed at increasing voter turnout, political participation and Americans' involvement in civic life.

EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency and provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security. Questions include:

- Did the states have in place clear and uniform written procedures, guidelines and instructions to govern the casting and counting of provisional ballots?

- Did local procedures reflect the state's uniform procedures?
- Did all states and election jurisdictions make these procedures available to the public, political parties and candidates before the election?

- To what extent were poll workers appropriately trained on how to administer provisional ballots, including establishing the identity of the potential voter seeking a provisional ballot?

- How were federal funds under the Help America Vote Act used to educate voters about their rights to cast a provisional ballot and where such provisional ballots must be cast to be counted?

- In states where a provisional ballot had to be cast at the voter's assigned polling place or precinct, was information available to poll workers to allow them to determine the voter's assigned precinct and polling place?

- Did states have mechanisms in place to inform voters casting provisional ballots whether their vote was counted and whether they are now registered for subsequent elections?

Eagleton will address these questions by examining the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public hearings to be held in conjunction with the project.

At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of alternatives to existing practices and procedures.

Notification to bidders

You are hereby advised that the U.S. Election Assistance Commission (EAC) has competitively awarded a contract to the Eagleton Institute of Politics at Rutgers, The State University of New Jersey for research assistance to support the development of guidance on the two topics of provisional voting and voter identification procedures. Eagleton is partnering with the Moritz College of Law of Ohio State University for this work effort. The amount of this award is $560,002.

EAC appreciates the interest you have expressed in supporting our research agenda by submitting a proposal for this work. Should you wish to receive a de-brief on this procurement, please contact Carol A. Paquette, Interim Executive Director, by email at **cpaquette@eac.gov.**

Subject June 30 Hearing Panelists

Julie:

Thanks for you call. Our conversation helped me crystallize further the recommendations we will make to the Commission about the material to be covered at the hearing.

I believe we will recommend two panels of 3 or 4 people each for the June 30 hearing. One will cover the relatively narrow HAVA Voter ID requirements with presentations by 2 state-level voting administrators with contrasting experiences. The contrast between Michigan and Pennsylvania might prove especially instructive because it would demonstrate the relationship between the quality of the data base and requirements for voter identification. Since the hearing is being held in Manhattan, perhaps inviting a speaker from New York instead of Pennsylvania would make sense. I'd appreciate your thoughts on that.

Two other speakers could address the issue of broader Voter ID requirements to reduce vote fraud by requiring some form of identification for each voter at the polling place. The experience in Mississippi over the past 5 years has been particularly dramatic, as illustrated by the attached news article from the local press last year. As we discussed, inviting the 2 legislators profiled in the article might make for powerful testimony.

The final 2 speakers we believe should be academics who have studied the relationship between Voter ID regimes, voter participation and vote fraud and who have conflicting evidence and conclusions to offer. We have found at least two university based researchers who can present the view that stricter Voter ID requirement do not reduce vote fraud and do dampen participation. We have not yet identified a researcher from the other end of the spectrum, but we are looking actively. Your suggestions would be most welcome.

Below is our current list of possibilities for your review.

Tom

JUNE 30 HEARING
POSSIBLE PANELISTS OR TOPICS

Possible States to be represented by one or more panelists

Mississippi
Debate over voter id issues has been dramatic. The resonance of Mississippi on voting issues would lend interest to the testimony. Voter id legislation was not approved in the current legislative session and has been a source of contention at least since 1999.

Michigan
Strong database state; lax Voter ID requirements don't seem to present as much of a problem (although one hears rumors about Detroit); interesting contrast to NY. With Pennsylvania would present contrasts in the importance of the Statewide Voter Data Base

New York
Had a significant problem with provisional ballots, suggesting that their relatively lax ID rules might be problematic; also Tom Wilkey will have good contacts there. The hearing is there.

Pennsylvania
Relatively lax ID rules and apparently quite a few problems with provisional ballots in 2004. Had start up problems with its data base and would offer comparisons between counties where the data base was well established and those where is new. Should be weighed against New York for inclusion as a contrast with Michigan

Wisconsin
Governor Doyle vetoed the legislature's first attempt at tightening voter ID requirements, and instead offered a package to recruit and train more qualified poll workers and calls for improvements in voter registration procedures.

Academics on Voter ID, Turnout, and Vote Fraud

Spencer Overton
Professor, GWU Law School. Has written op-eds arguing that the empirical research is insufficient to support the need for more ID to reduce fraud. He is working on a book on the topic.

John Fortier
Research Fellow at the American Enterprise Institute. Recommended by Norm Ornstein. Google revealed no publications on this topic by Fortier.

Lorraine C. Minnite
Assistant Professor of Political Science, Barnard College. Lead researcher of the Demos election fraud study and researcher in immigrant voting patterns. Found that the incidence of fraud perpetrated by individual voters in the United States was very low and had a minimal impact on election outcomes.

Guy-UrielCharles
Associate Professor of Law, Center for the Study of Political Psychology University of Minnesota. His areas of interest incoude Election Law and Election Law Disputes and African American Voting Concerns. He is a member of the National Research Commission on Elections and Voting of the Social Science Research Council

Subject Arrangements for June 30 Meeting

Julie,

Karen Lynn-Dyson suggested I consult directly with you about arrangements for the Commission's June 30 meeting in New York. As I understood our discussions in Washington last week, as your consultants we will be responsible for organizing the portion of the meeting that will cover the Voter Identification issue, while EAC staff will organize the regular meeting of the Commissioners. Is that understanding correct?

Because time is short, we know we must move quickly on the arrangements.

1. Does the EAC have a preference for a venue for the meeting? Have any arrangements --preliminary or otherwise-- been made to secure that facility? If not, I assume EAC would prefer a public building or an academic setting such as the auditorium you used at the law school in Columbus.

2. Has the EAC made arrangements for a transcriber to record the meeting of the Commissioners? If so, is it the EAC's intention that we will use the same transcriber for the panel? If not, should we arrange for a transcriber for the entire day? Are there federal rules on payments for transcription services that we should follow?

3. Will EAC support staff attend the hearing to sign in those attending, issue name tags, etc., or are these duties that we should be prepared to carry out?

4. Will the EAC issue the news release about the meeting and the panel?

5. What do federal regulation indicate that I may offer speakers we bring in from

these states in terms of travel, accommodations, meals, etc? Will speakers have to pay for their travel and accommodations and then request reimbursement or can we pay their bills directly?

These are the states we are currently evaluating for the Voter ID presentations: Arizona, California, Mississippi, .Michigan, New York, Pennsylvania, and Wisconsin. We may pick 4 of these, or fewer if we determine that one state should have two panelists representing different viewpoints: Karen tells me you have been working with several of these, and your counsel would sharpen the judgment we bring to bear on our selection. I am particularly interested in the Mississippi experience and would like to discuss that with you. . .perhaps by phone. The project team is aiming to agree on a panel of speakers to submit to the the EAC early next week. Panelists should receive their invitations at least two weeks in advance (more would be better), especially if we want to get onto their schedules.

I will be in a meeting tomorrow from 10:30 -- 1:00 p.m. but will be available the rest of the day for a phone conversation. My cell phone --on which you can always reach me-- is 908-794-1030.

Commissioners -

We have tentatively scheduled May 26 at 2:30 for a kickoff meeting here with Eagleton Institute. What will happen at this meeting is Eagleton will introduce their key people and make a brief presentation on their approach to performing the provisional voting and voter ID studies. It will be an opportunity to ask questions, raise any concerns, and/or provide guidance as they begin this work. Please advise if you wish to attend this meeting. I expect it will last about an hour.

June 15, 2006

Mr. John Weingart, Associate Director
Eagleton Institute of Politics
Rutgers University
191 Ryders Lane
New Brunswick NJ 08901-8557

Dear Mr. Weingart:

During a recent briefing by staff, the EAC discussed and reviewed possible next steps with the provisional voting and voter identification studies as well as the Eagleton contract which is scheduled to conclude on June 30, 2006.

We were in agreement that Eagleton's work on the EAC contract should conclude, as scheduled, by June 30, 2006. In preparation for this conclusion, the EAC requests that the comments and suggestions which were noted during the EAC's recent Board of Advisors and Standards Boards meeting (and were described in Mr. O'Neil's June 8, 2006 letter to Chairman DeGregorio) be included in the final draft report on provisional voting which Eagleton will deliver to the EAC on or about June 30, 2006. The Commissioners have determined that they will take this final draft report and, from it, may develop guidance and best practice recommendations that will be presented to the Board of Advisors and Standards Boards for further review.

The EAC Commissioners have also reviewed and considered next steps with the voter identification draft report which Eagleton has prepared. While the final disposition of the results and findings of this study, on the part of the EAC, are still unclear, the Commissioners have asked that the final draft report of this study also be prepared and submitted to the EAC not later than June 30, 2006.

We look forward to receiving these reports. On behalf of the EAC thank you for the considerable time and energy which the Eagleton/Moritz team has devoted to these critical election issues.

Sincerely,

Thomas R. Wilkey

Karen,

I have not heard from Tom Wilkey. If he signed the letter you drafted for him last Tuesday, could you email me a copy while we await the arrival of the hard copy by mail. I probably don't need to remind you that we have only 11 days left on this contract and need to know how we should move ahead to complete it.

Tom O'Neill

Karen,

Could you please give me your reading of the status of a response to our letter last week that raised some issues for resolution by the Commission on the completion of our work during the final few weeks of the contract period. The Team needs to know how to proceed during the remaining 2 weeks of the project.

Thanks,

Tom O'Neill

Fax: (202) 566-3127

June 8, 2006

Dear Chairman DeGregorio:

Karen Lynn-Dyson relayed the Commission's decision in your meeting of June 1 to take more time to consider how to proceed with the delivery of EAC research reports on provisional voting and voter identification.

The Eagleton-Moritz research team, of course, encourages the Commission's thoughtful consideration of the two reports, but we are mindful of the need to deliver revised documents that respond to the Commission's comments by the close of our contract on June 30th. We believe that if we receive the Commission's final comments on the Provisional Voting report by June 19 we will be able to complete any additional work that the Commission might request and incorporate the results in our final reports before the end of the contract period.

Based on suggestions raised at the meetings, we already plan to supplement the Provisional Voting report with some brief, additional information about the influence of the fail-safe ballot provisions of the National Voting Rights Act on the experience with provisional voting in 2004.

We understand that the Commission must submit the final draft Voter ID report to the same review process by your advisory boards as was followed with the Provisional Voting paper. We understand that step is a prerequisite for wider release. We would appreciate your advice on how to handle this review, given the rapidly approaching end of our contract.

We hope the commission will use both reports, as intended from the outset of this project, as the basis for recommendations for better, if not best, practices to the states. If the Commission cannot decide to issue such recommendations to the states, we hope it will promptly release the reports to provide the states and the broader elections community with this information, analysis and perspective on the issues.

We recognize, based on the reactions at the meetings of the Standards Board and, particularly, the Board of Advisors, that some of the findings, conclusions, and recommendations of the reports will be controversial with some of the Commission's constituencies. But we also believe, based on the comments of the Peer Review Group, the advisors assembled by the Commission, and our response to their critiques, that the reports are grounded on solid research by a well-qualified, nonpartisan team and that the reports will provide new information for the policy process. We believe this information will contribute to achieving the EAC mission of providing helpful information that the states may or may not choose to implement.

RUTGERS

E-mail: eagleton@rci.rutgers.edu
Web: www.eagleton.rutgers.edu

The information in the reports can improve the policy process by raising the level of debate over increasingly volatile issues related to election administration. We believe our reports will prove useful to the states as they complete preparations for the 2006 elections. Moreover, the elections community is aware of this work, and awaits the analysis and conclusions.

We look forward to working with you to conclude this research in a way that will serve the public interest.

Very truly yours,

Thomas M. O'Neill
Project Director

Hi Tom-

Just checking to see if your Power Point slides might be ready.

When they are, please send them on to me and hit Reply to All as Julie Hodgkins and Amie Sherrill (the Chairman's Special Assistant) would like copies before the presentation.

Thanks

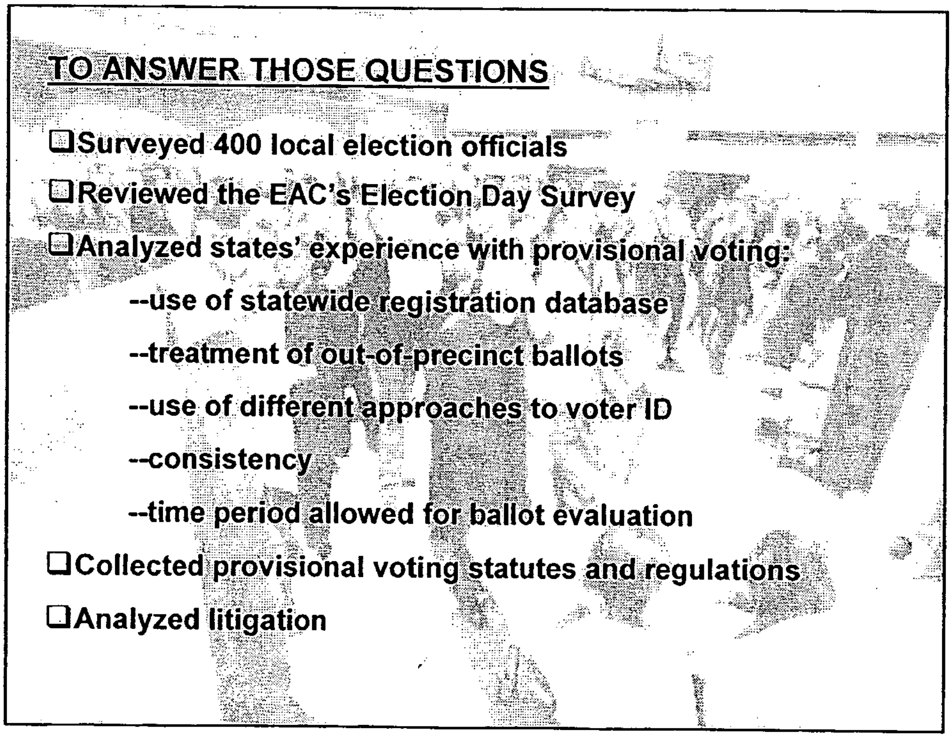
QUESTIONS RAISED BY THE EAC

1. How did states prepare for HAVA's provisional voting requirements?
2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?
3. How did litigation affect the implementation of Provisional Voting?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did State and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?



TO ANSWER THOSE QUESTIONS

❑Surveyed 400 local election officials

❑Reviewed the EAC's Election Day Survey

❑Analyzed states' experience with provisional voting:

--use of statewide registration database

--treatment of out-of-precinct ballots

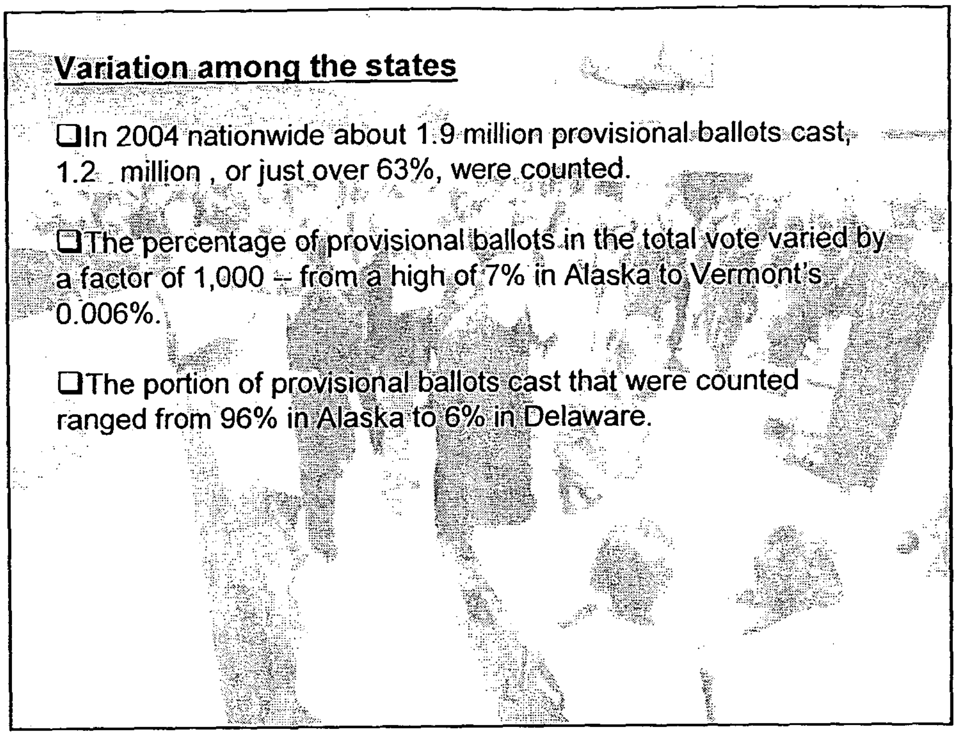
--use of different approaches to voter ID

--consistency

--time period allowed for ballot evaluation

❑Collected provisional voting statutes and regulations

❑Analyzed litigation

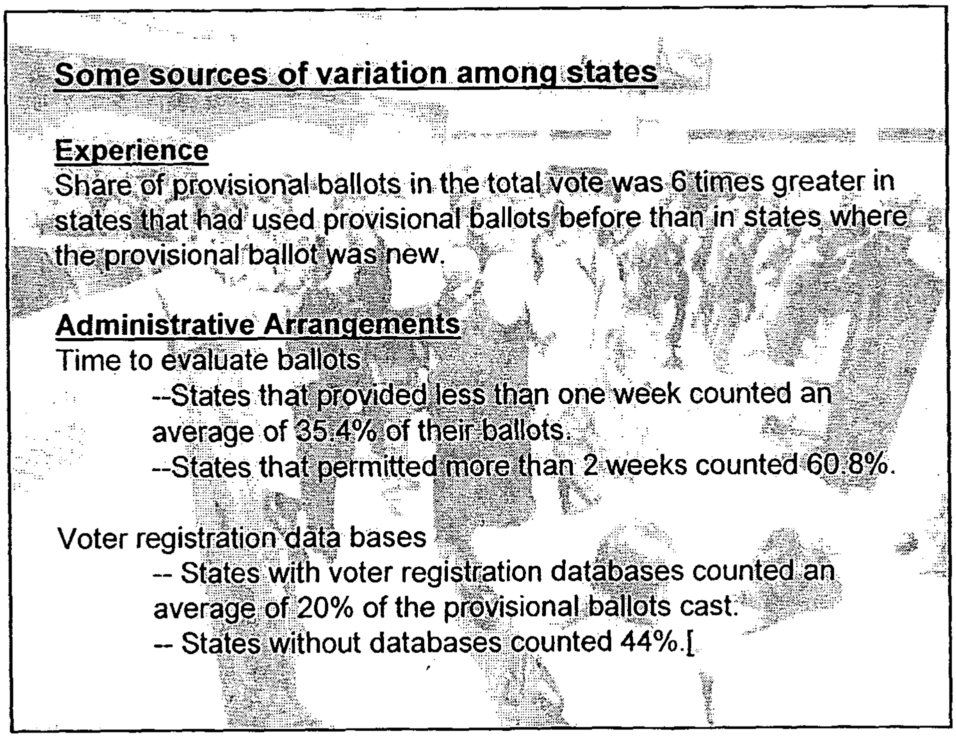


Variation among the states

☐In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million , or just over 63%, were counted.

☐The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.

☐The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.



Some sources of variation among states

Experience

Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

Administrative Arrangements

Time to evaluate ballots

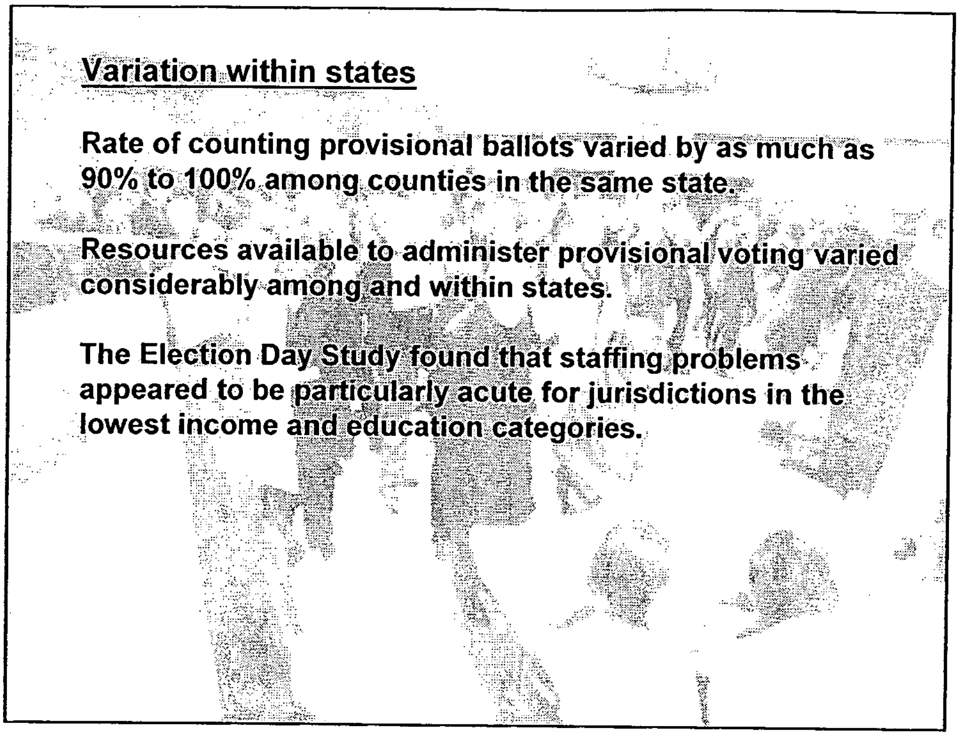
--States that provided less than one week counted an average of 35.4% of their ballots.

--States that permitted more than 2 weeks counted 60.8%.

Voter registration data bases

-- States with voter registration databases counted an average of 20% of the provisional ballots cast.

-- States without databases counted 44%.[

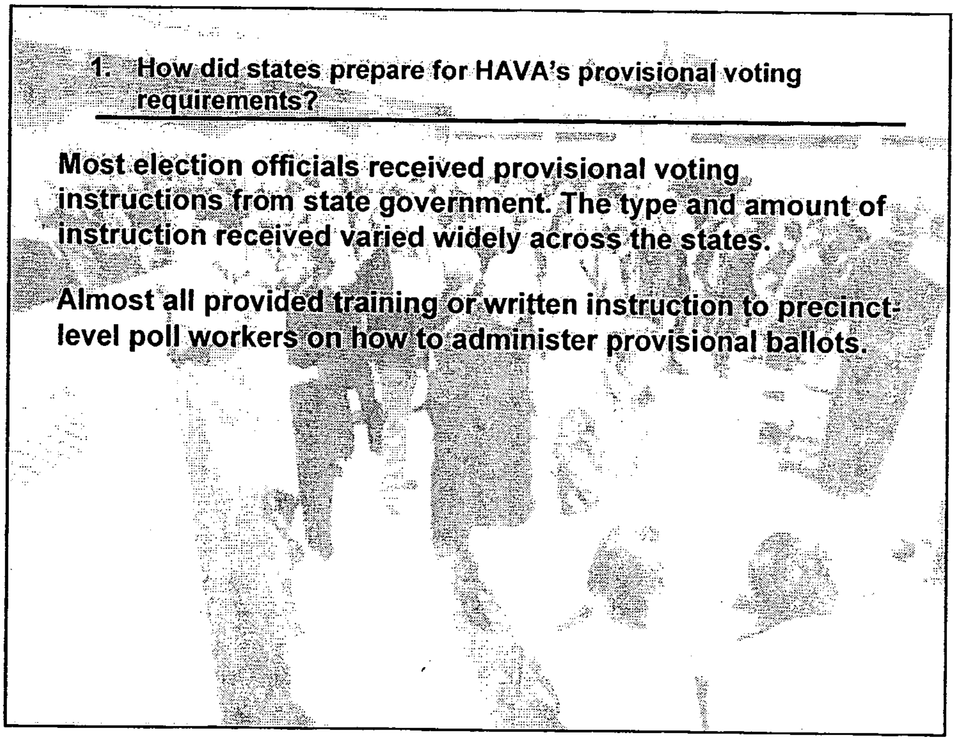


Variation within states

Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.

Resources available to administer provisional voting varied considerably among and within states.

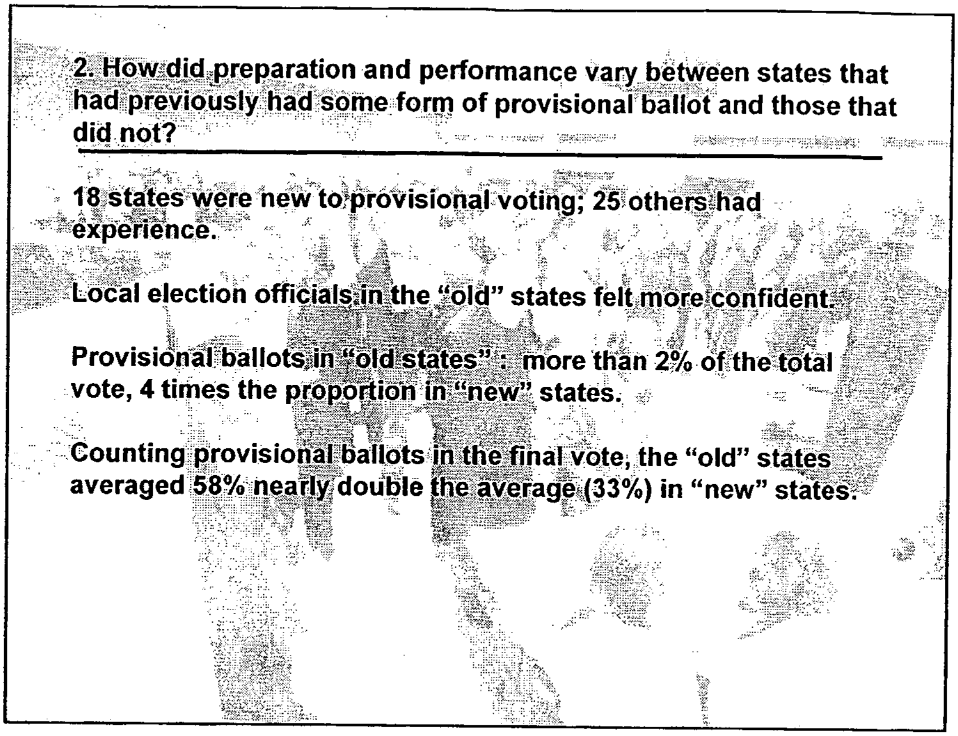
The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.



1. How did states prepare for HAVA's provisional voting requirements?

Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.



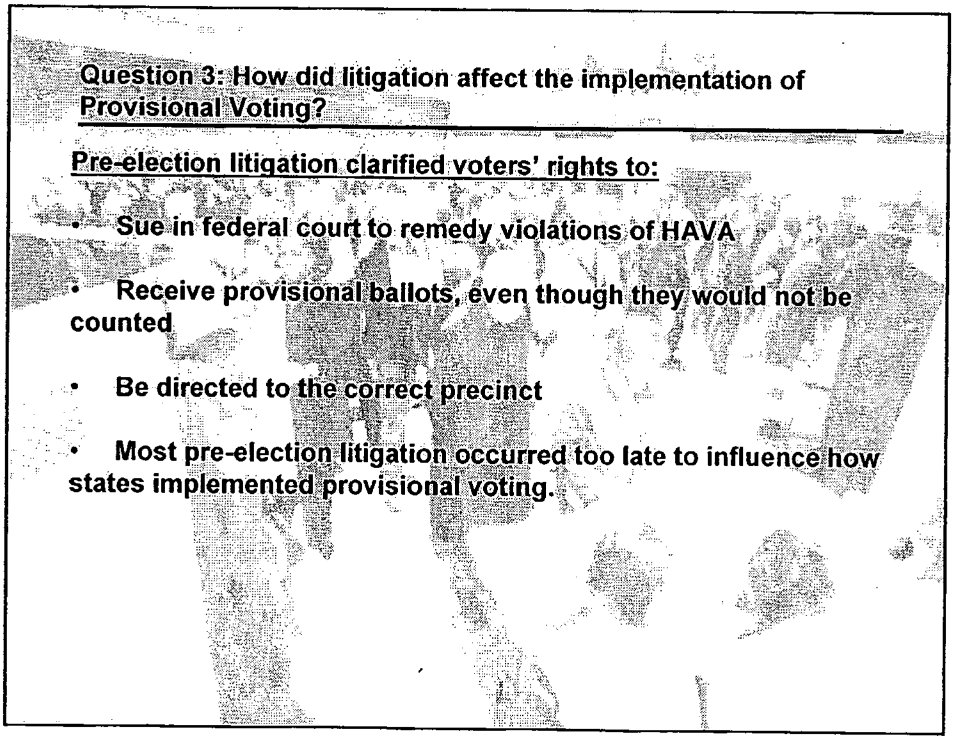
2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

18 states were new to provisional voting; 25 others had experience.

Local election officials in the "old" states felt more confident.

Provisional ballots in "old states" : more than 2% of the total vote, 4 times the proportion in "new" states.

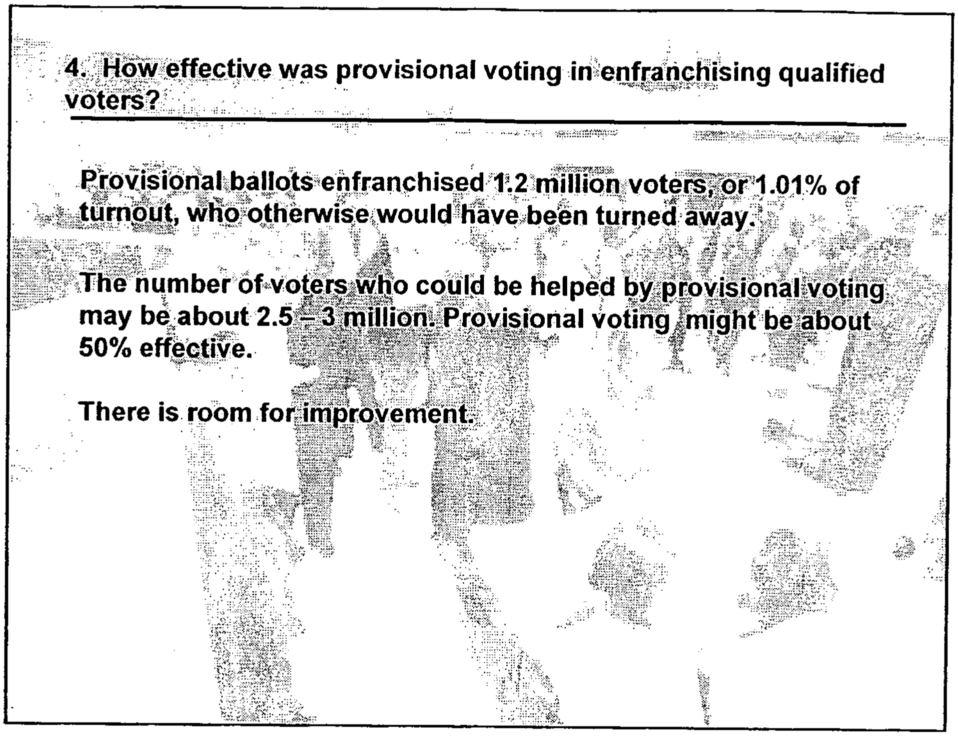
Counting provisional ballots in the final vote, the "old" states averaged 58% nearly double the average (33%) in "new" states.



Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

- Sue in federal court to remedy violations of HAVA
- Receive provisional ballots, even though they would not be counted
- Be directed to the correct precinct
- Most pre-election litigation occurred too late to influence how states implemented provisional voting.

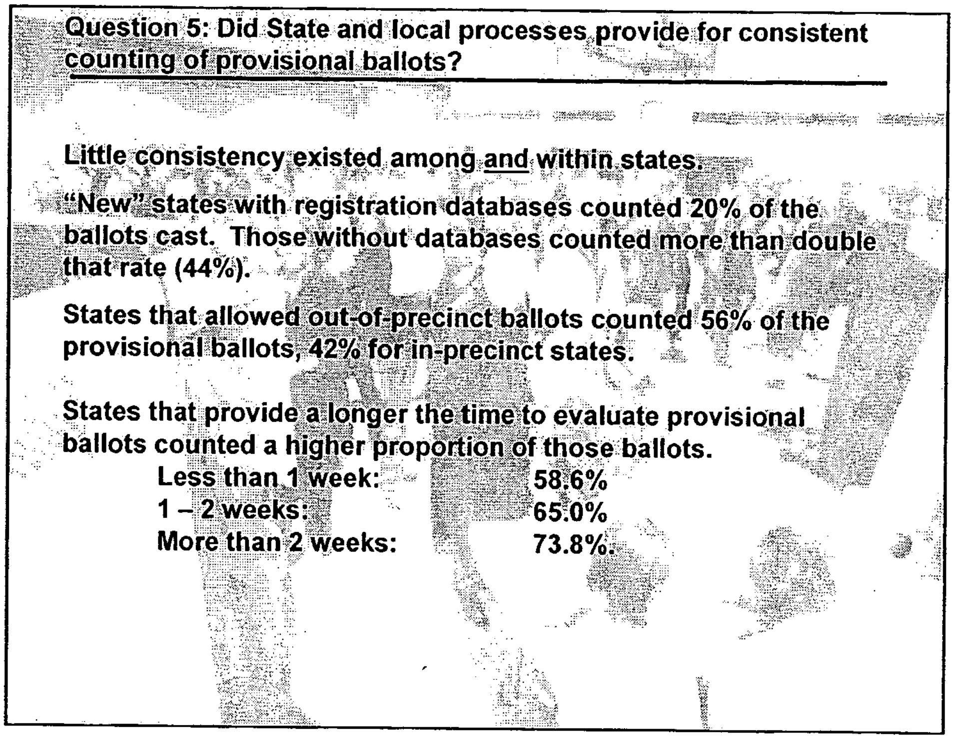


4. How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

There is room for improvement.



Question 5: Did State and local processes provide for consistent counting of provisional ballots?

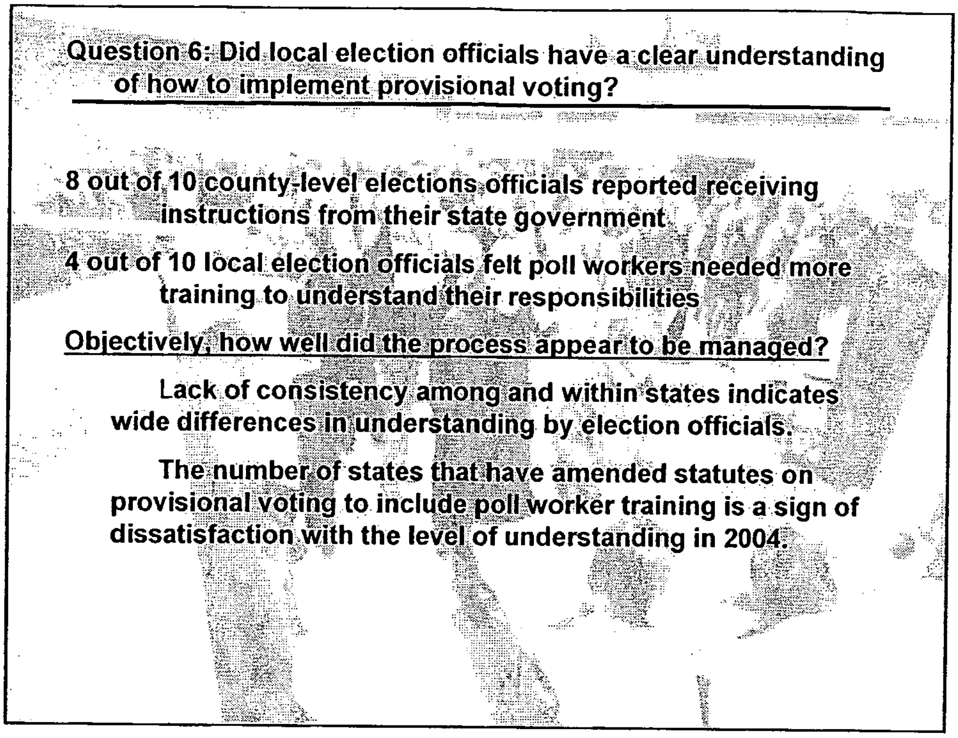
Little consistency existed among <u>and</u> within states.

"New" states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).

States that allowed out-of-precinct ballots counted 56% of the provisional ballots, 42% for in-precinct states.

States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.

Less than 1 week:	58.6%
1 – 2 weeks:	65.0%
More than 2 weeks:	73.8%



Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

8 out of 10 county-level elections officials reported receiving instructions from their state government

4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities

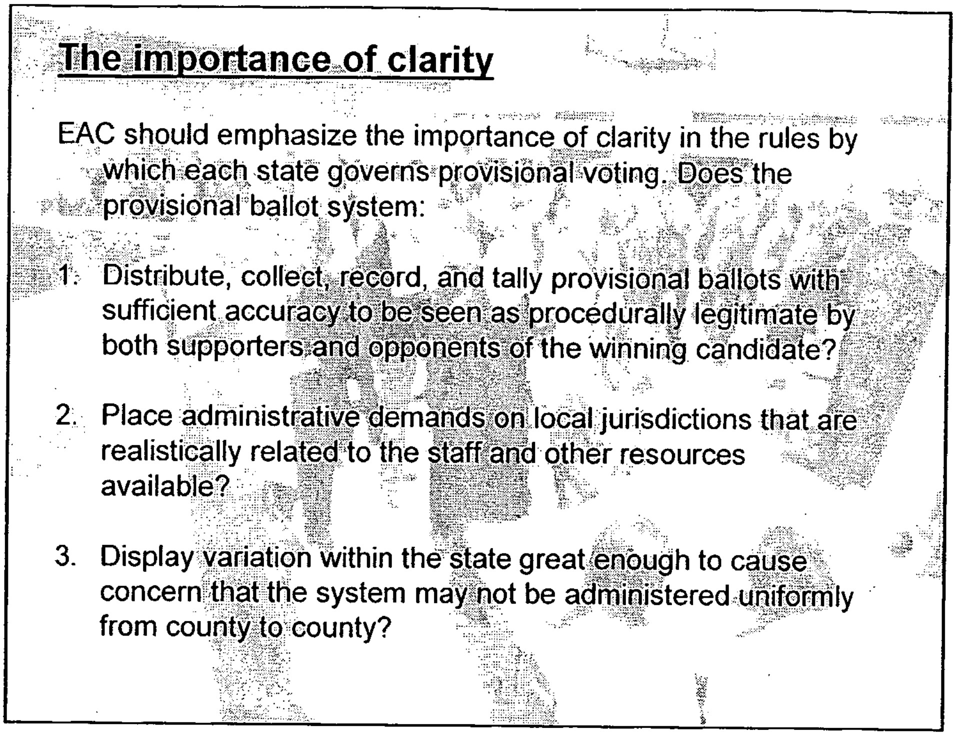
Objectively, how well did the process appear to be managed?

Lack of consistency among and within states indicates wide differences in understanding by election officials.

The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.

RECOMMENDATIONS TO THE EAC

BEST PRACTICES



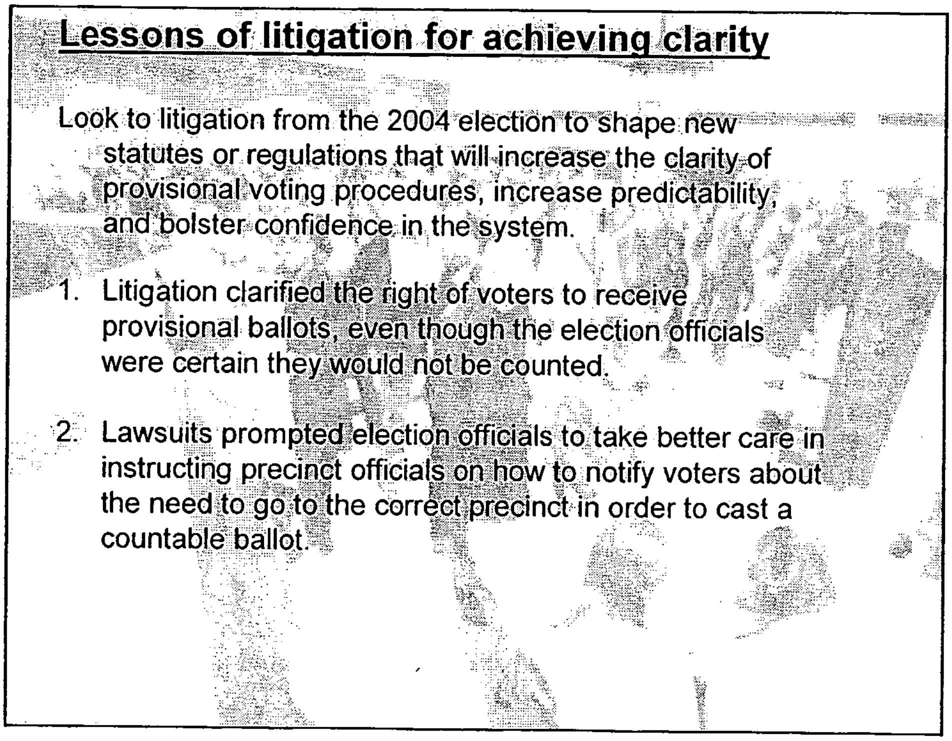
The importance of clarity

EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. Does the provisional ballot system:

1. Distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?

2. Place administrative demands on local jurisdictions that are realistically related to the staff and other resources available?

3. Display variation within the state great enough to cause concern that the system may not be administered uniformly from county to county?

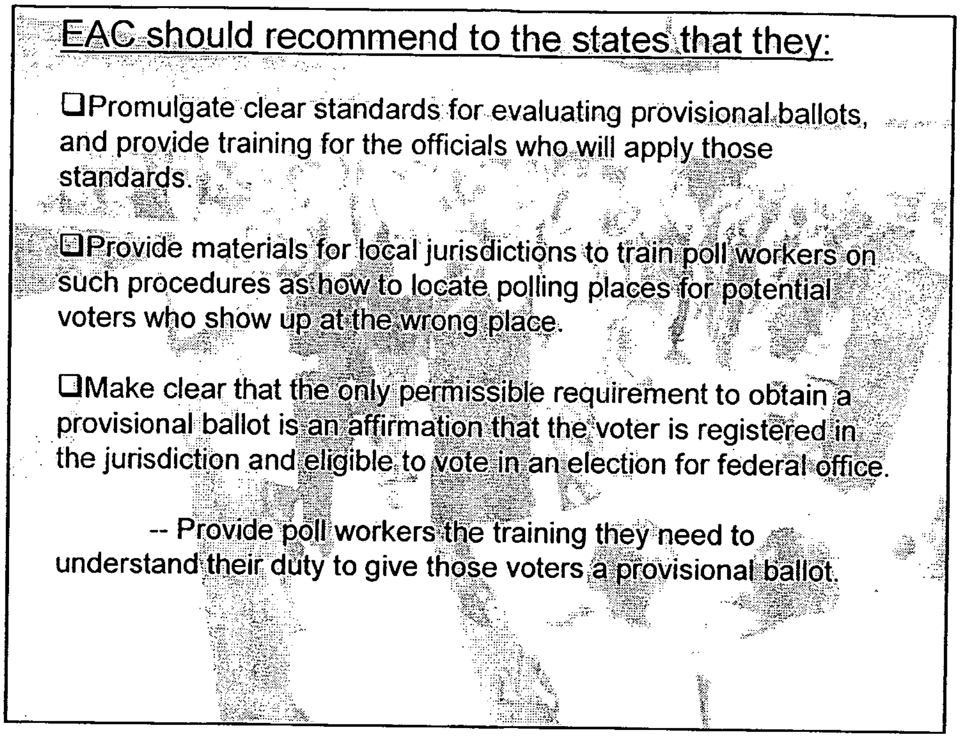


Lessons of litigation for achieving clarity

Look to litigation from the 2004 election to shape new statutes or regulations that will increase the clarity of provisional voting procedures, increase predictability, and bolster confidence in the system.

1. Litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted.

2. Lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.



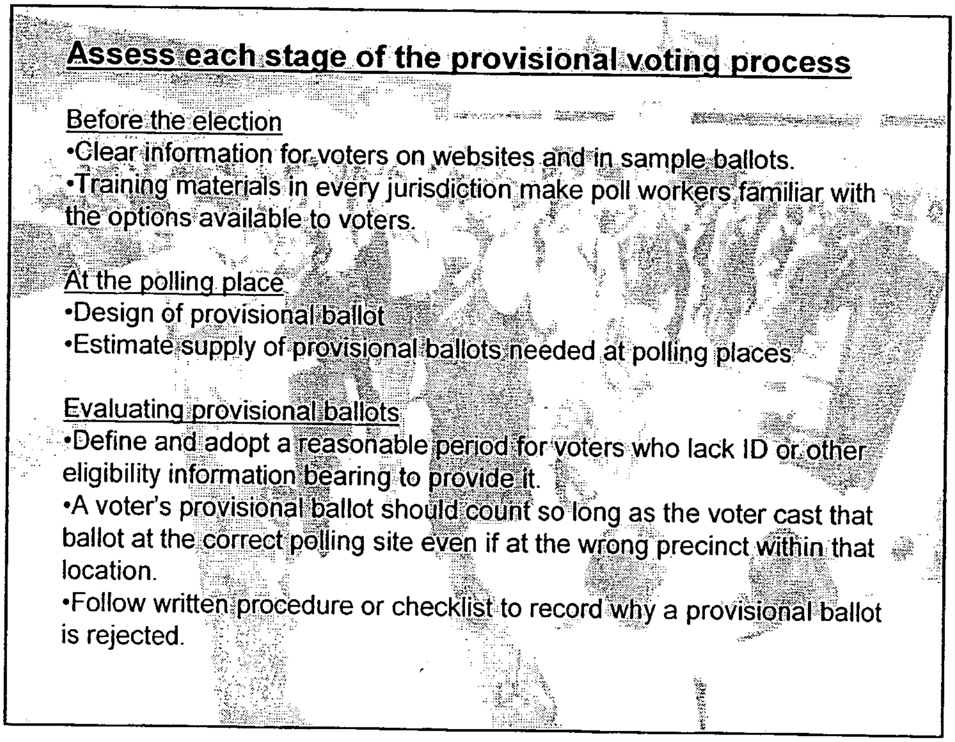
EAC should recommend to the states that they:

☐Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.

☐Provide materials for local jurisdictions to train poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.

☐Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.

-- Provide poll workers the training they need to understand their duty to give those voters a provisional ballot.

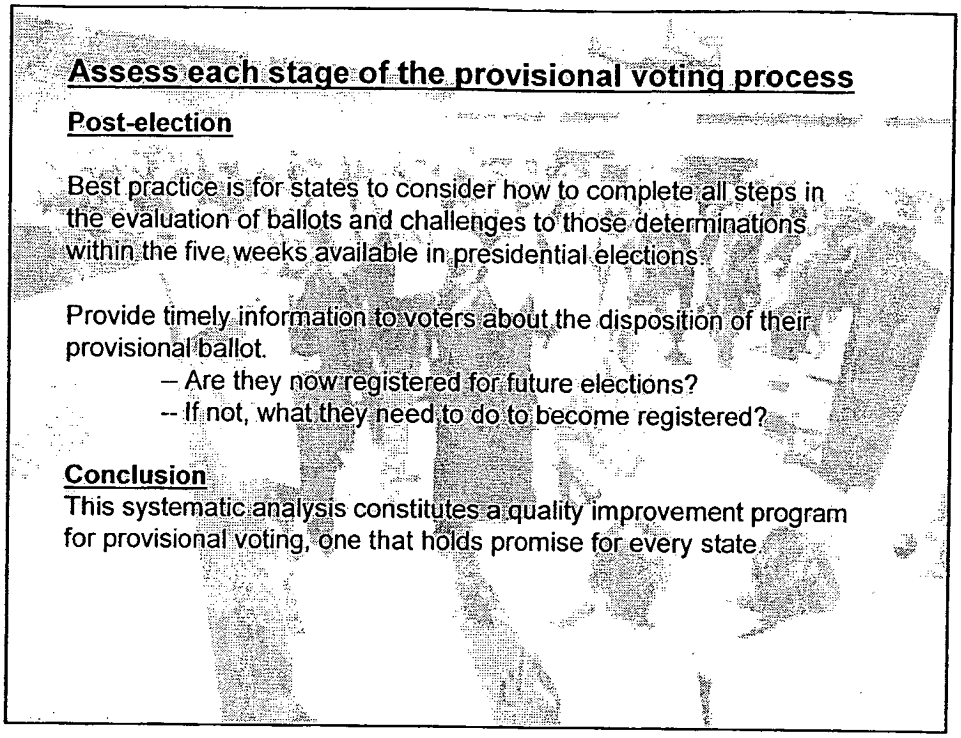


Assess each stage of the provisional voting process

Before the election
- Clear information for voters on websites and in sample ballots.
- Training materials in every jurisdiction make poll workers familiar with the options available to voters.

At the polling place
- Design of provisional ballot
- Estimate supply of provisional ballots needed at polling places

Evaluating provisional ballots
- Define and adopt a reasonable period for voters who lack ID or other eligibility information bearing to provide it.
- A voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.
- Follow written procedure or checklist to record why a provisional ballot is rejected.



Assess each stage of the provisional voting process

Post-election

Best practice is for states to consider how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available in presidential elections.

Provide timely information to voters about the disposition of their provisional ballot.
- – Are they now registered for future elections?
- -- If not, what they need to do to become registered?

Conclusion

This systematic analysis constitutes a quality improvement program for provisional voting, one that holds promise for every state.

QUESTIONS RAISED BY THE EAC

1. How did states prepare for HAVA's provisional voting requirements?
2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those did not?
3. How did litigation affect the implementation of Provisional Voting?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did State and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

TO ANSWER THOSE QUESTIONS

☐Surveyed 400 local election officials

☐Reviewed the EAC's Election Day Survey

☐Analyzed states' experience with provisional voting:

--use of statewide registration database

--treatment of out-of-precinct ballots

--use of different approaches to voter ID

--consistency

--time period allowed for ballot evaluation

☐Collected provisional voting statutes and regulations

☐Analyzed litigation

Variation among the states

☐In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million , or just over 63%, were counted.

☐The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.

☐The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.

Some sources of variation among states

Experience

Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

Administrative Arrangements

Time to evaluate ballots

--States that provided less than one week counted an average of 35.4% of their ballots.

--States that permitted more than 2 weeks counted 60.8%.

Voter registration data bases

-- States with voter registration databases counted an average of 20% of the provisional ballots cast.

-- States without databases counted 44%.

Variation within states

Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.

Resources available to administer provisional voting varied.

--The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.

--Small, rural jurisdictions and large, urban jurisdictions reported higher rates of an inadequate number of poll workers

--Jurisdictions in poor areas reported more inactive voter registrations and more provisional ballots cast.

--Richer areas had more poll workers per polling place and reported lower rates of staffing problems per precinct.

1. How did states prepare for HAVA's provisional voting requirements?

Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.

Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.

- **•Only about 1 in 10 made available to poll workers a voter registration database.**
- **•Almost equally rare were training and written procedures for poll workers on the counting of provisional ballots.**

2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?

Local election officials in the "old" states felt more confident.

18 states were new to provisional voting; 25 others had experience.

"New" state officials felt:

-- Voters did not receive enough information about where to cast a provisional ballot in order to be counted.

-- More funding was needed to educate voters about their rights to cast a provisional ballot.

Provisional ballots in "old states" : more than 2% of the total vote, 4 times the proportion in "new" states.

Counting provisional ballots in the final vote, the "old" states averaged 58% nearly double the average (33%) in "new" states.

Question 3: How did litigation affect the implementation of Provisional Voting?

Pre-election litigation clarified voters' rights to:

- Sue in federal court to remedy violations of HAVA
- Receive provisional ballots, even though they would not be counted
- Be directed to the correct precinct
- Most pre-election litigation occurred too late to influence how states implemented provisional voting.

4. How effective was provisional voting in enfranchising qualified voters?

Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.

The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.

There is room for improvement.

Legislative activity gives evidence that states were not satisfied with the effectiveness of their provisional voting systems.

Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the "new" states.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Little consistency existed among and within states.

The use of provisional ballots was not distributed evenly across the country. A few states accounted for most of the ballots cast.

Share of provisional ballots in the total vote was six times greater in experienced states than in new states.

More rigorous the state's Voter ID requirements the smaller the percentage of provisional ballots that were counted.

"New" states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

In-precinct versus out-of-precinct states had different outcomes.

States that allowed out-of-precinct ballots counted 56% of the provisional ballots.

States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.

In "old" states, this difference was greater.

52% of ballots cast were counted in states requiring in-district ballots, 70% were counted in those allowing out-of-precinct ballots.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.

14 states permitted less than 1 week :	35.4%
15 states permitted 1 – 2 weeks:	47.1%
14 states permitted more than 2 week:	60.8%.

Effect felt most strongly in states where more than 1% of the overall turnout was of provisional ballots.

Less than 1 week:	58.6%
1 – 2 weeks:	65.0%
More than 2 weeks:	73.8%.

Question 5: Did State and local processes provide for consistent counting of provisional ballots?

Conclusions

States have latitude in how they meet HAVA requirements.

A considerable degree of variation among the states is to be expected.

If that variation stems from differences in political culture among the states, it is likely to persist. If it reflects a learning curve for "new" states, consistency may increase more quickly.

Question 6: Did local election officials have a clear understanding of how to implement provisional voting?

8 out of 10 county-level elections officials reported receiving instructions from their state government
