- 6.6. Initial Decision.** The Decision Authority shall make and issue a written decision on voting systems submitted for certification. When such decisions result in a denial of certification, the decision shall be considered preliminary and referred to as an *Initial Decision*. Initial Decisions shall be in writing and contain (1) the Decision Authority's basis and explanation for the decision and (2) notice of the Manufacturer's rights in the denial of certification process.

6.6.1. Basis and Explanation. The Initial Decision of the Decision Authority shall accomplish the following:

6.6.1.1. Clearly state the agency's decision on certification.

6.6.1.2. Explain the basis for the decision, including identifying the following:

6.6.1.2.1. The relevant facts.

6.6.1.2.2. The applicable EAC voting system standards (VVSG or VSS).

6.6.1.2.3. The relevant analysis in the Program Director's recommendation.

6.6.1.2.4. The reasoning behind the decision.

6.6.1.3. State the actions the Manufacturer must take, if any, to cure all defects in the voting system and obtain a certification.

6.6.2. Manufacturer's Rights. The written Initial Decision must also inform the Manufacturer of its procedural rights under the program, including the following:

6.6.2.1. Right to request reconsideration. The Manufacturer shall be informed of its right to request a timely reconsideration (see Section 6.9). Such request must be made within 10 calendar days of the Manufacturer's receipt of the Initial Decision.

6.6.2.2. Right to request a copy or otherwise have access to the information that served as the basis of the Initial Decision ("the record").

6.6.2.3. Right to cure system defects prior to final Agency Decision (see Section 6.8). A Manufacturer may request an opportunity to cure within 10 calendar days of its receipt of the Initial Decision.

**6.7. No Manufacturer Action on Initial Decision.** If a Manufacturer takes no action (by either failing to request an opportunity to cure or request reconsideration) within 10 calendar days of its receipt of the Initial Decision, the Initial Decision shall become the agency's Final Decision on Certification. In such cases, the Manufacturer is determined to have foregone its right to reconsideration, cure, and appeal. The certification application shall be considered finally denied.

**6.8. Opportunity To Cure.** Within 10 calendar days of receiving the EAC's Initial Decision on Certification, a Manufacturer may request an opportunity to cure the defects identified in the EAC's Initial Decision. If the request is approved, a compliance plan must be created, approved, and followed. If this cure process is successfully completed, a voting system denied certification in an Initial Decision may receive a certification without resubmission.

- 6.8.1. Manufacturer's Request To Cure. The Manufacturer must send a request to cure within 10 calendar days of receipt of an Initial Decision. The request must be sent to the Program Director.
- 6.8.2. EAC Action on Request. The Decision Authority will review the request and approve it. The Decision Authority will deny a request to cure only if the proposed plan to cure is inadequate or does not present a viable way to remedy the identified defects. Approval or denial of a request to cure shall be provided the Manufacturer in writing. If the Manufacturer's request to cure is denied, it shall have 10 calendar days from the date it received such notice to request reconsideration of the Initial Decision pursuant to Section 6.6.2.
- 6.8.3. Manufacturer's Compliance Plan. Upon approval of the Manufacturer's request for an opportunity to cure, it shall submit a compliance plan to the Decision Authority for approval. This compliance plan must set forth steps to be taken to cure all identified defects. It shall include the proposed changes to the system, updated technical information (as required by Section 4.3.2), and a new test plan created and submitted directly to the EAC by the VSTL (testing the system consistent with Section 4.4.2.3). The plan shall also provide for the testing of the amended system and submission of a test report by the VSTL to the EAC for approval. It should provide an estimated date for receipt of this test report and include a schedule of periodic VSTL progress reports to the Program Director.
- 6.8.4. EAC Action on the Compliance Plan. The Decision Authority must review and approve the compliance plan. The Decision Authority may require the Manufacturer to provide additional information and modify the plan as required. If the Manufacturer is unable or unwilling to provide a compliance plan acceptable to the Decision Authority, the Decision Authority shall provide written notice terminating the "opportunity to cure" process. The Manufacturer shall have 10 calendar days from the date it receives such notice to request reconsideration of the Initial Decision pursuant to Section 6.6.2.
- 6.8.5. Compliance Plan Test Report. The VSTL shall submit the test report created pursuant to its EAC-approved compliance plan. The EAC shall review the test report, along with the original test report and other materials originally provided. The report will be technically reviewed by the EAC consistent with the procedures laid out in Chapter 4 of this Manual.
- 6.8.6. EAC Decision on the System. After receipt of the test plan, the Decision Authority shall issue a decision on a voting system amended pursuant to an approved compliance plan. This decision shall be issued in the same manner and with the same process and rights as an Initial Decision on Certification.

- 6.9. Requests for Reconsideration.** Manufacturers may request reconsideration of an Initial Decision.
- 6.9.1. Submission of Request. A request for reconsideration must be made within 10 calendar days of the Manufacturer's receipt of an Initial Decision. The request shall be made and sent to the Decision Authority.
  - 6.9.2. Acknowledgment of Request. The Decision Authority shall acknowledge receipt of the Manufacturer's request for reconsideration. This acknowledgment shall either enclose all information that served as the basis for the Initial Decision (the record) or provide a date by which the record will be forwarded to the Manufacturer.
  - 6.9.3. Manufacturer's Submission. Within 30 calendar days of receipt of the record, a Manufacturer may submit written materials in support of its position, including the following:
    - 6.9.3.1. A written argument responding to the conclusions in the Initial Decision.
    - 6.9.3.2. Documentary evidence relevant to the issues raised in the Initial Decision.
  - 6.9.4. Decision Authority's Review of Request. The Decision Authority shall review and consider all relevant submissions of the Manufacturer. In making a decision on reconsideration, the Decision Authority shall also consider all documents that make up the record and any other documentary information he or she determines relevant.
- 6.10. Agency Final Decision.** The Decision Authority shall issue a written Agency Decision after review of the Manufacturer's request for reconsideration. This Decision shall be the decision of the agency. The following actions are necessary for writing the decision:
- 6.10.1.1. Clearly state the agency's determination on the application for certification.
  - 6.10.1.2. Address the issues raised by the Manufacturer in its request for reconsideration.
  - 6.10.1.3. Identify all facts, evidence, and EAC voting system standards (VVSG or VSS) that served as the basis for the decision.
  - 6.10.1.4. Provide the reasoning behind the determination.
  - 6.10.1.5. Identify and provide, as an attachment, any additional documentary information that served as a basis for the decision and that was not part of the Manufacturer's submission or the prior record.
  - 6.10.1.6. Provide the Manufacturer notice of its right to appeal.

**6.11. Appeal of Agency Final Decision.** A Manufacturer may, upon receipt of an Agency Final Decision denying certification, issue a request for appeal.

6.11.1. Requesting Appeal. A Manufacturer may appeal a final decision of the agency by issuing a written request for appeal.

6.11.1.1. *Submission.* Requests must be submitted in writing to the Program Director, addressed to the Chair of the U.S. Election Assistance Commission.

6.11.1.2. *Timing of Appeal.* The Manufacturer may request an appeal within 20 calendar days of receipt of the Agency Final Decision. Late requests will not be considered.

6.11.1.3. *Contents of Request.*

6.11.1.3.1. The request must clearly state the specific conclusions of the Final Decision the Manufacturer wishes to appeal.

6.11.1.3.2. The request may include additional written argument.

6.11.1.3.3. The request may not reference or include any factual material not in the record.

6.11.2. Consideration of Appeal. All timely appeals will be considered by the Appeal Authority.

6.11.2.1. The Appeal Authority shall be two or more EAC Commissioners or other individuals appointed by the Commissioners who have not previously served as the initial or reconsideration authority on the matter.

6.11.2.2. All decisions on appeal shall be based on the record.

6.11.2.3. The determination of the Decision Authority shall be given deference by the Appeal Authority. Although it is unlikely that the scientific certification process will produce factual disputes, in such cases, the burden of proof shall belong to the Manufacturer to demonstrate by clear and convincing evidence that its voting system met all substantive and procedural requirements for certification. In other words, the determination of the Decision Authority will be overturned only when the Appeal Authority finds the ultimate facts in controversy highly probable.

**6.12. Decision on Appeal.** The Appeal Authority shall make a written, final Decision on Appeal and shall provide it to the Manufacturer.

6.12.1. Contents. The following actions are necessary to write the Decision on Appeal:

6.12.1.1. State the final determination of the agency.

6.12.1.2. Address the matters raised by the Manufacturer on appeal.

6.12.1.3. Provide the reasoning behind the decisions.

6.12.1.4. State that the Decision on Appeal is final.

6.12.2. Determinations. The Appeal Authority may make one of two determinations:

6.12.2.1. *Grant of Appeal.* If the Appeal Authority determines that the conclusions of the Decision Authority shall be overturned *in full*, the appeal shall be granted. In such cases, certification will be approved subject to the requirements of Chapter 5.

6.12.2.2. *Denial of Appeal.* If the Appeal Authority determines that *any part* of the Decision Authority's determination shall be upheld, the appeal shall be denied. In such cases, the application for appeal is finally denied.

6.12.3. Effect. All Decisions on Appeal shall be final and binding on the Manufacturer. No additional appeal shall be granted.

## 7. Decertification

**7.1. Overview.** Decertification is the process by which the EAC revokes a certification previously granted to a voting system. It is an important part of the Certification Program because it serves to ensure that the requirements of the program are followed and that certified voting systems fielded for use in Federal elections maintain the same level of quality as those presented for testing. Decertification is a serious matter. Its use will significantly affect Manufacturers, State and local governments, the public, and the administration of elections. As such, the process for Decertification is complex. It is initiated when the EAC receives information that a voting system may not be in compliance with the applicable voting system standard or the procedural requirements of this Manual. Upon receipt of such information, the Program Director may initiate an Informal Inquiry to determine the credibility of the information. If the information is credible and suggests the system is non-compliant, a Formal Investigation will be initiated. If the results of the Formal Investigation demonstrate non-compliance, the Manufacturer will be provided a Notice of Non-Compliance. Before a Final Decision on Decertification is made, the Manufacturer will have the opportunity to remedy any defects identified in the voting system and present information for consideration by the Decertification Authority. A Decertification of a voting system may be appealed in a timely manner.

**7.2. Decertification Policy.** Voting systems certified by the EAC are subject to Decertification. Systems shall be decertified if (1) they are shown not to meet applicable voting system standard, (2) they have been modified or changed without following the requirements of this Manual, or (3) the Manufacturer has otherwise failed to follow the procedures outlined in this Manual so that the quality, configuration, or compliance of the system is in question. Decertification of a voting system is a serious matter. Systems will be decertified only after completion of the process outlined in this chapter.

**7.3. Informal inquiry.** An Informal Inquiry is the first step taken when information is presented to the EAC that suggests a voting system may not be in compliance with the applicable voting system standard or the procedural requirements of this Manual.

**7.3.1. Informal Inquiry Authority.** The authority to conduct an Informal Inquiry shall rest with the Program Director.

**7.3.2. Purpose.** The sole purpose of the Informal Inquiry is to determine whether a Formal Investigation is warranted. The outcome of an Informal Inquiry is limited to a decision on referral for investigation.

**7.3.3. Procedure.** Informal Inquiries do not follow a formal process.

**7.3.3.1. *Initiation.*** Informal Inquiries are initiated at the discretion of the Program Director. They may be initiated any time the Program Director receives attributable, relevant information that suggests a certified voting system may require Decertification. The information shall come from a source that has directly observed or witnessed the reported occurrence. Such information may be a product of the Certification Quality Monitoring Program (see Chapter 8).

Information may also come from State and local election officials, voters, or others who have used or tested a given voting system. The Program Director may notify a Manufacturer that an Informal Inquiry has been initiated, but such notification is not required. Initiation of an inquiry shall be documented through the creation of a Memorandum for the Record.

- 7.3.3.2. *Inquiry.* The Informal Inquiry process is limited to that inquiry necessary to determine whether a Formal Investigation is required. In other words, the Program Director shall conduct such inquiry necessary to determine (1) that the information obtained is credible and (2) that the information, if true, would serve as a basis for Decertification. The nature and extent of the inquiry process will vary depending on the source of the information. For example, an Informal Inquiry initiated as a result of action taken under the Certification Quality Monitoring Program will often require the Program Director merely to read the report issued as a result of the Quality Monitoring action. On the other hand, information provided by election officials or by voters who have used a voting system may require the Program Director (or assigned technical experts) to perform an in-person inspection or make inquiries of the Manufacturer.
- 7.3.3.3. *Conclusion.* An Informal Inquiry shall be concluded after the Program Director is in a position to determine the credibility of the information that initiated the inquiry and whether that information, if true, would require Decertification. The Program Director may make only two conclusions: (1) refer the matter for a Formal Investigation or (2) close the matter without additional action or referral.
- 7.3.4. Closing the Matter Without Referral. If the Program Director determines, after Informal Inquiry, that a matter does not require a Formal Investigation, the Program Director shall close the inquiry by filing a Memorandum for the Record. This document shall state the focus of the inquiry, the findings of the inquiry and the reasons a Formal Investigation was not warranted.
- 7.3.5. Referral. If the Program Director determines, after Informal Inquiry, that a matter requires a Formal Investigation, the Program Director shall refer the matter in writing to the Decision Authority. In preparing this referral, the Program Director shall do the following:
  - 7.3.5.1. State the facts that served as the basis for the referral.
  - 7.3.5.2. State the findings of the Program Director.
  - 7.3.5.3. Attach all documentary evidence that served as the basis for the conclusion.
  - 7.3.5.4. Recommend a Formal Investigation, specifically stating the system to be investigated and the scope and focus of the proposed investigation.

**7.4. Formal Investigation.** A Formal Investigation is an official investigation to determine whether a voting system requires Decertification. The end result of a Formal Investigation is a Report of Investigation.

7.4.1. Formal Investigation Authority. The Decision Authority shall have the authority to initiate and conclude a Formal Investigation by the EAC.

7.4.2. Purpose. The purpose of a Formal Investigation is to gather and document relevant information sufficient to make a determination on whether an EAC-certified voting system requires Decertification consistent with the policy put forth in Section 7.2 above.

7.4.3. Initiation of Investigation. The Decision Authority shall authorize the initiation of an EAC Formal Investigation.

7.4.3.1. *Scope.* The Decision Authority shall clearly set the scope of the investigation by identifying (in writing) the voting system (or systems) and specific procedural or operational non-conformance to be investigated. The non-conformance or non-conformances to be investigated shall be set forth in the form of numbered allegations.

7.4.3.2. *Investigator.* The Program Director shall be responsible for conducting the investigation unless the Decision Authority appoints another individual to conduct the investigation. The Program Director (or Decision Authority appointee) may assign staff or technical experts, as required, to investigate the matter.

7.4.4. Notice of Formal Investigation. Upon initiation of a Formal Investigation, notice shall be given the Manufacturer of the scope of the investigation. The following actions are necessary to prepare this notice:

7.4.4.1. Identify the voting system and specific procedural or operation non-conformance being investigated (scope of investigation).

7.4.4.2. Provide the Manufacturer an opportunity to provide relevant information in writing.

7.4.4.3. Provide an estimated timeline for the investigation.

7.4.5. Investigation. Because voting systems play a vital role in our democratic process, investigations shall be conducted impartially, diligently, promptly, and confidentially. Investigators shall use techniques to gather necessary information that meet these requirements.

- 7.4.5.1. *Fair and Impartial Investigation.* All Formal Investigations shall be conducted in a fair and impartial manner. All individuals assigned to an investigation must be free from any financial conflicts of interest.
- 7.4.5.2. *Diligent Collection of Information.* All investigations shall be conducted in a meticulous and thorough manner. Investigations shall gather all relevant information and documentation that is reasonably available. The diligent collection of information is vital for informed decision making.
- 7.4.5.3. *Prompt Collection of Information.* Determinations that may affect the administration of Federal elections must be made with all reasonable speed. EAC determinations on Decertification will affect the actions of State and local election officials conducting elections. As such, all investigations regarding Decertification must proceed with an appropriate sense of urgency.
- 7.4.5.4. *Confidential Collection of Information.* Consistent with Federal law, information pertaining to a Formal Investigation should not be made public until the Report of Investigation is complete. The release of incomplete and unsubstantiated information or predecisional opinions that may be contrary or inconsistent with the final determination of the EAC could cause public confusion or could unnecessarily negatively affect public confidence in active voting systems. Such actions could serve to impermissibly affect election administration and voter turnout. All predecisional investigative materials must be appropriately safeguarded.
- 7.4.5.5. *Methodologies.* Investigators shall gather information by means consistent with the four principles noted above. Investigative tools include (but are not limited to) the following:
  - 7.4.5.5.1. Interviews. Investigators may interview individuals (such as State and local election officials, voters, or representatives of the Manufacturer) with relevant information. All interviews shall be reduced to written form; each interview should be summarized in a statement that is reviewed, approved, and signed by the subject.
  - 7.4.5.5.2. Field audits.
  - 7.4.5.5.3. Manufacturer site audits.
  - 7.4.5.5.4. Written interrogatories. Investigators may pose specific, written questions to the Manufacturer for the purpose of gathering information relevant to the investigation. The Manufacturer shall respond to the queries within a reasonable timeframe (as specified in the request).

- 7.4.5.5.5. System testing. Testing may be performed in an attempt to reproduce a condition or failure that has been reported. This testing will be conducted at a VSTL under contract with the EAC.
- 7.4.5.6. *Report of Investigation.* The end result of a Formal Investigation is a Report of Investigation.
- 7.4.6. Report of Investigation. The Report of Investigation serves, primarily, to document (1) all relevant and reliable information gathered in the course of the investigation, and (2) the conclusion reached by the Decision Authority.
  - 7.4.6.1. *When Complete.* The report is complete and final when certified and signed by the Decision Authority.
  - 7.4.6.2. *Contents of the Report of Investigation.* The following actions are necessary to prepare the written report:
    - 7.4.6.2.1. Restate the scope of the investigation, identifying the voting system and specific matter investigated.
    - 7.4.6.2.2. Briefly describe the investigative process employed.
    - 7.4.6.2.3. Summarize the relevant and reliable facts and information gathered in the course of the investigation.
    - 7.4.6.2.4. Attach all relevant and reliable evidence collected in the course of the investigation that documents the facts. All facts shall be documented in written form.
    - 7.4.6.2.5. Analyze the information gathered.
    - 7.4.6.2.6. Clearly state the findings of the investigation.
- 7.4.7. Findings, Report of Investigation. The Report of Investigation shall state one of two conclusions. After gathering and reviewing all applicable facts, the report shall find each allegation investigated to be either (1) substantiated, or (2) unsubstantiated.
  - 7.4.7.1. *Substantiated Allegation.* An allegation is substantiated if a preponderance of the relevant and reliable information gathered requires that the voting system at issue be decertified (consistent with the policy set out in Section 7.2). If any allegation is substantiated, a Notice of Non-Compliance must be issued.
  - 7.4.7.2. *Unsubstantiated Allegation.* An allegation is unsubstantiated if the preponderance of the relevant and reliable information gathered does not require Decertification (see Section 7.2). If all allegations are unsubstantiated,

the matter shall be closed and a copy of the report forwarded to the Manufacturer.

7.4.8. Publication of Report. The report shall not be made public nor released to the public until final.

7.5. **Effect of Informal Inquiry or Formal Investigation on Certification**. A voting system's EAC certification is not affected by the initiation or conclusion of an Informal Inquiry or Formal Investigation. Systems under investigation remain certified until a final Decision on Decertification is issued by the EAC.

7.6. **Notice of Non-Compliance**. If an allegation in a Formal Investigation is substantiated, the Decision Authority shall send the Manufacturer a Notice of Non-Compliance. *The Notice of Non-Compliance is not, itself, a Decertification of the voting system.* The purpose of the notice is to (1) notify the Manufacturer of the non-compliance and the EAC's intent to Decertify the system and (2) inform the Manufacturer of its procedural rights so that it may be heard prior to Decertification.

7.6.1. Non-Compliance Information. The following actions are necessary for preparing a Notice of Non-Compliance:

7.6.1.1. Provide a copy of the Report of Investigation to the Manufacturer.

7.6.1.2. Identify the non-compliance, consistent with the Report of Investigation.

7.6.1.3. Inform the Manufacturer that if the voting system is not made compliant, the voting system will be decertified.

7.6.1.4. State the actions the Manufacturer must take, if any, to bring the voting system into compliance and avoid Decertification.

7.6.2. Manufacturer's Rights. The written Notice of Non-Compliance must also inform the Manufacturer of its procedural rights under the program, which include the following:

7.6.2.1. *Right to Present Information Prior to Decertification Decision*. The Manufacturer shall be informed of its right to present information to the Decision Authority prior to a determination of Decertification.

7.6.2.2. *Right to Have Access to the Information That Will Serve as the Basis of the Decertification Decision*. The Manufacturer shall be provided the Report of Investigation and any other materials that will serve as the basis of an Agency Decision on Decertification.

7.6.2.3. *Right to Cure System Defects Prior to the Decertification Decision*. A Manufacturer may request an opportunity to cure within 20 calendar days of its receipt of the Notice of Non-Compliance.

**7.7. Procedure for Decision on Decertification.** The Decision Authority shall make and issue a written Decision on Decertification whenever a Notice of Non-Compliance is issued. The Decision Authority will not take such action until the Manufacturer has had a reasonable opportunity to cure the non-compliance and submit information for consideration.

**7.7.1. Opportunity to Cure.** The Manufacturer shall have an opportunity to cure a non-conforming voting system in a *timely* manner prior to Decertification. A cure is timely when the cure process can be completed before the next Federal election, meaning that any proposed cure must be in place before *any* individual jurisdiction fielding the system holds a Federal election. The Manufacturer must request the opportunity to cure. If the request is approved, a compliance plan must be created, approved, and followed. If this cure process is successfully completed, a Manufacturer may modify a non-compliant voting system, remedy procedural discrepancies, or otherwise bring its system into compliance without resubmission or Decertification.

**7.7.1.1. Manufacturer's Request to Cure.** Within 10 calendar days of receiving the EAC's Notice of Non-Compliance, a Manufacturer may request an opportunity to cure all defects identified in the Notice of Non-Compliance in a *timely* manner. The request must be sent to the Decision Authority and outline how the Manufacturer would modify the system, update the technical information (as required by Section 4.3.2), have the VSTL create a test plan and test the system, and obtain EAC approval before the next election for Federal office.

**7.7.1.2. EAC Action on Request.** The Decision Authority will review the request and approve it if the defects identified in the Notice of Non-Compliance may reasonably be cured before the next election for Federal office.

**7.7.1.3. Manufacturer's Compliance Plan.** Upon approval of the Manufacturer's request for an opportunity to cure, the Manufacturer shall submit a compliance plan to the Decision Authority for approval. This compliance plan must set forth the steps to be taken (including time frames) to cure *all* identified defects in a timely manner. The plan shall describe the proposed changes to the system, provide for modification of the system, update the technical information required by Section 4.3.2, include a test plan delivered to the EAC by the VSTL (testing the system consistent with Section 4.4.2.3), and provide for the VSTL's testing of the system and submission of the test report to the EAC for approval (assume *at least* 20 working days). The plan shall also include a schedule of periodic progress reports to the Program Director<sup>2</sup>.

---

<sup>2</sup> Manufacturers should also be cognizant of State certification procedures and local pre-election logic and accuracy testing. Systems that meet EAC guidelines will also be impacted by independent State and local requirements. These requirements may also prevent a system from being fielded, irrespective of EAC Certification.

- 7.7.1.4. *EAC Action on the Compliance Plan.* The Decision Authority must review and approve the compliance plan. The Decision Authority may require the Manufacturer to provide additional information and modify the plan as required. If the Manufacturer is unable or unwilling to provide a Compliance Plan acceptable to the Decision Authority, the Decision Authority shall provide written notice terminating the “opportunity to cure” process.
- 7.7.1.5. *VSTL’s Submission of the Compliance Plan Test Report.* The VSTL shall submit the test report created pursuant to the Manufacturer’s EAC-approved Compliance Plan. The EAC shall review the test report and any other necessary or relevant materials. The report will be technically reviewed by the EAC in a manner similar to the procedures described in Chapter 4 of this Manual.
- 7.7.1.6. *EAC Decision on the System.* After receipt of the VSTL’s test report, the Decision Authority shall issue a decision on a voting system amended pursuant to an approved Compliance Plan. For the purpose of planning, the Manufacturer should allow *at least 20* working days for this process.
- 7.7.2. Opportunity to Be Heard. The Manufacturer may submit written materials in response to the Notice of Non-Compliance and Report of Investigation. These documents shall be considered by the Decision Authority when making a determination on Decertification. The Manufacturer shall ordinarily have 20 calendar days from the date it received the Notice of Non-Compliance (or in the case of a failed effort to cure, the termination of that process) to deliver its submissions to the Decision Authority. When warranted by public interest (because a delay in making a determination on Decertification would affect the timely, fair, and effective administration of a Federal election), however, the Decision Authority may provide a Manufacturer less time to submit information. This alternative period (and the basis for it) must be stated in the Notice of Non-Compliance. The alternative time period must allow the Manufacturer a reasonable amount of time to gather its submissions. Submissions may include the following materials:
- 7.7.2.1. A written argument responding to the conclusions in the Notice of Non-Compliance or Report of Investigation.
- 7.7.2.2. Documentary evidence relevant to the allegations or conclusions in the Notice of Non-Compliance.
- 7.7.3. Decision on Decertification. The Decision Authority shall make an agency determination on Decertification.
- 7.7.3.1. *Timing.* The Decision Authority shall promptly make a decision on Decertification. The Decision Authority may not issue such a decision, however, until the Manufacturer has provided all of its written materials for

consideration or the time allotted for submission (usually 20 calendar days) has run out.

7.7.3.2. *Considered Materials.* The Decision Authority shall review and consider all relevant submissions of the Manufacturer. In making a Decision on Decertification, the Decision Authority shall also consider all documents that make up the record and any other documentary information he or she determines relevant.

7.7.3.3. *Agency Decision.* The Decision Authority shall issue a written Agency Decision after review of applicable materials. This decision shall be the final decision of the agency. The following actions are necessary to write the decision:

7.7.3.3.1. Clearly state the agency's determination on the Decertification, specifically addressing the areas of non-compliance investigated.

7.7.3.3.2. Address the issues raised by the Manufacturer in the materials it submitted for consideration.

7.7.3.3.3. Identify all facts, evidence, procedural requirements, and/or voting system standards (VMSG or VSS) that served as the basis for the decision.

7.7.3.3.4. Provide the reasoning behind the decision.

7.7.3.3.5. Identify, and provide as an attachment, any additional documentary information that served as a basis for the decision and that was not part of the Manufacturer's submission or the Report of Investigation.

7.7.3.3.6. Provide the Manufacturer notice of its right to appeal.

**7.8. Effect of Decision Authority's Decision on Decertification.** The Decision Authority's Decision on Decertification is the determination of the agency. A Decertification is effective upon the EAC's publication or Manufacturer's receipt of the decision (whichever is earlier). A Manufacturer that has had a voting system decertified may appeal that decision.

**7.9. Appeal of Decertification.** A Manufacturer may, upon receipt of an Agency Final Decision on Decertification, request an appeal in a timely manner.

7.9.1. Requesting Appeal.

7.9.1.1. *Submission.* Requests must be submitted by the Manufacturer in writing to the Chair of the U.S. Election Assistance Commission.

- 7.9.1.2. *Timing of Appeal.* The Manufacturer may request an appeal within 20 calendar days of receipt of the Agency Final Decision on Decertification. Late requests will not be considered.
- 7.9.1.3. *Contents of Request.* The following actions are necessary for the Manufacturer to write and submit a request for appeal:
  - 7.9.1.3.1. Clearly state the specific conclusions of the Final Decision the Manufacturer wishes to appeal.
  - 7.9.1.3.2. Include additional written argument, if any.
  - 7.9.1.3.3. Do not reference or include any factual material not previously considered or submitted to the EAC.
- 7.9.1.4. *Effect of Appeal on Decertification.* The initiation of an appeal does not affect the decertified status of a voting system. Systems are decertified upon notice of Decertification in the agency's Decision on Decertification (see Section 7.8).

7.9.2. Consideration of Appeal. All timely appeals will be considered by the Appeal Authority.

- 7.9.2.1. The Appeal Authority shall be two or more EAC Commissioners or other individual or individuals appointed by the Commissioners who have not previously served as investigators, advisors, or decision makers in the Decertification process.
- 7.9.2.2. All decisions on appeal shall be based on the record.
- 7.9.2.3. The decision of the Decision Authority shall be given deference by the Appeal Authority. Although it is unlikely that the scientific certification process will produce factual disputes, in such cases the burden of proof shall belong to the Manufacturer to demonstrate by clear and convincing evidence that its voting system met all substantive and procedural requirements for certification. In other words, the determination of the Decision Authority will be overturned only when the Appeal Authority finds the ultimate facts in controversy to be highly probable.

7.9.3. Decision on Appeal. The Appeal Authority shall make a written, final Decision on Appeal that it shall provide to the Manufacturer. Each Decision on Appeal shall be final and binding on the Manufacturer. No additional appeal shall be granted. The following actions are necessary to write a Decision on Appeal:

- 7.9.3.1. State the final determination of the agency.

7.9.3.2. Address the matters raised by the Manufacturer on appeal.

7.9.3.3. Provide the reasoning behind the decision.

7.9.3.4. State that the Decision on Appeal is final.

7.9.4. Effect of Appeal.

7.9.4.1. *Grant of Appeal.* If a Manufacturer's appeal is granted in whole, the decision of the Decision Authority is reversed. The voting system shall have its certification reinstated. For purposes of this program, the system shall be treated as though it was never decertified.

7.9.4.2. *Denial of Appeal.* If a Manufacturer's appeal is denied in whole or in part, the decision of the Decision Authority is upheld. The voting system remains decertified and no additional appeal is available.

**7.10. Effect of Decertification.** A voting system that has been decertified no longer holds an EAC certification under the Certification Program. For purposes of this Manual and the program, a decertified system will be treated as any other uncertified voting system. As such, the effects of Decertification are as follows:

7.10.1. The Manufacturer may not represent the voting system as certified.

7.10.2. The voting system may not be labeled with a mark of certification.

7.10.3. The voting system will be removed from the EAC list of certified systems.

7.10.4. The EAC will notify State and local election officials of the Decertification.

**7.11. Recertification.** A decertified system may be resubmitted for certification. Such systems shall be treated as any other system seeking certification. The Manufacturer shall present an application for certification consistent with the instructions of this Manual.

010050

## 8. Quality Monitoring Program

- 8.1. Overview.** The quality of any product, including a voting system, depends on two specific elements: (1) the design of the product or system and (2) the care and consistency of the manufacturing process. The EAC testing and certification process focuses on voting system design by ensuring that a representative sample of a system meets the technical specifications of the applicable EAC voting system standards. This process, commonly called “type acceptance,” determines whether the representative sample submitted for testing meets the requirements. What type acceptance does not do is explore whether variations in manufacturing may allow production of non-compliant systems. Generally, the quality of the manufacturing is the responsibility of the Manufacturer. After a system is certified, the vendor assumes primary responsibility for compliance of the products produced. This level of compliance is accomplished by the Manufacturer’s configuration management and quality control processes. The EAC’s Quality Monitoring Program, as outlined in this chapter, however, provides an additional layer of quality control by allowing the EAC to perform manufacturing site reviews, carry out fielded system reviews, and gather information on voting system anomalies from election officials. These additional tools help ensure that voting systems continue to meet the requirements of EAC’s voting system standards as the systems are manufactured, delivered, and used in Federal elections. These aspects of the program enable the EAC to independently monitor the continued compliance of fielded voting systems.
- 8.2. Purpose.** The purpose of the Quality Monitoring Program is to ensure that EAC-certified voting systems are identical to those fielded in election jurisdictions. This level of quality control is accomplished primarily by identifying (1) potential quality problems in manufacturing, (2) uncertified voting system configurations, and (3) field performance issues with certified systems.
- 8.3. Manufacturer’s Quality Control.** EAC’s Quality Monitoring Program is not a substitute for the Manufacturer’s quality control program. As stated in Chapter 2 of this Manual, all Manufacturers must have an acceptable quality control program in place before they may be registered. The EAC’s program serves as an independent and complementary process of quality control that works in tandem with the Manufacturer’s efforts.
- 8.4. Quality Monitoring Methodology.** This chapter provides the EAC with three primary tools for assessing the level of effectiveness of the certification process and the compliance of fielded voting systems. These tools include (1) manufacturing site reviews, (2) fielded system reviews, and (3) a means for receiving anomaly reports from the field.
- 8.5. Manufacturing Site Review.** Facilities that produce certified voting systems will be reviewed periodically, at the discretion of the EAC, to verify that the system being manufactured, shipped, and sold is the same as the sample submitted for certification testing. All registered Manufacturers must cooperate with such audits as a condition of program participation.
- 8.5.1. Notice.** The site review may be scheduled or unscheduled, at the discretion of the EAC. Unscheduled reviews will be performed with at least 24 hours notice. Scheduling and

notice of site reviews will be coordinated with and provided to both the manufacturing facility's representative and the Manufacturer's representative.

- 8.5.2. Frequency. At a minimum, at least one manufacturing facility of a registered Manufacturer shall be subject to a site review at least once every 4 years.
- 8.5.3. The Review. The production facility and production test records must be made available for review. When requested, production schedules must be provided to the EAC. Production or production testing may be witnessed by EAC representatives. If equipment is not being produced during the inspection, the review may be limited to production records. During the inspection, the Manufacturer must make available to the EAC representative the Manufacturer's quality manual and other documentation sufficient to enable the inspector to evaluate the following factors of the facility's production:
- 8.5.3.1. Manufacturing quality controls.
  - 8.5.3.2. Final inspection and testing.
  - 8.5.3.3. History of deficiencies or anomalies and corrective actions taken.
  - 8.5.3.4. Equipment calibration and maintenance.
  - 8.5.3.5. Corrective action program.
  - 8.5.3.6. Policies on product labeling and the application of the EAC mark of certification.
- 8.5.4. Exit Briefing. Site reviewers will provide the manufacturing facility representative a verbal exit briefing regarding the preliminary observations of the review.
- 8.5.5. Written Report. A written report documenting the review will be drafted by the EAC representative and provided to the Manufacturer. The report will detail the findings of the review and identify actions that are required to correct any deficiencies.

**8.6. Fielded System Review and Testing.** Upon invitation or with the permission of a State or local election authority, the EAC may, at its discretion, conduct a review of fielded voting systems. Such reviews will be done to ensure that a fielded system is in the same configuration as that certified by the EAC and that it has the proper mark of certification. This review may include the testing of a fielded system, if deemed necessary. Any anomalies found during this review and testing will be provided to the election jurisdiction and the Manufacturer.

**8.7. Field Anomaly Reporting.** As another means of gathering field data, the EAC will collect information from election officials who field EAC-certified voting systems. Information on actual voting system field performance is a basic means for assessing the effectiveness of the Certification Program and the manufacturing quality and version control. The EAC will

provide a mechanism for election officials to provide real-world input on voting system anomalies.

- 8.7.1. Anomaly Report. Election officials may use the Voting System Anomaly Reporting Form to report voting system anomalies to the EAC. The form and instructions for its completion are available as Appendix C in this Manual or on the EAC Web site, [www.eac.gov](http://www.eac.gov). The form may be filed with the EAC on line, by mail or by facsimile. Use of the form is required.
- 8.7.2. Who May Report? State or local election officials who have experienced voting system anomalies in their jurisdiction may file anomaly reports. The individuals reporting must identify themselves and have firsthand knowledge of or official responsibility over the anomaly being reported. Anonymous or hearsay reporting will not be accepted.
- 8.7.3. What Is Reported? Election officials shall report voting system anomalies. An *anomaly* is defined as an irregular or inconsistent action or response from the voting system or system component resulting in some disruption to the election process. Incidents resulting from administrator error or procedural deficiencies are not considered anomalies for purposes of this chapter. The report must include the following information:
  - 8.7.3.1. The official's name, title, contact information, and jurisdiction.
  - 8.7.3.2. A description of the voting system at issue.
  - 8.7.3.3. The date and location of the reported occurrence.
  - 8.7.3.4. The type of election.
  - 8.7.3.5. A description of the anomaly witnessed.
- 8.7.4. Distribution of Credible Reports. Credible reports will be distributed to State and local election jurisdictions who field similar systems, the Manufacturer of the voting system at issue, and the VSTLs. Reports are reviewed by EAC staff in coordination with relevant State officials. Credible reports:
  - 8.7.4.1. Meet the definition of anomaly under Section 8.7.3,
  - 8.7.4.2. Constitute a complete report per the requirements of Sections 8.7.3.1 through 8.7.3.5,
  - 8.7.4.3. Have had alleged facts confirmed by contacting filer and/or others present at the time of the incident, and
  - 8.7.4.4. Have been verified by the relevant State's chief election official.

- 8.8. Use of Quality Monitoring Information.** Ultimately, the information the EAC gathers from manufacturing site reviews, fielded system reviews, and field anomaly reports will be used to improve the program and ensure the quality of voting systems. The Quality Monitoring Program is not designed to be punitive but to be focused on improving the process. Information gathered will be used to accomplish the following:
- 8.8.1. Identify areas for improvement in the EAC Testing and Certification Program.
  - 8.8.2. Improve manufacturing quality and change control processes.
  - 8.8.3. Increase voter confidence in voting technology.
  - 8.8.4. Inform Manufacturers, election officials, and the EAC of issues associated with voting systems in a real-world environment.
  - 8.8.5. Share information among jurisdictions that use similar voting systems.
  - 8.8.6. Resolve problems associated with voting technology or manufacturing in a timely manner by involving Manufacturers, election officials, and the EAC.
  - 8.8.7. Provide feedback to the EAC and the Technical Guidelines Development Committee (TGDC) regarding issues that may need to be addressed through a revision to the Voluntary Voting System Guidelines.
  - 8.8.8. Initiate an investigation when information suggests that Decertification is warranted (see Chapter 7).

010054

## 9. Requests for Interpretations

**9.1. Overview.** A Request for Interpretation is a means by which a registered Manufacturer or VSTL may seek clarification on a specific EAC voting system standard (VVSG or VSS). An Interpretation is a clarification of the voting system standards and guidance on how to properly evaluate conformance to it. Suggestions or requests for modifications to the standards are provided by other processes. This chapter outlines the policy, requirements, and procedures for submitting a Request for Interpretation.

**9.2. Policy.** Registered Manufacturers or VSTLs may request that the EAC provide a definitive Interpretation of EAC-accepted voting system standards (VVSG or VSS) when, in the course of developing or testing a voting system, facts arise that make the meaning of a particular standard ambiguous or unclear. The EAC may self-initiate such a request when its agents identify a need for interpretation within the program. An Interpretation issued by the EAC will serve to clarify what a given standard requires and how to properly evaluate compliance. Ultimately, an Interpretation does not amend voting system standards, but serves only to clarify existing standards.

**9.3. Requirements for Submitting a Request for Interpretation.** An EAC Interpretation is limited in scope. The purpose of the Interpretation process is to provide Manufacturers or VSTLs who are in the process of developing or testing a voting system a means for resolving the meaning of a voting system standard in light of a specific voting system technology without having to present a finished product to EAC for certification. To submit a Request for Interpretation, one must (1) be a proper requester, (2) request interpretation of an applicable voting system standard, (3) present an actual controversy, and (4) seek clarification on a matter of unsettled ambiguity.

9.3.1. Proper Requestor. A Request for Interpretation may be submitted only by a registered Manufacturer or a VSTL. Requests for Interpretation will not be accepted from any other parties.

9.3.2. Applicable Standard. A Request for Interpretation is limited to queries on EAC voting system standards (i.e., VVSG or VSS). Moreover, a Manufacturer or VSTL may submit a Request for Interpretation only on a version of EAC voting system standards to which the EAC currently offers certification.

9.3.3. Existing Factual Controversy. To submit a Request for Interpretation, a Manufacturer or VSTL must present a question relative to a specific voting system or technology proposed for use in a voting system. A Request for Interpretation on hypothetical issues will not be addressed by the EAC. To submit a Request for Interpretation, the need for clarification must have arisen from the development or testing of a voting system. A factual controversy exists when an attempt to apply a specific section of the VVSG or VSS to a specific system or piece of technology creates ambiguity.

010055

9.3.4. Unsettled, Ambiguous Matter. Requests for Interpretation must involve actual controversies that have not been previously settled. This requirement mandates that interpretations contain actual ambiguities not previously clarified.

9.3.4.1. *Actual Ambiguity.* A proper Request for Interpretation must contain an actual ambiguity. The interpretation process is not a means for challenging a clear EAC voting system standard. Recommended changes to voting system standards are welcome and may be forwarded to the EAC, but they are not part of this program. An ambiguity arises (in applying a voting system standard to a specific technology) when one of the following occurs:

9.3.4.1.1. The language of the standard is unclear on its face.

9.3.4.1.2. One section of the standard seems to contradict another, relevant section.

9.3.4.1.3. The language of the standard, though clear on its face, lacks sufficient detail or breadth to determine its proper application to a particular technology.

9.3.4.1.4. The language of a particular standard, when applied to a specific technology, clearly conflicts with the established purpose or intent of the standard.

9.3.4.1.5. The language of the standard is clear, but the proper means to assess compliance is unclear.

9.3.4.2. *Not Previously Clarified.* The EAC will not accept a Request for Interpretation when the issue has previously been clarified.

**9.4. Procedure for Submitting a Request for Interpretation.** A Request for Interpretation shall be made in writing to the Program Director. All requests should be complete and as detailed as possible because Interpretations issued by the EAC are based on, and limited to, the facts presented. Failure to provide complete information may result in an Interpretation that is off point and ultimately immaterial to the issue at hand. The following steps must be taken when writing a Request for Interpretation:

9.4.1. Establish Standing To Make the Request. To make a request, one must meet the requirements identified in Section 9.3 above. Thus, the written request must provide sufficient information for the Program Director to conclude that the requestor is (1) a proper requester, (2) requesting an Interpretation of an applicable voting system standard, (3) presenting an actual factual controversy, and (4) seeking clarification on a matter of unsettled ambiguity.

9.4.2. Identify the EAC Voting System Standard To Be Clarified. The request must identify the specific standard or standards to which the requestor seeks clarification. The request

must state the version of the voting system standards at issue (if applicable) and quote and correctly cite the applicable standards.

9.4.3. State the Facts Giving Rise to the Ambiguity. The request must provide the facts associated with the voting system technology that gave rise to the ambiguity in the identified standard. The requestor must be careful to provide all necessary information in a clear, concise manner. Any Interpretation issued by the EAC will be based on the facts provided.

9.4.4. Identify the Ambiguity. The request must identify the ambiguity it seeks to resolve. The ambiguity shall be identified by stating a concise question that meets the following requirements:

9.4.4.1. Shall be clearly stated.

9.4.4.2. Shall be related to and reference the voting system standard and voting system technology information provided.

9.4.4.3. Shall be limited to a single issue. Each question or issue arising from an ambiguous standard must be stated separately. Compound questions are unacceptable. If multiple issues exist, they should be presented as individual, numbered questions.

9.4.4.4. Shall be stated in a way that can ultimately be answered *yes* or *no*.

9.4.5. Provide a Proposed Interpretation. A Request for Interpretation should propose an answer to the question posed. The answer should interpret the voting system standard in the context of the facts presented. It should also provide the basis and reasoning behind the proposal.

**9.5. EAC Action on a Request for Interpretation.** Upon receipt of a Request for Interpretation, the EAC shall take the following action:

9.5.1. Review the Request. The Program Director shall review the request to ensure it is complete, is clear, and meets the requirements of Section 9.3. Upon review, the Program Director may take the following action:

9.5.1.1. *Request Clarification.* If the Request for Interpretation is incomplete or additional information is otherwise required, the Program Director may request that the Manufacturer or VSTL clarify its Request for Interpretation and identify any additional information required.

9.5.1.2. *Reject the Request for Interpretation.* If the Request for Interpretation does not meet the requirements of Section 9.3, the Program Director may reject it. Such rejection must be provided in writing to the Manufacturer or VSTL and must state the basis for the rejection.

010057

9.5.1.3. *Notify Acceptance of the Request.* If the Request for Interpretation is acceptable, the Program Director will notify the Manufacturer or VSTL in writing and provide it with an estimated date of completion. A Request for Interpretation may be accepted in whole or in part. A notice of acceptance shall state the issues accepted for interpretation.

9.5.2. Consideration of the Request. After a Request for Interpretation has been accepted, the matter shall be investigated and researched. Such action may require the EAC to employ technical experts. It may also require the EAC to request additional information from the Manufacturer or VSTL. The Manufacturer or VSTL shall respond promptly to such requests.

9.5.3. Interpretation. The Decision Authority shall be responsible for making determinations on a Request for Interpretation. After this determination has been made, a written Interpretation shall be sent to the Manufacturer or VSTL. The following actions are necessary to prepare this written Interpretation:

9.5.3.1. State the question or questions investigated.

9.5.3.2. Outline the relevant facts that served as the basis of the Interpretation.

9.5.3.3. Identify the voting system standards interpreted.

9.5.3.4. State the conclusion reached.

9.5.3.5. Inform the Manufacturer or VSTL of the effect of an Interpretation (see Section 9.6).

**9.6. Effect of Interpretation.** Interpretations are fact specific and case specific. They are not tools of policy, but specific, fact-based guidance useful for resolving a particular problem. Ultimately, an Interpretation is determinative and conclusive only with regard to the case presented. Nevertheless, Interpretations do have some value as precedent. Interpretations published by the EAC shall serve as reliable guidance and authority over identical or similar questions of interpretation. These Interpretations will help users understand and apply the provisions of EAC voting system standards.

**9.7. Library of Interpretations.** To better serve Manufacturers, VSTLs, and those interested in the EAC voting system standards, the Program Director shall publish EAC Interpretations. All proprietary information contained in an Interpretation will be redacted before publication consistent with Chapter 10 of this Manual. The library of published opinions is posted on the EAC Web site: [www.eac.gov](http://www.eac.gov).

010058

## 10. Release of Certification Program Information

**10.1. Overview.** Manufacturers participating in the Certification Program will be required to provide the EAC a variety of documents. In general, these documents will be releasable to the public. Moreover, in many cases, the information provided will be affirmatively published by the EAC. In limited cases, however, documents may not be released if they include trade secrets, confidential commercial information, or personal information. While the EAC is ultimately responsible for determining which documents Federal law protects from release, Manufacturers must identify the information they believe is protected and ultimately provide substantiation and a legal basis for withholding. This chapter discusses EAC's general policy on the release of information and provides Manufacturers with standards, procedures, and requirements for identifying documents as trade secrets or confidential commercial information.

**10.2. EAC Policy on the Release of Certification Program Information.** The EAC seeks to make its Voting System Testing and Certification Program as transparent as possible. The agency believes that such action benefits the program by increasing public confidence in the process and creating a more informed and involved public. As such, it is the policy of the EAC to make all documents, or severable portions thereof, available to the public consistent with Federal law (e.g. Freedom of Information Act (FOIA) and the Trade Secrets Act).

10.2.1. Requests for information. As in any Federal program, members of the public may request access to Certification Program documents under FOIA (5 U.S.C. §552). The EAC will promptly process such requests per the requirements of that Act.

10.2.2. Publication of documents. Beyond the requirements of FOIA, the EAC intends to affirmatively publish program documents (or portions of documents) it believes will be of interest to the public. This publication will be accomplished through the use of the EAC Web site ([www.eac.gov](http://www.eac.gov)). The published documents will cover the full spectrum of the program, including information pertaining to:

10.2.2.1. Registered Manufacturers;

10.2.2.2. VSTL test plans;

10.2.2.3. VSTL test reports;

10.2.2.4. Agency decisions;

10.2.2.5. Denials of Certification;

10.2.2.6. Issuance of Certifications;

10.2.2.7. Information on a certified voting system's operation, components, features or capabilities;

10.2.2.8. Appeals;

010059

10.2.2.9. Reports of investigation and Notice of Non-compliance;

10.2.2.10. Decertification actions;

10.2.2.11. Manufacturing facility review reports;

10.2.2.12. Official Interpretations (VVSG or VSS); and

10.2.2.13. Other topics as determined by the EAC.

10.2.3. Trade Secret and Confidential Commercial Information. Federal law places a number of restrictions on a Federal agency's authority to release information to the public. Two such restrictions are particularly relevant to the Certification program: (1) trade secrets information and (2) privileged or confidential commercial information. Both types of information are explicitly prohibited from release by the FOIA and the Trade Secrets Act (18 U.S.C. §1905).

**10.3. Trade Secrets.** A trade secret is a secret, commercially valuable plan, process, or device that is used for the making or processing of a product and that is the end result of either innovation or substantial effort. It relates to the productive process itself, describing how a product is made. It does not relate to information describing end product capabilities, features, or performance.

10.3.1. The following examples illustrate productive processes that may be trade secrets:

10.3.1.1. Plans, schematics, and other drawings useful in production.

10.3.1.2. Specifications of materials used in production.

10.3.1.3. Voting system source code used to develop or manufacture software where release would reveal actual programming.

10.3.1.4. Technical descriptions of manufacturing processes and other secret information relating directly to the production process.

10.3.2. The following examples are likely not trade secrets:

10.3.2.1. Information pertaining to a finished product's capabilities or features.

10.3.2.2. Information pertaining to a finished product's performance.

10.3.2.3. Information regarding product components that would not reveal any commercially valuable information regarding production.

010060

**10.4. Privileged or Confidential Commercial Information.** Privileged or confidential commercial information is that information submitted by a Manufacturer that is commercial or financial in nature and privileged or confidential.

10.4.1. Commercial or Financial Information. The terms *commercial* and *financial* should be given their ordinary meanings. They include records in which a submitting Manufacturer has any *commercial interest*.

10.4.2. Privileged or Confidential Information. Commercial or financial information is privileged or confidential if its disclosure would likely cause substantial harm to the competitive position of the submitter. The concept of harm to one's competitive position focuses on harm flowing from a competitor's affirmative use of the proprietary information. It does not include incidental harm associated with upset customers or employees.

**10.5. EAC's Responsibilities.** The EAC is ultimately responsible for determining whether or not a document (in whole or in part) may be released pursuant to Federal law. In doing so, however, the EAC will require information and input from the Manufacturer submitting the documents. This requirement is essential for the EAC to identify, track, and make determinations on the large volume of documentation it receives. The EAC has the following responsibilities:

10.5.1. Managing Documentation and Information. The EAC will control the documentation it receives by ensuring that documents are secure and released to third parties only after the appropriate review and determination.

10.5.2. Contacting Manufacturer on Proposed Release of Potentially Protected Documents. In the event a member of the public submits a FOIA request for documents provided by a Manufacturer or the EAC otherwise proposes the release of such documents, the EAC will take the following actions:

10.5.2.1. Review the documents to determine if they are potentially protected from release as trade secrets or confidential commercial information. The documents at issue may have been previously identified as protected by the Manufacturer when submitted (see Section 10.7.1 below) or identified by the EAC on review.

10.5.2.2. Grant the submitting Manufacturer an opportunity to provide input. In the event the information has been identified as potentially protected from release as a trade secret or confidential commercial information, the EAC will notify the submitter and allow it an opportunity to submit its position on the issue prior to release of the information. The submitter shall respond consistent with Section 10.7.1 below.

10.5.3. Final Determination on Release. After providing the submitter of the information an opportunity to be heard, the EAC will make a final decision on release. The EAC will inform the submitter of this decision.

**10.6. Manufacturer's Responsibilities.** Although the EAC is ultimately responsible for determining if a document, or any portion thereof, is protected from release as a trade secret or confidential commercial information, the Manufacturer shall be responsible for identifying documents, or portions of documents, it believes warrant such protection. Moreover, the Manufacturer will be responsible for providing the legal basis and substantiation for its determination regarding the withholding of a document. This responsibility arises in two situations: (1) upon the initial submission of information, and (2) upon notification by the EAC that it is considering the release of potentially protected information.

**10.6.1. Initial Submission of Information.** When a Manufacturer is submitting documents to the EAC as required by the Certification Program, it is responsible for identifying any document or portion of a document that it believes is protected from release by Federal law. Manufacturers shall identify protected information by taking the following action:

**10.6.1.1. Submitting a Notice of Protected Information.** This notice shall identify the document, document page, or portion of a page that the Manufacturer believes should be protected from release. This identification must be done with specificity. For each piece of information identified, the Manufacturer must state the legal basis for its protected status.

10.6.1.1.1. Cite the applicable law that exempts the information from release.

10.6.1.1.2. Clearly discuss why that legal authority applies and why the document must be protected from release.

10.6.1.1.3. If necessary, provide additional documentation or information. For example, if the Manufacturer claims a document contains confidential commercial information, it would also have to provide evidence and analysis of the competitive harm that would result upon release.

**10.6.1.2. Label Submissions.** Label all submissions identified in the notice as "Proprietary Commercial Information." Label only those submissions identified as protected. Attempts to indiscriminately label all materials as proprietary will render the markings moot.

**10.6.2. Notification of Potential Release.** In the event a Manufacturer is notified that the EAC is considering the release of information that may be protected, the Manufacturer shall take the following action:

10.6.2.1. Respond to the notice within 15 calendar days. If additional time is needed, the Manufacturer must promptly notify the Program Director. Requests for additional time will be granted only for good cause and must be made before the 15-day deadline. Manufacturers that do not respond in a timely manner will be viewed as not objecting to release.

010062

10.6.2.2. Clearly state **one** of the following in the response:

10.6.2.2.1. There is no objection to release, or

10.6.2.2.2. The Manufacturer objects to release. In this case, the response must clearly state which portions of the document the Manufacturer believes should be protected from release. The Manufacturer shall follow the procedures discussed in Section 10.7.1 above.

**10.7. Personal Information.** Certain personal information is protected from release under FOIA and the Privacy Act (5 U.S.C. §552a). This information includes private information about a person that, if released, would cause the individual embarrassment or constitute an unwarranted invasion of personal privacy. Generally, the EAC will not require the submission of private information about individuals. The incidental submission of such information should be avoided. If a Manufacturer believes it is required to submit such information, it should contact the Program Director. If the information will be submitted, it must be properly identified. Examples of such information include the following:

10.7.1. Social Security Number.

10.7.2. Bank account numbers.

10.7.3. Home address.

10.7.4. Home phone number.

Subject: RE: Voter Hotline: Updated Draft Survey and Detailed Memo re SOW and Timeline

History: This message has been replied to.

Here you go. I halved the burden hours, which should please OMB, and modified some of the language on the survey topics. I think this new, user-friendly questionnaire will take much less time to complete.

Let me know if there is anything else.

Best,  
 Karen

**Subject:** Re: Voter Hotline: Updated Draft Survey and Detailed Memo re SOW and Timeline

Hello!

Please, go ahead and make any changes you wish to the highlighted section of the notice so it reflects the current focus or any other information you feel is critical to have there ---- this section was originally drafted by you (or staff), and you would be able to provide insight that I don't have (plus, I wouldn't have to send you back another draft for approval - I would take your changes as is.). Thank you!

Laiza N. Otero

Subject: Voter Hotline: Updated Draft Survey and Detailed Memo re SOW and  
Timeline

Hi Laiza, I don't want to slow anything down but I think it would be a good idea if you updated the wording about what we are collecting so that it correlates to the updated focus - for example, you can see from our memo that we are no longer asking for details on their software. If you are ok with it in its current form, please go ahead. Thanks, Jennifer

*lotero@eac.gov* wrote:

Hi Jennifer and Karen,

I have informed the counsel that it is an online survey. I have attached the draft notice for your review to make sure that all of the information is still correct on it (since it was originally drafted in early December and some changes have occurred since). Once I have your go ahead, I will get it signed and submit it today asap. As for the signing-off on the SOW pieces, Karen will be able to provide you more information on that. Thank you!

Hi Laiza,

GREAT news re the survey being approved for publication! Hurrah!

Please remind the Counsel that the survey is an ONLINE survey - we will be following up by phone with particular jurisdictions to encourage them to complete the survey, and with others on follow up to survey responses.

Has the Counsel signed off on the various peices of the memo/revised Statement of Work/revised timeline?

Best Regards, Jennifer

Update: we have the go ahead from the General Counsel's office to publish the survey on the Federal Register. However, she would like to know if the survey will be administered strictly by phone or will election officials have the option of completing it by mail or electronic format ?

Thank you!

VH 60-Day FR Notice 21 2007.doc

010069

**U.S. ELECTION ASSISTANCE COMMISSION**

**Information Collection Activity; Study of Voter Hotlines Operated by Election Offices**

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice; request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before April 6, 2007.

010070

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW, Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey instrument, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our website at [www.eac.gov](http://www.eac.gov).

**SUPPLEMENTARY INFORMATION:**

*Title:* Study of Voter Hotlines Operated by Election Offices

*OMB Number:* Pending.

*Type of Review:* Regular submission.

*Needs and Uses:* Section 241(b)(9) of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues, including methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections. Furthermore, Section 245(a)(2)(C) of HAVA indicates that the EAC may investigate the impact new communications or Internet technology systems used in the electoral process could have on voter participation rates, voter education, and public

010071

accessibility. In 2005, the EAC undertook a research study of voter hotline data available online to determine trends. A voter hotline was defined as a toll-free line that connects voters with elections offices, which then disseminate information and educate voters. The EAC found several hotlines in operation during the 2004 Presidential election, and their sponsorship and capabilities varied to a great degree. To build on and augment these research findings, the EAC wishes to conduct a study to determine the current state of voter information hotlines that are operated by Federal, State, and local election offices.

*Affected Public:* Federal, State, and local election offices

*Estimated Number of Respondents:* 6,500

*Responses per Respondent:* 1

*Estimated Burden per Response:* 1 hours

*Estimated Total Annual Burden Hours:* 6,500 hours

Information will be collected through a survey of existing hotline services operated by Federal, State, and local government agencies and election offices during the 2006 primary and general elections. The data collected will include information on voter hotlines operated by election offices and their features, including, but not limited to:

1. *Basic Information.* Hotline hours of operation, type of information available through the hotline, automated or non-automated service, links to other sources of voting information.
2. *Costs.* Breakdown of cost based on volume, cost of database maintenance per record, and all personnel and administrative costs of the service.
3. *Features.* Important factors include, but are not limited to: (1) languages used, (2)

disability-compliant features, (3) touch tone and voice services, (4) voice response options, and (5) ability for interactivity with additional databases (for example interactivity with a voter registration database).

4. *Network Capacity.* Number of calls capable of being routed per hour and the number of incoming calls that can be received.
5. *Call Tracking.* How calls are logged or tracked, how they are routed, and the types or categories of calls received.
6. *Hotline personnel.* Number of hotline operators and methods by which hotline operators are trained, the frequency of their training and how they are monitored for accuracy, currency, security, and other critical performance variables.
7. Methods by which the network operator maintains the accuracy and currency of the data. Important factors include, but are not limited to how regularly updates are made and quality-control procedures.
8. *Maintenance agreements with service providers.* Percentage of hotlines that outsource all or part of the Hotline, and experiences working with contractors?
9. *Timelines* for database creation, contractor integration, and final testing before launch.
10. Security measures to ensure that data in the call-routing network is confidential.
11. *Other information* such as: who the intended audience is; demographic, political and socioeconomic information of the community served; cost of publicizing the service and effectiveness of various publicity methods; and lessons learned.

A report on the key findings of the study, along with recommendations for the development and

010073

implementation of voter hotlines, will be made available to election officials and the public at the conclusion of this effort. The report will include a state-by-state compendium of the existing voter hotlines and their features. The report will be made available on the EAC website at [www.eac.gov](http://www.eac.gov).

## ELECTION ASSISTANCE COMMISSION

### Information Collection Activity; Study of Voter Hotlines Operated by Election Offices

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice; request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before April 6, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, *ATTN:* Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey instrument, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at [www.eac.gov](http://www.eac.gov).

### SUPPLEMENTARY INFORMATION:

*Title:* Study of Voter Hotlines Operated by Election Offices.

*OMB Number:* Pending.

*Type of Review:* Regular submission.

*Needs and Uses:* Section 241(b)(9) of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues, including methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections. Furthermore, Section 245(a)(2)(C) of HAVA indicates that the EAC may investigate the impact new communications or Internet technology systems used in the electoral process could have on voter participation rates, voter education, and public accessibility. In 2005, the EAC undertook a research study of voter hotline data available online to determine trends. At the time a voter hotline was defined as a toll-free line that connects voters with elections offices, which then disseminate information and educate voters. The EAC found several hotlines in operation during the 2004 Presidential election, and their sponsorship and capabilities varied to a great degree. To build on and augment these research findings, the EAC wishes to conduct a study to determine the current state of voter information hotlines that are operated by Federal, State, and local election offices. The definition of voter hotline has been broadened to include data from government agencies that employ non-toll free interactive phone systems to provide services to voters and pollworkers and to receive information from callers.

*Affected Public:* Federal, State, and local election offices.

*Estimated Number of Respondents:* 6,500.

*Responses per Respondent:* 1.

*Estimated Burden per Response:* 1 hour.

*Estimated Total Annual Burden Hours:* 6,500 hours.

Information will be collected through a survey of existing hotline services operated by Federal, State, and local government agencies and election offices during the 2006 primary and general elections. The data collected will include information on voter hotlines operated by election offices and their features, including, but not limited to:

1. *Basic Information.* Hotline hours of operation, type of information available through the hotline, automated or non-

automated service, links to other sources of voting information.

2. *Costs.* Breakdown of cost based on volume, cost of database maintenance per record, and all personnel and administrative costs of the service.

3. *Features.* Important factors include, but are not limited to: (1) Languages used, (2) disability-compliant features, (3) touch tone and voice services, (4) voice response options, and (5) ability for interactivity with additional databases (for example interactivity with a voter registration database).

4. *Network Capacity.* Number of calls capable of being routed per hour and the number of incoming calls that can be received.

5. *Call Tracking.* How calls are logged or tracked, how they are routed, and the types or categories of calls received.

6. *Hotline personnel.* Number of hotline operators and methods by which hotline operators are trained, the frequency of their training and how they are monitored for accuracy, currency, security, and other critical performance variables.

7. Methods by which the network operator maintains the accuracy and currency of the data. Important factors include, but are not limited to how regularly updates are made and quality-control procedures.

8. *Maintenance agreements with service providers.* Percentage of hotlines that outsource all or part of the Hotline, and experiences working with contractors?

9. *Timelines* for database creation, contractor integration, and final testing before launch.

10. Security measures to ensure that data in the call-routing network is confidential.

11. *Other information* such as: Who the intended audience is; demographic, political and socioeconomic information of the community served; cost of publicizing the service and effectiveness of various publicity methods; and lessons learned.

A report on the key findings of the study, along with recommendations for the development and implementation of voter hotlines, will be made available to election officials and the public at the conclusion of this effort. The report will include a state-by-state compendium of the existing voter hotlines and their features. The report will be made available on the EAC Web site at <http://www.eac.gov>.

Subject Voter Hotlines

For this study, we have not submitted a package to OMB. The Contractor has provided the requested information, and I am preparing the documentation for Julie to review and approve. They have done the initial 60-day FR Notice, and I am attaching that along with the draft collection instruments.

## U.S. Election Assistance Commission

### Voter Hotline Study

#### Background:

The U.S. Election Assistance Commission has commissioned The Pollworker Institute (PI) and the International Foundation for Election Systems (IFES) to conduct a survey on the current state-of-the-art in election hotlines operated by Federal, State and local government agencies and election offices. The data will serve as the basis for a report to the EAC that highlights the experiences and opinions of people like you who set-up, operate, and maintain the country's voter and pollworker hotlines.

This survey is for **research** purposes only. We are not selling anything and we are not associated with or being paid by any political party or candidate. Your participation is voluntary and will only take a few minutes. All of your answers will be kept **strictly confidential** and will not be connected to your name or the name of your office.

This survey should be completed by the person in your office **most knowledgeable about your office's phone hotlines** and/or voter information programs. If there is someone in your office who is more knowledgeable, please give your log-on and password to the person and request that he or she complete the survey.

Your time is valuable to us, and we thank you for your time!

If your office does not have voter and/or pollworker hotlines, it is still important that you complete the initial portion of this survey in order to help us collect the most scientifically valid results possible.

#### Q1. Please indicate your level of government:

1. Federal [GO TO Q4]
2. State [GO TO Q3b]
3. County [GO TO Q2a]
4. City [GO TO Q2b]
9. (No answer) [GO TO Q3]

IF COUNTY OFFICE, ASK:

#### Q2a. What county or counties does your office serve?

- [Open text response] [GO TO Q3a]  
9 (No answer)

IF CITY OFFICE, ASK:

#### Q2b. What town/city does your office serve?

- [Open text response] [GO TO Q3a]  
9 (No answer)

IF COUNTY OR CITY OFFICE, ASK:

#### Q3a. And what state is this jurisdiction in?

- [Dropdown menu with list of states] [GO TO Q4]  
9 (No answer)

IF STATE OFFICE, ASK:

**Q3b. What state does your office serve?**

[Dropdown menu with list of states] [GO TO Q4]

9 (No answer)

ASK ALL:

**Q4. During the 2006 Election season, did your office operate a phone "hotline" separate from your office's main number to provide services or information to voters or pollworkers in your area?**

1. Yes
2. No [GO TO DEMOGRAPHICS]
9. (No answer)

IF HOTLINE, ASK:

**Q5. How many dedicated phone hotlines did your office operate?**

\_\_\_ Record 2-digit response]

9999 (No answer)

IF ONLY ONE HOTLINE, ASK:

**Q6a. Was this a voter hotline toll-free (1-800) or a normal toll-call hotline?**

1. Voter hotline toll-free (1-800)
2. Normal toll-call hotline
9. (No answer)

**Q7a. And does this voter hotline operate year round, only during the election season, or only on Election Day?**

1. Year round
2. Only during election season
3. Only on Election Day
9. (No answer)

IF MORE THAN ONE HOTLINE, ASK:

**Q6b. Please indicate how many, if any, of these hotlines are toll-free (1-800) and how many are normal toll call phone numbers.**

\_\_\_ toll-free (1-800)

\_\_\_ normal toll-call

9999 (No answer)

**Q7b. Do your office's toll-free (1-800) hotline(s) operate year round, only during election season, or only on Election Day? (mark all that applies)**

1. Year round
2. Only during election season
3. Only on Election Day
9. (No answer)

**Q7c. And how about your office's normal toll-call hotline(s)? Do they operate year round, only during election season, or only on Election Day? (mark all that applies)**

1. Year round
2. Only during election season
3. Only on Election Day
9. (No answer)

**Q8. For each of the following areas of election services, please indicate if the service is available to voters through any of your office's dedicated toll-free phone hotline(s), normal toll-call hotline(s), or not offered. (multiple responses accepted)**

	Yes, available through toll-free hotline	Yes, available through normal toll hotline	Not offered	(No answer)
Voter registration – am I registered?	1	2	3	9
Absentee ballot information – request, status of request	1	2	3	9
Information on voting location and hours	1	2	3	9
Information on voting system used in voter's polling place	1	2	3	9
Information on accessibility provisions in polling locations for voters with disabilities	1	2	3	9
Provisional ballot status	1	2	3	9
Voter information specific to Overseas and Military Voters (UOCAVA ballot sent, received (status))	1	2	3	9
How to be a pollworker	1	2	3	9
Clarification of laws and/or procedures	1	2	3	9
Report fraud – file HAVA complaint	1	2	3	9
Other general voter complaints/concerns	1	2	3	9

**Q9. Please indicate if this is available to pollworkers through your office's dedicated toll-free phone hotline(s), normal toll-call hotline, or not offered.**

	Yes, available through toll-free hotline	Yes, available through normal toll hotline	Not offered	(No answer)
Pollworker recruiting and pollworker information (assignment, training schedule, etc.)	1	2	3	9
Election Day Hotlines for Pollworkers (clarification on laws and procedures, troubleshooting with voting system problems, "no-show" pollworkers, missing supplies, etc.)	1	2	3	9
Automated system for pollworkers to signal the open/closed station of that polling location	1	2	3	9

**Q10. Thinking only about the calls made to your hotline(s) on Election Day, approximately what percentage of calls are made to the following categories? (Just your best guess is fine)**

- \_\_\_ % Am I registered?
- \_\_\_ % Where do I vote?
- \_\_\_ % Did you get my absentee ballot?
- \_\_\_ % I suspect fraud
- \_\_\_ % I have a complaint (non-fraud related)
- \_\_\_ % Other (specify) \_\_\_\_\_
- 9999 (No answer)

**Q11. Does your office's hotline(s) operate solely in English or do you offer support in a language other than English?**

1. English only
2. Languages other than English
9. (No answer)

*IF LANGUAGE OTHER THAN ENGLISH AVAILABLE, ASK:*

**Q12. Which, if any, of the following languages are available through your office's hotline(s)?**

	Available	Not available	(No answer)
Chinese	1	2	9
Japanese	1	2	9
Korean	1	2	9
Spanish	1	2	9
Tagalog	1	2	9
Vietnamese	1	2	9
Other language(s) (specify)	1	2	9

**Q13. Does your office offer a number that is equipped with TTY or TTD technology for the hearing impaired?**

1. Yes
2. No
9. (No answer)

*IF ONLY ONE HOTLINE, ASK:*

**Q14a. Is your dedicated voter hotline initially answered by a live operator or is it answered by an automated system?**

1. Answered by a live operator
2. Answered by an automated system
9. (No answer)

*IF MORE THAN ONE HOTLINE, ASK:*

**Q14b. Are your dedicated voter hotlines answered by a live operator or are they answered by an automated system or do you have both kinds of hotlines?**

1. Answered by a live operator
2. Answered by an automated system
3. Have both a hotline answered by live operator and one answered by automated system
9. (No answer)

*IF HAVE HOTLINE ANSWERED BY A LIVE OPERATOR, ASK:*

**Q15a. Why did your office choose to have a live-operator hotline rather than an automated one? For each of the following, please indicate whether this was a "minor reason", "major reason", or "not a reason".**

	Minor reason	Major reason	Not a reason	(No answer)
A. Costs	1	2	3	9
B. Availability of staff	1	2	3	9
C. Anticipated call volume	1	2	3	9
D. Wait times / time on hold	1	2	3	9
E. Special needs of voters in jurisdiction	1	2	3	9
F. Other (specify _____)	1	2	3	9

IF HAVE AUTOMATED HOTLINE, ASK:

**Q15b. Why did your office choose to have an automated hotline rather than one answered by a live operator? For each of the following, please indicate whether this was a "minor reason", "major reason", or "not a reason."**

	Minor reason	Major reason	Not a reason	(No answer)
A. Costs	1	2	3	9
B. Availability of staff	1	2	3	9
C. Anticipated call volume	1	2	3	9
D. Wait times / time on hold	1	2	3	9
E. Special needs of voters in jurisdiction	1	2	3	9
F. Other (specify _____)	1	2	3	9

For the next few questions, please think back to when you first developed your office's dedicated hotline to provide service or information to voters and/or pollworkers. (If your office operates more than one hotline, please think about the most recent hotline developed by your office).

**Q16. Overall, how would you describe your office's experience developing the hotline? Would you say the overall process for developing the hotline was very easy, somewhat easy, somewhat hard or very hard?**

1. Very easy
2. Somewhat easy
3. Somewhat hard
4. Very hard
9. (No answer)

**Q17. And did you develop the hotline in-house or did you outsource most or all of the work to another company or organization?**

1. Developed the hotline in-house
2. Outsourced some of the development work
3. Outsourced most of the development work
4. Outsourced all of the development work
9. (No answer)

IF OUTSOURCE SOME, MOST, OR ALL, ASK:

**Q18. How would you rate your satisfaction with this service provider?**

1. Very satisfied
2. Somewhat satisfied
3. Somewhat unsatisfied
4. Very unsatisfied
9. (No answer)

**Q19. Approximately how many months did it take you to develop the hotline—from the time that you started planning the hotline's features to when the hotline was fully operational?**

\_\_\_\_ months  
9999 (No answer)

**Q20. Approximately, how much did it cost for your office to develop and implement the hotline?**

\_\_\_\_ USD  
9999 (No answer)

**Q21. What words of advice would you offer to another jurisdiction like yours that was planning to develop its own hotline to provide services and/or information to voters or pollworkers?**

[open-ended text box]

9 (No answer)

**IF HAVE AUTOMATED HOTLINE:** For the next several questions, we'd like you to think about the gathering and maintenance of the information used by your hotline (If your office operates more than one hotline, please think about the most recent hotline developed by your office).

**IF HAVE OPERATOR-ANSWERED HOTLINE:** For the next several questions, we'd like you to think about the day-to-day operation of your hotline (If your office operates more than one hotline, please think about the most recent hotline developed by your office).

**Q22. Does your office handle in-house the day-to-day maintenance of information and/or databases used by your hotline or do you outsource some, most or all of the work to another company or organization?**

1. Handle maintenance of information completely in-house
2. Outsourced some of the work
3. Outsourced most of the work
4. Outsourced all of the work
9. (No answer)

**IF OUTSOURCE SOME, MOST, OR ALL, ASK:**

**Q23. How would you rate your satisfaction with this service provider?**

1. Very satisfied
2. Somewhat satisfied
3. Somewhat unsatisfied
4. Very unsatisfied
9. (No answer)

**IF HAVE OPERATOR-ANSWERED HOTLINE, ASK:**

**Q24. Do your call-takers have a protocol card or software system to guide their interaction with callers or does your office use a non-structured and non-automated approach to respond to callers questions?**

1. Use protocol cards / checklist script
2. Use automated script / protocol software system
3. Use BOTH protocol cards and an automated software system
4. Use a non-structured and non-automated approach
9. (No answer)

**IF HAVE OPERATOR-ANSWERED HOTLINE, ASK:**

**Q25a. What databases, if any, do your hotline operators have access to?**

1. Voter registration database
2. Pollworker management database
3. Absentee ballot database
4. Provisional ballot database
5. Polling-place lookup database
9. (No answer)

*IF ONE AUTOMATED HOTLINE, ASK:*

**Q25b. What databases, if any, are integrated with your hotline(s) system?**

1. Voter registration database
2. Pollworker management database
3. Absentee ballot database
4. Provisional ballot database
5. Polling-place lookup database
9. (No answer)

*IF MORE THAN AUTOMATED ONE HOTLINE, ASK:*

**Q25c. Thinking about all the dedicated hotlines your office operates to provide information or services to voters or pollworkers, what databases, if any, are integrated with your hotline(s) system?**

1. Voter registration database
2. Pollworker management database
3. Absentee ballot database
4. Provisional ballot database
5. Polling-place lookup database
9. (No answer)

*IF STATE OFFICE, ASK:*

**Q26. Does your hotline have access to statewide voter registration lists?**

1. Yes
2. No
9. (No answer)

*IF STATE OFFICE, ASK:*

**Q27. Is your office's hotline able to give callers the general contact information for their specific county/township election office?**

1. Yes, operators have a hard copy list of phone numbers of county/city offices
2. Yes, operators have access to a database of phone numbers for counties/cities on the computer at their workstation
3. Operators are provided access to local jurisdiction's databases so they can provide immediate assistance.
9. (No answer)

*IF STATE OFFICE, ASK:*

**Q28. Does your office have a list of voter information hotlines operated by subordinate jurisdictions in your state?**

1. Yes
2. No
9. (No answer)

*IF HAVE AUTOMATED SYSTEM, ASK:*

**Q29a. During election season, how often are updates made to the system?**

1. In real time / as changes are made
2. Daily
3. Weekly
3. Monthly
4. Only at the end of the canvass/audit period
5. None of the above
9. (No answer)

IF HAVE OPERATOR-ANSWERED HOTLINE, ASK:

Q29b. During election season, how often are updates made to the information operators have access to?

- 1. In real time / as changes are made
- 2. Daily
- 3. Weekly
- 3. Monthly
- 4. Only at the end of the canvass/audit period
- 5. None of the above
- 9. (No answer)

Q30. Over the last year, what were the total costs including administration and personnel costs associated with maintaining and/or updating the information for your hotline?

\_\_\_\_ USD  
9999 (No answer)

ONLY IF HAVE AUTOMATED HOTLINE, ASK:

Q31. Is there a database maintenance charge per record?

- 1. Yes
- 2. No
- 9. (No answer)

IF CHARGE, ASK:

Q32. What is the monetary charge per call?

\_\_\_\_ USD  
9999 (No answer)

IF AUTOMATED HOLTINE, ASK:

Q33a. What advice about information gathering and maintenance would you offer to a jurisdiction such as yours that is setting up a voter hotline?

[open-ended text box]  
9 (No answer)

IF OPERATOR-ANSWERED HOLTINE, ASK:

Q33b. What advice about the day-to-day operation of a hotline would you offer to a jurisdiction such as yours that is setting up a voter hotline?

[open-ended text box]  
9 (No answer)

IF AUTOMATED HOLTINE, ASK:

Q34. Does your automated hotline system have the following features....

	Yes	No	(No answer)
Track the wait time of calls	1	2	9
Track the duration of calls	1	2	9
Track the disposition of each call	1	2	9

Q35. Do you currently track the type of call or information being sought after by the caller (for example, polling place lookup or absentee ballot status, etc.)?

- 1. Yes, track manually
- 2. Yes, track through automated system
- 3. No, don't currently track
- 9 (No answer)

**Q36. What is the average wait time for calls made to your hotline? (just your best guess is fine)**

- 98 not enough information to answer
- 99 (no answer)

**Q37. What is the average duration of calls made to your hotline once a caller is connected? (just your best guess is fine)**

- 98 not enough information to answer
- 99 (no answer)

**Q38. What is the number of incoming calls that can be received at one time?**

- 98 not enough information to answer
- 99 (no answer)

**Q39. Historically, what is the largest number of calls received in one day?**

- 98 not enough information to answer
- 99 (no answer)

**IF AUTOMATED HOTLINE, ASK:**

**Q40. Are callers able to exit the automated portion of the hotline and speak to an operator or is your hotline 100% automated?**

- 1. able to speak to an operator
- 2. 100% automated
- 9. (No answer)

**ONLY IF ABLE TO SPEAK TO OPERATOR:**

For the next few questions, we'd like you to think about the people who operate or staff the hotline and take calls.

**IF ABLE TO SPEAK TO OPERATOR, ASK:**

**Q41. Does your office handle in-house the day-to-day operation and staffing of the operators who take hotline calls, or do you outsource some, most or all of the staffing of the hotline staff to another company or organization?**

- 1. Handle day-to-day operation and staffing completely in-house
- 2. Outsourced some of the day-to-day operation and staffing
- 3. Outsourced most of the day-to-day operation and staffing
- 4. Outsourced all of the day-to-day operation and staffing
- 9. (No answer)

**IF OUTSOURCE SOME, MOST or ALL, ASK:**

**Q42. How would you rate your satisfaction with this service provider?**

- 1. Very satisfied
- 2. Somewhat satisfied
- 3. Somewhat unsatisfied
- 4. Very unsatisfied
- 9. (No answer)

IF ABLE TO SPEAK TO OPERATOR, ASK:

**Q43. During peak times or seasons what is the average number of full-time and part time hotline operators?**

- \_\_\_ full-time
- \_\_\_ part-time
- 9998 Not sure
- 9999 (No answer)

IF ABLE TO SPEAK TO OPERATOR, ASK:

**Q44. During non-peak peak times or seasons what is the average number of full-time and part time hotline operators?**

- \_\_\_ full-time
- \_\_\_ part-time
- 9998 Not sure
- 9999 (No answer)

IF ABLE TO SPEAK TO OPERATOR, ASK:

**Q45. For each of the following, please indicate whether or not this method is used to train hotline operators:**

	Used	Not used	Not sure / Not enough information to answer	(No answer)
Classroom lectures	1	2	8	9
Role playing / simulated calls	1	2	8	9
Computer-based tutorial	1	2	8	9
Shadowing experienced operator or person	1	2	8	9

IF ABLE TO SPEAK TO OPERATOR, ASK:

**Q46. Are all operators, regardless of their level of experience, trained before each major election cycle?**

- 1. Yes
- 2. No
- 9. (No answer)

IF ABLE TO SPEAK TO OPERATOR, ASK:

**Q47. Switching topics, what, if any, systematic effort does your office undertake to monitor the hotline for accuracy, security, or other critical performance variables?**

	Yes	No	Not sure / Not enough information to answer	(No answer)
Periodic listening in on calls	1	2	8	9
Tracking of complaints	1	2	8	9
Other (please describe)	1	2	8	9

**Q48. When a voter calls the hotline seeking information such as voting location, absentee ballot request, change of address, do you have a standardized procedure for verifying the caller's identity such as verifying social security number, date of birth, etc?**

- 1. Yes, always
- 2. Yes, sometimes
- 3. No
- 9. (No answer)

**Q49. Which, if any of the following security measures do you employ?**

	Yes	No	Not enough information to answer	(No answer)
The data utilized by the hotline(s) is secured behind a firewall.	1	2	3	9
Operators need a secure password to access data.	1	2	3	9

**Q50. Thinking now about possible outreach efforts, what methods, if any, do you use to inform voters about your voter hotline?**

	Use	Don't use	(No answer)
Advertise number in election mailing/sample ballot	1	2	9
Publicize number on office's website	1	2	9
Ads in local or community paper	1	2	9
Phone company operator	1	2	9
Handouts at polling place	1	2	9

**Q51. Last year, approximately how much did you spend specifically on publicizing your office's hotline(s)?**

\_\_\_\_ USD  
 9999 (No answer)

We have just a few more questions to help us better understand the types of election offices taking part in our survey.

**Q52. How many full-time and part-time staff work in your election office?**

\_\_\_\_ full-time  
 \_\_\_\_ part-time  
 9999 (No answer)

**Q53. Approximately how many voters are in your jurisdiction?**

\_\_\_\_ [7-digit numeric response]  
 9 (No answer)

**Q54. How would you describe the area of your jurisdiction?**

- 1. Mainly rural
- 2. Mainly urban
- 3. Mainly suburban
- 4. Mixed
- 9. (No answer)

**Q55. About what percentage of the voters in your area would you say are well-off, about average, and poorer than average? (just your best guess is fine)**

\_\_\_\_ % well-off  
 \_\_\_\_ % about average  
 \_\_\_\_ % poorer than average  
 9999 (No answer)

**Q56. About what percentage of the voters in your jurisdiction have a limited English proficiency? (just your best guess is fine)**

\_\_\_\_ %  
 9999 (No answer)

**Q57. If your office required by federal law to publish election materials in a language other than English?**

- 1. Yes
- 2. No
- 9. (No answer)

**Q58. Would you be willing to speak with one of our project researchers about your office's experience with hotlines?**

- 1. Yes
- 2. No
- 9. (No answer)

**IF WILLING TO BE CONTACTED, ASK:**

**Q59. Please fill in your contact information below:**

First name:  
Last name:  
Phone number:  
Email:

\*This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Respondent's obligation to reply to this information collection is voluntary; respondents include election offices in the 50 States and the District of Columbia. This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. pending (expires: to be determined). The time required to complete this information collection is estimated to average 30 minutes per response. Comments regarding this burden estimate should be sent to the Program Manager – 2007 Study of the Voter Hotlines, U.S. Election Assistance Commission, 1225 New York Ave. NW, Suite 1100, Washington, DC 20005.

Subject EAC Voter Hotline Survey: OMB Package

Hi Karen and Laiza,

Attached are 8 documents for the OMB Package, including a Summary of changes made to the survey after the 60-day public commenting period. We believe that the survey is in really good shape and benefited from feedback and pre-tests with sample jurisdictions. Please let us know when you have forwarded the package to OMB as we are anxiously watching the timeline!

**SEC. 241. <<NOTE: 42 USC 15381.>> PERIODIC STUDIES OF ELECTION ADMINISTRATION ISSUES.**

(a) <<NOTE: Public information.>> In General.--On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b), with the goal of promoting methods of voting and administering elections which--

(1) will be the most convenient, accessible, and easy to use for voters, including members of the uniformed services and overseas voters, individuals with disabilities, including the blind and visually impaired, and voters with limited proficiency in the English language;

(2) will yield the most accurate, secure, and expeditious system for voting and tabulating election results;

(3) will be nondiscriminatory and afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and

(4) will be efficient and cost-effective for use.

**(b) Election Administration Issues Described.--For purposes of subsection (a), the election administration issues described in this subsection are as follows:**

(1) Methods and mechanisms of election technology and voting systems used in voting and counting votes in elections for Federal office, including the over-vote and under-vote notification capabilities of such technology and systems.

(2) Ballot designs for elections for Federal office.

(3) Methods of voter registration, maintaining secure and accurate lists of registered voters (including the establishment of a centralized, interactive, statewide voter registration list linked to relevant agencies and all polling sites), and ensuring that registered voters appear on the voter registration list at the appropriate polling site.

(4) Methods of conducting provisional voting.

(5) Methods of ensuring the accessibility of voting, registration, polling places, and voting equipment to all voters, including individuals with disabilities (including the blind and visually impaired), Native American or Alaska Native citizens, and voters with limited proficiency in the English language.

(6) Nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office.

(7) Identifying, deterring, and investigating methods of voter intimidation.

(8) Methods of recruiting, training, and improving the performance of poll workers.

**(9) Methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections.**

(10) The feasibility and advisability of conducting elections for Federal office on different days, at different places, and

U.S. Election Assistance Commission

### RESEARCH ASSISTANCE TO THE U.S. ELECTION ASSISTANCE COMMISSION TO STUDY VOTER HOTLINES OPERATED BY GOVERNMENT AGENCIES AND ELECTION OFFICES

#### A. JUSTIFICATION

**1. Explain the circumstances that make the collection of information necessary.**

Section 241(b)(9) of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues, including methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections. Furthermore, Section 245(a)(2)(C) of HAVA indicates that the EAC may investigate the impact that new communications or Internet technology systems used in the electoral process could have on voter participation rates, voter education, and public accessibility.

The EAC seeks to conduct a study to determine the current state of voter information hotlines that are operated by Federal, State and local government agencies and election offices. The data will serve as the basis for a report on voter hotlines currently operating in this country.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

In 2005, the EAC undertook a research study of voter hotline data available online to determine trends. A voter hotline is defined as a toll-free line that connects voters with elections offices, which then disseminate information and educate voters. The EAC found that there were several hotlines in operation during the 2004 Presidential election, and their sponsorship and capabilities varied to a great degree. To build on and augment these research findings, the EAC wishes to conduct another study to determine the current state of voter information hotlines that are operated by Federal, State and local government agencies and election offices.

The information will be gathered through a one-time Internet survey of Federal, State and local government agencies and election offices.

Based upon the information gathered in the study, the EAC will draft a report on the current state of voter hotlines currently operating in this country.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The collection of information does utilize web-based internet software to conduct the opinion survey. This survey will be a self-administered electronically.

010092

**4. Describe efforts to identify duplication.**

This is the second study conducted by the EAC on the part of HAVA Section 241 (b) (9). In 2005, the EAC undertook a pilot research study of voter hotline data available online to determine trends. The purpose of this survey is to build on and augment this previous research conducted by the EAC.

The study contractor has reviewed previous and contemporaneous information on information hotlines offered by U.S. election offices to eliminate duplication.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

This collection of information does not involve small businesses or other small entities.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

Section 241 (b) (9) of the Help American Vote Act requires the EAC to collect this information to draft a report on voter hotlines currently operating in this country.

If the collection is not conducted, the EAC will be unable to fulfill Section 241 (b) (9) of HAVA. Furthermore, without this information the EAC will be unable to draft a report on voter hotlines operating in this country.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

Not applicable.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

This information collection request did not receive any public comments.

In drafting the survey questionnaire, the study contractor consulted extensively with U.S. election officials in small, medium and large jurisdictions.

The study contractor, IFES, has more than ten years of experience in conducting innovative and effective public opinion research around the world. IFES' survey and focus group capabilities provide relevant and reliable information on the opinions and attitudes in a country to government officials, development professionals, political actors, academics and others interested in democratic and political development. Further, a key strength of IFES' research is

010093

its use of a standard set of questions gauging sociopolitical development in most surveys we perform. Data from these questions can help researchers compare attitudes and opinions from country to country and across time in a single nation. To date, IFES has conducted more than 60 public opinion research projects in 24 countries around the world.

In addition to its survey capability, IFES has worked with election assistance and democratic development in over 100 countries since 1987. IFES' international professionals ensure that democracy solutions are home grown. IFES professionals provide technical assistance across many areas of democracy development. With its experience promoting democracy abroad, IFES has begun to work to strengthen democracy in the U.S.

The study contractor worked in tandem with the Pollworker Institute. The Pollworker Institute is a nonprofit organization dedicated to improving the recruitment and training of pollworkers. IFES and the Pollworker Institute have previously collaborated under a contract enacted in late September 2005 under the U.S. Election Assistance Commission (EAC). In partnership with the League of Women Voters (LWV), IFES and the Pollworker Institute are finalizing a year-long research project aimed at improving pollworker recruitment, training and retention in the United States. The project will develop better recruitment, training and retention methods to improve the Election Day experience for voters and election officials.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Respondents are voluntary and they will not be provided any incentives to participate.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

Prior to volunteering to participate, respondents will be given a written pledge of confidentiality

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

There are no questions of a sensitive nature.

**12. Provide an estimate in hours of the burden of the collection of information.**

The burden to each respondent is .5 hours. This survey will be sent to each election jurisdictions in the US resulting in six thousand four hundred and fifty-five (6,455) respondents being sent the survey. Based on a 30% response rate the total annual burden is estimated at 968.5 hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

We have identified no reporting and recordkeeping "non-hour cost" burdens associated with this proposed collection of information.

. 010094

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$50,000. We estimate \$1,600 for the data collection software, \$47,700 in personnel to design and monitor the data collection exercise, and \$700 in office expenses including communication and printing costs.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into a report on voter hotlines currently operating in this country.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

This data collection request is a census of all US state, country, and local election offices. As attempts will be made to contact and collection information from each entity in the potential respondent universe, no statistical sampling procedures are needed. However, as a part of this data collection exercise will monitor and report response rates including, based on available information, contact and cooperation rates.

Based on previous studies on this population, we estimate that we will achieve a 30% response

rate.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

As this study is a census of all election jurisdictions in the US, sampling techniques will not be used. Using information gathered for the Election Assistance Commission and State Election offices, we will send this data collection instrument to the universe of election office in the US that administer federal elections.

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

Although no sampling will be employed, to maximize the chances of making contact with a potential respondent, the web-based survey will utilize a five-contact design, the timing of which will be approximately as follows:

- 1st contact: letter of introduction sent by email
- 2nd contact: email invitation with hyperlink to survey
- 3rd contact: email reminder
- 4th contact: second email reminder
- 5th contact: Final email reminder

The five-contact design will be staggered over the 25-day survey field period.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

In total, five pretests were conducted. The survey instrument was tested in large, medium and small jurisdictions.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

**April 20, 2007**

**TO: Karen Lynn-Dyson, U.S. Election Assistance Commission**

**FROM: The Pollworker Institute and IFES**

**RE: Summary of changes made to Hotline survey after 60-public commenting period: Voter Hotline Project (Contract#63507)**

cc: Laiza Otero, Scott Lansell, Karen Buerkle, Connie Schmidt

- Shortened the introductory language.
- Q4a added the words "phone-based information line, phone bank" due to pre-test respondents' confusion over the term "hotline". The language of "phone information line" was added repeatedly through out the survey, especially at the beginning, to help respondents understand what we mean by "hotline".
- Q4b added separate question on dedicated line rather than including it as part of Q4a in response to comments made in pre-test.
- Q4c added so as to collect information on provisional ballot measures for offices that do not have dedicated hotlines.
- Q7series modified to collect information on hours of operation in addition to season of operation in response to reviewer from county election office.
- Q8 added item on legal deadlines to request/return absentee ballot.
- Q8series broke "not offered" category into 1) not offered but person referred and 2) not offered, in response to comments made in the pre-test.

010097

- Q9 added item on pre-election day pollworker information, in response to reviewer from county election office.
- Q12 added clarification of “directly or via a referral program”, in response to comments made in the pre-test.
- Q13 added response options of a relay program, in response to comments made in the pre-test.
- Q14a added the words “even if momentarily put on hold”, in response to comments made in the pre-test.
- Q15a/b added the item “customer service”, based on comments of county election office reviewer.
- Q24 added “checklist script”, in response to comments made in the pre-test
- Q34 added item on category of call and call volume, in response to comments of county election office reviewer.
- Q37 added words “not including hold time”, in response to pre-test.
- Q50 added item on advertising through outreach partner, in response to comments made in pre-test.
- Q58 added question collecting hotline number, in response to request from EAC.

(April 2007)

U.S. Election Assistance Commission

### RESEARCH ASSISTANCE TO THE U.S. ELECTION ASSISTANCE COMMISSION TO STUDY VOTER HOTLINES OPERATED BY GOVERNMENT AGENCIES AND ELECTION OFFICES

#### A. JUSTIFICATION

**1. Explain the circumstances that make the collection of information necessary.**

Section 241(b)(9) of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues, including methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections. Furthermore, Section 245(a)(2)(C) of HAVA indicates that the EAC may investigate the impact that new communications or Internet technology systems used in the electoral process could have on voter participation rates, voter education, and public accessibility.

The EAC seeks to conduct a study to determine the current state of voter information hotlines that are operated by Federal, State and local government agencies and election offices. The data will serve as the basis for a report on voter hotlines currently operating in this country.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

In 2005, the EAC undertook a research study of voter hotline data available online to determine trends. A voter hotline is defined as a toll-free line that connects voters with elections offices, which then disseminate information and educate voters. The EAC found that there were several hotlines in operation during the 2004 Presidential election, and their sponsorship and capabilities varied to a great degree. To build on and augment these research findings, the EAC wishes to conduct another study to determine the current state of voter information hotlines that are operated by Federal, State and local government agencies and election offices.

The information will be gathered through a one-time Internet survey of Federal, State and local government agencies and election offices.

Based upon the information gathered in the study, the EAC will draft a report on the current state of voter hotlines currently operating in this country.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The collection of information does utilize web-based internet software to conduct the opinion survey. This survey will be a self-administered electronically.

010100

**4. Describe efforts to identify duplication.**

This is the second study conducted by the EAC on the part of HAVA Section 241 (b) (9). In 2005, the EAC undertook a pilot research study of voter hotline data available online to determine trends. The purpose of this survey is to build on and augment this previous research conducted by the EAC.

The study contractor has reviewed previous and contemporaneous information on information hotlines offered by U.S. election offices to eliminate duplication.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

This collection of information does not involve small businesses or other small entities.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

Section 241 (b) (9) of the Help American Vote Act requires the EAC to collect this information to draft a report on voter hotlines currently operating in this country.

If the collection is not conducted, the EAC will be unable to fulfill Section 241 (b) (9) of HAVA. Furthermore, without this information the EAC will be unable to draft a report on voter hotlines operating in this country.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

Not applicable.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

This information collection request did not receive any public comments.

In drafting the survey questionnaire, the study contractor consulted extensively with U.S. election officials in small, medium and large jurisdictions.

The study contractor, IFES, has more than ten years of experience in conducting innovative and effective public opinion research around the world. IFES' survey and focus group capabilities provide relevant and reliable information on the opinions and attitudes in a country to government officials, development professionals, political actors, academics and others interested in democratic and political development. Further, a key strength of IFES' research is

its use of a standard set of questions gauging sociopolitical development in most surveys we perform. Data from these questions can help researchers compare attitudes and opinions from country to country and across time in a single nation. To date, IFES has conducted more than 60 public opinion research projects in 24 countries around the world.

In addition to its survey capability, IFES has worked with election assistance and democratic development in over 100 countries since 1987. IFES' international professionals ensure that democracy solutions are home grown. IFES professionals provide technical assistance across many areas of democracy development. With its experience promoting democracy abroad, IFES has begun to work to strengthen democracy in the U.S.

The study contractor worked in tandem with the Pollworker Institute. The Pollworker Institute is a nonprofit organization dedicated to improving the recruitment and training of pollworkers. IFES and the Pollworker Institute have previously collaborated under a contract enacted in late September 2005 under the U.S. Election Assistance Commission (EAC). In partnership with the League of Women Voters (LWV), IFES and the Pollworker Institute are finalizing a year-long research project aimed at improving pollworker recruitment, training and retention in the United States. The project will develop better recruitment, training and retention methods to improve the Election Day experience for voters and election officials.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Respondents are voluntary and they will not be provided any incentives to participate.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

Prior to volunteering to participate, respondents will be given a written pledge of confidentiality

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

There are no questions of a sensitive nature.

**12. Provide an estimate in hours of the burden of the collection of information.**

The burden to each respondent is .5 hours. This survey will be sent to each election jurisdictions in the US resulting in six thousand four hundred and fifty-five (6,455) respondents being sent the survey. Based on a 30% response rate the total annual burden is estimated at 968.5 hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

We have identified no reporting and recordkeeping "non-hour cost" burdens associated with this proposed collection of information.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$50,000. We estimate \$1,600 for the data collection software, \$47,700 in personnel to design and monitor the data collection exercise, and \$700 in office expenses including communication and printing costs.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into a report on voter hotlines currently operating in this country.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

This data collection request is a census of all US state, country, and local election offices. As attempts will be made to contact and collection information from each entity in the potential respondent universe, no statistical sampling procedures are needed. However, as a part of this data collection exercise will monitor and report response rates including, based on available information, contact and cooperation rates.

Based on previous studies on this population, we estimate that we will achieve a 30% response

010103

rate.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

As this study is a census of all election jurisdictions in the US, sampling techniques will not be used. Using information gathered for the Election Assistance Commission and State Election offices, we will send this data collection instrument to the universe of election office in the US that administer federal elections.

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

Although no sampling will be employed, to maximize the chances of making contact with a potential respondent, the web-based survey will utilize a five-contact design, the timing of which will be approximately as follows:

- 1st contact: letter of introduction sent by email
- 2nd contact: email invitation with hyperlink to survey
- 3rd contact: email reminder
- 4th contact: second email reminder
- 5th contact: Final email reminder

The five-contact design will be staggered over the 25-day survey field period.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

In total, five pretests were conducted. The survey instrument was tested in large, medium and small jurisdictions.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

## ELECTION ASSISTANCE COMMISSION

### Information Collection Activity; Study of Voter Hotlines Operated by Election Offices

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice; request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before April 6, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, *ATTN:* Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey instrument, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at [www.eac.gov](http://www.eac.gov).

### SUPPLEMENTARY INFORMATION:

*Title:* Study of Voter Hotlines Operated by Election Offices.

*OMB Number:* Pending.

*Type of Review:* Regular submission.

*Needs and Uses:* Section 241(b)(9) of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues, including methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections. Furthermore, Section 245(a)(2)(C) of HAVA indicates that the EAC may investigate the impact new communications or Internet technology systems used in the electoral process could have on voter participation rates, voter education, and public accessibility. In 2005, the EAC undertook a research study of voter hotline data available online to determine trends. At the time a voter hotline was defined as a toll-free line that connects voters with elections offices, which then disseminate information and educate voters. The EAC found several hotlines in operation during the 2004 Presidential election, and their sponsorship and capabilities varied to a great degree. To build on and augment these research findings, the EAC wishes to conduct a study to determine the current state of voter information hotlines that are operated by Federal, State, and local election offices. The definition of voter hotline has been broadened to include data from government agencies that employ non-toll free interactive phone systems to provide services to voters and pollworkers and to receive information from callers.

*Affected Public:* Federal, State, and local election offices.

*Estimated Number of Respondents:* 6,500.

*Responses per Respondent:* 1.

*Estimated Burden per Response:* 1 hour.

*Estimated Total Annual Burden Hours:* 6,500 hours.

Information will be collected through a survey of existing hotline services operated by Federal, State, and local government agencies and election offices during the 2006 primary and general elections. The data collected will include information on voter hotlines operated by election offices and their features, including, but not limited to:

1. *Basic Information.* Hotline hours of operation, type of information available through the hotline, automated or non-

automated service, links to other sources of voting information.

2. *Costs.* Breakdown of cost based on volume, cost of database maintenance per record, and all personnel and administrative costs of the service.

3. *Features.* Important factors include, but are not limited to: (1) Languages used, (2) disability-compliant features, (3) touch tone and voice services, (4) voice response options, and (5) ability for interactivity with additional databases (for example interactivity with a voter registration database).

4. *Network Capacity.* Number of calls capable of being routed per hour and the number of incoming calls that can be received.

5. *Call Tracking.* How calls are logged or tracked, how they are routed, and the types or categories of calls received.

6. *Hotline personnel.* Number of hotline operators and methods by which hotline operators are trained, the frequency of their training and how they are monitored for accuracy, currency, security, and other critical performance variables.

7. Methods by which the network operator maintains the accuracy and currency of the data. Important factors include, but are not limited to how regularly updates are made and quality-control procedures.

8. *Maintenance agreements with service providers.* Percentage of hotlines that outsource all or part of the Hotline, and experiences working with contractors?

9. *Timelines* for database creation, contractor integration, and final testing before launch.

10. Security measures to ensure that data in the call-routing network is confidential.

11. *Other information* such as: Who the intended audience is; demographic, political and socioeconomic information of the community served; cost of publicizing the service and effectiveness of various publicity methods; and lessons learned.

A report on the key findings of the study, along with recommendations for the development and implementation of voter hotlines, will be made available to election officials and the public at the conclusion of this effort. The report will include a state-by-state compendium of the existing voter hotlines and their features. The report will be made available on the EAC Web site at <http://www.eac.gov>.

**Thomas R. Wilkey,**  
Executive Director, U.S. Election Assistance Commission.

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
  - Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.
  - Enter the total annual recordkeeping and reporting hour burden.
  - Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
    - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.
    - "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
- Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
- Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

010109

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-1 is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.
2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.
4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.
5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-1), describe any methods used to minimize burden.
6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.
7. Explain any special circumstances that would cause an information collection to be conducted in a manner:
  - \* requiring respondents to report information to the agency more often than quarterly;
  - \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
  - \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.  
Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.  
Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:
  - \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
  - \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-1.
  - \* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.
13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).
  - \* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.
  - \* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

010111

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

010112

**U.S. ELECTION ASSISTANCE COMMISSION**

**Information Collection Activity; Study of Voter Hotlines Operated by Election Offices**

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice; request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before **May 15, 2007**

010113

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW, Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey instrument, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our website at [www.eac.gov](http://www.eac.gov).

**SUPPLEMENTARY INFORMATION:**

*Title:* Study of Voter Hotlines Operated by Election Offices

*OMB Number:* Pending.

*Type of Review:* Regular submission.

*Needs and Uses:* Section 241(b)(9) of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues, including methods of educating voters about the process of registering to vote and voting, the operation of voting mechanisms, the location of polling places, and all other aspects of participating in elections. Furthermore, Section 245(a)(2)(C) of HAVA indicates that the EAC may investigate the impact new communications or Internet technology systems used in the electoral process could have on voter participation rates, voter education, and public

010114

accessibility. In 2005, the EAC undertook a research study of voter hotline data available online to determine trends. A voter hotline was defined as a toll-free line that connects voters with elections offices, which then disseminate information and educate voters. The EAC found several hotlines in operation during the 2004 Presidential election, and their sponsorship and capabilities varied to a great degree. To build on and augment these research findings, the EAC wishes to conduct a study to determine the current state of voter information hotlines that are operated by Federal, State, and local election offices.

*Affected Public:* Federal, State, and local election offices

*Estimated Number of Respondents:* 1937

*Responses per Respondent:* 1

*Estimated Burden per Response:* .5 hours

*Estimated Total Annual Burden Hours:* 968.5 hours

Information will be collected through a survey of existing hotline services operated by Federal, State, and local government agencies and election offices during the 2006 primary and general elections. The data collected will include information on voter hotlines operated by election offices and their features, including, but not limited to:

1. *Basic Information.* Hotline hours of operation, type of information available through the hotline, automated or non-automated service, links to other sources of voting information.
2. *Costs.* Breakdown of cost based on volume, cost of database maintenance per record, and all personnel and administrative costs of the service.
3. *Features.* Important factors include, but are not limited to: (1) languages used, (2)

010115

disability-compliant features, (3) touch tone and voice services, (4) voice response options, and (5) ability for interactivity with additional databases (for example interactivity with a voter registration database).

4. *Network Capacity.* Number of calls capable of being routed per hour and the number of incoming calls that can be received.
5. *Call Tracking.* How calls are logged or tracked, how they are routed, and the types or categories of calls received.
6. *Hotline personnel.* Number of hotline operators and methods by which hotline operators are trained, the frequency of their training and how they are monitored for accuracy, currency, security, and other critical performance variables.
7. Methods by which the network operator maintains the accuracy and currency of the data. Important factors include, but are not limited to how regularly updates are made and quality-control procedures.
8. *Maintenance agreements with service providers.* Percentage of hotlines that outsource all or part of the Hotline, and experiences working with contractors?
9. *Timelines* for database creation, contractor integration, and final testing before launch.
10. Security measures to ensure that data in the call-routing network is confidential.
11. *Other information* such as: who the intended audience is; demographic, political and socioeconomic information of the community served; cost of publicizing the service and effectiveness of various publicity methods; and lessons learned.

A report on the key findings of the study, along with recommendations for the development and

implementation of voter hotlines, will be made available to election officials and the public at the conclusion of this effort. The report will include a state-by-state compendium of the existing voter hotlines and their features. The report will be made available on the EAC website at [www.eac.gov](http://www.eac.gov).

**Signed:** \_\_\_\_\_

**Thomas R. Wilkey**, Executive Director,

U.S. Election Assistance Commission

**[Billing Code 6820-KF]**

compensation is based primarily on student academic achievement.

(d) *Quality of the Management Plan and Key Personnel* (15 points).

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, milestones, and processes for continuous improvement to accomplish project tasks.

(2) The qualifications, including experience, education, and training of proposed key personnel.

(e) *Evaluation* (10 points).

(1) The extent to which the applicant's evaluation plan includes the use of objective measures that are clearly related to the goals of the project to raise student achievement and increase teacher effectiveness, including the extent to which the evaluation will produce quantitative and qualitative data.

(2) The extent to which the applicant includes adequate evaluation procedures for ensuring feedback and continuous improvement in the operation of the proposed project.

(3) The extent to which the applicant commits to participating in a rigorous national evaluation that will provide a common design methodology, data collection instruments, and performance measures for all grantees funded under this competition.

#### VI. Award Administration Information

1. *Award Notices*: If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN). We may also notify you informally.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements*: We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting*: At the end of the project period, recipients must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the

most current performance and financial expenditure information as specified by the Secretary in 34 CFR 75.118.

4. *Performance Measures*: Pursuant to the Government Performance and Results Act (GPRA), the Department has established the following performance measures that it will use to evaluate the overall effectiveness of the grantee's project, as well as the TIF program as a whole:

(1) Changes in LEA personnel deployment practices, as measured by changes over time in the percentage of teachers and principals in high-need schools who have a record of effectiveness; and

(2) Changes in teacher and principal compensation systems in participating LEAs, as measured by the percentage of a district's personnel budget that is used for performance-related payments to effective (as measured by student achievement gains) teachers and principals.

All grantees will be expected to submit an annual performance report documenting their success in addressing these performance measures. The Department will use the applicant's performance data for program management and administration, in such areas as determining new and continuation funding and planning technical assistance.

#### VII. Agency Contacts

##### FOR FURTHER INFORMATION CONTACT:

April Lee, U.S. Department of Education, 400 Maryland Avenue, SW., room 3W229, Washington, DC 20202-6200. Telephone number: (202) 205-5224 or by e-mail: [tif@ed.gov](mailto:tif@ed.gov) or by Internet at the following Web site: <http://www.ed.gov/programs/teacherincentive/index.html>.

If you use a telecommunications device for the deaf (TDD), you may call the Federal Relay Service (FRS) at 1-800-877-8339.

Individuals with disabilities may obtain this document in an alternative format (e.g., Braille, large print, audiotope, or computer diskette) on request to the individuals listed in this section.

#### VIII. Other Information

*Electronic Access to This Document*: You may view this document, as well as all other documents of this Department published in the *Federal Register*, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: <http://www.ed.gov/news/fedregister>.

To use PDF you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about

using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC, area at (202) 512-1530.

### ELECTION ASSISTANCE COMMISSION

#### Information Collection; Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Focus Groups

**AGENCY**: U.S. Election Assistance Commission (EAC).

**ACTION**: Notice; request for comments.

**SUMMARY**: The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES**: Written comments must be submitted on or before January 11, 2007.

**ADDRESSES**: Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, Attn: Ms.

010118

Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the Focus Group Discussion Guide, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at <http://www.eac.gov>.

**SUPPLEMENTARY INFORMATION:**

**Title:** Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Focus Groups  
**OMB Number:** Pending.

**Type of Review:** Regular submission.  
**Needs and Uses:** Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 U.S.C. 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study the Commission is directed to conduct a nationwide survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program. This survey will be supplemented by focus groups among potential beneficiaries—elderly, disabled, low-income—to obtain more specific information on the challenges these populations face when participating in election and to assess the potential benefit these populations might receive from a program of free return or reduced postage for absentee ballots.

At the conclusion of the study effort, EAC is required to submit a report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs. It

is required to specifically contain recommendations regarding the elderly and disabled populations, including ways a free absentee ballot return postage program would target these populations and identify methods to increase the number of such individuals who vote in elections for Federal office.

**Affected Public:** Citizens.

**Number of Respondents:** 36.

**Responses per Respondent:** 1.

**Estimated Burden per Response:** 1.25 hours.

**Estimated Total Annual Burden Hours:** 45 hours.

Information will be collected through a series of three focus groups comprised of potential beneficiaries of a free and/or discounted absentee ballot postage program: One focus group will be dedicated to issues confronting the elderly population; one focus group will be dedicated to issues confronting disabled people; and one focus group will be dedicated to issues confronting the low-income citizens. At least one official from the United States Postal Service will observe each planned focus group. The topics that will be explored include:

1. The challenges that the particular population faces when participating in elections.

a. Information on respondents' previous experiences with voting in Federal elections. Information on any difficulties encountered in the process of voting and how the issues were resolved.

2. The concerns members of the particular population have about voting (e.g. voter intimidation, voter confidentiality, security, use of ballots).

a. Information on particular incidents that has prevented respondent from being able to vote.

3. The possible remedies to those challenges that would likely increase the rates of voter participation in the particular population (e.g. relaxed absentee voting laws, better accessibility to polling places, voter education).

a. Information on respondents' interest in absentee ballot voting.

4. The likelihood that a free or discounted absentee ballot postage program would assist the particular population.

a. Information on respondents' interest in a program of free or discounted postage for absentee ballots.

5. How the program could possibly be implemented to target the particular population.

a. Information on creating and implementing the program to ensure that it benefits the particular population.

6. The factors that would make reaching the particular population difficult.

a. Information on advertising such a program to the particular population so that they can take advantage of the change.

Free or Reduced Return Postage Study  
Survey Questionnaire

Hello, my name is \_\_\_\_\_. We are conducting an important study for the U.S. Election Assistance Commission. This survey is for research purposes only, we are not selling anything and we are not associated with or being paid by any political party or candidate. Your participation is voluntary and will only take a few minutes of your time. All your answers will be strictly confidential. Am I speaking with someone 18 or older?

- S1** To make sure our survey includes many different kinds of people, I need to ask a few questions about who lives in your household. How many adults age 18 or older live in your household?
- 1 One—**GO TO S2**
  - 2 Two or more—**GO TO S3**

ASK IF ONLY ONE ADULT AGE 18+ IN HH (S1=1)

- S2** May I please speak to that person?
- 1 Continue with current respondent—**GO TO Q1**
  - 2 New respondent being brought to phone—**GO TO INTRO2**
  - 3 New respondent not available—**SCHEDULE CALL BACK**
  - 9 Refused—**TERMINATE**

ASK IF MORE THAN ONE ADULT AGE 18+ IN HH (S1=2)

- S3** May I please speak with the adult (18+) in your household who has most recently had a birthday. Are you this person?
- 1 Yes—**GO TO S4**
  - 2 No—**ASK TO SPEAK TO THAT PERSON AND REINTRODUCE THE SURVEY**

**S4** Because we are talking today about issues related to voting in the U.S., we only need to speak with people who are U.S. citizens. Are you currently a U.S. citizen or not?

- 1 Yes—**GO TO Q1**
- 2 No—**ASK FOR ANOTHER ADULT IN HH**

010121

ASK ALL

- Q1 How would you rate your neighborhood as a place to live? Would you say it is excellent, good, fair or poor?
- 1 Excellent
  - 2 Good
  - 3 Fair
  - 4 Poor
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q2 And how interested are you in matters of politics and government? Would you say you are very interested, somewhat interested, not too interested or not interested at all?
- 1 Very interested
  - 2 Somewhat interested
  - 3 Not too interested
  - 4 Not interested at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q3 How much information do you feel you have about politics and current events in the United States today? Do you have a great deal of information, a fair amount, not very much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not very much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q4 And how much information do you feel you have about the way elections are organized in your community such as the rules about who can vote and when, where to go to vote, etc? Do you have a great deal of information, a fair amount, not very much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not very much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

010122

ASK ALL

- Q5 Some states are using an election system in which residents are allowed to CHOOSE if they want to cast their vote through the MAIL in the weeks leading up the election OR vote IN PERSON ON Election Day. Do you strongly favor, somewhat favor, somewhat oppose or strongly oppose allowing people to CHOOSE if they vote by mail before Election Day or vote in a booth ON Election Day?
- 1 Strongly favor
  - 2 Somewhat favor
  - 3 Somewhat oppose
  - 4 Strongly oppose
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF SOMEWHAT OR STRONGLY OPPOSE (Q5=3 or 4)

- Q6 There are many reasons why people may have reservations about voting by mail before election-day instead of in a booth on election-day. Can you tell me the main reason why you have reservations about people voting by mail before election-day? [OPEN END FOR FIRST 100 RESPONDENTS; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q7 These days, many people are so busy they can't find time to register to vote, or move around so often they don't get a chance to re-register... Are you CURRENTLY registered to vote or haven't you been able to register so far? [IF RESPONDENT ANSWERS '1' YES, ASK, Are you registered to vote at your CURRENT address or are you registered to vote at some other previous address]
- 1 Yes, registered at current address
  - 2 Yes, registered at other/previous address
  - 3 No, not registered
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF REGISTERED TO VOTE (Q7=1 or 2)

- Q8 Every state has different regulations for voting by absentee ballot. If there were to be an election next week, do you know whether or not you would be eligible to vote by absentee ballot in your state?
- 1 Yes, eligible
  - 2 No, not eligible
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

010123

ASK IF CURRENTLY REGISTERED TO VOTE (Q7 = 1 or 2)

- Q9 Can you please tell me which state you are currently registered to vote in?  
1 Gave response [**Record verbatim—OK to use official two letter abbreviations**]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF NOT REGISTERED, DK, OR REFUSED (Q7 = 3, 8, or 9)

- Q10 Have you previously been registered to vote, or have you never been registered?  
1 Previously registered  
2 Never registered  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF NOT CURRENTLY REGISTERED

- Q11 What would you say is the MAIN reason you're not registered to vote?  
[OPEN END; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]  
1 Gave response [**Record verbatim**]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q7 = 1 OR Q7=2 OR Q10 = 1)

- Q12 Did you vote in the 2006 Election this past November for either a Senator or Congressperson?  
1 Yes  
2 No  
3 Too young to vote/Not registered to vote at the time/Not eligible [DO NOT READ]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 ELECTION (Q12 = 1)

- Q13 In the 2006 congressional election, do you recall if you voted BEFORE Election Day, that is at an early voting site or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?  
1 Before Election Day - Early Voting Site/Absentee  
2 In person at polling place on Election Day  
3 Dropped off absentee ballot on Election Day [DO NOT READ]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 BEFORE ELECTION DAY (Q13 = 1)

- Q14 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q14=2)

- Q15 Did being able to vote by MAIL before Election Day make it a lot more possible, somewhat more possible for you to vote, or did it not make any difference in your ability to vote in this election?
- 1 A lot more possible
  - 2 Somewhat more possible
  - 3 No difference in ability to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q7 = 1 OR Q7=2 OR Q10 = 1)

- Q16 Did you vote in the 2004 Presidential election between George Bush and John Kerry?
- 1 Yes
  - 2 No
  - 3 Not 18 at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 ELECTION (Q16 = 1)

- Q17 In the 2004 Presidential election, do you recall if you voted BEFORE Election Day, that is at an early voting site, or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?
- 1 Before Election Day - Early Voting Site/Absentee
  - 2 In person at polling place on Election Day
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 BEFORE ELECTION DAY (Q17 = 1)

- Q18 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q18=2)

Q19 Did being able to vote by MAIL before Election Day make it a lot more possible, somewhat more possible for you to vote, or did it not make any difference in your ability to vote in this election?

- 1 A lot more possible
- 2 Somewhat more possible
- 3 No difference in ability to vote
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Q20 Suppose that in addition to being able to vote IN-PERSON at the polls on Election Day, you also had the option of choosing to vote by MAIL before Election Day WITHOUT having to pay ANY postage. Would having these two options make it a lot more likely that you would vote in future elections, somewhat more likely, or would having the option to vote by mail WITHOUT paying ANY postage make no difference in your likelihood of voting?

- 1 A lot more likely
- 2 Somewhat more likely
- 3 Make no difference
- 4 Already voting by mail without paying postage [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF MAIL WOULD MAKE MORE LIKELY TO VOTE OR ALREADY VOTE BY MAIL (Q20=1, 2, or 4)

Q21 Please tell me the main reason you think you would be more likely to vote in elections if you had the option to vote by mail before Election Day. [OPEN END FOR FIRST 100 RESPONDENTS; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]

- 1 Gave response [**Record verbatim**]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF A LOT OR SOMEWHAT MORE LIKELY TO VOTE (Q20 = 1 OR 2)

Q22 Suppose you were able to mail in your ballot before Election Day BUT you were required to PAY postage. Which of these do you think is most likely: 1) You would pay the postage and still vote by mail, 2) vote in person on Election Day instead, or 3) there is a chance you wouldn't be able to vote.

[IF ASKED, the amount of postage depends on the size and weight of the ballot in your area—usually between 39 and 87 cents.]

- 1 Vote by mail anyway
- 2 Vote in person
- 3 Chance won't be able to vote
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

I would like to ask you a few final questions for statistical purposes. Please be assured that all of your responses will be kept entirely anonymous and absolutely confidential.

- D1 Record gender  
1 Male  
2 Female

ASK ALL

- D2 What is your age?  
Range 18-96  
97 97 or older  
98 Don't know  
99 Refused

ASK ALL

- D3 What is the highest level of education you received?  
1 High School or less  
2 Some College  
3 College Graduate  
4 Post graduate  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

- D12 Does this condition require you to use special equipment, such as a cane, a wheelchair, a special bed, or a special telephone?
- 1 Yes
  - 2 No
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

**Thank you. That is all of the questions I have for you.**

\*This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Respondent's obligation to reply to this information collection is voluntary; respondents include the 50 States, and the District of Columbia. This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. pending (expires: to be determined). The time required to complete this information collection is estimated to average 1.25 hours per response. Comments regarding this burden estimate should be sent to the Program Manager – 2007 Study of the Feasibility and Advisability of Establishing a Program of Free Return Postage for Absentee Ballots, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Dated: January 17, 2007.

**James F. Manning,**

*Acting Assistant Secretary for Postsecondary Education.*

## U.S. ELECTION ASSISTANCE COMMISSION

### Information Collection; Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Survey of Registered Voters

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice; request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before March 23, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the Focus Group Discussion Guide, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at [www.eac.gov](http://www.eac.gov).

### SUPPLEMENTARY INFORMATION:

**Title and OMB Number:** Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Survey of Registered Voters.

**OMB Number:** Pending.

**Type of Review:** Regular submission.

**Needs and Uses:** Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 U.S.C. 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study, the Commission is directed to conduct a survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program. At the conclusion of the study effort, EAC is required to submit a report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs.

**Affected Public:** Citizens.

**Estimated Number of Respondents:** 1,200.

**Responses per Respondent:** 1.

**Estimated Burden per Response:** .25 hours.

**Estimated Total Annual Burden Hours:** 300 hours.

Information will be collected through a survey of U.S. citizens to determine the possible effect that a free and/or reduced cost absentee ballot postage program would have on voter participation. The sample will be designed in such a way so as to afford analysis of the results according to significant sub-groups including those living in states with high versus low rates of absentee voting and states with restrictive versus states with laws favoring absentee voting. The surveys will be representative of the U.S. population and will be conducted by

phone using random digit dialing (RDD) technology. Within each contacted household, a respondent will be selected among all adults in the household aged 18 years and older. The following information will be requested from each respondent:

#### 1. Background Information

The survey will gather data regarding each respondent's background. Background information will include, the respondent's location (state, county, and zip code), the location of the respondent's voter registration (state, county, zip code), age, ethnicity, education, income bracket, whether the respondent is living with a disability, whether the respondent was displaced due to a natural disaster, and whether the respondent is currently an active-duty member of the armed forces (or a dependent thereof).

#### 2. Voting Information

The survey will gather data regarding the respondent's voting history. Voting information will include, registration status, whether the respondent voted in the 2006 Congressional election, whether the respondent voted in the 2004 Presidential election, whether the respondent voted in the 2000 Presidential election, how the respondent voted in past elections (in person, by mail, absentee), whether the respondent is eligible to vote absentee (or whether the respondent does not know).

#### 3. Program Effect

The survey will gather data from all respondents regarding the various effects that the establishment of this program would have on the targeted citizens. Questions on the program will cover (1) whether the program will increase the likelihood that the respondent would use the absentee ballot process; (2) whether the program will increase the likelihood that the respondent would vote in a federal election; (3) whether the program will make it easier for the voter to participate in elections.

This study is further being supplemented with information collected through a series of three focus groups comprised of potential beneficiaries of a free and/or discounted absentee ballot postage program. Information about the focus groups' information collection can be found at

010130

www.eac.gov and the **Federal Register** (Vol. 71, No. 219, Page 66321).

**Thomas R. Wilkey,**  
Executive Director, U.S. Election Assistance  
Commission.

## DEPARTMENT OF ENERGY

### Office of International Regimes and Agreements

#### Proposed Subsequent Arrangement

**AGENCY:** Department of Energy.

**ACTION:** Notice of Proposed Subsequent  
Arrangement.

**SUMMARY:** This notice is being issued under the authority of Section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160). The Department is providing notice of a proposed "subsequent arrangement" under the Agreement for Cooperation in the Peaceful Uses of Nuclear Energy between the United States and the European Atomic Energy Community (EURATOM).

This subsequent arrangement concerns a request for a one-year extension (April 2007 to April 2008) of the current one-year programmatic approval for retransfer of U.S.-obligated irradiated fuel rods between Studsvik Nuclear AB, Sweden and the Institutt for Energiteknikk, Norway. The rods are being transferred for irradiation service, tests and examination, and returned to Sweden for further tests and disposal. The amounts are the same as under the current approval—a maximum of 30,000 grams uranium, 400 grams U-235 and 400 grams plutonium in all shipments combined, with a maximum of 100 grams of plutonium per shipment. The original programmatic consent, published in the **Federal Register** June 13, 2006, is set to expire in March 2007. Additional transactions are scheduled to occur between April 2007 and April 2008 and will be subject to U.S.-Euratom Agreement for Cooperation on Peaceful Uses of Nuclear Energy.

In accordance with Section 131 of the Atomic Energy Act of 1954, as amended, we have determined that this subsequent arrangement will not be inimical to the common defense and security.

This subsequent arrangement will take effect no sooner than 15 days after the date of publication of this notice.

Dated: January 12, 2007.

For the Department of Energy.  
**Richard Goorevich,**  
Director, Office of International Regimes and  
Agreements.

## U.S. ELECTION ASSISTANCE COMMISSION

### Information Collection; Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Survey of Registered Voters

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice; request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before March 23, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the Focus Group Discussion Guide, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at [www.eac.gov](http://www.eac.gov).

### SUPPLEMENTARY INFORMATION:

*Title and OMB Number:* Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Survey of Registered Voters.

*OMB Number:* Pending.

*Type of Review:* Regular submission.

*Needs and Uses:* Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 U.S.C. 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study, the Commission is directed to conduct a survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program. At the conclusion of the study effort, EAC is required to submit a report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs.

*Affected Public:* Citizens.

*Estimated Number of Respondents:* 1,200.

*Responses per Respondent:* 1.

*Estimated Burden per Response:* .25 hours.

*Estimated Total Annual Burden Hours:* 300 hours.

Information will be collected through a survey of U.S. citizens to determine the possible effect that a free and/or reduced cost absentee ballot postage program would have on voter participation. The sample will be designed in such a way so as to afford analysis of the results according to significant sub-groups including those living in states with high versus low rates of absentee voting and states with restrictive versus states with laws favoring absentee voting. The surveys will be representative of the U.S. population and will be conducted by

phone using random digit dialing (RDD) technology. Within each contacted household, a respondent will be selected among all adults in the household aged 18 years and older. The following information will be requested from each respondent:

#### 1. Background Information

The survey will gather data regarding each respondent's background. Background information will include, the respondent's location (state, county, and zip code), the location of the respondent's voter registration (state, county, zip code), age, ethnicity, education, income bracket, whether the respondent is living with a disability, whether the respondent was displaced due to a natural disaster, and whether the respondent is currently an active-duty member of the armed forces (or a dependent thereof).

#### 2. Voting Information

The survey will gather data regarding the respondent's voting history. Voting information will include, registration status, whether the respondent voted in the 2006 Congressional election, whether the respondent voted in the 2004 Presidential election, whether the respondent voted in the 2000 Presidential election, how the respondent voted in past elections (in person, by mail, absentee), whether the respondent is eligible to vote absentee (or whether the respondent does not know).

#### 3. Program Effect

The survey will gather data from all respondents regarding the various effects that the establishment of this program would have on the targeted citizens. Questions on the program will cover (1) whether the program will increase the likelihood that the respondent would use the absentee ballot process; (2) whether the program will increase the likelihood that the respondent would vote in a federal election; (3) whether the program will make it easier for the voter to participate in elections.

This study is further being supplemented with information collected through a series of three focus groups comprised of potential beneficiaries of a free and/or discounted absentee ballot postage program. Information about the focus groups' information collection can be found at

010133

www.eac.gov and the **Federal Register** (Vol. 71, No. 219, Page 66321).

## DEPARTMENT OF ENERGY

### Office of International Regimes and Agreements

#### Proposed Subsequent Arrangement

**AGENCY:** Department of Energy.

**ACTION:** Notice of Proposed Subsequent Arrangement.

**SUMMARY:** This notice is being issued under the authority of Section 131 of the Atomic Energy Act of 1954, as amended (42 U.S.C. 2160). The Department is providing notice of a proposed "subsequent arrangement" under the Agreement for Cooperation in the Peaceful Uses of Nuclear Energy between the United States and the European Atomic Energy Community (EURATOM).

This subsequent arrangement concerns a request for a one-year extension (April 2007 to April 2008) of the current one-year programmatic approval for retransfer of U.S.-obligated irradiated fuel rods between Studsvik Nuclear AB, Sweden and the Institutt for Energiteknikk, Norway. The rods are being transferred for irradiation service, tests and examination, and returned to Sweden for further tests and disposal. The amounts are the same as under the current approval—a maximum of 30,000 grams uranium, 400 grams U-235 and 400 grams plutonium in all shipments combined, with a maximum of 100 grams of plutonium per shipment. The original programmatic consent, published in the **Federal Register** June 13, 2006, is set to expire in March 2007. Additional transactions are scheduled to occur between April 2007 and April 2008 and will be subject to U.S.-Euratom Agreement for Cooperation on Peaceful Uses of Nuclear Energy.

In accordance with Section 131 of the Atomic Energy Act of 1954, as amended, we have determined that this subsequent arrangement will not be inimical to the common defense and security.

This subsequent arrangement will take effect no sooner than 15 days after the date of publication of this notice.

Dated: January 12, 2007.

For the Department of Energy.  
**Richard Goorevich,**  
Director, Office of International Regimes and Agreements.

## DEPARTMENT OF ENERGY

### Federal Energy Regulatory Commission

#### Combined Notice of Filings #1

January 16, 2007.

Take notice that the Commission received the following electric rate filings:

**Docket Numbers:** ER06-707-000.  
**Applicants:** Arkansas Electric Cooperative Corporation.

**Description:** Arkansas Electric Cooperative Corporation submits a notice, of conditional withdrawal of protests.

**Filed Date:** 01/11/2007.  
**Accession Number:** 20070111-5016.  
**Comment Date:** 5 p.m. Eastern Time on Monday, January 22, 2007.

**Docket Numbers:** ER06-739-004; ER06-738-004; ER03-983-003.  
**Applicants:** Cogen Technologies Linden Venture, L.P.; East Coast Power, Linden Holding, L.L.C.

**Description:** Cogen Technologies Linden Venture LP et al notifies FERC, of a change in status resulting from acquisition of an, ownership interest in Babcock & Brown Wind Portfolio, Holdings 1 LLC etc.

**Filed Date:** 01/09/2007.  
**Accession Number:** 20070111-0043.  
**Comment Date:** 5 p.m. Eastern Time on Tuesday, January 30, 2007.

**Docket Numbers:** ER06-1452-001.  
**Applicants:** PJM Interconnection, L.L.C.

**Description:** PJM Interconnection, LLC submits a corrected Wholesale, Market Participation Agreement.

**Filed Date:** 01/11/2007.  
**Accession Number:** 20070112-0061.  
**Comment Date:** 5 p.m. Eastern Time on Thursday, February 01, 2007.

**Docket Numbers:** ER06-1453-001.  
**Applicants:** PJM Interconnection, L.L.C.

**Description:** PJM Interconnection, LLC submits a corrected Wholesale, Market Participation Agreement.

**Filed Date:** 01/10/2007.  
**Accession Number:** 20070111-0046.  
**Comment Date:** 5 p.m. Eastern Time on Wednesday, January 31, 2007.

**Docket Numbers:** ER07-233-001.  
**Applicants:** Occidental Power Services, Inc.

**Description:** Occidental Power Services, Inc submits an amendment to its, 11/17/06 rate schedule amendment.  
**Filed Date:** 01/10/2007.

**Accession Number:** 20070111-0044.  
**Comment Date:** 5 p.m. Eastern Time on Wednesday, January 31, 2007.

**Docket Numbers:** ER07-340-001.  
**Applicants:** Bell Independent Power Corporation.

**Description:** Bell Independent Power Corp submits an amended petition, for acceptance of initial Tariff, Original Volume 1, waivers, and blanket authority.

**Filed Date:** 01/11/2007.  
**Accession Number:** 20070112-0062.  
**Comment Date:** 5 p.m. Eastern Time on Thursday, February 01, 2007.

**Docket Numbers:** ER07-358-001.  
**Applicants:** Southwest Power Pool, Inc.

**Description:** Southwest Power Pool, Inc submits a supplement to its, 12/22/06 filing of an executed Service Agreement for Firm, Point-to-Point Transmission Service w/ Western Resources, dba Westar Energy etc.

**Filed Date:** 01/11/2007.  
**Accession Number:** 20070112-0063.  
**Comment Date:** 5 p.m. Eastern Time on Thursday, February 01, 2007.

**Docket Numbers:** ER07-422-000.  
**Applicants:** New York Independent System Operator, Inc.

**Description:** New York Independent System Operator, Inc submits, proposed revisions to its Open Access Transmission Tariff, and its Market Administration and Control Area Services, Tariff.

**Filed Date:** 01/09/2007.  
**Accession Number:** 20070111-0017.  
**Comment Date:** 5 p.m. Eastern Time on Tuesday, January 30, 2007.

**Docket Numbers:** ER07-423-000.  
**Applicants:** South Carolina Electric & Gas Company.

**Description:** South Carolina Electric & Gas Co submits a Facilities, Agreement with New Horizon Electric Cooperative.

**Filed Date:** 01/10/2007.  
**Accession Number:** 20070111-0045.  
**Comment Date:** 5 p.m. Eastern Time on Wednesday, January 31, 2007.

**Docket Numbers:** ER07-424-000.  
**Applicants:** PJM Interconnection, L.L.C.

**Description:** PJM Interconnection LLC submits a report of the, recommended allocations of cost responsibility for baseline, transmission upgrades reviewed and approved by PJM, Board of Managers and revised tariff sheets.

**Filed Date:** 01/11/2007.  
**Accession Number:** 20070112-0064.  
**Comment Date:** 5 p.m. Eastern Time on Monday, February 12, 2007.

010134

SEC. 246. <<NOTE: 42 USC 15386.>> STUDY AND REPORT ON FREE ABSENTEE BALLOT POSTAGE.

(a) Study on the Establishment of a Free Absentee Ballot Postage Program.--

(1) In general.--The Commission, in consultation with the Postal Service, shall conduct a study on the feasibility and advisability of the establishment of a program under which the Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots submitted

by

voters in general elections for Federal office (other than balloting materials mailed under section 3406 of title 39, United States Code) that does not apply with respect to the postage required to send the absentee ballots to voters.

(2) Public survey.--As part of the study conducted under paragraph (1), the Commission shall conduct a survey of potential beneficiaries under the program described in such paragraph, including the elderly and disabled, and shall take into account the results of such survey in determining the feasibility and advisability of establishing such a program.

(b) Report.--

(1) <<NOTE: Deadline.>> Submission.--Not later than the date that is 1 year after the date of the enactment of this

Act,

the Commission shall submit to Congress a report on the study conducted under subsection (a) (1) together with recommendations for such legislative and administrative action as the

Commission

determines appropriate.

(2) Costs.--The report submitted under paragraph (1) shall contain an estimate of the costs of establishing the program described in subsection (a) (1).

(3) Implementation.--The report submitted under paragraph (1) shall contain an analysis of the feasibility of

implementing

the program described in subsection (a) (1) with respect to the absentee ballots to be submitted in the general election for Federal office held in 2004.

(4) Recommendations regarding the elderly and disabled.--

The

report submitted under paragraph (1) shall--

(A) include recommendations on ways that program described in subsection (a) (1) would target elderly individuals and individuals with disabilities; and

(B) identify methods to increase the number of such individuals who vote in elections for Federal office.

(c) Postal Service Defined.--The term ``Postal Service'' means the United States Postal Service established under section 201 of title 39, United States Code.

# PAPERWORK REDUCTION ACT SUBMISSION

Please read the instructions before completing this form. For additional forms or assistance in completing this form, contact your agency's Paperwork Clearance Officer. Send two copies of this form, the collection instrument to be reviewed, the Supporting Statement, and any additional documentation to: **Office of Information and Regulatory Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street NW, Washington, DC 20503.**

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee	Date
--	------

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
- Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette, electronic mail, or electronic data interchange). Facsimile is **not** considered an electronic submission.
- Enter the total annual recordkeeping and reporting hour burden.
- Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.
  - "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
- Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
- Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

010139

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information—

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

010140

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-1 is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.

4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-1), describe any methods used to minimize burden.

6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:

- \* requiring respondents to report information to the agency more often than quarterly;
- \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
- \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:

- \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
- \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-1.

- \* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

- \* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

- \* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

010141

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

010142

**U.S. ELECTION ASSISTANCE COMMISSION**

**Information Collection Activity; Proposed Information Collection; Comment Request**

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice.

**SUMMARY:** In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, EAC announces the proposed extension of a public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents.

**DATES:** Written comments must be submitted on or before May 5, 2007.

**ADDRESSES:** Written comments and recommendations on the proposed information collection should be sent to the U.S. Election Assistance Commission, 1225 New York Avenue NW, Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at

010143

lotero@eac.gov).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey instrument, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our website at [www.eac.gov](http://www.eac.gov).

**SUPPLEMENTARY INFORMATION:**

*Title and OMB Number:* STUDY OF THE FEASIBILITY AND ADVISABILITY OF ESTABLISHING A PROGRAM OF FREE RETURN OR REDUCED POSTAGE FOR ABSENTEE BALLOTS; OMB Number Pending.

*Needs and Uses:* Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 USC 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study the Commission is directed to conduct a survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program.

At the conclusion of the study effort, EAC is required to submit a report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs.

*Affected Public:* US Citizens

*Number of Respondents:* 1200

*Responses per Respondent:* 1

*Estimated Burden Per Response:* 15 minutes

010144

*Estimated Total Annual Burden Hours: 300 hours*

Information will be collected through a survey of U.S. citizens to determine the possible effect that a free and/or reduced cost absentee ballot postage program would have on voter participation. The sample will be designed in such a way so as to afford analysis of the results according to significant sub-groups including those living in states with high versus low rates of absentee voting and states with restrictive versus states with laws favoring absentee voting. The surveys will be representative of the U.S. population in the fifty U.S. states and will be conducted by phone using random digit dialing (RDD) technology. Within each contacted household, a respondent will be selected among all adults in the household aged 18 years and older. The following information will be requested from each respondent:

1. Background Information

The survey will gather data regarding each respondent's background. Background information will include, the respondent's location, the location of the respondent's voter registration, age, ethnicity, education, income bracket, whether the respondent is living with a disability, and whether the respondent is currently an active-duty member of the armed forces (or a dependent thereof).

2. Voting Information

The survey will gather data regarding the respondent's voting history. Voting information will include, registration status, whether the respondent voted in the 2006 Congressional election, whether the respondent voted in the 2004 Presidential election, whether the respondent voted in the 2000 Presidential election, the method the respondent voted in past elections (in person, by mail, absentee), whether the respondent is eligible to vote absentee (or whether the respondent does not know).

3. Program Effect.

The survey will gather data from all respondents regarding the various effects that the establishment of this program would have on the targeted citizens. Questions on the program will cover (1) whether the program will increase the likelihood that the respondent would use the absentee ballot process; (2) whether the program will increase the likelihood that the respondent would vote in a federal election; (3) whether the program will make it easier for the voter to participate in elections.

**Signed:** \_\_\_\_\_

010145

**Thomas R. Wilkey**, Executive Director,

U.S. Election Assistance Commission

**[Billing Code 6820-KF]**

## SUPPORTING STATEMENTS

OMB Control Number: xxxx-xxxx

U.S. Election Assistance Commission

### Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots

#### A. JUSTIFICATION

**1. Explain the circumstances that make the collection of information necessary.**

Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 USC 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study the Commission is directed to conduct a survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

The information will be gathered through a one-time public opinion survey of 1,200 randomly selected U.S. citizen throughout the fifty U.S. states.

Based upon the information gathered in the study, EAC is required to submit a one-time report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs. The survey will gather information to study the feasibility of establishing free or reduced postage for absentee ballots.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The collection of information does utilize Computer Assisted Telephone Interviewing (CATI). CATI will be used to conduct the public opinion survey. CATI is a telephone surveying technique in which the interviewer follows a script by a software application. The software is able to customize the flow of the questionnaire based on the answers provided, as well as information already known about the participant.

010147

**4. Describe efforts to identify duplication.**

This is the first study conducted by the EAC on the part of HAVA Section 246. The study contractor has reviewed previous and contemporaneous public opinion surveys to eliminate duplication.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

This collection of information does not involve small businesses or other small entities.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

Section 246 of the Help American Vote Act requires the EAC to collect this information to provide recommendations on the establishment of this program to Congress.

If the collection is not conducted, the EAC will be unable to fulfill Section 246 of HAVA. Furthermore, without this information the EAC will be unable to submit a report to Congress detailing recommendations for legislative and administrative action. The determination of whether or not this program is feasible and advisable rests upon the collection of this information. HAVA only necessitates that this information be collected once.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

Not applicable.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

This information collection request received a comment concerned that the accuracy of the sample will be harmed through the exclusion of respondents who can only be reached through a cell phone. The comment suggests that the study include respondents that can be reached through landline telephones and cell phones.

**Action Taken:**

Research was conducted to evaluate this claim and determine if it was necessary to include cell phone users in this study. Based upon this research, it has been determined that the study will still be conducted using only random digit dialing technology (RDD).

In drafting the survey questionnaire, the study contractor consulted extensively with the U.S.

010148

Postal Service. The study contractor also consulted previous public opinion research conducted by The Pew Research Center for the People and the Press. The study contractor also consulted extensively with the U.S. state and county election officials in preparing the questionnaire.

The study contractor, IFES, has more than ten years of experience in conducting innovative and effective public opinion research around the world. IFES' survey and focus group capabilities provide relevant and reliable information on the opinions and attitudes in a country to government officials, development professionals, political actors, academics and others interested in democratic and political development. However, a key strength of IFES' research is its use of a standard set of questions gauging sociopolitical development in most surveys we perform. Data from these questions can help researchers compare attitudes and opinions from country to country and across time in a single nation. To date, IFES has conducted more than 60 public opinion research projects in 24 countries around the world.

In addition to its survey capability, IFES has worked with election assistance and democratic development in over 100 countries since 1987. IFES' international professionals ensure that democracy solutions are home grown. IFES professionals provide technical assistance across many areas of democracy development. With its experience promoting democracy abroad, IFES has begun to work to strengthen democracy in the U.S. IFES works directly with local, state, federal and private partners in the U.S. to support technical assistance initiatives and projects. Under a contract enacted in late September 2005 under the U.S. Election Assistance Commission (EAC) IFES, working with The Pollworker Institute and the League of Women Voters (LWV), is finalizing a year-long research project aimed at improving pollworker recruitment, training and retention in the United States. The project will develop better recruitment, training and retention methods to improve the Election Day experience for voters and election officials.

The study contractor also consulted with The Election Center. The Election Center is a nonprofit organization that works to promote and improve democracy in the U.S. The Center has experience performing research for governmental units concerning the similarities and differences in state or local laws, regulations, or practices concerning voter registration and elections administration. The Center also designs regional workshops and seminars on methods to improve operations and enhance efficiency of government election units.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Respondents are voluntary and they will not be provided any incentives to participate.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

Respondents will be given a verbal pledge of confidentiality prior to volunteering to participate.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

There are no questions of a sensitive nature.

010149

**12. Provide an estimate in hours of the burden of the collection of information.**

The burden to each respondent is 15 minutes. Twelve hundred (1,200) respondents are required for this study. Total annual burden is estimated at 300 hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

We have identified no reporting and recordkeeping "non-hour cost" burdens associated with this proposed collection of information.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$40,100. This estimate includes \$34,000 for the public opinion research firm and \$6,000 for personnel and \$100 in office expenses.

- We estimate \$34,000 for the public opinion research firm. This will include services for programming the survey instrument into a Computer Assisted Telephone Interviewing (CATI) system so that survey questions, instruction and response categories are displayed in the computer, conduct of 1,200 completed interviews, quality control, data entry, coding of data and delivery of final data.
- We estimate \$5,000 for personnel to design the study, oversee its implementation, analyze data, and draft a final report and \$100 for office expenses including telephone and printing costs.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into a report by the study contractor. Based upon the report, the Commission shall submit to Congress a report on the study together with recommendations for such legislative and administrative action as the Commission determines appropriate. Additionally, the documents will be available to the general public per FOIA and may be posted on the Internet website of the EAC.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

010150

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

The respondent universe for this study includes all adults aged 18 years who reside in one of the 50 U.S. states. The sample will be 1,200 respondents, and we aim to obtain a response rate of 30%. This is the first collection for this federal agency of this kind.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

The survey will be conducted by phone in both English and Spanish using random digit dialing (RDD) technology. In RDD surveys, telephone exchanges in the United States are selected at random according to the specifications of the sampling plan. The last digits needed to complete the phone number are generated completely at random. This design ensures full implementation of the sampling plan and ensures that those with listed and unlisted numbers have an equal chance of being included in the sample. Within each contacted household, a respondent will be selected among all adults in the household aged 18 years and who are citizens.

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

To maximize the chances of making contact with a potential respondent, as many as 10 attempts will be made to complete an interview at every sampled household, and calls will be staggered over times of the day and days of the week.

010151

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

The Pew Research Center for the People and the Press has used these questions in previous surveys, thus through other organizations these questions have already been refined.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

Free or Reduced Return Postage Study  
Survey Questionnaire

Hello, my name is \_\_\_\_\_. We are conducting an important study for the U.S. Election Assistance Commission. This survey is for research purposes only, we are not selling anything and we are not associated with or being paid by any political party or candidate. Your participation is voluntary and will only take a few minutes of your time. All your answers will be strictly confidential. Am I speaking with someone 18 or older?

- S1** To make sure our survey includes many different kinds of people, I need to ask a few questions about who lives in your household. How many adults age 18 or older live in your household?
- 1 One—**GO TO S2**
  - 2 Two or more—**GO TO S3**

**ASK IF ONLY ONE ADULT AGE 18+ IN HH (S1=1)**

- S2** May I please speak to that person?
- 1 Continue with current respondent—**GO TO Q1**
  - 2 New respondent being brought to phone—**GO TO INTRO2**
  - 3 New respondent not available—**SCHEDULE CALL BACK**
  - 9 Refused—**TERMINATE**

**ASK IF MORE THAN ONE ADULT AGE 18+ IN HH (S1=2)**

- S3** May I please speak with the adult (18+) in your household who has most recently had a birthday. Are you this person?
- 1 Yes—**GO TO S4**
  - 2 No—**ASK TO SPEAK TO THAT PERSON AND REINTRODUCE THE SURVEY**

**S4** Because we are talking today about issues related to voting in the U.S., we only need to speak with people who are U.S. citizens. Are you currently a U.S. citizen or not?

- 1 Yes—**GO TO Q1**
- 2 No—**ASK FOR ANOTHER ADULT IN HH**

010154

ASK ALL

- Q1 How would you rate your neighborhood as a place to live? Would you say it is excellent, good, fair or poor?
- 1 Excellent
  - 2 Good
  - 3 Fair
  - 4 Poor
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q2 And how interested are you in matters of politics and government? Would you say you are very interested, somewhat interested, not too interested or not interested at all?
- 1 Very interested
  - 2 Somewhat interested
  - 3 Not too interested
  - 4 Not interested at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q3 How much information do you feel you have about politics and current events in the United States today? Do you have a great deal of information, a fair amount, not too much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not too much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q4 And how much information do you feel you have about the way elections are organized in your community such as the rules about who can vote and when, where to go to vote, etc? Do you have a great deal of information, a fair amount, not too much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not too much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

010155

ASK ALL

Q5 Some states are using an election system in which residents are allowed to CHOOSE if they want to cast their vote through the MAIL in the weeks leading up the election OR vote IN PERSON ON Election Day. Do you strongly favor, somewhat favor, somewhat oppose or strongly oppose allowing people to CHOOSE if they vote by mail before Election Day or vote in a booth ON Election Day?

- 1 Strongly favor
- 2 Somewhat favor
- 3 Somewhat oppose
- 4 Strongly oppose
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF SOMEWHAT OR STRONGLY OPPOSE (Q5=3 or 4)

Q6 There are many reasons why people may have reservations about voting by mail before election-day instead of in a booth on election-day. Can you tell me the main reason why you have reservations about people voting by mail before election-day? [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]

- 1 Gave response [**Record verbatim**]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Q7 These days, many people are so busy they can't find time to register to vote, or move around so often they don't get a chance to re-register... Are you CURRENTLY registered to vote or haven't you been able to register so far?  
[IF RESPONDENT ANSWERS '1' YES, ASK,  
Are you registered to vote at your CURRENT address or are you registered to vote at some other previous address]

- 1 Yes, registered at current address
- 2 Yes, registered at other/previous address
- 3 No, not registered
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF REGISTERED TO VOTE (Q7=1 or 2)

Q8 Every state has different regulations for voting by absentee ballot. If there were to be an election next week, do you know whether or not you would be eligible to vote by absentee ballot in your state?

- 1 Yes, eligible
- 2 No, not eligible
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED TO VOTE AT PREVIOUS ADDRESS (Q7 = 2)

- Q9 Can you please tell me which state you are currently registered to vote in?
- 1 Gave response [**Record verbatim—OK to use official two letter abbreviations**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF NOT REGISTERED (Q7 = 3)

- Q10 Have you previously been registered to vote, or have you never been registered?
- 1 Previously registered
  - 2 Never registered
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF NOT REGISTERED (Q7 = 3)

- Q11 What would you say is the MAIN reason you're not registered to vote?  
[OPEN END; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q7 = 1 OR Q7=2 OR Q10 = 1)

- Q12 Did you vote in the 2006 Election this past November for either a Senator or Congressperson?
- 1 Yes
  - 2 No
  - 3 Too young to vote/Not registered to vote at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 ELECTION (Q12 = 1)

- Q13 In the 2006 congressional election, do you recall if you voted BEFORE Election Day, that is at an early voting site or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?
- 1 Before Election Day - Early Voting Site/Absentee
  - 2 In person at polling place on Election Day
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

010157

ASK IF VOTED IN 2006 BEFORE ELECTION DAY (Q13 = 1)

- Q14 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q14=2)

- Q15 Did being able to vote by MAIL before Election Day make it a lot easier, somewhat easier, somewhat harder, a lot harder, or did it make no difference in your ability to vote?
- 1 A lot easier
  - 2 Somewhat easier
  - 3 Somewhat harder
  - 4 A lot harder
  - 5 No difference in ability to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q7 = 1 OR Q7=2 OR Q10 = 1)

- Q16 Did you vote in the 2004 Presidential election between George Bush and John Kerry?
- 1 Yes
  - 2 No
  - 3 Not 18 at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 ELECTION (Q16 = 1)

- Q17 In the 2004 Presidential election, do you recall if you voted BEFORE Election Day, that is at an early voting site, or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?
- 1 Before Election Day - Early Voting Site/Absentee
  - 2 In person at polling place on Election Day
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 BEFORE ELECTION DAY (Q17 = 1)

- Q18 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q18=2)

- Q19 Did being able to vote by MAIL before Election Day make it a lot easier, somewhat easier, somewhat harder, a lot harder, or did it make no difference in your ability to vote?
- 1 A lot easier
  - 2 Somewhat easier
  - 3 Somewhat harder
  - 4 A lot harder
  - 5 No difference in ability to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q20 Suppose that in addition to being able to vote IN-PERSON at the polls on Election Day, you also had the option of choosing to vote by MAIL before Election Day WITHOUT having to pay ANY postage. Would having these two options make it a lot more likely, somewhat more likely, somewhat less likely, a lot less likely to vote or would having the option to vote by mail WITHOUT paying ANY postage make no difference in your ability to vote?
- 1 A lot more likely
  - 2 Somewhat more likely
  - 3 Somewhat less likely
  - 4 A lot less likely
  - 5 No difference in ability to vote
  - 6 Already voting by mail without paying postage [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF MAIL WOULD MAKE MORE LIKELY TO VOTE (Q20=1 or 2)

- Q21 Please tell me the main reason you think you would be more likely to vote in elections if you had the option to vote by mail before Election Day. [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF A LOT OR SOMEWHAT MORE LIKELY TO VOTE (Q20 = 1 OR 2)

- Q22 Suppose you were able to mail in your ballot before Election Day BUT you were required to PAY postage. Which of these do you think is most likely: 1) You would pay the postage and still vote by mail, 2) vote in person on Election Day instead, or 3) there is a chance you wouldn't be able to vote.  
[IF ASKED, the amount of postage depends on the size and weight of the ballot in your area—usually between 39 and 87 cents.]
- 1 Vote by mail anyway
  - 2 Vote in person
  - 3 Chance won't be able to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

010159

I would like to ask you a few final questions for statistical purposes. Please be assured that all of your responses will be kept entirely anonymous and absolutely confidential.

- D1 Record gender  
1 Male  
2 Female

ASK ALL

- D2 What is your age?  
Range 18-96  
97 97 or older  
98 Don't know  
99 Refused

ASK ALL

- D3 What is the highest level of education you received?  
1 High School or less  
2 Some College  
3 College Graduate  
4 Post graduate  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK ALL

- D4 What is your marital status: are you now married, widowed, divorced separated, or never married?  
1 Now married  
2 Widowed  
3 Divorced  
4 Separated  
5 Never married  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK ALL

- D5 Are you or someone in your household an active-duty member of the armed forces?  
1 Yes  
2 No  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

- D5a Which of the following best describes your current employment status—employed, self-employed, retired and not working, are you not in the labor force, or are you unemployed

and looking for work?

- 1 Employed
- 2 Self-employed
- 3 Retired and not working
- 4 Not in the labor force [INTERVIEWER, this includes homemakers]
- 6 Unemployed and looking for work
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED (D5a=1)

D5b Is this part-time or full-time?

- 1 Part-time
- 2 Full-time
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF-EMPLOYED (D5a=1 or 2)

D5c What is your MAIN occupation?

- 1 Gave response
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF-EMPLOYED (D5a=1 or 2)

D5d And would you characterize your occupation as...?

- 1 Executive/ high-level management
- 2 Professional/ middle manager
- 3 Technical/ administrative/ clerical
- 4 Service worker/ protective services
- 5 Skilled labor
- 6 Unskilled labor
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D6a Are you yourself of Latino or Hispanic origin or descent, such as Mexican, Puerto Rican, Cuban, or some other Latin American background?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

- D6b What is your race? (If Latino ask:) Are you white Latino, black Latino or some other race? (Else:) Are you white, African American or black, Asian or some other race?
- 1 White/White Latino
  - 2 African American/Black/Black Latino
  - 3 Asian
  - 4 Other
  - 8 Don't know
  - 9 Refused

- D7 Including your self, how many people are there living in your household?
- Range 1 – 30
- 98 Don't know
  - 99 Refused

- D8 Last year, that is in 2006, what was your total household income from all sources before taxes? Was it under or over \$40,000?
- 1 Under \$40,000
  - 2 Over \$40,000
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF INCOME LESS THAN \$40,000 (D8=1)

D9a Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 Less than \$10,000
- 2 \$10,000 to under \$15,000
- 3 \$15,000 to under \$20,000
- 4 \$20,000 to under \$25,000
- 5 \$25,000 to under \$30,000
- 6 \$30,000 to under \$35,000 or
- 7 \$35,000 to under \$40,000
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF INCOME MORE THAN \$40,000 (D8=2)

D9b Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 \$40,000 to under \$50,000
- 2 \$50,000 to under \$75,000
- 3 \$75,000 to under \$100,000
- 4 \$100,000 to under \$150,000 or
- 5 \$150,000 or more
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

- D10 Are you limited in any way in any activities because of physical, mental, or emotional problems?
- 1 Yes
  - 2 No
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF HAS DISABILITY (D10= 1).

- D11 Does this condition require you to use special equipment, such as a cane, a wheelchair, a special bed, or a special telephone?
- 1 Yes
  - 2 No
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

**Thank you. That is all of the questions I have for you.**

\*This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Respondent's obligation to reply to this information collection is voluntary; respondents include the 50 States, and the District of Columbia. This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. pending (expires: to be determined). The time required to complete this information collection is estimated to average 1.25 hours per response. Comments regarding this burden estimate should be sent to the Program Manager – 2007 Study of the Feasibility and Advisability of Establishing a Program of Free Return Postage for Absentee Ballots, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Julie-

I'm fairly certain that this does not need to go to the Commissioners but I think a legal OK is probably in order?

Thanks

Subject Fw: The Survey

Karen,

Does this survey have your approval/blessings for submission to OMB? Does it need to go through any other vetting with the legal staff or the commissioners prior to me doing all the paperwork for OMB and the FR? Thank you.

L.

Survey Questionnaire

Hello, my name is \_\_\_\_\_. We are conducting an important study for the U.S. Election Assistance Commission. This survey is for research purposes only, we are not selling anything and we are not associated with or being paid by any political party or candidate. Your participation is voluntary and will only take a few minutes of your time. All your answers will be strictly confidential. Am I speaking with someone 18 or older?

- S1** To make sure our survey includes many different kinds of people, I need to ask a few questions about who lives in your household. How many adults age 18 or older live in your household?
- 1 One—**GO TO S2**
  - 2 Two or more—**GO TO S3**

ASK IF ONLY ONE ADULT AGE 18+ IN HH (S1=1)

- S2** May I please speak to that person?
- 1 Continue with current respondent—**GO TO Q1**
  - 2 New respondent being brought to phone—**GO TO INTRO2**
  - 3 New respondent not available—**SCHEDULE CALL BACK**
  - 9 Refused—**TERMINATE**

ASK IF MORE THAN ONE ADULT AGE 18+ IN HH (S1=2)

- S3** May I please speak with the adult (18+) in your household who has most recently had a birthday. Are you this person?
- 1 Yes—**GO TO S4**
  - 2 No—**ASK TO SPEAK TO THAT PERSON AND REINTRODUCE THE SURVEY**

**S4** Because we are talking today about issues related to voting in the U.S., we only need to speak with people who are U.S. citizens. Are you currently a U.S. citizen or not?

- 1 Yes—**GO TO Q1**
- 2 No—**ASK FOR ANOTHER ADULT IN HH**

ASK ALL

- Q1 How would you rate your neighborhood as a place to live? Would you say it is excellent, good, fair or poor?
- 1 Excellent
  - 2 Good
  - 3 Fair
  - 4 Poor
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q2 And how interested are you in matters of politics and government? Would you say you are very interested, somewhat interested, not too interested or not interested at all?
- 1 Very interested
  - 2 Somewhat interested
  - 3 Not too interested
  - 4 Not interested at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q3 How much information do you feel you have about politics and current events in the United States today? Do you have a great deal of information, a fair amount, not too much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not too much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q4 And how much information do you feel you have about the way elections are organized in your community such as the rules about who can vote and when, where to go to vote, etc? Do you have a great deal of information, a fair amount, not too much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not too much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

010166

ASK ALL

- Q5 Some states are using an election system in which residents are allowed to CHOOSE if they want to cast their vote through the MAIL in the weeks leading up the election OR vote IN PERSON ON Election Day. Do you strongly favor, somewhat favor, somewhat oppose or strongly oppose allowing people to CHOOSE if they vote by mail before Election Day or vote in a booth ON Election Day?
- 1 Strongly favor
  - 2 Somewhat favor
  - 3 Somewhat oppose
  - 4 Strongly oppose
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF SOMEWHAT OR STRONGLY OPPOSE (Q5=3 or 4)

- Q6 There are many reasons why people may have reservations about voting by mail before election-day instead of in a booth on election-day. Can you tell me the main reason why you have reservations about people voting by mail before election-day? [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q7 These days, many people are so busy they can't find time to register to vote, or move around so often they don't get a chance to re-register... Are you CURRENTLY registered to vote or haven't you been able to register so far? [IF RESPONDENT ANSWERS '1' YES, ASK, Are you registered to vote at your CURRENT address or are you registered to vote at some other previous address]
- 1 Yes, registered at current address
  - 2 Yes, registered at other/previous address
  - 3 No, not registered
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF REGISTERED TO VOTE (Q7=1 or 2)

- Q8 Every state has different regulations for voting by absentee ballot. If there were to be an election next week, do you know whether or not you would be eligible to vote by absentee ballot in your state?
- 1 Yes, eligible
  - 2 No, not eligible
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED TO VOTE AT PREVIOUS ADDRESS (Q7 = 2)

- Q9 Can you please tell me which state you are currently registered to vote in?  
1 Gave response [**Record verbatim—OK to use official two letter abbreviations**]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF NOT REGISTERED (Q7 = 3)

- Q10 Have you previously been registered to vote, or have you never been registered?  
1 Previously registered  
2 Never registered  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF NOT REGISTERED (Q7 = 3)

- Q11 What would you say is the MAIN reason you're not registered to vote?  
[OPEN END; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]  
1 Gave response [**Record verbatim**]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q7 = 1 OR Q7=2 OR Q10 = 1)

- Q12 Did you vote in the 2006 Election this past November for either a Senator or Congressperson?  
1 Yes  
2 No  
3 Too young to vote/Not registered to vote at the time/Not eligible [DO NOT READ]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 ELECTION (Q12 = 1)

- Q13 In the 2006 congressional election, do you recall if you voted BEFORE Election Day, that is at an early voting site or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?  
1 Before Election Day - Early Voting Site/Absentee  
2 In person at polling place on Election Day  
3 Dropped off absentee ballot on Election Day [DO NOT READ]  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 BEFORE ELECTION DAY (Q13 = 1)

- Q14 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q14=2)

- Q15 Did being able to vote by MAIL before Election Day make it a lot easier, somewhat easier, somewhat harder, a lot harder, or did it make no difference in your ability to vote?
- 1 A lot easier
  - 2 Somewhat easier
  - 3 Somewhat harder
  - 4 A lot harder
  - 5 No difference in ability to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q7 = 1 OR Q7=2 OR Q10 = 1)

- Q16 Did you vote in the 2004 Presidential election between George Bush and John Kerry?
- 1 Yes
  - 2 No
  - 3 Not 18 at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 ELECTION (Q16 = 1)

- Q17 In the 2004 Presidential election, do you recall if you voted BEFORE Election Day, that is at an early voting site, or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?
- 1 Before Election Day - Early Voting Site/Absentee
  - 2 In person at polling place on Election Day
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 BEFORE ELECTION DAY (Q17 = 1)

- Q18 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q18=2)

- Q19 Did being able to vote by MAIL before Election Day make it a lot easier, somewhat easier, somewhat harder, a lot harder, or did it make no difference in your ability to vote?
- 1 A lot easier
  - 2 Somewhat easier
  - 3 Somewhat harder
  - 4 A lot harder
  - 5 No difference in ability to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q20 Suppose that in addition to being able to vote IN-PERSON at the polls on Election Day, you also had the option of choosing to vote by MAIL before Election Day WITHOUT having to pay ANY postage. Would having these two options make it a lot more likely, somewhat more likely, somewhat less likely, a lot less likely to vote or would having the option to vote by mail WITHOUT paying ANY postage make no difference in your ability to vote?
- 1 A lot more likely
  - 2 Somewhat more likely
  - 3 Somewhat less likely
  - 4 A lot less likely
  - 5 No difference in ability to vote
  - 6 Already voting by mail without paying postage [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF MAIL WOULD MAKE MORE LIKELY TO VOTE (Q20=1 or 2)

- Q21 Please tell me the main reason you think you would be more likely to vote in elections if you had the option to vote by mail before Election Day. [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF A LOT OR SOMEWHAT MORE LIKELY TO VOTE (Q20 = 1 OR 2)

- Q22 Suppose you were able to mail in your ballot before Election Day BUT you were required to PAY postage. Which of these do you think is most likely: 1) You would pay the postage and still vote by mail, 2) vote in person on Election Day instead, or 3) there is a chance you wouldn't be able to vote.  
[IF ASKED, the amount of postage depends on the size and weight of the ballot in your area—usually between 39 and 87 cents.]
- 1 Vote by mail anyway
  - 2 Vote in person
  - 3 Chance won't be able to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

I would like to ask you a few final questions for statistical purposes. Please be assured that all of your responses will be kept entirely anonymous and absolutely confidential.

- D1 Record gender  
1 Male  
2 Female

ASK ALL

- D2 What is your age?  
Range 18-96  
97 97 or older  
98 Don't know  
99 Refused

ASK ALL

- D3 What is the highest level of education you received?  
1 High School or less  
2 Some College  
3 College Graduate  
4 Post graduate  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK ALL

- D4 What is your marital status: are you now married, widowed, divorced separated, or never married?  
1 Now married  
2 Widowed  
3 Divorced  
4 Separated  
5 Never married  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

ASK ALL

- D5 Are you or someone in your household an active-duty member of the armed forces?  
1 Yes  
2 No  
8 Don't know [DO NOT READ]  
9 Refused [DO NOT READ]

- D5a Which of the following best describes your current employment status—employed, self-employed, retired and not working, are you not in the labor force, or are you unemployed

and looking for work?

- 1 Employed
- 2 Self-employed
- 3 Retired and not working
- 4 Not in the labor force [INTERVIEWER, this includes homemakers]
- 6 Unemployed and looking for work
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED (D5a=1)

D5b Is this part-time or full-time?

- 1 Part-time
- 2 Full-time
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF-EMPLOYED (D5a=1 or 2)

D5c What is your MAIN occupation?

- 1 Gave response
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF-EMPLOYED (D5a=1 or 2)

D5d And would you characterize your occupation as...?

- 1 Executive/ high-level management
- 2 Professional/ middle manager
- 3 Technical/ administrative/ clerical
- 4 Service worker/ protective services
- 5 Skilled labor
- 6 Unskilled labor
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D6a Are you yourself of Latino or Hispanic origin or descent, such as Mexican, Puerto Rican, Cuban, or some other Latin American background?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

010172

- D6b What is your race? (If Latino ask:) Are you white Latino, black Latino or some other race? (Else:) Are you white, African American or black, Asian or some other race?
- 1 White/White Latino
  - 2 African American/Black/Black Latino
  - 3 Asian
  - 4 Other
  - 8 Don't know
  - 9 Refused

- D7 Including your self, how many people are there living in your household?  
Range 1 – 30
- 98 Don't know
  - 99 Refused

- D8 Last year, that is in 2006, what was your total household income from all sources before taxes? Was it under or over \$40,000?
- 1 Under \$40,000
  - 2 Over \$40,000
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF INCOME LESS THAN \$40,000 (D8=1)

D9a Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 Less than \$10,000
- 2 \$10,000 to under \$15,000
- 3 \$15,000 to under \$20,000
- 4 \$20,000 to under \$25,000
- 5 \$25,000 to under \$30,000
- 6 \$30,000 to under \$35,000 or
- 7 \$35,000 to under \$40,000
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF INCOME MORE THAN \$40,000 (D8=2)

D9b Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 \$40,000 to under \$50,000
- 2 \$50,000 to under \$75,000
- 3 \$75,000 to under \$100,000
- 4 \$100,000 to under \$150,000 or
- 5 \$150,000 or more
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

- D10 Are you limited in any way in any activities because of physical, mental, or emotional problems?
- 1 Yes
  - 2 No
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF HAS DISABILITY (D10= 1).

- D11 Does this condition require you to use special equipment, such as a cane, a wheelchair, a special bed, or a special telephone?
- 1 Yes
  - 2 No
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

**Thank you. That is all of the questions I have for you.**

\*This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Respondent's obligation to reply to this information collection is voluntary; respondents include the 50 States, and the District of Columbia. This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. pending (expires: to be determined). The time required to complete this information collection is estimated to average 1.25 hours per response. Comments regarding this burden estimate should be sent to the Program Manager – 2007 Study of the Feasibility and Advisability of Establishing a Program of Free Return Postage for Absentee Ballots, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Hi Ernieh,

Were there changes made to the survey (questions added or removed, items rephrased to increase clarity, etc.) during this period? In other words, is the draft you sent for the 30-days exactly the same as the one we posted for comments in January? I need to note these changes for OMB purposes. Thank you!

Subject RE: Free Return Postage Package

History:

 This message has been replied to.

We did not make any changes due to public comments. As you saw, we responded to the one comment that came in but did not make any changes. We revised the questionnaire to modify certain questions when administered to Puerto Rico (the previous version did not), made some small changes to respond to some of the things we got from the Postal commission, and I fiddled a tiny bit to improve the question wording in a few cases. Nothing that had a substantial (or even moderate) impact on the material covered by the questionnaire.

Does this help?

Hi Karen,

Hope all is well. My question was regarding the changes done to the questions themselves on the questionnaire, not the burden hours (which you did provide in the supporting statement and I assume were calculated for the latest version). But were questions: added, deleted, rephrased, moved within the survey, etc.?

Thank you! - - - - Laiza

Subject RE: Free Return Postage Package

There were no significant changes in the burden hours. There were some changes in the questionnaire but we are still within the originally estimated time. I believe we have the burden hours calculated somewhere in the paperwork we gave you. Sorry, but I don't have it with me at the moment to look it up.

Yes, sort of; I apologize if I have not been clear. What I wanted to know were the changes you did to the survey like what you mention regarding Puerto Rico, the Postal Commission, and improving the wording. These are revisions and I need to note those; if you have a record or notes of those changes in more detail I would greatly appreciate it. I need to include them in the FR notice and for OMB.

Thank you!

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

a. If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.

b. Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

a. Check "New collection" when the collection has not previously been used or sponsored by the agency.

b. Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.

c. Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.

d. Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.

e. Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.

f. Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

a. Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.

b. Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.

c. Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

a. Check "Three years" if the agency requests a three year approval for the collection.

b. Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

a. Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.

b. Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.

c. Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

a. Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.

b. Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.

b1. Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.

c. Enter the total annual recordkeeping and reporting hour burden.

d. Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.

e. Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.

f. Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.

f.1. "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

a. Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.

b. Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.

c. Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.

d. Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.

e. Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.

f. Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.

f.1. "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

010188

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

010196

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-I is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.

4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.

6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:

- \* requiring respondents to report information to the agency more often than quarterly;
- \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
- \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:  
\* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.  
\* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.

\* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

\* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

\* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

**SEC. 246. <<NOTE: 42 USC 15386.>> STUDY AND REPORT ON FREE ABSENTEE  
BALLOT POSTAGE.**

**(a) Study on the Establishment of a Free Absentee Ballot Postage  
Program.--**

(1) In general.--The Commission, in consultation with the Postal Service, shall conduct a study on the feasibility and advisability of the establishment of a program under which the Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots submitted by voters in general elections for Federal office (other than balloting materials mailed under section 3406 of title 39, United States Code) that does not apply with respect to the postage required to send the absentee ballots to voters.

(2) Public survey.--As part of the study conducted under paragraph (1), the Commission shall conduct a survey of potential beneficiaries under the program described in such paragraph, including the elderly and disabled, and shall take into account the results of such survey in determining the feasibility and advisability of establishing such a program.

**(b) Report.--**

(1) <<NOTE: Deadline.>> Submission.--Not later than the date that is 1 year after the date of the enactment of this Act, the Commission shall submit to Congress a report on the study conducted under subsection (a)(1) together with recommendations for such legislative and administrative action as the Commission determines appropriate.

(2) Costs.--The report submitted under paragraph (1) shall contain an estimate of the costs of establishing the program described in subsection (a)(1).

(3) Implementation.--The report submitted under paragraph (1) shall contain an analysis of the feasibility of implementing the program described in subsection (a)(1) with respect to the absentee ballots to be submitted in the general election for Federal office held in 2004.

(4) Recommendations regarding the elderly and disabled.--The report submitted under paragraph (1) shall--

(A) include recommendations on ways that program described in subsection (a)(1) would target elderly individuals and individuals with disabilities; and

(B) identify methods to increase the number of such individuals who vote in elections for Federal office.

(c) Postal Service Defined.--The term "Postal Service" means the United States Postal Service established under section 201 of title 39, United States Code.

[[Page 116 STAT. 1692]]

010193

compensation is based primarily on student academic achievement.

(d) *Quality of the Management Plan and Key Personnel* (15 points).

(1) The adequacy of the management plan to achieve the objectives of the proposed project on time and within budget, including clearly defined responsibilities, timelines, milestones, and processes for continuous improvement to accomplish project tasks.

(2) The qualifications, including experience, education, and training of proposed key personnel.

(e) *Evaluation* (10 points).

(1) The extent to which the applicant's evaluation plan includes the use of objective measures that are clearly related to the goals of the project to raise student achievement and increase teacher effectiveness, including the extent to which the evaluation will produce quantitative and qualitative data.

(2) The extent to which the applicant includes adequate evaluation procedures for ensuring feedback and continuous improvement in the operation of the proposed project.

(3) The extent to which the applicant commits to participating in a rigorous national evaluation that will provide a common design methodology, data collection instruments, and performance measures for all grantees funded under this competition.

#### VI. Award Administration Information

1. *Award Notices*: If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN). We may also notify you informally.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements*: We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting*: At the end of the project period, recipients must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the

most current performance and financial expenditure information as specified by the Secretary in 34 CFR 75.118.

4. *Performance Measures*: Pursuant to the Government Performance and Results Act (GPRA), the Department has established the following performance measures that it will use to evaluate the overall effectiveness of the grantee's project, as well as the TIF program as a whole:

(1) Changes in LEA personnel deployment practices, as measured by changes over time in the percentage of teachers and principals in high-need schools who have a record of effectiveness; and

(2) Changes in teacher and principal compensation systems in participating LEAs, as measured by the percentage of a district's personnel budget that is used for performance-related payments to effective (as measured by student achievement gains) teachers and principals.

All grantees will be expected to submit an annual performance report documenting their success in addressing these performance measures. The Department will use the applicant's performance data for program management and administration, in such areas as determining new and continuation funding and planning technical assistance.

#### VII. Agency Contacts

##### FOR FURTHER INFORMATION CONTACT:

April Lee, U.S. Department of Education, 400 Maryland Avenue, SW., room 3W229, Washington, DC 20202-6200. Telephone number: (202) 205-5224 or by e-mail: [tif@ed.gov](mailto:tif@ed.gov) or by Internet at the following Web site: <http://www.ed.gov/programs/teacherincentive/index.html>.

## ELECTION ASSISTANCE COMMISSION

### Information Collection; Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Focus Groups

**AGENCY**: U.S. Election Assistance Commission (EAC).

**ACTION**: Notice; request for comments.

**SUMMARY**: The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES**: Written comments must be submitted on or before January 11, 2007.

**ADDRESSES**: Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, Attn: Ms.

010194

Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the Focus Group Discussion Guide, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at <http://www.eac.gov>.

**SUPPLEMENTARY INFORMATION:**

*Title:* Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots—Focus Groups  
*OMB Number:* Pending.

*Type of Review:* Regular submission.  
*Needs and Uses:* Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 U.S.C. 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study the Commission is directed to conduct a nationwide survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program. This survey will be supplemented by focus groups among potential beneficiaries—elderly, disabled, low-income—to obtain more specific information on the challenges these populations face when participating in election and to assess the potential benefit these populations might receive from a program of free return or reduced postage for absentee ballots.

At the conclusion of the study effort, EAC is required to submit a report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs. It

is required to specifically contain recommendations regarding the elderly and disabled populations, including ways a free absentee ballot return postage program would target these populations and identify methods to increase the number of such individuals who vote in elections for Federal office.

*Affected Public:* Citizens.

*Number of Respondents:* 36.

*Responses per Respondent:* 1.

*Estimated Burden per Response:* 1.25 hours.

*Estimated Total Annual Burden*

*Hours:* 45 hours.

Information will be collected through a series of three focus groups comprised of potential beneficiaries of a free and/or discounted absentee ballot postage program: One focus group will be dedicated to issues confronting the elderly population; one focus group will be dedicated to issues confronting disabled people; and one focus group will be dedicated to issues confronting the low-income citizens. At least one official from the United States Postal Service will observe each planned focus group. The topics that will be explored include:

1. The challenges that the particular population faces when participating in elections.

a. Information on respondents' previous experiences with voting in Federal elections. Information on any difficulties encountered in the process of voting and how the issues were resolved.

2. The concerns members of the particular population have about voting (e.g. voter intimidation, voter confidentiality, security, use of ballots).

a. Information on particular incidents that has prevented respondent from being able to vote.

3. The possible remedies to those challenges that would likely increase the rates of voter participation in the particular population (e.g. relaxed absentee voting laws, better accessibility to polling places, voter education).

a. Information on respondents' interest in absentee ballot voting.

4. The likelihood that a free or discounted absentee ballot postage program would assist the particular population.

a. Information on respondents' interest in a program of free or discounted postage for absentee ballots.

5. How the program could possibly be implemented to target the particular population.

a. Information on creating and implementing the program to ensure that it benefits the particular population.

6. The factors that would make reaching the particular population difficult.

a. Information on advertising such a program to the particular population so that they can take advantage of the change.

**Thomas R. Wilkey,**

*Executive Director, U.S. Election Assistance Commission.*

*Comment Date:* 5 p.m. Eastern Time on Friday, November 24, 2006.

*Docket Numbers:* ER03-985-001.

*Applicants:* El Cap II, LLC.

*Description:* El Cap II, LLC submits its Triennial Updated Market Power Analysis Report.

*Filed Date:* 10/30/2006.

*Accession Number:* 20061101-0147.

*Comment Date:* 5 p.m. Eastern Time on Monday, November 20, 2006.

*Docket Numbers:* ER06-451-010.

*Applicants:* Southwest Power Pool, Inc.

*Description:* Southwest Power Pool, Inc submits revisions to its Open Access Transmission Tariff effective 2/1/07.

*Filed Date:* 11/02/2006.

*Accession Number:* 20061103-0103.

*Comment Date:* 5 p.m. Eastern Time on Friday, November 24, 2006.

*Docket Numbers:* ER07-115-000.

*Applicants:* ISO New England Inc.

*Description:* ISO New England Inc submits its 2007 Capital Budget and Capital Budget Quarterly Filing for the Third Quarter of 2006.

*Filed Date:* 10/31/2006.

## SUPPORTING STATEMENTS

OMB Control Number: xxxx-xxxx

U.S. Election Assistance Commission

### Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots

#### A. JUSTIFICATION

**1. Explain the circumstances that make the collection of information necessary.**

Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 USC 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study the Commission is directed to conduct a survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

The information will be gathered through nine focus groups meetings to explore, in-depth, issues concerning the potential beneficiaries of this program. The beneficiaries include those who will be more likely to participate in federal elections should this program be implemented, including the elderly, the disabled, and the impoverished. Three (3) focus groups will be dedicated to issues confronting the elderly population; three (3) focus groups will be dedicated to issues confronting the disabled population; and three (3) focus groups will be dedicated to issues confronting the impoverished. Locations of the focus groups have been determined through consultation with the U.S. Postal Service and the study contractor, see Figure 1 below.

Figure 1

	Low income	Senior Citizens	Individuals with Disabilities
Urban	Washington, DC	Sacramento, California	Washington, DC
Rural	Lenawee/Hillsdale County Michigan	Lafayette County, Mississippi	Central Valley, California
Suburban	Memphis, Tennessee Metro (Marshall County, Mississippi)	Colorado Springs, Colorado	Detroit area Michigan

Based upon the information gathered in the study, EAC is required to submit a one-time report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs. It is required to specifically contain recommendations regarding the elderly and disabled populations, including ways a free absentee ballot return postage program would target these populations and identify methods to increase the number of such individuals who vote in elections for Federal office.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The collection of information does not utilize the use of any forms of automated, electronic, mechanical or other technological techniques.

**4. Describe efforts to identify duplication.**

This is the first study conducted by the EAC on the part of HAVA Section 246. The study contractor has reviewed previous and contemporaneous public opinion surveys to eliminate duplication.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.** This collection of information will seek out assistance from small entities that specialize in working with the elderly, impoverished or disabled in securing participants for the focus groups. The study contractor will also seek out assistance from small entities in meeting any special needs of the possible participants. The assistance provided by these small organizations will be on a voluntary basis and will have minimal economic impact.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

Section 246 of the Help America Vote Act requires the EAC to collect this information to provide recommendations on the establishment of this program to Congress.

If the collection is not conducted, the EAC will be unable to fulfill Section 246 of HAVA. Furthermore, without this information the EAC will be unable to submit a report to Congress detailing recommendations for legislative and administrative action. The determination of whether or not this program is feasible and advisable rests upon the collection of this information. HAVA only necessitates that this information be collected once.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

Not applicable.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their**

**views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

**Public Comment Summary:**

1. This information collection request received a comment from the U.S. Postal Service citing a concern over the potential establishment of a program of free return or reduced postage for absentee ballots. The U.S. Postal Service indicates that it lacks appropriations to fund such a program and the positive experience of Oregon and Washington, which rely almost exclusively on a vote-by-mail system, suggests that increased voter participation is not correlated with free or reduced postage for absentee ballots. In a separate communication, the U.S. Postal Service provided some suggestions to improve this information collection.
2. This information collection request received a comment from a member of the public indicating that the study will fail to draw any valid conclusions due to such a small sample of potential beneficiaries.

**Action Taken:**

In response to these comments, the study contractor and the EAC have decided to increase the number of focus groups from three to nine. Each selected group (individuals with disabilities, Senior Citizens and people with low-incomes) will have three dedicated focus groups. To ensure the diversity of responses and participants, each selected group will have one focus group from an urban, rural and suburban location (Figure 1).

Figure 1.

	Low income	Senior Citizens	Individuals with Disabilities
Urban	Washington, DC	Sacramento, California	Washington, DC
Rural	Lenawee/Hillsdale County Michigan	Lafayette County, Mississippi	Central Valley, California
Suburban	Memphis, Tennessee Metro (Marshall County, Mississippi)	Colorado Springs, Colorado	Detroit area Michigan

Furthermore, in consideration of the concerns presented by the U.S. Postal Service, the study contractor has adjusted the focus group discussion guides to address these issues. However, Section 246 of the Help America Vote Act requires the EAC to collect this information to provide recommendations on the establishment of this program to Congress. If the collection is not conducted, the EAC will be unable to fulfill Section 246 of HAVA. The study contractor and the EAC have decided to push forward with this information collection.

The study contractor has consulted extensively with the U.S. Postal Service in preparing the information collection request. Wherever possible, the study contractor has adjusted the information collection to accommodate the comments from the U.S. Postal Service. The study contractor also consulted extensively with the U.S. state and county election officials in preparing the focus group materials.

The study contractor, IFES, has more than ten years of experience in conducting innovative and

effective public opinion research around the world. IFES' survey and focus group capabilities provide relevant and reliable information on the opinions and attitudes in a country to government officials, development professionals, political actors, academics and others interested in democratic and political development.

In addition to its survey and focus group capability, IFES has worked with election assistance and democratic development in over 100 countries since 1987. IFES' international professionals ensure that democracy solutions are home grown. IFES professionals provide technical assistance across many areas of democracy development. With its experience promoting democracy abroad, IFES has begun to work to strengthen democracy in the U.S. IFES works directly with local, state, federal and private partners in the U.S. to support technical assistance initiatives and projects. Under a contract enacted in late September 2005 under the U.S. Election Assistance Commission (EAC) IFES, working with The Pollworker Institute and the League of Women Voters (LWV), is finalizing a year-long research project aimed at improving pollworker recruitment, training and retention in the United States. The project will develop better recruitment, training and retention methods to improve the Election Day experience for voters and election officials.

The study contractor also consulted with The Election Center. The Election Center is a nonprofit organization that works to promote and improve democracy in the U.S. The Center has experience performing research for governmental units concerning the similarities and differences in state or local laws, regulations, or practices concerning voter registration and elections administration. The Center also designs regional workshops and seminars on methods to improve operations and enhance efficiency of government election units.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Respondents will be supplied a cash incentive at the rate of \$25 per participant. Providing an incentive for participation will help in the process of securing respondents for this study.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

Assurance of confidentiality will be provided verbally by the Moderator of each focus group. The contributions of respondents in the focus groups will be anonymous and will not be connected to their name.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

There are no questions of a sensitive nature.

**12. Provide an estimate in hours of the burden of the collection of information.**

The burden to each respondent is 1 hour 15 minutes. Each focus group will last no longer than 1

hour and 15 minutes. One-hundred and eight (108) respondents are required for this study. Total annual burden is estimated at 135 hours.

Due to comments received from the U.S. Postal Service and U.S. state and county election officials, the number of focus groups was increased from originally three (3) to nine (9). This has increased the Total annual burden to 135 hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

We have identified no reporting and recordkeeping “non-hour cost” burdens associated with this proposed collection of information.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$46,940. This estimate includes \$27,984 for personnel, \$13,243 for travel expenses, \$210 in office expenses, and \$5,593 for the focus group events.

- We estimate \$27,984 for personnel to design the study, oversee its implementation, oversee the focus groups, and draft a final report. The travel expenses for this project are estimated at \$13,243.
- We estimate \$210 for office expenses including telephone and printing costs.
- We estimate \$5,593 for the focus group events, including payment of \$25 to each participant.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into a report by the study contractor. Based upon the report, the Commission shall submit to Congress a report on the study together with recommendations for such legislative and administrative action as the Commission determines appropriate. Additionally, the documents will be available to the general public per FOIA and may be posted on the Internet website of the EAC.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the**

010200

**OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

The collection of this information does not employ statistical methods.

**Summary of Public Comments Received on the Information Collection Materials for the Study of the Feasibility and Advisability of Establishing a Program of Free Return or Reduced Postage for Absentee Ballots; OMB Number Pending**

**Public Comment Summary:**

1. This information collection request received a comment from the U.S. Postal Service citing a concern over the potential establishment of a program of free return or reduced postage for absentee ballots. The U.S. Postal Service indicates that it lacks appropriations to fund such a program and the positive experience of Oregon and Washington, which rely almost exclusively on a vote-by-mail system, suggests that increased voter participation is not correlated with free or reduced postage for absentee ballots. In a separate communication, the U.S. Postal Service provided some suggestions to improve this information collection.

2. This information collection request received a comment from a member of the public indicating that the study will fail to draw any valid conclusions due to such a small sample of potential beneficiaries.

**Action Taken:**

In response to these comments, the study contractor and the EAC have decided to increase the number of focus groups from three to nine. Each selected group (individuals with disabilities, the elderly and people with low-incomes) will have three dedicated focus groups. To ensure the diversity of responses and participants, each selected group will have one focus group from an urban, rural and suburban location.

Furthermore, in consideration of the concerns presented by the U.S. Postal Service, the study contractor has adjusted the focus group discussion guides to address these issues.

However, Section 246 of the Help America Vote Act requires the EAC to collect this information to provide recommendations on the establishment of this program to Congress. If the collection is not conducted, the EAC will be unable to fulfill Section 246 of HAVA. The study contractor and the EAC have decided to push forward with this information collection.

## **Focus Group Free or Reduced Ballot Project Discussion Guide**

### **Introduction (5 minutes):**

Moderator into: My name is .....

Project intro: The Election Center and IFES (formerly the International Foundation for Election Systems) are jointly working on a project funded by the Election Assistance Commission to identify the challenges that people like you face when participating in elections. Our discussion today will help us better understand the needs and challenges of people like you.

Ground rules for today's discussion:

- All points are valid and needed.
- It is okay to disagree—do not be disagreeable.
- Be specific and talk about your own experiences.
- Allow everyone to speak. Speak briefly and often, but please, no speeches.
- One person speaks at a time – please don't interrupt.
- Your contributions are anonymous and will not be connected to your name.
- There are observers in the room, but they won't be participating.
- This discussion will be videotaped, but this videotape will only be used for analysis as we write a report on these focus groups. You will not be individually identified in any of the reporting for this project.

### **Experiences voting—challenges and remedies (20 minute)**

I'd like each of you to think back to the last federal election that you voted in. By federal election I mean voting for the President, the U.S. Senate, or the U.S. House of Representatives. What sticks out in your mind about the experience voting—not who you voted for but the process of voting itself?

- Probe: How did you vote: in-person at the polls or by mail?
- Probe: Was the process easy or hard?
- Probe: Did you encounter any particular difficulties?
- Probe: How did election officials respond?
- Probe: How did you resolve the situation?

And have any of you have been in the situation where you wanted to vote but for some reason you just weren't able to?

- Probe: Can you talk a little bit about the circumstances that kept you from being able to vote?
- Probe: What sorts of things do you think could have been done to make it easier for you to be able to participate in elections?

### **Voting by mail and free or reduced postage (20 minutes)**

As you may be aware, there has been a lot of discussion in the last year or so about the pluses and minuses of voting by mail. Some states have what is called "no-excuse absentee voting" that allows anyone who wants to, to be able to vote by mail-in absentee ballot. On the other hand, some states require people to provide a reason why they can't make it to the polls on Election Day.

What is your overall opinion of absentee voting by mail?

- Probe: Do you think everyone should have the opportunity to vote by mail or should

010203

be limited to those with a valid excuse? For example, being sick, disabled or out of town on Election Day?

Who here has voted by mail?

- Probe: If you weren't able to vote by mail would you still have been able to vote at the polls?

Can you tell me about your experience the last time you mailed in an absentee ballot?

- Probe: Would a free or discounted absentee ballot postage program have made things easier for you or would a free or discounted absentee ballot postage program make no substantial impact in your ability to get your vote in?

Do you think that finding ways to make it easier for people to vote by mail-in absentee ballot increase voter turn out among people like you?

- Probe: What sorts of things could be done to make this easier?
- Probe: What would be a good way of letting people like you know about such a program/changes so that they could take advantage of these changes?
- What kind of impact do you think a free or discounted absentee ballot postage program would make on the ability of people like you to vote?

Would you have any concerns about voting by mail?

- Probe: Would you be concerned about the security of your ballot once you drop it in the mail box?
- Probe: Would you have concerns about whether the ballot reaching its destination in time?

### **Concerns about voting (15 minutes)**

Still thinking about the elections process and voting, do any of you have personal concerns about voting that you would like to express?

- Probe: How do you think this problem could be solved?
- Probe: What would a program like this look like; how could it be implemented?

And do any of you have other more general concerns about election process or voting that you'd like to discuss?

- Probe: How do you think this problem could be solved?
- Probe: What would a program like this look like; how could it be implemented?

## Post Discussion Comment Sheet

Please take a few minutes to complete this form. Your answers to these questions as well as your viewpoints expressed in today's discussions will be kept confidential—your opinions will not be identified with your name.

By answering these questions, you help us understand the types of people who took part in today's discussion, and your opinions and feelings provide us with important information about this discussion that will help us in the future.

1) Name: \_\_\_\_\_

2)  Male  Female

3) What is your race/ethnicity? \_\_\_\_\_

4) What is your age? \_\_\_\_\_

5) What is the highest level of education you received?

- High School or less
- Some College
- College Graduate
- Post Graduate

6) What is your employment status?

- Full-time
- Part-time
- Unemployed
- Homemaker
- Retired
- Student

7) How many people, including yourself, are there in your household?

\_\_\_\_\_

8) In 2005, what was your total income from all sources before taxes?

- Under \$30,000
- \$30,000 to \$49,999
- \$50,000 to \$74,999
- \$75,000 +

9) Are you currently registered to vote?

Yes

No

10) How often do you vote?

Always

Sometimes

Rarely

11) What is the year and type of the last federal election (presidential or congressional) that you voted in? \_\_\_\_\_

12) Are there any feelings or opinions that you didn't share during the discussion that we should know? Please describe in as much detail as possible.

13) Any comments about the discussion itself and/or the moderator?

As you may be aware, there has been a lot of discussion in the last year or so about the pluses and minuses of voting by mail. Some states have what is called "no-excuse absentee voting" that allows anyone who wants to, to be able to vote by mail-in absentee ballot. On the other hand, some states require people to provide a reason why they can't make it to the polls on Election Day.

What is your overall opinion of absentee voting by mail?

- Probe: Do you think everyone should have the opportunity to vote by mail or should this

010207

be limited to those with a valid excuse? For example, being sick, disabled or out of town on Election Day?

Who here has voted by mail?

- Probe: If you weren't able to vote by mail would you still have been able to vote at the polls?

Can you tell me about your experience the last time you mailed in an absentee ballot?

- Probe: Would a free or discounted absentee ballot postage program have made things easier for you or would a free or discounted absentee ballot postage program really make no impact in your ability to get your vote in.

Do you think that finding ways to make it easier for people to vote by mail-in absentee ballot increase voter turn out among voters with disabilities?

- Probe: What sorts of things could be done to make this easier?
- Probe: What would be a good way of letting voters with disabilities know about such a program/changes so that they could take advantage of these changes?
- What kind of impact do you think a free or discounted absentee ballot postage program would make on the ability of people with disabilities to vote?

Would you have any concerns about voting by mail?

- Probe: Would you be concerned about the security of your ballot once you drop it in the mail box?
- Probe: Would you have concerns about whether the ballot reaching its destination in time?

### **Concerns about voting (15 minutes)**

Still thinking about the elections process and voting, do any of you have personal concerns about voting that you would like to express?

- Probe: How do you think this problem could be solved?
- What would a program like this look like; how could it be implemented?

And do any of you have other more general concerns about voting and voters with disabilities that you would like to discuss?

- Probe: How do you think this problem could be solved?
- What would a program like this look like; how could it be implemented?

## Post Discussion Comment Sheet People with Disabilities

Please take a few minutes to complete this form. Your answers to these questions as well as your viewpoints expressed in today's discussions will be kept confidential—your opinions will not be identified with your name.

By answering these questions, you help us understand the types of people who took part in today's discussion, and your opinions and feelings provide us with important information about this discussion that will help us in the future.

1) Name: \_\_\_\_\_

2)  Male  Female

3) What is your race/ethnicity? \_\_\_\_\_

4) What is your age? \_\_\_\_\_

5) What is the highest level of education you received?

- High School or less
- Some College
- College Graduate
- Post Graduate

6) What is your employment status?

- Full-time
- Part-time
- Unemployed
- Homemaker
- Retired
- Student

7) How many people, including yourself, are there in your household?

\_\_\_\_\_

8) In 2005, what was your total income from all sources before taxes?

- Under \$30,000
- \$30,000 to \$49,999
- \$50,000 to \$74,999
- \$75,000 +

9) Are you currently registered to vote?

Yes

No

10) How often do you vote?

Always

Sometimes

Rarely

11) What is the year and type of the last federal election (presidential or congressional) that you voted in? \_\_\_\_\_

12) Are there any feelings or opinions that you didn't share during the discussion that we should know? Please describe in as much detail as possible.

13) Any comments about the discussion itself and/or the moderator?

**Focus Group  
Free or Reduced Ballot Project  
Discussion Guide for Senior Citizens**

**Introduction (5 minutes):**

Moderator into: My name is .....

Project intro: The Election Center and IFES (formerly the International Foundation for Election Systems) are jointly working on a project funded by the Election Assistance Commission to identify the challenges that older voters face when participating in elections. Our discussion today will help us better understand the needs and challenges of people like you.

Ground rules for today's discussion:

- All points are valid and needed.
- It is okay to disagree—do not be disagreeable.
- Be specific and talk about your own experiences.
- Allow everyone to speak. Speak briefly and often, but please, no speeches.
- One person speaks at a time – please don't interrupt.
- Your contributions are anonymous and will not be connected to your name.
- There are observers in the room, but they won't be participating.
- This discussion will be videotaped, but this videotape will only be used for analysis as we write a report on these focus groups. You will not be individually identified in any of the reporting for this project.

**Experiences voting—challenges and remedies (20 minute)**

I'd like each of you to think back to the last federal election that you voted in. By federal election I mean voting for the President, the U.S. Senate, or the U.S. House of Representatives. What sticks out in your mind about the experience voting—not who you voted for but the process of voting itself?

- Probe: How did you vote: in-person at the polls or by mail?
- Probe: Was the process easy or hard?
- Probe: Did you encounter any particular difficulties?
- Probe: How did election official respond?
- Probe: How did you resolve the situation?

And have any of you have been in the situation where you wanted to vote but for some reason you just weren't able to?

- Probe: Can you talk a little bit about the circumstances that kept you from being able to vote?
- Probe: What sorts of things do you think could have been done to make it easier for you to be able to participate in elections?

**Voting by mail and free or reduced postage (20 minutes)**

As you may be aware, there has been a lot of discussion in the last year or so about the pluses and minuses of voting by mail. Some states have what is called "no-excuse absentee voting" that allows anyone who wants to, to be able to vote by mail-in absentee ballot. On the other hand, some states require people to provide a reason why they can't make it to the polls on Election Day.

What is your overall opinion of absentee voting by mail?

- Probe: Do you think everyone should have the opportunity to vote by mail or should this

**U.S. ELECTION ASSISTANCE COMMISSION**

**Information Collection Activity; Proposed Information Collection; Comment Request**

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice.

**SUMMARY:** In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, EAC announces the proposed extension of a public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents.

**DATES:** Written comments must be submitted on or before May 13, 2007.

**ADDRESSES:** Written comments and recommendations on the proposed information collection should be sent to the U.S. Election Assistance Commission, 1225 New York Avenue NW, Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at

lotero@eac.gov).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the Focus Group Discussion Guide, please, write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our website at [www.eac.gov](http://www.eac.gov).

**SUPPLEMENTARY INFORMATION:**

*Title and OMB Number:* STUDY OF THE FEASIBILITY AND ADVISABILITY OF ESTABLISHING A PROGRAM OF FREE RETURN OR REDUCED POSTAGE FOR ABSENTEE BALLOTS FOCUS GROUPS; OMB Number Pending.

*Needs and Uses:* Sec. 246 of the Help America Vote Act requires the Election Assistance Commission (EAC), in consultation with the United States Postal Service, to conduct a study on the feasibility and advisability of establishing a program under which the U.S. Postal Service shall waive or otherwise reduce the amount of postage applicable with respect to absentee ballots returned by voters in general elections for Federal office. This study does not address the cost to the U.S. Postal Service for free postage for sending absentee ballots but may consider costs to election officials that are related to implementing such a program including the costs of sending absentee ballots to voters. It also does not include consideration of the 39 USC 3406 provisions for the mailing of balloting materials for military and overseas absentee voters. As part of the study the Commission is directed to conduct a nationwide survey of potential beneficiaries, including the elderly and disabled, and to take into account the results of this survey in determining the feasibility and advisability of establishing such a program. This survey will be supplemented by focus groups among potential beneficiaries—elderly, disabled, low-income—to obtain more specific information on the challenges these populations face when participating in election and to assess the potential benefit these populations might receive from a program of free return or reduced postage for absentee ballots.

At the conclusion of the study effort, EAC is required to submit a report to Congress with recommendations for such legislative and administrative action as EAC determines appropriate. The report shall contain an analysis of the feasibility of implementing such a program and an estimate of the costs. It is required to specifically contain recommendations regarding the elderly and disabled populations, including ways a free absentee ballot return postage program would target these populations and identify methods to increase the number of such individuals who

vote in elections for Federal office.

*Affected Public:* Citizens

*Number of Respondents:* 108

*Responses per Respondent:* 1

*Estimated Burden Per Response:* 1 hour 15 minutes; focus groups will last no longer than 1 hour 15 minutes

*Estimated Total Annual Burden Hours:* 135 hours

Information will be collected through a series of nine focus groups comprised of potential beneficiaries of a free and/or discounted absentee ballot postage program. Three (3) focus groups will be dedicated to issues confronting the elderly population, three (3) focus groups will be dedicated to issues confronting disabled people and three (3) focus groups will be dedicated to issues confronting the low-income citizens. An official from the United States Postal Service will observe at least one of the planned focus groups. The topics that will be explored include:

1. The challenges that the particular population faces when participating in elections.
  - a. Information on respondents' previous experiences with voting in Federal elections. Information on any difficulties encountered in the process of voting and how the issues were resolved.
2. The concerns members of the particular population have about voting (e.g. voter intimidation, voter confidentiality, security, use of ballots).
  - a. Information on particular incidents that has prevented respondent from being able to vote.
3. The possible remedies to those challenges that would likely increase the rates of voter participation in the particular population (e.g. relaxed absentee voting laws, better accessibility to polling places, voter education).
  - a. Information on respondents' interest in absentee ballot voting
4. The likelihood that a free or discounted absentee ballot postage program would assist the particular population.

010218

- a. Information on respondents' interest in a program of free or discounted postage for absentee ballots.
5. How the program could possibly be implemented to target the particular population.
    - a. Information on creating and implementing the program to ensure that it benefits the particular population.
  6. The factors that would make reaching the particular population difficult.
    - a. Information on advertising such a program to the particular population so that they can take advantage of the change.

**Signed:** \_\_\_\_\_

Free or Reduced Return Postage Study  
Survey Questionnaire

Hello, my name is \_\_\_\_\_. We are conducting an important study for the U.S. Election Assistance Commission. This survey is for research purposes only, we are not selling anything and we are not associated with or being paid by any political party or candidate. Your participation is voluntary and will only take a few minutes of your time. All your answers will be strictly confidential. Am I speaking with someone 18 or older?

- S1** To make sure our survey includes many different kinds of people, I need to ask a few questions about who lives in your household. How many adults age 18 or older live in your household?
- 1 One—**GO TO S2**
  - 2 Two or more—**GO TO S3**

**ASK IF ONLY ONE ADULT AGE 18+ IN HH (S1=1)**

- S2** May I please speak to that person?
- 1 Continue with current respondent—**GO TO Q1**
  - 2 New respondent being brought to phone—**GO TO INTRO2**
  - 3 New respondent not available—**SCHEDULE CALL BACK**
  - 9 Refused—**TERMINATE**

**ASK IF MORE THAN ONE ADULT AGE 18+ IN HH (S1=2)**

- S3** May I please speak with the adult (18+) in your household who has most recently had a birthday. Are you this person?
- 1 Yes—**GO TO S4**
  - 2 No—**ASK TO SPEAK TO THAT PERSON AND REINTRODUCE THE SURVEY**

- S4** Because we are talking today about issues related to voting in the U.S., we only need to speak with people who are U.S. citizens. Are you currently a U.S. citizen or not?
- 1 Yes—**GO TO Q1**
  - 2 No—**ASK FOR ANOTHER ADULT IN HH**

ASK ALL

- Q1 How much information do you feel you have about politics and current events in the United States today? Do you have a great deal of information, a fair amount, not too much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not too much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q2 And how much information do you feel you have about the way elections are organized in your community such as the rules about who can vote and when, where to go to vote, etc? Do you have a great deal of information, a fair amount, not too much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not too much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q3 Some states are using an election system in which residents are allowed to CHOOSE if they want to cast their vote through the MAIL in the weeks leading up the election OR vote IN PERSON ON Election Day. Do you strongly favor, somewhat favor, somewhat oppose or strongly oppose allowing people to CHOOSE if they vote by mail before Election Day or vote in a booth ON Election Day?
- 1 Strongly favor
  - 2 Somewhat favor
  - 3 Somewhat oppose
  - 4 Strongly oppose
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF SOMEWHAT OR STRONGLY OPPOSE (Q3=3 or 4)

- Q4 There are many reasons why people may have reservations about voting by mail before election-day instead of in a booth on election-day. Can you tell me the main reason why you oppose people voting by mail before election-day? [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q5 These days, many people are so busy they can't find time to register to vote, or move around so often they don't get a chance to re-register... Are you CURRENTLY registered to vote or haven't you been able to register so far?  
[IF RESPONDENT ANSWERS '1' YES, ASK,  
Are you registered to vote at your CURRENT address or are you registered to vote at some other previous address]
- 1 Yes, registered at current address
  - 2 Yes, registered at other/previous address/not sure of which address
  - 3 No, not registered
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF REGISTERED TO VOTE (Q5=1 or 2)

- Q6 Every state has different regulations for voting by absentee ballot. If there were to be an election next week, do you know whether or not you would be eligible to vote by absentee ballot in your state?
- 1 Yes, eligible
  - 2 No, not eligible
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED TO VOTE AT PREVIOUS ADDRESS (Q5 = 2)

- Q7 Can you please tell me which state you are currently registered to vote in?
- 1 Gave response [**Record verbatim—OK to use official two letter abbreviations**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF NOT REGISTERED (Q5 = 3)

- Q8 Have you previously been registered to vote, or have you never been registered?
- 1 Previously registered
  - 2 Never registered
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF NOT REGISTERED (Q5 = 3)

- Q9 What would you say is the MAIN reason you are currently not registered to vote?  
[OPEN END; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q5 = 1 OR Q5=2 OR Q8 = 1)

- Q10 Talking to lots of people, we understand that for various reasons not everyone votes in every election. Did you vote in the 2006 Election this past November for either a Senator or Congressperson?
- 1 Yes
  - 2 No
  - 3 Too young to vote/Not registered to vote at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 ELECTION (Q10 = 1)

- Q11 In the 2006 congressional election, do you remember if you voted BEFORE Election Day, either at an early voting site or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?
- 1 Before Election Day - Early Voting Site/Absentee
  - 2 In person at polling place on Election Day
  - 3 Dropped off absentee ballot at the polls on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED IN 2006 BEFORE ELECTION DAY (Q11 = 1)

- Q12 And did you vote BEFORE Election Day in person at an early voting site or did you mail in your absentee ballot?
- 1 In person at an early voting site
  - 2 Mailed in absentee ballot
  - 3 Dropped off absentee ballot at the polls on Election Day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q12=2)

- Q13 Did being able to vote by MAIL before Election Day make it a lot easier, somewhat easier, somewhat harder, a lot harder, or did it make no difference in your ability to vote?
- 1 A lot easier
  - 2 Somewhat easier
  - 3 Somewhat harder
  - 4 A lot harder
  - 5 No difference in ability to vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF CURRENTLY REGISTERED OR PREVIOUSLY REGISTERED (Q5 = 1 OR Q5=2 OR Q8 = 1)

Q14 And were you able to vote in the 2004 Presidential election between George Bush and John Kerry?

- 1 Yes
- 2 No
- 3 Not 18 at the time/Not eligible [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 ELECTION (Q14 = 1)

Q15 In the 2004 Presidential election, do you remember if you voted BEFORE Election Day, either at an early voting site, or with an absentee ballot, OR did you vote in-person at your polling place ON Election Day?

- 1 Before Election Day - Early Voting Site/Absentee
- 2 In person at polling place on Election Day
- 3 Dropped off absentee ballot at the polls on Election Day [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF VOTED IN 2004 BEFORE ELECTION DAY (Q15 = 1)

Q16 And did you vote BEFORE Election Day in person at an early voting site or did you mail in an absentee ballot?

- 1 In person at an early voting site
- 2 Mailed in absentee ballot [DO NOT READ]
- 3 Dropped off absentee ballot at the polls on Election Day [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF VOTED BY MAIL (Q16=2)

Q17 Did being able to vote by MAIL before Election Day make it a lot easier, somewhat easier, somewhat harder, a lot harder, or did it make no difference in your ability to vote?

- 1 A lot easier
- 2 Somewhat easier
- 3 Somewhat harder
- 4 A lot harder
- 5 No difference in ability to vote
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Q18 Suppose that in addition to being able to vote IN-PERSON at the polls on Election Day, you also had the option of choosing to vote by MAIL before Election Day WITHOUT having to pay ANY postage. Would having these two options to chose from make it more likely you would vote, less likely you would vote, or would having the option to vote by mail WITHOUT paying ANY postage make no difference in your ability to vote?

- 1 More likely
- 2 Less likely
- 3 No difference in ability to vote
- 6 Already voting by mail without paying postage [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF MAIL WOULD MAKE MORE LIKELY TO VOTE (Q18=1)

Q19 And is this a lot more likely or somewhat more likely?

- 1 A lot more likely
- 2 Somewhat more likely
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF MAIL WOULD MAKE LESS LIKELY TO VOTE (Q18=2)

Q20 And is this a lot less likely or somewhat less likely?

- 1 A lot less likely
- 2 Somewhat less likely
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF MAIL WOULD MAKE MORE LIKELY TO VOTE (Q18=1)

Q21 Please tell me the main reason you think you would be more likely to vote in elections if you had the option to vote by mail before Election Day without having to pay postage. [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]

- 1 Gave response [**Record verbatim**]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

010227

ASK IF MAIL WOULD MAKE MORE LIKELY TO VOTE (Q18=1)

Q22 Suppose you were able to mail in your ballot before Election Day BUT you were required to PAY postage. Which of these do you think is most likely: 1) You would pay the postage and still vote by mail, 2) vote in person on Election Day instead, or 3) there is a chance you wouldn't be able to vote.

[IF ASKED, the amount of postage depends on the size and weight of the ballot in your area—usually between 39 and 87 cents.]

- 1 Vote by mail anyway
- 2 Vote in person
- 3 Chance won't be able to vote
- 4 Would drop off absentee ballot at the polls on Election Day [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF WOULD VOTE BY MAIL EVEN IF HAD TO PAY POSTAGE (Q22 = 1)

Q23 Please tell me the main reason why you would still prefer to vote by mail even if you had to pay postage. [ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]

- 1 Gave response [**Record verbatim**]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

I would like to ask you a few final questions for statistical purposes. Please be assured that all of your responses will be kept entirely anonymous and absolutely confidential.

- D1 Record gender
- 1 Male
  - 2 Female

ASK ALL

- D2 What is your age?  
Range 18-96
- 97 97 or older
  - 98 Don't know
  - 99 Refused

ASK ALL

- D3 What is the highest level of education you received?
- 1 High School or less
  - 2 Some College
  - 3 College Graduate
  - 4 Post graduate
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

D4 What is your marital status: are you now married, widowed, divorced separated, or never married?

- 1 Now married
- 2 Widowed
- 3 Divorced
- 4 Separated
- 5 Never married
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D5 Are you or someone in your household an active-duty member of the armed forces?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

D5a Which of the following best describes your current employment status—employed, self-employed, retired and not working, are you not in the labor force, or are you unemployed and looking for work?

- 1 Employed
- 2 Self-employed
- 3 Retired and not working
- 4 Not in the labor force [INTERVIEWER, this includes homemakers]
- 6 Unemployed and looking for work
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED (D5a=1)

D5b Is this part-time or full-time?

- 1 Part-time
- 2 Full-time
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF-EMPLOYED (D5a=1 or 2)

D5c What is your MAIN occupation?

- 1 Gave response
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF-EMPLOYED (D5a=1 or 2)

D5d And would you characterize your occupation as...?

- 1 Executive/ high-level management
- 2 Professional/ middle manager
- 3 Technical/ administrative/ clerical
- 4 Service worker/ protective services
- 5 Skilled labor
- 6 Unskilled labor
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D6a Are you yourself of Latino or Hispanic origin or descent, such as Mexican, Puerto Rican, Cuban, or some other Latin American background?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D6b What is your race? (If Latino ask:) Are you white Latino, black Latino or some other race? (Else:) Are you white, African American or black, Asian or some other race?

- 1 White/White Latino
- 2 African American/Black/Black Latino
- 3 Asian
- 4 Other
- 8 Don't know
- 9 Refused

D7 Including your self, how many people are there living in your household?

Range 1 - 30

- 98 Don't know
- 99 Refused

D8 Last year, that is in 2006, what was your total household income from all sources before taxes? Was it under or over \$40,000?

- 1 Under \$40,000
- 2 Over \$40,000
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

010230

ASK IF INCOME LESS THAN \$40,000 (D8=1)

D9a Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 Less than \$10,000
- 2 \$10,000 to under \$15,000
- 3 \$15,000 to under \$20,000
- 4 \$20,000 to under \$25,000
- 5 \$25,000 to under \$30,000
- 6 \$30,000 to under \$35,000 or
- 7 \$35,000 to under \$40,000
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF INCOME MORE THAN \$40,000 (D8=2)

D9b Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 \$40,000 to under \$50,000
- 2 \$50,000 to under \$75,000
- 3 \$75,000 to under \$100,000
- 4 \$100,000 to under \$150,000 or
- 5 \$150,000 or more
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D10 Are you limited in any way in any activities because of physical, mental, or emotional problems?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF HAS DISABILITY (D10= 1).

D11 Does this condition require you to use special equipment, such as a cane, a wheelchair, a special bed, or a special telephone?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

**Thank you. That is all of the questions I have for you.**

\*This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Respondent's obligation to reply to this information collection is voluntary; respondents include the 50 States, and the District of Columbia. This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995,

an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. pending (expires: to be determined). The time required to complete this information collection is estimated to average 1.25 hours per response. Comments regarding this burden estimate should be sent to the Program Manager – 2007 Study of the Feasibility and Advisability of Establishing a Program of Free Return Postage for Absentee Ballots, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Summary of changes  
Free Return Postage

- First two questions after the respondent screening removed from beginning of the survey at request of the EAC
- Q6 words “have reservations about” changed to “oppose” to make question more closely parallel wording in Q5.
- Q10 text “Talking to lots of people, we understand that for various reasons not everyone votes in every election” added to make more socially acceptable to admit have not voted.
- Q11 word “recall” change to “remember” at request of EAC
- Q13 scales changed from “likely” to “easy” and negative categories (harder) added at request of USPS
- Q17 scales changed from “likely” to “easy” and negative categories (harder) added at request of USPS
- Q18 small wording changes made to improve clarity. “Less likely” option added at request of USPS
- Q19 & Q20 added to complete collection of revised scales in Q18
- Q21 words “without having to pay postage” added for greater specificity
- Q23 added
- D4 added at request of USPS
- D5series added at request of USPS
- D7 added to assist in classifying respondent’s financial situation
- D8 & D9 income brackets expanded at request of USPS

**BILLING CODE 4000-01-P****DEPARTMENT OF EDUCATION****National Board for Education  
Sciences; Meeting****AGENCY:** National Board for Education Sciences; ED.**ACTION:** Notice of open meeting and a partially closed meeting.**SUMMARY:** This notice sets forth the schedule and proposed agenda of a forthcoming meeting of the National Board for Education Sciences. Notice of this meeting is required under Section 10(a)(2) of the Federal Advisory Committee Act. This document is intended to notify the general public of their opportunity to attend the open portion of the meeting. Individuals who will need accommodations for a disability in order to attend the meeting (i.e., interpreting services, assistive listening devices, materials in alternative format) should notify Mary Grace Lucier at 202/219-2253 (or [Mary.Grace.Lucier@ed.gov](mailto:Mary.Grace.Lucier@ed.gov)) by January 12. We will attempt to meet requests after this date, but cannot guarantee availability of the requested accommodation. The meeting site is accessible to individuals with disabilities.**Dates:** January 23 and 24, 2007.**Time:** January 23, 1:30 to 4:30 p.m.

January 24, 9-9:15 a.m., open; 9:15 to 10 a.m., closed; 10 a.m.-2 p.m., open.

**Location:** Washington Court Hotel, 525 New Jersey Ave., NW., Washington, DC 20001, (room to be announced).**FOR FURTHER INFORMATION CONTACT:**

Mary Grace Lucier, 202/219-2253.

**SUPPLEMENTARY INFORMATION:** The National Board for Education Sciences is authorized by Section 116 of the Education Sciences Reform Act of 2002. The Board advises the Director of the Institute of Education Sciences (IES) on the establishment of activities to be supported by the Institute, on the funding of applications for grants, contracts, and cooperative agreements for research after the completion of peer review, and reviews and evaluates the work of the Institute. On January 23 at 1:30 p.m., the Board will receive an update from the Director of IES on the

work of the Institute and its short and long-term goals. At 3 p.m., Alex Nock, Director of the Commission on No Child Left Behind, will discuss the role of research and evaluation in the reauthorization of the No Child Left Behind Act and the Education Sciences Reform Act.

On January 24, after a review of the prior day's activities the meeting will be closed to the public from 9:15 a.m.-10 a.m. under exemptions (2) and (6) of the Section 552b(c) of Title 5 U.S.C. The Board will discuss internal personnel issues relating to filling the positions of chairperson and executive director. After a 15-minute break, the Board will resume in open session at 10:15 a.m. At that time, the contractor chosen to conduct an evaluation of IES will give a presentation. This portion of the meeting will last until 11:30 a.m. The Board will hear a presentation by Dr. Mark Schneider, Commissioner of the National Center for Education Statistics from 11:30 a.m. to 12:15 p.m., followed by the Board's annual ethics briefing. From 1 p.m. to 2 p.m. the Board will hear reports from its subcommittees and consider next steps for its work in FY 2007. The meeting will adjourn at 2 p.m. A final agenda will be available from Mary Grace Lucier on January 12, 2007.

A summary of the activities at the closed session and related matters which are informative to the public consistent with the policy of Title 5 U.S.C. 552b(c) will be available to the public. Records will be kept of all Board proceedings and will be available for public inspection at the office of the National Board for Education Sciences, Room 627H, 555 New Jersey Ave., NW., Washington, DC 20208.

Dated: January 3, 2007.

**BILLING CODE 4000-01-M****ELECTION ASSISTANCE COMMISSION****Information Collection Activity; Study  
of Alternative Voting Methods****AGENCY:** Election Assistance Commission (EAC).**ACTION:** Notice; request for comments.**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed

010234

information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before March 9, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey, please write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at <http://www.eac.gov>.

**SUPPLEMENTARY INFORMATION:**

*Title:* Study of Alternative Voting Methods.

*OMB Number:* Pending.

*Type of Review:* Regular submission.

*Needs and Uses:* Section 241 of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues with the goal of promoting voting methods and improving election administration. Section 241(b)(10) instructs the EAC to study the feasibility and advisability of conducting elections for Federal office on different days, at different places, and during different hours. In addition, it recommends the study include a discussion of the advisability of establishing a uniform poll closing time and establishing:

(A) A legal public holiday under section 6103 of title 5 United States Code, as the date on which general elections for Federal office are held;

(B) The Tuesday after the 1st Monday in November, in every even numbered

year, as a legal public holiday under such section;

(C) A date other than the Tuesday next after the 1st Monday in November, in every even numbered year as the date on which general elections for Federal office are held; and

(D) Any date described in subparagraph (C) as a legal public holiday under such section.

To provide information to the States and the Congress on the feasibility and advisability of using alternative days, times, and places to conduct Federal elections, the EAC seeks to survey voters to better understand their motivations and perceptions of impediments to voting. The survey will provide insights into the public's perceptions of particular aspects of the voting process.

*Affected Public:* Citizens.

*Number of Respondents:* 3,000.

*Responses per Respondent:* 1.

*Estimated Burden per Response:* .25 hours.

*Estimated Total Annual Burden Hours:* 750 hours.

*Frequency:* One time collection.

Information will be collected through a statistically valid survey of 3,000 registered voters to determine how they currently respond to alternative voting methods (if in a State that offers them) or would respond to alternative voting methods (if in a State that does not allow them). The survey will be representative of the 50 States, the District of Columbia, and U.S. territories. The topics that will be explored include, but are not limited to:

- a. Voting by mail
- b. Voting at a consolidated polling center
- c. Voting online
- d. Voting earlier/later on Election Day
- e. Voting on weekend day
- f. Voting on day other than first Tuesday in November
- g. Making the day on which Federal elections are held a Federal holiday
- h. No alternative voting method, prefer status quo

The survey will gather data regarding each respondent's background. Background information will include, but is not limited to, (1) Respondents' voter registration history, (2) respondents' voting history, and (3) standard demographic questions covering (age, ethnicity, education, employment status, and income bracket).

**DEPARTMENT OF ENERGY**

**Environmental Management Site-Specific Advisory Board, Savannah River Site**

**AGENCY:** Department of Energy.

**ACTION:** Notice of open meeting.

**SUMMARY:** This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Savannah River Site. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

**DATES:** Monday, January 22, 2007, 1 p.m.-5 p.m.; Tuesday, January 23, 2007, 8:30 a.m.-4 p.m.

**ADDRESSES:** Crowne Plaza, 130 Shipyard Dr., Hilton Head, SC 29928.

**FOR FURTHER INFORMATION CONTACT:** Gerri Flemming, Closure Project Office, Department of Energy Savannah River Operations Office, P.O. Box A, Aiken, SC 29802; Phone: (803) 952-7886.

**SUPPLEMENTARY INFORMATION:**

*Purpose of the Board:* The purpose of the Board is to make recommendations to DOE in the areas of environmental restoration, waste management, and related activities.

**Tentative Agenda**

*Monday, January 22, 2007*

1 p.m. Combined Committee Session  
5 p.m. Adjourn

*Tuesday, January 23, 2007*

8:30 a.m. Approval of Minutes, Agency Updates  
9:45 a.m. Public Comment Session  
10 a.m. Chair and Facilitator Update  
10:45 a.m. Strategic & Legacy Management Committee Report  
11:45 a.m. Public Comment Session  
12 p.m. Lunch Break  
1 p.m. Nuclear Materials Committee Report  
1:30 p.m. Waste Management Committee Report  
2 p.m. Public Comment Session  
2:15 p.m. Facility Disposition & Site Remediation Committee Report  
3 p.m. Administrative Committee Report  
4 p.m. Adjourn

If needed, time will be allotted after public comments for items added to the agenda and administrative details. A final agenda will be available at the meeting Monday, January 22, 2007.

*Public Participation:* The meeting is open to the public. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements

Subject Alternative Voting Methods Study

Karen,

The last day for public comments regarding the Alternative Voting Methods survey instrument posted on 1/9/2007 has passed (last day was March 9, 2007). To proceed with clearance, the Contractor should finalize the survey instrument (incorporate all comment, make revisions, etc.). Then they must publish it on the Federal Register once more for 30 days and submit the ICR package to OMB. The OMB package includes:

Contractor Responsibilities - prepare all information and supporting documents required for the submission package

Provide IC instrument in its final form

Information on OMB Form 83-I

Supporting Statement A – joint Privacy Impact Assessment (PIA)

Supporting Statement B (if using statistical methods)

Copy of 60-day Federal Register Notice

Copy of 30-day Federal Register Notice

Summary of public comments received, including actions in response to the comments.

Copy of public comments received

Copies of pertinent statutory authority and regulation

EAC Responsibilities:

Review and approve documents prepared by Contractor

Submit ICR package to OMB via their online ROCIS system

The same applies to the focus groups for the free absentee postage study. As always, I am happy to provide you the necessary information to get these studies through PRA. For sample ICR submissions, one can go to: <http://www.reginfo.gov/public/do/PRAMain>).

OMB 83-I form.pdf

INSTRUCTIONS FOR THE SUPPORTING STATEMENT.doc

010230

**Supporting Statement A:**  
**OMB Control Number: xxxx-xxxx**  
**U.S. Election Assistance Commission**  
**Name of Study**

**A. JUSTIFICATION**

1. Explain the circumstances that make the collection of information necessary.
  
2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.
  
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.
  
4. Describe efforts to identify duplication.
  
5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.
  
6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.
  
7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.

010237

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

**12. Provide an estimate in hours of the burden of the collection of information.**

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

**14. Provide estimates of annualized cost to the Federal government.**

010238

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

**Supporting Statement B:**

**OMB Control Number: xxxx-xxxx**

**U.S. Election Assistance Commission**

**Name of Study**

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

010240

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

# PAPERWORK REDUCTION ACT SUBMISSION

Please read the instructions before completing this form. For additional forms or assistance in completing this form, contact your agency's Paperwork Clearance Officer. Send two copies of this form, the collection instrument to be reviewed, the Supporting Statement, and any additional documentation to: **Office of Information and Regulatory Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street NW, Washington, DC 20503.**

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-1

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
  - Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.
  - Enter the total annual recordkeeping and reporting hour burden.
  - Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.

f.1. "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
  - Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
  - Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
  - Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
- f.1. "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-I is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.
2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.
4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.
5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.
6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.
7. Explain any special circumstances that would cause an information collection to be conducted in a manner:
  - \* requiring respondents to report information to the agency more often than quarterly;
  - \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
  - \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:

- \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
- \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.

- \* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

- \* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

- \* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

## **INSTRUCTIONS FOR THE SUPPORTING STATEMENT:**

**GENERAL INSTRUCTIONS** -Each request for OMB approval of an information collection must include a Supporting Statement prepared in the format described below. The quality of the Supporting Statement is a key factor in whether approval is obtained. If an item is not applicable, provide a brief explanation. All Statements must respond to the items in Section A; if Section B does not apply, state that the collection will not employ statistical methods. If Item 17 of the OMB 83-I was checked "Yes", then Section B must be completed. Electronic formats for the Supporting Statement are available here.

Attach copies of any forms or other instruments used to obtain the information from the public. Collection forms must display the required public notification information described in Preambles, under PRA Guidance.

Your Supporting Statement should repeat the underlined portions of each item below. These are already provided on the electronic format available on this site.

### **SPECIFIC INSTRUCTIONS** -

#### **1. Explain the circumstances that make the collection of information necessary.**

Include a citation and brief description of any statute or executive order that requires the collection, as well as any regulations on which revisions are based, if applicable. Copies of statutes mandating or authorizing a collection must be included with all a submissions. Provide some background information on the program and describe how the collection supports it. Detail any specific program problems you hope to resolve.

If NOAA is already collecting information from the same universe of respondents, briefly describe these collections and how they relate to the proposed collection. Every practical effort should be made to consolidate requirements on the same respondents, and the Supporting Statement should reflect that this has been done. If collections have very similar questions, you may wish to describe the relationship in Item 4, rather than in Item 1.

#### **2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

For all but "New" collection requests, indicate the actual use NOAA has made of the information received. This explanation of the proposed and any past use of the information is a key one and must be detailed. *Do not just make general statements about the overall use of the information, but address the specific items of information being collected. You should deal individually with each question or type of question being asked in your survey or on your form unless the purpose of the question is obvious to someone not familiar with your program.* One of OMB's key standards under the Paperwork Reduction Act is whether the information has "practical utility"; you must demonstrate that you will be using all of the information collected for a practical and necessary program purpose.

In response to Section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Public Law 106-554), NOAA has issued guidelines for ensuring and maximizing the quality, objectivity, utility, and integrity of information

disseminated by NOAA; and established administrative mechanisms allowing affected persons to seek and obtain correction of information that does not comply with applicable guidelines.

As a result of the Section 515 requirements and resulting guidelines, you need to do the following: (1) become familiar with the NOAA Information Quality Guidelines and determine whether they could apply to your collection; and (2) if they do apply (e.g. the information collected will be disseminated to the public or used to support information that will be disseminated to the public), explain at the end of #2 how the information collected complies with applicable Information Quality Guidelines.

The following statement would be applicable when the Guidelines do apply: It is anticipated that the information collected will be disseminated to the public or used to support publicly disseminated information. As explained in the preceding paragraphs, the information gathered has utility. NOAA (*insert line office or program name*) will retain control over the information and safeguard it from improper access, modification, and destruction, consistent with NOAA standards for confidentiality, privacy, and electronic information. See response #10 of this Supporting Statement for more information on confidentiality and privacy. The information collection is designed to yield data that meet all applicable information quality guidelines. Prior to dissemination, the information will be subjected to quality control measures and a pre-dissemination review pursuant to Section 515 of Public Law 106-554.

If you do not plan to disseminate the information, or use it to support information that will be disseminated, explicitly state this in the answer: As explained in the preceding paragraphs, the information gathered has utility. NOAA Fisheries will retain control over the information and safeguard it from improper access, modification, and destruction, consistent with NOAA standards for confidentiality, privacy, and electronic information. See response #10 of this Supporting Statement for more information on confidentiality and privacy. The information collection is designed to yield data that meet all applicable information quality guidelines. Although the information collected is not expected to be disseminated directly to the public, results may be used in scientific, management, technical or general informational publications. Should NOAA (*insert line office*) decide to disseminate the information, it will be subject to the quality control measures and pre-dissemination review pursuant to Section 515 of Public Law 106-554.

If the collection involves *vessel or gear marking only*, state simply that "The information collected will not be disseminated to the public, as it consists solely of marking gear and/or vessels with the appropriate vessel or permit number. This information is not submitted to NMFS." You should always address the quality of information guidelines per one of the three scenarios above. It is critical that your collection complies with the Guidelines if they are applicable, since failure to do so can open Fishery Management Plans and other actions to legal challenge.

Finally, OMB has standards for asking questions about race or ethnicity. If you ask such questions, you must comply with those standards.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

Explain the basis for the decision for adopting this means of collection. Also describe

any consideration you have given or are giving to the use of improved information technology to reduce the burden on the public. You must address the following:

- a. Is the electronic submission of responses allowed\*
- b. If a form is involved, is it available for public printing off the Internet\*
- c. Will the results of the information collection be made available to the public over the Internet? If the answer to any of those questions is "no", are there plans to do so? Why not?

*Note: even in the best of scenarios, with all respondents having easy internet access, and all your forms being fillable on line, you would not state on the 83-I, #13(b)1, "100 %", as this would imply that should a respondent NOT be able to use electronic means, there would not be an alternative available. A separate aspect of the question is your use of technology. This is of particular concern in the case of interviews. Will your interviewers use laptops or other computers to directly enter the answers being provided? If not, why not?*

**4. Describe efforts to identify duplication.**

Describe your efforts to identify duplication with other collections which may be gathering the same or similar information. If the same or similar information is available, describe why it cannot be used or modified for the purposes described in "2" above.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

If the collection will have a significant impact on small entities such as small businesses, organizations, or government bodies (see the instruction above for Item 5 of the OMB 83-I), describe the methods used to minimize the burden on them.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

Address both parts of the question: not conducting the collection AND doing it less frequently. Generally one or two paragraphs is sufficient.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.** See Attachment 1 and explain the need for any inconsistencies in your collection.

**\* All NMFS forms must be made available to the public as "fillable and printable" in the NMFS forms portal. Therefore, unless another electronic means such as an online web affiliation is available, you must respond that the forms and related instructions are available to the public on the Internet and can be completed online and printed.**

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.** Specifically address comments

received on the estimated cost and hour burden. If you are submitting the request in association with a Notice of Proposed Rulemaking, state that comment is being solicited in the proposed rule.

Re "Describe your efforts . . .", *consultation with representatives of those being affected should occur at least once every three years, even if the collection has not changed.* If circumstances prevent this consultation, describe them, but please note that OMB is emphasizing the need for such consultations. Do not list consultations done more than 3 years ago.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

OMB is generally opposed to payments or gifts for information submissions, so if you are proposing to do so provide a good justification for it.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

You must cite a specific authority for promising confidentiality. 1. For many NMFS PRAs, section 402(b) of the Magnuson-Stevens Act (16 U.S.C. 1801, *et seq.*) may apply: <http://www.nmfs.noaa.gov/sfa/magact/mag4.html#s4022>.

If the Privacy Act (5 USC 552a) applies to a collection, it can be used as a statutory authority for confidentiality: <http://www.privacy.gov.au/act/privacyact/>. If there is another appropriate statutory authority in addition to the privacy act, it is best to cite that authority. However, if the Privacy Act applies, compliance is still necessary (see below). This Act generally applies if the information collected will be stored, and retrievable by, identifiable individual. This Act, as described in an OMB PRA training, "governs the collection, maintenance, disclosure of information from or about identifiable individuals (not statistical or aggregate information)." *For these purposes, corporations are NOT considered to be individuals, but persons acting as or for corporations are still considered individuals.*

If an information collection falls under this Act, a "system of records" must be published in the Federal Register, which describes how and where the information is stored, and how it is secured. . If a system of records already exists under which this collection would fall, then you do not need to go through this process. For instance, NOAA has a general fishery statistics system of records, NMFS Alaska Region has a permits system of records, and the NMFS Northwest Region's permits system of records is pending DOC approval.. A summary of the information in the system of records description - a Privacy Act Statement - must be posted on each form related to the collection. The [NOAA Privacy Act homepage](#) provides links to tutorials and instructions related to the Act, as well as a list of NOAA systems of records (which, however, may not be current). The NOAA PRA Clearance Officer can work with you to determine the applicability of the Privacy Act, and how to make your collection compliant if it is determined to be applicable.

If you request a respondent's social security number, this Privacy Act note (Section 7(a)(1) applies: *Any Federal, State or local government agency which requests an individual to disclose his social security account number shall inform that individual whether that disclosure is mandatory or voluntary, by what statutory or other authority such number is solicited, and what uses will be made of it.* You must also cite the statutory authority for requiring the SSN. Generally, this will be the Debt Collection Improvement Act, 31 U.S.C. 7701(c)(1), which provides that: "the head of

each Federal agency shall require each person doing business with that agency to furnish that agency such person's taxpayer identification number (*usually the SSN*). Further, at 31 U.S.C. 7701 (c)(2)(B): "For purposes of the subsection, a person shall be considered doing business with a Federal agency if the person is an applicant for, or recipient of, a Federal license, permit, right of way, grant or benefit payment administered by the agency...."

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

The justification should include the reasons why the questions are necessary, the specific uses for the information, the explanation to be given to the respondents, and any steps taken to obtain their consent.

*Note on the following two questions: You may present burden hour and cost estimates from Items 12 and 13 in a single table, making sure to separate "labor costs" from 12 and "recordkeeping and reporting" costs from 13 into separate, clearly labeled columns! See the sample table format, with two types of types of response that might be found in a NMFS collection. The hour and dollar amounts are examples only, not necessarily accurate for your purposes.*

**12. Provide an estimate in hours of the burden of the collection of information.**

This question corresponds most closely to #13 on the 83-I but also asks for the labor cost per burden hour. Although this submission may be a revision to an approved collection, and thus describes only the new or changed requirements in Question 2, this answer should state the total new burden hours and how much this figure is increased/decreased from the previous burden (if any) for the requirement. a. The statement must provide the number of respondents expected annually, the frequency of their responses, the total number of responses expected, the average response time per respondent, and the total annual response time (in hours) for the collection. Response time includes not only the time necessary to complete the form or answer the questions, but also the time needed to gather the information (unless it was already being gathered for other purposes), have it reviewed by lawyers or accountants, etc. Explain how you arrived at these estimates.

b. Remember that figures should be annualized. For example, if a permit will be valid for three years, and you expect 300 respondents the first year and none the second and third years, use the average of 100 respondents. If the burden per response is expected to vary widely, show the expected range of responses and explain the variance.

c. If the collection will involve more than one form, provide burden estimates for each form.

d. Provide estimates of annualized labor cost to respondents for the hour burden for the collection, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for the collecting the information should not be included here (see Item 14 below).

**13. Provide an estimate of the total annual recordkeeping/reporting cost burden to the respondents resulting from the collection (excluding the value of the burden hours in #12 above).**

This bears repeating - do NOT include the labor cost (wage equivalent) of the burden hours described in Question 12 (above). The information required here corresponds

to that in #14 on the 83-I.

The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. The total figure should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life), *if applicable*; and (b) a total operations, maintenance, and purchase of services components.

a. Capital and start-up costs, averaged over the three-year collection period, include among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling, and testing equipment; and record storage facilities.

(1) If cost estimates are expected to vary widely (e.g. based on choice of equipment vendor), present ranges of cost burden and explain the reasons for the variance, but in your final figures use ~~the~~ the highest estimate.

(2) Generally, estimates should *not* include purchases of equipment or services, or portions thereof, made: (a) to achieve regulatory compliance with requirements *not associated with the information collection*, (b) for reasons other than to provide information or keep records for the government, or (c) as part of customary and usual business of private practices.

b. Operations and maintenance costs include the costs of mailing, faxing or calling in information, making paper copies, and electronic transmission from vessel monitoring systems. Paint and brushes for vessel and gear marking would also fall under this category. Regular maintenance of any equipment whose initial costs fall under "capital and start-up" would also belong here.

**14. Provide estimates of annualized cost to the Federal government.**

Include here a description of the method used to estimate costs to the Federal government, which should show the quantification of hours, operational expenses (such as equipment, overhead, printing, and staff support), and any other expense which would not have been incurred without this collection of information.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

Program changes are new collections or changes in requirements. Adjustments are re-estimates of the number of respondents, responses and/or the response times for *existing* requirements. Please be more specific than, e.g. "Changes were due to the requirement that \_\_\_\_"). List at least net changes and the specific reasons for them, e.g. "Increased reporting/recordkeeping costs are due to the capital costs of vessel monitoring systems".

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

Address any complex analytical techniques that will be used.

Provide a time schedule for the collection, publication, and other actions. Also, will the results of the collection be made available on your organization's Home Pages? If not, why not?

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Self-explanatory.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

Self-explanatory. There are virtually never exceptions.

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*If your collection does not employ statistical methods, just say that and delete the following five questions from the format –UNLESS your proposed information collection is a survey. OMB has recently clarified that Part B must be completed for all survey requests, whether or not statistical analysis will be applied. In addition to statistical analysis, Part B addresses the description of the target group of respondents, the sampling plan, and plans to maximize response rates and address non-response.*

When Item 17 of the OMB 83-I is checked "Yes", the following documentation should be provided to the extent that it applies to the methods proposed. *Please see this document for OMB's guidance on surveys*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.** Note: response rate means: Of those in your respondent sample, from what percentage do you expect to get the required information (if this is not a mandatory collection). The nonrespondents would include those you could not contact, as well as those you contacted but who refused to give the information.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

If you are selecting a uniform respondent universe, you may be using simply a random numbers table to select a sample.

- Stratified sampling is often used when the sampling population can be split into non-overlapping strata that individually are more homogeneous than the population as a whole (e.g. gender and age groups). If there are no obvious "dividing lines", grid lines can be used to divide the population. Random samples are taken from each stratum (or class) and the results are combined to estimate a population mean. Stratified sampling is most successful when the variance within each stratum is less than the overall variance of the

population (Christopher and Schmitt, Environmental Monitoring and Sampling Primer, 1997:  
<http://ewr.cee.vt.edu/environmental/teach/smprimer/design/sample.html#stratified>

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.** Any aspect of your plan which makes it easier and more attractive to comply with the request for information, would tend to maximize response rate:

- This would include such steps as pre-notification and various types of follow-up with those who did not respond at the first opportunity.
- Making the questions as simple and brief as possible is also important.
- Already having a good working relationship with this group would also be important, as would the group's perception that actions based on the information collected would be helpful to them.

A lower response rate than 75% would definitely require a plan to address nonresponse, according to OMB's standards. This means that a large enough number of respondents didn't give information so that there is a possibility that their answers as a group might have differed significantly from those who did respond. Following up with nonrespondents – resending surveys or sending a shorter version of the survey, trying a phone interview if possible, etc. are all effective strategies.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval under the Paperwork Reduction Act.** Pilot surveys of 10 or more are often conducted, and must go through the PRA approval process.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.** Self-explanatory.

#### **ATTACHMENT 1: INFORMATION THAT MUST BE DISPLAYED ON FORMS USED TO COLLECT INFORMATION FROM THE PUBLIC**

Certain information has to be provided to the public for an OMB approval to be valid. Any approved information collection form must display the OMB control number assigned upon approval and the expiration date for current OMB approval. Potential respondents also have to be provided with notice of the following, although the information can be placed in a cover letter or instructions instead of on the survey form itself:

1. The policy reasons for collecting the information.
2. The way in which the information will be used to further performance of agency functions.
3. An estimate of the average burden using the following format: Public reporting burden for this collection of information is estimated to average \_\_\_\_\_ hours (or

minutes) per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to (name and address of sponsoring office).

4. Whether responses to the collection are voluntary, required to obtain or retain a benefit [citing the authority], or mandatory [citing the authority].

5. The nature and extent of confidentiality to be provided, if any [citing the authority].

6. The following sentence - "Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number."

All forms submitted for approval must display this information. For new collections, when neither control number or expiration date is available at the time of submission, you must indicate where this information will be placed on the final form. This is usually done by placing "OMB Control # \_\_\_\_" and "Expires \_\_\_\_" in the upper right-hand corner of the form.

***NOTE: if information is being collected through a telephone survey, the above information INCLUDING the OMB Control Number must be conveyed orally to the respondent (in addition to any written or emailed notice).***

Subject Fw: Alternative Voting Methods Study

-----Forwarded by Laiza N. Otero/EAC/GOV on 03/16/2007 10:51AM -----

To: Karen Lynn-Dyson/EAC/GOV@EAC  
From: Laiza N. Otero/EAC/GOV  
Date: 03/12/2007 04:09PM  
Subject: Alternative Voting Methods Study

Karen,

The last day for public comments regarding the Alternative Voting Methods survey instrument posted on 1/9/2007 has passed (last day was March 9, 2007). To proceed with clearance, the Contractor should finalize the survey instrument (incorporate all comment, make revisions, etc.). Then they must publish it on the Federal Register once more for 30 days and submit the ICR package to OMB. The OMB package includes:

Contractor Responsibilities - prepare all information and supporting documents required for the submission package

Provide IC instrument in its final form

Information on OMB Form 83-I

Supporting Statement A – joint Privacy Impact Assessment (PIA)

Supporting Statement B (if using statistical methods)

Copy of 60-day Federal Register Notice

Copy of 30-day Federal Register Notice

Summary of public comments received, including actions in response to the comments.

Copy of public comments received

Copies of pertinent statutory authority and regulation

EAC Responsibilities:

Review and approve documents prepared by Contractor

Submit ICR package to OMB via their online ROCIS system

The same applies to the focus groups for the free absentee postage study. As always, I am happy to provide you the necessary information to get these studies through PRA. For sample ICR submissions, one can go to: <http://www.reginfo.gov/public/do/PRAMain>.

Subject: Alternative Voting OMB Package

Ernie, we revised the questionnaire to make it administrable to Puerto Rico. I believe all the needed docs for the OMB package are attached. Let me know if you have any questions.

- OMB Form 83-I
- Supporting Statement A
- Supporting Statement B

010260

- Copy of 60 day Federal Register Notice
- Copy of 30 day Federal Register Notice to be submitted to post in Register
- Summary of public comments received, including actions in response to the comments
- Copies of pertinent statutory authority and regulations (HAVA 241)
- Copy of the survey instrument

*Assistant Deputy Secretary for Safe and Drug-Free Schools.*

[FR Doc. E7-105 Filed 1-8-07; 8:45 am]

**BILLING CODE 4000-01-P****DEPARTMENT OF EDUCATION****National Board for Education  
Sciences; Meeting****AGENCY:** National Board for Education Sciences; ED.**ACTION:** Notice of open meeting and a partially closed meeting.**SUMMARY:** This notice sets forth the schedule and proposed agenda of a forthcoming meeting of the National Board for Education Sciences. Notice of this meeting is required under Section 10(a)(2) of the Federal Advisory Committee Act. This document is intended to notify the general public of their opportunity to attend the open portion of the meeting. Individuals who will need accommodations for a disability in order to attend the meeting (i.e., interpreting services, assistive listening devices, materials in alternative format) should notify Mary Grace Lucier at 202/219-2253 (or [Mary.Grace.Lucier@ed.gov](mailto:Mary.Grace.Lucier@ed.gov)) by January 12. We will attempt to meet requests after this date, but cannot guarantee availability of the requested accommodation. The meeting site is accessible to individuals with disabilities.**Dates:** January 23 and 24, 2007.**Time:** January 23, 1:30 to 4:30 p.m.

January 24, 9-9:15 a.m., open; 9:15 to 10 a.m., closed; 10 a.m.-2 p.m., open.

**Location:** Washington Court Hotel, 525 New Jersey Ave., NW., Washington, DC 20001, (room to be announced).**FOR FURTHER INFORMATION CONTACT:** Mary Grace Lucier, 202/219-2253.**SUPPLEMENTARY INFORMATION:** The National Board for Education Sciences is authorized by Section 116 of the Education Sciences Reform Act of 2002. The Board advises the Director of the Institute of Education Sciences (IES) on the establishment of activities to be supported by the Institute, on the funding of applications for grants, contracts, and cooperative agreements for research after the completion of peer review, and reviews and evaluates the work of the Institute. On January 23 at 1:30 p.m., the Board will receive an update from the Director of IES on the

work of the Institute and its short and long-term goals. At 3 p.m., Alex Nock, Director of the Commission on No Child Left Behind, will discuss the role of research and evaluation in the reauthorization of the No Child Left Behind Act and the Education Sciences Reform Act.

On January 24, after a review of the prior day's activities the meeting will be closed to the public from 9:15 a.m.-10 a.m. under exemptions (2) and (6) of the Section 552b(c) of Title 5 U.S.C. The Board will discuss internal personnel issues relating to filling the positions of chairperson and executive director. After a 15-minute break, the Board will resume in open session at 10:15 a.m. At that time, the contractor chosen to conduct an evaluation of IES will give a presentation. This portion of the meeting will last until 11:30 a.m. The Board will hear a presentation by Dr. Mark Schneider, Commissioner of the National Center for Education Statistics from 11:30 a.m. to 12:15 p.m., followed by the Board's annual ethics briefing. From 1 p.m. to 2 p.m. the Board will hear reports from its subcommittees and consider next steps for its work in FY 2007. The meeting will adjourn at 2 p.m. A final agenda will be available from Mary Grace Lucier on January 12, 2007.

A summary of the activities at the closed session and related matters which are informative to the public consistent with the policy of Title 5 U.S.C. 552b(c) will be available to the public. Records will be kept of all Board proceedings and will be available for public inspection at the office of the National Board for Education Sciences, Room 627H, 555 New Jersey Ave., NW., Washington, DC 20208.

Dated: January 3, 2007.

**Grover J. Whitehurst,**  
*Director, Institute of Education Sciences.*

**BILLING CODE 4000-01-M****ELECTION ASSISTANCE COMMISSION****Information Collection Activity; Study  
of Alternative Voting Methods****AGENCY:** Election Assistance Commission (EAC).**ACTION:** Notice; request for comments.**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed

010262

information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before March 9, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005, ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the survey, please write to the above address or call Ms. Laiza N. Otero at (202) 566-3100. You may also view the proposed collection instrument by visiting our Web site at <http://www.eac.gov>.

**SUPPLEMENTARY INFORMATION:**

**Title:** Study of Alternative Voting Methods.

**OMB Number:** Pending.

**Type of Review:** Regular submission.

**Needs and Uses:** Section 241 of the Help America Vote Act (HAVA) requires the U.S. Election Assistance Commission (EAC) to periodically study election administration issues with the goal of promoting voting methods and improving election administration. Section 241(b)(10) instructs the EAC to study the feasibility and advisability of conducting elections for Federal office on different days, at different places, and during different hours. In addition, it recommends the study include a discussion of the advisability of establishing a uniform poll closing time and establishing:

(A) A legal public holiday under section 6103 of title 5 United States Code, as the date on which general elections for Federal office are held;

(B) The Tuesday after the 1st Monday in November, in every even numbered

year, as a legal public holiday under such section;

(C) A date other than the Tuesday next after the 1st Monday in November, in every even numbered year as the date on which general elections for Federal office are held; and

(D) Any date described in subparagraph (C) as a legal public holiday under such section.

To provide information to the States and the Congress on the feasibility and advisability of using alternative days, times, and places to conduct Federal elections, the EAC seeks to survey voters to better understand their motivations and perceptions of impediments to voting. The survey will provide insights into the public's perceptions of particular aspects of the voting process.

**Affected Public:** Citizens.

**Number of Respondents:** 3,000.

**Responses per Respondent:** 1.

**Estimated Burden per Response:** .25 hours.

**Estimated Total Annual Burden Hours:** 750 hours.

**Frequency:** One time collection.

Information will be collected through a statistically valid survey of 3,000 registered voters to determine how they currently respond to alternative voting methods (if in a State that offers them) or would respond to alternative voting methods (if in a State that does not allow them). The survey will be representative of the 50 States, the District of Columbia, and U.S. territories. The topics that will be explored include, but are not limited to:

- a. Voting by mail
- b. Voting at a consolidated polling center
- c. Voting online
- d. Voting earlier/later on Election Day
- e. Voting on weekend day
- f. Voting on day other than first Tuesday in November
- g. Making the day on which Federal elections are held a Federal holiday
- h. No alternative voting method, prefer status quo

The survey will gather data regarding each respondent's background. Background information will include, but is not limited to, (1) Respondents' voter registration history, (2) respondents' voting history, and (3) standard demographic questions covering (age, ethnicity, education, employment status, and income bracket).

**BILLING CODE 6820-KF-M**

**DEPARTMENT OF ENERGY**

**Environmental Management Site-Specific Advisory Board, Savannah River Site**

**AGENCY:** Department of Energy.

**ACTION:** Notice of open meeting.

**SUMMARY:** This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Savannah River Site. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of this meeting be announced in the **Federal Register**.

**DATES:** Monday, January 22, 2007, 1 p.m.-5 p.m.; Tuesday, January 23, 2007, 8:30 a.m.-4 p.m.

**ADDRESSES:** Crowne Plaza, 130 Shipyard Dr., Hilton Head, SC 29928.

**FOR FURTHER INFORMATION CONTACT:** Gerri Flemming, Closure Project Office, Department of Energy Savannah River Operations Office, P.O. Box A, Aiken, SC 29802; Phone: (803) 952-7886.

**SUPPLEMENTARY INFORMATION:**

**Purpose of the Board:** The purpose of the Board is to make recommendations to DOE in the areas of environmental restoration, waste management, and related activities.

**Tentative Agenda**

*Monday, January 22, 2007*

1 p.m. Combined Committee Session  
5 p.m. Adjourn

*Tuesday, January 23, 2007*

8:30 a.m. Approval of Minutes, Agency Updates  
9:45 a.m. Public Comment Session  
10 a.m. Chair and Facilitator Update  
10:45 a.m. Strategic & Legacy Management Committee Report  
11:45 a.m. Public Comment Session  
12 p.m. Lunch Break  
1 p.m. Nuclear Materials Committee Report  
1:30 p.m. Waste Management Committee Report  
2 p.m. Public Comment Session  
2:15 p.m. Facility Disposition & Site Remediation Committee Report  
3 p.m. Administrative Committee Report  
4 p.m. Adjourn

If needed, time will be allotted after public comments for items added to the agenda and administrative details. A final agenda will be available at the meeting Monday, January 22, 2007.

**Public Participation:** The meeting is open to the public. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements

010263

SEC. 241. <<NOTE: 42 USC 15381.>> PERIODIC STUDIES OF ELECTION  
ADMINISTRATION ISSUES.

(a) <<NOTE: Public information.>> In General.--On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b), with the goal of promoting methods of voting and administering elections which--

(1) will be the most convenient, accessible, and easy to use

for voters, including members of the uniformed services and overseas voters, individuals with disabilities, including the blind and visually impaired, and voters with limited

proficiency in the English language;

(2) will yield the most accurate, secure, and expeditious system for voting and tabulating election results;

(3) will be nondiscriminatory and afford each registered and

eligible voter an equal opportunity to vote and to have that vote counted; and

(4) will be efficient and cost-effective for use.

(b) Election Administration Issues Described.--For purposes of subsection (a), the election administration issues described in this subsection are as follows:

(1) Methods and mechanisms of election technology and voting

systems used in voting and counting votes in elections for Federal office, including the over-vote and under-vote notification capabilities of such technology and systems.

(2) Ballot designs for elections for Federal office.

(3) Methods of voter registration, maintaining secure and accurate lists of registered voters (including the establishment

list

of a centralized, interactive, statewide voter registration

list linked to relevant agencies and all polling sites), and

ensuring that registered voters appear on the voter registration list at the appropriate polling site.

(4) Methods of conducting provisional voting.

(5) Methods of ensuring the accessibility of voting, registration, polling places, and voting equipment to all voters, including individuals with disabilities (including the blind and visually impaired), Native American or Alaska Native citizens, and voters with limited proficiency in the English language.

(6) Nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office.

(7) Identifying, deterring, and investigating methods of voter intimidation.

(8) Methods of recruiting, training, and improving the performance of poll workers.

(9) Methods of educating voters about the process of registering to vote and voting, the operation of voting

mechanisms, the location of polling places, and all other aspects of participating in elections.

(10) The feasibility and advisability of conducting elections for Federal office on different days, at different places, and

[[Page 116 STAT. 1687]]

during different hours, including the advisability of establishing a uniform poll closing time and establishing--

(A) a legal public holiday under section 6103 of title 5, United States Code, as the date on which general elections for Federal office are held;

(B) the Tuesday next after the 1st Monday in November, in every even numbered year, as a legal

public

holiday under such section;

(C) a date other than the Tuesday next after the

1st

Monday in November, in every even numbered year as the date on which general elections for Federal office are held; and

(D) any date described in subparagraph (C) as a legal public holiday under such section.

(11) Federal and State laws governing the eligibility of persons to vote.

(12) Ways that the Federal Government can best assist State and local authorities to improve the administration of elections for Federal office and what levels of funding would be necessary to provide such assistance.

(13) (A) The laws and procedures used by each State that govern--

(i) recounts of ballots cast in elections for Federal office;

(ii) contests of determinations regarding whether votes are counted in such elections; and

(iii) standards that define what will constitute a vote on each type of voting equipment used in the State to conduct elections for Federal office.

(B) The best practices (as identified by the Commission) that are used by States with respect to the recounts and contests described in clause (i).

(C) Whether or not there is a need for more consistency among State recount and contest procedures used with respect to elections for Federal office.

(14) The technical feasibility of providing voting materials

in eight or more languages for voters who speak those languages and who have limited English proficiency.

(15) Matters particularly relevant to voting and administering elections in rural and urban areas.

(16) Methods of voter registration for members of the uniformed services and overseas voters, and methods of ensuring that such voters receive timely ballots that will be properly and expeditiously handled and counted.

(17) The best methods for establishing voting system performance benchmarks, expressed as a percentage of residual vote in the Federal contest at the top of the ballot.

(18) Broadcasting practices that may result in the broadcast

of false information concerning the location or time of operation of a polling place.

(19) Such other matters as the Commission determines are appropriate.

(c) Reports.--The Commission shall submit to the President and to the Committee on House Administration of the House of Representatives and the Committee on Rules and Administration of the Senate a report on each study conducted under subsection (a) together with such recommendations for administrative and legislative action as the Commission determines is appropriate.

[[Page 116 STAT. 1688]]

## **Summary of Public Comments Received on the Information Collection Materials for Study of Alternative Voting Methods; OMB Number Pending**

### **Public Comment Summary:**

The Study for Alternative Voting Methods received one comment regarding the Information Collection Materials. Overall, the comment demonstrated a support for the objectives of this study. Specifically, the comment indicated support for a key issue that will be examined in this study, namely, making the day on which Federal elections are held a Federal holiday. Providing several justifications for making Election Day a Federal holiday, the comment concluded that the benefits outweigh any drawbacks. There were no suggestions for changes to the study.

### **Action Taken:**

No action is necessary.

# PAPERWORK REDUCTION ACT SUBMISSION

Please read the instructions before completing this form. For additional forms or assistance in completing this form, contact your agency's Paperwork Clearance Officer. Send two copies of this form, the collection instrument to be reviewed, the Supporting Statement, and any additional documentation to: **Office of Information and Regulatory Affairs, Office of Management and Budget, Docket Library, Room 10102, 725 17th Street NW, Washington, DC 20503.**

1. Agency/Subagency originating request Election Assistance Commission	2. OMB control number <span style="float: right;">b. <input checked="" type="checkbox"/> None</span> a. _____
3. ## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
  - Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.
  - Enter the total annual recordkeeping and reporting hour burden.
  - Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
    - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.
    - "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
- Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
- Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-1 is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.

4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-1), describe any methods used to minimize burden.

6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:

- \* requiring respondents to report information to the agency more often than quarterly;
- \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
- \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:

- \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
- \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-1.

- \* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

- \* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

- \* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

010273

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

010274

## SUPPORTING STATEMENTS

OMB Control Number: XXXX-XXXX  
U.S. Election Assistance Commission  
Alternative Voting Methods Study

### A. JUSTIFICATION

#### 1. Explain the circumstances that make the collection of information necessary.

Section 241 of the Help America Vote Act (HAVA) (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (USEAC or EAC) to periodically study election administration issues with the goal of promoting voting methods and improving election administration. Section 241 (b)(10) (42 U.S.C. 15301) instructs the EAC to study the feasibility and advisability of conducting elections for Federal office on different days, at different places, and during different hours. The study should include a discussion of the advisability of establishing a uniform poll closing time and establishing:

- A legal public holiday under section 6103 of title 5 United States Code, as the date on which general elections for Federal office are held;
- The Tuesday after the 1<sup>st</sup> Monday in November, in every even numbered year, as a legal public holiday under such section;
- A date other than the Tuesday next after the 1<sup>st</sup> Monday in November, in every even numbered year as the date on which general elections for Federal office are held; and

#### 2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.

The information will be collected through a statistically valid survey of 3,000 U.S. citizens and residents of Puerto Rico to determine how they respond to alternative voting methods (if in a state that offers them) or would respond to alternative voting methods (if in a state that does not allow them). This survey will be representative of the entire U.S. and Puerto Rico. The topics that will be explored include, but are not limited to: voting by mail, voting at consolidated polling center, voting online, voting earlier/later on Election Day, voting on weekend day, voting on day other than first Tuesday in November, making the day on which Federal elections are held a Federal holiday.

Standard background information of respondent will also be gathered and will include but not be limited to, (1) respondents' voter registration history, (2) respondents' voting history, (3) standard demographic questions covering: age, ethnicity, education, employment status, and income bracket.

The information will be assessed and evaluated to determine the feasibility and advisability of establishing a legal public holiday on election-day by making the first Tuesday after the 1<sup>st</sup> Monday in November a legal public holiday, or making another date on which elections will fall a legal public holiday.

010275

Based upon the information gathered in the study, the EAC shall submit a report to the President and to the Committee on House Administration of the House of Representatives and the Committee on Rules and Administration of the Senate a report on administrative and legislative action as the EAC determines is appropriate.

The information will be available to the public once it is completed. This information collection is being carried out only once for purposes of meeting the statutory requirements under HAVA.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The collection of information does utilize Computer Assisted Telephone Interviewing (CATI). CATI will be used to conduct the public opinion survey. CATI is a telephone surveying technique in which the interviewer follows a script by a software application. The software is able to customize the flow of the questionnaire based on the answers provided, as well as information already known about the participant.

**4. Describe efforts to identify duplication.**

This is the first study conducted by the EAC on the part of HAVA Section 241 (b) (10). The study contractor has reviewed previous and contemporaneous public opinion surveys to eliminate duplication.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

This collection of information does not involve small businesses or other small entities.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

Section 241 of the Help American Vote Act requires the EAC to study election administration issues with the goal of promoting voting methods and improving election administration.

If the collection is not conducted, the EAC will be unable to fulfill Section 241 of HAVA (42 U.S.C. 15301). Furthermore, without this information the EAC will be unable to provide States and Congress with the feasibility and advisability of using alternative days, times and places to conduct Federal elections. The determination of whether these alternative voting methods are feasible rests upon the collection of this information.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

Not applicable.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received**

010276

**in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

The Study for Alternative Voting Methods received one comment regarding the Information Collection Materials. Overall, the comment demonstrated a support for the objectives of this study. Specifically, the comment indicated support for a key issue that will be examined in this study, namely, making the day on which Federal elections are held a Federal holiday. Providing several justifications for making Election Day a Federal holiday, the comment concluded that the benefits outweigh any drawbacks. There were no suggestions for changes to the study and subsequently no action is necessary.

In drafting the survey questionnaire, the study contractor consulted previous public opinion research conducted by The Pew Research Center for the People and the Press. The study contractor also consulted public opinion polls conducted by CBS News and NBC news. The study contractor also consulted with the U.S. Postal Service.

The study contractor, IFES, has more than ten years of experience in conducting innovative and effective public opinion research around the world. IFES' survey and focus group capabilities provide relevant and reliable information on the opinions and attitudes in a country to government officials, development professionals, political actors, academics and others interested in democratic and political development. However, a key strength of IFES' research is its use of a standard set of questions gauging sociopolitical development in most surveys we perform. Data from these questions can help researchers compare attitudes and opinions from country to country and across time in a single nation. To date, IFES has conducted more than 60 public opinion research projects in 24 countries around the world.

In addition to its survey capability, IFES has worked with election assistance and democratic development in over 100 countries since 1987. IFES' international professionals ensure that democracy solutions are home grown. IFES professionals provide technical assistance across many areas of democracy development. With its experience promoting democracy abroad, IFES has begun to work to strengthen democracy in the U.S. IFES works directly with local, state, federal and private partners in the U.S. to support technical assistance initiatives and projects. Under a contract enacted in late September 2005 under the U.S. Election Assistance Commission (EAC) IFES, working with The Pollworker Institute and the League of Women Voters (LWV), is finalizing a year-long research project aimed at improving pollworker recruitment, training and retention in the United States. The project will develop better recruitment, training and retention methods to improve the Election Day experience for voters and election officials.

The study contractor also consulted with The Election Center. The Election Center is a nonprofit organization that works to promote and improve democracy in the U.S. The Center has experience performing research for governmental units concerning the similarities and differences in state or local laws, regulations, or practices concerning voter registration and elections administration. The Center also designs regional workshops and seminars on methods to improve operations and enhance efficiency of government election units.

010277

In the PRA Federal Register Notice, the estimated total annual burden hours was miscalculated and based upon the assumption that the estimated burden per response was 25 minutes, but the estimated burden per response is 15 minutes, thus the estimated burden per response is 750 hours.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

We will not provide any payment or gift to respondents in this collection.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

Respondents will be given a verbal pledge of confidentiality prior to volunteering to participate.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

The collection does not include sensitive or private questions.

**12. Provide an estimate in hours of the burden of the collection of information.**

The study will gather information from 3,000 respondents. The estimated reporting burden is 750 hours (3,000 respondents X 15 minutes for interview) at no cost to the respondent.

In the PRA Federal Register Notice, the estimated total annual burden hours was miscalculated and based upon the assumption that the estimated burden per response was 25 minutes, but the estimated burden per response is 15 minutes, thus the estimated burden per response is 750 hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

We have identified no reporting and recordkeeping "non-hour cost" burdens associated with this proposed collection of information.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$113,241. This estimate includes \$82,044 for the public opinion research firm, \$27,915 for personnel, \$3,064 office expenses, and \$219 for transportation.

- We estimate \$82,044 for the public opinion research firm. This will include services for programming the survey instrument into a Computer Assisted Telephone Interviewing (CATI) system so that survey questions, instruction and response categories are displayed in the computer, conduct of 3,000 completed interviews, quality control, data entry, coding of data and delivery of final data.
- We estimate \$27,915 for personnel to design the study, oversee its implementation,

010278

- translate the questionnaire into Spanish, analyze data, and draft a final report.
- We estimate \$3,064 for office expenses.
- We estimate \$219 for any transportation related to this project.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into a report by the study contractor. The document will be made available to the President and Congress per HAVA Section 244. Additionally, the documents will be available to the general public per FOIA and may be posted on the Internet website of the EAC.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

The respondent universe for this study includes all adults aged 18 years who reside in one of the 50 U.S. states. The sample will be 3,000 respondents, and we aim to obtain a response rate of 30%. This is the first collection for this federal agency of this kind.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring**

**specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

The survey will be conducted by phone in both English and Spanish using random digit dialing (RDD) technology. In RDD surveys, telephone exchanges in the United States are selected at random according to the specifications of the sampling plan. The last digits needed to complete the phone number are generated completely at random. This design ensures full implementation of the sampling plan and ensures that those with listed and unlisted numbers have an equal chance of being included in the sample. Within each contacted household, a respondent will be selected among all adults in the household aged 18 years and who are citizens.

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

To maximize the chances of making contact with a potential respondent, as many as 10 attempts will be made to complete an interview at every sampled household, and calls will be staggered over times of the day and days of the week.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

Organizations such as The Pew Research Center for the People and the Press, NBC News, and CBS News have used these questions in previous surveys, thus through other organizations these questions have already been refined. Additionally, we pre-tested the instrument on 9 persons. Demographics describing the 9 respondents are listed in the tables below.

Education	Number of Respondents
High School or Less	2
Some College	2
College Graduate	2
Post Graduate	3

Age	Number of Respondents
Under 30	3
30 - 44	2
45 - 60	2
61 +	2

Race	Number of Respondents
White/White Latino	7
African	2
American/Black/Black Latino	

Registered to Vote?	Number of Respondents
Yes	7
No	2

010280

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

Contractor contact: Dr. Karen Buerkle; 202-350-6741; [kbuerkle@ifes.org](mailto:kbuerkle@ifes.org)

## ALTERNATIVE VOTING METHODS STUDY

Hello, my name is \_\_\_\_\_. We are conducting an important study for the U.S. Election Assistance Commission. This survey is for research purposes only, we are not selling anything and we are not associated with or being paid by any political party or candidate. Your participation is voluntary and will only take a few minutes of your time. All your answers will be strictly confidential. Am I speaking with someone 18 or older?

- S1 To make sure our survey includes many different kinds of people, I need to ask a few questions about who lives in your household. How many adults age 18 or older live in your household?
- 1 One—GO TO S2
  - 2 Two or more—GO TO S3

ASK IF ONLY ONE ADULT AGE 18+ IN HH (S1=1)

- S2 May I please speak to that person?
- 1 Continue with current respondent—GO TO Q1
  - 2 New respondent being brought to phone—GO TO INTRO2
  - 3 New respondent not available—SCHEDULE CALL BACK
  - 9 Refused—TERMINATE

ASK IF MORE THAN ONE ADULT AGE 18+ IN HH (S1=2)

- S3 May I please speak with the adult (18+) in your household who has most recently had a birthday. Are you this person?
- 1 Yes—GO TO Q1
  - 2 No—ASK TO SPEAK TO THAT PERSON AND REINTRODUCE THE SURVEY

ASK ALL

- Q1 How would you rate your neighborhood as a place to live? Would you say it is excellent, good, fair or poor?
- 1 Excellent
  - 2 Good
  - 3 Fair
  - 4 Poor
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL IN UNITED STATES

- Q2 Can you please tell me which state you currently live in?
- 1 Gave response [**Record verbatim—OK to use official two letter abbreviations**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL IN UNITED STATES

- Q3a And have you been living in this state at least 9 months?
- 1 Yes
  - 2 No [TERMINATE INTERVIEW]
  - 8 Don't know [DO NOT READ] [TERMINATE INTERVIEW]
  - 9 Refused [DO NOT READ] [TERMINATE INTERVIEW]

ASK ALL IN PUERTO RICO

- Q3a Have you been living in Puerto Rico at least 9 months?
- 1 Yes
  - 2 No [TERMINATE INTERVIEW]
  - 8 Don't know [DO NOT READ] [TERMINATE INTERVIEW]
  - 9 Refused [DO NOT READ] [TERMINATE INTERVIEW]

ASK ALL

- Q3b And are you a U.S. citizen or not?
- 1 Yes
  - 2 No [TERMINATE INTERVIEW]
  - 8 Don't know [DO NOT READ] [TERMINATE INTERVIEW]
  - 9 Refused [DO NOT READ] [TERMINATE INTERVIEW]

ASK ALL

- Q4 Switching topics, how much information do you feel you have about politics and current events in the United States today? Do you have a great deal of information, a fair amount, not very much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not very much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q5a How much information do you feel you have about the way elections are organized in your community such as the rules about who can vote, where to go to vote, etc? Do you have a great deal of information, a fair amount, not very much or no information at all?
- 1 Great deal
  - 2 Fair amount
  - 3 Not very much
  - 4 None at all
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q5b And how often would you say you vote in elections—always, nearly always, part of the time, seldom or never?
- 1 Always
  - 2 Nearly always
  - 3 Part of the time
  - 4 Seldom
  - 5 Never
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q6 These days, many people are so busy they can't find time to register to vote or move around so often they don't get a chance to re-register. Are you CURRENTLY registered to vote or haven't you been able to register so far? (Trend Question: Pew Research Center Oct. 11, 2006)
- [IF RESPONDENT ANSWERS YES, ASK: Are you registered to vote at your CURRENT address or are you registered to vote at some OTHER previous address]
- 1 Yes, registered at current address
  - 2 Yes, registered at other/previous address
  - 3 No, not registered
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF NOT REGISTERED TO VOTE (Q6 = 3)

- Q7a What would you say is the MAIN reason you're not registered to vote? [OPEN END; ACCEPT UP TO THREE RESPONSES BUT DO NOT PROBE FOR MORE THAN ONE]
- 1 Gave response [**Record verbatim**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF REGISTERED TO VOTE (Q6 = 1 or 2)

- Q7b Can you please tell me which state you are currently registered to vote in?
- 1 Gave response [**Record verbatim—OK to use official two letter abbreviations**]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL IN UNITED STATES

- Q8a We understand from talking to lots of people, that not everyone votes in every election. Did you vote in the 2006 Election this past November for either a Senator or Congressperson?
- 1 Yes
  - 2 No
  - 3 Not 18 at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF DID NOT VOTE 2006 (Q8a=2 or 3)

- Q8b Can you please tell me why you did not vote in the 2006 elections?
- 1 Gave response
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q9a And did you vote in the 2004 (in US: Presidential election between George Bush and John Kerry) (in PR: election for Resident Commissioner)?
- 1 Yes
  - 2 No
  - 3 Not 18 at the time/Not eligible [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF DID NOT VOTE 2004 (Q9a=2 or 3)

- Q9b Can you please tell me why you did not vote in the 2004 elections?
- 1 Gave response
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

- Q10a And thinking about the upcoming 2008 election for (in US: President) (in PR: Resident Commissioner), would you say it is more likely that you will vote or more likely that you will NOT vote?
- 1 Likely to vote
  - 2 Likely to NOT vote
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF LIKELY TO VOTE (Q10a=1)

Q10b Would you say you are absolutely certain to vote, very likely to vote, or fairly likely to vote?

- 1 Absolutely certain to vote
- 2 Very likely to vote
- 3 Fairly likely to vote
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF UNLIKELY TO VOTE (Q10a=2)

Q10c Would you say you are absolutely certain not to vote, very likely not to vote, or fairly likely not to vote?

- 1 Absolutely certain not to vote
- 2 Very likely not to vote
- 3 Fairly likely not to vote
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Q11 How much confidence do you have in the system in which votes are cast and counted in (in US: this country) (in PR: Puerto Rico)? Do you have a great deal, fair amount, not very much, or no confidence at all in the system in which votes are cast and counted?

- 1 Great deal
- 2 Fair amount
- 3 Not very much
- 4 None at all
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Q12 There are many ways for people to vote, and some prefer one way over another. If you had the choice of voting in a booth at a polling place on Election Day or over the Internet or through the mail during the weeks leading up to Election Day, which would you prefer? (Trend question: Pew Research Center March 2000)

- 1 Vote in booth at polling place on Election Day
- 2 Vote over the Internet
- 3 Vote through the mail during the weeks leading up to Election Day
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Q13 Some people have suggested reforms to the election process. Would you strongly favor somewhat favor, somewhat oppose or strongly oppose (insert item).  
How about (insert item)— strongly favor somewhat favor, somewhat oppose or strongly oppose?

**RANDOMIZE A thru C**

- A (ASK ONLY IN US) setting a uniform poll closing time on election night, so that all polling places across the country close at the same time regardless of the timezone? (Trend question: CBS News December 2000)?
- B changing the day of the election from Tuesday to a weekend so that people would be able to vote on either Saturday or Sunday [IF ASKED, the polls would be open both days and you could choose if you wanted to vote on Saturday or Sunday]?
- C holding elections over multiple WEEKdays?
- D (ASK ONLY IN US) making Election Day into a federal holiday? This would mean that schools would be closed and many people would have the day off work on Election Day.
  - 1 Strongly favor
  - 2 Somewhat favor
  - 3 Somewhat oppose
  - 4 Strongly oppose
  - 5 Depends what day [DO NOT READ]
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK IF OPPOSE FEDERAL HOLIDAY (Q13D=3, 4)

Q14a Can you please tell me why you oppose making Election Day a Federal holiday?

- 1 Gave response [**Record verbatim**]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF FAVOR HOLIDAY or DEPENDS WHAT DAY (Q13D= 1, 2, or 5)

Q14b And would you prefer the holiday to be on our traditional Election Day, on the first Tuesday in November, an already existing Federal Holiday, or some other day or would it make no difference to you?

- 1 Traditional Election Day – first Tuesday in November
- 2 Existing Federal Holiday
- 3 Some other day
- 4 Makes no difference
- 8 Don't Know [DO NOT READ]
- 9 No Answer/Refused [DO NOT READ]

ASK ALL

Q15 I am going to read out a number of different ways of voting some people are talking about. For each, please tell me if you think it will make you PERSONALLY more likely to vote, less likely to vote, or would it make no difference in the likelihood you will vote in future elections? Would (insert) make you PERSONALLY more likely to vote, less likely to vote, or would it make no difference to YOU?

**RANDOMIZE A thru G**

- A Giving you the option to vote in-person or by mail
- B Giving you the option to vote at any polling station in your area
- C Giving you the option to vote in person or online
- D Extending the hours the polls are open on Election Day so you could vote earlier or later
- E Holding elections over the whole weekEND so that you have the option of voting on either Saturday or Sunday
- F Holding elections over two week DAYS
- G (Ask only in US) Making the day on which elections are held a Federal holiday
  - 1 More likely to vote
  - 2 Less likely to vote
  - 3 Make no difference
  - 8 Don't know [DO NOT READ]
  - 9 Refused [DO NOT READ]

ASK ALL

Q16 What ONE of these changes that we just talked about, if any, would make the biggest difference in your ability to be able to vote in elections? [RANDOMIZE RESPONSE OPTIONS AND READ OUT]

- 1 Option to vote in-person or by mail
- 2 Option to vote at any polling station in your area
- 3 Option to vote in person or online
- 4 Extending the hours the polls are open on Election Day so you could vote earlier or later
- 5 Holding elections over the whole weekEND so that you have the option of voting on either Saturday or Sunday
- 6 Holding elections over two week DAYS
- 7 Making the day on which elections are held a Federal holiday
- 8 No change will make more likely [DO NOT READ]
- 98 Don't know [DO NOT READ]
- 99 Refused [DO NOT READ]

ASK ALL

Q17 Some jurisdictions are discussing an election system in which all residents cast their vote through the mail in the weeks leading up to Election Day, rather than going to a polling place to vote in an election booth. Do you strongly favor, somewhat favor, somewhat oppose or strongly oppose replacing voting booths with voting by mail? (Trend Question: Pew Research Center Oct. 11, 2006)

- 1 Strongly favor
- 2 Somewhat favor
- 3 Somewhat oppose
- 4 Strongly oppose
- 8 Don't Know [DO NOT READ]
- 9 No Answer/Refused [DO NOT READ]

ASK ALL

Q18 Now I'm going to ask you to compare a traditional voting booth with voting over the Internet. For each item I mention, please tell me whether you think that a traditional voting booth or voting over the Internet would be a better method for addressing that concern. If you think that both methods would be equally good, just say so. Do you think a traditional voting booth or voting over the internet would be better at (insert item) or do you think that both methods are equally good at (insert item).

**RANDOMIZE A thru C**

- A Preventing fraud
- B Ensuring an accurate vote count.
- C Encouraging greater voter participation
  - 1 Traditional voting booth
  - 2 Internet voting
  - 3 Both equally good
  - 4 Neither good [DO NOT READ]
  - 8 Don't Know [DO NOT READ]
  - 9 No Answer/Refused [DO NOT READ]

ASK ALL

Q19 And how about comparing a traditional voting booth with voting through the MAIL. Do you think a traditional voting booth or voting through the MAIL would be better at (insert item) or do you think that both methods are equally good at (insert item).

**RANDOMIZE A thru C**

- A Preventing fraud
- B Ensuring an accurate vote count.
- C Encouraging greater voter participation
  - 1 Traditional voting booth
  - 2 Voting through the mail
  - 3 Both equally good
  - 4 Neither good [DO NOT READ]
  - 8 Don't Know [DO NOT READ]
  - 9 No Answer/Refused [DO NOT READ]

010289

ASK IF VOTED IN 2004 OR 2006 (Q8a or Q9a=1)

Q20 For the next few questions, I would like you to think about your experiences voting in the (IF Q8a=1: the 2006 congressional elections) (IF in US AND Q8a=2 AND Q9a=1: 2004 presidential election) (IF in PR AND Q9a=1: 2004 election for Resident Commissioner). Do you recall if you voted BEFORE Election Day, that is at an early voting site or with an absentee ballot, OR did you vote in person ON Election Day?

- 1 Before Election Day - Early Voting Site/Absentee
- 2 In person on Election Day
- 3 Dropped off absentee ballot on Election Day [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF VOTED BEFORE ELECTION DAY (IF Q20 = 1)

Q21 And when you voted BEFORE Election Day in the (IF Q8a=1: 2006 elections) (IF Q8a=2 AND Q9a=1: 2004 elections), do you recall if you voted at an early voting site or through the mail?

- 1 Voted at early voting site
- 2 Voted through the mail
- 3 Did not vote before Election Day [DO NOT READ]
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF VOTED ON ELECTION DAY (IF Q20 = 2)

Q22 And were you assigned to a polling place or were you allowed to vote at any polling place in your area?

- 1 Assigned polling place
- 2 Allowed to vote at any polling place in area
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

Now I have just a few questions so we can describe the people who took part in our survey.

D1 Record gender

- 1 Male
- 2 Female

D2 What is your age?

Record range 18-96

- 97 97 or older
- 98 Don't know [DO NOT READ]
- 99 Refused [DO NOT READ]

D3 What is the highest level of education you received?

- 1 High School or less
- 2 Some College
- 3 College Graduate
- 4 Post graduate
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

D4 Do you or anyone in your household own a business?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

D5a Which of the following best describes your current employment status—employed, self-employed, retired and not working, are you not in the labor force, or are you unemployed and looking for work?

- 1 Employed
- 2 Self-employed
- 3 Retired and not working
- 4 Not in the labor force [INTERVIEWER, this includes homemakers]
- 6 Unemployed and looking for work
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED OR SELF EMPLOYED (D5a=1 or 2)

D5b Is this part-time or full-time?

- 1 Part-time
- 2 Full-time
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF EMPLOYED (D5a=1)

D5c What is your MAIN occupation?

- 1 Gave response
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF GAVE RESPONSE (D5c=1)

D5d And would you characterize this occupation as...?

- 1 Executive/ high-level management
- 2 Professional/ middle manager
- 3 Technical/ administrative/ clerical
- 4 Service worker/ protective services
- 5 Skilled labor
- 6 Unskilled labor
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK ALL

D6 Are you yourself of Latino or Hispanic origin or descent, such as (Ask in US: Mexican, Cuban,) Puerto Rican, Cuban, or some other Latin American background?

- 1 Yes
- 2 No
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

D7 What is your race? (If Latino ask :) Are you white Latino, black Latino or some other race? (Else:) Are you white, African American or black, Asian or some other race?

- 1 White/White Latino
- 2 African American/Black/Black Latino
- 3 Asian/Asian Latino
- 4 Other
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

D8 Last year, that is in 2006, what was your total household income from all sources before taxes? Was it under or over \$40,000?

- 1 Under \$40,000
- 2 Over \$40,000
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF INCOME LESS THAN \$40,000 (D8=1)

D9a Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 Less than \$10,000
- 2 \$10,000 to under \$15,000
- 3 \$15,000 to under \$20,000
- 4 \$20,000 to under \$25,000
- 5 \$25,000 to under \$30,000
- 6 \$30,000 to under \$35,000 or
- 7 \$35,000 to under \$40,000
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

ASK IF INCOME MORE THAN \$40,000 (D8=2)

D9b Now just stop me when I get to the right category. Was your income ...

**Read responses**

- 1 \$40,000 to under \$50,000
- 2 \$50,000 to under \$75,000
- 3 \$75,000 to under \$100,000
- 4 \$100,000 to under \$150,000 or
- 5 \$150,000 or more
- 8 Don't know [DO NOT READ]
- 9 Refused [DO NOT READ]

**Thank you. That is all of the questions I have for you.**

\*This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Respondent's reply to this information collection is voluntary; respondents are required to be U.S. citizens. This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 000000000 (expires 00/00/0000). The time required to complete this information collection is estimated to average 15 minutes per response. Comments regarding this burden estimate should be sent to the Program Manager – 2007 Alternative Voting Methods Study, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Subject: Alternative Voting Methods Study

Karen,

The last day for public comments regarding the Alternative Voting Methods survey instrument posted on 1/9/2007 has passed (last day was March 9, 2007). To proceed with clearance, the Contractor should finalize the survey instrument (incorporate all comment, make revisions, etc.). Then they must publish it on the Federal Register once more for 30 days and submit the ICR package to OMB. The OMB package includes:

Contractor Responsibilities - prepare all information and supporting documents required for the submission package

Provide IC instrument in its final form

Information on OMB Form 83-I

Supporting Statement A - joint Privacy Impact Assessment (PIA)

010294

Supporting Statement B (if using statistical methods)  
Copy of 60-day Federal Register Notice  
Copy of 30-day Federal Register Notice  
Summary of public comments received, including actions in response to  
the comments.  
Copy of public comments received  
Copies of pertinent statutory authority and regulation

EAC Responsibilities:

Review and approve documents prepared by Contractor  
Submit ICR package to OMB via their online ROCIS system

The same applies to the focus groups for the free absentee postage study. As always, I am happy to provide you the necessary information to get these studies through PRA. For sample ICR submissions, one can go to: <http://www.reginfo.gov/public/do/PRAMain>.

Laiza

Julie and Tom-

Commissioner Hillman has asked me to meet with each of you this morning regarding the sharing of the information of this report with Hill staffers.

Could we have a call at 10:30 or 11:00 this morning to reach a decision on how to proceed with this request?

I understand this is a time-sensitive matter that will need to be resolved by early afternoon.

Thanks

I think we need to get their final documents to the Commissioners prior to review by both the Boards. You see the politics here and everyone wants to make sure their comments were taken care of before they go to these two boards...as to the June public meeting Julie, you and I need to discuss. Let's chat tomorrow sometime when I get a spare minute.  
Thanks

**Subject:** Re: Schedule for completion of Prov. Voting and Voter ID research

I think that a number of months ago we envisioned the Eagleton project culminating with a presentation of both of the papers at a public meeting. We had tentatively scheduled that presentation for the June public meeting. Also, we must provide for a review of these studies to EAC's Standards Board and Board of Advisors.

Clearly, plans have changed although we need to figure out how we have Eagleton present its final papers on Provisional Voting (already planned) and Voter Identification (still in process) to the EAC Standards and Advisory Boards.

Look forward to your suggestions on how best to proceed with wrapping up these two efforts.

Juliet E. Thompson

**From:** Juliet E. Thompson  
**Sent:** 10/30/2005 10:06 PM  
**To:** Thomas Wilkey  
**Subject:** Eagleton/Moritz

I just sent my detailed comments to Eagleton. I stopped short of accusing them of making unfounded conclusions, but I am seriously concerned about all of our research projects on the point of presenting facts versus conclusions based upon assumptions. This was an issue with Kim Brace's report and the summary of it. I think that I caught most of them, but this is something that the research staff should be pointing out. I know I am preaching to the choir when I say that our reports (research and otherwise) have to be beyond reproach. I would rather stop short of reaching sensational conclusions to assure that they are supported in fact.

By way of example, in the Kim Brace draft there was a statement about states having VR databases having superior voter registration management. I am not sure that those two logically derive from one another without additional information and assumptions. The same sort of statements are rampant in the state by state summaries that Eagleton/Moritz provided. We should not accept these as summaries if they don't clean up the unsupported conclusions and unstated assumptions that pervade those documents.

Just so you'll know I am not just griping tonight -- how was your trip home? Hope all was well and that you have arrived/will arrive safely back in DC. You missed a gorgeous weekend here. Hope it was equally nice in NY. I was more or less a slug up until today, but it helped. I can now sit in a chair for more than 30 minutes at a time without a shooting pain in my stomach.

See you tomorrow.

Subject Re: Voter Fraud Contract 

Gavin-

A few answers to your questions:

They have not received contracts but did receive a Statement of Work about a month ago.

That Statement of Work does not reference use of Westlaw or a law clerk. I have no recollection of offering such services. I have, however, had many conversations with Tova and Job. At some point I may have said that because the EAC has Westlaw and legal interns, there may or may not be a way from Job and Tova to avail them of these services.

The Statements of Work developed (see draft attached) were used in place of an RFP. Tova and Job are to serve as consultants on a project that may or may not result in their developing an RFP on voting fraud and intimidation for the EAC.

Subject Voter Fraud Contract

Karen/Tom,

Peggy held a meeting with voting fraud/intimidation contractors. In this meeting they noted that despite the fact that the contract requires them to perform legal research, they do not have the means to do so (no access to Westlaw, etc.). They noted that in discussions with the two of you, they were told that the EAC would provide them access to West Law and, possibly, a law clerk with office space. None of

010314

this is noted in the contract. They claim to have never seen the contract? Do we have their response to our RFP? We will all need to meet to clarify this.

## **Statement of Work**

### **Assistance with developing an Election Assistance Commission (EAC) Voting Fraud and Voter Intimidation Project**

**(Job Serebrov)**

#### **Background**

Section 241 of HAVA enumerates a number of periodic studies of election administration issues in which the U.S. Election Assistance Commission may elect to engage. In general “On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b)”

Sections 241(b) (6) and (7) list the following election administration issues:

(6) Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices.

(7) Identifying, deterring and investigating methods of voter intimidation.

Building on this HAVA reference to studies of voting fraud and voter intimidation, the EAC Board of Advisors has indicated that further study of these issues to determine how the EAC might respond to them is a high priority.

The U.S. Election Assistance Commission (EAC) seeks to identify one or more senior-level project consultants to develop various project activities and studies related to voting fraud and voter intimidation affecting Federal elections.

The consultant(s) must of have knowledge of voting fraud and voter intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and with the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voting fraud and voter intimidation in a balanced, nonpartisan fashion.

010316

## **Duties**

The consultant(s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Identifying what constitutes voting fraud and voter intimidation affecting Federal elections.
2. Performing background research, including Federal and state-by state administrative and case law review related to voting fraud and voter intimidation, and a review of current voting fraud and voter intimidation activities taking place with key government agencies, civic and advocacy organizations. A written summary of this research, and a copy of any source documentation used, will be presented to EAC.
3. Identifying, in consultation with EAC, and convening a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
4. Developing a project scope of work and a project work plan related to voting fraud and voter intimidation. The consultants (s) will develop a draft scope of work and project work plan for EAC's consideration based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of EAC's mission and agency objectives.
5. Authoring a report summarizing the key findings of this preliminary study of voting fraud and voter intimidation. The report will also include suggestions for specific activities that EAC may undertake to address these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may pursue on the topics of voting fraud and voter intimidation.

## **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to, research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

### **Terms and Conditions**

The period of performance for this consulting contract is six months, with a fixed price ceiling of \$XXXXXX for labor. The consultant (s) is expected to work at least 200 hours in performing this work. The EAC estimates that the most efficient distribution of these hours would be as follows: XXXXX. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, as required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. An estimated \$XXXXXX has been allocated for reimbursement for travel and other allowable expenses.

### **Invoicing**

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

Section 241 of HAVA enumerates a number of periodic studies of election administration issues in which the U.S. Election Assistance Commission may elect to engage. In general “On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b)”

Sections 241(b) (6) and (7) list the following election administration issues:

(6) Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices.

(7) Identifying, deterring and investigating methods of voter intimidation.

Building on this HAVA reference to studies of voting fraud and voter intimidation, the EAC Board of Advisors has indicated that further study of these issues to determine how the EAC might respond to them is a high priority.

The U.S. Election Assistance Commission (EAC) seeks to identify one or more senior-level project consultants to develop various project activities and studies related to voting fraud and voter intimidation affecting Federal elections.

The consultant(s) must of have knowledge of voting fraud and voter intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and with the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voting fraud and voter intimidation in a balanced, nonpartisan fashion.

## **Duties**

The consultant(s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Identifying what constitutes voting fraud and voter intimidation affecting Federal elections.
2. Performing background research, including Federal and state-by state administrative and case law review related to voting fraud and voter intimidation, and a review of current voting fraud and voter intimidation activities taking place with key government agencies, civic and advocacy organizations. A written summary of this research, and a copy of any source documentation used, will be presented to EAC.
3. Identifying, in consultation with EAC, and convening a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
4. Developing a project scope of work and a project work plan related to voting fraud and voter intimidation. The consultants (s) will develop a draft scope of work and project work plan for EAC's consideration based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of EAC's mission and agency objectives.
5. Authoring a report summarizing the key findings of this preliminary study of voting fraud and voter intimidation. The report will also include suggestions for specific activities that EAC may undertake to address these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may pursue on the topics of voting fraud and voter intimidation.

## **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to, research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

### **Terms and Conditions**

The period of performance for this consulting contract is six months, with a fixed price ceiling of \$XXXXXX for labor. The consultant (s) is expected to work at least 200 hours in performing this work. The EAC estimates that the most efficient distribution of these hours would be as follows: XXXXX. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, as required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. An estimated \$XXXXXX has been allocated for reimbursement for travel and other allowable expenses.

### **Invoicing**

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

### **Deliverables and Timetable**

Subject Finishing touches on the Statement of Work for the Voter  
Fraud/Intimidation consultants

History

This message has been replied to.

All-

This morning the Commissioners approved the Statement of Work for the Voter Fraud/Voter Intimidation project consultants, with the caveat that some additional language would be added and the SOW polished up.

Tom, Peg and I are scheduled to interview the first candidate tomorrow morning at 10:00 am and will need your edits to this SOW by COB today.

I am attaching the item again, just in case you don't have a copy. Since I have an appointment out of the office and will be leaving at 4:00 today, I ask that you get your changes and edits to Nicole so that she may enter them and get the revised copy to the candidate first thing in the morning .

Thanks for your input on this.

Subject Finalizing a Statement of Work for consultants working on a voter fraud and intimidation project

Greetings-

Tom Wilkey and I are working to schedule a series of conference calls with three consultants we have identified to work with us to help us develop the voter fraud and voter intimidation project.

We have tentatively scheduled a series of telephone interviews with these three consultants (all of whom would be hired to work on this project) for August 17, 18 and 19.

Attached you will find a draft of a Statement of Work that has been developed for these consultants. Dan Murphy's contract was used as a template for this.

I've sent this document to you all because I need your edits and corrections to this document, based on your expertise either in contracting, human resources or the subject area.

Since Tom and I will be interviewing the candidates in two weeks, I'm hoping you can react to the document and get to Tom and Nicole your changes by mid-week next week.

I will then ask Nicole to send the draft statement of work to the three candidates, so they might refer to it, prior to our interviews.

Thanks for your input and assistance.

Subject Your recommendations for consultants to help frame EAC's  
work on voter fraud and intimidation

Ray-

As was discussed yesterday- you will get me the names of consultants and organizations who you think will be good for us to consider employing as consultants to help us frame our work around voter fraud and intimidation.

Once I have a list of names and resumes, I will work with Tom Wilkey to come up with a recommendation of a consultant or consultants to use on this project.

Thanks for your input.

Subject Job Description for a Voter Fraud Project Consultant

Commissioners-

Attached please find a first draft of a short job description outlining EAC's expectations for a project consultant on voter fraud.

As you are aware, Julie has shared with me the resume of someone with an interest in the position. Ray has indicated that he participates in a legal list-serve group that has recently focused on voter fraud issues. This list-serve is probably a good place to "advertise" the consultant opportunity.

Let me know your thoughts on next steps. I look forward to getting this project up and running.

Regards-

**Job Description****U.S. Election Assistance Commission (EAC) Voter Fraud Project Consultant**

The U.S. Election Assistance Commission (EAC) seeks to identify a senior-level project consultant to assist with the oversight and development of a study and possible project examining U.S. election voter fraud.

The consultant must of have a knowledge of voter fraud and an understanding of the complexities, nuances and challenges which surround the topic. The EAC is particularly interested in candidates with experience in elections, with public policy and the law. The consultant must be able to demonstrate an ability to approach the issue of voter fraud in a balanced, nonpartisan fashion.

This consultant, whose contract would run for the period June-November, 2005, would be responsible for conceptualizing a project scope of work around the issue and from that, developing a statement of work for a research project around the topic.

In consultation with EAC staff, EAC Commissioners, and other key EAC stakeholders, the consultant will develop a project plan around voter fraud. The consultant will recommend certain EAC project activities related to voter fraud and will develop a scope of work for an EAC research study on voter fraud. The consultant will oversee and manage various processes related to EAC contracts awarded for work related to voter fraud.

EAC's consultant fees are competitive and are awarded based on the candidates' relevant background and experience.

Subject Re: Voter Fraud Contract 

Carol:

This updated version is helpful to me but may be problematic for our contractors, who do not have a final contract and (I think) are unaware of the deliverable dates listed in this version. Of course, I did not inform them of these deadlines because I did not have them until today.

Unfortunately, the delay in getting the signed contracts out to our selected contractors has already adversely impacted deliverable dates for the contracts to which I have been assigned. Most contractors cannot hire researchers or commit funds without having a contract in hand, so they have had to delay their work.

Subj Re: Voter Fraud Contract [Link](#)  
ect

Gavin-

A few answers to your questions:

They have not received contracts but did receive a Statement of Work about a month ago.

That Statement of Work does not reference use of Westlaw or a law clerk. I have no recollection of offering such services. I have, however, had many conversations with Tova and Job. At some point I may have said that because the EAC has Westlaw and legal interns, there may or may not be a way from Job and Tova to avail them of these services.

The Statements of Work developed (see draft attached) were used in place of an RFP. Tova and Job are to serve as consultants on a project that may or may not result in their developing an RFP on voting fraud and intimidation for the EAC.

Karen/Tom,

Peggy held a meeting with voting fraud/intimidation contractors. In this meeting they noted that despite the fact that the contract requires them to perform legal research, they do not have the means to do so (no access to Westlaw, etc..). They noted that in discussions with the two of you, they were told that the EAC would provide them access to West Law and, possibly, a law clerk with office space. None of this is noted in the contract. They claim to have never seen the contract? Do we have their response to our RFP? We will all need to meet to clarify this.

**EAC CONTRACT #05-66 Consulting Services to Assist EAC  
in the Development of a Voting Fraud and Voter Intimidation Project**

**Background**

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

Due to the unavailability of internal staff, EAC needs to obtain consulting services to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. If so, the consultant would also be tasked to define the scope of the project and prepare a Statement of Work for the EAC to use for a subsequent competitive procurement. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two consultants, who will work jointly to perform the work described below and produce the required deliverables.

**Tasks**

1. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections. Submit this description to the EAC for review and approval.
2. Using the description developed in Task 1, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
3. In consultation with EAC, identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. Provide the Working Group with the results of Tasks 1 and 2 as background information. Develop a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.
4. Prepare a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future research resulting from this effort.

5. Should the EAC decide to pursue one or more of the Task 4 recommendations, Consultant shall define appropriate project scope(s) and prepare Statement(s) of Work sufficient to issue for competitive procurement.

### **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered “work for hire,” and any intellectual property or deliverables, including but not limited to research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

Acceptance of Work Product. The EAC Project Manager for this effort is Margaret Sims, EAC Research Specialist, who will review and approve all work.

### **Period of Performance and Compensation**

The period of performance for this contract is six months, with a fixed price ceiling of \$50,000 for labor. The Consultant is expected to work at least 450 hours during this period. The EAC suggests that these hours be distributed evenly over the period so that the Consultant is working approximately 20 hours per week. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, if required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. A total of \$5,000 has been allocated for reimbursement for travel and other allowable expenses.

### **Invoicing**

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

### **Contract Termination**

This contract can be terminated in advance of the current end date by two weeks' notice in writing by either of the parties.

**Deliverables and Timetable**

Deliverable	Due Date
Project work plan	10 days after contract award
Progress reports	monthly
Description of voting fraud and voter intimidation	October 2005
Summary of background research and associated source documentation	January 2006
Convene working group	February 2006
Summary report describing findings and recommendations for future EAC research	March 2006
Statement(s) of Work for future research project(s)	TBD

## **Statement of Work**

### **Assistance with developing an Election Assistance Commission (EAC) Voting Fraud and Voter Intimidation Project**

**(Job Serebrov)**

#### **Background**

Section 241 of HAVA enumerates a number of periodic studies of election administration issues in which the U.S. Election Assistance Commission may elect to engage. In general “On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b)”

Sections 241(b) (6) and (7) list the following election administration issues:

(6) Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices.

(7) Identifying, deterring and investigating methods of voter intimidation.

Building on this HAVA reference to studies of voting fraud and voter intimidation, the EAC Board of Advisors has indicated that further study of these issues to determine how the EAC might respond to them is a high priority.

The U.S. Election Assistance Commission (EAC) seeks to identify one or more senior-level project consultants to develop various project activities and studies related to voting fraud and voter intimidation affecting Federal elections.

The consultant(s) must of have knowledge of voting fraud and voter intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and with the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voting fraud and voter intimidation in a balanced, nonpartisan fashion.

010339

## **Duties**

The consultant(s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Identifying what constitutes voting fraud and voter intimidation affecting Federal elections.
2. Performing background research, including Federal and state-by state administrative and case law review related to voting fraud and voter intimidation, and a review of current voting fraud and voter intimidation activities taking place with key government agencies, civic and advocacy organizations. A written summary of this research, and a copy of any source documentation used, will be presented to EAC.
3. Identifying, in consultation with EAC, and convening a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
4. Developing a project scope of work and a project work plan related to voting fraud and voter intimidation. The consultants (s) will develop a draft scope of work and project work plan for EAC's consideration based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of EAC's mission and agency objectives.
5. Authoring a report summarizing the key findings of this preliminary study of voting fraud and voter intimidation. The report will also include suggestions for specific activities that EAC may undertake to address these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may pursue on the topics of voting fraud and voter intimidation.

## **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to, research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

## Terms and Conditions

The period of performance for this consulting contract is six months, with a fixed price ceiling of \$XXXXXX for labor. The consultant (s) is expected to work at least 200 hours in performing this work. The EAC estimates that the most efficient distribution of these hours would be as follows: XXXXX. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, as required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. An estimated \$XXXXXX has been allocated for reimbursement for travel and other allowable expenses.

## Invoicing

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

Sections 241(b) (6) and (7) list the following election administration issues:

(6) Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices.

(7) Identifying, deterring and investigating methods of voter intimidation.

Building on this HAVA reference to studies of voting fraud and voter intimidation, the EAC Board of Advisors has indicated that further study of these issues to determine how the EAC might respond to them is a high priority.

The U.S. Election Assistance Commission (EAC) seeks to identify one or more senior-level project consultants to develop various project activities and studies related to voting fraud and voter intimidation affecting Federal elections.

The consultant(s) must of have knowledge of voting fraud and voter intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and with the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voting fraud and voter intimidation in a balanced, nonpartisan fashion.

## **Duties**

The consultant(s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Identifying what constitutes voting fraud and voter intimidation affecting Federal elections.
2. Performing background research, including Federal and state-by state administrative and case law review related to voting fraud and voter intimidation, and a review of current voting fraud and voter intimidation activities taking place with key government agencies, civic and advocacy organizations. A written summary of this research, and a copy of any source documentation used, will be presented to EAC.
3. Identifying, in consultation with EAC, and convening a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
4. Developing a project scope of work and a project work plan related to voting fraud and voter intimidation. The consultants (s) will develop a draft scope of work and project work plan for EAC's consideration based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of EAC's mission and agency objectives.
5. Authoring a report summarizing the key findings of this preliminary study of voting fraud and voter intimidation. The report will also include suggestions for specific activities that EAC may undertake to address these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may pursue on the topics of voting fraud and voter intimidation.

## **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to, research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

010344

## Terms and Conditions

The period of performance for this consulting contract is six months, with a fixed price ceiling of \$XXXXXX for labor. The consultant (s) is expected to work at least 200 hours in performing this work. The EAC estimates that the most efficient distribution of these hours would be as follows: XXXXX. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, as required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. An estimated \$XXXXXX has been allocated for reimbursement for travel and other allowable expenses.

## Invoicing

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

Karen/Tom,

Peggy held a meeting with voting fraud/intimidation contractors. In this meeting they noted that despite the fact that the contract requires them to perform legal research, they do not have the means to do so (no access to Westlaw, etc..). They noted that in discussions with the two of you, they were told that the EAC would provide them access to West Law and, possibly, a law clerk with office space. None of this is noted in the contract. They claim to have never seen the contract? Do we have their response to our RFP? We will all need to meet to clarify this.

Subject Re: Revised Voter ID statement with Eagleton comments to  
paragraph 2 

I think Comm Rodriguez makes a good point about the document needing a different title. Also, it is my understanding that Jeannie has not yet edited the draft and therefore has not yet considered layout, subtitles, typos, etc.

I have raised three concerns/questions in Footnotes 2 and 4 and in the bullet that address the working group meeting.

Lastly, I have lost track of where we are with consideration of releasing the full report. The draft document does not do that, however I thought there was a suggestion that we should consider releasing the full report?

## EAC Statement on Future Study of Voter Identification Requirements

### Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election – November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document<sup>1</sup> was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates,<sup>2</sup> and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.<sup>3</sup>

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, [www.eac.gov](http://www.eac.gov).

**Comment [GH1]:** In Footnote #2:  
Regarding the estimate of non-citizens.  
Perhaps this could be clarified to say  
whether the % of non-citizens was in the  
VAP or of the US population as whole. It  
is not clear to me.

### EAC Recommendations for further study and next steps

<sup>1</sup> In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

<sup>2</sup> The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population include persons who are not registered to vote.

<sup>3</sup> The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The Contractor used a single election's statistics to conduct this analysis. The two sets of data came from the Census Bureau and included persons who were not eligible to and did not vote. The first analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. So, a second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced only some evidence of correlation between voter identification requirements and turnout. Furthermore, the initial categorization of voter identification requirements included classifications that actually require no identification at all, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by independent working and peer review groups comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers.<sup>4</sup> Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. EAC, however, is releasing the data and analysis conducted by Contractor.

**Comment [GH2]:** There is no page 109 in the Eagleton Testimony that was presented on 2/8/07, so I am not clear what document the public is being directed to see.

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

---

<sup>4</sup> See EAC Public Testimony, February 8, 2007, page 109.

- Convene, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.
- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.
- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Comment (GH3): Is it realistic that this meeting will be convened by June 30? Perhaps we should say "Convene in 2007 a working

## **EAC Report on Voter Identification**

### **Executive Summary**

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. HAVA Section 303 (b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC sought to examine how these voter identification requirements were implemented in the 2004 general elections and to prepare guidance for the states on this topic.

In May 2005 EAC entered into a contract with the Eagleton Institute of Politics at Rutgers, the State University of New Jersey and the Moritz College of Law at the Ohio State University to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor also performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data, aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau, the contractor found the overall relationship between the stringency of ID requirements and turnout to be fairly small, but statistically significant.

Based on The Eagleton Institute year-long inquiry into voter identification requirements EAC will implement one or more of the following recommendations:

- Further research into the connection between voter ID requirements and the number of ballots cast and counted;
- A state-by-state review of the impact that voter ID requirements are having on voter's participation;
- A state-by-state review of the relationship between ballot access and ballot security and the number of voters whose ballot is counted;
- A state-by-state review of time periods between voters casting of provisional ballots and the time allowed to return with an ID as well as a review of acceptable forms of identification other than photo ID.

## **Introduction**

This study was conducted at a time in which considerable attention is being paid to the issue of voter identification. Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for multiple voting or voting by those who are not eligible. The goal is to ensure that only those legally entitled to vote do so, and do so only once at each election. Opponents of stricter ID requirements seek to ensure board access to a regular ballot. There is a fear that some voters -- racial and ethnic minorities, young and elderly voters-- lack convenient access to required ID documents, or that these voters may be fearful of submitting their ID documents for official scrutiny.

This report considers policy issues associated with the voter ID debate. It examines the relationships between voter ID requirements and voter turnout along with the various policy implications of the issue.

## **Methodology of the Study**

In May 2005, under contract with the EAC, the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University undertook a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. The contract also included research and study related to provisional voting requirements. These research findings were submitted and reviewed by the EAC as a separate study.

The Eagleton Institute of Politics gathered information on the voter identification requirements in 50 states and the District of Columbia for 2004. Based on interpretations of state statutes and supplemental information provided through conversations with state election officials, state ID requirements were divided into five categories, with each category of identification more rigorous than the one preceding: stating name, signing name, signature match, presenting an ID, and the most rigorous, presenting a government photo ID. The Eagleton Institute also categorized and identified each state according to maximum and minimum identification requirements. Maximum requirements refer to the most that voters may be asked to do or show at the polling place. Minimum requirements refer to the most that voters can be required to do or show in order to cast a regular ballot. These definitions and the subsequent state-by-state analysis of voter identification requirements omitted those cases in which a particular voter's eligibility might be questioned using a state's voter ballot challenge process.

Two data sets were used to apply the criteria (variables) that were developed above: aggregate voter turnout data at the county level which was gathered from the EAC's 2004 Election Day Survey and; reports of individual voters collected through the November 2004 Current Population Survey administered by the U.S. Census Bureau. Use of EAC

survey data and Census Bureau CPS data provided a way to cross-check the validity of the analysis and conclusions that would be drawn regarding the effect of voter ID requirements on voter turnout.

## **Study Oversight and Methodological Review**

A draft of the Eagleton Institute report and findings on voter identification requirements was critiqued by a peer review group convened by the Eagleton Institute. A second review of the study's research and statistical methodologies was conducted using a group of research and statistical experts independently convened by the EAC. Comments and insights of the peer review group members were taken into account in the drafting of a study report although there was not unanimous agreement among the individual reviewers regarding the study findings and recommendations.

## **Summary of the Research**

### **Maximum and Minimum Voter Identification Requirements**

In order to analyze what, if any, correlation may exist between a State's voter identification requirements and voter turnout, the Eagleton Institute first coded a state according to how demanding its voter ID requirement was. The voter ID requirement, ranked from lowest to highest was as follows: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification and, providing a form of photo identification. Several possible caveats to this ranking system were noted. For all states which had photo identification requirements in 2004, voters

without a photo ID were permitted to cast a regular ballot after signing an affidavit regarding his or her identity and eligibility. These voters were also allowed to provide other forms of ID. The researchers also noted that while each state may be assigned to a category, that categorization may not reflect the actual practice related to voter identification that may or may not have taken place at many polling places.

Research performed for this study by the Moritz College of Law found that states had five different types of **maximum** identification requirements in place on Election Day 2004. For the purposes of this study a requirement that called for a signed affidavit or the provision of other forms of ID was considered the most rigorous or the “maximum” requirement. At the polling place voters were asked to:

- State his or her name (10 states)
- Sign his or her name (13 states and the District of Columbia)
- Sign his or her name, which would be matched to a signature on file (seven states)
- Provide a form of identification that did not necessarily include a photo (15 states)
- Provide a photo identification (five states)

Using the same criteria, but applying them as **minimum** rather than maximum criteria for voting the research showed: **(check this section- it doesn't really make sense)**

- State his or her name (12 states)
- Sign his or her name (14 states and the District of Columbia)
- Matching the voter's signature to the signature on file (6 states)
- Provide a non-photo identification (14 states)
- Swear by an affidavit (4 states)

The results of the research are summarized in Table 1.

Election laws in several states offer exceptions to these ID requirements if potential voters lack the necessary form of identification. Laws in these states set a minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. In 2004 none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID were allowed to vote in all states, if he or she was able to meet another ID requirement.

### **The Relationship of Voter Identification Requirements to Voter Turnout**

A statistical analysis examining the variation in turnout rates based on the type of voter ID required by each state in the 2004 election was conducted using two sets of data: 1) aggregate turnout data at the county level for each state (compiled by the Eagleton Institute of Politics-**footnote about how they collected the data**) and 2) individual level survey data included in the November 2004 Current Population Survey (CPS), conducted by the U.S. Census Bureau.

The analysis looked at the voter identification requirements as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements were ranked according to how demanding they were judged to be, with photo identification considered to be the most demanding requirement (**what about affidavit????**). Used as discrete variable, the statistical analysis considered stating the name as the least demanding ID requirement; the other ID requirements were then compared to that requirement.

### **Aggregate-level statistical analysis**

The statistical analysis performed by the Eagleton Institute of Politics found that when averaging across counties in each state, statewide turnout is negatively correlated to maximum voter identification requirements ( $r = -.30$ ,  $p$  less than .05). When a statistical analysis is performed on the other minimum voter ID requirements (with affidavit being the most demanding requirement), the correlation between voter identification and turnout is negative, but not statistically significant ( $r = -.20$ ,  $p = .16$ ). These findings would suggest that the relationship between turnout rates and minimum requirements may not be linear.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend was found when analyzing minimum ID requirements: Sixty-three percent of the voting age population turned out in states requiring voters to state their name, compared to 60.1 percent in states that required an affidavit from voters. This analysis showed there was not a clear, consistent linear relationship between turnout and minimum identification requirements.

**(insert table 2- Variation in 2004 State Turnout Based on Voter Identification Requirements)**

### **Multivariate models of analysis using aggregate-level data**

The Eagleton Institute of Politics performed an additional analysis that would estimate the effects of voter identification requirements, that took into account the electoral context in 2004 and, the demographic characteristics of the population in each county. The model also considers such variables as whether or not the county was 1) in a presidential battleground state, 2) if the county was in a state with a competitive race for government and/or the U.S. Senate, 3) the percentage of voting-age population in each county that was Hispanic or African-American 4) the percentage of county residents age 65 and older, 5) the percent of county residents below the poverty line, and 6) the number of days between each state's registration deadline and the election.

The results of this statistical modeling and subsequent analysis indicated that the stricter voter ID requirements of matching a voter's signature to a signature on file or with presenting a non-photo identification are associated with lower voter turnout when compared to voter turnout in states that required voters to simply state his or her name. These conclusions were reached when variables 1-5 listed above were held constant.

Other results from the Eagleton Institute analysis of stricter voter identification requirements showed that:

- Increased voter turnout was associated with whether the county was in a battleground state or whether that state have a competitive race for governor and/or U.S.Senate.
- A slight negative effect on turnout was correlated with those state's with a longer time between the closing date for registration and the election.
- Voter turnout declined as the percentage of Hispanics in a county's population increased.
- Higher turnout (and a positive correlation) was associated with a higher percentage of senior citizens and household median income.
- The percentage of African-Americans in the county did not have a significant effect on turnout.

The Eagleton Institute analysis of minimum voter identification requirements showed that:

- A relationship between minimum voter ID requirements and turnout was not demonstrated.
- Battleground states and those with competitive state races had a significant and positive correlation to turnout.
- A higher percentage of senior citizens in the county and higher household median income were associated with higher turnout and showed a positive correlation to turnout.
- The percentage of Hispanics in the county was associated with reduced turnout.
- The increased number of days between the closing date for registration was associated with reduced turnout.

The analysis of these aggregate, county-level data showed a significant correlation, between maximum voter identification requirements (a signature match and non-photo

identification, but not a photo identification) and lower turnout in the 2004 election. This correlation was also significant when compared to the minimum voter ID requirement of the voter simply having to state his or her name.

### **Multivariate analysis using individual level turnout data**

This analysis which used November 2004 Current Population Survey data conducted by the U.S. Census Bureau is based on reports from self-described registered voters. Not included in the analysis are persons who said they are not registered to vote, those who said they cast absentee ballots and those who said they were not U.S. citizens. The CPS' Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents. ( why is the N is Table 3 54,973?)

In addition to the five maximum voter identification requirements (enumerated on page XX) the analysis performed included other socioeconomic, demographic and political factors that could have influenced turnout in the 2004 election. These independent variables were analyzed against the dependent variable of whether or not the respondent said he or she voted in the November 2004 election.

In this analysis three of the voter identification requirements were shown to have a statistically significant correlation with whether or not the survey respondents said they have voted in 2004. Lower voter turnout was associated with:

- those states with maximum voter requirements to sign one's name,
- those states with maximum voter requirements to provide a non-photo ID or photo ID, or
- those states with the minimum voter requirement to swear by an affidavit in order to cast a ballot without the state-required identification

Increased voter turnout showed:

- A significant correlation with the competitiveness of the Presidential race **(explain)**.
- African-American voters were more likely than white or other voters to say they have voted.
- Income and marital status were positive predictors of voting **(high income or low income, single, married?)**,
- Women were more likely to say they voted than men.
- Those ages 45 to 64 and 65 and older were more likely to say they voted than those ages 18 to 24.
- Those who earned a high school diploma, attended some college, graduated from college or attended graduate school were more likely to say they have voted than those who had not finished high school.

## **Analysis of the predicted probability of voter turnout using the individual data**

Using this Census Bureau Current Population Survey data the Eagleton Institute of Politics performed an additional statistical analysis in which they calculated the effect of various independent variables on the probability that a respondent said he or she voted. This analysis, involving 54,973 voters cross-tabulated the maximum and minimum voter identification requirements in each state with the five levels of voting requirements: stating name, signing name, matching the signature, a non-photo ID, photo-ID signing an affidavit. The results of these **Predicted Probability of Voter Turnout for all Voter** tabulations are summarized in Table 3 below:

From this analysis, the Eagleton Institute of Politics found that three of the voter identification requirements (**which ones?**) exerted a statistically significant, negative effect on whether or not the CPS survey respondents said they had voted in 2004. That is, compared to states that require voters to only state their name, those states which require the voter to sign his or her name, to provide a non-photo ID, or to provide a photo ID as a maximum requirement, were shown to have a negative influence on turnout. Also, a negative influence on turnout was found when comparing those states that require voters to only state their name, as compared to those states which have as a minimum requirement for verifying voter ID, signing an affidavit.

This probability analysis also found that the competitiveness of the presidential race had a significant effect on turnout as well as some significant demographic and educational effects. For the entire voting population signature, non-photo identification and photo identification requirements were all associated with lower turnout rates compared to the requirements that voter simply state their names. The analysis further found that:

- The predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names and that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to only having to state one's name.
- Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. African American and Asian-American voters were about 6 percent less likely, while white voters were about 2 percent less likely.
- Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, while they were 6.1

percent less likely to vote where non-photo identification was the minimum requirement.

- For those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in those states that required an affidavit as the minimum requirement. These percentages were arrived at when comparing these states to ones that use as a minimum or maximum requirement, the voter to merely state his or her name.

### **Conclusions from the statistical analysis**

The statistical analysis found that as voter identification requirements vary, so do voter turnout rates. These findings were borne out through analyses conducted on aggregate data and individual-level data. There were, however, some distinctions found depending upon whether or not the state's particular voter identification requirements were set as minimums or maximums.

- The overall relationship between voter identification requirements and turnout for all registered voters was found to be small but statistically significant.
- Using the aggregate data the signature match and the non-photo identification requirement correlated with lower turnout. The photo identification requirement did not have a statistically significant effect.
- In the individual-level data the signature, no-photo identification and photo identification requirement were all correlated with lower turnout when compared to the requirements that voter simply state their names.
- Across various demographic groups (African-Americans, Asian-Americans and Hispanics) a statistically significant relationship was found between the non-photo identification requirement and voter turnout

### **Caveats to the Analysis**

The Eagleton Institute for Politics and the EAC make note that while this analysis is a good beginning, significant questions remain regarding the relationship between voter identification requirements and turnout. These analyses are unable, for example, to capture how or why identification requirements might lower turnout. That is, is it because voters are aware of the identification requirements and stay away from the polls because of them? Alternatively, do the requirements result in some voters being turned away when they cannot provide the identification, or must cast a provisional ballot?

Knowing more about the “on the ground” experience of voters regarding various identification requirements will guide state and local level policy makers in their efforts to educate voters about the requirements. These experiences could also help instruct election judges on how to handle questions and possible disputes over voter identification requirements.

## **Public Policy and Administrative Considerations**

Voter Identification, often described as the critical step in protecting the integrity of the ballot, is a process which can ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot. A voting system that requires voters to produce an identification document or documents may prevent the ineligible from voting, but also may prevent the eligible from casting a ballot.

Evaluating the effect of different voter identification regimes can be most effective when based on clear legal, equitable and practical standards. The questions outlined below might point policymakers to standards that can be created around voter identification requirements.

1. Is the voter ID system designed on the basis of valid and reliable empirical studies the will address concerns regarding certain types of voting fraud?
2. Does the voter ID requirement comply with the letter and spirit of the Voting Rights Act?
3. How effective is the voter ID requirement on increasing the security of the ballot and can it be coordinated with the statewide voter registration database?
4. How feasible is the voter identification requirement? That is, are there administrative or budgetary considerations or concerns? How easy or difficult will it be for pollworkers who must administer the requirement?
5. How cost effective is the voter ID system? That is, what are the monetary and non-monetary costs to the voter and to the state for implementing the ID system?
6. If voter ID requirements are shown to reduce voter turnout (generally, or with some particular groups), what possible steps should be taken to ameliorate this problem?

## **Recommendations and Next Steps**

As the Federal agency charged with informing election officials and the public about various issues related to the administration of elections EAC believes it should, in its capacity as a supporter of elections research, undertake additional study into the topic of voter identification requirements and the implementation of them in the following ways:

- Longitudinal studies of jurisdictions that have changed voter identification requirements.

- State-by-state and precinct-level analyses that will examine the correlations between various voter identification requirements and voter registration and turnout
- Alternative forms and methods for verifying a voter's identity.
- Continuing research into the connection between various voter identification requirements and the number of ballots cast and counted
- A continuing state-by-state update on changes to voter identification requirements.
- Continued collection of state-by-state data which will help examine the impact that voter identification requirements are having on the number of voters who are casting provisional ballots because of voter identification verification issues.

## EAC Statement on Future Study of Voter Identification Requirements

### Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. HAVA Section 303 (b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC sought to examine how these voter identification requirements were implemented in the 2004 general elections and to prepare guidance for the states on this topic.

In May 2005 EAC entered into a contract with the Eagleton Institute of Politics at Rutgers, the State University of New Jersey and the Moritz College of Law at the Ohio State University to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor also performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data-- aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic which are detailed in the attached report.

### EAC Recommendations for further study and next steps

EAC finds this initial review of States' voter identification requirements, state laws and litigation surrounding the implementation of voter identification requirements an important beginning step in its consideration of voter identification requirements. From this study and compilation of data EAC considers it advisable to engage in a longer-term, systematic review of voter identification requirements and is recommending that at a minimum the agency engage on an ongoing basis in:

- A state-by-state review, reporting and tracking of voter identification requirements.
- A review and study of how voter identification requirements are implemented and how these practices may vary from state law and statute.

From this ongoing review and tracking EAC can determine the feasibility and advisability of further research and study into how voter identification requirements have had an impact over time on factors such as voter turnout and voter registration.

EAC believes that the findings from this initial study of voter identification requirements are helping inform additional studies it is conducting on a variety of related topics. The EAC study on first time voters who have registered to vote by mail and several forthcoming studies related to voter registration processes will provide necessary additional data to help inform discussions and debate related to ballot access and ballot security. The EAC also anticipates that follow-on study it does related to election crimes and various aspects of voting accessibility will also help inform and guide these ballot security and ballot access discussions.

Finally, EAC is likely to consider implementing one or more of the following research studies that will serve to augment the work begun by the Eagleton Institute of Politics:

- A study of how certain voter identification provisions that have been in place for two or more Federal elections have had an impact on voter turnout and voter registration figures;
- A research study which examines, in greater detail, the relationship between race and voter turnout, and race and methods for registering voters;
- Studies on the inter-relationship between various voter registration processes, voter turnout and number of election crimes reported or litigated;
- Publication of a series of case studies which detail a particular state's or jurisdiction's experiences with various voter identification and voter registration regimes;
- A policy paper or memorandum exploring the alternatives to current voter identification processes and regimes.

## **EAC to Launch Comprehensive Study of Voter ID Laws**

**WASHINGTON** - The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive study focused on voter identification laws after concluding that initial research it received in a report, which focused on only one election cycle, was not sufficient to draw any conclusions. The Commission declined to adopt the report, but is releasing all of the data to the public.

The report and the research, conducted by Rutgers, the State University of New Jersey, through its Eagleton Institute of Politics, are available at [www.eac.gov](http://www.eac.gov). The Commission's statement regarding its decision is attached.

"After careful consideration of the initial research, the Commission decided this important issue deserves a more in-depth research approach, and that it should be examined beyond only one election cycle," said EAC Chair Donetta Davidson. "The Commission and our contractor agree that the research conducted for EAC raises more questions than provides answers."

EAC's strategy for moving forward is based upon an examination of the initial research and the testimony and discussion about this research project at the Commission's February 8, 2007 public meeting. For more information about the public meeting, including the agenda, transcript, and testimony go to [http://www.eac.gov/Public\\_Meeting\\_020807.asp](http://www.eac.gov/Public_Meeting_020807.asp).

EAC's future research on this topic will be expanded to include more than one federal election, environmental and political factors, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC's comprehensive research approach will undertake the following activities:

\* Conduct an ongoing state-by-state review, reporting and tracking of voter identification

010369

requirements.

\* Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation. EAC will use some of the information collected by the contractor as well as additional data from the states to develop this baseline.

\* In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification.

\* Study how voter identification provisions that have been in place for two or more federal elections have impacted voter turnout, voter registration figures, and fraud.

\* Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. The four EAC commissioners are Donetta Davidson, chair; Rosemary Rodriguez, Caroline Hunter and Gracia Hillman.

###

## **EAC Statement on Study of Voter Identification Requirements**

### **Background**

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election - November 2004. For example, the turnout rate in 2004 in states that required the voter to provide a photo identification document\* was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to

010370

receive a ballot. Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates\* and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau.\*

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, [www.eac.gov](http://www.eac.gov).

### **EAC Declines to Adopt Draft Report**

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's efforts to study the possible impact of voter identification requirements.

However, EAC has concerns regarding the data, analysis, and statistical methodology the Contractor used to analyze voter identification requirements to determine if these laws have an impact on turnout rates. The study only focused on one federal election. An analysis using averaged county-level turnout data from the U.S. Census showed no statistically significant correlations. A second analysis using a data set based upon the Current Population Survey (which was self-reported and showed a significantly higher turnout rate than other conventional data) was conducted that produced some evidence of correlation between voter identification requirements and turnout. The initial categorization of voter identification requirements included classifications that, actually, require no identification documentation, such as "state your name." The research methodology and the statistical analysis used by the Contractor were questioned by an EAC review group comprised of social scientists and statisticians. The Contractor and the EAC agree that the report raises more questions than provides answers and both agree the study should have covered more than one federal election.\* Thus, EAC will not adopt the Contractor's study and will not issue an EAC report based upon this study. All of the material provided by the Contractor is attached.

\*1 In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked photo ID to vote a regular ballot by swearing and affidavit.

\*2 The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. These data did not differentiate between citizens and non-citizens; because these numbers include non-citizens, the Contractor applied the percentage of citizens included in voting age population statistics in 2000 to the U.S. Census Bureau estimated voting age population in 2004. Thus, 2004 estimates of voting age population include persons who are not registered to vote.

\*3 The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S. citizens.

\*4 See Transcript of EAC Public Meeting, February 8, 2007, page 109.

### **Further EAC Study on Voter Identification Requirements**

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election cycle, additional environmental and political factors that effect voter participation and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

\* Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state his or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.

\* Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.

\* In 2007, convene a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.

\* Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.

\* Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

Subject Voter ID update

Commissioners,

The press release, the statement, and the draft report has been posted on our site. The press release is being distributed, and is on the way to all of you and the entire EAC staff. The following activities have occurred:

1. Press release was sent in advance to Eagleton.
2. I called Wendy Weiser of the Brennan Center and sent her the info.
3. I called and sent the info to Ray M. and Paul D.
4. I sent the info to Tom Hicks and Adam A.
5. Tom called Dan Tokaji, Dan Oak, and Rep. Hinchey's office.
6. Karen gave the three EAC experts a heads up.
7. Comm. Rodriguez was interviewed by NPR (the only outlet that showed any interest), as was Eagleton. Eagleton told NPR they are glad we are expanding the scope. Interview will run on affiliates today at approximately 5:44 pm EST.
8. I offered interviews to USA Today, WaPo, NYT, and AP but none were interested.
9. I have kept Eagleton apprised of our activities.

I'll continue to keep you apprised as the day goes on, and please let me know if there's anyone else you'd like me to contact.

**RE:** Communications Strategy for Release of Voter ID Tally Vote Results

In anticipation of the release of the results of the tally vote and all of the information provided by the contractor, I suggest taking the following steps to effectively communicate your decision. Taking this approach will help us control how the information is distributed, how it is framed, and how to focus the discussion on the positive outcome of your decision.

The bottom line is that we want to try our best to make this a story about EAC's decision to conduct a thorough and in-depth look into the subject of voter ID, and we have decided to release the preliminary research. We do not want this to evolve into a storyline about squabbling between EAC and Eagleton.

I have provided a suggested overall message that reflects the action taken, as well as questions we should be prepared to answer.

Please let me know if you have any questions about my proposal, and I look forward to your input.

010380

**Deliberative Process  
Privilege**

**PRELIMINARY ACTIVITIES**

Prior to the completion of the tally vote and the subsequent release of the results and the contractor's materials, I suggest taking the following steps:

1. Discuss EAC's decision with the contractors in advance of distributing the press release and discussions with reporters so that they have an opportunity to respond and also so they will be well informed and prepared to discuss the facts with reporters or others who will most likely contact them.
2. Prior to release of EAC's decision, reach out to key Hill staffers who have been following this issue, including those members who have requested this data in the past. This should include staffers for the House Appropriations Committee Subcommittee on Financial Services and General Government since the Committee requested this information a few weeks ago. It should be made clear to committee staffers that the tally vote is the culmination of a directive made by the EAC chair in Feb. that the agency move forward to complete this project. These staffers should also be included on our list of key stakeholders.
3. Executive director should determine whether there are other key stakeholders that should be made aware of this decision from EAC personally, not from a press release. Possible candidates include members of Congress, NASS, individual secretaries of state, DOJ, and NASED.

**PUBLIC ROLL-OUT**

Once the above preliminary steps have been completed, EAC Communications will:

1. Post the press release and the related data on the website, with a link from the home page.
2. Prior to release of the tally vote decision and related data, call Richard Whitt of USA Today, Will Lester of AP, Chris Drew of the NYT, and Zach Goldfarb of the WaPo and let them know we are about to release the information. Offer interviews with the chair or other commissioners.
3. Send the press release (with a link to the research) to all recipients in the media database. This includes national dailies, as well as wire services such as the Associated Press.
4. Send the press release (with a link to the research) to all recipients in the stakeholder database. The database consists of election officials, advocates, and other interested parties, including representatives from organizations who have been critical of EAC, including VoteTrust USA and the People for the American Way.

010381

## **Deliberative Process Privilege**

### **OVERALL MESSAGE**

Voter identification at the polling place is an important issue that affects voters in jurisdictions throughout the country. Understanding that this issue deserves a more in-depth approach, EAC has decided to move forward with a thorough, multi-year research project that will examine everything from turnout to voter education.

The findings of the preliminary research, which focused exclusively on the 2004 general elections, was insufficient to provide meaningful conclusions and raises more questions than provides answers. Future research will be expanded to include more than one election cycle and will examine environmental and political factors including, the many changes in state laws and regulations that have occurred since the 2004.

### **Q&A**

We should be prepared to answer the following questions:

#### **Q: Why not release the draft fraud report, too?**

A: EAC issued a final Voting Fraud and Voter Intimidation Report in December 2006, which included recommendations adopted by the Commission to conduct a comprehensive assessment of all claims, charges and prosecutions of voting crimes.

In the case of the voter ID report, the Commission chose not to adopt a final report because it was determined that there was insufficient data to provide meaningful conclusions.

#### **Q: You cited concerns with the contractor's methodology and analysis. Didn't your contract with Eagleton include specific language regarding these issues?**

A: Yes, but in retrospect, perhaps we could have done a better job articulating how we wanted this research to be conducted.

#### **Q: During the course of the project, did you see draft reports? If so, why didn't these concerns get addressed at that time?**

A: We did receive progress reports, and when we identified areas of concern, we discussed it with the contractor. It was because of these concerns that EAC decided to revisit the methodologies used so that we could provide a more in-depth look at the subject matter.

#### **Q: During the course of the contract, did you ever express these concerns with Eagleton?**

A: Yes, and as a result of these conversations, EAC decided to revisit the methodologies used so that we could provide a more in-depth look at the subject matter.

#### **Q: You spent more than \$500,000 for a report the Commission doesn't think should be adopted – so basically you're flushing a lot of money down the drain. Is this a wise use of taxpayer dollars?**

A: There is value in what Eagleton provided, and this included work they did for us regarding provisional voting. As a result of the research on provisional voting, EAC

**Deliberative Process  
Privilege**

issued a set of best practices last fall. The voter ID data will help provide a baseline for how to move forward. And even though their research raised many questions, contemplating the answers to those questions has informed us on how to move forward.

**Q: If you were not satisfied with the final product, why did you pay for it?**

A: We adhered to the terms of the contract.

**Q: EAC received this data in June of last year. What has taken so long to bring it to a conclusion?**

A: This is an important issue, one that deserves careful deliberation and a thorough approach. Yes, we like to get things done quickly, but it is more important to take the time to get things right.

010383

## **Deliberative Process Privilege**

### **TRANSITION PHRASES**

To stay on message and avoid being dragged into discussions about anything other than the action taken, employ the following phrases and transition back to the overall message.

#### ***Overall Message***

Voter identification at the polling place is an important issue that affects voters in jurisdictions throughout the country. Understanding that this issue deserves a more in-depth approach, EAC has decided to move forward with a thorough, multi-year research project that will examine everything from turnout to voter education.

The findings of the preliminary research, which focused exclusively on the 2004 general elections, were insufficient to provide meaningful conclusions and raises more questions than provides answers. Future research will be expanded to include more than one election cycle and will examine environmental and political factors, including the many changes in state laws and regulations that have occurred since 2004.

#### ***Bridge/Transition Phrases***

- What's really important here...
- The bottom line is...
- The point is...
- We have a responsibility to...
- I'll let others speak to that, but let me tell you what's important to EAC...
- Everyone agrees that...

## EAC to Launch Comprehensive Study of Voter ID Laws

For Immediate Release  
DATE, 2007

Contact: Jeannie Layson  
Bryan Whitener  
(202) 566-3100

WASHINGTON – The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive study focused on voter identification laws. The initial research on voter identification laws are available at [www.eac.gov](http://www.eac.gov), but because this research focused exclusively on the 2004 general elections, included populations that are not eligible to vote, and did not take into account influential factors such as the competitiveness of campaigns, it was insufficient to provide meaningful conclusions and thus the Commission declined to adopt a report based on it.

“New voter identification laws have been enacted recently, and the Commission began working to determine the possible impact of these new laws,” said EAC Chair Donetta Davidson. “After careful consideration of the initial research conducted by our contractor, the Commission decided this important issue deserves a more in-depth research approach and that it should be examined beyond only one election cycle. The bottom line is that the research raises more questions than provides answers.

EAC’s strategy for moving forward is based upon an examination of the initial research and the testimony and discussion about this research project at the Commission’s February 8, 2007, public meeting. For more information about the public meeting agenda, transcript, and testimony go to [http://www.eac.gov/Public\\_Meeting\\_020807.asp](http://www.eac.gov/Public_Meeting_020807.asp).

EAC’s future research on this topic will be expanded to include more than one election cycle and to examine environmental and political factors and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC’s comprehensive research approach will undertake the following activities:

- Convene a working group of advocates, academics, research methodologists and election officials to discuss EAC’s next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.
- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states’ requirements that require a voter to state his or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identity.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information already collected as well as additional data from the states to develop this baseline.

010385

- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures and fraud. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender. Study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting.
- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. The four EAC commissioners are Donetta Davidson, chair; Rosemary Rodriguez, Caroline Hunter and Gracia Hillman.

## **EAC to Launch Comprehensive Study of Voter ID Laws** *Releases Initial Research*

For Immediate Release  
March 23, 2007

Contact: Jeannie Layson  
Bryan Whitener  
(202) 566-3100

**WASHINGTON** – The U.S. Election Assistance Commission (EAC) has voted unanimously to launch a comprehensive, multi-year study on the impact of voter identification laws in the states based upon initial efforts that focused on the 2004 election cycle. The Commission also voted to provide all of the initial research conducted by its consultant, Rutgers, the State University of New Jersey, through its Eagleton Institute of Politics. The information is available at [www.eac.gov](http://www.eac.gov).

“Many new voter identification laws have been enacted recently, and the Commission began working to determine the impact of these new laws,” said EAC Chair Donetta Davidson. “However, after careful consideration of the initial research conducted by our contractor, the Commission decided this important issue deserves a more in-depth research approach and that it should be examined beyond only one election cycle.”

EAC’s strategy for moving forward is based upon an examination of the initial research and the testimony and discussion of this research at the Commission’s February 8, 2007 public meeting. For more information about the meeting agenda, transcript, and testimony go to [http://www.eac.gov/Public\\_Meeting\\_020807.asp](http://www.eac.gov/Public_Meeting_020807.asp).

EAC’s future research on this topic will be expanded to include more than one election cycle, environmental and political factors, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004. EAC comprehensive research approach will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states’ requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.
- Convene a working group of advocates, academics, research methodologists and election officials to discuss EAC’s next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.
- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early, absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.

010389

- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

EAC is an independent bipartisan commission created by the Help America Vote Act of 2002 (HAVA). It is charged with administering payments to states and developing guidance to meet HAVA requirements, implementing election administration improvements, adopting voluntary voting system guidelines, accrediting voting system test laboratories and certifying voting equipment and serving as a national clearinghouse and resource of information regarding election administration. The EAC has identified three academics who are going to serve as peer reviewers of the Eagleton Voter ID paper and research.

They are Jonathan Nagler of New York University, Jan Leighley, University of Arizona, and Adam Berinsky of MIT.

They are ready to review the documents as soon as they are available.

I would like to them one week to review the material and then have a joint conference call on **Thursday, May 11**, in which we would all have an opportunity to discuss the research methodology and statistical analysis, along with general comments and suggestions.

If you are able to get to me the paper and the supporting data analysis, I will distribute to the documents ASAP.

Also let me know, if you would, your availability on May 11 to do this conference all.

I anticipate that it will last approximately 90 minutes.

Subject EAgleton Comments

Karen,

I have reviewed the Eagleton final report and have a couple of questions for clarification:

1. On page 8, in the paragraph after the bulleted information, they list "high mobility" as a factor for the effective operation of provisional voting factors. There is no previous mention of this as a factor. What research do they have to back up naming this as a factor?
2. On page 10, line 2, the sentence begins "A rough estimate"? I have no idea what they are trying to say here. Is it that they are trying to compare the number of provisional ballots actual counted to the estimate that MIT made of lost ballots in 2000? If so, then they need to consider in making this statement whether the MIT survey would be influenced by the onset of statewide voter registration databases and interim measures that have been instituted by election officials that would improve the quality of the voter registration list and thus limit the need for provisional ballots.
3. On page 13, second bullet, do they literally mean that the state should provide poll workers training? Most of this training is provided in actuality by the local election jurisdiction (county, municipality). Are they deviating from the current practice?

I have many other comments that are more appropriately directed to the Commissioners in considering what has been provided by Eagleton in terms of what they desire to make "guidance" or "best practices".

Subject Job Description for a Voter Fraud Project Consultant

Commissioners-

Attached please find a first draft of a short job description outlining EAC's expectations for a project consultant on voter fraud.

As you are aware, Julie has shared with me the resume of someone with an interest in the position. Ray has indicated that he participates in a legal list-serve group that has recently focused on voter fraud issues. This list-serve is probably a good place to "advertise" the consultant opportunity.

Let me know your thoughts on next steps. I look forward to getting this project up and running.

Regards-

K

**Job Description****U.S. Election Assistance Commission (EAC) Voter Fraud Project Consultant**

The U.S. Election Assistance Commission (EAC) seeks to identify a senior-level project consultant to assist with the oversight and development of a study and possible project examining U.S. election voter fraud.

The consultant must of have a knowledge of voter fraud and an understanding of the complexities, nuances and challenges which surround the topic. The EAC is particularly interested in candidates with experience in elections, with public policy and the law. The consultant must be able to demonstrate an ability to approach the issue of voter fraud in a balanced, nonpartisan fashion.

This consultant, whose contract would run for the period June-November, 2005, would be responsible for conceptualizing a project scope of work around the issue and from that, developing a statement of work for a research project around the topic.

In consultation with EAC staff, EAC Commissioners, and other key EAC stakeholders, the consultant will develop a project plan around voter fraud. The consultant will recommend certain EAC project activities related to voter fraud and will develop a scope of work for an EAC research study on voter fraud. The consultant will oversee and manage various processes related to EAC contracts awarded for work related to voter fraud.

EAC's consultant fees are competitive and are awarded based on the candidates' relevant background and experience.

Subject Re: Eagleton draft press release

I have some concerns about the press release. In paragraph two, I am not comfortable with the following language in what I believe is paragraph two: Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006.

It seems to me that EAC will develop the guidance based on Eagleton's findings.

Also, I do not think the press release should contain the list of questions. Are they/we trying to float a trial balloon and elicit initial reaction at this early stage of the study??

DRAFT FOR APPROVAL

## **EAGLETON INSTITUTE OF POLITICS WINS \$560,000 CONTRACT FROM U.S. ELECTION ASSISTANCE COMMISSION**

### **Rutgers Institute to Study Provisional Voting, Voter Identification Procedures**

NEW BRUNSWICK/PISCATAWAY, N.J. – The U.S. Election Assistance Commission (EAC) has awarded the Eagleton Institute of Politics at Rutgers, The State University of New Jersey, a \$560,000 contract to study provisional voting and voter identification procedures based on experiences from the 2004 election.

Under the national contract, the institute will develop recommendations for EAC to issue as guidance to the states to use in 2006, according to Eagleton Director Ruth B. Mandel, the study's principal investigator. She added that the Moritz College of Law at Ohio State University, Eagleton's partner in the contract application, will be responsible for the legal analysis of the competitively bid, seven-month project.

Eagleton already is home to an extensive civic education and political participation program, with several projects aimed at increasing voter turnout, political participation and Americans' involvement in civic life.

EAC was established by the Help America Vote Act (HAVA) of 2002. It is an independent, bipartisan agency and provides federal funds to states to upgrade voting systems and improve election administration. It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security.

Questions include:

- Did the states have in place clear and uniform written procedures, guidelines and instructions to govern the casting and counting of provisional ballots?
  
- Did local procedures reflect the state's uniform procedures?
- Did all states and election jurisdictions make these procedures available to the public, political parties and candidates before the election?
  
- To what extent were poll workers appropriately trained on how to administer provisional ballots, including establishing the identity of the potential voter seeking a provisional ballot?
  
- How were federal funds under the Help America Vote Act used to educate voters about

010410

their rights to cast a provisional ballot and where such provisional ballots must be cast to be counted?

- In states where a provisional ballot had to be cast at the voter's assigned polling place or precinct, was information available to poll workers to allow them to determine the voter's assigned precinct and polling place?
- Did states have mechanisms in place to inform voters casting provisional ballots whether their vote was counted and whether they are now registered for subsequent elections?

Eagleton will address these questions by examining the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public hearings to be held in conjunction with the project.

At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of alternatives to existing practices and procedures.

It publishes voluntary guidelines for the states and serves as a national clearinghouse of information regarding election administration.

The Eagleton project team, led by Mandel, includes Ingrid W. Reed, John Weingart and consultant Thomas O'Neill, retired president of the Partnership for New Jersey, who will serve as project director. The project will address key questions related to provisional voting and voter identification in the context of effective election administration, voter access and ballot security.

Questions include:

- Did the states have in place clear and uniform written procedures, guidelines and instructions to govern the casting and counting of provisional ballots?

010420

- Did local procedures reflect the state's uniform procedures?
- Did all states and election jurisdictions make these procedures available to the public, political parties and candidates before the election?
- To what extent were poll workers appropriately trained on how to administer provisional ballots, including establishing the identity of the potential voter seeking a provisional ballot?
- How were federal funds under the Help America Vote Act used to educate voters about their rights to cast a provisional ballot and where such provisional ballots must be cast to be counted?
- In states where a provisional ballot had to be cast at the voter's assigned polling place or precinct, was information available to poll workers to allow them to determine the voter's assigned precinct and polling place?
- Did states have mechanisms in place to inform voters casting provisional ballots whether their vote was counted and whether they are now registered for subsequent elections?

Eagleton will address these questions by examining the nation's experience with provisional voting and voter identification requirements and practices in 2004 through extensive research including a survey of local election officials across the country. In addition, the work will be informed by scrutiny from a panel of peer reviewers as well as by comments offered at public hearings to be held in conjunction with the project.

At the contract's conclusion, the team will present a narrative on both topics, indexed databases of major articles on provisional voting and voter identification requirements, summaries of case law on each subject, analyses of provisional voting procedures from around the country and of voter participation and vote fraud under various voter ID requirements, and a report of alternatives to existing practices and procedures.

## **EAC Report on Voter Identification**

### **Executive Summary**

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. HAVA Section 303 (b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC sought to examine how these voter identification requirements were implemented in the 2004 general elections and to prepare guidance for the states on this topic.

In May 2005 EAC entered into a contract with the Eagleton Institute of Politics at Rutgers, the State University of New Jersey and the Moritz College of Law at the Ohio State University to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor also performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data, aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau, the contractor found the overall relationship between the stringency of ID requirements and turnout to be fairly small, but statistically significant.

Based on The Eagleton Institute year-long inquiry into voter identification requirements EAC will implement one or more of the following recommendations:

- Further research into the connection between voter ID requirements and the number of ballots cast and counted;
- A state-by-state review of the impact that voter ID requirements are having on voter's participation;
- A state-by-state review of the relationship between ballot access and ballot security and the number of voters whose ballot is counted;
- A state-by-state review of time periods between voters casting of provisional ballots and the time allowed to return with an ID as well as a review of acceptable forms of identification other than photo ID.

## **Introduction**

This study was conducted at a time in which considerable attention is being paid to the issue of voter identification. Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for multiple voting or voting by those who are not eligible. The goal is to ensure that only those legally entitled to vote do so, and do so only once at each election. Opponents of stricter ID requirements seek to ensure board access to a regular ballot. There is a fear that some voters -- racial and ethnic minorities, young and elderly voters-- lack convenient access to required ID documents, or that these voters may be fearful of submitting their ID documents for official scrutiny.

This report considers policy issues associated with the voter ID debate. It examines the relationships between voter ID requirements and voter turnout along with the various policy implications of the issue.

## **Methodology of the Study**

In May 2005, under contract with the EAC, the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University undertook a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. The contract also included research and study related to provisional voting requirements. These research findings were submitted and reviewed by the EAC as a separate study.

The Eagleton Institute of Politics gathered information on the voter identification requirements in 50 states and the District of Columbia for 2004. Based on interpretations of state statutes and supplemental information provided through conversations with state election officials, state ID requirements were divided into five categories, with each category of identification more rigorous than the one preceding: stating name, signing name, signature match, presenting an ID, and the most rigorous, presenting a government photo ID. The Eagleton Institute also categorized and identified each state according to maximum and minimum identification requirements. Maximum requirements refer to the most that voters may be asked to do or show at the polling place. Minimum requirements refer to the most that voters can be required to do or show in order to cast a regular ballot. These definitions and the subsequent state-by-state analysis of voter identification requirements omitted those cases in which a particular voter's eligibility might be questioned using a state's voter ballot challenge process.

Two data sets were used to apply the criteria (variables) that were developed above: aggregate voter turnout data at the county level which was gathered from the EAC's 2004 Election Day Survey and; reports of individual voters collected through the November 2004 Current Population Survey administered by the U.S. Census Bureau. Use of EAC

survey data and Census Bureau CPS data provided a way to cross-check the validity of the analysis and conclusions that would be drawn regarding the effect of voter ID requirements on voter turnout.

## **Study Oversight and Methodological Review**

A draft of the Eagleton Institute report and findings on voter identification requirements was critiqued by a peer review group convened by the Eagleton Institute. A second review of the study's research and statistical methodologies was conducted using a group of research and statistical experts independently convened by the EAC. Comments and insights of the peer review group members were taken into account in the drafting of a study report although there was not unanimous agreement among the individual reviewers regarding the study findings and recommendations.

## **Summary of the Research**

### **Maximum and Minimum Voter Identification Requirements**

In order to analyze what, if any, correlation may exist between a State's voter identification requirements and voter turnout, the Eagleton Institute first coded a state according to how demanding its voter ID requirement was. The voter ID requirement, ranked from lowest to highest was as follows: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification and, providing a form of photo identification. Several possible caveats to this ranking system were noted. For all states which had photo identification requirements in 2004, voters

without a photo ID were permitted to cast a regular ballot after signing an affidavit regarding his or her identity and eligibility. These voters were also allowed to provide other forms of ID. The researchers also noted that while each state may be assigned to a category, that categorization may not reflect the actual practice related to voter identification that may or may not have taken place at many polling places.

Research performed for this study by the Moritz College of Law found that states had five different types of **maximum** identification requirements in place on Election Day 2004. For the purposes of this study a requirement that called for a signed affidavit or the provision of other forms of ID was considered the most rigorous or the “maximum” requirement. At the polling place voters were asked to:

- State his or her name (10 states)
- Sign his or her name (13 states and the District of Columbia)
- Sign his or her name, which would be matched to a signature on file (seven states)
- Provide a form of identification that did not necessarily include a photo (15 states)
- Provide a photo identification (five states)

Using the same criteria, but applying them as **minimum** rather than maximum criteria for voting the research showed: **(check this section- it doesn't really make sense)**

- State his or her name (12 states)
- Sign his or her name (14 states and the District of Columbia)
- Matching the voter's signature to the signature on file (6 states)
- Provide a non-photo identification (14 states)
- Swear by an affidavit (4 states)

The results of the research are summarized in Table 1.

Election laws in several states offer exceptions to these ID requirements if potential voters lack the necessary form of identification. Laws in these states set a minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. In 2004 none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID were allowed to vote in all states, if he or she was able to meet another ID requirement.

### **The Relationship of Voter Identification Requirements to Voter Turnout**

A statistical analysis examining the variation in turnout rates based on the type of voter ID required by each state in the 2004 election was conducted using two sets of data: 1) aggregate turnout data at the county level for each state (compiled by the Eagleton Institute of Politics-**footnote about how they collected the data**) and 2) individual level survey data included in the November 2004 Current Population Survey (CPS), conducted by the U.S. Census Bureau.

The analysis looked at the voter identification requirements as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements were ranked according to how demanding they were judged to be, with photo identification considered to be the most demanding requirement (**what about affidavit????**). Used as discrete variable, the statistical analysis considered stating the name as the least demanding ID requirement; the other ID requirements were then compared to that requirement.

### **Aggregate-level statistical analysis**

The statistical analysis performed by the Eagleton Institute of Politics found that when averaging across counties in each state, statewide turnout is negatively correlated to maximum voter identification requirements ( $r = -.30$ ,  $p$  less than .05). When a statistical analysis is performed on the other minimum voter ID requirements (with affidavit being the most demanding requirement), the correlation between voter identification and turnout is negative, but not statistically significant ( $r = -.20$ ,  $p = .16$ ). These findings would suggest that the relationship between turnout rates and minimum requirements may not be linear.

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend was found when analyzing minimum ID requirements: Sixty-three percent of the voting age population turned out in states requiring voters to state their name, compared to 60.1 percent in states that required an affidavit from voters. This analysis showed there was not a clear, consistent linear relationship between turnout and minimum identification requirements.

**(insert table 2- Variation in 2004 State Turnout Based on Voter Identification Requirements)**

### **Multivariate models of analysis using aggregate-level data**

The Eagleton Institute of Politics performed an additional analysis that would estimate the effects of voter identification requirements, that took into account the electoral context in 2004 and, the demographic characteristics of the population in each county. The model also considers such variables as whether or not the county was 1) in a presidential battleground state, 2) if the county was in a state with a competitive race for government and/or the U.S. Senate, 3) the percentage of voting-age population in each county that was Hispanic or African-American 4) the percentage of county residents age 65 and older, 5) the percent of county residents below the poverty line, and 6) the number of days between each state's registration deadline and the election.

The results of this statistical modeling and subsequent analysis indicated that the stricter voter ID requirements of matching a voter's signature to a signature on file or with presenting a non-photo identification are associated with lower voter turnout when compared to voter turnout in states that required voters to simply state his or her name. These conclusions were reached when variables 1-5 listed above were held constant.

Other results from the Eagleton Institute analysis of stricter voter identification requirements showed that:

- Increased voter turnout was associated with whether the county was in a battleground state or whether that state have a competitive race for governor and/or U.S.Senate.
- A slight negative effect on turnout was correlated with those state's with a longer time between the closing date for registration and the election.
- Voter turnout declined as the percentage of Hispanics in a county's population increased.
- Higher turnout (and a positive correlation) was associated with a higher percentage of senior citizens and household median income.
- The percentage of African-Americans in the county did not have a significant effect on turnout.

The Eagleton Institute analysis of minimum voter identification requirements showed that:

- A relationship between minimum voter ID requirements and turnout was not demonstrated.
- Battleground states and those with competitive state races had a significant and positive correlation to turnout.
- A higher percentage of senior citizens in the county and higher household median income were associated with higher turnout and showed a positive correlation to turnout.
- The percentage of Hispanics in the county was associated with reduced turnout.
- The increased number of days between the closing date for registration was associated with reduced turnout.

The analysis of these aggregate, county-level data showed a significant correlation, between maximum voter identification requirements (a signature match and non-photo

identification, but not a photo identification) and lower turnout in the 2004 election. This correlation was also significant when compared to the minimum voter ID requirement of the voter simply having to state his or her name.

### **Multivariate analysis using individual level turnout data**

This analysis which used November 2004 Current Population Survey data conducted by the U.S. Census Bureau is based on reports from self-described registered voters. Not included in the analysis are persons who said they are not registered to vote, those who said they cast absentee ballots and those who said they were not U.S. citizens. The CPS' Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents. ( why is the N is Table 3 54,973?)

In addition to the five maximum voter identification requirements (enumerated on page XX) the analysis performed included other socioeconomic, demographic and political factors that could have influenced turnout in the 2004 election. These independent variables were analyzed against the dependent variable of whether or not the respondent said he or she voted in the November 2004 election.

In this analysis three of the voter identification requirements were shown to have a statistically significant correlation with whether or not the survey respondents said they have voted in 2004. Lower voter turnout was associated with:

- those states with maximum voter requirements to sign one's name,
- those states with maximum voter requirements to provide a non-photo ID or photo ID, or
- those states with the minimum voter requirement to swear by an affidavit in order to cast a ballot without the state-required identification

Increased voter turnout showed:

- A significant correlation with the competitiveness of the Presidential race **(explain)**.
- African-American voters were more likely than white or other voters to say they have voted.
- Income and marital status were positive predictors of voting **(high income or low income, single, married?)**,
- Women were more likely to say they voted than men.
- Those ages 45 to 64 and 65 and older were more likely to say they voted than those ages 18 to 24.
- Those who earned a high school diploma, attended some college, graduated from college or attended graduate school were more likely to say they have voted than those who had not finished high school.

## **Analysis of the predicted probability of voter turnout using the individual data**

Using this Census Bureau Current Population Survey data the Eagleton Institute of Politics performed an additional statistical analysis in which they calculated the effect of various independent variables on the probability that a respondent said he or she voted. This analysis, involving 54,973 voters cross-tabulated the maximum and minimum voter identification requirements in each state with the five levels of voting requirements: stating name, signing name, matching the signature, a non-photo ID, photo-ID signing an affidavit. The results of these **Predicted Probability of Voter Turnout for all Voter** tabulations are summarized in Table 3 below:

From this analysis, the Eagleton Institute of Politics found that three of the voter identification requirements (**which ones?**) exerted a statistically significant, negative effect on whether or not the CPS survey respondents said they had voted in 2004. That is, compared to states that require voters to only state their name, those states which require the voter to sign his or her name, to provide a non-photo ID, or to provide a photo ID as a maximum requirement, were shown to have a negative influence on turnout. Also, a negative influence on turnout was found when comparing those states that require voters to only state their name, as compared to those states which have as a minimum requirement for verifying voter ID, signing an affidavit.

This probability analysis also found that the competitiveness of the presidential race had a significant effect on turnout as well as some significant demographic and educational effects. For the entire voting population signature, non-photo identification and photo identification requirements were all associated with lower turnout rates compared to the requirements that voter simply state their names. The analysis further found that:

- The predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names and that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to only having to state one's name.
- Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. African American and Asian-American voters were about 6 percent less likely, while white voters were about 2 percent less likely.
- Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, while they were 6.1

percent less likely to vote where non-photo identification was the minimum requirement.

- For those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in those states that required an affidavit as the minimum requirement. These percentages were arrived at when comparing these states to ones that use as a minimum or maximum requirement, the voter to merely state his or her name.

### **Conclusions from the statistical analysis**

The statistical analysis found that as voter identification requirements vary, so do voter turnout rates. These findings were borne out through analyses conducted on aggregate data and individual-level data. There were, however, some distinctions found depending upon whether or not the state's particular voter identification requirements were set as minimums or maximums.

- The overall relationship between voter identification requirements and turnout for all registered voters was found to be small but statistically significant.
- Using the aggregate data the signature match and the non-photo identification requirement correlated with lower turnout. The photo identification requirement did not have a statistically significant effect.
- In the individual-level data the signature, no-photo identification and photo identification requirement were all correlated with lower turnout when compared to the requirements that voter simply state their names.
- Across various demographic groups (African-Americans, Asian-Americans and Hispanics) a statistically significant relationship was found between the non-photo identification requirement and voter turnout

### **Caveats to the Analysis**

The Eagleton Institute for Politics and the EAC make note that while this analysis is a good beginning, significant questions remain regarding the relationship between voter identification requirements and turnout. These analyses are unable, for example, to capture how or why identification requirements might lower turnout. That is, is it because voters are aware of the identification requirements and stay away from the polls because of them? Alternatively, do the requirements result in some voters being turned away when they cannot provide the identification, or must cast a provisional ballot?

Knowing more about the “on the ground” experience of voters regarding various identification requirements will guide state and local level policy makers in their efforts to educate voters about the requirements. These experiences could also help instruct election judges on how to handle questions and possible disputes over voter identification requirements.

## **Public Policy and Administrative Considerations**

Voter Identification, often described as the critical step in protecting the integrity of the ballot, is a process which can ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot. A voting system that requires voters to produce an identification document or documents may prevent the ineligible from voting, but also may prevent the eligible from casting a ballot.

Evaluating the effect of different voter identification regimes can be most effective when based on clear legal, equitable and practical standards. The questions outlined below might point policymakers to standards that can be created around voter identification requirements.

1. Is the voter ID system designed on the basis of valid and reliable empirical studies the will address concerns regarding certain types of voting fraud?
2. Does the voter ID requirement comply with the letter and spirit of the Voting Rights Act?
3. How effective is the voter ID requirement on increasing the security of the ballot and can it be coordinated with the statewide voter registration database?
4. How feasible is the voter identification requirement? That is, are there administrative or budgetary considerations or concerns? How easy or difficult will it be for pollworkers who must administer the requirement?
5. How cost effective is the voter ID system? That is, what are the monetary and non-monetary costs to the voter and to the state for implementing the ID system?
6. If voter ID requirements are shown to reduce voter turnout (generally, or with some particular groups), what possible steps should be taken to ameliorate this problem?

## **Recommendations and Next Steps**

As the Federal agency charged with informing election officials and the public about various issues related to the administration of elections EAC believes it should, in its capacity as a supporter of elections research, undertake additional study into the topic of voter identification requirements and the implementation of them in the following ways:

- Longitudinal studies of jurisdictions that have changed voter identification requirements.

- State-by-state and precinct-level analyses that will examine the correlations between various voter identification requirements and voter registration and turnout
- Alternative forms and methods for verifying a voter's identity.
- Continuing research into the connection between various voter identification requirements and the number of ballots cast and counted
- A continuing state-by-state update on changes to voter identification requirements.
- Continued collection of state-by-state data which will help examine the impact that voter identification requirements are having on the number of voters who are casting provisional ballots because of voter identification verification issues.

## **EAC Statement on Future Study of Voter Identification Requirements**

### **Background**

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. HAVA Section 303 (b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC sought to examine how these voter identification requirements were implemented in the 2004 general elections and to prepare guidance for the states on this topic.

In May 2005 EAC entered into a contract with the Eagleton Institute of Politics at Rutgers, the State University of New Jersey and the Moritz College of Law at the Ohio State University to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor also performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data-- aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic which are detailed in the attached report.

### **EAC Recommendations for further study and next steps**

EAC finds this initial review of States' voter identification requirements, state laws and litigation surrounding the implementation of voter identification requirements an important beginning step in its consideration of voter identification requirements. From this study and compilation of data EAC considers it advisable to engage in a longer-term, systematic review of voter identification requirements and is recommending that at a minimum the agency engage on an ongoing basis in:

- A state-by-state review, reporting and tracking of voter identification requirements.
- A review and study of how voter identification requirements are implemented and how these practices may vary from state law and statute.

From this ongoing review and tracking EAC can determine the feasibility and advisability of further research and study into how voter identification requirements have had an impact over time on factors such as voter turnout and voter registration.

EAC believes that the findings from this initial study of voter identification requirements are helping inform additional studies it is conducting on a variety of related topics. The EAC study on first time voters who have registered to vote by mail and several forthcoming studies related to voter registration processes will provide necessary additional data to help inform discussions and debate related to ballot access and ballot security. The EAC also anticipates that follow-on study it does related to election crimes and various aspects of voting accessibility will also help inform and guide these ballot security and ballot access discussions.

Finally, EAC is likely to consider implementing one or more of the following research studies that will serve to augment the work begun by the Eagleton Institute of Politics:

- A study of how certain voter identification provisions that have been in place for two or more Federal elections have had an impact on voter turnout and voter registration figures;
- A research study which examines, in greater detail, the relationship between race and voter turnout, and race and methods for registering voters;
- Studies on the inter-relationship between various voter registration processes, voter turnout and number of election crimes reported or litigated;
- Publication of a series of case studies which detail a particular state's or jurisdiction's experiences with various voter identification and voter registration regimes;
- A policy paper or memorandum exploring the alternatives to current voter identification processes and regimes.

Subject Fw: Eagleton/Moritz Study Release

All-

I know that Tom will be bringing the topic of the Provisional Voting and Voter ID studies up once again at this week's Commissioners meeting. To my knowledge, Elle is working with Commissioner Davidson to create the next draft of this document that the Commissioners will review. ( I have re-written the introduction to the report, using our 2005 EAC Advisory on the topic)

Prior to Thursday's meeting, however, I think we need ( or may want) to make clear to John Weingart that this report is ours to release or not release but that **we believe there is a lot of incorrect information stated in their studies .**

If Moritz/Rutgers decide to release their studies with or without our approval I fear the bad/misinformation contained in them will be attributed to us.

Subject RE: Eagleton/Moritz presentations at the upcoming Board of  
Advisors and Standards Board meetings 

Tom-

To reiterate the details of our discussion:

**By May 17** I will have received all of the materials you wish distributed to the EAC Board of Advisors and Standards Boards. You have indicated that this will be the Provisional Voting paper and the Voter ID paper, only.

**On Tuesday, May 23 from 2:30-4:00 PM, Tom O'Neill and Ed Foley** will present the Provisional Voting report to the EAC Standards Board. Julie Thompson-Hodgkins will be the resource person for that session

**On Wednesday, May 24 from 1:40-2:45 PM, Tom O'Neill, Dan Tokaji, and Tim Vercellotti** will present the Voter Identification report to the EAC Standards Board. Julie Thompson-Hodgkins will be the resource person for that session.

**On Wednesday, May 24 from 8:30-9:15 am, Tom O'Neill and Ed Foley** will present the Provisional Voting report to the EAC Board of Advisors. Julie Thompson-Hodgkins will be the resource person for that session.

**On Wednesday, May 24 from 11:00-11:55 am, Tom O'Neill, Dan Takaji and Tim Vercellotti** will present the Voter Identification report to the EAC Board of Advisors. Julie Thompson-Hodgkins will be the resource person for that session.

If you have further questions regarding the details of these sessions, please do not hesitate to contact me.

Regards-

Subject FYI-Eagleton

Turns out that Eagleton was doing a brief conference call with their project staff this afternoon and they asked me to participate briefly. Looked for you guys and you were in the Commissioner Retreat. Basically shared some very general thoughts with them and framed it as a series of questions/issues that might arise when they make their presentations next week.

Spoke of the CVAP vs. VAP issue, exit polls and CPS data versus using our Election Day survey and speaking with Election Officials about these topics. Also framed the issue of possible bias in their report by suggesting that they start out explaining how and why they have arrived at their statement about voter ID (burdensome, onerous, etc). Also suggested framing this by speaking of African American and elderly voter ID attitudes that appear to contrast with attitudes expressed by Hispanic voters. Did also ask about why they didn't look at Asian voters and if they included the March 15 2006 Census Bureau report in their analysis.

They took these comments under advisement and will be ready to address these and other topics at Monday's meetings.

Commissioner-

I believe an earlier and a later meeting time on the same day can be accommodated.

I will ask Nicole to arrange for a morning briefing and an afternoon one.  
I will also ask her to check on Commissioners' availability for the morning slot.

Commissioner-

Given travels costs and the number of persons involved from the Eagleton/Moritz team, the idea was to do the two meetings in the same day.

However, I could ask Nicole to determine if there is a day in March that might work with your schedule.

I am very reluctant to schedule a meeting later in April as the contract is technically over March 31 (a Friday). April 3 is the following Monday.

Please advise. Thanks

Subject Eagleton requesting a project close-out meeting with the 4 C's

Julie-

Eagleton would like to meet with the 4 C's sometime in very late March to report on their project findings and to do a project "close-out" meeting.

Commissioner Hillman asked that I check with you to be certain that such a meeting ( with all four Commissioners) is legal.

Thanks for advising.

Subject Eagleton Close-Out Meeting

Commissioners:

The Eagleton Close-Out Meeting has been scheduled for Monday, April 3, 2006. As requested, the delegation from Eagleton will give two presentations so that you may choose to attend the briefing which most readily jibes with your schedule.

Please advise as to which session you will attend. The meetings should last approximately 45 minutes plus discussion/question and answer time.

The meeting times are either 11:00am or 2:30pm. And will be held in the small conference room.

Regards,

Nicole K. Mortellito

Subject Comments regarding the Eagleton Report on Voter ID

Karen,

As you requested, here are my comments regarding the final draft Eagleton report on Voter ID.

While the report is generally acceptable, I don't believe the current draft is ready to be released.

I found some parts of the report to be misleading and, at times, appearing biased to support a view that imposing ID requirements at the polls should be discouraged. As an example, on the first page they write about poll workers facing "long lines and limited time," suggesting that may be a problem for the workers to check ID. I am not sure what their point may be, as poll workers in states that require ID checking will still have to do so, no matter how long the voter lines they have. Many states and their polling places may not have long lines at the polls, and thus voters may not have the "limited time" suggested in the report. They don't support their suggestion with hard data on long voter lines and time limits on poll workers.

They selectively quote the Carter-Baker Commission study to suggest that "photographic ID requirements for in-person voting do little to address the problem of registration by mail" even though the Carter-Baker study actually promotes the idea of a photographic ID requirement at the polls. To be fair, they need to state that fact and the reasons why the Carter-Baker Commission comes to that conclusion.

Their table on page 7 indicates that Missouri's current ID requirement for first-time voters relies on HAVA requirements. It is my understanding that Missouri law requires that all voters must show some type of ID at the polls (therefore it should state "Provide ID" as they did in listing CO, CN and LA requirements).

On page 9 and on subsequent pages they make reference to "voting age population" (VAP) data issued by the Census Bureau. Is all the data they represent in their analysis based on the VAP or do they take into consideration the Citizen Voting Age Population (CVAP), which takes into account the number of non-citizens who may be included in the VAP? It is not clear from the report. You may remember that Kim Brace discussed the VAP vs. CVAP issue with us extensively, and he indicated that the CVAP figure is always the better one to use when analyzing Census Bureau data against voting data. He also said that many of the non-citizens included in the VAP figures tend to be Hispanic. And since the Eagleton study is making conclusions that indicate that more stringent ID requirements may tend to reduce Hispanic voter turnout, it becomes important to understand which figures Eagleton uses, as Kim told us that VAP figures do not compensate for the non-citizen Hispanic voters that are included at a higher rate in the VAP (because as Kim stated most of the non-citizen population in the USA tends to be Hispanic).

I would like to know if the new Census report data on the 2004 election released on March 15, 2006 changes any of their perspectives. <http://www.census.gov/prod/2006pubs/p20-556.pdf>

010449

On page 12 they make reference to the CPS data and indicate that it reported a voter turnout rate of 89%, which is much higher than other data reported (which is also explained in their narrative). However, while the report indicates that the CPS data is "widely-accepted," it does not make clear by whom. I think for credibility reasons they need more supporting language since there is a significant difference between a self-reported turnout of 89% and the reality of 63%.

Considering that the beginning of the document reveals a bias towards lesser ID requirements, I believe that it is important to highlight earlier in the report the conclusion found on page 14 that concerns by critics of voter identification requirements for African-American and elderly voters "are not borne out by the results." This will provide at least some balance to the reader.

On page 20 they indicate they lack good data on why voters must cast their ballots provisionally. I thought that our Election Day Survey captured some of that data.

It appears that a preponderance of their citations are from organizations or groups that support liberal positions on election issues, or take selective information from reports to support a more liberal interpretation of views on voter ID issues. Examples would include: Carter-Baker on page 1; Tova Wang on page 4; Carter-Baker on page 4; Brennan Center page 20. While many of published articles cited on pages 30 and 31 provide relatively neutral information, those that appear to take positions (read from the description of the articles) appear to favor a liberal position on most ID issues. I would have hoped they would have provided a more balanced approach. I don't see conservative writers, such as Thor Hearne, of the American Center for Voting Rights, quoted or cited once in the report. Mr. Hearne has testified before Congress and has had several articles that address voter identification issues.

I was pleased that they cited (on page 5) a recent March 15, 2006 article from the Arizona Republic that indicated that their stricter voter ID law went smoothly in its first use.

They might want to be aware (and perhaps mention) that the recommendation from Edward Foley cited on the bottom of page 21 was actually used in Haiti's recent February 7, 2006 presidential election. In addition to each voter being provided a picture ID by the election commission, that same picture was found next to the voters' name on the voter rolls that were used at the polling places. Perhaps they want to contact Scott Lansell of IFES for confirmation. The picture ID project for Haiti's election was financed and implemented by the Organization for American States (OAS). I believe turnout for that election was over 60% of those eligible.

Please let me know if you or anyone from Eagleton has questions regarding these comments. Thanks.

----- Original Message -----

**From:** Juliet E. Hodgkins  
**Sent:** 11/17/2006 01:40 PM  
**To:** Donetta Davidson; Gracia Hillman; Paul DeGregorio; Thomas Wilkey  
**Cc:** Bert Benavides; Sheila Banks; Elieen Collver; Matthew Masterson; Gavin Gilmour  
**Subject:** Draft Voting Fraud and Voter Intimidation Report

Commissioners and Tom,

I have attached a draft version of the EAC Voting Fraud and Voter Intimidation report. **Please have your comments ready no later than Tuesday , Nov. 28, COB, so that I will be prepared to discuss them at our briefing on Wednesday , Nov. 29 at 10:30.**

You will note that there are appendixes referenced in the report. These documents are quite lengthy. Thus, I did not attach them to this email. If, however, you want to read the documents, DeAnna has access to them in my absence and can either email them to you or print them for you.

I think that the report is fairly self-explanatory. However, there are two questions that we need to address and that the Commissioners need to comment on:

1. The consultants provided summaries of articles, books, and reports that they read, as well as summaries of the interviews that they conducted. Peggy created two tables summarizing the consultants' summaries of books, article and reports as well as interviews. We need to make a determination of which summaries we want to attach as appendixes. The only issue that I am aware of (and I have a question pending to Peggy about the quality of these summaries) is a significant disagreement over the summaries of interviews with Craig Donsanto and John Tanner of the Dept. of Justice. They disagree with the characterization given by the consultants to what they said in the interview. Obviously, this matter would have to be resolved if we decide to use the consultants' summaries.
2. Tom and I had a conversation with Tova and Job about the fact that we are going to issue a report. Tova was quite insistent about being able to see the report before it is released. I am NOT inclined to give her a copy of the report before it is released. Neither Tova nor Job are still on contract with the EAC. Thus, they are just like any other member of the public. I believe that if we release it to them, then we may have a significant problem withholding the document from others that may ask for it via FOIA request. I believe that the course of action should be to release it to all persons simultaneously.

Happy reading and Happy Thanksgiving!

Subject Re: The Fraud "Report" 

I think it's good idea, especially considering the media coverage and controversy. I spoke with Todd Rokita today and he was not happy at all about what he has read and feels the status report was misleading as the working group session held the day after the report was given came to different conclusions.

We also should make mention on Thursday about the 4th anniversary of HAVA, which is this Friday. It could give us an opportunity to talk about the positive things that have happened in election reform since its passage. Much of the talking points our media advisors drafted talk about this.

**Subject:** The Fraud "Report"

I am recommending that we use Thursday's meeting, a public forum, to be on the record about this report.

My thought is that Tom should report the matter to us in his report. New Business?? Just stating the facts as they exist, including the nature of the study, how we have handled the numerous requests and inquiries that we have received, etc.

Please let me know what you think about this suggestion. Thanks.

RE: October 19, 2006 Letter

Dear Mr. Reynolds:

Your letter of October 19, 2006 requests the release of EAC's Voter Fraud and Intimidation Report. I would like to take this opportunity to clarify the purpose and status of this study.

In late 2005, EAC hired two consultants for the purpose of assisting EAC with two things: 1) developing a uniform definition of the phrase voter fraud, and 2) making recommendations on how to further study the existence, prosecution, and means of deterring such voter fraud. In May 2006, a status report on this study was given to the EAC Standards Board and EAC Board of Advisors during their public meetings. During the same week, a working group convened to react to and provide comment on the progress and potential conclusions that could be reached from the work of the two consultants.

The conversation at the working group meeting was lively on the very points that we were trying to accomplish as a part of this study, namely what is voter fraud and how do we pursue studying it. Many of the proposed conclusions that were suggested by the consultants were challenged by the working group members. As such, the consultants were tasked with reviewing the concerns expressed at the working group meeting, conducting additional research as necessary, and providing a draft report to EAC that took into account the working group's concerns and issues.

That draft report is currently being vetted by EAC staff. EAC will release a final report from this study after it has conducted a review of the draft provided by the consultants. However, it is important to remember the purpose of this study – finding a uniform definition of voter fraud and making recommendations on how to study the existence, prosecution and deterrence of voter fraud -- as it will serve as the basis of the EAC report on this study.

Thank you for your letter. You can be assured that as soon as a final report on the fraud and intimidation study is available, a copy will be made available to the public.

Sincerely,

Paul S. DeGregorio  
Chairman

Subject Eagleton

In his note regarding the Eagleton contract, Hans has raised some of the same concerns I raised from the beginning of any discussions I had regarding this contract with our staff, and at our first formal meeting with Eagleton. In reviewing their work product from time to time, I continue to have concerns about a lack of balanced input and have repeatedly voiced them with staff and with Eagleton. I did this when the initial peer review group was proposed and again during their presentation at our meeting in Pasadena (the outreach slide in their public presentation showed outreach to seven groups, of which only one could be considered conservative-leaning). Now, as I have just had the opportunity to read their July progress report, it appears that Eagleton seems to be going into a larger analysis of the voter fraud issue than was authorized in the contract. My suspicion is that Dan Tokaji is injecting his views into this to dismiss or diminish the concerns some people may have about voter fraud. I could be wrong, but his previous writings lead me to believe otherwise.

I only found one mention of voter fraud in the contract with Eagleton. It is in Section 3.5 regarding provisional voting, where it discusses "minimizing opportunity for voter fraud." Yet, on page 4 of the July progress report from Eagleton, in describing their work plan for the next month it states: "we will expand upon vote fraud research and examine further the relationship between instances of vote fraud and ensuing election reforms." This clearly seems to be going beyond the mandate we gave them as I thought they were going to be looking at voter fraud relating to provisional voting (as the contract calls for), not voter fraud as it relates to election reforms. While voter fraud was never mentioned in the contract regarding the voter ID issue, page 5 of their July report indicates that their narratives "will include an appraisal of the prevalence and nature of vote fraud." In addition to this, page 6 describes a look into the "relationship between voter ID regime and vote fraud."

Voter fraud is clearly an issue that is perceived differently from the Right and from the Left. I have struggled with determining what a clear definition of voter fraud is myself, and therefore want to obtain various perspectives and good analysis on this issue before I formulate a solid conclusion in my mind. It has been my understanding all along that the whole voter fraud/voter intimidation issue is going to be studied by the EAC using a balanced group of consultants--not Eagleton and Moritz, who are likely to focus on just on the number of prosecutions of voter fraud, rather than the complaints made or the fact that many election officials are frustrated that some prosecutors don't take their complaints about voter fraud seriously. I am not convinced at this point that we will get a balanced and objective study from Eagleton/Moritz on voter fraud. I am puzzled on why they seem to be expending a significant portion of their time on this and would want to know if we somehow authorized them to do more research into the voter fraud issue.

On page 7 of their July report Eagleton indicates that communications with the EAC on the Peer Review Group "were not clear or timely." I would like to know what this refers to. Also, I may have missed it, but I do not recall seeing the final list of who is serving as the Peer Review group.

The August 15th copy of the July report that I received from Karen did not include the attachment of the financial report of expenses incurred. I would like to see that attachment.

Outside of our NIST work, this contract represents our largest single outside expenditure of our operational funds. Any single expenditure of \$500,000+ needs to be closely monitored. I, for one, am not going to sign off on any report that appears to have been written from a biased viewpoint, especially one that doesn't appear to be interested in hearing from conservative organizations or right-leaning researchers, or seems to minimize any input from them. I've already had questions from congressional staff and others on why we picked Eagleton and Moritz, as they are perceived by some as biased against

010304

Republicans. I assured the critics that we have insisted all along on an objective study from Eagleton. An unbalanced or biased study from them will not only hurt my credibility, but also that of the EAC. I'm not suggesting that we stop their work, but I do want Tom and Julie to inform them in no uncertain terms that we will not accept a report that does not seriously consider all viewpoints on provisional voting and the voter ID issue, and that any study or interpretations they present to us reflect a diversity of opinions on these subjects. We also need for staff to determine whether their considerable work into the voter fraud area is authorized in the contract. We should not be paying for and receiving work we did not authorize.

The contract clearly calls for "alternative approaches" on voter ID requirements and "alternatives" on provisional voting. I agreed to support this contract to Eagleton because I was assured that we would receive a variety of approaches from their work, and not just those from a liberal perspective.

Julie,

I understand from Tom Wilkey that you are planning on releasing our report at the public meeting next Thursday, December 7. As we discussed, I respectfully request that Job and I be permitted to review what you are releasing before it is released. I would like us both to be provided with an embargoed copy as soon as possible so we have time to properly review it before Thursday. I can be contacted by email, cell phone at 917-656-7905, or office phone 202-741-6263. I hope to hear from you soon. Thanks.

Tom,

Regarding the FR notice, it can be short but it must be accurate and complete. We will also include this info in the newsletter on Thursday. Many people feel strongly about this issue and it may well generate news stories regardless of what we do. We must get it right at the beginning and be prepared to answer questions from the public and the media such as: How long have we had it ? Why are we discussing it now ? How much did it cost ? What will EAC do with it or what exactly are the next steps? If this is a report with preliminary research findings together with recommendations for future study, then could EAC acknowledge the findings without accepting them but instead accept recommendations for future study?

Subject Response Requested - EAC voter ID report

Karen,

We need to publish an FR notice early tomorrow regarding the next public meeting. In light of the recent matter regarding voter fraud, I want to be sure to accurately describe what's happening with the voter ID report item contained in the draft agenda. Please add some perspective about what will and will not be discussed and what, if any, action might be expected. The draft agenda says the following: "Presentation of Eagleton ID Report - "Best Practices to Improve Voter Identification Requirements," John Weingarten, Rutgers University (Time allotted 7-10 minutes; Q & A 5 min.)". What stage are we with this ? (preliminary, final, NOTA, etc.) Just trying to stay ahead of the curve,

Thanks,  
Bryan

Subject request for reports

Mr. Whitener,

I write to request a copy of the following two reports submitted to the Election Assistance Commission:

- (1) a report on voter fraud and voter intimidation, outlining a future research agenda, prepared by Tova Wang and Job Serebrov, and discussed in this morning's USA TODAY;
- (2) a report on provisional ballots and voter ID, prepared by the Moritz School of Law at Ohio State University in collaboration with others.

It is my understanding that these reports were commissioned by and submitted to the EAC several months ago. It is in the public interest to release these reports since they will advance the public discussion and understanding of important election administration issues.

Thank you very much for your attention to this request. Please let me know when I can expect

Subject: Re: Revised Voter ID statement with Eagleton comments to  
paragraph 2

Several thoughts on formatting:

Does the title of the document still work?

I still think that the two paragraphs, the one that precedes the Julie paragraph and the one that follows, should be set apart and titled "conclusion" or "finding" or something that recognizes it was the subject of an action by the EAC.

and then i ask if the title of the next section still works--do we make recommendations to ourselves?

## **VOTER ID REPORT TALKING POINTS**

**Public Meeting**

**February 8, 2007**

### **I. Chair Davidson's Opening Comments for Eagleton Portion of Public Meeting**

- This has been a highly anticipated report.
- We received the Eagleton draft in June 2006.
- We immediately realized that the data presented more questions than answers.
- Since we have limited staff and resources, we were unable to immediately resolve these questions. Our top priorities at the time were the lab accreditation and the voting system certification programs.
- In addition, we had to focus our efforts on getting information to election officials and the public concerning the November elections, especially because so many jurisdictions were using new voting equipment.
- Now that we have launched those programs, we are once again turning our attention to this research project.
- Let me introduce Tom O'Neil and Tim Vercellotti. They are here today to pick up where we left off, and to give us a brief overview of the research they conducted regarding voter identification.

### **II. Karen Lynn-Dyson Testimony**

### **III. Eagleton Testimony**

### **IV. Commissioners Q&A**

### **V. Chair Closes Eagleton Portion of Public Meeting**

- Obviously many questions have been raised today.
- Next step is for EAC to determine how to move forward.
- I request that Tom instruct staff to provide recommendations on how to proceed within the next 30 days.
- Once we determine how to move forward and what the final culmination of this initial research will be, we will notify everyone.
- Thank you Tom and Tim for your hard work and efforts in the study of this important topic.

010462

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Drawing on its nationwide review and legal analysis of state statutes and regulations for voter identification, the Contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election- November 2004. For example, the turnout rate in 2004 in states that required the voter to provide an identify document<sup>1</sup> was compared to the turnout rate in 2004 in states with a requirement that voters give his or her name in order to receive a ballot. The Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates<sup>2</sup>, and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau<sup>3</sup>

Comment [MSOffice1]: Some states compare signatures. Our base case was giving name - either orally or by signing without any attempt to verify the signature. Give is therefore a more precise word here than "sign".

Footnotes:

1. In 2004, three of the states that authorized election officials to request photo identification allowed voters to provide a non-photo ID and still vote a regular ballot and two others permitted voters who lacked a photo ID to vote a regular ballot by swearing an affidavit.

2. The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population includes persons who are not registered to vote.

3. The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S citizens.

Subject Re: EAC Statement on its future study of Voter ID requirements

John and Tom-

EAC staff are putting the finishing touches on the statement and data it will be releasing, in the next several days, related to voter identification study.

In our brief statement we will be summarizing what Rutgers/Eagleton did when performing its statistical analysis.

Could you review the following statement for accuracy and send me any revisions and edits to it by Friday March 16, 2007?

" The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. The Contractor compared states with similar voter identification requirements and drew conclusions based on comparing turnout rates among states for one election- November 2004. For example, the turnout rate in 2004 in states with a photo identification requirement was compared to the turnout rate in 2004 in states with a requirement that voters sign his or her name in order to receive a ballot. The Contractor used two sets of data to estimate turnout rates: 1) voting age population estimates 1 and 2) individual-level survey data from the November 2004 Current Population Survey conducted by the U.S. Census Bureau2 "

Footnotes:

1 The July 2004 estimates for voting age population were provided by the U.S. Census Bureau. Because these numbers include non-citizens, the Contractor reduced the numbers by the same percentage the U.S. Census Bureau estimated were non-citizens in 2000. Estimates of voting age population includes persons who are not registered to vote.

2. The Current Population Survey is based on reports from self-described registered voters who also describe themselves as U.S citizens.

Thanks for your feedback

Subject Next draft of the Voter ID statement

Commissioners-

It appears that I may be the latest casualty of the EAC "bug". As such, I'm leaving early today and may or may not be in the office tomorrow.

Jeannie and I have spoken of her getting the next draft of the statement from the four of you and preparing the final edited draft for the tally vote.

I would imagine Tom's office can put together the tally vote for this document and get it to you all tomorrow, if you have been able to reach a consensus on the final document. If this is not seen as urgent and I am back in the office I will be happy to get the material together for Wednesday.

Thanks

## **EAC Statement on Future Study of Voter Identification Requirements**

### **Background**

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005, EAC contracted with Rutgers, the State University of New Jersey through its Eagleton Institute of Politics ("Contractor") to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the Contractor was asked to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and to recommend various policies that could be applied to these approaches.

The Contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data-- aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the Contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.

The Contractor presented testimony summarizing its findings from this statistical and data analysis at the February 8, 2007 public meeting of the U.S. Election Assistance Commission. The Contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website, [www.eac.gov](http://www.eac.gov).

### **EAC Recommendations for further study and next steps**

EAC finds the Contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be a first step in the Commission's consideration of voter identification requirements.

However, EAC has concerns regarding the research and statistical methodology the Contractor chose to employ in order to analyze voter identification requirements and the potential variation in turnout rates based on the type of voter identification requirements. EAC is not adopting the report submitted by the Contractor and, therefore, is not releasing the report.

EAC will engage in a longer-term, more systematic review of voter identification requirements. Additional study on the topic will include more than one Federal election

cycle, additional environmental and political factors that effect voter participation, and the numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities:

- Conduct an ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors. EAC will use some of the information collected by Eagleton as well as additional data from the states to develop this baseline.
- Convene, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include methodology, specific issues to be covered in the study and timelines for completing an EAC study on voter identification.
- Study how voter identification provisions that have been in place for two or more Federal elections have impacted voter turnout, voter registration figures, and fraud, study the effects of voter identification provisions, or the lack thereof, on early absentee and vote-by-mail voting. Included in this study will be an examination of the relationship between voter turnout and other factors such as race and gender.
- Publish a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating poll workers and voters about various voter identification requirements. Included in the case studies will be detail on the policies and practices used to educate and inform poll workers and voters.

## EAC Statement on Future Study of Voter Identification Requirements

### Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005 EAC entered into a contract with Rutgers, The State University of New Jersey through its Eagleton Institute of Politics to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data-- aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.

**Comment [GH1]:** th respect to the last sentence in paragraph one above, it is my opinion that it would have been reasonable for Eagleton to have considered the statistical analysis they conducted as being covered by that task. Therefore, I recommend striking the word "also" from this sentence.

The contractor presented testimony summarizing its findings from this statistical and data analysis at a February 8, 2007 public meeting of the U.S. Election Assistance Commission. The contractor's testimony, its summary of voter identification requirements by State, its summary of court decisions and literature on voter identification and related issues, an annotated bibliography on voter identification issues and its summary of state statutes and regulations affecting voter identification are attached to this report and can also be found on EAC's website: [www.EAC.gov](http://www.EAC.gov).

### EAC Recommendations for further study and next steps

EAC finds the contractor's summary of States' voter identification requirements and its summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be an important first step in the Commission's consideration of voter identification requirements.

However, EAC has concerns regarding the research and statistical methodology the contractor chose to employ in order to analyze voter identification requirements.

Therefore, EAC is not adopting the contractor's full report that was submitted and is not releasing this report. Therefore, EAC will engage in a longer-term, more systematic review of voter identification requirements and the potential variation in turnout rates based on the types of voter identification requirements. EAC's additional study on the topic will include more than one Federal election cycle, examine additional environmental and political factors that effect voter participation, and consider the

numerous changes in state laws and regulations related to voter identification requirements that have occurred since 2004.

EAC will undertake the following activities.

- An ongoing state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- Using some of the information collected by Eagleton and assembling data from states, EAC will establish a baseline of information that will include factors that may affect or influence Citizen Voting Age Population (CVAP) voter participation, including various voter identification requirements, the competitiveness of a race and certain environmental or political factors.
- Convening, by mid-2007, a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include specific issues to be covered in the study, research and statistical methodologies to be employed and timelines for completing an EAC study on voter identification.
- A study of how certain voter identification provisions that have been in place for two or more Federal elections have had an impact on voter turnout, voter registration figures, and fraud. Included in this study would be an examination of the relationship between voter turnout and race and gender.
- Publication of a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating pollworkers and voters about various voter identification requirements. Included in the case studies would be detail on the policies and practices used to educate and inform pollworkers and voters.
- A state-by-state tracking of early voting, absentee voting, and vote-by-mail policies and procedures. The data collected through this tracking would be then be compared to various state voter identification policies and procedures.

Subject Close-to-final draft of Voter ID statement 

Commissioners-

Attached please find the draft statement on voter ID requirement in which I have attempted to incorporate your suggested changes. Those changes are highlighted in yellow and bolded.

You'll want to pay particular attention to the options for the third paragraph in which I have offered two choices:

One choice allows you to release all of Eagleton's documents, including the testimony, the 32-page report and the statistical analysis( Appendix C).

The second choice **only** includes the testimony and does **not** include the 32 page summary or the data analysis ( Appendix C).

Once you have reached a consensus on one of the choices, I'll ask Jeannie to take a close look at grammar and syntax.

Thanks

## EAC Statement on Future Study of Voter Identification Requirements

### Background

The Help America Vote Act of 2002 (HAVA) authorizes the United States Election Assistance Commission (EAC) to conduct periodic studies of election administration issues. In May 2005 EAC entered into a contract with the Eagleton Institute of Politics at Rutgers, the State University of New Jersey and the Moritz College of Law at the Ohio State University to perform a review and legal analysis of state legislation, administrative procedures and court cases, and to perform a literature review on other research and data available on the topic of voter identification requirements. Further, the contractor was to analyze the problems and challenges of voter identification, to hypothesize alternative approaches and recommend various policies that could be applied to these approaches.

The contractor also performed a statistical analysis of the relationship of various requirements for voter identification to voter turnout in the 2004 election. Using two sets of data-- aggregate turnout data at the county level for each state, and reports of individual voters collected in the November 2004 Current Population Survey conducted by the U.S. Census Bureau-- the contractor arrived at a series of findings, conclusions and subsequent recommendations for further research into the topic.

On February 8, 2007 in an EAC public meeting, the contractor presented testimony summarizing the findings from this statistical and data analysis which it elected to perform on voter identification requirements. A summary of voter identification requirements by State, court decisions and literature on voter identification and related issues court decisions, an annotated bibliography on voter identification issues and, state statutes and regulations affecting voter identification can be found, along with the contractor's testimony, on EAC's website: [www.EAC.gov](http://www.EAC.gov).

OR

On February 8, 2007 in an EAC public meeting, the contractor presented testimony summarizing the findings from this statistical and data analysis which it elected to perform on voter identification requirements. The contractor's full report describing the statistical and data analysis which it performed along with the testimony that was delivered summarizing this can be found on EAC's website. A summary of voter identification requirements by State, court decisions and literature on voter identification and related issue court decisions, the statistical and data analysis of the effect of voter identification requirements on turnout, an annotated bibliography on voter identification issues and, state statutes and regulations affecting voter identification can also be found on EAC's website: [www.EAC.gov](http://www.EAC.gov).

## EAC Recommendations for further study and next steps

EAC finds the contractor's summary of States' voter identification requirements and summary of state laws, statutes, regulations and litigation surrounding the implementation of voter identification requirements, to be an important beginning step in the Commission's consideration of voter identification requirements. From the contractor's statistical analysis and compilation of data EAC considers it advisable to engage in a longer-term, more systematic review of voter identification requirements and is recommending that at a minimum the agency engage on an ongoing basis in:

- A state-by-state review, reporting and tracking of voter identification requirements. This will include tracking states' requirements which require a voter to state this or her name, to sign his or her name, to match his or her signature to a signature on file, to provide photo or non-photo identification or to swear an affidavit affirming his or her identify.
- To collect a baseline of information on what factors may effect or influence Citizen Voting Age Population (CVAP) voter participation. **At a minimum data on voter participation statistics for the 2004 and 2008 election cycles would be collected.** Other factors to be examined will include various voter identification requirements, whether or not the race was "hotly" contested and, other environmental or political factors

From this ongoing review and tracking EAC can determine the feasibility and advisability of further research and study into whether voter identification requirements have had an impact over several elections on factors such as voter turnout, registration, and fraud.

EAC is likely to consider implementing one or more of the following research studies that will serve to augment the work begun by the Eagleton Institute of Politics:

- **Convening a working group of advocates, academics, research methodologists and election officials to discuss EAC's next study of voter identification. Topics to be discussed include specific issues to be covered in the study and timelines for completing an EAC study on voter identification.**
- A study of how certain voter identification provisions that have been in place for two or more Federal elections have had an impact on voter turnout, voter registration figures, and fraud. Included in this study would be an examination of the relationship between voter turnout and race and gender;
- Publication of a series of best practice case studies which detail a particular state's or jurisdiction's experiences with educating pollworkers and voters about various voter identification requirements. Included in the case studies would be detail on the policies and practices used to educate and inform pollworkers and voters;

- A state-by-state tracking of early voting, absentee voting, and vote-by-mail policies and procedures. The data collected through this tracking would then be compared to the various state voter identification policies and procedures described above.

Subject Final Provisional Voting and Voter ID reports

Karen,

Attached are our final reports on Provisional Voting and Voter Identification in PDF format. The hard copies with all attachments are on their way to you via Fed Ex.

I understand from your email today that we will be receiving a letter from Tom Wilkey on the final steps to wrap up the contract. All of us are eager to see the Commission move forward with recommendations to the states for best practices on provisional voting and to take the next step on voter id issues by submitting our report to the advisory boards.

Thanks for your long effort to help us see this research through to submission. I hope we'll have a further chance to work together as our recommendations approach implementation.

Hope you enjoy some time off during the coming long weekend and July 4 celebration.

## The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

### Peer Review Group

A draft of this report and the statistical analysis in its appendix were critiqued by a Peer Review Group. The comments of its members improved the quality of our work. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in our recommendations.

# **REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES**

---

## **Report Background**

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

## **EXECUTIVE SUMMARY AND RECOMMENDATIONS**

### Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

- Opponents seek to forestall more stringent identification requirements, such as government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate. It inquires whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout. That analysis would constitute an important first step in assessing tradeoffs between ballot security and ballot access. The aim of this research is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis examined the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information (such as the specific reasons some potential voters are not allowed to cast a regular ballot) that that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on

turnout and on vote fraud is to collect more information on both topics systematically and regularly.

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:<sup>1</sup> the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.<sup>2</sup> Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, the different statistical methods and two different sets of data on turnout in 2004 election used in the study point to the same general finding. Stricter voter identification requirements (for example, requiring voters to present non-photo ID compared to simply stating their names) were correlated with reduced turnout in the models employed, as described in detail in Appendix C.<sup>3</sup> As explained below, these models find that a statistically

---

<sup>1</sup> See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. *Political Behavior*, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

<sup>2</sup> The EAC has contracted with other researchers to study vote fraud issues.

<sup>3</sup> Appendix C: Tim Vercellotti, Eagleton Institute of Politics, *Analysis of Effects of Voter Identification Requirements on Turnout*. Using the aggregate data, photo ID did not have a significant effect on turnout, possibly because in the

significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. (But note that in the model using the aggregate data, photo ID did not have a significant effect on turnout. The reason may have been that in this election, each state with a photo ID requirement provided an alternate way for those without a photo ID to cast a regular ballot.) Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible voters, however, the tradeoffs between ballot security and ballot access cannot be assessed.

#### Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.<sup>4</sup> The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state

---

2004 election every state requiring photo ID provided an alternative way to cast a regular ballot for those voters who lacked photo identification. The individual data from the Current Population Survey did show a significant effect, but only for the overall sample and for white voters, which may be an artifact of the large sample size.

<sup>4</sup> Even the most relaxed provisions for identification at the polls—anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

challenge process). We have included “maximum” requirements in our analysis, and not simply “minimum” requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the “maximum” of being asked to show photo ID may deter some voters even though the “minimum” would allow them to vote without photo ID.

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a “minimum” requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

#### Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis’s aggregate data and the individual-level data, although not always

for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, for the maximum ID requirements, the match-signature requirement and the provide-a- non-photo-ID requirement, but not the photo ID requirement, were all correlated with lower turnout compared to requiring that voters state their names. When the registration closing deadline was added as an independent variable in the aggregate analysis, signature match and non-photo id remained significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a “maximum” requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a “minimum” requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such

knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>5</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

#### Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

---

<sup>5</sup> Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. A "Voter Impact Statement" would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.
3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC might also use the information reported by the states to encourage further assessment by the states of the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
  - I. Useful information could be supplied by state-sponsored surveys of voters conducted by local election officials. Such surveys would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
  - II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
  - III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks

statutory or regulatory requirements. Such reports should be available to the public.

4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots<sup>6</sup>, and the safe harbor provision in presidential elections.
5. Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is less certain.

## **SUMMARY OF RESEARCH**

### **Background and Approach of the Study**

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether to vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

---

<sup>6</sup> Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.
- Briens and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly*. 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics*. 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.
- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior*. 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review*. 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review*. 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.

- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review*. 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior*. 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.
- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior*. 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics*., 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

#### Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>7</sup> The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

---

<sup>7</sup> As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.<sup>8</sup>

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.<sup>9</sup> Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that

---

<sup>8</sup> Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

<sup>9</sup> "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.<sup>10</sup> Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.<sup>11</sup> And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

---

<sup>10</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>11</sup> The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest seven questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?<sup>12</sup>
2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>13</sup>
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>14</sup>
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.<sup>15</sup> A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

---

<sup>12</sup> "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." Harvard Law Review 127:1144 (2006)

<sup>13</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

<sup>14</sup> In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

<sup>15</sup> "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>16</sup>
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it, intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

### **Voter ID and Turnout**

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004. These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).<sup>17</sup> Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.<sup>18</sup>

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the

---

<sup>16</sup> For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

<sup>17</sup> Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

<sup>18</sup> As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a "minimum" requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state's voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.<sup>19</sup> Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state's legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

<sup>19</sup> One state election official told us that, "We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren't that way, but it probably is."

\* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

<sup>1</sup> Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

<sup>2</sup> Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

<sup>3</sup> Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

<sup>4</sup> Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

<sup>5</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>6</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>7</sup> Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

<sup>8</sup> Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

### Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ( $r = -.30, p < .05$ ). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ( $r = -.20, p = .16$ ). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	64.2 %	State Name	63.0 %
Sign Name	61.1 %	Sign Name	60.4 %
Match Signature	60.9 %	Match Signature	61.7 %
Provide Non-Photo ID	59.3 %	Provide Non-Photo ID	59.0 %
Provide Photo ID	58.1 %	Swear Affidavit	60.1 %
Average Turnout (All States)	60.9 %		

**This table displays the mean turnout using the aggregate county level data for each state in 2004.**

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables.<sup>21</sup>(Dichotomous variables reflect either the presence or absence of a characteristic. In the dummy variable for non-photo ID, a state would be coded as 1 if it required non-photo ID, and 0 otherwise.)

Voter identification requirements are just one factor that might affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American<sup>22</sup>
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering

---

<sup>21</sup> The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

<sup>22</sup> The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

The dependent variable in each model using the aggregate data was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that the stricter voter identification requirements of matching one's signature to a signature on file with election authorities or presenting a non-photo ID are associated with lower turnout compared to turnout in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. (A "dummy variable" represents a particular attribute and has the value zero or one for each observation, e.g. 1 for male and 0 for female.) Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.<sup>23</sup>

---

<sup>23</sup> This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum requirements, a signature match and non-photo identification –but not photo identification– were correlated at a significant level with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.<sup>24</sup> Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

#### Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.<sup>25</sup> The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens, who in this survey were not asked the voter registration and turnout questions. In

---

<sup>24</sup> For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).<sup>24</sup> Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

<sup>25</sup> It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have influenced turnout in 2004.<sup>26</sup> The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.<sup>27</sup>

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.<sup>28</sup> Table 3 below shows predicted probabilities (calculated from the probit

---

<sup>26</sup> The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

<sup>27</sup> The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

<sup>28</sup> A probit model is a popular specification of a generalized linear regression model, using the probit link function.

coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.<sup>29</sup>

<b>Table 3. Predicted probability of voter turnout – all voters</b>		
	<b>Maximum requirement</b>	<b>Minimum requirement</b>
<b>State name</b>	91.7%	91.5%
<b>Sign name</b>	89.9%	90.2%
<b>Match signature</b>	Not significant	Not significant
<b>Non-photo ID</b>	89.0%	89.0%
<b>Photo ID</b>	88.8%	---
<b>Affidavit</b>	---	87.5%
<b>Total difference from “state name” to “photo ID” or “affidavit”</b>	<b>2.9%</b>	<b>4.0%</b>
<b>N</b>	54,973	
Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies from stating one’s name to providing photo identification or an affidavit , with all other variables held constant.  Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.		

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one’s name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.<sup>30</sup> In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those with fewer years of education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum

<sup>29</sup> In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

<sup>30</sup> The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

requirement compared to states where stating one's name was the maximum or minimum requirement.

Race and ethnicity have generated particular interest in the debate over voter ID requirements.<sup>31</sup> The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

More rigorous voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

#### Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data,

---

<sup>31</sup> Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

In the aggregate data, the match-signature requirement and the provide-a-non-photo ID requirement were correlated with lower turnout compared to requiring that voters state their names. But the photo-ID requirement did not have an effect that was statistically significant, possibly because in 2004 each state requiring a photo-ID provided an alternative way to cast a regular ballot for voters who lacked that document.

In the model using the individual-level data the signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names (in the entire sample and for white voters, but the statistical significance may be an artifact of the very large sample size). That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day, or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

## Litigation Over Voter ID Requirements

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*). Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.<sup>32</sup> Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a

---

<sup>32</sup> Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a

balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

#### **Developments since 2004**

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgement in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

#### **State Voter Databases and Voter ID**

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the

Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

### **Conclusions**

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.<sup>33</sup>

---

<sup>33</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents with them to the polls, while assuring that each voter who casts a ballot is eligible and votes only once.

## The Research Team

This research report on Provisional Voting in the 2004 election is part of a broader analysis that also includes a study of Voter Identification Requirements, a report on which is forthcoming. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

The Peer Review Group improved the quality of our work by critiquing drafts of our analysis, conclusions and recommendations. While the Group as a whole and the comments of its members individually contributed generously to the research effort, any errors of fact or weaknesses in inference are the responsibility of the Eagleton-Moritz research team. The members of the Peer Review Group do not necessarily share the views reflected in the policy recommendations of the report.

# EXECUTIVE SUMMARY

## Background and Methodology

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve the process of provisional voting. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005.

The Help America Vote Act of 2002 (HAVA, (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient. Section 302(a) of HAVA required states to establish provisional balloting procedures by January 2004.<sup>1</sup> The process HAVA outlined left considerable room for variation among the states, arguably including such critical questions as who qualifies as a registered voter eligible to cast a provisional ballot that will be counted and in what jurisdiction (precinct or larger unit) the ballot must be cast in order to be counted.<sup>2</sup>

The general requirement for provisional voting is that, if a registered voter appears at a polling place to vote in an election for Federal office, but either the potential voter's name does not appear on the official list of eligible voters for the polling place, or an election official asserts that the individual is not eligible to vote, that potential voter must be permitted to cast a provisional ballot. In some states, those who should receive a provisional ballot include, in the words of the EAC's Election Day Survey, "first-time voters who registered by mail without identification and cannot provide identification, as required under HAVA. . ." <sup>3</sup> HAVA also provides that those who vote pursuant to a court order keeping the polls open after the established closing hour shall vote by provisional ballot. Election administrators are required by HAVA to notify individuals of their opportunity to cast a provisional ballot.

---

<sup>1</sup>The Election Center's National Task Force Report on Election Reform in July 2001 had described provisional ballots as providing "voters whose registration status cannot be determined at the polls or verified at the election office the opportunity to vote. The validity of these ballots is determined later, thus ensuring that no eligible voter is turned away and those truly ineligible will not have their ballots counted." It recommended "in the absence of election day registration or other solutions to address registration questions, provisional ballots must be adopted by all jurisdictions." See [www.electioncenter.org](http://www.electioncenter.org).

<sup>2</sup> The 2004 election saw at least a dozen suits filed on the issue of whether votes cast in the wrong precinct but the correct county should be counted. One federal circuit court decided the issue in *Sandusky County Democratic Party v. Blackwell*, 387 F.3d565 (6<sup>th</sup> Cir. 2004), which held that votes cast outside the correct precinct did not have to be counted. The court relied on the presumption that Congress must be clear in order to alter the state-federal balance; thus Congress, the court concluded would have been clearer had it intended to eliminate state control over polling location (387 F.3d at 578). An alternative argument, that HAVA's definition of "jurisdiction" incorporates the broader definition in the National Voting Rights Act, however, has not been settled by a higher court. But for now states do seem to have discretion in how they define "jurisdiction" for the purpose of counting a provisional ballot.

<sup>3</sup> The definition of who was entitled to a provisional ballot could differ significantly among the states. In California, for example, the Secretary of State directed counties to provide voters with the option of voting on a provisional paper ballot if they felt uncomfortable casting votes on the paperless e-voting machines. "I don't want a voter to not vote on Election Day because the only option before them is a touch-screen voting machine. I want that voter to have the confidence that he or she can vote on paper and have the confidence that their vote was cast as marked," Secretary Shelley said. See <http://wired.com/news/evote/0,2645,63298,00.html>. (Our analysis revealed no differences in the use of provisional ballots in the counties with these paperless e-voting machines.) In Ohio, long lines at some polling places resulted in legal action directing that voters waiting in line be given provisional ballots to enable them to vote before the polls closed. (Columbus Dispatch, November 3, 2004.)

Our research began in late May 2005. It focused on six key questions raised by the EAC.

1. How did the states prepare for the onset of the HAVA provisional ballot requirement?
2. How did this vary between states that had previously had some form of provisional ballot and those that did not?
3. How did litigation affect implementation?
4. How effective was provisional voting in enfranchising qualified voters?
5. Did state and local processes provide for consistent counting of provisional ballots?
6. Did local election officials have a clear understanding of how to implement provisional voting?

To answer those questions, we:

1. Surveyed 400 local (mostly county) election officials to learn their views about the administration of provisional voting and to gain insights into their experience in the 2004 election.
2. Reviewed the EAC's Election Day Survey, news and other published reports in all 50 states to understand the local background of provisional voting and develop leads for detailed analysis.<sup>4</sup>
3. Analyzed statistically provisional voting data from the 2004 election to determine associations between the use of provisional voting and such variables as states' experience with provisional voting, use of statewide registration databases, counting out-of-precinct ballots, and use of different approaches to voter identification.
4. Collected and reviewed the provisional voting statutes and regulations in all 50 states.
5. Analyzed litigation affecting provisional voting or growing out of disputes over provisional voting in all states.

Our research is intended to provide EAC with a strategy to engage the states in a continuing effort to strengthen the provisional voting process and increase the consistency with which provisional voting is administered, particularly within a state. As EAC and the states move forward to assess and adopt the recommendations made here, provisional voting merits continuing observation and research. The situation is fluid. As states, particularly those states that did not offer a provisional ballot before 2004, gain greater experience with the process and as statewide voter databases are adopted, the provisional voting process will demand further, research-based refinement.

## **KEY FINDINGS**

### **Variation among the states**

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million, or just over 63%, were counted. Provisional ballots accounted for a little more than 1% of the final vote tally. These totals obscure the wide variation in provisional voting among the states.<sup>5</sup>

---

<sup>4</sup> Attachment 1 provides detailed information on how this study classifies the states according to the characteristics of their provisional voting procedures. It also describes how the data used in the statistical analysis may differ from the data in the Election Day Survey, which became available as our research was concluding.

<sup>5</sup> HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.

- Six states accounted for two-thirds of all the provisional ballots cast.<sup>6</sup>
- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.
- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.
- States with voter registration databases counted, on average, 20% of the provisional ballots cast.
- States without databases counted ballots at more than twice that rate: 44%.<sup>7</sup>
- States that provided more time to evaluate provisional ballots counted a greater proportion of those ballots. Those that provided less than one week counted an average of 35.4% of their ballots, while states that permitted more than 2 weeks, counted 60.8%.

An important source of variation among states was a state's previous experience with provisional voting and with the fail-safe voting provision of the National Voting Rights Act. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.<sup>8</sup> Part of that difference was due to how states had implemented the National Voting Rights Act, particularly in regard to voters who changed address within weeks of the election. Voters in California, for example, who moved within their county must cast a provisional ballot, the information from which is used to update the voter's address. Other states, Tennessee for example, found that some fail-safe voters were reluctant to vote by provisional ballot. As a result, Tennessee abandoned provisional voting for those who moved within counties and allows failsafe voters cast a regular ballot. Relatively fewer provisional ballots would tend to be cast in such states.

#### **Variation within states**

Within states, too, there was little consistency among different jurisdictions. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This variation suggests that additional factors (including the training of election judges or poll workers) beyond statewide factors, such as experience or the existence of voter registration databases, also influence the use of provisional ballots.

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the provisional ballot.

<sup>6</sup> California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

<sup>7</sup> As the Carter-Baker Commission report put it, "provisional ballots were needed half as often in states with unified databases as in states without." Report on the Commission on Federal Election Reform, "Building Confidence in U. S. Elections," September 2005, p. 16.

<sup>8</sup> See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

Resources available to administer provisional voting varied considerably among and within states. Differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.

In precincts located in districts where many voters live in poverty and have low levels of income and education, the voting process, in general, may be managed poorly. Provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

#### **The lessons of litigation**

Successful legal challenges highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called "wrong precinct issue" – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. Most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots. This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second –and significantly-- the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right – the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

#### **States move to improve their processes**

Shortly after the 2004 election, several states came to the conclusion that the administration of their provisional voting procedures needed to be improved, and they amended their statutes. The new legislation highlights areas of particular concern to states about their provisional voting process.

- Florida, Indiana, Virginia, and Washington have clarified or extended the timeline to evaluate the ballots.

- Colorado, New Mexico, North Carolina, and Washington have passed legislation focused on improving the efficacy and consistency of the voting and counting process.
- Colorado, Arkansas, and North Dakota took up the issue of counting provisional ballots cast in the wrong precinct.

The wide variation in the implementation of provisional voting among and within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices that draw on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting. The important effect of experience on the administration of the provisional ballot process indicates that the states have much they can learn from each other.

### **SUMMARY OF RECOMMENDATIONS FOR BEST PRACTICES**

State efforts to improve the provisional voting process have been underway since the 2004 election. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states.

#### Take a quality-improvement approach

Defining what constitutes a successful provisional voting system is difficult. Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. A first step is for states to recognize that improving quality begins with seeing the provisional voting process as a system and taking a systems approach to regular evaluation through standardized metrics with explicit goals for performance. EAC can facilitate action by the states by recommending as a best practice that:

- Each state collect data systematically on the provisional voting process to permit evaluation of its voting system and assess changes from one election to the next. The data collected should include: provisional votes cast and counted by county; reasons why provisional ballots were not counted, measures of variance among jurisdictions, and time required to evaluate ballots by jurisdiction

#### Emphasize the importance of clarity

Above all else, the EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. As state legislators and election officials prepare for the 2006 election, answers to the questions listed in the recommendations section of this report could be helpful. Among those questions are:

- Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
- Do the procedural requirements of the system permit cost-efficient operation?
- How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

#### Court decisions suggest areas for action

The court decisions following the 2004 election also suggest procedures for states to incorporate into their procedures for provisional voting. EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide effective materials to be used by local jurisdictions in training poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office. Poll workers need appropriate training to understand their duty to give such voters a provisional ballot.

#### Assess each stage of the provisional voting process

Beyond the procedures suggested by court decisions, states should assess each stage of the provisional voting process. They can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process.

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot. Our recommendations for best practices to avoid error at the polling place include:

- The layout and staffing of the multi-precinct polling place is important. States should ensure that training materials distributed to every jurisdiction make poll workers familiar with the options available to voters.
- The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting and include take-away information for the voter on the steps in the ballot evaluation process.
- Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. Best practice for states should provide guidelines (as do Connecticut and Delaware) to estimate the supply of provisional ballots needed at each polling place.

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted.

- State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Kansas allows voters to proffer their ID by electronic means or by mail, as well as in person.
- More provisional voters have their ballots counted in those states that count ballots cast outside the correct precinct. While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots

are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence.

- If a state does require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location. While the best practice might be for poll workers to direct the voter to correct precinct poll workers' advice is not always correct, and the voter should be protect against ministerial error.
- Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected. Colorado's election rules offer particularly clear guidance to the official evaluating a provisional ballot.

In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. Our research did not identify an optimum division of the five weeks available.

- The best practice here is for states to consider the issue and make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

After the election, timely information to voters about the disposition of their provisional ballot can enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

- Best practice for the states is to establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

#### Final observation

The detailed examination of each stage in the provisional voting process can lay the foundation each state needs to improve its system. Efforts to improve provisional voting may be most effective as part of a broader effort by state and local election officials to strengthen their systems. Collecting and analyzing data about those systems will enable states to identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as ways to reduce the need for voters to cast their ballots provisionally.

## Provisional Voting in 2004

In the 2004 election, nationwide about 1.9 million votes, or 1.6% of turnout, were cast as provisional ballots. More than 1.2 million or just over 63% were counted. Provisional ballots accounted for a little more than 1% of the final vote tally.

These totals obscure the wide variation in provisional voting among the states.<sup>9</sup> Six states accounted for two-thirds of all the provisional ballots cast.<sup>10</sup> State by state, the percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%. The portion of provisional ballots cast that were actually counted also displayed wide variation, ranging from 96% in Alaska to 6% in Delaware. States with voter registration databases counted, on average, 20% of the provisional ballots cast. Those without databases counted provisional ballots at more than twice that rate, 44%.

An important source of variation was a state's previous experience with provisional voting. The share of provisional ballots in the total vote was six times greater in states that had used provisional ballots before than in states where the provisional ballot was new. In the 25 states that had some experience with provisional voting before HAVA, a higher portion of the total vote was cast as provisional ballots and a greater percentage of the provisional ballots cast were counted than in the 18 new to provisional balloting.<sup>11</sup>

- The percentage of the total vote cast as provisional ballots averaged more than 2% in the 25 experienced states. This was 4 times the rate in states new to provisional voting, which averaged 0.47%.<sup>12</sup>
- The experienced states counted an average of 58% of the provisional ballots cast, nearly double the proportion in the new states, which counted just 33% of cast provisional ballots.
- The combined effect of these two differences was significant. In experienced states 1.53% of the total vote came from counted provisional ballots. In new states, provisional ballots accounted for only 0.23% of the total vote.

Those voting with provisional ballots in experienced states had their ballots counted more frequently than those in the new states. This experience effect is evidence that there is room for improvement in provisional balloting procedures, especially in those states new to the process.<sup>13</sup> That conclusion gains support from the perspectives of the local election officials revealed in the survey conducted as a part of this research. Local (mostly county level) election officials from "experienced" states were more likely to:

---

<sup>9</sup> HAVA allows the states considerable latitude in how to implement provisional voting, including deciding who beyond the required categories of voters should receive provisional ballots and how to determine which provisional ballots should be counted.

<sup>10</sup> California, New York, Ohio, Arizona, Washington, and North Carolina. The appearance of Arizona, Washington and North Carolina on this list shows that the number of provisional ballots cast depends on factors other than the size of the population.

<sup>11</sup> See the appendix for our classification of "old" and "new" states and explanation of why the total is less than 50.

<sup>12</sup> To compensate for the wide differences in vote turnout among the 50 states the average figures here are calculated as the mean of the percent cast or counted rather than from the raw numbers of ballots cast or counted.

<sup>13</sup> Managing the provisional voting process can strain the capacity election administrators. For example, Detroit, counted 123 of the 1,350 provisional ballots cast there in 2004. A recent study concluded that Detroit's "6-day time limit to process provisional ballots was very challenging and unrealistic. To overcome this challenge, *the entire department's employees were mobilized to process provisional ballots.*" (emphasis added.) GAO Report-05-997, "Views of Selected Local Officials on Managing Voter Registration and Ensuring Citizens Can Vote," September 2005.

- Be prepared to direct voters to their correct precincts with maps;
- Regard provisional voting as easy to implement;
- Report that provisional voting sped up and improved polling place operations
- Conclude that the provisional voting process helped officials maintain accurate registration databases.

Officials from “new” states, on the other hand, were more likely to agree with the statement that provisional voting created unnecessary problems for election officials and poll workers.

If experience with provisional voting does turn out to be a key variable in performance, that is good news. As states gain experience with provisional ballots their management of the process could become more consistent and more effective over subsequent elections. Further information from the EAC on best practices and the need for more consistent management of the election process could sharpen the lessons learned by experience. The EAC can facilitate the exchange of experience among the states and can offer all states information on more effective administration of provisional voting.

Concluding optimistically that experience will make all the difference, however, may be unwarranted. Only if the performance of the “new” states was the result of administrative problems stemming from inexperience will improvement be automatic as election officials move along the learning curve. Two other possibilities exist. Our current understanding of how provisional voting worked in 2004 is not sufficient to determine unambiguously which view is correct.

1. “New” states may have a political culture different from “old” states. That is, underlying features of the “new” states political system may be the reason they had not adopted some form of provisional voting before HAVA. The “new” states may strike a different balance among the competing objectives of ballot access, ballot security and practical administration. They may ascribe more responsibility to the individual voter to take such actions as registering early, finding out where the right precinct is, or re-registering after changing address. They may value keeping control at the local level, rather than ceding authority to state or federal directives. The training they offer poll workers about provisional ballots may not be as frequent or effective as in other states. If the inconsistent performance in the “new” states arises out of this kind of political culture, improving effectiveness in the use of the provisional ballots -- as measured by intrastate consistency in administration-- will be harder and take longer to achieve.<sup>14</sup>
2. “Old” states may devote fewer resources to updating their registration files or databases because they consider provisional ballots as a reasonable fail safe way for voters with registration problems a way to cast a ballot. The adoption of statewide voter registration databases in compliance with HAVA therefore may reduce the variation in the use of provisional ballots among the states.

Other influences decreasing consistency among the states include:

---

<sup>14</sup> Despite differing political cultures among states and the latitude HAVA provides states, the statute does, indeed impose some degree of uniformity on issues that Congress thought essential. For example, before HAVA, took effect, “no state gave the voter the right to find out the status of their ballot after the election. “ Now all offer that opportunity. See Bali and Silver, “The Impact of Politics, Race and Fiscal Strains on State Electoral Reforms after Election 2000,” manuscript, Department of Political Science, Michigan State University. Resisting HAVA’s mandates through foot-dragging lacks any legitimate foundation in law or policy.

- The more rigorous the verification requirements, the smaller the percentage of provisional ballots that were counted. Some states verified provisional ballots by comparing the voter's signature to a sample, some matched such identifying data as address, birth date, or social security number, others required voters who lacked ID at the polling place to return later with the ID to evaluate the provisional ballot, and some required provisional voters to execute an affidavit.<sup>15</sup>
  - In the 4 states that simply matched signatures, nearly 3.5% of the total turnout consisted of provisional ballots, and just under three-fourths of those ballots (73%) were counted.
  - In the 14 states that required voters to provide such additional information as address or date of birth just over 1.5% of the total turnout consisted of provisional ballots, and 55% of those ballots were counted.
  - In the 14 states that required an affidavit (attesting, for example, that the voter was legally registered and eligible to vote in the jurisdiction) just over one-half of a percent (0.6%) of turnout came from provisional ballots, and less than one-third of those (30%) were counted. (But note that HAVA requires all voters to certify that they are eligible and registered in order to cast a provisional ballot, which is functionally an affidavit. The 14 states described here used an explicit affidavit form.)
  - In the 10 states that required voters to return later with identifying documents just under 1.5% of the total turnout came from provisional ballots, and more than half (52%) of these were counted. Voters apparently found this requirement less onerous than the affidavit, even though it required a separate trip to a government office
- Voter registration databases provided information that reduced the number of provisional ballots counted.<sup>16</sup> In states using provisional voting for the first time, states with registered-voter databases counted only 20% of the ballots that were cast. States without such databases counted more than double that rate (44%). As HAVA's requirement for adoption of statewide databases spreads across the country, this variation among states is likely to narrow. Real-time access to a continually updated, statewide list of registered voters should reduce the number of provisional ballots used and reduce the percentage counted since most of those who receive them will be less likely to be actually registered in the state.
- States that counted out-of-precinct ballots counted 56% of the provisional ballots cast. States that counted only ballots cast in the proper precinct counted an average of 42% of provisional ballots.<sup>17</sup>
  - In experienced states, the disparity was even more pronounced: just over half of provisional ballots cast were counted in states requiring in-district ballots, while more than two-thirds were counted in those allowing out-of-precinct ballots.
  - If all states had counted out-of-precinct ballots, perhaps 290,000 more provisional ballots would have been counted across the country.<sup>18</sup>

<sup>15</sup> See Table 2 in Appendix 2 for information on the verification method used in each state.

<sup>16</sup> The Election Day Survey found that states using statewide voter registration databases reported a lower incidence of casting provisional ballots than states without voter registration databases, suggesting that better administration of voter registration rolls might be associated with fewer instances where voters would be required to cast a provisional ballot due to a problem with their voter registration.

<sup>17</sup> The Election Day Survey concluded that : "Jurisdictions with jurisdiction-wide provisional ballot acceptance reported higher rates of provisional ballots cast, 2.09 percent of registration or 4.67 percent of ballots cast in polling places, than those with in-precinct-only acceptance, 0.72 and 1.18 percent, respectively. Predictably, those jurisdictions with more permissive jurisdiction-wide acceptance reported higher rates of counting provisional ballots, 71.50 percent, than other jurisdictions, 52.50 percent."

- States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.<sup>19</sup>
  - Fourteen states permitted less than one week to evaluate provisional ballots, 15 states permitted between one and two weeks, and 14 states permitted greater than two weeks<sup>20</sup>.
  - Those states that permitted less than one week counted an average of 35.4% of their ballots.
  - States that permitted between one and two weeks counted 47.1%.
  - States that permitted more than 2 weeks, counted 60.8% of the provisional ballots cast<sup>21</sup>.
  - The effect of allowing more time for evaluation is felt most strongly in states where more than 1% of the overall turnout was of provisional ballots. In states where provisional ballots were used most heavily, those that permitted less than one week to evaluate ballots counted 58.6% while those that permitted one to two weeks counted 65.0% of ballots, and those states that permitted greater than three weeks verified the highest proportion of provisional ballots, at 73.8%.

#### Variation Within States

Not only was there little consistency among states in the use of provisional ballots, there was also little consistency within states. This was true in both new and old states. Of the 20 states for which we have county-level provisional ballot data, the rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state. This suggests that additional factors beyond statewide factors, such as verification requirements or the time provided for ballot evaluation, also influence the provisional voting process. Reacting to the lack of consistency within states, the Carter-Baker Commission recommended that "states, not counties or municipalities, should establish uniform procedures for the verification and counting of provisional ballots, and that procedure should be applied uniformly throughout the state."<sup>22</sup>

Electionline reported that:

- In Ohio some counties counted provisional ballots not cast in the assigned precinct even though the state's policy was to count only those ballots cast in the correct precinct.
- Some counties in Washington tracked down voters who would otherwise have had their provisional ballots rejected because they had failed to complete part of their registration form, gave them the chance to correct those omissions, and then counted the

---

<sup>18</sup> This estimate is a rough approximation. States that recognize out-of-precinct ballots counted, on average, 56% of the provisional votes cast. Applying that ratio to the 1.9 million provisional ballots cast nationwide would result in 1.1 million provisional ballots that would have been counted if all states accepted out-of-precinct votes. States that did not recognize out-of-precinct ballots counted 42% of the provisional ballots cast, or about 813,000 ballots, for a difference of about 290,000 votes.

<sup>19</sup> See Appendix, Relationship Between Time Allotted to Verify Provisional Ballots and the Level of Ballots that are Verified, David Andersen, The Eagleton Institute of Politics

<sup>20</sup> Many thanks to Ben Shepler, of the Moritz College of Law, for assembling complete data on the time requirements states permitted for the counting of provisional ballots.

<sup>21</sup> 43 states are included in this analysis, including Washington D.C. The 7 election-day registration states are omitted, as is Mississippi, which never provided data on provisional ballots. North Carolina is also omitted from the regressions, as it does not have a statewide policy on how it verifies provisional ballots.

<sup>22</sup> Recommendation 2.3.2 of the Report of the Commission on Federal Election Reform, "Building Confidence in U.S. Elections," September 2005, p.16. The report also observed that, ". . .different procedures for counting provisional ballots within and between states led to legal challenges and political protests. Had the margin of victory for the presidential contest been narrower, the lengthy dispute that followed the 2000 election could have been repeated."

provisional ballot. This would probably not have come to light except for the sharp examination caused by the very close election for governor.

Resources available to administer provisional voting varied considerably among and within states. The result is that differences in demographics and resources result in different experiences with provisional voting. For example, the Election Day Survey found that:

- Jurisdictions with lower education and income tend to report more inactive voter registrations, lower turnout, and more provisional ballots cast.
- Jurisdictions with higher levels of income and education reported higher average numbers of poll workers per polling place or precinct and reported lower rates of staffing problems per precinct.
- Staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories. Small, rural jurisdictions and large, urban jurisdictions tended to report higher rates of an inadequate number of poll workers within polling places or precincts.
- Predominantly non-Hispanic, Black jurisdictions reported a greater percentage of polling places or precincts with an inadequate number of poll workers. Predominantly non-Hispanic, Native American jurisdictions reported the second highest percentage of staffing problems.

The conclusions to be drawn from these findings are clear. In voting districts with lower education levels, poverty, and inadequately staffed polling places, the voting process is unlikely to function well. More people will end up casting provisional ballots. That makes the provisional voting process especially important in such districts. But if jurisdictions struggle with regular voting, how well are they likely to do with the more complicated provisional balloting process? In precincts where the voting process, in general, is managed poorly, provisional ballots cannot be expected to work much better. In these areas, the focus should be on broader measures to improve the overall functionality of struggling voting districts, although improving the management of provisional balloting may help at the margin.

### **Effectiveness of Provisional Voting**

The certainty of our conclusions about the effectiveness of provisional voting is limited because of the complexity of the problem and a lack of important information. An ideal assessment of how well provisional ballots worked in 2004 would require knowing the decisions of local officials in 200,000 precincts on how to inform voters about provisional voting; their performance in providing a provisional ballot to those qualified to receive one, and their decisions whether to count a provisional ballot. Information needed about the eligibility or registration status of provisional voters is also not available.

We see no automatic correlation between the quality of a state's voting system and either the number of provisional ballots cast or counted. Low numbers could reflect accurate statewide voting data and good voter education. Or they could suggest that provisional ballots were not made easily available. High numbers could be seen as signifying an effective provisional voting system or a weak registration process. But we do know that in 2004 provisional ballots allowed 1.2 million citizens to vote, citizens who would otherwise have been turned away from the polls.

Since we do not know how many registered voters who might have voted but could not, we cannot estimate with any precision how effective provisional voting was in 2004. The Cal Tech – MIT Voting Technology Project, however, estimated that 4 – 6 million votes were lost in the

2000 presidential election for the reasons shown in Table 1 below. The estimate is an approximation, but it may provide data good enough for a general assessment of the size of the pool of potential voters who might have been helped by the provisional ballot process.

**Estimates of Votes Lost In 2000 Presidential Election**

<b>Votes Lost (Millions)</b>	<b>Cause</b>
1.5 – 2	Faulty equipment and confusing ballots
1.5 – 3	Registration mix-ups
<1	Polling place operations
?	Absentee ballot administration

**Table 1 Cal Tech – MIT Voting Technology Project Estimates**

4 – 6 million votes are lost in presidential elections due to the causes shown in the table. Registration mix-ups (e.g., name not on list) and polling place operations (e.g., directed to wrong precinct) are the causes most likely to be remedied by provisional voting.

The table shows that the universe of voters who could be helped by provisional voting might be 2.5 – 3 million voters. In 2004, about 1.2 million provisional voters were counted. A rough estimate of the effectiveness of provisional voting in 2004, then, might be 40% to 50% (ballots counted/votes lost)<sup>23</sup>. Whatever the precise figure, it seems reasonable to conclude that there is considerable room for improvement in the administration of provisional voting.

### Legislative Response

Indeed, several states<sup>24</sup> came to the conclusion that the administration of their provisional voting procedures needed to be improved and amended their statutes after the 2004 election. State legislation adopted since the election points to particular areas of concern.

- Not enough time to examine and count the provisional ballots. Florida, Indiana, Virginia, and Washington all have clarified or extended the timeline to evaluate the ballots. But taking more time can prove a problem, particularly in presidential elections with the looming deadline to certify the vote for the Electoral College.<sup>25</sup>

<sup>23</sup> Another interpretation of the data should be considered. The Census Bureau's Current Population Survey (CPS) developed the category of "registration mix-ups" to assess the states' registration systems. After each election the CPS asks people if they were registered and if they voted. The CPS gives breakdowns of reasons why people did not vote. Survey responders tend to deflect blame when answering questions about voting. In the narrow context of provisional ballots, 'registration problems' would cover only voters who went to the polls where the determination that they were not registered was wrong or they were registered, but in the wrong precinct. If they were in the wrong precinct, provisional voting can help them in only 17 states. In 2004, only 6.8% of those not voting and registered blamed registration problems, while 6.9% reported so in 2000.

<sup>24</sup> Twelve states made statutory or regulatory changes: Arizona, Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Montana, New Mexico, North Carolina, Virginia and Wyoming. See Table 4 in Appendix 2.

<sup>25</sup> The resources available to evaluate and count provisional ballots within a tight schedule may not be easily available. The General Accounting Office reports that Detroit, where 1,350 provisional ballots were cast and 123 counted, found the 6-day time frame for processing provisional ballots "very challenging and unrealistic. To overcome this challenge, the *entire department's employees were mobilized to process provisional ballots.*" The report also found that in Los Angeles County, "staff had to prepare duplicate ballots to remove ineligible or invalid contests when

- Lack of uniform rules for counting ballots and effective training of the election officials in interpreting and applying those rules to determine the validity of ballots. Colorado, New Mexico, North Carolina, and Washington have all passed legislation focused on improving the efficacy and consistency of the voting and counting process.

### **Litigation**

Successful legal challenges to the process highlight areas where provisional voting procedures were wanting. A flurry of litigation occurred around the country in October 2004 concerning the so-called “wrong precinct issue” – whether provisional ballots cast by voters in a precinct other than their designated one would be counted for statewide races. These lawsuits were largely unsuccessful in their stated goal: most courts, including the U.S. Court of Appeals for the Sixth Circuit (the only federal appeals court to rule on the issue), rejected the contention that HAVA requires the counting of these wrong-precinct provisional ballots.

This litigation was significant nonetheless.

- First, the Sixth Circuit decision established the precedent that voters have the right to sue in federal court to remedy violations of HAVA.
- Second –and significantly– the litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted. The decision also defined an ancillary right –the right to be directed to the correct precinct. There voters could cast a regular ballot that would be counted. If they insisted on casting a provisional ballot in the wrong precinct, they would be on notice that it would be a symbolic gesture only.
- Third, these lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot – although the litigation regrettably came too late to be truly effective in this regard. In many states, on Election Day 2004, the procedures in place for notifying voters about where to go were less than ideal, reflecting less-than-ideal procedures for training poll workers on this point.

There was also pre-election litigation over the question whether voters who had requested an absentee ballot were entitled to cast a provisional ballot. In both cases (one in Colorado and one, decided on Election Day, in Ohio), the federal courts ruled that HAVA requires that these voters receive a provisional ballot. Afterwards, it is for state officials under state law to determine whether these provisional ballots will be counted, in part by determining if these provisional voters already had voted by absentee ballot (in which case one ballot should be ruled ineligible, in order to avoid double voting). These decisions confirm the basic premise that provisional ballots should be available whenever voters believe they are entitled to them, so that their preferences can be recorded, with a subsequent determination whether these preferences count as valid votes.

---

voters cast their ballots at the wrong precinct. To overcome this challenge, staffing was increased to prepare the duplicate ballots.” In a close, contested election, “duplicate” ballots would doubtless receive long and careful scrutiny.” See Appendix 7, GAO, “Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote,” September 2005. (GAO Report-05-997)

## **RECOMMENDATIONS**

Because every provisional ballot counted represents a voter who, if the system had worked perfectly, should have voted by regular ballot, the advent of statewide registration databases is likely to reduce the use of provisional ballots. The one area in which such databases may not make a difference is for those who voted by provisional ballot because they did not bring required identification documents to the polling place. The statewide voter registration database will facilitate verifying that ballot, but the voter will still have to vote provisionally. Beyond that exception, even with statewide registries in every state, provisional voting will remain an important failsafe, and voters should have confidence that the failsafe will operate correctly.

The wide variation in the implementation of provisional voting among and particularly within states suggests that EAC can help states strengthen their processes. Research-based recommendations for best, or at least better, practices based on the experience gained in the 2004 election can be useful in states' efforts to achieve greater consistency in the administration of provisional voting.

### **Recommendations for Best Practices**

Recent legislative activity shows that state efforts to improve the provisional voting process are underway. Those states, as well as others that have not yet begun to correct shortcomings that became apparent in 2004, can benefit from considering the best practices described here. By recommending best practices, the EAC will offer informed advice while respecting diversity among the states. One way to strengthen the recommendations and build a constituency for them would be for EAC to ask its advisory committee members to recommend as best practices procedures that have worked in their states.

### **Self-evaluation of Provisional Voting –4 Key Questions**

The first step to achieving greater consistency within each state is to think about provisional voting systematically. As legislators, election officials, and citizens in the states prepare for the 2006 election, they should ask themselves these questions about their provisional voting systems.

1. Does the provisional voting system distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate? Does the tally include all votes cast by properly registered voters who correctly completed the steps required?
2. Is the provisional voting system sufficiently robust to perform well under the pressure of a close election when ballot evaluation will be under scrutiny and litigation looms?
3. Do the procedural requirements of the system permit cost-efficient operation? Are the administrative demands of the system reasonably related to the staff and other resource requirements available?
4. How great is the variation in the use of provisional voting in counties or equivalent levels of voting jurisdiction within the state? Is the variation great enough to cause concern that the system may not be administered uniformly across the state?

If the answers to these questions leave room for doubt about the effectiveness of the system or some of its parts, the EAC's recommendation of best practices should provide the starting point for a state's effort to improve its provisional voting system.

## Best Practices For Each Step In The Process

We examined each step of the provisional voting process to identify specific areas where the states should focus their attention to reduce the inconsistencies noted in our analysis. We offer recommendations in each area appropriate to the responsibilities that HAVA assigns the EAC for the proper functioning of the provisional voting process.

### The Importance of Clarity

The EAC should emphasize above all else the importance of clarity in the rules governing every stage of provisional voting. As the Century Foundation's recent report observed, "Close elections increasingly may be settled in part by the evaluating and counting of provisional ballots. . . . To avoid post election disputes over provisional ballots—disputes that will diminish public confidence in the accuracy and legitimacy of the result— well in advance of the election, states should establish, announce, and publicize clear statewide standards for every aspect of the provisional ballot process, from who is entitled to receive a provisional ballot to which ones are counted."<sup>26</sup>

Litigation surrounding the 2004 election resulted in decisions that, if reflected in state statutes or regulations and disseminated in effective training for poll workers, can increase the clarity of provisional ballot procedures, increase predictability, and bolster confidence in the system. By taking the following steps, states can incorporate those court rulings into their procedures.

- Promulgate, ideally by legislation, clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards. For example, in Washington State, the court determined that an election official's failure in evaluating ballots to do a complete check against all signature records is an error serious enough to warrant re-canvassing.<sup>27</sup> Clear direction by regulation or statute on what records to use in evaluating ballots could have saved precious time and effort and increased the reliability of the provisional voting system.
- States should provide standard information resources for the training of poll workers by local jurisdictions. Training materials might include, for example, maps or databases with instruction on how to locate polling places for potential voters who show up at the wrong place. Usable and useful information in the hands of poll workers can protect voters from being penalized by ministerial errors at the polling place.<sup>28</sup>
- State training materials provided to local jurisdictions should make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.<sup>29</sup> Recent legislation in Arizona indicates that recommendations should emphasize HAVA's requirement that persons appearing at the polling place claiming to be registered voters cannot be denied a ballot because they do not have identification with them. Poll

<sup>27</sup> See *Washington State Republican Party v. King County Division of Records*, 103 P3d 725, 727-728 (Wash. 2004)

<sup>28</sup> See *Panio v. Sunderland* 824 N.E.2d 488, 490 (NY, 2005) See also Order, *Hawkins v. Blunt*, No.04-4177-CV-C-RED (W.D. Mo. October 12, 2004). While rejecting the notion that all ballots cast in the wrong precinct should be counted, the court ruled that provisional votes cast in the wrong precinct should be thrown out provided that the voter had been directed to the correct precinct. This meant that provisional votes cast in the wrong precinct (and even the wrong polling place) would count if there were no evidence that the voter had been directed to a different polling place. The court placed a duty upon election officials to make sure the voters were in the correct locations. Note that this question would not arise in a state that counted ballots cast in the wrong polling place but within the correct county.

<sup>29</sup> *Sandusky County Democratic Party v. Blackwell*, 387 F.3d 565, 774 (6<sup>th</sup> Cir. 2004)

workers may need appropriate training to understand their duty to give such voters a provisional ballot.<sup>30</sup>

#### **A. Registration and Pre-Election Information for Voters**

Providing crisp, clear information to voters before the election is important to the success of the provisional voting process. The better voters understand their rights and obligations, the easier the system will be to manage, and the more legitimate the appearance of the process. States can begin by assessing the utility and clarity of the information for voters on their websites and by considering what information might be added to sample ballots mailed to voters before elections. Best practices in this area would include:

1. If states require identification at the time of registration, the kind of IDs required should be stated precisely and clearly and be publicly and widely available in a form that all voters can understand. For example, "You must bring your driver's license. If you don't have a driver's license, then you must bring an ID card with your photograph on it and this ID card must be issued by a government agency."<sup>31</sup>
2. The process to re-enfranchise felons should be clear and straightforward. To avoid litigation over the registration status of felons, best practice should be defined as making re-enfranchisement automatic, or no more burdensome than the process required for any new registrant.<sup>32</sup>
3. State or county websites for voters should offer full, clear information on boundaries of precincts, location of polling places, requirements for identification, and other necessary guidance that will facilitate registration and the casting of a regular ballot. An 800 number should also be provided. Models are available: the statewide databases in Florida and Michigan provide voters with provisional voting information, registration verification and precinct location information.

#### **B. At the Polling Place**

Avoiding error at the polling place will allow more voters to cast a regular ballot and all others who request it to cast a provisional ballot.

1. The layout and staffing of the polling place, particularly the multi-precinct polling place is important. Greeters, maps, and prominently posted voter information about provisional ballots, ID requirements, and related topics can help the potential voters cast their ballot in the right place. States should require poll workers to be familiar with the options and provide the resources needed for them to achieve the knowledge needed to be helpful and effective. Colorado has clear regulations on polling place requirements, including HAVA information and voting demonstration display.<sup>33</sup> Many states require training of poll workers. In some states that requirement is recent: after the 2004 election, New Mexico adopted a requirement for poll workers to attend an "election school."<sup>34</sup> A state

<sup>30</sup> *The Florida Democratic Party v. Hood*, 342 F. Supp. 2d 1073, 1075-76 (N.D. Fla. 2004). The court explained that provisional voting is designed to correct the situation that occurs when election officials do not have perfect knowledge and when they make incorrect determinations about eligibility (the "fail-safe" notion). Denying voters provisional ballots because of on-the-spot determinations directly contradicts this idea. Even before the cited decision, the Florida Secretary of State's office had determined that any voter who makes the declaration required by federal law is entitled to vote a provisional ballot, even if the voter is in the wrong precinct.

<sup>31</sup> Websites in 29 states describe, with varying degrees of specificity, the identification voters may need. In 18 states voters can learn something about the precinct in which they should vote. And in 6 states (California, District of Columbia, Kentucky, Michigan, North Carolina, and South Carolina) they can verify their registration on the website.

<sup>32</sup> The Century Foundation, *op. cit.*

<sup>33</sup> 8 Colo. Code Regs. § 1505-1, Rule 7.1.

<sup>34</sup> 2005 N.M. Laws 270 page no. 4-5.

statutory requirement for training could facilitate uniform instruction of poll workers in those states that do not already provide it.

2. The provisional ballot should be of a design or color sufficiently different from a regular ballot to avoid confusion over counting, as occurred in Washington State. The ballot might include a tear-off leaflet with information for voters such as: "Reasons Why Your Provisional Ballot Might Not Be Counted" on one side and "What to Do if My Provisional Ballot Is Not Counted" on the other.
3. Because provisional ballots offer a fail-safe, supplies of the ballots at each polling place should be sufficient for all the potential voters likely to need them. In 2004, some polling places ran out of ballots, with unknown effects on the opportunity to vote. In Middlesex County, New Jersey, for example, on Election Day the Superior Court ordered the county clerk to assure that sufficient provisional ballots were available at several heavily used polling places, and it authorized the clerk "in the event additional provisional ballots are required . . . to photocopy official provisional ballots."<sup>35</sup> At least two states, Connecticut and Delaware, provide guidelines to local election officials on how to estimate the demand for provisional ballots. Connecticut sets the number at 1% of the voters in the district, Delaware at 6%.<sup>36</sup> States that do not offer a practical method to guide the supply of provisional ballots at polling places should consider doing so. The guideline should take into account both the number of voters in the district and the number of provisional ballots actually cast in recent elections.
4. To achieve the procedural clarity needed to forestall disputes, states should establish a clear chain of custody for the handling of provisional ballots from production through distribution, collection and, finally, evaluation. A number of states have clear procedures for at least parts of this chain of custody. All states should examine their chain-of-custody requirements for clarity. Illinois includes the potentially beneficial requirement that ballots be transported by bi-partisan teams, which offers the potential to avoid some charges of election fraud.

### C. Evaluating Voter Eligibility and Counting Provisional Ballots

The clarity of criteria for evaluating voter eligibility is critical to a sound process for deciding which of the cast provisional ballots should be counted. Public recognition of the validity of those criteria is important to establishing the legitimacy of the system as a whole. The experience in 2004 in North Carolina, Washington, and Ohio underlines the importance of clear criteria. As the Century Foundation report put it, "Whatever procedures the states choose [to determine if a provisional ballot should be counted], the paramount consideration—as with all others concerning provisional voting—is that they be clear and thus not susceptible to post-election manipulation and litigation."<sup>37</sup> Nonetheless, the *Panio v. Sutherland*<sup>38</sup> decision in New York shows the difficulty of defining the range of administrative errors from which the provisional voters should be held harmless. Even when the standard is "clerical error" judges can differ over what that means exactly. Possibly a state law might be able to clarify a definition by giving examples of clerical errors, but even then the definition is unlikely to be perfect.

---

<sup>35</sup> Voting Order, November 2, 2004, Superior Court of New Jersey, Law Division, Middlesex County.

<sup>36</sup> Connecticut: "Equal to or not less than 1% of the number of electors who are eligible to vote in any given district, or such other number as the municipal clerk and the registrars agree is sufficient to protect voting rights. Conn. Gen. Stat. Ann. § 9-232j. Delaware: Each County Department of Elections Office is required to provide to each election district a number of provisional ballots equal to 6% of registered voters in that district, with a minimum allocation of 15 ballots. Additional supplies to be delivered when the supply becomes "very low." Del.Code Ann. Tit 15 § 4948(e).

<sup>37</sup> The Century Foundation, op. cit.

<sup>38</sup> 4 N.Y.3d 123, 824 N.E.2d 488 (N.Y. 2005) and Memorandum (LaPlante—Foley) Provisional Ballot Cases by State, July 19, 2005.

1. State statutes or regulations should define a reasonable period for voters who lack the HAVA-specified ID or other information bearing on their eligibility to provide it in order to facilitate the state's ability to verify that the person casting the provisional ballot is the same one who registered. While there may be a concern to ensure that the individual who returns with the ID may not be the same individual who cast the provisional ballot, the spirit of HAVA demands that the opportunity to prove identity be provided after Election Day. A signature match can go far in establishing that the individual who voted and the individual returning later with identification is, in fact, the same person. Encouraging a voter who lacks ID on Election Day to return later to help the verification process by providing proper identification will strengthen the system and increase public confidence in the electoral process. Our data indicate that some voters would prefer to return with ID rather than to sign an affidavit, perhaps because of uncertainty about the legal process involved in the affidavit. At least 11 states allow voters to provide ID or other information one to 13 days after voting. Of particular interest is Kansas, which allows voters to proffer their ID by electronic means or by mail, as well as in person.<sup>39</sup>
2. More provisional ballots are counted in those states that verify ballots cast outside the correct precinct.<sup>40</sup> While HAVA arguably leaves this decision up to the states, pointing out the effect of the narrower definition on the portion of ballots counted could be useful to the states in deciding this question. States should be aware, however, of the additional burden placed on the ballot-evaluation process when out-of-precinct ballots are considered. And tradeoffs are involved if out-of-precinct voters are unable to vote for the local offices that might appear on the ballot in their district of residence. One option for states is to involve the voters in the decision by pointing out that voters who cast their provisional ballots in the wrong precinct may not be able to participate in the local election. The voter could then decide to go to the correct precinct or vote provisionally for the higher offices at the top of the ticket only.
3. Alternatively, if a state chooses to require voters to appear at their assigned precinct, where the same polling site serves more than one precinct, a voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.<sup>41</sup> Ideally the voter could be directed to the correct machine, but poll worker advice will not always be correct. One way to assess the balance of issues here is to consider that, if a voter in a multi-precinct polling place is sent to the wrong machine, the error is probably the poll worker's, and the voter should not be penalized.

<sup>39</sup> In Kansas, the voter can provide ID to a County Election Officer any time before the County Board of Canvassers meets to count provisional ballots. KS. ST. 25-1122(d). ID can be presented in person, OR via mail or electronic means. *Id.* The Board must meet either on the Friday or Monday following a Tuesday election. *Id.* at 25-3104. Deadlines in other states are: Alabama – 5:00 P.M. on the Monday following the election AL ST § 17-10A-2(c)(1) Florida: until 5:00 P.M. on the third day following the election. Fla. Stat. Ann. § 101.048 (adopted after the 2004 election); Georgia—no later than 2 days after the election. GA ST § 21-2-417; 419. Illinois- 2 days to submit additional information 10 Ill. Comp. Stat. Ann. 5/18A-15(d); Indiana— in 2004 the deadline was the close of the polls IN. ST. §. 3-11.7-5-2(a). The time period was extended to 13 days by the adoption of Indiana Code 3-11-8, Section 25, Subsection (l); Maryland—until the meeting of the Election Board; MD ELEC LAW § 11-303. New Jersey— until the close of business on the second day after the election 19:53C-3(i). Nevada— until 5:00 P.M. on the Friday following the election NV ST 293.3085; New Mexico—until 7:00 P.M. on Election Day NM ADC 1.10.22 (8) (H).

<sup>40</sup> See Andersen, *op. cit.*, pgs. 23 – 24 for an analysis of the significant effect of counting out-of-precinct ballots. The Election Day Survey found that, "Most notably, jurisdictions that permitted jurisdiction-wide acceptance of provisional ballots reported higher rates of provisional ballots being cast, but also reported a much higher incidence of provisional ballots being counted, than other jurisdictions."

<sup>41</sup> Chances are administrative error accounts for the voter being directed to the wrong precinct under these circumstances.

4. Officials should follow a written procedure, and perhaps a checklist, to identify the reason why a provisional ballot is rejected (e.g., check the applicable box “unregistered voter”; “lack of signature match” “wrong precinct,” etc.) Those forms should be disclosed publicly when completed. Colorado’s election rules offer particularly clear guidance to the official evaluating a provisional ballot.<sup>42</sup>

Colorado Rejection Codes (Any ballot given a rejection code shall not be counted):

RFS	(Rejection federal or state) No federal or state candidates or issues to duplicate.
RNS	(Rejection not signed) Provisional Ballot Affidavit not signed.
RIN	(Rejection incomplete information provided) Required information is incomplete and the designated election official is unable to confirm voter’s eligibility.
RNR	(Rejection not registered) Voter did not register by the voter registration deadline or by emergency registration, Colorado voter registration record was not found, or voter was previously cancelled and has not been reinstated pursuant to 1-2-605(10), C.R.S.
REE	(Rejection envelope empty) Provisional ballot envelope is empty.
RAB	(Rejection voter voted absentee) Designated election official has confirmed that voter voted an absentee ballot.
REV	(Rejection based on ballot cast in early voting) Voter voted early.
RIP	(Rejection based on incorrect party) Incorrect Party in Primary Election.
RFE	(Rejection felon not eligible to vote) Individual was convicted of a felony and is either serving a sentence of confinement or detention or is on parole.
RWC	(Rejection elector not registered in county or State of Colorado) Non-county or non-state resident; therefore voter not eligible to vote in the county where the provisional ballot was voted.
RID	(Rejection first time voter has not supplied identification upon registration or thereafter prior to and during time voter voted) First Time Voter who registered by mail or through a voter registration drive, is tagged as id deficient, and did not provide id at the time of voting.
RRD	(Rejection registration deficient) Voter had deficient or incomplete registration and required information was not provided prior to or at the time of filling in the provisional ballot envelope. Voter’s eligibility cannot be established.

**D. Verification of Provisional Ballots**

1. States that use the information on the provisional ballot to permit voters who have changed their addresses to update their registrations should adopt clear procedures on that process and specify how the new information will be communicated between different Boards of Elections.
2. In verifying provisional ballots, the time by which election officials must make their eligibility determinations is particularly important in presidential elections because of the need to certify electors to the Electoral College. States should consider in particular how to divide the time constraints imposed in presidential election by the safe-harbor provisions regarding certification to the Electoral College. Some part of this five-week period will be consumed by the eligibility evaluation, but states should take care to provide a sufficient period of time as well for challenges. If a state consumes 21 days

<sup>42</sup> 8 CCR 1505-1, at 26.5.4, adopted August 4, 2005. See also 1-2-509(3) C.R.S.

following the election in the eligibility evaluations, only two weeks will remain for legal challenges to be concluded. Is that sufficient? Or should the state provide the resources needed to complete the eligibility determinations in 10 days or two weeks, leaving three weeks or more for legal challenges in a close election? Our research did not identify an optimum division of the five weeks available. The prudent course here would be to encourage states to consider the issue and then make a careful decision about how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available.

#### **E. Post-election Information for Voters**

Timely information to voters about the disposition of their provisional ballot will provide helpful feedback and more important enable voters to determine if they are registered for future elections and, if not, what they need to do to become registered.

1. Establish mechanisms to ensure that voters casting provisional ballots are informed whether they are now registered for future elections and, if not, what they need to do to become registered.

#### **F. State Laws Governing Litigation over Provisional Voting**

1. Establish special, streamlined litigation procedures for Election Day complaints that individuals are being denied the right to cast a provisional ballot.

#### **Broader Considerations**

##### **G. Integrity and the Appearance of Integrity**

1. State laws or regulations providing for non-partisan or bi-partisan bodies to make a public determination of the validity of provisional ballots would increase confidence in the system.
2. To improve transparency, state laws or regulations should require the purging process for registration to be public and with an opportunity for voters to correct an erroneous determination that they should be purged.
3. State laws or regulation should require the evaluation process for provisional ballots to be public, while protecting the names of those who voted provisionally.

##### **H. Continuous Assessment of the Provisional Ballot -- Process and Performance**

Defining what makes for a successful provisional voting system is difficult. The most successful system is probably not the one with the most provisional votes cast (that could indicate problems with the registration system). Nor is the system with the greatest number counted or with the fewest counted necessarily superior because the evaluation process could be flawed.

Defining quality requires a broad perspective about how well the system works, how open it is to error recognition and correction, and how well provisional voting processes are connected to the registration and voter identification regimes. The EAC should consider engaging one of the national quality organizations or processes, such as Six Sigma<sup>43</sup> or the Baldrige Quality

---

<sup>43</sup> Six Sigma is a measure of quality that strives for near perfection. Six Sigma is a disciplined, data-driven approach and methodology for eliminating defects (driving towards six standard deviations between the mean and the nearest specification limit) in any process – from manufacturing to transactional and from product to service.

process<sup>44</sup> to evaluate the provisional ballot process. Pending such a review, the EAC can recommend that states take the following actions.

1. Recognize that the first step to improving quality is to see the provisional voting process as a system and take a systems approach to regular evaluation through standardized metrics with explicit goals for performance.
2. States should begin by collecting data systematically on the provisional voting process so that they can evaluate their voting system and assess changes from one election to the next. The effort should start in the 2006 election, and the data collected should include:
  - Provisional votes cast and counted by jurisdiction, say counties, with details on why the voter had to vote provisionally (lack of ID, not on list, challenged at polling place, issued absentee ballot, etc) and number of ballots actually counted in each category.
  - Reasons why provisional ballots were not counted, using categories such as those that have been adopted by Colorado, described earlier in this report.
  - Measures of variance among jurisdictions.
  - Number of poll workers trained in administration of provisional voting by polling place.
  - Number of jurisdictions posting information on provisional voting in the polling place.
  - Time required to evaluate ballots by jurisdiction.

Improving understanding of the provisional voting process through analysis of detailed information will enable state and local election officials to strengthen their systems. By collecting and analyzing this data states can identify which aspects of the registration and electoral system are most important in shunting voters into the provisional ballot process. Responsible officials can then look to their registration system, identification requirements or poll worker training as a way to reduce the need for voters to cast their ballots provisionally.

---

<sup>44</sup> The Baldrige Criteria for Performance Excellence provide a systems perspective for understanding performance management. They reflect validated, leading-edge management practices against which an organization can measure itself. With their acceptance nationally and internationally as the model for performance excellence, the Criteria represent a common language for communication among organizations for sharing best practices. The Criteria are also the basis for the Malcolm Baldrige National Quality Award process.

## ATTACHMENT 1 – Data Sources for Classification of the States

Our research on provisional voting divided the various states into several categories to allow an assessment of how different factors may have influenced the process of casting and counting provisional ballots. This analysis was conducted before the release of the Election Day Study, and the categories we used may differ in some respects from its work. The variables used to analyze a state's use of provisional ballots were:

1. New vs. Old (states that used a provisional ballot before the 2004 election)
2. Use of a statewide database of registered voters vs. no use of a statewide database
3. Counting out-of-precinct ballots vs. not counting out-of-precinct ballots
4. Voter identification requirements
5. Method used to verify provisional ballots
6. Levels of provisional ballots cast and counted

We first assigned states within these categories based on classifications done by Electionline.org in its studies. The Electionline data was the only published information available at the time of our research. We reviewed the Electionline data carefully, and, in select cases, updated it with new, detailed information that had become available after its publication. The changes we made are explained below.

--Idaho, Maine, Minnesota, New Hampshire, Wisconsin and Wyoming were excluded from our analysis. They have election-day registration systems, and did not need to use HAVA-compliant provisional ballots.

--North Dakota does not register voters, so it also was excluded from HAVA requirements and did not use provisional voting.

--Mississippi has not reported its provisional voting results and could not be included in our analysis, though it was compliant in 2004.

--Pennsylvania did not report its totals for the Election Day Study, but we obtained information on Pennsylvania and included it in our analysis.

### New vs. Old States

We classified states as "new" or "old" based on the 2001 Electionline study of provisional voting,<sup>45</sup> but condensed its classifications into a single dichotomous variable, new/old with all other cases excluded. The Electionline study divided states into five categories of their use of provisional ballots in the 2000 election:

1. Use of provisional ballots (P)
2. Limited use of provisional ballots (LP)
3. Affidavit ballots (A)
4. No system in place (N)
5. Unnecessary/Not Applicable (U/NA)

We included in the list of "Old States" all states listed as using provisional ballots, limited use of provisional ballots or affidavit ballots. States in all three categories would have been familiar with key aspects of provisional voting. States that had no provisional voting system in place for the 2002 election, and were HAVA compliant in 2004, were listed as "new" states, as 2004 would have been the first year in which they would be offering the option of provisional voting. States that were listed as unnecessary or not applicable were excluded from this study, as they were exempt from the HAVA regulations in 2004 because they either allowed same-day registration or did not register voters.

---

<sup>45</sup> This study can be found at: <http://electionline.org/Portals/1/Publications/Provisional%20Voting.pdf>.

Rhode Island is the only state categorized as an old state by Electionline that we moved into the list of new states. Electionline's map shows Rhode Island as a state that used provisional voting in 2000, but in the state description, it is listed as having no system in place. We learned from the Rhode Island Board of Elections that the state had previously permitted potential voters to sign an affidavit if they did not appear on a precinct's list of registered voters, but felt they were registered to vote. Based on the signed affidavit, the election official would then contact a county official to see if the voter was on a more complete registration list. If the voter's name was on the complete list, that voter was permitted to cast a regular ballot. As this process did not grant the voter a provisional ballot, but served as a different type of administrative failsafe, we concluded that Rhode Island's first use of provisional voting was in 2004 and, therefore, classified the state as "new" to the system of provisional balloting.

<b>Old States</b>	<b>New States</b>	<b>HAVA Exempt or NA</b>

Statewide List of Registered Voters

The Electionline preview of the 2004 Election<sup>46</sup> was the starting point for compiling a list of states that had a statewide database of registered voters. That study listed 34 States that did not have their statewide database systems complete, and 16 that did, including the District of Columbia. North Dakota does not register voters, so does not need to compile such a database. Electionline’s criterion for concluding that a state had a statewide list was that the state have participation from all jurisdictions in a statewide system. We added Oklahoma to the list of states with statewide databases because we found it had met the Electionline criteria by the 2004 election, albeit too late for inclusion in the Electionline survey.

Out-of-Precinct Ballots

We based our classification of states that allow the counting of ballots cast outside the correct precinct on the data in the 2004 Electionline preview of the 2004 election<sup>2</sup>. States that evaluated ballots cast in a precinct where the voter was not registered were categorized as “out-of-precinct.” States that invalidated such ballots were categorized as “In-precinct only.”

<b>Table 2 CATEGORIZATION OF STATES -- Counting Out-Of-Precinct Ballots</b>		
<b>Out-of-Precinct</b>	<b>In-Precinct Only</b>	<b>HAVA EXEMPT OR NA</b>

<sup>46</sup> “Election Preview 2004: What’s changed, What Hasn’t and Why”. This study can be found at: <http://electionline.org/Portals/1/Publications/Election.preview.2004.report.final.update.pdf>

<sup>47</sup> In Illinois, it is not clear that all counties followed this procedure. Some counties may not have counted out-of-precinct ballots.

Verification Method

We identified four different ways states assessed provisional ballots to determine if they should be counted: signature match, match voter data, signed affidavits, and bringing back identification later. We gathered information about these verification techniques by checking state websites and consulting journalistic accounts. We consulted state legislation to provide further information where needed.

<b>Signature Match</b>	<b>Data Match</b>	<b>Affidavit</b>	<b>Return with ID</b>	<b>NA</b>
Alaska	Alabama	Connecticut	Indiana	Idaho
California	Arizona	Delaware	Iowa	Maine
Florida	Arkansas	Georgia	Kansas	Mississippi
Oregon	Colorado	Hawaii	Maryland	Minnesota
	DC	Illinois	Michigan	New Hampshire
	Louisiana	Kentucky	Montana	N. Carolina*
	Missouri	Massachusetts	New Jersey	N. Dakota
	Ohio	Nebraska	New Mexico	Wisconsin
	Oklahoma	Nevada	Texas	Wyoming
	Pennsylvania	New York	Utah	
	Rhode Island	South Dakota		
	S. Carolina	Tennessee		
	Washington	Vermont		
	West Virginia	Virginia		
4	14	14	10	9

\* North Carolina lacked clear standards to evaluate provisional ballots and is excluded from this analysis.

Data Collection

To assemble our data for analysis, we began by using the data on provisional votes cast and counted reported by Electionline. To increase the accuracy of this data, we surveyed each state's election websites for updated data, and for reported numbers on the county level. We then sent emails to 49 (we excluded Alaska, see below) states and the District of Columbia, requesting updated data on the number of provisional votes cast and counted by county. We received information from 25 states by our cut-off date of August 25, 2005.

<b>Table 4</b>	
<b>Updated information by State</b>	
<b>Received Updated Data</b>	<b>Did Not Receive Updated Data</b>
California	Alabama
District of Columbia	Alaska <sup>48</sup>
Florida	Arizona
Hawaii	Arkansas
Indiana	Colorado
Iowa	Connecticut
Kansas	Delaware
Louisiana	Georgia
Maryland <sup>49</sup>	Idaho
Missouri	Illinois
Montana	Kentucky
Nebraska <sup>50</sup>	Maine
Nevada	Massachusetts
New Jersey	Michigan
New Mexico	Minnesota
Ohio	Mississippi
Oklahoma	New Hampshire
Oregon	New York
Pennsylvania	North Carolina
Rhode Island	North Dakota
South Dakota	South Carolina
Tennessee	Utah
Texas	Vermont
Virginia	Wisconsin
Washington	Wyoming
West Virginia	
<b>26 States</b>	<b>25 States</b>

<sup>48</sup> Alaska was not contacted via email, as the state does not have voting districts comparable to counties in other states and could not be matched with comparable census data.

<sup>49</sup> Maryland reported provisional ballots that were counted per county, but not number cast.

<sup>50</sup> Nebraska reported an incomplete list of provisional ballots cast and counted by county, but designated counties by number, rather than by name.

Data Differences

The data used in this study differ from the data reported in the Election Day Study for 19 states. The Election Day Study was not completed until well after our statistical analysis of provisional voting was finished. Where there are differences, they are typically very small, usually fewer than 100 votes either cast or counted. Of the 9 states that have differences of more than 100 votes cast or counted, 7 have reported their numbers directly to us and can be considered updated data that EDS had not obtained. For one of those states, New Mexico, EDS had incomplete data, and for another, Pennsylvania, EDS had no data at all. The data that we have collected reflects updated numbers from the states that have changed following recounts and litigation that altered how ballots were evaluated.

<b>State</b>	<b>EDS Numbers Cast/Counted</b>	<b>Our Numbers Cast/Counted</b>	<b>Differences</b>	<b>Updated Info from State?<sup>51</sup></b>
<b>Alabama</b>	6,478/1,865	6560/1836	82/29	No

Tom-

As was just discussed, the EAC's Commissioners have elected to delay a presentation of Eagleton's report on Voter Identification to the EAC Board of Advisors and Standards Board, at this time.

The Commissioners will spend time over the next several weeks reviewing and considering this report in great detail and will make a determination, shortly thereafter, regarding how they wish to proceed with the issuance of an EAC report on this study.

Many thanks to you and your staff for the work that has been done. We look forward to next week's presentation of the Eagleton/Moritz study of provisional voting.

Regards-

Karen Lynn-Dyson

Karen,

Attached for review by the Commissioners is the Voter ID Report and its appendices. The appendices are lengthy, but I believe Appendix A should be included in the report sent to the Advisory Boards for review.

Thanks for your forbearance.

**Summary of Voter Identification Requirements By State**

Prepared by  
Sara A. Sampson, Reference Librarian,  
The Ohio State University Moritz College of Law.

**Voter ID Requirements**

State	Forms of ID Required 2004	Statutory Language	Statutory Citation
Alabama	Provide ID	<p>(b) Each elector shall provide identification to an appropriate election official prior to voting. A voter required to show identification when voting in person shall present to the appropriate election official either of the following forms of identification:</p> <p>(1) A current valid photo identification.</p> <p>(2) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the voter. The term "other government document" may include, but is not limited to, any of the following:</p> <p>a. A valid identification card issued by a branch, department, agency, or entity of the State of Alabama, any other state, or the United States authorized by law to issue personal identification.</p> <p>b. A valid United States passport.</p> <p>c. A valid Alabama hunting or fishing license.</p> <p>d. A valid Alabama permit to carry a pistol or revolver.</p> <p>e. A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States.</p> <p>f. A valid United States military identification card.</p> <p>g. A certified copy of the elector's birth certificate.</p> <p>h. A valid Social Security card.</p> <p>i. Certified naturalization documentation.</p> <p>j. A certified copy of court records showing adoption or name change.</p> <p>k. A valid Medicaid card, Medicare card, or an Electronic Benefits Transfer Card (formerly referred to as a "food stamp card").</p> <p>(c) For voters required to show identification when voting by mail, the voter shall submit with the ballot a copy of one of the forms of identification listed in subsection (b).</p> <p>(e) An individual required to present identification in accordance with this section who is unable to meet the identification requirements of this section shall be permitted to vote by a challenged or provisional ballot, as provided for by law.</p> <p>(f) In addition, an individual who does not have identification in his or her possession at the polls shall be permitted to vote if the individual is positively identified by two election officials as a voter on the poll list who is eligible to vote and the election official signs the voters list by where the voter signs.</p> <p>Effective Date: June 24, 2003</p>	Ala. Code § 17-11A-1
Alaska	Provide ID	<p>(a) Before being allowed to vote, each voter shall exhibit to an election official one form of identification, including</p> <p>(1) an official voter registration card, driver's license, state identification card, current and valid photo identification, birth certificate, passport, or hunting or fishing license; or</p> <p>(2) an original or a copy of a current utility bill, bank statement, paycheck, government check, or other government document; an item exhibited under this</p>	Alaska Stat. § 15.15.225

		<p>paragraph must show the name and current address of the voter.</p> <p>(b) An election official may waive the identification requirement if the election official knows the identity of the voter. The identification requirement may not be waived for voters who are first-time voters who initially registered by mail or by facsimile or other electronic transmission approved by the director under <u>AS 15.07.050</u>, and did not provide identification as required in <u>AS 15.07.060</u>.</p> <p>(c) A voter who cannot exhibit a required form of identification shall be allowed to vote a questioned ballot.</p> <p>effective June 17, 2003</p>	
Arizona	Provide ID	<p>B. If a statewide voter registration database is not yet operational, for any person who has registered to vote by mail for the first time in this state after January 1, 2003 or who is reregistering by mail after January 1, 2003 after moving from one county to another county in this state, the person shall comply with the following in order to be issued a ballot:</p> <p>1. The person shall present either one of the following:</p> <p>(a) A current form of identification that bears a photograph of the person and the name of the person.</p> <p>(b) A current utility bill, bank statement, paycheck, government issued check or other government document that shows the name and registration address of the person.</p> <p>2. If the person does not present a document that complies with paragraph 1, the person is only eligible to vote a provisional ballot as prescribed by <u>§ 16-584</u>.</p> <p>Effective Dec. 1, 2003</p>	Ariz. Rev. Stat. Ann. § 16-579
Arkansas	Provide ID	<p>7-5-305. Requirements.</p> <p>(a) Before a person is permitted to vote, the election official shall:</p> <p>(1) Request the voter to identify himself in order to verify the existence of his name on the precinct voter registration list;</p> <p>(2) Request the voter, in the presence of the election official, to state his address and state or confirm his date of birth;</p> <p>(3) Determine that the voter's date of birth and address are the same as those on the precinct voter registration list;</p> <p>(4) If the date of birth given by the voter is not the same as that on the precinct voter registration list, request the voter to provide identification as the election official deems appropriate;</p> <p>(5)(A) If the voter's address is not the same as that on the precinct voter registration list, verify with the county clerk that the address is within the precinct.</p> <p>(B) If the address is within the precinct, request the voter to complete a voter registration application form for the purpose of updating county voter registration record files.</p> <p>(C) If the address is not within the precinct, instruct the voter to contact the county clerk's office to determine the proper precinct;</p> <p>(6) If the voter's name is not the same as that on the precinct voter registration list, request the voter to complete a voter registration application form for purposes of updating county voter registration record files;</p> <p>(7) Request the voter, in the presence of the election official, to sign his name, including his given name, his middle name or initial, if any, and his last name in the space provided on the precinct voter registration list. If a person is unable to sign his signature or make his mark or cross, the election official shall enter his initials and the voter's date of birth in the space for the person's signature on the precinct voter registration list; and</p>	Arkansas Code Annotated § 7-5-305

		<p>(8)(A) Request the voter for purposes of identification to provide a valid driver's license, photo identification card issued by a governmental agency, voter card, social security card, birth certificate, United States passport, employee identification card issued by a governmental agency containing a photograph, employee identification card issued in the normal course of business of the employer, student identification card, Arkansas hunting license, or United States military identification card.</p> <p>(B)(i) If a voter is unable to provide this identification, the election official shall indicate on the precinct voter registration list that the voter did not provide identification.</p> <p>(ii) Following each election, the county board of election commissioners may review the precinct voter registration lists and may provide the information of the voters not providing identification at the polls to the prosecuting attorney.</p> <p>(iii) The prosecuting attorney may investigate possible voter fraud; and</p> <p>(9) Follow the procedures under §§ 7-5-310, 7-5-311, and 7-5-523, if the person is a disabled voter and presents himself or herself to vote.</p> <p>Effective: July 16, 2003</p>	
California	Sign Name	<p>Any person desiring to vote shall announce his or her name and address in an audible tone of voice, and when one of the precinct officers finds the name in the index, the officer shall in a like manner repeat the name and address. The voter shall then write his or her name and residence address or, if the voter is unable to write, shall have the name and residence address written by another person on a roster of voters provided for that purpose, whereupon a challenge may be interposed as provided in this article.</p> <p>(Enacted in 1994, no amendments since)</p>	Cal. Elec. Code § 14216
Colorado	Provide ID	<p>(1) Except as provided in subsection (4) of this section, any eligible elector desiring to vote shall show his or her identification as defined in section 1-1-104(19.5), write his or her name and address on the signature card, and give the signature card to one of the election judges, * * *</p> <p>(4) An eligible elector who is unable to produce identification may cast a provisional ballot in accordance with article 8.5 of this title.</p> <p>(19.5)(a) "Identification" means:</p> <p>(I) A valid Colorado driver's license;</p> <p>(II) A valid identification card issued by the department of revenue in accordance with the requirements of part 3 of article 2 of title 42, C.R.S.;</p> <p>(III) A valid United States passport;</p> <p>(IV) A valid employee identification card with a photograph of the eligible elector issued by any branch, department, agency, or entity of the United States government or of this state, or by any county, municipality, board, authority, or other political subdivision of this state;</p> <p>(V) A valid pilot's license issued by the federal aviation administration or other authorized agency of the United States;</p> <p>(VI) A valid United States military identification card with a photograph of the eligible elector;</p> <p>(VII) A copy of a current utility bill, bank statement, government check, paycheck, or other government document that shows the name and address of the elector;</p> <p>(VIII) A valid medicare or medicaid card issued by the United States health care</p>	Colo. Rev. Stat. Ann. § 1-7-110; Colo. Rev. Stat. Ann. § 1-1-104

		<p>financing administration;</p> <p>(IX) A certified copy of a birth certificate for the elector issued in the United States; or</p> <p>(X) Certified documentation of naturalization.</p> <p>(b) Any form of identification indicated in paragraph (a) of this subsection (19.5) that shows the address of the eligible elector shall be considered identification only if the address is in the state of Colorado.</p> <p>Effective 5/28/2004</p>	
Connecticut	Provide ID	<p>(a) In each primary, election or referendum, when an elector has entered the polling place, the elector shall announce the elector's street address, if any, and the elector's name to the checkers in a tone sufficiently loud and clear as to enable all the election officials present to hear the same. Each elector who registered to vote by mail for the first time on or after January 1, 2003, and has a "mark" next to the elector's name on the official registry list, as required by <u>section 9-23r</u>, shall present to the checkers, before the elector votes, either a current and valid photo identification that shows the elector's name and address or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows the name and address of the elector. Each other elector shall (1) present to the checkers the elector's Social Security card or any other preprinted form of identification which shows the elector's name and either the elector's address, signature or photograph, or (2) on a form prescribed by the Secretary of the State, write the elector's residential address and date of birth, print the elector's name and sign a statement under penalty of false statement that the elector is the elector whose name appears on the official checklist. Such form shall clearly state the penalty of false statement. A separate such form shall be used for each elector. If the elector presents a preprinted form of identification under subdivision (1) of this subsection, the checkers shall check the name of such elector on the official checklist. If the elector completes the form under subdivision (2) of this subsection, the assistant registrar of voters shall examine the information on such form and either instruct the checkers to check the name of such elector on the official checklist or notify the elector that the form is incomplete or inaccurate.</p> <p>Effective May 10., 2004</p>	Conn. Gen. Stat. Ann. § 9-261
Delaware	Provide ID	<p>(a) A voter, upon entering the room where an election is being held, shall announce his or her name and address and provide proof of identity, whereupon the clerks shall place a mark or make a notation of his or her name upon the election district record. In the event the voter does not have proof of identity with them, he or she shall sign an affidavit of affirmation that he or she is the person listed on the election district record.</p> <p>Effective: July 9, 2002</p>	15 Del. Code § 4937
D.C.	Sign Name	<p>(i)(1) A person shall be entitled to vote in an election in the District of Columbia if he or she is a duly registered voter. A qualified elector shall be considered duly registered in the District if he or she has met the requirements for voter registration and, on the day of the election, either resides at the address listed on the Board's records or files an election day change of address pursuant to this subsection.</p> <p>(2) Each registered voter who changes his or her place of residence from that listed on the Board's records shall notify the Board, in writing, of the new residence address. A change of address shall be effective on the date the notification was mailed as shown by the United States Postal Service postmark. If not postmarked, the notification shall be effective on the date of receipt by the Board. Change of address notifications from registrants shall be accepted pursuant to subsection (g) of this section, except that any registrant who has not notified the Board of his or her current residence address by the deadline established by subsection (g) of this section may be permitted to vote at the</p>	D.C. Code § 1-1001.07

		<p>polling place that serves the current residence address by filing an election day change of address notice pursuant to paragraph (4) of this subsection.</p> <p>(3) Each registered voter who votes at a polling place on election day shall affirm his or her residence address as it appears on the official registration roll for the precinct. The act of signing a copy of the official registration roll for the precinct shall be deemed affirmation of the voter's address as it appears on the Board's registration records.</p> <p>(Effective April 3, 2001)(not added as part of 2005 amendment)</p>	
Florida	Photo ID	<p>101.043 (1) The precinct register, as prescribed in <u>s. 98.461</u>, shall be used at the polls in lieu of the registration books for the purpose of identifying the elector at the polls prior to allowing him or her to vote. The clerk or inspector shall require each elector, upon entering the polling place, to present a current and valid picture identification as provided in <u>s. 97.0535(3)(a)</u>. If the picture identification does not contain the signature of the voter, an additional identification that provides the voter's signature shall be required. The elector shall sign his or her name in the space provided, and the clerk or inspector shall compare the signature with that on the identification provided by the elector and enter his or her initials in the space provided and allow the elector to vote if the clerk or inspector is satisfied as to the identity of the elector.</p> <p>(2) Except as provided in subsection (3), if the elector fails to furnish the required identification, or if the clerk or inspector is in doubt as to the identity of the elector, such clerk or inspector shall follow the procedure prescribed in <u>s. 101.49</u>.</p> <p><b>97.0535 (3)(a)</b> The following forms of identification shall be considered current and valid if they contain the name and photograph of the applicant and have not expired:</p> <ol style="list-style-type: none"> <li>1. Florida driver's license.</li> <li>2. Florida identification card issued by the Department of Highway Safety and Motor Vehicles.</li> <li>3. United States passport.</li> <li>4. Employee badge or identification.</li> <li>5. Buyer's club identification.</li> <li>6. Debit or credit card.</li> <li>7. Military identification.</li> <li>8. Student identification.</li> <li>9. Retirement center identification.</li> <li>10. Neighborhood association identification.</li> <li>11. Entertainment identification.</li> <li>12. Public assistance identification.</li> </ol> <p>(b) The following forms of identification shall be considered current and valid if they contain the name and current residence address of the applicant:</p> <ol style="list-style-type: none"> <li>1. Utility bill.</li> </ol>	West's Fla. Stat. Ann. § 101.043 & West's Fla. Stat. Ann. § 97.0535

		<p>2. Bank statement.</p> <p>3. Government check.</p> <p>4. Paycheck.</p> <p>5. Other government document (excluding voter identification card).</p> <p>Version effective 1/1/2005-12/31/2005</p>	
Georgia	Provide ID	<p>(a) Each elector shall present proper identification to a poll worker at or prior to completion of a voter's certificate at any polling place and prior to such person's admission to the enclosed space at such polling place. Proper identification shall consist of any one of the following:</p> <ol style="list-style-type: none"> <li>(1) A valid Georgia driver's license;</li> <li>(2) A valid identification card issued by a branch, department, agency, or entity of the State of Georgia, any other state, or the United States authorized by law to issue personal identification;</li> <li>(3) A valid United States passport;</li> <li>(4) A valid employee identification card containing a photograph of the elector and issued by any branch, department, agency, or entity of the United States government, this state, or any county, municipality, board, authority, or other entity of this state;</li> <li>(5) A valid employee identification card containing a photograph of the elector and issued by any employer of the elector in the ordinary course of such employer's business;</li> <li>(6) A valid student identification card containing a photograph of the elector from any public or private college, university, or postgraduate technical or professional school located within the State of Georgia;</li> <li>(7) A valid Georgia license to carry a pistol or revolver;</li> <li>(8) A valid pilot's license issued by the Federal Aviation Administration or other authorized agency of the United States;</li> <li>(9) A valid United States military identification card;</li> <li>(10) A certified copy of the elector's birth certificate;</li> <li>(11) A valid social security card;</li> <li>(12) Certified naturalization documentation;</li> <li>(13) A certified copy of court records showing adoption, name, or sex change;</li> <li>(14) A current utility bill, or a legible copy thereof, showing the name and address of the elector;</li> <li>(15) A bank statement, or a legible copy thereof, showing the name and address of the elector;</li> <li>(16) A government check or paycheck, or a legible copy thereof, showing the name and address of the elector; or</li> <li>(17) A government document, or a legible copy thereof, showing the name and address of the elector.</li> </ol> <p>(b) If an elector is unable to produce any of the items of identification listed in subsection (a) of this Code section, he or she shall sign a statement under oath in a form approved by the Secretary of State, separate and distinct from the elector's voter certificate, swearing or affirming that he or she is the person identified on the elector's voter certificate. Such person shall be allowed to vote without undue delay; provided, however, that an elector who registered for the first time in this state by mail and did not provide one of the forms of identification set forth in subsection (a) of this Code section at the time of registration and who is voting for the first time may vote a provisional ballot pursuant to Code Section 21-2-418 upon swearing or affirming that the elector is the person identified in the elector's voter certificate. Such provisional ballot shall only be counted if the registrars are able to verify current and valid identification of the elector as provided in this Code section within the time period for verifying provisional ballots pursuant to Code Section 21-2-419. Falsely swearing or affirming such statement under oath shall be punishable as a felony, and the penalty shall be distinctly set forth on the face of the statement."</p> <p>effective June, 2003</p>	Ga. Code. Ann. § 21-2-417

Hawaii	Photo ID	<p>(b) The voter shall present valid identification to the official in charge of the pollbook.</p> <p><i>Do I Need an I.D. to Vote on Election Day?</i>  <b>Yes.</b> Be sure to have an I.D. with a picture and signature (such as a Hawaii driver's license or state I.D. card) when you go to vote. The NVRAC card is not an acceptable form of identification.</p> <p>From the 2004 version of the administrative code.</p> <p><b>§ 11-136 Poll book, identification, voting.</b></p> <p>Every person upon applying to vote shall sign the person's name in the poll book prepared for that purpose. This requirement may be waived by the chairperson of the precinct officials if for reasons of illiteracy or blindness or other physical disability the voter is unable to write. Every person shall provide identification if so requested by a precinct official. A poll book shall not contain the social security number of any person.</p> <p>After signing the poll book and receiving the voter's ballot, the voter shall proceed to the voting booth to vote according to the voting system in use in the voter's precinct. The precinct official may, and upon request shall, explain to the voter the mode of voting.</p> <p>Last amended 2003.</p>	<p>Haw. Code. R. § 2-51-80 (Paper ballots; voting procedure at the polls), § 2-51-83 (Punchcard ballots; voting procedure at polls), 2-51-85.1 (Marksense ballots; voting procedure at the polls.) – All have same subsection (b)</p> <p>Haw. Code. R. T. 2, SUBT. 4, CH. 51, Appendix</p> <p>HRS 11-136</p>
Idaho	Sign Name	<p>(1) An elector desiring to vote shall state his name and address to the judge or clerk in charge of the combination election record and poll book.</p> <p>(2) Before receiving his ballot, each elector shall sign his name in the combination election record and poll book following his name therein.</p> <p>(5) The elector shall then be given the appropriate ballots which have been stamped with the official election stamp and shall be given folding instructions for such ballots.</p> <p>(Last amended in 1972)</p>	Id. St. §34-1106
Illinois	Give Name	<p>Any person desiring to vote shall give his name and, if required to do so, his residence to the judges of election, one of whom shall thereupon announce the same in a loud and distinct tone of voice, clear, and audible; the judges of elections shall check each application for ballot against the list of voters registered in that precinct to whom absentee or early ballots have been issued for that election, which shall be provided by the election authority and which list shall be available for inspection by pollwatchers. A voter applying to vote in the precinct on election day whose name appears on the list as having been issued an absentee or early ballot shall not be permitted to vote in the precinct. All applicable provisions of Articles 4, 5 or 6 shall be complied with and if such name is found on the register of voters by the officer having charge thereof, he</p>	10 Ill. Comp. Stat. 5/17-9

		<p>shall likewise repeat said name, and the voter shall be allowed to enter within the proximity of the voting booths, as above provided. One of the judges shall give the voter one, and only one of each ballot to be voted at the election, on the back of which ballots such judge shall indorse his initials in such manner that they may be seen when each such ballot is properly folded, and the voter's name shall be immediately checked on the register list. In those election jurisdictions where perforated ballot cards are utilized of the type on which write-in votes can be cast above the perforation, the election authority shall provide a space both above and below the perforation for the judge's initials, and the judge shall endorse his or her initials in both spaces. Whenever a proposal for a constitutional amendment or for the calling of a constitutional convention is to be voted upon at the election, the separate blue ballot or ballots pertaining thereto shall, when being handed to the voter, be placed on top of the other ballots to be voted at the election in such manner that the legend appearing on the back thereof, as prescribed in Section 16-6 of this Act, shall be plainly visible to the voter. At all elections, when a registry may be required, if the name of any person so desiring to vote at such election is not found on the register of voters, he or she shall not receive a ballot until he or she shall have complied with the law prescribing the manner and conditions of voting by unregistered voters. If any person desiring to vote at any election shall be challenged, he or she shall not receive a ballot until he or she shall have established his right to vote in the manner provided hereinafter; and if he or she shall be challenged after he has received his ballot, he shall not be permitted to vote until he or she has fully complied with such requirements of the law upon being challenged. Besides the election officer, not more than 2 voters in excess of the whole number of voting booths provided shall be allowed within the proximity of the voting booths at one time. The provisions of this Act, so far as they require the registration of voters as a condition to their being allowed to vote shall not apply to persons otherwise entitled to vote, who are, at the time of the election, or at any time within 60 days prior to such election have been engaged in the military or naval service of the United States, and who appear personally at the polling place on election day and produce to the judges of election satisfactory evidence thereof, but such persons, if otherwise qualified to vote, shall be permitted to vote at such election without previous registration.</p>

Michigan	Sign Name	<p>(1) At each election, before being given a ballot, each registered elector offering to vote shall identify himself or herself by presenting an official state</p>	Mich. Comp. Laws Ann. §

		<p>identification card issued to that individual pursuant to Act No. 222 of the Public Acts of 1972, being sections 28.291 to 28.295 of the Michigan Compiled Laws, an operator's or chauffeur's license issued to that individual pursuant to the Michigan Vehicle Code, Act No. 300 of the Public Acts of 1949, being sections 257.1 to 257.923 of the Michigan Compiled Laws, or other generally recognized picture identification card and by executing an application showing his or her signature or mark and address of residence in the presence of an election official. If the voter registration cards are used in the precinct, the election official in charge of the precinct registration file shall compare the signature upon the application with the signature upon the registration card. If voter registration lists are used in the precinct, the election inspector shall determine if the name on the application to vote appears on the voter registration list. If the name appears on the voter registration list, the elector shall provide further identification by giving his or her date of birth or other information stated upon the voter registration list. In precincts using voter registration lists, the date of birth may be required to be placed on the application to vote. If the signature or an item of information does not correspond, the vote of the person shall be challenged, and the same procedure shall be followed as provided in this act for the challenging of an elector. If the person offering to vote has signed the registration card or application by making a mark, the person shall identify himself or herself by giving his or her date of birth, which shall be compared with the date of birth stated upon the registration card or voter registration list, or shall give other identification as may be referred to upon the registration card or voter registration list. If the elector does not have an official state identification card, operator's or chauffeur's license as required in this subsection, or other generally recognized picture identification card, the individual shall sign an affidavit to that effect before an election inspector and be allowed to vote as otherwise provided in this act. However, an elector being allowed to vote without the identification required under this subsection is subject to challenge as provided in section 727.</p> <p>(2) If, upon a comparison of the signature or other identification, it is found that the applicant is entitled to vote, the election officer having charge of the registration list shall approve the application and write his or her initials on the application, after which the number on the ballot issued shall be noted on the application. The application shall serve as 1 of the 2 poll lists required to be kept as a record of a person who has voted. The application shall be filed with the township, city, or village clerk. If voter registration cards are used in the precinct, the date of the election shall be noted by 1 of the election officials upon the precinct registration card of each elector voting at an election. If voter registration lists are used in the precinct, the election official shall clearly indicate upon the list each elector voting at that election. The clerk of a city, village, or township shall maintain a record of voting participation for each registered elector.</p> <p>The Attorney General declared that this statute violated the Equal Protection Clause of the Fourteenth Amendment. Op. Atty. Gen. 1997, No. 6930. That decision is binding on all state agencies.</p> <p>(Effective March 31, 1997)</p>	168.523
Minnesota	Sign Name	(a) An individual seeking to vote shall sign a polling place roster which states that the individual is at least 18 years of age, a citizen of the United States, has resided in Minnesota for 20 days immediately preceding the election, maintains residence at the address shown, is not under a guardianship in which the court order revokes the individual's right to vote, has not been found by a court of law to be legally incompetent to vote or convicted of a felony without having civil rights restored, is registered and has not already voted in the election. The roster must also state: "I understand that deliberately providing false information is a felony punishable by not more than five years imprisonment and a fine of not	Minn. Stat. § 204C.10

		<p>more than \$10,000, or both."</p> <p>(b) A judge may, before the applicant signs the roster, confirm the applicant's name, address, and date of birth.</p> <p>(c) After the applicant signs the roster, the judge shall give the applicant a voter's receipt. The voter shall deliver the voter's receipt to the judge in charge of ballots as proof of the voter's right to vote, and thereupon the judge shall hand to the voter the ballot. The voters' receipts must be maintained during the time for notice of filing an election contest.</p> <p>(Effective January 1, 2004)</p>	
Mississippi	Sign Name	<p>***</p> <p>When any person entitled to vote shall appear to vote, he shall first sign his name in a receipt book or booklet provided for that purpose and to be used at that election only and said receipt book or booklet shall be used in lieu of the list of voters who have voted formerly made by the managers or clerks; whereupon and not before, the initialing manager or, in his absence, the alternate initialing manager shall indorse his initials on the back of an official blank ballot, prepared in accordance with law, and at such place on the back of the ballot that the initials may be seen after the ballot has been marked and folded, and when so indorsed he shall deliver it to the voter, which ballot the voter shall mark in the manner provided by law, which when done the voter shall deliver the same to the initialing manager or, in his absence, to the alternate initialing manager, in the presence of the others, and the manager shall see that the ballot so delivered bears on the back thereof the genuine initials of the initialing manager, or alternate initialing manager, and if so, but not otherwise, the ballot shall be put into the ballot box; and when so done one (1) of the managers or a duly appointed clerk shall make the proper entry on the pollbook. If the voter is unable to write his name on the receipt book, a manager or clerk shall note on the back of the ballot that it was receipted for by his assistance.</p> <p>(Effective January 1, 1987)</p>	Miss. Code Ann. § 23-15-541
Missouri	Provide ID	<p>1. Before receiving a ballot, voters shall identify themselves by presenting a form of personal identification from the following list:</p> <p>(1) Identification issued by the state of Missouri, an agency of the state, or a local election authority of the state;</p> <p>(2) Identification issued by the United States government or agency thereof;</p> <p>(3) Identification issued by an institution of higher education, including a university, college, vocational and technical school, located within the state of Missouri;</p> <p>(4) A copy of a current utility bill, bank statement, government check, paycheck or other government document that contains the name and address of the voter;</p> <p>(5) Driver's license or state identification card issued by another state; or</p> <p>(6) Other identification approved by the secretary of state under rules promulgated pursuant to subsection 3 of this section other identification approved by federal law. Personal knowledge of the voter by two supervising election judges, one from each major political party, shall be acceptable voter identification upon the completion of a secretary of state-approved affidavit that is signed by both supervisory election judges and the voter that attests to the personal knowledge of the voter by the two supervisory election judges. The secretary of state may provide by rule for a sample affidavit to be used for such purpose.</p> <p>(Last amended in 2002)</p>	Mo. Rev. Stat. §115.427.1

Montana	Provide ID	<p>(1) (a) Before an elector is permitted to receive a ballot or vote, the elector shall present to an election judge a current photo identification showing the elector's name. If the elector does not present photo identification, including but not limited to a valid driver's license, a school district or postsecondary education photo identification, or a tribal photo identification, the elector shall present a current utility bill, bank statement, paycheck, notice of confirmation of voter registration issued pursuant to 13-2-207, government check, or other government document that shows the elector's name and current address.</p> <p>(From 2004 version of the Montana Code Annotated; No updates in 2004, only in 2005 [ Unrelated section was amended in 2005])</p>	Mont. Code. Ann. §13-13-114(1)(a)
Nebraska	Sign Name	<p>(1) The clerks of election shall have a list of registered voters of the precinct and a sign-in register at the polling place on election day. The list of registered voters shall be used for guidance on election day and may be in the form of a computerized, typed, or handwritten list or precinct registration cards. Registered voters of the precinct shall place and record their signature in the sign-in register before receiving any ballot. The list of registered voters and the sign-in register may be combined into one document.</p> <p>(Last amended in 2003)</p> <p>Official ballots shall be used at all elections. No person shall receive a ballot or be entitled to vote unless and until he or she is registered as a voter except as provided in section 32-914.01, 32-914.02, 32-915, 32-915.01, or 32-936. Except as otherwise specifically provided, no ballot shall be handed to any registered voter at any election until (1) he or she announces his or her name and address to the clerk of election, (2) the clerk has found that he or she is a registered voter at the address as shown by the precinct list of registered voters unless otherwise entitled to vote in the precinct under section 32-328, 32-914.01, 32-914.02, 32-915, or 32-915.01, (3) if the voter registered by mail after January 1, 2003, and has not previously voted in an election for a federal office within the county, the clerk shall ask the registered voter to present a photographic identification which is current and valid or a copy of a utility bill, bank statement, government check, paycheck, or other government document that is current and that shows the name and address of the voter, (4) the clerk has instructed the registered voter to personally write his or her name in the precinct sign-in register on the appropriate line which follows the last signature of any previous voter, and (5) the clerk has listed on the precinct list of registered voters the corresponding line number and name of the registered voter.</p> <p>(Last updated in 2003)</p>	<p>Neb. Nevada	Match Sig.	<p>1. Except as otherwise provided in <u>NRS 293.541</u>, if a person's name appears in the election board register or if he provides an affirmation pursuant to <u>NRS 293.525</u>, he is entitled to vote and must sign his name in the election board register when he applies to vote. His signature must be compared by an election board officer with the signature or a facsimile thereof on his original application to register to vote or one of the forms of identification listed in subsection 2.</p> <p>2. Except as otherwise provided in <u>NRS 293.2725</u>, the forms of identification which may be used individually to identify a voter at the polling place are:</p> <p>(a) The card issued to the voter at the time he registered to vote;</p> <p>(b) A driver's license;</p> <p>(c) An identification card issued by the Department of Motor Vehicles;</p> <p>(d) A military identification card; or</p>	Nev. Rev. Stat. § 293.277

		(e) Any other form of identification issued by a governmental agency which contains the voter's signature and physical description or picture.  Last Amendment Effective Jan. 1, 2004.	
NH	Give Name	A person desiring to vote shall, before being admitted to the enclosed space within the guardrail, announce his or her name to one of the ballot clerks who shall thereupon repeat the name; and, if the name is found on the checklist by the ballot clerk, the ballot clerk shall put a checkmark beside it and again repeat the name. The ballot clerk shall state the address listed on the checklist for the voter, and ask if the address is correct; if the address on the checklist is not correct, the ballot clerk shall correct the address in red on the checklist. The voter, if still qualified to vote in the town or ward and unless challenged as provided for in <u>RSA 659:27-33</u> , shall then be allowed to enter the space enclosed by the guardrail. After the voter enters the enclosed space, the ballot clerk shall give the voter one of each ballot to be voted on in that election which shall be folded as it was upon receipt from the secretary of state.  Last Amendment Effective July 2, 2002.	N.H. Rev. Stat. Ann. 659:13
New Jersey	Match Sig.	19:15-17. Comparison of signatures or statements made openly; provisional ballots for newly registered voters without proper identification  a. The comparison of signatures of a voter made upon registration and upon election day, and if the voter alleges his inability to write, the comparison of the answers made by such voter upon registration and upon election day, shall be had in full view of the challengers.  b. If a voter has registered by mail after January 1, 2003 to vote for the first time in his or her current county of residence and did not provide personal identification when registering pursuant to section 16 of P.L.1974, c. 30 (C.19:31-6.4), the voter shall be permitted to vote starting at the first election held after January 1, 2004 at which candidates are seeking federal office after displaying one of the following items: (1) a current and valid photo identification card; (2) a current utility bill, bank statement, government check or pay check; (3) any other government document that shows the voter's name and current address; or (4) any other identifying document that the Attorney General has determined to be acceptable for this purpose. If the voter does not display one of these documents, the voter shall not be permitted to vote by machine but shall instead be provided with a provisional ballot, pursuant to the provisions of P.L.1999, c. 232 (C.19:53C-1 et seq.). This subsection shall not apply to any voter entitled to vote by absentee ballot under the "Uniformed and Overseas Citizens Absentee Voting Act" (42 U.S.C. 1973ff-1 et seq.) or to any voter who is provided the right to vote other than in person under section 3 of Pub.L.98-435, the "Voting Accessibility for the Elderly and Handicapped Act," or any other voter entitled to vote otherwise than in person under any other federal law. This subsection shall also not apply to any person who registers to vote by appearing in person at any voter registration agency or to any person whose voter registration form is delivered to the county commissioner of registration or to the Attorney General, as the case may be, through a third party by means other than by mail delivery.  c. Each county commissioner of registration shall collect and maintain, in the manner prescribed by the Attorney General, the information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31-6.4). Access to the personal identification information provided pursuant to subsection b. of this section and section 16 of P.L.1974, c. 30 (C.19:31-6.4) shall be prohibited, in accordance with subsection a. of section 6 of P.L.2001, c. 404 (C.47:1A-5).  Last Amendment Effective July 9, 2004	N.J. Stat. Ann. 19:15-17
New Mexico	Sign Name	D. The judge assigned to the voter list used for confirmation of registration and voting shall determine that each person offering to vote is registered and, in the	N.M. Stat. Ann §1-5-10

010570

		<p>case of a primary election, that the voter is registered in a party designated on the primary election ballot. If the person's registration is confirmed by the presence of his name on the voter list or if the person presents a certificate under the seal and signature of the county clerk showing that he is entitled to vote in the election and to vote in that precinct, the judge shall announce to the election clerks the list number and the name of the voter as shown on the voter list.</p> <p>E. The election clerk shall locate that list number and name on the signature roster and shall require the voter to sign his usual signature or, if unable to write, to make his mark opposite his printed name. If the voter makes his mark, it shall be witnessed by one of the judges of the precinct board. If the signature roster indicates that the voter is required to present a form of identification before voting, the election judge shall ask the voter for a current and valid photo identification or a copy of a current utility bill, bank statement, government check, paycheck or other government document that shows and matches the name and address of the voter as indicated on the signature roster. If the voter does not provide the required identification, he shall be allowed to vote on a provisional paper ballot.</p> <p>G. A voter shall not be permitted to vote until he has properly signed his usual signature or made his mark in the signature roster.</p> <p>(From 2004 version of New Mexico Annotated Statutes, amended in 2005 to require presentation of ID)</p>	<p>(Recompiled as §1-12 -7.1 by L. 2005, Ch. 270, §63, effective July 1, 2005)</p>
New York	Match Sig.	<p>1. A person before being allowed to vote shall be required, except as provided in this chapter, to sign his name on the back of his registration poll record on the first line reserved for his signature at the time of election which is not filled with a previous signature, or on the line of the computer generated registration list reserved for his signature. The two inspectors in charge shall satisfy themselves by a comparison of this signature with his registration signature and by comparison of his appearance with the descriptive material on the face of the registration poll record that he is the person registered. If they are so satisfied they shall enter the other information required for the election on the same line with the voter's latest signature, shall sign their names or initials in the spaces provided therefor, and shall permit the applicant to vote. Any inspector or inspectors not satisfied shall challenge the applicant forthwith.</p> <p>2. If a person who alleges his inability to sign his name presents himself to vote, the board of inspectors shall permit him to vote, unless challenged on other grounds, provided he had been permitted to register without signing his name. The board shall enter the words "Unable to Sign" in the space on his registration poll record reserved for his signature or on the line of the computer generated registration list reserved for his signature at such election. If his signature appears upon his registration record or upon the computer generated registration list the board shall challenge him forthwith, except that if such a person claims that he is unable to sign his name by reason of a physical disability incurred since his registration, the board, if convinced of the existence of such disability, shall permit him to vote, shall enter the words "Unable to Sign" and a brief description of such disability in the space reserved for his signature at such election. At each subsequent election, if such disability still exists, he shall be entitled to vote without signing his name and the board of inspectors, without further notation, shall enter the words "Unable to Sign" in the space reserved for his signature at such election.</p> <p>3. The voter's signature made by him upon registration and his signature made at subsequent elections shall be effectively concealed from the voter by a blotter or piece of opaque paper until after the voter shall have completed his signature.</p> <p>4. In any case where a person who has heretofore voted has placed his voting signature on the back of his registration poll record on the first or any succeeding line or lines at the time or times of an election, instead of on the last line of the</p>	<p>N.Y. Law § 8-304 (McKinney)</p>

		<p>space thereon required to be reserved for such voting signatures and on any lines next running upward therefrom, the inspectors of election shall obliterate such misplaced signature or signatures, initial the obliteration and require such voter to sign his name again in the correct place on such registration poll record.</p> <p>5. Any person who has heretofore registered and who at such time placed his or her registration signature on the back of the registration poll record otherwise than in the space required to be provided therefor at the bottom of such poll record, shall, before being permitted to vote at any election thereafter, subscribe a new registration signature for himself on the last line at the bottom of such poll record, and, at the same time, if the inspectors of election are satisfied that the signatures were made by the same person, obliterate his original registration signature placed elsewhere than on the bottom of such record. Such obliterations may be made by crossing out the signature so as to completely efface the same or by affixing thereover a piece of gummed tape of a size sufficient only to cover such signature and of a type adequate to fully conceal the same</p> <p>Last Amended 1986</p>	
North Carolina	Give Name	<p>(a) Checking Registration. --A person seeking to vote shall enter the voting enclosure through the appropriate entrance. A precinct official assigned to check registration shall at once ask the voter to state current name and residence address. The voter shall answer by stating current name and residence address. In a primary election, that voter shall also be asked to state, and shall state, the political party with which the voter is affiliated or, if unaffiliated, the authorizing party in which the voter wishes to vote. After examination, that official shall state whether that voter is duly registered to vote in that precinct and shall direct that voter to the voting equipment or to the official assigned to distribute official ballots. If a precinct official states that the person is duly registered, the person shall sign the pollbook, other voting record, or voter authorization document in accordance with subsection (c) of this section before voting.</p>	N.C. Gen. Stat. Ann. § 163-166.7
North Dakota	Provide ID	<p>16.1-05-07 Poll clerks to check identification and verify eligibility -- Poll clerks to request, correct, and update incorrect information contained in the pollbook.</p> <p>1. Before delivering a ballot to an individual according to section 16.1-13- 22, the poll clerks shall request the individual to show a driver's license issued by the state, another form of identification displaying a photograph of the individual and the individual's date of birth, or another appropriate form of identification prescribed by the secretary of state. If an individual offering to vote fails or refuses to show an appropriate form of identification, the individual may be allowed to vote without being challenged according to section 16.1-05-06 if the individual provides to the election board the individual's date of birth and if a member of the election board or a clerk knows the individual and can personally vouch that the individual is a qualified elector of the precinct. After verifying that the individual's name is contained in the pollbook generated from the central voter file, poll clerks shall verify the individual's residential address and mailing address, if different from the individual's residential address.</p> <p>(From 2003 version of N.D. Century Code; only amendment to this statute that became effective in 2003 was in 2005)</p>	N.D. Cent. Code § 16.1-05-07

Ohio	Match Sig.	<p>When an elector appears in a polling place to vote he shall announce his full name and address to the precinct election officials. He shall then write his name and address at the proper place in the poll lists or signature pollbooks provided therefore, except that if, for any reason, an elector shall be unable to write his name and address in the poll list or signature pollbook, the elector may make his mark at the place intended for his name and a precinct official shall write the name of the elector at the proper place on the poll list or signature pollbook following the elector's mark, upon the presentation of proper identification. The making of such mark shall be attested by the precinct official who shall evidence the same by signing his name on the poll list or signature pollbook as a witness to such mark.</p> <p>The elector's signature in the poll lists or signature pollbooks shall then be compared with his signature on his registration form or a digitized signature list as provided for in section 3503.13 of the Revised Code, and if, in the opinion of a majority of the precinct election officials, the signatures are the signatures of the same person, the clerks shall enter the date of the election on the registration form or shall record the date by such other means as may be prescribed by the secretary of state. If the right of the elector to vote is not then challenged, or, if being challenged, he establishes his right to vote, he shall be allowed to proceed into the voting machine. If voting machines are not being used in that precinct, the judge in charge of ballots shall then detach the next ballots to be issued to the elector from Stub B attached to each ballot, leaving Stub A attached to each ballot, hand the ballots to the elector, and call his name and the stub number on each of the ballots. The clerk shall enter the stub numbers opposite the signature of the elector in the pollbook. The elector shall then retire to one of the voting compartments to mark his ballots. No mark shall be made on any ballot which would in any way enable any person to identify the person who voted the ballot.</p> <p>(Effective at time of last update, 1992 H 182, eff. 4-9-93)</p>	Ohio Rev. Code Ann. § 3505.18
Oklahoma	Sign Name	<p>Each person presenting himself to vote shall announce his name to the judge of the precinct, whereupon the judge shall determine whether said person's name is in the precinct registry.</p> <p>(Last amended in 1990)</p> <p>Persons who have been determined to be eligible to vote shall sign, in the presence of the clerk, the proper precinct registry. Said clerk shall thereupon issue proper ballots to said person. The voter's signature on said precinct registry shall be the best evidence of said voter's having voted at said election. Said precinct registry shall be retained in the office of the county election board for a period of twenty-two (22) months following the election and shall be subject to public inspection during regular office hours.</p> <p>(Last amended in 1990)</p>	<p>Okla. Stat. Ann. tit. 26, § 7-114</p> <p>Okla. Stat. Ann. tit. 26, § 7-117</p>
Oregon	Match Sig.	<p>All elections in Oregon are Vote by Mail.</p> <p>An Elections Official will compare the signature on your ballot return envelope to the signature on your voter registration card to verify your identity</p> <p>(<a href="http://www.uhavavote.org/votingguide/votebymail.html">http://www.uhavavote.org/votingguide/votebymail.html</a>) (unknown date, but use of wayback machine shows that this provision on site on following dates: 7/11/04, 10/20/04 and 10/29/04)</p>	Or. Rev. Stat. § 254.385
Penn.	Match Sig.	(a.3) All electors, including any elector that shows identification pursuant to subsection (a), shall subsequently sign a voter's certificate, and, unless he is a State or Federal employee who has registered under any registration act without declaring his residence by street and number, he shall insert his address therein, and hand the same to the election officer in charge of the district register. Such election officer shall thereupon announce the elector's name so that it may be heard by all members of the election board and by all watchers present in the	25 Pa. Stat. Ann. § 3050

		<p>polling place and shall compare the elector's signature on his voter's certificate with his signature in the district register. If, upon such comparison, the signature upon the voter's certificate appears to be genuine, the elector who has signed the certificate shall, if otherwise qualified, be permitted to vote: Provided, That if the signature on the voter's certificate, as compared with the signature as recorded in the district register, shall not be deemed authentic by any of the election officers, such elector shall not be denied the right to vote for that reason, but shall be considered challenged as to identity and required to make the affidavit and produce the evidence as provided in subsection (d) of this section. When an elector has been found entitled to vote, the election officer who examined his voter's certificate and compared his signature shall sign his name or initials on the voter's certificate, shall, if the elector's signature is not readily legible, print such elector's name over his signature, and the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes shall also be entered by one of the election officers or clerks. As each voter is found to be qualified and votes, the election officer in charge of the district register shall write or stamp the date of the election or primary, the number of the stub of the ballot issued to him or his number in the order of admission to the voting machines, and at primaries a letter or abbreviation designating the party in whose primary he votes, and shall sign his name or initials in the proper space on the registration card of such voter contained in the district register.</p> <p>(In effect at time of, and unaltered by: 2004, Oct. 8, P.L. 807, No. 97, § 5.1 (changes procedure for first time voters, not established voters))</p>	
<p>Rhode Island</p>	<p>Give Name</p>	<p>(a) Each person desiring to vote shall state his or her name and residence, including that person's street address, if he or she has any, to one of the first pair of bi-partisan supervisors, who shall then announce the name and residence in a loud and distinct voice, clear and audible. As each voter's name is announced, the voter shall be handed a ballot application in the following form:</p> <p><b>BALLOT APPLICATION</b></p> <p>(Poll List)          Senatorial District _____          Representative District _____          Voting District _____</p> <p>Election          Date _____</p> <p>I hereby certify that I am a registered and qualified elector in the above voting district of          City of _____</p> <p>and hereby make application for ballots to be voted at this election.</p> <p>_____</p> <p>(Signature of Voter)</p> <p>_____</p> <p>(Residence Address)</p> <p>Number Approved _____</p> <p>(Supervisor of Election)</p>	<p>R.I. Gen. Laws          § 17-19-24</p>

		<p>(b) The voter shall sign the application in the presence and view of a bipartisan pair. They shall locate the voter's name on the certified voting list for the voting district. Upon finding the voter's name on the certified voting list for the district, they shall initial the ballot application in the place provided next to the word "Approved" and shall enter on the certified list of voters a proper notation that the applicant has voted in the election. They shall then return the ballot application to the voter who shall pass down the line and present it to the clerk. After the voter has handed the approved ballot application to the clerk, the clerk shall provide the voter with the appropriate computer ballot and security sleeve, the warden shall direct the voter to the voting booth which the voter shall use, and unless the voter needs instruction or assistance as provided in this chapter, the voter shall cast his or her vote, and if he or she desires place the voted computer ballot in a security sleeve, and shall proceed to the optical scan precinct count unit and shall personally place his or her voted ballot into the designated ballot slot on the unit, and after doing so, shall leave the enclosure at once. No voter shall remain within the voting booth longer than ten (10) minutes, and if the voter refuses to leave after the lapse of ten (10) minutes, the voter shall be removed from the voting booth by order of the warden. Except for the election officials and the election inspector, not more than two (2) voters in excess of the number of voting booths shall be permitted within the enclosed space at any time.</p> <p>(Last amended 2004, Current through January 2005 Session)</p>	
South Carolina	Photo ID	<p><b>§ 7-13-710. Proof of right to vote; signing poll list; comparison of signatures.</b></p> <p>When any person presents himself to vote, he shall produce his valid South Carolina driver's license or other form of identification containing a photograph issued by the Department of Motor Vehicles, if he is not licensed to drive, or the written notification of registration provided for by §§ 7-5-125 and 7-5-180 if the notification has been signed by the elector. If the elector loses or defaces his registration notification, he may obtain a duplicate notification from his county board of registration upon request in person, or by telephone or mail. After presentation of the required identification, his name must be checked by one of the managers on the margin of the page opposite his name upon the registration books, or copy of the books, furnished by the board of registration. The managers shall keep a poll list which must contain one column headed "Names of Voters". Before any ballot is delivered to a voter, the voter shall sign his name on the poll list, which must be furnished to the appropriate election officials by the State Election Commission. At the top of each page the voter's oath appropriate to the election must be printed. The signing of the poll list or the marking of the poll list is considered to be an affirmation of the oath by the voter. One of the managers shall compare the signature on the poll list with the signature on the voter's driver's license, registration notification, or other identification and may require further identification of the voter and proof of his right to vote under this title as he considers necessary. If the voter is unable to write or if the voter is prevented from signing by physical handicap, he may sign his name to the poll list by mark with the assistance of one of the managers.</p> <p>Last amended: 1968</p>	S.C. Code Ann. § 7-13-710
South Dakota	Photo ID	<p>When a voter is requesting a ballot, the voter shall present a valid form of personal identification. The personal identification that may be presented shall be either:</p> <ol style="list-style-type: none"> <li>(1) A South Dakota driver's license or nondriver identification card;</li> <li>(2) A passport or an identification card, including a picture, issued by an agency of the United States government;</li> <li>(3) A tribal identification card, including a picture; or</li> <li>(4) An identification card, including a picture, issued by a high school or an accredited institution of higher education, including a university, college, or</li> </ol>	S.D. 		<p>technical school, located within the State of South Dakota.</p> <p>Last amended March 2004</p>	
Tennessee	Provide ID	<p>Identification of eligible voters</p> <p>(a)(1) A voter shall sign an application for ballot, indicate the primary in which the voter desires to vote, if any, and present it to a registrar. The application for ballot shall include thereon a space for the address of the voter's current residence, and the voter shall write or print such address on the application when the voter signs it. The registrar shall compare the signature and information on the application with the signature and information on the duplicate permanent registration record. The registrar shall make a determination whether the voter's address is different from the address on the voter's permanent registration record or if the registration is in inactive status. If the voter has changed residence, or the voter's registration is inactive, the registrar shall follow the procedures for voting pursuant to § 2-7-140. If, upon comparison of the signature and other identification, it is found that the applicant is entitled to vote, the registrar shall initial the application and shall note on the reverse side of the voter's duplicate permanent registration record the date of the election, the number of the voter's ballot application, and the elections in which the voter votes. If the applicant's signature is illegible, the registrar shall print the name on the application. The registrar shall give the voter the ballot application which is the voter's identification for a paper ballot or ballots or for admission to a voting machine. The voter shall then sign the duplicate poll lists without leaving any lines blank on any poll list sheet.</p> <p>(2) In any computerized county, the county election commission shall have the option of using an application for a ballot as provided in this section, or using the computerized voter signature list. A computerized voter signature list shall include the voter's name, current address of residence, social security number or registration number, birth date and spaces for the voter's signature, elections voted, ballot number and precinct registrar's initials. The following procedures shall be followed in the case of computerized voter signature lists:</p> <p>(A) The voter shall sign the signature list and indicate the election or elections the voter desires to vote in and verify the voter's address in the presence of the precinct registrar;</p> <p>(B) The registrar shall compare the voter's signature and information on the signature list with other evidence of identification supplied by the voter. If, upon comparison of the signature and other evidence of identification, it is found that the applicant is entitled to vote, the registrar shall initial the signature list;</p> <p>(C) If the applicant's signature is illegible, the registrar shall print the name of the applicant on the voter list; and</p> <p>(D) If a voter is unable to present any evidence of identification specified in subsection (c), the voter shall be required to execute an affidavit of identity on a form provided by the county election commission.</p> <p>Last amended 2003</p>	Tenn. Code Ann. § 2-7-112
Texas	Provide ID	<p>(b) On offering to vote, a voter must present the voter's voter registration certificate to an election officer at the polling place.</p> <p>(Last amended in 1997)</p>	Tex. Elec. Code Ann. § 63.001
Utah	Give Name	<p>(1)(a) Any registered voter desiring to vote shall give his name, and, if requested, his residence, to one of the election judges.</p> <p>(b) If an election judge does not know the person requesting a ballot and has reason to doubt that person's identity, the judge shall request identification or have the voter identified by a known registered voter of the district.</p> <p>(3) If the election judge determines that the voter is registered:</p> <p>(a) the election judge in charge of the official register shall:</p> <p>(i) write the ballot number opposite the name of the voter in the official register; and</p>	Utah Code Ann. § 20A-3-104

Vermont	Give Name	<p>Before a person may be admitted to vote, he or she shall announce his or her name and if requested, his or her place of residence in a clear and audible tone of voice, or present his or her name in writing, or otherwise identify himself or herself by appropriate documentation. The election officials attending the entrance of the polling place shall then verify that the person's name appears on the checklist for the polling place. If the name does appear, and if no one immediately challenges the person's right to vote on grounds of identity or having previously voted in the same election, the election officials shall repeat the name of the person and:</p> <p>(1) If the checklist indicates that the person is a first-time voter in the municipality who registered by mail and who has not provided required identification before the opening of the polls, require the person to present any one of the following: a valid photo identification; a copy of a current utility bill; a copy of a current bank statement; or a copy of a government check, paycheck, or any other government document that shows the current name and address of the voter. If the person is unable to produce the required information, the person shall be afforded the opportunity to cast a provisional ballot, as provided in subchapter 6A of this chapter. The elections official shall note upon the checklist a first-time voter in the municipality who has registered by mail and who produces the required information, and place a mark next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting.</p> <p>(2) If the voter is not a first-time voter in the municipality, no identification shall be required, the clerk shall place a check next to the voter's name on the checklist and allow the voter to proceed to the voting booth for the purpose of voting</p> <p>(Last amended in 2003)</p>	Vt. Stat. Ann. tit. 17, § 2563
Virginia	Provide ID	<p>§ 24.2-643. Qualified voter permitted to vote; procedures at polling place; voter identification</p> <p>A. After the polls are open, each qualified voter at a precinct shall be permitted to vote. The officers of election shall ascertain that a person offering to vote is a qualified voter before admitting him to the voting booth and furnishing an official ballot to him.</p> <p>B. An officer of election shall ask the voter for his full name and current residence address and repeat, in a voice audible to party and candidate representatives present, the full name and address stated by the voter. The officer shall ask the voter to present any one of the following forms of identification: his Commonwealth of Virginia voter registration card, his social security card, his valid Virginia driver's license, or any other identification card issued by a government agency of the Commonwealth, one of its political subdivisions, or the United States; or any valid employee identification card containing a photograph of the voter and issued by an employer of the voter in the ordinary course of the employer's business.</p> <p>If the voter's name is found on the pollbook, if he presents one of the forms of</p>	Va. Code Ann.

		<p>identification listed above, if he is qualified to vote in the election, and if no objection is made, an officer shall enter, opposite the voter's name on the pollbook, the first or next consecutive number from the voter count form provided by the State Board, or shall enter that the voter has voted if the pollbook is in electronic form; an officer shall provide the voter with the official ballot; and another officer shall admit him to the voting booth.</p> <p>Except as provided in subsection E of this section, if a voter is entitled to vote except that he is unable to present one of the forms of identification listed above, he shall be allowed to vote after signing a statement, subject to felony penalties for false statements pursuant to § 24.2-1016, that he is the named registered voter who he claims to be. A voter who requires assistance in voting by reason of physical disability or inability to read or write, and who requests assistance pursuant to § 24.2-649, may be assisted in preparation of this statement in accordance with that section. The provisions of § 24.2-649 regarding voters who are unable to sign shall be followed when assisting a voter in completing this statement.</p> <p>(Version in effect as of 2004- effective 4/12/2004)</p>	
Washington	Sign Name	<p>29A.44.201.</p> <p>A voter desiring to vote shall give his or her name to the precinct election officer who has the precinct list of registered voters. This officer shall announce the name to the precinct election officer who has the copy of the inspector's poll book for that precinct. If the right of this voter to participate in the primary or election is not challenged, the voter must be issued a ballot or permitted to enter a voting booth or to operate a voting device. For a partisan primary in a jurisdiction using the physically separate ballot format, the voter must be issued a nonpartisan ballot and each party ballot. The number of the ballot or the voter must be recorded by the precinct election officers. If the right of the voter to participate is challenged, RCW 29A.08.810 and 29A.08.820 apply to that voter.</p> <p>(In effect at time of last update prior to 2005: 2004 c 271 § 136, eff. June 10, 2004)</p> <p>29A.44.210.</p> <p>Any person desiring to vote at any primary or election is required to sign his or her name on the appropriate precinct list of registered voters. If the voter registered using a mark, or can no longer sign his or her name, the election officers shall require the voter to be identified by another registered voter.</p> <p>The precinct election officers shall then record the voter's name.</p> <p>Effective date: July 1, 2004</p>	<p>Wash. Rev. Code § 29A.44.201 &amp; 29A.44.210</p>
West Virginia	Match Sig.	<p>(a) Any person desiring to vote in an election shall, upon entering the election room, clearly state his or her name and residence to one of the poll clerks who shall thereupon announce the same in a clear and distinct tone of voice. If that person is found to be duly registered as a voter at that precinct, he or she shall be required to sign his or her name in the space marked "signature of voter" on the pollbook prescribed and provided for the precinct. If that person is physically or otherwise unable to sign his or her name, his or her mark shall be affixed by one of the poll clerks in the presence of the other and the name of the poll clerk affixing the voter's mark shall be indicated immediately under the affixation. No ballot may be given to the person until he or she so signs his or her name on the pollbook or his or her signature is so affixed thereon.</p> <p>***</p> <p>(c) When the voter's signature is properly on the pollbook, the two poll clerks shall sign their names in the places indicated on the back of the official ballot and deliver the ballot to the voter to be voted by him or her without leaving the</p>	<p>W. Va. Code § 3-1-34 (a)</p>

		<p>election room. If he or she returns the ballot spoiled to the clerks, they shall immediately mark the ballot "spoiled" and it shall be preserved and placed in a spoiled ballot envelope together with other spoiled ballots to be delivered to the board of canvassers and deliver to the voter another official ballot, signed by the clerks on the reverse side required by this subsection. The voter shall thereupon retire alone to the booth or compartment prepared within the election room for voting purposes and there prepare his or her ballot using a ballpoint pen of not less than five inches in length or other indelible marking device of not less than five inches in length. In voting for candidates in general and special elections, the voter shall comply with the rules and procedures prescribed in section five, article six of this chapter.</p> <p>(In effect at time of last update prior to 2005: Acts 2003, c. 100, eff. 90 days after March 7, 2003)</p>	
Wisconsin	Give Name	<p>6.79(2)(a) Except as provided in sub. (6), where there is registration, each person, before receiving a voting number, shall state his or her full name and address. Upon the prepared registration list, after the name of each elector, the officials shall enter the serial number of the vote as it is polled, beginning with number one. Each elector shall receive a slip bearing the same serial number. A separate list shall be maintained for electors who are voting under s. 6.15, 6.29 or 6.55(2) or (3) and electors who are reassigned from another polling place under s. 5.25(5)(b). Each such elector shall have his or her full name, address and serial number likewise entered and shall be given a slip bearing such number.</p> <p>(In effect at time of last update prior to 2005: 2003 Act 327, § 4, eff. Const. Approved March 5, 2004.)</p>	Wyo. Stat. Ann. § 22-3-118

## APPENDIX B – Court Decisions and Literature on Voter Identification and Related Issues

## Court Decisions

**Summary of Relevant Cases:****Challenges Prevailed:***American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004*

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14<sup>th</sup> Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14<sup>th</sup> Amendment EPC: likely to prevail

*Greidinger v. Davis, 1993*

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14<sup>th</sup> Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

**Challenges Rejected:***League of Women Voters v. Blackwell, 2004.*

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

*Colorado Common Clause v. Davidson, 2004*

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

- Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
- Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

*McKay v. Thompson, 2000*

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14<sup>th</sup> Amend.: no protection for privilege where Congress authorized its infringement

*Kemp v. Tucker, 1975*

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15<sup>th</sup> Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14<sup>th</sup> Amendment EPC: ruled there was no distinction among voters

*Perez v. Rhiddlehoover, 1966*

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15<sup>th</sup> Amendment: same reasons

**Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:**

***American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at \*1 (D. Minn. Oct. 28, 2004).***

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at \*1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at \*3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

**Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at \*1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at \*6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at \*10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

***Perez v. Rhiddlehoover*, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

***Friendly House, et al. v. Janet Napolitano et al.*, CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

**Current Litigation Concerning Voter ID Issues<sup>1</sup>**

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

<sup>1</sup> As of January 2, 2006

**Georgia** (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)<sup>2</sup>. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.<sup>3</sup> As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

***Indiana*** (*Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

<sup>2</sup> Litigation documents are available at the Election Law @ Moritz website.  
<http://moritzlaw.osu.edu/electionlaw/litigation/index.php>

<sup>3</sup> GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.<sup>4</sup> The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves these decisions to state law. 42 U.S.C. § 15482(a).

---

<sup>4</sup> According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

### Analysis of Effects of Voter Identification Requirements on Turnout

Tim Vercellotti  
Eagleton Institute of Politics  
Rutgers University  
May 16, 2006

#### Introduction

A key area of disagreement in the policy debate over voter identification requirements concerns whether such requirements dampen turnout among those eligible to vote. Opponents of voter identification laws argue that they constitute an institutional barrier to voting, particularly among the poor, African-Americans, Hispanics, the elderly and people with disabilities (Baxter and Galloway 2005, Electionline.org 2002, Jacobs 2005, Young 2006). This argument holds that voter identification requirements create an extra demand on voters, and thus may discourage some of them from participating in elections. Further, critics of voter identification requirements contend that the effect is greater based on specific types of requirements. Critics argue that requiring voters to produce some form of government-issued photo identification on Election Day is more demanding than requiring, for example, that they state their names at the polling place because of the various steps needed to procure a photo identification card, such as a driver's license. Supporters of voter identification requirements, on the other hand, argue that the requirements are necessary to combat voter fraud, safeguard the integrity of the electoral process, and engender faith in the electoral process among citizens (Young 2006).

This report examines the potential variation in turnout rates based on the type of voter identification requirement in place in each state on Election Day 2004. This report draws from two sets of data – aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. Classification of voter identification requirements comes from a review of state statutes conducted by the Moritz College of Law at the Ohio State University.

#### Types of voter identification requirements

Based on research by the Moritz College of Law, states had one of five types of requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (10 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).<sup>5</sup> It was then possible to code the states according to these requirements, and test the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification.

---

<sup>5</sup> Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

But election laws in numerous states offer exceptions to these requirements if individuals lack the necessary form of identification, and laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot (as opposed to a provisional ballot). Thus it is also possible to categorize states based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). For the purposes of this analysis I also tested the array of minimum identification requirements to assess whether they posed increasing levels of demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

### **Estimating turnout among citizens in the voting-age population**

This report examines turnout among U.S. citizens of voting age in both the aggregate- and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000.<sup>6</sup>

### **Analysis of aggregate data**

If one treats maximum voter identification requirements as a continuous variable, with photo identification as the most demanding requirement, one finds some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter

---

<sup>6</sup> McDonald and Popkin (2001) recommend an even more stringent approach to voter turnout calculations. They point out that voting-age population estimates include adults who are ineligible to vote (such as convicted felons), and the estimates overlook eligible citizens living overseas. While estimates of the voting-eligible population are available at the state level, I was unable to find such estimates for individual counties, which provide the unit of analysis for the aggregate data analyzed here.

identification requirements ( $r = -.30, p < .05$ ). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ( $r = -.20, p = .16$ ). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

[Table 1 here]

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.2 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, I opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.<sup>7</sup>

Voter identification requirements alone do not determine voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. I estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county.

I coded the voter identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

To capture electoral context I included whether the county was in a presidential battleground state (any state in which the margin of victory for the winning candidate was five percent or less), and whether the county was in a state with a competitive race for governor and/or the U.S. Senate (also using the threshold of a margin of victory of five percent or less). Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus I added a variable to reflect the number of days between each state's registration deadline and the election.<sup>8</sup>

<sup>7</sup> Treating maximum voter identification requirements as a continuous variable yielded results in which voter identification requirements were negatively related to aggregate turnout. Those results can be found in Table A-1 in the Appendix to this report.

<sup>8</sup> For states that had Election Day registration or no registration requirement (North Dakota), I assigned a value of zero to this variable.

Drawing from U.S. Census projections for 2003, I included the percentage of the voting-age population in each county that was Hispanic or African-American to control for ethnicity and race. I controlled for age using the 2003 Census projection for the percentage of county residents age 65 and older, and I controlled for socioeconomic status by including the median household income for 2002 in each county.<sup>9</sup>

I estimated a series of random effects models to account for the likelihood that data from counties were correlated within each state (for further explanation of random effects and other multilevel models, see Bryk and Raudenbush 1992, Luke 2004, Singer 1998).<sup>10</sup> I allowed the median income variable to have both fixed and random effects in each state to take into account variation in the cost of living in each state. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the estimated citizen voting-age population that voted in the 2004 election.

[Table 2 here]

Turning first to an analysis using the maximum identification requirements, two of the four requirements had a small and negative effect on turnout in 2004: matching one's signature and providing a non-photo identification. Taking into account the reference variable of stating one's name, the results indicate that turnout was lower in states that required signature matches or a non-photo identification than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Two contextual factors -- whether the county was in a state that was a battleground state and whether that state had a competitive race for governor and/or U.S. Senate-- increased voter turnout. The time between the closing date for registration and the election had a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income had positive effects on turnout. The percentage of African-Americans in the county did not have a significant effect.

The effects of the minimum voter identification requirements were non-existent. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to have a negative effect on turnout, as did the number of days between the closing date for registration and the election.

I then sought to test the hypothesis that voter identification requirements dampen turnout among minorities, a claim voiced by some critics of the requirements. To test this idea I incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. A chi-square test of the difference in the deviance for each model (represented by -2 log likelihood in Table 2),

<sup>9</sup> To bring the income figures into a scale comparable to those of the other variables, I used the natural log of median household income.

<sup>10</sup> The data analyses provided evidence that there was, indeed, a clustering of data within each state. The intraclass correlation, bounded by 0 and 1, measures the variation between the states. A random intercept model using only the intercept as a predictor generated an intraclass correlation of .43, indicating considerable variation between the states.

showed no significant improvement by including the interactions ( $p > 0.05$ ). I report the coefficients for the models with the interactions in the Appendix in tables A-2 and A-3.

Analysis of the aggregate data at the county level generates some support for the hypothesis that as the identification requirements for voting vary, so does turnout. Specifically, in terms of the maximum requirements, the results suggest that requiring a signature match or non-photo identification is negatively related to turnout compared to requiring that a voter state his or her name. But the analysis showed that adding interactions between identification requirements and the percentage of the county that was African-American or Hispanic did not improve the fit of the model to the data.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote. For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).<sup>11</sup> Married individuals also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993). To fully explore the effects of voter identification requirements on turnout, it is important to examine individual-level data as well.

### Individual-level analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the advantages of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.<sup>12</sup> The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The analyses reported here are based on reports from self-described registered voters. I omitted those who said they were not registered to vote. I also excluded those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. In addition, I eliminated from the sample respondents who said they were not U.S. citizens because the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey.

The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.<sup>13</sup> As in the analysis of aggregate data, I coded the voter

<sup>11</sup> A reviewer for an earlier version of this paper recommended adding an education variable to the aggregate model. One version of the aggregate model not reported here included the percentage of adults in the county who had at least a college degree. The measure was highly collinear with the percentage of residents living below the poverty line, necessitating removal of the college degree variable from the model.

<sup>12</sup> It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

<sup>13</sup> The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown

identification requirements as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). I omitted the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.<sup>14</sup>

In addition to the voter identification requirements, the models include two other state-level factors that might have influenced turnout in 2004: whether the state was considered a battleground state in the presidential election, and whether there was a gubernatorial and/or U.S. Senate race in the state (see Alvarez and Ansolabehere 2002, Alvarez et al. 2004, and Kenny et al. 1993 for similar approaches). As in the aggregate data analysis, the threshold that determined whether the state was a battleground state or had a competitive statewide race was a margin of victory of five percent or less.<sup>15</sup> At the individual level, I controlled for gender, household income, and dummy variables for race/ethnicity, age and education. In terms of race and ethnicity, I created dummy variables to represent whether a voter was Black/non-Hispanic, Hispanic, or Asian (with white/non-Hispanic/other voters as the omitted category for reference purposes). I separated education into five dummy variables: less than high school, high school diploma, some college, college graduate, and graduate training. I omitted the "less than high school" variable from the model for reference purposes. Regarding age, I created four dummy variables to represent 18 to 24 years of age, 29 to 44, 45 to 64, and 65 years and older. I omitted the 18-to-24 category as the reference variable in the model.

Drawing on previous research on voting behavior, I also controlled for whether an individual was employed, or at least a member of the workforce (as opposed to being a full-time student, a homemaker, or retired). Both employment and workforce membership have been shown to be positive predictors of turnout (see Mitchell and Wlezien 1995). Marital status, whether one is a native-born citizen and residential mobility also have emerged as significant predictors of turnout (Alvarez and Ansolabehere 2002, Alvarez et al. 2004, Kenney et al. 1993, Wolfinger and Rosenstone 1980). I included in the model variables for whether a respondent was married (coded 1 if yes, 0 otherwise), and whether one was a native-born citizen (coded 1 if yes, 0 otherwise). I measured residential mobility by coding for whether the respondent had moved to a new address in the six months prior to the interview (coded 1 if yes, 0 otherwise).

## Results

---

that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

<sup>14</sup> Earlier versions of this paper included an individual-level analysis that included the five maximum voter identification requirements combined into a continuous variable. The results of that analysis, which found that voter identification requirements had a negative relationship with turnout, can be found in table A-4 in the Appendix.

<sup>15</sup> Given that the individual-level analysis focused on registered voters (as opposed to the citizen voting-age population in the aggregate analysis), I did not include the closing date for registration as a predictor of turnout in the individual-level analysis.

The dependent variable is whether a respondent said he or she voted in the November 2004 election (coded 1 for yes, 0 for no). I estimated models using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted. I estimated the models using robust standard errors to control for correlated error terms for observations from within the same state.

[Table 3 here]

The two models in Table 3 use either the maximum or minimum voter identification requirements in each state. The two models generate similar results. In each model, three of the voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. In other words, compared to states that require voters only to state their names, the requirements to sign one's name, provide a non-photo identification, photo identification in the maximum requirements or affidavit in the minimum requires exert a negative influence on turnout.

Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had finished high school. Respondents who had moved within six months before the interview were less likely to say they had voted.

While the probit models provide statistical support for the influence of voter identification requirements and other variables on turnout, probit coefficients do not lend themselves to intuitive interpretation. Another common approach in studies of election requirements is to examine how the predicted probability of voter turnout would vary as election requirements vary. I used the probit coefficients to calculate the predicted probability of voting at each level of voter identification requirements while holding all other independent variables in the models at their means.<sup>16</sup> I calculated the probabilities taking into account both maximum and minimum requirements.

[Table 4 here]

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability appear to decline from stating one's name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.<sup>17</sup> In terms of the

<sup>16</sup> In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

<sup>17</sup> The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of

minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one's name was the maximum or minimum requirement.

Race and ethnicity have generated particular interest in the debate over voter identification requirements. But incorporating dummy variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, I divided the sample into sub-samples and re-ran the probit models.

[Table 5 here]

The effects of voter identification requirements were similar for white voters compared to the entire sample, which was not surprising given that white voters comprised 81 percent of the sample. Voters in states where the maximum requirement involved signing one's name, providing a non-photo identification or photo identification were less likely to vote than those in a state that required voters to give their names. Taking into consideration the minimum requirements, this was true only for voters in states that require a non-photo identification or an affidavit. White voters in photo identification states were 3.7 percent less likely to vote than were white voters in states where respondents gave their names. The difference in probability was 4.4 percent for voters in states where an affidavit was the minimum requirement.

Voter identification requirements also influenced turnout among Black voters, but to a lesser extent relative to white voters.

[Table 6 here]

Of the maximum voter identification requirements, only the non-photo identification requirement reduced turnout compared to turnout in states that required voters to state their names. The predicted probability of voting was 5.7 percent lower for Black respondents in states that required non-photo identification. In terms of age, only African-Americans age 65 and older were more likely to vote than respondents in the 18 to 24 referent group. Respondents in all levels of education were more likely to vote than respondents without a high school diploma. Gender, income, living in a battleground state, being a part of the workforce and having been born in the United States also were positive predictors. Recent mobility tended to lower the probability of voting. None of the minimum identification requirements had a significant effect on voting, while most of the remaining variables had effects similar to those in the maximum requirement model.

---

all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

Hispanic voters also were less likely to vote in states that required non-photo identification as opposed to stating one's name.

[Table 7 here]

Using the coefficients from Table 7 to calculate predicted probabilities, for both the maximum and minimum requirements, Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name. Hispanic voters ages 45 to 64 and 65 and over were more likely to vote than their 18-to-24-year-old counterparts. Education and income also were positive predictors of voting. Interestingly, being a native-born citizen lowered the probability of voting, while native-born citizenship was a positive predictor for African-American voters and was not a predictor at all for white voters. It may be that naturalized citizens of Hispanic descent are more conscious of the value of voting rights than other groups.

Varying voter identification requirements influenced Asian-American voters as well. As with Hispanic and Black voters, Asian-American voters were less likely to turn out in states with non-photo identification requirements than in states where voters gave their names.

[Table 8 here]

Using the probit coefficients to calculate predicted probabilities, Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement. Asian-American voters also were 2.2 percent less likely to vote when signatures were the maximum requirement compared to stating one's name.

In terms of other predictors, there were no significant differences in terms of age or income. In contrast to Hispanic voters, where one was a naturalized or natural-born citizen did not affect the probability of voting. Those with high school or college diplomas or graduate training were more likely to turn out than those with less than a high school diploma. Women and married voters also were more likely to turn out than men and voters who were not married.

## **Discussion and conclusion**

The results presented here provide evidence that as voter identification requirements vary, voter turnout does as well. This point emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall effect for all registered voters was fairly small, but still statistically significant.

In the aggregate data, requirements that voters match signatures on file, provide a non-photo identification or photo identification had negative effects on turnout compared to requiring that voters state their names. Interactions with specific groups – African-Americans and Hispanics – did not improve the fit of the aggregate data to the models. But differences emerged among specific groups in the individual-level data. The signature, non-photo identification and photo identification requirements all had negative effects compared to the requirement that voters simply state their names. These effects translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For

example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters (the gap widened to 3.7 percent for white voters when comparing photo identification to simply stating one's name).

That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements. This begs the question as to why photo identification requirements did not have a greater influence in 2004. It may have been due to the fact that photo identification was a maximum requirement in only five states, and each of those states accepted another type of identification as a minimum requirement.

In examining the effects of voter identification requirements on turnout, there is still much to learn. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If these requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements?<sup>18</sup> Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

---

<sup>18</sup> The individual-level data offer some insight here. If advance knowledge of the voter identification requirements were to dampen turnout, it is reasonable to expect that advance knowledge of those requirements also could discourage some individuals from registering to vote. I ran the same probit models using the November 2004 Current Population Survey data and voter registration as the dependent variable (coded 1 if the respondent said he or she was registered, and 0 if the respondent was not registered). Of all of the voter identification requirements, only requiring signatures or matching signatures had a significant effect on whether a respondent said he or she was registered to vote in 2004. In each instance the effect was negative.

**APPENDIX D**

**Annotated Bibliography on Voter Identification Issues**

Law Journals

- Angelo J. Genova & Rebecca Moll Freed, *The Right to Vote and Be Counted: A Liberty at Risk*, 233 N.J. LAW 44, Apr. 2005.
  - Discusses HAVA a lot
- George W. Grayson, *Registering and Identifying Voters: What the United States Can Learn From Mexico*, 3 ELECTION L.J. 513 (2004).
  - Benefits of US adopting Mexican system of identifying voters and voter registration
- Robert A. Pastor, *Improving the U.S. Electoral System: Lessons from Canada and Mexico*, 3 ELECTION L.J. 584 (2004).
  - Discusses HAVA, problems of 2000 election, discusses registration & identification
- Brian Kim, *Recent Development: Help America Vote Act*, 40 HARV. J. ON LEGIS. 579 (Summer 2003).
  - Discussion of HAVA requirements and voter ID, problems in 2000
- Robert L. McCurley, *Legislative Wrap-Up: Election Law Changes*, 64 ALA. LAW. 364, Nov. 2003.
  - Discusses changes in AL to their election law in 2003, including adding voter ID
  - HAVA discussed
- Clifford B. Levine, Esq. & David J. Montgomery, Esq., *Post-Election Litigation in Pennsylvania*, 41 Duq. L. Rev. 153 (Fall, 2002).
  - Discusses challenging elections based on voter fraud & illegal votes
- Rebecca Barrett, *Election*, 18 GA. ST. U. L. REV. 114 (Fall 2001).
  - Discusses a GA law in 2001 removing hunting & fishing licenses from list of acceptable ID and a failed amendment to limit acceptable ID to photo ID only
- Robert A. Junell, Curtis L. Seidlits, Jr. & Glen G. Shuffler, *Consideration of Illegal Votes in Legislative Election Contests*, 28 Tex. Tech L. Rev. 1095 (1997).
  - General discussion of ways voters are verified, what happens when voters are challenged as illegal voters
- John Victor Berry, *Take the Money and Run: Lame-Ducks "Quack" and Pass Voter Identification Provisions*, 74 U. DET. MERCY L. REV. 291 (Winter 1997).
  - discusses a photo ID law passed in Michigan in 1997 (later declared violated EPC of 14<sup>th</sup> amendment)
  - arguments against photo ID
- Deborah S. James, Note, *Voter Registration: A Restriction on the Fundamental Right to Vote*, 96 YALE L.J. 1615 (1987).
  - Discusses voter registration as a way to combat fraud & several different ways to do it

**Historical articles:**

- Gabrielle B. Ruda, Note, *Picture Perfect: A Critical Analysis of the Debate on the 2002 Help America Vote Act*, 31 FORDHAM URB. L.J. 235 (November 2003).
  - Lot of analysis on HAVA and voter ID
  - Little bit of historical
  - Arguments for and against certain types of voter ID laws

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Kimberly C. Delk, *What Will it Take to Produce Greater American Voter Participation? Does Anyone Really Know?*, 2 LOY. J. PUB. INT. L. 133 (Spring 2001).
  - History of voting & requirements & laws throughout time
  - Future: I-voting & e-registration – improvements in voter ID which would result

**Marginally relevant/limited discussion of Voter ID issues**

- Jeanne S. Zaino & Jeffrey T. Zaino, *The Changing Landscape of Election Disputes*, 59 DISP. RESOL. J. 11 (Aug. – Oct. 2004).
  - Discusses HAVA & implementation
- Symposium, *Disability Law, Equality, and Difference: American Disability Law and the Civil Rights Model, Alabama Section*, 55 ALA. L. REV. 1167 (Summer 2004).
  - Discusses an AL law expanding exemptions to ID requirement if 2 poll workers identify them
- Bryan Mercurio, *Democracy in Decline: Can Internet Voting Save the Electoral Process*, 22 J. MARSHALL J. COMPUTER & INFO. L. 409 (Winter 2004).
  - Internet voting
- Kristen E. Larson, Note, *Cast Your Ballot.com: Fulfill Your Civic Duty over the Internet*, 27 WM. MITCHELL L. REV. 1797 (2001).
  - Voter ID and Internet voting
  - Costs & Benefits of Internet voting
  - States using or examining Internet voting
- Hugh M. Lee, *An Analysis of State and Federal Remedies for Election Fraud, Learning from Florida's Presidential Election Debacle?*, 63 U. Pitt. L. Rev. 159 (Fall, 2001).
  - Discusses illegal ballots, fraudulent registration
- Katharine Hickel Barondeau & Terry M. Jarrett, *The Florida Election Debacle: Can it Happen in Missouri?*, 57 J. Mo. B. 294, Nov./Dec. 2001.
  - Anti fraud election reform in Missouri
- Priscilla L. Southwell & Justin Burchett, *Vote-by-Mail in the State of Oregon*, 34 Willamette L. Rev. 345 (Spring 1998).
  - Vote by mail and discusses fraud issues involved
- Jonathan E. Davis, *Comment: The National Voter Registration Act of 1993: Debunking States' Rights Resistance and the Pretense of Voter Fraud*, 6 Temp. Pol. & Civ. Rts. L. Rev. 117 (Fall 1996/Spring 1997).
  - Voter fraud arguments against NVRA
- James A. Gardner, *Consent, Legitimacy and Elections: Implementing Popular Sovereignty Under the Lockean Constitution*, 52 U. PITT. L. REV. 189 (Fall 1990).
  - History of voting and requirements
  - Theory

## The Research Team

This research report on Voter Identification Requirements in the 2004 election is part of a broader analysis that also includes a study of Provisional Voting, which has already been submitted to the EAC. Conducting the work was a consortium of The Eagleton Institute of Politics of Rutgers, The State University of New Jersey, and The Moritz College of Law of The Ohio State University.

**The Eagleton Institute** explores state and national politics through research, education, and public service, linking the study of politics with its day-to-day practice. It focuses attention on how contemporary political systems work, how they change, and how they might work better. Eagleton regularly undertakes projects to enhance political understanding and involvement, often in collaboration with government agencies, the media, non-profit groups, and other academic institutions.

**The Moritz College of Law** has served the citizens of Ohio and the nation since its establishment in 1891. It has played a leading role in the legal profession through countless contributions made by graduates and faculty. Its contributions to election law have become well known through its Election Law @ Moritz website. *Election Law @ Moritz* illuminates public understanding of election law and its role in our nation's democracy.

## **REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES**

---

### **Report Background**

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the United States Election Assistance Commission (EAC) (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

This study provides information on voter identification practices in the 2004 election. It makes recommendations for best practices to evaluate future proposals for voter ID requirements, including the systematic collection and evaluation of information from the states. The research was conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at the Ohio State University under a contract with the EAC, dated May 24, 2005. The work included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting as well as a statistical analysis of the relationship of various requirements for voter identification to turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

### **EXECUTIVE SUMMARY AND RECOMMENDATIONS**

#### Background and Methods

This report arrives at a time of considerable ferment over the issue of voter identification. The debate across the nation over requiring voters to produce a specific identification document before being permitted to cast a regular (as opposed to a provisional) ballot, has revealed supporters and opponents in polarized camps.

- Proponents of stricter identification requirements base their case on improving the security of the ballot by reducing opportunities for one kind of vote fraud --multiple voting or voting by those who are not eligible. The proponents argue that their goal is to ensure that only those legally entitled to vote do so, and do so only once at each election.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Opponents seek to forestall more stringent identification requirements, such as for government-issued photo ID, in order to ensure broad access to a regular ballot. They fear that some voters --such as, they argue, racial and ethnic minorities, the young, and elderly voters-- may lack convenient access to the required ID documents, or that such voters may be fearful of submitting their ID documents to official scrutiny and thus stay away from the polls.
- Both sides argue that their preferred policy will engender faith in the electoral process among citizens.

This report considers policy issues associated with the voter ID debate and investigates whether empirical study can suggest a way to estimate the effects of different voter ID requirements on turnout, and important first step in assessing tradeoffs between ballot security and ballot access. The aim is to contribute to the effort to raise the quality of the debate over this contentious topic. The tradeoffs between ballot security and ballot access are crucial. A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

As part of the project's effort to analyze the relationship between Voter ID requirements, turnout, and their policy implications, a statistical analysis was conducted to examine the potential variation in turnout. This statistical study developed a model to illuminate the relationships between voter ID requirements and turnout. This model's findings and limitations suggest avenues for further research and analysis that may assist the EAC and the states as they explore policies to balance the goals of ballot integrity and ballot access.

The statistical analysis describes one possible way to estimate what might be the incremental effect on voters' access to the ballot of an increase in the rigor of voter identification requirements. We do not offer this statistical analysis as the last word, but rather as a preliminary word on the subject. Its findings must be regarded as tentative; the information that might permit greater certainty is simply not available. Indeed, as our recommendations indicate, the next step to improve understanding of the effects of stricter voter identification on turnout and on vote fraud is to collect more information on both topics systematically and regularly.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Making a statistical estimate of the effect of voting regulations on turnout is difficult. The dynamics of turnout are complex, much studied, and only partially understood. Some agreement exists, however, that three factors that exert substantial influence on voter turnout are:<sup>1</sup> the socioeconomic status of the potential voter; legal requirements to vote; and the political context of the election. By focusing on how voters identify themselves at the polls, this report emphasizes legal requirements. The statistical analysis also considers some of the socioeconomic, racial, and age characteristics of the electorate, as well as the political context in 2004 (such as whether a state was a battleground in the presidential race).

Examining tradeoffs between ballot security and ballot access requires some measure of the effectiveness of voter ID requirements in reducing multiple voting or voting by ineligible voters. The existing evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification, is not sufficient to evaluate those tradeoffs.<sup>2</sup> Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This research does not include consideration of vote fraud, nor does it estimate the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. Our analysis also cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

Despite these qualifications regarding the quality of the available data and the limitations of statistical analysis, however, although it used different statistical methods and two different sets of data on turnout in 2004 election, it points to the same general finding. As discussed at greater length in the appendix to this report, stricter voter identification requirements were correlated with reduced turnout in the models employed.<sup>3</sup> As explained below, these models find that a statistically significant relationship exists, even when controlling for other factors (such as whether the election was in a battleground state) that might affect turnout. Without knowing more about the effects of stricter voter ID on reducing multiple voting or voting by ineligible

---

<sup>1</sup> See, for example, Tom William Rice and Patrick J. Kenney, "Voter Turnout in Presidential Primaries." 1985. *Political Behavior*, 7: 101-112. Identification requirements are not the only legal restrictions on voting. States also differ, for example, in their registration requirements (including how long before the election registration must take place and the identity documents required register).

<sup>2</sup> The EAC has contracted with other researchers to study vote fraud issues.

<sup>3</sup> Appendix C: Tim Vercellotti, Eagleton Institute of Politics, *Analysis of Effects of Voter Identification Requirements on Turnout*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

voters, however, the tradeoffs between ballot security and ballot access cannot be assessed fully.

Methodology

The report includes detailed information on the nature of the statutory requirements across the country in 2004 and on the statutes and court decisions that provide the legal context for the voter ID debate. We gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. Based on our interpretation of state statutes, supplemented in some cases by conversations with state election officials, we divided the states' ID requirements into five categories. We believe each category is more rigorous than the one preceding, based on the demands they make on voters.<sup>4</sup> The categories range from "Stating Name" which we judge to be somewhat less demanding than "Signing Name." "Signature Match" requires poll workers to examine the signature and compare it to a sample, which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents may not be uniformly and conveniently available to all voters.

For each state, we identified both the "maximum" and "minimum" identification requirements. The term "maximum" refers to the most that voters may be *asked* to do or show at the polling place (putting aside cases in which particular voter's eligibility may be questioned pursuant to a state challenge process). The term "minimum," on the other hand, refers to the most that voters can be *required* to do or show, in order to cast regular ballot (again leaving aside a state challenge process). We have included "maximum" requirements in our analysis, and not simply "minimum" requirements, because simply asking voters to produce particular identifying information may have a deterrent effect, even if voters are ultimately allowed to cast a regular ballot without that identification. For example, in a state where voters are asked to show photo ID at the polling place, but still allowed to vote by completing an affidavit confirming their eligibility, the "maximum" of being asked to show photo ID may deter some voters even though the "minimum" would allow them to vote without photo ID.

---

<sup>4</sup> Even the most relaxed provisions for identification at the polls—anything stricter than the honor system used in North Dakota—will impose some burden on particular voters. Harvard Law Review 119:1146

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

It is worth emphasizing that, at the time of the 2004 election, there was *no* state that had a “minimum” requirement of showing photo ID – in other words, there was no state that required voters to show photo ID in order to cast a regular ballot. For this reason, our report does not measure the impact of laws, like those recently enacted in Indiana and Georgia, which require voters to show photo ID in order to cast a regular ballot without an affidavit exception.

To examine the potential variation on turnout rates associated with each type of voter ID requirements in effect on Election Day 2004, the statistical analysis drew on two sets of data. These were, first, aggregate turnout data at the county level for each state and, second, the reports of individual voters collected in the November 2004 Current Population Survey by the U. S. Census Bureau. Using two different data sets makes it possible to check the validity of one analysis against the other. It also provides insights not possible using only one of the data sets. The aggregate analysis cannot provide valid estimates on the effects of different ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates). The Current Population Survey data does permit that kind of analysis, although it has the disadvantage of relying on self-reports by respondents about their registration status and experience in the polling place.

To understand legal issues that have been raised in recent litigation over voter ID requirements, we collected and analyzed the few major cases that have been decided so far on this issue. The decisions so far provide some guidance on the constitutional and other constraints as to voter ID requirements.

Summary of Findings

As voter identification requirements vary, voter turnout varies as well. This finding emerged from both the statistical analysis's aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between the stringency of ID requirements and turnout was fairly small, but still statistically significant.

In the model used with the aggregate data in the statistical analysis, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names. With the addition of the registration closing data to the aggregate analysis, photo id is no longer a

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

significant predictor of turnout. Signature match and non-photo id remain significant and negative predictors in the model.

The reduction in turnout was not the same for all demographic groups in the citizen voting age population.

The non-photo identification requirement showed the most significant and consistent correlation with reduced turnout. This result may be surprising given the intense debates surrounding photo identification requirements. The effect of photo ID requirements cannot, however, be assessed from the data the statistical analysis examined, since none of the states had laws in 2004 that conditioned voting on presentation of photo ID. Each of the five states that had photo ID as a “maximum” requirement (i.e., the most that voters could be asked to show at the polls) accepted another type of identification or an affidavit as a “minimum” requirement in the 2004 election (i.e., they were allowed to cast a regular ballot with something less than photo ID).

Significant questions about the relationship of voter identification requirements to turnout remain unanswered. The data examined in this project could not capture the dynamics of how identification requirements might lower turnout. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? Other factors that may also be correlated with stricter ID laws – such as less user-friendly voter registration systems – may actually be causing lower turnout. The CPS data do not include the information needed to answer this question. Knowing more about the “on the ground” experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

Our analysis of litigation suggests that the courts will look more strictly at requirements that voters produce a photo ID in order to cast a regular ballot, than at non-photo ID laws. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, a best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

The current lack of understanding of precisely how voter ID requirements affect turnout could be ameliorated by requiring the collection and reporting of additional data, including the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of surveys of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>5</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous voter ID requirements may affect the decision by potential voters to go or stay away from the polls-- are not perfectly understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements and the two important goals of ensuring ballot access and ensuring ballot integrity.

1. Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot that is actually counted.
2. Recommend as a best practice the publication of a "Voting Impact Statement" by states as they assess their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that may be kept from the polls

---

<sup>5</sup> Arizona held its first election with its new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways that are not possible now because of insufficient data.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

or permitted to cast a provisional ballot by a stricter ID requirement; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.

3. Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should publish an analysis of this information to provide a sound factual basis for the states to consider as they estimate the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. EAC can also use this information to encourage the states to assess the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections. Well-designed longitudinal studies in the states can show the results of changing voter ID requirements on electoral participation over time. The studies should include precinct-level data to provide the fine-grained analysis that can provide a solid foundation for policy.
  - I. Useful information could be supplied by state-sponsored surveys of voters by local election officials. It would make clear why those who cast a provisional ballot were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
  - II. Surveys to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
  - III. Spot checks by state election officials on how the identification process works at polling places could provide information on how closely actual practice tracks statutory or regulatory requirements. Such reports should be available to the public.
4. Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors:

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the convenience of the voter, the total time allowed to evaluate ballots<sup>6</sup>, and the safe harbor provision in presidential elections.

5. Recommendations to the states from EAC should reflect current judicial trends.

Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more uncertain.

## **SUMMARY OF RESEARCH**

### **Background and Approach of the Study**

Voter ID requirements are just one set of rules governing voting that may affect turnout. Social scientists have long studied how election rules affect participation in elections. The general view today is that the individual citizen makes the choice of whether to vote in a way similar to other decisions that a rational citizen makes, by comparing costs and benefits. The benefits of voting are fairly stable and hard to specify given the remote probability that any one vote will make a difference in an election. But whatever the benefit as perceived by an individual voter, as the costs of voting (for example, time, hassle, acquisition of information) increase, the likelihood that a citizen will vote decrease. Not all groups in the population calculate the cost of participation in the same way, so that election laws (such as registration or identification requirements) may affect different groups differently.

A short summary of some of the social science literature illustrates what may be a broad consensus that the rules of elections affect turnout, but note the important differences in the details of what groups may be most affected.

- Bowler, Brockington and Donovan in "Election Systems and Voter Turnout: Experiments in the United States". *The Journal of Politics*, 63:3 (August 2001) concluded that electoral systems help shape turnout by altering the benefits perceived by voters. For example, cumulative voting systems have 5% greater turnout than plurality systems
- The effect of registration systems has been the subject of many studies over the last 40 years. Kelley, Ayres, and Bowen in "Registration and Voting: Putting First Things First." *American Political Science Review*. 61:2 (June 1967) found that local variations in the

---

<sup>6</sup> Our research on provisional voting reveals that states that provide more than a week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

rate of voting are most directly tied to variations in the rate of registering to vote, and that the rate of registering to vote in localities is most directly related to the laws and administration of the registration process. They concluded that the decline in voting over the past 80 years was due, in part, to the rise of registration laws.

- Brians and Grofman in "Election Day Registration's Effect on U.S. Voter Turnout." *Social Science Quarterly*. 82:1 (March 2001), found that relaxing registration laws produces higher turnout. In particular, they observed that relaxing registration laws is more likely to promote voter turnout among those with medium levels of income and education, rather than those at the lowest levels. Highton in "Easy Registration and Voter Turnout," *Journal of Politics*. 59:2 (May 1997), concluded similarly that registration laws affect voter turnout, but also observed that easier registration promotes turnout among those in lower socio-economic status.
  
- Mitchell and Wlezien. "The Impact of Legal Constraints on Voter Registration, Turnout, and the Composition of the American Electorate," *Political Behavior*. 17:2 (June 1995) agreed that easier registration promotes higher turnout, but also concluded that higher turnout from easier registration would be unlikely to change the composition of the electorate. Nagler in "The Effect of Registration Laws and Education on U.S. Voter Turnout." *American Political Science Review*. 85:4 (December 1991) found that registration laws decrease voter turnout by depressing the eligible electorate, but that lower educated people are not disproportionately impacted by these laws. But Rosenstone and Raymond E. Wolfinger in "The Effect of Registration Laws on Voter Turnout." *American Political Science Review*. 72:1 (March 1978) found that while registration laws did affect both voter turnout and the composition of the electorate, the sharpest effect of these restrictions was felt in the South and among the least educated.
  
- Squire, Wolfinger, and Glass in "Residential Mobility and Voter Turnout." *American Political Science Review*. 81:1 (March 1987) found that people who move constitute a major demographic group affected by registration laws. They estimated that altering laws to facilitate voting by recently moved people could increase turnout by 9%. Highton in "Residential Mobility, Community Mobility, and Voter Turnout." *Political Behavior*. 22:2 (June 2000) also found that people who move have lower turnout than stable residents, and estimated that the decline was more a result of registration laws than a loss of social connections.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

- Highton and Wolfinger in "Estimating the Effects of the National Voter Registration Act of 1993." *Political Behavior*. 20:2 (June 1998) concluded that the Motor Voter laws led to a significant increase in voting; that eliminating voter purges for not voting also increases voting; and that these effects are felt most heavily by the young (under 30) and the mobile (moved within past 2 years). Knack, in "Does 'Motor Voter' Work? Evidence from State-Level Data." *Journal of Politics*., 57:3 (August 1995), also found that motor voter does lead to increased registration and voting, but that other parts of NVRA of 1993, like mail-in registrations, agency-based registrations, and limitations on voter purges had not been as influential two years after the passage of the act.

While voter ID may not have been the subject of as much research as the registration process, establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The pressures felt by the voter arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may feel under pressure when faced with long lines and limited time.

Voter ID requirements on Election Day

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>7</sup> The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks at voter ID issues that go beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures over voter ID ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. Current controversies in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.<sup>8</sup>

---

<sup>7</sup> As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

<sup>8</sup> Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.<sup>9</sup> Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and, if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit. Ultimately, a normative evaluation of whether a state should adopt a stricter voter ID requirement (and, if so, what particular form that new requirement should take) will weigh value judgments as well as available factual evidence. Nonetheless, this report has proceeded on the premise that increased understanding of the factual evidence relating to the imposition of voter ID requirements, based on available data and statistical analysis of that data, can help inform the policy process.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our study of the possible effects of voter

---

<sup>9</sup> "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.<sup>10</sup> Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- may divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.<sup>11</sup> And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the polls.

Evaluating the effect of different Voter ID regimes can be most effective when based on clear standards --legal, equitable, practical. The standards outlined here might be described as questions policy-makers should ask about Voter ID requirements. We suggest 7 questions that address important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?<sup>12</sup>

---

<sup>10</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>11</sup> The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

<sup>12</sup> "Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . ." *Harvard Law Review* 127:1144 (2006)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>13</sup>
3. How practical is the requirement? (Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required?) Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>14</sup>
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.<sup>15</sup> A thorough, objective impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.
5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>16</sup>
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. How neutral is the effect of the Voter ID requirement on the composition of the qualified and eligible electorate? Might it,

---

<sup>13</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

<sup>14</sup> In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement actually was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

<sup>15</sup> "Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

<sup>16</sup> For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

intentionally or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another without an offsetting decrease in vote fraud?

**Voter ID and Turnout**

Based on research for this study by the Moritz College of Law, states had one of five types of maximum requirements in place on Election Day 2004. These are shown in Table 1, *Voter ID Requirements*. The five categories: at the polling place, voters were asked to either: state their names (10 states); sign their names (13 states and the District of Columbia); sign their names, to be matched to a signature on file (seven states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (five states).<sup>17</sup> Using this information made it possible to code the states according to these requirements, and examine the assumption that voter identification requirements would pose an increasingly demanding requirement in this order: stating one's name, signing one's name, matching one's signature to a signature on file, providing a form of identification, and providing a form of photo identification, however, in all "photo ID" states in 2004, voters without photo ID could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID). The report refers to this set of ID requirements as "maximum," the most rigorous ID the voter can be asked to present at the polling place in order to cast a regular ballot.<sup>18</sup>

Election laws in several states offer exceptions to these requirements if potential voters lack the necessary form of identification. Laws in those states set a minimum standard – that is the minimum requirement that a voter may be required to satisfy in order to vote using a regular ballot. States can be categorized based on the minimum requirement for voting with a regular ballot. In 2004 the categories were somewhat different compared to the maximum requirement, in that none of the states required photo identification as a minimum standard for voting with a regular ballot. That is, voters who lacked photo ID would still be allowed to vote in all states, if able to meet another requirement. Four states required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). The analysis also examined this array of minimum

---

<sup>17</sup> Oregon conducts elections entirely by mail. Voters sign their mail-in ballots, and election officials match the signatures to signatures on file. For the purposes of this analysis, Oregon is classified as a state that requires a signature match.

<sup>18</sup> As noted above, our analysis does not consider additional requirements that particular voters may be subjected to as part of an official challenge process, in the event that their eligibility is called into question.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

identification requirements to assess how they correlated with turnout: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit. As noted above, *no* state had a “minimum” requirement of showing photo ID. This analysis therefore cannot estimate the effect of laws, such as those recently enacted in Indiana and Georgia that require voters to show photo ID in order to cast a regular ballot without an affidavit or other exception.

We recognize the difficulties in summarizing each state’s voter ID requirements. The problem is illustrated by the number of footnotes to Table 1 below. The variety of statutory and regulatory details among the states is complex.

Moving beyond the statutes and regulations, we also recognize that the assignment of each state to one category may fail to reflect actual practice at many polling places. As in any system run by fallible humans, the voter ID process is subject to variation in practice.<sup>19</sup> Voters may have been confronted with demands for identification different from the directives in state statutes or regulation. It seems reasonable to conclude, however, that while actual practices may vary, the variance is around each state’s legal requirement for ID. The analysis of the effect of state requirements on turnout must be viewed with some caution. We believe that the categories used in this report provide an acceptable level of discrimination among voter identification regimes.

---

<sup>19</sup> One state election official told us that, “We have 110 election jurisdictions in Illinois, and I have reason to believe [the voter ID requirements] are administered little bit differently in each one. We wish it weren’t that way, but it probably is.”

\* States applies only HAVA's ID requirement, applicable to first-time voters who registered by mail and did not provide applicable ID at the time of registration.

<sup>1</sup> Arizona voters who lack a photo ID may present 2 forms of ID with no photograph.

<sup>2</sup> Florida required a photo ID in 2004, but voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot. Florida subsequently changed its law to require that voters present photo ID to cast a regular ballot, though voters without photo ID may still cast a provisional ballot by signing an affidavit, which ballot should ordinarily be counted.

<sup>3</sup> Louisiana required a photo ID in 2004. Voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

<sup>4</sup> Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

<sup>5</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>6</sup> Voters lacking a photo ID could vote by providing another form of ID in 2004.

<sup>7</sup> Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compared to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with the registration.

<sup>8</sup> Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

Relationship of Voter ID requirements to Turnout

The statistical analysis examined the potential variation in turnout rates based on the type of voter identification required in each state on Election Day 2004 using two sets of data: aggregate turnout data at the county level for each state, as compiled by the Eagleton Institute of Politics, and individual-level survey data included in the November 2004 Current Population Survey conducted by the U.S. Census Bureau.

The statistical analysis examined turnout among U.S. citizens of voting age in both the aggregate and the individual-level data. Determining citizenship status in the individual-level data simply involved restricting the analyses to individuals who identified themselves as citizens in the November 2004 Current Population Survey. (Those who said they were not citizens did not have the opportunity to answer the supplemental voting questions contained in the Current Population Survey.)

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Findings of the statistical analysis

The analysis looked at the voter identification requirements in two ways, as a continuous variable and as a series of discrete variables. As a continuous variable the maximum voter identification requirements are ranked according to how demanding they were judged to be, with photo ID as the most demanding requirement. As discrete variables, the statistical analysis assume that stating name is the least demanding ID requirement and compare each other requirement to it.

The analysis treating the requirements as a continuous variable offers some statistical support for the premise that as the level of required proof increases, turnout declines. Averaging across counties in each state, statewide turnout is negatively correlated with maximum voter identification requirements ( $r = -.30, p < .05$ ). In considering the array of minimum requirements, with affidavit as the most demanding requirement, however, the correlation between voter identification and turnout is negative, but it is not statistically significant ( $r = -.20, p = .16$ ). This suggests that the relationship between turnout rates and minimum requirements may not be linear. Breaking down the turnout rates by type of requirement reveals in greater detail the relationship between voter identification requirements and voter turnout.

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	64.2 %	State Name	63.0 %
Sign Name	61.1 %	Sign Name	60.4 %
Match Signature	60.9 %	Match Signature	61.7 %
Provide Non-Photo ID	59.3 %	Provide Non-Photo ID	59.0 %
Provide Photo ID	58.1 %	Swear Affidavit	60.1 %
<i>Average Turnout (All States)</i>	<b>60.9 %</b>		

**This table displays the mean turnout using the aggregate county level data for each state in 2004.**

The aggregate data show that 60.9 percent of the estimated citizen voting age population voted in 2004. Differences in voter turnout at the state level in 2004 varied based on voter identification requirements. Taking into account the maximum requirements, an average of 64.6 percent of the voting age population turned out in states that required voters to state their names, compared to 58.1 percent in states that required photo identification. A similar trend

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

emerged when considering minimum requirements. Sixty-three percent of the voting age population turned out in states requiring voters to state their names, compared to 60.1 percent in states that required an affidavit from voters. Given the lack of a clear, consistent linear relationship between turnout and minimum identification requirements, however, we opted to treat the voter identification requirements as a series of dichotomous variables in subsequent analyses.<sup>21</sup>

Voter identification requirements are just one factor that may affect voter turnout. Multivariate models that take into account other predictors of turnout can paint a more complete picture of the relationship between voter identification requirements and turnout. This analysis estimated the effects of voter identification requirements in multivariate models that also took into account the electoral context in 2004 and demographic characteristics of the population in each county. While the model takes account of several important variables, statistical models do not capture all the messiness of the real world. It is a simplification of a complex reality, and its results should be treated with appropriate caution.

The model also took into account such variables as:

- Was the county in a presidential battleground state?
- Was the county was in a state with a competitive race for governor and/or the U.S. Senate?
- Percentage of the voting-age population in each county that was Hispanic or African-American<sup>22</sup>
- Percentage of county residents age 65 and older
- Percentage of county residents below the poverty line

Another contextual factor to consider is voter registration requirements, such as the deadline for registration. As states set the deadline farther away from Election Day, the task of remembering to register to vote becomes more challenging. Thus our model takes into account the number of days between each state's registration deadline and the election.

---

<sup>21</sup> The voter identification requirements are coded as a series of dummy variables, coding each variable as one if the requirement existed in a given state, and zero otherwise. This yielded five dichotomous variables for maximum requirements (state name, sign name, match signature, non-photo identification, or photo identification), and five dichotomous variables for minimum requirements (state name, sign name, match signature, non-photo identification, or providing an affidavit). Omitted is the variable for stating one's name so that it could serve as the reference category in comparison with the other four identification requirements in each of the statistical analyses.

<sup>22</sup> The U.S. Census projections for 2003 provided the data for the percentage of the voting-age population in each county that was Hispanic or African-American and for the percentage of county residents age 65 and older.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the citizen voting-age population that voted in the 2004 election.

The results of this modeling suggest that voter identification requirements such as signature matching, a non-photo ID or a photo ID are associated with lower turnout than in states that required voters to simply state their name, holding constant the electoral context and demographic variables.

Contextual factors, such as whether the county was in a battleground state or whether that state had a competitive race for governor and/or U.S. Senate, were associated with increased voter turnout. The time between the closing date for registration and the election was correlated with a slight negative effect on turnout. As the percentage of Hispanics in the county's population increased, turnout declined. The percentage of senior citizens in the county and household median income were associated with higher turnout. The percentage of African-Americans in the county did not have a significant effect in the model. The percentage of senior citizens in the county and household median income showed a positive correlation with turnout. In this aggregate model, the percentage of African-Americans in the county was not associated with a significant difference in turnout.

The relationship of the minimum voter identification requirements to turnout was not demonstrated. None of the dummy variables for voter identification requirements were statistically significant. Being a battleground state and having a competitive statewide race were significant and positive, as was the percentage of senior citizens in the county and household median income. The percentage of Hispanics in the county's population continued to be associated with reduced turnout, as was the number of days between the closing date for registration and the election.<sup>23</sup>

Analysis of the aggregate data at the county level generates some support for the hypothesis that stricter identification requirements are correlated with lower turnout. For the maximum

---

<sup>23</sup> This test incorporated a series of interactions between the maximum and minimum voter identification requirements and the percentage of African-Americans and Hispanics living in the counties. In each case the interactions did not improve the fit of the models to the data. See tables A-1 and A-2 in the appendix of Vercellotti's paper in the appendices.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

requirements, a signature match, non-photo identification or photo identification were correlated with lower turnout in 2004, compared to requiring that voters simply state their names.

Aggregate data, however, cannot fully capture the individual demographic factors that may figure into the decision to turn out to vote.<sup>24</sup> Voter identification requirements could have a relationship to the turnout of particular groups of voters, in ways that county-level aggregate data on turnout would not capture. To explore the effects of voter identification requirements on turnout more completely, it is important to examine individual-level data as well.

#### Individual-level Analysis

Individual-level turnout data exists in the November 2004 Current Population Survey conducted by the U.S. Census Bureau. The Census Bureau conducts the CPS monthly to measure unemployment and other workforce data, but the bureau adds a battery of voter participation questions to the November survey in even-numbered years to coincide with either a presidential or midterm Congressional election.

One of the of the CPS is the sheer size of the sample. The survey's Voting and Registration Supplement consisted of interviews, either by telephone or in person, with 96,452 respondents.<sup>25</sup> The large sample size permits analyses of smaller groups, such as Black or Hispanic voters or voters with less than a high school education. The statistical analysis in relying on the CPS is based on reports from *self-described* registered voters. Omitted are those who said they were not registered to vote, as are those who said they cast absentee ballots because the identification requirements for absentee ballots may differ from those required when one votes in person. Eliminated from the sample are respondents who said they were not U.S. citizens; the questionnaire design skipped those individuals past the voter registration and turnout questions in the survey. In addition to the voter identification requirements, the models include other socioeconomic, demographic, and political environment factors that might have

---

<sup>24</sup> For example, previous research has found that education is a powerful determinant of turnout (Wolfinger and Rosenstone 1980, but see also Nagler 1991).<sup>24</sup> Married people also are more likely to vote than those who are not married (Alvarez and Ansolabehere 2002; Alvarez, Nagler and Wilson 2004; Fisher, Kenny, and Morton 1993).

<sup>25</sup> It is important to note that the Census Bureau allows respondents to answer on behalf of themselves and others in the household during the interview. While proxy reporting of voter turnout raises the possibility of inaccurate reports concerning whether another member of the household voted, follow-up interviews with those for whom a proxy report had been given in the November 1984 CPS showed 99 percent agreement between the proxy report and the information given by the follow-up respondent (U.S. Census Bureau 1990).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

influenced turnout in 2004.<sup>26</sup> The dependent variable in these analyses is whether a respondent said he or she voted in the November 2004 election.<sup>27</sup>

In the model, three of the voter identification requirements have a statistically significant correlation with whether survey respondents said they had voted in 2004. That is, compared to states that require voters only to state their names, the requirement to sign one's name, provide a non-photo ID, or photo ID in the maximum requirements or affidavit in the minimum is associated with lower turnout.

Of the other state factors, only the competitiveness of the presidential race showed a significant, correlation with increased turnout. In terms of demographic influences, African-American voters were more likely than white voters or other voters to say they had cast a ballot, while Asian-Americans were less likely than white or other voters to say they had turned out. Hispanic voters were not statistically different from white or other voters in terms of reported turnout. Consistent with previous research, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Among the age categories, those ages 45 to 64 and 65 and older were more likely than those ages 18 to 24 to say they voted. Respondents who had earned a high school diploma, attended some college, graduated from college or attended graduate school were all more likely to say they voted than those who had not finished high school.

While the probit models provide statistical evidence for the relationship of voter identification requirements and other variables to turnout, probit coefficients do not lend themselves to intuitive interpretation.<sup>28</sup> Table 3 below shows predicted probabilities (calculated from the probit coefficients) of voting for each level of voter identification requirements while holding all other independent variables in the models at their means.<sup>29</sup>

---

<sup>26</sup> The models are estimated using probit analysis, which calculates the effects of independent variables on the probability that an event occurred – in this case whether a respondent said he or she voted and using robust standard errors to control for correlated error terms for observations from within the same state.

<sup>27</sup> The U.S. Census Bureau reported, based on the November 2004 CPS, that 89 percent of those who identified themselves as registered voters said they voted in 2004 (U.S. Census Bureau 2005). Previous research has shown that, generally speaking, some survey respondents overstate their incidence of voting. Researchers speculate that over-reports may be due to the social desirability that accompanies saying one has done his or her civic duty, or a reluctance to appear outside the mainstream of American political culture (U.S. Census Bureau 1990). It is also possible that voting is an indication of civic engagement that predisposes voters to agree to complete surveys at a higher rate than non-voters (Flanigan and Zingale 2002). Hence the voter turnout rates reported in the CPS tend to be up to 10 percentage points higher than the actual turnout rate for the nation (Flanigan and Zingale 2002). Even with this caveat, however, the CPS serves as a widely accepted source of data on voting behavior.

<sup>28</sup> A probit model is a popular specification of a generalized linear regression model, using the probit link function.

<sup>29</sup> In the case of dichotomous independent variables, holding them at their mean amounted to holding them at the percentage of the sample that was coded 1 for the variable (Long 1997).

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

<b>Table 3. Predicted probability of voter turnout – all voters</b>		
	<b>Maximum requirement</b>	<b>Minimum requirement</b>
<b>State name</b>	91.7%	91.5%
<b>Sign name</b>	89.9%	90.2%
<b>Match signature</b>	Not significant	Not significant
<b>Non-photo ID</b>	89.0%	89.0%
<b>Photo ID</b>	88.8%	----
<b>Affidavit</b>	----	87.5%
<b>Total difference from “state name” to “photo ID” or “affidavit”</b>	<b>2.9%</b>	<b>4.0%</b>
<b>N</b>	54,973	
<p>Figures represent the predicted probability of registered voters saying they voted as the identification requirement varies stating one’s name to providing photo identification or an affidavit, with all other variables held constant. N.S. = nonsignificant coefficient in the probit model.</p> <p>Data source: U.S. Census Bureau, Current Population Survey, Voting and Registration Supplement, November 2004.</p>		

Taking into account that signature matches were not a predictor of turnout, the differences in predicted probability decline from stating one’s name to providing a photo identification or affidavit. Voters in states that required photo identification were 2.7 percent less likely to vote than voters in states where individuals had to give their names.<sup>30</sup> In terms of the minimum requirement, voters in states that required an affidavit at minimum were 4 percent less likely to turn out than voters in states where they had to give their names.

The differences were more pronounced for those lower in education. Constraining the model to show predicted probabilities only for those with less than a high school diploma, the probability of voting was 5.1 percent lower in states that required photo identification as the maximum requirement and 7 percent lower in states that required an affidavit as the minimum requirement compared to states where stating one’s name was the maximum or minimum requirement.

<sup>30</sup> The voter turnout percentages may seem disproportionately high compared to the turnout rates reported in the aggregate data analysis. It is important to consider that the turnout rates in the aggregate data were a proportion of all citizens of voting-age population, while the turnout rates for the individual-level data are the proportion of only registered voters who said they voted.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Race and ethnicity have generated particular interest in the debate over voter ID requirements.<sup>31</sup> The analysis using the aggregate data shed no light on the association between voter ID requirements and turnout for African-American and Hispanic voters. But in the models using the individual data, some significant relationships emerged for African-American, Hispanic and Asian citizens. For the entire population, the signature, non-photo identification and photo identification requirements all were associated with lower turnout compared to the requirement that voters simply state their names. These correlations translated into reduced probabilities of voting of about 3 to 4 percent for the entire sample, with larger differences for specific subgroups. For example, the predicted probability that Hispanics would vote in states that required non-photo identification was about 10 percentage points lower than in states where Hispanic voters gave their names. The difference was about 6 percent for African-Americans and Asian-Americans, and about 2 percent for white voters.

The model also showed that Hispanic voters were less likely to vote in states that required non-photo identification as opposed to stating one's name. Hispanic voters were 10 percent less likely to vote in non-photo identification states compared to states where voters only had to give their name.

Varying voter identification requirements were associated with lower turnout rates for Asian-American voters as well. Asian-American voters were 8.5 percent less likely to vote in states that required non-photo identification compared to states that require voters to state their names under the maximum requirements, and they were 6.1 percent less likely to vote where non-photo identification was the minimum requirement.

Conclusions of the Statistical Analysis

The statistical analysis found that, as voter identification requirements vary, voter turnout varies as well. This finding emerged from both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements. The overall relationship between ID requirements and turnout for all registered voters was fairly small, but still statistically significant.

---

<sup>31</sup> Incorporating discrete variables for Hispanics, African-Americans, and Asian-Americans into one model carries the implicit assumption that the remaining variables, including education and income, will influence each of these groups in a similar manner in terms of deciding whether to vote. These assumptions are not always born out by the data (see Leighley and Vedlitz, 1999.) To isolate the effects of voter identification and other variables on voter turnout within specific racial and ethnic groups, the sample is divided into sub-samples and the model re-run to calculate the data discussed and shown in Tables 5, 6, and 7 in Appendix C.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

In the aggregate data, the match signature requirement, the provide a non-photo ID requirement, and the photo ID requirement were all correlated with lower turnout compared to requiring that voters state their names.

The signature, non-photo ID, and photo ID requirements were all correlated with lower turnout compared to the requirement that voters simply state their names. That the non-photo identification requirement was the most consistent in terms of statistical significance across the groups is intriguing given the intense debates surrounding photo identification requirements.

Significant questions about the relationship between voter identification requirements and turnout remain unanswered. The data examined in the statistical analysis could not capture the dynamics of how identification requirements might lower turnout, nor could they rule out that other attributes of a state's electoral system might explain the statistically significant correlations that the study found. If ID requirements dampen turnout, is it because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day , or forced to cast a provisional ballot that is not ultimately counted? The CPS data do not include measures that can answer this question. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for election judges to handle questions about, and potential disputes over, voter identification requirements.

#### **Litigation Over Voter ID Requirements**

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only two cases have considered laws requiring voters to show photo ID (*Common Cause v. Billups* and *Indiana Democratic Party v. Rokita*). Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification at the polls in order to have one's vote counted, without an affidavit exception: Georgia and Indiana.<sup>32</sup> Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the plaintiffs' motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*, Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). On April 14, 2006, the district court granted defendants' motion for summary judgment, concluding that plaintiffs had failed to produce evidence showing that the state's ID law would have an adverse impact on voters. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL

---

<sup>32</sup> Indiana's law does allow voters without ID to cast provisional ballots, and then to appear before the county board of elections to execute an affidavit saying that they are indigent and unable to obtain the requisite ID without payment of a fee. But in contrast to other states, voters cannot cast a ballot that will be counted by submitting an affidavit at the polls, affirming that they are the registered voter and are otherwise eligible to vote.

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. These decisions indicate that courts are likely to carefully scrutinize the evidence regarding the impact of photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will carefully scrutinize the evidence, where states require that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

**Developments since 2004**

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

#### State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the Statewide Voter Registration List. It also requires voters to present ID at

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

**Conclusions**

The analysis of voter ID requirements is complex. It takes into account important values associated with an electoral process, such as ballot access and integrity. The continuing effort to understand how voter ID requirements may affect turnout and the integrity of the ballot could benefit from additional factual information, including statistical analyses. Our research includes a statistical study of this kind. It indicated that the level of voter turnout in a state is correlated with the stringency of the voter ID requirement imposed by that state. Additional empirical research of this nature, with additional data collected by or for the EAC, would further illuminate the relationship between stricter voter ID rules and turnout, perhaps explaining if awareness of a strict ID requirement tends to discourage would-be voters from going to the polls. Or, additional research may shed light on whether, if voters did go to the polls, stricter Voter ID requirements will divert more voters into the line for provisional ballots. The consequence of increased reliance on provisional ballots can be longer lines at the polls and confusion, without necessarily a clear demonstration that the security of the ballot is correspondingly increased.<sup>33</sup>

The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That might include longitudinal studies of jurisdictions that have changed voter ID requirements, as well as precinct-level analyses that would allow more finely tuned assessment of the correlation between stricter identification requirements and turnouts. Further research could also identify methods to eliminate the need for voters to bring specific identity documents

---

<sup>33</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

**REVISED FINAL D R A F T**  
**For review by the EAC's Advisory Boards**

with them to the polls, while assuring that each voter who casts a ballot is eligible and votes only once.

research

Tom-

It is my understanding that the EAC Executive Director and General Counsel are currently discussing processes regarding your project's close-out, particularly those related to formal presentations of the provisional voting and voter ID papers, at the June EAC public meeting.

I should have an answer to you on this by early next week.

Regards-

Subject RE: Schedule for completion of Prov. Voting and Voter ID  
research

Thanks, Karen.

Just to be sure that our expectations are clear, I'll summarize the perspective behind the schedule we submitted for the recent extension.

#### A. Provisional Voting

1. We presented our Provisional Voting report to the commissioners several months ago, revised its organization and clarified findings and recommendations in line with the comments of staff and commissioners, and we researched Tom Wilkey's additional question of the effect of the time for review on the evaluation of provisional ballots, which will be included in the final revision.
2. The final draft will be completed by May 5 .
3. Based on discussions with you and the commissioners we look forward to presenting that revised, final report to the Advisory Board on May 24, following whatever additional review the Commission finds appropriate.
4. Our discussions with Commissioners and staff anticipated that we would make some

010655

presentation of the provisional voting work at the Commission's public meeting in June, a presentation that might include revisions occasioned by the comments of the Advisory Board.

B. Voter ID

1. We presented our Voter ID research to the Commissioners in April and are now revising it in line with their comments.
2. That revised research paper will be discussed in mid May by reviewers selected by the Commission. That date was set specifically to allow us to prepare a final report that would be ready for review by the Advisory Board on May 24.
3. We anticipate that the Commission will want the comments of its Advisory Board on the Voter ID report before it receives it in June. (Indeed, we were advised that the Advisory Board members would be most interested in the accuracy of observations or findings specific to their individual states.)
4. The appropriate conclusion for our work is a presentation of findings and recommendations for both Provisional Voting and Voter ID, 2 closely related topics, to the Commission at its public meeting in late June, just a week before the termination of our contract under the extended schedule.

I hope you'll share this outline of our expectations with the others at the Commission involved in assuring a successful completion of this research and analysis.

Tom-

I am certain the provisional voting paper will be presented. The Chairman has asked that the Commissioners have an opportunity to review your corrected and final draft of that document prior to it being presented to the EAC Boards, preferably next week.

Because of the issues surrounding voter identification, I am less certain about the protocol that will be followed. I will ask Tom Wilkey and Julie Hodgkins to offer insights on that matter.

I will also ask them about the protocol to be followed regarding the formal submission and acceptance of both the papers.

Tom-

Just had a good conversation with our folks in the legal department, who as you know, are responsible for coordinating our public meetings.

Original plans had slotted Eagleton for the presentation of its final reports on provisional voting and voter id, at a June public meeting. Those plans have been revised to have Eagleton, instead, present its findings to the EAC Board of Advisors and Standards Board on May 24th.

The details of the Board of Advisors and Standards Board meetings are being finalized this week.

010657

and early next. I will be certain to get your more details, as I learn of them.

Also, I will get you the details on who will provide the EAC peer review of the Voter ID work, as soon as I have them.

research

Tom-

I am certain the provisional voting paper will be presented. The Chairman has asked that the Commissioners have an opportunity to review your corrected and final draft of that document prior to it being presented to the EAC Boards, preferably next week.

Because of the issues surrounding voter identification, I am less certain about the protocol that will be followed. I will ask Tom Wilkey and Julie Hodgkins to offer insights on that matter.

I will also ask them about the protocol to be followed regarding the formal submission and acceptance of both the papers.

research

Karen,

Thanks for your quick reply.

Am I correct in understanding that the presentation to the Board of Advisors on May 24 will include both the Provisional Voting report and the Voter ID report?

If the Commissioners do not consider the reports at its June meeting, when will it take action to receive and record the reports?

Tom O'Neill

Tom-

Just had a good conversation with our folks in the legal department, who as you know, are responsible for coordinating our public meetings.

Original plans had slotted Eagleton for the presentation of its final reports on provisional voting and voter id, at a June public meeting. Those plans have been revised to have Eagleton, instead, present its findings to the EAC Board of Advisors and Standards Board on May 24th.

The details of the Board of Advisors and Standards Board meetings are being finalized this week and early next. I will be certain to get your more details, as I learn of them.

Also, I will get you the details on who will provide the EAC peer review of the Voter ID work, as soon as I have them.

I think that a number of months ago we envisioned the Eagleton project culminating with a presentation of both of the papers at a public meeting. We had tentatively scheduled that presentation for the June public meeting. Also, we must provide for a review of these studies to EAC's Standards Board and Board of Advisors.

Clearly, plans have changed although we need to figure out how we have Eagleton present its final papers on Provisional Voting (already planned) and Voter Identification (still in process) to the EAC Standards and Advisory Boards.

Look forward to your suggestions on how best to proceed with wrapping up these two efforts.

Tom-

Thanks ever so much for getting back to me. I am going to speak with key staff in the legal department ( who arrange the public hearings) and with the Commissioners regarding your question about the June presentation and the Voter ID paper. I will get you a response on this in the next day or so.

I will also work diligently to pin down a date and time for the peer review of Tim's work by the end of this week.

Thanks

Subject Schedule for completion of Prov. Voting and Voter ID research

Karen,

John and I reviewed your recent email today, and he asked me to respond.

Important to us is a clear commitment now by the EAC to schedule a presentation of our Voter ID research at the May meeting of the Advisory Board, if its review is required before the paper is published and presented at the EAC's public meeting in June. Your email made no mention of that June public meeting. Our schedule (submitted with the request for the no-cost extension) —and our previous discussion with you—treats that meeting as the key event that will conclude our research under this contract. Therefore, we also look for an explicit understanding that a presentation of our reports will be included in the agenda for that public meeting.

We can deliver a final report on Provisional Voting by May 5 and will be prepared for whatever role we might play at the May 24 meeting of the Advisory Board.

010667

The team is looking forward to a discussion of Tim Vercellotti's revised statistical analysis of Voter ID with the academic reviewers you are in the process of identifying during the week of May 8. Knowing the specific date and time of that discussion in the next day or so would facilitate the participation of appropriate members of our Peer Review Group in that conversation.

\*Subject: \* Re: Eagleton/Moritz Next Steps

John and Tom-

A couple of items related to timing over the next several weeks:

1. Is it possible to get your final report on Provisional Voting by COB May 5? If so, I can get this to the four Commissioners for final review and approval. It will then be ready to present to the EAC Board of Advisors and Standards Board at the May 24 meeting.

2. As we discussed I have been working to identify a small group of academics (three or so) who will be available to review the Voter ID paper the week of May 8. The focus of the review will be on Tim's research methodology and statistical analysis. I am fairly certain that this review can be done via conference call, preferably on May 11 or May 12. This would assume each of the reviewers will have spent time reviewing the paper, taking extensive notes and summarizing his or her comments. I expect that you all, Tim, Mike Alvarez and any others from your peer review panel, who have an expertise in research and statistics, will be available for the conference call, as well?

3. While I expect you will be able to have your final Voter ID paper to me sometime during the week of May 15, it is not clear whether or not the paper will be presented to the EAC Standards and Advisory Boards the following week. As you know, the paper contains some controversial information, so the Commissioners may elect to spend additional time reviewing the findings among themselves, and before it is formally presented to our Boards.

Let me know if this schedule works for you all.

Subject: Revised Voter ID Paper

Karen,

Attached is a new draft of the Voter ID paper, revised to take into account the comments you gave us on Tuesday as well as some points raised recently by other reviewers. We'll be bringing hard copies of this draft with us to Monday's briefing. If you could distribute the new "Executive Summary" (pages 1 – 5) in advance to those who will take part in the meeting on Monday, I think the discussion would be improved.

Our train is scheduled to get into Union Station at 10:30 on Monday. Barring Amtrak delays, we should arrive at your offices shortly before 11.

## FINAL DRAFT REPORT AND RECOMMENDATIONS TO THE EAC VOTER IDENTIFICATION ISSUES

---

### Report Background

This report to the United States Election Assistance Commission (EAC) presents an analysis of voter identification requirements across the country and makes recommendations for best practices to improve implementation of voter ID requirements at the polls. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under a contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (Sec. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

### Executive Summary

#### Methods

To explore the effects of voter ID requirements on electoral participation in 2004, as measured by turnout, we gathered information on the requirements in effect in the 50 states and the District of Columbia in that year. We assigned each state to one of five categories based on its ID requirements. The five categories are progressively more rigorous based on the demands they make on both voters<sup>1</sup> (and, to some extent) on election workers. The categories range from “Stating Name” which we judge to be somewhat less demanding than “Signing Name.” “Signature Match” requires poll workers to examine the signature and compare it to a sample,

---

<sup>1</sup> Even the most relaxed provisions for identification at the polls — anything stricter than the honor system used in North Dakota — will impose some burden on particular voters. *Harvard Law Review* 119:1146

## FINAL D R A F T

which is slightly more demanding than the voter simply signing. "Present ID" requires voters to offer some documentary evidence of their identity, ranging from a utility bill to a passport. It is more demanding than the previous three categories because it requires that the voter remember to bring this documentation to the polls. (Even a simple ID, such as a utility bill, may not be available to some renters or, say, those in group housing.) We regard a government "Photo ID" as the most rigorous requirement. Such identity documents are not uniformly and conveniently available to all voters.

We collected data on turnout in all counties to permit an estimate of the relationship between the rigor of the ID requirements and the level of turnout. This aggregate analysis is useful, but does not provide valid estimates on the effects of different kinds of ID requirements on particular demographic groups (e.g., the old, the young, African-Americans, the poor, or high school graduates.) To allow that analysis, we used the Census Bureau's Current Population Survey from November 2004, which asked a large sample of Americans about their experience in the election. It has the disadvantage of relying on self reports by respondents about their registration status, citizenship, and experience in the polling place, but it provides the demographic data needed to supplement the aggregate analysis.

To understand the legal issues raised by voter ID requirements, we collected and analyzed the few major cases that have been decided on this issue. The decisions so far suggest the constitutional and other constraints to policies on voter ID requirements.

### Findings

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack precise information on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.

Voter turnout at the state level in 2004 was lower in states where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required

010671

## FINAL D R A F T

voters to state their names, compared to 57.3 percent in states that required photo identification. Those figures, however, probably overstate the effect since the inclusion of other factors beyond voter ID requirements in the analysis diminishes the extent of influence of voter ID on turnout. After taking account of the other factors, the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or people living below the poverty line.

Our analysis of litigation suggests that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, best practice for the states may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not now sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots during the 2006 and subsequent elections. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>2</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

A voting system that requires voters to produce an identify document or documents may indeed prevent the ineligible from voting. It may also prevent eligible voters from casting a ballot. If the

---

<sup>2</sup> Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.

## FINAL D R A F T

ID requirement of a ballot protection system blocks ineligible voters from the polls at the cost of preventing eligible voters who lack the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

### Recommendations for consideration and action by the EAC

The dynamics of Voter ID requirements –how more rigorous Voter ID requirements affect the decision by potential voters to go or stay away from the polls– are not well understood. This lack of understanding should be recognized in the policy process in the states. The debate over voter ID in the states would be improved by additional research sponsored by the EAC.

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice the publication of a “Voting Impact Statement” by states considering changing their voter ID requirements to protect the integrity of the ballot. The analysis will help ensure that efforts to increase ballot security have a neutral effect on electoral participation by eligible voters. The Voter Impact Statement would estimate the number and demographics of 1) eligible, potential voters that a proposed stricter ID requirement may keep away from the polls or be permitted to cast only a provisional ballot; and 2) and assess the number of ineligible voters who will be prevented from voting by the stricter ID requirements.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. EAC should analyze this publish an analysis of this information to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent. The analysis should describe the dynamics of the voter ID process in preserving the security of the ballot. The states should also be encouraged to use this information to increase the effectiveness of programs to ensure that all eligible voters have required ID and are permitted to vote in future elections.
  - Useful information could be supplied by exit polling or surveys of voters by local election officials. It would make clear why those who cast a provisional ballot

## FINAL D R A F T

were found ineligible to cast a regular ballot. The answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.

- Polling to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter ID requirements on electoral participation.
- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three factors: the convenience of the voter, the total time allowed to evaluate ballots<sup>3</sup>, and the safe harbor provision in presidential elections.
- Recommendations to the states from EAC should reflect current judicial trends. Requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional.

### **Background and Approach of the Study**

Establishing the eligibility of a person to vote has long been part of the electoral process. Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The stress on voters to provide required ID documents may be greater at the polls on Election Day than when registering. The pressures arising from the need to check ID, even so simple a check as a signature match, can be greater at the polls on Election Day than at the time of registration. Poll workers may be faced with long lines and limited time.

---

<sup>3</sup> Our research on provisional voting reveals that states that provide more than week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

## FINAL D R A F T

This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>4</sup> The emphasis in this report is on Voter ID requirements on Election Day and afterwards as election judges evaluate provisional ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

The report looks broadly at voter ID issues and goes beyond the rather narrow identification requirements in HAVA. Much of the current debate in state legislatures on voter ID goes ranges beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those who had not registered in person and are casting a ballot for the first time. The controversy in the states over voter ID seems to have been sparked in part by the HAVA requirements, but goes beyond those requirements, and sets the context for the analysis here.<sup>5</sup>

We recognize that the previously technical, rather dull subject of voter ID requirements has become fiercely partisan and divisive in many states. The polarization of the debate has raised the stakes over this issue, making dispassionate analysis both more valuable and more rare.<sup>6</sup> Voter ID is often described as the critical step in protecting the integrity of the ballot, the process to ensure that the potential voter is eligible and , if eligible, is permitted to cast one ballot and one ballot only. Truly protecting the integrity of the ballot, however, requires a perspective that takes in the entire voting process. It demands more than preventing the ineligible from voting, and should also ensure that all those who are eligible and want to vote can cast a ballot that counts. The protection effort must embrace all forms of voting, including absentee ballots, and consider each step in the process from registration through vote counting.

---

<sup>4</sup> As the Carter-Baker Commission noted, photo ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify ID. Commission on Federal Election Reform, pp 46-47.

<sup>5</sup> Harvard Law Review 119:1127: "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA."

<sup>6</sup> "Of the various electoral procedure laws passed in the fifty states since the 2000 and 2004 presidential elections and those still being debated in state legislatures and local media, few arouse more potent partisan feelings than voter identification laws." *Harvard Law Review* 119:1144. John Fund's 2004 book, *Stealing Elections: How Voter Fraud Threaten Our Democracy*, cites (pages 16 – 17) a Rasmussen Research poll that asked respondents if they were more concerned with voting by ineligible participants or with disenfranchisement of eligible voters. Sixty-two percent of Kerry supporters, but only 18 percent of Bush supporters, worried more about *disenfranchisement*; 58 percent of Bush supporters, but only 19 percent of Kerry supporters were more concerned with *voter fraud*.

## FINAL D R A F T

A voting system that requires voters to produce an identity document or documents may prevent the ineligible from voting. It may also prevent the eligible from casting a ballot. If the ID requirements block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or have left at home the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. The EAC has informed us that it has commissioned a separate analysis of the incidence of vote fraud. Consequently, this research does not include consideration of vote fraud nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. As a result, our analysis of the effects of voter ID requirements on turnout cannot take into account how many potential voters who did not turn out under comparatively stricter voter ID requirements might have been ineligible or eligible to vote.

In some states, voters lacking required ID, or who have ID that does not reflect their current address, are able to vote only by casting a provisional ballot.<sup>7</sup> Voter ID requirements that require voters to bring a document to the polls --rather than simply sign their names-- can divert more voters to the provisional ballot. Requiring poll workers to request and check ID, can put stress on the already demanding environment of the polling place. Scrutiny of ID can create lines at the polling places. Further delays can result when voters cast a provisional ballot and fill out the ballot envelope. Voters who cast a provisional ballot because they lack their ID on Election Day, and who then fail to return with the needed document or documents, will have their ballot rejected.<sup>8</sup> And, of course, the cost of processing provisional ballots is greater than the cost of regular ballots.

Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle, an impression that could keep more citizens (even those with ID) from the

---

<sup>7</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>8</sup> The EAC's Election Day Study found "improper ID," to be the third most common reason for a provisional ballot to be rejected. "Improper ID" was cited by 7 states responding to the survey, compared to 14 mentions for voting in the wrong precinct. *Election Day Study*, Chapter 6, p. 5.

## FINAL D R A F T

polls. In conducting this analysis, we were sensitive to the observation that the problem with American elections may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes can be more effective if based on clear standards –legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

1. Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?<sup>9</sup>
2. How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>10</sup>
3. How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>11</sup>
4. How cost-effective is the system? Does it demonstrably increase the security of the ballot affordably, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.<sup>12</sup> A thorough, objective

---

<sup>9</sup> “Often where the battle over voter identification is most heated, real evidence of voter fraud proves scarce: in Georgia, for example, the Secretary of State averred that she had never encountered a single instance of voter impersonation at the polls. State laws might sometimes impose tighter restrictions on in-person voting than on absentee ballots, which yield the greatest incidence of, and provide the easiest avenue for, voter fraud. . .” Harvard Law Review 127:1144 (2006)

<sup>10</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

<sup>11</sup> In New York, in 2004, disparities in training and voting information were made apparent in a study finding elections officials had wildly varying interpretations of what the state’s voter identification requirement actually was. Tova Wang, “Warning Bell in Ohio,” December 5, 2005. Website, the Foundation for National Progress.

<sup>12</sup> “Absent clear empirical evidence demonstrating widespread individual voter fraud, legislatures need to fashion narrowly tailored voter identification provisions with an eye toward the inevitable and well-grounded constitutional challenges that will arise in the courts. Only as states grow more adept at

impact statement that demonstrated the nexus between the identification regime and the integrity of the ballot could provide protection against inevitable legal challenges.

5. If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>13</sup>
6. Does it comply with the letter and spirit of Voting Rights Act?
7. The seventh question is the most difficult to answer. Does the Voter ID requirement have a neutral result on the composition of the qualified and eligible electorate? ID requirements should not be designed to, or unintentionally, reduce the turnout of particular groups of voters or supporters of one party or another. Whatever the requirement may be, can all citizens comply with it easily and at no or minimal cost?

### **Voter ID and Turnout**

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility or provide other forms of ID.

This neat assignment in the following table and map of each state to one category no doubt fails to reflect actual practice at many polling places. Like any system run by fallible people, the voter ID process is subject to wide variation in practice. Voters may be confronted with demands for identification different from the directives in state statutes or regulation. Some voters may be waved through the process without a look at any document, no matter what the regulations say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters actually encounter.

---

administering elections will courts likely demonstrate greater willingness to uphold strict identification requirements." Harvard Law Review 127:1144 (2006)

<sup>13</sup> For example, the Carter-Baker Commission coupled its recommendation for a national voter ID card to a call for an affirmative effort by the states to reach out and register the unregistered, that is, to use the new Voter ID regime as a means to enroll more voters. Similarly, Richard Hasen Hasen's has suggested combining a national voter ID with universal registration. See his "Beyond the Margin of Litigation: Reforming U.S. Election Administration to Avoid Electoral Meltdown," 62 Washington and Lee Law Review 937 (2005).

^In Florida and Louisiana, states that required a photo id in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

^^In these states in 2004, voters lacking a photo ID could vote by providing other ID.

\*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

\*\*State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

\*\*\*Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

\*\*\*\*Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

\*\*\*\*\*Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compare to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

\*\*\*\*\*Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

**Figure 1**

**Voter ID Requirements 2004**

## FINAL D R A F T

Since it is not practical to attempt to capture the wide variety of how voter ID requirements are actually implemented across the nation's tens of thousands of polling places, the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

### Effect of Voter ID requirements on Turnout

We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau.<sup>14</sup>

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

---

<sup>14</sup> See Appendix \_\_\_ for the full report on voter ID and turnout.

## FINAL D R A F T

### Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit is regarded as the most rigorous.

Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

FINAL D R A F T

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	63.1 %	State Name	61.3 %
Sign Name	58.6 %	Sign Name	60.4 %
Match Signature	62.1 %	Match Signature	59.2 %
Provide Non-Photo ID	57.8 %	Provide Non-Photo ID	57.6 %
Provide Photo ID	57.3 %	Swear Affidavit	58.7 %
Average Turnout (All States)	59.6 %		

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political– also affect voter participation. Multivariate models that take into account other predictors can place the effects of voter identification in a more accurate context. The multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line. In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. The decline in turnout is particularly noticeable in counties with concentrations of Hispanic residents or individuals who live below the poverty line. Determining if the reduction in turnout is, in fact, among the Hispanic or poor residents of those counties requires further research at the individual level.

## FINAL D R A F T

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting. Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

## FINAL D R A F T

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

### Discussion and Conclusions of the Analysis

The results give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.

## FINAL D R A F T

- Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.
- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.
- Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the self-reports of elderly voters, while indicating that they would be slightly less likely to vote as ID requirements become stricter, do not show a dramatic effect.

The data examined in this analysis could not capture the dynamics of how identification requirements lower turnout. Do know the voter ID and stay away from the polls because they cannot or do not want to meet them? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

It is important to note that the 2004 data do not allow us to draw conclusions about the effect of laws such as those recently passed in Georgia and Indiana, which require government-issued photo ID. No such laws were in place in 2004, and the five states that then required photo ID at the time allowed voters who signed an affidavit or provided another form of identification to cast a regular ballot.

**Litigation Over Voter ID Requirements**

A handful of cases have challenged identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on requirements that voters present some form of identifying documents if the photo identification is not the only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*,

## FINAL D R A F T

Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions

## FINAL D R A F T

suggest that best practice may be to limit requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

### **Developments since 2004**

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

Answering these questions would provide the information needed for more informed judgment in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

### **State Voter Databases and Voter ID**

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

## FINAL D R A F T

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation would require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

### 6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.<sup>15</sup>

The dynamics of Voter ID requirements—how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in

---

<sup>15</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

## FINAL D R A F T

the states would be improved by additional research sponsored by the EAC. So far as it may be necessary to reduce vote fraud made possible by inadequate voter ID, the research could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended elsewhere by one of the authors of this report, Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed.<sup>16</sup>

---

<sup>16</sup> "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier."

### Appendices

- a. Summary of case law on Voter ID issues (included with this draft)
- b. Analysis of Effects of Voter ID Requirements on Turnout (attached as a separate document)
- c. Indexed database of major articles on Voter ID Requirements and related topics (included with this draft)
- d. Compendium of states' legislation, procedures, and litigation

## FINAL D R A F T

### APPENDIX –Court Decisions and Literature on Voter Identification and Related Issues

#### Court Decisions

#### Summary of Relevant Cases:

#### Challenges Prevailed:

##### *American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004*

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14<sup>th</sup> Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14<sup>th</sup> Amendment EPC: likely to prevail

##### *Greidinger v. Davis, 1993*

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14<sup>th</sup> Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

#### Challenges Rejected:

##### *League of Women Voters v. Blackwell, 2004.*

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

##### *Colorado Common Clause v. Davidson, 2004*

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

## FINAL D R A F T

- Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
- Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

### *McKay v. Thompson, 2000*

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14<sup>th</sup> Amend.: no protection for privilege where Congress authorized its infringement

### *Kemp v. Tucker, 1975*

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15<sup>th</sup> Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14<sup>th</sup> Amendment EPC: ruled there was no distinction among voters

### *Perez v. Rhiddlehoover, 1966*

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15<sup>th</sup> Amendment: same reasons

### **Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:**

#### ***American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at \*1 (D. Minn. Oct. 28, 2004).***

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at \*1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

## FINAL D R A F T

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at \*3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

### ***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

### **Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

#### ***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

#### ***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

## FINAL D R A F T

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at \*1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at \*6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at \*10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

### ***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

### ***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

## FINAL D R A F T

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

### ***Perez v. Rhiddlehoover*, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

### ***Friendly House, et al. v. Janet Napolitano et al.*, CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

### **Current Litigation Concerning Voter ID Issues<sup>17</sup>**

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

<sup>17</sup> As of January 2, 2006

## FINAL D R A F T

### **Georgia** (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)<sup>18</sup>. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.<sup>19</sup> As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

### **Indiana** (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

<sup>19</sup> GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

## FINAL D R A F T

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.<sup>20</sup> The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves these decisions to state law. 42 U.S.C. § 15482(a).

---

<sup>20</sup> According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Subject Fw: Voter ID Paper --Final Draft

Commissioners-

Attached please find a copy of the draft Voter ID best practices paper which Eagleton submitted to me last evening.

I will confer with Tom regarding when you would like this put on your Commissioner meeting agenda.

Regards-

Karen Lynn-Dyson

Subject Voter ID Paper --Final Draft

Karen,

Attached is the final draft of the Voter ID paper, with recommendations for the EAC to consider promulgating as best practices. Two appendices are included as part of the draft and a third, the statistical analysis of the effects of different voter ID requirements on turnout, is attached separately to this email.

We look forward to discussing this final draft with you and with the commissioners on April 3. I'll be preparing a Powerpoint presentation for that meeting. Any guidance you can give me later this month on particular questions that briefing should address would be appreciated.

The Moritz-Eagleton team will be meeting next Tuesday at 9:30 a.m.. If you have preliminary comments you would like us to consider, that meeting would be a most convenient occasion to

010710

discuss them.

# REPORT AND RECOMMENDATIONS TO THE EAC

## VOTER IDENTIFICATION ISSUES

---

### 1. Introduction and Report Background

This report to the United States Election Assistance Commission (EAC) presents recommendations for best practices to improve implementation of the requirements for voters to show identification pursuant to [statute or regulation citation]. It is based on research conducted by the Eagleton Institute of Politics at Rutgers, the State University of New Jersey, and the Moritz College of Law at Ohio State University under contract to the EAC, dated May 24, 2005. The research included a review and legal analysis of state statutes, regulations and litigation concerning voter identification and provisional voting, a sample survey of local election officials, and a statistical analysis of the effects of various requirements for voter identification on turnout in the 2004 election. This report is a companion to a report on Provisional Voting submitted to the EAC on November 28, 2005 under the same contract.

The Help America Vote Act of 2002 (HAVA) (Public Law 107-252) authorizes the EAC (SEC. 241, 42 USC 15381) to conduct periodic studies of election administration issues. The purpose of these studies is to promote methods for voting and administering elections, including provisional voting, that are convenient, accessible and easy to use; that yield accurate, secure and expeditious voting systems; that afford each registered and eligible voter an equal opportunity to vote and to have that vote counted; and that are efficient.

### 2. Voter Identification –Background and Approach of the Study

Voters may have to identify themselves twice in the electoral process: when registering to vote and then when casting a ballot. The burden of providing required ID documents on the voter may be greater at the polls on Election Day than at the time of registration. The burden of checking ID, even as simple as a signature match, can be much greater on election workers at the polls than on those registering voters. Poll workers may be faced with long lines and limited time. This analysis focuses on ID requirements on Election Day, but with an appreciation that the ID requirements at time of registration and on Election Day are inter-related.<sup>1</sup> The emphasis here is on Voter ID on Election Day and afterwards as election judges evaluate provisional

---

<sup>1</sup> As the Carter-Baker Commission noted, photographic ID requirements for in-person voting do little to address the problem of fraudulent registration by mail, especially in states that do not require third-party organizations that register voters to verify identification. Commission on Federal Election Reform, pp 46-47.

## FINAL D R A F T

ballots. This is the critical period for the electoral system, the time when ballot access and ballot security are in the most sensitive balance.

This analysis takes a view of voter ID issues broader than the rather narrow identification requirements in HAVA. Much of the national ferment over voter ID goes beyond HAVA to require more rigorous documentation of identity for all would-be voters, not just those casting a ballot for the first time who had not registered in person. The controversy in the states over voter ID stems from the HAVA requirements, goes beyond those requirements, and sets the context for the analysis here.<sup>2</sup>

Identification is often described as the critical step in protecting the integrity of the ballot, the process that ensures that the potential voter is eligible and permitted to cast a ballot and one ballot only. In fact, ensuring ballot integrity requires a perspective that takes in the entire voting process. Protecting the integrity of the ballot requires more than preventing the ineligible from voting. It also should ensure that all those who are eligible and want to vote can cast a ballot that counts, and that they can effectively cast a ballot for the candidate of their choice. The protection effort must take into account all forms of voting, including absentee ballots, and embrace each step in the process. A voting system that establishes onerous requirements for voters to identify themselves may prevent the ineligible from voting, but it may also prevent the eligible from casting a ballot. If the ID requirements of a ballot protection system block ineligible voters from the polls at the cost of preventing eligible voters who cannot obtain or forget to bring to the polls the required forms of identification, the integrity of the ballot may not have been improved; the harm may be as great as the benefit.

Assessing the effectiveness of voter ID as a way to protect the integrity of the ballot should logically include an estimate of the nature and frequency of vote fraud. This analysis does not include consideration of the incidence of vote fraud, the forms that it takes, nor the possible effectiveness of various voter ID regimes to counter attempts at vote fraud. The EAC has commissioned a separate study of vote fraud and instructed us not to address that issue in this research.

---

<sup>2</sup> Harvard Law Review 119:1127. "Legislators hoping to stiffen their state antifraud laws have taken their cue from identification provisions buried in HAVA. . . . HAVA makes explicit that it shall not 'be construed to prevent a State from establishing election technology and administration requirements that are more strict than' HAVA itself provides. The states have accepted the invitation. "

## FINAL D R A F T

Nonetheless, a broad view of ballot integrity is needed to appreciate the background and context of this narrower study. We explore the inter-relationships between Voter ID requirements and Provisional Voting and estimate the effects of various voter id requirements on turnout and on the casting of provisional ballots.

Voters lacking required ID, or who have ID that does not reflect their current address, may be able to vote only by casting a provisional ballot.<sup>3</sup> To the extent that stricter voter ID requirements divert more voters to the provisional ballot, voter ID requirements can put stress on the already pressured management of the polling place. Administering provisional ballots is more expensive than the normal ballot. Scrutiny of ID can create lines at the polling places, lines made longer as voters are diverted to the provisional voting line. Each of these potential consequences of more elaborate voter identification processes can increase the chance of litigation. Long lines will, at best, discourage voters and at worst make voting seem a hassle that will keep more citizens from the polls. A review of voter identification practices should keep in mind that America's problem may well be that too many people do not vote rather than that a few people may vote more than once.

An evaluation of the effect of different Voter ID regimes will be more effective if based on clear standards –legal, equitable, practical. The standards suggested here can best be described as the set of questions to be asked about Voter ID requirements. We suggest 7 questions that try to measure the most important dimensions of the problem.

- Is the Voter ID system designed on the basis of valid and reliable, empirical studies of the incidence of the sorts of vote fraud it is designed to prevent?
- How effective is the ID requirement in increasing the security of the ballot? How well can it be coordinated with a statewide voter database?<sup>4</sup>
- How practical is the requirement? Can it be administered smoothly by the staff and budget likely to be made available? How much additional training of polling place workers might be required? Is it simple enough or can it be defined with sufficient clarity

---

<sup>3</sup> For example, the Florida voter ID law adopted after the 2004 election and pre-cleared by the Department of Justice, permits voters who cannot meet the ID requirements to sign an affidavit on the envelope of a provisional ballot, which will be counted if the signature matches that on the voter's registration form.

<sup>4</sup> See the final section of this report for a brief overview of possible effects of a statewide voter database on voter identification issues.

## FINAL D R A F T

that poll workers throughout the state can administer it uniformly and with a minimum of local interpretation made on the fly under the pressure of Election Day?<sup>5</sup>

- How cost-effective is the system? Does it increase the security of the ballot at an affordable cost, measured in both monetary and other costs? To improve understanding of the non-monetary component of the costs, conducting a voter impact study might be appropriate. The voter impact study would examine, before the adoption of the regulation, the cost of compliance by the voter (such as the cost in time and money of acquiring a photo ID card), any offsetting benefits to voters, and the possible disparate effects of the regulation on various groups of voters.
- If a side effect of the Voter ID regulation is likely to reduce turnout, generally or among particular groups, is it possible to take other steps to ameliorate the adverse consequences?<sup>6</sup>
- Does it comply with the letter and spirit of Voting Rights Act?
- The seventh question is more difficult to measure than those described in the 6 questions outlined above. The Voter ID requirements should have a neutral result on the composition of the qualified electorate. That is, those requirements should not be designed to reduce the turnout of particular groups of voters who may have a propensity to support one party over another. Whatever the requirement may be, all citizens should be able to comply with it easily and at no or minimal cost.

### Summary of findings and conclusions

Voter turnout at the state level in 2004 declined where voter identification requirements were more demanding. While the trend is not perfectly linear, the data show a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Including other factors beyond voter id requirements diminishes the influence of voter ID on turnout. But the analysis still offers some support for the hypothesis that as the burden of voter identification

---

<sup>5</sup> In New York, in 2004, disparities in training and voting information were made all too apparent in a study finding elections officials had wildly varying interpretations of what the state's voter identification requirement was. Tova Wang, "Warning Bell in Ohio," December 5, 2005. Website, the Foundation for National Progress.

<sup>6</sup> For example, the Carter-Baker Commission accompanied its recommendation for a national voter ID card with a recommendations for an affirmative effort by the states to reach out and register the unregistered, to use the new Voter ID regime as a means to enroll more voters.

## FINAL D R A F T

requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

Evidence on the incidence of vote fraud, especially on the kind of vote fraud that could be reduced by requiring more rigorous voter identification is not sufficient to evaluate the tradeoffs between ensuring ballot access and ensuring ballot integrity. The lack of full understanding of the dynamics of voter ID requirements on political participation can be remedied by requiring the collection and reporting of data on the reasons potential voters are required to cast a provisional ballot and the reasons for rejecting provisional ballots. Also useful would be the results of exit polling of voters on their experiences in meeting voter ID requirements and on what type of ballot they cast.<sup>7</sup> And, of course, more information is needed on the incidence and varieties of vote fraud, but that inquiry is outside the scope of this report.

### Recommendations for consideration and action by the EAC

The EAC should consider the following actions to improve understanding of the relationship between voter ID requirements, broadly defined, and the two important goals of ensuring ballot access and ensuring ballot integrity.

- Encourage or sponsor further research to clarify the connection between Voter ID requirements and the number of potential voters actually able to cast a ballot.
- Recommend as a best practice that before states adopt a change described as increasing ballot security, states should publish an analysis of the number of eligible, potential voters that the new requirement may keep away from the polls or be permitted to cast only a provisional ballot as well as an estimate of the number of ineligible voters who will be prevented from voting.
- Encourage or require the states in the 2006 election and beyond, to collect and report reliable, credible information on the relationship between ballot access and ballot security. The data should be analyzed to provide a sound estimate of the incidence of the kinds of vote fraud that more stringent ID requirements may prevent and should describe the dynamics of voter ID in preserving the security of the ballot?

---

<sup>7</sup> Arizona held its first election with new, stricter ID requirements on March 14, 2006. In at least one county (Maricopa) election officials handed a survey to voters that asked if they knew about the voter identification law and if they did, how they found out about it. Edythe Jensen, "New Voter ID Law Goes Smoothly in Chandler," *Arizona Republic*, March 15, 2006. More surveys of this kind can illuminate the dynamics of voter ID and voting in ways not possible with the current lack of information on this subject.

## FINAL D R A F T

- Useful information could be supplied by exit polling. It would identify those who had cast a provisional ballot and ask why they were unable to cast a regular ballot. Answers would illuminate the frequency with which ID issues divert voters into the provisional ballot line.
- Polling to ask voters what they know about the voter id requirements would also provide useful context for evaluating the effect of various voter id requirements on electoral participation.
- Encourage states to examine the time period allowed for voters who cast a provisional ballot because they lacked required ID to return with their identification. In eleven states, voters who had to cast a provisional ballot because they lacked the ID required for a regular ballot were permitted to return later with their ID. Their provision of this ID is the critical step in evaluating the ballots. The length of the period in which the voter may return with ID is important. In setting the time period for return, which now varies among the states from the same day to about two weeks, states should consider three criteria: the convenience of the voter, the total time allowed to evaluate ballots<sup>8</sup>, and the safe harbor provision in presidential elections.

---

<sup>8</sup> Our research on provisional voting reveals that states that provide more than week to evaluate provisional ballots end up counting substantially more of those ballots than states that provide less than a week.

FINAL D R A F T

**3. Voter ID and Turnout**

As of the 2004 election, the states and the District of Columbia could be divided into 5 different Voter ID regimes. These are shown in Table 1, *Voter ID Requirements*. Nine states required that voters give their names; 14 that they sign their names; 8 match the signature to a sample in the registration book; 15 require some form of ID (ranging from a utility bill to a government-issued photo ID), and 5 states in 2004 required a photo ID, although in all those states voters without that credential could cast a regular ballot after signing an affidavit concerning their identity and eligibility.

**TABLE 1 -- Voter ID Requirements**

State	Forms of ID Required 2004	Current ID Requirement for First-Time Voters	Current ID Requirements for All Other Voters	Verification Method for Provisional Ballots

^In Florida and Louisiana, states that required a photo id in 2004, voters without that credential could sign an affidavit concerning their identity and eligibility and cast a regular ballot.

^^In these states in 2004, voters lacking a photo ID could vote by providing other ID.

\*Arizona voters who lack a photo ID may present 2 forms of ID with no photograph, such as 2 utility bills.

\*\*State only requires ID for first-time voters who register by mail without providing ID. They accept all forms of ID listed in the statute.

\*\*\*Georgia is currently enjoined from implementing this law, returning them for the time being to their 2004 requirement of provide ID.

\*\*\*\*Pennsylvania requires ID of all first-time voters, whether they registered by mail or in-person.

\*\*\*\*\*Tennessee voters must provide signature and address. In counties without computerized lists, the signature is compare to the registration card. In counties with computerized lists, the signature is compared to a signature on ID presented with registration.

\*\*\*\*\*Texas voters must present a current registration certificate. Those without a certificate can vote provisionally after completing an affidavit.

In 9 states, voters were required merely to state their names so that poll workers could locate them in the registration book. In 14 states, voters signed their names. In 8 states, voters' signatures were matched with a specimen signature. In 15 states voters had to show some form of ID, not necessarily an official picture ID. And in 5 states, voters were required to show an official photo ID, although in 2004 voters who lacked a picture ID could execute an affidavit and vote a regular ballot.

## FINAL D R A F T

This neat assignment of each state to one of a few categories may fail to reflect actual practice at a polling place. Like any system run by fallible people it is subject to wide variation in practice. Voters may be confronted with demands for identification at variance with state statutes or legislation. Other voters may be waved through the process without a look at any document, no matter what the regulations may say. Under the press of long lines and unfamiliar requirements, there is, in short, no sure way to report the wide variety of conditions voters may encounter.

It is not practical to attempt to capture the wide variety of how voter ID requirements may be actually implemented across the nation's tens of thousands of polling places. Recognizing that means that the analysis of the effect of state requirements on county-level turnout must be viewed with some caution.

### Effect of Voter ID requirements on Turnout

#### Summary of Findings and Conclusions

We categorized each state according to its voter ID requirements in 2004, as shown in Table 1 and analyzed turnout data for each county according to the voter identification requirements of its state. We also assessed self-reported turnout by the sample interviewed in the November 2004 Current Population Survey of the Census Bureau.<sup>9</sup>

Voter turnout at the state level in 2004 varied based on voter identification requirements. An average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. Other factors, of course, also influence turnout. Taking those other factors into account in the county-level analysis makes the effect of the voter ID requirement less dramatic. But the analysis still offers some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines. The effect is particularly noticeable in counties with concentrations of Hispanic residents or of people living below the poverty line.

The individual-level analysis, based on the CPS, produced a similar result. Voter identification requirements exert a statistically significant, negative effect on whether survey respondents said they had voted in 2004. The probability that a respondent to the survey voted dropped with each

---

<sup>9</sup> See Appendix \_\_\_ for the full report on voter ID and turnout.

## FINAL D R A F T

level of voter identification requirement, with a total drop of 2.5 percent across the five types of identification.

Future policy decisions should consider the tradeoffs between the incidence of vote fraud that can be prevented by stricter voter ID requirements and the number of eligible voters who will be kept from the polls by those stricter ID requirements. Continuing research is needed to provide the information to inform this calculation of benefits and costs.

### Methods and Findings

We classified each state as having one of five types of identification requirements in place on Election Day 2004. Upon arrival at polling places, voters had to either: state their names (9 states); sign their names (13 states and the District of Columbia); match their signature to a signature on file with the local election board (8 states); provide a form of identification that did not necessarily include a photo (15 states); or provide a photo identification (5 states). We then tested the assumption that voter identification requirements would prove to be increasingly demanding on the voter, with providing photo ID the most rigorous. a form of identification, and providing a form of photo identification.

The analysis recognized that election laws in numerous states offer exceptions to these requirements if a prospective voter lacked the ID. Laws in those states set a minimum standard that a voter must meet in order to vote using a regular ballot. We therefore also categorized states based on the minimum requirement for voting with a regular ballot. None of the states required photo identification as a minimum standard for voting with a regular ballot. Four states, however, required voters to swear an affidavit as to their identity (Florida, Indiana, Louisiana, and North Dakota). The five categories for minimum requirements were: state name (12 states), sign name (14 states and the District of Columbia), match one's signature to a signature on file (six states), provide a non-photo identification (14 states), or swear an affidavit (four states). This analysis treats the array of minimum identification requirements also in terms of increasing demand on the voter: state name, sign name, match signature, provide non-photo identification, and, given the potential legal consequences for providing false information, swearing an affidavit.

**FINAL D R A F T**

Voter turnout at the state level in 2004 declined as voter identification requirements became more demanding, as shown in Table 2. While the trend is not perfectly linear, there is a general movement toward lower turnout as requirements tend toward requiring greater levels of proof. Using the maximum requirements as the independent variable, an average of 63.1 percent of the voting age population turned out in states that required voters to state their names, compared to 57.3 percent in states that required photo identification. A similar trend emerged when using the minimum requirements as the independent variable. Sixty-one percent of the voting age population turned out in states requiring voters to state their names, compared to 58.7 percent in states that required an affidavit from voters.

**Table 2 – Variation in 2004 State Turnout Based on Voter Identification Requirements**

Maximum Requirement		Minimum Requirement	
Voter Identification Required in the States	Mean Voter Turnout for States in that Category	Voter Identification Required in the States	Mean Voter Turnout for States in that Category
State Name	63.1 %	State Name	61.3 %
Sign Name	58.6 %	Sign Name	60.4 %
Match Signature	62.1 %	Match Signature	59.2 %
Provide Non-Photo ID	57.8 %	Provide Non-Photo ID	57.6 %
Provide Photo ID	57.3 %	Swear Affidavit	58.7 %
Average Turnout (All States)	59.6 %		

Voter identification requirements alone do not determine voter turnout. Other influences – demographic or political– also affect voter participation. Multivariate models that take into account other predictors place the effects of voter identification in a more accurate context. To consider that broader context, our multivariate analysis included whether the county was in a presidential battleground state or a state with a competitive race for governor or the U.S. Senate. Demographic variables included the percentage of the voting-age population in each county that was Hispanic or African-American, the percentage of county residents age 65 and older, and the percentage of the county population living below the poverty line. The dependent variable in each model was voter turnout at the county level, with turnout calculated as the percentage of the voting-age population that voted in the 2004 election.

The aggregate analysis for the maximum identification requirements revealed a small and negative effect on turnout in 2004 controlling for electoral context and demographic factors. If the state was a battleground for president, governor or senate voter turnout increased. As the percentage of senior citizens in the county increased, so did turnout. The percentage of African-

## FINAL D R A F T

Americans in the county had no effect, but the percentage of Hispanic adults reduced voter turnout, as did the percentage of individuals living below the poverty line.

In general, analysis of the aggregate data at the county level provides some support for the hypothesis that as the burden of voter identification requirements increases, turnout declines, at least in the case of the maximum requirements. This is particularly so for counties with concentrations of Hispanic residents or individuals who live below the poverty line.

Information collected for the Census Bureau Current Population Survey in November 2004 makes it possible to examine the influence of voter ID requirements at the individual level. Self-identified registered voters reported their experience at the polls in the survey. (Note that the voter turnout rate for the CPS sample, an average of 89%, is much higher than the turnout rates presented in the aggregate data analysis, which average 58%. The difference is a result of several factors, including different denominators in calculating the turnout rate – self-reported registered voters in the CPS versus the much larger voting-age population for the aggregate data. Also some survey respondents overstate their incidence of voting.) Nevertheless, the CPS serves as a widely accepted source of data on voting behavior.

The dependent variable in the individual analyses is whether respondents said they voted in the 2004 election. As in the aggregate analysis the contextual variables consist of whether the state was a battleground state or had competitive state-level races. The analysis also controlled for gender, age in years, education, household income, race or ethnicity, and employment status, marital status, and residential mobility.

The analysis revealed that voter identification requirements exerted a statistically significant, negative effect on whether survey respondents said they had voted in 2004. Of the other state factors, only the competitiveness of the presidential race had a significant effect on turnout. In terms of demographic influences, consistent with previous research, age, education, income, and marital status all were positive predictors of voting. Women also were more likely to say they voted than men. Those who had moved within six months before the interview were less likely to say they had voted.

Allowing the voter identification requirement to vary while holding constant all other variables in the model showed that the predicted probability of turnout ranged from 91.2 percent if all voters had to state their names to 88.7 percent if all voters had to provide photo identification. (Note

## FINAL D R A F T

that these turnout figures are higher than actual because of the factors involved in the CPS's self-reported survey, but that the difference in effect is reasonably related to the results obtained in the aggregate analysis.) In other words, the probability of voting dropped with each level of the maximum voter identification requirement, with a total drop of 2.5 percent across the five types of identification. When taking into account the minimum requirement for identification, the probability showed a similar decline, with a slightly larger total drop of 3.3 percent.

Both the maximum and minimum identification requirements had negative and statistically significant effects for white voters. Allowing the requirements to vary from stating one's name to providing photo identification or an affidavit showed drops of 2.5 percent and 3.3 percent respectively in the predicted probability of voting. The identification requirements had no effect on the probability of African-Americans voting, but the minimum identification requirements had a comparatively sizable effect on voter turnout among Hispanics. The predicted probability of Hispanics voting ranged from 87 percent if stating one's name would be the required form of identification to 77.3 percent if a voter would have to provide an affidavit in order to vote, a difference of 9.7 percent. Variation also emerged along the lines of income, with the effects of voter identification requirements varying to a greater extent for voters in households below the poverty line compared to those living above the poverty line.

Registered voters who had less than a high school education had a 77.5 percent probability of voting if the maximum requirement would be stating one's name, and a 70.8 percent probability if they would have to provide photo identification under the maximum requirement, a difference of 6.7 percent. The range of effects of voter identification requirements was smaller among those with higher levels of education (and non-existent for one category – voters with some college education).

### Discussion and Conclusions of the Analysis

The results presented here give evidence that tougher voter identification requirements are associated with a decline in voter participation. The overall effect for all registered voters was fairly small, but even a slight decline in turnout has the potential to alter the outcome of a close election. The decline is apparent in both the aggregate data and the individual-level data, although not always for both the maximum and minimum sets of requirements.

## FINAL D R A F T

- Hispanic voters and the poor appear to be less likely to vote if the level of required identification becomes more demanding, according to both the aggregate and the individual-level data. In the individual-level data, for Hispanic voters, the probability of voting dropped by 9.7 percent across the various levels of minimum identification requirements. Survey respondents living in poor households would be 5.3 percent less likely to vote as the requirements vary from stating one's name to attesting to one's identity in an affidavit.
- Self-reported registered voters who had not graduated from high school would be 6.7 percent less likely to vote if the maximum requirement is photo identification as opposed to stating one's name. When considering the minimum requirements, those with less than a high school education would be 7.4 percent less likely to say they voted if the requirement was an affidavit as opposed to stating one's name.
- Age was also a key factor, with voters ages 18 to 24 being 7.7 percent to 8.9 percent less likely to vote as the requirements ranged from stating one's name to providing a photo identification or affidavit.
- Two concerns aired by critics of voter identification requirements were not borne out by the results. African-American voters did not appear to be affected by voter identification requirements, according to both the aggregate data and individual-level data analyses. Also, the elderly, while they would be slightly less likely to vote as requirements range from least to most demanding, would not necessarily be affected in the dramatic manner predicted by some opposed to photo identification requirements in particular.

The data examined in this analysis could not capture the dynamics of how identification requirements might lower turnout. Do these requirements dampen turnout because individuals are aware of the requirements and stay away from the polls because they cannot or do not want to meet the requirements? Or, do the requirements result in some voters being turned away when they cannot meet the requirements on Election Day? The CPS data do not include measures that can answer these questions, pointing up the need for collection of additional data. Knowing more about the "on the ground" experiences of voters concerning identification requirements could guide policy-makers at the state and local level in determining whether and at what point in the electoral cycle a concerted public information campaign might be most

**FINAL D R A F T**

effective in helping voters to meet identification requirements. Such knowledge also could help in designing training for poll workers to handle questions about, and potential disputes over, voter identification requirements.

**4. Litigation over Voter ID Requirements**

There have been a handful of cases challenging identification requirements in court in recent years. In general, requirements that voters provide some identifying documentation have been upheld, where photo ID is *not* the only acceptable form. Whether or not laws requiring photo ID will be upheld is more doubtful. To date, only one court has considered a law requiring voters to show photo ID (*Common Cause v. Billups*), and that court concluded that this requirement is likely unconstitutional. Cases challenging the mandatory disclosure of voters' Social Security numbers on privacy grounds have yielded mixed results.

*Non-photo identification.* For the most part, courts have looked favorably on cases challenging requirements that voters present some form of identifying documents if the photo identification is the only form accepted. In *Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004), plaintiffs challenged a law requiring all in-person voters to show identification (not just first-time registrants). The court upheld this requirement against a constitutional challenge. Similarly, in *League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004), the court rejected a challenge to an Ohio directive requiring first-time voters who registered by mail to provide one of the HAVA-permitted forms of identification, in order to have their provisional ballots counted. Specifically, the directive provided that their provisional ballots would be counted if the voter (a) orally recited his driver's license number or the last four digits of his social security number or (b) returned to the polling place before it closed with some acceptable identification (including reciting those identification numbers). *Id.* This was found to be consistent with HAVA.

*Photo ID.* Since the 2004 election, two states have adopted laws requiring photo identification in order to have one's vote counted, without an affidavit exception: Georgia and Indiana. Both these requirements were enacted in 2005 and both have been challenged in court. The Georgia law required voters attempting to cast a ballot in person present a valid form of photographic identification. O.C.G.A. § 21-2-417. On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements on constitutional grounds. In granting the injunction, the court held that plaintiffs' claims under both the Fourteenth Amendment (equal protection) and Twenty-Fourth Amendment (poll tax) had a substantial likelihood of succeeding on the merits at trial (*Common Cause v. Billups*,

## FINAL D R A F T

Prelim. Inj. 96, 104). In January 2006, Georgia enacted a modified version of its photo ID law, which the court has not yet ruled on. In the other state that has enacted a photo ID requirement without an affidavit exception (Indiana), legal challenges have also been filed. (*Indiana Democratic Party v. Rokita* and *Crawford v. Marion County Election Board*). Cross-motions for summary judgment are currently pending. Another case of significance, for purposes of photo ID requirements, is *American Civil Liberties Union of Minnesota v. Kiffmeyer*, No. 04-CV-4653, 2004 WL 2428690, at \*1 (D. Minn. Oct. 28, 2004). In that case, the court enjoined a Minnesota law that allowed the use of tribal photo ID cards, only for an Indian who lived on the reservation. 2004 WL 2428690, at \*1. The Court found no rational basis for distinguishing based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3. The court's decision in this case indicates that courts are likely to look strictly on photo ID requirements.

*Privacy.* In *Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993), the court struck down on due process grounds a Virginia law requiring disclosure of voters' social security numbers for voter registration. The social security numbers recorded in voter registration lists had been disclosed to the public and political parties that had requested the lists. The court found that the requirement to give the social security number effectively conditioned rights on the consent to an invasion of privacy. It concluded that this public disclosure of the social security numbers was not necessary to achieve the government's interest in preventing fraud. On the other hand, in *McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000), the court rejected privacy challenges based on both the Constitution and federal statutes, to a Tennessee law requiring social security numbers for voter registration since 1972. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. The distinction appears to be between the use of Social Security numbers for internal purposes only, which was deemed permissible, and the disclosure of those numbers to the public which was not.

These decisions suggest that the courts will look strictly at requirements that voters produce a photo ID in order to cast a regular ballot. The courts have used a balancing test to weigh the legitimate interest in preventing election fraud against the citizen's right to privacy (protecting social security numbers from public disclosure, for example) and the reasonableness of requirements for identity documents. To provide both the clarity and certainty in administration of elections needed to forestall destabilizing challenges to outcomes, these early decisions

**FINAL D R A F T**

suggest that best practice may be to conform to the NVRA's limitation on requirements for voter identification to the minimum needed to prevent duplicate registration and ensure eligibility.

## FINAL D R A F T

### 5. Developments since 2004

Since the passage of HAVA, with its limited requirements for voter identification, and following the 2004 election, debate over voter ID has taken place in state legislatures across the country. That debate has not been characterized by solid information on the consequences of tightening requirements for voters to identify themselves before being permitted to cast a regular, rather than a provisional, ballot.

Better information might improve the quality of the debate. Answers to the following key questions are not available in a form that might satisfy those on both sides of the argument.

- What is the overall incidence of vote fraud?
- How does fraud take place in the various stage of the process: registration, voting at the polls, absentee voting, or ballot counting?
- What contribution can tighter requirements for voter ID make to reducing vote fraud?
- What would be the other consequences of increasingly demanding requirements for voters to identify themselves? This is the question addressed, within the limits of the available data, in the analysis in this report.

This information would allow a more informed judgment to be brought to bear in the states as they consider the tradeoffs among the competing goals of ballot integrity, ballot access, and administrative efficiency. The Carter-Baker Commission recognized the tradeoffs when it tied recommendation for national ID to an affirmative effort by government to identify unregistered voters and make it easy for them to register.

#### State Voter Databases and Voter ID

With the implementation of the HAVA Computerized Statewide Voter Registration List, an application for voter registration for an election for Federal office may not be accepted or processed unless the application includes a driver's license number or last four digits of the Social Security number on the voter registration form. This information can be used to verify the identity of the registrant through interfacing with lists maintained by the Motor Vehicle office and Social Security office. If registrants do not have either a driver's license or Social Security number, the State will assign a unique identifier number to that person.

## FINAL D R A F T

HAVA does not require that the states notify registrants to remedy any failure to provide either of these numbers or to confirm that they have provided a verifiable number. Verification at the time of registration could forestall difficulties at the polling place. HAVA is silent on how the ID might be required at the polling place for new voters whose driving license or Social Security number could not be verified. Errors in recording those numbers are sure to occur.

Some states are wrestling now with these unresolved issues. In New Jersey, for example, pending legislation require that voters must be able to confirm their registration through a secure access to the SVRL. It also requires voters to present ID at the polls in order to cast a regular ballot if the numbers recorded on the registration have not been verified (or if no verifiable number appears on the registration). It recognizes the HAVA requirement that if the number provided by the voter has not been verified and if the voter does not present ID at the polls, that voter may cast a provisional ballot. The bill does not specify they have to provide ID within 48 hours in order for their vote to count, as is the case with first-time mail-in registrants.

As some states gain experience in this area, the EAC would perform a useful service by making timely recommendations of best practices for all states to consider.

### 6. Conclusions

The form of Voter ID required of voters affects turnout. Lack of ID can keep voters from the polls. Or, when they go to the polls, it is reasonable to conclude that stricter Voter ID requirements will divert more voters into the line for provisional ballots. (This conclusion is a conjecture because we lack good data on why voters must cast their ballots provisionally.) The result can be longer lines at the polls and confusion, without a clear demonstration that the security of the ballot is correspondingly increased.<sup>10</sup> The dynamics of Voter ID requirements—how the more rigorous Voter ID requirements—affect the decision by potential voters to go or stay away from the polls are not well understood. This lack of understanding should be recognized in the policy process. The debate over voter ID in the states would be improved by additional research sponsored by the EAC. That research might address that, so far as may be

---

<sup>10</sup> In this connection, the Brennan Center's response to the Carter-Baker Commission report observes that, "while it might be true that in a close election "a small amount of fraud could make the margin of difference," it is equally true that the rejection of a much larger number of eligible voters could make a much bigger difference in the outcome." The exclusion of voters through restrictive ID requirements could affect election outcomes as much as fraud by voters at the polls. *Response to the Report of the 2005 Commission on Federal Election Reform*, The Brennan Center for Justice at NYU School of Law and Spencer Overton, On Behalf Of The National Network on State Election Reform, September 19, 2005

## FINAL D R A F T

necessary to reduce vote fraud, could identify methods to eliminate the need for voters to bring specific identity documents with them to the polls while assuring that each voter who casts a ballot is eligible and votes only once. One way to break the connection between the benefits of photo ID and the need for the voter to bring identification to the polling place, as recommended by our colleague Edward Foley: keep the information to verify a voter's identity in the records at the polling place. Other approaches could be developed.<sup>11</sup>

---

<sup>11</sup> "A potential solution to this problem is to break the connection with the photo requirement and the obligation to produce identification at the polls. Eligible citizens could be required to provide a photograph at the time they *register* to vote, and poll workers would match this photograph with the image of the person standing in front of them. Given the availability of digital photography, the photos of registered voters could be stored in electronic poll books and easily "pulled up" with a click of a computer mouse when voters sign in to vote. These electronic photos should satisfy the anti-fraud concerns of conservatives as much as printed photos that citizens would be required to bring to the polls. . . Of course, to satisfy the concerns of liberals, a requirement to provide a digital photograph at time of registration would have to address the cost and accessibility issues identified earlier."

## APPENDIX –Court Decisions and Literature on Voter Identification and Related Issues

### Court Decisions

#### Summary of Relevant Cases:

#### Challenges Prevailed:

##### *American Civil Liberties Union of Minnesota v. Kiffmeyer, 2004*

- Action for temporary restraining order – granted
- Statute: allowed use of tribal identification cards w/ name, address & photo as a valid identification to register to vote only if the voter lives on the reservation to “complete” a mail-in application (which only affected about 600 voters w/ incomplete applications)
- Claim -14<sup>th</sup> Amendment EPC: likely to prevail, no rational basis for a distinction between Indians residing on reservations and those not
- Statute: may use certain forms of photo identification lacking address together with a utility bill but not tribal identification cards
- Claim -14<sup>th</sup> Amendment EPC: likely to prevail

##### *Greidinger v. Davis, 1993*

- Statute: mandated disclosure of SS # as a precondition to voter registration (rationale was voter identification, but the numbers were rarely used to verify identity & were disclosed in voter lists to both political parties and the public upon request)
- Claims:
  - 14<sup>th</sup> Amendment EPC: no classification (applied strict scrutiny)
  - Substantive due process: law invalid; found that the statute conditioned the fundamental right to vote on the consent to an invasion of privacy; this was found to be a substantial burden (applied strict scrutiny)
    - Compelling interests: preventing voter fraud (deemed compelling)
    - Necessary: fails, preventing voter fraud when allowing names for inspection could be achieved by supplying addresses and DOBs or use of voter registration numbers
    - HOWEVER: Court also made it clear that if the registration scheme kept the SS# for internal use only – it would be valid

#### Challenges Rejected:

##### *League of Women Voters v. Blackwell, 2004.*

- Sec. of State Directive: provisional ballots issued if first-time voter, who registered by mail and did not provide ID, cannot produce proper ID at the polls AND that the provisional ballot will only be counted if the voter returns to the poll before it closes w/ ID or can recite SS# or DL#
- Claims – Supremacy Clause & HAVA: ruled that HAVA did not specify how the first-time voters' identifications should be verified and this method was not unreasonable or too burdensome

##### *Colorado Common Clause v. Davidson, 2004*

- Statute: required all voters to show ID (most types permitted) before voting
- Claims:
  - HAVA: ruled that HAVA did not preempt more strict state laws & allowed States to be more strict as long as consistent with the purpose of HAVA (both HAVA & CO provisions' purposes were to prevent voter fraud)
  - Substantive due process and equal protection
    - No improper discrimination

## FINAL D R A F T

- Preventing voter fraud is a compelling interest since it is irreversible once vote is cast
- Only marginally more intrusive than HAVA, many types of identification permitted – thus, valid

### *McKay v. Thompson, 2000*

- Statute: mandated disclosure of SS # as a precondition to voter registration
- Claims:
  - Privacy Act, Section 7: ruled that Tennessee voter system exempt from Privacy Act because it is pre-75
  - NVRA, permitting only min. amt. of info. necessary to prevent duplicate registration and determine eligibility: ruled that NVRA does not specifically forbid the use of SS#s & the Privacy Act specifically permits them pre-75
  - Substantive due process: ruled that internal use of SS# not a burden
  - Free Exercise, based on Bible's supposed prohibition on use of universal identifiers: ruled that law is generally applicable and thus valid
  - P&I, Article IV: does not protect in-state citizens
  - P&I, 14<sup>th</sup> Amend.: no protection for privilege where Congress authorized its infringement

### *Kemp v. Tucker, 1975*

- Statute: required name, occupation, address, sex, race, height, hair color, eye color, and date of birth be listed on voter registration card for identification purposes
- Claims:
  - VRA: ruled that race was not made a "qualification" for voting
  - 15<sup>th</sup> Amendment: ruled that it did not abridge right to vote on account of race because rejection of application was due to failure to provide information, not race; race only one factor in identification
  - 14<sup>th</sup> Amendment EPC: ruled there was no distinction among voters

### *Perez v. Rhiddlehoover, 1966*

- Statute: date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration for identification
- Claims:
  - VRA: ruled that it was not a "test or device" because it applied equally
  - 15<sup>th</sup> Amendment: same reasons

### **Cases in Which the Plaintiffs Have Prevailed in Challenging the Statute Requiring Voter Identification:**

#### ***American Civil Liberties Union of Minnesota v. Kiffmeyer, No. 04-CV-4653, 2004 WL 2428690, at \*1 (D. Minn. Oct. 28, 2004).***

This was an action just before the November 2004 election for a temporary restraining order, which was granted. The ACLU challenged a Minnesota law allowing the use of tribal identification cards with the name, address, and photograph as a valid identification (equal to a driver's license) for use in "completing" an incomplete mail-in voter registration only if the Indian lives on the reservation. 2004 WL 2428690, at \*1. The Court ruled that this distinction would likely violate the Equal Protection Clause because there was no rational basis for differentiating

## FINAL D R A F T

between the validity of the identification based on whether or not the cardholder lives on the reservation. *Id.* at \*1, 3.

Secondly, the ACLU challenged a second statute which allowed the use of certain photo identification lacking the voter's address to be used together with a utility bill or bank statement as valid identification for registration. *Id.* at \*3. The statute did not, however, permit using a tribal identification for this same purpose. *Id.* The Court ruled that this likely violated the equal protection clause as well. *Id.*

### ***Greidinger v. Davis*, 988 F.2d 1344 (4th Cir. 1993).**

This case challenged a Virginia law requiring the social security number for voter registration, which the State subsequently disclosed to the public and political parties upon request in voter registration lists, which included the social security numbers. Failure to provide the social security number resulted in the denial of the registration application. The law was challenged under the Equal Protection Clause and under substantive due process. The Court quickly rejected the equal protection challenge because the law made no classification. 988 F.2d at 1350.

The law was invalidated under substantive due process. *Id.* at 1355. The Court found that the statutory scheme conditioned the fundamental right to vote on the consent to an invasion of privacy, based on concerns of identity theft. *Id.* at 1353-54. The Court found this to be a substantial burden on the right to vote. *Id.* at 1354. The Court recognized that the government's interest in preventing voter fraud was compelling. *Id.* However, the Court found that disclosure of the information to the public and political parties was not necessary to achieve that interest. *Id.* Disclosure of addresses or dates of birth would be sufficient to aid the public in distinguishing between two voters with the same name. *Id.* at 1355. The Court did state that required disclosure of the social security number for internal use only would be valid. *Id.* at 1354 n.10.

### **Cases in Which the Statute or Practice of Voter Identification Has Been Upheld:**

#### ***League of Women Voters v. Blackwell*, 340 F. Supp. 2d 823 (N.D. Ohio 2004).**

The League of Women Voters challenged the Secretary of State's directive that provisional ballots should be issued to all first-time voters who registered by mail without providing identification who cannot show proper identification at the polls. 340 F. Supp. 2d at 828. The Directive also stated that the provisional ballots would only be counted if the voter orally recited his driver's license number or the last four digits of his social security number or returned to the polling place before it closed with some acceptable identification, including reciting those identification numbers. *Id.* The Court stated that HAVA only requires verification of eligibility of first time voters registering by mail; it does not say how that should be done. *Id.* at 831. The Court found the burden on the right to vote to be slight. *Id.* The Directive was found valid under HAVA and the Supremacy Clause because the number of uncounted votes would be small, the requirement was reasonable, and there was adequate notice of the requirement on the registration forms. *Id.* at 829-30.

#### ***Colorado Common Cause v. Davidson*, No. 04CV7709, 2004 WL 2360485, at \*1 (Colo. Dist. Ct. Oct. 18, 2004).**

In this case, the validity of three Colorado statutory provisions was challenged. The laws (1) required all in-person voters to show identification (not just first-time registrants); (2) provided that votes cast in the wrong precinct would not be counted; and (3) provided that

## FINAL D R A F T

provisional ballots would not be counted if the voter applied for an absentee ballot. 2004 WL 2360485, at \*1. The plaintiffs also challenged the provisions under HAVA. The identification provision allowed nearly all forms of acceptable identification under HAVA. *Id.* at \*6.

The challenge to the identification requirement failed under both challenges. The Court interpreted HAVA as not intended to preempt state laws and as permitting states to be more strict than, but not inconsistent with, HAVA. *Id.* at \*10. The Court felt that the purpose of both laws was the same, to reduce voter fraud, and thus, both laws could coexist. As to the Constitutional claim, both equal protection and substantive due process, the Court felt that preventing voter fraud, which is impossible to remedy once a vote is cast, is a compelling interest, and the Court also felt that a voter identification requirement for all voters, with many types of acceptable identification, was only marginally more intrusive than HAVA. *Id.* at 12. The Court also found no improper discrimination between voters. *Id.* Thus, the provision was upheld.

### ***McKay v. Thompson*, 226 F.3d 752 (6th Cir. 2000).**

The Sixth Circuit ruled that the Privacy Act, the National Voter Registration Act, Substantive Due Process, the Privileges and Immunities Clauses (Fourteenth Amendment & Article IV), and the First Amendment right to free exercise do not prohibit requiring disclosure of social security numbers as a precondition to voter registration.

The Privacy Act, Section 7, mandates that it is unlawful for a government to deny a right or privilege because of a citizen's refusal to disclose his social security number, unless the disclosure was required for a system established prior to 1975. 226 F.3d at 755 (citing Privacy Act of 1974, Pub. L. No. 93-579 (1974)). Since Tennessee required social security numbers for voter registration since 1972, his challenge was rejected. 226 F.3d at 755. Second, the NVRA only permits requiring the minimum amount of information necessary to prevent duplicate voter registration and to determine eligibility. *Id.* at 755-56 (citing 42 U.S.C. §1973gg-3(c)(2)(B)). The Court rejected this challenge because the NVRA does not specifically forbid the use of social security numbers, and the Privacy Act, a more specific statute, grandfathered their use if prior to 1975. 226 F.3d at 756.

Finally, the plaintiff's constitutional claims were all rejected. His substantive due process claim was rejected because internal receipt and use of social security numbers does not burden the fundamental right to vote. *Id.* The free exercise challenge, based on the Bible's supposed prohibition of universal identifiers, was rejected because the law was generally applicable and not directed at particular religious practices. *Id.* The Privileges and Immunities Clause claim was rejected because the Clause does not apply to citizens of the state. *Id.* The Fourteenth Amendment Privileges and Immunities claim, based on the right to vote as unique to U.S. citizenship, was rejected because the Clause provides no protection where Congress has authorized the infringement. *Id.*

### ***Kemp v. Tucker*, 396 F. Supp. 737 (M.D. Pa. 1975), *aff'd*, 423 U.S. 803.**

A statute was upheld, which required name, occupation, address, sex, race, height, hair color, eye color, and date of birth to be recorded on the voter registration card and allowed registration officials to reject an incomplete application. 396 F. Supp. at 738. Claims were alleged under the Fourteenth Amendment's Equal Protection Clause, the Fifteenth Amendment, and the Voting Rights Act.

As to the Fourteenth and Fifteenth Amendment claims, the Court reasoned that preventing voter fraud is a compelling goal, and identification provisions are "an essential means of achieving the goal." *Id.* at 739. The Court also rejected the equal protection claim because the statutes did not create a distinction at all. *Id.* at 740 n.3. Since race is just one of

## FINAL D R A F T

several characteristics required, the Court found that it was intended for preventing voter fraud, not some other motive. *Id.* at 740. As to the VRA, the Court rejected the claim that it added race as a qualification for voting as frivolous. *Id.* As to a Fifteenth Amendment claim that it abridged the right to vote on account of race, the Court also made a distinction between rejecting a voter application because of race and rejecting an application because of failure to answer all relevant questions to assist in preventing voter fraud. *Id.* The statute was upheld.

### ***Perez v. Rhiddlehoover*, 186 So. 2d 686 (La. Ct. App. 1966).**

A voter registration requirement was challenged and upheld. The statute stated that date of birth, place of birth, mother's first or maiden name, color of eyes, sex, race, occupation, and whether owner, tenant or boarder must appear on the registration. 186 So.2d at 690. This information was required for identification of voters, especially when voters had the same name, to prevent duplicate voting. It was challenged under the Voting Rights Act of 1965 Section 4(a) which prohibits denying the right to vote for failure to comply with a "test or device." The Court felt that this requirement was not a test or device for discrimination because it applied equally. *Id.* at 691. The Court also determined that it was not in conflict with the Fifteenth Amendment either. *Id.*

### ***Friendly House, et al. v. Janet Napolitano et al.*, CV 04-649 TUC DCB**

On November 30, 2004, the Mexican American Legal Defense and Educational Fund (MALDEF) filed suit seeking to halt the implementation of Proposition 200. . Proposition 200 created a number of legal requirements to ensure that public benefits are not available to illegal immigrants. In particular, Proposition 200 requires that a person attempting to register to vote provide one of six specific forms of proof of United States citizenship. Compl. 12-13. Also, any person attempting to vote must present either one form of photo identification or two forms of non-photo identification. *Id.* at 13.

The lawsuit alleges two violations that directly relate to the voting identification restrictions. First, the lawsuit alleges a violation of the Twenty-Fourth and Fourteenth amendments in that a voter must pay a poll tax by spending money to purchase the required identification. *Id.* at 20. Second, the lawsuit alleges violation of the Voting Rights Act. *Id.* at 21. The lawsuit was recently dismissed by the 9th Circuit Court of Appeals for a lack of standing. The Circuit Court found that there was no injury-in-fact, meaning that once an injury occurs the suit will likely be refiled. Additionally, it should be noted that the voter identification issue is only a part of the lawsuit, and much of the focus has been on other aspects of Proposition 200.

### **Current Litigation Concerning Voter ID Issues<sup>12</sup>**

Litigation is filled with uncertainty. Litigation stemming from newly passed voter identification requirements will continue into the foreseeable future. Lawsuits are currently pending over voter identification requirements in Georgia and Indiana. Other states, such as Ohio, are considering new identification requirements that could lead to further litigation. The Georgia lawsuit has already succeeded in getting a preliminary injunction against the law in question, which will likely galvanize interested parties in other states to pursue similar litigation. Of course, if the injunction is eventually overturned at the appellate level it could have a similar chilling affect on future litigation.

This summary major litigation pending in Georgia and Indiana includes a brief assessment of the likelihood of success:

---

<sup>12</sup> As of January 2, 2006

## FINAL D R A F T

### Georgia (*Common Cause/Georgia v. Billups*):

On September 19, 2005, Common Cause of Georgia, in conjunction with several other non-profit organizations, filed suit in Federal District Court against the Georgia Secretary of State and other election officials, challenging the constitutionality of Georgia's new voter identification requirements. The new law requires all voters attempting to cast a ballot in person to present a valid form of photographic identification. O.C.G.A. § 21-2-417. A voter that is unable to provide proper identification is given a provisional ballot. However, that provisional ballot will be counted only if the voter is able to subsequently present valid identification within two days of the election. *Id.*

The lawsuit alleges five separate violations of state and federal law. First, the complaint alleges that the identification requirements infringe on the right to vote guaranteed in the Georgia constitution (Compl. 32)<sup>13</sup>. In addition, the Plaintiffs claim violations of the Federal Civil Rights Act and Voting Rights Act. (Compl. 36,38). Finally, the lawsuit alleges violations of the Fourteenth and Twenty-Fourth amendments to the U.S. Constitution. The complaint claims that the ID requirements constitute an "undue burden" on the right to vote, in violation of the Equal Protection Clause of the Fourteenth Amendment (Compl. 34). The ID requirement does not apply to most absentee voters, and thus the requirement is also over-broad and not narrowly tailored to address the stated purpose of preventing voter fraud (Compl. 34). The complaint further alleges that the cost of obtaining a photo ID constitutes a poll tax, in violation of the Twenty-Fourth Amendment, and that the cost is also a violation of the Fourteenth Amendment because it applies to voters who choose to vote in person, and not to those who vote absentee (Compl. 34,35).

On October 18, 2005, the District Court granted the Plaintiff's motion for a preliminary injunction, enjoining the application of the new identification requirements. In granting the injunction, the court held that both federal constitutional claims had a substantial likelihood of succeeding on the merits at trial (Prelim. Inj. 96, 104). The court also held that, while the two federal statutory claims were plausible, they both lacked sufficient evidence at the time to have a substantial likelihood of success. (Prelim. Inj. 109,111,116). Finally, the court held that the Georgia constitutional claim would be barred by the Eleventh Amendment to the U.S. Constitution. (Prelim. Inj. 77).

The Defendants appealed the motion for preliminary injunction to the Eleventh Circuit, and oral argument is scheduled for March 1, 2006. In addition, some news reports have claimed that the Georgia legislature is considering re-visiting the ID requirements in light of the on-going litigation.<sup>14</sup> As for the merits, in granting the preliminary injunction the District Court has already signaled its belief that the federal constitutional claims are likely meritorious. The Eleventh Circuit may have a different view, but for now the case looks to have a reasonable chance of success.

### *Indiana* (*Indiana Democratic Party v. Rokita and Crawford v. Marion County Election Board*):

The Indiana lawsuit is similar to its Georgia counterpart in content, though not in status. In Indiana separate lawsuits, now joined, were filed by the state Democratic Party and the

<sup>14</sup> GA Legislature May Revisit Voter ID Law, State Net Capitol Journal, Dec. 19, 2005.

## FINAL D R A F T

Indiana Civil Liberties Union (ICLU). The Democratic Party's lawsuit is directed against the Indiana Secretary of State, while the ICLU's lawsuit involves the Marion County Board of Elections and the State of Indiana. Like Georgia, Indiana law also requires citizens voting in person to present some form of official photo identification. IC § 3-11-8-25.1. Voters unable to present identification are given a provisional ballot, which is counted if they are able to provide the required identification by Noon on the second Monday following the election. IC § 3-11.7-5-1. Unlike Georgia, Indiana provides state issued identification at no charge. However, there are costs involved in the process, including transportation to the Bureau of Motor Vehicles, and payment for documents such as birth certificates, which are needed to obtain the ID. (Second Am. Compl. 6).

The Democratic Party's complaint raises Fourteenth Amendment claims similar to those in the Georgia lawsuit, including concerns about substantially burdening the right to vote, the enactment of a de-facto poll tax from the costs indirectly associated with obtaining ID, and the lack of applicability to voters who cast an absentee ballot. (Second Am. Compl. 6-9). In addition, the complaint alleges that the substantial burden placed on the right to vote violates the First Amendment protection of expressive or symbolic speech, as well as the freedom of association as applied to Democratic primary elections. (Second Am. Compl. 9-10). Finally, the complaint alleges violations of the Voting Rights Act, National Voter Registration Act, and the Help America Vote Act (Second Am. Compl. 10-11). The ICLU's complaint alleges many of the same violations, but also includes claims of a violation of Indiana's constitutional guarantee of a free and equal election system. (Compl. 15)

The case is currently in the pre-trial phase, with both sides awaiting decisions on their respective motions for summary judgment.<sup>15</sup> The likelihood of success is bolstered by the fact that the Fourteenth amendment constitutional claims have already been found persuasive by at least one other Federal District Court. However, the Indiana law is notably different than its Georgia counterpart in that it provides free identification. While the plaintiffs make a solid argument that related costs still amount to a poll-tax, it is possible that the court could distinguish on this matter.

Unlike the Georgia case, the Indiana lawsuit also claims a violation of the Help America Vote Act. Although the claim is not completely clear, it seems as though the Plaintiffs are arguing that the Indiana statute requires more stringent identification than what is required by HAVA. 42 U.S.C. § 15483(b)(1)-(2). While this is true, it is unclear how this violates the statute. HAVA merely states that certain voters unable to produce HAVA required identification be given a provisional ballot. *Id.* Indiana law meets this requirement. IC § 3-11-8-25.1. Although Indiana law requires more stringent identification for counting the provisional ballot, HAVA leaves these decisions to state law. 42 U.S.C. § 15482(a).

---

<sup>15</sup> According to an AP article, the Plaintiffs filed some type of brief on December 21—however it is not yet up on the Moritz website and I am unsure how to access it otherwise.

Subject Commissioner approval (by 2/25) of contracting process for  
work on Provisional Voting and Voter ID projects

Commissioners-

As was discussed during our session on February 17, 2005, please *review and provide your approval ,  
disapproval or amendments* to the following items by Friday, February, 25, 2005:

1. The attached Scope of Work which outlines the tasks related to contract work around projects relating to voluntary guidance on provisional voting and voter identification procedures.
2. The proposal will be advertised beginning February 28, 2005.
3. The deadline for submitting proposals will be March 14, 2005.
4. Proposal review will be completed by EAC staff by March 17, 2005
5. Staff will recommend a contractor to the Commissioners on March 18, 2005.
6. Commissioners will be asked for their decisions no later than Tuesday, March 22, 2005

Statement of Work - Provisional Voting, Voter ID.doc

Thank you for your help and attention to this matter.

K  
Karen Lynn-Dyson  
Research Director  
U.S. Election Assistance Commission

February 14, 2005

**PROVIDING EAC ASSISTANCE IN DEVELOPING VOLUNTARY GUIDANCE ON PROVISIONAL VOTING AND VOTER IDENTIFICATION PROCEDURES**

0.0 Contract Title: Assistance to the U.S. Election Assistance Commission in the Development of Guidance on Provisional Voting and Voter Identification Procedures

1.0 Background: Sec. 302(a) of HAVA requires that all States allow the casting of provisional ballots in instances where a voter declares their eligibility to vote but their name does not appear on the official list of eligible voters, or an election official asserts that a voter is not eligible to vote. This section describes several requirements for implementation of provisional voting, but the States have considerable latitude in specifying how to carry out these requirements. The EAC seeks to examine how provisional voting was implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 Federal elections.

HAVA Sec. 303(b) mandates that first time voters who register by mail are required to show proof of identity before being allowed to cast a ballot. The law prescribes certain requirements concerning this section, but also leaves considerable discretion to the States for its implementation. The EAC seeks to examine how these voter identification requirements were implemented in the 2004 general election and to prepare guidance for the States on this topic for the 2006 elections.

One of the remedies for a voter not having an acceptable proof of identity is to allow the voter to cast a provisional ballot, either at the polling place or by mail. This linkage between these two HAVA sections provides a rationale for conducting research on these topics in parallel. However, it is anticipated that two separate guidance documents will result.

2.0 Objective: The objective of this contract is for EAC to obtain assistance with the collection, analysis and interpretation of information regarding HAVA provisional voting and voter identification requirements for the purpose of drafting guidance on these topics for promulgation to the States in time for implementation for the 2006 Federal elections. The anticipated outcome of this activity is the generation of concrete policy recommendations to be issued as voluntary guidance for States.

3.0 Scope: In general the Contractor shall be responsible for all research and analysis activities, including the conduct of public hearings for fact finding and public comment purposes. However, in light of the urgent need to get this work underway, the EAC has scheduled a public hearing on February 23, 2005, on the topic of provisional voting.

010752

An initial framework for provisional voting policy has been set by the court decisions rendered on the election procedures utilized in the 2004 election. The 6<sup>th</sup> Circuit decision, in particular, has drawn some boundaries which must be given due regard in the course of considering future policy alternatives for provisional voting.

Notice of public meetings and hearings is required to be published in the Federal Register. The Contractor shall be responsible for preparing the notice documents, and the EAC will submit the notices and cover the cost of publication. In addition, draft guidance documents must be published in the Federal Register to obtain public comment prior to their adoption. Again, the Contractor will work with the EAC to prepare the draft documents for publication, which the EAC will submit and cover the cost of publication. Comments received will be provided to the Contractor for analysis and incorporation into the final guidance documents, as appropriate.

#### 4.0 Specific Tasks

For ease of reference, following task 4.3 the remaining tasks are listed separately under the headings of Provisional Voting and Voter Identification Requirements. It is understood that the work on these two topics will be conducted essentially concurrently, with Voter Identification activities starting approximately one month after Provisional Voting.

- 4.1 Prepare a project work plan. The Contractor shall prepare and deliver a brief Project Plan not later than 10 days after contract award. This plan shall describe how the Contractor will accomplish each of the project tasks, including a timeline indicating major milestones. A single document will be prepared to include both provisional voting and voter identification tasks. The Plan shall be presented at a project kickoff meeting with the EAC Project Manager.
- 4.2 Submit monthly progress reports. The Contractor shall submit a monthly progress report within 2 weeks of the end of each month. This report shall provide a brief summary of activities performed and indicate progress against the timeline provided in the Project Plan. Any issues that could adversely affect schedule should be identified for resolution. Budget status should also be provided.
- 4.3 Conduct periodic briefings for the EAC. The Contractor shall periodically meet with the EAC Project Manager and the lead Commissioner for this work to discuss research findings and progress. The Project Plan should make allowance for this activity. The number and frequency of briefings will be determined by the Contractor Project Manager and the EAC Project Manager as the work progresses. The Contractor may also be required to periodically brief the full Commission on their work.

#### Provisional Voting

- 4.4 Collect and analyze State legislation, administrative procedures, and court cases. An understanding of the disparities and similarities of how provisional

voting was implemented around the country will provide a baseline for the consideration of future approaches. Seventeen States never had provisional voting before HAVA was enacted, while many other States did. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.

- 4.5 Recommend alternative approaches for future implementation of provisional voting. The Contractor shall conduct a literature review to identify other research results and data available on this topic. The EAC Election Day Survey, for example, contained several questions on provisional voting. The EAC will make these survey data available to the Contractor. Based on their analysis of available research and the results of Task 4.5, the Contractor shall diagnose the problems and challenges of provisional voting implementation and hypothesize alternative approaches.

The Contractor shall assess the efficacy of these alternatives in relation to the following inter-related policy objectives: (1) enabling the maximum number of eligible voters to cast ballots that will be counted; (2) providing procedural simplicity for voters, poll workers, and election officials; (3) minimizing opportunity for voter fraud; and (4) maintaining a reasonable workload for election officials and poll workers. Additional policy considerations may be identified in the course of this research effort. The Contractor shall document and brief these alternatives to the Commission.

- 4.6 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board of Advisors meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.
- 4.7 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.
- 4.8 Arrange one public hearing for receiving public comment on draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the meeting
- 4.9 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

### Voter Identification Requirements

- 4.10 Collect and analyze State legislation, administrative procedures, and court cases. It is assumed that the collection of information for analysis of voter identification requirements will be performed concurrently with the research for Task 4.5. An understanding of the disparities and similarities of how voter identification requirements were implemented around the country will provide a baseline for the consideration of future approaches. A State-by-State compendium of the legislation, procedures, and litigation reviewed shall be delivered along with the analysis results.
- 4.11 Convene a half day public hearing on the topic of voter identification requirements. The Contractor shall be responsible for all aspects of planning and conducting this hearing in consultation with the EAC. The Contractor shall identify three panels of three to four speakers each. The Contractor shall arrange for speaker attendance to include travel and per diem expenses. The EAC will provide publicity for the hearing. The Contractor shall prepare a document summarizing the proceedings and containing all testimony provided.
- 4.12 Recommend alternative approaches for future implementation of HAVA voter identification requirements. The Contractor shall conduct a literature review to identify other research results and data available on this topic. Based on their analysis of available research and the results of Task 5.11, the Contractor shall diagnose the problems and challenges of voter identification and hypothesize alternative approaches. The Contractor shall coordinate with the EAC to identify appropriate policy objectives by which to assess these alternatives. The Contractor shall document and brief these alternatives to the Commission.
- 4.13 Prepare preliminary draft guidance document. Based on the feedback received from the Commission, the Contractor shall prepare a draft guidance document for review and comment by the EAC Board of Advisors. EAC will convene a Board meeting or teleconference for the discussion of this document. The Contractor shall provide the document in advance and participate in the Board meeting to answer questions and record comments.
- 4.14 Revise draft guidance for publication in the Federal Register. The Contractor shall revise the guidance document as appropriate to reflect the comments of the EAC and the Board of Advisors and provide the draft guidance for publication in the Federal Register by the EAC.
- 4.15 Arrange one public hearing for receiving public comment on the draft guidance. This hearing should be scheduled 30 days after the initial publication date. The Contractor shall select the location in consultation with the EAC. No speakers will be required. EAC will handle publicity for the hearing.
- 4.16 Prepare final guidance document for EAC adoption. Review all comments received in response to Federal Register publication and at public hearing and revise guidance document as appropriate. Provide final version to EAC for adoption.

Contract Type. The contract type will be Time and Materials with a ceiling of

6.0 Place of performance. The principal place of performance will be the Contractor's place of business. Meetings and occasional work efforts may be performed at the EAC offices.

7.0 Period of Performance. The period of performance is from date of award until October 28, 2005.

8.0 Schedule of Deliverables:

- Project plan – 10 days after contract award.
- Progress reports – monthly
- Briefings – as required
- Analysis report on provisional voting - TBD
- Alternatives report on provisional voting – TBD
- Preliminary draft guidance on provisional voting - TBD
- Draft guidance on provisional voting for publication – 8/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on provisional voting for EAC adoption – 9/2005
- Analysis report on voter identification requirements – TBD
- Public hearing on voter identification requirements – TBD
- Summary of voter identification requirements hearing - TBD
- Alternatives report on voter identification requirements - TBD
- Preliminary draft guidance on voter identification requirements - TBD
- Draft guidance on voter identification requirements for publication – 9/2005
- Public hearing on draft guidance – 30 days after publication
- Final guidance on voter identification requirements to EAC for adoption – 10/2005

REMAINING STANDARD CONTRACT TERMS TO BE PROVIDED.

Subject: Edited version of the Voter ID statement

Commissioners,

I intended to get this out to you much earlier today, but the day got away from me. After our hearing last week before the House Appropriations Subcommittee and the requests that were made for the draft reports of the Eagleton and Voter Fraud studies, I think that we must take a different approach to addressing the quality of these reports. While it may or may not be our intention to release these documents publicly, we MUST respond to the request made from a Congressional Committee and cannot use FOIA exemptions as FOIA does not apply to them. I believe that it is safe to assume that if we provide these documents to the Committee, even with a letter explaining their predecisional nature, that these documents will be released into the public spectrum. As such, I feel that EAC needs to make a statement regarding the quality of these reports and why we are making (or have made) a decision not to adopt the draft reports that were produced by our contractors.

Thus, I edited the statement that Karen produced with comments that reflect why we will not adopt the Eagleton report. That document is attached below. I would suggest that we put similar statements regarding Eagleton's report and the Voter Fraud draft report into a letter that I am drafting to go to the Committee with the requested documents. I will edit that letter to include similar comments tonight/tomorrow morning and will circulate it to you.

Please let me know if you have any questions, concerns, comments, etc.

Subject: Next draft of the Voter ID statement

Commissioners-

It appears that I may be the latest casualty of the EAC "bug". As such, I'm leaving early today and may or may not be in the office tomorrow.

Jeannie and I have spoken of her getting the next draft of the statement from the four of you and preparing the final edited draft for the tally vote.

I would imagine Tom's office can put together the tally vote for this document and get it to you all tomorrow, if you have been able to reach a consensus on the final document. If this is not seen as urgent

010759

and I am back in the office I will be happy to get the material together for Wednesday.

Thanks

Karen,

I started by adopting all of the changes made to the document that you sent me. Then I made edits. Because they are so extensive, I thought it best to note them in track changes. Once you have had a chance to read them over, you can get rid of the formatting problems by "accepting all changes" to the document.

Karen,

I started by adopting all of the changes made to the document that you sent me. Then I made edits. Because they are so extensive, I thought it best to note them in track changes. Once you have had a chance to read them over, you can get rid of the formatting problems by "accepting all changes" to the document.

Subject Final EAC statement on Voter ID report

Julie/Jeannie-

010767

Attached please find the final version of the EAC statement on the Voter ID report.

As indicated, the Commissioners have asked that you all review this statement for legal accuracy, grammar, syntax, etc, before it is sent to them for final review and approval.

If you could, go ahead and make the edits without track changes (as track changes seem to create printing problems)

Once you all have edited the statement I will send the final version on to them for the tally vote.

Thanks

Hi Tom-

Just checking to see if your Power Point slides might be ready.

When they are, please send them on to me and hit Reply to All as Julie Hodgkins and Amie Sherrill (the Chairman's Special Assistant) would like copies before the presentation.

## **QUESTIONS RAISED BY THE EAC**

- 1. How did states prepare for HAVA's provisional voting requirements?**
- 2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those that did not?**
- 3. How did litigation affect the implementation of Provisional Voting?**
- 4. How effective was provisional voting in enfranchising qualified voters?**
- 5. Did State and local processes provide for consistent counting of provisional ballots?**
- 6. Did local election officials have a clear understanding of how to implement provisional voting?**

## **TO ANSWER THOSE QUESTIONS**

- Surveyed 400 local election officials**
- Reviewed the EAC's Election Day Survey**
- Analyzed states' experience with provisional voting:**
  - use of statewide registration database**
  - treatment of out-of-precinct ballots**
  - use of different approaches to voter ID**
  - consistency**
  - time period allowed for ballot evaluation**
- Collected provisional voting statutes and regulations**
- Analyzed litigation**

## **Variation among the states**

- In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million , or just over 63%, were counted.
- The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.
- The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.

## Some sources of variation among states

### Experience

Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

### Administrative Arrangements

#### Time to evaluate ballots

- States that provided less than one week counted an average of 35.4% of their ballots.
- States that permitted more than 2 weeks counted 60.8%.

#### Voter registration data bases

- States with voter registration databases counted an average of 20% of the provisional ballots cast.
- States without databases counted 44%.]

## **Variation within states**

**Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.**

**Resources available to administer provisional voting varied considerably among and within states.**

**The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.**

**1. How did states prepare for HAVA's provisional voting requirements?**

---

**Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.**

**Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.**

## **2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?**

---

**18 states were new to provisional voting; 25 others had experience.**

**Local election officials in the “old” states felt more confident.**

**Provisional ballots in “old states” : more than 2% of the total vote, 4 times the proportion in “new” states.**

**Counting provisional ballots in the final vote, the “old” states averaged 58% nearly double the average (33%) in “new” states.**

### **Question 3: How did litigation affect the implementation of Provisional Voting?**

---

#### **Pre-election litigation clarified voters' rights to:**

- **Sue in federal court to remedy violations of HAVA**
- **Receive provisional ballots, even though they would not be counted**
- **Be directed to the correct precinct**
- **Most pre-election litigation occurred too late to influence how states implemented provisional voting.**

#### **4. How effective was provisional voting in enfranchising qualified voters?**

---

**Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.**

**The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.**

**There is room for improvement.**

## **Question 5: Did State and local processes provide for consistent counting of provisional ballots?**

Little consistency existed among and within states.

“New” states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).

States that allowed out-of-precinct ballots counted 56% of the provisional ballots, 42% for in-precinct states.

States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.

Less than 1 week:	58.6%
1 – 2 weeks:	65.0%
More than 2 weeks:	73.8%.

**Question 6: Did local election officials have a clear understanding of how to implement provisional voting?**

---

**8 out of 10 county-level elections officials reported receiving instructions from their state government**

**4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities**

**Objectively, how well did the process appear to be managed?**

**Lack of consistency among and within states indicates wide differences in understanding by election officials.**

**The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.**

Subject Extension Needed for Voting Fraud/Voter Intimidation Project  
Consultants

The estimated additional hours needed to bring the Voting Fraud/Voter Intimidation Project to a logical stopping point (without requiring a draft statement of work for any future RFPs on the topic) are:

Expert Interviews:

3 hours of scheduling  
17 hours conducting the interviews  
15 hours summarizing and analyzing the interviews

Subtotal: 35 hours

Nexis research, organization of research, summary of research (Tova): 180 hours  
Lexis research, organization of research, summary of research (Job): 180 hours  
Subtotal: 360 hours

Working Group preparation and meeting time: 20 hours

Final Report: 45 hours

Grand Total: 460

The sooner we find out if the Commissioners will accept this extension, the better. If the extension (or new contract for 3 additional months) is not accepted, we have to figure out what can be done in the limited time remaining. --- Peggy

Subject Definition of Voting Fraud and Voter Intimidation

History:  This message has been replied to.

Attached discusses the definitions that Job and Tova would like to use. I have already taken issue with the exclusion of all voter registration shenanigans and the inclusion of administrative mistakes. Would be pleased to have your feedback and, if possible, your assistance for 15 minutes of a teleconference today (3:30 PM to 3:45 PM). --- Peggy

combined defining Fraud 11-18-05.doc

010786

“Fraud” should be defined as any illegal act that has a clear and direct distorting impact on the election results. It includes adding illegal votes and tampering with vote counts as well as actions such as voter intimidation and deceptive practices that serve to subtract legal votes. Illegally keeping certain voters from voting has the same distorting effect on election outcomes as ineligible voters casting ballots or some form of modern ballot box stuffing. Fraud may involve wrongdoing by individual voters, election workers or organized groups such as campaigns or political parties.

Vote fraud usually breaks down into three categories---intentional fraud, de facto fraud, and quasi-fraud. Research and investigation of fraud should focus on those forms of fraud that are known to have had true impacts on election outcomes.

"Intentional fraud" includes acts that are intentionally planned. Such forms of fraud include the following:

- Absentee/mail ballot fraud, e.g. coercing another voter's choice, use of a false or other voter's name and signature, destruction or misappropriation of an absentee or mail-in ballot
- Ex-felons knowingly and willingly casting illegal ballots
- Knowingly and willingly misleading an ex-felon about his or her right to vote
- Voting more than once
- Noncitizen voting
- Intimidating practices e.g. intimidating signs, inappropriate police presence, abusive/threatening treatment by poll workers or others that deter voters from voting
- Deceptive practices e.g. providing false information to voters about the voting process, such as when and/or where to vote, who is eligible to vote
- Fraud by election administrators in the handling or counting of ballots, misrepresentation of vote tallies
- Vote buying
- Addition or destruction of cast ballots by elections officials
- Intentional wrongful removal of eligible voters from voter registration lists
- Knowingly falsifying registration information pertinent to eligibility to cast a vote, e.g. residence, criminal status, etc.

The second type of fraud is de facto fraud. This occurs when the intent to commit fraud is lacking, but the party or parties' actions results in fraud nonetheless. De facto fraud more often is a result of a misapplication of election statutes or the application of a long established practice or tradition in a way that contradicts the intent of the statute. Examples of de facto fraud include the abusive use of challengers to voter registrations or to voters' eligibility at the polls and wrongful purging of voter lists.

The last form of fraud, "quasi-fraud," is the most difficult to classify as such because the correct law (case law or legislative act) is applied but the result is to deprive voters of their electoral rights. This type of fraud is also the most difficult to catch because it requires both legal electoral expertise and almost always occurs on the day of the election. One example of this is Arkansas supreme court case law making election

statutes mandatory before an election but discretionary after. The discretion is left up to the county board of election commissioners. These are not elected but are either the chairs of the two main political parties or a person elected by the county central committee should the chair decide not to serve. The result is that election statutes are never enforced after the election. It therefore permits past patterns of fraud to persist.

Two areas that are of major concern but do not come within the purview of fraud for the purposes of this type of research are registration forms in the name of another or fake person(s), which from the evidence do not usually result in illegal votes; and electronic vote machine tampering, for which there is as of now no definitive evidence has taken place in a U.S. election.

Subject Voter Fraud Contract

Karen/Tom,

Peggy held a meeting with voting fraud/intimidation contractors. In this meeting they noted that despite the fact that the contract requires them to perform legal research, they do not have the means to do so (no access to Westlaw, etc.). They noted that in discussions with the two of you, they were told that the EAC would provide them access to West Law and, possibly, a law clerk with office space. None of this is noted in the contract. They claim to have never seen the contract? Do we have their response to our RFP? We will all need to meet to clarify this.

Carol:

This updated version is helpful to me but may be problematic for our contractors, who do not have a final contract and (I think) are unaware of the deliverable dates listed in this version. Of course, I did not inform them of these deadlines because I did not have them until today.

Unfortunately, the delay in getting the signed contracts out to our selected contractors has already adversely impacted deliverable dates for the contracts to which I have been assigned. Most contractors cannot hire researchers or commit funds without having a contract in hand, so they have had to delay their work.

Gavin-

A few answers to your questions:

They have not received contracts but did receive a Statement of Work about a month ago.

That Statement of Work does not reference use of Westlaw or a law clerk. I have no recollection of offering such services. I have, however, had many conversations with Tova and Job. At some point I may have said that because the EAC has Westlaw and legal interns, there may or may not be a way from Job and Tova to avail them of these services.

The Statements of Work developed (see draft attached) were used in place of an RFP. Tova and Job are to serve as consultants on a project that may or may not result in their developing an RFP on voting fraud and intimidation for the EAC.

**Subject:** Re: Voting Fraud and Intimidation contract

Tova-

The contracts are completed, although not formally signed by the Chair of the Commission ( a formality)

As discussed, the contract will be for six months-September 26- February 28 for a fixed contract fee of \$50,000 plus and additional \$5,000 for expenses.

\$10,000 has been set aside in the FY 05 EAC budget to cover working group costs.

Gavin Gilmour will be the EAC staff project manager, to whom you and Job will be reporting.

Gavin should be in touch in the next day or so, with more details and specifics related to getting the project started.

Thanks

**EAC CONTRACT #05-66 Consulting Services to Assist EAC  
in the Development of a Voting Fraud and Voter Intimidation Project**

**Background**

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics regarding the identification, deterrance and investigation of voting fraud and voter intimidation in elections for Federal offices. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

The EAC seeks to obtain consulting services from an individual who can provide advice drawn from broad professional and technical experience in the area of voter fraud and intimidation. The EAC needs this consultant to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. If so, the consultant would also be tasked to define the scope of the project and prepare a Statement of Work for the EAC to use for a subsequent competitive procurement. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two consultants, who will work jointly to perform the work described below.

**Nature of the Appointment**

The EAC enters into this contract pursuant to its authority to contract for consultants under 5 U.S.C. §3109 (See 42 U.S.C. §15324(b)). As such this contract is for personal services and creates a limited employment relationship. (See 5 C.F.R. §304). As a result of this unique relationship, and pursuant to this agreement, you are required to follow all Federal laws and regulations as they related to conflicts of interest, the release of agency documents and information, travel and conduct. All research, information, documents and any other intellectual property, (including but not limited to policies, procedures, manuals, and other work created at the request or otherwise while laboring for the EAC) shall be owned exclusively by the EAC, including copyright. All such work product shall be turned over to the EAC upon completion of your appointment term or as directed by the EAC. The EAC shall have exclusive rights over this material. You may not release government information or documents without the express permission of the EAC.

**Supervision and Management.** The EAC Project Manager for this effort is Margaret Sims, EAC Research Specialist. Ms. Sims will provide taskings, and supervise, review and approve all work and performance.

**Period of Appointment, Compensation and Travel.**

The period of appointment under this contract is estimated at six months. The appointment shall constitute intermittent appointment (without a regularly scheduled tour of duty) per 5 C.F.R. §340.401(b). The consultant shall not incur overtime. The consultants shall **not** receive automatic adjustments of pay based upon 5 U.S.C. 5303.

- Deleted: of nationwide statistics and methods of
- Deleted: ying

- Deleted: and identifying, deterring and investigating methods of voter intimidation.
- Deleted: EAC is limited Due to the unavailability of internal staff,
- Deleted: needs
- Deleted:
- Deleted: to
- Deleted: and produce the required deliverables

The consultants are not eligible for sick and annual leave, nor compensation for work performed on federal holidays. The Consultant is expected to work 450 hours during the estimated six month appointment period. These hours must be distributed evenly over the period so that the Consultant is working approximately, but no more than 20 hours per week. The consultant shall be paid at a rate of \$111 per hour. The dates of performance are flexible but shall be based upon the needs of the project and the EAC. The project at issue is sought to be completed within the sixth month period. The period of appointment shall continue until the project, outlined below, is completed.

Consultant's duty station shall be his/her home or place of business. The consultant has access to and shall supply common office equipment to include telecommunications, internet, a computer, office supplies, facsimile machine and common workplace software (including Microsoft Word and Excel). Other resources will be provided by the EAC as needed and at its discretion.

The Consultant is required to travel on a periodic, as needed basis, throughout the duration of their appointment. All travel must be pre-approved by the EAC per Federal Travel Regulations and EAC policy. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, proper incidental expenses, and per diem while on official, pre-approved EAC travel.

**Areas of Responsibility**

1. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections.
2. Using the description developed above, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
3. Work in consultation with other EAC staff and the Commissioners to identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The Working Group will be provided with the results of Tasks 1 and 2 as background information. The consultant will be responsible for developing a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.
4. The consultant shall be responsible for creating a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future research resulting from this effort.
5. Should the EAC decide to pursue one or more of the recommendations made in the report noted above, the consultant will be responsible for defining the

**¶ Work for Hire.** The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.¶

**Termination**

This consultant contract can be terminated without cause in advance of the current end date by two weeks' notice in writing by either of the parties.

**¶ Acceptance of Work Product.** The EAC Project Manager for this effort is Margaret Sims, EAC Research Specialist, who will review and approve all work.¶

**Estimated Project Timetable.**

**¶ Period of Performance and Compensation¶**

The period of performance for this contract is six months, with a cost ceiling of \$50,000 for labor. The Consultant is expected to work at least 450 hours during this period. These hours must be distributed evenly over the period so that the Consultant is working approximately, but no more than 20 hours per week at a rate of \$111 per hour. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, if required. Contractor's duty station shall be his/her place of business.¶

Deliverable	Due Date
Project work plan	10 days after contract award
Progress reports	monthly
Description of voting fraud and voter intimidation	October 2005
Summary of background research and associated source documentation	January 2006
Convene working group	February 2006
Summary report describing findings and recommendations for future EAC research	March 2006
Statement(s) of Work for future research project(s)	TBD

¶ The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. A total of \$5,000 has been allocated ... [1]

Subject Statement of Work to be circulated to the voting fraud/voter  
intimidation consultant candidates

Nicole-

Attached please find the Statement of Work which should be sent to each of the three candidates who are being considered for the consulting position:

Steve A.  
Tova W.  
Job S.

Please be certain they are sent separately and not collectively to all three and that it is sent by COB today.

Thanks so much for your help.

**EAC CONTRACT #05-66 Consulting Services to Assist EAC  
in the Development of a Voting Fraud and Voter Intimidation Project**

**Background**

Section 241 of HAVA lists a number of election administration topics on which the U.S. Election Assistance Commission may elect to do research. In particular, Section 241(b) (6) and (7) state the two topics of nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices; and identifying, deterring and investigating methods of voter intimidation. The EAC Board of Advisors has recommended that the EAC make research on these topics a high priority.

Due to the unavailability of internal staff, EAC needs to obtain consulting services to conduct a preliminary examination of these topics to determine if a larger research project might be warranted. If so, the consultant would also be tasked to define the scope of the project and prepare a Statement of Work for the EAC to use for a subsequent competitive procurement. To promote a balanced and non-partisan approach to this effort, EAC is contracting with two consultants, who will work jointly to perform the work described below and produce the required deliverables.

**Tasks**

1. Develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections. Submit this description to the EAC for review and approval.
2. Using the description developed in Task 1, perform background research, including both Federal and State administrative and case law review, and a summation of current activities of key government agencies, civic and advocacy organizations regarding these topics. Deliver a written summary of this research and all source documentation.
3. In consultation with EAC, identify a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. Provide the Working Group with the results of Tasks 1 and 2 as background information. Develop a discussion agenda and convene the Working Group with the objective of identifying promising avenues for future research by EAC.
4. Prepare a report summarizing the findings of this preliminary research effort and Working Group deliberations. This report should include any recommendations for future research resulting from this effort.

010802

**Deliberative Process  
Privilege**

5. Should the EAC decide to pursue one or more of the Task 4 recommendations, Consultant shall define appropriate project scope(s) and prepare Statement(s) of Work sufficient to issue for competitive procurement.

### **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

Acceptance of Work Product. The EAC Project Manager for this effort is Margaret Sims, EAC Research Specialist, who will review and approve all work.

### **Period of Performance and Compensation**

The period of performance for this contract is six months, with a fixed price ceiling of \$50,000 for labor. The Consultant is expected to work at least 450 hours during this period. The EAC suggests that these hours be distributed evenly over the period so that the Consultant is working approximately 20 hours per week. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, if required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. A total of \$5,000 has been allocated for reimbursement for travel and other allowable expenses.

### **Invoicing**

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

### **Contract Termination**

This contract can be terminated in advance of the current end date by two weeks' notice in writing by either of the parties.

**Deliverables and Timetable**

Deliverable	Due Date

Statement(s) of Work for future research project(s)	TBD

## **Statement of Work**

### **Assistance with developing an Election Assistance Commission (EAC) Voting Fraud and Voter Intimidation Project**

**(Job Serebrov)**

#### **Background**

Section 241 of HAVA enumerates a number of periodic studies of election administration issues in which the U.S. Election Assistance Commission may elect to engage. In general “On such periodic basis as the Commission may determine, the Commission shall conduct and make available to the public studies regarding the election administration issues described in subsection (b)”

Sections 241(b) (6) and (7) list the following election administration issues:

(6) Nationwide statistics and methods of identifying, deterring and investigating voting fraud in election for Federal offices.

(7) Identifying, deterring and investigating methods of voter intimidation.

Building on this HAVA reference to studies of voting fraud and voter intimidation, the EAC Board of Advisors has indicated that further study of these issues to determine how the EAC might respond to them is a high priority.

The U.S. Election Assistance Commission (EAC) seeks to identify one or more senior-level project consultants to develop various project activities and studies related to voting fraud and voter intimidation affecting Federal elections.

The consultant(s) must have knowledge of voting fraud and voter intimidation along with an understanding of the complexities, nuances and challenges which surround the topics. The EAC is particularly interested in candidates with experience in elections, with public policy and with the law. The consultant (s) must be able to demonstrate an ability to approach the issues of voting fraud and voter intimidation in a balanced, nonpartisan fashion.

## **Duties**

The consultant(s), whose contract would run for the period September-February, 2005, would be responsible for the following.

1. Identifying what constitutes voting fraud and voter intimidation affecting Federal elections.
2. Performing background research, including Federal and state-by state administrative and case law review related to voting fraud and voter intimidation, and a review of current voting fraud and voter intimidation activities taking place with key government agencies, civic and advocacy organizations. A written summary of this research, and a copy of any source documentation used, will be presented to EAC.
3. Identifying, in consultation with EAC, and convening a working group of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation. The working group's goals and objectives and meeting agendas will be vetted with key EAC staff.
4. Developing a project scope of work and a project work plan related to voting fraud and voter intimidation. The consultants (s) will develop a draft scope of work and project work plan for EAC's consideration based on research into the topics, the deliberations and findings of the working group, and the consultants' understanding of EAC's mission and agency objectives.
5. Authoring a report summarizing the key findings of this preliminary study of voting fraud and voter intimidation. The report will also include suggestions for specific activities that EAC may undertake to address these topics.

From this initial research and exploration of these topics the consultant (s) may be retained to help oversee follow-on research projects and contracts EAC may pursue on the topics of voting fraud and voter intimidation.

## **Special Considerations**

Work for Hire. The services performed under the terms of this agreement are considered "work for hire," and any intellectual property or deliverables, including but not limited to, research, policies, procedures, manuals, and other works submitted; or which are specified to be delivered; or which are developed or produced and paid for by EAC, shall be owned exclusively by EAC, including copyright. EAC or its assignees have the exclusive right to reproduce all work products from this agreement without further payment to the Contractor.

### **Terms and Conditions**

The period of performance for this consulting contract is six months, with a fixed price ceiling of \$XXXXXX for labor. The consultant (s) is expected to work at least 200 hours in performing this work. The EAC estimates that the most efficient distribution of these hours would be as follows: XXXXXX. The period of performance and level of effort can be revised in writing by mutual agreement of the EAC and the consultant, as required.

The Consultant is required to travel to the EAC Washington, D.C. offices on a periodic, as needed basis, throughout the duration of the contract. The Consultant will be reimbursed, at the Federal government rates, for hotel and ground transportation costs, other approved incidental expenses, and per diem costs while working on-site at the EAC offices. An estimated \$XXXXXX has been allocated for reimbursement for travel and other allowable expenses.

### **Invoicing**

Invoices may be submitted monthly in equal payments for labor. Expenses claimed for reimbursement shall be itemized with appropriate receipts provided. Invoices shall be delivered to Ms. Diana Scott, Administrative Officer, U.S. Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington DC 20005.

### **Deliverables and Timetable**

**Subject:** Voter Fraud Contract

Karen/Tom,

Peggy held a meeting with voting fraud/intimidation contractors. In this meeting they noted that despite the fact that the contract requires them to perform legal research, they do not have the means to do so (no access to Westlaw, etc..). They noted that in discussions with the two of you, they were told that the EAC would provide them access to West Law and, possibly, a law clerk with office space. None of this is noted in the contract. They claim to have never seen the contract? Do we have their response to our RFP? We will all need to meet to clarify this.

Subject Re: Definition of Voting Fraud and Voter Intimidation 

Peggy,

Per our discussion, I have some initial concerns regarding the definitions that have been proposed.

1. Fraud is a legal term of art. Fraud is an intentional act or omission (i.e. actual fraud or constructive fraud) of misrepresentation or deceit. There is no such thing as defacto fraud or quasi fraud. Fraud must be intentional.... negligence alone is not fraud.

The general definition of voter fraud must concise and universally applicable (this in the challenging part). After this definition is created and intellectually tested, one can then create examples and explanations. These would 1) apply the definition to the entire election process (from beginning to end) and (2) apply it to action by voters, 3rd parties and election officials. Through this process a determination may be made regarding whether three definitions are needed or just one.

2. The document has no definition of voter intimidation. What is voter intimidation and how does it differ from voter fraud? I assume this would also be an intentional act.

3. Definitions need to be concise and tight. Such definitions need to be able to be broken down into elements. Each of these elements must have clear, applicable and enforceable meaning. This can be a challenge. For example use of the term "any illegal act" is unclear, begs the question and suggests that fraud only occurs in the course of committing a related crime.

These are just my initial thoughts.

Subject Definition of Voting Fraud and Voter Intimidation

Attached discusses the definitions that Job and Tova would like to use. I have already taken issue with the exclusion of all voter registration shenanigans and the inclusion of administrative mistakes. Would be pleased to have your feedback and, if possible, your assistance for 15 minutes of a teleconference today (3:30 PM to 3:45 PM). --- Peggy

combined defining Fraud 11-18-05.doc

010817

“Fraud” should be defined as any illegal act that has a clear and direct distorting impact on the election results. It includes adding illegal votes and tampering with vote counts as well as actions such as voter intimidation and deceptive practices that serve to subtract legal votes. Illegally keeping certain voters from voting has the same distorting effect on election outcomes as ineligible voters casting ballots or some form of modern ballot box stuffing. Fraud may involve wrongdoing by individual voters, election workers or organized groups such as campaigns or political parties.

Vote fraud usually breaks down into three categories---intentional fraud, de facto fraud, and quasi-fraud. Research and investigation of fraud should focus on those forms of fraud that are known to have had true impacts on election outcomes.

“Intentional fraud” includes acts that are intentionally planned. Such forms of fraud include the following:

- Absentee/mail ballot fraud, e.g. coercing another voter’s choice, use of a false or other voter’s name and signature, destruction or misappropriation of an absentee or mail-in ballot
- Ex-felons knowingly and willingly casting illegal ballots
- Knowingly and willingly misleading an ex-felon about his or her right to vote
- Voting more than once
- Noncitizen voting
- Intimidating practices e.g. intimidating signs, inappropriate police presence, abusive/threatening treatment by poll workers or others that deter voters from voting
- Deceptive practices e.g. providing false information to voters about the voting process, such as when and/or where to vote, who is eligible to vote
- Fraud by election administrators in the handling or counting of ballots, misrepresentation of vote tallies
- Vote buying
- Addition or destruction of cast ballots by elections officials
- Intentional wrongful removal of eligible voters from voter registration lists
- Knowingly falsifying registration information pertinent to eligibility to cast a vote, e.g. residence, criminal status, etc.

The second type of fraud is de facto fraud. This occurs when the intent to commit fraud is lacking, but the party or parties’ actions results in fraud nonetheless. De facto fraud more often is a result of a misapplication of election statutes or the application of a long established practice or tradition in a way that contradicts the intent of the statute. Examples of de facto fraud include the abusive use of challengers to voter registrations or to voters' eligibility at the polls and wrongful purging of voter lists.

The last form of fraud, "quasi-fraud," is the most difficult to classify as such because the correct law (case law or legislative act) is applied but the result is to deprive voters of their electoral rights. This type of fraud is also the most difficult to catch because it requires both legal electoral expertise and almost always occurs on the day of the election. One example of this is Arkansas supreme court case law making election

010818

statutes mandatory before an election but discretionary after. The discretion is left up to the county board of election commissioners. These are not elected but are either the chairs of the two main political parties or a person elected by the county central committee should the chair decide not to serve. The result is that election statutes are never enforced after the election. It therefore permits past patterns of fraud to persist.

Two areas that are of major concern but do not come within the purview of fraud for the purposes of this type of research are registration forms in the name of another or fake person(s), which from the evidence do not usually result in illegal votes; and electronic vote machine tampering, for which there is as of now no definitive evidence has taken place in a U.S. election.

# BEST PRACTICES

## **The importance of clarity**

EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. Does the provisional ballot system:

1. Distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
2. Place administrative demands on local jurisdictions that are realistically related to the staff and other resources available?
3. Display variation within the state great enough to cause concern that the system may not be administered uniformly from county to county?

# **Lessons of litigation for achieving clarity**

Look to litigation from the 2004 election to shape new statutes or regulations that will increase the clarity of provisional voting procedures, increase predictability, and bolster confidence in the system.

1. Litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted.
2. Lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

## EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide materials for local jurisdictions to train poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.
  - Provide poll workers the training they need to understand their duty to give those voters a provisional ballot.

## Assess each stage of the provisional voting process

### Before the election

- Clear information for voters on websites and in sample ballots.
- Training materials in every jurisdiction make poll workers familiar with the options available to voters.

### At the polling place

- Design of provisional ballot
- Estimate supply of provisional ballots needed at polling places

### Evaluating provisional ballots

- Define and adopt a reasonable period for voters who lack ID or other eligibility information bearing to provide it.
- A voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.
- Follow written procedure or checklist to record why a provisional ballot is rejected.

## **Assess each stage of the provisional voting process**

### **Post-election**

Best practice is for states to consider how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available in presidential elections.

Provide timely information to voters about the disposition of their provisional ballot.

- Are they now registered for future elections?
- If not, what they need to do to become registered?

### **Conclusion**

This systematic analysis constitutes a quality improvement program for provisional voting, one that holds promise for every state.

## **QUESTIONS RAISED BY THE EAC**

- 1. How did states prepare for HAVA's provisional voting requirements?**
- 2. How did preparation and performance vary between states that had previously had some form of Provisional Ballot and those that did not?**
- 3. How did litigation affect the implementation of Provisional Voting?**
- 4. How effective was provisional voting in enfranchising qualified voters?**
- 5. Did State and local processes provide for consistent counting of provisional ballots?**
- 6. Did local election officials have a clear understanding of how to implement provisional voting?**

## TO ANSWER THOSE QUESTIONS

- Surveyed 400 local election officials
- Reviewed the EAC's Election Day Survey
- Analyzed states' experience with provisional voting:
  - use of statewide registration database
  - treatment of out-of-precinct ballots
  - use of different approaches to voter ID
  - consistency
  - time period allowed for ballot evaluation
- Collected provisional voting statutes and regulations
- Analyzed litigation

## Variation among the states

In 2004 nationwide about 1.9 million provisional ballots cast, 1.2 million, or just over 63%, were counted.

The percentage of provisional ballots in the total vote varied by a factor of 1,000 -- from a high of 7% in Alaska to Vermont's 0.006%.

The portion of provisional ballots cast that were counted ranged from 96% in Alaska to 6% in Delaware.

## Some sources of variation among states

### Experience

Share of provisional ballots in the total vote was 6 times greater in states that had used provisional ballots before than in states where the provisional ballot was new.

### Administrative Arrangements

#### Time to evaluate ballots

- States that provided less than one week counted an average of 35.4% of their ballots.
- States that permitted more than 2 weeks counted 60.8%.

#### Voter registration data bases

- States with voter registration databases counted an average of 20% of the provisional ballots cast.
- States without databases counted 44%.]

## Variation within states

Rate of counting provisional ballots varied by as much as 90% to 100% among counties in the same state.

Resources available to administer provisional voting varied.

--The Election Day Study found that staffing problems appeared to be particularly acute for jurisdictions in the lowest income and education categories.

--Small, rural jurisdictions and large, urban jurisdictions reported higher rates of an inadequate number of poll workers

--Jurisdictions in poor areas reported more inactive voter registrations and more provisional ballots cast.

--Richer areas had more poll workers per polling place and reported lower rates of staffing problems per precinct.

**1. How did states prepare for HAVA's provisional voting requirements?**

---

**Most election officials received provisional voting instructions from state government. The type and amount of instruction received varied widely across the states.**

**Almost all provided training or written instruction to precinct-level poll workers on how to administer provisional ballots.**

- **Only about 1 in 10 made available to poll workers a voter registration database.**

- **Almost equally rare were training and written procedures for poll workers on the counting of provisional ballots.**

**2. How did preparation and performance vary between states that had previously had some form of provisional ballot and those that did not?**

---

**Local election officials in the “old” states felt more confident.**

**18 states were new to provisional voting; 25 others had experience.**

**“New” state officials felt:**

**-- Voters did not receive enough information about where to cast a provisional ballot in order to be counted.**

**-- More funding was needed to educate voters about their rights to cast a provisional ballot.**

**Provisional ballots in “old states” : more than 2% of the total vote, 4 times the proportion in “new” states.**

**Counting provisional ballots in the final vote, the “old” states averaged 58% nearly double the average (33%) in “new” states.**

### **Question 3: How did litigation affect the implementation of Provisional Voting?**

---

#### **Pre-election litigation clarified voters' rights to:**

- **Sue in federal court to remedy violations of HAVA**
- **Receive provisional ballots, even though they would not be counted**
- **Be directed to the correct precinct**
- **Most pre-election litigation occurred too late to influence how states implemented provisional voting.**

#### **4. How effective was provisional voting in enfranchising qualified voters?**

---

**Provisional ballots enfranchised 1.2 million voters, or 1.01% of turnout, who otherwise would have been turned away.**

**The number of voters who could be helped by provisional voting may be about 2.5 – 3 million. Provisional voting might be about 50% effective.**

**There is room for improvement.**

**Legislative activity gives evidence that states were not satisfied with the effectiveness of their provisional voting systems.**

**Those voting with provisional ballots in states with experience were enfranchised more frequently than those in the “new” states.**

**Question 5: Did State and local processes provide for consistent counting of provisional ballots?**

---

Little consistency existed among and within states.

The use of provisional ballots was not distributed evenly across the country. A few states accounted for most of the ballots cast.

Share of provisional ballots in the total vote was six times greater in experienced states than in new states.

More rigorous the state's Voter ID requirements the smaller the percentage of provisional ballots that were counted.

“New” states with registration databases counted 20% of the ballots cast. Those without databases counted more than double that rate (44%).

**Question 5: Did State and local processes provide for consistent counting of provisional ballots?**

**In-precinct versus out-of-precinct states had different outcomes.**

**States that allowed out-of-precinct ballots counted 56% of the provisional ballots.**

**States that recognized only ballots cast in the proper precinct counted an average of 42% of provisional ballots cast.**

**In “old” states, this difference was greater.**

**52% of ballots cast were counted in states requiring in-district ballots, 70% were counted in those allowing out-of-precinct ballots.**

## Question 5: Did State and local processes provide for consistent counting of provisional ballots?

States that provide a longer the time to evaluate provisional ballots counted a higher proportion of those ballots.

---

14 states permitted less than 1 week :	35.4%
15 states permitted 1 – 2 weeks:	47.1%
14 states permitted more than 2 week:	60.8%.

Effect felt most strongly in states where more than 1% of the overall turnout was of provisional ballots.

---

Less than 1 week:	58.6%
1 – 2 weeks:	65.0%
More than 2 weeks:	73.8%.

**Question 5: Did State and local processes provide for consistent counting of provisional ballots?**

**Conclusions**

**States have latitude in how they meet HAVA requirements.**

**A considerable degree of variation among the states is to be expected.**

**If that variation stems from differences in political culture among the states, it is likely to persist. If it reflects a learning curve for “new” states, consistency may increase more quickly.**

**Question 6: Did local election officials have a clear understanding of how to implement provisional voting?**

---

**8 out of 10 county-level elections officials reported receiving instructions from their state government**

**4 out of 10 local election officials felt poll workers needed more training to understand their responsibilities**

**Objectively, how well did the process appear to be managed?**

**Lack of consistency among and within states indicates wide differences in understanding by election officials.**

**The number of states that have amended statutes on provisional voting to include poll worker training is a sign of dissatisfaction with the level of understanding in 2004.**

# BEST PRACTICES

## **The importance of clarity**

EAC should emphasize the importance of clarity in the rules by which each state governs provisional voting. Does the provisional ballot system:

1. Distribute, collect, record, and tally provisional ballots with sufficient accuracy to be seen as procedurally legitimate by both supporters and opponents of the winning candidate?
2. Place administrative demands on local jurisdictions that are realistically related to the staff and other resources available?
3. Display variation within the state great enough to cause concern that the system may not be administered uniformly from county to county?

# **Lessons of litigation for achieving clarity**

Look to litigation from the 2004 election to shape new statutes or regulations that will increase the clarity of provisional voting procedures, increase predictability, and bolster confidence in the system.

1. Litigation clarified the right of voters to receive provisional ballots, even though the election officials were certain they would not be counted.
2. Lawsuits prompted election officials to take better care in instructing precinct officials on how to notify voters about the need to go to the correct precinct in order to cast a countable ballot.

## EAC should recommend to the states that they:

- Promulgate clear standards for evaluating provisional ballots, and provide training for the officials who will apply those standards.
- Provide materials for local jurisdictions to train poll workers on such procedures as how to locate polling places for potential voters who show up at the wrong place.
- Make clear that the only permissible requirement to obtain a provisional ballot is an affirmation that the voter is registered in the jurisdiction and eligible to vote in an election for federal office.
  - Provide poll workers the training they need to understand their duty to give those voters a provisional ballot.

## EAC should recommend quality improvement

Begin a systematic quality improvement program by collecting data on the provisional voting process. Data collected should include:

- Specific reasons why provisional ballots were not counted
- Measures of variance among jurisdiction
- Time required to evaluate ballots by jurisdiction
- Provisional votes cast and counted by jurisdiction

## **Assess each stage of the provisional voting process**

### **Before the election**

- Clear information for voters on websites and in sample ballots.
- Training materials in every jurisdiction make poll workers familiar with the options available to voters.

### **At the polling place**

- Design of provisional ballot
- Estimate supply of provisional ballots needed at polling places

### **Evaluating provisional ballots**

- Define and adopt a reasonable period for voters who lack ID or other eligibility information bearing to provide it.
- A voter's provisional ballot should count so long as the voter cast that ballot at the correct polling site even if at the wrong precinct within that location.
- Follow written procedure or checklist to record why a provisional ballot is rejected.

## Assess each stage of the provisional voting process

### Post-election

Best practice is for states to consider how to complete all steps in the evaluation of ballots and challenges to those determinations within the five weeks available in presidential elections.

Provide timely information to voters about the disposition of their provisional ballot.

- Are they now registered for future elections?
- If not, what they need to do to become registered?

Subject

Julie,

I just called Dan Tokaji at Moritz and found that he is traveling to a meeting in New Orleans today. I'll try to catch him by Blackberry to review your request for a presentation at the Pasadena meeting.

Below is the editorial from today's New York Times.

Tom

July 20, 2005

## Georgia's Undemocratic Voter Law

Georgia has passed a disturbing new law that bars people from voting without government-issued photo identification and seems primarily focused on putting up obstacles for black and poor voters. The Justice Department is now weighing whether the law violates the Voting Rights Act. Clearly it does, and it should be blocked from taking effect.

The new law's supporters claim that it is an attempt to reduce voter fraud, but Secretary of State Cathy Cox has said she cannot recall a single case during her tenure when anyone impersonated a voter.

In the same period, she says, there have been numerous allegations of fraud involving absentee ballots. But the Georgia Legislature has passed a law that focuses on voter identification while actually making absentee ballots more prone to misuse.

The new law will make it harder for elderly Georgians to vote as well. It has been estimated that

010853

more than 150,000 older Georgians who voted in the 2004 presidential election do not have driver's licenses, and are unlikely to have other acceptable forms of identification. According to census data, black Georgians are far less likely to have access to a car than white Georgians, so they are at a distinct disadvantage when driver's licenses have an important role in proving people's eligibility to vote.

Under the Voting Rights Act, Georgia's law must be cleared by the Justice Department before it can take effect. There can be little doubt that the law would have "the effect of denying or abridging the right to vote on account of race," and it therefore must be rejected. But in the current Justice Department, there is a real danger that this decision will be based on politics rather than law.

Georgia's new identification requirement is part of a nationwide drive to erect barriers at the polls. Indiana also recently passed a new photo-identification requirement, and several other states, including Ohio, are considering the addition of such requirements.

There are many steps states can take to reduce election fraud. But laws that condition voting on having a particular piece of identification that many eligible voters do not possess have no place in a democracy.

Subject Voter ID in Arizonz

Julie,

The article below is an excellent summary of the current debate over Voter ID in Arizona. Reading it might make good preparation for the July 28 public meeting –it nails the issues in dispute very clearly.

Tom O'Neill

## Plan to set Prop. 200's vote rules draws fire

*Dispute involves how many, what type of ID*

**Elvia Díaz and Robbie Sherwood**

The Arizona Republic  
Jul. 18, 2005 12:00 AM

County election officials from across Arizona are speaking out against a new plan to comply with Proposition 200's voter-identification requirement, predicting it would result in long lines at the polls, create trouble recruiting workers and force some registered voters to be turned away.

Secretary of State Jan Brewer, a Republican, and Attorney General Terry Goddard, a Democrat, negotiated the new rules this month, but they still need approval from Gov. Janet Napolitano and the U.S. Justice Department.

Proposition 200 carried a vague requirement that voters produce identification to cast a ballot in person. But Brewer, Goddard and Napolitano have been bickering over how to implement the mandate. The agreement is an attempt to settle some of their differences.

The plan calls for voters to be given more ways to prove their identity than under previous proposals. But those lacking Proposition 200-compliant identification would not be able to cast even a provisional ballot, despite their names appearing on the voter registration list. Under the old rules, voters whose names were left off of the roster in their voting district were allowed to cast a provisional ballot without providing identification. Workers verified the votes before they were counted.

County election officials and Latino leaders say that voters whose names appear on the rolls, but who don't carry identification or who may have had it lost or stolen, should be given a provisional ballot at the polls so their identity can be verified later. That way, registered voters who may lack the proper ID would not be disenfranchised.

Under the proposed new rules, voters would need to show one piece of photo identification with a current address or at least two forms of non-photo ID containing a current address. Those could include utility and cellphone bills, tribal enrollment and Indian census cards, or bank and credit-union statements.

Pima County Recorder F. Ann Rodriguez said a plan that potentially could disenfranchise registered voters would be unconstitutional and could spark lawsuits. Rodriguez was among election officials from 10 of the state's 15 counties to express concerns or suggest changes to Brewer's proposal, according to documents obtained by *The Arizona Republic*.

"It's going to hurt people who tend to move a lot, young people who all live together with the utilities in just one

010855

name," Rodriguez said. "We have a few legislators who really don't know what we really do internally in conducting elections trying to create law where they don't know the total ramifications."

Rodriguez argued that any photo ID with a name and address, not just government-issued IDs, should be acceptable. And any mail delivered to a voter's registered address by the U.S. Postal Service should also be allowed to help prove a voter's identity.

Deputy Secretary of State Kevin Tyne, however, dismissed some of the criticisms as "mostly political."

"Some of them (county recorders) were opposed to Prop. 200 from the get-go," Tyne said. "This is a first draft. It's not a done deal."

## **Problems at the polls**

Coconino County Recorder Candy Owens concluded that even she would face problems meeting the voting provision.

"I approached this from a scientific method and looked at what I had in my own purse," Owens said in a letter to Brewer. "My driver's license is 1995 and has the wrong address on it, even though I have changed (it) in the system at DMV."

She added, "I have my voter- ID card and my checkbook and nothing else I have in my wallet has (an) address on it."

Rodriguez and other recorders also expressed anger that Brewer gave them only three working days to comment on the plan, unveiled June 30.

Rodriguez said the "unreasonably short time period" effectively excludes county officials from carefully considering and discussing the matter.

Others echoed Rodriguez's concerns, adding that the election procedures as outlined by Brewer would result in confusion among poll workers and ultimately deny many Arizona citizens the right to vote.

Penny L. Pew, Apache County elections director, said many of the 33,000 registered voters living on Native American lands could be disenfranchised under the proposed plan.

"In many instances, a person could travel over 50 miles to their polling place and not have proper ID and be turned away without voting," Pew said in a letter to Brewer.

## **Addressing the concerns**

Pew and others point to the difficulty of individuals in rural Arizona to obtain the type of ID that would be required. Also, many elderly citizens would be affected because they live with relatives and thus don't have identification with their names and address on it, Pew said. The solution? Let voters lacking proper ID cast a provisional ballot.

Goddard and Tyne said the proposed procedures are just a draft and that they are addressing the concerns raised by the county recorders.

"It's not the final draft," Goddard said, adding that Brewer made a good attempt to outline the initial guidelines. "We all want to see this done as quickly as possible so it can be tested."

The Proposition 200 provisions were supposed to go into effect before municipal elections earlier this year, but no agreement could be reached on how they would be carried out.

Approved by voters in November, Proposition 200 was designed to combat voting fraud, particularly among undocumented immigrants, and save the state millions annually by denying benefits to people in the country illegally.

So far, Arizonans have had to produce proof of citizenship only when registering to vote. They have not been required to present identification while voting in person.

## **Much work remains**

Goddard, Brewer and other key leaders worked out a plan but they agree much work remains to determine exactly what forms of ID cards will be acceptable to vote in person.

Goddard believes it is still possible to have the new guidelines in time for the Phoenix's Sept. 13 City Council elections so they could serve as a test run before the much larger elections next year.

But he acknowledged that the earliest voters could realistically be required to produce ID is during the November election when, for instance, Phoenix may have a runoff.

Rodriguez argued that Proposition 200 places no limitation on the types of acceptable photo identification. Limiting the forms of identification would affect the elderly, Native Americans and college students, she said.

For instance, many students and young adults live in apartments or college dorms with multiple tenants, and typically one person gets the utility bill, she said.

"Likewise, not all young adults choose to operate a car or obtain an DMV issued identification card," she said. "Those still living at home with their parents will not have any utilities issued in their names."

Ana Wayman-Trujillo, Yavapai County recorder, questions whether it would be necessary to do background checks on poll workers because they would have access to voters' personal information. It would be harder to recruit poll workers, usually hired to work just on Election Day.

"This obviously will slow down the process at the polls, with many constituents as well as poll workers getting frustrated and walking away from the polls," she said.

### **Latino leaders' concerns**

Arizona election officials aren't the only ones raising concerns about the voting requirements. Latino leaders say the requirements won't meet the federal voting rights laws because many eligible voters would be denied the right to cast a ballot.

"It going to be disastrous for Arizona," said Steve Reyes, an attorney with the Mexican American Legal Defense and Educational Fund. "It would disenfranchise the majority of Arizona voters regardless of race."

He suggests allowing provisional ballots. Reyes said those in charge of drafting the new rules have failed to seek the opinions of Arizonans in general and Latinos in particular.

Rep. Steve Gallardo, D-Phoenix, is also against the proposal, saying many elderly Arizonans, college students and Native Americans may lack the proper ID to vote.

"We all agree in protecting the integrity of our elections," said Gallardo, suggesting provisional ballots without ID are necessary to give eligible voters the chance to vote.

"The issue is how to do that without disenfranchising voters."

Subject Response Requested - EAC voter ID report

Karen,

We need to publish an FR notice early tomorrow regarding the next public meeting. In light of the recent matter regarding voter fraud, I want to be sure to accurately describe what's happening with the voter ID report item contained in the draft agenda. Please add some perspective about what will and will not be discussed and what, if any, action might be expected. The draft agenda says the following: "Presentation of Eagleton ID Report - "Best Practices to Improve Voter Identification Requirements," John Weingarten, Rutgers University (Time allotted 7-10 minutes; Q & A 5 min.)". What stage are we with this ? (preliminary, final, NOTA, etc.) Just trying to stay ahead of the curve,

Thanks,  
Bryan

## U.S. Election Assistance Commission Public Meeting Agenda

1225 New York Avenue, NW  
Suite 150  
Washington, DC  
Thursday, February 08, 2007  
10:00 AM – 1:00 PM EST

**Call to Order** (Chair Davidson) (1 minute)

**Pledge of Allegiance** (Chair Davidson) (1 minute)

**Roll Call** (1 minute)

**Adoption of Agenda** (Chair Davidson) (2 minutes)

**Welcoming Remarks** (Chair Davidson) (2-3 minutes)

### **OLD BUSINESS:**

- **Correction and Approval of Minutes from the December 07, 2006 Meeting** (Chair Davidson) (1-3 minutes)
- **Report of the Executive Director** (Thomas Wilkey) (5-15 minutes)

10:25 AM approximate time

### **NEW BUSINESS:**

- **Update on EAC/NIST Laboratory Accreditation Program**
  - Brian Hancock, EAC (Time allotted 7-10 minutes; Q & A 10 min.)
  - Mary Saunders, NIST (Time allotted 7-10 minutes; Q & A 10 min.)
- **Presentation of Eagleton ID Report – “Best Practices to Improve Voter Identification Requirements,”**
  - John Weingarten, Rutgers University (Time allotted 7-10 minutes; Q & A 5 min.)

**11:20 AM Break (10 minutes)**

- **EAC Audit Process**
  - **Curtis Crider, EAC Inspector General, (Time allotted 5-7 minutes; Q & A 5 min.)**
  - **Roger LaRouche, EAC Assistant Inspector General (Time allotted 5-7 minutes; Q & A 5 min.) Note: Curtis is asking Roger if he wants to participate since he has been at EAC so much longer.**
- **State Observations - EAC Program**
  - **Texas: Dan Glotzer, HAVA Grant Manager (Time allotted 7-10 minutes; Q & A 5 min.)**
  - **Awaiting recommendations by Curtis (Time allotted 7-10 minutes Q & A 5 min.)**

**Approximate time: 12:20 PM**

**Commissioners' Closing Remarks (Time allotted 20 minutes)**

**Adjournment (Approximately 12:45 PM)**

Jeannie:

We should have copies of the personal services contracts between EAC and Tova Wang and Job Serebrov in our contract files. (Each had an agreement for FY05 and for FY06 --- four agreements altogether). I have written on my working file copies, so they would be no good. There were no RFPs.

I have scads of email with Tova and Job, and limited correspondence with project working group members. I will forward the little email I can access now via a separate email. I cannot access the vast majority of the emails right now because my computer crashes every time I try to access my archived documents. (I'll check with Henry to find out how long it will take to fix this problem.) Some of these emails include documents that comprise the final report submitted by Job and Tova, so this would be a back door way for the FOIA requester to obtain that report. Copies of the only letter sent to the working group members are attached.

Karen Lynn-Dyson may also have some communications with Job and Tova, as she started out as the project manager before I took over. She also has been the person who dealt with the Eagleton Institute of Politics on the voter ID study. There also is a letter from then Chair Hillman to Donsanto. If Sheila cannot locate it, I can make a copy from my work file copy tomorrow.

In your opinion, does this request include copies of emails between EAC staff persons?

Subject FOIA Request

Hello everyone,

I need each of you to respond affirmatively or negatively to the FOIA request below. **If you have no documents in your possession related to this request, please reply to me with the words "no records."**

010862

If you have records, please identify them in an e-mail reply and attach them to the e-mail. If the document is not electronic, hand deliver them to me. Also, if you believe any of these related documents should be withheld, please provide a brief memo stating the reason for your position.

I need this information and/or a response by **COB December 5, 2006**. If you cannot comply by this date, please provide notification and an estimated time when you will provide the information and the reason why you cannot comply by the original deadline. Thanks for your cooperation. See request below:

Wendy Weiser of the Brennan Center for Justice has submitted a FOIA request for the voting fraud report prepared by our consultants and the voter ID report, as well as the following information:

"In the event that the EAC denies my renewed request for the voter ID and voting fraud reports or delays another week in providing those materials, we respectfully request copies of (1) all requests for proposals and contracts relating to the voter ID and voting fraud reports; and (2) all written and electronic communications concerning the voter ID and voting fraud reports between the EAC and (a) the Eagleton Institute of Politics, (b) the Moritz College of Law, (c) Tova Wang, (d) Job Serebrov, and (e) any other individuals or entities, including but not limited to outside reviewers."

Please let me know if you would like a copy of the FOIA request.

Subject Tova and Job

History:

 This message has been replied to.

Julie;

I had a call from Tova who had a call from Job on what are plans are for the report.

I think it would be a good idea for us to have a brief meeting with them early next week so that both understand what we are doing here.

I told her we had found some interesting things they has assembled...but I think it would be good to "clear the air " with both of them

Thanks

Tom

**From:** Karen Lynn-Dyson  
**Sent:** 05/01/2006 02:58 PM  
**To:** Thomas Wilkey; Juliet Thompson-Hodgkins  
**Subject:** E-mail to Voter ID peer reviewers

Tom and Julie-

Please take a look at this draft e-mail and let me know if it captures all that it needs to.

Would like to get this out ASAP- appreciate your feedback..

Dear Jonathan Nagler  
Dear Jan Leighley  
Dear Adam Berinsky

On behalf of the U.S. Election Assistance Commission (EAC), thank you in advance for agreeing to assist us with the review of research conducted by the Eagleton Institute of Politics on voter identification. By **Friday, May 5, 2006**, you will receive, in electronic form, the research paper and relevant data analysis which supports the paper's findings. Through this independent review by a small group of experts familiar with elections data and research we are seeking feedback on:

- The research methodology which was used to support the paper's conclusions
- The specific statistical applications which were used to analyze the data and arrive at various conclusions

If there are alternate methodological and statistical approaches to analyzing the data on voter identification, and if there is other data on voter identification that you think should have been included in the analysis, please be certain to note this in your comments.

On **May 11, 2006** EAC will conduct a 60-90 minute phone call with key Eagleton Institute staff responsible for the research, members of Eagleton's peer review group and the EAC-identified reviewers who have been asked to consider the research. Through this dialogue EAC hopes to gather varying perspectives and insights on the research strategies and methods that were

010867

employed by Eagleton. As a result of this conversation, EAC anticipates that some revisions will be made to the Eagleton research paper. This paper is scheduled to be presented to EAC's Board of Advisors and Standards Boards in late May.

While EAC agency policy does not allow us to provide you with financial compensation for your review of this research we greatly appreciate your willingness to assist us with this important task. We believe that the research findings we will provide on voter identification are important and will most certainly be enhanced by your insights and expertise.

Sincerely,

Karen Lynn-Dyson

Subject Re: My Thoughts --PRIVILEGED COMMUNICATION 

Gavin:

This looks good to me. I just have a few questions/clarifications, both involving the **second paragraph**:

1. First sentence - Do you mean "intra-agency", rather than interagency?
2. Second sentence - If we plan to release an EAC report based on the material provided by the consultants, then can we avoid implying that we are ever going to release a report written by the consultants?
3. Sixth sentence - I was present at only one interview, not all of them; but I did facilitate and help schedule the interviews.

Subject My Thoughts --PRIVILEGED COMMUNICATION

Do Not Release

People for the American Way.doc

Gavin S. Gilmour  
Deputy General Counsel  
United States Election Assistance Commission  
1225 New York Ave., NW, Ste 1100  
Washington, DC 20005  
(202) 566-3100

THIS MESSAGE IS FOR ITS INTENDED RECIPIENT ONLY. IT IS A PRIVILEGED DOCUMENT AND SHALL NOT BE RELEASED TO A THIRD PARTY WITHOUT THE CONSENT OF THE SENDER.

010869

The document you request on voter fraud is protected from release under FOIA. Specifically, the responsive information is protected by the Deliberative Process Privilege and exempted from release under 5 U.S.C. §552(b)(5). As you may know, the Deliberative Process Privilege protects intra-agency documents that are (1) predecisional in nature and (2) part of the deliberative process. In other words, the documents must be part of a process that recommends or presents opinions on a policy matter before that matter is adopted. Such documents are exempt from release (1) to encourage open and frank discussions on policy matters between agency subordinates and superiors, (2) to protect against premature disclosure of proposed policies and (3) to protect against public confusion that might result from disclosure of rationales that were not in fact the ultimate basis for agency action.

The report you have requested is an interagency document that is not yet complete and has not been reviewed and approved by the Commissioners (the relevant policy makers). The document was created by two contract employees with the support of EAC staff. The contract employees were hired pursuant EAC's authority to hire consultants and experts under 5 U.S.C. §3109 (See 42 U.S.C. §15324(b)). Individuals hired under this authority enter into an employment relationship with the EAC. The contract employees at issue were closely supervised by an EAC program director who participated directly in the project. For example, the supervisor participated in each interview conducted for the project. Further, the contract employees were provided research materials and other support from EAC law clerks and staff. Communications with contract employees are interagency communications for the purposes of FOIA.<sup>1</sup> Work continues to proceed on the draft.

Similarly, the document you have requested constitutes a recommendation on a policy matter. The purpose or subject of the draft report at issue is to make an EAC determination on how voter fraud should be studied by the Agency. This is to be done by (1) accessing the nature and quality of the information that presently exists on the subject matter (2) defining the terms and scope of EAC study as proposed under HAVA, (3) determining what is to be studied and (4) determining how it is to be studied. Clearly, EAC's interpretation of HAVA and its determination of what it will study and how it will use its resources to study it are matters of agency policy. This policy can only be made by the EAC's duly appointed commissioners. This has not yet been done. Thus, any draft created by staff is a proposal or recommendation on a policy matter and clearly both predecisional and deliberative.

For these reasons, the draft document you have requested is exempt from release. The release of an incomplete and unofficial document would serve only to confuse the public. We expect the report to be made final and approved by the Commission in December. It will be made public at that time. Upon its release you may obtain a copy of it on our Website.

---

<sup>1</sup> Department of the Interior v. Klamath Water Users Protective Association, 532 U.S. 1, 9-11 (2001) and Hertzberg v. Veneman, 273 F. Supp. 2d 67, 76 n.2 (D.D.C. 2003).

DRAFT

The EAC has decided to waive the processing fees for your request. If you interpret any portion of this response as an adverse action, you may appeal it to the Election Assistance Commission. Your appeal must be in writing and sent to the address noted on the above letterhead. Any appeal submitted, must be postmarked no later than 60 calendar days from the date of this letter. Please include your reasons for reconsideration and attach a copy of this letter.

Sincerely,

CONFIDENTIAL

Subject Draft Voter Fraud/Voter Intimidation Report

History

This message has been replied to

Julie:

I really like the tone, focus, and organization of the paper. I also liked the way you interspersed the lists of Working Group members, interviewees, and reports reviewed with the text (drawing the reader's attention to the info, cutting down on the # of appendices, and giving the eye a break from regular text). Attached is your document with my comments, questions, and suggested changes. I did not do much to it.

Regarding your questions about the appendices:

I really did not prepare my summaries with an eye toward publication, but the consultants' summaries probably include incendiary info (particularly re DOJ interviews). As for the case law, we have multiple, voluminous charts, but no list. We can create a list from the charts, but that will take time. The Commissioners may want to see the consultants' or my summaries and the case law charts, but do we need to publish them?

Do we need to put short bios for Tova and Job in an appendix? --- Peggy

EAC VF-VI Report- rev 11-17-06.doc

010872

EAC REPORT ON VOTER FRAUD AND VOTER INTIMIDATION STUDY

Comment [M1]: HAVA §241(b)(6) refers to voting (rather than voter) fraud and 241(b)(7) refers to voter intimidation. Do we want to do a global change from voter fraud to voting fraud, or leave it as is?

**INTRODUCTION**

Voter fraud and intimidation is a phrase familiar to many voting-aged Americans. However, it means different things to different people. Voter fraud and intimidation is a phrase used to refer to crimes, civil rights violations, and at times even the correct application of state or federal laws to the voting process. Past study of this topic has been as varied as its perceived meaning. In an effort to help understand the realities of voter fraud and voter intimidation in our elections, EAC has begun this, phase one, of a comprehensive study on election crimes. In this phase of its examination, EAC has developed a definition of election crimes and adopted some research methodology on how to assess the true existence and enforcement of election crimes in this country.

**PURPOSE AND METHODOLOGY OF THE EAC STUDY**

Section 241 of the Help America Vote Act of 2002 (HAVA) calls on the U.S. Election Assistance Commission (EAC) to research and study various issues related to the administration of elections. During Fiscal Year 2006, EAC began projects to research several of the listed topics. These topics for research were chosen in consultation with the EAC Standards Board and Board of Advisors. Voter fraud and voter intimidation, listed in §§241(b)(6) and (7), were topics ~~was a topic~~ that EAC as well as its advisory boards felt were important to study to help improve the administration of elections for federal office.

EAC began this study with the intention of identifying a common understanding of voter fraud and intimidation and devising a plan for a comprehensive study of these issues. This study was not intended to be a comprehensive review of existing voter fraud and voter intimidation actions, laws, or prosecutions. That type of research is well beyond the basic understanding that had to be established regarding what is commonly referred to as voter fraud and voter intimidation. Once that understanding was reached, a definition had to be crafted to refine and in some cases limit the scope of what reasonably can be researched and studied as evidence of voter fraud and voter intimidation. That definition will serve as the basis for recommending a plan for a comprehensive study of the area.

To accomplish these tasks, EAC employed two consultants, Tova Wang and Job Serebrov, who along with EAC staff and interns conducted the research that forms the basis of this report. ~~The c~~ Consultants were chosen based upon their experience with the topic and. ~~In addition, consultants were chosen to assure a bipartisan representation in this study. The consultants and EAC staff were charged to:~~ (1) ~~to~~ research the current state of information on the topics of voter fraud and voter intimidation; (2) ~~to~~ develop a uniform definition of voter fraud and voter intimidation; and (3) ~~to~~ propose recommended strategies for researching this subject.

EAC consultants reviewed existing studies, articles, reports and case law on voter fraud and intimidation. In addition, EAC consultants conducted interviews with selected experts in the field. Last, EAC consultants and staff presented their study to a working group that provided feed back. The working group participants were:

**The Honorable Todd Rokita**  
Indiana Secretary of State  
Member, EAC Standards Board and the  
Executive Board of the Standards Board

**Kathy Rogers**  
Georgia Director of Elections, Office of  
the Secretary of State  
Member, EAC Standards Board

**J.R. Perez**  
Guadalupe County Elections  
Administrator, Texas

**Barbara Arnwine**  
Executive Director, Lawyers Committee  
for Civil Rights under Law  
Leader of Election Protection Coalition

**Benjamin L. Ginsberg**  
Partner, Patton Boggs LLP  
Counsel to national Republican  
campaign committees and Republican  
candidates

**Robert Bauer**  
Chair of the Political Law Practice at the  
law firm of Perkins Coie, District of  
Columbia  
National Counsel for Voter Protection,  
Democratic National Committee

**Mark (Thor) Hearne II**  
Partner-Member, Lathrop & Gage, St  
Louis, Missouri  
National Counsel to the American  
Center for Voting Rights

**Barry Weinberg**  
Former Deputy Chief and Acting Chief,  
Voting Section, Civil Rights Division,  
U.S. Department of Justice

*Technical Advisor:*

**Craig Donsanto**  
Director, Election Crimes Branch, U.S.  
Department of Justice

Throughout the process, EAC staff assisted the consultants by providing statutes and cases on this subject as well as supervision on the direction, scope and product of this research.

The consultants drafted a report for EAC that included their summaries of existing laws, relevant cases, studies and reports on voter fraud and intimidation as well as summaries of the interviews that they conducted. The draft report also provided a definition of voter fraud and intimidation and made certain recommendations developed by the consultants or by the working group on how to pursue further study of this subject. This document was vetted and edited to produce this final report.

**Comment [M2]:** The consultants did not really summarize existing law.

## **EXISTING INFORMATION ABOUT FRAUD AND INTIMIDATION**

To begin our study of voter fraud and voter intimidation, EAC consultants reviewed the current body of information on voter fraud and intimidation. What the world knows about these issues comes largely from a very limited body of reports, articles and books.

There are volumes of case law and statutes in the various states that also impact our understanding of what actions or inactions are legally considered fraud or intimidation. Last, there is anecdotal information available through media reports and interviews with persons who have administered elections, prosecuted fraud, and studied these problems. All of these resources were used by EAC consultants to provide an introductory look at the available knowledge of voter fraud and voter intimidation.

### **Reports and Studies of Voter Fraud and Intimidation**

Over the years, there have been a number of studies and reports published conducted about ~~the concepts of~~ voter fraud and voter intimidation. EAC consultants reviewed many of these studies and reports to develop a base-line understanding of the information that is currently available about voter fraud and voter intimidation. EAC consultants reviewed the following articles, reports and books, summaries of which are available in Appendix “ \_\_\_ ”:

#### **Articles and Reports**

- People for the American Way and the NAACP, “The Long Shadow of Jim Crow,” December 6, 2004.
- Laughlin McDonald, “The New Poll Tax,” *The American Prospect* vol. 13 no. 23, December 30, 2002.
- Wisconsin Legislative Audit Bureau, “An Evaluation: Voter Registration Elections Board” Report 05-12, September, 2005.
- Milwaukee Police Department, Milwaukee County District Attorney’s Office, Federal Bureau of Investigation, United States Attorney’s Office “Preliminary Findings of Joint Task Force Investigating Possible Election Fraud,” May 10, 2005.
- National Commission on Federal Election Reform, “Building Confidence in U.S. Elections,” Center for Democracy and Election Management, American University, September 2005.
- The Brennan Center for Justice at NYU School of Law and Spencer Overton, Commissioner and Law Professor at George Washington University School of Law “Response to the Report of the 2005 Commission on Federal Election Reform,” September 19, 2005.
- Chandler Davidson, Tanya Dunlap, Gale Kenny, and Benjamin Wise, “Republican Ballot Security Programs: Vote Protection or Minority Vote Suppression – or Both?” A Report to the Center for Voting Rights & Protection, September, 2004.

- Alec Ewald, "A Crazy Quilt of Tiny Pieces: State and Local Administration of American Criminal Disenfranchisement Law," The Sentencing Project, November 2005.
- American Center for Voting Rights "Vote Fraud, Intimidation and Suppression in the 2004 Presidential Election," August 2, 2005.
- The Advancement Project, "America's Modern Poll Tax: How Structural Disenfranchisement Erodes Democracy" November 7, 2001

- Lori Minnite and David Callahan, "Securing the Vote: An Analysis of Election Fraud," Demos: A Network of Ideas and Action, 2003.
- People for the American Way, NAACP, Lawyers Committee for Civil Rights, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," December 2004.

#### Books

- John Fund, *Stealing Elections: How Voter Fraud Threatens Our Democracy*, Encounter Books, 2004.
- Andrew Gumbel, *Steal this Vote: Dirty Elections and the Rotten History of Democracy in American*, Nation Books, 2005.
- Tracy Campbell, *Deliver the Vote: A History of Election Fraud, An American Political Tradition – 1742-2004*, Carroll & Graf Publishers, 2005.
- David E. Johnson and Jonny R. Johnson, *A Funny Thing Happened on the Way to the White House: Foolhardiness, Folly, and Fraud in the Presidential Elections, from Andrew Jackson to George W. Bush*, Taylor Trade Publishing, 2004.
- Mark Crispin Miller, *Fooled Again*, Basic Books, 2005.

During our review of these documents, we learned a great deal about the type of research that has been conducted in the past concerning voter fraud and voter intimidation. None of the studies or reports was based on a comprehensive nationwide study, survey or review of all allegations, prosecutions or convictions of state or federal crimes related to voter fraud or voter intimidation in the U.S. Most reports focused on a limited number of case studies or instances of alleged voter fraud or intimidation. For example, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," a report produced by the People for the American Way, focused exclusively on citizen reports of fraud or intimidation to the Election Protection program during the 2004 presidential election. Similarly, reports produced annually by the Department of Justice, Public Integrity Division, deal exclusively with crimes reported to and prosecuted by the United States Attorneys and/or the Department of Justice through the Public Integrity Section.

It is also apparent from a review of these articles and books that there is no consensus on the pervasiveness of voter fraud and voter intimidation. Some reports, such as "Building Confidence in U.S. Elections," suggest that there is little or no evidence of extensive fraud in U.S. elections or of multiple voting. This conflicts directly with other reports, such as the "Preliminary findings of Joint Task Force Investigating Possible Election Fraud," produced by the Milwaukee Police Department, Milwaukee County District

Attorney’s Office, FBI and U.S. Attorney’s Office. That report cited evidence of more than 100 individual instances of suspected double-voting, voting in the name of persons who likely did not vote, and/or voting using a name believed to be fake.

Voter intimidation is also a topic of some debate. Generally, speaking there is little agreement on what constitutes actionable voter intimidation. Some studies and reports cover only intimidation that involves physical or financial threats, while others cover non-criminal intimidation and even legal practices that they allege suppress the vote.

One point of agreement is that absentee voting and voter registration by ~~third-party nongovernmental~~ groups has created opportunities for fraud. A number of studies cited circumstances in which voter registration drives have falsified voter registration applications or have destroyed voter registration applications of persons affiliated with voters of a certain political party. Others conclude that paying persons per voter registration application creates the opportunity and perhaps the incentive for fraud.

**Comment [M3]:** The term "third-party" is often used for minor political parties. As most of the voter registration drive problems have involved major party operatives and advocacy groups, "nongovernmental" seems a better choice.

### Interviews with Experts

In addition to reviewing prior studies and reports on voter fraud and intimidation, EAC consultants interviewed a number of persons regarding their experiences and research of voter fraud and voter intimidation. Persons interviewed included

**Wade Henderson**  
Executive Director,  
Leadership Conference for Civil Rights

**Pat Rogers**  
Attorney, New Mexico

**Wendy Weiser**  
Deputy Director,  
Democracy Program, The Brennan  
Center

**Rebecca Vigil-Giron**  
Secretary of State, New Mexico

**William Groth**  
Attorney for the plaintiffs in the Indiana  
voter identification litigation

**Sarah Ball Johnson**  
Executive Director,  
State Board of Elections, Kentucky

**Lori Minnite**  
Barnard College, Columbia University

**Stephen Ansolobehere**  
Massachusetts Institute of Technology

**Neil Bradley**  
ACLU Voting Rights Project

**Chandler Davidson**  
Rice University

**Nina Perales**  
Counsel,  
Mexican American Legal Defense and  
Education Fund

**Tracey Campbell**  
Author, *Deliver the Vote*

**Douglas Webber**  
Assistant Attorney General, Indiana

**Heather Dawn Thompson**

Director of Government Relations,  
National Congress of American Indians

**Jason Torchinsky**  
Assistant General Counsel,  
American Center for Voting Rights

**Robin DeJarnette**  
Executive Director,  
American Center for Voting Rights

**Harry Van Sickle**  
Commissioner of Elections,  
Pennsylvania

**Joseph Sandler**  
Counsel  
Democratic National Committee

**John Ravitz**  
Executive Director  
New York City Board of Elections

**Sharon Priest**  
Former Secretary of State, Arkansas

**Kevin Kennedy**  
Executive Director  
State Board of Elections, Wisconsin

**Evelyn Stratton**  
Justice  
Supreme Court of Ohio

**Tony Sirvello**  
Executive Director  
International Association of Clerks,  
Recorders, Election Officials and  
Treasurers

**Joseph Rich**  
Former Director  
Voting Section, Civil Rights Division  
U.S. Department of Justice

**Craig Donsanto**  
Director, Public Integrity Section  
U.S. Department of Justice

**John Tanner**  
Director  
Voting Section, Civil Rights Division  
U.S. Department of Justice

These interviews in large part confirmed the conclusions that were gleaned from the articles, reports and books that were analyzed. For example, the interviewees largely agreed that absentee balloting is subject to the greatest proportion of fraudulent acts, followed by vote buying and voter registration fraud. They similarly pointed to voter registration drives by ~~third-party~~nongovernmental groups as a source of fraud, particularly when the workers are paid per registration. Many asserted that impersonation of voters is probably the least frequent type of fraud, citing as reasons that it was the most likely type of fraud to be discovered, ~~and that there are stiff penalties associated with this type of fraud, and that it was an inefficient method of influencing an election.~~

Interviewees differed on what they believe constitutes actionable voter intimidation. Law enforcement and prosecutorial agencies tend to look to the criminal definitions of voter intimidation which generally require some threat of physical or financial harm. On the other hand, voter rights advocates tended to point to activities such as challenger laws, voter identification laws, the location of polling places, and distribution of voting machines as activities that can constitute voter intimidation.

Those interviewed also expressed opinions on the enforcement of voter fraud and voter intimidation laws. States have varying authorities to enforce these laws. In some states, enforcement is left to the county or district attorney, and in others enforcement is managed by the state's attorney general. Regardless, voter fraud and voter intimidation are difficult to prove and require resources and time that local law enforcement and prosecutorial agencies do not have. Federal law enforcement and prosecutorial agencies have more time and resources but have limited jurisdiction. They can only prosecute election crimes related to elections with a federal candidate on the ballot and those committed by a public official under color of law involving federal candidates. Those interviewed differed on the effectiveness of the current system of enforcement. Some including those that allege that prosecutions are not sufficiently aggressive. Others and those that feel that the current laws are sufficient for prosecuting fraud and intimidation.

A summary of the each of the interviews conducted is attached as Appendix “\_\_\_”.

### **Case Law and Statutes**

Consultants reviewed over 40,000 cases that were identified using a series of search terms related to voter fraud and voter intimidation. The majority of these cases came from appeal courts. This is not a surprising situation, since most cases that are publicly reported come from courts of appeal. Very few cases that are decided at the district court level are reported for public review.

Very few of the identified cases were applicable to this study. Of those that were applicable, no apparent thematic pattern emerged. However, it did seem that the greatest number of cases reported on fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying and challenges to felon eligibility.

A listing of the cases reviewed in this study is attached as Appendix “\_\_\_”.

### **Media Reports**

EAC consultants reviewed thousands of media reports concerning a wide variety of potential voter fraud or voter intimidation, including:

- absentee ballot fraud,
- voter registration fraud,
- voter intimidation and suppression,
- deceased voters,
- multiple voting,
- felons voting,
- non-citizens voting,
- vote buying,
- deceptive practices, and

- fraud by election officials.

While these reports showed that there were a large number of allegations of voter fraud and voter intimidation, they provided much less information as to whether the allegations were ever formalized as complaints to law enforcement, whether charges were filed, whether prosecutions ensued, and whether any convictions were made. The media reports were enlightening as to the pervasiveness of complaints of fraud and intimidation throughout the country, the correlation between fraud allegations and the perception that the state was a “battleground” or “swing” state, and the fact that there were reports of almost all types of voter fraud and voter intimidation. However, these reports do not provide much data for analysis as to the number of complaints, charge and prosecutions of voter fraud and intimidation throughout the country.

## DEFINITION OF ELECTION CRIMES

From our study of available information on voter fraud and voter intimidation, we have learned that these terms mean many things to many different people. These terms are used casually to refer to anything from vote buying to refusing to register a voter to falsifying voter registration applications. Upon further inspection, however, it is apparent that there is no common understanding of what is and what is not “voter fraud” and “voter intimidation.” Some think of voter fraud and voter intimidation only as criminal acts, while others include actions that may constitute civil wrongs, civil rights violations, and even legal and appropriate activities. In order to come up with a common definition and list of activities that can be studied, EAC assessed the appropriateness of the terminology that is currently in use and applied certain factors to limit the scope and reach of what can and will be studied by EAC in the future.

### New Terminology

The phrase “voter fraud” is really a misnomer for a concept that is much broader. “Fraud” is a concept that connotes an intentional act of deception, which may constitute either a criminal act or civil tort depending upon the willfulness of the act.

**Fraud, n. 1.** A knowing misrepresentation of the truth or concealment of a material fact to induce another to act to his or her detriment. • Fraud is **usu.** a tort, but in some cases (esp. when the conduct is willful) it may be a crime.

Comment [M4]: Sic? Or is this a typo?

Black’s Law Dictionary, Eighth Edition, p. 685.

A “voter” is a person who is eligible to and engages in the act of voting. Black’s Law Dictionary, Eighth Edition, p. 1608. Using these terms to form a definition of “voter fraud,” it means fraudulent or deceptive acts committed by the voter or in which the voter is the victim. Thus, a voter who intentionally provides false information on a voter registration application or intentionally impersonates another registered voter and attempts to vote for that person would be committing “voter fraud.” Similarly, a person

who knowingly provides false information to a voter about the location of the voter’s polling place commits fraud on the voter.

The phrase “voter fraud” does not capture a myriad of other criminal acts that are related to elections which are not perpetrated by the voter and/or do not involve an act of deception. For example, “voter fraud” does not capture actions or willful inaction by candidates and election workers. When an election official willfully and knowingly refuses to register to vote an otherwise legally eligible person it is a crime. This is a crime that involves neither the voter nor an act of deception.

To further complicate matters, the phrases “voter fraud” and “voter intimidation” are used to refer to actions or inactions that are criminal as well as those that are potentially civil wrongs and even those that are legal. Obviously, criminal acts and civil wrongs are pursued in a very different manner. Criminal acts are prosecuted by the local, state or federal government. Generally, civil wrongs are prosecuted by the individual who believes that they were harmed. In some cases, when civil rights are involved, the civil division of the Department of Justice may become involved.

The goal of this study was to develop a common definition of what is generically referred to as “voter fraud” and “voter intimidation” that would serve as the basis of for a future, comprehensive study of the existence of these problems. In order to meet that goal, we recognize that the current terminology does not accurately represent the spectrum of activities that we desire to study. Furthermore, we recognize that the resources, both financial and human capital, needed to study allegations and prosecutions of criminal acts, suits involving civil torts, and allegations of potential voter suppression through the use legal election processes are well beyond the resources available to EAC. As such, EAC has defined “election crimes,” a phrase that captures all crimes related to the voter registration and voting processes.

**What is an Election Crime for Purposes of this Study**

**Comment [M5]:** So this means that we will not look at civil actions involving Voting Rights Act violations, right?

Election crimes are intentional acts or willful failures to act, prohibited by state or federal law, that are designed to cause ineligible persons to participate in the election process, eligible persons to be excluded from the election process, ineligible votes to be cast in an election, eligible votes not to be cast or counted, or other interference with or invalidation of election results. Election crimes generally fall into one of four categories: acts of deception; acts of coercion; acts of damage or destruction; and failures or refusals to act.

Generally speaking, election crimes can be committed by voters, candidates, election officials, or any other members of the public that desire to criminally impact the result of an election. However, crimes that are based upon knowing or willful failure to act assume that a duty to act exists. Election officials have affirmative duties to act with regard to elections. By and large, other groups and individuals do not have such duties.

The victim of an election crime can be a voter, a group of voters, or the public, in general. Election crimes can occur during any stage of the election process, including but not limited to qualification of candidates; voter registration; campaigning; voting system preparation and programming; voting either early, absentee, or election day; vote tabulation; recounts; and recalls.

The following are examples of activities that may constitute election crimes. This list is not intended to be exhaustive, but is representative of what states ~~and~~ or the federal government consider criminal activity related to elections.

*Acts of Deception*

- Knowingly causing to be mailed or distributed, or knowingly mailing or distributing, literature that includes false information about the voter's precinct or polling place, regarding the date and time of the election or regarding a candidate;
- Possessing an official ballot outside the voting location, unless the person is an election official or other person authorized by law or local ordinance possess a ballot outside of the polling location;
- Making, or knowingly possessing, a counterfeit of an official election ballot;
- Signing a name other than his/her own to a petition proposing an initiative, referendum, recall, or nomination of a candidate for office;
- Knowingly signing more than once for the proposition, question, or candidate at one election;
- Signing a petition proposing an initiative or referendum when the signer is not a qualified voter.
- Voting or attempting to vote in the name of another person;
- Voting or attempting to vote more than once at the same election;
- Intentionally making a false affidavit, swearing falsely, or falsely affirming under an oath required by a statute regarding their voting status, including when registering to vote, requesting an absentee ballot or presenting to vote in person;
- Registering to vote without being entitled to register;
- Knowingly making a material false statement on an application for voter registration or re-registration; and
- Voting or attempting to vote in an election after being disqualified or when the person knows that he/she is not eligible to vote.

*Acts of Coercion*

- Using, threatening to use, or causing to be used force, coercion, violence, restraint, or inflicting, threatening to inflict, or causing to be inflicted damage harm, or loss, upon or against another person to induce or compel that person to vote or refrain from voting or to register or refrain from registering to vote;
- Knowingly paying, offering to pay, or causing to be paid money or other valuable thing to a person to vote or refrain from voting for a candidate or for or against an election proposition or question;

- Knowingly soliciting or encouraging a person who is not qualified to vote in an election;
- Knowingly challenging a person's right to vote without probable cause or on fraudulent grounds, or engaging in mass, indiscriminate, and groundless challenging of voters solely for the purpose of preventing voter from voting or delay the process of voting;
- As an employer, attempting by coercion, intimidation, threats to discharge or to lessen the remuneration of an employee, to influence his vote in any election, or who requires or demands an examination or inspection by himself or another of an employee's ballot;
- Soliciting, accepting, or agreeing to accept money or other valuable thing in exchange for signing or refraining from signing a petition proposing an initiative;
- Inducing or attempting to induce an election official to fail in the official's duty by force, threat, intimidation, or offers of reward;
- Directly or through any other person advancing, paying, soliciting, or receiving or causing to be advanced, paid, solicited, or received, any money or other valuable consideration to or for the use of any person in order to induce a person not to become or to withdraw as a candidate for public office; and
- Soliciting, accepting, or agreeing to accept money or other valuable thing in exchange for registering to vote.

***Acts of Damage or Destruction***

- Destroying completed voter registration applications that are necessary for the applicants to exercise their right to vote;
- Removing or destroying any of the supplies or other conveniences placed in the voting booths or compartments for the purpose of enabling the voter to vote his or her ballot;
- Removing, tearing down, or defacing election materials, instructions or ballots;
- Fraudulently altering or changing the vote of any elector, by which such elector is prevented from voting as he intended;
- Knowingly removing, altering, defacing or covering any political sign of any candidate for public office for a prescribed period prior to and following the election;
- Intentionally changing, attempting to change, or causing to be changed an official election document including ballots, tallies, and returns; and
- Intentionally delaying, attempting to delay, or causing to be delayed the sending of certificate, register, ballots, or other materials whether original or duplicate, required to be sent by jurisdictional law.

Formatted: Bullets and Numbering

***Failure or Refusal to Act***

- Intentionally failing to perform an election duty, or knowingly committing an unauthorized act with the intent to effect the election;
- Knowingly permitting, making, or attempting to make a false count of election returns;

- Intentionally concealing, withholding, or destroying election returns or attempts to do so;
- Marking a ballot by folding or physically altering the ballot so as to recognize the ballot at a later time;
- Attempting to learn or actually and unlawfully learning how a voter marked a ballot;
- Distributing or attempting to distribute election material knowing it to be fraudulent;
- Knowingly refusing to register a person who is entitled to register under the rules of that jurisdiction; and
- Knowingly refusing to allow an eligible voter to cast his/her ballot.

### What is not an Election Crime for Purposes of this Study

There are some actions or inactions that may constitute crimes or civil wrongs that we do not include in our definition of “election crimes.” All criminal es-or civil violations related to campaign finance contribution limitations and prohibitions, as well as reporting either at the state or federal level are not “election crimes” for purposes of this study and any future study conducted by EAC. The federal agency responsible for administering federal campaign finance law and monitoring the status of state campaign finance law is the Federal Election Commission (FEC).

**Comment [M6]:** Do we want to restrict our study to election crimes that affect federal elections only? HAVA §241(b)(6) specifically refers to Nationwide statistics and methods of identifying, detecting, and investigating voting fraud in elections for Federal office. [Emphasis added]. That would mean we would also stay away from election crimes affecting ballot issues and elections with no federal candidate on the ballot.

Similarly, criminal acts that are unrelated to elections, voting, or voter registration are not “election crimes,” even when those offenses occur in a polling place, voter registration office, or a candidate’s office or appearance. For example, an assault or battery that results from a fight in a polling place or at a candidate’s office is not an election crime. Similarly, violations of ethical provisions such as the Hatch Act are not “election crimes.” Last, actions that do not rise to the level of criminal activity, that is a misdemeanor, relative felony or felony, are not “election crimes.”

### RECOMMENDATIONS ON HOW TO STUDY ELECTION CRIMES

As a part of its study, EAC sought recommendations on ways that EAC can study the existence of election crimes. EAC consultants developed recommendations. In addition, the working group and some of the persons interviewed as a part of this study provided recommendations.

#### *Recommendation 1: Conduct More Interviews*

Future activity in this area should include conducting additional interviews. In particular, more election officials from all levels of government, parts of the country, and political parties should be interviewed. It would also be especially beneficial to talk to people in law enforcement, specifically federal District Election Officers (“DEOs”) and local district attorneys, as well as civil and criminal defense attorneys.

#### *Recommendation 2: Follow Up on Media Research*

The media search conducted for this phase of the research was based on a list of search terms agreed upon by EAC consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contain allegations of fraud or intimidation. Similarly, many of the articles contain information about investigations into such activities or even charges brought. Additional media research should be conducted to determine what, if any, resolutions or further activity there was in each case.

***Recommendation 3: Follow Up on Allegations Found in Literature Review***

Many of the allegations made in the reports and books that were analyzed and summarized by EAC consultants were not substantiated and were certainly limited by the date of publication of those pieces. Despite this, such reports and books are frequently cited by various interested parties as evidence of fraud or intimidation. Further research should include follow up on the allegations discovered in the literature review.

***Recommendation 4: Review Complaints Filed With “MyVote1” Voter Hotline***

During the 2004 election and the statewide elections of 2005, the University of Pennsylvania led a consortium of groups and researchers in conducting the MyVote1 Project. This project involved using a 1-800 voter hotline where voters could call for poll location, be transferred to a local hotline, or leave a recorded message with a complaint. In 2004, this resulted in over 200,000 calls received and over 56,000 recorded complaints.

Further research should be conducted using the MyVote1 data with the cooperation of the project leaders. While perhaps not a fully scientific survey given the self-selection of the callers, the information regarding 200,000 complaints may provide a good deal of insight into the problems voters experienced, especially those in the nature of intimidation or suppression.

***Recommendation 5: Further Review of Complaints Filed With U.S. Department of Justice***

Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice has a variety ~~in-of~~ ways it tracks complaints of voter intimidation. Attempts should be made to obtain relevant data, including the telephone logs of complaints and information from the Interactive Case Management (ICM) system. Further research should also include a review and analysis of the DOJ/OPM observer and monitor field reports from Election Day.

***Recommendation 6: Review Reports Filed By District Election Officers***

Further research should include a review of the reports that must be filed by every District Election Officer to the Public Integrity Section of the Criminal Division of the Department of Justice. The DEOs play a central role in receiving reports of voter fraud

and investigating and pursuing them. Their reports back to the Department would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or made confidential.

***Recommendation 7: Attend Ballot Access and Voting Integrity Symposium***

Further activity in this area should include attending the next Ballot Access and Voting Integrity Symposium. At this conference, prosecutors serving as District Election Officers in the 94 U.S. Attorneys' Offices obtain annual training on fighting election fraud and voting rights abuses. These conferences are sponsored by the Voting Section of the Civil Rights Division and the Public Integrity Section of the Criminal Division, and feature presentations by Civil Rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys' Offices. By attending the symposium researchers could learn more about the following how District Election Officers are trained; how information about previous election and voting issues is presented; and how the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants

***Recommendation 8: Conduct Statistical Research***

EAC should measure voter fraud and intimidation using interviews, focus groups, and a survey and statistical analysis of the results of these efforts. The sample should be based on the following factors:

- o Ten locations that are geographically and demographically diverse where there have historically been many reports of fraud and/or intimidation;
- o Ten locations (geographically and demographically diverse) that have not had many reports of fraud and/or intimidation;

EAC should also conduct a survey of elections officials, district attorneys, and district election officers. The survey sample should be large in order to be able to get the necessary subsets. The sample must include a random set of counties where there have and have not been a large number of allegations

***Recommendation 9: Explore Improvements to Federal Law***

Future researchers should review federal law to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threat.

***Recommendation 10: Use Observers to Collect Data on Election Day***

Use observers to collect data regarding fraud and intimidation at the polls in on Election Day. There may be some limitations to the ability to conduct this type of research, including difficulty gaining access to polling places for the purposes of observation, and

concerns regarding how the observers themselves may inadvertently or deliberately influence the occurrence of election crimes.

***Recommendation 11: Study Absentee Ballot Fraud***

Because absentee ballot fraud constitutes a large portion of election crimes, a stand-alone study of absentee ballot fraud should be conducted. Researchers should look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing them.

***Recommendation 12: Use Risk Analysis Methodology to Study Fraud***

Conduct an analysis of what types of fraud people are most likely to commit. Researchers can use that risk analysis to rank the types of fraud based on the ease of commission and the impact of the fraud.

***Recommendation 13: Conduct Research Using Database Comparisons***

Researchers should compare information on databases to determine whether the voter rolls contain deceased persons and felons. In addition, the voter rolls can then be compared with the list of persons who voted to determine whether deceased voters or felons are noted as having actually-voted.

***Recommendation 14: Conduct a Study of Deceptive Practices***

The working group discussed the increasing use of deceptive practices, such as flyers with false and/or intimidating information, to suppress voter participation. A number of groups, such as the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such practices. These logs should be reviewed and analyzed to see how such practices are being conducted and what can be done about them.

***Recommendation 15: Study Use of HAVA Administrative Complaint Procedure as Vehicle for Measuring Fraud and Intimidation***

EAC should study the extent to which states are actually utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.

***Recommendation 16: Examine the Use of Special Election Courts***

Given that many state and local judges are elected, it may be worth exploring whether special election courts should be established to handle fraud and intimidation complaints before, during and after Election Day. Pennsylvania employs such a system and could investigate how well that system is working.

### Accepted Recommendations

There has never been a comprehensive national study that gathered data regarding all claims, charges and prosecutions of voting crimes. EAC feels that a comprehensive study is the most important research that it can offer the election community and the public. As such, EAC has adopted all or a part of six of the 16 recommendations made by EAC consultants and working group.

While several of the other recommendations could be used to obtain more anecdotal information regarding election crimes, EAC believes that what is needed is a comprehensive survey and study of the information available from investigatory agencies, prosecutorial bodies and courts on the number and types of complaints, charges and prosecutions of election crimes. Additional media reviews, additional interviews and the use of observers to collect information from voters on Election Day will only serve to continue the use of anecdotal data to report on election crimes. Hard data on complaints, charges and prosecutions exists and we should gather and use that data, rather than rely on the perceptions of the media or the members of the public as to what might be fraud or intimidation.

Some of the recommendations are beyond the scope of the current study. While election courts may be a reasonable conclusion to reach after we determine what volume and type of election crimes are being reported, charged or prosecuted, it is premature to embark on an analysis of that solution without more information. Last, some of the recommendations do not support a comprehensive study of election crimes. While a risk analysis might be appropriate in a smaller scale study, EAC desires to conduct a broader survey to avoid the existing problem of anecdotal and limited scope of information.

In order to further its goal of developing a comprehensive data set regarding election crimes and the laws and procedures used to identify and prosecute them, EAC intends to engage in the following research activities in studying the existence and enforcement of election crimes:

#### *Survey Chief Election Officers Regarding Administrative Complaints*

Likely sources of complaints concerning voting crimes are the administrative complaint processes that states were required to establish to as a part of complying with HAVA §402. These complaint procedures were required to be in place prior to a state receiving any funds under HAVA. Citizens are permitted to file complaints alleging violations of HAVA Title III provisions under these procedures with the state's chief election official and these complaints must be resolved within 60 days. The procedures also allow for alternative dispute resolution of claims. Some states have expanded this process to include complaints of other violations, such as election crimes.

In order to determine how many of these complaints allege the commission of election crimes, EAC will survey the states' chief election officers regarding complaints that have

been filed, investigated and resolved since January 1, 2004. EAC will use the definition of election crimes provided above in this report in its survey so that data regarding a uniform set of offenses can be collected.

*Survey State Election Crime Investigation Units Regarding Complaints Filed and Referred*

Several chief state election officials have developed investigation units focused on receiving, investigating and referring complaints of election crimes. These units were established to bolster the abilities of state and local law enforcement to investigate allegations of election crimes. California, New York and Florida are just three examples of states that have these types of units.

EAC will use a survey instrument to gather information on the numbers and types of complaints that have been received by, investigated and ultimately referred to local or state law enforcement by election crime investigation units since January 1, 2004. This data will help us understand the pervasiveness of perceived fraud, as well as the number of claims that state election officials felt were meritorious of being referred to local and state law enforcement or prosecutorial agencies for further action.

*Survey Law Enforcement and Prosecutorial Agencies Regarding Complaints and Charge of Voting Crimes*

While voters, candidates and citizens may call national hotlines or the news media to report allegations of election crimes, it is those complaints that are made to law enforcement that can be investigated and ultimately prosecuted. Thus, it is critical to the study of election crimes to obtain statistics regarding the number and types of complaints that are made to law enforcement, how many of those complaints result in the perpetrator being charged or indicted, and how many of those charges or indictments result in pleas or convictions.

Thus, EAC will survey law enforcement and prosecutorial agencies at the local, state and federal level to determine the number and types of complaints, charges or indictments, and pleas or convictions of election crimes since January 1, 2004. In addition, EAC will seek to obtain an understanding of why some complaints are not charged or indicted and why some charges or indictments are not prosecuted.

*Analyze Survey Data in Light of State Laws and Procedures*

Once a reliable data set concerning the existence and enforcement of election crimes is assembled, a real analysis of the effectiveness of fraud prevention measures can be conducted. For example, data can be analyzed to determine if criminal activities related to elections are isolated to certain areas or regions of the country. Data collected from the election official surveys can be compared to the data regarding complaints, charges and prosecutions gathered from the respective law enforcement and prosecutorial agencies in each jurisdiction. The effect and/or effectiveness of provisions such as voter

**Comment [M7]:** Need to include survey of laws and procedures used to ID and prosecute election crime.

**Comment [M8]:** Need to include survey of laws and procedures used to ID and prosecute election crime.

**Comment [M9]:** Would this include the verification of information about current federal and state laws and procedures that may be used to pursue violations? We would need this information in order to better understand the data we collect.

identification laws and challenger provisions can be assessed based on hard data from areas where these laws exist. Last, analyses such as the effectiveness of enforcement can be conducted in light of the resources available to the effort.

### CONCLUSION

Election crimes are nothing new to our election process. The pervasiveness of these crimes and the fervor with which they have been enforced has created a great deal of debate among academics, election officials, and political pundits. Past studies of these issues have been limited in scope and some have been riddled with bias. These are issues that deserve comprehensive and nonpartisan review. EAC through its clearinghouse role will collect and analyze data on election crimes throughout the country. These data not only will tell us what types of election crimes are committed and where fraud exists, but also inform us of what factors impact the existence, prevention and prosecution of election crimes.

Subject Voter Fraud-Voter Intimidation Draft Report

Attached is a copy of the draft voter fraud-voter intimidation report that combines all of the pieces provided to me by the consultants, except for the voluminous Nexis research and case law charts. Tom wants to get this before the Commissioners ASAP, but I need some other eyes to look it over before we do. Although I've made some formatting changes to provide some consistency in presentation, and corrected a couple of glaring errors, I remain concerned about a number of issues:

- As you know, references to DOJ actions/responses have caused some concern at DOJ. But both consultants are adamantly opposed to EAC making substantive changes to their report. Perhaps using footnotes clearly labeled as EAC footnotes would be a method of addressing this issue?
- There are some recommendations regarding DOJ that we (the consultants and I) were told would not be supported by DOJ, and other references to DOJ, none of which have been reviewed by the department. I think we ought to give Craig Donsanto and John Tanner a chance to provide feedback on each of these sections.
- I am a little concerned about the naming of names, particularly in the section that addresses working group concerns. If we publish it as is, it might end up as fodder for some very negative newspaper articles.
- The report currently uses three different voices: third person, first person singular, first person plural. I think this looks really clumsy. If we are not actually making substantive changes, perhaps we could get away with making the presentation consistent in this regard.
- Because the consultants submitted the report in pieces, they did not include proper sequeways. I don't know if we should leave it as is, or insert them where needed.

Please let me know what you think. If it would help, we can schedule a teleconference. --- Peggy

- Appendix 4: Members of the Working Group

## **Introduction**

### **Charge Under HAVA**

Under the Help America Vote Act, Pub. L. No. 107-252, 116 Stat. 1666 (2002) (“HAVA”), the United States Election Assistance Commission is charged with developing national statistics on voter fraud and developing methods of deterring and investigating voter fraud. Also, the Commission is charged with developing methods of identifying, deterring, and investigating methods of voter intimidation.

### **Scope of Project**

The Commission employed a bipartisan team of legal consultants, Tova Wang and Job Serebrov to develop a preliminary overview work product to determine the quantity and quality of vote fraud and voter intimidation that is present on a national scale. The consultants’ work is neither comprehensive nor conclusive. This first phase of an envisioned two-phase project was constrained by both time and funding. The consultants’ conclusions and recommendations for phase II will be contained in this report.

The consultants, working without the aid of a support staff, divided most of the work. However, the final work product was mutually checked and approved. They agreed upon the steps that were taken needed and the method employed. For all of the documentary sources, the consultants limited the time period under review from January 1, 2001 to January 1, 2006. The research performed by the consultants included interviews, an extensive Nexis search, a review of existing literature, and case research.

**Interviews:** The consultants chose the interviewees by first coming up with a list of the categories of types of people they wanted to interview. Then the consultants separately, equally filled those categories with a certain number of people. Due to time and resource constraints, the consultants had to pare down this list substantially – for instance, they had to rule out interviewing prosecutors altogether – but still got a good range of people to talk to. The ultimate categories were academics, advocates, elections officials, lawyers and judges. Although the consultants were able to talk to most of the people they wanted to, some were unavailable and a few were not comfortable speaking to them, particularly judges. The consultants together conducted all of the interviews, either by phone or in person. Then the consultants split up drafting the summaries. All summaries were reviewed and mutually approved. Most of the interviews were extremely informative and the consultants found the interviewees to be extremely knowledgeable and insightful for the most part.

**Nexis:** Initially, the consultants developed an enormous list of possible Nexis search terms. It soon became obvious that it would be impossible to conduct the research that way. As a result, consultant Wang performed the Nexis search by finding search term combinations that would yield virtually every article on a particular subject from the last

five years. Consultant Serebrov approved the search terms. Then Wang created an excel spreadsheet in order to break down the articles in way in which they could be effectively analyzed for patterns. Each type of fraud is broken down in a separate chart according to where it took place, the date, the type of election it occurred in, what the allegation was, the publication it came from. Where there was a follow up article, any information that that suggested there had been some further action taken or some resolution to the allegation was also included. For four very complicated and long drawn out situations – Washington State, Wisconsin, South Dakota in 2004, and the vote buying cases in a couple of particular jurisdictions over the last several years –written summaries with news citations are provided.

***Existing Literature:*** Part of the selections made by the consultants resulted from consultant Wang's long-term familiarity with the material while part was the result of a joint web search for articles and books on vote fraud and voter intimidation and suggestions from those interviewed by the consultants. The consultants reviewed a wide range of materials from government reports and investigations, to academic literature, to reports published by advocacy groups. The consultants believe that they covered the landscape of available sources.

***Cases:*** In order to properly identify all applicable cases, the consultants first developed an extensive word search term list. A WestLaw search was performed and the first one hundred cases under each word search term were then gathered in individual files. This resulted in a total of approximately 44,000 cases. Most of these cases were federal as opposed to state and appellate as opposed to trial. Consultant Serebrov analyzed the cases in each file to determine if they were on point. If he found that the first twenty cases were inapplicable, Serebrov would sample forty to fifty other file cases at random to determine applicability. If the entire file did not yield any cases, the file would be discarded. All discarded word search terms were recorded in a separate file. Likewise, if the file only yielded a few applicable cases, it would also be discarded. However, if a small but significant number of cases were on point, the file was later charted. The results of the case search were stark because relatively few applicable cases were found.

## **Working Definition of Fraud and Intimidation**

*Note: The definition provided below is for the purposes of this EAC project. Most of the acts described come within the federal criminal definition of fraud, but some may not.*

Election fraud is any intentional action, or intentional failure to act when there is a duty to do so, that corrupts the election process in a manner that can impact on election outcomes. This includes interfering in the process by which persons register to vote; the way in which ballots are obtained, marked, or tabulated; and the process by which election results are canvassed and certified.

Examples include the following:

- falsifying voter registration information pertinent to eligibility to cast a vote, (e.g. residence, criminal status, etc).;
- altering completed voter registration applications by entering false information;
- knowingly destroying completed voter registration applications (other than spoiled applications) before they can be submitted to the proper election authority;
- knowingly removing eligible voters from voter registration lists, in violation of HAVA, NVRA, or state election laws;
- intentional destruction by election officials of voter registration records or balloting records, in violation of records retention laws, to remove evidence of election fraud;
- vote buying;
- voting in the name of another;
- voting more than once;
- coercing a voter's choice on an absentee ballot;
- using a false name and/or signature on an absentee ballot;
- destroying or misappropriating an absentee ballot;
- felons, or in some states ex-felons, who vote when they know they are ineligible to do so;
- misleading an ex-felon about his or her right to vote;
- voting by non-citizens who know they are ineligible to do so;
- intimidating practices aimed at vote suppression or deterrence, including the abuse of challenge laws;
- deceiving voters with false information (e.g.; deliberately directing voters to the wrong polling place or providing false information on polling hours and dates);
- knowingly failing to accept voter registration applications, to provide ballots, or to accept and count voted ballots in accordance with the Uniformed and Overseas Citizens Absentee Voting Act;
- intentional miscounting of ballots by election officials;
- intentional misrepresentation of vote tallies by election officials;
- acting in any other manner with the intention of suppressing voter registration or voting, or interfering with vote counting and the certification of the vote.

Voting fraud does not include mistakes made in the course of voter registration, balloting, or tabulating ballots and certifying results. For purposes of the EAC study, it also does not include violations of campaign finance laws.

DRAFT

## Summaries of Research Conducted

### Interviews

#### *Common Themes*

- There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.
- There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud, although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.
- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.
- Several people indicate – including representatives from DOJ -- that for various reasons, the Department of Justice is bringing fewer voter intimidation and suppression cases now and is focusing on matters such as noncitizen voting, double voting and felon voting. While the civil rights section continues to focus on systemic patterns of malfeasance, the public integrity section is focusing now on individuals, on isolated instances of fraud.
- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full

implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

***Common Recommendations:***

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed
- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
  - With respect to the civil rights section, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one’s definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and the section has not pursued any such cases.
  - Craig Donsanto of the public integrity section says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases the department is investigating and the number of indictments the section is pursuing are both up dramatically. Since 2002, the department has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so it can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.
- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.
- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud. Of particular note, Sarah Ball Johnson, Executive Director of Elections for Kentucky, emphasized that having had an effective statewide voter registration database for more than thirty years has helped that state avoid most of the fraud problems that have been alleged elsewhere, such as double voting and felon voting.
- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.
- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment

- Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill
- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected nonpartisanly they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas is a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states’ office; increasing transparency in the process; and enacting conflict of interest rules.
- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.
- A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the scheme contemplated in the Carter-Baker Commission Report.
- A couple of interviewees indicated the need for clear standards for the distribution of voting machines

## **Nexis Research**

### ***Absentee Ballot Fraud***

According to press reports, absentee ballots are abused in a variety of ways:

- Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters
- Workers for groups and individuals have attempted to vote absentee in the names of the deceased
- Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.

### ***Voter Registration Fraud***

According to press reports, the following types of allegations of voter registration fraud are most common:

- Registering in the name of dead people
- Fake names and other information on voter registration forms
- Illegitimate addresses used on voter registration forms
- Voters being tricked into registering for a particular party under false pretenses
- Destruction of voter registration forms depending on the party the voter registered with

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported on included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota and Wisconsin.

### ***Voter Intimidation and Suppression***

This is the area which had the most articles in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters' registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places.
- Improper demands for identification
- Poll watchers harassing voters
- Poll workers being hostile to or aggressively challenging voters
- Disproportionate police presence
- Poll watchers wearing clothes with messages that seemed intended to intimidate
- Insufficient voting machines and unmanageably long lines

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio and Pennsylvania.

### ***“Dead Voters and Multiple Voting”***

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking of voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person taking criminal advantage of that. In total, the San Francisco Chronicle found 5 such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.

As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

### ***Vote Buying***

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations in three particular jurisdictions as detailed in the vote buying summary. There were more official investigations, indictments and convictions/pleas in this area. All of these cases are concentrated in the Midwest and South.

### ***Deceptive Practices***

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of voter registration forms. There were no reports of prosecutions or any other legal proceeding.

### ***Non-citizen Voting***

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case charges were filed against ten individuals. In one case a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this nexis search, remained just allegations of noncitizen voting.

### ***Felon Voting***

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem has been the large number of ineligible felons that remained on the voting list.

### ***Election Official Fraud***

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker's possession. In two cases workers were said to have changed peoples' votes. The one instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

### ***Existing Research***

There are many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. There is little research that is truly systematic or scientific. The most systematic look at fraud is the report written by Lori Minnite. The most systematic look at voter intimidation is the report by Laughlin McDonald. Books

written about this subject seem to all have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists. It is hoped that this gap will be filled in the “second phase” of this EAC project.

Moreover, reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund’s frequently cited book. Again, this is something that it is hoped will be addressed in the “second phase” of this EAC project by doing follow up research on allegations made in reports, books and newspaper articles.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate, but some reports say it is a major problem, albeit hard to identify.
- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.
- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

## Cases

After reviewing over 40,000 cases, the majority of which came from appeals courts, I have found comparatively very few which are applicable to this study. Of those that are applicable, no apparent thematic pattern emerges. However, it seems that the greatest areas of fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility. But because so few cases provided a picture of these current problems, I suggest that case research for the second phase of this project concentrate on state trial-level decisions.

## Methodology

The following is a summary of interviews conducted with a number of political scientists and experts in the field as to how one might undertake a comprehensive examination of voter fraud and intimidation. A list of the individuals interviewed and their ideas are available, and all of the individuals welcome any further questions or explanations of their recommended procedures.

- In analyzing instances of alleged fraud and intimidation, we should look to criminology as a model. In criminology, experts use two sources: the Uniform Crime Reports, which are all reports made to the police, and the Victimization Survey, which asks the general public whether a particular incident has happened to them. After surveying what the most common allegations are, we should conduct a survey of the general public that ask whether they have committed certain acts or been subjected to any incidents of fraud or intimidation. This would require using a very large sample, and we would need to employ the services of an expert in survey data collection. (Stephen Ansolobhere, MIT)
- Several political scientists with expertise in these types of studies recommended a methodology that includes interviews, focus groups, and a limited survey. In determining who to interview and where the focus groups should be drawn from, they recommend the following procedure:
  - Pick a number of places that have historically had many reports of fraud and/or intimidation; from that pool pick 10 that are geographically and demographically diverse, and have had a diversity of problems
  - Pick a number of places that have not had many reports of fraud and/or intimidation; from that pool pick 10 places that match the geographic and demographic make-up of the previous ten above (and, if possible, have comparable elections practices)

- Assess the resulting overall reports and impressions resulting from these interviews and focus groups, and examine comparisons and differences among the states and what may give rise to them.

In conducting a survey of elections officials, district attorneys, district election officers, they recommend that:

- The survey sample be large in order to be able to get the necessary subsets
- The survey must include a random set of counties where there have and have not been a large number of allegations

(Allan Lichtman, American University; Thad Hall, University of Utah; Bernard Grofman, UC – Irvine)

- Another political scientist recommended employing a methodology that relies on qualitative data drawn from in-depth interviews with key critics and experts on all sides of the debate on fraud; quantitative data collected through a survey of state and local elections and law enforcement officials; and case studies. Case studies should focus on the five or ten states, regions or cities where there has been a history of election fraud to examine past and present problems. The survey should be mailed to each state's attorney general and secretary of state, each county district attorney's office and each county board of elections in the 50 states. (Lorraine Minnite, Barnard College)
- The research should be a two-step process. Using LexisNexis and other research tools, a search should be conducted of news media accounts over the past decade. Second, interviews with a systematic sample of election officials nationwide and in selected states should be conducted. (Chandler Davidson, Rice University)
- One expert in the field posits that we can never come up with a number that accurately represents either the incidence of fraud or the incidence of voter intimidation. Therefore, the better approach is to do an assessment of what is most likely to happen, what election violations are most likely to be committed – in other words, a risk analysis. This would include an analysis of what it would actually take to commit various acts, e.g. the cost/benefit of each kind of violation. From there we could rank the likely prevalence of each type of activity and examine what measures are or could be effective in combating them. (Wendy Weiser, Brennan Center of New York University)
- Replicate a study in the United States done abroad by Susan Hyde of the University of California- San Diego examining the impact of impartial poll site observers on the incidence of election fraud. Doing this retrospectively would require the following steps:
  - Find out where there were federal observers
  - Get precinct level voting information for those places

- Analyze whether there was any difference in election outcomes in those places with and without observers, and whether any of these results seem anomalous.

Despite the tremendous differences in the political landscapes of the countries examined by Hyde in previous studies and the U.S., Hyde believes this study could be effectively replicated in this country by sending observers to a random sample of precincts. Rather than compare the incumbent's vote share, such factors such as voter complaints, voter turnout, number of provisional ballots used, composition of the electorate, as well as any anomalous voting results could be compared between sites with and without monitors.

For example, if intimidation is occurring, and if reputable monitors make intimidation less likely or voters more confident, then turnout should be higher on average in monitored precincts than in unmonitored precincts. If polling station officials are intentionally refusing to issue provisional ballots, and the polling station officials are more likely to adhere to regulations while being monitored, the average number of provisional ballots should be higher in monitored precincts than in unmonitored precincts. If monitors cause polling station officials to adhere more closely to regulations, then there should be fewer complaints (in general) about monitored than unmonitored precincts (this could also be reversed if monitors made voters more likely to complain).

Again, random assignment controls for all of the other factors that otherwise influence these variables.

One of the downsides of this approach is it does not get at some forms of fraud, e.g. absentee ballot fraud; those would have to be analyzed separately.

- Another political scientist recommends conducting an analysis of vote fraud claims and purging of registration rolls by list matching. Allegations of illegal voting often are based on matching of names and birth dates. Alleged instances of double voting are based on matching the names and birth dates of persons found on voting records. Allegations of ineligible felon (depending on state law), deceased, and of non-citizen voting are based on matching lists of names, birth dates, and sometimes addresses of such people against a voting records. Anyone with basic relational database skills can perform such matching in a matter of minutes.

However, there are a number of pitfalls for the unwary that can lead to grossly over-estimating the number of fraudulent votes, such as missing or ignored middle names and suffixes or matching on missing birth dates. Furthermore, there is a surprising statistical fact that a group of about three hundred people with the same first and last name are almost assured to share the exact same birth date, including year. In a large state, it is not uncommon for hundreds of Robert Smiths (and other common names) to have voted. Thus, allegations of vote fraud

or purging of voter registration rolls by list matching almost assuredly will find a large proportion of false positives: people who voted legally or are registered to vote legally.

Statistics can be rigorously applied to determine how many names would be expected to be matched by chance. A simulation approach is best applied here: randomly assign a birth date to an arbitrary number of people and observe how many match within the list or across lists. The simulation is repeated many times to average out the variation due to chance. The results can then be matched back to actual voting records and purge lists, for example, in the hotly contested states of Ohio or Florida, or in states with Election Day registration where there are concerns that easy access to voting permits double voting. This analysis will rigorously identify the magnitude alleged voter fraud, and may very well find instances of alleged fraud that exceed what might have otherwise happened by chance.

This same political scientist also recommends another way to examine the problem: look at statistics on provisional voting: the number cast might provide indications of intimidation (people being challenged at the polls) and the number of those not counted would be indications of "vote fraud." One could look at those jurisdictions in the Election Day Survey with a disproportionate number of provisional ballots cast and cross-reference it with demographics and number of provisional ballots discarded. (Michael McDonald, George Mason University)

- Spencer Overton, in a forthcoming law review article entitled *Voter Identification*, suggests a methodology that employs three approaches—investigations of voter fraud, random surveys of voters who purported to vote, and an examination of death rolls provide a better understanding of the frequency of fraud. He says all three approaches have strengths and weaknesses, and thus the best studies would employ all three to assess the extent of voter fraud. An excerpt follows:

#### *1. Investigations and Prosecutions of Voter Fraud*

Policymakers should develop databases that record all investigations, allegations, charges, trials, convictions, acquittals, and plea bargains regarding voter fraud. Existing studies are incomplete but provide some insight. For example, a statewide survey of each of Ohio's 88 county boards of elections found only four instances of ineligible persons attempting to vote out of a total of 9,078,728 votes cast in the state's 2002 and 2004 general elections. This is a fraud rate of 0.00000045 percent. The Carter-Baker Commission's Report noted that since October 2002, federal officials had charged 89 individuals with casting multiple votes, providing false information about their felon status, buying votes, submitting false voter registration information, and voting improperly as a non-citizen. Examined in the context of the 196,139,871 ballots cast between October 2002 and

August 2005, this represents a fraud rate of 0.0000005 percent (note also that not all of the activities charged would have been prevented by a photo identification requirement).

A more comprehensive study should distinguish voter fraud that could be prevented by a photo identification requirement from other types of fraud — such as absentee voting and stuffing ballot boxes — and obtain statistics on the factors that led law enforcement to prosecute fraud. The study would demand significant resources because it would require that researchers interview and pour over the records of local district attorneys and election boards.

Hard data on investigations, allegations, charges, pleas, and prosecutions is important because it quantifies the amount of fraud officials detect. Even if prosecutors vigorously pursue voter fraud, however, the number of fraud cases charged probably does not capture the total amount of voter fraud. Information on official investigations, charges, and prosecutions should be supplemented by surveys of voters and a comparison of voting rolls to death rolls.

## *2. Random Surveys of Voters*

Random surveys could give insight about the percentage of votes cast fraudulently. For example, political scientists could contact a statistically representative sampling of 1,000 people who purportedly voted at the polls in the last election, ask them if they actually voted, and confirm the percentage who are valid voters. Researchers should conduct the survey soon after an election to locate as many legitimate voters as possible with fresh memories.

Because many respondents would perceive voting as a social good, some who did not vote might claim that they did, which may underestimate the extent of fraud. A surveyor might mitigate this skew through the framing of the question (“I’ve got a record that you voted. Is that true?”).

Further, some voters will not be located by researchers and others will refuse to talk to researchers. Photo identification proponents might construe these non-respondents as improper registrations that were used to commit voter fraud.

Instead of surveying all voters to determine the amount of fraud, researchers might reduce the margin of error by focusing on a random sampling of voters who signed affidavits in the three states that request photo identification but also allow voters to establish their identity through affidavit—Florida, Louisiana, and South Dakota. In

South Dakota, for example, only two percent of voters signed affidavits to establish their identity. If the survey indicates that 95 percent of those who signed affidavits are legitimate voters (and the other 5 percent were shown to be either fraudulent or were non-responsive), this suggests that voter fraud accounts for, at the maximum, 0.1 percent of ballots cast.

The affidavit study, however, is limited to three states, and it is unclear whether this sample is representative of other states (the difficulty may be magnified in Louisiana in the aftermath of Hurricane Katrina's displacement of hundreds of thousands of voters). Further, the affidavit study reveals information about the amount of fraud in a photo identification state with an affidavit exception—more voter fraud may exist in a state that does not request photo identification.

### 3. *Examining Death Rolls*

A comparison of death rolls to voting rolls might also provide an estimate of fraud.

Imagine that one million people live in state A, which has no documentary identification requirement. Death records show that 20,000 people passed away in state A in 2003. A cross-referencing of this list to the voter rolls shows that 10,000 of those who died were registered voters, and these names remained on the voter rolls during the November 2004 election. Researchers would look at what percentage of the 10,000 dead-but-registered people who “voted” in the November 2004 election. A researcher should distinguish the votes cast in the name of the dead at the polls from those cast absentee (which a photo identification requirement would not prevent). This number would be extrapolated to the electorate as a whole.

This methodology also has its strengths and weaknesses. If fraudulent voters target the dead, the study might overestimate the fraud that exists among living voters (although a low incidence of fraud among deceased voters might suggest that fraud among all voters is low). The appearance of fraud also might be inflated by false positives produced by a computer match of different people with the same name. Photo identification advocates would likely assert that the rate of voter fraud could be higher among fictitious names registered, and that the death record survey would not capture that type of fraud because fictitious names registered would not show up in the death records. Nevertheless, this study, combined with the other two, would provide important insight into the magnitude of fraud likely to exist in the absence of a photo identification requirement.

**Recommendations for Further EAC Activity  
on Voting Fraud and Voter Intimidation**

**Consultants' Recommendations**

***Recommendation 1: Conduct More Interviews***

Time and resource constraints prevented the consultants from interviewing the full range of participants in the process. As a result, we recommend that any future activity in this area include conducting further interviews.

In particular, we recommend that more election officials from all levels of government, parts of the country, and parties be interviewed. These individuals have the most direct inside information on how the system works -- and at times does not work. They are often the first people voters go to when something goes wrong and are often responsible for fixing it. They are the ones who must carry out the measures that are designed to both prevent fraud and voter intimidation and suppression. They will most likely know what, therefore, is and is not working.

It would also be especially beneficial to talk to people in law enforcement, specifically federal District Election Officers ("DEOs") and local district attorneys, as well as civil and criminal defense attorneys.

The Public Integrity Section of the Criminal Division of the Department of Justice has all of the 93 U.S. Attorneys appoint Assistant U.S. Attorneys to serve as DEOs for two years. DEOs are required to

- screen and conduct preliminary investigations of complaints, in conjunction with the FBI and PIN, to determine whether they constitute potential election crimes and should become matters for investigation;
- oversee the investigation and prosecution of election fraud and other election crimes in their districts;
- coordinate their district's (investigative and prosecutorial) efforts with DOJ headquarters prosecutors;
- coordinate election matters with state and local election and law enforcement officials and make them aware of their availability to assist with election-related matters;
- issue press releases to the public announcing the names and telephone numbers of DOJ and FBI officials to contact on election day with complaints about voting or election irregularities and answer telephones on election day to receive these complaints; and
- supervise a team of Assistant U.S. Attorneys and FBI special agents who are appointed to handle election-related allegations while the polls are open on election day.<sup>1</sup>

Given the great responsibilities of the DEOs, and the breadth of issues they must deal with, they undoubtedly are great resources for information and insight as to what types of fraud and intimidation/suppression are occurring in their districts.

In many situations, however, it is the local district attorneys who will investigate election fraud and suppression tactics, especially in local elections. They will be able to provide information on what has gone on in their jurisdictions, as well as which matters get pursued and why.

Finally, those who defend people accused of election related crimes would also be useful to speak to. They may have a different perspective on how well the system is working to detect, prevent, and prosecute election fraud.

***Recommendation 2: Follow Up on Nexis Research***

The Nexis search conducted for this phase of the research was based on a list of search terms agreed upon by both consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contain allegations of fraud or intimidation. Similarly, many of the articles contain information about investigations into such activities or even charges brought. However, without being able to go beyond the agreed search terms, it could not be determined whether there was any later determination regarding the allegations, investigation or charges brought. This leaves a gaping hole: it is impossible to know if the article is just reporting on “talk” or what turns out to be a serious affront to the system.

As a result, we recommend that follow up Nexis research be conducted to determine what, if any, resolutions or further activity there was in each case. This would provide a much more accurate picture of what types of activities are actually taking place.

***Recommendation 3: Follow Up on Allegations Found in Literature Review***

Similarly, many allegations are made in the reports and books that we analyzed and summarized. Those allegations are often not substantiated in any way and are inherently time limited by the date of the writing. Despite this, such reports and books are frequently cited by various interested parties as evidence of fraud or intimidation.

Therefore, we recommend follow up to the literature review: for those reports and books that make or cite specific instances of fraud or intimidation, a research effort should be made to follow up on those references to see if and how they were resolved.

***Recommendation 4: Review Complaints File With MyVote1 Project Voter Hotline***

During the 2004 election and the statewide elections of 2005, the University of Pennsylvania led a consortium of groups and researchers in conducting the MyVote1 Project. This project involved using a 1-800 voter hotline where voters could call for poll location, be transferred to a local hotline, or leave a recorded message with a complaint.

In 2004, this resulted in over 200,000 calls received and over 56,000 recorded complaints.<sup>ii</sup> The researchers in charge of this project have done a great deal of work to parse and analyze the data collected through this process, including going through the audio messages and categorizing them by the nature of the complaint. These categories include registration, absentee ballot, poll access, ballot/screen, coercion/intimidation, identification, mechanical, provisional (ballot).

We recommend that further research include making full use of this data with the cooperation of the project leaders. While perhaps not a fully scientific survey given the self-selection of the callers, the information regarding 200,000 complaints should provide a good deal of insight into the problems voters experienced, especially those in the nature of intimidation or suppression.

***Recommendation 5: Further Review of Complaints Filed With U.S. Department of Justice***

Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice has a variety in ways it tracks complaints of voter intimidation,<sup>iii</sup> the Section was extremely reluctant to provide the consultants with useful information. Further attempts should be made to obtain relevant data. This includes the telephone logs of complaints the Section keeps and information from the database – the Interactive Case Management (ICM) system – the Section maintains on complaints received and the corresponding action taken. We also recommend that further research include a review and analysis of the observer and monitor field reports from Election Day that must be filed with the Section.

***Recommendation 6: Review Reports Filed By District Election Officers***

Similarly, the consultants believe it would be useful for any further research to include a review of the reports that must be filed by every District Election Officer to the Public Integrity Section of the Criminal Division of the Department of Justice. As noted above, the DEOs play a central role in receiving reports of voter fraud and investigating and pursuing them. Their reports back to the Department would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or made confidential.

***Recommendation 7: Attend Ballot Access and Voting Integrity Symposium***

The consultants also believe it would be useful for any further activity in this area to include attendance at the next Ballot Access and Voting Integrity Symposium. According to the Department,<sup>iv</sup>

Prosecutors serving as District Election Officers in the 94 U.S. Attorneys' Offices are required to attend annual training conferences on fighting election fraud and voting rights abuses... These conferences are sponsored by the Voting Section of the Civil Rights Division and the Public Integrity

Section of the Criminal Division, and feature presentations by Civil Rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys' Offices. As a result of these conferences, there is a nationwide increase in Department expertise relating to the prosecution of election crimes and the enforcement of voting rights.

By attending the symposium researchers could learn more about the following:

- How District Election Officers are trained, e.g. what they are taught to focus their resources on, how they are instructed to respond to various types of complaints
- How information about previous election and voting issues is presented
- How the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants

***Recommendation 8: Employ Academic or Individual to Conduct Statistical Research***

Included in this report is a summary of various methodologies political scientists and others suggested to measure voter fraud and intimidation. While we note the skepticism of the Working Group in this regard, we nonetheless recommend that in order to further the mission of providing unbiased data, further activity in this area include an academic institution and/or individual that focuses on sound, statistical methods for political science research.

***Recommendation 9: Explore Improvements to Federal Law***

Finally, consultant Tova Wang recommends that future researchers review federal law to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threat.

According to Craig Donsanto, long-time Director of the Election Crimes Branch, Public Integrity Section, Criminal Division of the U.S. Department of Justice:

As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation which is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.<sup>v</sup>

Mr. Donsanto reiterated these points to us on several occasions, including at the working group meeting.

As a result, researchers should examine if there is some way in which current law might be revised or new laws passed that would reach voter intimidation that does not threaten the voter physically or financially, but rather threatens the voter's right to vote as a tangible value in itself. Such an amendment or law would reach all forms of voter intimidation, no matter if it is motivated by race, party, ethnicity or any other criteria. The law would then *potentially* cover, for example, letters and postcards with language meant to deter voters from voting and both pre-election and Election Day challengers that are clearly mounting challenges solely on illegitimate bases.

In the alternative to finding a way to criminalize such behavior, researchers might examine ways to invigorate measures to deter and punish voter intimidation under the civil law. For example, there might be a private right of action created for voters or groups who have been subjected to intimidation tactics in the voting process. Such an action could be brought against individual offenders; any state or local actor where there is a pattern of repeated abuse in the jurisdiction that such officials did not take sufficient action against; and organizations that intentionally engage in intimidating practices. As a penalty upon finding liability, civil damages could be available plus perhaps attorney's fees.

Another, more modest measure would be, as has been suggested by Ana Henderson and Christopher Edley,<sup>vi</sup> to bring parity to fines for violations under the Voting Rights Act. Currently the penalty for fraud is \$10,000 while the penalty for acts to deprive the right to vote is \$5,000.

### **Working Group Recommendations**

#### ***Recommendation 1: Employ Observers To Collect Data in the 2006 and/or 2008 Elections***

At the working group meeting, there was much discussion about using observers to collect data regarding fraud and intimidation at the polls in the upcoming elections. Mr. Ginsberg recommended using representatives of both parties for the task. Mr. Bauer and others objected to this, believing that using partisans as observers would be unworkable and would not be credible to the public.

There was even greater concern about the difficulties in getting access to poll sites for the purposes of observation. Most states strictly limit who can be in the polling place. In addition, there are already so many groups doing observation and monitoring at the polls, administrators might object. There was further concern that observers would introduce a variable into the process that would impact the outcome. The very fact that observers were present would influence behavior and skew the results.

Moreover, it was pointed out, many of the problems we see now with respect to fraud and intimidation does not take place at the polling place, e.g. absentee ballot fraud and deceptive practices. Poll site monitoring would not capture this activity. Moreover, with

increased use of early voting, poll site monitoring might have to go on for weeks to be effective, which would require tremendous resources.

Mr. Weinberg suggested using observers in the way they are utilized in international elections. Such observers come into a jurisdiction prior to the election, and use standardized forms at the polling sites to collect data.

***Recommendation 2: Do a Study on Absentee Ballot Fraud***

The working group agreed that since absentee ballot fraud is the main form of fraud occurring, and is a practice that is great expanding throughout the country, it would make sense to do a stand-alone study of absentee ballot fraud. Such a study would be facilitated by the fact that there already is a great deal of information on how, when, where and why such practices are carried out based on cases successfully prosecuted. Researchers could look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing them.

***Recommendation 3: Use Risk Analysis Methodology to Study Fraud<sup>1</sup>***

Working group members were supportive of one of the methodologies recommended for studying this issue, risk analysis. As Mr. Bauer put it, based on the assumption that people act rationally, do an examination of what types of fraud people are most likely to commit, given the relative costs and benefits. In that way, researchers can rank the types of fraud that are the easiest to commit at the least cost with the greatest effect, from most to least likely to occur. This might prove a more practical way of measuring the problems than trying to actually get a number of acts of fraud and/or intimidation occurring. Mr. Greenbaum added that one would want to examine what conditions surrounding an election would be most likely to lead to an increase in fraud. Mr. Rokita objected based on his belief that the passions of partisanship lead people to not act rationally in an election.

***Recommendation 4: Conduct Research Using Database Comparisons***

Picking up on a suggestion made by Spencer Overton and explained in the suggested methodology section, Mr. Hearne recommended studying the issue using statistical database matching. Researchers should compare the voter roll and the list of people who actually voted to see if there are “dead” and felon voters. Because of the inconsistent quality of the databases, however, a political scientist would need to work in an appropriate margin of error when using such a methodology.

***Recommendation 5: Conduct a Study of Deceptive Practices***

The working group discussed the increasing use of deceptive practices, such as flyers with false and/or intimidating information, to suppress voter participation. A number of

---

<sup>1</sup> See Appendix C, and section on methodology

groups, including the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such practices, which may be available for review and analysis. This is also an area in which there is often tangible evidence, such as copies of the flyers and postcards themselves. All of this information should be reviewed and analyzed to see how such practices are being conducted and what can be done about them.

***Recommendation 6: Study Use of HAVA Administrative Complaint Procedure As Vehicle for Measuring Fraud and Intimidation***

The EAC should study the extent to which states are actually utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.

***Recommendation 7: Examine the Use of Special Election Courts***

Given that many state and local judges are elected, it may be worth exploring whether special election courts that are running before, during, and after election day would be an effective means of disposing with complaints and violations in an expeditious manner. Pennsylvania employs such a system, and the EAC should consider investigating how well it is working to deal with fraud and intimidation problems.

DRAFT

## Key Working Group Observations and Concerns

### Working Group Observations

1. ***The main problems today are structural barriers to voting and administrative error.*** Mr. Perez observed that, in accordance with the research, the biggest issues today are structural barriers to voting, not stealing votes. Election administrators share this view. Election fraud is negligible, and to the extent it occurs, it needs to be prosecuted with stronger criminal laws. The biggest problem is properly preparing people, which is the responsibility of election administrators.
2. ***Most fraud and intimidation is happening outside of the polling place.*** Mr. Greenbaum observed that with respect to both voter fraud and voter suppression, such as deceptive practices and tearing up voter registration forms, most of that is taking place outside of the polling place.
3. ***This issue cannot be addressed through one study or one methodology alone.*** Mr. Weinberg observed that since there is such a variety in types of fraud and intimidation, one solution will not fit all. It will be impossible to obtain data or resolve any of these problems through a single method.
4. ***The preliminary research conducted for this project is extremely valuable.*** Several of the working group members complimented the quality of the research done and although it is only preliminary, thought it would be useful and informative in the immediate future.
5. ***The Department of Justice is exploring expanding its reach over voter suppression activities.*** In the context of the conversation about defining voter intimidation, Mr. Donsanto pointed out that while voter intimidation was strictly defined by the criminal law, his section is beginning to explore the slightly different concept of vote suppression, and how to pursue it. He mentioned the phone-jamming case in New Hampshire as an initial success in this effort. He noted that he believes that vote suppression in the form of deceptive practices ought to be a crime and the section is exploring ways to go after it within the existing statutory construct. Mr. Bauer raised the example of a party sending people dressed in paramilitary outfits to yell at people as they go to the polls, telling them they have to show identification. Mr. Donsanto said that under the laws he has to work with today, such activity is not considered corrupt. He said that his lawyers are trying to “bend” the current laws to address aggravated cases of vote suppression, and the phone-jamming case is an example of that. Mr. Donsanto said that within the Department, the term vote “suppression” and translating it into a crime is a “work in progress.”

6. **Registration fraud does not translate into vote fraud.** Ms. Rogers, Mr. Donsanto and others stated that although phony voter registration applications turned in by people being paid by the form was a problem, it has not been found in their experience to lead to fraudulent voters at the polls. Ms. Rogers said such people were motivated by money, not defrauding the election.
7. **Handling of voter fraud and intimidation complaints varies widely across states and localities.** Ms. Rogers and others observed that every state has its own process for intake and review of complaints of fraud and intimidation, and that procedures often vary within states. The amount of authority secretaries of state have to address such problems also is different in every state. Mr. Weinberg stated he believed that most secretaries of state did not have authority to do anything about these matters. Participants discussed whether secretaries ought to be given greater authority so as to centralize the process, as HAVA has mandated in other areas.

### Working Group Concerns

1. Mr. Rokita questioned whether the purpose of the present project ought to be on assessing the level of fraud and where it is, rather than on developing methods for making such measurements. He believed that methodology should be the focus, “rather than opinions of interviewees.” He was concerned that the EAC would be in a position of “adding to the universe of opinions.”
2. Mr. Rokita questioned whether the “opinions” accumulated in the research “is a fair sampling of what’s out there.” Ms. Wang responded that one of the purposes of the research was to explore whether there is a method available to actually quantify in some way how much fraud there is and where it is occurring in the electoral process. Mr. Rokita replied that “Maybe at the end of the day we stop spending taxpayer money or it’s going to be too much to spend to find that kind of data. Otherwise, we will stop it here and recognize there is a huge difference of opinion on that issue of fraud, when it occurs is obtainable, and that would possibly be a conclusion of the EAC.” Ms. Sims responded that she thought it would be possible to get better statistics on fraud and there might be a way of “identifying at this point certain parts in the election process that are more vulnerable, that we should be addressing.”
3. Mr. Rokita stated that, “We’re not sure that fraud at the polling place doesn’t exist. We can’t conclude that.”
4. Mr. Rokita expressed concern about working with a political scientist. He believes that the “EAC needs to be very careful in who they select, because all the time and effort and money that’s been spent up to date and would be spent in the future could be invalidated by a wrong selection in the eyes of some group.”

### Appendix 3

## Excerpt from “Machinery of Democracy,” a Brennan Center Report

### APPENDIX C

#### **BRENNAN CENTER TASK FORCE ON VOTING SYSTEM SECURITY, LAWRENCE NORDEN, CHAIR**

Excerpted from pp. 8-19

#### **METHODOLOGY**

The Task Force concluded, and the peer review team at NIST agreed, that the best approach for comprehensively evaluating voting system threats was to: (1) identify and categorize the potential threats against voting systems, (2) prioritize these threats based upon an agreed upon metric (which would tell us how difficult each threat is to accomplish from the attacker's point of view), and (3) determine, utilizing the same metric employed to prioritize threats, how much more difficult each of the catalogued attacks would become after various sets of countermeasures are implemented.

This model allows us to identify the attacks we should be most concerned about (*i.e.*, the most practical and least difficult attacks). Furthermore, it allows us to quantify the potential effectiveness of various sets of countermeasures (*i.e.*, how difficult the least difficult attack is after the countermeasure has been implemented). Other potential models considered, but ultimately rejected by the Task Force, are detailed in Appendix B.

#### **IDENTIFICATION OF THREATS**

The first step in creating a threat model for voting systems was to identify as many potential attacks as possible. To that end, the Task Force, together with the participating election officials, spent several months identifying voting system vulnerabilities. Following this work, NIST held a Voting Systems Threat Analysis Workshop on October 7, 2005. Members of the public were invited to write up and post additional potential attacks. Taken together, this work produced over 120 potential attacks on the three voting systems. They are detailed in the catalogs annexed.<sup>20</sup> Many of the attacks are described in more detail at <http://vote.nist.gov/threats/papers.htm>.

The types of threats detailed in the catalogs can be broken down into nine categories: (1) the insertion of corrupt software into machines prior to Election Day; (2) wireless and other remote control attacks on voting machines on Election Day; (3) attacks on tally servers; (4) miscalibration of voting machines; (5) shut off of voting machine features intended to assist voters; (6) denial of service attacks; (7) actions by corrupt poll workers or others at the polling place to affect votes cast; (8) vote buying schemes; (9) attacks on ballots or VVPT. Often, the actual attacks

involve some combination of these categories. We provide a discussion of each type of attack in “Categories of Attacks,” *infra* at pp. 24–27.

**PRIORITIZING THREATS:  
NUMBER OF INFORMED PARTICIPANTS AS METRIC**

Without some form of prioritization, a compilation of the threats is of limited value. Only by prioritizing these various threats could we help election officials identify which attacks they should be most concerned about, and what steps could be taken to make such attacks as difficult as possible. As discussed below, we have determined the level of difficulty for each attack where the attacker is attempting to affect the outcome of a close statewide election.

There is no perfect way to determine which attacks are the least difficult, because each attack requires a different mix of resources – well-placed insiders, money, programming skills, security expertise, *etc.* Different attackers would find certain resources easier to acquire than others. For example, election fraud committed by local election officials would always involve well-placed insiders and a thorough understanding of election procedures; at the same time, there is no reason to expect such officials to have highly skilled hackers or first-rate programmers working with them. By contrast, election fraud carried out by a foreign government would likely start with plenty of money and technically skilled attackers, but probably without many conveniently placed insiders or detailed knowledge of election procedures.

Ultimately, we decided to use the “number of informed participants” as the metric for determining attack difficulty. An attack which uses fewer participants is deemed the easier attack.

We have defined “informed participant” as someone whose participation is needed to make the attack work, and who knows enough about the attack to foil or expose it. This is to be distinguished from a participant who unknowingly assists the attack by performing a task that is integral to the attack’s successful execution without understanding that the task is part of an attack on voting systems.

The reason for using the security metric “number of informed participants” is relatively straightforward: the larger a conspiracy is, the more difficult it would be to keep it secret. Where an attacker can carry out an attack by herself, she need only trust herself. On the other hand, a conspiracy that requires thousands of people to take part (like a vote-buying scheme) also requires thousands of people to keep quiet. The larger the number of people involved, the greater the likelihood that one of them (or one who was approached, but declined to take part) would either inform the public or authorities about the attack, or commit some kind of error that causes the attack to fail or become known.

Moreover, recruiting a large number of people who are willing to undermine the integrity of a statewide election is also presumably difficult. It is not hard to imagine two or three people agreeing to work to change the outcome of an election. It seems far less likely that an attacker could identify and employ hundreds or thousands of similarly corrupt people without being discovered.

We can get an idea of how this metric works by looking at one of the threats listed in our catalogs: the vote-buying threat, where an attacker or attackers pay individuals to vote for a particular candidate. This is Attack Number 26 in the PCOS Attack Catalog<sup>22</sup> (though this attack would not be substantially different against DREs or DREs w/ VVPT).<sup>23</sup> In order to work under our current types of voting systems, this attack requires (1) at least one person to purchase votes, (2) many people to agree to sell their votes, and (3) some way for the purchaser to confirm that the voters she pays actually voted for the candidate she supported. Ultimately, we determined that, while practical in smaller contests, a vote-buying attack would be an exceptionally difficult way to affect the outcome of a statewide election. This is because, even in a typically close statewide election, an attacker would need to involve thousands of voters to ensure that she could affect the outcome of a statewide race.<sup>24</sup>

For a discussion of other metrics we considered, but ultimately rejected, see Appendix C.

## **DETERMINING NUMBER OF INFORMED PARTICIPANTS**

### **DETERMINING THE STEPS AND VALUES FOR EACH ATTACK**

The Task Force members broke down each of the catalogued attacks into its necessary steps. For instance, Attack 12 in the PCOS Attack Catalog is “Stuffing Ballot Box with Additional Marked Ballots.”<sup>25</sup> We determined that, at a minimum, there were three component parts to this attack: (1) stealing or creating the ballots and then marking them, (2) scanning marked ballots through the PCOS scanners, probably before the polls opened, and (3) modifying the poll books in each location to ensure that the total number of votes in the ballot boxes was not greater than the number of voters who signed in at the polling place.

Task Force members then assigned a value representing the minimum number of persons they believed would be necessary to accomplish each goal. For PCOS Attack 12, the following values were assigned:<sup>26</sup>

**Minimum number required to steal or create ballots: 5 persons total.**<sup>27</sup>

**Minimum number required to scan marked ballots: 1 per polling place attacked.**

**Minimum number required to modify poll books: 1 per polling place attacked.**<sup>28</sup>

After these values were assigned, the Brennan Center interviewed several election officials to see whether they agreed with the steps and values assigned to each attack.<sup>29</sup> When necessary, the values and steps were modified. The new catalogs, including attack steps and values, were then reviewed by Task Force members. The purpose of this review was to ensure, among other things, that the steps and values were sound.

These steps and values tell us how difficult it would be to accomplish a *single attack in a single polling place*. They do not tell us how many people it would take to change the outcome of an election successfully – that depends, of course, on specific facts about the jurisdiction: how many votes are generally recorded in each polling

place, how many polling places are there in the jurisdiction, and how close is the race? For this reason, we determined that it was necessary to construct a hypothetical jurisdiction, to which we now turn.

**NUMBER OF INFORMED PARTICIPANTS NEEDED TO CHANGE STATEWIDE ELECTION**

We have decided to examine the difficulty of each attack in the context of changing the outcome of a reasonably close statewide election. While we are concerned by potential attacks on voting systems in any type of election, we are most troubled by attacks that have the potential to affect large numbers of votes. These are the attacks that could actually change the outcome of a statewide election with just a handful of attack participants.

We are less troubled by attacks on voting systems that can only affect a small number of votes (and might therefore be more useful in local elections). This is because there are many non-system attacks that can also affect a small number of votes (*i.e.*, sending out misleading information about polling places, physically intimidating voters, submitting multiple absentee ballots, *etc.*). Given the fact that these non-system attacks are likely to be less difficult in terms of number of participants, financial cost, risk of detection, and time commitment, we are uncertain that an attacker would target *voting machines* to alter a small number of votes.

In order to evaluate how difficult it would be for an attacker to change the outcome of a statewide election, we created a composite jurisdiction. The composite jurisdiction was created to be representative of a relatively close statewide election. We did not want to examine a statewide election where results were so skewed toward one candidate (for instance, the re-election of Senator Edward M. Kennedy in 2000, where he won 73% of the vote<sup>30</sup>), that reversing the election results would be impossible without causing extreme public suspicion. Nor did we want to look at races where changing only a relative handful of votes (for instance, the Governor's race in Washington State in 2004, which was decided by a mere 129 votes<sup>31</sup>) could affect the outcome of an election; under this scenario, many of the potential attacks would involve few people, and therefore look equally difficult.

We have named our composite jurisdiction "the State of Pennasota." The State of Pennasota is a composite of ten states: Colorado, Florida, Iowa, Ohio, New Mexico, Pennsylvania, Michigan, Nevada, Wisconsin and Minnesota. These states were chosen because they were the ten "battleground" states that Zogby International consistently polled in the spring, summer, and fall 2004.<sup>32</sup> These are statewide elections that an attacker would have expected, ahead of time, to be fairly close.

We have also created a composite election, which we label the "Governor's Race" in Pennasota. The results of this election are a composite of the actual results in the same ten states in the 2004 Presidential Election.

We have used these composites as the framework by which to evaluate the difficulty of the various catalogued attacks.<sup>33</sup> For instance, we know a ballot-box stuffing attack would require roughly five people to create and mark fake ballots, as

well as one person per polling place to stuff the boxes, and one person per polling place to modify the poll books. But, in order to determine how many informed participants would be needed to affect a statewide race, we need to know how many polling places would need to be attacked.

The composite jurisdiction and composite election provide us with information needed to answer these questions: *i.e.*, how many extra votes our attackers would need to add to their favored candidate's total for him to win, how many ballots our attackers can stuff into a particular polling place's ballot box without arousing suspicion (and related to this, how many votes are generally cast in the average polling place), how many polling places are there in the state, *etc.* We provide details about both the composite jurisdiction and election in the section entitled "Governor's Race, State of Pennasota, 2007," *infra* at pp 20-27.

#### LIMITS OF INFORMED PARTICIPANTS AS METRIC

Of the possible metrics we considered, we believe that measuring the number of people who know they are involved in an attack (and thus could provide evidence of the attack to the authorities and/or the media), is the best single measure of attack difficulty; as already discussed, we have concluded that the more people an attacker is forced to involve in his attack, the more likely it is that one of the participants would reveal the attack's existence and foil the attack, perhaps sending attackers to jail. However, we are aware of a number of places where the methodology could provide us with questionable results.

By deciding to concentrate on size of attack team, we mostly ignore the need for other resources when planning an attack. Thus, a software attack on DREs which makes use of steganography<sup>34</sup> to hide attack instruction files (see "DRE w/ VVPT Attack No.1a" discussed in greater detail, *infra* at pp. 62-65) is considered easier than an attack program delivered over a wireless network at the polling place (see discussion of wireless networks, *infra* at pp. 85-91). However, the former attack probably requires a much more technologically sophisticated attacker.

Another imperfection with this metric is that we do not have an easy way to represent how much choice the attacker has in finding members of his attack team.

Thus, with PCOS voting, we conclude that the cost of subverting a routine audit of ballots is roughly equal to the cost of intercepting ballot boxes in transit and substituting altered ballots (see discussion of PCOS attacks, *infra* at pp. 77-83).

However, subverting the audit team requires getting a specific set of trusted people to cooperate with the attacker. By contrast, the attacker may be able to decide which precincts to tamper with based on which people he has already recruited for his attack.

In an attempt to address this concern, we considered looking at the number of "insiders" necessary to take part in each attack. Under this theory, getting five people to take part in a conspiracy to attack a voting system might not be particularly difficult. But getting five well-placed county election officials to take part in the attack would be (and should be labeled) the more difficult of the two attacks. Because, for the most part, the low-cost attacks we have identified do not necessarily involve well placed insiders (but could, for instance, involve one of many people with access to commercial off the shelf software ("COTS") during development

or at the vendor), we do not believe that using this metric would have substantially changed our analysis.<sup>35</sup>

Finally, these attack team sizes do not always capture the logistical complexity of an attack. For example, an attack on VVPT machines involving tampering with the voting machine software and also replacing the paper records in transit requires the attacker to determine what votes were falsely produced by the voting machine and print replacement records in time to substitute them. While this is clearly possible, it raises a lot of operational difficulties – a single failed substitution leaves the possibility that the attack would be detected during the audit of ballots.

We have tried to keep these imperfections in mind when analyzing and discussing our least difficult attacks.

We suspect that much of the disagreement between voting officials and computer security experts in the last several years stems from a difference of opinion in prioritizing the difficulty of attacks. Election officials, with extensive experience in the logistics of handling tons of paper ballots, have little faith in paper and understand the kind of breakdowns in procedures that lead to traditional attacks like ballot box stuffing; in contrast, sophisticated attacks on computer voting systems appear very difficult to many of them. Computer security experts understand sophisticated attacks on computer systems, and recognize the availability of tools and expertise that makes these attacks practical to launch, but have no clear idea how they would manage the logistics of attacking a paper-based system. Looking at attack team size is one way to bridge this difference in perspective.

## **EFFECTS OF IMPLEMENTING COUNTERMEASURE SETS**

The final step of our threat analysis is to measure the effect of certain countermeasures against the catalogued attacks. How much more difficult would the attacks become once the countermeasures are put into effect? How many more informed participants (if any) would be needed to counter or defeat these countermeasures?

Our process for examining the effectiveness of a countermeasure mirrors the process for determining the difficulty of an attack: we first asked whether the countermeasure would allow us to detect an attack with near certainty. If we agreed that the countermeasure would expose the attack, we identified the steps that would be necessary to circumvent or defeat the countermeasure. For each step to defeat the countermeasure, we determined the number of additional informed participants (if any) that an attacker would need to add to his team. As with the process for determining attack difficulty, the Brennan Center interviewed numerous election officials to see whether they agreed with the steps and values assigned. When necessary, the values and steps for defeating the countermeasures were altered to reflect the input of election officials.

## **COUNTERMEASURES EXAMINED**

### **BASIC SET OF COUNTERMEASURES**

The first set of countermeasures we looked at is the “Basic Set” of countermeasures. This Basic Set was derived from security survey responses<sup>36</sup> we received

from county election officials around the country, as well as additional interviews with more than a dozen current and former election officials. Within the Basic Set of countermeasures are the following procedures:

### **Inspection**

The jurisdiction is not knowingly using any uncertified software that is subject to inspection by the Independent Testing Authority (often referred to as the “ITA”).<sup>37</sup>

### **Physical Security for Machines**

- Ballot boxes (to the extent they exist) are examined (to ensure they are empty) and locked by poll workers immediately before the polls are opened.
- Before and after being brought to the polls for Election Day, voting systems for each county are locked in a single room in a county warehouse.
- The warehouse has perimeter alarms, secure locks, video surveillance and regular visits by security guards.
- Access to the warehouse is controlled by sign-in, possibly with card keys or similar automatic logging of entry and exit for regular staff.
- Some form of “tamper evident” seals are placed on machines before and after each election.
- The machines are transported to polling locations five to fifteen days before Election Day.

### **Chain of Custody/Physical Security of Election Day Records**

- At close of the polls, vote tallies for each machine are totaled and compared with number of persons that have signed the poll books.
- A copy of totals for each machine is posted at each polling place on Election Night and taken home by poll workers to check against what is posted publicly at election headquarters, on the web, in the papers, or elsewhere.<sup>38</sup>
- All audit information (*i.e.*, Event Logs, VVPT records, paper ballots, machine printouts of totals) that is not electronically transmitted as part of the unofficial upload to the central election office, is delivered in official, sealed and hand-delivered information packets or boxes. All seals are numbered and tamper-evident.
- Transportation of information packets is completed by two election officials representing opposing parties who have been instructed to remain in joint custody of the information packets or boxes from the moment it leaves the precinct to the moment it arrives at the county election center.

- Each polling place sends its information packets or boxes to the county election center separately, rather than having one truck or person pick up this data from multiple polling locations.
- Once the sealed information packets or boxes have reached the county election center, they are logged. Numbers on the seals are checked to ensure that they have not been replaced. Any broken or replaced seals are logged. Intact seals are left intact.
- After the packets and/or boxes have been logged, they are provided with physical security precautions at least as great as those listed for voting machines, above. Specifically, for Pennasota, we have assumed the room in which the packets are stored have perimeter alarms, secure locks, video surveillance and regular visits by security guards and county police officers; and access to the room is controlled by sign-in, possibly with card keys or similar automatic logging of entry and exit for regular staff.

### Testing<sup>39</sup>

- An Independent Testing Authority has certified the model of voting machine used in the polling place.
- Acceptance Testing<sup>40</sup> is performed on machines at time, or soon after they are received by County.
- Pre-election Logic and Accuracy<sup>41</sup> testing is performed by the relevant election official.
- Prior to opening the polls, every voting machine and vote tabulation system is checked to see that it is still configured for the correct election, including the correct precinct, ballot style, and other applicable details.

### REGIMEN FOR AUTOMATIC ROUTINE AUDIT PLUS BASIC SET OF COUNTERMEASURES.

The second set of countermeasures is the Regimen for an Automatic Routine Audit Plus Basic Set of Countermeasures.

Some form of routine auditing of voter-verified paper records occurs in 12 states, to test the accuracy of electronic voting machines. They generally require between 1 and 10% of all precinct voting machines to be audited after each election. <sup>42</sup>

Jurisdictions can implement this set of countermeasures only if their voting systems produce some sort of voter-verified paper record of each vote. This could be in the form of a paper ballot, in the case of PCOS, or a voter-verified paper trail (“VVPT”), in the case of DREs.

We have assumed that jurisdictions take the following steps when conducting an Automatic Routine Audit (when referring to this set of assumptions “Regimen for an Automatic Routine Audit”):

### **The Audit**

- Leaders of the major parties in each county are responsible for selecting a sufficient number of audit-team members to be used in that county.<sup>43</sup>
- Using a highly transparent random selection mechanism (*see point ii, below*), the voter-verified paper records for between a small percentage of all voting machines in the State are selected for auditing.
- Using a transparent random selection method, auditors are assigned to the selected machines (two or three people, with representatives of each major political party, would comprise each audit team).
- The selection of voting machines, and the assignment of auditors to machines, occurs immediately before the audits take place. The audits take place as soon after polls close as possible – for example, at 9 a.m. the morning after polls close.
- Using a transparent random selection method, county police officers, security personnel and the video monitor assigned to guard the voter-verified records are chosen from a large pool of on-duty officers and employees on election night.
- The auditors are provided the machine tallies and are able to see that the county tally reflects the sums of the machine tallies before the start of the inspection of the paper.
- The audit would include a tally of spoiled ballots (in the case of VVPT, the number of cancellations recorded), overvotes, and undervotes.

### **Transparent Random Selection Process**

In this report, we have assumed that random auditing procedures are in place for both the Regimen for an Automatic Routine Audit and Regimen for Parallel Testing. We have further assumed procedures to prevent a single, corrupt person from being able to fix the results. This implies a kind of transparent and public random procedure.

For the Regimen for an Automatic Routine Audit there are at least two places where transparent, random selection processes are important: in the selection of precincts to audit, and in the assignment of auditors to the precincts they will be auditing.

Good election security can employ Transparent Random Selection in other places with good effect:

- the selection of parallel testers from a pool of qualified individuals.
- the assignment of police and other security professionals from on-duty lists, to monitor key materials, for example, the VVPT records between the time that they arrive at election central and the time of the completion of the ARA.

If a selection process for auditing is to be trustworthy and trusted, ideally:

- The whole process will be publicly observable or videotaped;<sup>44</sup>
- The random selection will be publicly verifiable, *i.e.*, anyone observing will be able to verify that the sample was chosen randomly (or at least that the number selected is not under the control of any small number of people); and
- The process will be simple and practical within the context of current election practice so as to avoid imposing unnecessary burdens on election officials.

There are a number of ways that election officials can ensure some kind of transparent randomness. One way would be to use a state lottery machine to select precincts or polling places for auditing. We have included two potential examples of transparent random selection processes in Appendix F. These apply to the Regimen for Parallel Testing as well.

#### **REGIMEN FOR PARALLEL TESTING PLUS BASIC SET OF COUNTERMEASURES**

The final set of countermeasures we have examined is “Parallel Testing” plus the Basic Set of countermeasures. Parallel Testing, also known as election-day testing, involves selecting voting machines at random and testing them as realistically as possible during the period that votes are being cast.

#### **Parallel Testing**

In developing our set of assumptions for Parallel Testing, we relied heavily upon interviews with Jocelyn Whitney, Project Manager for Parallel Testing in the State of California, and conclusions drawn from this Report.<sup>45</sup> In our analysis, we assume that the following procedures would be included in the Parallel Testing regimen (when referring to this regimen “Regimen for Parallel Testing”) that we evaluate:

- At least two of each DRE model (meaning both vendor and model) would be selected for Parallel Testing;
- At least two DREs from each of the three largest counties would be parallel tested;
- Counties to be parallel tested would be chosen by the Secretary of State in a transparent and random manner.
- Counties would be notified as late as possible that machines from one of their precincts would be selected for Parallel Testing;<sup>46</sup>
- Precincts would be selected through a transparent random mechanism;
- A video camera would record testing;
- For each test, there would be one tester and one observer;

- Parallel Testing would occur at the polling place;
- The script for Parallel Testing would be generated in a way that mimics voter behavior and voting patterns for the polling place;
- At the end of the Parallel Testing, the tester and observer would reconcile vote totals in the script with vote totals reported on the machine.

#### **Transparent Random Selection Process**

We further assume that the same type of transparent random selection process that would be used for the Regimen for Automatic Routine Audit would also be employed for the Regimen for Parallel Testing to determine which machines would be subjected to testing on Election Day.

### **APPENDIX C**

#### **ALTERNATIVE SECURITY METRICS CONSIDERED**

##### **Dollars Spent**

The decision to use the number of informed participants as the metric for attack level difficulty came after considering several other potential metrics. One of the first metrics we considered was the dollar cost of attacks. This metric makes sense when looking at attacks that seek financial gain – for instance, misappropriating corporate funds. It is not rational to spend \$100,000 on the misappropriation of corporate funds if the total value of those funds is \$90,000. Ultimately, we rejected this metric as the basis for our analysis because the dollar cost of the attacks we considered were dwarfed by both (1) current federal and state budgets, and (2) the amounts currently spent legally in state and federal political campaigns.

##### **Time of Attack**

The relative security of safes and other safety measures are often rated in terms of “time to defeat.” This was rejected as metric of difficulty because it did not seem relevant to voting systems. Attackers breaking into a house are concerned with the amount of time it might take to complete their robbery because the homeowners or police might show up. With regard to election fraud, many attackers may be willing to start months or years before an election if they believe they can control the outcome. As discussed *supra* at pp. 35–48, attackers may be confident that they can circumvent the independent testing authorities and other measures meant to identify attacks, so that the amount of time an attack takes becomes less relevant.

## 6 accused of casting multiple votes

By Keith Ervin  
*Seattle Times staff reporter*

Criminal charges have been filed against six more King County voters for allegedly casting more than one ballot under a variety of circumstances in last November's election, prosecutors said yesterday.

Two defendants, William A. Davis of Federal Way and Grace E. Martin of Enumclaw, were accused of casting absentee ballots in the names of their recently deceased spouses, Sonoko Davis and Lawrence Martin, respectively.

A mother and daughter were also charged with casting a ballot in the name of the mother's dead husband. The mother, Harline H.L. Ng, and her daughter, Winnie W.Y. Ng, both of Seattle, signed their names as witnesses to the "X" marked on the ballot of Jacob Ng, who had died in February 2004.

Jared R. Hoadley of Seattle was accused of casting a ballot in the name of Hans Pitzen, who had lived at the same Seattle address as Hoadley and who died last May.

Dustin S. Collings, identified as a homeless Seattle resident, was charged with casting two ballots, both using the alias of Dustin Ocoilain, a name that was listed twice on the voter-registration rolls.

The defendants are charged with repeat voting, a gross misdemeanor that carries possible jail time of up to one year and a fine of up to \$5,000.

010942

Election officials asked prosecutors to investigate the voters after news reporters and a blogger reported that they may have voted twice. The voters will be arraigned July 5 in King County District Court.

Two other voters previously received deferred sentences — and avoided jail time — after they pleaded guilty to charges of repeat voting.

The King County Sheriff's Office is investigating several other cases, prosecutors reported yesterday. The investigations resulted from the intense scrutiny surrounding the governor's election in which Democrat Christine Gregoire defeated Republican Dino Rossi by 129 votes after he narrowly won two earlier vote counts.

After the November election, prosecutors also successfully challenged the voter registrations of 648 felons whose right to vote had not been restored.

**Status Report on the  
Voting Fraud-Voter Intimidation Research  
Project**

**May 17, 2006**

010944

## INTRODUCTION

Section 241 of the Help America Vote Act of 2002 (HAVA) requires EAC to conduct research on election administration issues. Among the tasks listed in the statute is the development of:

- nationwide statistics and methods of identifying, deterring, and investigating voting fraud in elections for Federal office [section 241(b)(6)]; and
- ways of identifying, deterring, and investigating methods of voter intimidation [section 241(b)(7)].

EAC's Board of Advisors recommended that the agency make research on these matters a high priority.

## FOCUS OF CURRENT RESEARCH

In September 2005, the Commission hired two consultants with expertise in this subject matter, Job Serebrov and Tova Wang, to:

- develop a comprehensive description of what constitutes voting fraud and voter intimidation in the context of Federal elections;
- perform background research (including Federal and State administrative and case law review), identify current activities of key government agencies, civic and advocacy organizations regarding these topics, and deliver a summary of this research and all source documentation;
- establish a project working group, in consultation with EAC, composed of key individuals and representatives of organizations knowledgeable about the topics of voting fraud and voter intimidation;
- provide the description of what constitutes voting fraud and voter intimidation and the results of the preliminary research to the working group, and convene the working group to discuss potential avenues for future EAC research on this topic; and
- produce a report to EAC summarizing the findings of the preliminary research effort and working group deliberations that includes recommendations for future research, if any;

As of the date of this report, the consultants have drafted a definition of election fraud, reviewed relevant literature and reports, interviewed persons from government and private sectors with subject matter expertise, analyzed news reports of alleged election fraud, reviewed case law, and established a project working group.

## DEFINITION OF ELECTION FRAUD

The consultants drafted a definition of election fraud that includes numerous aspects of voting fraud (including voter intimidation, which is considered a subset of voting fraud) and voter registration fraud, but excludes campaign finance violations and election administration mistakes. This draft will be discussed and probably refined by the project working group, which is scheduled to convene on May 18, 2006.

## LITERATURE REVIEW

The consultants found many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. They found little research that is truly systematic or scientific. The most systematic look at fraud appears to be the report written by Lori Minnite, entitled "Securing the Vote: An Analysis of Election Fraud". The most systematic look at voter intimidation appears to be the report by Laughlin McDonald, entitled "The New Poll Tax". The consultants found that books written about this subject all seem to have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Moreover, the consultants found that reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund's frequently cited book, "Stealing Elections".

Consultants found that researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate; but some reports say it is a major problem, albeit hard to identify.

- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.
- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

### **Recommendations**

The consultants recommend that subsequent EAC research include a follow up study of allegations made in reports, books and newspaper articles. They also suggest that the research should focus on filling the gap between the lack of reports based on methodical studies by social or political scientists and the numerous, but less scientific, reports published by advocacy groups.

### **INTERVIEWS**

The consultants jointly selected experts from the public and private sector for interviews. The consultants' analysis of their discussions with these members of the legal, election official, advocacy, and academic communities follows.

### **Common Themes**

- There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.
- There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, "dead" voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud,

although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.

- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.
- Several people indicate that, for various reasons, DOJ is bringing fewer voter intimidation and suppression cases now, and has increased its focus on matters such as noncitizen voting, double voting, and felon voting. Interviews with DOJ personnel indicate that the Voting Section, Civil Rights Division, focuses on systemic patterns of malfeasance in this area. While the Election Crimes Branch, Public Integrity Section, continues to maintain an aggressive pursuit of systematic schemes to corrupt the electoral process (including voter suppression), it also has increased prosecutions of individual instances of felon, alien, and double voting.
- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

#### Common Recommendations:

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed.
- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.

- With respect to DOJ's Voting Section, Civil Rights Division, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one's definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and his office has not pursued any such cases.
- Craig Donsanto of DOJ's Election Crimes Branch, Public Integrity Section, says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases DOJ is investigating and the number of indictments his office is pursuing are both up dramatically. Since 2002, in addition to pursuing systematic election corruption schemes, DOJ has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so that his agency can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.
- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.
- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.
- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud.
- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment.
- Several people advocate passage of Senator Barak Obama's "deceptive practices" bill.
- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected as non partisan officials, they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas are a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states' office; increasing transparency in the process; and enacting conflict of interest rules.

- A few recommend returning to allowing use of absentee ballots "for cause" only if it were politically feasible.
- A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the proposal in the Carter-Baker Commission Report.
- A couple of interviewees indicated the need for clear standards for the distribution of voting machines

### **NEWS ARTICLES**

Consultants conducted a Nexis search of related news articles published between January 1, 2001 and January 1, 2006. A systematic, numerical analysis of the data collected during this review is currently being prepared. What follows is an overview of these articles provided by the consultants.

#### **Absentee Ballots**

According to press reports, absentee ballots are abused in a variety of ways:

- Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters.
- Workers for groups and individuals have attempted to vote absentee in the names of the deceased.
- Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times.

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.

## **Voter Registration Fraud**

According to press reports, the following types of allegations of voter registration fraud are most common:

- Registering in the name of dead people;
- Fake names and other information on voter registration forms;
- Illegitimate addresses used on voter registration forms;
- Voters being tricked into registering for a particular party under false pretenses; and
- Destruction of voter registration forms depending on the party the voter registered with.

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota, and Wisconsin.

## **Voter Intimidation and Suppression**

This is the area which had the most articles, in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters' registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places;
- Improper demands for identification;

- Poll watchers harassing voters;
- Poll workers being hostile to or aggressively challenging voters;
- Disproportionate police presence;
- Poll watchers wearing clothes with messages that seemed intended to intimidate; and
- Insufficient voting machines and unmanageably long lines.

Although the incidents reported on occurred everywhere, not surprisingly, many came from "battleground" states. There were several such reports out of Florida, Ohio, and Pennsylvania.

#### **"Dead Voters and Multiple Voting"**

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials, and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person took criminal advantage of that. In total, the San Francisco Chronicle found five such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.

As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

### **Vote Buying**

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations concentrated in three states (Illinois, Kentucky, and West Virginia). There were more official investigations, indictments and convictions/pleas in this area.

### **Deceptive Practices**

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of completed voter registration applications. There were no reports of prosecutions or any other legal proceeding.

### **Non-citizen Voting**

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case, charges were filed against ten individuals. In another case, a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this Nexis search, remained just allegations of noncitizen voting.

### **Felon Voting**

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem was the large number of ineligible felons that remained on the voting list.

### **Election Official Fraud**

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker's possession. In two cases workers were said to have changed peoples' votes. The one

instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

### **Recommendation**

The consultants recommend that subsequent EAC research should include a Nexis search that specifically attempts to follow up on the cases for which no resolution is evident from this particular initial search.

## **CASE LAW RESEARCH**

After reviewing over 40,000 cases from 2000 to the present, the majority of which came from appeals courts, the consultants found comparatively few applicable to this study. Of those that were applicable, the consultants found that no apparent thematic pattern emerges. However, it appears to them that the greatest areas of fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility.

### **Recommendation**

Because so few cases provided a picture of these current problems, consultants suggest that subsequent EAC research include a review of state trial-level decisions.

## **PROJECT WORKING GROUP**

Consultants and EAC worked together to select members for the Voting Fraud-Voter Intimidation Working Group that included election officials and representatives of advocacy groups and the legal community who have an interest and expertise in the subject matter. (See Attachment A for a list of members.) The working group is scheduled to convene at EAC offices on May 18, 2006 to consider the results of the preliminary research and to offer ideas for future EAC activities concerning this subject.

## **FINAL REPORT**

After convening the project working group, the consultants will draft a final report summarizing the results of their research and the working group deliberations. This report will include recommendations for future EAC research related to this subject matter. The draft report will be reviewed by EAC and, after obtaining any clarifications or corrections deemed necessary, will be made available to the EAC Standards Board and EAC Board of Advisors for review and comment. Following this, a final report will be prepared.

Commissioners & Tom,

After having received this request, reviewed it and discussed it with the Inspector General and Gavin, I believe that it is ill-advised to continue such a request in light of the pending investigation of this matter by the Inspector General. While I am certain that this was not the intent of this request, the inevitable appearance of this request would suggest that the Commission is seeking to influence an ongoing investigation of the IG. This appearance of inappropriate influence would arise because two employees, who will undoubtedly be contacted by and interviewed as a part of the ongoing IG investigation, are being asked to provide a statement to their supervisors prior to interviews of those persons by the IG. Furthermore, this situation could appear as an attempt by employees and/or the agency to collude on a statement prior to making a formal statement in the investigation of the IG.

This IG's investigation was requested to address issues of public perception. Thus, it is critical that this investigation proceed in a manner that leaves no room for question. As such, I believe that it is inappropriate to proceed with this request.

Subject Fraud Report

After much discussion today among the Commissioners would like you both to prepare an in depth

010956

overview of the work you did on this report.

This would include all of the details of your work on the both the draft report and the final report adopted by the Commissioners, Jeannie has offered to help you in any way.

I will discuss this further with each of you between now and tomorrow.

I have been at the damn conference all day and have not been able to go to a single session or spend time with people.

Thanks

Tom

Subject Voter ID and Vote Fraud and Voter Intimidation IG Review Update

Hello everyone,

The chair wanted to distribute the attached memo from the IG, which contains guidance about how we proceed during the review of the voter ID and the vote fraud and voter intimidation research projects. She will continue to keep staff informed as this review moves forward, and she thanks everyone for their continued cooperation and hard work.

IG Memo to Chair on Review of Studies ( 4-27-07 ).pdf

Washington, DC 20005

April 27, 2007

Memorandum

To: Donetta Davidson  
Chair, U.S. Elections Commission

From: Curtis Crider *Curtis Crider*  
Inspector General

Subject: U.S. Election Assistance Commission Activities Pending the Office of Inspector  
General Investigation of the Voting Fraud and Voter Intimidation Report

In your letter of April 23, 2007, you requested my comments concerning several activities that the Election Assistance Commission (EAC) was considering to undertake pending our review of the Voting Fraud and Voter Intimidation Study and on related questions. My responses to your proposed activities and questions follow:

1. The EAC would like to prepare a summary of the differences between the draft report prepared by the consultants and the final report adopted by the EAC.

Answer: We believe that such a summary will be helpful to our investigation. Please provide us with a copy of the summary of differences upon its completion.

2. Would there be any prohibition against the Director of Communications speaking with EAC employees, consultants or working group members when questions arise from members of the press or under the Freedom of Information Act?

Answer: We are not aware of any prohibition. However, we suggest that EAC not comment or limit its comments on this matter because of the ongoing investigation. Any FOIA requests should be promptly responded to stating that the matter is under investigation. Once the investigation is completed, appropriate information should be made available to the FOIA requester.

3. Would there be any prohibition against EAC briefing members of the EAC Standards Board and the EAC Board of Advisors.

Answer: We are not aware of any prohibition. Our preference, however, would be that EAC allow the investigation to be completed before conducting any briefings.

4. Would there be any prohibition against gathering information related to this project in order to respond to inquiries that have been made by members of Congress?

010961

Answer: We are not aware of any prohibition. As previously stated, our preference is that there are no public comments while the investigation is in process or that comments be limited. However, we appreciate the sensitivity of Congressional requests, EAC must decide how best to proceed in this matter. We ask that you share any proposed responses with us prior to their release and that you provide us with a copy of final responses and any attachments.

5. Would there be any prohibition against responding to an inquiry that the Commission has received from an attorney engaged by one of the consultants?

Answer: It is the EAC's decision whether to respond to the attorney for the consultant. We prefer that the consultants not be released from the confidentiality clause of their contracts until the OIG has completed its investigations.

We understand that EAC will want to respond to criticism of its handling of the Voter Fraud and Intimidation Study, and that management must ultimately decide how best to proceed. Our preference would be that you attempt to defer commenting until we have finished our investigation.

I appreciate you raising these matters to me before acting. Please feel free to contact me if you have any questions about this memorandum.

Subject Re: Review of Voter ID Statement

Karen - To further my earlier email, I want to make clear that only respondents who identified themselves as U.S. citizens were asked whether they were registered to vote for the November 2004 election. And only those who said they were registered to vote were asked whether they voted in the election.

Subject Re: Review of Voter ID Statement

Karen:

The estimate of citizens of voting-age population controls for the percentage of the voting-age population that might have been non-citizens in 2004. We calculated the citizens of voting-age population using the following approach (this is a direct quote from Appendix C to our final Voter Identification report to the EAC):

"In the aggregate data, determining the percentage of the voting-age population that has U.S. citizenship posed a methodological challenge. The Census Bureau gathers information on the citizenship status of adults ages 18 and older only during the decennial census. While the Census Bureau provides annual estimates of the population to account for changes between decennial censuses, the bureau does not offer estimates for the proportion of the adult population who are citizens as part of the annual estimates. To address this issue I estimated the 2004 citizen voting-age population for each county using a method reported in the analysis of the 2004 Election Day Survey conducted for the U.S. Election Assistance Commission (U.S. Election Assistance Commission, 2005). I calculated the percentage of the 2000 voting-age population who were citizens in 2000, and applied that percentage to the July 1, 2004 estimates for voting-age population in each county. In other words, I assumed that the percentage of the voting-age population that had U.S. citizenship in 2004 was similar to the percentage of the voting-age population who were citizens in 2000."

I hope this addresses the issue. If it doesn't, let us know and Tim Vercellotti or I will be happy to elaborate.

Thanks,

John

Subject Draft Voter Fraud and Voter Intimidation Report

DeAnna,

Shortly, I will send the draft voter fraud/voter intimidation report to the Commissioners. I am not going to include the appendixes as they are quite lengthy. However, I am going to let them know that you have access to the appendixes and can give the appendixes to them if they want to read them.

I have created a subfolder in the General Counsel folder, called Voter Fraud and Intimidation Report. There you will find the report and four appendixes. If any of the commissioners ask for the appendixes or another copy of the report, you will have access to them all. You will note that there are two versions of appendixes 2 and 3. That is because we need to make a decision on whether to attach the summaries prepared by the consultants or the summaries prepared by Peggy. You will see clearly the difference -- as they are marked either "consultant" or "Peggy." I will explain this to the Commissioners in the email that I send to them. I will be sure to copy you on the email that I send to the Commissioners.

Let me know if you have any questions. I should have Blackberry service for a while, at least through to Paris.

RE: October 19, 2006 Letter

Dear Mr. Reynolds:

Your letter of October 19, 2006 requests the release of EAC's Voter Fraud and Intimidation Report. I would like to take this opportunity to clarify the purpose and status of this study.

In late 2005, EAC hired two consultants for the purpose of assisting EAC with two things: 1) developing a uniform definition of the phrase voter fraud, and 2) making recommendations on how to further study the existence, prosecution, and means of deterring such voter fraud. In May 2006, a status report on this study was given to the EAC Standards Board and EAC Board of Advisors during their public meetings. During the same week, a working group convened to react to and provide comment on the progress and potential conclusions that could be reached from the work of the two consultants.

The conversation at the working group meeting was lively on the very points that we were trying to accomplish as a part of this study, namely what is voter fraud and how do we pursue studying it. Many of the proposed conclusions that were suggested by the consultants were challenged by the working group members. As such, the consultants were tasked with reviewing the concerns expressed at the working group meeting, conducting additional research as necessary, and providing a draft report to EAC that took into account the working group's concerns and issues.

That draft report is currently being vetted by EAC staff. EAC will release a final report from this study after it has conducted a review of the draft provided by the consultants. However, it is important to remember the purpose of this study – finding a uniform definition of voter fraud and making recommendations on how to study the existence, prosecution and deterrence of voter fraud -- as it will serve as the basis of the EAC report on this study.

Thank you for your letter. You can be assured that as soon as a final report on the fraud and intimidation study is available, a copy will be made available to the public.

Sincerely,

Paul S. DeGregorio  
Chairman

Subject Re: Voter Fraud/Voter Intimidation Research Project 

As we discussed, we do have concerns that the interviews with Mr. Donsanto and Mr. Tanner were not accurately reflected in the document. I have searched my emails and find no comments having been transmitted by Mr. Tanner. As we also discussed, I did not sit in on the interview with Mr. Tanner, thus, I cannot independently identify the changes that need to be made. If you will forward his comments to me, I will assure that they are incorporated in the final document.

As for the public availability of the document, EAC does not intend to publish or distribute the draft document about which your agency has concerns. However, if we receive a request under FOIA, we will have to examine whether the document is releasable under the parameters set forth in that law. A final document will be produced with EAC review and will be vetted through our standards board and board of advisors, as usual -- including input from the Department of Justice.

Subject Voter Fraud/Voter Intimidation Research Project

Julie - I'd like to officially send something to you to confirm the following from our conversation today, but wanted to give you a chance to react first, to be sure I was accurate in my understanding of our conversation:

(1) the "status report" issued by EAC to the Standards Board and Advisory Board in May was not something that EAC, institutionally, had necessarily intended for official public distribution, and certainly will not be further distributed, such that no additions/corrections to it make sense at this point;

(2) you acknowledge DOJ concerns that the "status report" at a minimum did not accurately reflect the conversations that Ms. Wang and Mr. Serebrov had with DOJ officials on at least two occasions, and that our concerns about the inaccurately reflected conversations are consistent with other information you received suggesting the characterization of the conversations was not entirely accurate;

(3) you are just getting in the draft material on this project from which, at some point, some kind of official document for public distribution is still contemplated, most likely before the end of the fiscal year; and

010977

(4) in light of our concerns about the previous inaccurate characterization of the conversations with DOJ officials in the "status report", you will ensure that at a minimum we have an opportunity to review the draft report and provide feedback about information attributed to DOJ officials prior to any draft report being circulated more publicly.

Will the entire reports of the various research projects be circulated for review among Standards Board and Advisory Board members prior to issuance by the EAC? I had understood, please correct me if I'm wrong, that the VVSG guidelines were so circulated last year, but am not sure what else, if anything, has been circulated/reviewed in the past.

Thanks, Julie, for your help in correcting this!

Subject Question

Julie:

I need clarification on something in the project before the conference call at 2:00 today between Peggy, Tova, and me. How much of what we are investigating should involve DOJ's jurisdictional matters under such things as the Voting Rights Act?

Also, did you have a chance to talk to Karen about a second project? I need to know because if there will not be one I will have to get a job with a local law firm until the 2006 elections.

Go with what Peggy gave you. I was not in on the initial conversations on how this project would work. I asked Edgardo to put together some information that he distributed to other contractors, as I thought it was appropriate for their contracts. If this is not appropriate for your contract, that's fine. Again, I was not in on those discussions. Go with Peggy's instructions.

Sorry that I can't talk to you right now, but I'm in a meeting and multi-tasking as others talk.
