Subject Notice of Actions Update

This is to inform you that as of today you will no longer be receiving Notice of Actions or Reports from our former system.

ROCIS is to be used for all types of Notice of Actions and Reports.

Our former system will be totally stopped at the end of October, so please check your agency systems to make sure that all the information for your files are up to date. I will not be able to send you any materials from our former system after October.

However, all of OIRA's data from the former system has been migrated to ROCIS and is available there.

Also, those on your staff who do not have access to ROCIS, can always check our web site for information regarding a submission's status. The web site is [www.RegInfo.gov](http://www.RegInfo.gov) and information from production is moved there nightly.

Remember, ROCIS is interactive, and you can verify the status of your submissions at anytime by checking your submitted and concluded boxes.

Thank you and have a good afternoon.

Subject ROCIS Data Base being updated over long wkend!!--please  
note unavailable after 9 pm tonight. Thanks.

History:

✉ This message has been replied to.

When you log in to ROCIS today, you will see the following note.

"The ROCIS system will be down for routine maintenance from Friday, January 12, 2007 at 9:00 PM until 6:00 AM, Tuesday, January 16, 2007. If you have any questions regarding this matter, please contact Mike Johnson (202) 208-7659."

Just so you know why, we are "migrating" ALL of the historical records from our former system, RMS, into ROCIS over the weekend. You may have noticed that they are already in the practice site at <http://192.136.12.204/rocis/>

We have been testing them there for the last week and are pretty close to being able to put them into ROCIS so that every OMB Control Number will have a complete OMB Control Number History all the way back to 1974. Important to note that the farther back we go, the fewer data fields are completed, but I think you will be very impressed with what is there and what you are able to do with the records; i.e., searching back to the 1970's and even creating an ICR from one that has been historically active a long long time.

Nancy Bushi is the STAR of this production along with her sidekick, Brenda Raj, who you don't see often but is very there into the wee hours of the morning sometimes. They have worked closely with our application contractor, CyberData, to make sure the records don't break the system and the system doesn't break the records. We owe them all a great big THANK YOU.

So wish us luck today as we complete our testing and fixing and over the weekend as we load these records into the production application. We will also load them into the website in a week or so, which will enable the public to see our history as well.

So all of this to THANK YOU AGAIN for your patience and please get all your work done by 9:00 p.m. tonight or it will have to wait until Tuesday morning after our celebration of Martin Luther King holiday on Monday.

Subject Important Msg--ROCIS ICR Module Certification Page

### Agency Clearance Officers:

It has come to my attention that there is a misunderstanding as to how to use the certification page when submitting ICRs to OIRA.

Check mark the box for each and every provision in order to CERTIFY that your Agency has complied with the PRA provisions.

Leave blank only those check boxes for provisions for which you CANNOT CERTIFY your Agency's compliance and discuss why you did NOT or were NOT able to certify compliance of the un-check-marked PRA provision in the supporting statement.

OIRA Desk Officers will review the certification pages and will look for the statement of noncompliance in the supporting statement for those provisions that WERE NOT check-marked.

Thank you.

**Subject:** Re: ROCIS ICR Module Workshop October 3!!

Hello,

I am submitting an ICR (and possibly two), or at least hoping to on the week of October 2nd. If this training will assist in learning how to submit the ICRs via the ROCIS, I will be more than happy to attend. Also, I have played around with the sample ROCIS and gotten familiar with it. When would you like me to call you to discuss how it went? Overall, it went well; my questions are more about the information/documents we need to attach when it's an emergency review and when it's a normal review - I need to know the exact information these documents need to have so the ICR review process goes smoothly. Thank you!

SuROCIS ICR Module Workshop October 3!!

bje  
ct

Great news!! Carolyn at RISC has been able to get the GSA training room again for two workshops on October 3, 2006.

I'll hold the workshops at 10 to 12:30 and 1:30 to 4:00 at the main GSA building, 1800 F Street NW, in room 5031.

I still have a waiting list but willing to consider folks that need to prepare submissions for October, November and December.

Please send me list of those that you wish me to consider by next Friday, 22 September.

Thanks for your patience.

We are trying now for room in November.

## **ROCIS Security Requirements for System Users**

The RISC/OIRA Consolidated Information System (ROCIS) supports the following informational and review functions:

- Preparation by GSA's Regulatory Information Service Center (RISC) of the semiannual "Unified Agenda of Federal Regulatory and Deregulatory Actions" and the annual "Regulatory Plan," in accordance with Executive Order 12866 and the Regulatory Flexibility Act;
- Review by OMB's Office of Information and Regulatory Affairs (OIRA) of regulatory actions under Executive Order 12866; and
- Review by OIRA of information collections under the Paperwork Reduction Act.

Each of these functions requires entry and updating of information by authorized users acting on behalf of their respective Federal agencies. This document contains the principal security requirements that all users of ROCIS must observe in connection with their use of the system.

### **Access to ROCIS**

Users gain access to ROCIS via an Internet browser. To enter the system, a user must indicate acceptance of the terms of the following warning notice:

"You are about to access a U.S. Government computer system. Access to this system is restricted to authorized users only. Anyone who accesses the system without authorization or in excess of their authorization could be subject to a fine or imprisonment, or both, under Public-Law 98-473. By entering this system, you consent to having your activities and or accesses recorded by the system software and periodically monitored. If this record reveals suspected unauthorized use or criminal activity, the evidence may be provided to supervisory personnel and law enforcement officials. Do NOT process classified information on this system."

Other applicable laws include the Federal Information Security Management Act of 2002 (FISMA), P.L. 107-347, Title III; the Computer Security Act of 1987, P.L. 100-235; OMB Circular A-130, Management of Federal Resources, Appendix III; and the Privacy Act, 5 U.S.C. 552a.

User access will be controlled in accordance with the GSA IT Security Procedural Guide: Access Control CIO-IT Security-01-07. Access will be limited to authorized users as follows:

- All users must receive instruction in the proper use of ROCIS, including ROCIS security instruction, prior to being given access to the system.
- Access to ROCIS will be controlled through the use of user names and passwords and based on privileges granted by the ROCIS System Administrator.
- Each user will be granted access only to the extent needed to support the individual's specified role in relation to the agency's business functions.

- Accounts will be locked after three unsuccessful login attempts. Users will need to contact the help desk to get their accounts unlocked.
- Individuals who no longer have a need for access to ROCIS related to agency business functions, because of termination of employment, reassignment, or any other reason, are prohibited from logging into ROCIS. The individual or the agency should notify the ROCIS System Administrator of any such change in status.
- The ROCIS System Administrator will revoke access privileges for users who intentionally violate ROCIS security policies.
- All users must sign the "Acknowledgment of ROCIS Security Requirements" form attached to this document.

### **Sensitivity and Confidentiality of Information in the System**

ROCIS must not be used to process classified data. However, the data ROCIS will handle are considered sensitive and proprietary because the information relates to decisions and actions that take place during the life cycle of regulations development and information collections approvals. Much of this information is predecisional, and there could be significant ramifications to the missions of RISC, OIRA, and other Federal agencies if the information is disclosed, altered, or misused prior to approved release. Users therefore are prohibited from unauthorized disclosure of predecisional or other deliberative information.

In addition, ROCIS maintains user data containing information about agencies and employees, mailing lists, access privileges, user names and passwords, and user level access assignments, which must be protected.

Some of the information within ROCIS will be published and made available directly to the general public through the Internet. The public will not have access to sensitive or proprietary information in the system.

### **Rules for Behavior**

All authorized governmental and contractor users of ROCIS will be responsible for data protection, including maintaining the confidentiality and integrity of sensitive data from unauthorized or accidental disclosure, misuse, or alteration. Users will be held accountable for their interactions with ROCIS and its data. Compliance with these rules will be enforced through sanctions commensurate with the level of infraction. Actions may include a verbal or written warning, removal of system access for a specific period of time, reassignment to other duties, or termination, depending on the severity of the violation.

#### *General Requirements:*

- Users must be familiar with ROCIS security and operational policies and practices and with any corresponding requirements of their agency.
- Users must promptly notify RISC, OIRA and, if appropriate, other Federal agency security personnel of any security incident related to ROCIS.
- Users must attend ROCIS and their agency's security instruction as required.

- Users must maintain an awareness of threats to the ROCIS application, server hardware, or data.
- Users must maintain familiarity with the functionality and proper use of ROCIS.
- ROCIS will track actions of users through audit trails. Individuals will be held accountable for their actions on the system and for any accesses made with their user names and passwords.
- Users must not import data into ROCIS from disks or files created on other systems unless they have first been scanned by an antivirus protection system.

*Password Protection:*

- Users must not share or otherwise disclose their passwords to other persons.
- Users must change their passwords upon initial access to ROCIS and thereafter every 90 days, or as prompted by the system, in accordance with the specifications for a mix of letters, numbers and special characters.
- Users should select passwords that avoid family names, sports team names, and other predictable keyboard patterns that may easily be guessed.
- Passwords should be memorized. Do not write, display, or store passwords where other persons may access or view them.
- Users should report to the ROCIS System Administrator any requests by others to reveal their passwords.

*Use and Protection of Data:*

- Users must access ROCIS only through authorized interfaces.
- Users must not attempt to view, change, or delete data, or to perform any other actions in ROCIS, unless authorized to do so.
- Users must control access to their personal computers whenever they are logged into ROCIS. Users should terminate their connections to ROCIS immediately upon completion of their work in the system and whenever their personal computers will be unattended.

**Acknowledgment of ROCIS Security Requirements**

Please complete this form, sign and date it, and return the form to the ROCIS Security Officer (System Administrator Mike Johnson), acknowledging that you have read the "ROCIS Security Requirements for System Users" and have understood its content.

AGENCY REQUEST FOR ACCESS PRIVILEGES TO ROCIS ICR MODULE					
	Name	e-mail Address	Office Phone Number	IV. Privileges A, B, C in accordance with table below	Agency Code(s) for which privileges apply
I. Agency Name:					
II. PRA Roles:					
Alternate Rep for ICR Module Access Privileges					
Certifying Official Designee(s)					
Clearance Officer/POC for ROCIS Implementation					
III. PRA Staff Users:					
ICR Reviewing Officials:					
	Directions for completing this spreadsheet:				
	I. Please enter Agency name.				
	II. Please identify the individuals who fill the following roles for your Agency:				
	Alternate responsible for representing and coordinating additions and deletions to Agency ICR Module Access List as personnel changes dictate.				
	Certifying Official certifies that the Agency's information collections comply with 5 CFR 1320.9. Please note that the Clinger-Cohen Act specifies the "senior official" responsible for compliance and certification required by OMB's regulations implementing the Paperwork Reduction Act (5 CFR Part 1320) to be the agency's chief information officer." (See 44 USC 3506.)				
	Designee(s) delegated authority to certify on behalf of the CIO.				
	Clearance Officer in charge of day-to-day Agency PRA process and POC for ROCIS implementation.				
	III. Please list the PRA staff and ICR reviewing officials you wish to have ROCIS ICR Module access.				
	IV. Identify requested privileges A, B, and C below in Column E for each person named in II and III. List all that apply.				
	A. Authority to certify that the ICR complies with 5 CFR 1320.9 and to submit an ICR to OIRA.				
	B. Authority to create and edit (prepare) (but not certify and submit) a PRA Information Collection Request (ICR).				
	C. Authority to view-only the Agency's ICRs and to write short intra-agency review/routing notes to ICRs prior to submission of requests to OIRA. (This authority does not include authority to prepare or submit an ICR.)				
	Some considerations for assigning privileges:				
	Certifying Official and Designee(s) will be granted Privilege A, authority to certify that the ICR complies with 5 CFR 1320.9 and submit an ICR to OIRA. Unless otherwise noted by you, if one is granted Privilege A, the lesser Privileges B and C apply as well.				
	All three of the above privileges include rights to view and download Notices of Action, run reports, and perform searches.				
	ICR preparation privileges (Privilege B) should be limited to your agency's PRA professionals rather than program subject matter content contacts.				
	Privilege C is intended for those individuals who are part of your agency's ICR review process prior to submission to OIRA. Pending and concluded actions will be viewable by program subject matter content contacts at the public website, RegInfo.gov.				
	V. Please E-mail the spreadsheet to Jacqueline A. Zeiher@omb.eop.gov by 12/16/2005. Address questions to Jacke Zeiher at 202-395-4638.

**Subject:** RE: OMB clearance package

Dear Mr. Hunt,

I am writing to follow up on our last e-mail exchange (see below). The EAC currently has a (60 day) notice in the Federal Register for public comment to end on Sept. 29th regarding its 2006 Election Day survey. I would like more information about the documentation we have to provide to request OMB clearance; you had mentioned there would be an online method for submitting the clearance package.

Also, my colleague Gavin Gilmour, our Deputy General Counsel, mentioned that he spoke to you about emergency processing for an information collection he is working on related to the EAC's Certification Program for election systems. We would like more information about that process as well. We are looking at submitting the document for OMB review and/or Federal Register publication on October 1st for 30 days.

I greatly appreciate your time and assistance, and I look forward to your response. Thank you and have a great day!

Sincerely,

**Subject:** OMB clearance package

Dear Mr. Hunt,

Per our phone conversation earlier today, I would like to have more information about submitting an information collection request for OMB clearance. The U.S. Election Assistance Commission (EAC) intends to administer a survey later on this year to all 50 States, the District of Columbia, and the U.S. territories to collect election administration and voting data. We are in the process of preparing the document for publication in the Federal Register for the initial 60-day public comment period. Once we do this, it is my understanding that we then submit to OMB the clearance package. I would like to request information as to what exactly is the process, what documents we need to submit, time frames, document formats, etc. Any help or information you can provide on the matter will be greatly appreciated. If you have any questions or need more information, please, do not hesitate to contact me at this address or by phone at the number listed below. Thank you and have a great week!

Sincerely,

Laiza N. Otero  
Research Associate

**Subject:** RE: OMB clearance package

Dear Mr. Hunt,

I am writing to follow up on our last e-mail exchange (see below). The EAC currently has a (60 day) notice in the Federal Register for public comment to end on Sept. 29th regarding its 2006 Election Day survey. I would like more information about the documentation we have to provide to request OMB

009093

clearance; you had mentioned there would be an online method for submitting the clearance package.

Also, my colleague Gavin Gilmour, our Deputy General Counsel, mentioned that he spoke to you about emergency processing for an information collection he is working on related to the EAC's Certification Program for election systems. We would like more information about that process as well. We are looking at submitting the document for OMB review and/or Federal Register publication on October 1st for 30 days.

I greatly appreciate your time and assistance, and I look forward to your response. Thank you and have a great day!

Sincerely,

Subject OMB training

Hello,

OMB has booked a space for me to attend a training next Tuesday, October 3rd from 10am-12:30pm @ GSA. It's a workshop designed to teach us about their new ROCIS system for submitting information collection requests. There's no cost involved. Is it ok with both of you that I attend? I think the training would be quite useful to say the least --- I am planning on learning that system and the whole clearance process inside/out. Thank you!

Subject OMB Clearance Conference call Friday 13th at 2:00 PM

Peter-

Assuming Laiza gives you the OK ( since she is the primary presenter) for a Friday, October 13th 2:00 conference call, please send out to our four new contractors the following:

"On Friday, October 13 at 2:00 PM EAC staff will conduct a 45-60 minute call on various details and processes related to the Paperwork Reduction Act and the OMB Clearance process. If the EAC research project you are currently operating requires surveying 10 or more persons, you are subject to the rules and regulations of the Paperwork Reduction Act. Most of the EAC 's research contractors will involve surveying more than 10 voters and/or election officials.

We look forward to your participation in this call:

(..... Call-in information ) "

Thanks

Subject PRA

Thought this might be helpful in helping you determine if you need PRA clearance for your focus groups :

In accordance with the PRA, OMB approval must be obtained prior to collecting information in any situation where 10 or more individuals are involved and the questions are standardized in nature.

**Do focus groups need Paperwork Reduction Act clearance?**

Yes -- assuming that the focus groups are working from predetermined scripts that are being asked each group

Compliance with the PRA is required whenever a federal agency sponsors a data collection by using identical questions, using identical reporting or record-keeping requirements, or asking respondents to provide the same level of information on the same subject involving 10 or more respondents in a 12-month period (7,10). The law applies to all federal employees, contractors, people in cooperative agreements, and anyone else who asks the public for information for the purpose of research, public health practice, program evaluation, or any other reason. The PRA also addresses customer satisfaction inventories, focus group inquiries, all types of surveys, telephone interviews, and electronic environments.

**What Doesn't Need PRA Clearance?**

Open-ended questions to the public, e.g. "What do you think about this?" in a focus group do not require OMB approval.

**Does the PRA affect questions at public meetings ?**

Not usually. No clearance is needed if the attendees are just asked to comment or give suggestions on the program or subject in question. If, however, the group is gathered for the purpose of having attendees respond to a specific set of formatted questions, then the PRA does apply

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years: Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
- Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.
- Enter the total annual recordkeeping and reporting hour burden.
- Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
- "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.

- "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
- Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
- Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
- "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

009103

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information—

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-I is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.
2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.
4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.
5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.
6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.
7. Explain any special circumstances that would cause an information collection to be conducted in a manner:
  - \* requiring respondents to report information to the agency more often than quarterly;
  - \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
  - \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.  
Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.  
Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:
  - \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
  - \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.

- \* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

- \* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

- \* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

## LIST OF STANDARDS FOR STATISTICAL SURVEYS

### SECTION 1 DEVELOPMENT OF CONCEPTS, METHODS, AND DESIGN

#### Survey Planning

**Standard 1.1:** Agencies initiating a new survey or major revision of an existing survey must develop a written plan that sets forth a justification, including: goals and objectives; potential users; the decisions the survey is designed to inform; key survey estimates; the precision required of the estimates (e.g., the size of differences that need to be detected); the tabulations and analytic results that will inform decisions and other uses; related and previous surveys; steps taken to prevent unnecessary duplication with other sources of information; when and how frequently users need the data; and the level of detail needed in tabulations, confidential microdata, and public-use data files.

#### Survey Design

**Standard 1.2:** Agencies must develop a survey design, including defining the target population, designing the sampling plan, specifying the data collection instrument and methods, developing a realistic timetable and cost estimate, and selecting samples using generally accepted statistical methods (e.g., probabilistic methods that can provide estimates of sampling error). Any use of nonprobability sampling methods (e.g., cut-off or model-based samples) must be justified statistically and be able to measure estimation error. The size and design of the sample must reflect the level of detail needed in tabulations and other data products, and the precision required of key estimates. Documentation of each of these activities and resulting decisions must be maintained in the project files for use in documentation (see Standards 7.3 and 7.4).

#### Survey Response Rates

**Standard 1.3:** Agencies must design the survey to achieve the highest practical rates of response, commensurate with the importance of survey uses, respondent burden, and data collection costs, to ensure that survey results are representative of the target population so that they can be used with confidence to inform decisions. Nonresponse bias analyses must be conducted when unit or item response rates or other factors suggest the potential for bias to occur.

#### Pretesting Survey Systems

**Standard 1.4:** Agencies must ensure that all components of a survey function as intended when implemented in the full-scale survey and that measurement error is controlled by conducting a pretest of the survey components or by having successfully fielded the survey components on a previous occasion.

### SECTION 2 COLLECTION OF DATA

#### Developing Sampling Frames

**Standard 2.1:** Agencies must ensure that the frames for the planned sample survey or census are appropriate for the study design and are evaluated against the target population for quality.

### **Required Notifications to Potential Survey Respondents**

**Standard 2.2:** Agencies must ensure that each collection of information instrument clearly states the reasons the information is planned to be collected; the way such information is planned to be used to further the proper performance of the functions of the agency; whether responses to the collection of information are voluntary or mandatory (citing authority); the nature and extent of confidentiality to be provided, if any, citing authority; an estimate of the average respondent burden together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden; the OMB control number; and a statement that an agency may not conduct and a person is not required to respond to an information collection request unless it displays a currently valid OMB control number.

### **Data Collection Methodology**

**Standard 2.3:** Agencies must design and administer their data collection instruments and methods in a manner that achieves the best balance between maximizing data quality and controlling measurement error while minimizing respondent burden and cost.

## **SECTION 3 PROCESSING AND EDITING OF DATA**

### **Data Editing**

**Standard 3.1:** Agencies must edit data appropriately, based on available information, to mitigate or correct detectable errors.

### **Nonresponse Analysis and Response Rate Calculation**

**Standard 3.2:** Agencies must appropriately measure, adjust for, report, and analyze unit and item nonresponse to assess their effects on data quality and to inform users. Response rates must be computed using standard formulas to measure the proportion of the eligible sample that is represented by the responding units in each study, as an indicator of potential nonresponse bias.

### **Coding**

**Standard 3.3:** Agencies must add codes to collected data to identify aspects of data quality from the collection (e.g., missing data) in order to allow users to appropriately analyze the data. Codes added to convert information collected as text into a form that permits immediate analysis must use standardized codes, when available, to enhance comparability.

### **Data Protection**

**Standard 3.4:** Agencies must implement safeguards throughout the production process to ensure that survey data are handled to avoid disclosure.

### **Evaluation**

**Standard 3.5:** Agencies must evaluate the quality of the data and make the evaluation public (through technical notes and documentation included in reports of results or through a separate report) to allow users to interpret results of analyses, and to help designers of recurring surveys focus improvement efforts.

## **SECTION 4 PRODUCTION OF ESTIMATES AND PROJECTIONS**

### **Developing Estimates and Projections**

**Standard 4.1:** Agencies must use accepted theory and methods when deriving direct survey-based estimates, as well as model-based estimates and projections that use survey data. Error estimates must be calculated and disseminated to support assessment of the appropriateness of the uses of the estimates or projections. Agencies must plan and implement evaluations to assess the quality of the estimates and projections.

## **SECTION 5 DATA ANALYSIS**

### **Analysis and Report Planning**

**Standard 5.1:** Agencies must develop a plan for the analysis of survey data prior to the start of a specific analysis to ensure that statistical tests are used appropriately and that adequate resources are available to complete the analysis.

### **Inference and Comparisons**

**Standard 5.2:** Agencies must base statements of comparisons and other statistical conclusions derived from survey data on acceptable statistical practice.

## **SECTION 6 REVIEW PROCEDURES**

### **Review of Information Products**

**Standard 6.1:** Agencies are responsible for the quality of information that they disseminate and must institute appropriate content/subject matter, statistical, and methodological review procedures to comply with OMB and agency Information Quality Guidelines.

## **SECTION 7 DISSEMINATION OF INFORMATION PRODUCTS**

### **Releasing Information**

**Standard 7.1:** Agencies must release information intended for the general public according to a dissemination plan that provides for equivalent, timely access to all users and provides information to the public about the agencies' dissemination policies and procedures including those related to any planned or unanticipated data revisions.

### **Data Protection and Disclosure Avoidance for Dissemination**

**Standard 7.2:** When releasing information products, agencies must ensure strict compliance with any confidentiality pledge to the respondents and all applicable Federal legislation and regulations.

### **Survey Documentation**

**Standard 7.3:** Agencies must produce survey documentation that includes those materials necessary to understand how to properly analyze data from each survey, as well as the information necessary to replicate and evaluate each survey's results (See also Standard 1.2). Survey documentation must be readily accessible to users, unless it is necessary to restrict access to protect confidentiality.

009110

**Documentation and Release of Public-Use Microdata**

**Standard 7.4:** Agencies that release microdata to the public must include documentation clearly describing how the information is constructed and provide the metadata necessary for users to access and manipulate the data (See also Standard 1.2). Public-use microdata documentation and metadata must be readily accessible to users.

## INTRODUCTION

This document provides 20 standards that apply to Federal censuses and surveys whose statistical purposes include the description, estimation, or analysis of the characteristics of groups, segments, activities, or geographic areas in any biological, demographic, economic, environmental, natural resource, physical, social, or other sphere of interest. The development, implementation, or maintenance of methods, technical or administrative procedures, or information resources that support such purposes are also covered by these standards. In addition, these standards apply to censuses and surveys that are used in research studies or program evaluations if the purpose of the survey meets any of the statistical purposes noted above. To the extent they are applicable, these standards also cover the compilation of statistics based on information collected from individuals or firms (such as tax returns or the financial and operating reports required by regulatory commissions), applications/registrations, or other administrative records.

## Background

Standards for Federal statistical programs serve both the interests of the public and the needs of the government. These standards document the professional principles and practices that Federal agencies are required to adhere to and the level of quality and effort expected in all statistical activities. Each standard has accompanying guidelines that present recommended best practices to fulfill the goals of the standards. Taken together, these standards and guidelines provide a means to ensure consistency among and within statistical activities conducted across the Federal Government. Agency implementation of standards and guidelines ensures that users of Federal statistical information products are provided with details on the principles and methods employed in the development, collection, processing, analysis, dissemination, and preservation of Federal statistical information.

In 2002, the U.S. Office of Management and Budget (OMB), in response to Section 515 of the Treasury and General Government Appropriations Act for Fiscal Year 2001 (Public Law 106-554), popularly known as the Information Quality Act, issued government-wide guidelines that “provide policy and procedural guidance to Federal agencies for ensuring and maximizing the quality, objectivity, utility, and integrity of information (including statistical information) disseminated by Federal agencies” (67 FR 8452-8460; February 22, 2002). Federal statistical agencies worked together to draft a common framework to use in developing their individual Information Quality Guidelines. That framework, published in the June 4, 2002, *Federal Register* Notice, “Federal Statistical Organizations’ Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Disseminated Information” (67 FR 38467-38470), serves as the organizing framework for the standards and guidelines presented here.<sup>1</sup> The framework for these standards and guidelines includes:

---

<sup>1</sup> The *Federal Register* notice included eight areas where statistical organizations set standards for performance. The framework utilized here combines “Development of concepts and methods” with “Planning and design of surveys and other means of collecting data” into the single section on “Development of concepts, methods, and design.” The standards for these activities were closely linked and attempting to separate them into two distinct sections would have resulted in some duplication of standards between sections. The only other change is the title of Section 7, which was shortened to “Dissemination of Information Products” for convenience rather than “Dissemination of data by published reports, electronic files, and other media requested by users” as it originally appeared in the *Federal Register* notice.

- Development of concepts, methods, and design
- Collection of data
- Processing and editing of data
- Production of estimates and projections
- Data analysis
- Review procedures
- Dissemination of Information Products.

Within this framework, the 20 standards and their related guidelines for Federal statistical surveys focus on ensuring high quality statistical surveys that result in information products satisfying an agency's and OMB's Information Quality Guidelines' requirements for ensuring and maximizing the quality, objectivity, utility, and integrity of information disseminated by the Federal Government.

The standards and guidelines are not intended to substitute for the extensive existing literature on statistical and survey theory, methods, and operations. When undertaking a survey, an agency should engage knowledgeable and experienced survey practitioners to effectively achieve the goals of the standards. Persons involved should have knowledge and experience in survey sampling theory, survey design and methodology, field operations, data analysis, and dissemination as well as technological aspects of surveys.

Under the OMB Information Quality Guidelines, quality is an encompassing term comprising objectivity, utility, and integrity.

Objectivity refers to whether information is accurate, reliable, and unbiased, and is presented in an accurate, clear, and unbiased manner. It involves both the content of the information and the presentation of the information. This includes complete, accurate, and easily understood documentation of the sources of the information, with a description of the sources of any errors that may affect the quality of the data, when appropriate. Objectivity is achieved by using reliable information sources and appropriate techniques to prepare information products.

Standards related to the production of accurate, reliable, and unbiased information include Survey Response Rates (1.3), Developing Sampling Frames (2.1), Required Notifications to Potential Survey Respondents (2.2), Data Collection Methodology (2.3), Data Editing (3.1), Nonresponse Analysis and Response Rate Calculation (3.2), Coding (3.3), Evaluation (3.5), Developing Estimates and Projections (4.1), Analysis and Report Planning (5.1), and Inference and Comparisons (5.2).

Standards related to presenting results in an accurate, clear, and unbiased manner include: Review of Information Products (6.1), Survey Documentation (7.3), and Documentation and Release of Public-Use Microdata (7.4).

Utility refers to the usefulness of the information that is disseminated to its intended users. The usefulness of information disseminated by Federal agencies should be considered from the perspective of specific subject matter users, researchers, policymakers, and the public. Utility is

achieved by continual assessment of information needs, anticipating emerging requirements, and developing new products and services.

To ensure that information disseminated by Federal agencies meets the needs of the intended users, agencies rely upon internal reviews, analyses, and evaluations along with feedback from advisory committees, researchers, policymakers, and the public. In addition, agencies should clearly and correctly present all information products in plain language geared to their intended audiences. The target audience for each product should be clearly identified, and the product's contents should be readily accessible to that audience.

In all cases, the goal is to maximize the usefulness of information and minimize the costs to the government and the public. When disseminating their information products, Federal agencies should utilize a variety of efficient dissemination channels so that the public, researchers, and policymakers can locate and use information in an equitable, timely, and cost-effective fashion.

The specific standards that contribute directly to the utility and the dissemination of information include: Survey Planning (1.1), Survey Design (1.2), Pretesting Survey Systems (1.4), Review of Information Products (6.1), Releasing Information (7.1), Survey Documentation (7.3), and Documentation and Release of Public-Use Microdata (7.4).

Integrity refers to the security or protection of information from unauthorized access or revision. Integrity ensures that the information is not compromised through corruption or falsification.

Federal agencies have a number of statutory and administrative provisions governing the protection of information. Examples that may affect all Federal agencies include the Privacy Act; the Freedom of Information Act; the Confidential Information Protection and Statistical Efficiency Act of 2002; the Federal Information Security Management Act of 2002; the Health Insurance Portability and Accountability Act of 1996; OMB Circular Nos. A-123, A-127, and A-130; and the Federal Policy for the Protection of Human Subjects. The standards on Required Notifications to Potential Survey Respondents (2.2), Data Protection (3.4), and Data Protection and Disclosure Avoidance for Dissemination (7.2) directly address statistical issues concerning the integrity of data.

### **Requirements for Agencies**

The application of standards to the wide range of Federal statistical activities and uses requires judgment that balances such factors as the uses of the resulting information and the efficient allocation of resources; this should not be a mechanical process. Some surveys are extremely large undertakings requiring millions of dollars, and the resulting general-purpose statistics have significant, far-reaching effects. (Examples of major Federal information programs, many based on statistical surveys, are the Principal Federal Economic Indicators.<sup>2</sup>) Other statistical activities may be more limited and focused on specific program areas (e.g., customer satisfaction surveys, program evaluations, or research).

---

<sup>2</sup> For the list of principal economic indicators and their release dates see <http://www.whitehouse.gov/omb/infereg/statpolicy.html#sr>

For each statistical survey in existence when these standards are issued and for each new survey, the sponsoring and/or releasing agency should evaluate compliance with applicable standards. The agency should establish compliance goals for applicable standards if a survey is not in compliance. An agency should use major survey revisions or other significant survey events as opportunities to address areas in which a survey is not in compliance with applicable standards.

Federal agencies are required to adhere to all standards for every statistical survey, even those that have already received OMB approval. Agencies should provide sufficient information in their Information Collection Requests (ICR) to OMB under the Paperwork Reduction Act (PRA) to demonstrate whether they are meeting the standards. OMB recognizes that these standards cannot be applied uniformly or precisely in every situation. Consideration will be given to the importance of the uses of the information as well as the quality required to support those uses. If funding or other contingencies make it infeasible for all standards to be met, agencies should discuss in their ICR submissions the options that were considered and why the final design was selected.

The agency should also include in the standard documentation for the survey, or in an easily accessible public venue, such as on its web site, the reasons why the standard could not be met and what actions the agency has taken or will take to address any resulting issues.<sup>3</sup>

The following standards and guidelines are not designed to be completely exhaustive of all efforts that an agency may undertake to ensure the quality of its statistical information. Agencies are encouraged to develop additional, more detailed standards focused on their specific statistical activities.

The standards are presented in seven sections. For each standard, there is a list of key terms that are used in the standard or accompanying guidelines, and these terms are defined in the appendix to provide clarification on their use in this document. The guidelines for each standard represent best practices that may be useful in fulfilling the goals of the standard and provide greater specificity and detail than the standards. However, as noted earlier, these standards and guidelines are not intended to substitute for the extensive existing literature on statistical and survey theory, methods, and operations. Additional information relevant to the standards can be found in other more specialized publications, and references to other Federal guidance documents or resources and the work of the Federal Committee on Statistical Methodology are provided in this document.

Agencies conducting surveys should also consult guidance issued by OMB entitled *Questions and Answers When Designing Surveys for Information Collections*. That document was developed by OMB to assist agencies in preparing their Information Collection Requests for OMB review under the Paperwork Reduction Act (PRA). The PRA requires that all Federal agencies obtain approval from OMB prior to collecting information from ten or more persons.<sup>4</sup>

---

<sup>3</sup> In cases where the agency determines that ongoing surveys are not in compliance with the standards, the documentation should be updated at the earliest possible time.

<sup>4</sup> Under the PRA, "Person means an individual, partnership, association, corporation (including operations of government-owned contractor-operated facilities), business trust, or legal representative, an organized group of

## SECTION 1 DEVELOPMENT OF CONCEPTS, METHODS, AND DESIGN

### Section 1.1 Survey Planning

**Standard 1.1:** Agencies initiating a new survey or major revision of an existing survey must develop a written plan that sets forth a justification, including: goals and objectives; potential users; the decisions the survey is designed to inform; key survey estimates; the precision required of the estimates (e.g., the size of differences that need to be detected); the tabulations and analytic results that will inform decisions and other uses; related and previous surveys; steps taken to prevent unnecessary duplication with other sources of information; when and how frequently users need the data; and the level of detail needed in tabulations, confidential microdata, and public-use data files.

**Key Terms:** bridge study, confidentiality, consistent data series, crosswalk study, data series, effect size, individually-identifiable data, key variables, measurement error, microdata, minimum substantively significant effect (MSSE), pretest, public-use data file, respondent burden, survey system

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 1.1.1:** Surveys (and related activities such as focus groups, cognitive interviews, pilot studies, field tests, etc.) are collections of information subject to the requirements of the Paperwork Reduction Act of 1995 (Pub.L. No. 104-13, 44 U.S.C. § 3501 et seq.) and OMB's implementing regulations (5 C.F.R. § 1320, Controlling Paperwork Burdens on the Public). An initial step in planning a new survey or a revision of an existing survey should be to contact the sponsoring agency's Chief Information Officer or other designated official to ensure the survey work is done in compliance with the law and regulations. OMB approval will be required before the agency may collect information from 10 or more members of the public in a 12-month period. A useful reference document regarding the approval process is OMB's *Questions and Answers When Designing Surveys for Information Collections*.

**Guideline 1.1.2:** Planning is an important prerequisite when designing a new survey or survey system, or implementing a major revision of an ongoing survey. Key planning and project management activities include the following:

1. A justification for the survey, including the rationale for the survey, relationship to prior surveys, survey goals and objectives (including priorities within these goals and objectives), hypotheses to be tested, and definitions of key variables. Consultations with potential users to identify their requirements and expectations are also important at this stage of the planning process.
2. A review of related studies, surveys, and reports of Federal and non-Federal sources to ensure that part or all of the survey would not unnecessarily duplicate available data from an existing

---

individuals, a State, territorial, tribal, or local government or branch thereof, or a political subdivision of a State, territory, tribal, or local government or a branch of a political subdivision" (5 C.F.R. § 1320.3(k)).

source, or could not be more appropriately obtained by adding questions to existing Federal statistical surveys. The goal here is to spend Federal funds effectively and minimize respondent burden. If a new survey is needed, efforts to minimize the burden on individual respondents are important in the development and selection of items.

3. A review of the confidentiality and privacy provisions of the Privacy Act, the Confidential Information Protection and Statistical Efficiency Act of 2002, and the privacy provisions of the E-Government Act of 2002, and all other relevant laws, regulations, and guidance, when planning any surveys that will collect individually-identifiable data from any survey participant.
4. A review of all survey data items, the justification for each item, and how each item can best be measured (e.g., through questionnaires, tests, or administrative records). Agencies should assemble reasonable evidence that these items are valid and can be measured both accurately and reliably, or develop a plan for testing these items to assess their accuracy and reliability.
5. A plan for pretesting the survey or survey system, if applicable (see Section 1.4).
6. A plan for quality assurance during each phase of the survey process to permit monitoring and assessing performance during implementation. The plan should include contingencies to modify the survey procedures if design parameters appear unlikely to meet expectations (for example, if low response rates are likely). The plan should also contain general specifications for an internal project management system that identifies critical activities and key milestones of the survey that will be monitored, and the time relationships among them.
7. A plan for evaluating survey procedures, results, and measurement error (see Section 3.5).
8. An analysis plan that identifies analysis issues, objectives, key variables, minimum substantively significant effect sizes, and proposed statistical tests (see Section 5.1).
9. An estimate of resources and target completion dates needed for the survey cycle.
10. A dissemination plan that identifies target audiences, proposed major information products, and the timing of their release.
11. A data management plan for the preservation of survey data, documentation, and information products as well as the authorized disposition of survey records.

**Guideline 1.1.3:** To maintain a consistent data series over time, use consistent data collection procedures for ongoing data collections. Continuous improvement efforts sometimes result in a trade-off between the desire for consistency and a need to improve a data collection. If changes are needed in key variables or survey procedures for a data series, consider the justification or rationale for the changes in terms of their usefulness for policymakers, conducting analyses, and addressing information needs. Develop adjustment methods, such as crosswalks and bridge studies that will be used to preserve trend analyses and inform users about the effects of changes.

## Section 1.2 Survey Design

**Standard 1.2:** Agencies must develop a survey design, including defining the target population, designing the sampling plan, specifying the data collection instrument and methods, developing a realistic timetable and cost estimate, and selecting samples using generally accepted statistical methods (e.g., probabilistic methods that can provide estimates of sampling error). Any use of nonprobability sampling methods (e.g., cut-off or model-based samples) must be justified statistically and be able to measure estimation error. The size and design of the sample must reflect the level of detail needed in tabulations and other data products, and the precision required of key estimates. Documentation of each of these activities and resulting decisions must be maintained in the project files for use in documentation (see Standards 7.3 and 7.4).

**Key Terms:** bias, confidentiality, cut-off sample, domain, effective sample size, estimation error, frame, imputation, key variables, model-based sample, nonprobabilistic methods, nonsampling error, power, precision, probabilistic methods, probability of selection, response rate, sampling error, sampling unit, strata, target population, total mean square error, variance

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 1.2.1:** Include the following in the survey design: the proposed target population, response rate goals, frequency and timing of collection, data collection methods, sample design, sample size, precision requirements, and, where applicable, an effective sample size determination based on power analyses for key variables.

**Guideline 1.2.2:** Ensure the sample design will yield the data required to meet the objectives of the survey. Include the following in the sample design: identification of the sampling frame and the adequacy of the frame; the sampling unit used (at each stage if a multistage design); sampling strata; power analyses to determine sample sizes and effective sample sizes for key variables by reporting domains (where appropriate); criteria for stratifying or clustering, sample size by stratum, and the known probabilities of selection; response rate goals (see Standard 1.3); estimation and weighting plan; variance estimation techniques appropriate to the survey design; and expected precision of estimates for key variables.

**Guideline 1.2.3:** When a nonprobabilistic sampling method is employed, include the following in the survey design documentation: a discussion of what options were considered and why the final design was selected, an estimate of the potential bias in the estimates, and the methodology to be used to measure estimation error. In addition, detail the selection process and demonstrate that units not in the sample are impartially excluded on objective grounds in the survey design documentation.

**Guideline 1.2.4:** Include a pledge of confidentiality (if applicable), along with instructions required to complete the survey. A clear, logical, and easy-to-follow flow of questions from a respondents point of view is a key element of a successful survey.

**Guideline 1.2.5:** Include the following in the data collection plans: frequency and timing of

data collections; methods of collection for achieving acceptable response rates; training of enumerators and persons coding and editing the data; and cost estimates, including the costs of pretests, nonresponse follow-up, and evaluation studies.

**Guideline 1.2.6:** Whenever possible, construct an estimate of total mean square error in approximate terms, and evaluate accuracy of survey estimates by comparing with other information sources. If probability sampling is used, estimate sampling error; if nonprobability sampling is used, calculate the estimation error.

**Guideline 1.2.7:** When possible, estimate the effects of potential nonsampling errors including measurement errors due to interviewers, respondents, instruments, and mode; nonresponse error; coverage error; and processing error.

### **Section 1.3 Survey Response Rates**

**Standard 1.3:** Agencies must design the survey to achieve the highest practical rates of response, commensurate with the importance of survey uses, respondent burden, and data collection costs, to ensure that survey results are representative of the target population so that they can be used with confidence to inform decisions. Nonresponse bias analyses must be conducted when unit or item response rates or other factors suggest the potential for bias to occur.

**Key Terms:** cross-sectional, key variables, longitudinal, nonresponse bias, response rates, stage of data collection, substitution, target population, universe

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 1.3.1:** Calculate sample survey unit response rates without substitutions.

**Guideline 1.3.2:** Design data collections that will be used for sample frames for other surveys (e.g., the Decennial Census, and the Common Core of Data collection by the National Center for Education Statistics) to meet a target unit response rate of at least 95 percent, or provide a justification for a lower anticipated rate (See Section 2.1.3).

**Guideline 1.3.3:** Prior to data collection, identify expected unit response rates at each stage of data collection, based on content, use, mode, and type of survey.

**Guideline 1.3.4:** Plan for a nonresponse bias analysis if the expected unit response rate is below 80 percent (see Section 3.2.9).

**Guideline 1.3.5:** Plan for a nonresponse bias analysis if the expected item response rate is below 70 percent for any items used in a report (see Section 3.2.9).

## Section 1.4 Pretesting Survey Systems

**Standard 1.4:** Agencies must ensure that all components of a survey function as intended when implemented in the full-scale survey and that measurement error is controlled by conducting a pretest of the survey components or by having successfully fielded the survey components on a previous occasion.

**Key Terms:** cognitive interview, edit, estimation, field test, focus group, frame, pretest, survey system, usability testing

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 1.4.1:** Test new components of a survey using methods such as cognitive testing, focus groups, and usability testing, prior to a field test of the survey system and incorporate the results from these tests into the final design.

**Guideline 1.4.2:** Use field tests prior to implementation of the full-scale survey when some or all components of a survey system cannot be successfully demonstrated through previous work. The design of a field test should reflect realistic conditions, including those likely to pose difficulties for the survey. Elements to be tested include, for example, frame development, sample selection, questionnaire design, data collection, item feasibility, electronic data collection capabilities, edit specifications, data processing, estimation, file creation, and tabulations. A complete test of all components (sometimes referred to as a dress rehearsal) may be desirable for highly influential surveys.

## SECTION 2 COLLECTION OF DATA

### Section 2.1 Developing Sampling Frames

**Standard 2.1:** Agencies must ensure that the frames for the planned sample survey or census are appropriate for the study design and are evaluated against the target population for quality.

**Key Terms:** bias, coverage, estimation, frame, frame populations, target populations

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 2.1.1:** Describe target populations and associated survey or sampling frames. Include the following items in this description:

1. The manner in which the frame was constructed and the maintenance procedures;
2. Any exclusions that have been applied to target and frame populations;
3. Coverage issues such as alternative frames that were considered, coverage rates (an estimation of the missing units on the frame (undercoverage), and duplicates on the frame (overcoverage)), multiple coverage rates if some addresses target multiple populations (such

as schools and children or households and individuals), what was done to improve the coverage of the frame, and how data quality and item nonresponse on the frame may have affected the coverage of the frame;

4. Any estimation techniques used to improve the coverage of estimates such as post-stratification procedures; and
5. Other limitations of the frame including the timeliness and accuracy of the frame (e.g., misclassification, eligibility, etc.).

**Guideline 2.1.2:** Conduct periodic evaluations of coverage rates and coverage of the target population in survey frames that are used for recurring surveys, for example, at least every 5 years.

**Guideline 2.1.3:** Coverage rates in excess of 95 percent overall and for each major stratum are desirable. If coverage rates fall below 85 percent, conduct an evaluation of the potential bias.

**Guideline 2.1.4:** Consider using frame enhancements, such as frame supplementation or dual-frame estimation, to increase coverage.

For more information on developing survey frames, see *Federal Committee on Statistical Methodology (FCSM) Statistical Policy Working Paper 17, Survey Coverage*.

## **Section 2.2 Required Notifications to Potential Survey Respondents**

**Standard 2.2:** Agencies must ensure that each collection of information instrument clearly states the reasons the information is planned to be collected; the way such information is planned to be used to further the proper performance of the functions of the agency; whether responses to the collection of information are voluntary or mandatory (citing authority); the nature and extent of confidentiality to be provided, if any, citing authority; an estimate of the average respondent burden together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden; the OMB control number; and a statement that an agency may not conduct and a person is not required to respond to an information collection request unless it displays a currently valid OMB control number.

**Key Terms:** confidentiality, mandatory, respondent burden, voluntary

---

The following guideline represents best practices that may be useful in fulfilling the goals of the standard:

**Guideline 2.2.1:** Provide appropriate informational materials to respondents, addressing respondent burden as well as the scope and nature of the questions to be asked. The materials may include a pre-notification letter, brochure, set of questions and answers, or an 800 number to call that does the following:

1. Informs potential respondents that they have been selected to participate in a survey;
2. Informs potential respondents about the name and nature of the survey; and

3. Provides any additional information to potential respondents that the agency is required to supply (e.g., see further requirements in the regulations implementing the Paperwork Reduction Act, 5 C.F.R. § 1320.8(b)(3)).

### **Section 2.3 Data Collection Methodology**

**Standard 2.3:** Agencies must design and administer their data collection instruments and methods in a manner that achieves the best balance between maximizing data quality and controlling measurement error while minimizing respondent burden and cost.

**Key Terms:** imputation, item nonresponse, nonresponse bias, required response item, respondent burden, response analysis survey, response rates, target population, validation studies

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 2.3.1:** Design the data collection instrument in a manner that minimizes respondent burden, while maximizing data quality. The following strategies may be used to achieve these goals:

1. Questions are clearly written and skip patterns easily followed;
2. The questionnaire is of reasonable length;
3. The questionnaire includes only items that have been shown to be successful in previous administrations or the questionnaire is pretested to identify problems with interpretability and ease in navigation.
4. Methods to reduce item nonresponse are adopted.

**Guideline 2.3.2:** Encourage respondents to participate to maximize response rates and improve data quality. The following data collection strategies can also be used to achieve high response rates:

1. Ensure that the data collection period is of adequate and reasonable length;
2. Send materials describing the data collection to respondents in advance, when possible;
3. Plan an adequate number of contact attempts; and
4. If applicable, train interviewers and other staff who may have contact with respondents in techniques for obtaining respondent cooperation and building rapport with respondents. Techniques for building rapport include respect for respondents' rights, follow-up skills, knowledge of the goals and objectives of the data collection, and knowledge of the uses of the data.
5. Although incentives are not typically used in Federal surveys, agencies may consider use of respondent incentives if they believe incentives would be necessary to use for a particular survey in order to achieve data of sufficient quality for their intended use(s).

**Guideline 2.3.3:** The way a data collection is designed and administered also contributes to data quality. The following issues are important to consider:

1. Given the characteristics of the target population, the objectives of the data collection, the resources available, and time constraints, determine the appropriateness of the method of data collection (e.g., mail, telephone, personal interview, Internet);
2. Collect data at the most appropriate time of year, when relevant;
3. Establish the data collection protocol to be followed by the field staff;
4. Provide training for field staff on new protocols, with refresher training on a routine, recurring cycle;
5. Establish best practice mechanisms to minimize interviewer falsification, such as protocols for monitoring interviewers and reinterviewing respondents;
6. Conduct response analysis surveys or other validation studies for new data collection efforts that have not been validated;
7. Establish protocols that minimize measurement error, such as conducting response analysis surveys to ensure records exist for data elements requested for business surveys, establishing recall periods that are reasonable for demographic surveys, and developing computer systems to ensure Internet data collections function properly; and
8. Quantify nonsampling errors to the extent possible.

**Guideline 2.3.4:** Develop protocols to monitor data collection activities, with strategies to correct identified problems. The following issues are important to consider:

1. Implement quality and performance measurement and process control systems to monitor data collection activities and integrate them into the data collection process. These processes, systems, and tools will provide timely measurement and reporting of all critical components of the data collection process, on the dimensions of progress, response, quality, and cost. Thus, managers will be able to identify and resolve problems and ensure that the data collection is completed successfully. Additionally, these measurements will provide survey designers and data users with indicators of survey performance and resultant data quality.
2. Use internal reporting systems that provide timely reporting of response rates and the reasons for nonresponse throughout the data collection. These systems should be flexible enough to identify important subgroups with low response rates for more intensive follow-ups.
3. If response rates are low and it is impossible to conduct more extensive procedures for the full sample, select a probabilistic subsample of nonrespondents for the more intensive data collection method. This subsample permits a description of nonrespondents' characteristics, provides data needed for nonresponse bias analysis, and allows for possible weight adjustments or for imputation of missing characteristics.
4. Determine a set of required response items to obtain when a respondent is unwilling to cooperate fully. These items may then be targeted in the nonresponse follow-up in order to meet the minimum standard for unit response. These items may also be used in a nonresponse bias analysis that compares characteristics of respondents and nonrespondents using the sample data for those items. These required response items may also be used for item nonresponse imputation systems.

009120

## SECTION 3 PROCESSING AND EDITING OF DATA

### Section 3.1 Data Editing

**Standard 3.1:** Agencies must edit data appropriately, based on available information, to mitigate or correct detectable errors.

#### **Key Terms:** editing

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 3.1.1:** Check and edit data to mitigate errors. Data editing is an iterative and interactive process that includes procedures for detecting and correcting errors in the data. Editing uses available information and some assumptions to derive substitute values for inconsistent values in a data file. When electronic data collection methods are used, data are usually edited both during and after data collection. Include results from analysis of data and input from subject matter specialists in the development of edit rules and edit parameters. As appropriate, check data for the following and edit if errors are detected:

1. Responses that fall outside a prespecified range (e.g., based on expert judgment or previous responses) or, for categorical responses, are not equal to specified categories;
2. Consistency, such as the sum of categories matches the reported total, or responses to different questions are logical;
3. Contradictory responses and incorrect flow through prescribed skip patterns;
4. Missing data that can be directly filled from other portions of the same record (including the sample frame);
5. The omission and duplication of records; and
6. Inconsistency between estimates and outside sources.

**Guideline 3.1.2:** Possible actions for failed edits include the following:

1. Automated correction within specified criteria;
2. Data verified by respondent, and edit overridden;
3. Corrected data provided by respondent;
4. Corrected data available from other sources;
5. If unable to contact respondent, and after review by survey staff, an imputed value may be substituted for a failed edit; and
6. Data edit failure overridden after review by survey staff.

**Guideline 3.1.3:** Code the data set to indicate any actions taken during editing, and/or retain the unedited data along with the edited data.

For more information on data editing, see *FCSM Statistical Policy Working Paper 18, Data Editing in Federal Statistical Agencies*, and *FCSM Statistical Policy Working Paper 25, Data Editing Workshop and Exposition*.

## Section 3.2 Nonresponse Analysis and Response Rate Calculation

**Standard 3.2:** Agencies must appropriately measure, adjust for, report, and analyze unit and item nonresponse to assess their effects on data quality and to inform users. Response rates must be computed using standard formulas to measure the proportion of the eligible sample that is represented by the responding units in each study, as an indicator of potential nonresponse bias.

**Key Terms:** bias, cross-wave imputation, cross-sectional, eligible sample unit, frame, imputation, item nonresponse, key variables, longitudinal, longitudinal analysis, missing at random, missing completely at random, multivariate analysis, multivariate modeling, nonresponse bias, overall unit nonresponse, probability of selection, response rates, stages of data collection, unit nonresponse, wave, weights

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 3.2.1:** Calculate all response rates unweighted and weighted. Calculate weighted response rates based on the probability of selection or, in the case of establishment surveys, on the proportion of key characteristics that is represented by the responding units. Agencies may report other response rates in addition to those given below (e.g., to show the range of response rates given different assumptions about eligibility) as long as the rates below are reported and any additional rates are clearly defined.

**Guideline 3.2.2:** Calculate unweighted unit response rates (RRU) as the ratio of the number of completed cases (or sufficient partials) ( $C$ ) to the number of in-scope sample cases (AAPOR, 2004). There are a number of different categories of cases that comprise the total number of in-scope cases:

- $C$  = number of completed cases or sufficient partials;
- $R$  = number of refused cases;
- $NC$  = number of noncontacted sample units known to be eligible;
- $O$  = number of eligible sample units not responding for reasons other than refusal;
- $U$  = number of sample units of unknown eligibility, not completed; and
- $e$  = estimated proportion of sample units of unknown eligibility that are eligible.

The unweighted unit response rate represents a composite of these components:

$$RRU = \frac{C}{C + R + NC + O + e(U)}$$

**Guideline 3.2.3:** Calculate weighted unit response rates (RRW) to take into account the different probabilities of selection of sample units, or for economic surveys, the different proportions of key characteristics that are represented by the responding units. For each observation  $i$ :

- $C_i = 1$  if the  $i$ th case is completed (or is a sufficient partial), and  $C_i = 0$  if the  $i$ th case is not completed;
- $R_i = 1$  if the  $i$ th case is a refusal and  $R_i = 0$  if the  $i$ th case is not a refusal;
- $NC_i = 1$  if the  $i$ th case is a noncontacted sample unit known to be eligible and  $NC_i = 0$  if

the *ith* case is not a noncontacted sample unit known to be eligible;  
 $O_i = 1$  if the *ith* case is a eligible sample units not responding for reasons other than refusal and  $O_i = 0$  if the *ith* case is not a eligible sample unit not responding for reasons other than refusal;  
 $U_i = 1$  if the *ith* case is a sample units of unknown eligibility and  $U_i = 0$  if the *ith* case is not a sample unit of unknown eligibility;  
 $e$  = estimated proportion of sample units of unknown eligibility that are eligible; and  
 $w_i$  = the inverse probability of selection for the *ith* sample unit.

The weighted unit response rate can be given by summing over all sample units selected to be in the sample, as shown below:

$$RRW = \frac{\sum w_i C_i}{\sum w_i (C_i + R_i + NC_i + O_i + e(U_i))}$$

Many economic surveys use weighted response rates that reflect the proportion of a key characteristic,  $y$ , such as “total assets,” “total revenues,” or “total amount of coal produced.” Though it may be referred to as a coverage rate, it is, in fact, a weighted item response rate where the item of interest is a quantity of primary interest for the survey. If we let  $y_i$  be the value of the characteristic  $y$  for the *ith* sample unit and sum over the entire sample, then the weighted response rate can be given by:

$$RRW = \frac{\sum w_i y_i C_i}{\sum w_i y_i (C_i + R_i + NC_i + O_i + e(U_i))}$$

Alternatively, the denominator can be based on the population total from a previous period or from administrative records.

**Guideline 3.2.4:** Calculate the overall unit response rates for cross-sectional sample surveys ( $RRO^C$ ) as the product of two or more unit-level response rates when a survey has multiple stages:

$$RRO^C = \prod_{i=1}^K RRU_i$$

Where:

$RRU_i$  = the unit level response rate for the *ith* stage;  
 $C$  denotes cross-sectional; and  
 $K$  = the number of stages.

When a sample is drawn with probability proportionate to size (PPS), then the interpretation of  $RRO^C$  can be improved by using size weighted response rates for the  $K$  stages. This is especially helpful if nonresponse is related to the size of the sample units.

**Guideline 3.2.5:** Calculate longitudinal response rates for each wave. Use special procedures for longitudinal surveys where previous nonrespondents are eligible for inclusion in subsequent waves. The overall unit response rate used in longitudinal analysis ( $RRO^L$ ) reflects the proportion of all eligible respondents in the sample who participated in all waves in the analysis, and includes the response rates from all stages of data collection used in the analysis:

$$RRO^L = \prod_{k=1}^K \frac{I_k^L}{I_k^1 + R_k^1 + O_k^1 + NC_k^1 + e_k(U_k^1)}$$

where:

$K$  = the last stage of data collection used in the analysis;  
 $I^L$  = the number of responding cases common to all waves in the analysis  
 $R^1_k$  = Refusals at wave 1 at stage  $k$   
 so that  $I^1_k + R^1_k + O^1_k + NC^1_k + e_k(U^1_k)$  is the entire sample entered at wave 1

**Guideline 3.2.6:** Calculate item response rates (RRI) as the ratio of the number of respondents for whom an in-scope response was obtained ( $I^x$  for item  $x$ ) to the number of respondents who were asked to answer that item. The number asked to answer an item is the number of unit-level respondents ( $I$ ) minus the number of respondents with a valid skip for item  $x$  ( $V^x$ ). When an abbreviated questionnaire is used to convert refusals, the eliminated questions are treated as item nonresponse:

$$RRI^x = \frac{I^x}{I - V^x}$$

**Guideline 3.2.7:** Calculate the total item response rates ( $RRT^x$ ) for specific items as the product of the overall unit response rate (RRO) and the item response rate for item  $x$  ( $RRI^x$ ):

$$RRT^x = RRO * RRI^x$$

**Guideline 3.2.8:** When calculating a response rate with supplemented samples, base the reported response rates on the original and the added sample cases. However, when calculating response rates where the sample was supplemented during the initial sample selection (e.g., using matched pairs), calculate unit response rates without the substituted cases included (i.e., only the original cases are used).

**Guideline 3.2.9:** Given a survey with an overall unit response rate of less than 80 percent, conduct an analysis of nonresponse bias using unit response rates as defined above, with an assessment of whether the data are missing completely at random. As noted above, the degree of nonresponse bias is a function of not only the response rate but also how much the respondents and nonrespondents differ on the survey variables of interest. For a sample mean, an estimate of the bias of the sample respondent mean is given by:

$$B(\bar{y}_r) = \bar{y}_r - \bar{y}_t = \left( \frac{n_{nr}}{n} \right) (\bar{y}_r - \bar{y}_{nr})$$

Where:

- $\bar{y}_t$  = the mean based on all sample cases;
- $\bar{y}_r$  = the mean based only on respondent cases;
- $\bar{y}_{nr}$  = the mean based only on the nonrespondent cases;
- $n$  = the number of cases in the sample; and
- $n_{nr}$  = the number of nonrespondent cases.

For a multistage (or wave) survey, focus the nonresponse bias analysis on each stage, with particular attention to the “problem” stages. A variety of methods can be used to examine nonresponse bias, for example, make comparisons between respondents and nonrespondents across subgroups using available sample frame variables. In the analysis of unit nonresponse, consider a multivariate modeling of response using respondent and nonrespondent frame

variables to determine if nonresponse bias exists. Comparison of the respondents to known characteristics of the population from an external source can provide an indication of possible bias, especially if the characteristics in question are related to the survey's key variables.

**Guideline 3.2.10:** If the item response rate is less than 70 percent, conduct an item nonresponse analysis to determine if the data are missing at random at the item level for at least the items in question, in a manner similar to that discussed in Guideline 3.2.9.

**Guideline 3.2.11:** In those cases where the analysis indicates that the data are not missing at random, the amount of potential bias should inform the decision to publish individual items.

**Guideline 3.2.12:** For data collections involving sampling, adjust weights for unit nonresponse, unless unit imputation is done. The unit nonresponse adjustment should be internally consistent, based on theoretical and empirical considerations, appropriate for the analysis, and make use of the most relevant data available.

**Guideline 3.2.13:** Base decisions regarding whether or not to adjust or impute data for item nonresponse on how the data will be used, the assessment of nonresponse bias that is likely to be encountered in the review of collections, prior experience with this collection, and the nonresponse analysis discussed in this section. When used, imputation and adjustment procedures should be internally consistent, based on theoretical and empirical considerations, appropriate for the analysis, and make use of the most relevant data available. If multivariate analysis is anticipated, care should be taken to use imputations that minimize the attenuation of underlying relationships.

**Guideline 3.2.14:** In the case of imputing longitudinal data sets, use cross-wave imputations or cross-sectional imputations.

**Guideline 3.2.15:** Clearly identify all imputed values on a data file (e.g., code them).

For more information on calculating response rates and conducting nonresponse bias analyses, see *FCSM Statistical Policy Working Paper 31, Measuring and Reporting Sources of Error in Surveys*.

### **Section 3.3 Coding**

**Standard 3.3:** Agencies must add codes to collected data to identify aspects of data quality from the collection (e.g., missing data) in order to allow users to appropriately analyze the data. Codes added to convert information collected as text into a form that permits immediate analysis must use standardized codes, when available, to enhance comparability.

**Key Terms:** coding, quality assurance process

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 3.3.1:** Insert codes into the data set that clearly identify missing data and cases where an entry is not expected (e.g., skipped over by skip pattern). Do not use blanks and zeros as codes to identify missing data, as they tend to be confused with actual data.

**Guideline 3.3.2:** When converting text data to codes to facilitate easier analysis, use standardized codes, if they exist. Use the Federal coding standards listed below, if applicable. Provide cross-referencing tables to the Federal standard codes for any legacy coding that does not meet the Federal standards. Develop other types of codes using existing Federal agency practice or standard codes from industry or international organizations, when they exist. Current Federal standard codes include the following:

1. FIPS Codes. The National Institute of Standards and Technology maintains Federal Information Processing Standards (FIPS) required for use in Federal information processing in accordance with OMB Circular No. A-130. Use the following FIPS for coding (see [www.itl.nist.gov/fipspubs/index.htm](http://www.itl.nist.gov/fipspubs/index.htm) for the most recent versions of these standards):
  - 5-2 Codes for the Identification of the States, the District of Columbia and the Outlying Areas of the United States, and Associated Areas
  - 6-4 Counties and Equivalent Entities of the United States, Its Possessions, and Associated Areas
  - 9-1 Congressional Districts of the United States
  - 10-4 Countries, Dependencies, Areas of Special Sovereignty and Their Principal Administrative Divisions
2. NAICS Codes. Use the North American Industry Classification System (NAICS) to classify establishments. NAICS was developed jointly by Canada, Mexico, and the United States to provide new comparability in statistics about business activity across North America. NAICS coding has replaced the U.S. Standard Industrial Classification (SIC) system (for more information, see [www.census.gov/epcd/www/naics.html](http://www.census.gov/epcd/www/naics.html)).
3. SOC Codes. Use the Standard Occupational Classification (SOC) system to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data (for more information, see [www.bls.gov/soc](http://www.bls.gov/soc)).
4. Race and Ethnicity. Follow OMB's Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity when collecting data on race and ethnicity (for more information, see [www.whitehouse.gov/omb/inforeg/statpolicy.html](http://www.whitehouse.gov/omb/inforeg/statpolicy.html)).
5. Statistical Areas. Use the Standards for Defining Metropolitan and Micropolitan Statistical Areas for collecting, tabulating, and publishing Federal statistics for geographic areas (for more information, see [www.whitehouse.gov/omb/inforeg/statpolicy.html](http://www.whitehouse.gov/omb/inforeg/statpolicy.html)).

**Guideline 3.3.3:** When setting up a manual coding process to convert text to codes, create a quality assurance process that verifies at least a sample of the coding to determine if a specific level of coding accuracy is being maintained.

### Section 3.4 Data Protection

**Standard 3.4:** Agencies must implement safeguards throughout the production process to ensure that survey data are handled to avoid disclosure.

**Key Terms:** confidential, individually-identifiable data

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 3.4.1:** For surveys that include confidential data, establish procedures and mechanisms to ensure the information's protection during the production, use, storage, transmittal, and disposition of the survey data in any format (e.g., completed survey forms, electronic files, and printouts).

**Guideline 3.4.2:** Ensure that

1. Individually-identifiable survey data are protected;
2. Data systems and electronic products are protected from unauthorized intervention; and
3. Data files, network segments, servers, and desktop PCs are electronically secure from malicious software and intrusion using best available information resource security practices that are periodically monitored and updated.

**Guideline 3.4.3:** Ensure controlled access to data sets so that only specific, named individuals working on a particular data set can have read only, or write only, or both read and write access to that data set. Data set access rights are to be periodically reviewed by the project manager responsible for that data set in order to guard against unauthorized release or alteration.

For more information on data protection, see *FCSM Statistical Policy Working Paper 22, Report on Statistical Disclosure Limitation Methodology*, and forthcoming OMB guidance on implementation of the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA).

### Section 3.5 Evaluation

**Standard 3.5:** Agencies must evaluate the quality of the data and make the evaluation public (through technical notes and documentation included in reports of results or through a separate report) to allow users to interpret results of analyses, and to help designers of recurring surveys focus improvement efforts.

**Key Terms:** coverage error, instrument, item nonresponse, measurement error, nonresponse error, nonsampling error, sampling error, weights

---

The following guideline represents best practices that may be useful in fulfilling the goals of the standard:

**Guideline 3.5.1:** Include an evaluation component in the survey plan that evaluates survey procedures, results, and measurement error (see Section 1.1). Review past surveys similar to the one being planned to determine likely sources of error, appropriate evaluation methods, and problems that are likely to be encountered. Address the following areas:

1. Potential sources of error, including
  - Coverage error (including frame errors);
  - Nonresponse error;
  - Measurement error, including sources from the instrument, interviewers, and collection process; and
  - Data processing error (e.g., keying, coding, editing, and imputation error);
2. How sampling and nonsampling error will be measured, including variance estimation and studies to isolate error components;
3. How total mean square error will be assessed;
4. Methods used to reduce nonsampling error in the collected data;
5. Methods used to mitigate nonsampling error after collection;
6. Post-collection analyses of the quality of final estimates (include a comparison of the data and estimates derived from the survey to other independent collections of similar data, if available); and
7. Make evaluation studies public to inform data users.

**Guideline 3.5.2:** Where appropriate, develop and implement methods for bounding or estimating the nonsampling error from each source identified in the evaluation plan.

For more information on evaluations, see *FCSM Statistical Policy Working Paper 15, Measurement of Quality in Establishment Surveys*, and *FCSM Statistical Policy Working Paper 31, Measuring and Reporting Sources of Error in Surveys*.

## SECTION 4 PRODUCTION OF ESTIMATES AND PROJECTIONS

### Section 4.1 Developing Estimates and Projections

**Standard 4.1:** Agencies must use accepted theory and methods when deriving direct survey-based estimates, as well as model-based estimates and projections that use survey data. Error estimates must be calculated and disseminated to support assessment of the appropriateness of the uses of the estimates or projections. Agencies must plan and implement evaluations to assess the quality of the estimates and projections.

**Key Terms:** design effect, direct survey-based estimates, estimation, model, model-based estimate, model validation, population, post-stratification, projection, raking, ratio estimation, sensitivity analysis, strata, variance, weights

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 4.1.1:** Develop direct survey estimates according to the following practices:

1. Employ weights appropriate for the sample design to calculate population estimates. However, an agency may employ an alternative method (e.g., ratio estimators) to calculate population estimates if the agency has evaluated the alternative method and determined that it leads to acceptable results.

2. Use auxiliary data to improve precision and/or reduce the error associated with direct survey estimates.
3. Calculate variance estimates by a method appropriate to a survey's sample design taking into account probabilities of selection, stratification, clustering, and the effects of nonresponse, post-stratification, and raking. The estimates must reflect any design effect resulting from a complex design.

**Guideline 4.1.2:** Develop model-based estimates according to accepted theory and practices (e.g., assumptions, mathematical specifications).

**Guideline 4.1.3:** Develop projections in accordance with accepted theory and practices (e.g., assumptions, mathematical specifications).

**Guideline 4.1.4:** Subject any model used for developing estimates or projections to the following:

1. Sensitivity analysis to determine if changes in key model inputs cause key model outputs to respond in a sensible fashion;
2. Model validation to analyze a model's performance by comparing the results to available independent information sources; and
3. Demonstration of reproducibility to show that, given the same inputs, the model produces similar results.

**Guideline 4.1.5:** Prior to producing estimates, establish criteria for determining when the error (both sampling and nonsampling) associated with a direct survey estimate, model-based estimate, or projection is too large to publicly release the estimate/projection.

**Guideline 4.1.6:** Document methods and models used to generate estimates and projections to help ensure objectivity, utility, transparency, and reproducibility of the estimates and projections. (For details on documentation, see Section 7.3). Also, archive data and models so the estimates/projections can be reproduced.

For more information on developing model-based estimates, see *FCSM Statistical Policy Working Paper 21, Indirect Estimators in Federal Programs*.

## SECTION 5 DATA ANALYSIS

### Section 5.1 Analysis and Report Planning

**Standard 5.1:** Agencies must develop a plan for the analysis of survey data prior to the start of a specific analysis to ensure that statistical tests are used appropriately and that adequate resources are available to complete the analysis.

**Key Terms:** key variables, response rates

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the

standard:

**Guideline 5.1.1:** Include the following in the analysis plan:

1. An introduction that describes the purpose, the research question, relevant literature, data sources (including a brief description of the survey data and any limitations of the data), key variables to be used in the analysis, type of analysis, and significance level to be used;
2. Table and figure shells that support the analysis; and
3. A framework for technical notes including, as appropriate, the history of the survey program, data collection methods and procedures, sample design, response rates and the treatment of missing data, weighting methods, computation of standard errors, instructions for constructed variables, limitations of the data, and sources of error in the data.

**Guideline 5.1.2:** Include standard elements of project management in the plan, including target completion dates, the resources needed to complete each activity, and risk planning.

## **Section 5.2 Inference and Comparisons**

**Standard 5.2:** Agencies must base statements of comparisons and other statistical conclusions derived from survey data on acceptable statistical practice.

**Key Terms:** Bonferroni adjustment, covariance, estimates, hypothesis test, multiple comparisons,  $p$  value, standard error, statistical significance, Type I error

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 5.2.1:** Specify the criterion for judging statistical significance for tests of hypotheses (Type I error) before conducting the testing.

**Guideline 5.2.2:** Before including statements in information products that two characteristics being estimated differ in the actual population, make comparison tests between the two estimates, if either is constructed from a sample. Use methods for comparisons appropriate for the nature of the estimates. In most cases, this requires estimates of the standard error of the estimates and, if the estimates are not independent, an estimate of the covariance between the two estimates.

**Guideline 5.2.3:** When performing multiple comparisons with the same data between subgroups, include a note with the test results indicating whether or not the significance criterion (Type I error) was adjusted and, if adjusted, by what method (e.g., Bonferroni, modified Bonferroni, Tukey).

**Guideline 5.2.4:** When performing comparison tests, test and report only the differences that are substantively meaningful (i.e., don't necessarily run a comparison between every pair of estimates; run only those that are meaningful within the context of the data, and report only

differences that are large enough to be substantively meaningful, even if other differences are also statistically significant).

**Guideline 5.2.5:** Given a comparison that does not have a statistically significant difference, conclude that the data do not support a statement that they are different. If the estimates have apparent differences, but have large standard errors making the difference statistically insignificant, note this in the text or as a note with tables or graphs.

**Guideline 5.2.6:** Support statements about monotonic trends (strictly increasing or decreasing) in time series using appropriate tests. If extensive seasonality, irregularities, known special causes, or variation in trends are present in the data, take those into account in the trend analysis.

**Guideline 5.2.7:** If part of an historical series is revised, data for both the old and the new series should be published for a suitable overlap period for the use of analysts.

## **SECTION 6 REVIEW PROCEDURES**

### **Section 6.1 Review of Information Products**

**Standard 6.1:** Agencies are responsible for the quality of information that they disseminate and must institute appropriate content/subject matter, statistical, and methodological review procedures to comply with OMB and agency Information Quality Guidelines.

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 6.1.1:** Conduct a content/subject-matter review of all information products that present a description or interpretation of results from the survey, such as analytic reports or “briefs.” Select reviewers with appropriate expertise in the subject matter, operation, or statistical program discussed in the document. Among the areas that reviewers should consider are the following:

1. Subject-matter literature is referenced in the document if appropriate;
2. Information is factually correct; and
3. Information is presented clearly and logically, conclusions follow from analysis, and no anomalous findings are ignored.

**Guideline 6.1.2:** Conduct a statistical and methodological review of all information products. Select reviewers with appropriate expertise in the methodology described in the document. Among the tasks that reviewers should consider are the following:

1. Review assumptions and limitations for accuracy and appropriateness;
2. Ensure that appropriate statistical methods are used and reported;
3. Review calculations and formulas for accuracy and statistical soundness;
4. Review data and presentations of data (e.g., tables) for disclosure risk, as necessary;

5. Review contents, conclusions, and technical (statistical and operational areas) recommendations to ensure that they are supported by the methodology used; and
6. Ensure that data sources and technical documentation, including data limitations, are included or referenced.

**Guideline 6.1.3:** Review all information products that will be disseminated electronically for compliance with Section 508 of the U.S. Rehabilitation Act (29 U.S.C. § 794d ) for accessibility by persons with disabilities. Ensure that any product that is disseminated via special software is tested for accessibility and interpretability prior to dissemination.

## **SECTION 7 DISSEMINATION OF INFORMATION PRODUCTS**

### **Section 7.1 Releasing Information**

**Standard 7.1:** Agencies must release information intended for the general public according to a dissemination plan that provides for equivalent, timely access to all users and provides information to the public about the agencies' dissemination policies and procedures including those related to any planned or unanticipated data revisions.

**Key Terms:** estimate, forecast, key variables, model, nonsampling error, variance

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 7.1.1:** Dissemination procedures for major information products include the following:

1. Develop schedule and mode for the release of information products;
2. Inform targeted audiences; and
3. Ensure equivalent, timely access to all users.

**Guideline 7.1.2:** Protect information against any unauthorized prerelease, and release information only according to established release procedures.

**Guideline 7.1.3:** If revisions to estimates are planned, establish a schedule for anticipated revisions, make it available to users, and identify initial releases as preliminary.

**Guideline 7.1.4:** Establish a policy for handling unscheduled corrections due to previously unrecognized errors. The policy may include threshold criteria (e.g., the correction will change a national level total value by more than one percent or a regional value by more than five percent) identifying conditions under which data will be corrected and redisseminated.

**Guideline 7.1.5:** When information products are disseminated, provide users access to the following information:

1. Definitions of key variables;

2. Source information, such as a survey form number and description of methodology used to produce the information or links to the methodology;
3. Quality-related documentation such as conceptual limitations and nonsampling error;
4. Variance estimation documentation;
5. Time period covered by the information and units of measure;
6. Data taken from alternative sources;
7. Point of contact to whom further questions can be directed;
8. Software or links to software needed to read/access the information and installation/operating instructions, if applicable;
9. Date the product was last updated; and
10. Standard dissemination policies and procedures.

**Guideline 7.1.6:** For information products derived using models, adhere to the following:

1. Clearly identify forecasts and derived estimates ; and
2. Make descriptions of forecasting models or derivation procedures accessible from the product along with any available evaluation of its accuracy.

**Guideline 7.1.7:** Include criteria for instances when information will not be publicly disseminated (e.g., underlying data are of insufficient quality) in the agency's standard dissemination policies and procedures.

For more information on electronic dissemination of statistical data, see *FCSM Statistical Policy Working Paper 24, Electronic Dissemination of Statistical Data*.

## **Section 7.2 Data Protection and Disclosure Avoidance for Dissemination**

**Standard 7.2:** When releasing information products, agencies must ensure strict compliance with any confidentiality pledge to the respondents and all applicable Federal legislation and regulations.

**Key Terms:** confidentiality, data protection, disclosure

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 7.2.1:** For survey information collected under a pledge of confidentiality, employ sufficient procedures and mechanisms to protect any individually-identifiable data from unauthorized disclosure.

**Guideline 7.2.2:** Do not publicly reveal parameters associated with disclosure limitation rules.

For more information, see *FCSM Statistical Policy Working Paper 22, Report on Statistical Disclosure Limitation Methodology*, and forthcoming OMB guidance on the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA).

### Section 7.3 Survey Documentation

**Standard 7.3:** Agencies must produce survey documentation that includes those materials necessary to understand how to properly analyze data from each survey, as well as the information necessary to replicate and evaluate each survey's results (See also Standard 1.2). Survey documentation must be readily accessible to users, unless it is necessary to restrict access to protect confidentiality.

**Key Terms:** coverage, editing, imputation, instrument, nonsampling error, response rates, sampling error, sampling unit, strata, variance

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 7.3.1:** Survey system documentation includes all information necessary to analyze the data properly. Along with the final data set, documentation, at a minimum, includes the following:

1. OMB Information Collection Request package;
2. Description of variables used to uniquely identify records in the data file;
3. Description of the sample design, including strata and sampling unit identifiers to be used for analysis;
4. Final instrument(s) or a facsimile thereof for surveys conducted through a computer-assisted telephone interview (CATI) or computer-assisted personal interview (CAPI) or Web instrument that includes the following:
  - All items in the instrument (e.g., questions, check items, and help screens);
  - Items extracted from other data files to prefill the instrument (e.g., dependent data from a prior round of interviewing); and
  - Items that are input to the post data collection processing steps (e.g., output of an automated instrument);
5. Definitions of all variables, including all modifications;
6. Data file layout;
7. Descriptions of constructed variables on the data file that are computed from responses to other variables on the file;
8. Unweighted frequency counts;
9. Description of sample weights, including adjustments for nonresponse and benchmarking and how to apply them;
10. Description of how to calculate variance estimates appropriate for the survey design;
11. Description of all editing and imputation methods applied to the data (including evaluations of the methods) and how to remove imputed values from the data;
12. Descriptions of known data anomalies and corrective actions;
13. Description of the magnitude of sampling error associated with the survey;
14. Description of the sources of nonsampling error associated with the survey (e.g., coverage, measurement) and evaluations of these errors;
15. Comparisons with independent sources, if available;

16. Overall unit response rates (weighted and unweighted) and nonresponse bias analyses (if applicable); and
17. Item response rates and nonresponse bias analyses, (if applicable).

**Guideline 7.3.2:** To ensure that a survey can be replicated and evaluated, the agency's internal archived portion of the survey system documentation, at a minimum, must include the following:

1. Survey planning and design decisions, including the OMB Information Collection Request package;
2. Field test design and results;
3. Selected sample;
4. Sampling frame;
5. Justifications for the items on the survey instrument, including why the final items were selected;
6. All instructions to respondents and/or interviewers either about how to properly respond to a survey item or how to properly present a survey item;
7. Description of the data collection methodology;
8. Sampling plan and justifications, including any deviations from the plan;
9. Data processing plan specifications and justifications;
10. Final weighting plan specifications, including calculations for how the final weights were derived, and justifications;
11. Final imputation plan specifications and justifications;
12. Data editing plan specifications and justifications;
13. Evaluation reports;
14. Descriptions of models used for indirect estimates and projections;
15. Analysis plans;
16. Time schedule for revised data; and
17. Documentation made publicly available in conjunction with the release of data.

**Guideline 7.3.3:** For recurring surveys, produce a periodic evaluation report, such as a methodology report, that itemizes all sources of identified error. Where possible, provide estimates or bounds on the magnitudes of these errors; discuss the total error model for the survey; and assess the survey in terms of this model.

**Guideline 7.3.4:** Retain all survey documentation according to appropriate Federal records disposition and archival policy.

For more information on measuring and reporting sources of errors in surveys, see *FCSM Statistical Policy Working Paper 31, Measuring and Reporting Sources of Error in Surveys*.

#### **Section 7.4 Documentation and Release of Public-Use Microdata**

**Standard 7.4:** Agencies that release microdata to the public must include documentation clearly describing how the information is constructed and provide the metadata necessary for users to access and manipulate the data (See also Standard 1.2). Public-use microdata documentation and metadata must be readily accessible to users.

**Key Terms:** microdata, public-use microdata, record layout, stage of the data collection

---

The following guidelines represent best practices that may be useful in fulfilling the goals of the standard:

**Guideline 7.4.1:** Provide complete documentation for all data files. See Section 7.3 for additional information on file documentation.

**Guideline 7.4.2:** Provide a file description and record layout for each file. All variables must be clearly identified and described.

**Guideline 7.4.3:** Make all microdata products and documentation accessible by users with generally available software.

**Guideline 7.4.4:** Clearly identify all imputed values on the data file.

**Guideline 7.4.5:** Release public-use microdata as soon as practicable to ensure timely availability for data users.

**Guideline 7.4.6:** Retain all microdata products and documentation according to appropriate Federal records disposition and archival policy. Archive data with the National Archives and Records Administration and other data archives, as appropriate, so that data are available for historical research in future years.

## APPENDIX DEFINITIONS OF KEY TERMS

### -B-

**Bias** is the systematic deviation of the survey estimated value from the true population value. Bias refers to systematic errors that can occur with any sample under a specific design.

**Bonferroni adjustment** is a procedure for guarding against an increase in the probability of a Type I error when performing multiple significance tests. To maintain the probability of a Type I error at some selected value alpha, each of the m tests to be performed is judged against a significance level, alpha/m.

A **bridge study** continues an existing methodology concurrent with a new methodology for the purpose of examining the relationship between the new and old estimates.

### -C-

**Coding** involves converting information into numbers or other symbols that can be more easily counted and tabulated.

**Cognitive interviews** are used to develop and refine questionnaires. In a typical cognitive interview, respondents report aloud everything they are thinking as they attempt to answer a survey question.

A **collection of information** is defined in the Paperwork Reduction Act as the obtaining, causing to be obtained, soliciting, or requiring the disclosure to an agency, third parties or the public of information by or for an agency by means of identical questions posed to, or identical reporting, recordkeeping, or disclosure requirements imposed on, ten or more persons, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit.

**Confidentiality** involves the protection of individually-identifiable data from unauthorized disclosures.

A **consistent data series** maintains comparability over time by keeping an item fixed, or by incorporating appropriate adjustment methods in the event an item is changed.

**Covariance** is a characteristic that indicates the strength of relationship between two variables. It is the expected value of the product of the deviations of two random variables,  $x$  and  $y$  from their respective means.

**Coverage** refers to the extent to which all elements on a frame list are members of the population, and to which every element in a population appears on the frame list once and only once.

**Coverage error** refers to the discrepancy between statistics calculated on the frame population and the same statistics calculated on the target population. Undercoverage errors occur when target population units are missed during frame construction, and overcoverage errors occur when units are duplicated or enumerated in error.

A **crosswalk study** delineates how categories from one classification system are related to categories in a second classification system.

A **cross-sectional** sample survey is based on a representative sample of respondents drawn from a population at one point in time.

**Cross-sectional imputations** are based on data from a single time period.

**Cross-wave imputations** are imputations based on data from multiple time periods. For

example, a **cross-sectional imputation** for a time 2 salary could simply be a donor's time 2 salary. Alternatively, a cross-wave imputation could be the change in a donor's salary from time 1 to time 2 multiplied by the time 1 nonrespondent's salary.

A **cut-off sample** is a nonprobability sample that consists of the units in the population that have the largest values of a key variable (frequently the variable of interest from a previous time period). For example, a 90% cut-off sample consists of the largest units accounting for at least 90% of the population total of the key variable. Sample selection is usually done by sorting the population in decreasing order by size, and including units in the sample until the percent coverage exceeds the established cut-off.

**-D-**

**Data protection** involves techniques that are used to insure that confidential individually-identifiable data are not disclosed.

**Data series** are repeated collections of sequential cross-sectional or longitudinal data characteristics of the target population over time.

The **design effect (DEFF)** is the ratio of the true variance of a statistic (taking the complex sample design into account) to the variance of the statistic for a simple random sample with the same number of cases. Design effects differ for different subgroups and different statistics; no single design effect is universally applicable to any given survey or analysis.

**Direct survey-based estimates** are intended to achieve efficient and robust estimates of the true values of the target populations, based on the sample design and resulting survey data.

**Disclosure** means the public release of individually-identifiable data.

**Dissemination** is any agency initiated or sponsored distribution of information to the public.

**Domain** refers to a defined universe or a subset of the universe with specific attributes, e.g., knowledge, skills, abilities, attitudes, interests, lines of business, size of operations, etc.

**-E-**

**Editing** is the data-processing activity aimed at detecting and correcting errors.

**Effect size** refers to the standardized magnitude of the effect or the departure from the null hypothesis. For example, the effect size may be the amount of change over time, or the difference between two population means, divided by the appropriate population standard deviation. Multiple measures of effect size can be generated (e.g., standardized differences between means, correlations, and proportions).

The **effective sample size**, as used in the design phase, is the sample size under a simple random sample design that is equivalent to the actual sample under the complex sample design. In the case of complex sample designs, the actual sample size is determined by multiplying the effective sample size by the anticipated design effect.

An **eligible sample unit** is a unit selected for a sample that is confirmed to be a member of the target population.

**Estimates** result from the process of providing a numerical value for a population parameter on the basis of information collected from a survey and/or other sources.

**Estimation** is the process of using data from a survey and/or other sources to provide a value for an unknown population parameter (such as a mean, proportion, correlation, or effect size), or to provide a range of values in the form of a confidence interval.

**Estimation error** is the difference between a survey estimate and the true value of the parameter in the target population.

**-F-**

In a **field test**, all or some of the survey procedures are tested on a small scale that mirrors the planned full-scale implementation.

A **focus group** involves a semi structured group discussion of a topic.

**Forecasts** involve the specific projection that an investigator believes is most likely to provide an accurate prediction of a future value of some process.

A **frame** is a mapping of the universe elements (i.e., sampling units) onto a finite list (e.g., the population of schools on the day of the survey).

The **frame population** is the set of elements that can be enumerated prior to the selection of a survey sample.

**-H-**

**Hypothesis testing** draws a conclusion about the tenability of a stated value for a parameter. For example, sample data may be used to test whether an estimated value of a parameter (such as the difference between two population means) is sufficiently different from zero that the null hypothesis, designated  $H_0$  (no difference in the population means), can be rejected in favor of the alternative hypothesis,  $H_1$  (a difference between the two population means).

**-I-**

**Imputation** is the procedure for entering a value for a specific data item where the response is missing or unusable.

**Individually-identifiable data** refers specifically to data from any list, record, response form, completed survey, or aggregation from which information about particular individuals or their organizations may be revealed by either direct or indirect means.

**Instrument** refers to an evaluative device that includes tests, scales, and inventories to measure a domain using standardized procedures. It is commonly used when conducting surveys to refer to the device used to collect data, such as a questionnaire or data entry software.

**Item nonresponse** occurs when a respondent fails to respond to one or more relevant item(s) on a survey.

**-K-**

**Key variables** include survey-specific items for which aggregate estimates are commonly published from a study. They include, but are not restricted to, variables most commonly used in table row stubs. Key variables also include important analytic composites and other policy-relevant variables that are essential elements of the data collection. They are first defined in the initial planning stage of a survey, but may be added to as the survey and resulting analyses develop. For example, a study of student achievement might use gender, race-ethnicity, urbanicity, region, and school type (public/private) as key reporting variables.

**-L-**

A **longitudinal** sample survey follows the experiences and outcomes over time of a representative sample of respondents (i.e., a cohort).

**Longitudinal analysis** involves the analysis of data from a study in which subjects are measured repeatedly over time.

**-M-**

Response to a **mandatory survey** is required by law.

**Measurement error** is the difference between observed values of a variable recorded under similar conditions and some fixed true value (e.g., errors in reporting, reading, calculating, or recording a numerical value). Response bias is the deviation of the survey estimate from the true population value that is due to measurement error from the data collection. Potential sources of response bias include the respondent, the instrument, and the interviewer.

A **microdata** file includes the detailed responses for individual respondents.

The **minimum substantively significant effect (MSSE)** is the smallest effect, that is, the smallest departure from the null hypothesis, considered to be important for the analysis of key variables. The minimum substantively significant effect is determined during the design phase. For example, the planning document should provide the minimum change in key variables or perhaps, the minimum correlation,  $r$ , between two variables that the survey should be able to detect for a specified population domain or subdomain of analytic interest. The MSSE should be based on a broad knowledge of the field, related theories, and supporting literature.

**Missing at random**, for a given survey variable, refers to a situation in which the probability that a unit is missing that variable is independent of its value, but may not be independent of another variable being measured.

**Missing completely at random** occurs when values are missing because individuals drop out of a study in a process that is independent of both the observed measurements and those that would have been available had they not been missing.

A **model** is a formalized set of mathematical expressions quantifying the process assumed to have generated a set of observations.

A **model-based estimate** is produced by a model.

**Model-based samples** are selected to achieve efficient and robust estimates of the true values of the target populations under a chosen working model.

**Model validation** involves testing a model's predictive capabilities by comparing the model results to "known" sources of empirical data.

**Multiple comparisons** involve a detailed examination of the differences among a set of means.

**Multivariate analysis** is a generic term for many methods of analysis that are used to investigate multivariate data.

**Multivariate data** include data for which each observation consists of values for more than one random variable.

**Multivariate modeling** provides a formalized mathematical expression of the process assumed to have generated the observed multivariate data.

-N-

**Nonprobabilistic methods**—see “probabilistic methods.”

**Nonresponse bias** occurs when the observed value deviates from the population parameter due to differences between respondents and nonrespondents. Nonresponse bias may occur as a result of not obtaining 100 percent response from the selected cases.

**Nonresponse error** is the overall error observed in estimates caused by differences between respondents and nonrespondents. It consists of a variance component and nonresponse bias.

**Nonsampling error** includes measurement errors due to interviewers, respondents, instruments, and mode; nonresponse error; coverage error; and processing error.

-O-

**Overall unit nonresponse** reflects a combination of unit nonresponse across two or more levels of data collection, where participation at the second stage of data collection is conditional upon participation in the first stage of data collection.

-P-

The ***p* value** is the probability of the observed data's showing a more extreme value than the result, when there is no effect in the population.

In a **pilot test**, a laboratory or a very small-scale test of a questionnaire or procedure is conducted.

**Population**—see “target population.”

**Post-stratification** is applied to survey data, in which sample units are stratified after data collection using information collected in the survey and auxiliary information to adjust weights to population control totals.

The **power** ( $1 - b$ ) of a test is defined as the probability of rejecting the null hypothesis when a specific alternative hypothesis is assumed. For example, with  $b = 0.20$  for a particular alternative hypothesis, the power is 0.80, which means that 80 percent of the time the test statistic will fall in the rejection region if the parameter has the value specified by the alternative hypothesis.

**Precision** of survey results refers to how closely the results from a sample can reproduce the results that would be obtained from a complete count (i.e., census) conducted using the same techniques. The difference between a sample result and the result from a complete census taken under the same conditions is an indication of the precision of the sample result.

A survey **pretest** involves experimenting with different components of the questionnaire or survey design or operationalization prior to full-scale implementation. This may involve **pilot testing**, that is a laboratory or a very small-scale test of a questionnaire or procedure, or a **field test** in which all or some of the survey procedures are tested on a small scale that mirrors the planned full-scale implementation.

**Probabilistic methods** for survey sampling are any of a variety of methods for sampling that give a known, non-zero, probability of selection to each member of the target population. The advantage of probabilistic sampling methods is that sampling error can be calculated. Such methods include: random sampling, systematic sampling, and stratified sampling. They do not include: convenience sampling, judgment sampling, quota sampling, and snowball sampling.

**Probability of selection** in a survey is the probability that a given sampling unit will be selected, based on the probabilistic methods used in sampling.

A **projection** is an estimate of a future value of a characteristic based on current trends.

A **public-use data file or public-use microdata file** includes a subset of data that have been coded, aggregated, or otherwise altered to mask individually-identifiable information, and thus is available to all external users. Unique identifiers, geographic detail, and other variables that cannot be suitably altered are not included in public-use data files.

**-Q-**

**Quality assurance processing** includes any procedure or method that is aimed at maintaining or improving the reliability or validity of the data.

**-R-**

**Raking** is a multiplicative weighting technique that uses iterative proportional fitting. That is, weights are obtained as the product of a number of factors contributed by auxiliary variables. In **ratio estimation**, an auxiliary variate  $x_i$ , correlated with  $y_i$ , is obtained for each unit in the sample. The population total  $X$  of the  $x_i$  must be known. In practice,  $x_i$  is often the value of  $y_i$  at some previous time when a complete census was taken. The goal is to obtain increased precision by taking advantage of the correlation between  $y_i$  and  $x_i$ . The ratio estimate of  $Y$ , the population total of  $y_i$ , is  $YR = (y/x)$ , where  $y$  and  $x$  are the sample totals of  $y_i$  and  $x_i$ , respectively.

A **record layout** is a description of the data elements on the file (variable names, data types, and length of space on the file) and their physical locations.

**Required response items** include the minimum set of items required for a case to be considered a respondent.

**Respondent burden** is the estimated total time and financial resources expended by the survey respondent to generate, maintain, retain, and provide survey information.

A **response analysis survey** is a study of the capability of respondents to accurately provide the data requested for a survey.

**Response bias** is the deviation of the survey estimate from the true population value that is due to measurement error from the data collection. Potential sources of response bias include the respondent, the instrument, and the interviewer.

**Response rates** calculated using base weights measure the proportion of the sample frame that is represented by the responding units in each study.

**-S-**

**Sampling error** is the error associated with nonobservation, that is, the error that occurs because all members of the frame population are not measured. It is the error associated with the variation in samples drawn from the same frame population. The sampling error equals the square root of the variance.

**Sampling units** are the basic components of a sample frame. Everything covered by a sample frame must belong to one definite sampling unit, or have a measurable probability of belonging to a specific unit. The sampling unit may contain, for example, defined areas, houses, people, or businesses.

**Sensitivity analysis** is designed to determine how the variation in the output of a model (numerical or otherwise) can be apportioned, qualitatively or quantitatively, to changes in input parameter values and assumptions. This type of analysis is useful in ascertaining the capability of a given model, as well its robustness and reliability.

**Stage of data collection** includes any stage or step in the sample identification and data collection process in which data are collected from the identified sample unit. This includes information obtained that is required to proceed to the next stage of sample selection or data collection (e.g., school district permission for schools to participate or schools providing lists of teachers for sample selection of teachers).

**Standard error** is the standard deviation of the sampling distribution of a statistic. Although the standard error is used to estimate sampling error, it includes some nonsampling error.

**Strata** are created by partitioning the frame and are generally defined to include relatively homogeneous units within strata.

**Statistical significance** is attained when a statistical procedure applied to a set of observations yields a  $p$  value that exceeds the level of probability at which it is agreed that the null hypothesis will be rejected.

A **statistical survey** is a data collection whose purposes include the description, estimation, or analysis of the characteristics of groups, organizations, segments, activities, or geographic areas. A statistical survey may be a census or may collect information from a sample of the target population.

**Substitution** is the process of supplementing the sample in an unbiased manner in order to ensure it continues to be representative of the population.

A **survey system** is a set of individual surveys that are interrelated components of a data collection.

**-T-**

The **target population** is any group of potential sample units or persons, businesses, or other entities of interest.

The **total mean square error** is a measure of the combined overall effect of sampling and nonsampling error on the estimate.

**Type I error** is made when the tested hypothesis,  $H_0$ , is falsely rejected when in fact it is true. The probability of making a Type I error is denoted by alpha ( $\alpha$ ). For example, with an alpha level of 0.05, the analyst will conclude that a difference is present in 5 percent of tests where the null hypothesis is true.

**-U-**

**Unit nonresponse** occurs when a respondent fails to respond to all required response items (i.e., fails to fill out or return a data collection instrument).

A **universe survey** involves the collection of data covering all known units in a population (i.e., a census).

**Usability testing** in surveys is the process whereby a group of representative users are asked to interact and perform tasks with survey materials, e.g., computer-assisted forms, to determine if the intended users can carry out planned tasks efficiently, effectively, and satisfactorily.

-V-

**Validation studies** are conducted to independently verify that the data collection methodology employed will obtain accurate data for the concept studied.

**Validity** is the degree to which an estimate is likely to be true and free of bias (systematic errors).

**Variance or variance estimates**— The variance is a measure based on the deviations of individual scores from the mean. However, simply summing the deviations will result in a value of 0. To get around this problem the variance is based on squared deviations of scores about the mean. When the deviations are squared, the rank order and relative distance of scores in the distribution is preserved while negative values are eliminated. Then to control for the number of subjects in the distribution, the sum of the squared deviations,  $\sum(X - \bar{X})^2$ , is divided by  $N$  (population) or by  $N - 1$  (sample). The result is the average of the sum of the squared deviations. Response to a **voluntary** survey is not required by law.

-W-

A **wave** is a round of data collection in a longitudinal survey (e.g., the base year and each successive followup are each waves of data collection).

**Weights** are the inverse of the probability of selection in most probabilistic surveys. However, in the case of establishment surveys, the weights most frequently represent the estimated proportion that the responding establishments represent of the total industry. Weights may be adjusted for nonresponse.

**SUPPORTING STATEMENTS**  
(Name)

**A. JUSTIFICATION**

1. Explain the circumstances that make the collection of information necessary.
  
2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.
  
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.
  
4. Describe efforts to identify duplication.
  
5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.
  
6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.
  
7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.

009147

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

**12. Provide an estimate in hours of the burden of the collection of information.**

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

**14. Provide estimates of annualized cost to the Federal government.**

009148

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

## **B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

009149

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

OFFICE OF  
INFORMATION AND  
REGULATORY AFFAIR

January 20, 2006

MEMORANDUM FOR THE PRESIDENT'S MANAGEMENT COUNCIL

FROM: John D. Graham, Ph.D. *Jm*  
Administrator

SUBJECT: Guidance on Agency Survey and Statistical Information Collections

The Paperwork Reduction Act of 1995 requires that Federal agency information collections employ effective and efficient survey and statistical methodologies appropriate to the purpose for which the information is to be collected. It further directs the Office of Management and Budget (OMB) to develop and oversee the implementation of Government-wide policies, principles, standards, and guidelines concerning statistical collection procedures and methods.

The attached guidance document, entitled "Questions and Answers When Designing Surveys for Information Collections" (Q&A), provides details about the OMB review process, assistance in strengthening supporting statements for information collection requests, and, most importantly, advice for improving information collection designs. The document was circulated for agency comment on December 14, 2004, and has been revised in response to comments from agencies and external peer reviewers.

The content of this document is focused on what agencies need to consider when designing information collections and preparing requests for OMB approval. The guidance addresses issues that frequently arise in OMB reviews, including topics ranging from basic procedural requirements to best practices for technical documentation of surveys. It has been written for a wide audience. We anticipate that the document will be updated and revised as developments warrant so that the guidance will remain current with professional practice and useful to the agencies. Ultimately, we hope the Q&A's will serve to improve the quality of Federal surveys and statistical information.

Please share the attached Q&A document with appropriate program managers and paperwork clearance officers in your agency.

## **PURPOSE OF THIS GUIDANCE**

Federal agencies conduct or sponsor a wide variety of information collections to gather data from businesses, individuals, schools, hospitals, and State, local, and tribal governments. Information collections employing surveys are frequently used for general purpose statistics, as well as for program evaluations or research studies that answer more specific research questions. Data collected by Federal agencies are widely used to make informed decisions and to provide necessary information for policy makers and planners. The collection of this information can take many forms and is accomplished in a variety of ways.

The Paperwork Reduction Act of 1995 (PRA) requires agencies to submit requests to collect information from the public to the Office of Management and Budget (OMB) for approval. This guidance is designed to assist agencies and their contractors in preparing Information Collection Requests (ICRs), which may be commonly known as PRA submissions or “OMB clearance packages,” for surveys used for general purpose statistics or as part of program evaluations or research studies.

### **1. What is the purpose of this guidance?**

OMB is often asked about the ICR review process and what its expectations are, especially for collections involving surveys. These Q&As are designed to answer many of the frequently asked questions to help agencies better understand OMB’s expectations for survey information collection requests. This improved understanding should assist agencies in identifying and documenting information for inclusion in their ICRs, and should facilitate the review process.

This guidance seeks to highlight a wide range of issues that agencies need to consider when designing their surveys. Different sections of this guidance provide a very brief overview of the literature on statistical sampling and different survey methodology topics; each section provides some useful references for more information on these issues. The goal of this guidance is to help agencies to better plan and document their information collections that use surveys.

Conducting a high quality survey is a complex undertaking, and this guidance cannot (and is not intended to) take the place of professional survey methodologists and statisticians that agencies will need to consult in designing, executing, and documenting their surveys. For agencies that do not have these professionals on staff or involved in a particular collection, this guidance points out some key areas where professional consultation will be needed.

### **2. Does this guidance apply to all ICRs submitted to OMB?**

The next two sections of this guidance (on submission of ICRs to OMB and scope of the information collection) cover some general requirements under the PRA that can generally be applied to any information collection request an agency makes. However, the focus of this guidance is on conducting surveys for general purpose statistics or as part of program evaluations or research studies:

## Purpose

Surveys represent only a small percentage of all ICRs that OMB reviews. Most ICRs submitted to OMB are mandatory recordkeeping requirements, applications, or audits that are not used for statistical purposes. Because surveys require that careful attention be paid to a variety of methodological and statistical issues, agencies are required to complete Part B of the ICR supporting statement to more fully document how the survey will be conducted and analyzed (see question #10). The focus of this guidance is to assist agencies in planning surveys and documenting their proposed surveys in their ICRs.

## SUBMISSION OF ICRs TO OMB

This section covers some basic questions related to the Paperwork Reduction Act (PRA) submissions that agencies prepare and submit to OMB including process issues, what is and is not covered by the PRA, and when agencies need to complete Part B of the Information Collection Request (ICR) supporting statement. Agencies should consult the OMB regulations implementing the PRA (5 C.F.R. § 1320) for more detailed and complete information.

### 3. When should an agency begin the PRA process?

The PRA requires that the agency publish a 60-day notice in the *Federal Register* to obtain public comment on the proposed collection, prior to submitting the information collection to OMB.<sup>1</sup> At the time this notice is published, agencies must have at least a draft survey instrument available for the public to review. Agencies should state in their ICRs whether any comments were received from the public, and the comments should be addressed in the ICR that is submitted to OMB.

When submitting the ICR to OMB, agencies are required to place a second notice in the *Federal Register*, allowing a 30-day public comment period and notifying the public that OMB approval is being sought and that comments may be submitted to OMB. This notice runs concurrent with the first 30 days of OMB review, and OMB has a total of 60 days after receipt of the ICR to make its decision.<sup>2</sup> Thus, agencies need to allow at least 120 days for consideration of initial public comments, the second public comment period and OMB review, plus additional time for preparation of the ICR, as well as time lags for publication of *Federal Register* notices.

Agencies may also have requirements for internal review or higher level reviews (e.g., departmental) that need to be factored into the schedule for planning a survey. A six month period, from the time the agency completes the ICR to OMB approval, is fairly common for planning purposes but varies considerably across agencies depending on internal review procedures. Thus, starting the process early can be very important to ensure timely data collection. Survey managers should consult with their agency paperwork clearance officers to ascertain what they need to do and the time required to meet agency and OMB requirements. In rare instances, the PRA does provide for expedited processing if an agency can justify an Emergency Collection (see question #9).

### 4. When should agencies talk to OMB about plans for a study?

The PRA and its implementing regulations provide a formal basis for OMB review of agency information collection requests. However, they do not preclude informal consultation with OMB desk officers prior to the submission of an ICR. Consultation with OMB prior to submission of an ICR is not required as part of the PRA and typically does not occur. However, if an agency is proposing a significant new collection about which it expects OMB may have questions or concerns, the agency is encouraged to consult with its OMB desk officer about the particular

---

<sup>1</sup> 5 C.F.R. § 1320.8(d)(1)

<sup>2</sup> 5 C.F.R. § 1320.10(a)

## Submission of ICRs

collection in advance of submitting the ICR to OMB. When an agency is planning a new, large survey data collection, a major revision to an ongoing survey, or large-scale experiments or tests, agencies and OMB frequently find it helpful for the agency to brief OMB on the nature of the planned collection and the proposed methodology. In this less formal context, OMB and agency staff can discuss potential areas of concern, including the need for further detail and justification. This kind of early consultation can considerably reduce the likelihood that major unexpected concerns about survey methodology or statistical sample design will arise during OMB review, and it allows more time for the agency to consider alternatives if necessary. Agencies can then address any issues identified by OMB in their ICRs. While this informal consultation does not affect the timing of the formal OMB review process under the PRA, it can be of benefit in identifying some issues much earlier and may avoid delays that could otherwise occur.

### **5. What does it mean for an agency to conduct or sponsor an information collection?**

An agency conducts or sponsors an information collection if the agency collects the information using its own staff and resources, or causes another agency or entity to collect the information, or enters into a contract or cooperative agreement with another person or contractor to obtain the information.<sup>3</sup> If the agency requests the collection directly or indirectly through another entity or contractor or exercises control over those collecting the information, the agency is conducting or sponsoring the collection (see also question #6).

### **6. When are studies involving third party or investigator-initiated grants subject to PRA review?**

Collections of information conducted through investigator-initiated grants (e.g., in response to a Request for Applications (RFA)) are generally not subject to OMB review under the PRA. However, information collections by a Federal grant recipient are subject to PRA review if (1) the grant recipient is conducting the collection at the specific request of the agency, or (2) the terms and conditions of the grant require specific approval by the agency for the collection or collection procedures.<sup>4</sup> If either of these conditions is met, the sponsoring agency needs to seek and obtain OMB approval, and the grantee needs to display the OMB control number on the collection instrument.

For example, the National Science Foundation has many program areas that support basic research on a wide variety of topics. Proposals are reviewed by scientific panels and funding may be provided to a university researcher to study some topic, which may include a survey. Although the National Science Foundation funded the research, it did not specifically request the survey, nor does the agency approve the collection or the collection procedures. However, if another agency gives the same researcher a grant to design and conduct a survey that the agency reviews and approves, then this collection would be covered by the PRA. Agencies are encouraged to discuss specific cases with their OMB desk officers prior to collecting the information to determine whether the collection is subject to OMB review under the PRA.

---

<sup>3</sup> 5 C.F.R. § 1320.3(d)

<sup>4</sup> 5 C.F.R. § 1320.3(d)

**7. Are focus groups subject to PRA review?**

There is no exemption for focus groups in the PRA. Agencies conducting focus groups must comply with the requirements detailed in 5 C.F.R. § 1320.3(c): “Collection of information means...the obtaining...of information by or for an agency by means of identical questions posed to, or identical reporting, record-keeping, or disclosure requirements imposed on, ten or more persons...” It then goes on to clarify “ten or more persons refers to the persons to whom a collection of information is addressed by the agency within any 12 month period.” Thus, focus groups are covered unless the total number of persons participating within a 12-month period is fewer than ten. For example, an agency conducting three focus groups of nine persons would be subject to the PRA because the total number of participants is greater than 10.

Although each focus group may not be asked the exact same questions in the same order, focus groups should be treated as information collections under the PRA if the same information is being sought from the groups. For example, an agency that is developing questions for a survey may convene a few focus groups in different areas of the country (or composed of people with different characteristics) and may have fairly wide ranging discussions on the topic of the survey in order to hear how the participants think about that topic and the vocabulary they use. Because the flow of discussion in the different groups may lead to different areas in more depth or at different points in the discussion, some parts of the protocol may not have been necessarily followed verbatim or may have occurred at a different point in one focus group than another. However, the same information was still being sought by the agency and the collection is subject to the PRA, regardless of whether the exact questions or probes were used or used in the exact same order with each group.

When agencies submit their ICRs for focus groups to OMB, they should include the protocols or scripts for the discussion. Agencies that routinely conduct focus groups as part of their development of questionnaires (e.g., pretesting) may find it useful to obtain a generic clearance for focus groups (see questions #8, #50, #51).

In addition to using focus groups for pretesting, an agency may conduct focus groups as part of its collection of other information and in conjunction with other methods of data collection as part of an overall research study. For example, some program participants may participate in a focus group as part of a program evaluation that also includes other collections, such as surveys of program administrators and staff. In these cases, it is important that the focus groups are included and described in the ICR in the context of the collection the agency is conducting so that OMB can appropriately evaluate the entire scope of the study and the practical utility of the information the agency will obtain. Thus, agencies should include the respondent burden associated with the focus groups in the ICR along with the protocols or script for the focus groups.

## Submission of ICRs

### 8. What are generic clearances and when are these useful for agencies?

A generic clearance is a plan for conducting more than one collection of information using very similar methods. The review of this plan occurs in two stages: (1) a full PRA review of the generic clearance ICR, which includes the general approach and methodology, at least once every three years, and (2) an expedited review of the individual collections that fall within the scope of the generic clearance. A generic clearance is considered only when the agency is able to demonstrate that there is a need for multiple, similar collections, but that the specifics of each collection cannot be determined until shortly before the data are to be collected.

Collections that are appropriate for consideration as generic include methodological tests, focus groups, or other pretesting activities (see question #51), as well as many customer satisfaction surveys. For example, an agency may want to use a "core" satisfaction survey with its many customer groups, but may want to customize the questionnaire for different groups by including some specific questions related to a particular service or publication they use.

Each collection under the generic clearance must be well defined in the overarching ICR approved by OMB in terms of its sample or respondent pool and research methodology, and each individual collection should clearly fit within the overall plan. Individual collections should not raise any substantive or policy issues or go beyond the methods specified in the generic ICR. Any individual collection that would require policy or methodological review is inappropriate for expedited review under the generic clearance and must go through the full PRA process. For example, a generic clearance is not appropriate for the collection of influential information (see question #18) and is probably not appropriate for large collections involving many respondents and high respondent burden. Agencies are encouraged to consult with their OMB desk officers before developing a generic clearance to determine whether their plans are appropriate for this type of clearance.

### 9. What needs to be done for an emergency clearance?

Agencies may submit an emergency ICR if the collection is both needed sooner than would be possible using normal procedures and is essential for the agency's mission. In addition, the agency must demonstrate that the time to comply with the public comment provisions of the PRA would do any of the following: (1) result in public harm; (2) prevent the agency from responding to an unanticipated event; (3) prevent or disrupt the collection; or (4) cause the agency to miss a statutory or court-ordered deadline. This type of clearance should only be sought if the agency could not have reasonably foreseen the circumstances requiring collection; it is not a substitute for inadequate planning.

Agencies submitting an emergency ICR must publish a *Federal Register* notice stating the collection is being reviewed under emergency processing procedures unless OMB waives this publication requirement. The emergency ICR must contain all of the information that would be submitted with a normal ICR. Agencies must also specify the date by which they would like OMB to act on the ICR. Approval for an emergency collection is valid for a maximum of six months. If longer approval is needed, the agency must also initiate the normal PRA approval

## Submission of ICRs

process to take effect when the emergency clearance expires. Agencies are strongly encouraged to consult with their OMB desk officers prior to submitting a request for emergency clearance.

### **10. When do agencies need to complete Part B of the ICR Supporting Statement?**

Agencies are instructed to complete Part B if they are using statistical methods, such as sampling, imputation, or other statistical estimation techniques; most research collections or program evaluations should also complete Part B.<sup>5</sup> If an agency is planning to conduct a sample survey as part of its information collection, Part B of the ICR supporting statement must be completed, and an agency should also complete relevant portions of Part B when conducting a census survey (collections that are sent to the entire universe or population under study). For example, an agency doing a census of a small, well-defined population may not need to describe sampling procedures requested in Part B, but it should address what pretesting has taken place, what its data collection procedures are, how it will maximize response rates, and how it will deal with missing unit and item data.

Agencies conducting qualitative research studies or program evaluations, including case studies or focus groups, should also complete the relevant sections of Part B to provide a more complete description of the use of the information and the methods for collecting the information (see question #11).

### **11. Why do agencies need to complete some of Part B if they are conducting qualitative research studies or program evaluations?**

Agencies need to specify how they plan to use the information they are collecting and how they will collect the information in order for OMB to properly evaluate an ICR that uses qualitative methods. There are elements of Part B that are not covered elsewhere in the justification that agencies should answer to appropriately describe the information collection. For example, an agency conducting case studies should specify in Part B:

- how the different sites and/or respondents will be selected,
- whether the agency intends to generalize beyond the specific sites and/or respondents selected,
- what pretesting has been done, and
- what different methods will be used to collect the information, e.g., in-person interviews, focus groups, observations, etc. and the protocols that will be followed to ensure high quality data are obtained.

In addition, as noted in questions #21 and #24, agencies will need to justify why they are not using statistical methods if their research questions are most appropriately addressed by a survey or other quantitative study.

*Useful Resources*

Office of Management and Budget (August 1995). 5 C.F.R. § 1320 Controlling Paperwork Burdens on the Public; Regulatory Changes Reflecting Recodification of the Paperwork Reduction Act. *Federal Register*, 60, No. 167, 44978-44996.

## SCOPE OF THE INFORMATION COLLECTION

This section addresses questions related to the content of the Information Collection Requests (ICRs) submitted to OMB. The Paperwork Reduction Act (PRA) requires agencies to demonstrate the practical utility of the information that they propose to collect and to balance this against the burden imposed on the public. Thus, it is critical that agencies describe the need for the information and how it will be used. Without a clear justification, OMB cannot approve the collection. The burden on the public must also be completely accounted for and minimized to the extent practicable while still yielding useful information. Again, agencies should consult the OMB regulations implementing the PRA (5 C.F.R. § 1320) for more detailed and complete information.

### **12. Why is this data collection necessary and how will the information be used?**

The PRA requires that agencies address how the information the agency is proposing to collect is necessary for the performance of the functions of the agency. First, agencies should identify legal or administrative requirements that authorize the collection and should include copies of the authorizing statute and regulations in their ICRs. Second, agencies must also justify why the information is needed and how it furthers the agency's goals.

When appropriate, agencies should also highlight the knowledge gaps that the information collection is designed to address, including a brief review of existing information and the relevant scientific literature. If an agency proposes a research study or program evaluation that is designed to address specific research questions, it must demonstrate a direct connection between the information needs and the specific research questions. Thus, agencies should provide sufficient background information to support the need for the research questions (including a brief review of the relevant scientific literature) and how the study will meet that need. Agencies must also ensure that the collection does not duplicate other information accessible to the agency (but see question #47). If the information is a continuation of a prior collection, agencies should document how the information has been used and the continuing need for the collection.

The PRA also requires that the agency demonstrate the practical utility of the collection and the use the agency will make of the information. The supporting statement should always include a careful discussion of what the agency hopes to achieve by collecting the information and the quality of information that will be obtained employing the proposed design.

Agencies must also evaluate their intended use of information from the proposed collection in light of the OMB's information quality guidelines for utility, integrity, and objectivity<sup>6</sup> as well as the agency's information quality guidelines. Based on that evaluation, agencies should be able to state in their ICRs that the proposed collection of information will result in information that will be collected, maintained, and used in a way consistent with the OMB and agency information quality guidelines (also see question #18).

---

<sup>6</sup> Guidelines for ensuring and maximizing the quality, objectivity, utility, and integrity of information disseminated by Federal agencies, 67 FR 8452-8460

### 13. How often should data be collected?

When submitting an information collection request (ICR) to OMB, agencies are required to describe the consequences of collecting data less frequently than proposed. While less frequent data collection reduces burden on the public, more frequent data collection can provide more current and useful information. For example, in longitudinal and panel surveys, more frequent collections allow for shorter reference periods between reports, which may reduce bias. The goal is to strike a balance between the need for current information and the need to reduce public reporting burden.

Most Federal data collections fall into one of two categories: continuing or one-time. Continuing data collections have an established frequency of collection (monthly, quarterly, annually, biannually, etc.). A one-time collection is conducted without the intention of collecting the same information again, or without an established collection pattern. The frequency of data collection is an issue when establishing a new continuing data collection, when renewing a continuing data collection, or when repeating a prior one-time survey.

When determining the frequency of data collection, the agency should consider the following:

- *The timeliness of estimates requires high frequency collections.* For example, the monthly unemployment rate is a key economic indicator, and the data must be collected monthly. Some collections are required by law to be collected at specific frequencies, e.g., the Decennial Census occurs every 10 years, and the Economic Censuses are conducted every 5 years (for years ending in 2 and 7).
- *There is a reasonable expectation of significant change in key statistics between collections.* For example, an agency may wish to conduct a customer satisfaction survey every year; however, if the agency has not made any changes in its programs, there would be no expectation for change. If the agency has started a new customer relations program, then a repeat of the customer satisfaction survey could be used to measure the effectiveness of that change. Another consideration in evaluating the frequency of a collection is the potential for seasonal variation. The need to capture cyclical patterns might justify either monthly or quarterly collection.
- *The frequency of collection has an effect on data quality.* For example, the Survey of Income and Program Participation (SIPP) is a longitudinal survey that captures a month-by-month accounting of income and governmental transfers such as Social Security, welfare, food stamps, etc. Pretesting of two different collection periods showed significant differences in the data quality between the three-month and six-month time frames, requiring the use of a shorter period. SIPP adopted a four-month time frame for data collection and reference period, which provided nearly the same quality of data as the three-month time frame with a 25 percent reduction in respondent burden.
- *Reduced frequency would have an adverse impact on agency programs.* If an agency program requires data with a specified frequency, the agency needs to detail how the data will be used and how the agency would be hindered by less frequent information.

01/10/11

009164

**14. What is included in the calculation of burden hours?**

Burden hours are a measure of the time it takes respondents to review instructions, search data sources, complete and review their responses, and transmit or disclose information. Estimating burden for household surveys is typically done by timing the completion of interviews done in previous administrations of the survey or in pretests (using 9 or fewer persons) and developing an average time.

Estimating burden for establishment surveys is more complicated because respondents often have to search for information before answering the survey questions. Agencies must first identify all the steps a respondent takes in order to comply with the survey request, and then estimate the time for each step to arrive at a total burden per respondent. The aggregate burden of an ICR is the average burden per respondent multiplied by the number of expected respondents and should be reported in section A.12 of the ICR.

**15. For establishment surveys or panel surveys, should burden hours include the original collection of administrative records that may have taken place months or years before?**

Generally, surveys of business establishments ask a respondent to aggregate and report data that the establishment already has somewhere in files or databases. Burden hours for these surveys should include only the time it takes to locate the source data and aggregate them. The estimate should not include the time originally taken to collect information in administrative records that were compiled by the establishment for its own purposes, such as accounting records. For example, there are a variety of reporting and recordkeeping requirements in the equal employment opportunity arena. These reports usually ask for summary demographic and job data on employees, and respondents often obtain the data needed from existing personnel files, records, or databases. Agencies SHOULD NOT count the time involved in the original collection of the demographic data from the employees but SHOULD count the time it takes to access the personnel files, aggregate the requested data, and report the data on the agency form.

For panel or longitudinal surveys, agencies SHOULD count the time it takes respondents to begin their participation in a panel in the initial ICR for the recruitment and baseline collection. However, this time SHOULD NOT be counted in subsequent ICRs that concern later collections. Agencies SHOULD count only the hours associated with the collection of information described in the current ICR. For example, the Survey of Income and Program Participation selects respondents to participate in interviews every four months (called waves) for the duration of a panel—usually 3 or 4 years. Each wave has a set of core questions used in all waves and a topical module that differs from one wave to the next. In essence, each wave is treated as a unique survey and the burden associated with answering all the questions in a wave is reported. In this case, the agency SHOULD count the burden of recruitment and the initial collection in the ICR for wave 1; however, the agency SHOULD NOT count the original recruitment of the individual into the survey panel in the ICRs for later waves.

009165

**16. Why are agencies required to estimate the burden in terms of both time and costs?**

The term "burden" means the "time, effort, or financial resources" the public expends to provide information to or for a Federal agency, or otherwise fulfill statutory or regulatory requirements.<sup>7</sup> Currently, agencies separately estimate the "hour burden" and "cost burden" of each particular information collection in their supporting statements in A.12 and A.13, respectively. This ensures that both types of burden are taken into account.

Thus, for establishment surveys, in addition to the hour burden for reviewing instructions, searching data sources, completing and reviewing responses, and transmitting or disclosing information, there may also be capital, operation, and maintenance costs associated with generating and maintaining the information. Agencies should include costs that respondents incur for developing, acquiring, installing, and utilizing technology and systems for the purposes of collecting, validating, verifying, processing, maintaining, disclosing, and providing information, as well as costs incurred by respondents adjusting to changes from previous instructions, and training personnel to be able to respond to a collection. These costs may be borne directly by the respondent or indirectly by their subordinates, agents, or contractors.

The PRA requires that the agency demonstrate the practical utility of the collection and demonstrate that the burden of the collection both in terms of hours and other costs is justified given the agency's need for the information and the use the agency will make of the information.

<sup>7</sup> 44 U.S.C. § 3502(2); 5 C.F.R. 1320.3(b).

## CHOICE OF METHODS

This section is intended as a broad overview of many specialized methodologies. One can often find entire textbooks devoted to one or more methods; thus, the purpose of this section is simply to call attention to some basic considerations agencies should explain and justify in their ICRs when proposing to conduct studies that use these methods. The method selected must also be appropriate for the intended use of the information. Agencies should consult with experts in the particular methods to design and implement their studies.

### **17. How does the choice of methods for the study relate to the research questions or purpose of the collection?**

The methodology for the study should be driven by the kinds of questions the agency needs to answer or the general purpose of the collection. Sometimes agencies collect information for general statistical purposes that may be used by a wide variety of different parties to address many different questions. In this case, the design of the survey or study should reflect these multiple uses and be clear about its strengths and limitations for different purposes, and agencies should consult with appropriate stakeholders and experts when designing their studies to ensure the relevant questions are addressed. In other cases, agencies need to answer very specific questions, and the design needs to be appropriately focused to answer those questions well.

Agencies should carefully consider the kinds of questions the information collection needs to answer and the strengths and limitations of different methods to answer those questions. For example, if an agency wishes to know whether a program caused some change to occur in those served by the program, appropriate methods, such as an experimental design, will need to be employed. In this case, agencies will need to do considerable advance planning to randomly assign participants to experimental or control conditions to evaluate the program. If an experimental design is not possible or practical, then a quasi-experimental design or other design may be used by the agency. Agencies need to justify how their choice of methodology will be able to provide the information needed to address the research question and discuss the limitations as well as the strengths of the methodology for the particular purpose (see question #26).

In order to address complex and multi-faceted research questions, an agency may need to plan a program of research and use multi-method approaches to obtain all the information needed. When more than a single study is planned to address the research questions, the agency should include a brief description of the complete research program (including studies not yet approved) in its ICRs and refer to previously approved collections (by their OMB number) to explain how the study fits into the larger program and support how the complete program will provide the agency with the information it needs. If the agency is supplementing its survey collection with administrative or other available data, this should also be described. In addition, the general timeframe for the other components should be included.

### **18. How do the use of the information and choice of methods for the study relate to the agency's information quality guidelines?**

A primary consideration for an agency in designing its information collections should be how the agency intends to use the information it is gathering. Agencies use information collected through surveys for a variety of purposes. Some information is intended to be "influential information." As defined in OMB and agency Information Quality Guidelines, "influential" means that "an agency can reasonably determine that dissemination of the information will have or does have a clear and substantial impact on important public policies or important private sector decisions." The Information Quality Guidelines require that agencies hold the information they designate as "influential" to a higher standard of reproducibility and transparency than information that is not defined as influential. For example, some survey results directly or indirectly feed into Principal Federal Economic Indicators that are widely watched and have broad impact on government, business, and individual decisions. In other situations, one agency may use the information collected by another agency to support health and safety assessments that in turn affect both public and private sector decisions.

As part of their ICRs, agencies report how they intend to use the information they are proposing to gather. Agencies should explain how the methods they have chosen to employ will yield information of sufficient quality for its intended purpose. For example, if an agency wishes to generalize the results of a survey beyond the particular cases sampled, it must utilize appropriate statistical sampling methods (see question #30) to yield information that has sufficient precision and accuracy (see question #33). Because more rigorous methods often entail higher cost, agencies need to carefully consider the resources that will be required to obtain information of sufficient quality for the intended uses. Agencies should be able to certify explicitly in their ICRs that the proposed collection of information will result in information that will be collected, maintained, and used in a way consistent with the OMB and agency information quality guidelines, or they should not propose to collect the information.

### **19. When should agencies consider conducting a survey?**

When the research question or purpose of the study is to produce descriptive information about a population, agencies should consider conducting a survey. Surveys may be conducted to provide general purpose statistics on the national (or some target) population, or they may be used as part of a research study, experiment, or program evaluation. For example, an evaluation of a federally funded school program may be done by conducting surveys of school principals, teachers, and district administrators to obtain information from each about the implementation or results of the program. However, surveys are often only one source of information that an agency may need, especially when conducting program evaluations. Agencies should also examine how they can obtain other appropriate outcome measures, including the use of administrative records.

When properly done with an appropriate sample design, a survey can provide broad descriptive information about a population and subgroups, as well as information about relationships among variables or constructs that are being measured. Generally, the results from surveys are only

## Choice of Methods

descriptive or correlational. When surveys are used in the context of an experimental design, quasi-experimental design, or longitudinal study, stronger causal inferences may be warranted; however, agencies will need to carefully consider the limitations of the study and other potential explanations when drawing causal conclusions.

Because they are designed to gather standardized information from an often relatively large number of persons or entities, surveys may not be able to provide the degree of detail that can be obtained through qualitative or case study methods. Furthermore, the standardization of questions requires that the concepts that are being measured be well known and understood, and shown to be reliable and valid. Thus, it may be premature to conduct a survey when an agency is in a more exploratory mode, trying to develop research questions, or understand the characteristics that need to be measured. It is not appropriate for agencies to conduct developmental activities to define a concept and then attempt to use those same findings to test hypotheses (see question #21). A separate survey is needed to test the hypothesis.

### **20. What should agencies consider when designing and conducting a survey?**

The quality of a survey design can be judged by the strategies that are taken to prevent, adjust for, and measure potential problems and sources of error in surveys. How well a survey is designed and conducted can lead to either more or less variance (or noise) or bias (or systematic errors) in results. Well-designed and conducted surveys anticipate potential problems and try to prevent or minimize the impact of different sources of error as much as possible. Additionally, good surveys make efforts to measure and adjust for errors that are not controlled. The best surveys are those that check and verify each step of the research process. Common sources of error in surveys include sampling (due to measuring only a subset of the population), coverage (due to mismatches between the population and the lists used to draw the sample), nonresponse (due to failure to measure some sampled units), measurement (due to mismatches between data sought and data provided), and processing (due to editing or imputation). These topics are dealt with in greater detail in the following sections of this guidance.

For example, measurement errors can be reduced through careful questionnaire design and pretesting (see Questionnaire Design and Development). A field test comparing alternative versions (or revised versions) of key questions may provide insights into sensitivity of answers to alternative wording (see questions #22, #23, and #49). Agencies can also reinterview a subsample of respondents to measure instability in responses. Sometimes, survey results can also be checked against administrative records; however, there may be differences in definition and coverage between the information available from records and the survey that need to be carefully considered when assessing the results of the comparison. Similarly, potential nonresponse bias can be reduced by following a variety of strategies to maximize response rates or repair imbalances in the respondent pool (see questions #69 and #70). Bias can be measured in special nonresponse bias studies (see question #71) and adjustments can be made to weights to attempt to reduce bias.

Agencies designing and conducting surveys need to consider all of the potential sources of errors and plan to adequately prevent, measure, and adjust for them. Conducting a high quality survey

requires careful planning and sufficient resources to yield quality data that have practical utility for the agency. Agencies should carefully document and justify the adequacy of their survey methods in their ICRs. Specifically, agencies should provide information about the target population, the sampling frame used and its coverage of the target population, the design of the sample (including any stratification or clustering), the size of the sample and the precision needed for key estimates, the expected response rate (see question #63), the expected item non-response rate for critical questions, the exact wording and sequence of questions and other information provided to respondents, data collection methods and procedures, and the training of interviewers (if applicable). In addition, agencies need to take into account what is known about the different sources of error in their analysis and interpretation of the results from the survey. Experts in survey methodology within and outside the agencies can be helpful to inform this process. Agencies should be transparent and report in their ICRs the methods they plan to use, what is known about the different sources of error, and the impact of the errors on the analytic results.<sup>8</sup>

### **21. When should agencies consider conducting a qualitative study?**

An agency may want to consider a qualitative study under a variety of circumstances. In contrast to gathering numerical information or data that can be quantified, a qualitative study uses unstructured interviews, notes, or observations that are typically difficult to quantify. Qualitative studies can be useful for exploratory investigations such as when very little is known about a problem or the implementation of a program. A qualitative study in this case may be a good first step to understanding the scope of a problem or identifying the key issues for more systematic study. A variety of methods may be used in a qualitative study, including focus groups, unstructured interviews, or semi-structured interviews with “experts,” stakeholders, or other participants. Case studies may also be conducted (see question #24). Typically, these methods attempt to obtain insights through the intensive study of a relatively small number of people, institutions, or establishments. Respondents are usually purposively chosen because of their knowledge, experience, or status.

In a qualitative study, typically, different persons or entities may be chosen because they “represent” a particular kind of person or entity, but the sample is usually not representative—in a statistical sense—of any larger population. However, the obtained information may be very useful in generating hypotheses that can be tested more systematically with other methods such as quantitative surveys. Sometimes qualitative studies are done in conjunction with or as a component of a larger quantitative study to obtain further insights or context for the results; however, these qualitative interpretations can be prone to misinterpretation and over-generalization. Although qualitative studies can also be done using statistical sampling (see question #30) and rigorous designs to generalize results, this is rarely done.

Agencies should demonstrate how a qualitative study will meet their information needs. Agencies need to acknowledge the limitations of data gathered using these methods and not generalize the data beyond those persons or entities that were interviewed. These studies should

---

<sup>8</sup> For further information see *Statistical Policy Working Paper #31, Measuring and Reporting Sources of Error in Surveys* available at [www.fcsn.gov/reports/](http://www.fcsn.gov/reports/).

usually be considered preliminary, and will often need to be followed with a larger-scale, representative study.

### **22. When should agencies conduct a pilot study, pretest, or field test?**

Agencies should always consider conducting pretests (small trials of the measurement process) or pilot studies (larger trials yielding statistical information) when planning for a new information collection or changing methods and procedures for an ongoing survey. These kinds of tests may provide critical information necessary to ensure the quality of the data and smoothness of operations needed in the full-scale information collection. They can provide essential information to the agency and result in higher data quality than would have been achieved without them and may be the only vehicle for measuring the effects of different changes an agency is considering implementing. Thus, agencies will need to weigh the importance and use of pretests against the time and resources needed to conduct them.

Pilot studies can be useful when there are a number of issues the agency needs more information about before a full-scale study can be reasonably implemented. A pilot study may help an agency narrow down the research questions or provide rough estimates (and variances) that can be used to guide sample size determinations. An agency may also use a pilot study to examine potential methodological issues and decide upon a strategy for the main study. A pilot test may also be conducted before a large-scale study in order to test and refine the implementation procedures for the full-scale study.

Agencies may want to conduct pretests when developing new questionnaires to see how respondents actually answer questions and identify potential data quality problems, such as high item nonresponse rates. Agencies may also conduct pretests to gather data to refine questionnaire items and scales and assess reliability or validity. Sometimes agencies may also use a field test or experiment (a study to compare the effects of two or more procedures or questionnaires) when planning a change in methodology or questions in an ongoing survey. This enables comparisons and often provides quantifiable data to decide among the different methods or questions to use. An agency may further want to consider conducting a field test experiment on a representative sample to measure the effect of the change in methods or questions on resulting estimates.

Agencies can request clearance for pretests, pilot studies, or field tests separately or as part of their ICR for the full-scale collection (also see questions #50 and #51). However, in many cases it makes more sense for these to be separate requests, especially when conducting pilot studies for new collections. Agencies are encouraged to discuss whether it is appropriate to submit these studies separately or in combination with the full-scale study with their OMB desk officers prior to submitting the ICR to OMB.

**23. When should agencies consider conducting focus groups or cognitive interviews?**

Agencies should consider using focus groups or cognitive interviews when planning for a new information collection or when altering questions on an ongoing survey. Developing effective new questions or revising existing questions can be more difficult than most people anticipate, and questions need to be constructed so that respondents can answer them and provide useful data for the agency.

Focus groups (groups of 8-12 persons engaged in a semi-structured conversation led by a moderator) can be a useful first step in questionnaire development that can allow an agency to better understand what respondents think about a topic and what terms they use. Agencies can learn the language that respondents use when discussing the topic and as a result integrate more common terms and phrases into the design of survey questions.

Focus groups are also often used as part of a case study or in conjunction with a sample survey or program evaluation to gain insights and perspectives on the operation of a program or to provide more detailed information to help illustrate the results from the survey (see question #24).

In a cognitive interview, respondents are asked to think aloud as they answer questions and to identify anything that confuses them. Cognitive interviews can be a valuable tool when an agency has developed proposed questions and needs to understand better how respondents interpret them. Respondents are often asked to paraphrase a question so that researchers learn whether a respondent understands the question and interprets it as intended. Good questionnaire development is aided by survey methodologists who are trained in these methods. Further information on methods for developing questionnaires is provided in the section on Questionnaire Design and Development (questions #45 to #51).

**24. When should agencies consider using case study methods?**

A case study is a research methodology that is widely used in a variety of contexts. One good definition of a case study is:

a method for learning about a complex instance, based on a comprehensive understanding of that instance obtained by extensive description and analysis of that instance taken as a whole and in its context. (GAO 1990, p. 14)

Case studies can be useful when one is dealing with a complex program about which relatively little is known or understood. A case study can thus serve a useful purpose as a preliminary study for the agency to learn some of the characteristics of how the program is implemented or operating or what its possible effects might be. This can be a useful *first step* in evaluating a program because it leads to the generation of hypotheses about the program and its implementation, as well as a preliminary assessment of how more systematic research can be designed and implemented to evaluate the program.

Case studies can also provide important insights when used in conjunction with other research methods such as sample surveys. For example, an agency may conduct a large representative sample survey of program sites to gain knowledge about their characteristics. A number of sites may also be selected for case studies to help provide additional understanding about the way the program functions or is implemented, and thus illuminate the quantitative results from the survey. These case studies may, for example, include direct observational components that are not feasible in a large scale national study.

More specifically, case studies can provide vital insights about how programs are implemented in different local areas. For programs that deliver their services through State and local agencies, the Federal Government often sets general standards regarding administration, evaluation, and funding. Developing a comprehensive picture of how a federally-regulated program is administered, for example, may require site-specific observation and investigation. Data from specific sites can serve several purposes depending on the study design including:

- developing explanatory hypotheses on program characteristics and outcomes, which can be tested in future statistical studies;
- preparing guidance for field offices on how services may be delivered more effectively;
- providing qualitative explanatory information on the range of program characteristics and outcomes, which complement quantitative results obtained through a statistically valid, generalizable study; and
- illustrating findings of the main study through real-world examples.

### **25. What should agencies consider when designing and conducting a case study?**

There are a number of limitations of the case study method that agencies should consider. In some situations, these limitations can make it difficult to conduct the research. In others, they can make it difficult to generalize the results. Limitations include:

- the case study sites are typically not selected in a manner that allows one to generalize to the population under study;
- too few sites are typically visited to get a comprehensive or generalizable picture;
- results observed at a site may be due to other factors besides the program being studied, and there is often no control group or randomized assignment to the program;
- site visits are expensive; they require significant travel and preparation costs; and
- data from site visits are often qualitative and anecdotal in nature.

When designing or evaluating a case study, the following questions should be considered:

- *Who is conducting the case study?* The role of the investigator is very prominent in case study methods and the training, experience, and thoroughness of the investigators visiting a site can have a large impact on the quality of the data that are gathered.
- *How are the sites selected?* How sites are chosen will have direct implications for the kinds of conclusions that can be drawn from the research. Although probability methods are essential for generalizable survey samples (see question #30), the small samples that are typically used in case studies cannot usually be meaningfully generalized to any population. However, the results from case studies are typically not intended to describe

## Choice of Methods

the population in the same way as those from sample surveys. It may be useful to select cases to represent the diversity and important variations of programs that exist.

- *How well do the protocols or questionnaires elicit the desired information?* As much thought and effort should go into the design of questionnaires and protocols for case studies as goes into these instruments when administered to a national sample. Careful attention also needs to be paid to who will be interviewed as part of the case study. Similarly, other sources of information such as observations by researchers, examination of administrative records, and other documentation are often important components of the case study.
- *Is interviewer bias and interpretation being minimized?* If the data are only qualitative, they may be subject to interviewer interpretation and bias. To the greatest extent possible, guides for onsite visits and data collection as well as instructions for coding and analyzing the data should be developed beforehand. Visiting one or two sites for a pretest is also highly recommended because the actual site visits can reveal the complexity and difficulty of analyzing case study data.
- *How will the data be analyzed?* Some analysis usually needs to take place in real time at the site to resolve discrepancies or take advantage of the multiple perspectives offered by the different investigators on site. Objective data that have been gathered should be quantified and displayed with basic descriptive statistics. It is unlikely that inferential statistics or hypothesis testing could be used unless sample sizes are adequate and sites were selected appropriately to generalize.
- *What is the relevant comparison group?* Case study research may include comparisons between a program site and a “comparable” site that did not have the program. Unless very strict controls are in place, it is difficult to have a true comparison site for most case studies due to the unknown influences of other factors that could affect observed differences between the sites. The differences between sites that cannot be controlled can, however, often be articulated in advance and need to be carefully considered as limitations to comparisons; nonetheless, having a comparison group may provide more information than if there is no comparison group. Alternatively, case study designs may include baseline pre-program measurements of persons and post-program measurements of the same individuals.

### 26. When should agencies consider using experimental and quasi-experimental designs?

When agency research questions involve trying to determine whether there is a causal relationship between two variables or whether a program caused a change for participants, then agencies will need to employ an experimental or quasi-experimental design or demonstrate how their study design will allow them to determine causality. Even well conducted experimental and quasi-experimental designs may have limitations or alternative explanations for the results that the agency will need to carefully consider in designing the study and drawing conclusions from the results.

For example, it can often be difficult to identify appropriate comparison groups to evaluate the impact of Federal programs or interventions. If an agency wishes to evaluate a new education program that provided some districts or schools with competitive grants to implement the

## Choice of Methods

program, it can be difficult to identify similar districts that are an appropriate comparison to gauge the effects of the program on student outcomes. If the comparison schools or districts differed systematically from those that received program funding then it is not clear whether any differences in student outcomes are due to the program or to the preexisting differences such as urbanicity or poverty level. In addition, sometimes, schools or districts that win (or even apply for) competitive grants may be more interested, motivated, or have greater capabilities for improving student outcomes than schools or districts that don't win (or apply) for the program grants, and the student outcomes may reflect the underlying motivation or capabilities rather than anything about the program itself. Thus, the agency needs to consider appropriate methods to select comparison schools or districts that will rule out or minimize alternative explanations for differences in student outcomes in order to maximize the value of the program evaluation.

One of the key characteristics of experimental designs is random assignment of persons or entities to treatment (or experimental) and control (or comparison) conditions. For example, participants in the treatment condition may receive benefits or services from a Federal program, while participants in the control condition do not. This random assignment of persons to conditions acts to equalize preexisting differences between the two groups so that differences observed between the groups can be attributed to the differences in the Federal program. If random assignment is not strictly possible, then quasi-experimental designs can be employed. These designs rely on identifying appropriate comparison groups and frequently take measurements at two or more points in time in order to rule out or reduce threats to the validity of the conclusions or alternative explanations for differences between the experimental and comparison groups.

Different kinds of experimental designs may be used by an agency depending on the research questions or the types of decisions the agency intends to make based on the results. Sometimes the goal may be simply to assess whether a new demonstration program is having the intended effect, before investing additional resources to expand the program and study it further. In this case, it may be possible for an agency to justify using a sample that is not nationally representative or even representative of potential program members. In other cases, the agency may want to estimate the size of the effect a specific intervention would have if implemented throughout the country or evaluate the effectiveness of an ongoing program. In these circumstances, the agency would need a representative sample of program participants in order to accurately describe the population and generalize the results to the rest of the country or to all program sites (see section on Sampling).

Agencies need to consider the difficulties of implementing experimental designs and guard against potential threats to the internal validity of the design through choice of appropriate comparison groups and/or conducting multiple measurements over time. It is key that agencies design and implement programs in ways that they can be meaningfully evaluated. For example, conducting an experimental study requires advance planning so that participants can be assigned to conditions. Agencies should justify that the design they have chosen is practical to conduct and will provide the information they need to answer the agency's research questions. Agencies also need to acknowledge the limitations of their design and to identify clearly how they intend to generalize the results of experimental studies, especially if a representative sample is not proposed.

### SAMPLING

This section is intended as a broad overview of some key issues in survey sampling. Designing an appropriate sample for a given purpose and target population requires considerable technical expertise, and agencies will need to consult with statisticians and experts in survey sampling in designing their studies. The purpose of this section is to provide a general non-technical introduction to some of the concepts of survey sampling that agencies will need to describe and justify in their Information Collection Requests (ICRs) when proposing to do studies whose purpose is statistical in nature.

#### **27. What is the difference between a census and a sample survey and when is each appropriate?**

A study where all target population members are asked to participate is often called a universe survey or a census. In contrast, a *sample survey* is a survey where only a portion of the population of interest is included in the study; that is, only a selected number of households (or businesses) are asked to participate rather than including all members of the population. Furthermore, the members of the target population must be selected with a known probability of selection from a sampling frame that contains all (or nearly all) of the members of the target population.

When the target population is small and each unit is unique, a census is likely to be preferred over a sample survey. For example, when an agency evaluates a Federal program that is implemented by the states (each one perhaps somewhat differently), a census of state program directors may provide higher quality information with little cost difference from a sample survey of a slightly smaller number of states. In this case, there may also be concerns about missing practices of some states that were not included in the sample if a census were not conducted.

Sample surveys are useful when it is not possible or desirable to collect data from every single member of the population of interest due to reasons such as respondent burden, cost, and operational feasibility. Often it would be simply too burdensome, expensive, or logistically impractical to collect data from every single unit of the target population. Agencies should consider collecting data from a sample and trying to ensure a high response rate from the sampled units. For a given budget, an agency can devote more resources to quality control activities such as callbacks to nonrespondents and data editing for a sample survey than would be possible with a census, and the results from the sample survey should be more representative and provide less biased estimates of the population than a poorly conducted census.

Agencies should carefully consider the benefits and costs of conducting a sample survey versus a census. When the data must be representative of the target population, carefully designed samples can be used to ensure data quality in a way that is often more economical and efficient than a census. Agencies need to justify in Part B of their ICRs their decision to conduct a census instead of a sample survey.

### **28. What is a sampling frame and what is the coverage of the sampling frame?**

A sampling frame is a list or set of procedures for identifying all elements of a target population. In theory, the sampling frame should include everyone in the target population as well as other information that will be used in the sampling process or can be used to assess the representativeness of the sample. There are different types of sampling frames, e.g., area and list frames. In an area frame, geographic areas are defined, listed, and then sampled. Often, lists of elements (e.g., housing units) are constructed within the sampled areas and then elements are selected from the lists. In a list frame, a list of all the population elements is used to select the sample directly. Sampling frames also may include information on characteristics of the elements, such as employment levels for a business or enrollment for schools.

Sampling frames should be up to date and accurate. The coverage of the sampling frame refers to how well the frame matches the target population. For example, approximately 97 percent of U.S. households have land-based telephone lines; therefore, a frame of all residential telephone numbers would have a national coverage rate of 97 percent.<sup>9</sup> However, there are systematic differences between households with and without telephones, so that telephone coverage rates for some target populations such as the poor, young adults, and racial or ethnic minorities are often much lower and may not be adequate for some purposes. When those subgroups differ from others on key survey variables, coverage error in the survey estimates can result.

The coverage of a sampling frame can change over time and, therefore, it needs to be kept current and accurate. A list of business establishments that is two or three years old will not include any new businesses formed in the past two to three years but will include establishments that have gone out of business, and also may have incorrect contact information for those that have relocated. The availability and accuracy of contact information for sample units within the frame may affect the agency's choice of mode of data collection. In addition, the availability and accuracy of information for stratification is also an important consideration for choosing a frame.

Agencies need to consider the adequacy of potential sampling frames for their target population and should justify in Part B of their ICRs the frame they have chosen for their collection, its coverage, the mechanism for updating, how recently it has been updated, and what is done to assess or adjust for potential coverage errors.

### **29. Is a list of Internet subscribers available and acceptable for use as a sampling frame?**

There currently are no unduplicated lists of Internet users from which to draw a probability sample (see question #30). In other words, there is no sampling frame available for Internet users or those with Internet access. Furthermore, unlike telephone numbers, there is no set format for e-mail addresses that could be used to generate meaningful addresses to construct a sampling frame for those addresses. Currently, lists of e-mail addresses that are commercially available tend to have unknown coverage for most target populations or consist of persons who

---

<sup>9</sup> Blumberg, S., Cynamon, M, Lake, J., & Frankel, M. (2006). Recent trends in household telephone coverage in the United States. Paper presented at the Second International Conference on Telephone Survey Methodology, Miami, Florida.

## Sampling

have self-selected or volunteered to participate in studies; thus, these lists represent convenience samples (see question #35).

Recent estimates are that more than 50 percent of households have Internet access at home.<sup>10</sup> Despite the increasing rate of Internet access in the U.S., there remain systematic differences in socio-demographic characteristics between those who have access to the Internet at home and those who do not. Thus, there are significant coverage errors in any sampling frame composed only of those who have access to the Internet, which could lead to biased estimates when generalizing to the national population.<sup>11</sup>

In some cases, an agency may have e-mail addresses from its list frame for the target population that could be used for a census or sample survey. For example, administrative records of program participants may include a variety of means of contacting participants including their e-mail addresses. In this case, the coverage of the sampling frame is based on the characteristics of the frame the agency has and the specific target population; it does not use or require an Internet sampling frame.

The limitations for coverage and sampling of current lists of Internet users means that agencies should consider using any Internet sampling frame only for exploratory purposes, such as part of a pretest (if the main study will have a response option via the Internet), or in other instances where a convenience sample would be appropriate (see question #35). However, these limitations of the Internet for sampling do not imply that the Internet cannot be used as one mode of collecting survey data in a mixed-mode collection (see Modes of Collection), but rather that it is not suitable for drawing a probability sample that can be generalized to a target population. When used simply as a mode of collection, Internet surveys can provide a convenient means for respondents with Internet access to respond to a survey. Using the Internet simply as a mode of data collection, rather than as a sampling frame, is further addressed in question #43.

### **30. What is an appropriate sample design to ensure the sample drawn represents the population of interest?**

When a subset of the population is chosen randomly such that each unit has a known nonzero probability of selection, the sample is called a probability sample. For the purpose of making estimates with measurable sampling error that represent a population, the sample must be selected using probability methods (however, also see question #31 for a discussion of cut-off samples that are able to measure estimation error). These methods require that each case in the population has some known nonzero probability of being included in the sample. For example, an agency can randomly select a sample of 500 customers from a complete list of 10,000 customers by drawing their names out of a hat. This is commonly referred to as a simple random sample (SRS). In a simple random sample, every case in the population (i.e., each of the 10,000

---

11 These coverage problems do not necessarily apply to panels or other studies that use some other sampling frame (such as RDD) to recruit panel members and then provide them with Internet access, see question #34.

## Sampling

customers) has the same probability of being selected. Although SRS is rarely used in practice, there are other probability methods that may involve stratifying and/or clustering the sample or involve unequal probabilities of selection (e.g., a design that intentionally oversamples minorities or includes with certainty large businesses that account for a high volume) that are often used in the design of Federal surveys (see question #32). As long as there is a probability mechanism used in selecting the cases (and every unit is given a nonzero chance of selection), samples constructed in this manner can allow the agency to estimate the characteristics of the population from which they were drawn with a known level of sampling error. Non-probability samples do not have this property.

When selecting a sample design, agencies need to consider how the information will be used and what generalizations are intended, and agencies need to explain in their ICRs how they will generalize the results of a survey. Agencies must have a statistical basis for generalizing the results beyond the particular sample selected and need to consult a sampling statistician in designing their sample for their survey. Agencies conducting surveys that are intended to produce valid and reliable results that can be generalized to the universe of study, but are not based on probability methods, must clearly justify the statistical methodology (e.g., see question #31) in Part B of the ICR. Otherwise, OMB cannot approve the collection.<sup>12</sup>

### 31. Are probability samples always the best for surveys of establishments?

Although a probability sample drawn from the general population is the best way to represent a population of individuals or households, it can be more efficacious to employ other sampling methods, such as cut-off samples, when the target population is businesses or other highly skewed populations. *Cut-off samples* are selected by ordering the universe of potential respondents by some important characteristic and selecting the units with the greatest amount of the characteristic until some specified percentage of the universe is included in the sample. A rule of thumb often used for cut-off samples is that the sample should cover 80 percent of the population total. This method gives an achieved sample that provides the minimum mean square error estimate for the total value of the variable used to specify the coverage. For highly skewed populations, such as those found in some establishment surveys, this method also provides the smallest possible sample. For example, an agency conducting a study of capital expenditures of manufacturers may “cut off” when the survey has received data from establishments with more than 80 percent of the revenues of the universe. Since the cutoff rule is based generally on estimates from a prior time period, the success of the cutoff rule is dependent on the level of stability in the estimates over time. In conjunction with a ratio based on a recent census survey of the population, this method is efficient, reduces respondent burden, and works well for estimating totals. However, it can be misleading if detail is needed on the smaller units, because they are more likely to be excluded from the sample.

Cut-off or other model-based samples are used for some economic surveys conducted by Federal agencies. Designing and using these samples requires that agencies have considerable information about the target population and statistical expertise in order to achieve estimates with smaller errors and biases than would be possible with a probability sample of the same size.

---

<sup>12</sup> 5 C.F.R. § 1320.5(d)(2)(v).

## Sampling

When the goal of the collection is to make an estimate for a target population, agencies need to provide a statistical justification in the ICR for using cut-off or other model-based samples that demonstrates that estimates of precision can be calculated and that the error of the estimates and potential biases are acceptably small.

### **32. What information should agencies provide about their complex sample designs?**

Simple random samples (where all units and all equal-numbered combinations of units have the same probabilities of selection) are rare in practice for a number of reasons. Often they are not practical for many information collections because the sheer size of a universe listing and subsequent random sampling may be cost prohibitive. For example, it may be impractical for an agency wishing to survey and administer tests to high school students to select a simple random sample of students because there is not a comprehensive listing of all students in the United States, and even if there were, the costs of administering tests across the many sites where students were sampled could be prohibitive. Thus, other probability-based methods that employ multiple stages of selection, and/or stratification, and/or clustering are used to draw more practical samples that can be generalized with known degrees of sampling error. These samples are referred to as complex sample designs. To properly design and analyze data from these kinds of samples, agencies will need to consult with trained survey statisticians to accurately reflect the statistical effects of the design on the survey estimates.

Agencies need to consider tradeoffs between the cost and efficiency of different sample designs for their purpose, and should demonstrate why the particular design they have chosen is appropriate for their research questions and planned uses of the information. In their ICRs agencies should provide a complete description of the proposed sample design including a description of each stage of selection, a description and definition of the strata, including estimates of the size of the universe and the proposed sample by strata. Any clustering in the sample should also be described.

### **33. How large should a sample be for a statistical survey?**

There are a variety of factors that will affect the size of the probability sample that an agency will need for a particular collection in order to obtain the quality of information that is needed. The size of a sample needed for an information collection is affected by a number of different factors including:

- degree of precision required--the significance level and confidence levels required for the estimates, and the acceptable margin of error;
- variability of the overall population on the key variables being measured;
- approximate values of the statistics that will be estimated, especially for proportions;
- type of estimate;
- sample design, e.g., the stratification and clustering of the sample;
- whether overall national estimates are the primary focus or whether estimates will also be made for subgroups—each subgroup must have adequate sample sizes; and

## Sampling

- size of the overall population that estimates will describe.

Agencies will need to consult with trained survey statisticians to ensure that the sample size is adequate for its intended purposes. In Part B, agencies need to provide their precision requirements for the estimates they intend to produce from the survey to justify the sample size and the resulting respondent burden. Although overall national estimates are often the focus of Federal surveys, in many cases what is of greater analytic interest to the agency is either sub-national estimates or estimates for subgroups, e.g., different industries in an establishment survey or different income or education groups for a demographic survey. The precision requirements for estimates of these subgroups often drive the overall sample size that is needed, and therefore should be clearly documented in Part B of the ICR.

For illustrative purposes, Table 1 below provides a very general guide on sample sizes in the special case of a simple random sample and a survey variable that can be expressed as a percentage of the sample. The table provides 95 percent confidence intervals for different estimated percentages from the survey (shown in the first column) with different sample sizes of a simple random sample (shown on the second row across the columns). The size of the 95 percent confidence interval for each combination of survey estimates and sample sizes is shown in the body of the table. For example, if an item on a survey is selected by 50 percent of the respondents and the sample size is 400 respondents, the 95 percent confidence interval for this estimate would be 50 percent plus or minus 5.0 percent, or 45 percent to 55 percent. Values in this table are based on a simple random sample; many complex sample designs (see question #32), especially those using natural clusters, will typically require larger overall sample sizes to achieve the same level of precision.

**Table 1. Half-Width 95 percent Confidence Intervals for Estimated Values of Percentages as a Function of Sample Size (for simple random samples)**

Survey Estimate	Sample Size								
	50	100	200	300	400	500	700	1000	2000
50	14.1	10.0	7.1	5.8	5.0	4.5	3.8	3.2	2.2
60	13.9	9.8	7.0	5.7	4.9	4.4	3.7	3.1	2.2

### **34. Can pre-existing survey panels, such as Internet panels, be used to obtain representative samples?**

Recently, some private sector firms have developed pre-recruited panels of respondents who respond to surveys on the Internet. These pre-existing panels consist of lists of potential respondents that were recruited from a variety of sources and are maintained for additional survey use. For market research, these panels have become an easy, quick, and inexpensive way to assess consumer preferences. However, use of these panels for Federal surveys that are seeking to generalize to a target population can be problematic. Often, respondents in these panels are not recruited using probability methods (see question #30), and the panels are typically simply convenience samples of persons interested in taking part in surveys on the Internet (see question #35). Because the sample is not a probability sample where each member of the target population had a known nonzero chance of selection, the results cannot be generalized to any target population using traditional statistical criteria.

Some Internet panels have been recruited from a probability-based sampling frame such as a Random Digit Dialing (RDD) sample of telephone numbers, and panel members are given Internet access as part of their participation. In this case, the Internet simply serves as the mode of data collection, not the sampling frame (see question #43). The issues of coverage and quality of the frame apply to whatever frame was used (e.g., RDD), not the Internet. However, there are also concerns about potential self-selection of respondents and low response rates in these panels (see question #72). These panels work well when samples of persons interested in taking part in surveys are needed, and the objective is not to generalize to a specific target population (e.g., pilot studies).

Agencies planning to use a pre-existing panel or Internet-based sampling frame need to justify its appropriateness for the intended use of the data in the ICR (see question #72).

### **35. What are some common nonprobability samples, and why are they used?**

Under some circumstances, agencies may consider using nonprobability or purposive samples. It is not possible to calculate a probability of selection for these kinds of samples; therefore, their use is typically limited to research or exploratory purposes. Agencies need to understand the limitations of these samples and how those limitations will affect the use of data resulting from these samples. Agencies should justify in their ICRs the rationale for choosing a particular nonprobability sample and state how they will use the data. Agencies conducting surveys that were not designed to produce valid and reliable results that can be generalized to the universe of study must clearly explain how the collection is necessary to satisfy a statutory requirement or other substantial need. Otherwise, OMB cannot approve the collection.<sup>13</sup>

*Convenience samples* are mostly drawn from units of the population of interest that are close at hand or willing to participate. In convenience samples, there is little to no effort made to ensure that the samples are representative of the population. Consequently, they are relatively inexpensive, easy to plan, and take a minimal amount of time to draw. Though results cannot be

---

<sup>13</sup> 5 C.F.R. § 1320.5(d)(2)(v).

## Sampling

generalized to a target population, convenience samples can be useful for pilot research studies, testing of questionnaires, and some customer satisfaction surveys. Examples of convenience samples include shoppers at a mall, truck drivers visiting a weigh station, attendees at a conference, or visitors at a web site.

*Quota samples* are samples where units are selected nonrandomly based on a quota. The quota may be defined such that the final numbers of participating units with given characteristics have the same proportion as corresponding units have in the population. While the resulting quota sample may appear to be representative of the population for a set of characteristics, there is still an element of convenience—only those units that were the most ‘available’ become part of the sample. Also, there is no controlling for additional nonrepresentativeness that may exist in the sample for variables not used to define the quotas.

*Expert choice samples* are purposive samples in which an “expert” specifically chooses sample elements with certain characteristics to mimic ‘typical’ or ‘representative’ members of the population. In addition to the inability to determine the probability of selection associated with the sampled cases, this method can also produce entirely different types of samples depending on the opinions of the experts used.

*Snowball* samples are traditionally used to sample rare populations or populations that are hard to locate. A frame or sample for the rare population is created or identified by beginning with a set of units belonging to the target population, and asking this initial set to provide information on other members of this population. These units are then contacted for information that they may have on others in the population. This method of sampling is excellent for building a frame or creating a sample based on informal social networks and is often used for research or investigative purposes. For example, testing new questions on race with individuals of a particular background (e.g., Hmong) might be accomplished by finding some initial participants at a community center providing services to Hmong patrons and then asking them to refer others with the same background. However, there is no good way to evaluate the coverage of the frame constructed in this manner, and duplications in the frame are not always evident.

*Cut-off samples* are selected by ordering the universe of potential respondents by some important characteristic and selecting the units with the greatest amount of the characteristics until some specified percentage of the universe is included in the sample. Cut-off samples are used for some economic surveys conducted by Federal agencies. See question #31 for further information about justifying the use of cutoff samples.

## MODES OF DATA COLLECTION

The purpose of this section is to provide an overview of the different modes for survey data collection and some of the strengths and limitations of each mode. Because the choice of mode affects and is affected by many other aspects of the survey design, the choice of mode or modes should be carefully considered by agencies, and they should consult with trained survey methodologists in selecting the appropriate data collection mode or modes given the survey's purpose.

### 36. What are the different modes of survey data collection?

The mode of data collection includes the way in which respondents are contacted and how their responses are obtained. The most commonly used data collection modes are in-person (or face-to-face), telephone, mail, and web (including e-mail). In-person and telephone surveys are typically interviewer-administered, while mail and web surveys are self-administered, though technology is creating new hybrids, such as self-administered telephone surveys using touchtone data entry (TDE) or interactive voice response (IVR). Although mail, telephone, and in-person surveys were traditionally conducted with a paper and pencil questionnaire, many Federal surveys now use some form of computer-assisted interviewing (CAI). Each mode of administration may be computer assisted: Computer-Assisted Telephone Interviewing (CATI), Computer-Assisted Personal Interviewing (CAPI), and Computer-Assisted Self-Interviewing (CASI).

There are a number of advantages of CAI. It allows for more complex questionnaire designs because CAI instruments can use answers from several questions to direct the interview through different series of questions, skip particular questions, and change question wording based on previous responses. Data quality may also be improved by including range and consistency checks into the instrument to help ensure that the correct information is being entered by the respondent or the interviewer. Furthermore, for longitudinal surveys, information provided previously by the respondent may be available to reduce respondent burden and/or improve data quality. Finally, data are usually available quickly and with fewer data entry errors than data from paper instruments that require clerical check-in and keying.

There are also disadvantages associated with CAI. CAI instruments often take longer to develop and program than paper instruments and may be costly to pretest and revise. Agencies need to schedule lead time to draft specifications and author the instrument, as well as test and debug the instrument. The time and costs involved in these efforts can be considerable for complex instruments. In addition, interviewers will need training in using the instrument. Data quality may also be affected by the usability and design of the instrument, so agencies are encouraged to include usability testing as part of their pretesting (see question #22 and #49).

009186

### 37. What mode of data collection is appropriate for a given survey?

Each mode of data collection has inherent advantages and disadvantages, and there is no one best data collection mode for all situations. Selection of the mode requires consideration of many factors.

Specifically, agencies should consider the following statistical and nonstatistical issues when selecting a mode of collection:

#### Statistical issues in mode selection

- *Coverage*: Who in the target population may be missed in the sampling frame used for the mode? Because the mode of data collection is often intertwined with the selection or availability of a sampling frame, it has implications for how well the target population will be covered (see question #28). For example, a telephone survey would be inappropriate in terms of coverage for a study of poverty or means-tested programs where a significant portion of the target population does not have a phone or often has phone service interruptions due to nonpayment of bills.
- *Nonresponse bias*: How different are respondents expected to be from nonrespondents? Data collection modes can also affect response rates and nonresponse bias. For example, in-person surveys on average show the highest response rates, and for household surveys, telephone survey response rates have tended to be higher than mail surveys, although recent declines in telephone response rates may remove this advantage. There is also evidence that mail surveys yield higher response rates than web or e-mail surveys. Different data collection modes also have different implications for investigating potential nonresponse bias. For example, the interviewers for in-person surveys can record characteristics of the neighborhood for respondents and nonrespondents allowing a comparison of differences between these groups.
- *Measurement error*: What factors may affect the quality and completeness of responses? The choice of mode can affect the completeness of data that are collected and the extent to which there are other response effects such as social desirability bias, and response order effects. For example, the presence of an interviewer has been shown to affect reporting of sensitive behaviors such as illicit drug use.

#### Nonstatistical issues in mode selection

- *Timeliness*
- *Cost*

The following questions and answers on each mode provide some advantages and disadvantages for each mode of collection in terms of both statistical and nonstatistical issues. For clarity and simplicity, the information in the following questions and answers describes the advantages of each mode when it is the only one used. In practice, multiple modes are frequently used by agencies to overcome specific disadvantages associated with a single mode of collection (see question #38).

In considering which mode (or modes) of survey data collection is appropriate for their information collection, agencies will need to balance the advantages and disadvantages of each

## Modes of Data Collection

mode for the given purpose of the survey, the use of the data, the characteristics of the respondent population, and available resources. Agencies must justify their choice of mode of data collection in their ICRs and provide details of their data collection methods in Part B of their supporting statements.

### **38. When should agencies consider a mixed-mode approach?**

The two main reasons to consider using more than one mode of collection simultaneously are cost and response rates. The typical mixed mode approach is to use a less costly method for initial contact and a more costly mode for follow-up with nonrespondents, such as using a mail survey with telephone nonresponse follow-up or a telephone survey with an in-person nonresponse follow-up.

Using multiple modes often yields a higher response rate by offering alternative means to respond, so respondents may choose the mode that is most convenient for them; for example, some businesses may prefer to respond via the Internet rather than complete a paper questionnaire. A multimode survey can often be conducted at a lower cost than doing the entire survey using the more expensive mode. However, switching modes for a nonrandom subset of the sample (those who initially did not respond) may also introduce additional variability or bias due to mode effects. Using a mixed mode approach is best applied in situations where the trade-off in the reduction of nonresponse error compensates for any increase in response error related to mode effects. Agencies planning mixed mode collections should carefully design their survey questionnaires to minimize potential mode effects or they should consider conducting experimental studies to assess potential mode effects.

### **39. How does GPEA affect choice of modes for survey data collection?**

The Government Paperwork Elimination Act (GPEA) required agencies by October 21, 2003 to provide for the option of electronic reporting when practicable, and OMB has issued implementation guidance on this law.<sup>14</sup> Agencies are increasingly offering either computer-assisted interviewing, fax reporting, or options for filling out a survey on the web. Because many households do not have access to the Internet or computers, electronic reporting options for many household survey information collections will likely lead to more multi-mode surveys rather than replacing telephone or mail surveys completely with electronic collections; however, many business establishments may prefer an electronic option.

An electronic option should be considered for every data collection, and if electronic reporting is not offered for a survey, agencies should explain why it is not practicable for them to offer an electronic response option.

---

<sup>14</sup> <http://www.whitehouse.gov/omb/fedreg/gpea2.html>.

### **40. What are the advantages and disadvantages of mail surveys?**

Mail surveys have been particularly useful for mandatory household and establishment surveys. They are most appropriate when there is a good address list for a sampling frame. For example, both the Census Bureau and the Bureau of Labor Statistics have list frames of business establishments (the Census Bureau also has the master address file for households). Other Federal agencies may have administrative records of their program participants that serve as their sampling frames. Mail surveys have relatively low cost, and self-administration of the questionnaire improves response to sensitive questions, minimizing social desirability and interviewer biases. There is also evidence that question order effects are reduced in mail survey questionnaires. In addition, visual aids can be used with this mode.

There are a number of disadvantages of mail surveys. Mail surveys frequently can suffer from low response rates, especially for household surveys; therefore, they are often used in mixed mode surveys (see question #38) with follow-ups done via telephone or in-person. Furthermore, there may be more nonresponse bias in mail surveys because the respondent can look over the entire questionnaire before deciding whether to respond or not, increasing the likelihood that the decision to respond is based on his or her values on the key variables of the survey. Mail surveys require accurate mailing addresses, a longer data collection phase than other modes (usually eight weeks or more are required from the initial mailing), and greater literacy skills on the part of respondents. Household mail surveys should generally have short, less complex questions; however, more complex questions are frequently used in mail surveys of business establishments. It is important that mail questionnaires have clear instructions, easy to follow layouts, and clear question wording because there is no interviewer present to clarify the agency's intent. The items on mail survey questionnaires are more likely to be incomplete than those on surveys that employ other modes (higher item nonresponse). Mail surveys may be completed by someone other than the sampled person, which can be problematic for household surveys that seek to randomly select one adult from among the household members. In mail surveys of business establishments, gatekeepers can prevent respondents from receiving questionnaires. For example, a secretary or administrative assistant may open all the mail for an office and may routinely throw away voluntary surveys rather than passing them on to the appropriate respondent.

### **41. What are the advantages and disadvantages of telephone interviewing?**

Telephone interviewing can provide lower costs and shorter data collection times compared to in-person interviews. Telephone coverage rates in the United States have been over 90 percent for several decades, and random-digit dialing (RDD) surveys have become very popular for a wide range of social, political, and marketing research. RDD telephone surveys have been very useful for screening large numbers of households to find rare populations. Often telephone surveys are conducted using computer assisted telephone interviewing (CATI) in large, centralized facilities that include careful supervision and monitoring of interviewers. Thus, in CATI calling centers, interviewer variance is likely to be less than for in-person interviews. Social desirability concerns may also be less than is the case for in-person surveys. Some

## Modes of Data Collection

technology is also being used to reduce further the role of the interviewer and allow self-administered telephone surveys using touchtone data entry (TDE) or interactive voice response (IVR). For example, short, simple surveys that require numeric responses that can be entered on the telephone key pad may be done through touch-tone data entry (TDE), and may not require an interviewer at all. TDE has worked well with ongoing, simple establishment surveys when respondents have been trained to answer this way.

There are also disadvantages to telephone interviewing. Although telephone coverage in the United States is very high, some groups, such as those with low incomes, are more likely to be excluded from the sampling frame, thereby introducing bias. Cell phones currently are not covered by existing frames, and there are some legal restrictions on calling these phones (i.e., automated dialers cannot be used). Current estimates of households with only cell phones are still small; for example, a 2004 supplement to the Current Population Survey showed that approximately 6 percent of households had cell phones but no landline phone.<sup>15</sup> However, the number of households with only mobile phones is growing and may present further coverage problems for telephone surveys. Increasing use of technologies including answering machines, voice-mail, and caller ID is making it harder to reach households, and RDD telephone survey response rates have been decreasing more rapidly than those of other modes in recent years (see question #70). RDD sampling frames have no information other than the phone number, so vendors are often used to match phone numbers to addresses and other area-level information to make it possible to mail advance letters, do in-person follow-up, or conduct non-response bias analyses (see questions #38, #70, and #71). However, match rates for phone numbers to addresses are frequently 50 percent or less when using a single vendor.

Conducting an interview over the telephone also imposes more constraints on the length of the questionnaire and complexity of the questions compared to some other modes. For example, the design of telephone surveys usually includes short questions, with a minimum number of response categories, and a relatively short interview length. Some response effects, such as question order and response order, are more likely to occur in telephone surveys than self-administered surveys. For example, respondents are more likely to select the last response option (recency effect) in a telephone survey than a mail survey. There is no ability to use a visual communication medium in telephone surveys (unless materials are mailed in advance), and it is difficult to search records or look up information during a telephone interview. In business establishments and some households, gatekeepers can prevent the interviewer from reaching the desired respondent. For example, a secretary or administrative assistant may screen all calls and not allow access to the appropriate respondent. Similarly, a spouse or parent may prevent direct access to the sample person.

Recent changes in the law related to the portability of telephone numbers are likely to have an increasing impact on telephone surveys and make it more difficult and expensive to conduct them in the short term. The longer term implications are not yet clear.

### 42. What are the advantages and disadvantages of in-person interviewing?

Area probability sampling and in-person interviewing provide the best coverage for household surveys, and are often considered the gold standard. Given adequate time and numbers of contact attempts, in-person interviews typically have the highest response rates. In-person interviews also allow the use of visual tools such as flash cards and calendars, and permit longer, more complex interviews to take place. In addition, the interviewer can make observations about the neighborhood of the household, or in establishment surveys, facility characteristics can be documented.

The primary disadvantage of in-person interviews is the high cost associated with sending an interviewer to households or business establishments to collect the data. Also, the data collection phase of the survey may take longer (or require a larger interviewing force) compared to other modes of collection. In-person interviewers may also face barriers in completing their assignments because some sampled addresses may be less accessible to interviewers, e.g., high rise buildings and gated communities, or be in high crime areas with greater risk to interviewer safety. Because in-person interviewers typically operate alone with much less supervision and control than is possible in more centralized telephone facilities, there may be greater interviewer variance in in-person surveys, and there are also greater opportunities for interviewer falsification of some survey items or entire interviews. Survey organizations typically conduct some reinterviews or independent verification of interviewers' work to detect and minimize falsification.

In-person interviews may not be the best mode of data collection when respondents in a business must refer to detailed records that take time to find, or when there are concerns about potential interviewer or social desirability bias. However, technology has been used to address concerns about social desirability with surveys on sensitive topics, such as illicit drug use. Portions of the in-person interview can be completed privately by respondents using an audio computer assisted self-interview (ACASI) instrument that "reads" the question to the respondent through headphones to increase privacy as well as reduce bias due to literacy or English proficiency problems. Respondents can listen to questions and look at the instrument on a computer screen at the same time and respond in private. Research has demonstrated that respondents report more incidents of drug use, sexual activities, and other sensitive behaviors using this mode of collection, which is presumed to reflect more accurate reporting.<sup>16</sup>

### 43. What are the advantages and disadvantages of using Internet surveys?

To comply with the Government Paperwork Elimination Act (GPEA), agencies are increasingly offering the opportunity to respond to surveys, especially surveys of business establishments, via electronic means, including the Internet (see question #39). When e-mail addresses are

"Automated self-interviewing and the survey measurement of sensitive behaviors," in Couper, M., Baker, R., Bethlehem, J., Clark, C., Martin, J., Nicholls II, W., and O'Reilly, J. (eds.), *Computer assisted survey information collection*, pp. 455-473, New York: Wiley.

## Modes of Data Collection

available, using the Internet can be a very inexpensive way to contact and remind respondents about completing the survey.

Similar to mail surveys, simple Internet surveys can be low cost, but data collection can be faster since reminders and responses can be sent and received without delay. The Internet offers the potential for presenting visual aids or even multi-media presentations of information to respondents, and self-administration of the questionnaire increases response to sensitive questions, while minimizing social desirability and interviewer biases. Like other modes that use computer administration, data processing time and cost may be reduced compared to paper and pencil surveys because data can be uploaded or captured directly into databases without additional keying. Data quality may also be higher because the instrument can contain built-in edits and prompts. However, more complex instruments may be costly to pretest and revise.

There are a number of disadvantages to Internet surveys. As noted in question #29, a key problem is that there is no sampling frame of persons or establishments with Internet access or means of randomly generating e-mail addresses to obtain a random sample of users. Low household coverage rates for Internet access as well as systematic differences between households with access and those without access means that using the Internet as the sole mode for population surveys is problematic. If an agency has a high quality sampling frame for its target population and knows the members of the target population have Internet access, then the agency could consider an Internet-only collection.

There are other disadvantages or limitations to Internet surveys. Mail surveys (on paper) typically achieve higher response rates than web surveys or e-mail surveys. Respondents need to be "computer literate" and have access to the Internet. Respondents may also have a variety of hardware and software configurations that may cause differences in how they see and interact with the survey. Therefore, usability testing should be an important part of the agency's development and testing of the questionnaire. Respondents may have concerns about confidentiality and, therefore, be reluctant to provide some information over the Internet. Finally, there is little control or knowledge about whether the selected respondent is the actual survey respondent.

#### **44. How does the data collection mode affect questionnaire design?**

Each mode of data collection has implications for different issues in questionnaire design, including skip patterns, response options, and question wording. Studies that use multiple modes of collection also need to ensure that the questionnaire can be effectively administered in each mode and any response effects due to the mode of administration are minimized.

For example, skip patterns can be programmed easily into a computer assisted interview (CAI) instrument, but only limited skip patterns should be used in paper instruments because errors are more likely to occur when respondents or interviewers are asked to follow skip patterns. Self-administered interviews can have more response options than interviewer-administered interviews (especially telephone surveys) because the respondent can easily go back over the list before selecting a response and can more easily change a response if an inaccurate response has

## Modes of Data Collection

been entered. Also, visual aids cannot be used to help the respondent understand the question or the response options in a telephone interview. Complex and long sentences should generally be avoided in survey questions, but they are particularly difficult to understand over the telephone.

It is important that agencies test their survey questionnaires in all modes that they plan to use to collect information for the full-scale survey (see section on Questionnaire Design). Usability testing of computer survey instruments should also be included as part of questionnaire pretesting to identify problems either interviewers or respondents may have with the instrument (see question #48).

## QUESTIONNAIRE DESIGN AND DEVELOPMENT

The focus of this section is to provide a brief overview of the methods for developing and testing questionnaire items and clarify the requirements for conducting these activities and obtaining OMB approval under the PRA. Agencies should consult with survey methodologists and cognitive psychologists trained in these methods to help design and test questionnaires prior to survey administration.

### **45. What should agencies do when developing new questionnaires or questionnaire items?**

Agencies need to use questions that will elicit the appropriate information from respondents to fill the agencies' data needs. Agencies should determine the different topics, estimated survey length, and mode of survey administration prior to drafting the actual survey questions. Questionnaire designers should inspect other instruments that have collected data on similar topics and must also adhere to OMB classifications and standards for particular data elements, such as data on race and ethnicity, and industry and occupation (see question #47, #52, and #55). If new questions are needed, agencies should use techniques to test the questions that will ensure that the questions they develop provide the information they need and have adequate statistical reliability (see question #48).

Agencies should clearly document in their ICRs the source for questions that were taken from other surveys and identify new questions the agency has developed and tested on its own. For ongoing surveys, any changes to the questionnaire should be clearly noted and described. The plan for testing or the results from the testing should also be described in Part B of the ICR.

### **46. Why should agencies consider using questions previously used by other agencies or researchers?**

There are many surveys conducted by government agencies or private sector entities that may include questions that will effectively capture some of the data needed by an agency. Questions used in other major surveys are more likely to have known characteristics of reliability and validity, allowing the agency to take advantage of research data collected and analyzed by other agencies. However, the questions may have been asked in a different context or be more detailed than needed. Agencies will need to consider these factors when looking at other agencies' questions.

Agencies with data needs outside their particular subject matter specialty should consult with the statistical agencies that are most likely to collect the type of data needed as well as with agencies with expertise in the area. For example, if a health survey needs employment data, the agency should collaborate with the Bureau of Labor Statistics or the Census Bureau, or if an education survey needs disability questions, the agency should consult with the National Center for Health Statistics, the Census Bureau, and the Social Security Administration. Many Federal agencies currently post survey questionnaires on their web sites, which facilitates the sharing of questions.

009194

## Questionnaire Design

Interagency groups are occasionally formed to develop standardized questions on subjects that cut across many agencies. For example, an Interagency Committee on Measures of Educational Attainment has reviewed and recommended a set of standard categories for educational attainment.<sup>17</sup> More recently, an interagency committee on the American Community Survey has coordinated across agencies to share needs for information and to test alternative questions.<sup>18</sup>

On the other hand, asking previously used questions does not mean that the survey requires no pretesting. There is substantial evidence that the context of the question affects its performance; hence, pretesting is always needed.

### **47. When is it acceptable to duplicate questions used on other surveys?**

In designing their information collections, agencies are expected to review existing studies to determine whether the information the agency needs exists elsewhere. Agencies are to describe the existing information in their ICRs and show specifically why the information already available cannot be used or modified for use. If the existing information will not fulfill the agency's needs, the agency should take advantage of the developmental work from existing collections to inform the design of its information collection.

Using questions from well-established national data collections such as the Current Population Survey, the Decennial Census, the Medical Expenditure Panel Survey, the National Crime Victimization Survey, or the National Health Interview Survey helps assure comparability of results. Reasons for using the same questions include benchmarking the responses of one survey to another, or obtaining comparable information from a different population or from the same population at a different time period. In their ICRs, agencies should clearly document the source for questions that were taken from other surveys.

### **48. What techniques can be used to develop new questions?<sup>19</sup>**

Developing effective new questions is often more difficult than most people anticipate, especially if the questionnaire designer is not experienced with survey measurement. Agencies immersed in a topic are often surprised how little respondents know and care about the topic. Agencies may assume knowledge and points of view that respondents may not have. For example, respondents need to know what the intention of the question is so that they can answer it appropriately, and they may have difficulty understanding questions that use technical or unfamiliar terminology. Questions need to be developed so that respondents can answer the question and provide useful data for the agency. The following survey research methods can be used to develop and pretest new survey questions:

---

<sup>18</sup> See *Statistical Programs of the U.S. Government FY 2005* at [www.whitehouse.gov/omb](http://www.whitehouse.gov/omb); Go to Statistical Programs and Standards.

<sup>19</sup> This section is based on *Census Bureau Standards: Pretesting Questionnaires and Related Materials for Surveys and Censuses*, U.S Bureau of the Census, July 25, 2003.

## Questionnaire Design

### *Focus Groups*

Focus groups are often a useful first step in questionnaire development. Typically, a moderator will guide participants in a focus group discussion on the topics related to the subject area of the survey. Participants are encouraged to talk using their own terms and experiences and react to what others have said. In fact, it is often the interaction among participants that provides the most useful insights. Agencies can learn the language that respondents use when discussing the topic and integrate more common terms and phrases into the design of survey questions.

Focus groups often serve as a way to test the ease of completing a self-administered questionnaire. After completing the questionnaire individually, the group discusses the experience with overall direction from the moderator. This provides information about the appearance and formatting of the questionnaire in addition to content problems.

Finally, focus groups can be very effective in the ultimate design of surveys that ask about sensitive topics. Asking sensitive questions in a survey environment can be especially awkward, and discussions among focus group participants can provide useful information on appropriate wording, terms, and phrases that respondents will not find offensive.

### *Pre-Survey Design Visits for Establishment Surveys*

Visiting a respondent's place of business to review plans for a new survey or major changes in an existing survey can be very useful in improving the final design of a questionnaire. These visits generally involve discussions with a potential respondent on the following topics:

- Does the respondent keep the data that the agency wants?
- How closely does the establishment's record keeping correspond to the required survey data?
- How compatible are these record keeping systems with the agency's collection instruments?
- How difficult will it be to provide the data in the time period needed by the agency?

These visits can help in the preliminary stages of survey development to ensure that the data collectors will design a survey that respondents can complete and that will obtain useful and usable information that corresponds to the agency's data needs.

### *Cognitive Interviews*

The goal of cognitive interviews is to gain insight into how respondents think about and interpret the survey questions. In classical cognitive interviews, this is done by asking respondents to think aloud as they answer questions (concurrent think aloud) and to identify anything that confuses them. Respondents are often asked to paraphrase a question so that researchers learn whether a respondent understands the question and interprets it as intended. If the same paraphrased wording is used by several respondents, it might suggest a better wording of the question. Cognitive interviews can also include in-depth retrospective debriefings during which the interviewer asks a series of probes after the completion of the survey.

009196

A key benefit of using cognitive interview methods is that researchers can quickly diagnose problems, revise question wording to solve problems and conduct additional interviews to see if the new questions are less problematic. The most effective process is to plan iterative rounds, first identifying problems, then making changes to items, and then trying out those changes in successive rounds of cognitive interviews.

### **49. What role does pretesting play in questionnaire development?**

When an agency has developed new survey questions or is pulling questions from different sources into a new questionnaire, it is important to test how respondents will react to the individual items and the questionnaire as a whole, so a variety of methods are often used to test the questionnaire. In a pilot test, the survey (or some portion of the survey) is administered to a sample of respondents similar to those in the main study using procedures planned for the full survey. Although this is often the only type of testing done prior to data collection, this type of pretest is not beneficial for question development unless there is a respondent and/or interviewer debriefing as part of the process or the data from the pretest are reviewed for questions with high item nonresponse.

Pretests may aid in question development by using one or more of the following methods:

- respondent debriefing
- interviewer debriefing
- split panel designs
- behavior coding
- data reviews

#### *Respondent Debriefing*

Respondent debriefing typically consists of follow-up questions at the end of an interview that are designed to obtain quantitative information about respondents' interpretations of survey questions. These questions help researchers determine whether concepts and questions were understood by respondents in the same way that the survey designers intended. In an interviewer-administered survey, the debriefing questions may be followed by a discussion between respondent and interviewer, to further probe the respondent's reaction to and comprehension of the questions in the survey instrument.

#### *Interviewer Debriefing*

Evaluating pilot tests of demographic surveys conducted by personal interview has often centered on structured debriefing of field interviewers at the end of the test. Interviewers are trained prior to the survey and are asked to carefully record problems they encounter during the interview. Typically, interviewers know in advance that they will be participating in debriefing discussions at the end of the pilot test.

Although some valuable insights can be obtained from interviewers, it is important to recognize that they may not always be accurate reporters of certain types of questionnaire problems or may be conveying their opinions more than respondents' problems. For example, when interviewers report a problem, researchers cannot assess whether it was troublesome for one respondent or for

## Questionnaire Design

many, or whether the problem reflects the interviewer's own preference or understanding of the question rather than respondent confusion. In addition, experienced interviewers sometimes change the wording of problem questions as a matter of course to make them work, and may not even realize they have done so.

### *Split Panel Designs*

In a split panel field test, respondents are randomly assigned into different groups to receive different versions of the questions. This is a very useful method for comparing two (or more) different versions of the same question or testing question-order effects because the responses can be compared between the different panels to examine the potential impact of the change on survey estimates.

### *Behavior Coding*

Behavior coding focuses on the overt behavior of interviewers and respondents as they interact during the survey interview. Although behavior coding can be done by an evaluator in real time during the interaction between the interviewer and respondent, frequently the interaction is recorded and then coded by one or more evaluators. There are a variety of coding systems that reflect errors made by the interviewer and difficulties the respondent has with the questions. Because it is a quantitative method, a relatively large number of interviews need to be coded and statistical summaries created to identify problematic questions.

### *Data Review*

A data review of the pilot test results is conducted to identify questions that have higher than expected or desired levels of non-response (either don't know or refusals). High item nonresponse in a pilot test could indicate poor question wording, generally unavailable data, or non-applicability of the question to a significant subset of respondents. Because data review involves examination of quantitative results from the pilot test, larger numbers of respondents may be needed with more complex instruments to ensure that an adequate number of respondents are asked each question.

## **50. What do agencies need to do to obtain clearance for pretesting activities?**

Pretesting activities, including cognitive interviews and focus groups, must comply with requirements of the PRA, which are detailed in 5 C.F.R. § 1320. Although agencies do not need OMB approval to test draft questionnaires when they are administered to fewer than 10 persons, agencies must obtain approval to conduct iterative testing of the same questions even with minor modifications, on a total of 10 or more persons.<sup>20</sup> Thus, it is not acceptable for an agency to test a questionnaire on seven individuals, make minor format and grammar changes, and test those revised questions on another seven people without OMB approval. Focus groups are also subject to the PRA (see question #7). Because most meaningful pretesting, especially iterative rounds of testing on different versions of questions, will require more than nine persons, agencies will need to seek clearance to conduct their pretesting.

---

<sup>20</sup> Note, however, that if fewer than 10 persons or entities make up a substantial proportion of the entire population, e.g., car manufacturers, the collection may also be subject to the PRA.

Agencies that plan to do pretesting activities, including cognitive interviews and focus groups, can obtain OMB approval in one of two ways. First, the pretesting activities can be described and submitted as part of the ICR for the final survey. When this approach is used, OMB approval usually includes a term of clearance that the agency must report to OMB the results of the pretesting and any changes to the survey instrument that were made based on the findings. Alternatively, the agency can submit a separate ICR just for the pretesting activities, and later submit an ICR for the final survey that reflects the results of the pretest. Agencies usually do the latter when the pretest involves a design that is complex, includes large numbers of respondents, or has a relatively high response burden. Agencies also should submit the pretest separately from the full-scale collection when little has been decided about the design of the final survey when the pretesting is planned.

### 51. What is a generic clearance for pretesting activities?

Agencies that regularly do pretesting and development work for multiple surveys have found it beneficial to obtain a generic clearance specifically for these kinds of studies. Once the overall generic clearance is obtained on the pretesting activities and methods that will be used (e.g., cognitive interviews, focus groups, respondent debriefings, etc.) through the normal clearance process, agencies can submit abbreviated collection requests on the specific questions to be tested and obtain expedited OMB review (often within 10 working days) of the specific study, which can greatly facilitate ongoing and iterative rounds of testing. For example, cognitive laboratories at the Bureau of Labor Statistics, the Bureau of the Census, and the National Center for Health Statistics have these clearances.

The primary justification for having a generic clearance for pretesting is that agencies know in advance that methodological research is needed, but they cannot anticipate the specific kinds of tests or methods that will be used. Generic clearances provide a mechanism for agencies to quickly test and implement new survey questions that often arise to address policy issues or emerging programmatic needs. The generic clearance should only be used in a well-defined and structured context, such as methodological testing. It is not appropriate for an agency to use a generic clearance as a means to bypass the requirements of the PRA to conduct a variety of information collections. Agencies are encouraged to consult with their OMB desk officers before submitting a generic clearance to determine whether their plans are appropriate for this type of clearance (see also question #8).

## STATISTICAL STANDARDS

The purpose of this section is to provide an introduction to the statistical standards that OMB has issued and that agencies must utilize if the standards apply to the information the agency is collecting. In section A.7 of the supporting statement, agencies certify in their ICRs that they are not using a statistical classification not approved by OMB, or they must request a waiver of the applicable OMB standard with a justification for not using the approved classification.

### 52. What are OMB statistical classifications, definitions, and data sources?

Under the PRA, OMB is charged with developing and overseeing the implementation of government-wide policies, principles, standards, and guidelines concerning statistical collection procedures and methods. Statistical classifications, definitions, and data sources encourage uniformity in data collection, analysis, and dissemination. They are designed and managed to support the full range of research and analytical objectives in a specific subject matter area rather than the needs of a specific program or a specific study. The general criteria OMB has for evaluating the standards have been relevancy, accuracy, currency, efficiency, minimization of burden, and stability ("continuity" and/or "comparability"). There is a clear trade-off between currency and stability; typically, revisions to these standards have been no more frequent than once every five years or longer. However, annual updates of statistical areas are issued based on Census Bureau population estimates.

OMB currently has a number of different statistical classifications for demographic, economic, and geographic data, including data on race and ethnicity, industries, occupations, and statistical areas described in more detail in the following questions. In addition, there are some standard definitions of economic concepts for statistical purposes, and standard sources for Federal data for some demographic and economic statistics.

### 53. What statistical classifications have been adopted by OMB?

Standard reporting categories are necessary to ensure comparability across Federal Government statistical data. The statistical classifications are issued pursuant to OMB's authority to promulgate standards and guidelines for Federal statistics. These standards apply to all data collected for statistical use by Federal agencies and their contractors. Some standards also apply to data collected for administrative use.

There are currently six statistical classifications adopted by OMB:

- Federal Administrative Regions
- Metropolitan and Micropolitan Statistical Areas
- North American Industry Classification System (formerly the Standard Industrial Classification of Establishments)
- Standard Occupational Classification
- Data on Race and Ethnicity
- Fields of Science and Engineering (R&D)

## Statistical Standards

Classifications that have been updated after 1980 are available at [www.whitehouse.gov/omb](http://www.whitehouse.gov/omb) (Go to Statistical Programs and Standards). Tables 5 and 6 provide a brief summary of the statistical and administrative uses of these standards, and conditions under which there may be exceptions to their use. Agencies must justify in their ICRs the use of statistical classifications that differ from those approved by OMB.<sup>21</sup>

**Table 5. Brief Summary of Statistical Classifications' Required Uses and Exceptions**

Classification	Required for Statistical Use	Required for Administrative Use	Exceptions	Last Updated <sup>6</sup>
Federal Administrative Regions	Recommended	Yes	1,2	1978
Metropolitan and Micropolitan areas	Yes	No	3,2	December 27, 2000 <sup>22</sup>
North American Industry Classification System	Yes	No	3	April 20, 2000 <sup>23</sup>
Standard Occupational Classification	Yes	No	3	September 30, 1999 <sup>24</sup>
Data on Race and Ethnicity	Yes	Yes, 4		October 30, 1997 <sup>25</sup>
Fields of Science and Engineering	Yes	No	5	1978

**Notes:**

1. Exceptions have been recognized for regions defined and widely used prior to the standard, such as Census regions.
2. There are other stable, widely-used geographic classifications such as Census regions and districts, USPS ZIP code areas, and political (state and county) boundaries.
3. A notice and comment process consistent with the Administrative Procedure Act is usually required if an agency proposes using or modifying the statistical definitions for program administrative purposes.
4. Required for administrative reporting and record keeping.
5. Compatible classifications of educational curricula are permitted.
6. Standards that have not been updated were last issued in the U.S. Department of Commerce *Statistical Policy Handbook* (1978), when the statistical policy authority was the responsibility of that Department (1977-1981).

<sup>21</sup> 5 C.F.R. § 1320.5(d)(2)(vi).

<sup>22</sup> *Federal Register* 65:82228-82238.

<sup>23</sup> *Federal Register* 65:21242-21282.

<sup>24</sup> *Federal Register* 64:53135-53163.

<sup>25</sup> *Federal Register* 62:58781-58790.

**54. What standard definitions and data sources have been adopted by OMB?**

Statistical definitions are provided for two economic concepts:

- Poverty (used to monitor changes in the number of persons and families in poverty and their characteristics over time), and
- Payroll Periods for Employment Reports (used to standardize reference periods).

Standard sources for Federal data are provided for some economic and demographic statistics. There are currently standard statistical data sources for:

- Labor Force and Unemployment Data, (Bureau of Labor Statistics), and
- Population Data (the Decennial Censuses and the Census Bureau’s intercensal estimates)

**Table 6. Brief Summary of Standard Definitions and Data Sources’ Required Uses and Exceptions.**

Standard	Required for Statistical Use	Required for Administrative Use	Last Updated <sup>1</sup>
Definition of Poverty	Yes	No	1978 <sup>2</sup>
Definition of Payroll Periods for Employment Reports	Yes	No	1978
Labor Force and Unemployment Data	Yes	No	1978
Population Data	Yes	Yes <sup>3</sup>	1978

Notes:

1. Standards that have not been updated were last issued in the U.S. Department of Commerce *Statistical Policy Handbook* (1978), when the statistical policy authority was the responsibility of that Department (1977-1981).
2. Although the official definition has not been changed, several experimental measures are being developed and tracked over time.
3. This standard has been incorporated into several statutes.

**55. What are the requirements for collecting individual data on race and ethnicity?**

The most commonly used OMB statistical classification for population-based surveys concerns data on race and ethnicity. The OMB standards provide *how* agencies must collect data on race and ethnicity if they are collecting this information—the standards do not require agencies to gather data on race and ethnicity. Most, if not all, of the population-based surveys or censuses have now implemented the 1997 standards for data on race and ethnicity.

The OMB standards for data on race and ethnicity provide a minimum set of two categories for data on ethnicity:

- Hispanic or Latino and
- Not Hispanic or Latino,

## Statistical Standards

and five categories for data on race collected from individuals:

- American Indian or Alaska Native,
- Asian,
- Black or African American,
- Native Hawaiian or Other Pacific Islander, and
- White.

Note: “other race” is not a response category.

Respondents are to be offered the option of selecting one or more racial designations. Based on research findings, the recommended forms for the instruction are *Mark one or more*, *Select one or more*, or *Choose one or more* (not check all that apply).

The mode of administration should be taken into account when designing the exact wording of the question. For example, face-to-face surveys permit the use of flashcards with a listing of the racial categories, whereas a telephone administration must rely on the interviewer reading each of the categories. Examples of questions for different modes are provided in the *Provisional Guidance on the Implementation of the 1997 Standards for Federal Data on Race and Ethnicity*.<sup>26</sup>

The standards permit the collection of greater detail; however, the additional categories must be organized in such a way that they can be aggregated into these minimum categories for data on race and ethnicity.

Self-reporting or self-identification using separate questions (the two-question format) for race and ethnicity is the preferred method for collecting the data; note that the question on ethnicity should precede the question on race.

If self-reporting is not practicable or feasible, for example, when identification is done by funeral personnel, observer identification may be used. The use of the two-question format is strongly encouraged even when observer identification is used.

All information collections that include data on race and ethnicity were to be in compliance with the 1997 standards by no later than January 1, 2003. If an agency believes the standard categories are inappropriate, the agency must request a specific variance from OMB. Further information is available on the OMB web site, [www.whitehouse.gov/omb/](http://www.whitehouse.gov/omb/) under “Statistical Programs and Standards.”

## INFORMING RESPONDENTS ABOUT THEIR PARTICIPATION AND THE CONFIDENTIALITY OF THEIR DATA

The purpose of this section is to provide a brief overview of the requirements for informing respondents about their participation in Federal surveys. One piece of information that can be very important to respondents is whether the Federal agency will keep their information confidential and use it only for statistical purposes. The statutory authority for such promises is also covered, as well as the requirements for documenting this authority in agency ICRs.

### 56. What should respondents be told about their participation in an information collection?

The Paperwork Reduction Act (PRA) requires that agencies provide certain information to respondents to help them understand why they are being asked to respond, how they are supposed to respond, and the effects the collection of information may have on them.<sup>27</sup> Within an agency, the Chief Information Officer or other designated official is responsible for ensuring that each collection of information informs and provides reasonable notice to respondents about the purpose of the study. Assuming that the basic information called for is provided, an agency can adjust the amount of detail provided depending on the scope, importance, and nature of the collection of information. For example, a brief telephone survey may call for less detail than a highly burdensome or personally intrusive written questionnaire. The following basic information must be provided to respondents:<sup>28</sup>

- The reasons the information is to be collected;<sup>29</sup>
- The way the information will be used to further agency purposes and serve agency needs;<sup>30</sup>
- An estimate of the average burden of the collection and whom to contact about the estimate;<sup>31</sup>
- Whether responses to the collection of information are voluntary or mandatory, or required to obtain a benefit;<sup>32</sup>
- The nature and extent of confidentiality to be provided, if any;<sup>33</sup>
- The duration of respondents' expected involvement (e.g., if this is a longitudinal survey, they should be informed that they will be contacted in the future); and
- If the agency is collecting "sensitive information," respondents should be informed about what type(s) of sensitive information will be requested.

---

27 44 U.S.C. § 3506(c)(1)(B)(iii).

28 5 C.F.R. § 1320.8(b)(3).

29 44 U.S.C. § 3506(c)(1)(B)(iii)(I); 5 C.F.R. § 1320.8(b)(3)(i).

30 44 U.S.C. § 3506(c)(1)(B)(iii)(II); 5 C.F.R. § 1320.8(b)(3)(ii).

31 44 U.S.C. § 3506(c)(1)(B)(iii)(III); 5 C.F.R. § 1320.8(b)(3)(iii).

32 44 U.S.C. § 3506(c)(1)(B)(iii)(IV); 5 C.F.R. § 1320.8(b)(3)(iv).

33 5 C.F.R. § 1320.8(b)(3)(v). This provision was included in the regulation as a necessary component of telling the respondent of "the way such information is to be used" (44 U.S.C. § 3506(c)(1)(B)(iii)(II); see 5 C.F.R. § 1320.8(b)(3)(ii)).

## Confidentiality

Agencies that conduct research studies involving human subjects may also be required by Institutional Review Boards (IRBs) to provide additional information such as informed consent statements that are signed by the respondent. Typically, statistical surveys do not require formal consent forms.

### **57. What is a pledge of confidentiality and how should a pledge of confidentiality be made to respondents?**

In the context of collecting data for statistical and research purposes,<sup>34</sup> an agency pledge of confidentiality "refers broadly to a quality or condition accorded to information as an obligation not to transmit that information to an unauthorized party."<sup>35</sup> Most important is that the identity of respondents not be revealed, either deliberately or inadvertently, as part of data processing and dissemination. Respondents are more likely to provide information (and in the case of "sensitive topics," the correct information) when they know the data that they provide will be kept confidential by the collecting agency. However, confidentiality is only meaningful when the agency is able to deliver the promised protection to the respondent, that is, "the data gatherer must have the will, technical ability, and moral and legal authority to protect the data."<sup>36</sup>

Respondents may be given information on confidentiality in a number of different formats, depending on the mode of data collection. For a mail survey, the information is provided either in a cover letter or in a statement printed on the questionnaire. In telephone surveys, interviewers typically include a few summary sentences to potential respondents, and may refer to an advance letter that was sent. For surveys conducted by in-person interviewers, an introductory letter is usually mailed in advance or presented to the respondent. Also, an agency might provide its interviewers with a fact sheet containing answers to "frequently asked questions" or a reference to a web site or toll free number. In short, the mode of data collection determines how best to communicate the pledge of confidentiality.

Informed consent and pledges of confidentiality should be accurate and use words that are easy for the respondents to understand, taking into account their level of education. For example, a consent form for a survey of adults who have not completed high school should be composed at a basic reading level. To help ensure that respondents will understand a consent statement or confidentiality pledge, agencies should take several steps before sending a survey into the field. For example, an agency should pretest its forms, cover letters, consent statements, etc. using methods similar to those for developing and testing the survey questionnaire (see question #48).

All information collection materials such as consent forms, brochures explaining the purpose of the study and the use of the data, and so forth must be included in the ICR package submitted to

---

34 Confidentiality means different things and depends on the context. For example, in the classification of national security information, "confidential" is one of three classification levels, the other two being "secret" and "top secret". In such a context, "confidential" is applied to information, the unauthorized disclosure of which reasonably could be expected to cause damage to the national security that the original classification authority is able to identify or describe" (White House: Executive Order 12958, Part 1, Section 1.3(3); April 17, 1995). The discussion in this document relates to confidential *statistical* information.

35 *Private Lives and Public Policies*, p. 22.

36 *Private Lives and Public Policies*, p. 23.

009206

OMB. If an agency pledges confidentiality to respondents, it must also cite the statutory authority it has to protect the confidentiality of the information in its ICR (see question #58).

**58. What legal authority does an agency have to protect the confidentiality of information it is collecting?**

Before making a pledge of confidentiality, an agency must know whether or not it can protect the information. Some statistical agencies have specific legal authority to protect the confidentiality of the data they collect (e.g., the Bureau of the Census, the Bureau of Economic Analysis, the National Center for Health Statistics, and the Science Resources Statistics Division of the National Science Foundation). When agencies with statutory protection pledge confidentiality, the data cannot be used for nonstatistical "administrative purposes." For example, data collected by the Bureau of the Census are immune from legal process and cannot be admitted as evidence or used for any purpose in any action, suit, or other judicial or administrative proceeding.<sup>37</sup>

For surveys conducted by contractors, agencies may also be able to protect the confidentiality of responses by including such protection in the terms of the contract signed by the vendor (see question #60).

Agencies need to include in their ICRs all statements and pledges of confidentiality they are making to respondents, and they need to cite the statutory authority they have for those pledges and statements. Agencies cannot make a promise of confidentiality that they do not have statutory authority to make.

**59. What is the Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA)?**

Recent legislation has provided broad protection to information gathered solely for statistical purposes under a pledge of confidentiality. The Confidential Information Protection and Statistical Efficiency Act of 2002 (CIPSEA)<sup>38</sup> provides uniform protection to data gathered under a pledge of confidentiality that will be used exclusively for statistical purposes. A statistical purpose is defined as the description, estimation, or analysis of the characteristics of groups, without identifying the individuals or organizations that comprise such groups.<sup>39</sup> Provided that the requirements for CIPSEA are met, this law can be used by any Federal agency to protect the statistical data it collects under a pledge of confidentiality alone or in addition to the agency's existing statutory authority. This law prohibits disclosure of confidential statistical data and any nonstatistical uses of the data. Penalties for violations are a class E felony, punishable by up to five years in prison or a fine of \$250,000 or both.

---

37 13 U.S.C. § 9(a)(3).

38 Pub. L. No. 107-347, title V.

39 Pub. L. No. 107-347, Section 502(9)(A).

CIPSEA imposes strict requirements on agencies to fulfill the pledge of confidentiality. Agencies planning to use CIPSEA should consult with OMB to obtain guidance on all of the requirements, including the CIPSEA pledge, data security, use of agents, etc.<sup>40</sup>

**60. If an agency does not collect data under CIPSEA, how can it protect the confidentiality of the data?**

CIPSEA cannot be used to protect data if an agency plans to use the data for nonstatistical purposes, which include the use of information in identifiable form for anything other than a statistical purpose, such as any administrative, regulatory, law enforcement, adjudicative, or other purpose that affects the rights, privileges, or benefits of a particular identifiable respondent.<sup>41</sup> However, the agency may be able to use other legal authority to protect the confidentiality of the data it has gathered. Other general Federal Government statutes that affect the confidentiality of information include the Privacy Act of 1974 and the Freedom of Information Act (FOIA). The Privacy Act can be useful in helping to ensure the confidentiality of information collected about private individuals.

The Freedom of Information Act establishes the public's right of access to Federal records. However, FOIA does have nine exemptions allowing agencies to withhold certain types of information from release. A key FOIA exemption (b)(4)<sup>42</sup> allows an agency to withhold information when public release would cause substantial competitive harm. This exemption is useful when collecting proprietary information from businesses or other organizations that might be harmed if the information were publicly released. Agencies have also relied upon the Privacy Act and FOIA in some circumstances to prevent the release of information that was collected primarily for statistical and research purposes.

Agencies have also used contracts with data collection contractors to protect the confidentiality of their data. Agencies can specify in contracts that only aggregate results from the survey can be given to the sponsoring agency, and that the agency does not own and cannot receive identifiable microdata. This kind of third-party collection may also increase participation from respondents who might be hesitant to provide some kinds of information directly to an agency. For example, prior to CIPSEA, the Energy Information Administration used this kind of arrangement for the household survey on Residential Energy Consumption because the agency had no statutory authority to protect this information from release. This kind of arrangement can limit the kinds of analyses the agency can do, but may be necessary to protect the confidentiality of respondent data.

42 5 U.S.C. § 552 (b)(4).

000000

009208

### 61. What must be done to protect data that are gathered under a pledge of confidentiality?

Agencies need to employ administrative, operational, and technical procedures to protect any data collected under a pledge of confidentiality. Administrative procedures include keeping the data in a secure environment with access limited to approved individuals. Operational procedures may include the administration of a survey in a secluded area, protection of survey forms in the possession of an interviewer, and so forth. Technical procedures are also required to ensure that data or results released do not reveal individually identifiable data.

These technical procedures are often referred to as statistical disclosure limitation (SDL) methods. SDL methods are applied to tables or microdata prior to release and include withholding release of selected data items as well as various manipulations to make data less identifiable. Data protection methods are described in Statistical Policy Working Paper #22, *Report on Statistical Disclosure Limitation Methodology* published by the Federal Committee on Statistical Methodology (FCSM). Many agencies have also found a checklist developed by the FCSM's Confidentiality and Data Access Committee (CDAC) to be very useful in assessing disclosure risks in their tables and microdata.<sup>43</sup>

Although agencies must take reasonable steps to protect the confidentiality of the data they collect under a pledge of confidentiality, it is impossible to guarantee that there will be no breach of confidentiality or zero risk of disclosure.

## RESPONSE RATES AND INCENTIVES

The focus in this section is on unit nonresponse or the failure to obtain any information from a selected sample member. Item nonresponse, or the failure of a respondent to respond to a specific survey item, is also discussed briefly. Nonresponse affects all surveys to varying degrees, and agencies need to consider the potential impact of nonresponse on the quality of information obtained from the survey. This section provides guidance on improving response rates and assessing potential nonresponse bias. Agencies should consult with trained survey methodologists in designing their surveys to minimize nonresponse bias.

### 62. Why are response rates important?

A survey's response rate is a valuable data quality and field performance indicator, and is probably the most widely cited single number associated with the generalizability of a survey's results. A high response rate increases the likelihood that the survey results reflect the views and characteristics of the target population. Conversely, a low response rate can be an indicator of potential nonresponse bias, which would be detrimental to the accuracy of the results of a study in a variety of ways, including:

- Survey estimates may be biased if those who choose to participate (respondents) differ substantially and systematically in some way from those who choose not to participate (nonrespondents). If these differences are related to critical information from the survey or the census, the results may be misleading or even erroneous.
- The standard errors of the survey estimates may also be biased because an incomplete sample may fail to capture the true variability that would be observed in a complete sample.

Nonresponse can occur for a variety of reasons, such as refusals, failure to contact the respondent, or the respondent's inability to respond due to language barriers, illness, etc. Often these different reasons for nonresponse reflect different causes, and thus, have different implications for reducing nonresponse and the potential for nonresponse bias. For example, in a household survey, noncontact may be due to respondents spending less time at home and may require more attempts by interviewers to reach them. Noncontacts may spend their time quite differently from people who are at home more, and therefore, their absence may lead to bias in survey estimates related to activities away from home. In contrast, a respondent who refuses may not be interested in the topic of the survey and may need greater persuasion as to the importance of the survey or an incentive to participate. The absence of data from the cohort of refusals may lead to bias in survey estimates of the prevalence or attitudes in the population about the main survey topic.

Agencies need to carefully consider the intended uses of the survey results and the potential impact of nonresponse bias on their data (see questions #18, #19, and #20). Agencies need to provide their best estimate for expected response rates in their ICRs and the basis for those estimates, e.g., prior surveys conducted by the agency, or similar survey methods used on similar populations by other organizations. Although response rates do not provide a clear indication of

nonresponse bias (because such bias is also a function of the differences between respondents and nonrespondents on specific survey estimates), response rates can be a useful indicator of the *risk* of nonresponse bias and should be computed and used by agencies to inform decisions on making efforts to improve cooperation and assessing potential nonresponse bias.

### 63. How should response rates be calculated?

Response rates have been calculated in a wide variety of ways, making comparisons across different surveys difficult. Recently, there have been attempts to standardize the calculation of response rates to provide a common basis for comparison. For example, the American Association for Public Opinion Research (AAPOR) has provided a set of six *standard definitions* of response rates as well as other formulas for calculating cooperation rates, refusal rates, and contact rates.<sup>44</sup> The variations in response rate calculations depend on how partial responses are considered and how cases of unknown eligibility are handled. Agencies are encouraged to use the AAPOR standard formulas in calculating and reporting response rates in their ICRs; however, agencies may use other formulas as long as the method used to calculate response rates is documented in the ICR.

At their most basic level, response rates can be viewed simply as the result of dividing the number of completed interviews/questionnaires by the number of eligible respondents who were selected to participate. Potential respondents may be split into the following categories:

1. Eligible and interview completed (c).
2. Eligible and not interviewed (e).
3. Ineligible (e.g., out of scope) (i).
4. Unable to determine eligibility (u).

Potential respondents that are eligible and not interviewed (e) may include refusals, non-contacts, non-interview due to incapacity, language difficulties, or other reasons for nonresponse. The response rate formula discussed below includes in the denominator an estimate for the proportion of cases of unknown eligibility that are actually eligible, which can be an important component for some surveys, like Random Digit Dialing (RDD) surveys, that often have many phone numbers that are never answered.

Sometimes only partial interviews are obtained due to a respondent's breaking off an interview or completing only part of a mailed questionnaire. For these cases, agencies need to set thresholds for completion of a proportion of the questionnaire or certain key items in order for the case to be counted as a completed interview. Thus, these cases would be treated either as eligible and interview completed (c) if all required items are completed or as eligible and not interviewed (e) if any required items are missing.

The total number of participants selected to be in the survey (n) is the sum of eligible and completed (c), eligible and not interviewed (e), ineligible (i), and unable to determine eligibility (u). That is  $n = c + e + i + u$ . Among those with unknown eligibility (u), there is a proportion (x)

---

<sup>44</sup> See [www.aapor.org](http://www.aapor.org); Go to Standards.

## Response Rates

that is eligible. This proportion may be estimated as part of the collection process, with the most common estimate of  $x$  being  $(c + e) / (c + e + i)$ . The response rate is defined as

$$\text{Response rate} = c / (c + e + x u).$$

In the above formula,

- the denominator includes all original survey units that were identified as being eligible, including units with pending responses with no data received, post office returns because of “undeliverable as addressed,” and new eligible units added to the survey. The denominator does not include units deemed out-of-business, out-of-scope, or duplicates.
- the numerator includes all survey units that have submitted all the required items for the report period.

The response rate formula above is unweighted because every case is treated equally. An unweighted response rate is used to measure the proportion of the sample that resulted in useable information for analysis, and it is a useful indicator of field performance. A weighted response rate can be defined as the proportion of the survey population for which useable information is available. In some instances, the two response rates may result in identical values (if a census is taken or if a sample is selected with equal probability (see question #64).

### 64. When should weighted response rates be reported?

As noted in question #63, unweighted and weighted response rates may result in different values if a sample is selected with different probabilities of selection as the result of oversampling or undersampling specific subpopulations. Oversampling or undersampling of specific subpopulations occurs when the sample size for a specific subpopulation is increased (relative to the remainder of the population) to support analytic objectives and goals. For example, the analytic objectives for a study may require a sampling design with oversampling of persons in minority subpopulations or in rural areas to permit sufficiently precise estimates for these subpopulations. The oversampling of specific subpopulations will assign a higher probability of selection for units in the oversampled subpopulation than for units in the undersampled subpopulations or in the remainder of the full population. Many Federal studies use oversampling of specific subpopulations to support analyses in a cost and statistically efficient fashion.

The weighted response rate takes into account the oversampling and undersampling of the subpopulation by using the sampling weights (which are computed from the inverse of the selection probabilities). By using the sampling weight, this weighted response rate is an unbiased estimate of the proportion of the target population for which useable data are available.

Weighted response rates are often used differently in establishment surveys to take into account the relative importance assigned to different reporting units (rather than probability of selection as is done in household surveys). For example, it is common that a few very large businesses dominate an industry in terms of their production or sales with many smaller firms accounting for only a small percentage of the total production or sales within the United States. Thus, nonresponse by one or two very large businesses could jeopardize a survey estimate whereas

## Response Rates

nonresponse by dozens of small firms may have almost no impact. In this case, weighted response rates may be constructed as the ratio of the total weighted quantity for responding units to the total weighted quantity for all eligible units to obtain a rate that reflects the proportion of the quantity being estimated that is being covered by the survey respondents.

Because unweighted and weighted response rates can provide different and useful information, agencies should generally report both in their ICRs. Whenever there are complex sample designs or the probability of selection is not equal for all cases, it is essential that weighted response rates be reported. Similarly, agencies should always report weighted response rates for establishment surveys in their ICRs and describe what is used for the weight.

### 65. What are typical response rates for Federal Government statistical surveys?

National surveys conducted by and for Federal statistical agencies to provide official Federal statistics generally have much larger samples, invest more resources, and achieve higher response rates than surveys sponsored by academic or commercial organizations. While some Federal surveys are mandatory, the vast majority are voluntary. For example, the Current Population Survey that provides the monthly unemployment rate is a voluntary monthly survey of over 50,000 households and has a response rate of 93 percent at the household level

The Paperwork Reduction Act does not specify a minimum response rate. In the 1980's and 1990's, many Federal surveys achieved response rates above 90 percent. Such high performance levels were well known in major household surveys, and OMB research in the 1980's showed equally high performance in many important business surveys, with a median response rate of about 90 percent across all business surveys conducted as "small censuses" or "probability samples" by major statistical agencies. In the 1990's, due to changing social and business environments, many business and household surveys saw a slippage in their response rates.

In 2001, OMB examined 199 general statistical survey information collections that were approved in 1998. OMB requested detailed information from agencies on the actual response rates achieved. These collections included mandatory and voluntary surveys, household and establishment surveys, and surveys conducted by both statistical and non-statistical agencies using a variety of data collection modes. The mean response rate was 82.2 percent (unweighted) and the median response rate was 84.7 percent. The distribution of response rates showed that about two-thirds of surveys achieved response rates above 80 percent and eighty percent of surveys achieved response rates above 70 percent. Although one might expect there to be large differences between household and establishment surveys or voluntary versus mandatory surveys, average response rates for these different types of surveys were in fact very similar. There were also small overall differences in survey response rates by mode, though it should be noted that most of the surveys were multi-mode (further information about the methods and results of this study can be found in Lu (2002)).<sup>45</sup>

---

45 Lu, R. (2002). Response Rates Achieved in Government Surveys: Results from an OMB Study. *Federal Committee on Statistical Methodology Working Paper #35*. (Available at [www.fcsm.gov/reports/](http://www.fcsm.gov/reports/))

## Response Rates

The studies noted above reflect a snapshot of response rates at a particular point in time. More recent, but less systematic observations suggest that response rates have been decreasing in many ongoing surveys in the past few years. Some evidence suggests these declines have occurred more rapidly for some data collection modes (such as RDD telephone surveys) and are more pronounced for non-government surveys than Federal Government surveys. Generally, these declines have occurred despite increasing efforts and resources that have been expended to maintain or bolster response rates. It is likely that agencies will need to increase attention to their survey methods and expand innovations to continue to ensure that information gathered through Federal statistical surveys yields high quality, useful information.

The next few questions and answers are intended to help agencies evaluate their response rates, improve survey methods through the sharing of best practices, and assess potential nonresponse bias using a variety of methodologies.

### **66. What are acceptable response rates for different kinds of survey collections?**

The 2001 OMB study of information collections described in question #65 clearly shows that the majority of Federal statistical surveys achieve good response rates. Response rates are an important indicator of the potential for non-response bias (see question #62). Clearly, the lower the response rate, the greater the caution or risk that bias can occur. Therefore, agencies should strive to obtain the highest practical rates of response, commensurate with the importance of survey uses, respondent burden, and data collection costs. Agencies should also plan additional efforts to study non-response bias if projected response rates suggest the potential for bias to occur.

An agency's justification for a survey response rate should reflect, at least in part, the intended use of the data. For example, surveys collecting influential information or information that will otherwise have a substantial impact on an agency's programs or policies should be designed to minimize all sources of survey error (see question #20), including nonresponse bias. As defined in OMB and agency Information Quality Guidelines, "influential" means that "an agency can reasonably determine that dissemination of the information will have or does have a clear and substantial impact on important public policies or important private sector decisions." The Information Quality Guidelines require that agencies hold the information they designate as "influential" to a higher standard of reproducibility and transparency than information that is not defined as influential under the Information Quality Guidelines (see also question #18). Agencies need to document in their ICRs the importance and use of the information and the methods they will use to achieve acceptable response rates for their collections.

In their ICRs, agencies need to report expected response rates for their surveys, which should reflect the overall unit response rate as calculated in questions #63 and #64. For ongoing surveys, the most recent actual achieved response rates should also be reported. As noted in question #62, agencies should use expected response rates as an indicator of potential risk for nonresponse bias. Agencies are encouraged to carefully consider how they can use current and new methodological tools to maximize data quality and minimize nonresponse bias. ICRs for surveys with expected response rates of 80 percent or higher need complete descriptions of the

## Response Rates

basis of the estimated response rate and a detailed description of steps that will be taken to achieve the expected response rate (see question #69). ICRs for surveys with expected response rates lower than 80 percent need complete descriptions of how the expected response rate was determined, a detailed description of steps that will be taken to maximize the response rate (see question #69), and a description of plans to evaluate nonresponse bias (see question #71). Agencies also need a clear justification as to why the expected response rate is adequate based on the purpose of the study and the type of information that will be collected (whether influential or not). This discussion may include past experience with response rates when studying this population, prior investigations of nonresponse bias, plans to evaluate nonresponse bias, and plans to use survey methods that follow best practices that are demonstrated to achieve good response rates (see question #69). The ICR should also include a discussion of the selection of the mode of data collection and its impact on the expected response rate. ICRs with lower response rates are often justified by agencies in cases when they are seeking to gather information that is planned for internal use only, is exploratory, or is not intended to be generalized to a target population. Examples for these kinds of collections may include some customer satisfaction and web site user surveys and other qualitative or anecdotal collections.

While the focus is often on the overall unit response rate, agencies should also pay attention to response rates for specific subgroups or levels (e.g., regions or states) for which the agency produces estimates. For example, if each state collects data from establishments within the state or if the agency produces estimates for each state, then response rates for each state should be examined. In this case, an agency may achieve an acceptable response rate at the national level, but could have substantial problems in some states that should not be overlooked.

Oftentimes, OMB may require in the terms of clearance that the agency report to OMB the actual response rate achieved at the completion of the data collection and the results of any nonresponse bias analyses or investigations. Even after the approval and fielding of an information collection, agencies should be prepared to provide detailed response rate information to OMB upon request.

### **67. Do longitudinal and multi-stage surveys need to achieve the same levels of response rates as other surveys?**

In multi-stage and longitudinal surveys, the response rate for the last stage or latest wave is only one component of the overall response rate. While each stage or wave may have a high response rate, it is the overall unit response rate that is the most comprehensive indicator of potential nonresponse bias. Agencies that submit ICRs with multi-stage sampling plans should provide expected response rates for each stage of the sampling process, and the total response rate, taking into account all stages or prior waves. The final (or cumulative) response rate should be calculated by multiplying each stage's response rate together and should be considered an indicator for the risk of nonresponse bias and used accordingly, as noted in question #66. For these types of surveys, agencies may choose to focus their nonresponse bias analyses on a particular stage or wave that appears to be the greatest contributor towards nonresponse or take into account all stages/waves. For example, in longitudinal surveys, the response rate for each wave after the initial wave is often high, and the major contributor to the response rate may be the initial recruitment into the study. In such a case an agency may want to compare respondents

and nonrespondents to the first wave but wait to examine bias due to attrition until later waves when response rates have dropped to 80 percent or less from the first wave (see question #71).

### **68. Are different response rates acceptable for different modes of data collection?**

Different modes of data collection typically yield differences in response rates, depending on the target population and specific methods used. For example, while a 60 percent response rate to a mail survey or RDD telephone survey may be considered quite good for some populations, such a response rate would not be considered as good for a personal visit survey. However, there are not established differences in risk for nonresponse bias by mode that would suggest that a 60 percent response rate in one mode carries a higher risk of nonresponse bias than another mode. Therefore, OMB has not set different thresholds in question #66 for different data collection modes.

Agencies need to consider how the choice of data collection mode will affect their response rates, potential for nonresponse bias, and the information that will be available to assess potential nonresponse bias (see question #71) and weigh these factors along with the other advantages and disadvantages of the modes or modes of collection they are considering. Agencies need to justify in their ICRs their choice of mode given the advantages and disadvantages of that mode (see question #37).

### **69. How can response rates be improved?**

Regardless of the type of information collection, widely-acknowledged procedures can have a major effect on the number of respondents who complete the information request. Agencies should consult with professional survey methodologists in designing their information collections and consider answers to the following questions to maximize response rates:

- Is the agency sending an advance letter to respondents? Even for RDD surveys, agencies can obtain addresses for a large proportion of the phone numbers they have in their sample through vendors that offer reverse matching. Sending a letter in advance to inform respondents about the survey can lead to improved response rates. The letter should:
  - be signed by a senior agency official;
  - be personally addressed to the respondent if possible;
  - provide meaningful motivation for the respondent to participate;
  - answer questions of who, what, when, why, and how;
  - address how long the survey will take and whether participation is voluntary, mandatory, or required to obtain benefits (if the survey is mandatory some agencies opt to state this on the outside envelope rather than in the letter);
  - contain a contact number (toll-free phone if possible) for respondents to verify the legitimacy of the survey or ask questions; and
  - include any confidentiality pledge or assurance of anonymity (which should also be provided with the questionnaire if it is a mail survey).

## Response Rates

- Has the agency considered ways to promote awareness of the survey? Agencies should utilize their websites and consider obtaining the endorsement of stakeholders, interest groups, and community leaders. The agency may want to conduct outreach sessions with presentations in several cities or provide news releases to trade journals, state associations, and other interested parties. It may also be possible to engage the local media for localized surveys.
- What mode of administration is being used? Has the agency carefully considered the use of more than one collection mode, e.g., following up nonrespondents to a mail survey with telephone calls, to improve response rates?
- Is the questionnaire well-designed with user-friendly formatting? Is it as brief as possible? Are the questions, instructions, and definitions easy to understand? Is the content of the survey relevant to the respondent?
- Has the agency identified strategies for contacting hard-to-reach populations?
- Does the survey allow for proxy responses? Some household surveys allow one household member to report for another member; however, whether this is practical or would have larger implications for data quality depends on the kind of information the agency is gathering.
- Has the agency investigated various survey introductions to minimize break-offs and maximize participation?
- For longitudinal surveys, has the agency considered creative ways to maintain contact with respondents between waves? For example, some agencies send newsletters or birthday cards to respondents or provide postcards that respondents can use to notify agencies of address changes. Is information from prior waves used to determine the best time to call? Are records kept of concerns respondents raise that can be addressed in future contacts?
- For longitudinal or panel surveys, does the agency go back to nonrespondents from prior waves? Some prior nonrespondents can be reached and brought back into the study in later panels or waves. Sometimes data from the missing wave can also be “filled in” based on subsequent interviews with the respondent. For example, some longitudinal studies will ask respondents about life events such as marriages, births of children, jobs, etc., that occurred since the last interview, and this information may be used to fill in questions asked in a prior missed wave.
- For personal visit and telephone surveys, has the agency clearly described the number and timing of contact attempts? More contact attempts spaced across days and times of the day offer greater potential for reaching respondents at home.
- For mail surveys, has the agency planned to conduct a follow-up contact after the first mailout with a second mailing, phone call, or a fax (if surveying businesses)? Is the agency planning to mail the survey using priority mail or a courier delivery service to distinguish it from regular mail? Is there a plan to send reminder/thank you cards and replacement questionnaires as part of nonresponse follow-up? Are there plans to allow respondents to complete the survey on the web or via phone?
- For Internet surveys, does the agency plan to use e-mail for advance notification, reminders, and follow-ups? Are respondents allowed to complete the survey on a hardcopy (to mail in) or via phone? Do nonresponse follow-up efforts include phone contact (or fax, if a business)?

## Response Rates

- Are respondents hesitant to provide this kind of information directly to the government or the particular agency? Agencies should ensure that they can adequately protect the confidentiality of the information and communicate this to respondents (see questions #56 to #61). To provide a clearer barrier between the agency and the respondent, agencies can also consider using another agency or an external contractor to collect the data and specify in the contract that only aggregate results from the survey and no individually identifiable data can be given to the sponsoring agency.
- Does the survey allow for an increase in the length of the field period to improve low response rates?
- Have interviewers received adequate training about the survey and about interacting with respondents? Does the interviewer training include “refusal conversion” and other techniques to maximize response rates?
- For RDD surveys, has the agency purchased a higher “grade” RDD sample that removes out-of-scope numbers to minimize interviewer time spent on non-productive cases, so more time is available to spend on potential respondents?
- If the above efforts have been attempted, and there are still problems with the response rate, have incentives been tried in experiments to improve response rates (see questions #74-76 below)?

### **70. Given that Random Digit Dialing (RDD) telephone survey response rates have been declining, will OMB approve ICRs with this methodology?**

Some recent evidence suggests that response rates to RDD surveys have been declining more rapidly than those for other modes of data collection in the past few years. RDD surveys do have some advantages for certain types of studies (see question #41); however, agencies need to carefully consider their total survey design, weighing the expected response rates they are likely to achieve using RDD methodology against its other advantages for their particular survey.

OMB has approved ICRs for RDD studies when agencies provide a clear justification in their ICRs that this is the most appropriate methodology for their study, and agencies are using appropriate methods to maximize the response rate and assess and adjust for potential nonresponse bias and coverage error.

### **71. How can agencies examine potential nonresponse bias?**

Nonresponse bias associated with a survey statistic may be considered to have two components: the nonresponse rate and differences between respondents and nonrespondents. The lower the response rates are and the greater the differences between respondents and nonrespondents, the greater the nonresponse bias. Another way of looking at nonresponse bias is that it occurs when there is a correlation between the likelihood of participation in the survey and the survey variable(s) being measured. This view highlights the fact that some survey estimates may have nonresponse bias (because they are correlated with the likelihood of participation) while others do not.

## Response Rates

Agencies should plan to evaluate potential nonresponse bias if they expect response rates may fall below the levels noted in question #66; these plans should be described in their ICRs. When agencies are gathering influential information (under OMB information quality guidelines) or other information with a substantial impact on programs and policies that requires high precision, agencies should consider examining potential nonresponse bias even when normally acceptable response rates are achieved.

Because nonresponse bias is particular to each survey estimate, it is possible that some survey estimates are unbiased while others have a great deal of bias. Therefore, it is important that agencies attempt to assess nonresponse bias on key survey estimates. For example, a survey on willingness to pay for some environmental improvements should assess bias on the key estimate of willingness to pay (or something highly related to it); it is not sufficient for an agency to simply look at the demographic composition of the sample compared to, for example, the latest official Census figures and, if similar, conclude there is no nonresponse bias. Similarly, agencies cannot simply assume that because the demographic composition of their achieved sample was close to the composition of the decennial census before adjustment, that there is no bias on the other substantive survey variables or that making the weighting adjustments to the demographic composition of the sample will eliminate nonresponse bias in the other variables.

Agencies should consult with professional statisticians and survey methodologists to ensure that potential nonresponse bias is addressed in the design of the study as options are far more limited after the collection has occurred. Although assessing bias and potentially adjusting the data to account for nonresponse can be complicated and time-consuming, there are a number of methods that can be used. These methods vary in the amount and kind of information that is available on respondents and nonrespondents.

At a minimum, agencies should plan to compare respondents and nonrespondents on information available from the sampling frame. Sampling frames that include data on various attributes of the population unit are helpful in examining whether response rates vary on those attributes or whether the characteristics of respondents and nonrespondents differ on these characteristics. For example, response rates from large companies versus small can be compared for establishment surveys.

In addition, agencies should seek out other available external information that they may be able to match to their sampling frame that would provide some insights into nonresponse bias. For example, agencies that survey their program participants may have other administrative data that can be matched at the individual level to compare respondents and nonrespondents more directly. If this kind of information is not available, there are other possibilities to consider, such as mapping telephone exchanges in an RDD survey to census tracts or zip codes, and then matching with aggregated data from the Census long form, permitting comparison of respondents and nonrespondents at an area level (as opposed to the specific household).

Another source of information in longitudinal surveys is to compare respondents and nonrespondents on characteristics gathered at prior waves. For some multi-stage surveys, agencies should consider including items at a screener stage that may be useful in comparing respondents and nonrespondents to the later extended interview.

When there are no good sources of information about respondents and nonrespondents on the substantive variables of interest, agencies can also use additional follow-up procedures with an abbreviated questionnaire to estimate the characteristics of nonrespondents on some key variables of interest. Sometimes these follow-up studies are done by selecting a probability sample of nonrespondents for extensive and more expensive efforts on a smaller sample that are then used to estimate the characteristics of all nonrespondents and compare to respondents.

Agencies can also assess potential nonresponse bias by analyzing differences between respondents and initial refusals (who were later "converted") or conduct analyses of key estimates by levels of effort to obtain the response (e.g., the number of reminders sent for a mail survey or the number of calls made in a telephone survey).

Finally, agencies can also evaluate and compare different methods of nonresponse weighting adjustments using additional variables and information noted above to see what impact these have on the key survey estimates.

All of the above methods have varying strengths and weaknesses in providing useful information on nonresponse bias. Thus, agencies should attempt to use a variety of methods whenever possible.

### **72. What response rate issues are involved with using samples derived from pre-existing multipurpose panels, such as Internet or consumer panels?**

Multi-purpose consumer and Internet survey panels are similar to multi-stage surveys or longitudinal studies in that there are several stages of agreement and participation by respondents over some period of time before they become members of the panel (see question #67). Panel members are also typically expected to participate in the panel for some fixed period of time and complete some number of surveys during that time. Often the only response rate reported for studies using these panels is based on the number of panel members who completed the specific survey and those who did not; however, this provides a very incomplete picture, because each prior stage of selection or participation, including dropping out of the panel before a respondent's scheduled time was completed, potentially affects the representativeness of the panel, may introduce nonresponse bias, and must be taken into account in calculating the overall response rate.

For example, one vendor who conducts Internet panel surveys has documented that in 2002, a 36 percent response rate for households agreeing to join the panel was achieved. However, this was only the first stage; of those households who agreed, only 67 percent actually installed the equipment for Internet access, and only 47 percent of installed households had an adult who completed the profile and was an active panel participant available to complete a survey. Although individual survey response rates averaged 75 to 80 percent of these active members, the cumulative response rate taking into account all stages ( $.36 \times .67 \times .47 \times .80$ ) was about 9 percent.

Because of the multiple stages of initiation of a prospective panel member and the resulting opportunities for nonresponse, different biases due to nonresponse may enter into the panel at different stages. For example, those who agree to become part of the panel may be systematically different from those who do not agree to join the panel, and those who do not install the equipment or complete the profile may be different from those who remain in the panel. Panel members also often depart from the panel before their “term” is completed, introducing further potential nonresponse bias due to attrition.

In their ICRs, agencies proposing to use multipurpose survey panels should provide a justification for their use, provide expected response rates in detail, and devote careful attention to potential nonresponse bias as warranted (see questions #66, #67, and #71). Although these panels have been used as a convenience sample and/or for pilot studies, there is some recent research that examines the quality of estimates from these panels.<sup>46</sup> OMB will continue to monitor this research area and evaluate results from agency studies on nonresponse bias.

Agencies should carefully consider the response rates that they are likely to achieve and the quality of the information that they will be able to obtain from pre-existing multi-purpose survey panels, taking into account the utility of the data for its intended use. While there may appear to be cost and time advantages to using a pre-existing panel, the quality of estimates obtained using this method will require careful scrutiny to ensure it is sufficient to meet its intended purposes. In their ICRs, agencies need to justify use of a multipurpose survey panel and describe how they will attempt to assess and address the potential nonresponse bias and other limitations of these panels (see question #71).

### **73. What should agencies do to assess and deal with nonresponse bias due to item nonresponse?**

The focus of this section has been on unit nonresponse, the failure to obtain any participation from the respondent. However, even when respondents agree to participate in a survey, they do not necessarily provide all of the information that the agency requests. Thus, agencies also need to examine nonresponse to questionnaire items to see what impact this has on their results.

Agencies should note in their ICRs if substantial item nonresponse is expected for any key or sensitive items, and how this will be handled. Similar to unit nonresponse, agencies need to consider the risk of nonresponse bias at the item level. At a minimum, agencies should plan to conduct nonresponse bias analyses (see question #71) if an item missing rate exceeds 30 percent, but agencies should consider lower thresholds for key variables. Because respondents have provided information to other items on the questionnaire, there is generally a great deal of

---

<sup>46</sup> For example, see Cameron, T.A. & DeShazo, J.R. (November, 2005). Comprehensive selectivity assessment for a major consumer panel: Attitudes toward government regulation of environment, health, and safety risks. Unpublished manuscript. Krosnick et al. (May, 2005). Comparing the results of probability and nonprobability sample surveys. Paper presented at the Annual Conference of the American Association for Public Opinion Research, Miami, Florida. Viscusi, W. K., Huber, J., & Bell, J. (2004). The value of regional water quality improvements. Available at [www.law.harvard.edu/programs/olin\\_center/](http://www.law.harvard.edu/programs/olin_center/).

information from the survey itself that can be used to assess potential bias due to item nonresponse.

For key survey estimates, many large statistical surveys use a variety of statistical methods to impute values for the missing items. These imputation methods include identifying "donor" records that are similar to the case with the missing item on a variety of other variables and replacing the missing value with the value from the donor case. Other methods use regression or other statistical models to predict values for the missing variable based on complete cases and then generate a value for the missing case from this model.

Agencies should consult with trained survey statisticians on the appropriate ways to handle missing item data in their surveys. Agencies need to specify how they will handle missing item data and assess or control potential nonresponse bias, including whether the information will be imputed. If an agency uses imputation, the method that will be used should be described in the ICR.

### **74. What are incentives?**

An incentive is defined as a positive motivational influence; something that induces action or motivates effort. Incentives are often used in market research, and sometimes used in survey research, to encourage participation. They may be monetary or non-monetary, such as phone cards, books, calculators, etc. Incentives are often unconditional; that is, they are paid prior to and regardless of a respondent's decision to participate in the study. Research has consistently shown that giving an unconditional incentive when first contacting the respondent is more effective in obtaining cooperation than the promise of an incentive after completion of the survey.

Incentives are most appropriately used in Federal statistical surveys with hard-to-find populations or respondents whose failure to participate would jeopardize the quality of the survey data (e.g., in panel surveys experiencing high attrition), or in studies that impose exceptional burden on respondents, such as those asking highly sensitive questions, or requiring medical examinations (see question # 76).

Incentives are also often used in studies used to develop surveys. For example, research subjects who participate in cognitive research protocols and focus groups are typically paid an incentive for their participation.

Distinctions are sometimes made between an honorarium and an incentive. An honorarium is a payment given to professional individuals or institutions for services for which fees are not legally or traditionally required in order to secure their participation. Thus, this term is more appropriately used for payments to physicians, accountants, school administrators, teachers, and so forth. An honorarium is usually paid on the condition of a respondent's participation as a token of appreciation.

**75. Why must agencies provide a justification to give incentives to respondents?**

While incentives have been used in the private sector without much controversy, most Federal Government surveys do not provide incentives to respondents, and the use of incentives by Federal agencies has raised a variety of concerns about their cost, the use of taxpayer funds, impact on survey responses, and implications for the “social contract” between the Federal Government and citizens. The regulations implementing the Paperwork Reduction Act (PRA) of 1980 prohibited the use of incentives for respondents to Federal surveys unless agencies could demonstrate a substantial need. The regulations implementing the 1995 reauthorization of the PRA require agencies to justify any payments to respondents.

In keeping with these concerns, OMB’s guidelines on providing incentives to respondents follow a general conceptual framework that seeks to avoid the use of incentives except when the agency has clearly justified the need for the incentive and has demonstrated positive impacts on response and data quality by using an incentive (see question #76).

**76. What factors should agencies address in their justification to give incentives to respondents?**

Research has consistently shown that monetary incentives are more effective in increasing survey response than nonmonetary incentives. However, agencies should still consider appropriate nonmonetary incentives, especially if they are related to the survey (or the agency more generally) and are likely to be of interest to respondents. For example, respondents to a business survey on wages may be very interested in the results to see how they compare to the industry average, and schools may find curriculum materials or books for the library an effective incentive. Other examples of nonmonetary incentives that agencies sometimes use include items directly related to the data collection, such as a folder for receipts or a calculator for respondents in a survey on expenditures. In lieu of a relevant nonmonetary incentive, agencies should consider appropriate monetary incentives (or debit cards with a PIN provided) instead of phone cards or gift certificates, as research has generally shown cash to be more effective.

In justifying their proposed use of incentives, agencies should consider the following principles, many of which overlap:

- *Data quality:* One possible justification for requesting use of an incentive is improvement in data quality. For example, agencies may be able to provide evidence that, because of an increase in response rates, an incentive will significantly improve validity and reliability to an extent beyond that possible through other means.
- *Burden on the respondent:* An agency can justify an incentive if it can demonstrate that there is a need to pay a respondent for exerting unusual effort or having an unusual reporting burden in responding to a collection of information. This type of effort can be seen in data collections that require respondents to keep daily logs for an extended period of time, participate in a medical examination, abstract information from a significant number of records, coordinate study team visits, and so forth.

## Response Rates

- *Complex study design:* Some studies require ongoing participation of various respondents, each of whom is important to the achievement of study goals. For example, there may be a panel study over multiple years that requires participation by the same schools, teachers, parents, and students.
- *Past experience:* Agencies may be able to justify the use of incentives by relating past survey experience, results from pretests or pilot tests, or findings from similar studies. This is especially true where there is evidence of attrition and/or poor prior response rates.
- *Improved coverage of specialized respondents, rare groups, or minority populations:* A survey may have as its target population a highly selective group. Offering incentives to this population can be justified by describing the importance and difficulty of obtaining their participation in the study. For example, a study on the health of the hearing-impaired may propose providing an incentive to obtain enough respondents with particular impairments to participate. Similarly, a justification to pay an incentive for a study that involves recruiting highly specialized physicians may be considered.
- *Reduced survey costs:* If prior or similar surveys have devoted considerable resources to nonresponse follow-up, it may be possible to demonstrate that the cost of incentives will be less than the costs of extensive follow-up. While some personal visit surveys have found that the cost of incentives has been made up in reduced field interviewer time and travel costs, this is rarely true for other data collection modes. Thus, agencies should not assume that incentives will pay for themselves.
- *Equity:* Agencies should treat all respondents equally with regard to incentives. OMB generally does not approve agency plans to give incentives solely to convert refusals, or treat specific subgroups differently, unless the plan is part of an experimental design for further investigation into the effects of incentives.
- *Research into the effects of incentives:* Because OMB has expressed interest over the years in encouraging research into the effects of incentives, proposals that include experimental designs that provide insight into incentive effects are often approved. Agencies should plan to examine not only the impact on overall response rates by the use of an incentive, but also the effects on key estimates (with a similar purpose to that addressed in question #71).

OMB desk officers carefully review the justification of incentives. Agencies should cite the research literature and demonstrate how their study particularly merits use of an incentive by its similarity to specific studies on similar populations using similar methods that exist in the literature, or propose a field test or experiment to evaluate the effects of the incentive.

Agencies should either propose, or OMB may request in the terms of clearance, that results of the use of incentives will be reported to OMB.

## ANALYSIS AND REPORTING

The focus of this section is on the documentation that agencies need to provide in their ICRs on their plans for analyzing and reporting the information they will collect in their survey.

### **77. What information should agencies include in their analysis plans?**

In their ICRs agencies need to provide information on their plans for analyzing and publishing the information they are collecting. The analysis plans should include a description of the statistical methods as well as any other relevant model or analytic plan that will be used to address the research questions or purposes for which the information was collected.

With respect to statistical methods, agencies should specify the estimation methods they will use, including any use of weighting. Agencies should clearly describe how weights will be derived and any adjustments that will be made to the weights to minimize potential nonresponse or coverage errors. When analyzing data from a complex survey design, agencies must ensure that appropriate statistical methods and software are used so that accurate estimates and associated variances or standard errors of those estimates are reported. For complex sample designs, specialized software is necessary that takes into account the sample design in estimating the variances. The statistical methods and software should be clearly identified in the ICR.

Often, research questions involve comparisons between groups or subgroups. Agencies should specify what statistical tests will be used to assess potential differences between the groups. The information collection should be designed with an appropriate sample size so that planned comparisons between groups or subgroups have adequate statistical power to statistically detect the differences between the groups or subgroups that are likely to exist (see question #33). Agencies should provide a power analysis in their ICRs to justify the sample size when key analyses involve comparisons among groups or subgroups (this may be included in Part B of the ICR in the justification for sample size).

When possible, agencies should include table shells or actual results from prior collections to show how the information will be presented. If detailed estimates by subgroups are planned, agencies should also describe criteria that are used to determine the amount of detail that is published in a table or figure. For example, agencies should consider criteria such as a minimum sample size, precision of the estimate, or potential disclosure risk (see question #61) in publishing estimates in tables.

Sometimes, agencies use the data gathered from a survey as inputs to models (e.g., economic forecasting models, biomechanical models) to conduct analyses. For recurring collections, agencies should submit information on the relevant models with sufficient details to allow OMB to assess the practical utility of the data being collected. For one-time collections, agencies should submit as much information as possible on the tentative models and analytic plans.

### 78. What predissemination review do agencies need to do for reports based on surveys or statistical collections?

Agencies are responsible for the quality of the information that they disseminate and must institute appropriate review procedures to comply with OMB and agency Information Quality Guidelines. Agencies proposing information products that involve reporting results from surveys or other statistical collections should include as part of their review process a statistical and methodological review to ensure that appropriate statistical methods are used and reported. The reviewer should have appropriate expertise in the methodology that is used, and should be provided with sufficient technical documentation to evaluate the information in the report (See OMB Peer Review Bulletin).<sup>47</sup>

The statistical and methodological review should include an evaluation of the suitability of the statistical methods used, the accuracy of the assumptions and limitations of the data, and the appropriateness of the conclusions and technical recommendations (from a statistical perspective). The statistical and methodological review should also include examination of presentations of data in tables or figures as well as examination of any public use datasets that are released. Agencies must ensure that appropriate statistical disclosure limitation methods and procedures have been followed in keeping with the confidentiality pledge made to the respondents (see questions #57 and #61).

## STUDIES USING STATED PREFERENCE METHODS

The focus of this section is on surveys that use stated preference methods, which are frequently used in regulatory analyses by Federal agencies. Generally, the same requirements described throughout this guidance for surveys collecting influential information apply to these surveys; however, some of these considerations are highlighted in this section with particular illustrations for this type of survey.

### 79. What are stated preference methods?

Stated Preference Methods (SPM) have been developed and used in the peer-reviewed literature to estimate both "use" and "non-use" values of goods and services. They have also been widely used in regulatory analyses by Federal agencies, in part because these methods can be creatively employed to address a wide variety of goods and services that are not easy to study through revealed preference methods.

The distinguishing feature of these methods is that questions about the use or non-use value of a good are posed to survey respondents in order to obtain willingness-to-pay estimates relevant to benefit or cost estimation. Some examples of SPM include contingent valuation, conjoint analysis, and risk-tradeoff analysis. The surveys used to obtain the health-utility values used in cost effectiveness analysis are similar to stated preference surveys but do not entail monetary measurement of value. Nevertheless, the principles governing quality stated preference research, with some obvious exceptions involving monetization, are also relevant in designing quality health-utility research.

### 80. What should agencies consider when designing questions for stated preference studies?

Stated Preference Methods have been developed and used to estimate both "use" and "non-use" values of goods and services. Because these methods pose hypothetical questions about use or non-use values to survey respondents in order to obtain willingness-to-pay estimates relevant to benefit or cost estimation, the following principles should be considered when designing these questions:

- the good or service being evaluated should be explained to the respondent in a clear, complete and objective fashion, and the survey instrument should be pre-tested;
- willingness-to-pay questions should be designed to focus the respondent on the reality of budgetary limitations and on the availability of substitute goods and alternative expenditure options; and
- the survey instrument should be designed to probe beyond general attitudes (e.g., a "warm glow" effect for a particular use or non-use value) and focus on the magnitude of the respondent's economic valuation.

In addition, the results from the questions should be consistent with economic theory using both "internal" (within respondent) and "external" (between respondent) scope tests such as the willingness to pay is larger (smaller) when more (less) of a good is provided.

## Stated Preference Methods

The challenge in designing quality stated preference studies is arguably greater for non-use values and unfamiliar use values than for familiar goods or services that are traded (directly or indirectly) in market transactions. The good being valued may have little meaning to respondents, and respondents may be forming their valuations for the first time in response to the questions posed. Since these values are effectively constructed by the respondent during the elicitation, the instrument and mode of administration should be rigorously pre-tested to make sure that responses are not simply an artifact of specific features of instrument design and/or mode of administration.

### **81. What factors should be considered when designing or evaluating studies using stated preference methods?**

When designing or evaluating a stated preference study, agencies need to consider all aspects of the survey design, including coverage of the target population, mode of data collection, sampling, questionnaire design, and response rates that are covered in more detail in the preceding sections (also see question #20).

Since stated preference methods generate data from respondents in a hypothetical setting, often on complex and unfamiliar goods, special care is demanded in the design and execution of surveys, analysis of the results, and characterization of the uncertainties. A stated preference study may be the only way to obtain quantitative information about non-use values, though a number based on a poor quality study is not necessarily superior to no number at all.

There is no simple formula that can be used to determine whether a particular study is of sufficient quality to justify its use in regulatory analysis. However, OMB and agency Information Quality Guidelines require that agencies hold the information they designate as "influential" to a higher standard of reproducibility and transparency than information that is not defined as influential under the Information Quality Guidelines. As defined in OMB and agency Information Quality Guidelines, "influential" means that "an agency can reasonably determine that dissemination of the information will have or does have a clear and substantial impact on important public policies or important private sector decisions." If SPM are used to support a Regulatory Impact Analysis (RIA), weaknesses in the study design should be acknowledged, including any resulting biases or uncertainties that are suspected. If a study has too many weaknesses with unknown consequences for the quality of the data, the study should not be used for an RIA. In employing SPM for regulatory analyses agencies should consider the following:

- documentation should be provided about the target population, the sampling frame used and its coverage of the target population, the design of the sample including any stratification or clustering, the cumulative response rate (including response rate at each stage of selection if applicable), the item non-response rate for critical questions, the exact wording and sequence of questions and other information provided to respondents, and the training of interviewers and techniques they employed (as appropriate);
- the analytic results should be consistent with economic theory using both "internal" (within respondent) and "external" (between respondents) scope tests, such as the willingness to pay is larger (smaller) when more (less) of a good is provided; and

## Stated Preference Methods

- the statistical and econometric methods used to analyze the collected data should be transparent, well suited for the analysis, and applied with rigor and care.

More detailed guidance on regulatory analysis is provided in OMB Circular No. A-4.<sup>48</sup>

## Glossary of Terms

**-A-**

**Administrative records** are information kept by business establishments, institutions, and governments primarily for their own purposes in running their business or program. Respondents may need to refer to these records in order to answer questions on Federal surveys.

**-B-**

**Behavior coding** is a technique used for pretesting that involves monitoring the interaction between interviewers and respondents (often through reviewing tape recordings) and coding certain behaviors, such as the interviewer misreading the question or a respondent asking for clarification, in order to identify problem questions.

**Bias** is the deviation of the average survey value from the true population value. Bias refers to systematic errors that affect any sample taken under a specific design with the same constant error.

**-C-**

A **case study** is a method for learning about a complex instance, based on a comprehensive understanding of that instance obtained by extensive description and analysis of that instance taken as a whole and in its context.

A **census** survey is a survey of the entire universe or target population that is of interest.

**Clustering** refers to a sample design in which geographic groups are formed (clusters) for purposes of sampling in order to reduce the costs of interviewer travel.

**Coding** involves converting information into numbers or other symbols that can be more easily counted and tabulated.

**Cognitive interviews** are used to test and refine questionnaires. In a cognitive interview, respondents are required to report aloud everything they are thinking as they attempt to answer a survey question.

A **complex sample design** is one that involves multiple stages, stratification, unequal probabilities of selection or clustering.

**Confidentiality** involves the protection of individually identifiable data from unauthorized disclosures.

A **convenience sample** is a nonprobability sample that is drawn from units of the population of interest that are close at hand or willing to participate.

**Coverage** refers to the extent to which all elements on a frame list are members of the population, and to which every element in a population appears on the frame list once and only once.

**Coverage error** refers to the discrepancy between statistics calculated on the frame population and the same statistics calculated on the target population. Undercoverage errors occur when target population units are missed during frame construction, and overcoverage errors occur when units are duplicated or enumerated in error.

A **cut-off sample** is a nonprobability sample that consists of the units in the population that have the largest values of a key variable (frequently the variable of interest from a previous time period). For example, a 90 percent cut-off sample consists of the largest units accounting for at least 90 percent of the population total of the key variable. Sample selection is usually done by sorting the population in decreasing order by size, and including units in the sample until the percent coverage exceeds the established cut-off.

### -D-

**Data protection** involves techniques that are used to insure that confidential individually identifiable data are not disclosed.

The **design effect (DEFF)** is the ratio of the true variance of a statistic (taking the complex sample design into account) to the variance of the statistic for a simple random sample with the same number of cases. Design effects differ for different subgroups and different statistics; no single design effect is universally applicable to any given survey or analysis.

**Disclosure** means the public release of individually identifiable data that were obtained under a pledge of confidentiality.

### -E-

**Editing** is a procedure that uses available information and some assumptions to derive substitute values for inconsistent values in a data file.

An **eligible sample unit** is a unit selected for a sample that is confirmed to be a member of the target population.

An **establishment survey** is a survey of a business establishment.

**Estimates** result from the process of providing a numerical value for a population parameter on the basis of information collected from a survey and/or other sources.

**Estimation** is the process of using data from a survey and/or other sources to provide a value for an unknown population parameter (such as a mean, proportion, correlation, or effect size), or to provide a range of values in the form of a confidence interval.

**Estimation error** is the difference between a survey estimate and the true value of the target population.

An **experimental design** is a type of research design in which the researcher controls and manipulates conditions in order to assess the effect on some outcome of interest. Experiments are conducted when researchers want to be able to infer causality.

An **expert choice sample** is a nonprobability sample in which an "expert" specifically chooses sample elements with certain characteristics to mimic 'typical' or 'representative' members of the population.

### -F-

In a **field test**, all or some of the survey procedures are tested on a small scale that mirrors the planned full-scale implementation.

A **focus group** involves a semi-structured group discussion of a topic.

**Forecasting** involves the specific projection that an investigator believes is most likely to provide an accurate prediction of a future value of some process.

A **frame** is a mapping of the universe elements (i.e., sampling units) onto a finite list (e.g., the population of schools on the day of the survey).

The **frame population** is the set of elements that can be enumerated prior to the selection of a survey sample.

### -G-

A **gatekeeper** is a person who is between the interviewer and the respondent and may prevent the interviewer from gaining access to the respondent. In an establishment survey, secretaries or administrative assistants may control what mail and telephone calls reach a respondent and, thus, act as gatekeepers.

### -H-

**Honoraria** are payments given to professional individuals or institutions for services for which fees are not legally or traditionally required in order to secure their participation. Thus, this term is more appropriately used for payments to physicians, CPAs, schools, administrators, teachers, and so forth. An honorarium is usually paid on the condition of a respondent's participation as a token of appreciation.

**Hypothesis testing** draws a conclusion about the tenability of a stated value for a parameter. For example, sample data may be used to test whether an estimated value of a parameter (such as the difference between two population means) is sufficiently different from zero that the null hypothesis, designated  $H_0$  (no difference in the population means), can be rejected in favor of the alternative hypothesis,  $H_1$  (a difference between the two population means).

### -I-

**Imputation** is a procedure that uses available information and some assumptions to derive substitute values for missing values in a data file.

An **incentive** is a positive motivational influence; something that induces action or motivates effort. Incentives are sometimes used in surveys to increase cooperation.

**Individually identifiable data** refers specifically to data from any list, record, response form, completed survey, or aggregation about an individual or individuals from which information about particular individuals or their schools/education institutions may be revealed by either direct or indirect means.

**Instrument** refers to an evaluative device that includes tests, scales, and inventories to measure a domain using standardized procedures. It is commonly used in surveys to refer to the device used to collect data, such as a questionnaire or data entry software.

**Interactive voice response** refers to a method for data collection in which a computer "reads" the question to respondents over the phone, and respondents reply by using the keypad or saying their answers aloud.

**Internal validity** refers to the soundness of an experimental design so that the results reflect only the differences the researcher intended by manipulating the conditions, and the absence of alternative explanations for the results from the experiment.

An **Internet panel** consists of a large sample of respondents who have volunteered or been recruited to participate in many surveys on the Internet over some period of time.

**Interviewer bias** refers to effects that interviewers may have that bias the survey results. One bias that may occur is that respondents will report fewer socially undesirable attitudes or behaviors to an interviewer.

**Interviewer debriefing** is a method used in pretesting in which interviewers are asked to report any problems that they perceived that respondents had with the questions in the survey instrument.

**Item nonresponse** occurs when a respondent fails to respond to one or more relevant item(s) on a survey.

### -K-

**Key variables** include survey-specific items for which aggregate estimates are commonly published from a study. They include, but are not restricted to, variables most commonly used in table row stubs. Key variables also include important analytic composites and other policy-relevant variables that are essential elements of the data collection. They are first defined in the initial planning stage of a survey, but may be added to as the survey and resulting analyses develop. For example, a study of student achievement might use gender, race-ethnicity, urbanicity, region, and school type (public/private) as key reporting variables.

### -L-

A **longitudinal** sample survey follows the experiences and outcomes over time of a representative sample of respondents (i.e., a cohort) who are defined based on a shared experience (e.g., shared birth year or grade in school).

### -M-

Response to a **mandatory survey** is required by law.

**Measurement error** is the difference between observed values of a variable recorded under similar conditions and some fixed true value (e.g., errors in reporting, reading, calculating, or recording a numerical value). Response bias is the deviation of the survey estimate from the true population value that is due to measurement error from the data collection. Potential sources of response bias include the respondent, the instrument, and the interviewer.

A **microdata** file includes the detailed responses for individual respondents.

A **mixed mode** survey is one that uses more than one mode for data collection, for example, a mail survey is initially sent to respondents, but nonrespondents are called on the telephone to complete the survey.

**Mode of data collection** refers to whether the information is gathered from respondents in a face-to-face interview, over the telephone, from a mail survey, or via a web survey.

A **model** is a formalized set of mathematical expressions quantifying the process assumed to have generated a set of observations.

**Model-based samples** are selected to achieve efficient and robust estimates of the true values of the target populations under a chosen working model.

A **multi-stage design** for a sample is a complex design in which the sample is selected in stages because a comprehensive listing of sample elements is not available. One example of a multi-stage sample design for an area sample is first states may be selected, then counties, then a

census tract or block group within the county. The sample elements are then listed and finally selected for inclusion into the sample.

### -N-

**Nonprobabilistic methods** are methods for selecting a sample that do not select sample elements such that each one has some known nonzero probability of being selected into the sample.

A **nonprobability sample** is a sample in which sample elements are not chosen so that each one has some known nonzero probability of being selected into the sample. Common examples of nonprobability samples are convenience sample, quota samples, and expert choice samples.

**Nonresponse bias** occurs when the observed value deviates from the population parameter due to differences between respondents and nonrespondents. Nonresponse bias is likely to occur as a result of not obtaining 100 percent response from the selected cases.

**Nonresponse error** is the overall error observed in estimates caused by differences between respondents and nonrespondents. It consists of a variance component and nonresponse bias.

**Nonsampling error** includes measurement errors due to interviewers, respondents, instruments, and mode; nonresponse error; coverage error; and processing error.

### -O-

**Overall unit nonresponse** reflects a combination of unit nonresponse across two or more levels of data collection, where participation at the second stage of data collection is conditional upon participation in the first stage of data collection.

An **oversample** refers to selecting some sample elements with probabilities greater than their proportion in the population usually in order to have a large enough sample to make separate estimates for a subgroup with greater precision than would be possible if the group was selected in proportion to its representation in the population.

### -P-

A **panel survey** is a survey that is repeated with the same respondents over some period of time. The **p value** is the probability of the observed data, or data showing a more extreme departure from the null hypothesis, occurring when the null hypothesis is true.

In a **pilot test**, a laboratory or a very small-scale test of a questionnaire or procedure is conducted.

**Population**—see “target population.”

The **power** ( $1 - b$ ) of a test is defined as the probability of rejecting the null hypothesis when a specific alternative hypothesis is assumed. For example, with  $b = 0.20$  for a particular alternative hypothesis, the power is 0.80, which means that 80 percent of the time the test statistic will fall in the rejection region if the parameter has the value specified by the alternative hypothesis.

**Precision** of survey results refers to how closely the results from a sample can reproduce the results that would be obtained from a complete count (i.e., census) conducted using the same techniques. The difference between a sample result and the result from a complete census taken under the same conditions is known as the precision of the sample result.

A survey **pretest** involves experimenting with different components of the questionnaire or survey design or operationalization prior to full-scale implementation. This may involve **pilot**

**testing**, that is a laboratory or a very small-scale test of a questionnaire or procedure, or a **field test** in which all or some of the survey procedures are tested on a small scale that mirrors the planned full-scale implementation.

**Probabilistic methods** for survey sampling are any of a variety of methods for sampling that give a known, non-zero, probability of selection to each member of the target population. The advantage of probabilistic sampling methods is that sampling error can be calculated. Such methods include: random sampling, systematic sampling, and stratified sampling. They do not include: convenience sampling, judgment sampling, quota sampling, and snowball sampling.

A **probability sample** is a sample that is selected so that each sample member has some known nonzero probability of being selected into the sample.

**Probability of selection** in a survey is the probability that a given sampling unit will be selected, based on the probabilistic methods used in sampling.

**Proxy responses** are responses provided by anyone other than the respondent who is reporting for the respondent or providing information about the respondent. For example, parents often report for young children in surveys.

A **public-use data file** or **public-use microdata file** includes a subset of data that have been coded, aggregated, or otherwise altered to mask individually identifiable information, and thus is available to all external users. Unique identifiers, geographic detail, and other variables that cannot be suitably altered are not included in public-use data files.

#### **-Q-**

A **qualitative study** is one done with the goal of obtaining rich information and insight to describe or explore a phenomena through a variety of methods such as focus groups, case studies, in-depth interviews, and observations.

A **quasi-experimental design** is one in which the researcher is unable to assign persons randomly to conditions but is still able to have some control over the conditions.

A **quota sample** samples are samples where units are selected nonrandomly based on a quota. The quota may be defined such that the final numbers of participating units with given characteristics have the same proportion as corresponding units have in the population.

#### **-R-**

A **RDD survey** refers to Random Digit Dialing, which is a means of generating telephone numbers to select a random sample.

**Refusal conversion** refers to the practice of having interviewers call back (either on the telephone or in-person) a respondent who has refused and attempt to gain his or her cooperation in the survey. Often the most effective interviewers in an organization are selected to do refusal conversions.

**Reinterview** refers to asking usually only a small subset of respondents to take the survey again or answer a subset of the survey questions again. Reinterviews may be conducted to assess interviewers or statistical properties of questions in the survey.

**Required response items** include the minimum set of items required for a case to be considered a respondent.

**Respondent burden** is the estimated total time and financial resources expended by the survey respondent to generate, maintain, retain, and provide survey information.

**Respondent debriefing** is a pretesting method in which respondents are asked questions about the survey questions after they have completed the survey. Respondents may be asked to report if they had any trouble understanding any of the questions or found any questions unclear or confusing.

A **response analysis survey** is a study of the capability of respondents to accurately provide the data requested for a survey.

**Response rates:** see weighted response rate and unweighted response rate.

### -S-

A **sample survey** selects respondents from only a portion of the total target population using probability methods in order to make an inference about the target population.

**Sampling error** is the error associated with nonobservation, that is, the error that occurs because all members of the frame population are not measured. It is the error associated with the variation in samples drawn from the same frame population. The variance equals the square of the sampling error.

A **sampling frame** is a list or set of procedures for identifying all elements of a target population from which one can draw a sample.

**Sampling units** are the basic components of a sample frame. Everything covered by a sample frame must belong to one definite sampling unit, or have a measurable probability of belonging to a specific unit. The sampling unit may contain, for example, houses, people, or businesses.

**Sampling weights** are the inverse of the probability of selection for a sample element.

A **simple random sample** is one in which every member of the population has an equal probability of being selected, and all samples of a given size have the same probability of being selected.

**Skip patterns** are used in questionnaires to indicate when the next question should be skipped because of the respondent's answer to the current question. On paper questionnaires, skip patterns may be indicated by arrows or instructions to go to a specific item. Computer-assisted interviews have the skip patterns programmed into the instrument.

A **snowball sample** is a sample that is built by asking a respondent to provide the name of someone that he or she knows for the researcher to contact. It can be a useful technique to build a sample of individuals who have a rare condition and know one another.

**Social desirability** is a bias that occurs when respondents answer questions in a manner designed to present themselves favorably.

In a **split panel design**, respondents are randomly assigned into different groups to receive different versions of the questions to measure any differences between the different question wordings.

**Stage of data collection** includes any stage or step in the sample identification and data collection process in which data are collected from the identified sample unit. This includes information obtained that is required to proceed to the next stage of sample selection or data collection (e.g., school district permission for schools to participate or schools providing lists of teachers for sample selection of teachers).

**Standard error** is the standard deviation of the sampling distribution of a statistic. Although the standard error is used to estimate sampling error, it includes some nonsampling error.

**Statistical disclosure limitation methods** refer to a variety of techniques and rules for reducing the amount of information that is presented that could be used to identify a respondent from data in tables or in microdata files.

**Statistical methods** include the use of sampling, estimation, imputation, or techniques for modeling or data analysis.

**Strata** are created by partitioning the frame and are generally defined to include relatively homogeneous units within strata.

A **statistical survey** is a data collection whose purposes include the description, estimation, or analysis of the characteristics of groups, organizations, segments, activities, or geographic areas. A statistical survey may be a census or may collect information from a sample of the target population.

**Survey panel:** see panel survey.

### -T-

The **target population** is any group of potential sample units or persons, businesses, or other entities of interest.

**Touchtone data entry** refers to using the touchtone key pad to enter numeric information in response to a survey question.

### -U-

**Unit nonresponse** occurs when a respondent fails to respond to all required response items (i.e., fails to fill out or return a data collection instrument).

A **universe** survey involves the collection of data covering all known units in a population (i.e., a census).

The **unweighted response rate** is the response rate calculated using the direct counts of the number of completed interviews, noncontacts, refusals, etc. not taking into account any differential probabilities of selection.

**Usability testing** involves some assessment of how well a survey instrument can be used in practice by an interviewer or a respondent. Some Federal agencies have usability laboratories where they can observe and record respondent's behavior interacting with a computerized survey instrument.

### -V-

**Variance estimates**—see “sampling error.”

Response to a **voluntary** survey is not required by law.

### -W-

A **wave** is a round of data collection in a longitudinal survey (e.g., the base year and each successive followup are each waves of data collection).

**Weights** are relative values associated with each sample unit that are intended to correct for unequal probabilities of selection for each unit due to sample design. Weights most frequently

## Glossary

represent the relative portion of the population that the unit represents. Weights may be adjusted for nonresponse.

A **weighted response rate** is the response rate calculated using the counts of the number of completed interviews, noncontacts, refusals, etc. taking into account the probabilities of selection for each case to measure the proportion of the sampling frame that is represented by the responding units.

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**NOTE:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous language that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention periods for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8 (b)(3) about:
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology (if applicable); and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
  - Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.
  - Enter the total annual recordkeeping and reporting hour burden.
  - Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
    - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.
    - "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
- Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
- Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

009248

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

009244

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

009245

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-1 is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.

2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.

3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.

4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.

5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-1), describe any methods used to minimize burden.

6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.

7. Explain any special circumstances that would cause an information collection to be conducted in a manner:

- \* requiring respondents to report information to the agency more often than quarterly;
- \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
- \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:

- \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
- \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-1.

- \* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

- \* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

- \* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

Subject RE: Emergency Review

The hour burden calculation would be correct, but you shouldn't monetize the hour burden (we account for out-of-pocket costs separately). In your emergency request, you will need to explain what emergency or unforeseen event made the normal PRA approval process impractical or contrary to the public interest.

Thanks.

**From:** lotero@eac.gov [mailto:lotero@eac.gov]  
**Sent:** Tuesday, October 17, 2006 1:51 PM  
**To:** Hunt, Alexander T.  
**Subject:** Emergency Review

Dear Mr. Hunt,

We are preparing two ICR submission packages for emergency review for two separate studies we are required under the Help America Vote Act of 2002 regarding uniformed and overseas voters (42 U.S. C. 15385) and voters who register by mail and use of social security information (42 U.S.C. 15384). These projects require information from voters on or very soon after Election Day (11/7/2006) in the forms of surveys and focus groups so we may better capture data relevant to the studies and report to Congress our findings as required.

I have a question regarding the requirement to provide an estimate in hours of the burden of the collection informations, in particular the estimates of annualized cost to respondents for the hour burdens for these collection of informations - for example, if we are aiming for a sample of 1,200 voters and it takes approximately 15 minutes to complete the survey and we are only collecting this information once =  $1200 \times .25 \times 1 = 300$  total annual hourly burden?. Then to figure out the total cost - do we use (.25 hours x minimum wage rate) x 300 = \$386.25 total cost to the public?

Thank you very much as always for your time and patience.

Sincerely,

Laiza N. Otero

Subject: Privacy Impact Assessments

009250

Dear Mr. Hunt,

Question: When submitting an ICR for review that will collect information in identifiable form - do we have to submit a separate "Privacy Impact Assessment" document or isn't this requirement already addressed within the structure of the Supporting Statements? I believe it's the latter but I want to make sure I have the correct information (based on the following from OMB's Guidance for Implementing the Privacy Provisions of the E-Government Act of 2002 - M-03-22):

- D. *Relationship to requirements under the Paperwork Reduction Act (PRA)* <sup>10</sup>.
1. Joint Information Collection Request (ICR) and PIA. Agencies undertaking new electronic information collections may conduct and submit the PIA to OMB, and make it publicly available, as part of the SF83 Supporting Statement (the request to OMB to approve a new agency information collection).
  2. If Agencies submit a Joint ICR and PIA:
    - a. All elements of the PIA must be addressed and identifiable within the structure of the Supporting Statement to the ICR, including:
      - i. a description of the information to be collected in the response to Item 1 of the Supporting Statement<sup>11</sup>;
      - ii. a description of how the information will be shared and for what purpose in Item 2 of the Supporting Statement<sup>12</sup>;
      - iii. a statement detailing the impact the proposed collection will have on privacy in Item 2 of the Supporting Statement<sup>13</sup>;
      - iv. a discussion in item 10 of the Supporting Statement of:
        1. whether individuals are informed that providing the information is mandatory or voluntary
        2. opportunities to consent, if any, to sharing and submission of information;
        3. how the information will be secured; and
        4. whether a system of records is being created under the Privacy Act<sup>14</sup>.

Thank you for your time and assistance in this matter.

Respectfully yours,

Washington, DC 20005

**Topic:** Procedures for Paperwork Reduction Act Submissions

**1. Definition of a collection of information - PRA regulations at 5 C.F.R. 1320**

- (c) *Collection of information* means, except as provided in § 1320.4, the obtaining, causing to be obtained, soliciting, or requiring the disclosure to an agency, third parties or the public of information by or for an agency by means of identical questions posed to, or identical reporting, recordkeeping, or disclosure requirements imposed on, ten or more persons, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. “Collection of information” includes any requirement or request for persons to obtain, maintain, retain, report, or publicly disclose information. As used in this Part, “collection of information” refers to the act of collecting or disclosing information, to the information to be collected or disclosed, to a plan and/or an instrument calling for the collection or disclosure of information, or any of these, as appropriate.

(1) A “collection of information” may be in any form or format, including the use of report forms; application forms; schedules; questionnaires; surveys; reporting or recordkeeping requirements; contracts; agreements; policy statements; plans; rules or regulations; planning requirements; circulars; directives; instructions; bulletins; requests for proposal or other procurement requirements; interview guides; oral communications; posting, notification, labeling, or similar disclosure requirements; telegraphic or telephonic requests; automated, electronic, mechanical, or other technological collection techniques; standard questionnaires used to monitor compliance with agency requirements; or any other techniques or technological methods used to monitor compliance with agency requirements. A “collection of information” may implicitly or explicitly include related collection of information requirements.

**2. Steps for submitting an Information Collection Request (ICR) to OMB (Regular Process)**

- **60-day Federal Register Notice:** A 60-day notice must be published on the Federal Register before the information collection package can be forwarded to OMB for review and approval.
  - Include in this Federal Register notice the proposed information collection document(s), such as a questionnaire or form, or tell the public how they can obtain the proposed documents without charge from the EAC. Direct the public to send comments to the EAC Project Manager/CIO. You must ask for specific public comments on:
    - Whether or not the collection of information is necessary for the proper performance of the functions of the Service, including whether or not the information will have practical utility;
    - The accuracy of the estimate of the burden of the collection of information, including the validity of the methodology and assumptions used.
    - The quality, utility, and clarity of the information to be collected; and

009255

- Preparing all information and supporting documents required for the submission package on Item 2 above (Prepare an Information Collection Request (ICR) submission package)
- Review and summarize all comments received to notices in the Federal Register. Incorporate public comments/recommendations as appropriate and approved by EAC staff. Maintain record of changes done to the information collection due to the comments received and prepare a brief report of these changes, which will be submitted to OMB.
- Include the PRA and the Privacy Act Statements on the approved forms.

**6. EAC Responsibilities:**

- Review, approve, and publish all Federal Register notices
- Review, approve, and submit the ICR submission package to OMB for approval
- Receive public comments and forward to Contractor.

U.S. ELECTION ASSISTANCE COMMISSION  
1225 New York Ave. NW – Suite 1100  
Washington, DC 20005

November 30, 2006

## **Paperwork Reduction Act – Information Collection Clearance Process – Regular Clearance Process**

### **Step 1: 60-Day Federal Register Notice**

- Contractor Responsibilities:
  - Draft FR Notice
  - Provide information collection (IC) instrument(s)
  - Review public comments – provide summary of comments received and changes made to the IC
- EAC Responsibilities:
  - Review, approve, and publish FR Notice
  - Post information on website
  - Receive and forward all public comments to Contractor

### **Step 2: 30-Day Federal Register Notice**

- Contractor Responsibilities:
  - Draft FR Notice
  - Provide revised and final information collection (IC) instrument(s)
- EAC Responsibilities:
  - Review, approve, and publish FR Notice
  - Post information on website
- OMB is recipient of public comments during this period

### **Step 3: Submit Information Collection Request (ICR) to the Office of Management and Budget (OMB)**

- Contractor Responsibilities - prepare all information and supporting documents required for the submission package
  - Provide IC instrument in its final form
  - Information on OMB Form 83-I
  - Supporting Statement A – joint Privacy Impact Assessment (PIA)
  - Supporting Statement B (if using statistical methods)
  - Copy of 60-day Federal Register Notice
  - Copy of 30-day Federal Register Notice
  - Summary of public comments received, including actions in response to the comments.
  - Copy of public comments received
  - Copies of pertinent statutory authority and regulation
- EAC Responsibilities:
  - Review and approve documents prepared by Contractor
  - Submit ICR package to OMB via their online ROCIS system

### **Step 4: ICR approval**

- Contractor Responsibilities:
  - Upon approval, insert OMB Control Number, expiration date, burden information, and IC requirements on the information collection instrument(s)
- EAC Responsibilities:
  - Receive OMB approval notification and notify Contractor
  - Make IC materials available on website

009257

- How to minimize the burden of collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other forms of information technology.
- **Prepare an Information Collection Request (ICR) submission package:**
  - Information on OMB Form 83-1 (*template attached*)
  - Supporting Statement A (*template attached*)
  - Supporting Statement B (if using statistical methods) (*template attached*)
  - Copy of 60-day Federal Register Notice
  - Copy of draft of 30-day Federal Register Notice
  - Summary of public comments received, including actions in response to the comments.
  - Copies of pertinent statutory authority and regulations.
- **30-day Federal Register Notice** (occurs at the same time the ICR package is submitted to OMB)
  - Notice will inform the public that OMB has up to 60 days to approve or disapprove the proposed information collection, but may respond after 30 days. To ensure consideration, public comments should be submitted to OMB within 30 days. Include the following:
    - Title for the collection of information
    - Summary of the collection of information;
    - Brief description of the need for the information and proposed use;
    - Description of likely respondents, including estimated number, and proposed frequency of response;
    - Estimate of the total annual reporting and recordkeeping burden that will result from the collection of information.
    - Statement that directs public comments to the Desk Officer for the U.S. Election Assistance Commission at the Office of Information and Regulatory Affairs, Office of Management and Budget.
    - If the EAC has requested approval on an emergency basis, indicate time period within which the Service has requested OMB to approve or disapprove.
    - You must solicit public comments on:
      - (1) Whether or not the collection of information is necessary for the proper performance of the functions of the Service, including whether or not the information will have practical utility;
      - (2) The accuracy of the estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;
      - (3) The quality, utility, and clarity of the information to be collected; and
      - (4) How to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated electronic, mechanical, or other forms of information technology.
- **Upon approval:**

- All information collections must have a Paperwork Reduction Act statement and, if required, a Privacy Act Statement<sup>1</sup>. This information must be on the form or its accompanying instructions.
- The form or collection instrument must contain the OMB number, expiration date, and estimated public burden. This includes the time and cost amounts for completing one form or the instrument, time required for recordkeeping and/or obtaining any necessary documentation, and the time necessary for storing the form and its attendant documentation.

### 3. Emergency Process:

- Agencies may submit an emergency ICR if the collection is both needed sooner than would be possible using normal procedures and is essential for the agency's mission. In addition, the agency must provide a brief, written justification demonstrating that the time to comply with the public comment provisions of the PRA would do any of the following: (1) result in public harm; (2) prevent the agency from responding to an unanticipated event; (3) prevent or disrupt the collection; or (4) cause the agency to miss a statutory or court-ordered deadline. This type of clearance should only be sought if the agency could not have reasonably foreseen the circumstances requiring collection; it is not a substitute for inadequate planning.
- **The emergency ICR must contain all of the information that would be submitted with a normal ICR. Agencies must also specify the date by which they would like OMB to act on the ICR. Approval for an emergency collection is valid for a maximum of six months.** If longer approval is needed, the agency must also initiate the normal PRA approval process to take effect when the emergency clearance expires. Agencies are strongly encouraged to consult with their OMB desk officers prior to submitting a request for emergency clearance.
- **The 60 and 30 Days FR Notices are waived under the emergency process.** However, it is recommend that one publish a notice stating that one is seeking emergency clearance (and to direct comments to our OMB Desk Officer).

### 4. Focus Groups:

- Focus groups are covered under the PRA unless the total number of persons participating within a 12-month period is fewer than ten. For example, an agency conducting three focus groups of nine persons would be subject to the PRA because the total number of participants is greater than 10. Although each focus group may not be asked the exact same questions in the same order, focus groups should be treated as information collections under the PRA if the same information is being sought from the groups.
- Open-ended questions to the public (i.e. What do you think?) in a focus group do not require OMB approval.
- When submitting the ICR package to OMB, the following needs to be included: script, moderator questions, general plan of how the focus groups will be carried out, and the plan for ensuring it is a representative sample of the larger group we wish to gather data from.

### 5. Contractor Responsibilities:

- Drafting of all Federal Register Notices

---

<sup>1</sup> Privacy Impact Assessments (PIAs) are required by Section 208 of the E-Government Act for all Federal government agencies that develop or procure new technology (e.g. an electronic database) involving the collection, maintenance or dissemination of personally identifiable information or that make substantial changes to existing technology for managing information in identifiable form. The Office of Management and Budget (OMB) ensures that PIAs necessitated under the E-Government Act are completed by requiring them as part of the annual budget process. *Some information collections under the PRA involve new or upgraded databases and thus would require PIAs.*

**Abstract:** The proposed information collection is necessary to meet requirements of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). HAVA §241 requires the U.S. Election Assistance Commission (EAC) to study and report on election activities, practices, policies, and procedures, including methods of voter registration, methods of conducting provisional voting, poll worker recruitment and training, and such other matters as the Commission determines are appropriate. In addition, HAVA §802 transferred to the EAC the Federal Election Commission's responsibility of biennially administering a survey on the impact of the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.). The information the States are required to submit to the EAC for purposes of the NVRA report are found under Title 11 of the Code of Federal Regulations (11 CFR 8.7). HAVA §703(a) also amended §102 the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1) by requiring that "not later than 90 days after the date of each regularly scheduled general election for Federal office, each State and unit of local government which administered the election shall (through the State, in the case of a unit of local government) submit a report to the Election Assistance Commission (established under the Help America Vote Act of 2002) on the combined number of absentee ballots transmitted to absent uniformed services voters and overseas voters for the election and the combined number of such ballots which were returned by such voters and cast in the election, and shall make such a report available to the general public."

**Authorizing Statute(s):** US Code: 42 USC 1973gg-1 et seq. Name of Law: National Voter Registration Act

US Code: 42 USC 1973ff-1 Name of Law: Uniformed and Overseas Citizen Absentee Voters Act

US Code: 42 USC 15301 Name of Law: Help America Vote Act of 2002

**Citations for New Statutory Requirements:** None

009262

- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention periods for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8 (b)(3) about:
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected.
- (i) It uses effective and efficient statistical survey methodology (if applicable); and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item by leaving the box unchecked and explain the reason in the Supporting Statement.

**Certification Date:** 10/31/2006

009265

**Supporting Statement A:**

**OMB Control Number: xxxx-xxxx**

**U.S. Election Assistance Commission**

**2006 Election Administration and Voting Survey**

**A. Justification**

**1. Explain the circumstances that make the collection of information necessary.**

The proposed information collection is necessary to meet requirements of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). HAVA §241 requires the U.S. Election Assistance Commission (EAC) to study and report on election activities, practices, policies, and procedures, including methods of voter registration, methods of conducting provisional voting, poll worker recruitment and training, and such other matters as the Commission determines are appropriate. In addition, HAVA §802 transferred to the EAC the Federal Election Commission's responsibility of biennially administering a survey on the impact of the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.). The information the States are required to submit to the EAC for purposes of the NVRA report are found under Title 11 of the Code of Federal Regulations (11 CFR 8.7).

HAVA §703(a) also amended §102 the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1) by requiring that "not later than 90 days after the date of each regularly scheduled general election for Federal office, each State and unit of local government which administered the election shall (through the State, in the case of a unit of local government) submit a report to the Election Assistance Commission (established under the Help America Vote Act of 2002) on the combined number of absentee ballots transmitted to absent uniformed services voters and overseas voters for the election and the combined number of such ballots which were returned by such voters and cast in the election, and shall make such a report available to the general public."

**2. Indicate how, by whom, and for what purpose the information is to be used.**

The information collected in the 2006 EAC Administration and Voting Survey will be used by the EAC to report to Congress on the impact of the NVRA (42 U.S.C. 1973gg-1 et seq.) on the administration of elections for Federal office for the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections. In addition, the EAC shall make available to the public the information collected on the combined number of absentee ballots transmitted to absent uniformed services voters and overseas voters for the election and the combined number of such ballots which were returned by such voters and cast in the election as required by UOCAVA §102(c). Further, this collection will standardize the format for the reports submitted by States under UOCAVA §102(c) as required by HAVA §703(b).

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.**

The EAC will provide for the secure collection of information via its website. Submission will be accepted using a secure, automated, form-fillable web application. Information will also be accepted via e-mail, fax, and regular mail to accommodate respondents that prefer alternate methods for submitting information. The EAC is committed to making the submission of information to the agency as secure,

efficient, and easy as possible through the use of technology and the ongoing support of survey respondents during the information collection process.

**4. Describe efforts to identify duplication.**

Currently, the U.S Census Bureau's Current Population Survey (CPS) contains a bi-annual supplement that collects information about the voting characteristics of their households. However, the EAC Survey is a census of election administration practices and voter turnout as reported by the chief election officials for the states, the District of Columbia, and the U.S. territories; it does not collect information from voters or regarding characteristics of the voters. The EAC has included the U.S. Department of Defense's Federal Voting Assistance Program in the development of this information collection to minimize duplication efforts regarding UOCAVA voters.

**5. If the collection of information impacts small businesses or other small entities, describe any methods used to minimize burden.**

This information collection does not have a significant impact on small businesses or other small entities. The chief election officials for the states, the District of Columbia, and the U.S. territories may have to request information from their local election jurisdictions, but most of this information is already routinely collected from the local election officials to certify election results and report voter turnout. The EAC has made efforts to limit the information requested and burden on all participants. The information sought is limited to that information necessary to meet the requirements listed in response to Question 1 above.

**6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.**

If the EAC does not collect this information it may be unable to comply with its statutory requirements under HAVA (42 U.S.C. 15301), NVRA (42 U.S.C. 1973gg-1 et seq.), and UOCAVA (42 U.S.C. 1973ff-1). This collection of information must be carried out every two years after each Federal general election as stipulated by NVRA and UOCAVA. The EAC has reduced the burden of responding to the information collection by developing a single instrument to collect the information. Prior to this effort, the EAC administered three separate surveys to collect the information, and respondents were burdened by the different deadlines for submitting information and the lack of uniform definitions to describe the data requested. This new collection has clarified questions and election terms to alleviate some of the problems encountered in the previous surveys and increase the response rate.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

There are no special circumstances applicable to this information collection.

**8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5CFR 320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken in response to the comments. Specifically address comments received on cost and hour burden. Describe efforts to consult with persons outside DOE.**

The EAC published a notice in the Federal Register on August 1, 2006, at 71 FR 43477.

009267

9. **Explain any decision to provide any payment or gift to respondents, other than remuneration of contractors or grantees.**

The EAC does not provide any payment or gift to respondents.

10. **Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.**

There is no assurance of confidentiality.

11. **Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

There are no questions of a sensitive nature.

12. **Provide estimates of the hour burden of the collection of information. The statement should indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated.**

- a. Number of respondents = 55
- b. Number of responses per each respondent = 1
- c. Total annual responses = 1
- d. Hours per response = 115.07 hours
  - i. Reviewing instructions: 2.13 hours
  - ii. Adjusting to comply with any previously applicable requirements: 10.75 hours
  - iii. Training personnel to respond to a collection of information: 5 hours
  - iv. Searching data sources: 47.20 hours
  - v. Completing and reviewing the collection of information: 47.63 hours
  - vi. Transmitting or otherwise disclosing the information: 2.36
- e. Total annual reporting burden = 6,328.85 hours (*# of respondents x frequency of response x hours of response*)
- f. Estimated total annual cost burden = \$147,905.22 (*# of total annual reporting hours (6,328.85) x estimated hourly cost for responding to this information collection (\$23.37)*)
  - i. The hourly cost factor was derived from dividing the estimated annual cost factor per respondent (\$2,689.63) by the estimated hours per response (115.07) = \$23.37

13. **Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information.**

There are no capital or start-up costs associated with this information collection.

14. **Provide estimates of annualized cost to the Federal government.**

009263

The estimated annual cost to the Federal Government is \$272,007.20. This estimate includes: \$82,007.20 for website management and programming services for a web-based survey response application; \$180,000 for personnel to administer and manage collections, and \$10,000 for equipment and overhead.

- We estimate \$82,007.20 for website management and programming services for a web-based survey response application.
- We estimate \$180,000 for personnel to administer and manage the collections. Two full time personnel will be assigned to this program. With an average cost (pay and benefits) of approximately \$90,000 a year.
- We estimate \$10,000 for equipment costs and overhead.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 (or 14) of OMB Form 83-I.**

Not applicable. This is a new information collection.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The EAC is required by NVRA (42 U.S.C. 1973gg-7) to no later than June 30th of each odd-numbered year submit to Congress a report assessing the impact of this Act on the administration of elections for Federal office during the preceding 2-year period, including recommendations or improvements in Federal and State procedures, forms, and other matters affected by this Act. In addition, the EAC will make available to the public the information collected on the combined number of absentee ballots transmitted to absent uniformed services voters and overseas voters for the election and the combined number of such ballots which were returned by such voters and cast in the election as required by UOCAVA §102(c). Since the data required by these two Acts is being collected as part of this information collection, the EAC expects to release all of its findings as one publication no later than the date required by NVRA (42 U.S.C. 1973gg-7). The EAC is also in process of developing a process for using a geographic information system (GIS) to display the collected data and allow the public to conduct queries.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of OMB Form 83-I.**

The EAC does not request an exception to the certification of this information collection.

009269

**Supporting Statement B:**

**OMB Control Number: xxxx-xxxx**

**U.S. Election Assistance Commission**

**2006 Election Administration and Voting Survey**

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.**

This information collection does not use sampling. The respondent universe for the 2006 includes all 50 states, the District of Columbia, and the four U.S. territories; the total universe is 55 respondents. The EAC expects all of the identified respondents (100%) to provide responses to the collection as a whole; however, some of the respondents are exempt from the NVRA and as such are not required to provide certain answers. In addition, since the manner in which elections are administered may vary by jurisdiction, there are some questions that may not apply to all respondents.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

Not applicable to this collection.

**3. Describe the methods used to maximize response rates and to deal with non-response. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses.**

The EAC has worked closely with all survey respondents since early in 2005 to clarify survey questions and terms, and encourage full participation. For example, in May 2005, the EAC met with a small group of election officials to solicit their feedback regarding the 2004 Election Day Survey, which is now part of this new information collection. The group discussed the challenges faced by election officials when collecting this data, including the interpretation of the survey questions and terms and the methods for assembling the data. In April 2006, the EAC convened a second group, this time consisting of election officials, social scientists, and voter interest groups, to improve the new information collection based on their experiences with previous collections. In addition, the EAC has vetted the document with its Advisory and Standards Boards, which are comprised of 110 state and election officials and another 37 are drawn from various national associations and government agencies that play a role in the

009270

implementation of the Help America Vote Act and science and technology-related professionals appointed by Congressional members. Furthermore, the EAC met with the state members of the National Association of State Election Directors (NASSED) in July to review the proposed information collection. The EAC will carefully review the information submitted by survey respondents to ensure completeness and accuracy; respondents will be contacted by phone, e-mail, and/or mail to request information regarding missing and/or erroneous data.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

Not applicable to this collection.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

The EAC staff members responsible for conducting this information collection are:

## Summary of and Response to Comments on the U.S. Election Assistance Commission's 2006 Election Administration and Voting Survey

The U.S. Election Assistance Commission (EAC) issued its 2006 Election Administration and Voting Survey for public comments on August 1, 2006 (71 FR 43477). Fourteen public comments were received in response to the EAC's request. The EAC made modifications in response to the comments to improve the clarity and consistency of the information collection. Not all comments were appropriate to accommodate at this time due to the short notice election officials would have to organize and collect the new data or they were outside the scope of the information collection. However, the EAC will consider those comments for incorporation into the 2008 version of the EAC's Election Administration and Voting Survey. It should be noted that the long-term goals of the EAC Survey includes refining the information collection to gather as much data as possible at the lowest level of analysis (precinct) regarding the administration of election, but this process will require careful planning and implementation so as to maintain the lowest burden possible on respondents. A copy of the comments received is being provided as part of this ICR.

The following changes were made to the information collection as a result of the public comments received.

- The definition for "duplicate registration application" now reads: "refers to an application to register by a person already registered to vote at the same address, under the same name and personal information (i.e. date of birth, social security number, driver's license, etc.), and the same political party (where applicable)."
- The following question was inserted and is now the first question on the survey:

Please, check if your State is exempt from NVRA:

- Yes; exempt from NVRA.  
 No; not exempt from NVRA.

- Respondents now have the choice to mark either a "Don't Know" or "Check if your office does not collect this data" for questions requiring a numeric answer. In addition, a "Comment" box has been included after each question for respondents to address any concerns or provide additional information relating to that particular question.
- For question 3 (previously #2), the State of Montana was included in the list of states that allow registration on Election Day.
- Question 9 (previously #8) was rephrased as follows: "Total number statewide and by county/local jurisdiction of new, valid registrations verified and processed between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections. *\*\*This includes all registrations that are new to the local jurisdiction and re-registrations due to a change of address across jurisdictional lines but within the state. This does not include applications that are duplicates, rejected,*

009272

or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.”

- In Question 11 (previously #10), “Tax Assessors” and “Tax Collectors” are now listed separately.
- Question 12 (previously #11) now reads as follows:

Identify each and every other state and local government office or agency designated as a voter registration agency (*provides voter registration opportunities/services*):

- Motor vehicle offices
- All offices that provide public assistance that are mandated as registration sites by NVRA
- All offices that provide state-funded programs primarily serving persons with disabilities that are mandated as registration sites by NVRA
- All Armed Forces recruitment offices that are mandated as registration sites by NVRA
- Other agencies designated by the State as registration sites, and which are not mandated as registration sites by NVRA.

► Please, provide the names of the agencies designated by the State as registration sites, and which are not mandated as registration sites by NVRA.

- Question 13 (previously #12) now reads as follows:

Does your office provide training on the voter registration process to employees of Federal, State, and local government offices or agencies designated as voter registration agencies?

Yes, our office provides training on the voter registration process to ALL Federal, State, and local government offices or agencies designated as voter registration agencies.

► If yes, how frequently does your office provide training the above training?

Monthly     Quarterly     Biannual     Annual     Biennial

Other (*please, specify*) \_\_\_\_\_

009273  
2

Yes, our office provides training on the voter registration process to SOME, BUT NOT ALL, Federal, State, and local government offices or agencies designated as voter registration agencies.

▶ If yes, how frequently does your office provide training the above training?

Monthly     Quarterly     Biannual     Annual     Biennial

Other (please, specify) \_\_\_\_\_

No, our office provides no such training.

- Question 14 (previously #13) now reads as follows:

How are voter registration applications transferred from the other voter registration agencies listed in response to Question 12 to the official responsible for voter registration (see Question 11)? Please, select all that apply.

Courier

Fax

Hand-delivered

Inter-office mail

U.S. mail

Electronic (If electronic, then select the appropriate media below.)

Power Profile System     Tape     Disk, CD, or other portable storage media

VPN     Other electronic media (please, specify) \_\_\_\_\_

Other (please, specify) \_\_\_\_\_

- Question 17 (previously #16) now reads as follows:

How do the voter registration officials identified in Question 11 verify voter registration applications? (This refers to the process of verifying the applications used to register to vote. This does not refer to the process of verifying voter identity when they go to vote.) Please, select all that apply.

Check jury lists

Verify through the department of motor vehicles

Verify through the Social Security Administration's records

Verify through the State's vital statistics records

Verify through other state agency (please, specify agency)

Matched against the voter registration database

Tracking of returned voter identification cards

Tracking the return of disposition notices

009274

Other (please, specify)

- Question 18 (previously #17) now reads as follows:

What data fields are compared (used as matching criteria) to identify duplicate registrations? Please, select all that apply.

- Address
- Date of birth
- Driver's license number
- Names provided by registrant
- Social Security number
- Other (please, specify)

- Question 21 (previously #20) now reads as follows:

How does the statewide voter registration database link to the State's department of motor vehicles?

- Real-time
- Specific time intervals (please, specify)
- Other (please, specify)

- Question 30 (previously #29) now includes "Tax offices."
- The definition for "At the polls" was clarified to read as follows: "'refers to ballots issued, cast, or counted on a jurisdiction's voting system on Election Day at a polling place (separate from early and in-person absentee voting at the polls prior to Election Day)."
- The definition for "Ballots Cast" was clarified to read as follows: "refers to ballots that have been submitted manually or electronically by a voter regardless of whether they are ultimately counted. *Note:* For jurisdictions that provide voters with more than one ballot card to vote for different contests or measures should only report one ballot cast per voter."
- The definition for "Domestic civilian absentee ballot" was clarified to read as follows: "refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State's requirement for voting absentee, and is not considered early voting by state definitions. Generally, a voter must request an absentee ballot from their local election office, and the completed ballot may be sent back by mail or dropped off in person (in-person absentee) depending on the laws and regulations of the voter's State of residence."
- The definition for "Domestic military citizen" now reads: "Domestic military citizen is statutorily defined as..."
- The definition for "Early voting" was clarified to read as follows: "refers generally to any in-person voting that occurred prior to November 7, 2006, at specific polling locations for which there were no special eligibility requirements,

009275

and is not considered absentee voting under the State's definitions/requirements for absentee voting."

- The definition for "Federal Write-In Absentee Ballot (FWAB)" was clarified to read as follows: "...is an emergency ballot available to military and overseas citizens (including APO and FPO addresses) when they have properly requested but have not received a regular absentee ballot from their local jurisdiction in time to return it before the deadline."
- The definition for "Overseas military citizen" now reads: "Overseas military citizen is statutorily defined as ..."
- The definition for "Provisional Ballot" was clarified to read as follows: "...refers to a ballot issued to a voter at the polling place when their eligibility to vote has not been determined."
- Question 32 (previously 31) was rephrased as: "Did your State conduct early voting for the November 7, 2006, Federal general elections?"
- Questions 33 and 34 were originally asked as part of the same question, but to avoid confusion the data is being requested separately. In addition, the following item was added to both questions (and later on in questions 38-40):
  - UOCAVA voters: If you are not able to separate ballots cast/counted for UOCAVA voters into the categories above, please, provide the combined total statewide and by county/local jurisdiction:
- For question 37 (previously #35), the category of "Administrative error" was removed."
- Question 38 (previously #36) no longer asks for the number of absentee ballots "not counted," it only asks for the number of absentee ballots that were requested.
- Question 39 (previously #37) was clarified to read as follows: "Total number statewide and by county/local jurisdiction of advanced ballots TRANSMITTED to military and overseas citizens for the November 7, 2006 Federal general elections: (*Advanced ballot means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.*)"
- For question 41, the categories of "Elector deceased" and "Elector voted early at the polls" were rephrased as "Voter deceased" and "Already voted in person."
- Question 50 (previously 48) was rephrased as: "Total number statewide and by county/local jurisdiction of precincts for the November 7, 2006, Federal general elections."
- Question 53 (previously 51) was rephrased as: "Total number statewide and by county/local jurisdiction of polling places where voters with disabilities can cast a private ballot for the November 7, 2006, Federal general elections: (*Identify the total number of polling places where voting equipment is used such that a visually disabled voter can cast a private ballot (e.g., a DRE with audio ballot capability or paper ballots in Braille).*)"
- Question 55 was inserted to capture information regarding voting equipment in use during the November 7, 2006, Federal general elections. This question was previously asked by the EAC in their 2004 Election Day Survey, and initially

removed for purposes of this survey. However, in light of the public comments and the current attention on voting equipment/systems the EAC felt it was necessary to include it in the final information collection. The question reads as follows:

- Please, provide a list of the types of voting equipment used in each county during the November 7, 2006, Federal general elections. Please, provide the following for each county:
  - a. Name of county
  - b. Type of voting system(s)
  - c. Manufacturer
  - d. Software version (if applicable)
- Question 56 (previously 52) was rephrased to read as follows:
  - Please, provide the following for each local election jurisdiction official that provided information for purposes of responding to this survey:
    - a. Name
    - b. Title
    - c. Agency/Office
    - d. Street address
    - e. P.O. Box number
    - f. City
    - g. State
    - h. Zip code
    - i. Telephone number
    - j. General e-mail address (if available)
- Question 57 (previously 53) was rephrased to read as follows:
  - Identify any other sources of information used to respond to this survey other than those provided in response to the two previous questions. (All other sources of data shall include information obtained from a statewide voter registration database or any other public or non-public source). For individuals and agencies, please, include the following:
    - Statewide voter registration database
    - Other public and non-public sources – please, include the following:
      - a. Name of contact person
      - b. Title
      - c. Agency/Office
      - d. Street address
      - e. P.O. Box number
      - f. City
      - g. State
      - h. Zip code
      - i. Telephone number
      - j. General e-mail address (if available)
- Question 58 (previously 54) was rephrased to read as follows:

- Please, provide a list of the local individuals/entities responsible for registering voters (see Question 11) and those administering elections; include their name/entity, title, complete mailing address, telephone number, and general e-mail address (if available). In some cases, these two activities are carried out by one individual/entity and in others they are divided between two or more; please, identify which individual is responsible for each of the activities.
  - a. Name
  - b. Title
  - c. Agency/Office
  - d. Role (voter registration, election administration, or both)
  - e. Street address
  - f. P.O. Box number
  - g. City
  - h. State
  - i. Zip code
  - j. Telephone number
  - k. General e-mail address (if available)

Subject response to voter questionnaire

Ms Latero

Bryan Whitener sent out the draft of the survey for the 2006 election to the members of the EAC advisory board

my comments

1. easy to read
2. don't split sections or questions between two pages (it occurs a few times only)
3. page 14, #43, in our situation the numbers of poll workers varies depending upon the number of registered voters in a precinct, but this question doesn't allow for a response where the numbers of poll workers vary among the precincts
4. page 14, #46, do you want multiple responses here? we have several who are involved
5. page 16, #53, not enough room to respond if you want everyone who had input to list name & info since not just one person will necessarily be completing the form
6. lastly, i hope this goes out early enough so that those who will be completing the form know what will be asked of them so they can compile the info as they go along

Subject washington county survey request

Laiza,

Thanks for letting us get a heads up on the new stats that we should be tracking.

I noticed that as I was doing this, most of the questions were fairly relevant. I know that some states are a little ahead of us, but I think the information can be useful in the future.

I did have some concerns about the time it would take, unless we could get Vista to track this info for us. I had to gather the info from many sources, and it took longer than I expected.

Here are some specifics,

We do not have information to track yet by Mail, or in Clerk's office, DMV, or other registrations with dates.

We cannot identify dupilcates, address changes or rejected registrations.

I thought tracking the deleted list was interesting, but I can see why they would like to have that info.

Tracking the amounts of confirmation cards would be a great help to me, it would be good to see how many

go out, and how many come back! Track expenses better.

Election totals seemed to be over kill, but if we could track the info in 1 or 2 places I would be willing to do the in depth detail that they would like.

If you have questions call me!

Melanie Abplanalp

**Election Administration Voting Survey Draft**

Q10. I would suggest splitting up the Tax Assessor and the Tax Collector. In Illinois and many other jurisdictions throughout the country, they are two different offices.

Q11. In Illinois there are so many townships, cities and villages, that you may get a list several thousand. Likewise there are many public service agency locations.

I am not sure what the goal is for Q11 or what information is to be collected? Name, address, city, state, zipcode, person in charge, phone number? It doesn't appear that the question is detailed enough about what information is to be collected and that it tries to collect too much information (at least for a large state with many local offices.)

Q13 – there are kind of redundant answers e-mail/electronic and VPN are similar. Is Disk / tape the same? How about CD? Some people may use a USB drive? Either have a category of

Electronic with sub sections under it

Electronic

Tape

Diskette

E-mail

USB

Website Form

Website File Upload

FTP

VPN

Under Other you may want to put a line for them to write it in.

Great survey and good luck with the responses!

Subject 2006 Election Administration and Voting Survey

Dear Laiza,

Today as I was preparing a note to send to North Dakota's county election officials to encourage them to review the survey that is under review prior to the General Election in November, I noticed something in the Absentee Ballots section that made me think I should send a comment upon which I hope you too will ponder before the survey is finalized. I don't think we talked about this when we were together in April for the preliminary survey meeting, but if we did I apologize for not paying attention.

Question 36 asks for the number of absentee ballots (excluding FWABs) requested and the number not counted.

1. FWAB is spelled out in question 38, but since this is the first place it is used, this is the place it should be spelled out.
2. I understand the need for collecting both of these items of information, but the two numbers are quite disjointed from each other unless another number is asked for between these two.
3. The number would be the number of ballots returned.

I would suggest the following order and wording of the questions if I may be so bold:

36. Total number of statewide and by county/local jurisdiction of **advanced ballots** transmitted to military and overseas citizens for the November 7, 2006, Federal General Election: [keep the three subcategories with the total line]
37. Total number of statewide and by county/local jurisdiction of **absentee ballots** requested and returned (do not include FWAB) for the November 7, 2006, Federal General Election: [keep the four subcategories with the totals line – one column for requested and one column for returned]
38. This one could stay just as it is
39. If you added a total line to this question, you would know the number of absentee ballots not counted or rejected that were received from domestic civilians
40. If you added a total line to this question, you would know the number of absentee ballots not counted or rejected that were received from military and overseas citizens

The survey asks for the number of advanced ballots transmitted, but it doesn't ask how many of those were returned; rejected or not counted and why unless we are supposed to assume that these ballots should be tabulated with all the other absentee ballots based on the definition of "**Absentee voting**" at the beginning of this section. Perhaps this could be explained with the questions relating to the return of absentee ballots or these numbers could be separated as you have separated them for the two questions differentiating their delivery to the voter.

Please feel free to call me if you have any questions for me. Maybe I have been as clear as mud to you or maybe I have missed the obvious that would make the current order clearer to me.

009283

Thanks for letting me comment,

P.S. I know you have talked in the past that the 2006 survey would be one in which the numbers would be entered by each state through a web application. Do you know whether this will be a manual data entry method by those of us in the state election offices? If it is, I am concerned that there will be a high potential for "fat finger" errors to the submitted data. Or, can you describe the survey tool that is being planned for use?

Thanks,

*Jim Silrum*

Subject: DRAFT 2006 Election Administration and Voting Survey

Laiza,

I found the Draft 2006 Survey to be comprehensive and well done, and just have one subject to be addressed, if deemed warranted.

After Question #40, before ending the section on UOCAVA absentee ballots, would it be possible to add a question, or questions, concerning the absentee requests that were honored based on the UOCAVA voters' 2004 requests (per HAVA's mandated two-general-election-cycle requests)? It might be a multi-part question, to include these issues:

- How many absentee ballots were issued in 2006 to UOCAVA voters who requested a ballot in 2004, but from whom the election official had no contact since the 2004 request?
- Was any additional contact made to those voters prior to the 2006 elections?
- How many of those 2006 absentee ballots (from the 2004 request) came back "Return as Undeliverable" from the Postal Service?
- How many came back voted?
- How many never came back?

I am planning on including this subject in my presentation on Sept 21 in St. Louis, which is before the close of the Public Comment period, so I will be able to further explain the value of this information.

Dear Ms. Otero,

Attached please find comments submitted by Project Vote responding to the "Draft 2006 Election Administration & Voting Survey" of the U.S. Election Assistance Commission.

Please confirm receipt, and please be certain to notify me if you have any problems opening up the attachment.

Many thanks.  
Sincerely,

Jo-Anne Chasnow

ATTN: Ms. Laiza N. Otero  
([lotero@eac.gov](mailto:lotero@eac.gov))

Dear Ms. Otero:

We are writing today to provide comments on the "Draft 2006 Election Administration & Voting Survey". Thank you for this opportunity.

- I. On Page 1, the survey provides a "definition" of a duplicate registration. However, a vital piece of the definition is missing: same birth date. Without matching birth date, it is impossible to definitively identify duplicate registrations. We encourage you to add the words "same birth date".
- II. We believe additional questions should be included as a subset of question #12 if the respondent answers "yes" in either of the two "yes" boxes. The first question we recommend that you include is "If yes, how often?" and the second is "When was the last training offered?" It is vitally important to know some details about training of public employees who are offering voter registration.
- III. We believe you should insert a question following question #16. Our recommended language is: "If the voter registration application is not successfully matched against any existing record, is the next step to assign the registrant with a unique identifying number? If not, what IS the next step?"
- IV. In question #18, there is a "yes" box, followed by "(If yes, please identify which states)." Please consider adding to the words within the parenthesis the following phrase: "and the elements that must 'match' to establish a duplicate". We further recommend a follow-up question: "If duplicates are found, how are those duplicates handled?"

009287

- V. In question #19, please add the word "all" between the word "Are" and the word "applicants", so that it reads "Are all applicants whose applications are rejected notified of the rejection and the reason for the rejection?"
- VI. We encourage you to reinsert a question that was asked in the prior survey, to be added after question #21: "Identify any restrictions on the acceptance of voter registration applications such as paper weight, fax, electronic, mail (for non-NVRA states), batch, third-party handling (changed from delivery to handling), etc." These sorts of restrictions have placed significant burden on many of the civic organizations engaged in voter registration across the country. A question soliciting information from the states would be very informative and encourage transparency.
- VII. We also encourage you to add another additional question here, related to acceptance of the national application: "Do all election jurisdictions in your state accept a completed National Mail-In application as a complete voter registration application?"
- VIII. It would appear that two sections of the previous survey have been entirely eliminated. One section is "Voter Registration Drives". Voter registration drives are a centerpiece of participatory democracy. But little by little the ability for these drives to function is being eroded. Specifically, we encourage including the following questions:
- a. "Does your State manage the number of applications given to the outside groups and the number and timing of the return of those forms by these non-governmental registration organizations. If so, how?"
  - b. "Does your State allow organizations to print additional copies of the state voter registration applications by photocopying a blank application?"
  - c. "Does your State use serial numbers or other identifying codes on voter registration applications given to non-governmental organizations or individuals in order to be able to identify who handled completed applications that are received by State and local officials?"
- IX. The other section that has been entirely eliminated is "Public Information". Confirmation of whether applicants have actually been placed onto the voter rolls, especially when a state does not have a public access portal, is critical, especially for voter registration organizations. It is vitally important to know if voter registration cards are available for public inspection; and with newly created statewide databases, to know if voter registration files are available for sale – and if so how much they cost.

Project Vote  
Comments on Draft Election Administration & Voting Survey  
September 29, 2006

We then recommend the following questions, included in the previous version of the survey, be included here as well:

- a. "Are voter registration records public information?"
  - b. "Are voter registration files available for sale to the public? If so, how much do they cost?"
- X. Finally, we encourage you to add a section specifically for the states to report the breadth of voting machine problems experienced in 2006. This will respond to the rash of problems that jurisdictions around the country have experienced with elections in the 2006 primaries and most likely will experience in the 2006 general elections.

Thank you for the opportunity to share these comments.

Sincerely,

Jo-Anne Chasnow  
Policy Director, Election Administration Program

Subject DRAFT 2006 Election Administration and Voting Survey

Laiza,

The one thing I have worried about since you shared this draft with us at the Standards Board Meeting in May is that election officials may not have adequate data to answer many of the questions that ask for information between Election Day 2004 through Election Day 2006. It seems to me that if you want data collected for a two year period, you need to tell the election officials about the expectation before the two year period begins.

Thanks,  
Michael

Subject comments on 2006 election administration survey

Laiza -

This survey has really improved. Someone has been working hard on this. I hope the attached comments are understandable and helpful. I was sorry to see that there are no questions on types of voting systems in use and identification of any problems, but maybe EAC is collecting that data from some other source. You can reach me at 703.532.0524 if you have questions. Good luck with the survey! There are many of us eagerly awaiting the results!

9/28/2006

COMMENTS ON DRAFT OF 2006 ELECTION  
ADMINISTRATION AND VOTING SURVEY

1. Recommend that "Voter Registration Applications" heading be changed to "Registered Voters", and that new heading "Voter Registration Application Processing" be inserted after question 2. Rationale: 1st 2 questions only refer to numbers of voters; other questions deal with application processing. Adjusting the headers helps the respondent navigate the instrument.
2. Recommend to move "Duplicate registration application ..." description to question 7 where it is referred to. Rationale: Use of ease for respondent by providing explanatory material where it is referenced.
3. In question 1, would it be clearer to use "at the conclusion of registration processing" or similar wording in place of "close of registration?" Rationale: Not all registrations are processed by the close of the registration period. I assume that the information sought is the final number of registered voters. This revised wording would also encompass Election Day registrations.
4. In question 2, should November 2, 2004 be added to get comparative data?
5. In question 6, what about applications generated by voter registration drives run by civic organizations and political parties? These constituted a big processing issue in 2004.
6. In question 7, it would be interesting to know the reason, for applications being rejected (in addition to being a duplicate, as noted).
7. In question 8, does "new, valid registrations *processed*" mean entered in to the voter database? Also, what is meant by "re-registrations across jurisdictional lines"? Is this a change of address?
8. Recommend that the words "conducting voter registration" in question 9 be replaced with "responsible for registering voters," as used in question 10. Rationale: This just makes clear that both questions are talking about the same function.
9. Capitalize Armed Forces in question 11 to be consistent with usage in question 6 (or vice versa!).
10. In question 12, it would be interesting to know which agencies are provided training for the "SOME, BUT NOT ALL" response.
11. In question 13, recommend that "official responsible for voter registration" be reworded to something like "election official responsible for approving voter registration applications." Rationale: This more clearly differentiates the election folks and their role from the other agencies involved. Also recommend that responses be divided into two categories: how delivered and what media used. For example, a tape could be delivered by courier, by hand (what's the difference between these two?), U.S. mail, inter-office mail, etc. Electronic delivery could be by fax, email, VPN. Ftp is missing as an important electronic means. Power Profile System needs to be explained. What are you trying to find out by this question? How quickly updates can be processed or how efficiently the process takes place? Not clear what one would learn from this set of responses. For

009292

example, a tape delivered manually that is compatibly formatted to run directly against the voter database would be much more efficient to process than an automated ftp that requires data format conversion.

12. In question 14, recommend that "forms" be replaced with "applications."  
Rationale: Consistent terminology. What is meant by "verifies"? Does it mean the official with authority to approve application? What is meant by "processes"? Is this merely data entry; does it include validation of any sort? Some local election offices have administrative personnel enter applications into electronic pending file via keystroking the data or scanning the form, and then a senior official reviews and approves for upload to voter registration file.
13. In question 15, recommend that "processed voter registration form" be replaced with "accepted (or approved) voter registration application." Rationale: Keeps terminology consistent and clear.
14. In question 16, recommend that parenthetical explanation be reworded to read: This refers to the process of verifying the information provided in the voter registration application. It does not refer to the process of verifying voter eligibility at the polling place. Rationale: Clarifies the language. Also, what does "Link" mean in the responses? The word "records" should be added to the end of the second and fifth responses. Social Security Administration should be capitalized. What is a "disposition notice"?
15. Recommend that wording in question 17 be changed to read: "What data fields are compared to identify duplicate registrations?" Rationale: This wording better suits the response choices given.
16. In questions 20 and 21, suggest that questions be further refined to identify nature of linkage, e.g., periodic batch ftp uploads, real-time transaction-based data transfer, etc. This begins to provide some interesting data.
17. Don't understand what is meant by the terms "electronically" and "manually" in the responses. Can you clarify?
18. In question 23, would be interesting to know if there are differences in what the state and local officials can do for the "Both" response.
19. Recommend that a heading such as REMOVING (OR PURGING) VOTERS FROM VOTER REGISTRATION DATABASE be inserted after question 23.  
Rationale: Ease of use for the respondent. This is the topic that the next several questions deal with.
20. Questions 24 and 28 seem to be asking for the same information with slightly different wording.
21. In question 25, need a citation for parenthetical [Section 8(d)(2) confirmation]. Is this NVRA?
22. In question 28, suggest you clarify what "moved outside of jurisdiction" means in first response. I assume it means left the state? Recommend that the word "registrations" be replaced with "voters" in the last response.
23. In question 29, aren't "car registrations" and "lists of automobile registrations" the same thing?
24. Recommend that next section heading be revised to "2006 ELECTION RESULTS". Rationale: I assume that the data sought is the official certified

- election results, not the preliminary election returns. Certified results are not available until 30 or so days after the election, as defined by state law.
25. In first line, change "Ballots" to "Ballot" for grammatical consistency with rest of sentence. Under Note:, delete "For" for grammatical correctness.
  26. Is "Ballots Counted" going to be a problem for election officials? As I understand it, normally ballots don't get counted, only votes get counted. Is EAC asking election officials to collect new data ? (There's nothing wrong with this, in my view) But if so, do election officials understand what's being asked for? (And maybe I'm just wrong in my understanding.)
  27. Description of "At the polls" is a bit confusing when the counting activity is included. Some jurisdictions have central count systems for voting machine results, so no ballots are counted at the polling place. Some jurisdictions send absentee ballots to the polling place to be counted, so all ballots are counted there. If you are trying to distinguish between polling place and absentee, maybe that can be accomplished by just saying where the ballot is voted and cast.
  28. Recommend that description of "Domestic civilian absentee ballot" be revised to something like the following. "Domestic civilian absentee voter refers to a non-military citizen who is otherwise eligible to vote, but is temporarily absent from their place of residence on election day, and meets their State's requirements to vote absentee."
  29. Recommend that "Domestic military citizen" be revised to something like: "Domestic military absentee voter is statutorily defined as: etc.,etc."
  30. Recommend that "Overseas military citizen" be revised to "Overseas military absentee voter is statutorily defined as: etc.", and that "Overseas civilians" be revised to "Overseas civilian absentee voter etc." These two descriptions should be moved to immediately follow the Domestic military absentee voter, so all descriptions of different categories of absentee voters are together.
  31. What about the category of permanent absentee voters? Many states have this designation for voters with medical conditions or disabilities that make it difficult for them to get to the polls, residents of nursing homes, etc. Since they are not absent from their place of residence they don't quite fit into the domestic civilian absentee category above. This is also a category where voting fraud is often an issue.
  32. Under "Early voting" description I would add the word "special" in the second line: "were no special eligibility requirements." Probably a nitpick, but avoids possible (but somewhat silly) interpretation that normal eligibility requirements don't apply.
  33. Recommend that FWAB description be revised to something like: Federal Write-In Absentee Ballot (FWAB) is an emergency absentee ballot available for use by military and overseas citizens when they have properly requested but have not received a regular absentee ballot from their local jurisdiction in time to return it before the deadline. I would move this description to follow provisional ballot.
  34. Would revise provisional ballot to something like: "Provisional ballot refers to a ballot issued to a voter at the polling place when their eligibility to vote has not been determined. Provisional ballots are prescribed by Section 302(a) of the Help America Vote Act."

35. Would it be possible to add further sub-questions to question 31? For those who answer yes, suggest you ask what is the time period, Also, what is the process, i.e., do voters have to go to clerk's office or are satellite locations provided, etc.? Since this is defined by state law it shouldn't be too hard to answer.
36. In question 32, I would split the responses as follows: (A) Ballots cast in person – at the polls, early voting, provisional ballots; and (B) Ballots cast absentee – domestic civilian absentee, domestic military absentee, overseas military absentee, overseas civilian absentee, FWAB
37. In question 35, I don't understand how "Ballot not timely received (absentee)" would be a reason to reject a provisional ballot? Similarly "Incomplete ballot form"? First of all, I don't really know what this means. If it means a ballot in which no votes have been cast for some of the races, that's not a reason to reject, because voters are not required to cast votes in all races for their ballot to be accepted.
38. Suggest that description of absentee voting is not needed if previous suggestions on rewording absentee voter categories are used. I think this description sort of misses the point of this voting option, which is not voting before Election Day (although true), but not being able to vote on Election Day due to inability to get to the polls – either through physical absence or for other state-defined reasons.
39. I think the correct term is "advance ballot" rather than "advanced ballot." Also appears in question 37.
40. In question 36, would add a column for Number Received and change Not Counted heading to Number Rejected. Would also ask for how many of each of these 4 categories of ballots were delivered to the voter and how many returned to the election office by mail, fax, email or courier.
41. In question 37, column heading for responses should be Number Received and Number Rejected.
42. Would use the same column headings for question 38.
43. In question 39, would change "Elector deceased" to "Voter deceased". Why introduce a new term? Would change "Elector voted early at the polls" to something like "Voter voted in person (either early voting or on election day)". Would add the word request to "No ballot request application on record". What does "Spoiled ballot" mean?

Comments on EAC 2006 survey.pdf

009296

September 28, 2006

ATTN: Ms. Laiza N. Otero  
US Election Assistance Commission  
1225 New York Avenue, NW., Suite 1100  
Washington, DC. 2005

Dear Ms. Laiza N. Otero:

We submit the following comments about the 2006 Election Administration and Voting Survey, pertaining to “c) ways to enhance the quality, utility, and clarity of the information to be collected.”

These comments are based on our experience conducting research with state and local election officials and in local election jurisdictions, both in terms of what data is possible to collect and what would be useful for research. Questions are referred to as ‘Q#’ in comments below.

#### Voter Registration Applications

Q4-Q6: It is likely that local election officials do not record if registrations come in by mail or in person, so it might be easier to make Q4 and Q5 optional. The same idea applies to Q6, that is, it is unlikely that the local election officials record where these additional registration forms come from; even if they do record which ones come from an outside agency, they will not necessarily specify the agency in all cases.

Q10. In the case of California, each county has either a County Clerk who is the Registrar or a Registrar, rather than two titles that “share responsibility for registering voters” the responsible party is called by different titles in different jurisdictions. The question could be worded more clearly along these lines “mark all possible titles of the individual in each jurisdiction that is responsible for registering voters.”

Q11. The usefulness and purpose of this question is not clear. The choices provided are a mix of what is required by law and what is a state option, which could lead to confusion in completing this and responses that do not reflect what the question is meant to measure.

#### Election Day Results

Q31. Early voting will likely vary across local jurisdictions and over time. For this question to illicit a more clear response, we recommend “Did any local jurisdiction in your state conduct early voting for the November 7, 2006 Election.” It also might help to ask the number of local jurisdiction that did conduct early voting.

Q32. This break down of ballots cast and of ballots counted by different methods, especially the five different forms of absentee ballots, will provide extremely useful information for understanding the different voting programs and their prevalence in each

009297

state. However, states that have a large number of jurisdictions may have difficulty getting this level of breakdown from each jurisdiction. While states should be encouraged to collect this, perhaps they should have instructions for compiling the results from less than all the jurisdictions (perhaps adding to their counts something like: "this is the number of ballots cast and counted in 40 out of 58 counties that provided this information").

Q35. This question will produce valuable information. However, it will be difficult for states to collect the number for each reason for each jurisdiction. We see that in the previous survey the question was simply "Identify the five most common reasons that provisional ballots were rejected," which did not require explicit counting of the reasons. We suggest offering an alternative way to report these reasons if the state is not able to count the incidence of each one. Also, "administrative error" could mean different things to different survey respondents. For that choice, we recommend something a little more specific about the kind of administrative error, such as "poll worker error," or a space to list the type of administrative error.

#### Absentee Ballots

We are confused by the definition of "absentee ballots," because in California any registered voter can request an absentee ballot without a reason or special qualification.

Q40. This data is only useful in the context of each state's laws. For example, do all states require that the ballot be notarized? Some require the registration form for military and overseas (FPCA) is notarized, but do they require that for the voted ballot as well?

#### Poll Workers

Q43-Q45. Collecting information on poll workers is very important; however, these three questions are too general to provide useful data. The previous survey asked for the required number of poll workers per precinct as established by law, and this question should be asked again, but with an option to give more than one answer. For example, in California the law is 3 workers per precinct, but for various reasons, such as language needs, voting technology, size of polling place, and precincts per polling place, the required number is more than 3 for certain precincts.

Also the counties in California have their own preferred level of staffing (often 4 or more) based on various needs at different polling places. In many cases, the legal minimum is not considered adequate staffing. For practical purposes, the success in staffing polling places is better reflected by evaluating how well they met their own perceived needs. The states could ask local jurisdictions to report some numbers on that question. For example, "how many precincts in your jurisdiction should have 3, 4, 5, and 6 workers at all times, and how many precincts did have that number."

If there are "split shifts" where two poll workers are hired for one day, then the number in Q44 will not be useful compared to the number in Q43. Q44 could read the number of "poll worker days served" so that two workers who split the day are counted as one.

Q45 will not necessarily produce useful answers because states will try to minimize this number; poll worker staffing is an extremely sensitive topic. Asking about actual staffing relative to preferred staffing (as suggested above) might be more productive than asking about compliance with the laws, and will still reflect difficulties with recruitment.

It would also be beneficial to ask more from states about poll workers than their total number hired and the adequacy of staffing levels. Some other important topics could be

- the five most common methods of recruitment,
- the five most common barriers to recruitment,
- the extent of problems with last minute dropouts and no-shows (such as the number per jurisdiction of individuals who were signed up but declined to work in the last week before the election or failed to show on Election Day), and
- whether any jurisdiction allows half day or multiple shifts.

#### Voting Jurisdictions and Polling Places

Q50. This question will be very difficult to answer, as it requires a "yes accessible" or "no not accessible" evaluation of thousands of polling places, rather than a degree of accessibility. Many polling places may be substantially more accessible than other polling places, but not completely ADA compliant on every measure. Also, many polling places are not accessible on their own, but are adapted by the elections office just for Election Day, and its unclear how to tease those out from others in this number. Q50 needs to be broken down into several questions or needs to include a more explicit definition of "accessibility" for the purposes of the question.

Q51. It is unclear why there is this question on visual impairment and not any other type of disability. It seems as though there should be a question on each major disability category or none at all. It is also unclear why any questions about voting equipment were dropped from this version of the survey. Asking about the number of "accessible voting machines" per polling place would be a better measure of accessibility to independent voting for voters with various disabilities. A measure of the prevalence of non-electronic accessibility devices must also be collected, in order to account for those jurisdictions which meet this requirement without "machines." Note that all states should answer in Q51 that all their polling places have the capacity for a visually impaired voter to cast a private ballot, as required by law. Because some jurisdictions use the "accessible" machines for all voters, the average number of accessible machines per polling place (for those jurisdictions which use machines for accessibility) should be more than one. That average would be an interesting number to compare across states, capturing both the uptake of accessible voting machines as well as the extent of accessibility. While we understand that the "accessibility" of different machine types is not absolutely confirmed, especially for all disabilities on all machines, collecting this data may still give a fairly good indication of the intent of jurisdictions to provide accessibility.

009299

Thank you for the opportunity to share our thoughts about this important survey of election administration. Please contact us if you have any questions about these remarks.

Subject Comments: DRAFT 2006 Election Administration & Voting  
Survey ( Michigan)

Greetings Ms. Otero: The following comments are offered with respect to the proposed 2006 Election Administration and Voting Survey released by the U.S. Election Assistance Commission (EAC) in August. We are directing our comments to your attention pursuant to the instructions published in the Federal Register on August 1, 2006.

In general terms, we find the data requests provided under the section of the survey entitled "2006 Election Day Results" overly detailed and ambiguous in places -- a problem noted in the 2004 Election Day Data Survey released by the EAC and the subject of much discussion at the meeting convened by the EAC on April 4, 2006 to review and critique the survey tool.

It bears note that despite the fact that Michigan's Qualified Voter File (QVF) system has been programmed to capture many of the data elements requested in the proposed EAC survey, it will still be necessary for this office to contact every local clerk in the state (i.e., Michigan's 1,516 city and township clerks) to collect key portions of the requested information.

This task will entail the analysis of the final version of the EAC survey to identify the data elements which must be collected from the city and township clerks, the development and design of our own survey tool, the distribution of the reformatted survey tool to the state's 1,516 local clerks, the compilation of the responses we receive, and the correction of any errors that we are able to identify in the compiled data. This is essentially the same procedure we followed when preparing our responses to the EAC's 2004 post-election surveys.

As you may be aware, we aggregated the data we collected after the 2004 general election by county given the complexity and burden such data collection exercises pose for Michigan. It is our intent to aggregate the data collected after the 2006 general election in the same manner when responding to the EAC's 2006 post-election survey.

In view of the above concerns, we strongly urge the simplification of the EAC's proposed 2006 post-election survey. As stands to reason, the more complex and ambiguous the data requests, the greater the chance for errors, confusion and unreliable results. Specific observations and recommendations are outlined below:

ITEM 32

1) Item 32 asks for the number of ballots "cast" at the polls and the number of ballots "counted" at the polls. Under the definitions, "ballots cast" means those ballots that have been submitted but not "verified and/or counted." Aside from the fact that a unique -- and therefore confusing -- definition has been given to the term "ballots cast," what would be an example of a ballot that has been "cast" at the polls but not "counted"? Would provisional ballots held for later evaluation fall into this category? (We note that there are separate data entry lines for "provisional ballots" later in the survey.)

2) In many cases, it is impossible for election officials to distinguish those

009301

ballots mailed to "domestic civilian" absentee voters from those ballots mailed to "domestic military" absentee voters. Consequently, any data that relies on the accuracy of this distinction would be highly unreliable.

3) Similarly, it is often impossible for election officials to distinguish those ballots mailed to "overseas military" absentee voters from those ballots mailed to "overseas civilian" absentee voters. Again, any data that relies on the accuracy of this distinction would be highly unreliable.

4) As you are aware, a Federal Write-In Absentee Ballot (FWAB) can be rejected for a variety of reasons -- including the fact that the voter returned the absentee ballot issued by his/her voting jurisdiction in time to be counted. Given the definition given to "ballots cast" (i.e., submitted but not counted), it would appear that the number of FWAB's that will fall under the "ballots cast" category will be alarmingly high and very misleading.

5) Again, given the definition of "ballots cast," would the "ballots cast" entry for provisional ballots under Item 32 be the same as the entry for the number of provisional ballots "rejected" under item 34?

ITEMS 36 and 38 (ITEM 37 does not apply in Michigan)

See comments above regarding the difficulty of accurately distinguishing ballots sent to "domestic civilian" absentee voters verses "domestic military" absentee voters and "overseas military" absentee voters verses "overseas civilian" absentee voters.

ITEMS 39 and 40

Requesting breakdowns of the specific reasons why absentee ballots mailed to "domestic civilian" absentee voters and "military and overseas" absentee voters were rejected would be tedious and burdensome data to document. Consequently, the accuracy of any data collected would be questionable.

Recommendation

Given the issues identified above, the simplification of the data requested under the "2006 Election Day Results" portion of the survey is strongly recommended. The following is suggested:

A) Number of voters who participated in the election (include all voters who attended the polls including those voters who were issued a provisional ballot; all voters who returned an absentee ballot which was counted; and all voters who submitted a FWAB which was counted).

B) Number of absentee ballots distributed to all voters.

C) Of the absentee ballots distributed to all voters, the number distributed to 1) voters within the territorial limits of the United States and 2) voters outside of the territorial limits of the United States.

D) Number of absentee ballots returned in time to be counted.

E) Of the absentee ballots returned in time to be counted, the number returned by 1) voters within the territorial limits of the United States and 2) voters outside of the territorial limits of the United States.

F) Number of absentee ballots which were rejected and not counted including those that were returned late.

G) Of the absentee ballots which were rejected and not counted, the number

009302

returned by 1) voters within the territorial limits of the United States and  
2) voters outside of the territorial limits of the United States.

H) Number of provisional ballots issued to voters.

I) Of the number of provisional ballots which were issued to voters, the  
number which were counted and the number which were rejected and not counted.

J) Number of Federal Write-In Absentee Ballots (FWAB's) submitted by 1)  
domestic military voters and 2) overseas military and civilian voters.

K) Of the number of Federal Write-In Absentee Ballots (FWAB's) which were  
submitted, the number which were counted and the number which were not  
counted.

Thank you for extending the opportunity to comment on the proposed survey.  
Please do not hesitate to contact this office if you have any questions  
regarding our comments.

Laiza N. Otero  
U.S. Election Assistance Commission  
1225 New York Avenue, N.W. Suite 1100  
Washington DC 20005

Dear Ms. Otero:

Thank you for the opportunity to provide comment on the proposed 2006 Election Administration and Voting Survey. My comments relate only to the "2006 Election Day Results" portion of the draft survey.

Applying the proposed definitions of "early voting" and "absentee voting" to Maryland's absentee voting laws<sup>1</sup>, the State has "early voting" and does not have "absentee voting." As a result, we would not be required to submit the information requested under the "Absentee Ballots" section of the survey (i.e., the number of requested and not counted absentee ballots, the number of rejected absentee ballots and the reasons for the rejections, etc.). I assume that this is an unintended consequence of the definitions.

If early voting is generally considered "in person" voting and absentee voting is typically conducted "by mail," perhaps the distinction between the two terms could be based on those criteria, instead of whether eligibility requirements exist. Alternatively, a footnote or parenthetical comment could be added under the "Absentee Ballots" section that requires states with "early voting" that is conducted generally by mail to complete this section, even though the definition is not technically met.

Question 32 asks for a breakdown of the ballots cast and ballots counted for domestic military citizens, overseas military citizens, and overseas citizens. It is important to note that statistics for these categories of voters can only be provided if the voters voted by absentee ballot. A voter who falls into one of these categories, is in Maryland on Election Day, and wishes to vote in person at the polling place will be counted as "at the polls." To clarify that these voters voted by absentee ballot, the report could refer to these categories as "Domestic military citizen absentee ballots," "Overseas military citizen absentee ballots," and "Overseas civilian absentee ballots." These descriptions would be similar to the description of "Domestic civilian absentee ballots."

<sup>1</sup> During the 2005 Legislative Session, the Maryland General Assembly passed legislation repealing the eligibility requirements for a voter who wishes to vote by absentee ballot. Under the new law, *any* voter may request an absentee ballot.

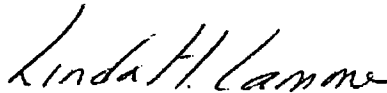

Letter to Ms. Otero  
Page 2  
September 29, 2006

Question 38 requests information about the number of Federal Write-In Absentee Ballots (FWABs) received. Question 36 requests the number of requested and rejected ("not counted") absentee ballots but specifically excludes FWABs. Question 40 is silent as to whether the reasons why any FWABs were rejected should be included, although the lack of responses specific to FWABs suggests that these ballots are not to be included. If Question 40 is **not** intended to report the rejection reasons for FWABs, there is no place to report the number of FWABs either counted or rejected. This will likely result in misleading absentee ballot statistics.<sup>2</sup>

To avoid this result, I suggest either: (1) including a separate question requesting the number of FWABs received, the number of FWABs rejected, and the reasons for the rejections; or (2) specifically including FWABs in Question 40. If the Election Assistance Commission includes a request for the number of rejected FWABs and the reasons why the ballots were rejected, rejection reasons specific to FWABs (i.e., "not registered" and "no ballot application on record") need to be included.<sup>3</sup>

Thank you again for the opportunity to comment on the proposed 2006 Election Administration and Voting Survey. If you have any questions about these comments, please contact Nikki Baines Trella at 410-269-2843.

Sincerely yours,

Linda H. Lamone  
State Administrator

<sup>2</sup> In responding to the 2004 Military and Overseas Absentee Ballot Survey, Maryland reported that the total number of absentee ballot returned was 9,538. As requested, this number did not include 1,768 FWABs received by local election officials in Maryland. We also reported that the total number of absentee ballots counted (including FWABs) was 10,205. By not including FWABs in the number of received absentee ballots, it looks like more absentee ballots were counted than were received.

<sup>3</sup> The Federal Voting Assistance Program's 2004 Post-Election Voting Survey of Local Election Officials included a specific question about the number of FWABs that were rejected and the reasons why the ballots were rejected. (See Question 8 of the survey.) Another rejection reason would be that the voter's State absentee ballot was voted and timely received.

MINNESOTA SECRETARY OF STATE OFFICE

Mary Kiffmeyer, Secretary of State

MEMORANDUM

Date: September 29, 2006

To: United States Elections Administration

From: Mary Kiffmeyer  
Minnesota Secretary of State

Re: Comments on Draft 2006 Election Administration and Voting Survey

First, as Minnesota Secretary of State, and on behalf of the State of Minnesota, I wish to commend the hard work of everyone who has contributed to developing the proposed Information Collection Activity.

I have provided comments on areas of the collection activity that I believe could benefit from revision. My hope is that you will find my commentary helpful, and that it will serve to enhance this activity. In response to the four questions presented, I make the following comments.

**(a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility;**

- Much of the information requested may have relevance for election administration. However, even though Minnesota has a well developed Statewide Voter Registration System, having had no notice that some of this information would be collected this election cycle means that some of this information has not been tracked in the past in a form which would provide an answer to the question.
- As examples, question (32) asks for a separate count of "Domestic Military Citizens," and "Overseas Military Citizens." Because the information requested on the Federal Post Card Application permits sending voting materials to a forwarding address, it is not always clear if a service member is overseas or not. In addition, question (36) asks for number of ballots "Not

009308

Counted.” Ballots “Not Counted” is not defined. Does it include ballots mailed out, but returned as undeliverable or not returned at all, along with rejected ballots? The answer to this question, as it is written, may give a misleading result.

- Question (39) requests information as to the reasons for the rejection of domestic civilian absentee ballots which is beyond the specific information maintained by the local election official. The reasons for rejection are noted by this state but placed into fewer categories in the state registration system than the expectation of this question. With notice, this information can be categorized as requested, but it cannot be done after the fact.
- Although question (45) asks the number of polling places “that did not have the required number of poll workers” for the election, it seems implausible that answers to a question of this type, i.e., asking a local election jurisdiction to admit it did not comply with state law, will result in an accurate answer.
- Questions (41) and (42) are to the number of undervotes and overvotes reported. However, currently, this information is not tracked in the system and cannot be tracked without redoing part of the system. With notice, this can be done, but it will require a substantial systemic change in the state which cannot be accomplished on such short notice, and so close to the 2006 election.

**(b) the accuracy of the agency’s estimate of the burden of the proposed information collection;**

- I believe this estimate underestimates the cumulative burden of the proposed information collection on all levels of election officials. Some of the information proposed to be collected has not been required to be tracked in the past so it may be unavailable. In addition, NVRA reporting requirements are now being placed upon all states as required reporting with this proposal, with no notice being given so states and local jurisdictions could begin collecting this information in a timely manner. In fact, as some of these requirements may increase election administration costs or conflict with current state statutory requirements; it may be necessary to amend current statutes to become consistent with these revised reporting requirements.
- In particular, proposed questions (25), (26), and (28) are not consistent with current state statutes and would place a heavy burden upon local election officials to research the answer.
- In addition, this state permits precincts to have combined polling places which would not readily appear in the Statewide Voter Registration System; so this total would have to be manually prepared this election cycle. If we had notice

that this information would be requested; the data could be entered into the system as part of routine data entry in the future.

**(c) ways to enhance the quality, utility, and clarity of the information to be collected; and**

- Provide longer notice of information which is to be sought so that systemic changes can be made prior to the request for the information.
- Permit states that do not come under the NVRA the option to respond to a question that information only required under the NVRA was not collected in that state, if that was the case, and waive the reporting requirement for that question at least until the succeeding election cycle. Those states can then begin collecting that information for the next reporting cycle.

**(d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.**

- Due to the close proximity of the 2006 election to the time when the proposed information collection activity was released for comment, the burden on respondents is significantly increased because not all of the information has been previously sought, nor collected. Consequently, when this collection activity is finalized, it will be too late for some of the information to be collected from voters by local election officials, placing an undue burden upon them for providing this information. This will be particularly burdensome on local offices with smaller staffs.
- Automated collection techniques, when coordinated with the information maintained in state registration systems, will enhance this process, and will relieve the burden on all officials affected.

**CONCLUSION**

On behalf of the State of Minnesota, as well as the citizens of the United States of America, I would like to thank the Elections Assistance Commission for allowing me to comment on the proposed Information Collection Activity. Your assistance in this process is to be commended. The integrity of not only our elections process, but that of our democracy is contingent upon setting forth standards that are based upon reliable information. This should be taken as an opportunity to bolster a system that will stand strong for generations to come. With that said, thank you for putting this process into motion, and I wish the Election Assistance Commission much success in these, and all future efforts.

## Before the U.S. Election Assistance Commission

### Notice of Information Collection Activity; Proposed Information Collection; Comment Request

#### Comments provided by Demos: A Network for Ideas & Action

##### I. Introduction

Demos: A Network for Ideas & Action submits these comments in response to the Election Assistance Commission's Notice of Information Collection Activity; Proposed Information Collection; Comment Request published at 71 *Fed. Reg.* 43477 (August 1, 2006). Demos is a non-profit, non-partisan think tank and advocacy center dedicated to helping America achieve its highest democratic ideals. Demos' primary interest in the EAC's Election Administration and Voting Survey is to create a survey instrument that accurately collects much-needed and usable data on elections.

Demos has a strong record of producing high quality research and conducting advocacy campaigns around several of the topics covered on the proposed survey. Through the NVRA Implementation Project, a collaboration to improve states' compliance with the public assistance provisions of the National Voter Registration Act, Demos has made extensive use of the EAC's (previously the Federal Election Commission's) biennial report on the impact of the NVRA. Demos also has assumed leadership in the national debate on Election Day registration, published several reports and mounted advocacy campaigns on felony disenfranchisement and published *Placebo Ballots: Will "Fail-safe" Voting Fail?*, one of the first reports to address HAVA's provisional ballot requirement. Additionally, Demos staff members have had significant graduate-level instruction and experience in survey construction. This work puts Demos in a unique position to speak to the types of data needed for the understanding of the electoral issues sought by the survey.

We offer the following recommendations with the hope that the EAC can further develop its role as a centralized clearinghouse for election-related data.

##### II. Data Gathered with Respect to the National Voter Registration Act

###### A. Additional Information Required

The EAC has the responsibility to administer a survey on the impact of the National Voter Registration Act. With respect to public assistance agencies, the current survey gathers the basic information, i.e. the number of registrations received from public assistance offices. However, additional information is necessary for more than a surface understanding of this voter registration activity. Collection of this additional information would greatly advance the survey's purpose to ascertain the impact of the law.

009313

Specifically, we encourage the EAC to request the following additional information:

- The number of applications, recertifications, and changes of address processed by public assistance agencies;
- How often a recipient of public assistance is required to recertify or renew her benefits;
- The percentage (or raw number) of agency interactions that are conducted via telephone, mail, or internet;
- The individual public assistance programs (e.g. Food Stamps, Medicaid, TANF) administered by each office designated as a public assistance agency; and
- The number of completed voter registration applications submitted by *each* public assistance office or agency.

The current survey does not provide us with the information necessary to contextualize the raw number of applications. We recommend that the survey ask for the number of applications, recertifications, and changes of address processed by each public assistance agency – a figure that represents the total number of transactions in which voter registration should have been offered under the NVRA.<sup>1</sup>

Raw numbers can be misleading without this information. For example, assume that a state registered 10 individuals in its public assistance offices. If that office only had 11 client interactions requiring an offer of voter registration services, it did a fantastic job. However, if 100,000 individuals completed NVRA-covered transactions, registering only 10 of these individuals may be indicative of a serious failure to implement the law. Furthermore, it is wholly possible that as office traffic rises faster than the number of applications completed, an increase in the raw number of applications is actually accompanied by a decrease in the percentage of clients completing voter registration applications.

In order to most accurately gauge an agency's NVRA-covered traffic flow, two additional pieces of information would be quite helpful. It is important to know what percentage (or the raw number) of an agency's interactions are conducted via telephone, mail, or Internet. While some states require voter registration to be offered to clients interacting remotely, many do not. Additionally, information on how often a recipient is required to renew or recertify benefits will be useful in understanding how many times a single recipient is offered the opportunity to register.

Collecting the above information relating to office traffic is not likely to place an undue burden on public assistance agencies. We know that the federal government already requires agencies to track much of this information for the Food Stamp program and we suspect that it may be tracked for Medicaid and WIC as well. Even if Food Stamps was the only program for which this data were available, its traffic flow could serve as a proxy measurement for general public assistance use.

---

<sup>1</sup> This information is different than agency caseload, a number that does not capture recertifications, changes of address or initial applicants who were denied benefits but who are still required to be offered the opportunity for voter registration upon application. Nevertheless, caseload data would be preferable (as an indicator of covered transactions) to nothing.

Finally, we urge the EAC to seek two additional pieces of information to ensure that voter registration services are being offered at public assistance agencies: (1) identification of individual programs (e.g. Food Stamps, Medicaid, TANF) administered by each office designated as a voter registration agency; and (2) the number of completed voter registration forms submitted by *each* public assistance agency or office. Collecting such information would help ensure that all covered programs are offering voter registration and facilitate identifying offices that may be having difficulties or are especially successful in implementing the law.

B. Existing Questions

Drawing on our knowledge of effective surveying, we offer the following additional comments about the survey's format and language used in questions relating to the National Voter Registration Act.

**Question 6** asks for the number of registration applications received from or generated by several categories of designated voter registration agencies including "All public assistance agencies that are mandated as registration sites under the NVRA." **Question 11** asks elections officials to identify "each and every" state "office or agency" that is designated as a voter registration agency.

We recommend moving Question 11 toward the beginning of the survey so that it appears before Question 6, as it did in the survey instrument used in the previous EAC report. This proposed ordering will require officials to list relevant NVRA agencies *before* tallying the total number of applications received from such agencies.

In addition, the format of the list of categories that follows Question 11 looks more like a multiple-choice check-off than a template for a listing of designated agencies. The current placement of the question next to others in which similarly formatted answer templates actually *are* multiple choice check-offs adds to the assumption that Question 11 should be answered similarly. We suggest that the answer to this question be reformatted to make clear to respondents that they need to list all agencies for each category listed.

Finally, the request for a listing of "each and every state and local government *office or agency* designated as a voter registration agency" in **Question 11** is vague and subject to multiple interpretations. For example, a respondent could list the name and address of each *office* (meaning the physical building) that is designated as a voter registration agency. Alternately, a respondent could simply list "Department of Social Services," meaning the abstract *agency* with multiple physical *office* locations that administer assistance. In order to maximize the usefulness of the survey, we recommend that respondents list the overarching agencies designated as providing public assistance (i.e. Department of Social Services) as well as the address of each physical office building at which registration is conducted.

**Question 7** asks for the "Total number statewide and by county/local jurisdiction of registration applications identified in response to Question 6 [regarding different designated

voter registration agencies] that were: Duplicates of other valid voter registrations; Changes of address, name, or party; or Invalid or rejected (other than duplicates).”

From the wording and context of Question 7, it is not clear if the category for “Changes of address, name, or party” is meant to include all such changes or only those making these changes within their local jurisdiction. Since Question 8 (asking for the number of new, valid registrations) specifies that name, address changes, and changes of party within the local jurisdiction are *not* to be counted as “new, valid registrations,” it seems that a voter changing an address *outside* of their jurisdiction would be counted as “new” under Question 8 rather than a change of address under Question 7. If this is the case, Question 7 of the survey should clarify that respondents should report only the number of address, name, or party changes within the local jurisdiction.

Without this clarification, it is entirely possible that the same application might be counted in more than one category, e.g. a change of address outside the local jurisdiction might be counted as both a new registration and also a name, address, and party change. The possibility of this double-counting will reduce the value of the data collected. Furthermore, this ambiguity may lead to different interpretations in different states, hindering meaningful cross-state comparisons.

**Question 12** inquires about the voter registration training provided to employees of designated voter registration agencies. The proposed multiple choice answers are helpful in that respondents must clearly state the level of training that is provided. For the second answer listed (stating that the office conducts training for “some, but not all” agencies), we recommend inserting a follow-up question asking for which agencies training is provided. A common theme in the NVRA Implementation Project’s work in public assistance agencies is that front line agency workers are not provided adequate training on voter registration procedures. A question asking to whom training is provided would be helpful in understanding why a state may or may not be successful in implementing the NVRA.

### **III. Data Gathered with Respect to Election Day Registration**

As registration deadlines may pose a barrier to a significant number of citizens who wish to cast a ballot, it is important for policy reasons that we have an accurate count of the number of citizens who utilize policies allowing them to register and cast a ballot on the same day.

**Question 2** asks for the total number of persons in each county/jurisdiction who registered to vote on Election Day. The survey states this question is “Only applicable to states with Election Day registration (Idaho, Maine, Minnesota, New Hampshire, Wisconsin, and Wyoming).” We suggest that Montana be included among the list of states to answer this question. In 2005, Montana passed a law allowing its citizens to register and vote on Election Day at the county election administrator’s office. *See* Mont. Code Ann. § 13-2-304 (effective July 1, 2006). This law will be fully implemented in the November 7, 2006 General Election. A comprehensive count of the number of citizens who utilize Election Day registration should include the number of voters in Montana who register and vote on Election Day.

In addition, several states, including five states that have Election Day registration, also allow what we have termed “same day registration.” Under this system a citizen may register to vote and cast a ballot on the same day during periods of early voting. To further gain an understanding of how many voters register and vote in the same day, it would be helpful to add the following question:

“If your state allows early voting, how many citizens registered to vote and cast a ballot on the same day during the period of early voting?”

#### **IV. Data Gathered with Respect to Felon Disfranchisement**

Felon disfranchisement laws are often complicated and a recent study<sup>2</sup> indicates many elections officials themselves do not completely understand the laws. We are concerned that the wording of the series of questions relating to felon disfranchisement will cause more confusion among those completing the survey and those utilizing its results. Our comments and recommendations to avoid such confusion follow below.

**Are the following classes of persons eligible to vote?**

**A1) Those who have been convicted of a felony?**

- Yes
- No

A simple “yes” or “no” response to this question cannot accurately capture most states’ laws. “Those . . . convicted of a felony” is a “class of persons” that may include both those able and unable to vote within a single state.

In New York, for example, only those incarcerated or on parole for a felony conviction are barred from voting. Those on probation, even if for a felony conviction, remain eligible to vote. Those “convicted of a felony” who have completed their sentence of incarceration also *can* vote. So how should a New York official answer this question? Answering “yes” (as would seem to be required since a certain number of those convicted of a felony can vote) would void Question A2, which we do not believe is the intention of the Commission nor the best way to ascertain information about a state’s felon disfranchisement practices.

A recent study<sup>3</sup> has documented a widespread belief in affected communities in several states (including New York) that a felony conviction permanently bars an individual from voting even when that is not the case. We fear that the inclusion of this question will further perpetuate

---

<sup>2</sup> See “Boards of Elections Continue Illegally to Disfranchise Voters with Felony Convictions” (2006) by the Brennan Center for Justice at the NYU School of Law and Demos: A Network for Ideas & Action, available at <http://www.demos.org/pubs/NYSurveyReport031506.pdf>.

<sup>3</sup> See “Studies of Voting Behavior and Felony Disenfranchisement Among Individuals in the Criminal Justice System in New York, Connecticut, and Ohio” (2005) by Ernest Drucker and Ricardo Barreras, available at <http://www.sentencingproject.org/pdfs/drucker.barreras.pdf>.

misinformation about felon voting laws. We recommend alternative language for the question, which we have provided at the end of this section.

**A2) If “No”, are they eligible to register or re-register upon pardon, issuance of certificate of eligibility, or restoration of their Civil Rights?**

As with A1, the phrasing of this question does not capture the nuances of state felon disfranchisement laws. As a result, different respondents are likely to interpret questions differently, thereby reducing meaningful use of the survey results.

First, the question refers to the “restoration of Civil Rights” but, in many states, restoration of *civil* rights is much different than, and not necessarily connected to, restoration of *voting* rights. In New York, for example, a felon’s voting rights are automatically restored upon completion of the sentence of incarceration or discharge from parole, whereas restoration of civil rights would be applied for at a later time. At least in the case of New York, asking about restoration of civil rights does not seem to make much sense.

Similarly, there is a good deal of variation among state laws on certificates of eligibility and other similar certificates that the survey’s language does not capture. Using New York as an example once more, those on parole can apply for a Certificate of Relief from Disabilities, which would allow them to vote while still on parole. This is much different than a policy that requires application for a certificate of relief after completion of the individual’s entire sentence.

Finally, the inclusion of pardon, issuance of certificate of eligibility, and restoration of Civil Rights together does not provide any valuable information when presented as a “yes” or “no” question. A pardon, which is generally granted by a governor, is much different from a certificate of eligibility in which an individual must often navigate a complex set of bureaucratic procedures to obtain. Finally, in a state like New York, asking about restoration of civil rights is largely meaningless, as a felon would likely have finished serving her sentence (and thus have had her voting rights automatically restored) prior to applying for restoration of civil rights.

The remainder of the questions regarding felony disfranchisement laws is also confusing. We propose the following clearer and more user-friendly set of questions:

- Does your state currently disfranchise:
  - Individuals who are currently incarcerated for a felony conviction? Yes No
  - Those currently on parole for a felony conviction? Yes No
  - Those currently on probation for a felony conviction? Yes No
- Can an individual disfranchised for a felony conviction ever regain the right to vote? Yes No
  - If yes, what are the requirements for voting rights restoration?
    - Completion of sentence of incarceration
    - Discharge from parole and/or probation
    - A pardon
    - Other \_\_\_\_\_

- Does an individual disfranchised due to a felony conviction have to pay all fines, fees, and/or child support prior to having her or his voting rights restored?
- Does an individual whose voting rights have been restored have to produce documentation of her status when registering to vote?
- Who notifies elections officials to remove an individual from the voting rolls due to a felony conviction?
- If applicable, are elections officials notified when an individual convicted of a felony is once again eligible to vote?
  - If yes, how are elections officials notified of this change in eligibility?

## V. Data Gathered With Respect to Provisional Ballots

According to the EAC, in the 2004 election, elections officials ultimately rejected over half a million provisional ballots. To date, we know very little about why so many provisional ballots were rejected. There has been no systematic analysis of the specific reasons why provisional ballots were not counted. It is essential that this information be compiled to allow clear insight into the effectiveness of provisional ballots.

While it is a significant improvement to ask respondents for the number of rejected ballots categorized by the reason for rejection, rather than asking for the five most frequent reasons why a ballot was rejected (as was done on the previous survey), the response categories proposed under **Question 35** are not mutually exclusive. A fundamental principle in creating survey questions of this sort is that each response should fit into one, and only one, category. Here it is possible for the same provisional ballot to be accurately counted in multiple categories. For example, it is not clear what the difference is between the categories labeled “Name missing from voter list” and “Not registered.” If a person’s name were missing from the voter list, it would also follow that the same person could also be considered to be “not registered.” In another case, if someone does not produce ID at the polls and fails to return with ID within 24 hours, do they belong in the category of “No identification provided” or “Non-appearance within 24 hours”? Also, some states may allow a voter longer than 24 hours to appear with ID. Such ambiguity will make it difficult to create meaningful cross-state comparisons.

Finally, we are doubtful that some of the categories listed are indeed reasons to lawfully reject a provisional ballot. For example, can a provisional ballot be rejected because the voter is a “First time voter registration on Election Day”? In such an instance, the ballot would likely be rejected because the registrant did not have the proper ID to register at the polls on Election Day and was not able to subsequently provide adequate ID, rather than simply because the voter registered for the first time on Election Day. Another suspect category is that of “Elector challenged.” An elector being challenged would be a reason to cast a provisional ballot, not to have that ballot rejected.

## VI. Conclusion

Demos is encouraged by the EAC’s dedication to becoming a national clearinghouse on election data. We applaud the Commission’s efforts in combining and revising its various

survey instruments in a manner that captures accurate information. We urge the EAC to adopt our suggestions to clarify the questions asked of elections officials and to provide the data necessary to accurately evaluate and improve our electoral system.

Subject Comment on EAC's 2006 Election Information and Voting  
survey

This comment is submitted in response to the request in the Federal Register, Document 06-6602

[http://eac.gov/eav\\_survey.asp](http://eac.gov/eav_survey.asp)

Questions about audits are completely missing from the proposed 2006 Election Information and Voting survey. Audits are critical to the security of elections and voter confidence, and insights and feedback on current audit practice is sorely needed so they can be improved.

The following information, at a minimum, should be provided for each county or other voting jurisdiction.

- 1) Was a post-election audit of election results performed?
- 2) How many electronic voting devices were used in the election?
- 3) How many electronic voting devices were audited?
- 4) Were all contests per device audited, or just some of them? How many?
- 5) How many problems or issues arose during the audits?
- 6) How were the issues resolved?
- 7) Was your audit designed to help also detect problems with your central tally equipment?

More information on problems with current audit procedures is available at

<http://www.coloradovoter.net/moin.cgi/ManualCountAudit>

Thank you,

Neal McBurnett

<http://mcburnett.org/neal/>

**Abstract:** This is the third of three clearance packages for the NAEP 2007 assessment activities. This package covers two studies intended to study measures of student background characteristics. These are a new set of questions for students to respond to and a study looking at a potential link to census block level information.

Requests for copies of the information collection submission for OMB review may be accessed from <http://edicsweb.ed.gov>, by selecting the "Browse Pending Collections" link and by clicking on link number 3163. When you access the information collection, click on "Download Attachments" to view. Written requests for information should be addressed to U.S. Department of Education, 400 Maryland Avenue, SW., Potomac Center, 9th Floor, Washington, DC 20202-4700. Requests may also be electronically mailed to [ICDocketMgr@ed.gov](mailto:ICDocketMgr@ed.gov) or faxed to 202-245-6623. Please specify the complete title of the information collection when making your request.

Comments regarding burden and/or the collection activity requirements should be electronically mailed to [ICDocketMgr@ed.gov](mailto:ICDocketMgr@ed.gov). Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

## ELECTION ASSISTANCE COMMISSION

### Information Collection Activity; Proposed Information Collection; Comment Request

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice.

**SUMMARY:** In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, EAC announces the proposed extension of a public information collection and seeks public comment on the provisions thereof. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use

of automated collection techniques or other forms of information technology.

**DATES:** Written comments must be submitted on or before Friday, September 29, 2006.

**ADDRESSES:** Written comments and recommendations on the proposed information collection should be sent to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005. ATTN: Ms. Laiza N. Otero (or via the Internet at [lotero@eac.gov](mailto:lotero@eac.gov)).

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the above address or call Mrs. Juliet Thompson-Hodgkins or Ms. Laiza N. Otero at (202) 556-3100. You may also view the proposed collection instrument by visiting our Web site at <http://www.eac.gov>.

#### SUPPLEMENTARY INFORMATION:

**Title and OMB Number:** 2006 Election Administration and Voting Survey; OMB Number Pending.

**Needs and Uses:** This proposed information collection activity is necessary to meet requirements of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Section 241 of HAVA requires the EAC to study and report on election activities, practices, policies, and procedures, including methods of voter registration, methods of conducting provisional voting, poll worker recruitment and training, and such other matters as the Commission determines are appropriate. In addition, HAVA transferred to the EAC the Federal Election Commission's responsibility of biennially administering a survey on the impact of the National Voter Registration Act (NVRA). The information the States are required to submit to the EAC for purposes of the NVRA report are found under Title 11 of the Code of Federal Regulations (Chapter 1, Part 8, Subchapter C). HAVA 703(a) also amended the Uniformed and Overseas Citizens Absentee Voters Act by requiring that "not later than 90 days after the date of each regularly scheduled general election for Federal office, each State and unit and local government which administered the election shall (through the State, in the case of a unit of local government) submit a report to the Election Assistance Commission (established under the Help America Vote Act of 2002) on the combined number of absentee ballots transmitted to absent uniformed services voters and overseas voters for the election and the combined

number of such ballots which were returned by such votes and cast in the election, and shall make such a report available to the general public." In order to fulfill these requirements and to provide a complete report to Congress, the EAC is seeking information relating to the period from the close of registration for the November 2, 2004, Federal general election until the close of registration for the November 7, 2006, Federal general election, and information from the November 7, 2006, Federal general election.

**Affected Public:** State government.

**Number of Respondents:** 55.

**Responses per Respondent:** 1.

**Estimated Burden per Response:** 91 hours.

**Estimated Total Annual Burden**

**Hours:** 728.50 hours.

**Frequency:** Biennially.

To improve and facilitate the collection and analysis of the survey data, the EAC anticipates developing and implementing an Internet-based platform to administer the survey. This method will allow respondents to enter, save, and edit data prior to submitting their final survey response. The following categories of information are requested on a state level and/or county/local election jurisdiction:

#### Voter Registration Applications

(a) Number of active and inactive registered voters at the time of the close of registration for the November 2, 2004, and the November 7, 2006, Federal general elections; (b) Number of persons who registered to vote on Election Day (November 7, 2006)—only applicable to States with Election Day registration; (c) Number of voter registration applications received from all sources during the period between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; (d) Number of voter registration applications received by mail during the period between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; (e) Number of voter registration applications received in person at the clerk or registrar's office during the period between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; (f) Number of voter registration applications received or generated by each voter registration agency during the period between the close of registration for the November 2, 2004, Federal general elections until

close of registration for the November 7, 2006, Federal general elections; (g) Number of voter registration applications that were duplicates of other valid voter registrations, changes of name, changes of address, changes of party, and invalid or rejected (other than duplicates); (h) Number of new, valid voter registration applications processed between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; Number of election jurisdictions conducting voter registration; (i) The local entity primarily responsible for registering voters; State and local government offices or agencies designated as voter registration agencies; (j) Training provided to employees of Federal, State, and local government offices or agencies designated as voter registration agencies on the voter registration process; (k) Manner in which voter registration applications are transferred from voter registration agencies to the official responsible for voter registration; Official responsible for verifying and processing voter registration forms; (1) Number used as the voter identification number on the processed voter registration form; Manner in which voter registration applications are verified; (m) Manner in which voter registration officials check for duplicate registrations; Notification to applicants of rejection of their application and reason for the rejection; and (n) Manner in which the statewide voter registration database links to a State's department of motor vehicles and disability and social services agencies.

#### List Maintenance

(a) Manner in which list maintenance is performed; Number of registrations deleted from the registration list for whatever reason between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; (b) Number of removal notices [Section 8, (d)(2) confirmation] mailed out between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; (c) Number of responses received to the confirmation notices mailed out between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general elections; (d) Number of voters moved to the inactive list between the close of registration for the November 2, 2004, Federal general elections until close of

registration for the November 7, 2006, Federal general elections; (e) Number of voters (active and inactive) removed from the voter rolls between the close of registration for the November 2, 2004, Federal general elections until close of registration for the November 7, 2006, Federal general election; (f) Sources considered in performing list maintenance; and (g) Manner in which voters convicted of a felony, voters serving a sentence of incarceration for conviction of a felony, and voters serving a term of probation following being convicted of a felony are treated.

#### 2006 Election Day Results

(a) Identification of States that conduct early voting; (b) Statistics on ballots cast and ballots counted by mode of voting; (c) Statistics on ballots counted for each candidate on a Federal race; and (d) Statistics on provisional ballots.

#### Absentee Ballots (for the November 7, 2006, Federal General Election Only)

(a) Statistics on absentee ballots requested and not counted by type of absentee voter; (b) Statistics on advanced ballots; (c) Statistics on the number of Federal Write-In Absentee Ballots (FWAB) received; and (d) Statistics on absentee ballot rejections.

#### Undervotes and Overvotes (for the November 7, 2006, Federal General Election Only)

(a) Statistics on the number of undervotes reported in each Federal contest; and (b) Statistics on the number of overvotes reported in each Federal contest.

#### Poll Workers (for the November 7, 2006, Federal General Election Only)

(a) Information on the number of poll workers required by State law or regulation to be present at each polling place; (b) Statistics on the number of poll workers that served on Election Day; and (c) Number of polling places that did not have the required number of poll workers.

#### Voting Jurisdictions and Polling Places (for the November 7, 2006, Federal General Election Only)

(a) Information on what constitutes a local election jurisdiction in the State; (b) Number of local election jurisdictions in the State; Statistics on the number of precincts; (c) Statistics on the number of polling places; (d) Number of polling places that are accessible to voters with disabilities; and (e) Number of polling places where a visually impaired voter can cast a private ballot.

#### Sources of Information

(a) Number of jurisdictions that provided information to the State for purposes of responding to the survey; (b) Contact information for each local election official that provided information to the State for purposes of responding to the survey; and (c) Other sources of information used to respond to the survey other than those already provided.

**Thomas R. Wilkey,**

*Executive Director, U.S. Election Assistance Commission.*

[FR Doc. 06-6602 Filed 7-31-06; 8:45 am]

BILLING CODE 6820-KF-M

#### DEPARTMENT OF ENERGY

[OE Docket No. EA-267-A]

#### Application To Amend Authority To Export Electric Energy; Conectiv Energy Supply, Inc.

**AGENCY:** Office of Electricity Delivery and Energy Reliability, DOE.

**ACTION:** Notice of application.

**SUMMARY:** Conectiv Energy Supply, Inc. (CESI) has applied to amend its authority to transmit electric energy from the United States to Canada pursuant to section 202(e) of the Federal Power Act.

**DATES:** Comments, protests, or requests to intervene must be submitted on or before August 16, 2006.

**ADDRESSES:** Comments, protests or requests to intervene should be addressed as follows: Office of Electricity Delivery and Energy Reliability, Mail Code: OE-20, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585-0350 (FAX 202-586-5860).

**FOR FURTHER INFORMATION CONTACT:** Ellen Russell (Program Office) 202-586-9624 or Michael Skinker (Program Attorney) 202-586-2793.

**SUPPLEMENTARY INFORMATION:** Exports of electricity from the United States to a foreign country are regulated and require authorization under section 202(e) of the Federal Power Act (FPA) (16 U.S.C. 824a(e)).

On July 18, 2002, the Department of Energy (DOE) issued Order No. EA-267 authorizing CESI to transmit electric energy from the United States to Canada as a power marketer using international transmission facilities located at the United States border with Canada. That authorization expired on July 18, 2004.

On July 7, 2006, CESI filed an application with DOE to renew the

009323

Impact Statement (DEIS) that evaluates the potential environmental effects of the land use agreement between the DON and the VA National Cemetery Administration (NCA) for the proposed annex to the existing Fort Rosecrans National Cemetery at Point Loma in San Diego, CA. The DEIS also evaluates the potential effects of construction and operation of the proposed cemetery annex. The annex would be located at MCAS Miramar, in San Diego, CA.

The purpose of the proposed action is to provide needed burial space on federal land for military veterans in the San Diego area. The DEIS addresses the proposed site (Site 2), one on-site development alternative (Site 4), and the No Action Alternative.

The DEIS evaluates the potential environmental effects associated with each of the alternatives. Issues addressed in the DEIS include land use, socioeconomic/environmental justice, utilities, public services, visual resources, cultural resources, biological resources, soils and geology, water resources, public health and safety, traffic/circulation, air quality, and noise. Impact analyses include an evaluation of direct, indirect, short-term, and cumulative impacts.

**DATES:** All written comments must be received on or before December 11, 2006. A public meeting will be held on Thursday, November 16, 2006, from 6 p.m. to 8 p.m. at the Holiday Inn Select Miramar, 9335 Kearny Mesa Road, San Diego, CA.

**ADDRESSES:** Written comments should be directed to: Ms. Hiphil S. Clemente (Code OPCE.HC), Naval Facilities Engineering Command, Southwest, 1220 Pacific Highway, San Diego, CA 92132.

**FOR FURTHER INFORMATION CONTACT:** Ms. Hiphil S. Clemente, Naval Facilities Engineering Command, Southwest at telephone 619-532-3781, fax 619-532-4160, or e-mail: [hiphil.clemente@navy.mil](mailto:hiphil.clemente@navy.mil).

**SUPPLEMENTARY INFORMATION:** The VA operates the Fort Rosecrans National Cemetery, located on the Point Loma Submarine Base. It is the only national cemetery in San Diego County and has been closed to casketed burials since 1966. It is scheduled to be closed to cremated remains burials by 2008 and has no additional land available for expansion. The NCA has identified a need for additional burial space option for 253,000 San Diego-area eligible military veterans for the next 20 to 30 years.

A Notice of Intent to prepare the DEIS was published in the **Federal Register** on October 4, 2005. A public scoping meeting was held on November 2, 2005,

at the Holiday Inn Select located at 9335 Kearny Villa Road in San Diego, CA.

The DEIS addresses the proposed site (Site 2), one on-site development alternative (Site 4), and the No Action Alternative. The Site 2 Alternative is located in the northwestern corner of MCAS Miramar. This site is approximately 323 acres and has access to Miramar Road to the north and Nobel Drive to the northwest. The site is bounded by Miramar Road to the north, the commuter/freight railway to the south and east, and the western boundary of MCAS Miramar to the west. The Site 4 Alternative is located in the south-central portion of MCAS Miramar in the former Camp Elliott area and is approximately 175 acres. The site is completely surrounded by freeways with State Route 163 to the west, State Route 52 to the south, and Interstate 15 to the east. Kearny Villa Road traverses the site in a north-south direction. The DEIS identifies the Site 2 Alternative as the Preferred Alternative.

The DEIS has been distributed to various federal, state, and local agencies, elected officials, special interest groups, and interested parties. The DEIS is also available for public review at the following local libraries:

Scripps Miramar Ranch Library, 10301 Scripps Lake Drive, San Diego, CA.

Mira Mesa Branch Library, 8405 New Salem Drive, San Diego, CA.

San Diego Central Library, 820 E Street, San Diego, CA.

The public review period begins with the publication of this Notice of Availability and ends 45 days after. All comments must be received on or before December 11, 2006. A public meeting will be held on Thursday, November 16, 2006, from 6 p.m. to 8 p.m. at the Holiday Inn Select Miramar, 9335 Kearny Mesa Road, San Diego, California. The public meeting will follow an informal open house format. The public is invited to attend the meeting at their convenience during the meeting hours and can view project-related displays and speak with DON and VA representatives. A court reporter will be available at the meeting to accept oral comments.

Dated: October 26, 2006.

## ELECTION ASSISTANCE COMMISSION

### Information Collection Activity; Proposed Information Collection; Comment Request

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** 30-Day Notice of Information Collection Under Review.

**SUMMARY:** The U.S. Election Assistance Commission has submitted the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995. The information collection was previously published in the **Federal Register** on August 1, 2006, at 71 FR 43457. The notice allowed for a 60-day public comment period. Fourteen comments were received on this information collection, and modifications were made to improve and clarify the information collection based on those comments. The purpose of this notice is to allow an additional 30 days for public comments. Comments are encouraged and will be accepted until November 27, 2006. This process is conducted in accordance with 5 CFR 1320.10. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

**DATES:** Written comments must be submitted on or before November 27, 2006.

**ADDRESSES:** Written comments and recommendations on the proposed information collection should be sent to: OMB Reviewer: Alexander T. Hunt, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, (202) 395-7316.

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please, write to the above address or call Mrs. Juliet Thompson-Hodgkins or Ms. Laiza N. Otero at (202) 566-3100.

**SUPPLEMENTARY INFORMATION:**

009324

*Title and OMB Number:* 2006 Election Administration and Voting Survey; OMB Number Pending.

*Needs and Uses:* This proposed information collection activity is necessary to meet requirements of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Section 241 of HAVA requires the EAC to study and report on election activities, practices, policies, and procedures, including methods of voter registration, methods of conducting provisional voting, poll worker recruitment and training, and such other matters as the Commission determines are appropriate. In addition, HAVA transferred to the EAC the Federal Election Commission's responsibility of biennially administering a survey on the impact of the National Voter Registration Act (NVRA). The information the States are required to submit to the EAC for purposes of the NVRA report are found under Title 11 of the Code of Federal Regulations (Chapter 1, Part 8, Subchapter C). HAVA § 703(a) also amended the Uniformed and Overseas Citizens Absentee Voters Act by requiring that "not later than 90 days after the date of each regularly scheduled general election of Federal office, each State and unit of local government which administered the election shall (through the State, in the case of a unit of local government) submit a report to the Election Assistance Commission (established under the Help American Vote Act of 2002) on the combined number of absentee ballots transmitted to absent uniformed services voters and overseas for the election and the combined number of such ballots which were returned by such voters and cast in the election, and shall make such a report available to the general public." In order to fulfill these requirements and to provide a complete report to Congress, the EAC is seeking information relating to the period from the close of registration for the November 2, 2004, Federal general election until the close of registration for the November 7, 2006, Federal general election, and information from the November 7, 2006, Federal general election.

*Affected Public:* State government.

*Number of Respondents:* 55.

*Responses per Respondent:* 1.

*Estimated Burden Per Response:* 115.07 hours.

*Estimated Total Annual Burden Hours:* 6,328.85 hours.

*Frequency:* Biennially.

## DEPARTMENT OF ENERGY

### Office of Science; Climate Change Science Program Product Development Advisory Committee

**AGENCY:** Department of Energy.

**ACTION:** Notice of open meeting.

**SUMMARY:** This notice announces a meeting of the Climate Change Science Program Product Development Advisory Committee. Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of these meetings be announced in the **Federal Register**.

**DATES:** Wednesday, November 15, 2006, 1 p.m. to 4 p.m.

**ADDRESSES:** Room 109, Keck Center of the National Academies, 500 Fifth St., NW., Washington, DC 20001.

**FOR FURTHER INFORMATION CONTACT:** Dr. Anjali S. Bamzai (301-903-0294; [anjali.bamzai@science.doe.gov](mailto:anjali.bamzai@science.doe.gov)) Designated Federal Officer, Climate Change Science Program Product Development Advisory Committee, U.S. Department of Energy, Office of Science, Office of Biological and Environmental Research, Climate Change Research Division, SC-23.3/Germantown Building, 1000 Independence Avenue, SW., Washington, DC 20585-1290. The most current information concerning this meeting can be found on the Web site: <http://www.science.doe.gov/ober/cpdac/announcement.html>.

**SUPPLEMENTARY INFORMATION:**

*Purpose of the Meeting:* To continue discussions on drafting the Climate Change Science Program (CCSP) Synthesis and Assessment Product related to scenarios of greenhouse gas emissions and concentrations, and development and application of integrated scenarios of greenhouse gas emissions. This activity is being conducted at the request of the Department of Energy, in accordance with the CCSP Guidelines for Producing the CCSP Synthesis and Assessment Products.

*Tentative Agenda Items:*

Wednesday, November 15, 1 p.m.-4 p.m.

- Presentation on 2.1a and 2.1b to resolve issues raised by both the public review and the CPDAC committee at the August 17-18 CPDAC meeting.

- Response that the 2.1a and 2.1b author team has made to address these items.

- Discussion by the CPDAC to decide whether the revisions on 2.1a and 2.1b are adequate and meet their approval.

- List of changes for 2.1a and 2.1b, if any, for final concurrence by CPDAC.

- Public comment (10 minute rule).

*Public Participation:* The half day meeting is open to the public. If you would like to file a written statement with the Committee, you may do so either before or after the meeting. If you would like to make oral statements regarding any of the items on the agenda, you should contact Anjali Bamzai at the address or telephone number listed above. You must make your request for an oral statement at least five business days before the meeting. Reasonable provisions will be made to include the scheduled oral statements on the agenda. The Chairperson of the Committee will conduct the meeting to facilitate the orderly conduct of business. Public comment will follow the 10-minute rule.

*Minutes:* The minutes of this meeting will be available for public review and copying within 30 days at the Freedom of Information Public Reading Room, IE-190, Forrestal Building, 1000 Independence Avenue, SW., Washington, DC, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, on October 26, 2006.

**Rachel M. Samuel,**

*Deputy Advisory Committee Management Officer.*

# U.S. ELECTION ASSISTANCE COMMISSION

## 2006 ELECTION ADMINISTRATION AND VOTING SURVEY

### SECTION ONE: VOTER REGISTRATION

**Note:** Questions 1-31 refer to the period from the close of registration for the November 2, 2004, Federal general elections to the close of registration for the November 7, 2006, Federal general elections.

#### DEFINITIONS:

- **Active voters:** refers to all registered voters **except** those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.
- **Inactive voters:** refers to registrants who **have been sent but have not responded** to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.
- **List maintenance:** refers to the specific process and procedures by which State and/or local election officials update and preserve information contained on the official list of registered voters.
- **Duplicate registration application:** refers to an application to register by a person already registered to vote at the same address, under the same name and personal information (i.e. date of birth, social security number, driver's license, etc.), and the same political party (where applicable).

#### QUESTIONS:

1. Please, check if your State is exempt from NVRA:

- Yes; exempt from NVRA.  
 No; not exempt from NVRA.

2. Total number of **registered voters** statewide and by county/local jurisdiction at the time of the close of registration for the past two Federal general elections (*including Election Day registrations where applicable - see Question 3*):

#### November 2, 2004:

Active Voters: \_\_\_\_\_  Don't know  Check if your office does not collect this data  
 Inactive Voters: \_\_\_\_\_  Don't know  Check if your office does not collect this data

#### November 7, 2006:

Active Voters: \_\_\_\_\_  Don't know  Check if your office does not collect this data  
 Inactive Voters: \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

3. Total number of persons statewide and by county/local jurisdiction who registered to vote on **Election Day [November 7, 2006]** - *\*\*Only applicable to states with Election Day registration (i.e. Idaho, Maine, Minnesota, Montana, New Hampshire, Wisconsin, and Wyoming):*

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

4. Total number statewide and by county/local jurisdiction of **voter registration applications received from all sources** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

5. Total number statewide and by county/local jurisdiction of **voter registration applications received by mail** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

6. Total number statewide and by county/local jurisdiction of **voter registration applications received in person at the clerk or registrar's office** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

7. Total number statewide and by county/local jurisdiction of **voter registration applications that were received from or generated by** each of the following categories between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

a) All motor vehicle offices: \_\_\_\_\_

Don't know       Check if your office does not collect this data

b) All public assistance agencies mandated as registration sites under NVRA: \_\_\_\_\_

Don't know       Check if your office does not collect this data

c) All state-funded agencies primarily serving persons with disabilities: \_\_\_\_\_

Don't know       Check if your office does not collect this data

d) All Armed Forces recruitment offices: \_\_\_\_\_

Don't know       Check if your office does not collect this data

e) All other agencies designated by the State and not required under NVRA: \_\_\_\_\_

Don't know       Check if your office does not collect this data

**Comments:**

8. Total number statewide and by county/local jurisdiction of voter registration applications identified in response to Question 7 that were:

a) Duplicates of other valid voter registrations: \_\_\_\_\_

Don't know       Check if your office does not collect this data

b) Changes of address, name, or party: \_\_\_\_\_

Don't know       Check if your office does not collect this data

c) Invalid or rejected (other than duplicates): \_\_\_\_\_

Don't know       Check if your office does not collect this data

**Comments:**

9. Total number statewide and by county/local jurisdiction of **new, valid registrations** verified and processed between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections. **\*\*This includes all registrations that are new to the local jurisdiction and re-registrations due to a change of address across jurisdictional lines but within the state. This does not include applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.**

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

10. Total number of election jurisdictions conducting voter registration:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

11. Identify the **local entity** primarily responsible for registering voters: *(In some cases, more than one choice may apply. If so, mark all of the appropriate local entities that share primary responsibility for registering voters)*

- |  |   |
|--|---|
| <input type="checkbox"/> Circuit Clerk                   | <input type="checkbox"/> Election Commissioner            |
| <input type="checkbox"/> City Clerk                      | <input type="checkbox"/> Local General Registrar          |
| <input type="checkbox"/> County Auditor                  | <input type="checkbox"/> Municipal Clerk                  |
| <input type="checkbox"/> County Board of Elections       | <input type="checkbox"/> Recorder                         |
| <input type="checkbox"/> County Clerk                    | <input type="checkbox"/> Registrar                        |

| <input type="checkbox"/> County Election Board Secretary | <input type="checkbox"/> Tax Assessor                     |
| <input type="checkbox"/> County Voter Registration Board | <input type="checkbox"/> Tax Collector                    |
| <input type="checkbox"/> Director of Voter Registration  | <input type="checkbox"/> Town Clerk                       |

Other *(please, specify)* \_\_\_\_\_

**Comments:**

12. Identify each and every other state and local government office or agency designated as a voter registration agency (*provides voter registration opportunities/services*):

- Motor vehicle offices
- All offices that provide public assistance that are mandated as registration sites by NVRA
- All offices that provide state-funded programs primarily serving persons with disabilities that are mandated as registration sites by NVRA
- All Armed Forces recruitment offices that are mandated as registration sites by NVRA
- Other agencies designated by the State as registration sites, and which are not mandated as registration sites by NVRA.

▶ Please, provide the names of the agencies designated by the State as registration sites, and which are not mandated as registration sites by NVRA.

**Comments:**

13. Does your office provide training on the voter registration process to employees of Federal, State, and local government offices or agencies designated as voter registration agencies?

Yes, our office provides training on the voter registration process to ALL Federal, State, and local government offices or agencies designated as voter registration agencies.

▶ If yes, how frequently does your office provide training the above training?

Monthly     Quarterly     Biannual     Annual     Biennial

Other (*please, specify*) \_\_\_\_\_

Yes, our office provides training on the voter registration process to SOME, BUT NOT ALL, Federal, State, and local government offices or agencies designated as voter registration agencies.

▶ If yes, how frequently does your office provide training the above training?

Monthly     Quarterly     Biannual     Annual     Biennial

Other (*please, specify*) \_\_\_\_\_

No, our office provides no such training.

**Comments:**

14. How are voter registration applications transferred from the other voter registration agencies listed in response to Question 12 to the official responsible for voter registration (see Question 11)? Please, select all that apply.

- Courier
- Fax
- Hand-delivered
- Inter-office mail
- U.S. mail
- Electronic (If electronic, then select the appropriate media below.)
  - Power Profile System       Tape       Disk, CD, or other portable storage media
  - VPN       Other electronic media (*please, specify*) \_\_\_\_\_
- Other (*please, specify*) \_\_\_\_\_

**Comments:**

15. Who verifies and processes voter registration forms?

- Only State officials
- Only local officials
- Both State and local officials

**Comments:**

16. Which number is used as the voter identification number on the processed voter registration form? (This does not refer to the number used to verify the application. This refers to the number given to the voter once they have been verified and entered into the voter database.) Please, select all that apply.

- Last 4-digits of the Social Security number
- Full Social Security number
- Driver's license number
- Unique identifier (*please, identify what method is used for assigning the unique identifier*)
- Other (*please, specify*) \_\_\_\_\_

**Comments:**

17. How do the voter registration officials identified in Question 11 verify voter registration applications? (This refers to the process of verifying the applications used to register to vote. This does not refer to the process of verifying voter identity when they go to vote.) Please, select all that apply.

- Check jury lists
- Verify through the department of motor vehicles
- Verify through the Social Security Administration's records
- Verify through the State's vital statistics records
- Verify through other state agency (please, specify agency)
- Matched against the voter registration database
- Tracking of returned voter identification cards
- Tracking the return of disposition notices
- Other (please, specify)

**Comments:**

18. What data fields are compared (used as matching criteria) to identify duplicate registrations? Please, select all that apply.

- Address
- Date of birth
- Driver's license number
- Names provided by registrant
- Social Security number
- Other (please, specify)

**Comments:**

19. Does your State electronically check for duplicate voter registrations across state lines?

- Yes (If "yes," please, identify which states)
- No

**Comments:**

20. Are all applicants whose applications are rejected notified of the rejection and the reason for the rejection?

- Yes
- No

**Comments:**

009332

21. How does the statewide voter registration database link to the State's department of motor vehicles?

- Real-time
- Specific time intervals (*please, specify*)
- Other (*please, specify*)

**Comments:**

22. Does the statewide voter registration database link to disability and social services agencies in a similar manner to the State's department of motor vehicles?

- Yes
- No (*If "no," please, specify other method*)

**Comments:**

23. What process is used to perform list maintenance?

- Only electronically
- Only manually
- Both electronically and manually

**Comments:**

24. Who is responsible for conducting list maintenance?

- Only State officials
- Only local officials
- Both State and local officials (*If "both," please, specify the roles and responsibilities of each*)

**Comments:**

25. Total number of registrations statewide and by county/local jurisdiction that were, for whatever reason, **deleted from the registration list**, including both active and inactive voters if such a distinction is made in your state, between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

009338

26. Total number statewide and by county/local jurisdiction of **removal notices [NVRA Section 8 (d)(2) confirmation] mailed** to voters between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

27. Total number statewide and by county/local jurisdiction of **responses received** to the confirmation notices mailed out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

28. Total number statewide and by county/local jurisdiction of voters **moved** to the inactive list between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

29. Total number statewide and by county/local jurisdiction of **voters (active AND inactive voters) removed** from the voter rolls between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections for the following reasons:

- a) Change of address (moved outside jurisdiction): \_\_\_\_\_  
 Don't know     Check if your office does not collect this data
  
- b) Death: \_\_\_\_\_  
 Don't know     Check if your office does not collect this data
  
- c) Disqualifying felony convictions: \_\_\_\_\_  
 Don't know     Check if your office does not collect this data
  
- d) Failure to vote in two consecutive Federal general elections: \_\_\_\_\_  
 Don't know     Check if your office does not collect this data
  
- e) Voter requested to be removed: \_\_\_\_\_  
 Don't know     Check if your office does not collect this data
  
- f) Other reasons (*please, specify*): \_\_\_\_\_  
 Don't know     Check if your office does not collect this data

**Comments:**

30. Identify all of the sources considered in performing list maintenance:

- Applications for absentee ballots
- Ballots returned as undeliverable
- Canvasses, house-to-house
- Canvasses, political parties
- Car registrations
- Contact by phone
- Contact in person
- Jury questionnaires
- List of address changes, Emergency 911 (E-911) system
- List of deceased persons, Social Security Administration
- Lists of felony convictions, Federal and state courts
- Lists of persons licensed in other states, Department of Motor Vehicles
- Lists of property ownership
- Newspaper death notices/obituaries
- Notices of address confirmations
- Notices of deceased persons (Department of Health/Bureau of Vital Statistics)
- Notices of persons adjudicated mentally incapacitated
- Petition checks
- Reports/Notices from other States that a former resident has registered to vote
- Reports of address changes U.S. Postal Service National Change of Address

009338

U.S. Election Assistance Commission

- Reports of surrendered driver's licenses - other states' motor vehicles offices
- Returned election notices
- Returned jury summons
- Returned mail from county agencies using official voter file for mailings
- Requests from voters for removal
- Targeted mailings
- Tax offices
- Utility changes, municipal
- Voter registration applications
- Voter registration system - duplicate checks
- Other (*please, specify*)

**Comments:**

31. Are the following classes of persons eligible to vote?

a) Those who have been convicted of a felony

- Yes
- No

If "no," are they eligible to register or reregister upon pardon, issuance of certificate of eligibility, or restoration of their Civil Rights?

- Yes
- No

b) Those who are serving a sentence of incarceration for conviction of a felony

- Yes
- No

If "no," are they eligible to register or reregister upon completion of their sentence of incarceration for conviction of a felony?

- Yes
- No

c) Those who are serving a term of probation following being convicted of a felony

- Yes
- No

If "no," are they eligible to register or reregister upon completion of their term of probation following being convicted of a felony?

- Yes
- No

**Comments:**

## SECTION TWO: NOVEMBER 7, 2006, ELECTION RESULTS

### DEFINITIONS for Questions 32-42:

- **"At the polls:"** refers to ballots issued, cast, or counted on a jurisdiction's voting system on Election Day at a polling place (separate from early and in-person absentee voting at the polls prior to Election Day).
- **Ballots cast:** refers to ballots that have been submitted manually or electronically by a voter regardless of whether they are ultimately counted. *Note:* For jurisdictions that provide voters with more than one ballot card to vote for different contests or measures should only report one ballot cast per voter.
- **Ballots counted:** refers to all ballots that have been cast, processed, and counted.
- **Domestic civilian absentee ballot:** refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State's requirement for voting absentee, and is not considered early voting by state definitions. Generally, a voter must request an absentee ballot from their local election office, and the completed ballot may be sent back by mail or dropped off in person (in-person absentee) depending on the laws and regulations of the voter's State of residence.
- **Domestic military citizen** is statutorily defined as:
  - A. A member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned within the United States or its territories, and who is absent from the place of residence where the member is otherwise qualified to vote;
  - B. A member of the merchant marine who, by reason of service in the merchant marine, is serving within the United States and its territories, and who is absent from the place of residence where the member is otherwise qualified to vote; and
  - C. A spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.
- **Early voting** refers generally to any in-person voting that occurred prior to November 7, 2006, at specific polling locations for which there were no special eligibility requirements, and is not considered absentee voting under the State's definitions/requirements for absentee voting.
- **Federal Write-In Absentee Ballot (FWAB)** is an emergency ballot available to military and overseas citizens (including APO and FPO addresses) when they have properly requested but have not received a regular absentee ballot from their local jurisdiction in time to return it before the deadline.
- **Overseas military citizen** is statutorily defined as:
  - A. A member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote;
  - B. A member of the merchant marine who, by reason of service in the merchant marine, is serving outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote; and
  - C. A spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.
- **Overseas citizens** refers to persons who are citizens of the United States who are living, working or stationed outside of the United States and its territories and who are not members of a uniformed service.

- **Provisional ballot** refers to a ballot issued to a voter at the polling place when their eligibility to vote has not been determined.

**QUESTIONS:**

32. Did your State conduct early voting for the November 7, 2006, Federal general elections?

- Yes
- No

**Comments:**

33. Total number statewide and by county/local jurisdiction, for the November 7, 2006, Federal general elections of **BALLOTS CAST**:

- At the polls: \_\_\_\_\_  Don't know  Check if your office does not collect this data
- Early voting: \_\_\_\_\_  Don't know  Check if your office does not collect this data

U.S. Election Assistance Commission

Was received after the state deadline: \_\_\_\_\_  Don't know  Check if your office does not collect this data

Other (please, specify): \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**DEFINITIONS FOR Questions 43-44:**

- **An UNDERVOTE** occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.
- **An OVERVOTE** occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.

**QUESTIONS:**

**43.** Total number statewide and by county/local jurisdiction of **undervotes** reported in each Federal contest for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**44.** Total number statewide and by county/local jurisdiction of **overvotes** reported in each Federal contest for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**DEFINITIONS FOR Questions 45-58:**

- **Precinct** means the geographic area to which voters are assigned.
- **Polling place** means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.

**Note:** *The answer to questions regarding poll workers should include the number of persons who served in all polling places in the State as poll workers, election judges, wardens, commissioners, or other similar term that refers to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits or other documents required to cast a ballot; assist the voter by providing the voter with a ballot or setting up the voting machine for the voter; and serving other functions as dictated by state law. The answers to these questions should not include observers stationed at the polling place.*

**QUESTIONS:**

**45.** Total number of **poll workers required** by law or regulation to be present at each polling place/precinct:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**46.** Total number statewide and by county/local jurisdiction of **poll workers that served** in the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**47.** Total number statewide and by county/local jurisdiction of precincts that **did not have the required number of poll workers** in the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**48. Identify what constitutes a local election jurisdiction in your State (select all that apply):**

- Borough
- City
- County
- Parish
- Township
- Village
- Other (please, specify)

**Comments:**

**49. Total number of local election jurisdictions in your State:**

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**50. Total number statewide and by county/local jurisdiction of precincts for the November 7, 2006, Federal general elections:**

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**51. Total number statewide and by county/local jurisdiction of polling places for the November 7, 2006, Federal general elections:**

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**52. Total number statewide and by county/local jurisdiction of polling places that are accessible to voters with disabilities for the November 7, 2006, Federal general elections: (For purposes of this question only, accessibility refers to the physical structure of the polling place, not the voting system.)**

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**53.** Total number statewide and by county/local jurisdiction of polling places where voters with disabilities can **cast a private ballot** for the November 7, 2006, Federal general elections: *(Identify the total number of polling places where voting equipment is used such that a visually disabled voter can cast a private ballot (e.g., a DRE with audio ballot capability or paper ballots in Braille)*

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**54.** Total number of local election jurisdictions that provided information for purposes of responding to this survey:

**Total:** \_\_\_\_\_  Don't know  Check if your office does not collect this data

**Comments:**

**55.** Please, provide a list of the types of voting equipment used in each county during the November 7, 2006, Federal general elections. Please, provide the following for each county:

- a) Name of county
- b) Type of voting system(s)
- c) Manufacturer
- d) Software version (if applicable)

**Comments:**

**56.** Please, provide the following for each local election jurisdiction official that provided information for purposes of responding to this survey:

- a) Name
- b) Title
- c) Agency/Office
- d) Street address
- e) P.O. Box number
- f) City
- g) State
- h) Zip code
- i) Telephone number
- j) General e-mail address (if available)

**Comments:**

009347

57. Identify any other sources of information used to respond to this survey other than those provided in response to the two previous questions. (All other sources of data shall include information obtained from a statewide voter registration database or any other public or non-public source). For individuals and agencies, please, include the following:

- Statewide voter registration database
- Other public and non-public sources – please, include the following:
  - a) Name of contact person
  - b) Title
  - c) Agency/Office
  - d) Street address
  - e) P.O. Box number
  - f) City
  - g) State
  - h) Zip code
  - i) Telephone number
  - j) General e-mail address (if available)

**Comments:**

58. Please, provide a list of the local individuals/entities responsible for registering voters (see Question 11) and those administering elections; include their name/entity, title, complete mailing address, telephone number, and general e-mail address (if available). In some cases, these two activities are carried out by one individual/entity and in others they are divided between two or more; please, identify which individual is responsible for each of the activities.

- a) Name
- b) Title
- c) Agency/Office
- d) Role ( voter registration,  election administration, or  both)
- e) Street address
- f) P.O. Box number
- g) City
- h) State
- i) Zip code
- j) Telephone number
- k) General e-mail address (if available)

**Comments:**

**END OF SURVEY**

**Subject:** OMB submission deadline

Re: Improving Election Data Collection Project

Good morning Julie and Gavin,

I am trying to establish a date for convening a working group for the project named above. What is the latest date for us to submit the revised Election Day Survey to OMB for approval as required by the Paperwork Reduction Act so that we can disseminate it to election officials with ample time before elections? How long is the OMB approval process?

Thank you!

Subject Election Day Survey

Gavin,

Per our conversation, here are the questions I put forward regarding the Election Day Survey:

- What was the process used in 2004 to approve the survey tool back then?
  - If it was approved for use in 2004 and there are no changes done to the survey per the working group, can we go ahead without OMB publication?
  - If the changes are only minor, can the process be expedited and what would the process be?
- If it has to go through the entire process again:
  - Can we forward a notice (or the survey itself) to the state election directors (and maybe local jurisdictions as well) during the feedback period so they can begin to review the survey tool to familiarize themselves with the data they will need to collect in November. ----- One of the areas of concern in 2004 was the short length of time between the receipt of the survey tool and the deadline for returning the results.
- What is the cost involved in the OMB process?

Thank you!!

Yes, we have to go back through OMB because the emergency approval that we got was only for 6 months.

Subject Election Day Survey

Julie,

Brian Hancock just told me that Wyoming called him this morning and informed him that they are working with their voting system provider to include data collection capabilities relating to the questions in the election day survey - - - another reason to not make radical changes to the survey, at least for this year. In our conversation, the following question came up: If no changes are done to the survey beyond those related to the look of it (placement of instructions, wording, etc.) - - - still collecting the same, exact data - - - do we need to go through the OMB approval process since OMB usually approves a collection for a maximum of 3 years. From what I have been reading and comprehending about the process, OMB approval is needed to continue a collection for which OMB's approval and the validity of the OMB Control Number are about to expire. When does our expire? Thank you and sorry for any inconvenience.

**IMPORTANT:** Please, **DO NOT USE** "N/A" as an equivalent to "0," or vice versa. Only use "N/A" (not applicable) if the answer is not available or not allowable by state law or not collected by your jurisdiction. The number "0" ("zero") should only be used to indicate that there are "zero" number of the data being requested.

**Voter Registration**

**Note:** Questions under this section refer at times to the period between the past two federal general elections. This period is from the close of registration for the November 2, 2004, Federal general elections and the close of registration for the November 7, 2006, Federal general elections.

**Active voters** means all registered voters except those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**Inactive voters** means registrants who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**Duplicate registration application** means an offer to register by a person already registered to vote at the same address, under the same name, and (where applicable) in the same political party.

**1. Total number of registered voters at the time of the close of registration** for the past two Federal general elections:

	November 2, 2004	November 7, 2006
<b>Active voters:</b>	_____	_____
<b>Inactive voters (if applicable):</b>	_____	_____
<b>Total:</b>	_____	_____

**2. Total number of persons who registered to vote during Election Day** [November 7, 2006] – only applicable to states with Election Day registration (Idaho, Maine, Minnesota, New Hampshire, Wisconsin, and Wyoming):

November 2, 2004	November 7, 2006
_____	_____

3. Total number of registration applications that were **received from or generated by** each of the following categories between the past two federal general elections:

**Mail:**

**All motor vehicle offices:**

**All public assistance agencies that are mandated as registration sites under NVRA:**

**All state-funded agencies primarily serving persons with disabilities:**

**All Armed Forces recruitment offices:**

**All other agencies designated by the state:**

**All other means (including but not limited to, in person, deputy registrars, and organized drives delivering forms directly to registrars):**

**Total from all sources:**

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

4. Total number of registration applications identified in response to the previous question that were:

**Duplicates of other valid voter registrations:**

**Changes of address, name, or party:**

**Invalid or rejected (other than duplicates):**

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

5. Total number of **new, valid registrations accepted** between the past two federal general elections, including all registrations that are new to the local jurisdiction and re-registrations across jurisdictional lines, but excluding all applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.

**Total:**

\_\_\_\_\_

**Registration process**

6. Total number of election jurisdictions conducting voter registration.

**Total:**

\_\_\_\_\_

7. Identify the local election official primarily responsible for registering voters.

8. Identify each and every other state and local government office or agency, aside from those designated by NVRA, that conduct voter registration.

9. What, if any, training is provided to employees of voter registration agencies on the voter registration process?

10. How are voter registration applications transferred from the other voter registration agencies listed in response to the question above to the official responsible for voter registration (ex. e-mail, VPN, tape, disk, mail, fax, etc.)?

11. Who processes voter registration forms?

- State officials
- Local officials
- Both

12. Which number is used as the voter identification number on the processed voter registration form?

- Last 4-digits of the Social Security number
- Full Social Security number
- Driver's license number
- Unique identifier *(please, identify what method is used for assigning the unique identifier)*
- Other *(please, specify)*

13. How do registration officials check for duplicate registrations?

14. Does your State check for duplicate voter registrations across state lines?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

15. How does your State verify voter registration applications (e.g., tracking the return of disposition notices, checks against driver's license and social security administration records, etc)?

16. Are applicants whose applications are rejected notified of the rejection and the reason for the rejection?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

17. Does the statewide voter registration database link to disability and social services agencies in a similar manner to the state department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**List Maintenance**

18. What process is used to perform list maintenance?

<input checked="" type="checkbox"/>	Electronic
<input type="checkbox"/>	Manual
<input type="checkbox"/>	Both

19. Who is responsible for conducting list maintenance?

<input type="checkbox"/>	State officials
<input type="checkbox"/>	Local officials
<input type="checkbox"/>	Both

20. Total number of registrations that were, for whatever reason, **deleted from the registration list**, including both active and inactive voters if such a distinction is made in your state, between the past two federal elections.

**Total:** \_\_\_\_\_

21. Total number of **removal notices [Section 8(d)(2) confirmation] mailed** out between the past two federal general elections.

**Total:** \_\_\_\_\_

22. Total number of **responses received** to the confirmation notices during the same period.

**Total:** \_\_\_\_\_

23. Total number of voters **moved to the inactive list**:

**Total:** \_\_\_\_\_

24. Total number of **voters removed** from the voter rolls between the past two Federal elections for the following reasons:

- Death:** \_\_\_\_\_
- Failure to vote in two consecutive federal general elections:** \_\_\_\_\_
- Voter requested to be removed:** \_\_\_\_\_
- Disqualifying felony convictions:** \_\_\_\_\_
- Other reasons: (please, specify)** \_\_\_\_\_
- Total number of registrations removed:** \_\_\_\_\_

25. List all of the sources considered in performing list maintenance (ex: returned election notices, Postal Service NCOA information, returned jury summons, etc.).

26. How does your State treat voters who:

- a) Have been convicted of a felony

- b) Are serving a sentence of incarceration for conviction of a felony
- c) Are serving a term of probation following being convicted of a felony

### Election Day Administration and Results

*Ballots cast means a ballot that has been submitted manually or electronically by a voter but has not been verified and/or counted.*

**Note:** *For jurisdictions that provide voters with more than one ballot card to vote for different contests or measures should only report one ballot cast per voter.*

*Ballots counted means all ballots that have been cast, processed, and counted.*

*“At the polls” refers to ballots issued, cast, or counted on a jurisdiction’s voting system on Election Day at a polling place.*

*Early voting means any voting that occurred prior to November 7, 2006, for which there were no eligibility requirements. For example, the voter did not have to attest that he/she would be absent from the voting jurisdiction on the day of the election.*

*Federal Write-In Absentee Ballot (FWAB) is a ballot available to military and overseas citizens (including APO and FPO addresses) when they have not received their regular absentee ballot from their state.*

27. Does your State conduct early voting?

<input checked="" type="checkbox"/>	Yes
<input type="checkbox"/>	No

28. Total number statewide and by county/local jurisdiction of:

	Ballots Cast	Ballots Counted
At the polls	_____	_____
Early voting	_____	_____
Domestic civilian absentee ballots	_____	_____
Domestic military citizens	_____	_____

<b>Overseas military citizens</b>	_____	_____
<b>Overseas civilians</b>	_____	_____
<b>Federal Write-In Absentee Ballot (FWAB)</b>	_____	_____
<b>Provisional ballots</b>	_____*	_____
<b>Total</b>	_____	_____

\* The number provided in response to this question should include the total number of ballots cast in the State's program for contingent or provisional ballots that complies with section 302(a) of the Help America Vote Act.

29. Total number of votes counted by county/local election jurisdiction for **each candidate** in a Federal contest.

30. Identify the five most common reasons that **provisional ballots** were rejected:

- 1.
- 2.
- 3.
- 4.
- 5.

**Absentee Ballots**

*Absentee voting is defined as voting prior to Election Day which requires that the voter meet qualifications other than those generally required to register to vote.*

*Advanced ballot means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.*

31. Total number of **absentee ballots** state-wide and by county/local jurisdiction (do not include FWAB):

	<b>Requested</b>	<b>Not Counted</b>
<b>Domestic civilian absentee ballots</b>	_____	_____

009360

<b>Domestic military citizens</b>	*	_____	_____
<b>Overseas military citizens</b>	*	_____	_____
<b>Overseas civilians</b>	*	_____	_____
<b>Total</b>		_____	_____

*\*Includes ballots transmitted by mail, fax, e-mail, or courier.*

32. Total number of **advanced ballots** transmitted to military and overseas citizens:

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

33. Total number of **Federal Write-In Absentee Ballots (FWAB)** received for each of the following voters for the November 7, 2006, election:

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

34. Identify the five most common reasons that **domestic civilian** absentee ballots were rejected:

- 1.
- 2.
- 3.
- 4.
- 5.

35. Provide the number of **military and overseas** absentee ballots rejected for each of the following reasons:

- Lacked a postmark \_\_\_\_\_
- No voter signature \_\_\_\_\_
- Voter signature not verifiable \_\_\_\_\_
- Had no date of voter signature \_\_\_\_\_
- Had no notary/witness signature \_\_\_\_\_
- Had no date of notary/witness signature \_\_\_\_\_
- Was received after the state deadline \_\_\_\_\_
- Returned as undeliverable \_\_\_\_\_
- Other reason (please, specify "other" reason) \_\_\_\_\_

**Undervotes and Overvotes**

*An undervote occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.*

*An overvote occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.*

36. Total number of **undervotes** reported in each federal contest by county/local election jurisdiction:

**Total:** \_\_\_\_\_

37. Total number of **overvotes** reported in each federal contest by county/local election jurisdiction:

**Total:** \_\_\_\_\_

**Poll Workers**

**Note:** *The answer to these questions should include the number of persons who served in all polling places in the State as poll workers, election judges, wardens, commissioners, or other similar term that refers to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits or other documents required to cast a ballot; assist the voter by providing the voter with a ballot or setting up the voting machine for the voter; and serving other functions as dictated by state law. The answers to these questions should not include observers stationed at the polling place.*

**38.** Has there been a change in the number of poll workers per precinct/polling place required by law or regulation since November 2004?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

► If “yes,” please, provide the new number of poll workers required by law or regulation to be present at each precinct/polling place.

**39.** Total number of poll workers who served in the November 7, 2006, Federal general elections statewide and by county/local jurisdiction.

**Total:** \_\_\_\_\_

**40.** Total number of polling places and precincts that did not have the required number of poll workers statewide and by county/local jurisdiction.

**Total:** \_\_\_\_\_

**Voting Jurisdictions and Polling Places**

*Precinct means the geographic area to which voters are assigned.*

*Polling place means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.*

**41.** Identify what constitutes a local election jurisdiction in your State (e.g. county, parish, township, and city).

42. Total number of precincts statewide and by county/local election jurisdiction.

**Total:** \_\_\_\_\_

43. Total number of polling places statewide and by county/local election jurisdiction.

**Total:** \_\_\_\_\_

44. Total number of polling places statewide and by county/local election jurisdiction that are accessible to voters with disabilities.

**Total:** \_\_\_\_\_

*Note: For purposes of this question only, accessibility refers to the physical structure of the polling place, not the voting system.*

- a) Voters who use wheelchairs, scooters, or other mobility devices:
- b) Voters who are blind or have low vision:

45. Total number of polling places by county/local election jurisdiction where a visually impaired voter can cast a private ballot:

**Total:** \_\_\_\_\_

*Note: Identify the total number of polling places where voting equipment is used such that a visually disabled voter can cast a private ballot (e.g., a DRE with audio ballot capability or paper ballots printed in Braille).*

**Sources of Information**

46. Total number of local election jurisdictions that provided information for purposes of responding to this survey:

**Total:** \_\_\_\_\_

47. Provide the name and contact information for each local election jurisdiction official that provided information for purposes of responding to this survey:

**48.** Identify any other sources of information used to respond to this survey other than those provided in response to the two previous questions. (*All other sources of data shall include information obtained from a state-wide voter registration database or any other public or non-public source.*)

**THANK YOU FOR RESPONDING TO THE SURVEY. PLEASE, FOLLOW THE ENCLOSED INSTRUCTIONS FOR SUBMITTING YOUR COMPLETED SURVEY.**

Subject revised survey

Julie,

Is this better? I closed every question, except numbers 51 and 52 (under "sources of information). I have not come up with a good definition for "list maintenance," and the previous surveys did not provide one. Any suggestions? I have also asked Brian for a definition.

Jeannie and I are speaking with Humanitas at 1:00pm - - - if you're available, please, stop by. THANK YOU!!

009366

**IMPORTANT:** Please, **DO NOT USE** "N/A" as an equivalent to "0." Only use "N/A" (not applicable) if the answer is not available or not allowable by state law or not collected by your jurisdiction. The number "0" ("zero") should only be used to indicate that the answers is "zero" or "none."

### VOTER REGISTRATION

**Note:** Questions 1-26 refer to the period from the close of registration for the **November 2, 2004**, Federal general elections to the close of registration for the **November 7, 2006**, Federal general elections.

**Active voters** refers to all registered voters except those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**Inactive voters** refers to registrants who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**Duplicate registration application** refers to an application to register by a person already registered to vote at the same address, under the same name, and (where applicable) the same political party.

**1. Total number of registered voters at the time of the close of registration** for the past two Federal general elections (including Election Day registrations where applicable – see Question 2):

	November 2, 2004	November 7, 2006
<b>Active voters:</b>	_____	_____
<b>Inactive voters (if applicable):</b>	_____	_____
<b>Total:</b>	_____	_____

**2. Total number of persons who registered to vote on Election Day** [November 7, 2006] – **\*\*Only applicable to states with Election Day registration (Idaho, Maine, Minnesota, New Hampshire, Wisconsin, and Wyoming):**

November 2, 2004	November 7, 2006
_____	_____

009367

3. Total number of voter registration applications received **from all sources** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

4. Total number of voter registration applications received **by mail** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

5. Total number of voter registration applications received **in person at the clerk or registrar's office** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

6. Total number of registration applications that were **received from or generated by** each of the following categories between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**All motor vehicle offices:** \_\_\_\_\_

**All public assistance agencies that are mandated as registration sites under NVRA:** \_\_\_\_\_

**All state-funded agencies primarily serving persons with disabilities:** \_\_\_\_\_

**All Armed Forces recruitment offices:** \_\_\_\_\_

**All other agencies designated by the state:** \_\_\_\_\_

7. Total number of registration applications identified in response to **Question 3** that were:

**Duplicates of other valid voter registrations:** \_\_\_\_\_

**Changes of address, name, or party:** \_\_\_\_\_

**Invalid or rejected (other than duplicates):** \_\_\_\_\_

8. Total number of **new, valid registrations** processed between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections. ***\*\*This includes all registrations that are new to the local jurisdiction and re-registrations across jurisdictional lines. This does not include applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.***

**Total:** \_\_\_\_\_

**Registration process**

9. Total number of election jurisdictions conducting voter registration.

**Total:** \_\_\_\_\_

10. Identify the local entity primarily responsible for registering voters:

- Circuit Clerk
- City Clerk
- County Auditor
- County Board of Elections
- County Clerk
- County Commissioner
- County Election Board Secretary
- County Voter Registration Board
- Director of Voter Registration

- Election Commissioner
- Local General Registrar
- Municipal Clerk
- Recorder
- Registrar
- Supervisor/Director of Elections
- Tax Assessor Collector
- Town Clerk
- Other (please, specify)

11. Identify each and every other state and local government office or agency designated as a voter registration agency (provides voter registration opportunities/services):

- Motor vehicle offices**
- All offices that provide public assistance that are mandated as registration sites by NVRA**
- All offices that provide state-funded programs primarily serving persons with disabilities**
- All armed forces recruitment offices**
- Other agencies designated by the State (please, specify)**

12. Does your office provide training on the voter registration process to employees of Federal, State, and local government offices or agencies designated as voter registration agencies?

- Yes**
- No**

13. How are voter registration applications transferred from the other voter registration agencies listed in response to Question 11 to the official responsible for voter registration?

- |                          |                          |                          |                                |
|--------------------------|--------------------------|--------------------------|--------------------------------|
| <input type="checkbox"/> | <b>Courier</b>           | <input type="checkbox"/> | <b>Power Profile System</b>    |
| <input type="checkbox"/> | <b>Disk</b>              | <input type="checkbox"/> | <b>Tape</b>                    |
| <input type="checkbox"/> | <b>E-mail/Electronic</b> | <input type="checkbox"/> | <b>U.S. Mail</b>               |
| <input type="checkbox"/> | <b>Fax</b>               | <input type="checkbox"/> | <b>VPN</b>                     |
| <input type="checkbox"/> | <b>Hand delivered</b>    | <input type="checkbox"/> | <b>Other (please, specify)</b> |
| <input type="checkbox"/> | <b>Inter-office mail</b> |                          |                                |

14. Who verifies and processes voter registration forms?

- State officials**
- Local officials**
- Both**

15. Which number is used as the voter identification number on the processed voter registration form? (This does not refer to the number used to verify the application. This refers to the number given to the voter once they have been verified and entered into the voter database.)

- Last 4-digits of the Social Security number
- Full Social Security number
- Driver's license number
- Unique identifier (please, identify what method is used for assigning the unique identifier)
- Other (please, specify)

16. How do voter registration officials **verify voter registration applications**? (This refers to the process of verifying the applications used to register to vote. This does not refer to the process of verifying voters when they go to vote.)

- Check jury lists
- Link and verify through other state agency (please, specify agency)
- Link and verify through the department of motor vehicles
- Link and verify through the social security administration records
- Link and verify through the State's vital statistics records
- Matched against the voter registration database
- Tracking of returned voter identification cards
- Tracking the return of disposition notices
- Other (please, specify)

17. How do voter registration officials check for duplicate registrations?

- Address
- Date of birth
- Driver's license number
- Names provided by registrant
- Social security number
- Other (please, specify)

18. Does your State check for duplicate voter registrations across state lines?

- Yes (If "yes", please, identify which states.)
- No

009371

19. Are applicants whose applications are rejected notified of the rejection and the reason for the rejection?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

20. Does the statewide voter registration database link to the State's department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

20. Does the statewide voter registration database link to disability and social services agencies in a similar manner to the State's department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**List Maintenance**

21. What process is used to perform list maintenance?

<input type="checkbox"/>	Electronic
<input type="checkbox"/>	Manual
<input type="checkbox"/>	Both

22. Who is responsible for conducting list maintenance?

<input type="checkbox"/>	State officials
<input type="checkbox"/>	Local officials
<input type="checkbox"/>	Both

23. Total number of registrations that were, for whatever reason, **deleted from the registration list**, including both active and inactive voters if such a distinction is made in your state, between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_ 009372

24. Total number of **removal notices [Section 8(d)(2) confirmation] mailed** out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

25. Total number of **responses received** to the confirmation notices mailed out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

26. Total number of voters **moved to the inactive list** between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

27. Total number of voters (**active AND inactive voters**) removed from the voter rolls between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections for the following reasons:

**Death:** \_\_\_\_\_

**Disqualifying felony convictions:** \_\_\_\_\_

**Failure to vote in two consecutive federal general elections:** \_\_\_\_\_

**Voter requested to be removed:** \_\_\_\_\_

**Other reasons: (please, specify)** \_\_\_\_\_

**Total number of registrations removed:** \_\_\_\_\_

009373

**28. Identify all of the sources considered in performing list maintenance:**

<input type="checkbox"/>	<b>Applications for absentee ballots</b>	<input type="checkbox"/>	<b>Notices of deceased persons (Department of Health/Bureau of Vital Statistics)</b>
<input type="checkbox"/>	<b>Ballots returned as undeliverable</b>	<input type="checkbox"/>	<b>Notices of persons adjudicated mentally incapacitated</b>
<input type="checkbox"/>	<b>Canvasses, house-to-house</b>	<input type="checkbox"/>	<b>Petition checks</b>
<input type="checkbox"/>	<b>Canvasses, political parties</b>	<input type="checkbox"/>	<b>Reports/Notices from other States that a former resident has registered to vote</b>
<input type="checkbox"/>	<b>Car registrations</b>	<input type="checkbox"/>	<b>Reports of address changes – U.S. Postal Service National Change of Address</b>
<input type="checkbox"/>	<b>Contact by phone</b>	<input type="checkbox"/>	<b>Reports of surrendered driver's licenses – other states' motor vehicles offices</b>
<input type="checkbox"/>	<b>Contact in person</b>	<input type="checkbox"/>	<b>Returned election notices</b>
<input type="checkbox"/>	<b>Jury questionnaires</b>	<input type="checkbox"/>	<b>Returned jury summons</b>
<input type="checkbox"/>	<b>List of address changes, Emergency 911 (E-911) system</b>	<input type="checkbox"/>	<b>Returned mail from county agencies using official voter file for mailings</b>
<input type="checkbox"/>	<b>Lists of automobile registrations</b>	<input type="checkbox"/>	<b>Requests from voters for removal</b>
<input type="checkbox"/>	<b>List of deceased persons, Social Security Administration</b>	<input type="checkbox"/>	<b>Targeted mailings</b>
<input type="checkbox"/>	<b>Lists of felony convictions, Federal and state courts</b>	<input type="checkbox"/>	<b>Utility changes, municipal</b>
<input type="checkbox"/>	<b>Lists of persons licensed in other states, Department of Motor Vehicles</b>	<input type="checkbox"/>	<b>Voter registration applications</b>
<input type="checkbox"/>	<b>Lists of property ownership</b>	<input type="checkbox"/>	<b>Voter registration system – duplicate checks</b>
<input type="checkbox"/>	<b>Newspaper death notices/obituaries</b>	<input type="checkbox"/>	<b>Other (<i>please, specify</i>)</b>
<input type="checkbox"/>	<b>Notices of address confirmations</b>		

009374

**29. How does your State treat voters who:**

- a) Have been convicted of a felony
- b) Are serving a sentence of incarceration for conviction of a felony
- c) Are serving a term of probation following being convicted of a felony

**2006 Election Day Results**

**Ballots cast** means a ballot that has been submitted manually or electronically by a voter but has not been verified and/or counted.

**Note:** For jurisdictions that provide voters with more than one ballot card to vote for different contests or measures should only report one ballot cast per voter.

**Ballots counted** means all ballots that have been cast, processed, and counted.

**“At the polls”** refers to ballots issued, cast, or counted on a jurisdiction’s voting system on Election Day at a polling place.

**Domestic civilian absentee ballot** refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State’s requirement for voting absentee.

**Domestic military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned within the United States or its territories, and who is absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving within the United States and its territories, and who is absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Early voting** refers to any voting that occurred prior to November 7, 2006, for which there were no eligibility requirements. For example, the voter did not have to attest that he/she would be absent from the voting jurisdiction on the day of the election.

**Federal Write-In Absentee Ballot (FWAB)** is a ballot available to military and overseas citizens (including APO and FPO addresses) when they have not received their regular absentee ballot from their state.

**Overseas military citizen** refers to:

009375

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Overseas civilians** refers to persons who are citizens of the United States who are living, working or stationed outside of the United States and its territories and who are not members of a uniformed service.

**Provisional ballot** refers to a ballot issued when a voter's eligibility has not been determined.

30. Does your State conduct early voting?

	Yes
	No

31. Total number statewide and by county/local jurisdiction of:

	Ballots Cast	Ballots Counted
<b>At the polls</b>	_____	_____
<b>Early voting</b>	_____	_____
<b>Domestic civilian absentee ballots</b>	_____	_____
<b>Domestic military citizens</b>	_____	_____
<b>Overseas military citizens</b>	_____	_____
<b>Overseas civilians</b>	_____	_____
<b>Federal Write-In Absentee Ballot (FWAB)</b>	_____	_____
<b>Provisional ballots</b>	*	_____
<b>Total</b>	_____	_____

\* The number provided in response to this question should include the total number of ballots cast in the State's program for contingent or provisional ballots that complies with section 302(a) of the Help America Vote Act.

009376

32. Total number of votes counted by county/local election jurisdiction for **each candidate** in a Federal contest.

33. Total number of **provisional ballots** rejected:

**Total:** \_\_\_\_\_

34. Provide the number of **provisional ballots** rejected for each of the following reasons:

<b>Administrative error</b>	_____	<b>No signature</b>	_____
<b>Already voted</b>	_____	<b>Non-appearance within 24 hours</b>	_____
<b>Ballot not timely received (absentee)</b>	_____	<b>Non-matching signature</b>	_____
<b>Deceased</b>	_____	<b>Non-verifiable signature</b>	_____
<b>Elector challenged</b>	_____	<b>Not registered</b>	_____
<b>First time voter registering on Election Day</b>	_____	<b>Registration purged</b>	_____
<b>Improper ID</b>	_____	<b>Wrong jurisdiction</b>	_____
<b>Incomplete ballot form</b>	_____	<b>Wrong precinct</b>	_____
<b>Ineligible to vote</b>	_____	<b>Other (please, specify)</b>	_____
<b>Missing ballot</b>	_____	<b>Other (please, specify)</b>	_____
<b>Multiple ballots in one envelope</b>	_____		
<b>Name missing from voter listed</b>	_____		

009377

**Absentee Ballots**

*Absentee voting is defined as voting prior to Election Day which requires that the voter meet qualifications other than those generally required to register to vote.*

*Advanced ballot means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.*

**35. Total number of absentee ballots state-wide and by county/local jurisdiction (do not include FWAB):**

	<b>Requested</b>	<b>Not Counted</b>
<b>Domestic civilian absentee ballots</b>	_____	_____
<b>Domestic military citizens</b>	*	_____
<b>Overseas military citizens</b>	*	_____
<b>Overseas civilians</b>	*	_____
<b>Total</b>	_____	_____

*\*Includes ballots transmitted by mail, fax, e-mail, or courier.*

**36. Total number of advanced ballots transmitted to military and overseas citizens:**

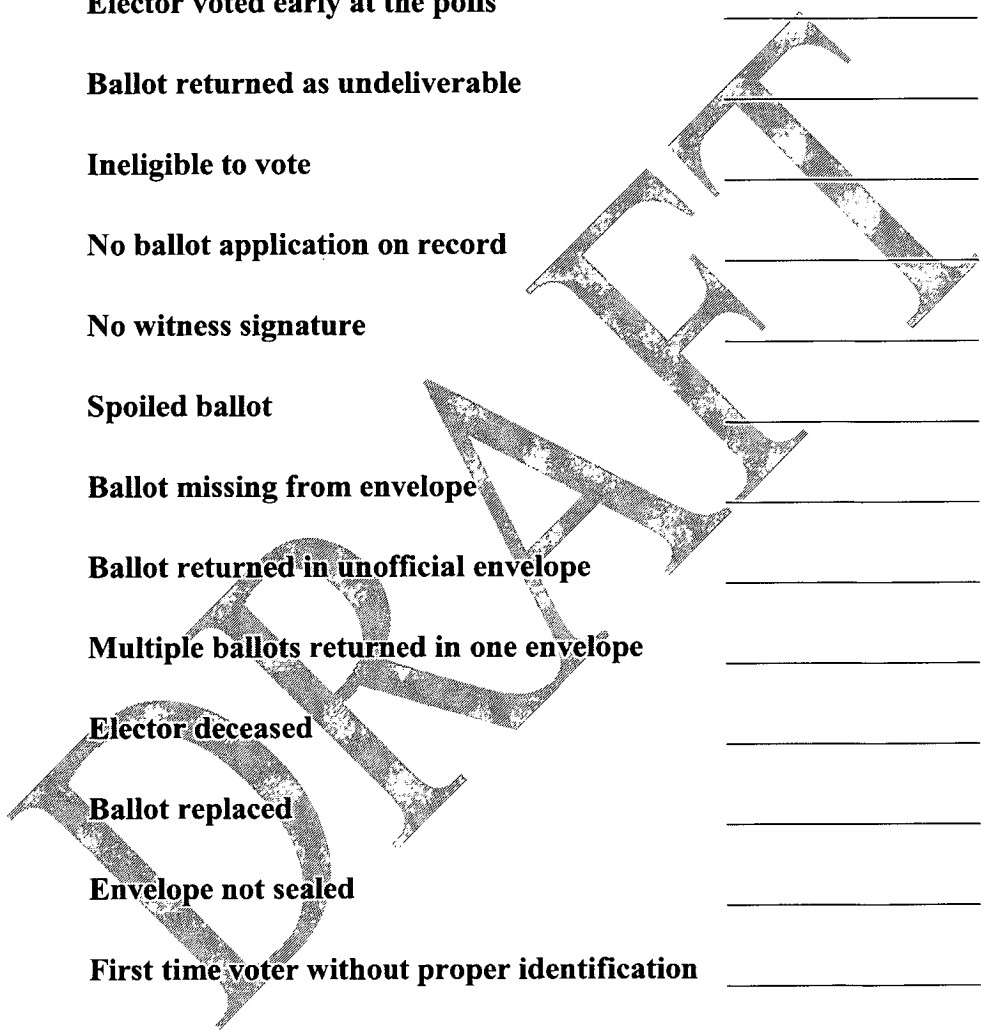

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

**37. Total number of Federal Write-In Absentee Ballots (FWAB) received for each of the following voters for the November 7, 2006, election:**

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____009378
<b>Total</b>	_____

38. Identify the five most common reasons that **domestic civilian** absentee ballots were rejected:

- No voter signature \_\_\_\_\_
- Ballot not timely received \_\_\_\_\_
- Non-matching signature \_\_\_\_\_
- Elector voted early at the polls \_\_\_\_\_
- Ballot returned as undeliverable \_\_\_\_\_
- Ineligible to vote \_\_\_\_\_
- No ballot application on record \_\_\_\_\_
- No witness signature \_\_\_\_\_
- Spoiled ballot \_\_\_\_\_
- Ballot missing from envelope \_\_\_\_\_
- Ballot returned in unofficial envelope \_\_\_\_\_
- Multiple ballots returned in one envelope \_\_\_\_\_
- Elector deceased \_\_\_\_\_
- Ballot replaced \_\_\_\_\_
- Envelope not sealed \_\_\_\_\_
- First time voter without proper identification \_\_\_\_\_
- No election official's signature on ballot \_\_\_\_\_
- No residence address on envelope \_\_\_\_\_
- Other (*please, specify*) \_\_\_\_\_

009379

39. Provide the number of **military and overseas** absentee ballots rejected for each of the following reasons:

- Lacked a postmark** \_\_\_\_\_
- No voter signature** \_\_\_\_\_
- Voter signature not verifiable** \_\_\_\_\_
- Had no date of voter signature** \_\_\_\_\_
- Had no notary/witness signature** \_\_\_\_\_
- Had no date of notary/witness signature** \_\_\_\_\_
- Was received after the state deadline** \_\_\_\_\_
- Returned as undeliverable** \_\_\_\_\_
- Other reason (please, specify "other" reason)** \_\_\_\_\_

**Undervotes and Overvotes**

*An **undervote** occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.*

*An **overvote** occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.*

40. Total number of **undervotes** reported in each federal contest by county/local election jurisdiction:

**Total:** \_\_\_\_\_

41. Total number of **overvotes** reported in each federal contest by county/local election jurisdiction:

**Total:** \_\_\_\_\_

009380

**Poll Workers**

**Note:** *The answer to these questions should include the number of persons who served in all polling places in the State as poll workers, election judges, wardens, commissioners, or other similar term that refers to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits or other documents required to cast a ballot; assist the voter by providing the voter with a ballot or setting up the voting machine for the voter; and serving other functions as dictated by state law. The answers to these questions should not include observers stationed at the polling place.*

**42a.** Has there been a change in the number of poll workers per precinct/polling place required by law or regulation since November 2004?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**42b.** If "yes," please, provide the new number of poll workers required by law or regulation to be present at each precinct/polling place.

**Total:** \_\_\_\_\_

**43.** Total number of poll workers who served in the November 7, 2006, Federal general elections statewide and by county/local jurisdiction:

**Total:** \_\_\_\_\_

**44.** Total number of polling places and precincts that did not have the required number of poll workers statewide and by county/local jurisdiction:

**Total:** \_\_\_\_\_

**Voting Jurisdictions and Polling Places**

*Precinct means the geographic area to which voters are assigned.*

*Polling place means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.*

009381

45. Identify what constitutes a local election jurisdiction in your State:

<input type="checkbox"/>	County
<input type="checkbox"/>	Parish
<input type="checkbox"/>	Township
<input type="checkbox"/>	City
<input type="checkbox"/>	Borough
<input type="checkbox"/>	Village
<input type="checkbox"/>	Other (please, specify)

46. Total number of precincts statewide and by county/local election jurisdiction:

Total: \_\_\_\_\_

47. Total number of polling places statewide and by county/local election jurisdiction:

Total: \_\_\_\_\_

48. Total number of polling places statewide and by county/local election jurisdiction that are accessible to voters with disabilities:

Total: \_\_\_\_\_

*Note: For purposes of this question only, accessibility refers to the physical structure of the polling place, not the voting system.*

49. Total number of polling places by county/local election jurisdiction where a visually impaired voter can cast a private ballot:

Total: \_\_\_\_\_

*Note: Identify the total number of polling places where voting equipment is used such that a visually disabled voter can cast a private ballot (e.g., a DRE with audio ballot capability or paper ballots printed in Braille).*

009382

### Sources of Information

50. Total number of local election jurisdictions that provided information for purposes of responding to this survey:

**Total:** \_\_\_\_\_

51. Provide the name and contact information for each local election jurisdiction official that provided information for purposes of responding to this survey.

52. Identify any other sources of information used to respond to this survey other than those provided in response to the two previous questions. *(All other sources of data shall include information obtained from a state-wide voter registration database or any other public or non-public source.)*

**THANK YOU FOR RESPONDING TO THE SURVEY. PLEASE, FOLLOW THE ENCLOSED INSTRUCTIONS FOR SUBMITTING YOUR COMPLETED SURVEY.**

Subject Latest draft of survey

Hi Julie,

I left a copy of the latest draft of the survey on your chair. I'm also attaching a copy, and this one has a slight numbering correction that is not on the hard copy I left you. Please, review and comment. I also added a Glossary at the end of the survey for those people that may not see the definitions within the survey. I included a definition for List Maintenance that Brian provided me; let me know your thoughts on it. Thank you.

Revised Survey.doc

009384

**IMPORTANT:** Please, **DO NOT USE** "N/A" as an equivalent to "0." Only use "N/A" (not applicable) if the answer is not available or not allowable by state law or not collected by your jurisdiction. The number "0" ("zero") should only be used to indicate that the answers is "zero" or "none."

**VOTER REGISTRATION**

**Note:** Questions 1-29 refer to the period from the close of registration for the **November 2, 2004**, Federal general elections to the close of registration for the **November 7, 2006**, Federal general elections.

*Active voters* refers to all registered voters **except** those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

*Inactive voters* refers to registrants who **have been sent but have not responded** to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

*Duplicate registration application* refers to an application to register by a person already registered to vote at the same address, under the same name, and (where applicable) the same political party.

**1. Total number of registered voters statewide and by county/local jurisdiction at the time of the close of registration** for the past two Federal general elections (including Election Day registrations where applicable – see Question 2):

	November 2, 2004	November 7, 2006
<b>Active voters:</b>	_____	_____
<b>Inactive voters (if applicable):</b>	_____	_____
<b>Total:</b>	_____	_____

**2. Total number of persons statewide and by county/local jurisdiction who registered to vote on Election Day [November 7, 2006] – \*\*Only applicable to states with Election Day registration (Idaho, Maine, Minnesota, New Hampshire, Wisconsin, and Wyoming):**

November 2, 2004	November 7, 2006
_____	_____

009385

3. Total number statewide and by county/local jurisdiction of voter registration applications received **from all sources** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

4. Total number statewide and by county/local jurisdiction of voter registration applications received **by mail** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

5. Total number statewide and by county/local jurisdiction of voter registration applications received **in person at the clerk or registrar's office** during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

6. Total number statewide and by county/local jurisdiction of registration applications that were **received from or generated by** each of the following categories between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**All motor vehicle offices:** \_\_\_\_\_

**All public assistance agencies that are mandated as registration sites under NVRA:** \_\_\_\_\_

**All state-funded agencies primarily serving persons with disabilities:** \_\_\_\_\_

**All Armed Forces recruitment offices:** \_\_\_\_\_

**All other agencies designated by the state:** \_\_\_\_\_

009386

7. Total number statewide and by county/local jurisdiction of registration applications identified in response to **Question 3** that were:

**Duplicates of other valid voter registrations:** \_\_\_\_\_

**Changes of address, name, or party:** \_\_\_\_\_

**Invalid or rejected (other than duplicates):** \_\_\_\_\_

8. Total number statewide and by county/local jurisdiction of **new, valid registrations** processed between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections. **\*\*This includes all registrations that are new to the local jurisdiction and re-registrations across jurisdictional lines. This does not include applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.**

**Total:** \_\_\_\_\_

**Registration process**

9. Total number of election jurisdictions conducting voter registration.

**Total:** \_\_\_\_\_

10. Identify the local entity primarily responsible for registering voters:

- Circuit Clerk
- City Clerk
- County Auditor
- County Board of Elections
- County Clerk
- County Commissioner
- County Election Board Secretary
- County Voter Registration Board
- Director of Voter Registration

- Election Commissioner
- Local General Registrar
- Municipal Clerk
- Recorder
- Registrar
- Supervisor/Director of Elections
- Tax Assessor Collector
- Town Clerk
- Other (please, specify)

009387

11. Identify each and every other state and local government office or agency designated as a voter registration agency (provides voter registration opportunities/services):

<input type="checkbox"/>	<b>Motor vehicle offices</b>
<input type="checkbox"/>	<b>All offices that provide public assistance that are mandated as registration sites by NVRA</b>
<input type="checkbox"/>	<b>All offices that provide state-funded programs primarily serving persons with disabilities</b>
<input type="checkbox"/>	<b>All armed forces recruitment offices</b>
<input type="checkbox"/>	<b>Other agencies designated by the State (please, specify)</b>

12. Does your office provide training on the voter registration process to employees of Federal, State, and local government offices or agencies designated as voter registration agencies?

<input type="checkbox"/>	<b>Yes</b>
<input type="checkbox"/>	<b>No</b>

13. How are voter registration applications transferred from the other voter registration agencies listed in response to **Question 11** to the official responsible for voter registration?

<input type="checkbox"/>	<b>Courier</b>	<input type="checkbox"/>	<b>Power Profile System</b>
<input type="checkbox"/>	<b>Disk</b>	<input type="checkbox"/>	<b>Tape</b>
<input type="checkbox"/>	<b>E-mail/Electronic</b>	<input type="checkbox"/>	<b>U.S. Mail</b>
<input type="checkbox"/>	<b>Fax</b>	<input type="checkbox"/>	<b>VPN</b>
<input type="checkbox"/>	<b>Hand delivered</b>	<input type="checkbox"/>	<b>Other (please, specify)</b>
<input type="checkbox"/>	<b>Inter-office mail</b>		

14. Who verifies and processes voter registration forms?

<input type="checkbox"/>	<b>State officials</b>
<input type="checkbox"/>	<b>Local officials</b>
<input type="checkbox"/>	<b>Both</b>

009388

15. Which number is used as the voter identification number on the processed voter registration form? (This does not refer to the number used to verify the application. This refers to the number given to the voter once they have been verified and entered into the voter database.)

- Last 4-digits of the Social Security number
- Full Social Security number
- Driver's license number
- Unique identifier (please, identify what method is used for assigning the unique identifier)
- Other (please, specify)

16. How do voter registration officials verify voter registration applications? (This refers to the process of verifying the applications used to register to vote. This does not refer to the process of verifying voters when they go to vote.)

- Check jury lists
- Link and verify through other state agency (please, specify agency)
- Link and verify through the department of motor vehicles
- Link and verify through the social security administration records
- Link and verify through the State's vital statistics records
- Matched against the voter registration database
- Tracking of returned voter identification cards
- Tracking the return of disposition notices
- Other (please, specify)

17. How do voter registration officials check for duplicate registrations?

- Address
- Date of birth
- Driver's license number
- Names provided by registrant
- Social security number
- Other (please, specify)

18. Does your State check for duplicate voter registrations across state lines?

- Yes (If "yes", please, identify which states.)
- No

009389

19. Are applicants whose applications are rejected notified of the rejection and the reason for the rejection?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

20. Does the statewide voter registration database link to the State's department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

21. Does the statewide voter registration database link to disability and social services agencies in a similar manner to the State's department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**List Maintenance**

*List maintenance refers to the specific process and procedures by which State and/or local election officials update and preserve information contained on the official list of registered voters.*

22. What process is used to perform list maintenance?

<input type="checkbox"/>	Electronic
<input type="checkbox"/>	Manual
<input type="checkbox"/>	Both

23. Who is responsible for conducting list maintenance?

<input type="checkbox"/>	State officials
<input type="checkbox"/>	Local officials
<input type="checkbox"/>	Both

24. Total number of registrations statewide and by county/local jurisdiction that were, for whatever reason, **deleted from the registration list**, including both active and inactive voters if such a distinction is made in your state, between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:**

\_\_\_\_\_

009390

25. Total number statewide and by county/local jurisdiction of **removal notices [Section 8(d)(2) confirmation] mailed** out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

26. Total number statewide and by county/local jurisdiction of **responses received** to the confirmation notices mailed out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

27. Total number statewide and by county/local jurisdiction of voters **moved to the inactive list** between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

28. Total number statewide and by county/local jurisdiction of **voters (active AND inactive voters) removed** from the voter rolls between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections for the following reasons:

**Death:** \_\_\_\_\_

**Disqualifying felony convictions:** \_\_\_\_\_

**Failure to vote in two consecutive federal general elections:** \_\_\_\_\_

**Voter requested to be removed:** \_\_\_\_\_

**Other reasons: (please, specify)** \_\_\_\_\_

**Total number of registrations removed:** \_\_\_\_\_

009391

**29. Identify all of the sources considered in performing list maintenance:**

<input type="checkbox"/>	<b>Applications for absentee ballots</b>	<input type="checkbox"/>	<b>Notices of deceased persons (Department of Health/Bureau of Vital Statistics)</b>
<input type="checkbox"/>	<b>Ballots returned as undeliverable</b>	<input type="checkbox"/>	<b>Notices of persons adjudicated mentally incapacitated</b>
<input type="checkbox"/>	<b>Canvasses, house-to-house</b>	<input type="checkbox"/>	<b>Petition checks</b>
<input type="checkbox"/>	<b>Canvasses, political parties</b>	<input type="checkbox"/>	<b>Reports/Notices from other States that a former resident has registered to vote</b>
<input type="checkbox"/>	<b>Car registrations</b>	<input type="checkbox"/>	<b>Reports of address changes – U.S. Postal Service National Change of Address</b>
<input type="checkbox"/>	<b>Contact by phone</b>	<input type="checkbox"/>	<b>Reports of surrendered driver’s licenses – other states’ motor vehicles offices</b>
<input type="checkbox"/>	<b>Contact in person</b>	<input type="checkbox"/>	<b>Returned election notices</b>
<input type="checkbox"/>	<b>Jury questionnaires</b>	<input type="checkbox"/>	<b>Returned jury summons</b>
<input type="checkbox"/>	<b>List of address changes, Emergency 911 (E-911) system</b>	<input type="checkbox"/>	<b>Returned mail from county agencies using official voter file for mailings</b>

<input type="checkbox"/>	<b>Lists of property ownership</b>	<input type="checkbox"/>	<b>Voter registration system – duplicate checks</b>
<input type="checkbox"/>	<b>Newspaper death notices/obituaries</b>	<input type="checkbox"/>	<b>Other (please, specify)</b>
<input type="checkbox"/>	<b>Notices of address confirmations</b>		

009392

30. How does your State treat voters who:

- a) Have been convicted of a felony
- b) Are serving a sentence of incarceration for conviction of a felony
- c) Are serving a term of probation following being convicted of a felony

## 2006 ELECTION DAY RESULTS

**Ballots cast** means a ballot that has been submitted manually or electronically by a voter but has not been verified and/or counted.

**Note:** For jurisdictions that provide voters with more than one ballot card to vote for different contests or measures should only report one ballot cast per voter.

**Ballots counted** means all ballots that have been cast, processed, and counted.

**“At the polls”** refers to ballots issued, cast, or counted on a jurisdiction’s voting system on Election Day at a polling place.

**Domestic civilian absentee ballot** refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State’s requirement for voting absentee.

**Domestic military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned within the United States or its territories, and who is absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving within the United States and its territories, and who is absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Early voting** refers to any voting that occurred prior to November 7, 2006, for which there were no eligibility requirements. For example, the voter did not have to attest that he/she would be absent from the voting jurisdiction on the day of the election.

**Federal Write-In Absentee Ballot (FWAB)** is a ballot available to military and overseas citizens (including APO and FPO addresses) when they have not received their regular absentee ballot from their state.

**Overseas military citizen** refers to:

009393

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Overseas civilians** refers to persons who are citizens of the United States who are living, working or stationed outside of the United States and its territories and who are not members of a uniformed service.

**Provisional ballot** refers to a ballot issued when a voter's eligibility has not been determined.

31. Does your State conduct early voting?

	Yes
	No

32. Total number statewide and by county/local jurisdiction of:

	Ballots Cast	Ballots Counted
<b>At the polls</b>	_____	_____
<b>Early voting</b>	_____	_____
<b>Domestic civilian absentee ballots</b>	_____	_____
<b>Domestic military citizens</b>	_____	_____
<b>Overseas military citizens</b>	_____	_____
<b>Overseas civilians</b>	_____	_____
<b>Federal Write-In Absentee Ballot (FWAB)</b>	_____	_____
<b>Provisional ballots</b>	*	_____
<b>Total</b>	_____	_____

\* The number provided in response to this question should include the total number of ballots cast in the State's program for contingent or provisional ballots that complies with section 302(a) of the Help America Vote Act.

009394

33. Total number statewide and by county/local jurisdiction of votes counted for **each candidate** in a Federal contest.

34. Total number statewide and by county/local jurisdiction of **provisional ballots** rejected:

**Total:** \_\_\_\_\_

35. Total number statewide and by county/local jurisdiction of **provisional ballots** rejected for each of the following reasons:

- Administrative error \_\_\_\_\_
- Already voted \_\_\_\_\_
- Ballot not timely received (absentee) \_\_\_\_\_
- Deceased \_\_\_\_\_
- Elector challenged \_\_\_\_\_
- First time voter registering on Election Day \_\_\_\_\_
- Improper ID \_\_\_\_\_
- Incomplete ballot form \_\_\_\_\_
- Ineligible to vote \_\_\_\_\_
- Missing ballot \_\_\_\_\_
- Multiple ballots in one envelope \_\_\_\_\_
- Name missing from voter listed \_\_\_\_\_

- No signature \_\_\_\_\_
- Non-appearance within 24 hours \_\_\_\_\_
- Non-matching signature \_\_\_\_\_
- Non-verifiable signature \_\_\_\_\_
- Not registered \_\_\_\_\_
- Registration purged \_\_\_\_\_
- Wrong jurisdiction \_\_\_\_\_
- Wrong precinct \_\_\_\_\_
- Other (please, specify) \_\_\_\_\_

009395

**Absentee Ballots**

*Absentee voting is defined as voting prior to Election Day which requires that the voter meet qualifications other than those generally required to register to vote.*

*Advanced ballot means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.*

**36. Total number state-wide and by county/local jurisdiction of absentee ballots (do not include FWAB):**

	<b>Requested</b>	<b>Not Counted</b>
<b>Domestic civilian absentee ballots</b>	_____	_____
<b>Domestic military citizens</b>	* _____	_____
<b>Overseas military citizens</b>	* _____	_____
<b>Overseas civilians</b>	* _____	_____
<b>Total</b>	_____	_____

*\*Includes ballots transmitted by mail, fax, e-mail, or courier.*

**37. Total number statewide and by county/local jurisdiction of advanced ballots transmitted to military and overseas citizens:**

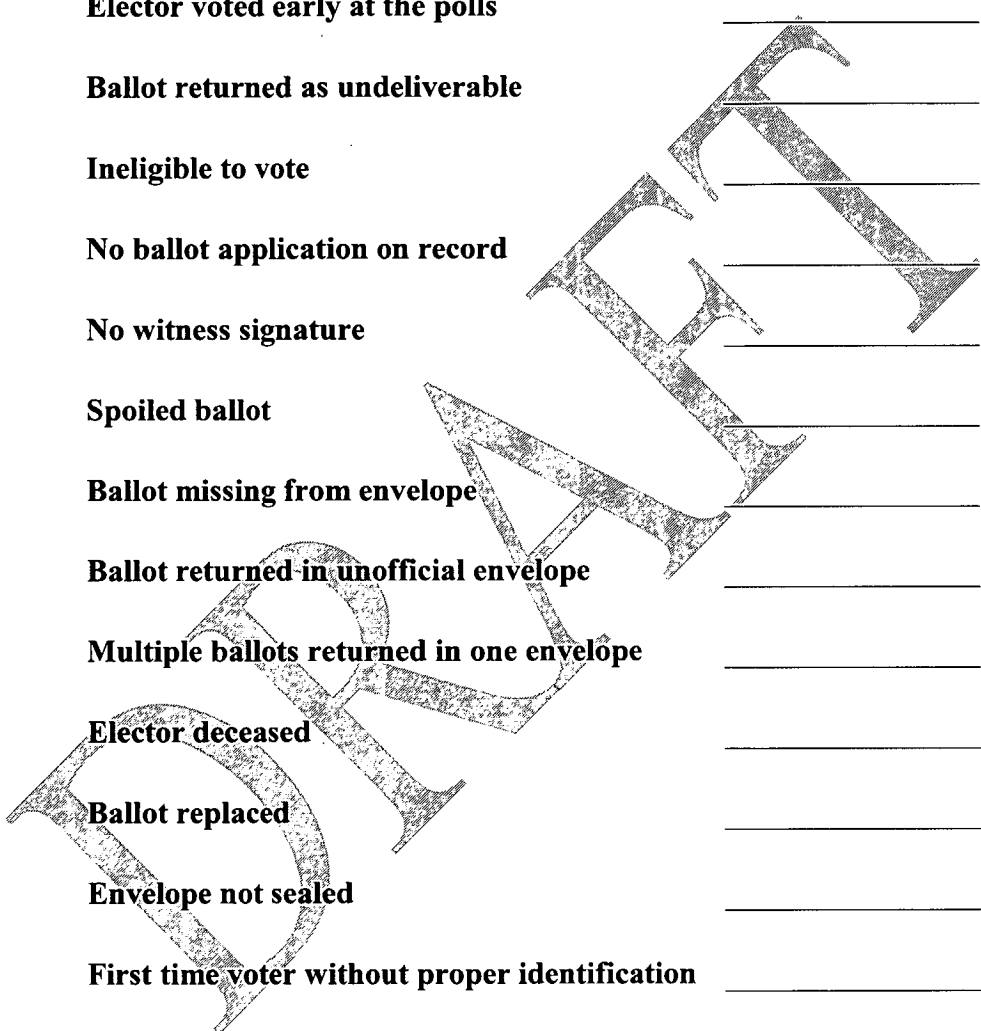

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

**38. Total number statewide and by county/local jurisdiction of Federal Write-In Absentee Ballots (FWAB) received for each of the following voters for the November 7, 2006, election:**

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

39. Identify the five most common reasons that **domestic civilian** absentee ballots were rejected:

- No voter signature \_\_\_\_\_
- Ballot not timely received \_\_\_\_\_
- Non-matching signature \_\_\_\_\_
- Elector voted early at the polls \_\_\_\_\_
- Ballot returned as undeliverable \_\_\_\_\_
- Ineligible to vote \_\_\_\_\_
- No ballot application on record \_\_\_\_\_
- No witness signature \_\_\_\_\_
- Spoiled ballot \_\_\_\_\_
- Ballot missing from envelope \_\_\_\_\_
- Ballot returned in unofficial envelope \_\_\_\_\_
- Multiple ballots returned in one envelope \_\_\_\_\_
- Elector deceased \_\_\_\_\_
- Ballot replaced \_\_\_\_\_
- Envelope not sealed \_\_\_\_\_
- First time voter without proper identification \_\_\_\_\_
- No election official's signature on ballot \_\_\_\_\_
- No residence address on envelope \_\_\_\_\_
- Other (please, specify) \_\_\_\_\_

009397

40. Total number statewide and by county/local jurisdiction of **military and overseas** absentee ballots rejected for each of the following reasons:

- Lacked a postmark** \_\_\_\_\_
- No voter signature** \_\_\_\_\_
- Voter signature not verifiable** \_\_\_\_\_
- Had no date of voter signature** \_\_\_\_\_
- Had no notary/witness signature** \_\_\_\_\_
- Had no date of notary/witness signature** \_\_\_\_\_
- Was received after the state deadline** \_\_\_\_\_
- Returned as undeliverable** \_\_\_\_\_
- Other reason (please, specify)** \_\_\_\_\_

**Undervotes and Overvotes**

*An undervote occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.*

*An overvote occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.*

41. Total number statewide and by county/local jurisdiction of **undervotes** reported in each federal contest:

**Total:** \_\_\_\_\_

42. Total number statewide and by county/local jurisdiction of **overvotes** reported in each federal contest:

**Total:** \_\_\_\_\_

009398

**Poll Workers**

**Note:** *The answer to these questions should include the number of persons who served in all polling places in the State as poll workers, election judges, wardens, commissioners, or other similar term that refers to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits or other documents required to cast a ballot; assist the voter by providing the voter with a ballot or setting up the voting machine for the voter; and serving other functions as dictated by state law. The answers to these questions should not include observers stationed at the polling place.*

**43a.** Has there been a change in the number of poll workers per precinct/polling place required by law or regulation since November 2004?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**43b.** If “yes,” please, provide the new number of poll workers required by law or regulation to be present at each precinct/polling place.

**Total:** \_\_\_\_\_

**44.** Total number statewide and by county/local jurisdiction of poll workers that served in the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

**45.** Total number statewide and by county/local jurisdiction of polling places and precincts that did not have the required number of poll workers:

**Total:** \_\_\_\_\_

**Voting Jurisdictions and Polling Places**

*Precinct means the geographic area to which voters are assigned.*

*Polling place means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.*

009399

46. Identify what constitutes a local election jurisdiction in your State:

- County
- Parish
- Township
- City
- Borough
- Village
- Other (please, specify)

47. Total number statewide and by county/local election jurisdiction of **precincts**:

**Total:** \_\_\_\_\_

48. Total number statewide and by county/local election jurisdiction of **polling places**:

**Total:** \_\_\_\_\_

49. Total number statewide and by county/local election jurisdiction of polling places that are accessible to voters with disabilities:

**Total:** \_\_\_\_\_

*Note: For purposes of this question only, accessibility refers to the physical structure of the polling place, not the voting system.*

50. Total number by county/local election jurisdiction of polling places where a visually impaired voter can cast a private ballot:

**Total:** \_\_\_\_\_

*Note: Identify the total number of polling places where voting equipment is used such that a visually disabled voter can cast a private ballot (e.g., a DRE with audio ballot capability or paper ballots printed in Braille).*

009400

**Sources of Information**

**51.** Total number of local election jurisdictions that provided information for purposes of responding to this survey:

**Total:** \_\_\_\_\_

**52.** Provide the name and contact information for each local election jurisdiction official that provided information for purposes of responding to this survey.

**53.** Identify any other sources of information used to respond to this survey other than those provided in response to the two previous questions. *(All other sources of data shall include information obtained from a state-wide voter registration database or any other public or non-public source.)*

**DRAFT**

THANK YOU FOR RESPONDING TO THE SURVEY. PLEASE, FOLLOW THE ENCLOSED INSTRUCTIONS FOR SUBMITTING YOUR COMPLETED SURVEY.

## GLOSSARY

**Absentee voting** is defined as voting prior to Election Day which requires that the voter meet qualifications other than those generally required to register to vote.

**Active voters** refers to all registered voters except those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**Advanced ballot** means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.

**“At the polls”** refers to ballots issued, cast, or counted on a jurisdiction’s voting system on Election Day at a polling place.

**Ballots cast** means a ballot that has been submitted manually or electronically by a voter but has not been verified and/or counted.

**Ballots counted** means all ballots that have been cast, processed, and counted.

**Domestic civilian absentee ballot** refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State’s requirement for voting absentee.

**Domestic military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned within the United States or its territories, and who is absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving within the United States and its territories, and who is absent from the place of residence where the member is otherwise qualified to vote; and

(C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Duplicate registration application** refers to an application to register by a person already registered to vote at the same address, under the same name, and (where applicable) the same political party.

**Early voting** refers to any voting that occurred prior to November 7, 2006, for which there were no eligibility requirements. For example, the voter did not have to attest that he/she would be absent from the voting jurisdiction on the day of the election.

**Federal Write-In Absentee Ballot (FWAB)** is a ballot available to military and overseas citizens (including APO and FPO addresses) when they have not received their regular absentee ballot from their state.

**Inactive voters** refers to registrants who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**List maintenance** refers to the specific process and procedures by which State and/or local election officials update and preserve information contained on the official list of registered voters.

**New, valid registrations** include all registrations that are new to the local jurisdiction and re-registrations across jurisdictional lines. This does not include applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.

**Overseas civilians** refers to persons who are citizens of the United States who are living, working or stationed outside of the United States and its territories and who are not members of a uniformed service.

**Overseas military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Overvote** occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.

**Precinct** means the geographic area to which voters are assigned.

**Polling place** means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.

**Provisional ballot** refers to a ballot issued when a voter's eligibility has not been determined.

**Undervote** occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.

Subject Re: Federal Register

We need a burden analysis first. Ask DeAnna for some previous burden analyses that we have done. This involves getting several (up to 9) states that will be responding to estimate the time and money that will be needed to complete the survey. That information must be included in the FR publication. Ask DeAnna to give you some sample FR publications as well and you will see what I am talking about.

Subject Federal Register

Julie,

Can we go ahead and publish the required 60-day notice in the Federal Register to obtain public comment on the 2006 Survey? This needs to be done prior to submitting the Information Collection Request to OMB, and June will be here this week. The responses we receive from the Boards, if any, could be part of this period. How can we move ahead? How can I assist? Thank you!

Subject PRA and focus groups

Hello,

Karen told me to check with you about focus groups and PRA in preparation for her conference call with the Contractors regarding their information collection activities. I am putting together some materials for the participants and wanted to make sure I have the correct information. From what I have found out (and from my understanding of her projects as they are written on the SOW):

In accordance with the PRA, OMB approval must be obtained prior to collecting information in any situation where 10 or more individuals are involved and the questions are standardized in nature. A project could have a series of focus groups of 3-5 people each, but if the total number of participants from all sessions amounts to 10 or more then they fall under PRA.

**Do focus groups need Paperwork Reduction Act clearance?**

Yes -- assuming that the focus groups are working from predetermined scripts that are being asked each group

Compliance with the PRA is required whenever a federal agency sponsors a data collection by using identical questions, using identical reporting or record-keeping requirements, or asking respondents to provide the same level of information on the same subject involving 10 or more respondents in a 12-month period. The law applies to all federal employees, contractors, people in cooperative agreements, and anyone else who asks the public for information for the purpose of research, public health practice, program evaluation, or any other reason. The PRA also addresses customer satisfaction inventories, focus group inquiries, all types of surveys, telephone interviews, and electronic environments.

**What Doesn't Need PRA Clearance?**

Open-ended questions to the public, e.g. "What do you think about this?" in a focus group do not require OMB approval.

**Does the PRA affect questions at public meetings?**

Not usually. No clearance is needed if the attendees are just asked to comment or give suggestions on the program or subject in question. If, however, the group is gathered for the purpose of having attendees respond to a specific set of formatted questions, then the PRA does apply

I have placed a call to Alex at OMB asking him to assist us in understanding this point for us.

Subject ICR Submission

Dear Mr. Hunt,

I am writing to notify you of our ICR submission via ROCIS of our 2006 Election Administration and Voting Survey. The form has been completed to the best of our knowledge and all supporting documents have been included in the package. This information collection is being submitted under the regular review process. However, we would greatly appreciate an estimate of when we could expect approval since the information collection focuses on election related data. If you have any questions or need more information, please, do not hesitate to contact me at your earliest convenience. Thank you very much for your time and invaluable assistance in this matter.

Sincerely,

NOTICE OF OFFICE OF MANAGEMENT AND BUDGET ACTION

Date 12/11/2006

U.S. Election Assistance Commission

FOR CERTIFYING OFFICIAL: Juliet Thompson-Hodgkins

FOR CLEARANCE OFFICER: Laiza Otero

In accordance with the Paperwork Reduction Act, OMB has taken action on your request received 12/06/2006

ACTION REQUESTED: No material or nonsubstantive change to a currently approved collection

TYPE OF REVIEW REQUESTED: Emergency

ICR REFERENCE NUMBER: 200612-3265-002

TITLE: U.S. Election Assistance Commission Survey of UOCAVA Voters

LIST OF INFORMATION COLLECTIONS: See next page

OMB ACTION: Approved without change

OMB CONTROL NUMBER: 3265-0005

The agency is required to display the OMB Control Number and inform respondents of its legal significance in accordance with 5 CFR 1320.5(b).

EXPIRATION DATE: 05/31/2007

DISCONTINUE DATE:

BURDEN:	RESPONSES	HOURS	COSTS
Previous	10,000	2,500	0
New	10,000	2,500	0
Difference			
Change due to New Statute	0	0	0
Change due to Agency Discretion	0	0	0
Change due to Agency Adjustment	0	0	0
Change Due to Potential Violation of the PRA	0	0	0

TERMS OF CLEARANCE: Terms of the previous clearance remain in effect.

OMB Authorizing Official:

John F. Morrall III  
Acting Deputy Administrator,  
Office Of Information And Regulatory Affairs

Subject omb submission

History: This message has been replied to.

hello ms otero,

i am emailing two documents of the three you are probably expecting: one is form 83-I. i have filled it out as much as possible: i was trying to contact you today to ask for assistance, but unfortunately did not reach you. rather than delaying this matter longer, i am sending an incomplete document. what i am stuck on is question 14 - the record keeping and cost item. the other problem on the form is a formatting issue i am having with question 12. for some reason, if i fill in the P for voluntary, it overwrites the agency line in item 1 and vice versa. i can not figure out if this is a bug in the form or if there is something wrong with my version of adobe!

the second document is the supporting documentation for omb. that document is ready to go, but please let me know if you would like me to make changes.

finally, the time and cost burden document i have not filled out. can you please help me with this? as i interpret it, there are no costs associated other than faxing the survey back for some respondents. i am not sure how to budget for this so it would leave most of the form blank. is this your understanding of the process?

thank you in advance for your assistance.

if you need to contact me tomorrow by phone, please try my cell at 510.367.7527. otherwise, i should be on email for most of the day.

regards,

karin mac donald

Supporting Documentation for OMB.doc 2006-10-16 - OMB 83-I form.pdf

009438

**SUPPORTING STATEMENTS**  
**United States Election Assistance Commission - Survey of UOCAVA Voters**

**A. JUSTIFICATION**

**1. Explain the circumstances that make the collection of information necessary.**

Section 245 of the Help America Vote Act (HAVA) requires the United States Election Assistance Commission (EAC) to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the Federal, State, and local electoral process. Previously, in 2001, operating under the National Defense Authorization Act on behalf of the Secretary of Defense, the Director of the Federal Voting Assistance Program (FVAP) began work to fulfill a congressional directive to conduct an electronic voting demonstration for the 2002 general election. Building upon the technical foundation of the first national electronic voting pilot (the 2000 Voting Over the Internet project), FVAP designed the Secure Electronic Registration and Voting Experiment (SERVE). SERVE was designed to assess whether electronic voting technology could be used to improve the voting participation of uniformed services members and overseas citizens, whose rights are protected by the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA). Currently, UOCAVA voters are most likely to utilize communications and internet technologies in the electoral process, thus, they must be studied to fulfill the requirements of Sec. 245 or HAVA.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

The data will be collected, coded, summarized and analyzed by an EAC contractor. Summary data from the survey will be contextualized with qualitative data collected in case studies and presented in a report to the EAC. At the conclusion of the study, the EAC will transmit a report on the results of the study to Congress. The study, or subsections thereof, will also be publicly available upon release by the EAC.

The collection of data complies with the applicable Information Quality Guidelines in the following ways: One, the survey is timed to be conducted shortly after the General Election of 2006, when respondents' recollection of their interaction with the voting process is still at its best. Two, statistical sampling techniques will be employed to select a sample that is representative of the population being studied. Three, the survey instrument, a description of the sample, and the summary data will be made available to the public, thus replication of results within the statistical error margin will be possible. Four, the data collection, analysis and resulting reports will be completed within an eleven month time-frame, which allows for a timely distribution of results to Congress, election officials, data users, researchers and other interested parties. Five, the survey instrument is being developed by a group of highly qualified researchers, and is being beta tested after each change with a different group of volunteers. The instrument will then be sent to interested groups that have experience with the subject topic, for comments. As appropriate, these comments will be incorporated prior to a final pre-test of the

009439

survey. Six, coding documentation will be developed, and coders will be trained to ensure uniform interpretation of data during the coding process of the results. Seven, statistical analysis will include modern methods that are commonly used in social science research, including cross-tabs, frequencies and regression analysis. Eight, ongoing quality control programs are in place to assure the highest possible validity and reliability of the data.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The potential respondents to the survey will be contacted in the same way in which they have asked for their ballot to be transmitted to them. This means that those that ask for their ballot to be faxed, will receive a faxed copy of the survey, and those that use email, will receive an email invitation to complete the survey over the internet. Respondents have the option to ask for the survey in a different medium, i.e. a fax respondent has the option to use the internet to complete the survey, and vice versa.

**4. Describe efforts to identify duplication.**

Each respondent will be assigned a unique code that will prevent duplication. Internet invitations to respond to the survey will also include a unique link that can only be used once. Each respondent will only have one opportunity to fill out a survey, and only originals will be accepted back, not copies of the survey instrument.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

The collection of information does not involve small businesses or other small entities.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

The EAC is asking for a one-time collection of survey responses. If these data are not collected, the mandate of Sec. 245 of HAVA can not be met.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

OMB guidelines provide for the submission of an emergency ICR if the collection is needed sooner than would be possible using normal procedures and is essential for the agency's mission. The collection of the survey data will be consistent with the OMB guidelines under the emergency ICR. Following the regular procedures would prevent the collection of data.

009440

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

A PRA Federal Register notice is not available. This agency is asking for emergency review and for a waiver of the Federal Register publication requirement from OMB.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

No payments or gifts will be provided to respondents.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

In accordance with generally used Human Subjects protocols, survey respondents will be informed that the information they provide will not be attributed to them personally, and will be compiled with the data from other respondents to construct summary data. Survey forms will not request identifying information from respondents, such as their name or address.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

No questions of a sensitive nature will be asked.

**12. Provide an estimate in hours of the burden of the collection of information.**

Responding to the survey will take approximately ten minutes if the internet is used. If respondents chose to use the hard-copy survey form, we estimate an additional five minutes for faxing of the survey.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

Most respondents who utilize the internet to respond to the survey should not incur any cost. Respondents that have to pay for the use of a computer at an internet café may incur a cost of no

009441

more than \$1 each to respond to the survey. Respondents that chose to fax the responses may incur a cost of up to \$3.

**14. Provide estimates of annualized cost to the Federal government.**

There is no cost to the Federal government. Responses to the survey are strictly voluntary and respondents will not be reimbursed for their incurred costs to answer the survey.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is a new collection – there are no program changes or adjustments.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The collected survey responses will only be published in summary data format, as part of a report. The survey data will be contextualized with data from case studies. The report will be published by the EAC on its website, and results will also be presented to Congress in a report.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

N/A

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

There are no exceptions to the certification statement identified in Item 19 of the OMB 83-I.

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

009442

The sample will target a sample of the 2006 UOCAVA registered voters in the four jurisdictions identified in our case studies. We expect the sample to be at least 10,000 registered voters, and we hope to get response rate of 20%. Previous on-line surveys of UOCAVA voters by the Overseas Vote Foundation had response rates of approximately 17%.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

The sample will be chosen from UOCAVA registered voter lists in four states that vary by the size of the UOCAVA pool and the method by which overseas ballots can be obtained or cast. Montana is a small state (4,721 UOCAVA votes cast) that has a wide variety of electronic transmission methods with differences between local jurisdictions. South Carolina has the largest number of UOCAVA voters (168,814) and allows for emailing of blank and voted ballots and faxing of ballots and registration forms. Florida allows some emailing and faxing of blank ballots and is considering the possibility of internet voting. Most likely, the fourth state will be either Vermont (1,733 UOCAVA voters) or Illinois (30,556 UOCAVA voters) which have smaller numbers of UOCAVA voters but allow faxing for registration, ballot requests and blank ballots, and also have variations between local jurisdiction that can be studied. Working from the registration lists, we will invite the respondents to complete the survey in the form they received their ballot (i.e. mail, fax or email). Those that check email will get an email invitation with a link to the on-line survey. Others will get a paper version by fax or mail. Our intention is to contact all the registered UOCAVA voters in a given jurisdiction or where necessary to draw a random sample.

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

Follow-up emails will be sent after 5 days to those who have not responded by email, and follow-up faxes and postcards to those who did not respond from those categories. Aside from these multiple contacts, we will monitor for any potential biases in the responses we get by comparing attributes in the registration file with those who respond to the survey. If necessary, we will consider weighting the responses to test whether there is a measurable difference in the results as a result of any skew in the respondents' characteristics.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

The questionnaire will be pre-tested with a small sample of Overseas Vote Foundation

009443

volunteers and associates to refine the wording of questions and ensure that the questions are well understood, as well as members of the research team.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

Contractor contact: Prof. Bruce E. Cain, 1.415.336.0570

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
- (i) It uses effective and efficient statistical survey methodology; and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
  - Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is **not** considered an electronic submission.
- Enter the total annual recordkeeping and reporting hour burden.
- Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.
  - "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
- Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
- Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
- Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
- Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
  - "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

009447

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

009448

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-I is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.
2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.
4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.
5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.
6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.
7. Explain any special circumstances that would cause an information collection to be conducted in a manner:
  - \* requiring respondents to report information to the agency more often than quarterly;
  - \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
  - \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.

10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:
  - \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
  - \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.

\* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

\* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

\* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

009450

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-I.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-I.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-I is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

009452

## Sample

### 12. Annual Reporting Burden:

- a. Number of Respondents 8,397
- b. Number of Responses per Respondent 1
- c. Total Annual Responses 8,397
- d. Hours per Response 2
- e. Total Annual Reporting Burden 16,794
- f. Total Public Cost \$ 1,091,610

The projected hours per response for this collection of information were derived by dividing the process into three actions:

- Learning about the law and the form: 15 minutes
- Completion of the form: 20 minutes
- Assembling and filing the form: 85 minutes
- Total Hours 120 minutes (2 hours)

For the first two actions, tests were used to determine completion times. Persons who were not conversant with immigration processes were used to determine the average completion time. The third action of the form, assembling and filing the form, was broken down into subtasks. For example, an application for a reentry permit or refugee travel document is mailed directly to the USCIS Nebraska Service Center. Meanwhile, an application for advance parole is filed at the local USCIS office if the applicant is in the United States. If, however, the applicant seeking advance parole is outside the United States, he or she would mail the form to USCIS Headquarters in Washington, DC. Consequently, the time necessary to actually file the form can vary widely, depending on the circumstances of the applicant.

### **Annual Reporting Burden**

**The annual reporting burden is 16,794.** This figure was derived by multiplying the number of respondents (8,397) x frequency of response (1) x (2) hours per response. This estimation is based on prior USCIS experience with the program.

### **Public Cost**

**The estimated annual public cost is \$ 1,091,610.** This estimate is based on the number of respondents 8,397 x (2) hours per response x \$10 (average hourly rate) plus the number of respondents (8,397 x fee charge of \$190).

- 13. There are no capital or start-up costs associated with this information collection. Any cost burdens to respondents as a result of this information collection are identified in Item 14.
- 14. There is a \$190 fee charge associated with the collection of this information.

14. Annualized Cost Analysis:

- a. Printing Cost \$ 5,290
- b. Collection and Processing Cost \$ 918,380
- c. Total Cost to Program \$ 923,670
- d. Fee Charge \$ 923,670
- e. Total Cost to Government \$ 0

**Government Cost**

The estimated cost of the program to the Government is calculated by using the estimated number of respondents (8,397) multiplied (x) by the suggested \$110 fee charge (which includes the suggested average hourly rate for clerical, officer, and managerial time with benefits, plus a percent for the estimated overhead cost for printing, stocking, distributing and processing of this form).

## U.S. ELECTION ASSISTANCE COMMISSION

### **Request For Substantive Comments on Procedural Manual For The Election Assistance Commission's Voting System Testing and Certification Program; Proposed Information Collection: Request for Comments on Information Collection Burden; U.S. EAC Voting System Testing and Certification Program.**

**AGENCY:** United States Election Assistance Commission (EAC).

**ACTION:** NOTICE.

---

**SUMMARY:** The EAC has drafted a procedural manual for its Voting System Testing and Certification Program. This program sets administrative procedures for obtaining an EAC Certification for voting systems. Participation in the program is strictly voluntary. The program is mandated by 42 U.S.C. §15371. The purpose of this notice is twofold: (1) to request public comment on the substantive aspects of the program and (2) to request public comment on the proposed collection of information pursuant to the emergency processing provisions of the Paperwork Reduction Act as submitted to the Office of Management and Budget (OMB).

**(1) SUBSTANTIVE COMMENTS:** The EAC seeks substantive comments from the public on its proposed procedural manual. Please submit comments consistent with the information below. Comments should identify and cite the section of the manual at issue. Where a substantive issue is raised, please propose a recommended change or alternative policy. This publication and request for comment is not required under the rulemaking, adjudicative or licensing provisions of the Administrative Procedures Act (APA). It is a voluntary effort by the EAC to gather input from the public on the EAC's administrative procedures for certifying or decertifying voting systems. Furthermore, this request by the

009466

EAC for public comment is not intended to make any of the APA's rulemaking provisions applicable to development of this or future EAC procedural programs.

DATES (Comments): Submit written or electronic comments on this draft procedural manual on or before 5:00 p.m. EDT on October 31, 2006.

ADDRESSES: Submit comments on-line on EAC's website: <http://www.eac.gov>; via mail to Brian Hancock, Director of Voting System Certification, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, D.C. 20005; or via fax to 202-566-1392. An electronic copy of the proposed guidance may be found on the EAC's web cite <http://www.eac.gov>.

FOR FURTHER INFORMATION CONTACT: Brian Hancock, Director of Voting System Certification, 1225 New York Avenue, Suite 1100, Washington, D.C., (202)566-3100, Fax: (202)566-1392.

**(2) COMMENTS ON THE PROPOSED COLLECTION OF INFORMATION:** In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the EAC is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be

collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to provide for the certification of voting systems as mandated by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this program in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software...." This mandate represents the first time the Federal government will provide for the voluntary testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC is developing the Voting System Testing and Certification Program. This program requires the submission and retention of information related to voting systems and voting system manufacturers.

009468

Until recently, national voting system certification was conducted by a private membership organization, the National Association of State Election Directors (NASED). NASED certified voting systems for over a decade, using standards issued by the Federal government. The organization terminated its certification efforts on July 10, 2006. While the EAC and NASED have worked together to provide for the certification of emergency modifications necessary to properly field voting systems for the 2006 General Election, there is presently no mechanism in place to test and certify new systems or to process modifications for the 2008 Federal elections. Given the fact that (1) it can take years to develop, test, certify, sell and field a new or modified voting system, and (2) a large volume of voting systems (new, existing and modified) are expected to be submitted to the EAC upon initiation of the new Certification Program, it is imperative that the EAC's Voting System Testing and Certification Program begin on the earliest possible date. The 2008 Federal elections are less than 2 years away. Ensuring that certified voting systems are available for the 2008 Election Cycle is essential to the public welfare.

1. Type of Information Collection Request: New collection;
2. Title of Information Collection: EAC Voting System Testing and Certification Program Manual;
3. Use: HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software by accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing

and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and effective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may effect a voting system's certification.

4. Form Numbers: EAC-001C, 002C and 003C.
5. Frequency: Voluntary Reporting – (1) *Manufacturer Registration Form*: one time when a manufacturer registers for the program, (2) *Voting System Certification Application Form*: as needed, when a manufacturer submits a voting system for testing and certification, and (3) *Field Anomaly Reporting Form*: as needed, when an election official voluntarily notifies the EAC of a witnessed voting system anomaly.
6. Affected Public: Business or other for-profit institutions and state and local election officials;
7. Number of Respondents: 94 annually;
8. Total Annual Responses: 99 annually;
9. Total Annual Hours: 119 hours, annually.

EAC is requesting OMB review and approval of this collection by

009470

November 30, 2006, with a 180-day approval period. Written comments and recommendations will be considered from the public if received by the individuals designated below by October 31, 2006.

To obtain copies of the supporting statement, the Voting System Testing and Certification Program Manual or EAC forms referenced above, access the EAC Web Site at [www.eac.gov](http://www.eac.gov) or mail your request, including your address, phone number, to Director of Voting System Certification, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, D.C. 20005; or fax the EAC Director of Voting System Certification at 202-566-1392.

Interested persons are invited to send comments regarding the burden or any other aspect of these collections of information requirements. However, as noted above, comments on these information collection and recordkeeping requirements must be mailed and/or faxed to the designees referenced below by October 31, 2006:

*OMB Reviewer: Alexander T. Hunt*

Office of Management and Budget, Room 10235

New Executive Office Building

Washington, DC 20503, (202) 395-7316.

survey Burden.doc

009472

## USEAC Survey of UOCAVA voters, Burden and Cost estimate

### **12. Annual Reporting Burden:**

- a. Number of Respondents: approximately 10,000
- b. Number of Responses per Respondent: 1
- c. Total Annual Responses: 10,000
- d. Hours per Response: 0.25
- e. Total Annual Reporting Burden: 2,500
- f. Total Public Cost: 0

The projected hours per response for this collection of information were derived by dividing the process into two actions:

- Reading the introduction: 2 minutes
- Completion of the survey: 13 minutes
- Total hours: 15 minutes

For both actions, tests were used to determine completion times. UOCAVA voters were used to determine the average completion time. The time to actually complete the survey will vary somewhat, depending on the experiences and circumstances of the respondent.

### **Annual Reporting Burden**

**The annual reporting burden is 2,500.** This figure was derived by multiplying the approximate number of respondents (10,000) x frequency of response (1) x (0.25) hours per response. This estimation is based on the tests that were conducted with UOCAVA voters.

### **Public Cost**

**The estimated annual public cost is \$ 0.** This is a voluntary on-line survey and respondents will not be compensated for their time.

- 13. There are no capital or start-up costs associated with this information collection.
- 14. There are no fees or charges associated with this collection

14. Annualized Cost Analysis: 0

### **Government Cost**

There are no costs to the government.

Subject justification attached

History:  This message has been replied to.

hello laiza  
i am attaching a document with the justification for emergency  
processing. i worked off the notice you sent (thank you SO MUCH!!! it  
made it so much easier!!!!!!)  
so i hope that this will double up for the section in the federal  
register as well. please take a look at it and use the sections you  
believe to be most appropriate. i assume that the first paragraph is  
more appropriate for the federal register than for omb review...  
please let me know what you need next. i will try to reach you by phone  
in a while to touch base!

thanks!

karin

reasons for emergency review.doc

009474

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the Federal, State, and local electoral process, as mandated by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this study in an expedited fashion is reasonably likely to prevent or disrupt the collection; as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). Section 245 of the Help America Vote Act (HAVA) requires the United States Election Assistance Commission (EAC) to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the Federal, State, and local electoral process. In delineating nine possible research topics, Congress specifically identified the need for further research in determining the requirements for authorization, collection, storing, and processing electronically generated messages permitting eligible voters to apply for an absentee ballot.

In response to this HAVA requirement, the EAC is developing a Survey of voters that are protected by the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA). UOCAVA voters are most likely to utilize communications and internet technologies in the Federal, State and local electoral process. The upcoming General Election of 2006 is the only Federal Election that will be conducted until 2008. This is the only election that will include Federal, State and local candidates and issues on one ballot until 2008, thus this election presents the only opportunity to collect the necessary data to comply with the HAVA requirement within the mandated time frame.

Statistical analyses on respondent behavior to voluntary surveys have shown that the interest level of potential respondents, and thus the response rate, drops dramatically as time passes after the event in question, which in this case, is the respondents' interaction and experience with the electoral system during the General Election of 2006. Furthermore, UOCAVA voters are a highly mobile group of voters. Their contact information will be gathered from local election officials, based on what the voter supplied as their contact preference for this election. As time passes from the date of the election, we will lose more potential respondents because we will not have current contact information. Members of the military, for example, are often reassigned on short notice and their contact information for election purposes will not have to be updated until the next election in 2008. Both reasons will dramatically disrupt, or in fact prevent, the collection of a sufficient number of responses to constitute a large enough sample to provide statistically significant data that are representative of the population being studied. The quality of the data collected from respondents will also suffer if the

collection is not undertaken close to election time. It is a well documented fact that respondents tend to forget or don't adequately recollect processes as time passes. The validity of the data will greatly suffer if the collection commences much after election day.

Draft 1.0 UOCAVA Voter Survey for EAC Review.pdf

009478

## Review Draft 1.0 2006 EAC – UOCAVA Voter Survey

Dear Voter,

Your local election official is collaborating with the United States Election Assistance Commission (USEAC) on this survey of overseas and uniformed services absentee (UOCAVA) voters. You are invited to participate in this voluntary survey, which will take an estimated maximum of 8 - 10 minutes to complete, and we greatly appreciate your response.

The objective of the survey is to better understand the usability aspects of Internet and electronic transmission methods for voting materials in use by election jurisdictions today. The responses will be summarized and result in a report and recommendations to Congress, election administrators, and the general public.

This survey is an opportunity to tell us about your voting experience in November 2006. Your participation is essential to help us to learn about the unique challenges that UOCAVA voters face in the electoral process, and to develop suggestions for improvement.

Your response is confidential and can not be attributed to you, and no data that can identify you as the respondent will be maintained. This survey project is funded by the USEAC, and administered by the Overseas Vote Foundation.

Thank you for taking the time to participate in this important research project!

Sincerely

(If you are not an overseas civilian or uniformed services voter, spouse or dependent, please excuse this message, as you have received this survey in error.)

---

Please note with the hard copy survey that the page changes are listed at the *end* of the pages - and they are not aligned with the pages of the paper document. Unfortunately, the online program is not well-designed for hardcopy or survey document extraction. It will be best to test the survey online.

To take the survey online, use this URL:

<http://www.zoomerang.com/survey.zgi?p=WEB225RPY7TAGA>

009479

The paper version of the survey can be studied more easily, and for that, the following explanations may be of assistance:

1. The survey has two primary lines with an extra page of questions for voters who used a form of ETS in their ballot transmission/s.
  - Main Line (with Extra Page: ETS voters)
  - Did Not Vote Line
2. All survey takers get the first question #1 and then the last 2 pages of questions.
3. The "Did Not Vote" line starts of Page 2 of the Survey and continues through to the end of Page 4, then jumps to Page 10 to the end.
4. The "Yes - I Voted" line is called the "Main Line", and it starts on Page 5 and continues through to the the end.
5. The Main Line bifurcates at one point where the ETS voters must go through a page of additional questions and then the re-unite with the Main Line of voters.

All sections are labeled where the **Survey Pages** change.

## Review Draft 2006 EAC UOCAVA Voter Survey

ALL SURVEY TAKERS ANSWER THIS QUESTION

"Yes" answers take the Main Line of questions

"No" answers take the Did Not Vote Line of questions

1

Did you vote as an overseas citizen or active-duty military absentee voter in 2006?

- Yes
- No
- I tried but was unable to complete the process

End of Survey Page 1

---

009481

## "Did Not Vote" line of questions

DID NOT VOTE LINE

2

Why didn't you vote? (check all that apply)

- My ballot did not arrive
- My ballot was late
- Forgot to send my ballot
- Registration/ballot request FPCA form was denied
- Missed the registration deadline
- Intended to vote but found out too late I wasn't registered
- My address changed
- Couldn't fulfill the notarization requirements
- Witness requirements unclear
- Didn't think my vote would matter
- The process was too complicated
- Had no candidate preference
- No interest
- Other, please specify

End of Survey Page 2

009482

**“Did Not Vote” line of questions, continued**

DID NOT VOTE LINE

3

In which state would you have voted?

4

On November 7th, in which country were you residing or serving?

5

What filing status did you use? (Please check the same status as you indicated on your voter registration/ballot request FPCA form)

- U.S. citizen residing outside the U.S. temporarily
- U.S. citizen resident outside the U.S. indefinitely
- Uniformed Services, spouse or dependent

6

What is your voting history?

- I would have been a first time voter this year
- Voted before as overseas civilian
- Voted before in the US
- Voted both in the US, and as an overseas civilian

009483

- Voted before as absentee military/spouse/dependent
- Voted in US, and as absentee military/spouse/dependent

7

Did you try to register/request an absentee ballot for November 2006?

- Yes, I tried to register/request my ballot
- No, I didn't even try
- No, I thought I was registered
- No, I had confirmed that I was registered

End of Survey Page 3

---

**“Did Not Vote” line of questions, continued**

DID NOT VOTE LINE

8

By what means did you REQUEST your FPCA form to register to vote and/or request an absentee ballot? [Note: this form is traditionally called an FPCA form] (check all that apply)

- Electronically/online from a website
- In person from my Voting Assistance Officer (VAO)
- In person from the Consulate/Embassy
- Contacted my local election office by email

009484

- Contacted my local election office by telephone
- Contacted my local election office by FAX
- In person from local election office
- Used IVAS service from DOD
- In person from political party representative
- In person at a voter registration event
- In person from my employer
- In person from a friend
- Other, please specify

\_\_\_\_\_

9

By which means were you PROVIDED a registration/ballot request FPCA form?

- Downloaded from a website
- Generated completed form through a website
- In the mail
- By FAX
- Via Email
- In person, I received a hardcopy paper form
- Accessed through automated IVAS system
- Other, please specify

\_\_\_\_\_

009485

10

When did you send in your registration/ballot request FPCA form?

- June 2006 or earlier
- July
- August
- First half of September
- Second half of September
- First half of October
- Second half of October
- November

11

What method did you use to SEND IN your registration/ballot request FPCA form?

- FAX
- FAX + original FPCA by mail
- Email
- Email + original FPCA by mail
- Used IVAS service for DOD
- Regular Mail
- Certified or Express Mail / Courier
- Military Postal Service (APO/FPO)
- Sent through Consulate/Embassy mail pouch
- In person visit to election office

### “Voted” Main Line of Questions

MAIN LINE OF QUESTIONS

12

How satisfied were you with the process of obtaining and casting a ballot in 2006?

Satisfied	Somewhat satisfied	Neutral	Somewhat dissatisfied	Dissatisfied
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5

13

What filing status did you use? (Please check the same status as you indicated on your voter registration/ballot request FPCA form)

- U.S. citizen residing outside the U.S. temporarily
- U.S. citizen resident outside the U.S. indefinitely
- Uniformed Services, spouse or dependent

14

In which state did you vote by absentee ballot in 2006?

009487

15

On November 7th, in which country were you residing or serving?

16

What is your previous voting history?

- I would have been a first time voter this year
- Voted before as overseas civilian
- Voted before in the US
- Voted both in the US, and as an overseas civilian
- Voted before as absentee military/spouse/dependent
- Voted in US, and as absentee military/spouse/dependent.

17

Through which means/entity did you OBTAIN your voter registration/ballot request FPCA form? [Note: this form is traditionally called an FPCA form]

- My ballot arrived without filing a request
- Used online IVAS service from DOD
- Downloaded from a website
- Generated completed form through a website
- From my Voting Assistance Officer (VAO)
- From the Consulate/Embassy
- Election office sent it by email

009488

- Election office sent it by FAX
- Personally obtained it from local election office
- From political party representative
- At a voter registration event
- From my employer

Subject draft federal register notice attached

History:

✉ This message has been replied to.

good morning, laiza

attached, please find my first attempt to write the federal register notice. please let me know what, if anything, i should change. i assume that you received the survey document that i emailed to you and karen this afternoon - let me know if you have any questions about it, or problems with the formatting etc.  
thank you again for all of your help!

regards,

karin

## U.S. ELECTION ASSISTANCE COMMISSION

### **Request For Substantive Comments on the Survey Instrument for Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA) Voters.**

**AGENCY:** United States Election Assistance Commission (EAC).

**ACTION:** NOTICE.

---

**SUMMARY:** The EAC has drafted a survey to collect information from UOCAVA voters about their interaction and experiences with the electoral system, specifically about their use of information technology and the internet in the registration and balloting process. Participation in the survey is strictly voluntary. The project is mandated by 42 U.S.C. §15371. The purpose of this notice is twofold: (1) to request public comment on the substantive aspects of the survey instrument and (2) to request public comment on the proposed collection of information pursuant to the emergency processing provisions of the Paperwork Reduction Act as submitted to the Office of Management and Budget (OMB).

**(1) SUBSTANTIVE COMMENTS:** The EAC seeks substantive comments from the public on the UOCAVA survey instrument. Please submit comments consistent with the information below. Comments should identify and cite the question and location of the survey question at issue. Where a substantive issue is raised, please propose a recommended change or alternative wording. This publication and request for comment is a voluntary effort by the EAC to gather input from the public on this EAC survey instrument.

**DATES (Comments):** Submit written or electronic comments on this draft procedural manual on or before 5:00 p.m. EDT on October 31, 2006.

009503

ADDRESSES: Submit comments on-line on EAC's website: <http://www.eac.gov>; via mail to Karen Lynn-Dyson, Research Director, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, D.C. 20005; or via fax to 202-566-1392. An electronic copy of the survey may be found on the EAC's web cite <http://www.eac.gov>.

FOR FURTHER INFORMATION CONTACT: Karen Lynn-Dyson, Research Director, 1225 New York Avenue, Suite 1100, Washington, D.C., (202)566-3100, Fax: (202)566-1392.

**(2) COMMENTS ON THE PROPOSED COLLECTION OF INFORMATION**: In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the EAC is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's requirement to conduct this study; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the

Federal, State, and local electoral process, as mandated by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this study in an expedited fashion is reasonably likely to prevent or disrupt the collection; as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). Section 245 of the Help America Vote Act (HAVA) requires the United States Election Assistance Commission (EAC) to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the Federal, State, and local electoral process. In delineating nine possible research topics, Congress specifically identified the need for further research in determining the requirements for authorization, collection, storing, and processing electronically generated messages permitting eligible voters to apply for an absentee ballot.

In response to this HAVA requirement, the EAC is developing a Survey of voters that are protected by the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA). UOCAVA voters are most likely to utilize communications and internet technologies in the Federal, State and local electoral process. The upcoming General Election of 2006 is the only Federal Election that will be conducted until 2008. This is the only election that will include Federal, State and local candidates and issues on one ballot until 2008, thus this election presents the only opportunity to collect the necessary data to comply with the HAVA requirement within the mandated time frame.

Statistical analyses on respondent behavior to voluntary surveys have shown that the interest level of potential respondents, and thus the response rate, drops dramatically as time passes after the event in question, which in this case, is the respondents' interaction and experience with the electoral system during the General Election of 2006. Furthermore, UOCAVA voters are a highly mobile group of voters. Their contact information will be gathered from local election officials, based on what the voter supplied as their contact preference for this election. As time passes from the date of the election, we will lose more potential respondents because we will not have current

009505

contact information. Members of the military, for example, are often reassigned on short notice and their contact information for election purposes will not have to be updated until the next election in 2008. Both reasons will dramatically disrupt, or in fact prevent, the collection of a sufficient number of responses to constitute a large enough sample to provide statistically significant data that are representative of the population being studied. The quality of the data collected from respondents will also suffer if the collection is not undertaken close to election time. It is a well documented fact that respondents tend to forget or don't adequately recollect processes as time passes. The validity of the data will greatly suffer if the collection commences much after election day.

1. Type of Information Collection Request: New collection;
2. Title of Information Collection: USEAC Survey of UOCAVA Voters
3. Use: The data will be collected, coded, summarized and analyzed by an EAC contractor. Summary data from the survey will be contextualized with qualitative data collected in case studies and presented in a report to the EAC. At the conclusion of the study, the EAC will transmit a report on the results of the study to Congress. The study, or subsections thereof, will also be publicly available upon release by the EAC.
4. Form Numbers: ?
5. Frequency: One-Time Voluntary Response
6. Affected Public: UOCAVA voters
7. Number of Respondents: 10,000;
8. Total Annual Responses: 10,000;
9. Total Annual Hours: 2,500 hours.

EAC is requesting OMB review and approval of this collection by

009506

October 31, 2006, with a 180-day approval period. Written comments and recommendations will be considered from the public if received by the individuals designated below by October 31, 2006.

To obtain copies of the supporting statement, access the EAC Web Site at [www.eac.gov](http://www.eac.gov) or mail your request, including your address, phone number, to Research Director, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, D.C. 20005; or fax the EAC Research Director at 202-566-1392.

Interested persons are invited to send comments regarding the burden or any other aspect of these collections of information requirements. However, as noted above, comments on these information collection and recordkeeping requirements must be mailed and/or faxed to the designees referenced below by October 31, 2006:

Dear Laiza and Karen:

Karin asked me to forward the pdf of the survey to you to include with the OMB application. It is attached here. Please let me know if you have any questions or need anything else.

Thanks,

Bonnie Glaser

Q2 Data & Research, LLC Review Draft 2006 EAC UOCAVA Voter Survey Nov6\_06.pdf

009508

## Review Draft 2006 EAC UOCAVA Voter Survey

Dear Voter,

We are conducting a survey of overseas and uniformed services absentee voters and are inviting you to tell us about your experiences with the election process. The United States Congress has asked for this study because of the reports that uniformed services and overseas voters often have problems when trying to vote. We are working with the United States Election Assistance Commission to make sure that your experiences and suggestions are being collected and forwarded to Congress.

Your responses are confidential so please take 8-10 minutes to fill out this survey, and tell us about your voting experience in November of 2006. This is a great opportunity to help improve the system and your participation matters: we can not do a good job without your help!

Thank you so much!

## Review Draft 2006 EAC UOCAVA Voter Survey

### DID NOT VOTE LINE

Please note: The Federal Post Card Application (FPCA) is the federal form for both voter registration and absentee ballot request for overseas citizens, active duty military within and outside of the U.S., and their spouses and dependents.

3

Why didn't you vote? (check all that apply)

- My ballot did not arrive
- My ballot was late
- Forgot to send my ballot
- Registration/ballot request FPCA form was denied
- Missed the registration deadline
- I thought I was registered, but wasn't

009510

- My address changed
- Could not meet my state's notarization requirements
- Could not meet my state's witness requirements
- I did not know what I needed to do to register and vote
- Didn't think my vote would matter
- The process was too complicated
- Lacked candidate information
- No interest
- Other, please specify

DID NOT VOTE LINE

4

If you had been in the U.S. on November 7, 2006, Election Day,  
how likely is it that you would have voted?

Very likely	Somewhat likely	Neither likely or unlikely	Somewhat unlikely	Very unlikely
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>

009511

5

In which U.S. state or territory would you have voted had you been in the U.S.?

6

On November 7th, in which country were you living or serving?

7

What filing status did you use, or would you have used, on the registration/ballot request FPCA form?

- U.S. citizen living outside the U.S. temporarily
- U.S. citizen living outside the U.S. indefinitely
- Uniformed Services, spouse or dependent

8

Describe your voting history: (check all that apply)

- This would have been my first time voting in my life
- This would have been my first time voting as an overseas citizen
- This would have been my first time voting as an absentee military service member
- This would have been my first time voting as an absentee military spouse
- This would have been my first time voting as an absentee military dependent
- Voted before as an overseas citizen

009512

- Voted before as an absentee military services member
- Voted before as a military absentee spouse
- Voted before as a military absentee dependent
- Voted before locally in the US
- Voted before as a domestic absentee in the US

9

Did you try to register to vote and/or request an absentee ballot for the November 7, 2006 election?

- Yes, I tried to request my ballot with the FPCA form
- Yes, I used a state absentee ballot request form
- Yes, but I am not sure which form I used
- No, I didn't even try
- No, I thought I was registered
- No, I had confirmed that I was registered

DID NOT VOTE LINE

009513

10

Who did you go to for your FPCA form to register to vote and/or request an absentee ballot? (check all that apply)

- Looked in the Internet
- Federal Voting Assistance Program
- Voting Assistance Officer (VAO)
- Consulate/Embassy
- Local election office
- IVAS service from DOD
- Political party
- Nonpartisan voter organization
- Voter registration event
- Employer
- Friend
- I did not request or look for an FPCA form
- Other, please specify \_\_\_\_\_

11

How did you get your registration/ballot request FPCA form?

- Downloaded the blank FPCA form from a website
- Filled-out the FPCA form online and printed it
- Used the online IVAS system

009514

- In person, I received a hardcopy paper form
- Received it in the mail
- It was FAXed to me
- Received it as an email attachment
- I did not receive the form
- Other, please specify

---

12

When, in 2006, did you send in your registration/ballot request FPCA form?

- From January through June 2006
- July
- August
- First half of September
- Second half of September
- First half of October
- Second half of October
- November
- I was already registered from a previous year
- I never sent it in

13

009515

How did you SEND IN your registration/ballot request FPCA form?

- FAX
- FAX + original FPCA by mail
- Email
- Email + original FPCA by mail
- Used IVAS service for DOD
- Regular Mail
- Certified or Express Mail / Courier
- Military Postal Service (APO/FPO)
- Sent through Consulate/Embassy mail pouch
- In person visit to election office
- Other, please specify

### ETS USER SPECIFIC QUESTIONS

#### PLEASE NOTE:

The term "electronic transmission method" includes Email, FAX, Internet and online systems.

009525

**33**

How would you describe the electronic transmission method you used for returning your voted ballot? (check all that apply)

- Practical
- User-friendly
- Logical
- Well-defined
- Fast
- Easy
- Slow
- Difficult
- Hard to understand
- Other, please describe:  
\_\_\_\_\_

**34**

Did you ever use this electronic transmission method to send a voted ballot in any other election?

YES  NO

**35**

satisfied

dissatisfied

1     2     3     4     5

36

Please rate the ease-of-use of the electronic transmission method you used to send your voted ballot?

Easy    Somewhat Easy    Neutral    Somewhat difficult    Difficult

1     2     3     4     5

37

What made this electronic transmission method to return your voted ballot easy for you to use? (check all that apply)

- Clear instructions
- Easy to understand
- Fast
- Handy
- Good format - easy to see
- Low cost or no cost
- Could use it from my location
- No travel required
- Other, please specify \_\_\_\_\_

38

Did you have any problems with the electronic transmission method of sending your voted ballot? (check all that apply)

- Too many steps
- Didn't understand the instructions
- Wasn't sure if I needed a witness
- I didn't understand what to do
- No, I did not have any problems
- Other, please specify

---

39

Why did you decide to send your ballot in this way? (check all that apply)

- It was easy
- It saved me time
- I didn't need to travel
- I thought it was required
- It was offered
- To get my ballot back faster
- It was suggested that I use this method
- I received an email telling me about it
- I thought it was safer than regular mail
- My blank ballot arrived late

009528

Other, please specify  
\_\_\_\_\_

40

How would you describe your feelings about vote privacy?

Concerned	Somewhat concerned	Neutral	Somewhat unconcerned	Unconcerned	Don't know

## Review Draft 2006 EAC UOCAVA Voter Survey

ALL SURVEY TAKERS

---

56

When did you last live in the US?

- Less than 1 year ago
- At least 1 year but less than 2 years ago
- At least 2 years but less than 5 years ago
- At least 5 year but less than 10 years ago
- 10 or more years ago
- Does not apply - I am active duty within the US

---

57

How old were you on November 7, 2006?

- 18 to 24 years

009536

- 25 to 34 years
- 35 to 44 years
- 45 to 54 years
- 55 to 64 years
- 65 to 74 years
- 75 years and older

---

58

What is the highest level of formal education you have completed?

- Less than high school graduate
- High school graduate or GED
- Trade school
- College or associate's degree
- Bachelor's degree
- Advanced degree
- Other, please specify

\_\_\_\_\_

---

59

Did you need to go to the US Embassy or Consulate at any time in the voting process?

YES  NO

009537

60

How often do you go to the US Embassy or Consulate during an average election year?

- Never
- Once
- Twice
- Three times or more
- Other, please specify

\_\_\_\_\_

61

How long would it take to travel to the closest US Consulate/Embassy from where you live right now?

- Less than 1 hour
- 2-3 hours
- 4 or more hours

62

Would a Consulate/Embassy visit require time off work?

- Yes
- No
- Not applicable

009538

63

Please indicate your gender:

Male

Female

64

Please provide other comments or suggestions that you may have here:

Subject Survey of UOCAVA Voters

Hello,

Could you look over and approve the following Supporting Statements for the Survey of UOCAVA Voters? I would like to submit them today since they will be an emergency review --- since it's emergency we do not need the FR Notices, nor does this one require the PIA - I have included the Justification Statement below (this will be copied and pasted in the required text box allotted for it in ROCIS). Alex was made aware of this possible submission a couple of weeks ago. Thank you!

## **Emergency Justification**

### **U.S. Election Assistance Commission**

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the Federal, State, and local electoral process, as mandated by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this study in an expedited fashion is reasonably likely to prevent or disrupt the collection; as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). Section 245 of the Help America Vote Act (HAVA) requires the United States Election Assistance Commission (EAC) to conduct a study of issues and challenges, specifically including the potential for election fraud, that are presented by the incorporation of communications and internet technologies in the Federal, State, and local electoral process. In delineating nine possible research topics, Congress specifically identified the need for further research in determining the requirements for authorization, collection, storing, and processing electronically generated messages permitting eligible voters to apply for an absentee ballot.

In response to this HAVA requirement, the EAC is developing a Survey of voters that are protected by the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA). UOCAVA voters are most likely to utilize communications and internet technologies in the Federal, State and local electoral process. The upcoming General Election of 2006 is the only Federal Election that will be conducted until 2008. This is the only election that will include Federal, State and local candidates and issues on one ballot until 2008, thus this election presents the only opportunity to collect the necessary data to comply with the HAVA requirement within the mandated time frame.

Statistical analyses on respondent behavior to voluntary surveys have shown that the interest level of potential respondents, and thus the response rate, drops dramatically as time passes after the event in question, which in this case, is the respondents' interaction and experience with the electoral system during the General Election of 2006. Furthermore, UOCAVA voters are a highly mobile group of voters. Their contact information will be gathered from local election officials, based on what the voter supplied as their contact preference for this election. As time passes from the date of the election, we will lose more potential respondents because we will not have current

contact information. Members of the military, for example, are often reassigned on short notice and their contact information for election purposes will not have to be updated until the next election in 2008. Both reasons will dramatically disrupt, or in fact prevent, the collection of a sufficient number of responses to constitute a large enough sample to provide statistically significant data that are representative of the population being studied. The quality of the data collected from respondents will also suffer if the collection is not undertaken close to election time. It is a well documented fact that respondents tend to forget or don't adequately recollect processes as time passes. The validity of the data will greatly suffer if the collection commences much after Election Day.

## Supporting Statement A

OMB Control Number: xxxx-xxxx

U.S. Election Assistance Commission

Survey of UOCAVA Voters

### A. JUSTIFICATION

#### 1. Explain the circumstances that make the collection of information necessary.

In 2001, operating under the National Defense Authorization Act on behalf of the Secretary of Defense, the Director of the Federal Voting Assistance Program (FVAP) began work to fulfill a congressional directive to conduct an electronic voting demonstration for the 2002 general election. Building upon the technical foundation of the first national electronic voting pilot (the 2000 Voting Over the Internet project), FVAP designed the Secure Electronic Registration and Voting Experiment (SERVE). SERVE was designed to assess whether electronic voting technology could be used to improve the voting participation of uniformed services members and overseas citizens, whose rights are protected by the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA).

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process. In delineating nine possible research topics, Congress specifically identified the need for further research in determining the requirements for authorization, collection, storing, and processing electronically generated messages permitting eligible voters to apply for an absentee ballot. At the conclusion of the study, the EAC is required to submit a report on the results of the study to Congress.

#### 2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.

The data will be collected, coded, summarized and analyzed by an EAC Contractor. Summary data from the survey will be contextualized with qualitative data collected in case studies and presented in a report to the EAC. At the conclusion of the study, the EAC will transmit a report on the results of the study to Congress. The study, or subsections thereof, will also be publicly available upon release by the EAC.

The collection of data complies with the applicable Information Quality Guidelines in the following ways: One, the survey is timed to be conducted shortly after the General Election of 2006, when respondents' recollection of their interaction with the voting process is still at its best. Two, statistical sampling techniques will be employed to select a sample that is representative of the population being studied. Three, the survey instrument, a description of the sample, and the summary data will be made available to the public, thus replication of results

009548

within the statistical error margin will be possible. Four, the data collection, analysis and resulting reports will be completed within an eleven month time-frame, which allows for a timely distribution of results to Congress, election officials, data users, researchers and other interested parties. Five, the survey instrument is being developed by a group of highly qualified researchers, and is being beta tested after each change with a different group of volunteers. The instrument will then be sent to interested groups that have experience with the subject topic, for comments. As appropriate, these comments will be incorporated prior to a final pre-test of the survey. Six, coding documentation will be developed, and coders will be trained to ensure uniform interpretation of data during the coding process of the results. Seven, statistical analysis will include modern methods that are commonly used in social science research, including cross-tabs, frequencies and regression analysis. Eight, ongoing quality control programs are in place to assure the highest possible validity and reliability of the data.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The potential respondents to the survey will be contacted in the same way in which they have asked for their ballot to be transmitted to them. This means that those that ask for their ballot to be faxed will receive a faxed copy of the survey, and those that use email will receive an email invitation to complete the survey over the Internet. Respondents have the option to ask for the survey in a different medium, i.e. a fax respondent has the option to use the Internet to complete the survey, and vice versa.

**4. Describe efforts to identify duplication.**

There are currently no other efforts to gather the information requested in this information collection. This information collection is unique and required by Section 245 of HAVA (42 U.S.C. 15301).

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

The collection of information does not involve small businesses or other small entities.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

The EAC is asking for a one-time collection of survey responses. If the EAC does not collect this information it may be unable to comply with its statutory requirements under Section 245 of HAVA (42 U.S.C. 15301).

**7. Explain any special circumstances that require the collection to be conducted in a**

009544

**manner inconsistent with OMB guidelines.**

There are no special circumstances applicable to this information collection.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

The EAC is requesting an emergency approval to collect this information. We are requesting a waiver of the 60-day and 30-day *Federal Register* notices required in 5 CFR 1320.13(d) in order to ensure that we comply with the Help America Vote Act.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

No payments or gifts will be provided to respondents.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

In accordance with generally used Human Subjects protocols, survey respondents will be informed that the information they provide will not be attributed to them personally, and will be compiled with the data from other respondents to construct summary data. Survey forms will not request identifying information from respondents, such as their name or address.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

No questions of a sensitive nature will be asked.

**12. Provide an estimate in hours of the burden of the collection of information.**

- a. Estimated number of respondents = 10,000
- b. Number of responses per each respondent = 1
- c. Total annual responses = 1
- d. Estimated hours per response = .25 hours
- e. Total annual reporting burden = 2,500 hours (# of respondents x frequency of

009545

*response x hours of response)*

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

Most respondents who utilize their personal computers to respond to the survey should not incur any costs additional to the monthly/yearly fees they already pay for connecting to the Internet. If respondents do not use their own personal computers but have free access to another one, there should be no cost associated with this collection. However, respondents may choose to respond to the survey from a location where they have to pay an hourly fee for use of a computer with access to the Internet; this cost will vary by location but it is estimated the time required for responding to the survey will only be a small part of the hourly fee (based on the estimated hours per response above). Respondents that chose to fax the responses may incur a cost of up to \$3.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated annual cost to the Federal Government is \$99,176. This includes the fees associated with the development, testing, administration, analysis, and reporting of the survey and its results. This figure also includes the costs associated with printing and mailing of hard copies of the survey, and the costs for administering the survey online.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

Not applicable. This is a new information collection.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The collected survey responses will only be published in summary data format, as part of a report. The survey data will be contextualized with data from case studies. The report will be published by the EAC on its website, and results will also be presented to Congress in a report.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

There are no exceptions to the certification statement identified in Item 19 of the OMB 83-I.

009546

## Supporting Statement B

OMB Control Number: xxxx-xxxx

U.S. Election Assistance Commission

Survey of UOCAVA Voters

### B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

The sample will target a sample of the 2006 UOCAVA registered voters in the four jurisdictions identified in our case studies. We expect the sample to be at least 10,000 registered voters, and we hope to get response rate of 20%. Previous on-line surveys of UOCAVA voters by the Overseas Vote Foundation had response rates of approximately 17%.

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

The sample will be chosen from UOCAVA registered voter lists in four states that vary by the size of the UOCAVA pool and the method by which overseas ballots can be obtained or cast. Montana is a small state (4,721 UOCAVA votes cast) that has a wide variety of electronic transmission methods with differences between local jurisdictions. South Carolina has the largest number of UOCAVA voters (168,814) and allows for emailing of blank and voted ballots and faxing of ballots and registration forms. Florida allows some emailing and faxing of blank ballots and is considering the possibility of internet voting. Most likely, the fourth state will be either Vermont (1,733 UOCAVA voters) or Illinois (30,556 UOCAVA voters) which have smaller numbers of UOCAVA voters but allow faxing for registration, ballot requests and blank ballots, and also have variations between local jurisdiction that can be studied. Working from the registration lists, we will invite the respondents to complete the survey in the form they received their ballot (i.e. mail, fax or email). Those that check email will get an email invitation with a link to the on-line survey. Others will get a paper version by fax or mail. Our intention is to contact all the registered UOCAVA voters in a given jurisdiction or where necessary to draw a random sample.

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for**

009547

**the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

Follow-up emails will be sent after 5 days to those who have not responded by email, and follow-up faxes and postcards to those who did not respond from those categories.

Aside from these multiple contacts, we will monitor for any potential biases in the responses we get by comparing attributes in the registration file with those who respond to the survey. If necessary, we will consider weighting the responses to test whether there is a measurable difference in the results as a result of any skew in the respondents' characteristics.

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

The questionnaire will be pre-tested with a small sample of Overseas Vote Foundation volunteers and associates to refine the wording of questions and ensure that the questions are well understood, as well as members of the research team.

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

Subject: Emergency Clearance

Dear Mr. Hunt,

This e-mail is to notify you that the EAC has submitted its 2006 Survey of UOCAVA Voters for emergency clearance as we had communicated previously we would do. If you have any questions or need more information, please, do not hesitate to contact me at this e-mail address or at the number listed below. Thank you very much for your time and assistance in this matter.

Sincerely,

Laiza N. Otero

Subject RE: Fw: RE: Emergency Clearance

hi laiza

my apologies for the late reply: somehow your email got stuck in my spam folder! yikes. here is the email i sent to karen a couple of hours ago. i hope this makes sense. please don't hesitate to call me if you need answers quickly and don't hear from me. my cell phone number is 510.367.7527. i'm in my uc berkeley office right now at 510.642.9086.

thanks!

karin

hi karen

here are our thoughts on the questions below:

1. The data that are collected through the survey are quantitative, not qualitative! The case studies will result in qualitative data. We are hoping that the response rate will be above 20%, but can currently only base our estimate on the only survey of UOCAVA voters that has been conducted to date. That survey, by the Overseas Vote Foundation, only contacted voters via email - we will contact voters via mail, fax and email. We hope that this will result in a higher response rate! While a 20% response rate would have a higher error rate than a larger response rate, we will be able to correct for this statistically. Recent survey research response rates have not been much higher than 20%.

2. The sample is a stratified one, due to the nature of the research. The EAC is interested in the experiences of UOCAVA voters and the sample is selected to reach such voters from an environment that stratifies them by the communication choices they are allowed to make by the local and state jurisdictions that governs them. Thus, we are currently in the process of collecting voter files from jurisdictions that fall into the various communication categories to draw a sample that is large enough to result in a generalizable sample. The qualitative data from the case studies will document the current processes of the local jurisdictions in the various strata, in the areas of collection, storing and processing of electronically generated messages etc.

3. The EAC's report to Congress will most certainly outline any limitations to the generalizability of these data. The qualitative data will provide context to understand the quantitative results.

please let me know if you have further questions. i can be reached today at 510.642.9086.

thanks

karin

Subject cleaned up survey instrument

History:

 This message has been replied to.

hi laiza

attached, please find the new, improved, spelled, cleaned-up and FINAL version of the survey instrument, along with a document that outlines the changes. we tried to make it easy to work with but as i said: its a difficult medium to improve upon unfortunately.

please let me know if i can help you get through it!

thank you for dealing with omb on this. we appreciate it!

regards,

karin mac donald

or cell 510.367.7527 Revised 3.0 EAC UOCAVA Survey 28\_Nov\_2006\_1.pdf

EAC UOCAVA Survey Revisions Report.112806.doc

009553

**28 November 2006**

**Proposed Revisions to EAC UOCAVA Survey**

In light of the results and feedback we have received from the OVF 2006 Post Election Survey, we propose the following refinements to be made to the *EAC Post Election Survey for UOCAVA Voters*.

Please refer to the new version: Revised 3.0 EAC UOCAVA Survey 28\_Nov\_2006 when reviewing this document. The comparison of question numbers is against the first submitted version titled: Review Draft 2006 EAC UOCAVA Voter Survey Nov6\_06

**Notes to survey reviewers:**

1. Page headers in the review version of the survey will be removed prior to survey launch.
2. Please note that depending on answers some questions will be skipped; and these skips are noted in the new version (in yellow boxes) for the reviewers benefit.
3. Question numbers have necessarily changed, as the order of questions has been improved and a few deletions/additions made, however – the basic questions, the meaning and purpose of the survey remain consistent with the earlier version.

**The three main, inter-related issues that drove revisions:**

1. Time needed to take the survey
2. Number of questions
3. Redundancy of questions

In other words, this is a shorter survey with less redundancy and takes less time to complete.

**Summary of Changes:**

- Questions Added (refer to '28\_Nov\_2006' version): Q7, Q9, Q10, Q14, Q18, Q49
- Questions Moved (from 'Nov6\_06' version) : Q14, Q15-Q18, Q53
- Questions Deleted (from 'Nov6\_06' version) : Q10, Q15, Q16, Q17, Q19, Q26, Q40, Q59, Q61
- Reorganized the early flow of voter profile questions to eliminate redundancy (from 'Nov6\_06' version) : Q 5-8, Q15-18
- Revised wording to eliminate technical term, "FPCA," and its associated definition statement; this makes the survey easier to understand and complete.
- Other minor modifications included: spelling; general clean-up; making answers and questions more concise and more personal; adding answer options to be more complete; and improving general readability.

## **Review Draft 2006 EAC UOCAVA Voter Survey**

Dear Voter,

We are conducting a survey of overseas and uniformed services absentee voters and are inviting you to tell us about your experiences with the election process. The United States Congress has asked for this study because of the reports that uniformed services and overseas voters often have problems when trying to vote. We are working with the United States Election Assistance Commission to make sure that your experiences and suggestions are being collected and forwarded to Congress.

Your responses are confidential so please take 8-10 minutes to fill out this survey, and tell us about your voting experience in November of 2006. This is a great opportunity to help improve the system and your participation matters: we can not do a good job without your help!

Thank you so much!

## Review Draft 2006 EAC UOCAVA Voter Survey

Note to survey reviewers: This and other page headers in this review version of the survey will be removed prior to survey launch.

ALL SURVEY TAKERS ANSWER THIS PAGE OF QUESTIONS

Q5 will divide respondents:

"Yes" respondents skip to Main Line of questions

"No" respondents continue on Did Not Vote Line of questions

Welcome! This survey will take approximately 7 minutes to complete. You may use your browser "back" button if you need to return to a previous page. The questions will first cover your registration and ballot request experience and then your voting experience before asking a few general questions. Thank you for your participation!

If you encounter a technical problem in the survey, please 'Reply' to your survey invitation email to report it. The Zoomerang survey tool uses browser cookies (a small text file stored on your computer) to track your progress during a survey. If cookies are blocked by your web browser or another program on your PC, the survey will repeat the questions from the first page while numbering the questions as if they were new. Let us know if you encounter that problem and we will send you some simple instructions for what to do. Thank you!

- 1** Were you an overseas citizen or a member of the Uniformed Services, a spouse or dependent of a uniformed service member on November 7, 2006?

- U.S. citizen living outside the U.S. temporarily
- U.S. citizen living outside the U.S. indefinitely/permanently
- Uniformed service member
- Spouse or dependent of a uniformed service member

- 2** On November 7th, in which country were you living or serving?

- 3** In which U.S. state or territory did you vote, or would you have voted, had you been in the U.S. on November 7, 2006?

- 4** Describe your voting history: (check all that apply)

009556

- This was or would have been my first time voting in my life as an overseas citizen
- This was or would have been my first time voting as an absentee military service member, spouse or dependent
- Voted before as an overseas citizen
- Voted before as an absentee military services member, spouse or dependent
- Voted before locally in the US
- Voted before as a domestic absentee in the US
- I don't remember

**5** Did you vote on November 7, 2006?

- Yes, I voted
- No, I did not vote or try to vote
- No, I tried but was unable to complete the process

## Review Draft 2006 EAC UOCAVA Voter Survey

DID NOT VOTE LINE

**6** Why didn't you vote? (check all that apply)

- My ballot did not arrive
- My ballot was late
- My ballot arrived while I was traveling
- My ballot arrived while I was on duty somewhere else
- I moved and my ballot was sent to my old address
- I forgot to send my ballot
- My voter registration/ballot request was denied
- I missed the registration deadline
- I thought I was registered, but wasn't
- My address changed
- I could not meet my state's notarization requirements
- I could not meet my state's witness requirements

009557

- I did not know what I needed to do to register and vote
- I didn't think my vote would matter
- I found the process too complicated
- I lacked candidate information
- I had no interest in voting
- Other, please specify

\_\_\_\_\_

**7** Did any of the following problems arise when identifying your last residence in the US? (check all that apply)

- My former address in the US no longer exists
- I couldn't remember the street or county where I lived
- I couldn't prove where I used to live in the US
- I never lived in the US so I didn't know where to register
- I did not know which parent's US address to use
- I was born in the US but did not live there long-term
- No, I had no problems
- Other

**8** If you had been in the U.S. on November 7, 2006, Election Day, how likely is it that you would have voted?

Very likely	Somewhat likely	Neither likely or unlikely	Somewhat unlikely	Very unlikely
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>

**9** Would you have voted if you had been given electronic options to transmit your voting materials (telephone, FAX, email, Internet)?

**YES**    **NO**

**10** Did you complete a form to register to vote and/or request an absentee ballot for the November 7, 2006 election?

- Yes
- No
- I don't remember

### DID NOT VOTE LINE

#### 11 How did you get your voter registration/ballot request form?

- I downloaded the blank form from a website
- I filled-out the form online and printed it
- I received it from my state/local election office
- I picked it up at the US Embassy/Consulate
- I used the online IVAS system
- I registered and/or received a form in person
- I received it in the mail
- It was faxed to me
- I received it as an email attachment
- Other, please specify

#### 12 When, in 2006, did you send in your voter registration/ballot request form?

- Between January and July 2006
- August
- September
- First half of October
- Second half of October
- November
- I never sent the form
- I don't remember

#### 13 How did you SEND IN your voter registration/ballot request form?

- FAX
- FAX + original form by mail
- Email
- Email + original form by mail
- I used the IVAS service for the DOD
- Regular Mail
- Courier/Certified or Express Mail

009559

- Military Postal Service (APO/FPO)
- Sent through Consulate/Embassy mail pouch
- In person at my election office
- I never sent the form
- Other, please specify

#### ETS USER SPECIFIC QUESTIONS

**PLEASE NOTE:**

The term "electronic transmission method" includes Email, FAX, Internet and online systems.

009564

29 How would you describe the electronic transmission method you used to RETURN your voted ballot? (check all that apply)

- Practical
- User-friendly
- Logical
- Well-defined
- Fast
- Easy
- Slow
- Difficult
- Hard to understand
- Other, please describe:  
\_\_\_\_\_

30 Did you ever use this electronic transmission method to send a voted ballot in any other election?

YES  NO

31 Please rate the ease-of-use of the electronic transmission method you used to send your voted ballot?

Easy	Somewhat Easy	Neutral	Somewhat difficult	Difficult
<input type="checkbox"/> 1	<input type="checkbox"/> 2	<input type="checkbox"/> 3	<input type="checkbox"/> 4	<input type="checkbox"/> 5

32 If you found this method easy to use, please tell us what contributed to that ease-of-use. (check all that apply)

- Clear instructions
- Easy to understand
- Fast
- Handy
- Good format - easy to see
- Could use it from my location
- No travel required
- Not applicable; I found it difficult to use
- Other, please specify  
\_\_\_\_\_

009565

**33** Why did you decide to send your ballot in this way? (check all that apply)

- It was easy
- It saved me time
- I didn't need to travel
- I thought it was required
- It was offered
- It was less expensive
- To get my ballot back faster
- It was suggested that I use this method
- I received an email telling me about it
- I thought it was safer than regular mail
- My blank ballot arrived late
- Other, please specify
- 

**34** Did you have any problems with the electronic transmission method of sending your voted ballot? (check all that apply)

- There were too many steps
- I didn't understand the instructions
- I wasn't sure if I needed a witness
- I didn't understand what to do
- No, I did not have any problems
- Other, please specify
- 

**35** How satisfied were you with the electronic transmission method you used to send in your voted ballot?

Satisfied	Somewhat satisfied	Neutral	Somewhat dissatisfied	Dissatisfied
<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>

**36** Were you asked to waive (give up) the right to a private vote?

YES  NO

Additional Comment

009566

**37** If you did waive your right to a private vote, how would you describe your feelings about that?

- |           |                    |          |                      |             |            |                |
|-----------|--------------------|----------|----------------------|-------------|------------|----------------|
| Concerned | Somewhat concerned | Neutral  | Somewhat unconcerned | Unconcerned | Don't know | Not Applicable |
| <b>1</b>  | <b>2</b>           | <b>3</b> | <b>4</b>             | <b>5</b>    | <b>6</b>   | <b>7</b>       |

**From:** lotero@eac.gov [mailto:lotero@eac.gov]

**Sent:** Friday, November 17, 2006 7:32 AM

**To:** Hunt, Alexander T.

**Subject:** RE: Emergency Clearance

Dear Mr. Hunt,

As a follow-up to the information I provided two days ago, our Contractor provided the following insight - please, let me know if you have any other questions regarding this project - Thank you!

1. The data that are collected through the survey are quantitative, not qualitative. The case studies will result in qualitative data. We are hoping that the response rate will be above 20%, but can currently only base our estimate on the only survey of UOCAVA voters that has been conducted to date. That survey, by the Overseas Vote Foundation, only contacted voters via email - we will contact voters via mail, fax and email. We hope that this will result in a higher response rate! While a 20% response rate would have a higher error rate than a larger response rate, we will be able to correct for this statistically. Recent survey research response rates have not been much higher than 20%.
2. The sample is a stratified one, due to the nature of the research. The EAC is interested in the experiences of UOCAVA voters and the sample is selected to reach such voters from an environment that stratifies them by the communication choices they are allowed to make by the local and state jurisdictions that governs them. Thus, we are currently in the process of collecting voter files from jurisdictions that fall into the various communication categories to draw a sample that is large enough to result in a generalizable sample. The qualitative data from the case studies will document the current processes of the local jurisdictions in the various strata, in the areas of collection, storing and processing of electronically generated messages etc.
3. The EAC's report to Congress will most certainly outline any limitations to the generalizability of these data. The qualitative data will provide context to understand the quantitative results.

Laiza N. Otero

Subject: RE: Emergency Clearance

I have reviewed the submission and have one general concern regarding EAC's use of the survey results.

In Q.2 of the supporting statement, EAC acknowledges that the data collected will be qualitative, which is reasonable given the expected 20 percent response rate. However, is EAC confident that qualitative data (versus quantitative data that is generalizable to the population) is sufficient, given the statutory mandate to produce a study of the challenges of internet voting (e.g., potential for fraud ) and determine requirements for authorization, collection, storing, and processing of electronically generated messages permitting eligible voters to apply for an absentee ballot ? Will EAC's report to Congress make it clear that these survey results are qualitative and therefore not necessarily representative of all overseas voters?

If you would prefer to discuss this, please let me know.

Thanks.

Dear Mr. Hunt,

This e-mail is to notify you that the EAC has submitted its 2006 Survey of UOCAVA Voters for emergency clearance as we had communicated previously we would do. If you have any questions or need more information, please, do not hesitate to contact me at this e-mail address or at the number listed below. Thank you very much for your time and assistance in this matter.

Sincerely,

Laiza N. Otero

Subject RE: ICR approved!!!!!!!!!!!!

The OMB Control number for the focus groups collection is: 3265-0005. The expiration date is 5/31/2007. Both these pieces of information need to appear everywhere on the collection instrument - my suggestion is to make them part of the heading or footer of the pages. In addition, there is boiler plate information I am working on today with our general counsel's office that needs to be included as well - the latter is info on the time and cost burden on respondents, the response requirements (voluntary/mandatory), and compliance with the PRA process - I should have that information by the end of today.

Also, for your records the ICR Reference Number is: 200611-3265-001. This is an internal OMB number given to the request we made. This may or may not have to be included - waiting to hear on that.

If you have any questions or need more information, please, do not hesitate to contact me at your earliest convenience. Have a great day!

Sincerely,

Laiza

Subject RE: EAC logo on survey 

Is this ok with you? If it is, I'll put at the end of the pdf file - you can insert it then as a footnote on the actual survey.

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process. The EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are registered uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

It appears on the "created request list" - I did not enter new data or attach documents nor submit it, which you can do if I hit the tab under "Request Type" and "ICR Ref. No." However, there is a "Delete" option once you open the edit screen - will it delete just the new "ICR Rev." or both of them? Thank you.

**Sent:** Wednesday, December 06, 2006 5:52 PM  
**To:** Hunt, Alexander T.  
**Subject:** RE: Revised UOCAVA Survey Instrument

I uploaded the survey under the IC section and the summary of changes is on that same page and also under the supplementary documents section. I also selected the "No material or nonsubstantive change to a currently approved collection" for Type of information collection. When you create a new ICR based on an existing collection it migrates all of the information and documents of the previous one - should I delete the previous survey and select "agency discretion"? Should I delete any other information/documents?

I'm still here for a bit at the office, in case it may easier to go over it on the phone.

## **U.S. Election Assistance Commission (EAC)**

### **Research in Progress: Survey of Uniformed and Overseas Voters (OMB Control No. 3265-0005 – ICR Ref. No. 200612-3265-002)**

#### **Background:**

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the EAC to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process. In delineating nine possible research topics, Congress specifically identified the need for further research in determining the requirements for authorization, collection, storing, and processing electronically generated messages permitting eligible voters to apply for an absentee ballot. At the conclusion of the study, the EAC is required to submit a report to both the Committee on House Administration of the House of Representatives and the Committee on Rules and Administration of the Senate on the results of the study, including such legislative recommendations or model State laws as are required to address the findings of the Commission. In addition, the report will be made available on the EAC website at [www.eac.gov](http://www.eac.gov).

To meet its requirements under HAVA §245, the EAC awarded a contract in November 2006 to Q2 Data & Research, LLC to: 1) conduct case studies to examine in depth the experiences of four to five state and/or local election jurisdictions with developing and implementing a system for transmitting and/or receiving absentee ballots from uniformed and overseas voters; 2) administer a survey of overseas and uniformed voters regarding their experiences with electronic voting; and 3) conduct a conference on internet voting and the transmission and receipt of absentee ballots for UOCAVA voters.

In accordance with the information clearance process under the Paperwork Reduction Act (PRA) of 1995, the EAC received approval from the Office of Management and Budget (OMB) to carry out the survey of uniformed and overseas voters; a copy of the survey and OMB documentation are available below.

VIEW Survey of UOCAVA Voters (OMB Control No. 3265-0005) (PDF)

# U.S. Election Assistance Commission

## 2006 Overseas and Military Voter Survey

Dear Voter,

We are conducting a survey of overseas and uniformed services absentee voters and are inviting you to tell us about your experiences with the election process.

The United States Congress has asked for this study because of the reports that uniformed services and overseas voters often have problems when trying to vote. We are working to make sure that your experiences and suggestions are being collected and forwarded to Congress.

Your responses are confidential so please take 8-10 minutes to fill out this survey, and tell us about your voting experience in November of 2006. This is a great opportunity to help improve the system and your participation matters: we can not do a good job without your help!

Thank you so much!

**Please send your completed replies to:**

Q<sup>2</sup> Data & Research, LLC  
Mail Services Office  
217 Bayview Street  
San Rafael, CA 94901 USA

**Please Note:**

You are invited to take this same survey online.

It's fast and there's no postage!

[Click here](#) to take the 2006 EAC UOCAVA Voter Survey online!

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process. The EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

## Survey Instructions:

Work your way through the survey following the numbered questions in order. Several of the questions instruct you to skip ahead to a specific question depending on how you answered the question. Please follow these skip instructions carefully.

Make a heavy mark in the box next to your chosen answer or answers. Many of the questions allow for more than one response.

Thanks again for your help with this important project.

### 1. Were you an overseas citizen or a member of the Uniformed Services, a spouse or dependent of a uniformed service member on November 7, 2006?

- U.S. citizen living outside the U.S. temporarily
- U.S. citizen living outside the U.S. indefinitely/permanently
- Uniformed service member
- Spouse or dependent of a uniformed service member

### 2. On November 7th in which country were you living or serving?

### 3. In which U.S. state or territory did you vote, or would you have voted, had you been in the U.S. on November 7, 2006.

### 4. Describe your voting history: (check all that apply)

- This was or would have been my first time voting in my life as an overseas citizen
- This was or would have been my first time voting as an absentee military service member, spouse or dependent
- Voted before as an overseas citizen
- Voted before as an absentee military services member spouse or dependent.
- Voted before locally in the US
- Voted before as a domestic absentee in the US
- I don't remember

### 5. Did you vote in the November 7, 2006 election?

- Yes, I voted **Skip to Q12!**
- No, I did not vote or try to vote
- No, I tried but was unable to complete the process

### 6. Why didn't you vote? (check all that apply)

- My ballot did not arrive
- My ballot was late
- My ballot arrived while I was traveling
- My ballot arrived while I was on duty somewhere else
- I moved and my ballot was sent to my old address
- I forgot to send my ballot
- My voter registration/ballot request was denied
- I missed the registration deadline
- I thought I was registered, but wasn't
- My address changed
- I could not meet my state's notarization requirements
- I could not meet my state's witness requirements
- I did not know what I needed to do to register to vote
- I didn't think my vote would matter
- I found the process to complicated
- I had no interest in voting
- Other, please specify:

### 7. If you had been in the U.S. on November 7, 2006, Election Day, how likely is it that you would have voted?

- Very likely
- Somewhat likely
- Neither likely or unlikely
- Somewhat unlikely
- Very unlikely

### 8. Did you complete a form to register to vote and/or request an absentee ballot for the November 7, 2006 election?

- Yes
- No
- I don't remember } **Skip to Q42!**

### 9. How did you get your voter registration/ballot request form?

- I downloaded the blank form from a website
- I filled-out the form online and printed it
- I received it from my state/local election office
- I picked it up at the US Embassy/Consulate
- I used the online IVAS system
- I registered and/or received a form in person
- I received it in the mail
- It was faxed to me
- I received it as an email attachment
- Other, please specify:

### 10. When, in 2006, did you send in your voter registration/ballot request form?

- Between January and July 2006
- August
- September
- First half of October
- Second half of October
- November
- I never sent the form
- I don't remember

### 11. How did you SEND IN your voter registration/ballot request form?

- FAX
- FAX + original form by mail
- Email
- Email + original form by mail
- I used the IVAS service for the DOD
- Regular Mail
- Courier/Certified or Express Mail
- Military Postal Service (APO/FPO)
- Sent through Consulate/Embassy mail pouch
- In person at my election office
- I never sent the form
- Other, please specify:

**Skip to Q42!**

**23. How would you rate the ease-of-use of this way of sending in your voted ballot?**

Easy  
 Somewhat easy  
 Neutral  
 Somewhat difficult  
 Difficult

**24. When did you send in your voted ballot for the November 7, 2006 election?**

September  
 First half of October  
 Second half of October  
 First week of November  
 Election Day  
 After Election Day  
 I can't remember

**25. How satisfied were you with the process of obtaining and casting a ballot in 2006?**

Satisfied  
 Somewhat satisfied  
 Neutral  
 Somewhat dissatisfied  
 Dissatisfied

**After completing the above questions 23-25, please return to Q22 to determine where to move to next.**

**If you chose any of the top 6 answers to Q22, please continue through all questions in the survey to the end.**

**If you chose any of the bottom 6 answers to Q22, please skip to Q35 and complete the survey from that point.**

**26. How would you describe the electronic transmission method you used to RETURN your voted ballot? (check all that apply)**

Practical  
 User-friendly  
 Logical  
 Well-defined  
 Fast  
 Easy  
 Slow  
 Difficult  
 Hard to understand  
 Other, please describe:

**27. Did you ever use this electronic transmission method to send a voted ballot in any other election?**

Yes  
 No

**28. Please rate the ease-of-use of the electronic transmission method you used to send your voted ballot?**

Easy  
 Somewhat easy  
 Neutral  
 Somewhat difficult  
 Difficult

**29. If you found this method easy to use, please tell us what contributed to that ease-of-use. (check all that apply)**

Clear instructions  
 Easy to understand  
 Fast  
 Handy  
 Good format - easy to see  
 Could use it from my location  
 No travel required  
 Not applicable; I found it difficult to use  
 Other, please specify

**30. Why did you decide to send your ballot in this way? (check all that apply)**

It was easy  
 It saved me time  
 I didn't need to travel  
 I thought it was required  
 It was offered  
 It was less expensive  
 To get my ballot back faster  
 It was suggested that I use this method  
 I received an email telling me about it  
 I thought it was safer than regular mail  
 My blank ballot arrived late  
 Other, please specify:

**31. Did you have any problems with the electronic transmission method of sending your voted ballot? (check all that apply)**

There were too many steps  
 I didn't understand the instructions  
 I wasn't sure if I needed a witness  
 I didn't understand what to do  
 No, I did not have any problems  
 Other, please specify

**32. How satisfied were you with the electronic method used to send in your voted ballot?**

Satisfied  
 Somewhat satisfied  
 Neutral  
 Somewhat dissatisfied  
 Dissatisfied

**33. Were you asked to waive (give up) the right to a private vote?**

Yes  
 No

Additional Comment:

**34. If you did waive your right to a private vote, how would you describe your feelings about that?**

Concerned  
 Somewhat concerned  
 Neutral  
 Somewhat unconcerned  
 Unconcerned  
 Don't know  
 Not Applicable

**35. Would you send in your voted ballot again in the future using the same method as you did in the election of November 7, 2006?**

Yes  
 No

# 2006 EAC UOCAVA Voter Survey

**36. How did you find out about the voting method you used? (check all that apply)**

- Internet Search
- Got an Email
- Local Election Official
- Consulate/Embassy
- Voting Assistance Officer  
Federal Voter Assistance Program
- IVAS Website from DOD
- Newspaper
- Newsletter
- State Election Office web site
- Local Election Office web site
- Political party
- Voter organization
- Can't remember
- Other, please specify

**37. How did you feel about the security of your actual VOTE?**

- Concerned
- Somewhat concerned
- Neutral
- Somewhat unconcerned
- Unconcerned
- Don't know
- Not Applicable

**38. What security concerns did you have in regard to your vote? (check all that apply)**

- I was not sure my voted ballot actually arrived
- I was concerned that my voted ballot could get lost
- I was concerned that someone saw how I voted
- I was concerned someone could change my vote
- I had no concerns
- Other, please specify

**39. Did you confirm that your ballot arrived?**

- Yes, I checked through state or county online tracking tool
- Yes, I contacted my election office
- No, I did not confirm my ballot arrival
- Other, please specify

**40. How much time would you estimate the entire process of voting took you from the time you started till the time you sent your voted ballot for November 7, 2006?**

**Include registration/ballot request, paperwork processing, phone calls or visits to official offices, as applicable to you.**

- Less than 2 weeks
- 2 - 4 weeks
- 5 - 6 weeks
- 7 - 8 weeks
- More than 8 weeks
- I don't know

**41. What was the TOTAL cost to you to return your registration AND ballot materials, including postage and any other costs? (in \$USD)**

- None
- Under \$5
- \$ 5 - \$10
- \$10 - \$25
- \$25 - \$50
- \$50 - \$100+
- Other, please specify

**42. If you were to send a FAX, what type of FAX service would you use: (check all that apply)**

- FAX machine always available
- Pay-per-use FAX services
- Internet FAX program
- No FAX services available
- I don't use FAX services
- Other, please specify

**43. How often do you access the Internet?**

- Daily
- 2-3 times a week
- Once a week
- Sometimes
- Almost Never
- Never

**44. Where do you access the Internet? (check all that apply)**

- Home
- Work
- Internet Cafe
- Library
- Other, please specify

**45. What kind of Internet access location do you use: (check all that apply)**

- Public
- Private
- Business
- Other, please specify

**46. In a future election, would you be comfortable sending in a voted ballot electronically by email, FAX or voting online?**

- Yes
- No
- Not sure
- Other, please specify:

# 2006 EAC UOCAVA Voter Survey

## 47. What concerns would you have about sending in a voted ballot electronically by email, FAX or voting online? (check all that apply)

- I do not have any concerns about voting online
- I do not have any concerns about voting by FAX
- I do not have any concerns about voting by email
- I have privacy concerns
- I have security concerns
- I don't trust the Internet
- I don't want to share personal information on the Internet
- I'm concerned that my election official will see how I voted
- I'm afraid that people could see how I voted
- Other, please specify

## 48. How old were you on November 7, 2006?

- 18 to 24 years
- 25 to 34 years
- 35 to 44 years
- 45 to 54 years
- 55 to 64 years
- 65 to 74 years
- 75 years and older

## 49. Please indicate your gender.

- Male
- Female

## 50. When did you last live in the US?

- Less than 1 year ago
- At least 1 year but less than 2 years ago
- At least 2 years but less than 5 years ago
- At least 5 year but less than 10 years ago
- 10 or more years ago
- Does not apply - I am active duty / active duty family member in the US

## 51. What is the highest level of formal education you have completed?

- Some high school
- High school graduate or GED
- Trade school
- College or associate's degree
- Bachelor's degree
- Advanced degree
- Other, please specify

## 52. Did you have to go to the US Embassy or Consulate at any time in the voting process?

- Yes
- No

## 53. How often do you go to the US Embassy or Consulate related to the voting process during an average election year?

- Never
- Once
- Twice
- Three times or more
- Other, please specify

## 54. How long does it take to travel to the closest US Consulate/Embassy from where you live right now?

- Less than 1 hour
- 2-3 hours
- 4 or more hours

## 55. Please provide other comments or suggestions that you may have here:

Thank you for participating in this EAC voter survey.

Your feedback will contribute to the further development and improvement of voter services to overseas citizens and military absentee voters.

Subject Survey

Julie,

- I have revised the survey to reflect your changes/recommendations. See attached.
- For Question 29 (regarding felons), I have included a yes/no check box under each category. However, do we need/want more information beyond the eligibility of the persons? For example, when are their rights restored, if at all, if they are not allowed to vote while in one of the categories mentioned.
- I have to present the draft document to the Commissioners and the Boards in the next couple of weeks. In your most honest and brutal opinion, what could I do the document (short of a puppet skit) to make it more clear, readable, and usable? Is it ready to be presented to the Commissioners and the Board? I would like to have the official draft by the end of this week so Adam can distribute it to the Boards and I can distribute it to the Commissioners and Tom in time for the meetings. I will be out of the office this coming Monday thru Wednesday (I'll be in Kennesaw, GA).
- Humanitas: Their price quote is \$82,007.20. This price is within the project's budget; especially since the money for analysis would come out of the '07 budget. I have looked at other vendors on the GSA Schedule to compare the Direct Labor Costs, and the Humanitas quote seems to be in tandem with the other ones I looked at; the difficulty is assessing the estimated amount of hours they claim it will take. However, is this task within the original scope of work of our contract with Humanitas? Is it as simple as modifying their contract? Or do we want to consider bidding it? I have spoken with both Karen and Gaylin about this. My concern is that I want to make sure we get the best possible candidate for the job (not that I think Humanitas would do a poor job) and at the best value for us. We really need to make sure we do an outstanding job collecting the survey data this time around. With GovWorks, the bidding process should be much simpler than before, and we have some time before the online instrument would need to go "live" since a lot of the information we need becomes available after November 7th. By writing a SOW we can also be very clear as to what it is we want and how we want it done, and it's best in my opinion for accountability purposes. What are your thoughts on this?

**IMPORTANT:** Please, **DO NOT USE** "N/A" as an equivalent to "0." Only use "N/A" (not applicable) if the answer is not available or not allowable by state law or not collected by your jurisdiction. The number "0" ("zero") should only be used to indicate that the answers is "zero" or "none."

**VOTER REGISTRATION**

**Note:** Questions 1-29 refer to the period from the close of registration for the **November 2, 2004**, Federal general elections to the close of registration for the **November 7, 2006**, Federal general elections.

*Active voters* refers to all registered voters **except** those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

*Inactive voters* refers to registrants who **have been sent but have not responded** to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

*Duplicate registration application* refers to an application to register by a person already registered to vote at the same address, under the same name, and (where applicable) the same political party.

**1. Total number of registered voters statewide and by county/local jurisdiction at the time of the close of registration for the past two Federal general elections (including Election Day registrations where applicable – see Question 2):**

	November 2, 2004	November 7, 2006
<b>Active voters:</b>	_____	_____
<b>Inactive voters (if applicable):</b>	_____	_____
<b>Total:</b>	_____	_____

**2. Total number of persons statewide and by county/local jurisdiction who registered to vote on Election Day [November 7, 2006] – \*\*Only applicable to states with Election Day registration (Idaho, Maine, Minnesota, New Hampshire, Wisconsin, and Wyoming):**

**Total:** \_\_\_\_\_

3. Total number statewide and by county/local jurisdiction of voter registration applications received from all sources during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

Total: \_\_\_\_\_

4. Total number statewide and by county/local jurisdiction of voter registration applications received by mail during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

Total: \_\_\_\_\_

5. Total number statewide and by county/local jurisdiction of voter registration applications received in person at the clerk or registrar's office during the period from the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

Total: \_\_\_\_\_

6. Total number statewide and by county/local jurisdiction of registration applications that were received from or generated by each of the following categories between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

All motor vehicle offices: \_\_\_\_\_

All public assistance agencies that are mandated as registration sites under NVRA: \_\_\_\_\_

All state-funded agencies primarily serving persons with disabilities: \_\_\_\_\_

All Armed Forces recruitment offices: \_\_\_\_\_

All other agencies designated by the state: \_\_\_\_\_

7. Total number statewide and by county/local jurisdiction of registration applications identified in response to **Question 3** that were:

**Duplicates of other valid voter registrations:** \_\_\_\_\_

**Changes of address, name, or party:** \_\_\_\_\_

**Invalid or rejected (other than duplicates):** \_\_\_\_\_

8. Total number statewide and by county/local jurisdiction of **new, valid registrations** processed between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections. **\*\*This includes all registrations that are new to the local jurisdiction and re-registrations across jurisdictional lines. This does not include applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.**

**Total:** \_\_\_\_\_

**Registration process**

9. Total number of election jurisdictions conducting voter registration.

**Total:** \_\_\_\_\_

10. Identify the local entity primarily responsible for registering voters:

- Circuit Clerk
- City Clerk
- County Auditor
- County Board of Elections
- County Clerk
- County Commissioner
- County Election Board Secretary
- County Voter Registration Board
- Director of Voter Registration

- Election Commissioner
- Local General Registrar
- Municipal Clerk
- Recorder
- Registrar
- Supervisor/Director of Elections
- Tax Assessor Collector
- Town Clerk
- Other (please, specify)

11. Identify each and every other state and local government office or agency designated as a voter registration agency (provides voter registration opportunities/services):

- Motor vehicle offices
- All offices that provide public assistance that are mandated as registration sites by NVRA
- All offices that provide state-funded programs primarily serving persons with disabilities
- All armed forces recruitment offices
- Other agencies designated by the State (*please, specify*)

12. Does your office provide training on the voter registration process to employees of Federal, State, and local government offices or agencies designated as voter registration agencies?

- Yes
- No

13. How are voter registration applications transferred from the other voter registration agencies listed in response to Question 11 to the official responsible for voter registration?

- |                          |                   |                          |                                  |
|--------------------------|-------------------|--------------------------|----------------------------------|
| <input type="checkbox"/> | Courier           | <input type="checkbox"/> | Power Profile System             |
| <input type="checkbox"/> | Disk              | <input type="checkbox"/> | Tape                             |
| <input type="checkbox"/> | E-mail/Electronic | <input type="checkbox"/> | U.S. Mail                        |
| <input type="checkbox"/> | Fax               | <input type="checkbox"/> | VPN                              |
| <input type="checkbox"/> | Hand delivered    | <input type="checkbox"/> | Other ( <i>please, specify</i> ) |
| <input type="checkbox"/> | Inter-office mail |                          |                                  |

14. Who verifies and processes voter registration forms?

- State officials
- Local officials
- Both

15. Which number is used as the voter identification number on the processed voter registration form? (This does not refer to the number used to verify the application. This refers to the number given to the voter once they have been verified and entered into the voter database.)

- Last 4-digits of the Social Security number
- Full Social Security number
- Driver's license number
- Unique identifier (please, identify what method is used for assigning the unique identifier)
- Other (please, specify)

16. How do voter registration officials verify voter registration applications? (This refers to the process of verifying the applications used to register to vote. This does not refer to the process of verifying voters when they go to vote.)

- Check jury lists
- Link and verify through the department of motor vehicles
- Link and verify through the social security administration records
- Link and verify through the State's vital statistics records
- Link and verify through other state agency (please, specify agency)
- Matched against the voter registration database
- Tracking of returned voter identification cards
- Tracking the return of disposition notices
- Other (please, specify)

17. How do voter registration officials check (use as matching criteria) for duplicate registrations?

- Address
- Date of birth
- Driver's license number
- Names provided by registrant
- Social security number
- Other (please, specify)

18. Does your State check for duplicate voter registrations across state lines?

- Yes (If "yes", please, identify which states.)
- No

19. Are applicants whose applications are rejected notified of the rejection and the reason for the rejection?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

20. Does the statewide voter registration database link to the State's department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

21. Does the statewide voter registration database link to disability and social services agencies in a similar manner to the State's department of motor vehicles?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**List Maintenance**

*List maintenance refers to the specific process and procedures by which State and/or local election officials update and preserve information contained on the official list of registered voters.*

22. What process is used to perform list maintenance?

<input type="checkbox"/>	Electronic
<input type="checkbox"/>	Manual
<input type="checkbox"/>	Both

23. Who is responsible for conducting list maintenance?

<input type="checkbox"/>	State officials
<input type="checkbox"/>	Local officials
<input type="checkbox"/>	Both

24. Total number of registrations statewide and by county/local jurisdiction that were, for whatever reason, **deleted from the registration list**, including both active and inactive voters if such a distinction is made in your state, between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:**

25. Total number statewide and by county/local jurisdiction of **removal notices [Section 8(d)(2) confirmation] mailed** out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

26. Total number statewide and by county/local jurisdiction of **responses received** to the confirmation notices mailed out between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

27. Total number statewide and by county/local jurisdiction of voters **moved to the inactive list** between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

28. Total number statewide and by county/local jurisdiction of voters (**active AND inactive voters**) **removed** from the voter rolls between the close of registration for the November 2, 2004, Federal general elections until the close of registration for the November 7, 2006, Federal general elections for the following reasons:

**Change of address (moved outside of jurisdiction)** \_\_\_\_\_

**Death:** \_\_\_\_\_

**Disqualifying felony convictions:** \_\_\_\_\_

**Failure to vote in two consecutive federal general elections:** \_\_\_\_\_

**Voter requested to be removed:** \_\_\_\_\_

**Other reasons: (please, specify)** \_\_\_\_\_

**Total number of registrations removed:** \_\_\_\_\_

009413

**29. Identify all of the sources considered in performing list maintenance:**

	<b>Applications for absentee ballots</b>		<b>Notices of deceased persons (Department of Health/Bureau of Vital Statistics)</b>
	<b>Ballots returned as undeliverable</b>		<b>Notices of persons adjudicated mentally incapacitated</b>
	<b>Canvasses, house-to-house</b>		<b>Petition checks</b>
	<b>Canvasses, political parties</b>		<b>Reports/Notices from other States that a former resident has registered to vote</b>
	<b>Car registrations</b>		<b>Reports of address changes – U.S. Postal Service National Change of Address</b>
	<b>Contact by phone</b>		<b>Reports of surrendered driver's licenses – other states' motor vehicles offices</b>
	<b>Contact in person</b>		<b>Returned election notices</b>
	<b>Jury questionnaires</b>		<b>Returned jury summons</b>
	<b>List of address changes, Emergency 911 (E-911) system</b>		<b>Returned mail from county agencies using official voter file for mailings</b>
	<b>Lists of automobile registrations</b>		<b>Requests from voters for removal</b>
	<b>List of deceased persons, Social Security Administration</b>		<b>Targeted mailings</b>
	<b>Lists of felony convictions, Federal and state courts</b>		<b>Utility changes, municipal</b>
	<b>Lists of persons licensed in other states, Department of Motor Vehicles</b>		<b>Voter registration applications</b>
	<b>Lists of property ownership</b>		<b>Voter registration system – duplicate checks</b>
	<b>Newspaper death notices/obituaries</b>		<b>Other (please, specify)</b>
	<b>Notices of address confirmations</b>		

30. Are the following classes of persons eligible to vote?

a) Those who have been convicted of a felony

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

b) Those who are serving a sentence of incarceration for conviction of a felony

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

c) Those who are serving a term of probation following being convicted of a felony

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

2006 ELECTION DAY RESULTS

*Ballots cast means a ballot that has been submitted manually or electronically by a voter but has not been verified and/or counted.*

**Note:** *For jurisdictions that provide voters with more than one ballot card to vote for different contests or measures should only report one ballot cast per voter.*

*Ballots counted means all ballots that have been cast, processed, and counted.*

*“At the polls” refers to ballots issued, cast, or counted on a jurisdiction’s voting system on Election Day at a polling place.*

*Domestic civilian absentee ballot refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State’s requirement for voting absentee.*

*Domestic military citizen refers to:*

- (A) *a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned within the United States or its territories, and who is absent from the place of residence where the member is otherwise qualified to vote;*
- (B) *a member of the merchant marine who, by reason of service in the merchant marine, is serving within the United States and its territories, and who is absent from the place of residence where the member is otherwise qualified to vote; and*
- (C) *a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.*

**Early voting** refers to any voting that occurred prior to November 7, 2006, for which there were no eligibility requirements. For example, the voter did not have to attest that he/she would be absent from the voting jurisdiction on the day of the election.

**Federal Write-In Absentee Ballot (FWAB)** is a ballot available to military and overseas citizens (including APO and FPO addresses) when they have not received their regular absentee ballot from their state.

**Overseas military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Overseas civilians** refers to persons who are citizens of the United States who are living, working or stationed outside of the United States and its territories and who are not members of a uniformed service.

**Provisional ballot** refers to a ballot issued when a voter's eligibility has not been determined.

31. Does your State conduct early voting?

Yes  
 No

32. Total number statewide and by county/local jurisdiction of:

	Ballots Cast	Ballots Counted
At the polls	_____	_____
Early voting	_____	_____
Domestic civilian absentee ballots	_____	_____
Domestic military citizens	_____	_____
Overseas military citizens	_____	_____
Overseas civilians	_____	_____
Federal Write-In Absentee Ballot (FWAB)	_____	_____

**Provisional ballots**

\* \_\_\_\_\_

**Total**

\_\_\_\_\_

*\* The number provided in response to this question should include the total number of ballots cast in the State's program for contingent or provisional ballots that complies with section 302(a) of the Help America Vote Act.*

**33.** Total number statewide and by county/local jurisdiction of votes counted for **each candidate** in a Federal contest.

**34.** Total number statewide and by county/local jurisdiction of **provisional ballots** rejected:

**Total:**

\_\_\_\_\_

**35.** Total number statewide and by county/local jurisdiction of **provisional ballots** rejected for each of the following reasons:

**Administrative error**

**No signature**

**Already voted**

**Non-appearance within 24 hours**

**Ballot not timely received (absentee)**

**Non-matching signature**

**Deceased**

**Non-verifiable signature**

**Elector challenged**

**Not registered**

**First time voter registering on Election Day**

**Registration purged**

**Improper ID**

**Wrong jurisdiction**

**Incomplete ballot form**

**Wrong precinct**

**Ineligible to vote**

**Other (please, specify)**

**Missing ballot**

**Multiple ballots in one envelope**

**Name missing from voter listed**

**Absentee Ballots**

*Absentee voting is defined as voting prior to Election Day which requires that the voter meet qualifications other than those generally required to register to vote.*

*Advanced ballot means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.*

**36.** Total number state-wide and by county/local jurisdiction of **absentee ballots** (do not include FWAB):

	Requested	Not Counted
<b>Domestic civilian absentee ballots</b>	_____	_____
<b>Domestic military citizens</b>	*	_____
<b>Overseas military citizens</b>	*	_____
<b>Overseas civilians</b>	*	_____
<b>Total</b>	_____	_____

*\*Includes ballots transmitted by mail, fax, e-mail, or courier.*

**37.** Total number statewide and by county/local jurisdiction of **advanced ballots** transmitted to military and overseas citizens:

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

**38.** Total number statewide and by county/local jurisdiction of **Federal Write-In Absentee Ballots (FWAB) received** for each of the following voters for the November 7, 2006, election:

<b>Domestic military citizens</b>	_____
<b>Overseas military citizens</b>	_____
<b>Overseas civilians</b>	_____
<b>Total</b>	_____

39. Identify the **five (5)** most common reasons that **domestic civilian** absentee ballots were rejected:

No voter signature \_\_\_\_\_

Ballot not timely received \_\_\_\_\_

Non-matching signature \_\_\_\_\_

Elector voted early at the polls \_\_\_\_\_

Ballot returned as undeliverable \_\_\_\_\_

Ineligible to vote \_\_\_\_\_

No ballot application on record \_\_\_\_\_

No witness signature \_\_\_\_\_

Spoiled ballot \_\_\_\_\_

Ballot missing from envelope \_\_\_\_\_

Ballot returned in unofficial envelope \_\_\_\_\_

Multiple ballots returned in one envelope \_\_\_\_\_

Elector deceased \_\_\_\_\_

Ballot replaced \_\_\_\_\_

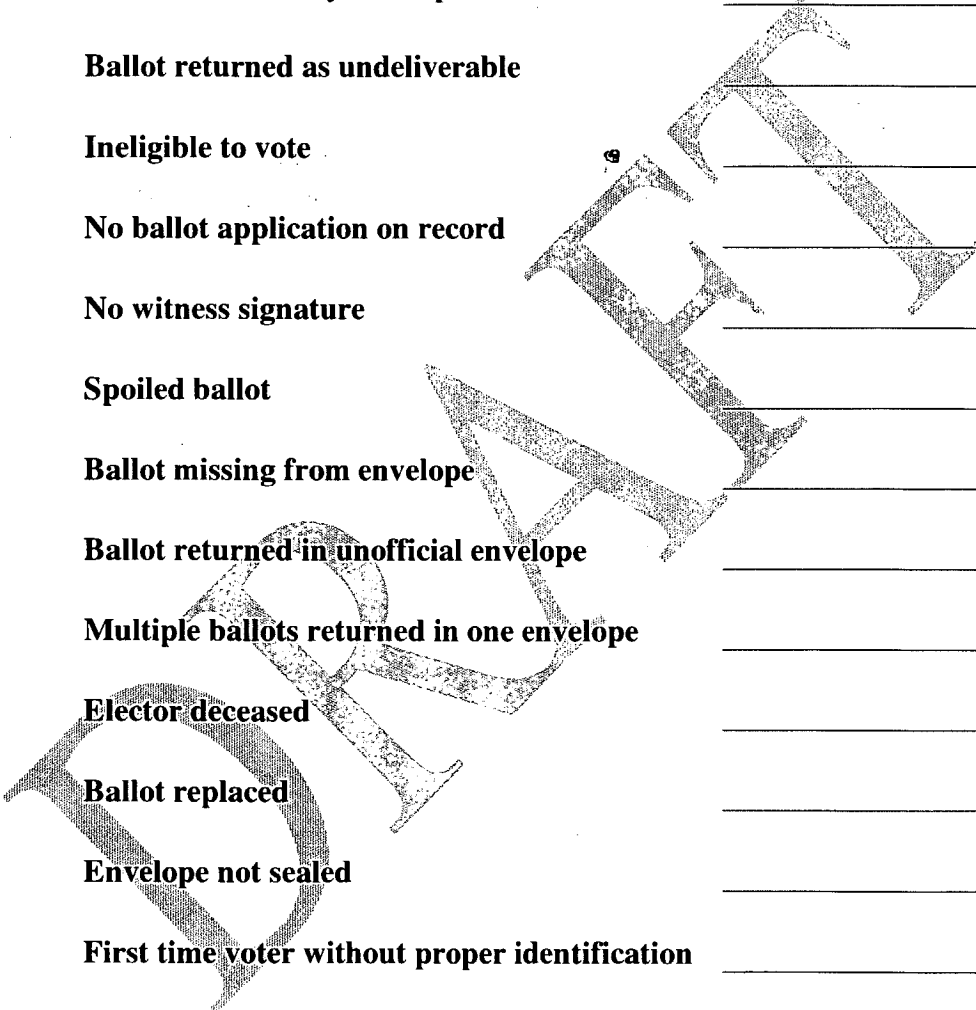

Envelope not sealed \_\_\_\_\_

First time voter without proper identification \_\_\_\_\_

No election official's signature on ballot \_\_\_\_\_

No residence address on envelope \_\_\_\_\_

Other (*please, specify*) \_\_\_\_\_

40. Total number statewide and by county/local jurisdiction of **military and overseas** absentee ballots rejected for each of the following reasons:

- Lacked a postmark \_\_\_\_\_
- No voter signature \_\_\_\_\_
- Voter signature not verifiable \_\_\_\_\_
- Had no date of voter signature \_\_\_\_\_
- Had no notary/witness signature \_\_\_\_\_
- Had no date of notary/witness signature \_\_\_\_\_
- Was received after the state deadline \_\_\_\_\_
- Returned as undeliverable \_\_\_\_\_
- Other reason (*please, specify*) \_\_\_\_\_

**Undervotes and Overvotes**

*An undervote occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.*

*An overvote occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.*

41. Total number statewide and by county/local jurisdiction of **undervotes** reported in each federal contest:

**Total:** \_\_\_\_\_

42. Total number statewide and by county/local jurisdiction of **overvotes** reported in each federal contest:

**Total:** \_\_\_\_\_

**Poll Workers**

**Note:** *The answer to these questions should include the number of persons who served in all polling places in the State as poll workers, election judges, wardens, commissioners, or other similar term that refers to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits or other documents required to cast a ballot; assist the voter by providing the voter with a ballot or setting up the voting machine for the voter; and serving other functions as dictated by state law. The answers to these questions should not include observers stationed at the polling place.*

**43a.** Has there been a change in the number of poll workers per precinct/polling place required by law or regulation since November 2004?

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No

**43b.** If "yes," please, provide the new number of poll workers required by law or regulation to be present at each precinct/polling place.

**Total:** \_\_\_\_\_

**44.** Total number statewide and by county/local jurisdiction of poll workers that served in the November 7, 2006, Federal general elections:

**Total:** \_\_\_\_\_

**45.** Total number statewide and by county/local jurisdiction of polling places and precincts that did not have the required number of poll workers:

**Total:** \_\_\_\_\_

**Voting Jurisdictions and Polling Places**

***Precinct** means the geographic area to which voters are assigned.*

***Polling place** means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.*

46. Identify what constitutes a local election jurisdiction in your State:

- County
- Parish
- Township
- City
- Borough
- Village
- Other (please, specify)

47. Total number statewide and by county/local election jurisdiction of **precincts**:

**Total:** \_\_\_\_\_

48. Total number statewide and by county/local election jurisdiction of **polling places**:

**Total:** \_\_\_\_\_

49. Total number statewide and by county/local election jurisdiction of polling places that are accessible to voters with disabilities:

**Total:** \_\_\_\_\_

*Note: For purposes of this question only, accessibility refers to the physical structure of the polling place, not the voting system.*

50. Total number by county/local election jurisdiction of polling places where a visually impaired voter can cast a private ballot:

**Total:** \_\_\_\_\_

*Note: Identify the total number of polling places where voting equipment is used such that a visually disabled voter can cast a private ballot (e.g., a DRE with audio ballot capability or paper ballots printed in Braille).*

**Sources of Information**

51. Total number of local election jurisdictions that provided information for purposes of responding to this survey:

**Total:** \_\_\_\_\_

52. Provide the name and contact information for each local election jurisdiction official that provided information for purposes of responding to this survey.

53. Identify any other sources of information used to respond to this survey other than those provided in response to the two previous questions. *(All other sources of data shall include information obtained from a state-wide voter registration database or any other public or non-public source.)*

**DRAFT**

**THANK YOU FOR RESPONDING TO THE SURVEY. PLEASE, FOLLOW THE ENCLOSED INSTRUCTIONS FOR SUBMITTING YOUR COMPLETED SURVEY.**

## GLOSSARY

**Absentee voting** is defined as voting prior to Election Day which requires that the voter meet qualifications other than those generally required to register to vote.

**Active voters** refers to all registered voters **except** those who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**Advanced ballot** means any special Write-In Absentee Ballot, State Write-In Absentee Ballot, Special Write-In Early Ballot, or Blank Absentee Ballot that is distributed by a state in advance of the publication of an official ballot for a federal election on which military and overseas citizens are allowed to write in the name of the candidate in each contest for whom they choose to vote.

**“At the polls”** refers to ballots issued, cast, or counted on a jurisdiction’s voting system on Election Day at a polling place.

**Ballots cast** means a ballot that has been submitted manually or electronically by a voter but has not been verified and/or counted.

**Ballots counted** means all ballots that have been cast, processed, and counted.

**Domestic civilian absentee ballot** refers to a ballot available to a non-military citizen living in the United States who is registered to vote and meets the State’s requirement for voting absentee.

**Domestic military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned within the United States or its territories, and who is absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving within the United States and its territories, and who is absent from the place of residence where the member is otherwise qualified to vote; and

(C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Duplicate registration application** refers to an application to register by a person already registered to vote at the same address, under the same name, and (where applicable) the same political party.

**Early voting** refers to any voting that occurred prior to November 7, 2006, for which there were no eligibility requirements. For example, the voter did not have to attest that he/she would be absent from the voting jurisdiction on the day of the election.

**Federal Write-In Absentee Ballot (FWAB)** is a ballot available to military and overseas citizens (including APO and FPO addresses) when they have not received their regular absentee ballot from their state.

**Inactive voters** refers to registrants who have been sent but have not responded to a confirmation mailing sent in accordance with NVRA (42 U.S.C. 1973gg-6(d)) and have not since offered to vote.

**List maintenance** refers to the specific process and procedures by which State and/or local election officials update and preserve information contained on the official list of registered voters.

**New, valid registrations** include all registrations that are new to the local jurisdiction and re-registrations across jurisdictional lines. This does not include applications that are duplicates, rejected, or report only a change of name, address, or (where applicable) party preference within the local jurisdiction.

**Overseas civilians** refers to persons who are citizens of the United States who are living, working or stationed outside of the United States and its territories and who are not members of a uniformed service.

**Overseas military citizen** refers to:

- (A) a member of a uniformed service on active duty who, by reason of such active duty, is stationed or positioned outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote;
- (B) a member of the merchant marine who, by reason of service in the merchant marine, is serving outside of the United States and its territories, and who is thus absent from the place of residence where the member is otherwise qualified to vote; and
- (C) a spouse or dependent of a member referred to in subparagraph (A) or (B) who, by reason of the active duty or service of the member, is absent from the place of residence where the spouse or dependent is otherwise qualified to vote.

**Overvote** occurs when a voter makes more than the permitted number of selections in a single race/contest or when a voter makes a selection in a race/contest on which he/she was not eligible to vote.

**Precinct** means the geographic area to which voters are assigned.

**Polling place** means the physical structure where residents of a precinct go to cast their votes on Election Day. A polling place includes any structure that houses one or more precincts.

**Provisional ballot** refers to a ballot issued when a voter's eligibility has not been determined.

**Undervote** occurs at any time when a voter makes less than that allowed number of selections in a single race/contest or when a voter votes on less than all of the races/contests for which he/she is eligible to vote.

Subject Re: Paperwork Reduction Act/OMB Clearance needs

Hello Meredith,

Here are some documents that may help you along in completing the information requested on the 83-I form and the supporting documents. I have attached a file illustrating screenshots of the online system OMB has developed so you may have a better feel for how the information you provide is entered into the system. I look forward to working with you to get this process started. Thank you!

Subject Re: Paperwork Reduction Act/OMB Clearance needs

Laiza:

Just a quick question. I believe you mentioned this on the call, but I neglected to write it down as I didn't think we'd need to take advantage of emergency approval. Once the required paperwork is submitted, how quickly does OMB typically turn around an emergency ICR?

Thanks,

*Meredith Battle Imwalle*

Subject: Re: Paperwork Reduction Act/OMB Clearance needs

Thanks for your email, Karen. During our phone interviews with the states, we learned that we can identify first-time voters and potential focus group participants after the November election by using their statewide voter registration database records. My plan was to submit the OMB paperwork within the next 2 or 3 weeks and to pursue a standard, not expedited, clearance. That said, we'll need to begin contacting focus group participants on February 19, 2007. Should we change our plans and pursue an expedited clearance instead? Laiza, any thoughts?

Regards,

*Meredith Battle Imwalle*

Subject: Re: Paperwork Reduction Act/OMB Clearance needs

Meredith-

I wanted to be certain to follow-up on last week's call on the PRA/OMB clearance process to determine if you will need Laiza to work with you on an expedited/emergency clearance process.

I know that you will be surveying first-time voters and, perhaps, will need to identify them at the November election.

Karin McDonald has been working with Laiza to get her survey process expedited and I wanted to be certain that if you need the same, that you are working with Laiza to process the paperwork now.

Thanks

Karen Lynn-Dyson

**U.S. ELECTION ASSISTANCE COMMISSION**

**Request For Substantive Comments on Procedural Manual For The Election Assistance Commission's Voting System Testing and Certification Program; Proposed Information Collection: Request for Comments on Information Collection Burden; U.S. EAC Voting System Testing and Certification Program.**

**AGENCY:** United States Election Assistance Commission (EAC).

**ACTION:** NOTICE.

---

**SUMMARY:** The EAC has drafted a procedural manual for its Voting System Testing and Certification Program. This program sets administrative procedures for obtaining an EAC Certification for voting systems. Participation in the program is strictly voluntary. The program is mandated by 42 U.S.C. §15371. The purpose of this notice is twofold: (1) to request public comment on the substantive aspects of the program and (2) to request public comment on the proposed collection of information pursuant to the emergency processing provisions of the Paperwork Reduction Act as submitted to the Office of Management and Budget (OMB).

**(1) SUBSTANTIVE COMMENTS:** The EAC seeks substantive comments from the public on its proposed procedural manual. Please submit comments consistent with the information below. Comments should identify and cite the section of the manual at issue. Where a substantive issue is raised, please propose a recommended change or alternative policy. This publication and request for comment is not required under the rulemaking, adjudicative or licensing provisions of the Administrative Procedures Act (APA). It is a voluntary effort by the EAC to gather input from the public on the EAC's administrative procedures for certifying or decertifying voting systems. Furthermore, this request by the

EAC for public comment is not intended to make any of the APA's rulemaking provisions applicable to development of this or future EAC procedural programs.

DATES (Comments): Submit written or electronic comments on this draft procedural manual on or before 5:00 p.m. EDT on October 31, 2006.

ADDRESSES: Submit comments on-line on EAC's website: <http://www.eac.gov>; via mail to Brian Hancock, Director of Voting System Certification, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, D.C. 20005; or via fax to 202-566-1392. An electronic copy of the proposed guidance may be found on the EAC's web site <http://www.eac.gov>.

FOR FURTHER INFORMATION CONTACT: Brian Hancock, Director of Voting System Certification, 1225 New York Avenue, Suite 1100, Washington, D.C., (202)566-3100, Fax: (202)566-1392.

**(2) COMMENTS ON THE PROPOSED COLLECTION OF INFORMATION:** In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the EAC is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be

collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to provide for the certification of voting systems as mandated by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this program in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software...." This mandate represents the first time the Federal government will provide for the voluntary testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC is developing the Voting System Testing and Certification Program. This program requires the submission and retention of information related to voting systems and voting system manufacturers.

009610

Until recently, national voting system certification was conducted by a private membership organization, the National Association of State Election Directors (NASED). NASED certified voting systems for over a decade, using standards issued by the Federal government. The organization terminated its certification efforts on July 10, 2006. While the EAC and NASED have worked together to provide for the certification of emergency modifications necessary to properly field voting systems for the 2006 General Election, there is presently no mechanism in place to test and certify new systems or to process modifications for the 2008 Federal elections. Given the fact that (1) it can take years to develop, test, certify, sell and field a new or modified voting system, and (2) a large volume of voting systems (new, existing and modified) are expected to be submitted to the EAC upon initiation of the new Certification Program, it is imperative that the EAC's Voting System Testing and Certification Program begin on the earliest possible date. The 2008 Federal elections are less than 2 years away. Ensuring that certified voting systems are available for the 2008 Election Cycle is essential to the public welfare.

1. Type of Information Collection Request: New collection;
2. Title of Information Collection: EAC Voting System Testing and Certification Program Manual;
3. Use: HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software by accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing

and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and effective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may effect a voting system's certification.

4. Form Numbers: EAC-001C, 002C and 003C.
5. Frequency: Voluntary Reporting – (1) *Manufacturer Registration Form*: one time when a manufacturer registers for the program, (2) *Voting System Certification Application Form*: as needed, when a manufacturer submits a voting system for testing and certification, and (3) *Field Anomaly Reporting Form*: as needed, when an election official voluntarily notifies the EAC of a witnessed voting system anomaly.
6. Affected Public: Business or other for-profit institutions and state and local election officials;
7. Number of Respondents: 94 annually;
8. Total Annual Responses: 99 annually;
9. Total Annual Hours: 119 hours, annually.

EAC is requesting OMB review and approval of this collection by

009612

November 30, 2006, with a 180-day approval period. Written comments and recommendations will be considered from the public if received by the individuals designated below by October 31, 2006.

To obtain copies of the supporting statement, the Voting System Testing and Certification Program Manual or EAC forms referenced above, access the EAC Web Site at [www.eac.gov](http://www.eac.gov) or mail your request, including your address, phone number, to Director of Voting System Certification, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, D.C. 20005; or fax the EAC Director of Voting System Certification at 202-566-1392.

Interested persons are invited to send comments regarding the burden or any other aspect of these collections of information requirements. However, as noted above, comments on these information collection and recordkeeping requirements must be mailed and/or faxed to the designees referenced below by October 31, 2006:

*OMB Reviewer:* Alexander T. Hunt

Office of Management and Budget, Room 10235

## Sample

### **12. Annual Reporting Burden:**

- a. Number of Respondents 8,397
- b. Number of Responses per Respondent 1
- c. Total Annual Responses 8,397
- d. Hours per Response 2
- e. Total Annual Reporting Burden 16,794
- f. Total Public Cost \$ 1,091,610

The projected hours per response for this collection of information were derived by dividing the process into three actions:

- Learning about the law and the form: 15 minutes
- Completion of the form: 20 minutes
- Assembling and filing the form: 85 minutes
- Total Hours 120 minutes (2 hours)

For the first two actions, tests were used to determine completion times. Persons who were not conversant with immigration processes were used to determine the average completion time. The third action of the form, assembling and filing the form, was broken down into subtasks. For example, an application for a reentry permit or refugee travel document is mailed directly to the USCIS Nebraska Service Center. Meanwhile, an application for advance parole is filed at the local USCIS office if the applicant is in the United States. If, however, the applicant seeking advance parole is outside the United States, he or she would mail the form to USCIS Headquarters in Washington, DC. Consequently, the time necessary to actually file the form can vary widely, depending on the circumstances of the applicant.

### **Annual Reporting Burden**

**The annual reporting burden is 16,794.** This figure was derived by multiplying the number of respondents (8,397) x frequency of response (1) x (2) hours per response. This estimation is based on prior USCIS experience with the program.

### **Public Cost**

**The estimated annual public cost is \$ 1,091,610.** This estimate is based on the number of respondents 8,397 x (2) hours per response x \$10 (average hourly rate) plus the number of respondents (8,397 x fee charge of \$190).

13. There are no capital or start-up costs associated with this information collection. Any cost burdens to respondents as a result of this information collection are identified in Item 14. There is a \$190 fee charge associated with the collection of this information.

14. Annualized Cost Analysis:

- a. Printing Cost \$ 5,290
- b. Collection and Processing Cost \$ 918,380
- c. Total Cost to Program \$ 923,670
- d. Fee Charge \$ 923,670
- e. Total Cost to Government \$ 0

**Government Cost**

The estimated cost of the program to the Government is calculated by using the estimated number of respondents (8,397) multiplied (x) by the suggested \$110 fee charge (which includes the suggested average hourly rate for clerical, officer, and managerial time with benefits, plus a percent for the estimated overhead cost for printing, stocking, distributing and processing of this form).

009625

**SUPPORTING STATEMENTS**  
(Name)

**A. JUSTIFICATION**

1. Explain the circumstances that make the collection of information necessary.
  
2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.
  
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.
  
4. Describe efforts to identify duplication.
  
5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.
  
6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.
  
7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.

009626

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

**12. Provide an estimate in hours of the burden of the collection of information.**

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

**14. Provide estimates of annualized cost to the Federal government.**

009627

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

**1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection method to be used. Data on the number of entities (e.g. establishments, State and local governmental units, households, or persons) in the universe and the corresponding sample are to be provided in tabular form. The tabulation must also include expected response rates for the collection as a whole. If the collection has been conducted before, provide the actual response rate achieved.**

**2. Describe the procedures for the collection, including: the statistical methodology for stratification and sample selection; the estimation procedure; the degree of accuracy needed for the purpose described in the justification; any unusual problems requiring specialized sampling procedures; and any use of periodic (less frequent than annual) data collection cycles to reduce burden.**

009628

**3. Describe the methods used to maximize response rates and to deal with nonresponse. The accuracy and reliability of the information collected must be shown to be adequate for the intended uses. For collections based on sampling, a special justification must be provided if they will not yield "reliable" data that can be generalized to the universe studied.**

**4. Describe any tests of procedures or methods to be undertaken. Tests are encouraged as effective means to refine collections, but if ten or more test respondents are involved OMB must give prior approval.**

**5. Provide the name and telephone number of individuals consulted on the statistical aspects of the design, and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.**

To "Adam L. Bourne"

cc

bcc Karen Lynn-Dyson/EAC/GOV@EAC

Subject Re: EAC Project and Paperwork Reduction Act 

Dear Mr. Bourne,

Per our conversation, here are the forms/information that need to be completed. I am also including a handbook of OMB's online submission system, ROCIS, so you get a feel for how the information you provide on the 83-I is presented to them. Since this will be an emergency review, there also needs to be justification included as to why it's going through the emergency process. In addition, we need to submit the survey instrument itself and a draft of the 30-day Federal Register notice (I can provide you a template as well for that if you need one). Please, let me know if you have any questions or need more information. Thank you!

## 19. Certification for Paperwork Reduction Act Submissions

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9.

**Note:** The text of 5 CFR 1320.9, and the related provisions of 5 CFR 1320.8(b)(3), appear at the end of the instructions. *The certification is to be made with reference to those regulatory provisions as set forth in the instructions.*

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous terminology that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention period for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8(b)(3):
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected (see note in Item 19 of the instructions);
  - (i) It uses effective and efficient statistical survey methodology; and
  - (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item below and explain the reason in Item 18 of the Supporting Statement.

Signature of Senior Official or designee

Date

# Instructions For Completing OMB Form 83-I

Please answer all questions and have the Senior Official or designee sign the form. These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

## 1. Agency/Subagency originating request

Provide the name of the agency or subagency originating the request. For most cabinet-level agencies, a subagency designation is also necessary. For non-cabinet agencies, the subagency designation is generally unnecessary.

## 2. OMB control number

- If the information collection in this request has previously received or now has an OMB control or comment number, enter the number.
- Check "None" if the information collection in this request has not previously received an OMB control number. Enter the four digit agency code for your agency.

## 3. Type of information collection (check one)

- Check "New collection" when the collection has not previously been used or sponsored by the agency.
- Check "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.
- Check "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.
- Check "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.
- Check "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.
- Check "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

## 4. Type of review requested (check one)

- Check "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.
- Check "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval.
- Check "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

## 5. Small entities

Indicate whether this information collection will have a significant impact on a substantial number of small entities. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

## 6. Requested expiration date

- Check "Three years" if the agency requests a three year approval for the collection.
- Check "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date.

## 7. Title

Provide the official title of the information collection. If an official title does not exist, provide a description which will distinguish this collection from others.

## 8. Agency form number(s) (if applicable)

Provide any form number the agency has assigned to this collection of information. Separate each form number with a comma.

## 9. Keywords

Select and list at least two keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection. Other terms may be used but should be listed after those selected from the thesaurus. Separate keywords with commas. Keywords should not exceed two lines of text.

## 10. Abstract

Provide a statement, limited to five lines of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents.

## 11. Affected public

Mark all categories that apply, denoting the primary public with a "P" and all others that apply with "X."

## 12. Obligation to respond

Mark all categories that apply, denoting the primary obligation with a "P" and all others that apply with "X."

- Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.
- Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.
- Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

## 13. Annual reporting and recordkeeping hour burden

- Enter the number of respondents and/or recordkeepers. If a respondent is also a recordkeeper, report the respondent only once.
- Enter the number of responses provided annually. For recordkeeping as compared to reporting activity, the number of responses equals the number of recordkeepers.
  - Enter the estimated percentage of responses that will be submitted/collected electronically using magnetic media (i.e., diskette), electronic mail, or electronic data interchange. Facsimile is not considered an electronic submission.
  - Enter the total annual recordkeeping and reporting hour burden.
  - Enter the burden hours currently approved by OMB for this collection of information. Enter zero (0) for any new submission or for any collection whose OMB approval has expired.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parentheses.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.

f.1. "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes.

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

## 14. Annual reporting and recordkeeping cost burden (in thousands of dollars)

The costs identified in this item must exclude the cost of hour burden identified in Item 13.

- Enter the total dollar amount of annualized cost for all respondents of any associated capital or start-up costs.
  - Enter recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
  - Enter total (14.a. + 14.b.) annual reporting and recordkeeping cost burden.
  - Enter any cost burden currently approved by OMB for this collection of information. Enter zero (0) if this is the first submission after October 1, 1995.
  - Enter the difference by subtracting line d from line c. Record a negative number (d larger than c) within parenthesis.
  - Explain the difference. The difference in line e must be accounted for in lines f.1. and f.2.
- f.1. "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revisions or changes resulting in cost changes are recorded as program changes.

009637

f.2. "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimations or actions not controllable by the Federal government are recorded as adjustments.

#### 15. Purpose of information collection

Mark all categories that apply, denoting the primary purpose with a "P" and all others that apply with "X."

a. Mark "Application for benefits" when the purpose is to participate in, receive, or qualify for a grant, financial assistance, etc., from a Federal agency or program.

b. Mark "Program evaluation" when the purpose is a formal assessment, through objective measures and systematic analysis, of the manner and extent to which Federal programs achieve their objectives or produce other significant effects.

c. Mark "General purpose statistics" when the data is collected chiefly for use by the public or for general government use without primary reference to the policy or program operations of the agency collecting the data.

d. Mark "Audit" when the purpose is to verify the accuracy of accounts and records.

e. Mark "Program planning or management" when the purpose relates to progress reporting, financial reporting and grants management, procurement and quality control, or other administrative information that does not fit into any other category.

f. Mark "Research" when the purpose is to further the course of research, rather than for a specific program purpose.

g. Mark "Regulatory or compliance" when the purpose is to measure compliance with laws or regulations.

#### 16. Frequency of recordkeeping or reporting

Check "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Check "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

Check "Reporting" for information collections that involve reporting and check the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, check "On occasion."

#### 17. Statistical methods

Check "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, check "No" for applications and audits (unless a random auditing scheme is used). Check "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in accordance with Section B of the Supporting Statement.

#### 18. Agency contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission.

#### 19. Certification for Paperwork Reduction Act Submissions

The Senior Official or designee signing this statement certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9. Provisions of this certification that the agency cannot comply with should be identified here and fully explained in item 18 of the attached Supporting Statement. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR 1320.3(d)).

## Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information--

"(a) is necessary for the proper performance of the functions of the agency, including that the information to be collected will have practical utility;

"(b) is not unnecessarily duplicative of information otherwise reasonably accessible to the agency;

"(c) reduces to the extent practicable and appropriate the burden on persons who shall provide information to or for the agency, including with respect to small entities, as defined in the Regulatory Flexibility Act (5 U.S.C. § 601(6)), the use of such techniques as:

"(1) establishing differing compliance or reporting requirements or timetables that take into account the resources available to those who are to respond;

"(2) the clarification, consolidation, or simplification of compliance and reporting requirements; or collections of information, or any part thereof;

"(3) an exemption from coverage of the collection of information, or any part thereof;

"(d) is written using plain, coherent, and unambiguous terminology and is understandable to those who are to respond;

"(e) is to be implemented in ways consistent and compatible, to the maximum extent practicable, with the existing reporting and recordkeeping practices of those who are to respond;

"(f) indicates for each recordkeeping requirement the length of time persons are required to maintain the records specified;

"(g) informs potential respondents of the information called for under §1320.8(b)(3); [see below]

"(h) has been developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected, including the processing of the information in a manner which shall enhance, where appropriate, the utility of the information to agencies and the public;

"(i) uses effective and efficient statistical survey methodology appropriate to the purpose for which the information is to be collected; and

"(j) to the maximum extent practicable, uses appropriate information technology to reduce burden and improve data quality, agency efficiency and responsiveness to the public."

NOTE: 5 CFR 1320.8(b)(3) requires that each collection of information:

"(3) informs and provides reasonable notice to the potential persons to whom the collection of information is addressed of:

"(i) the reasons the information is planned to be and/or has been collected;

"(ii) the way such information is planned to be and/or has been used to further the proper performance of the functions of the agency;

"(iii) an estimate, to the extent practicable, of the average burden of the collection (together with a request that the public direct to the agency any comments concerning the accuracy of this burden estimate and any suggestions for reducing this burden);

"(iv) whether responses to the collection of information are voluntary, require to obtain or retain a benefit (citing authority) or mandatory (citing authority);

"(v) the nature and extent of confidentiality to be provided, if any (citing authority); and

"(vi) the fact that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number."

009639

# Supporting Statement for Paperwork Reduction Act Submissions

## General Instructions

A Supporting Statement, including the text of the notice to the public required by 5 CFR 1320.5(a)(i)(iv) and its actual or estimated date of publication in the Federal Register, must accompany each request for approval of a collection of information. The Supporting Statement must be prepared in the format described below, and must contain the information specified in Section A below. If an item is not applicable, provide a brief explanation. When Item 17 of the OMB Form 83-I is checked "Yes", Section B of the Supporting Statement must be completed. OMB reserves the right to require the submission of additional information with respect to any request for approval.

## Specific Instructions

### A. Justification

1. Explain the circumstances that make the collection of information necessary. Identify any legal or administrative requirements that necessitate the collection. Attach a copy of the appropriate section of each statute and regulation mandating or authorizing the collection of information.
2. Indicate how, by whom, and for what purpose the information is to be used. Except for a new collection, indicate the actual use the agency has made of the information received from the current collection.
3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses, and the basis for the decision for adopting this means of collection. Also describe any consideration of using information technology to reduce burden.
4. Describe efforts to identify duplication. Show specifically why any similar information already available cannot be used or modified for use for the purposes described in Item 2 above.
5. If the collection of information impacts small businesses or other small entities (Item 5 of OMB Form 83-I), describe any methods used to minimize burden.
6. Describe the consequence to Federal program or policy activities if the collection is not conducted or is conducted less frequently, as well as any technical or legal obstacles to reducing burden.
7. Explain any special circumstances that would cause an information collection to be conducted in a manner:
  - \* requiring respondents to report information to the agency more often than quarterly;
  - \* requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it;
  - \* requiring respondents to submit more than an original and two copies of any document;

- \* requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than three years;
- \* in connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study;
- \* requiring the use of a statistical data classification that has not been reviewed and approved by OMB;
- \* that includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use; or
- \* requiring respondents to submit proprietary trade secrets, or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.

8. If applicable, provide a copy and identify the date and page number of publication in the Federal Register of the agency's notice, required by 5 CFR 1320.8(d), soliciting comments on the information collection prior to submission to OMB. Summarize public comments received in response to that notice and describe actions taken by the agency in response to these comments. Specifically address comments received on cost and hour burden.

Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.

Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

9. Explain any decision to provide any payment or gift to respondents, other than reenumeration of contractors or grantees.
10. Describe any assurance of confidentiality provided to respondents and the basis for the assurance in statute, regulation, or agency policy.

11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private. This justification should include the reasons why the agency considers the questions necessary, the specific uses to be made of the information, the explanation to be given to persons from whom the information

is requested, and any steps to be taken to obtain their consent.

12. Provide estimates of the hour burden of the collection of information. The statement should:
  - \* Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. If the hour burden on respondents is expected to vary widely because of differences in activity, size, or complexity, show the range of estimated hour burden, and explain the reasons for the variance. Generally, estimates should not include burden hours for customary and usual business practices.
  - \* If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.

\* Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate categories. The cost of contracting out or paying outside parties for information collection activities should not be included here. Instead, this cost should be included in Item 13.

13. Provide an estimate for the total annual cost burden to respondents or recordkeepers resulting from the collection of information. (Do not include the cost of any hour burden shown in Items 12 and 14).

\* The cost estimate should be split into two components: (a) a total capital and start-up cost component (annualized over its expected useful life) and (b) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start-up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.

\* If cost estimates are expected to vary widely, agencies should present ranges of cost burdens and explain the reasons for the variance. The cost of purchasing or contracting out information collections services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use

009640

existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

\* Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.

14. Provide estimates of annualized costs to the Federal government. Also, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Agencies may also aggregate cost estimates from Items 12, 13, and 14 in a single table.

15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB Form 83-1.

16. For collections of information whose results will be published, outline plans for tabulation and publication. Address any complex analytical techniques that will be used. Provide the time schedule for the entire project, including beginning and ending dates of the collection of information, completion of report, publication dates, and other actions.

17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons that display would be inappropriate.

18. Explain each exception to the certification statement identified in Item 19, "Certification for Paperwork Reduction Act Submissions," of OMB Form 83-1.

#### **B. Collections of Information Employing Statistical Methods**

The agency should be prepared to justify its decision not to use statistical methods in any case where such methods might reduce burden or improve accuracy of results. When Item 17 on the Form OMB 83-1 is checked, "Yes," the following documentation should be included in the Supporting Statement to the extent that it applies to the methods proposed:

1. Describe (including a numerical estimate) the potential respondent universe and any sampling or other respondent selection methods to be used. Data on the number of entities (e.g., establishments, State and local government units, households, or persons) in the universe covered by the collection and in the corresponding sample are to be provided in tabular form for the universe as a whole and for each of the strata in the proposed sample. Indicate expected response rates for the collection as a whole. If the collection had been conducted previously, include the actual response rate achieved during the last collection.

2. Describe the procedures for the collection of information including:

- \* Statistical methodology for stratification and sample selection,
- \* Estimation procedure,
- \* Degree of accuracy needed for the purpose described in the justification,
- \* Unusual problems requiring specialized sampling procedures, and
- \* Any use of periodic (less frequent than annual) data collection cycles to reduce burden.

3. Describe methods to maximize response rates and to deal with issues of non-response. The accuracy and reliability of information collected must be shown to be adequate for intended uses. For collections based on sampling, a special justification must be provided for any collection that will not yield "reliable" data that can be generalized to the universe studied.

4. Describe any tests of procedures or methods to be undertaken. Testing is encouraged as an effective means of refining collections of information to minimize burden and improve utility. Tests must be approved if they call for answers to identical questions from 10 or more respondents. A proposed test or set of test may be submitted for approval separately or in combination with the main collection of information.

5. Provide the name and telephone number of individuals consulted on statistical aspects of the design and the name of the agency unit, contractor(s), grantee(s), or other person(s) who will actually collect and/or analyze the information for the agency.

# ROCIS HOW TO Guide for Agency Users of ICR Module

## HOW TO Log Into ROCIS

If you are logging onto the system, please point your browser to [www.rocis.gov](http://www.rocis.gov) to enter real data or to the Practice Site provided to you by OIRA, <http://192.136.12.204/rocis/>.

Read and select the Accept Terms on the Warning Screen.

Enter your User ID (first initial and last name) and Password (initially rocis123 until you change it to your personal password as directed by the system). Select the Done button on the Notification screen.

- You may land directly into your ICR Module inbox or at a screen requesting you to choose the Agenda/Reg module or the PRA module. Please select PRA to conduct business in the ICR Module or Agenda/Reg to change passwords or to review and modify your user information.

## HOW TO Change Your Password

If this is the first time you have logged in, the system will ask you to change your password. On the Change Password screen, enter your old password, enter your new password (must be at least 8 characters, must have one number and one special character—like oira@1234) in both boxes as indicated and click Change Password button. When you get the Confirmation screen, click ok. Please do not share your password with any other authorized or unauthorized user.

Confirm New Password

\*Password length should be between 8 and 14. Password must contain at least one alphabetic, one numeric and one special character.

start [taskbar icons] 5:16 PM

## HOW TO Review and Change Your User Profile

Upon successful login, you should arrive at your Inbox. If you are an Agency user, you will arrive in your Created Request List. If you are an OIRA user, you will arrive in your Pending List of reviews that are assigned to you. Take a moment to look at your tabs and sub tabs at the top of the screen. Select the Agenda/Regs tab. Click on the Admin tab on the top line. The User Profile tab provides you a place to view and update your user information.

Upon initial entry, please verify and make appropriate changes to name, agency, telephone number and e-mail. Please do not enter address information and disregard the information about your role in ROCIS, which is for System Administrative Use. Then, be sure to save your information. The Save button is all the way at the bottom of the screen.

Please be sure to return to the User Profile to modify your personal information whenever changes occur, such as your phone number or e-mail address.

## HOW TO Use the ROCIS Employee Administration Search

The purpose of the Employee Administration Screen is to allow ROCIS users to find other ROCIS users via the search capability. For instance, if you would like to send another agency's Authorized Paperwork Contact (Submitter) an e-mail regarding a potential transfer of an OMB Control Number, you are able to search on the APC "role" for the agency and receive a list of contact information. If a clearance officer wants to identify for management the list of preparers (PDECs) for his/her agency, this is the screen from which to search and gain the information.

The screenshot shows a web browser window titled "ROCIS - Employee Administration - Microsoft Internet Explorer". The address bar shows "http://192.136.12.204/rocs/do/ListUser". The page content includes a navigation bar with "Admin" and "Help" tabs, and a sub-navigation bar with "User Profile", "Change Password", and "Employee Admin". The main heading is "ROCIS Employee Administration". Below this is a search form with the following fields: "User ID", "Last Name", "First Name", "Agency" (dropdown), "Sub Agency" (dropdown), and "Role" (dropdown). There are radio buttons for "Users" and "Contacts", and a "Search" button. Below the form is a table header with columns: "Agency", "Name", "User ID", "Phone Number", "Email", "Inactivate", and "Locked". The page footer shows "Login: Ideltzer" and the browser's taskbar with the time "5:10 PM".

When you have satisfied your ROCIS administrative functions, click on the PRA tab to return to the Created Request List Inbox for Agency users or to the Pending Inbox for OIRA users.

Login: ldeitzer

When you arrive in ROCIS ICR Module after successfully logging in, you'll be in the Created Request List Inbox. Think of this as the top of the desk in your office where you are working to create and prepare ICRs and other requests to OIRA, such as, emergency extensions, discontinuations, or transfer OMB Control Numbers.

You may sort on each of the column headings to organize your work space and you may filter and/or view all the contents of the inbox.

## HOW TO Use the Home Row of Tabs

At the top of the screen is a set of tabs that enable you to perform any and all functions within ROCIS and within the ICR Module. This set of tabs is referred to as the Home Row. You can move from the Created Request List to the Submitted (to OIRA) Request List and to the (OIRA) Concluded Request List. You can also select from a drop down of Request types, use the Simple and Advanced Search tools or run Reports.

When you are working on or viewing an OMB Control Number or ICR Package, you can use the Home Row to view the ICR Package and the History of the ICR package or the History of the OMB Control Number.

009647

# HOW TO Create an ICR Package

There are three ways to create an ICR Package—

1. By using the Request drop down box to select the type of request you desire;
2. By finding an action in the Concluded Request List to view and from which to view and begin a new ICR, or
3. By searching for an OMB Control Number or ICR Reference Number of an existing ICR to view and from which to begin a new ICR.

## 1. Create an ICR by selecting from the Request drop down box.

### Create New ICR Package

Create a New ICR from Scratch

Sub Agency

Will be generic ?

Title

Abstract

Check Spelling    Create    Cancel

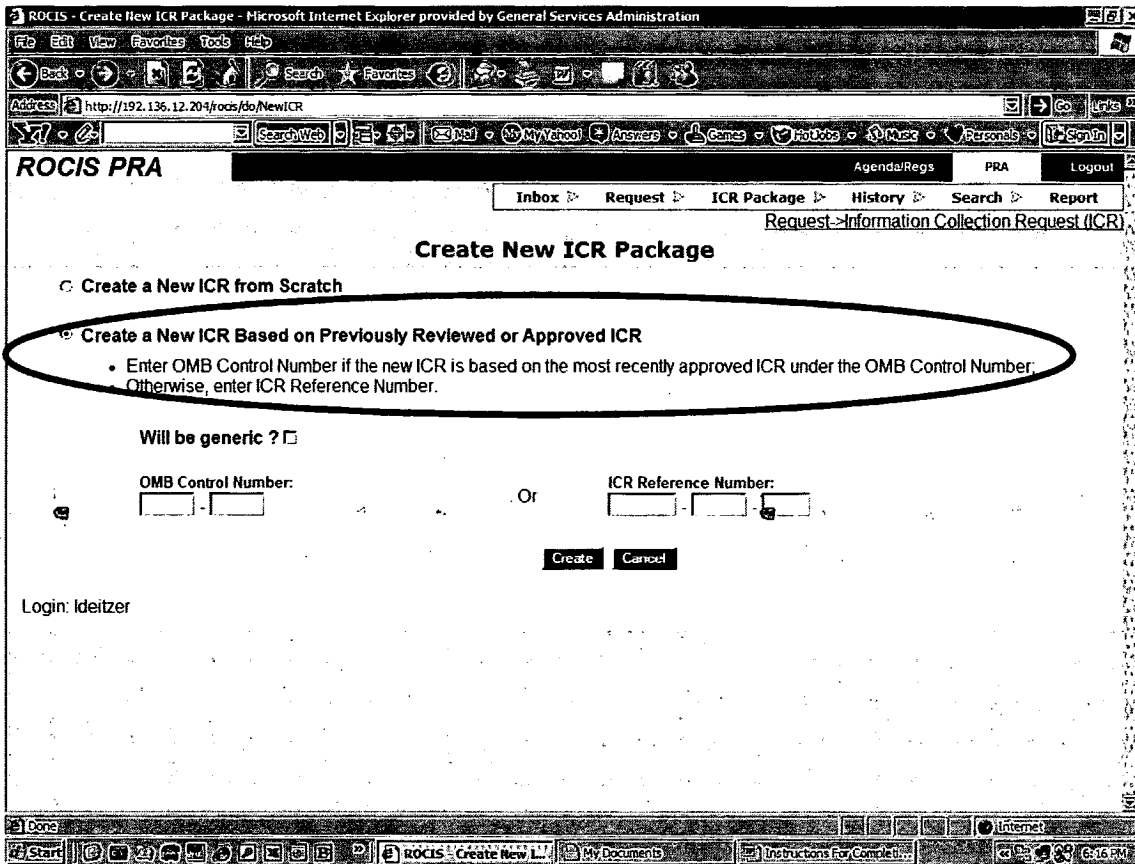

Create a New ICR Based on Previously Reviewed or Approved ICR

- Enter OMB Control Number if the new ICR is based on the most recently approved ICR under the OMB Control Number;
- Otherwise, enter ICR Reference Number.

Use this screen to identify the Agency, Sub Agency, Title and Abstract of a new ICR that has no existing OMB Control Number (or previously begun ICR Package).

Select Create a New ICR from Scratch.

009649

If an OMB Control Number exists, use this screen to identify the OMB Control Number or most recently approved ICR under the OMB Control Number to create an ICR. Both of these lead to the Edit ICR screen. Select Create a New ICR Based on Previously Reviewed or Approved ICR.

If the Create a New ICR from Scratch was selected, the Edit ICR screen will be blank except the agency, sub agency, title and abstract you created. An ICR Reference Number is assigned by the system upon creation to track the ICR throughout its history.

If the second screen is used, ROCIS will assign an ICR Reference Number and populate the screen from the last previously approved ICR under the OMB Control Number. Records from the legacy OIRA data base are migrated to the ROCIS ICR Module data base. When viewing ICRs that are created from migrated data, keep in mind that some data was not collected electronically in the legacy system, in which case, the field will appear blank.

### 3. Create an ICR by Using the Simple Search--Enter the OMB Control Number.

The result is the OMB Control Number History. Find the last approved ICR from which to base the new ICR (revision or extension or change). Here is the result of the search:

Click on the ICR Reference Number or the Request Type and you will be brought to the same View ICR-OIRA Conclusion screen from which to make your choice of action at the bottom of the screen; e.g., Create ICR Package.

## Instructions for Completing the Fields of the EDIT ICR Screen

These instructions should be used in conjunction with 5 CFR 1320, which provides information on coverage, definitions, and other matters of procedure and interpretation under the Paperwork Reduction Act of 1995.

### 1. Agency/Sub agency of the originating request

Provide the four digit agency code for your agency or sub agency originating the request. For most cabinet-level agencies, a sub agency designation is also necessary. For non-cabinet agencies, the sub agency designation is generally unassigned.

### 2. OMB Control Number

a. If the information collection in this request has previously received or now has an OMB Control Number, enter the number.

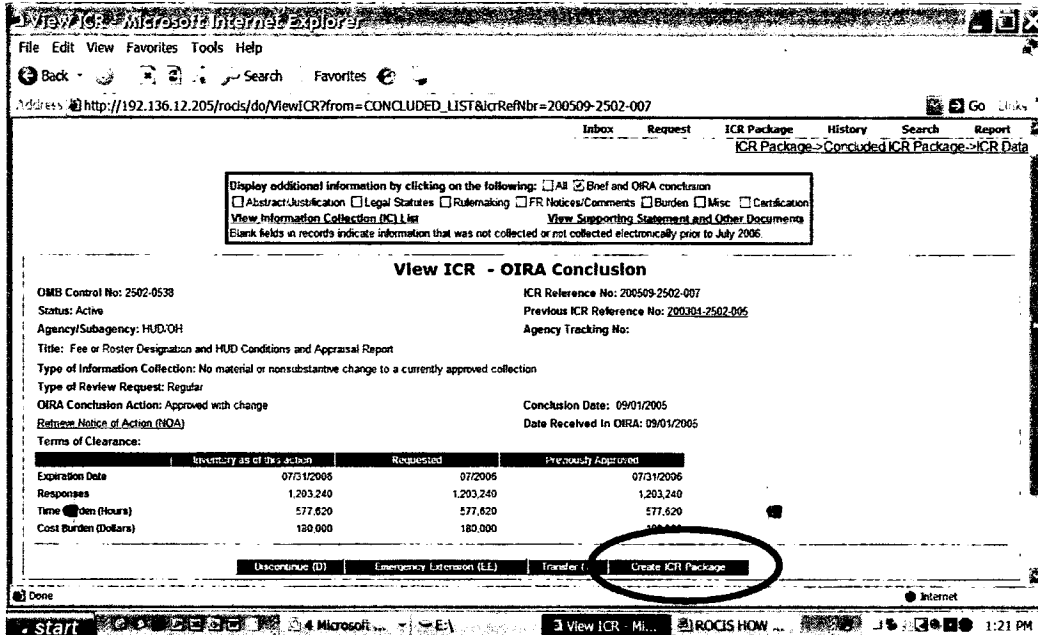

b. If the information collection in this request has not previously received an OMB Control Number, one will be assigned upon approval of the ICR by OIRA.

### 3. Agency Tracking Number

Use to distinguish ICRs in ways helpful to your agency; for instance, include codes for strategic goals, associated rules, associated IT investments, record number in former

28001

009655

## HOW TO Edit the ICR Package

Similar to the former paper process, the electronic ICR package contains four basic elements:

- ✓ ICR Data (equivalent to the former 831--one per package)
- ✓ IC (Information Collection) form(s), survey(s) or other collection instrument(s) and/or CFR citation(s) requiring collections --at least one IC per ICR package
- ✓ ICR Documents
  - Supporting Statement A
  - Supporting Statement B (when statistical .....
  - Supplemental Documents
    - Draft (not published) Proposed Rule
    - Draft (not published) Final Rule
    - Draft Federal Register Notice
    - Justification for a no material/nonsubstantive change (old 83C)
    - Supplemental Documents not fitting the other categories
  - Public Comments
- ✓ ICR Certification (back of the former 831) of adherence to provisions of PRA.

The Edit ICR screen is equivalent to the former 831 in the paper process and is the foundation of the package. While working on the Current ICR package, you may use ICR Package and History tabs at the home row to assist your preparation.

009654

8. Requested expiration date

- a. Select "Three years" if the agency requests a three year approval for the collection.
- b. Select "Other" if the agency requests approval for less than three years. Specify the month and year of the requested expiration date. The maximum request for an Emergency ICR is 6 months.

9. Does this ICR contain surveys, censuses, or employ statistical methods?

Select "Yes" if the information collection uses statistical methods such as sampling or imputation. Generally, select "No" for applications and audits (unless a random auditing scheme is used). Select "Yes" for statistical collections, most research collections, and program evaluations using scientific methods. For other types of data collection, the use of sampling, imputation, or other statistical estimation techniques should dictate the response for this item. Ensure that supporting documentation is provided in Supporting Statement B. Upload Supporting Statement B on the Manage Documents screen. Select ICR Docs at the Current ICR at the ICR Package tab at Home Row of Tabs.

10. Does the Supporting Statement serve as a Joint ICR and Privacy Impact Assessment (PIA) per OMB Memorandum 03-22, Section II.D?

If "Yes," according to the OMB Memorandum 03-22, address accordingly in the Supporting Statement A. To learn more about a joint ICR and PIA, open the hot linked Memorandum.

agency-specific PRA tracking system, etc. Agencies without sub agency codes can use the Agency Tracking Number to identify ICRs to divisions or branches.

#### 4. ICR Reference Number and Previous ICR Reference Number

Assigned and populated by the system based on the Create action. The format is YYYYMM of the month of origin---Agency/Sub Agency code---sequential number assigned per action per month.

#### 5. Title

Provide the official title of the information collection request. If an official title does not exist, provide a description which will distinguish this collection request from others and enable text searches on titles.

#### 6. Type of information collection (select one)

a. Select "New collection" when the collection has not previously been used or sponsored by the agency.

b. Select "Revision" when the collection is currently approved by OMB, and the agency request includes a material change to the collection instrument, instructions, its frequency of collection, or the use to which the information is to be put.

c. Select "Extension" when the collection is currently approved by OMB, and the agency wishes only to extend the approval past the current expiration date without making any material change in the collection instrument, instructions, frequency of collection, or the use to which the information is to be put.

d. Select "Reinstatement without change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is no change to the collection.

e. Select "Reinstatement with change" when the collection previously had OMB approval, but the approval has expired or was withdrawn before this submission was made, and there is change to the collection.

f. Select "Existing collection in use without OMB control number" when the collection is currently in use but does not have a currently valid OMB control number.

g. Select Nonmaterial/Nonsubstantive Change to perform the function of the former 83C Change Sheet. (Upload—electronically attach—your explanation of the requested change in Supplemental Documents.)

#### 7. Type of review requested (select one)

a. Select "Regular" when the collection is submitted under 5 CFR 1320.10, 1320.11, or 1320.12 with a standard 60 day review schedule.

b. Select "Emergency" when the agency is submitting the request under 5 CFR 1320.13 for emergency processing and provides the required supporting material. Provide the date by which the agency requests approval and the justification in the blank presented upon selection of "Emergency."

c. Select "Delegated" when the agency is submitting the collection under the conditions OMB has granted the agency delegated authority.

009656

16. Did the Agency receive public comments on this ICR?

If comments were not received, select "No." If comments were received, select "Yes," and summarize public comments received and describe actions taken by the agency in response to these comments in Supporting Statement A. Specifically address comments received on cost and hour burden. Describe efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported. Consultation with representatives of those from whom information is to be obtained or those who must compile records should occur at least once every 3 years - even if the collection of information activity is the same as in prior periods. There may be circumstances that may preclude consultation in a specific situation. These circumstances should be explained.

Public comments can be, but are not required to be, uploaded in ICR Documents, especially if the comments are available through the Federal Docket Management System or other electronic means that can be made available to the OIRA desk officer. Comments received by OIRA in response to the 30-day notice will be uploaded by OIRA. Public comments can be uploaded at the Manage Documents page located at ICR Documents under the Current ICR Package at the home row. When providing multiple comments, it is adequate to provide a representative comment document.

Final

009659

#### 11. Agency Contact

Provide the name and telephone number of the agency person best able to answer questions regarding the content of this submission. If sensitive to having this name published on the OMB website, <http://www.whitehouse.gov/omb/inforeg/infocoll.html> or [www.RegInfo.gov](http://www.RegInfo.gov), please consider using the name of the agency's Clearance Officer.

#### 12. Abstract

Provide a statement, limited to 4,000 characters of text, covering the agency's need for the information, uses to which it will be put, and a brief description of the respondents. The requirement to identify Keywords has been removed as a requirement because the text search of titles and abstracts are possible. You may want to continue to include in titles and abstracts keywords (descriptors) from the "Federal Register Thesaurus of Indexing Terms" that describe the subject area(s) of the information collection.

#### 13. Authorizing Statute

Provide the statute that is the source of the ICR or the source of the associated rulemaking, whichever is more appropriate. If neither is appropriate, provide the authorizing statute for the program or for the agency or leave blank.

#### 14. Associated rulemaking Information

Select Proposed Rule, Interim Final or Final Rule, or Not associated with rulemaking as appropriate. If Proposed rule or Interim Final Rule, enter the RIN number, the Federal Register Citation and the Citation Date. For a Final Rule, please put the ICR reference number for the ICR reviewed at the proposed rule stage when creating the ICR. For a Proposed Rule, OMB will not consider an ICR complete until the Notice of Proposed Rulemaking has been published. You do not need to attach the rule unless it has not been published (i.e., Federal Register information is blank). If this is the case, check the appropriate stage of rulemaking and upload (electronically attach) the draft rule in the Supplemental Documents (proposed rule or final rule) at the Manage ICR Documents screen. Locate the screen via the ICR Documents item in the drop down of choices of the Current ICR Package at ICR Package at the Home Row of Tabs. For ICRs associated with Interim Final rules that are not significant under EO 12866, please upload a draft of the Federal Register notice as a Supplementary Document in Manage ICR Documents. The note "For a final rule, please put the ICR reference number for the ICR reviewed at the Proposed Rule stage," is for a preapproval process your OIRA desk officer will discuss with you when applicable.

#### 15. Federal Register Notices and Comments

Enter the Federal Register Citations and Citation Dates of the 60- and 30-day notices for the ICR. You no longer need to provide a copy of the FR notice. However, if you wish to provide a draft Federal Register notice, for a request for an Emergency ICR, for instance, upload (electronically attach) it in the Supplemental Documents (drop down for draft Federal Register Notice) via the ICR Documents tab of the ICR Package. Unless submitted as an Emergency or Associated with Rulemaking, OMB will not consider an ICR complete without the 30-day notice publication citation.

## HOW TO Create and Edit an Information Collection

The first step to creating or editing an IC is to save the ICR Data and click on "Add/Edit Information Collections" hotlink on the Edit ICR screen OR to select IC List from the drop down of choices in the Current ICR Package at the ICR Package Tab at the Home Row of Tabs. Either choice will take you to the Add/Edit Information Collection screen below.

Data from OIRA's legacy data base will be "migrated" to the ROCIS ICR Module. Each ICR will be assigned one IC and will list the form numbers related to the current OMB Control Number. Click on the IC Title of the migrated IC to open the Edit IC screen and proceed to review, correct, modify, and supplement the legacy "migrated" data to form the IC. For instance, you will need to complete the CFR citation(s) and/or will need to upload the form, survey, or other instrument(s) you wish the OIRA desk officer to consider in its review.

When creating new ICR's, you will need to choose the Add IC button on the Add/Edit Information Collections screen below to enter the IC information.

Both Add or Edit choices will take you to the Edit IC screen displayed below.

Burden decreases because of Program Change due to Agency Discretion

[Add/Edit Supporting Statement and Other Documents](#)

### 17. Annual Cost to Federal Government

Provide estimated annualized cost to the Federal government, if any, of implementing the collection. In the Supporting Statement A, provide a description of the method used to estimate cost, which should include quantification of hours, operational expenses (such as equipment, overhead, printing, and support staff), and any other expense that would not have been incurred without this collection of information. Do not use commas or \$ sign.

### 18. ICR Summary of Burden

Burden is accounted for at the information collection (IC) level; that is, per collection, whether one collection or multiple collections within one ICR. An IC is a set of information collected by an agency that is associated with a given affected public, obligation to respond, and line of business. The set of information may be defined by the instrument (e.g., a form), an activity (e.g., loans, filing taxes), or any other logical grouping determined by the agency that will provide explicit burden estimates by affected public, obligation to respond, and line of business.

Therefore, the Edit ICR page will display the sum of the burden entered on the Edit IC page for each IC. To enter your burden request, SAVE the ICR Data by clicking on Save at the bottom of the Edit ICR screen, and move to the IC List.

b. Mark "Required to obtain or retain benefits" when the response is elective, but is required to obtain or retain a benefit.

c. Mark "Mandatory" when the respondent must reply or face civil or criminal sanctions.

CFR Citation: An information collection is usually a form or survey, but can also be required by a statute or regulation. To identify regulation that is the requirement to collect the information, enter the regulation in the CFR Citation. Multiple citations can be entered for a single IC as long as one Affected Public, Obligation to Respond, and the Line of Business applies. To add another, click on Add Another CFR Citation.

Information Collection Instruments: An "instrument" is the mechanism for gathering the information. The most obvious and easily identified type of instrument is a paper form or a survey, but it may be a web-based application, a telephone script, or any other means you use to gather information. If forms were recorded as part of the ICR in the migrated legacy data base, they will be listed here. However, you will need to open the Instrument File by clicking on the instrument file on the Add/Edit IC Instrument screen to upload the form, survey, or other instrument that is applicable to the IC.

To remove the reference to the form from the migrated legacy data, or for some other reason, use the Remove button.

To add a new instrument, click on Add Instrument on the Edit IC screen.

### **HOW TO Add an Instrument and Share Electronic Forms with E-Forms**

The Add Instrument screen is a shared screen for making the instrument available for the OIRA desk officer's review and to share an electronic form's url and information about the electronic form with the E-gov initiative, Business Gateway Forms Catalog, E-Forms.

### Instructions for Completing the Fields of the ADD/EDIT IC Screen

**IC Title:** Title the IC with potential text search in mind.

**Agency IC Tracking Number:** This field is entirely optional. One possibility is to provide the IT investment number (Exhibit 300 ITBRS number) when an information system is associated with the ICR.

**Is this a Common Form?:** Select Yes to identify forms that your agency is willing to host for potential use by other agencies as well as your own. If your OIRA desk officer agrees, the form will become part of an inventory of common forms. When an agency selects a common form from the inventory, the using agency will be accountable for the burden of its use rather than the hosting agency. The inventory will be built in 2006 and the use of the common form will be available in 2007.

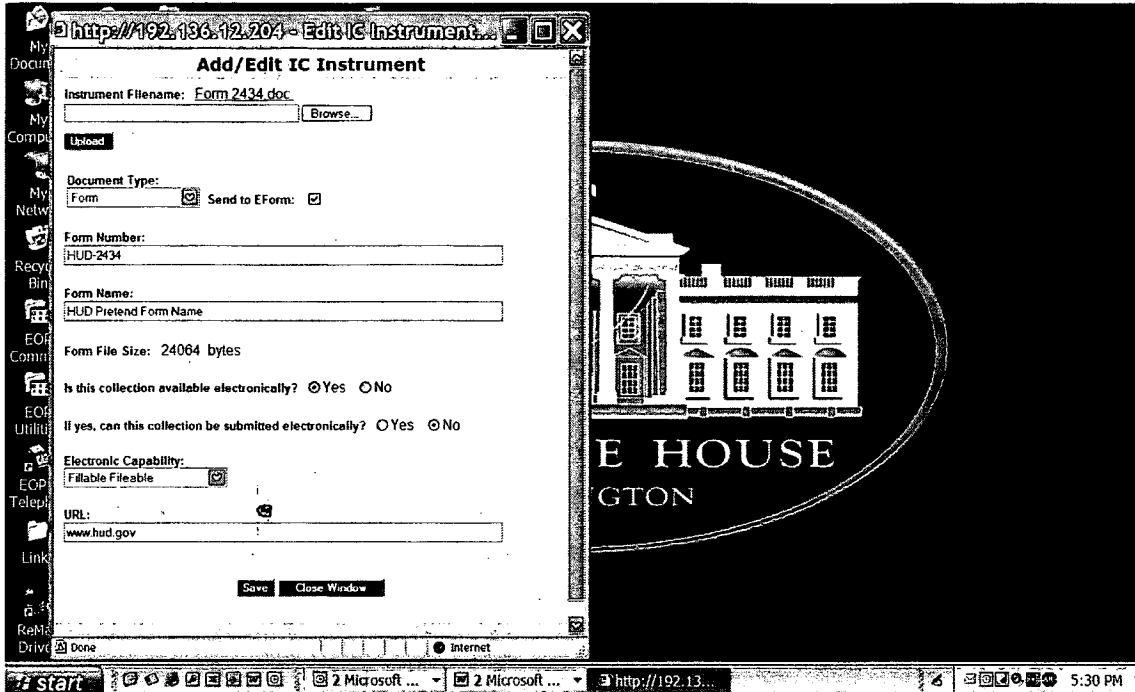

**IC Status:** ROCIS will populate this field; no entry by the agency is required.

**Obligation to Respond:** The "obligation to respond" is either mandatory, required to obtain benefits, or voluntary. Select the category that applies to the IC. If more than one category applies, you will need to create a second IC to account for the burden associated with all the categories that apply.

a. Mark "Voluntary" when the response is entirely discretionary and has no direct effect on any benefit or privilege for the respondent.

009662

To upload an instrument for OIRA's review, browse to locate it and select upload. Answer the questions and save the instrument file, close the window to return to the Edit IC screen.

If the document type is a form or form and instruction and you answer "Yes" to "Is this form available electronically?" "Send to E-Forms" with a check mark to indicate the default position of checked will appear. This will alert ROCIS to send the url, the document type, form number, form name, document size, and electronic capability to the Forms Catalog upon approval of the ICR. If the ICR is new (without OMB Control Number), please ensure that the url is not live until after the agency receives approval for the form. (If there is no form number, please state "NA.")

Just as it is possible to list multiple CFR citations for an IC, it is possible that an IC will have multiple forms; such as an electronic and a paper version of the same collection. Of course, if the burden is considerably less for one version than the other, it might be advantageous to record the two versions as two ICs. If for some reason the two versions of the same instrument have different answers to Affected Public, Obligation to Respond, or Line of Business, the instruments should be recorded as two ICs.

**Federal Enterprise Architecture Business Reference Model Line of Business and Subfunction:** The “line of business” refers to the federal government’s lines of business in services to citizens and management of governmental resources affecting citizens as defined by the Federal Enterprise Architecture Business Reference Model.

For more information on the Business Reference Model see [http://www.whitehouse.gov/omb/egov/documents/FEA\\_CRM\\_v20\\_Final\\_June\\_2006.pdf](http://www.whitehouse.gov/omb/egov/documents/FEA_CRM_v20_Final_June_2006.pdf) “The Business Reference Model is a function-driven framework for describing the business operations of the federal government independent of the agencies that perform them. The Business Reference Model lines of business provide a way to identify “government-wide common solutions for improved service to citizens.”

If an IT investment/system is related to the information collection, the line of business should be that which is used by the agency to justify the IT investment in its Exhibit 300. If there is no system, please use the definitions at <http://www.whitehouse.gov/omb/egov/a-3-2-services.html> to select the line of business that most accurately reflects the “business” of the collection.

Because lines of business functionally cross organizations, assignment of lines of business to ICs will also enable identification of potential opportunities for merged and/or common forms and reduced burden.

**Privacy Act System of Records and FR Citation:** Enter if applicable. If not, leave blank.

**Number of Respondents:** This is the basis for a burden number that is calculated by ROCIS on the Burden Worksheet.

**Number of Respondents for Small Entity:** Indicate the number of respondents upon which the information collection will have a significant impact. A small entity may be (1) a small business which is deemed to be one that is independently owned and operated and that is not dominant in its field of operation; (2) a small organization that is any not-for-profit enterprise that is independently owned and operated and is not dominant in its field; or (3) a small government jurisdiction which is a government of a city, county, town, township, school district, or special district with a population of less than 50,000.

**Affected Public:** Select one from the following choices: federal government, households and individuals, the private sector, and state and local governments. You may select one of the choices per IC. If you select private sector, you will be presented another set of choices to select from; i.e., private sector, farms, and not-for-profit institutions.

**Percentage of Respondents Reporting Electronically:** Enter the estimated percentage of responses that will be submitted/collected electronically using electronic means, such as electronic mail, (mailed) diskette, or web-based transaction. Facsimile is not considered an electronic submission.

Annual IC Burden (Select appropriate IC Burden Worksheet): Burden is calculated and accounted for at the IC level. Therefore, new burden and increases and/or decreases to existing burden are requested on the Edit IC screen and more specifically through one of two Burden Worksheet pop-up screens circled above.

**HOW TO Calculate and Record Burden at the IC level**

ROCIS will populate Revisions/Extensions from the migrated legacy data with the burden hours currently approved by OMB. ROCIS will assume the request will be the same as the current inventory and will populate the current inventory with zero (0) for ICRs from scratch or for any collection whose OMB approval has expired.

**If there is no change in burden and the revision/extension requires the same IC,** choose "This ICR Requests No Change in Net Burden" to review the burden and to enter the frequency of reporting.

Frequency of Reporting: Multiple choices are acceptable; doesn't affect calculations.

Select "Reporting" for information collections that involve reporting and select the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, select "On occasion."

Select "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Select "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

**NOTE:** When creating new collections from scratch, you must select and use “This ICR Requests Change in Net Burden.”

**To request new burden or change burden,** select (by clicking on the link for) “This ICR Requests a Change in Burden” worksheet. ROCIS will populate the worksheet with the Number of Respondents you verified or entered on the Edit IC screen.

Enter the Number of Responses per Respondent per Time Period by selecting from the drop down of a variety of frequency options. ROCIS will calculate Annual Frequency and Annual Number of Responses based on your choice.

**IC Burden Worksheet**

Number of Respondents: 100

Number of Responses per Respondent:  per Time Period:

Annual Frequency: 0 Annual Number of Responses: 0

Type of Collection and Burden

Burden per Response:

	Time Per Response	Hours	Cost Per Response
Reporting	<input type="text" value="0.0"/>	0	0.00
Record Keeping	<input type="text" value="0.0"/>	0	0.00
Third Party Disclosure	<input type="text" value="0.0"/>	0	0.00
Total		0	0.00

Annual Burden:

	Annual Time Burden (Hours)	Annual Cost Burden (Dollars)
Reporting	<input type="text" value="0"/>	0
Record Keeping	<input type="text" value="0"/>	0
Third Party Disclosure	<input type="text" value="0"/>	0
Total	0	0

Enter Time per Response in seconds, minutes, or hours (drop down choices) per Reporting, Record Keeping, and/or Third Party Disclosure and ROCIS will calculate the hours and Annual Time Burden for each category and summarize the total in the Annual Responses and Burden with Changes summary table.

Notes regarding hour burden: Unless directed to do so, agencies should not conduct special surveys to obtain information on which to base hour burden estimates. Consultation with a sample (fewer than 10) of potential respondents is desirable. Generally, estimates should not include burden hours for customary and usual business practices.

Likewise, if appropriate, enter the estimated Cost per Response and ROCIS will calculate the Annual Cost Burden for each category and summarize the total in the Annual Responses and Burden with Changes summary table.

Annual hour burden and annual cost burden are mutually exclusive. On these forms, do not report as a dollar cost any burden reported in hours. The supporting statement asks for this information, but it should not be reported here.

**Cost Burden includes:**

- a. the annualized dollar cost for capital investment or start-up costs, such as, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.
- b. recurring annual dollar amount of cost for all respondents associated with operating or maintaining systems or purchasing services.
- c. total annual reporting and recordkeeping cost burden. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information.

*Generally, Cost Burden should not include investments or purchases made:*

- a. to achieve regulatory compliance with requirements not associated with the information collection;*
- b. for reasons other than to provide information or keep records for the government; or*
- c. as part of customary and usual business or private practices.*

In developing cost burden estimates, agencies may consult with a small sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.

ROCIS will place the increase and/or decrease between the current inventory and the request in the "Program Change Due to Agency Discretion" column to identify the reason for the change. See example:

	Requested	Program Change Due to New Statute	Program Change Due to Agency Discretion	Change Due to Adjustment in Agency Estimate	Change Due to Violation of the PRA	Previously Approved
Annual Number of Responses	20000	0	20000	0	0	0
Annual Time Burden (Hr)	100000	0	100000	0	0	0
Annual Cost Burden (\$)	500000	0	500000	0	0	0

You may move the numbers into the other three columns as appropriate on the burden worksheet. The other three columns to place the requested changes are:

**Program Change due to New Statute.** "Program change" is the result of deliberate Federal government action. All new collections and any subsequent revision of existing collections (e.g., the addition or deletion of questions) are recorded as program changes. When program changes due to New Statute is selected at the IC level, you will be prompted to provide the statute citation on the ICR screen.

**Change Due to Adjustment in Agency Estimate.** "Adjustment" is a change that is not the result of a deliberate Federal government action. Changes resulting from new estimates or action not controllable by the Federal government are recorded as adjustments.

**Change due to Violation of the PRA.** This is a change as a result of a reinstatement due to expiration or a request for approval for collections not in adherence to the PRA, "bootleg collections."

	Requested	Program Change Due to New Statute	Program Change Due to Agency Discretion	Change Due to Adjustment in Agency Estimate	Change Due to Violation of the PRA	Previously Approved
Annual Number of Responses	3,792	0	0	0	3,792	0
Annual Time Burden (Hr)	948	0	0	0	948	0
Annual Cost Burden (\$)	0	0	0	0	0	0

**Frequency of Reporting:** Multiple choices are acceptable; doesn't affect calculations.

Select "Reporting" for information collections that involve reporting and select the frequency of reporting that is requested or required of a respondent. If the reporting is on "an event" basis, select "On occasion."

Select "Recordkeeping" if the collection of information explicitly includes a recordkeeping requirement.

Select "Third party disclosure" if a collection of information includes third-party disclosure requirements as defined by 1320.3(c).

009670

009670

**IC Burden Worksheet**

Number of Respondents: 20

Number of Responses per Respondent: 1 per Time Period: Year

Annual Frequency: 1.0 Annual Number of Responses: 20

Type of Collection and Burden

Burden per Response:	Time Per Response	Hours	Cost Per Response
Reporting	12 Hours	12.00	0.00
Record Keeping	12 Hours	12.00	0.00
Third Party Disclosure	0 Hours	0.00	0.00
<b>Total</b>		<b>24.00</b>	<b>0.00</b>

Annual Burden:	Annual Time Burden (Hours)	Annual Cost Burden (Dollars)
Reporting	240.00	0
Record Keeping	240.00	0
Third Party Disclosure	0.00	0
<b>Total</b>	<b>480</b>	<b>0</b>

Annual Responses and Burden with Changes:	Requested	Program Change Due to New Statute	Program Change Due to Agency Discretion	Change Due to Adjustment in Agency Estimate	Change Due to Violation of the PRA	Previously Approved
Annual Number of Responses for this IC	20	0	0	0	0	0
Annual IC Time Burden (Hour)	480	0	480	0	0	0
Annual IC Cost Burden (Dollars)	0	0	0	0	0	0

When you are satisfied with the calculation of the burden worksheet and identified frequency of reporting, Save it and Close the Window. The calculation will be saved to the Edit IC page at the Annual IC Burden table.

After saving the calculation, return to the IC, and save the IC.

Then either add another IC and repeat the process above or return to the ICR Data page to complete the ICR Burden questions.

Edit ICR - Microsoft Internet Explorer provided by General Services Administration

Short Statement: (Explain the reasons for any program changes or adjustments reported; that is, provide a short statement of how the reduction in burden was achieved or why the increase in burden occurred. (If you need more space, please provide a short statement less than 4000 characters here and elaborate in the Supporting Statement.))

Add/Edit Supporting Statement and Other Documents

Check Spelling | IC List | Agency Review | Save | Check For Completeness | Submit | Delete | Cancel

Burden Results of the IC page(s) sum to the ICR page. If changes in burden have occurred because the ICR is new or due to a revision with change, you will be prompted to answer questions related to the changes. This information will be used to draft the Information Collection Budget Report to Congress and better inform management through improved search/query capability.

- Citations for New Statutory Requirements are required if summary change in burden is a Program Change Due to New Statute.
- When the summary indicates changes attributed to Program Change Due to Agency Discretion, select the Information Collection Budget chapter headings to which the increase or decrease is attributed from the drop down list offered.
- When there is a change in burden of any kind in the ICs, the system will prompt you to provide a short explanation. This is the justification that was previously provided in the supporting statement. If you need more than 4000 characters to elaborate, please offer a concise explanation in the space provided and write a longer version in the supporting statement.

## HOW TO Use Function Buttons & Agency Review Notes

Use the buttons at the bottom of the screens to guide your actions. Most are self explanatory and remember to save your data before moving between screens.

**Buttons for the ICR Page:** Check Spelling; (go to) IC List; Agency Review; Save; Check (whole ICR) for Completeness; Submit (to OIRA); Delete; and Cancel.

**Buttons for the IC Page:** ICR Data, Save, Check IC Completeness, Remove, Cancel

Pop-up screens are used in ROCIS to enable you to complete information while staying on a page; for instance, completing the instrument page as a pop up while on the Edit IC page. Your access to Internet may block pop ups and you will need to, at least temporarily, allow pop ups to complete the input of an ICR package.

Another tip: Do not use commas, periods, or dollar or cent signs in numeric fields.

One button that is essential to communications within your agency is the **Agency Review Button**. Use this short note space to record status of the ICR or to write a short request of another user in the Agency ICR Review chain. Your user id and date will appear in the Agency Created Request List "Last Reviewed By" column but will not be viewable to OIRA. To view all status notes written during the create and edit stage of the ICR package, go to the Home Row, History, and select ICR History.

The screenshot shows a web browser window with a pop-up titled "Agency Review". The pop-up contains the following information:

- Reviewed By: Deitzer, Lilian
- Reviewed Date: 06/19/2006
- Brief Note: this is a test note (100 characters maximum)
- Close Window button

The main browser window displays the "ICR History" table. The table has three columns: Event, User, and Event Date.

Event	User	Event Date
Reviewed by	Zeiter, Jacqueline (jzeitera)	07/10/2006
Reviewed by	Deitzer, Lilian (ldeitzer)	06/19/2006

Created	Deitzer, Lilian (ldeitzer)	06/19/2006

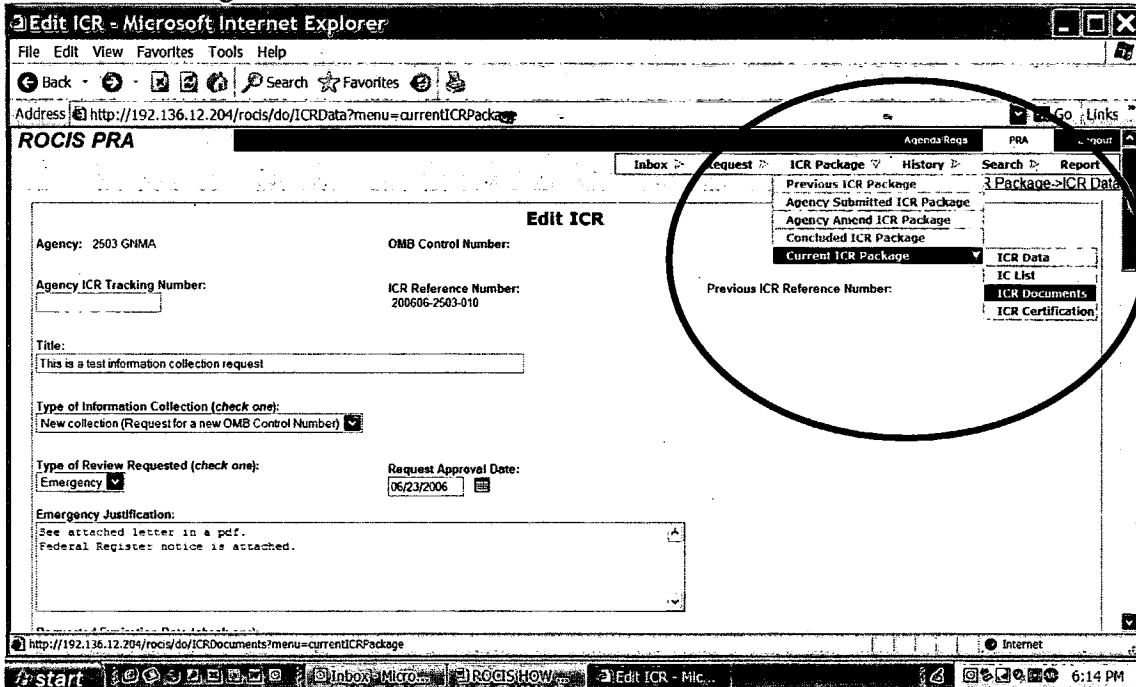

Below the table, the text "Login: jzeitera" is visible.

009676

## HOW TO Electronically Attach (Upload) ICR Documents

To upload (electronically attach) the Supporting Statements A and B, draft rules, draft FR notices, Justification for Nonmaterial/Nonsubstantive changes (formerly 83C), and to document public comments, use the Manage ICR Documents screen.

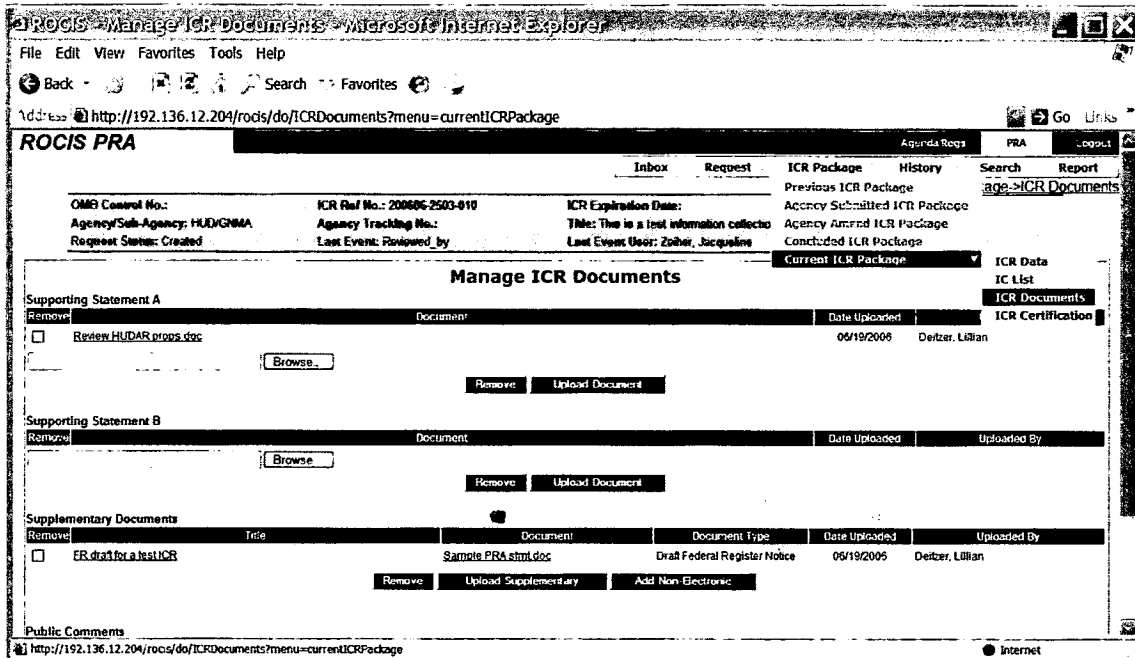

While in Edit ICR, select ICR Documents in the drop down at the Current ICR Package at the ICR Package tab at the Home Row of Tabs.

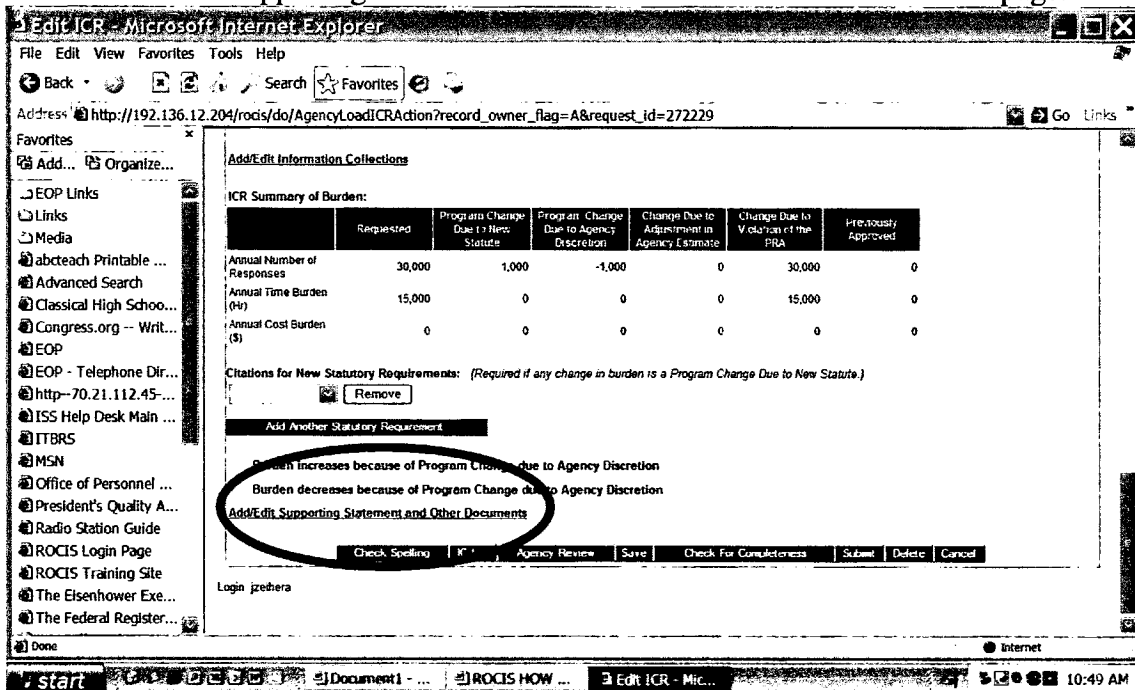

You will arrive at the Manage ICR Documents screen:

009674

78800

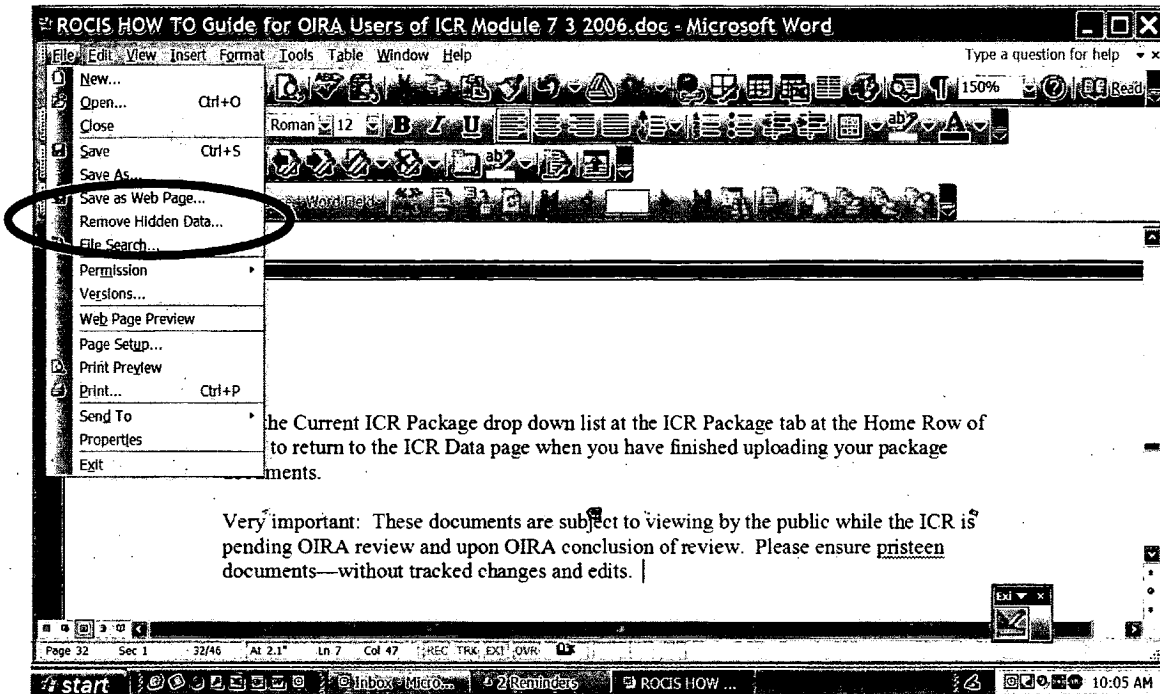

You can also reach the Manage ICR Documents screen by saving and selecting the hotlink Add/Edit Supporting Statement and Other Documents on the Edit ICR page.

Use the Current ICR Package drop down list at the ICR Package tab at the Home Row of Tabs to return to the ICR Data page when finished uploading your package documents.

**Very important:** These documents are subject to viewing by the public while the ICR is pending OIRA review and upon OIRA conclusion of review at RegInfo.gov and at the OMB website. Please ensure pristine documents—without tracked changes and edits. It is important to use the Remove Hidden Data feature in Microsoft Word. Find it in the File tab-- illustrated below. Uploading as pdf documents is another way to ensure against displaying modifications.

## HOW TO Submit an ICR

The Certification Requirement for Paperwork Reduction Act Submissions

5 CFR 1320.9 reads "As part of the agency submission to OMB of a proposed collection of information, the agency (through the head of the agency, the Senior Official, or their designee) shall certify (and provide a record supporting such certification) that the proposed collection of information....

After saving, checking for completeness and correcting any deficiencies, preparers may select and complete the ICR Certification Page at the Home Row, ICR Package, Current, ICR Certification. Submitters will reach the ICR Certification page when they click on Submit at the bottom of the Edit ICR screen.

The Certifying Official or Designee certifies that the collection of information encompassed by the request complies with 5 CFR 1320.9 by check marking each of the provision statements. Provisions of this certification that the agency cannot comply with should be identified by leaving unchecked and fully explaining in the Supporting Statement A. NOTE: The Office that "develops" and "uses" the information to be collected is the office that "conducts or sponsors" the collection of information. (See 5 CFR1320.3(d)).

009676

Certification for Paperwork Reduction Act Submissions - Microsoft Internet Explorer provided by General Services Administration

http://192.136.12.204/rocis/do/ICRCertification?menu=agencySubmittedICRPackage

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 1320.9 and the related provisions of 5 CFR 1320.8(b)(3)

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous language that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention periods for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8 (b)(3) about:
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management and use of the information to be collected.
- (i) It uses effective and efficient statistical survey methodology (if applicable); and
- (j) It makes appropriate use of information technology

If you are unable to certify compliance with any of these provisions, identify the item(s) and explain the reason in the Supporting Statement

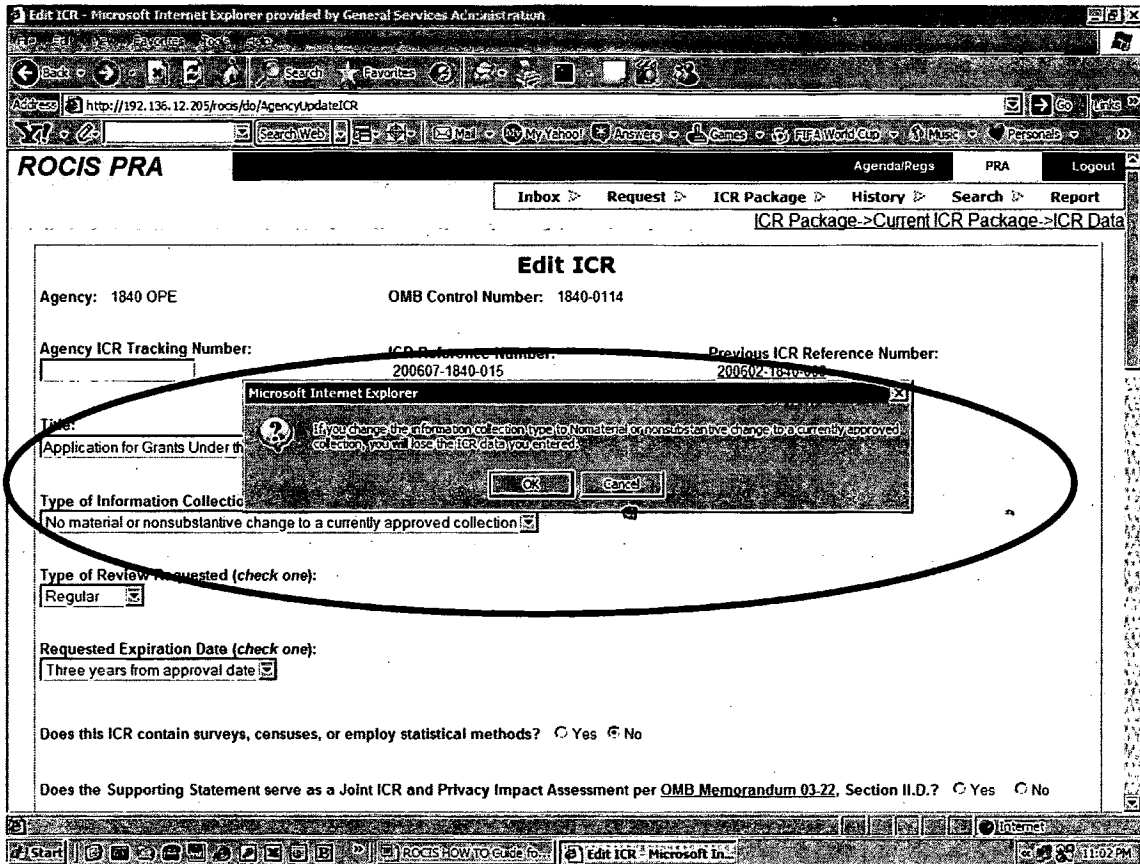

Certification Date: 06/19/2006

## **HOW TO Request a Nonmaterial/Nonsubstantive Change (former 83C)**

A nonmaterial/nonsubstantive change is handled in ROCIS as an ICR. The directions for creating an ICR generally apply, however, there is no requirement for federal register notices and information that isn't subject to change is grayed out so that it cannot be modified.

Create ICR following the instructions HOW TO Create an ICR and select "No material/nonsubstantive Change to a currently approved collection" as the type of information collection at the Edit ICR Screen.

009677

Make the proposed changes on the appropriate screens (Edit ICR, Edit IC, Add Instrument, Burden Worksheet).

Upload a Justification for Nonmaterial/Nonsubstantive Change in the Supplemental Documents at the Manage Documents screen. Select ICR Documents from the drop down list of the Current ICR at the ICR Package tab at the Home Row of Tabs. Supporting Statements A and B are not required.

## HOW TO Request an Emergency Extension of an OMB Control No.

You may create a Request for Emergency Extension the same way as to create an ICR.

1. Find the OMB Control Number and active ICR through the Concluded List Sort or Filter or through Simple Search and select the Emergency Extension (EE) button to reach the Create Request for Emergency Extension of OMB Control Number screen.

2. Select Emergency Extension (EE) in the drop down list at the Request tab at the Home Row of Tabs.

1. In the first scenario, upon selecting the Emergency Extension (EE) button at the bottom of the View ICR screen of the OMB Control Number's active ICR, you will be brought directly to the Create Request for Emergency Extension of OMB Control Number screen with the information about the OMB Control Number and active ICR in the header box.

The screenshot shows a web browser window with the URL <http://192.136.12.204/rocs/do/EmergencyExtension>. The page title is "ROCIS - Create Request to Discontinue OMB Control Number - Microsoft Internet Explorer provided by General Services Administration". The browser's address bar shows the URL. The page content includes a navigation menu with tabs: "Inbox", "Request", "ICR Package", "History", "Search", and "Report". Below the navigation menu is a header box containing the following information:

OMB Control No.: 2502-0029	ICR Ref No.: 200509-2502-005	ICR Expiration Date: 05/31/2006	ICR Status: Active
Agency/Sub-Agency: HUD/OH	Agency Tracking No.	Title: Multifamily Project Applications and Construction Prior to Initial Endorsement	
Request Status: Created	Last Event: Created	Last Event User: Deitzer, Lilian	Last Event Date: 05/10/2006

Below the header box is the main form titled "Create Request to Emergency Extension of OMB Control Number". The form contains the following fields:

Current Expiration Date: 05/31/2006

Requested Expiration Date: Specify Date: (mm/yyyy) [ ] Or Number of Month(s) beyond the Current Expiration Date: 3

Justification: To gain additional support from program office and publish in the federal register.

At the bottom of the form are buttons: "Check Spelling", "Agency Review", "Save", "Submit", "Delete", and "Cancel".

At the bottom of the browser window, the status bar shows "Done" and the system clock displays "10:44 PM".

Enter the justification to OMB and write an Agency Review note for other internal agency users. A saved request will be displayed in the Created Request List inbox. You and other authorized agency users may return to edit the request. Your agency's authorized paperwork contact (APC) may submit the request. Submitted requests will be displayed in the Submitted Request List and the item will be displayed as well in your OIRA desk officer's Pending Inbox.

## HOW TO Request to Discontinue an OMB Control Number

You may create a Request to Discontinue an OMB Control Number the same way as to create an ICR.

1. Find the OMB Control Number and active ICR through the Concluded List Sort or Filter or through Simple Search and select the Discontinue (D) button to reach the Request to Discontinue an OMB Control Number screen.
2. Select Discontinue OMB Control Number (D) in the drop down list at the Request tab at the Home Row of Tabs.

1. In the first scenario, upon selecting the Discontinue (D) button at the bottom of the View ICR screen of the OMB Control Number's active ICR, you will be brought directly to the Create Request to Discontinue OMB Control Number screen with the information about the OMB Control Number and active ICR in the header box.

The screenshot shows a web browser window with the URL <http://192.136.12.204/rocis/Do/DiscontinueOMBControlNum>. The page title is "ROCIS PRA". The navigation menu includes "Inbox", "Request", "ICR Package", "History", "Search", and "Report". The "Request" tab is selected, and a dropdown menu shows "Request -> Discontinue OMB Control Number (D)".

The main form is titled "Create Request to Discontinue OMB Control Number". It contains the following fields:

- Expiration Date: 05/31/2006
- Requested Discontinue Date: Specify Date. (mm/yyyy)
- Program Change Due to: Agency Discretion
- Justification: The Agency will no longer use this form; using another form instead.

At the bottom of the form, there are buttons for "Check Spelling", "Agency Review", "Save", "Submit", "Delete", and "Cancel".

Complete your justification for OMB and an Agency Review note for internal agency users and select Save or Submit. A saved request will be displayed in the Created Request List inbox. You and other authorized agency users may return to edit the request. Your agency's authorized paperwork contact (APC) may submit the request. Submitted requests will be displayed in the Submitted Request List and the item will be displayed as well in your OIRA desk officer's Pending Inbox.

# HOW TO Create a Generic ICR and Request Generic ICs

The generic ICR is created by selecting Information Collection Request (ICR) in the drop down at the Request tab in the home row of tabs. In either a Create a New ICR from Scratch or Create an ICR from a Previously Reviewed or Approved ICR, be sure to check mark in response to the question posed, "Will be generic?"

When you arrive in the Edit ICR screen upon clicking the Create button, complete the data as you would a regular ICR with one exception. You will be able to request the annual number of responses, the annual hour burden and annual cost burden by entering the request directly into the Requested column. You will need to provide a Supporting Statement in the ICR Documents but you will not be required to complete an Edit IC screen unless you would like to submit a Generic IC with the Generic ICR.

Upon approval from OIRA, the generic ICR will establish a “budget” from which future IC’s can be submitted

Once the Generic ICR is approved by OIRA, you may submit ICs as long as they do not exceed the “budget,” which is the current inventory of the ICR.

To request a Generic IC, select New IC to Generic ICR (Gen IC) under the Request choices in the home row of tabs.

**Edit Generic ICR**

Agency: 2502 OH      OMB Control Number:

Agency ICR Tracking Number: subagency      ICR Reference Number: 200606-2502-035

Title: New ICR for 9/22/2006

Type of Information Collection (check one):  
 New collection (Request for a new OMB Control Number)

Type of Review Requested (check one):  
 Regular

Requested Expiration Date (check one):  
 Three years from approval date

Does this ICR contain surveys, censuses, or employ statistical methods?  Yes  No

Does the Supporting Statement serve as a Joint ICR and Privacy Impact Assessment per OMB Memorandum 03-22, Section II.D.?  Yes  No

Previous ICR Reference Number:

Request Choices:  
 Information Collection Request (ICR)  
 New IC to Generic ICR (Gen IC) **(Circled)**  
 Discontinue OMB Control Number (D)  
 Emergency Extension (EE)  
 Transfer OMB Control Number (T)

Enter the OMB Control Number of the Generic ICR and you will arrive at the Generic ICR. Click on Add/Edit Information Collections and note the difference of the format for the requested burden, which is a result of using the Generic IC Burden Worksheet. The Generic IC Burden Worksheet carries the burden to the IC page but does not affect the overall Generic ICR burden summary. When the Generic IC is approved by OIRA, the List of ICs of the Generic ICR will show each approved IC and the resultant drawdown of the ICR approved inventory, the budget. When the ICR budget is depleted, ROCIS will not process a Generic IC until you submit a nonmaterial/nonsubstantive change in burden request for the overall Generic ICR.

Subject Re: First-Time Voter Study - Focus Group Materials and PRA Statements

Hello,

I am putting the final touches on the documents and the submission package and need your assistance. For the following question for the Supporting Statement A, the following answer is what appears there currently. However, is that amount the total cost for all of the work on Tasks 4.6-4.7 of the Statement of Work, which relate to the focus groups? Is the rest of the contract money going towards the case studies? Thank you!

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$11,088. This estimate includes \$4,050 for stipends, transportation, and food for focus group participants; \$4,854 for staff travel, airfare, hotel, and per diem; and \$2,184 for staff labor.

**WINNER'S CIRCLE COMMUNICATIONS, LLC**  
**Study of First-Time Voters Who Register to Vote by Mail**

---

**Quiz for Focus Group Participants**

---

**PART ONE**

**Instructions**

Please select the answer that best describes your state's laws, rules and/or requirements as you understand them. Your answers to these questions will be used to determine how effectively [STATE] communicated its first-time voter identification, or ID, requirements.

1. What types of ID does [STATE] require each person applying to register to vote, or applicant, to include with his or her voter registration form when that form is submitted via mail? Please circle all that apply.

Driver's License Number

Last four digits of Social Security Number

Copy of Driver's License

Copy of Social Security Card

Entire Social Security Number

Copy of Utility Bill

Copy of photo ID

Any government document with the voter's name and address

All of the above

None of the above

2. If the applicant does not have a driver's license or social security number, the state will assign the applicant a number which will serve to identify the applicant for voter registration purposes. Please circle one.

True

False

3. At the polls, [STATE] has different ID requirements for first-time voters who registered to vote by mail than it does for voters who have cast a ballot in another recent election. Please circle one.

True

False

4. All first-time voters in [STATE] are required to show government-issued photo ID at the polls. Please circle one.

True

False

5. Which of the following types of ID may first-time voters who registered to vote by mail show at the polls in order to meet [STATE'S] identification requirements? Please circle all that apply.

Any current and valid photo ID

Government-issued photo ID

Current utility bill

Bank statement

Government check

Paycheck

Any government document that includes the voter's name and address

All of the above

None of the above

009695

**PART TWO**

**Instructions**

Please base your answers to the following questions on your own opinions and experiences.

1. On a scale of one to 10, with one being the least confident and 10 being the most confident, how confident are you that you understand [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle one.

1      2      3      4      5      6      7      8      9      10

2. How did you learn of [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle all that apply.

**WINNER'S CIRCLE COMMUNICATIONS, LLC**  
**Study of First-Time Voters Who Register to Vote by Mail**

---

**Focus Group Script and Questions**  
Prepared 11.06.06

---

**Background**

---

*Introduction*

Thank you for joining us today and agreeing to participate in this focus group discussion of your experiences as first-time voters who registered to vote by mail. My name is Meredith Imwalle and I'll be your facilitator, which means it's my job to keep today's session on track by asking a series of open-ended questions, and some more specific ones, intended to stimulate discussion. My colleague, Adam Bourne, will serve as a co-facilitator.

We've organized this focus group as part of a study our company, Winner's Circle Communications, is conducting on behalf of the United States Election Assistance Commission, a federal government agency created to provide guidance to states implementing election reforms that are required by the federal Help America Vote Act, often referred to as HAVA. Since HAVA require that every state implement certain minimum identification, or ID, requirements for first-time voters like you, we've been asked to find out what your experiences were with registering to vote and voting this year. We hope to use your input to help us determine what state practices are working and how states can best communicate ID requirements to voters.

First let's go over a few ground rules for today:

- Your participation in this focus group is voluntary, and you may stop at any time.
- We hope to gather information about your voting experiences. There are no wrong answers today; please let everyone speak and respect everyone's opinion, even if it is different from your own.
- We will make an audio recording of this session, so that we can be sure not to miss any of your important comments today. The recording will not be released publicly, and it will not be shared with anyone outside of our company.

009698

## **Voters' Level of Understanding of New Requirements**

---

Before we start our discussion today, we'd like to get a sense of how well each of you understand [STATE'S] voter ID requirements for first-time voters. Adam is handing out a quick quiz that we will give you 15 minutes to complete.

By testing your knowledge of [STATE'S] ID requirements, we are hoping to gauge how effectively your state's elections officials communicated the requirements to you, the voters. So please answer the questions as best you can and don't worry if you don't have all of the answers.

*Distribute quizzes; allow participants 15 minutes to complete.*

## **Voters' Experiences Registering to Vote by Mail**

---

### *Introduction*

Now that we've collected your completed quizzes, let's talk about your experiences registering to vote by mail.

### *Questions*

1. We'd like to ask each of you to describe the process of filling out your voter registration application. Please provide an estimate of how long it took you to complete the application and tell us whether you thought the form's instructions for submitting the required identification information (your driver's license number, Social Security Number or the last four digits of your Social Security Number) were easy to understand.
2. If you didn't include your driver's license number, Social Security Number or the last four digits of your Social Security Number with your application, why not?

### *Prompts*

Were the instructions unclear? Do you have a driver's license or Social Security Number? Did you hesitate to include one of these numbers due to privacy or security concerns?

3. If you included a copy of your utility bill or some other document that includes your name and address with your application, why did you choose to do so?

### *Prompts*

Did you believe you were required to include such information with your voter registration application? Were you hoping to save time at the polls by including the information with your application?

## **Voters' Experiences at the Polls on Election Day**

---

### *Introduction*

Now we'd like to move on and discuss your experiences at the polling place on Election Day.

### *Questions*

4. Were you required to show ID at the polls before you could vote? What kind of ID were you asked to present?
5. Did a poll worker or election official clearly explain what kinds of ID would be accepted?
6. Did you know before you arrived at the polling place that you would be required to show ID? Did you know what kinds of ID would be accepted?
7. Were you able to present an acceptable form of ID at the polling place?
8. Which statement best represents your feelings about being required to present ID and why:
  - "I felt comfortable showing my ID to the poll worker."
  - "I felt singled out or intimidated when I was asked to present ID at the polling place."

**\*Fifteen Minute Break: Let's take a short break and reconvene here in 15 minutes.\***

## **Voters' Overall Perceptions of Voter ID Requirements**

---

### *Introduction*

Let's discuss your overall perceptions of [STATE'S] voter ID requirements. Remember, we're interested in your opinions so there are no right or wrong answers. Any feedback you can offer may help the state improve upon current procedures.

### *Questions*

9. Did you find it to be easy or difficult to understand and comply with [STATE'S] voter ID requirements? Why?
10. Do you think [STATE'S] ID requirements for first-time voters are too strict, not strict enough or appropriate?

11. Do you think the requirements made registering to vote more complicated than it should be, less complicated, or do you believe they had no noticeable effect?

12. How about the requirement to show ID at the polling place? Do you think it contributed to a longer wait time at your polling place? Did showing ID make voting more complicated than it would have been if you had not been required to show ID?

13. Do you feel ID requirements are necessary to prevent voters from attempting to commit fraud?

*Prompts*

Instances of voter fraud may include an individual impersonating a registered voter in order to vote in his or her name or an individual voting in more than one precinct.

14. How effectively do you think your state and local election officials communicated the ID requirements to first-time voters?

*Prompts*

What were the most effective or memorable techniques used? Television and radio spots? Mailers? Other voter education materials?

15. What are the advantages of requiring first-time voters who registered to vote by mail to show ID at the polls? What are your concerns or reservations about the requirement?

**Voters' Perceptions of the General Advisability of Unique ID**

---

*Introduction*

Now we'd like to get your impressions of whether or not it's a good idea for states to require voters to present ID at the polls.

*Questions*

16. Do you support requiring every voter to provide his or her driver's license number, Social Security Number or the last four digits of his or her Social Security Number as part of his or her application to register to vote?

*Prompts*

Are you concerned about privacy or security issues? Do you believe the requirement helps prevent voter fraud?

17. Do you support requiring first-time voters who registered to vote by mail to provide ID at the polling place?

18. Should **all** voters be required to show ID at the polls, or just first-time voters?

*Prompts*

Are you concerned that some voters may not have the ID they need or may be intimidated by ID requirements? Do you believe that ID requirements could help prevent voter fraud?

19. Would you find it useful to have access to some form of special ID, provided by the state, that you could show at the polls in order to vote? Do you think such an ID should be provided free of charge to voters, or should voters pay to obtain this ID?

**Final Solicitation**

---

20. Do you have any other thoughts about your experiences registering to vote and casting a ballot for the first time this year that we haven't covered?

21. What recommendations do you have for states working to educate first-time voters about ID requirements?

*Prompt*

What methods did your state use to educate voters about ID requirements? Were they effective? What did you like or dislike about them?

**Conclusion**

---

That concludes our focus group discussion. Thank you all for participating. The input you provided today will be studied and compiled into a report that we are preparing on behalf of the U.S. Election Assistance Commission. We expect it to be released some time in June 2007. To learn more about the EAC, visit their website: [www.eac.gov](http://www.eac.gov).

**SUPPORTING STATEMENTS**  
**U.S. Election Assistance Commission**  
**Study on First-Time Voters who Register to Vote by Mail**

**A. JUSTIFICATION**

**1. Explain the circumstances that make the collection of information necessary.**

This information collection is necessary to conduct a study that the U.S. Election Assistance Commission ("EAC") is required by federal law to complete. Section 244 of the Help America Vote Act of 2002, Pub. L. 107-252, ("HAVA") requires the EAC to conduct a study on the effects of HAVA Section 303(b) on (1) first-time mail registrants who vote in person, (2) voter registration, (3) the accuracy of voter rolls, and (4) existing state practices. The study will provide the EAC and state election offices with critical information as to how to implement potential future identification requirements and better educate voters.

The EAC is requesting emergency review of this information collection. In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, Pub. L. 104-13, the EAC is requesting emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary to conduct a study mandated by HAVA. The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this study in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Emergency approval of this information collection is essential to comply with HAVA, which requires that the EAC conduct a study of voters who register by mail and the impact of HAVA Section 303(b). The study will take approximately nine (9) months to complete, at which time there will be approximately one (1) year until the 2008 Federal elections. Ensuring that this information is available to election administrators and policymakers in time to be of use for the 2008 Election Cycle is essential to the public welfare. To that end, the EAC respectfully requests that approval of this emergency collection be granted by November 22, 2006.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

This information collection will be used by federal, state, and local election officials and policymakers to assess the impact of HAVA Section 303(b) on election administration, voter registration, and voting.

The information collection will be summarized by the study contractor and incorporated into a report to the EAC. The report will summarize all key topics discussed in the focus group meetings and make recommendations to the states as to how to implement potential future voter identification requirements and better educate voters.

009703

The primary audience for the aforementioned report is the EAC and state election offices. However, the report will be available to the general public per the Freedom of Information Act, Pub. L. 104-231 (“FOIA”).

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The information collection will occur at in-person focus group meetings. The responses to the written “quiz” (included with this submission) will be recorded on paper by focus group participants. The remaining information will be collected via a scripted conversation (also included with this submission), which will be tape recorded for interoffice use only.

**4. Describe efforts to identify duplication.**

This is the first study conducted by the EAC on the effects of HAVA Section 303(b) and first-time voters who register by mail. The study contractor and the EAC staff have reviewed previous and contemporaneous surveys of election officials and voters to eliminate duplicative questions.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

Not applicable to this information collection.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

If the EAC does not collect this information, it will be unable to comply with HAVA Section 244. Further, without this information, the EAC and state election officials and policymakers would be unable to objectively assess the impact of relatively new identification requirements for first-time voters who register by mail.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

*(a) Requiring respondents to report information to the agency more often than quarterly.*

Not applicable to this information collection.

*(b) Requiring respondents to prepare a written response to a collection of information in*

*fewer than 30 days after receipt of it.*

This information collection will involve a 15 minute “quiz,” a copy of which is included with this submission, which will be completed by focus group participants during the focus group meetings.

- (c) *Requiring respondents to submit more than an original and two copies of any document.*

Not applicable to this information collection.

- (d) *Requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than 3 years.*

Not applicable to this information collection.

- (e) *In connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study.*

Not applicable to this information collection.

- (f) *Requiring the use of statistical data classification that has been reviewed and approved by OMB.*

Not applicable to this information collection.

- (g) *That includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use.*

This information collection does not include a pledge of confidentiality.

- (h) *Requiring respondents to submit proprietary trade secrets or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information’s confidentiality to the extent permitted by law.*

Not applicable to this information collection.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

The EAC is requesting emergency approval to collect this information. The EAC is

009705

requesting a waiver of the 60-day and 30-day *Federal Register* notices described in 5 CFR 1320.13(d) to ensure that it complies with HAVA and meets the needs of the public.

The study contractor has contacted state election officials that will be involved in the study to gather information on the burdens imposed by this information collection.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Each focus group participant will be paid a \$100 stipend for his or her time, plus reimbursement of travel expenses.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

No assurance of confidentiality will be provided to respondents. Information will be made public consistent with the requirements of FOIA.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

This information collection does not include sensitive or private questions.

**12. Provide an estimate in hours of the burden of the collection of information.**

This information collection will consist of three (3) separate focus group meetings, each expected to last no more than two (2) hours based on the scripted conversation and the 15 minute "quiz," both of which are included with this submission. Therefore the total, collective time burden for respondents is expected to be no more than six (6) hours.

Prior to the focus group meetings, state election officials will assist the study contractor in identifying eligible focus group participants. This will involve three (3) state election offices. Assuming the use of both automated voter registration systems and limited manual sorting, it is estimated that each state election office will spend no more than four (4) hours identifying eligible focus group participants. Therefore, total, collective time burden for participating state election officials is expected to be no more than twelve (12) hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

The focus group participants will bear no significant cost burden, as each participant will receive a stipend of \$100 and will be reimbursed promptly for all reasonable travel expenses.

009706

Retrieving and disseminating voter registration information to members of the public and government entities is a usual and customary business practice for any state election office. Therefore, participating state election offices are not expected to bear any cost in excess of their usual operating expenses.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$11,088. This estimate includes \$4,050 for stipends, transportation, and food for focus group participants; \$4,854 for staff travel, airfare, hotel, and per diem; and \$2,184 for staff labor.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal Government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into three (3) separate reports by the study contractor. The results will also be reflected in a spreadsheet compiled by the study contractor. These documents will be made available to state election officials and transmitted to the President and Congress per HAVA Section 244. Additionally, the documents will be available to the general public per FOIA and may be posted on the Internet website of the EAC.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this information collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this information collection, the EAC is not making any exception to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

This information collection does not employ statistical methods.

Subject Re: Fw: First-Time Voter Study - Focus Group Materials and PRA Statements

Hello!

No, this quiz does not seem to require for us to submit a privacy impact assessment since they don't seem to be requesting participants' personal information or identifiers. I will confirm with Julie tomorrow.

I assume, then, that this Focus Group "quiz" doesn't fall under the Privacy Act, as does the other focus group material for the Free Absentee Postage group.

and PRA Statements

Ms. Lynn-Dyson and Ms. Otero:

Please find attached for your review the focus group quiz, the focus group script, and

009708

the accompanying Paperwork Reduction Act supporting statements .

I will be faxing a copy of the OMB 83-I form to you shortly, as it is not a writable PDF document.

Thank you for your assistance. Please feel free to contact me or Meredith if you have any questions or would like us to make any revisions .

**SUPPORTING STATEMENTS**  
**U.S. Election Assistance Commission**  
**Study on First-Time Voters who Register to Vote by Mail**

**A. JUSTIFICATION**

**1. Explain the circumstances that make the collection of information necessary.**

This information collection is necessary to conduct a study that the U.S. Election Assistance Commission ("EAC") is required by federal law to complete. Section 244 of the Help America Vote Act of 2002, Pub. L. 107-252, ("HAVA") requires the EAC to conduct a study on the effects of HAVA Section 303(b) on (1) first-time mail registrants who vote in person, (2) voter registration, (3) the accuracy of voter rolls, and (4) existing state practices. The study will provide the EAC and state election offices with critical information as to how to implement potential future identification requirements and better educate voters.

The EAC is requesting emergency review of this information collection. In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, Pub. L. 104-13, the EAC is requesting emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary to conduct a study mandated by HAVA. The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this study in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Emergency approval of this information collection is essential to comply with HAVA, which requires that the EAC conduct a study of voters who register by mail and the impact of HAVA Section 303(b). The study will take approximately nine (9) months to complete, at which time there will be approximately one (1) year until the 2008 Federal elections. Ensuring that this information is available to election administrators and policymakers in time to be of use for the 2008 Election Cycle is essential to the public welfare. To that end, the EAC respectfully requests that approval of this emergency collection be granted by November 22, 2006.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

This information collection will be used by federal, state, and local election officials and policymakers to assess the impact of HAVA Section 303(b) on election administration, voter registration, and voting.

The information collection will be summarized by the study contractor and incorporated into a report to the EAC. The report will summarize all key topics discussed in the focus group meetings and make recommendations to the states as to how to implement potential future voter identification requirements and better educate voters.

009710

The primary audience for the aforementioned report is the EAC and state election offices. However, the report will be available to the general public per the Freedom of Information Act, Pub. L. 104-231 ("FOIA").

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The information collection will occur at in-person focus group meetings. The responses to the written "quiz" (included with this submission) will be recorded on paper by focus group participants. The remaining information will be collected via a scripted conversation (also included with this submission), which will be tape recorded for interoffice use only.

**4. Describe efforts to identify duplication.**

This is the first study conducted by the EAC on the effects of HAVA Section 303(b) and first-time voters who register by mail. The study contractor and the EAC staff have reviewed previous and contemporaneous surveys of election officials and voters to eliminate duplicative questions.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

Not applicable to this information collection.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

If the EAC does not collect this information, it will be unable to comply with HAVA Section 244. Further, without this information, the EAC and state election officials and policymakers would be unable to objectively assess the impact of relatively new identification requirements for first-time voters who register by mail.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

*(a) Requiring respondents to report information to the agency more often than quarterly.*

Not applicable to this information collection.

*(b) Requiring respondents to prepare a written response to a collection of information in*

009711

*fewer than 30 days after receipt of it.*

This information collection will involve a 15 minute "quiz," a copy of which is included with this submission, which will be completed by focus group participants during the focus group meetings.

- (c) *Requiring respondents to submit more than an original and two copies of any document.*

Not applicable to this information collection.

- (d) *Requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than 3 years.*

Not applicable to this information collection.

- (e) *In connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study.*

Not applicable to this information collection.

- (f) *Requiring the use of statistical data classification that has been reviewed and approved by OMB.*

Not applicable to this information collection.

- (g) *That includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use.*

This information collection does not include a pledge of confidentiality.

- (h) *Requiring respondents to submit proprietary trade secrets or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.*

Not applicable to this information collection.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

The EAC is requesting emergency approval to collect this information. The EAC is

009712

requesting a waiver of the 60-day and 30-day *Federal Register* notices described in 5 CFR 1320.13(d) to ensure that it complies with HAVA and meets the needs of the public.

The study contractor has contacted state election officials that will be involved in the study to gather information on the burdens imposed by this information collection.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Each focus group participant will be paid a \$100 stipend for his or her time, plus reimbursement of travel expenses.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

No assurance of confidentiality will be provided to respondents. Information will be made public consistent with the requirements of FOIA.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

This information collection does not include sensitive or private questions.

**12. Provide an estimate in hours of the burden of the collection of information.**

This information collection will consist of three (3) separate focus group meetings, each expected to last no more than two (2) hours based on the scripted conversation and the 15 minute "quiz," both of which are included with this submission. Therefore the total, collective time burden for respondents is expected to be no more than six (6) hours.

Prior to the focus group meetings, state election officials will assist the study contractor in identifying eligible focus group participants. This will involve three (3) state election offices. Assuming the use of both automated voter registration systems and limited manual sorting, it is estimated that each state election office will spend no more than four (4) hours identifying eligible focus group participants. Therefore, total, collective time burden for participating state election officials is expected to be no more than twelve (12) hours.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

The focus group participants will bear no significant cost burden, as each participant will receive a stipend of \$100 and will be reimbursed promptly for all reasonable travel expenses.

009713

Retrieving and disseminating voter registration information to members of the public and government entities is a usual and customary business practice for any state election office. Therefore, participating state election offices are not expected to bear any cost in excess of their usual operating expenses.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$11,088. This estimate includes \$4,050 for stipends, transportation, and food for focus group participants; \$4,854 for staff travel, airfare, hotel, and per diem; and \$2,184 for staff labor.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal Government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

The results from this information collection will be summarized into three (3) separate reports by the study contractor. The results will also be reflected in a spreadsheet compiled by the study contractor. These documents will be made available to state election officials and transmitted to the President and Congress per HAVA Section 244. Additionally, the documents will be available to the general public per FOIA and may be posted on the Internet website of the EAC.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this information collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this information collection, the EAC is not making any exception to the "Certification for Paperwork Reduction Act Submissions."

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(If your collection does not employ statistical methods, just say that and delete the following five questions from the format.)*

This information collection does not employ statistical methods.

**Study of First-Time Voters Who Register to Vote by Mail**

---

**Focus Group Script and Questions**  
Prepared 11.06.06

---

**Background**

---

*Introduction*

Thank you for joining us today and agreeing to participate in this focus group discussion of your experiences as first-time voters who registered to vote by mail. My name is Meredith Imwalle and I'll be your facilitator, which means it's my job to keep today's session on track by asking a series of open-ended questions, and some more specific ones, intended to stimulate discussion. My colleague, Adam Bourne, will serve as a co-facilitator.

We've organized this focus group as part of a study our company, Winner's Circle Communications, is conducting on behalf of the United States Election Assistance Commission, a federal government agency created to provide guidance to states implementing election reforms that are required by the federal Help America Vote Act, often referred to as HAVA. Since HAVA require that every state implement certain minimum identification, or ID, requirements for first-time voters like you, we've been asked to find out what your experiences were with registering to vote and voting this year. We hope to use your input to help us determine what state practices are working and how states can best communicate ID requirements to voters.

First let's go over a few ground rules for today:

- Your participation in this focus group is voluntary, and you may stop at any time.
- We hope to gather information about your voting experiences. There are no wrong answers today; please let everyone speak and respect everyone's opinion, even if it is different from your own.
- We will make an audio recording of this session, so that we can be sure not to miss any of your important comments today. The recording will not be released publicly, and it will not be shared with anyone outside of our company.

009715

## **Voters' Level of Understanding of New Requirements**

---

Before we start our discussion today, we'd like to get a sense of how well each of you understand [STATE'S] voter ID requirements for first-time voters. Adam is handing out a quick quiz that we will give you 15 minutes to complete.

By testing your knowledge of [STATE'S] ID requirements, we are hoping to gauge how effectively your state's elections officials communicated the requirements to you, the voters. So please answer the questions as best you can and don't worry if you don't have all of the answers.

*Distribute quizzes; allow participants 15 minutes to complete.*

## **Voters' Experiences Registering to Vote by Mail**

---

### *Introduction*

Now that we've collected your completed quizzes, let's talk about your experiences registering to vote by mail.

### *Questions*

1. We'd like to ask each of you to describe the process of filling out your voter registration application. Please provide an estimate of how long it took you to complete the application and tell us whether you thought the form's instructions for submitting the required identification information (your driver's license number, Social Security Number or the last four digits of your Social Security Number) were easy to understand.
2. If you didn't include your driver's license number, Social Security Number or the last four digits of your Social Security Number with your application, why not?

### *Prompts*

Were the instructions unclear? Do you have a driver's license or Social Security Number? Did you hesitate to include one of these numbers due to privacy or security concerns?

3. If you included a copy of your utility bill or some other document that includes your name and address with your application, why did you choose to do so?

### *Prompts*

Did you believe you were required to include such information with your voter registration application? Were you hoping to save time at the polls by including the information with your application?

## **Voters' Experiences at the Polls on Election Day**

---

### *Introduction*

Now we'd like to move on and discuss your experiences at the polling place on Election Day.

### *Questions*

4. Were you required to show ID at the polls before you could vote? What kind of ID were you asked to present?
5. Did a poll worker or election official clearly explain what kinds of ID would be accepted?
6. Did you know before you arrived at the polling place that you would be required to show ID? Did you know what kinds of ID would be accepted?
7. Were you able to present an acceptable form of ID at the polling place?
8. Which statement best represents your feelings about being required to present ID and why:
  - "I felt comfortable showing my ID to the poll worker."
  - "I felt singled out or intimidated when I was asked to present ID at the polling place."

**\*Fifteen Minute Break: Let's take a short break and reconvene here in 15 minutes.\***

## **Voters' Overall Perceptions of Voter ID Requirements**

---

### *Introduction*

Let's discuss your overall perceptions of [STATE'S] voter ID requirements. Remember, we're interested in your opinions so there are no right or wrong answers. Any feedback you can offer may help the state improve upon current procedures.

### *Questions*

9. Did you find it to be easy or difficult to understand and comply with [STATE'S] voter ID requirements? Why?
10. Do you think [STATE'S] ID requirements for first-time voters are too strict, not strict enough or appropriate?

11. Do you think the requirements made registering to vote more complicated than it should be, less complicated, or do you believe they had no noticeable effect?

12. How about the requirement to show ID at the polling place? Do you think it contributed to a longer wait time at your polling place? Did showing ID make voting more complicated than it would have been if you had not been required to show ID?

13. Do you feel ID requirements are necessary to prevent voters from attempting to commit fraud?

*Prompts*

Instances of voter fraud may include an individual impersonating a registered voter in order to vote in his or her name or an individual voting in more than one precinct.

14. How effectively do you think your state and local election officials communicated the ID requirements to first-time voters?

*Prompts*

What were the most effective or memorable techniques used? Television and radio spots? Mailers? Other voter education materials?

15. What are the advantages of requiring first-time voters who registered to vote by mail to show ID at the polls? What are your concerns or reservations about the requirement?

**Voters' Perceptions of the General Advisability of Unique ID**

*Introduction*

Now we'd like to get your impressions of whether or not it's a good idea for states to require voters to present ID at the polls.

*Questions*

16. Do you support requiring every voter to provide his or her driver's license number, Social Security Number or the last four digits of his or her Social Security Number as part of his or her application to register to vote?

*Prompts*

Are you concerned about privacy or security issues? Do you believe the requirement helps prevent voter fraud?

17. Do you support requiring first-time voters who registered to vote by mail to provide ID at the polling place?

18. Should **all** voters be required to show ID at the polls, or just first-time voters?

*Prompts*

Are you concerned that some voters may not have the ID they need or may be intimidated by ID requirements? Do you believe that ID requirements could help prevent voter fraud?

19. Would you find it useful to have access to some form of special ID, provided by the state, that you could show at the polls in order to vote? Do you think such an ID should be provided free of charge to voters, or should voters pay to obtain this ID?

**Final Solicitation**

---

20. Do you have any other thoughts about your experiences registering to vote and casting a ballot for the first time this year that we haven't covered?

21. What recommendations do you have for states working to educate first-time voters about ID requirements?

*Prompt*

What methods did your state use to educate voters about ID requirements? Were they effective? What did you like or dislike about them?

**Conclusion**

---

That concludes our focus group discussion. Thank you all for participating. The input you provided today will be studied and compiled into a report that we are preparing on behalf of the U.S. Election Assistance Commission. We expect it to be released some time in June 2007. To learn more about the EAC, visit their website: [www.eac.gov](http://www.eac.gov).

**WINNER'S CIRCLE COMMUNICATIONS, LLC**  
**Study of First-Time Voters Who Register to Vote by Mail**

---

**Quiz for Focus Group Participants**

---

**PART ONE**

**Instructions**

Please select the answer that best describes your state's laws, rules and/or requirements as you understand them. Your answers to these questions will be used to determine how effectively [STATE] communicated its first-time voter identification, or ID, requirements.

1. What types of ID does [STATE] require each person applying to register to vote, or applicant, to include with his or her voter registration form when that form is submitted via mail? Please circle all that apply.

Driver's License Number

Last four digits of Social Security Number

Copy of Driver's License

Copy of Social Security Card

Entire Social Security Number

Copy of Utility Bill

Copy of photo ID

Any government document with the voter's name and address

All of the above

None of the above

2. If the applicant does not have a driver's license or social security number, the state will assign the applicant a number which will serve to identify the applicant for voter registration purposes. Please circle one.

True

False

009720

3. At the polls, [STATE] has different ID requirements for first-time voters who registered to vote by mail than it does for voters who have cast a ballot in another recent election. Please circle one.

True

False

4. All first-time voters in [STATE] are required to show government-issued photo ID at the polls. Please circle one.

True

False

5. Which of the following types of ID may first-time voters who registered to vote by mail show at the polls in order to meet [STATE'S] identification requirements? Please circle all that apply.

Any current and valid photo ID

Government-issued photo ID

Current utility bill

Bank statement

Government check

Paycheck

Any government document that includes the voter's name and address

All of the above

None of the above

009721

**PART TWO**

**Instructions**

Please base your answers to the following questions on your own opinions and experiences.

1. On a scale of one to 10, with one being the least confident and 10 being the most confident, how confident are you that you understand [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle one.

1      2      3      4      5      6      7      8      9      10

2. How did you learn of [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle all that apply.

History: This message has been replied to.

Laiza:

Thank you for your email. We did not include the total labor cost for Tasks 4.6-4.7 but rather, just the labor cost for conducting the three, two-hour groups. Please find a revised total cost below which includes the total cost for all work related to the focus groups, as outlined in Tasks 4.6-4.7 of the SOW. Thanks for catching this for us.

Labor	\$75,720
Travel	\$4,854
Stipends, food and transportation for focus group participants	\$4,050
Total Cost	\$84,624

Regards,

**Subject:** Re: First-Time Voter Study - Focus Group Materials and PRA Statements

Hello,

009724

I am putting the final touches on the documents and the submission package and need your assistance. For the following question for the Supporting Statement A, the following answer is what appears there currently. However, is that amount the total cost for all of the work on Tasks 4.6-4.7 of the Statement of Work, which relate to the focus groups? Is the rest of the contract money going towards the case studies? Thank you!

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$11,088. This estimate includes \$4,050 for stipends, transportation, and food for focus group participants; \$4,854 for staff travel, airfare, hotel, and per diem; and \$2,184 for staff labor.

**Background**

---

*Introduction*

Thank you for joining us today and agreeing to participate in this focus group discussion of your experiences as first-time voters who registered to vote by mail. My name is Meredith Imwalle and I'll be your facilitator, which means it's my job to keep today's session on track by asking a series of open-ended questions, and some more specific ones, intended to stimulate discussion. My colleague, Adam Bourne, will serve as a co-facilitator.

We've organized this focus group as part of a study our company, Winner's Circle Communications, is conducting on behalf of the United States Election Assistance Commission, a federal government agency created to provide guidance to states implementing election reforms that are required by the federal Help America Vote Act, often referred to as HAVA. Since HAVA require that every state implement certain minimum identification, or ID, requirements for first-time voters like you, we've been asked to find out what your experiences were with registering to vote and voting this year. We hope to use your input to help us determine what state practices are working and how states can best communicate ID requirements to voters.

First let's go over a few ground rules for today:

- Your participation in this focus group is voluntary, and you may stop at any time.
- We hope to gather information about your voting experiences. There are no wrong answers today; please let everyone speak and respect everyone's opinion, even if it is different from your own.
- We will make an audio recording of this session, so that we can be sure not to miss any of your important comments today. The recording will not be released publicly, and it will not be shared with anyone outside of our company.

## **Voters' Level of Understanding of New Requirements**

---

Before we start our discussion today, we'd like to get a sense of how well each of you understand [STATE'S] voter ID requirements for first-time voters. Adam is handing out a quick quiz that we will give you 15 minutes to complete.

By testing your knowledge of [STATE'S] ID requirements, we are hoping to gauge how effectively your state's elections officials communicated the requirements to you, the voters. So please answer the questions as best you can and don't worry if you don't have all of the answers.

*Distribute quizzes; allow participants 15 minutes to complete.*

## Supporting Statement A

OMB Control Number: xxxx-xxxx

U.S. Election Assistance Commission

### Study on First-Time Voters Who Register to Vote by Mail

#### A. JUSTIFICATION

**1. Explain the circumstances that make the collection of information necessary.**

The proposed information collection is necessary to meet requirements of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301). Section 244 of HAVA requires the U.S. Election Assistance Commission (EAC) to conduct a study of the effects of HAVA §303(b) on (1) first-time mail registrants who vote in person, (2) voter registration, (3) the accuracy of voter rolls, and (4) existing state practices. Upon completion of the study, the EAC is required to submit a report to the President and Congress on the study together with such recommendations for administrative and legislative action as the EAC determines appropriate.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used.**

Section 244 of HAVA (42 U.S.C. 15301) requires the EAC to conduct this information collection and submit a report to the President and Congress on the study together with such recommendations for administrative and legislative action as the EAC determines appropriate. In addition, the EAC shall make the study and its findings available to the public. This information collection is being carried out only once for purposes of meeting the statutory requirements under HAVA.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The information collection will occur at in-person focus group meetings. The responses to the written "quiz" (included with this submission) will be recorded on paper by focus group participants. The remaining information will be collected via a scripted conversation (also included with this submission), which will be tape recorded for interoffice use only.

**4. Describe efforts to identify duplication.**

This is the first study conducted by the EAC on the effects of HAVA Section 303(b) and first-time voters who register by mail. The study contractor and the EAC staff have reviewed previous and contemporaneous surveys of election officials and voters to eliminate duplicative questions.

009737

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

Not applicable to this information collection.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

If the EAC does not collect this information it may be unable to comply with its statutory requirements under HAVA (42 U.S.C. 15301). This is a one-time collection.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

There are no special circumstances applicable to this information collection.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

The EAC is requesting emergency approval to collect this information. The EAC is requesting a waiver of the 60-day and 30-day *Federal Register* notices described in 5 CFR 1320.13(d) to ensure that it complies with HAVA and meets the needs of the public. The study Contractor has contacted state election officials that will be involved in the study to gather information on the burdens imposed by this information collection.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

Each focus group participant will be paid a \$100 stipend for his or her time, plus reimbursement of travel expenses.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

There is no assurance of confidentiality.

009738

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

There are no questions of a sensitive nature.

**12. Provide an estimate in hours of the burden of the collection of information.**

This information collection will consist of three (3) separate focus group meetings, each expected to last no more than two (2) hours based on the scripted conversation and the 15 minute "quiz," both of which are included with this submission. Prior to the focus group meetings, state election officials will assist the study contractor in identifying eligible focus group participants. This will involve three (3) state election offices. Assuming the use of both automated voter registration systems and limited manual sorting, it is estimated that each state election office will spend no more than four (4) hours identifying eligible focus group participants. Therefore, total, collective time burden for participating state election officials is expected to be no more than twelve (12) hours.

- a. Number of respondents = 30
- b. Number of responses per each respondent = 1
- c. Total annual responses = 1
- d. Hours per response = 2.25 hours
- e. Total annual reporting burden = 67.5 hours (*# of respondents x frequency of response x hours of response*)

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

There are no capital or start-up costs associated with this information collection.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated cost to the Federal Government is \$84,624. This estimate includes \$4,050 for stipends, transportation, and food for focus group participants; \$4,854 for staff travel, airfare, hotel, and per diem; and \$75,720 for staff labor.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection has been performed by the Federal 009739

Government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

Section 244 of HAVA (42 U.S.C. 15301) requires the EAC to conduct this information collection and submit a report to the President and Congress on the study together with such recommendations for administrative and legislative action as the EAC determines appropriate. In addition, the EAC shall make the study and its findings available to the public. The final report will be made available on EAC's website. The report is expected to be released in mid to late 2007.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this information collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

The EAC does not request an exception to the certification of this information collection

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

This information collection does not employ statistical methods.

009740

## JUSTIFICATION

The EAC is requesting emergency review of this information collection. In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, Pub. L. 104-13, the EAC is requesting emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary to conduct a study mandated by HAVA. The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this study in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Emergency approval of this information collection is essential to comply with HAVA, which requires that the EAC conduct a study of voters who register by mail and the impact of HAVA Section 303(b). The study will take approximately nine (9) months to complete, at which time there will be approximately one (1) year until the 2008 Federal elections. Ensuring that this information is available to election administrators and policymakers in time to be of use for the 2008 Election Cycle is essential to the public welfare. To that end, the EAC respectfully requests that approval of this emergency collection be granted by November 22, 2006.

Subject New ICR - Emergency Submission

Dear Mr. Hunt,

This e-mail is to notify you that we have submitted a second ICR for emergency clearance as we had spoken about previously that we would do. This study is required under Section 244 of the Help America Vote Act of 2002, and we are required to report the results of this study to the President and Congress. If you have any questions or need more information relating to this particular ICR, please, do not hesitate to contact me at your earliest convenience. As always, thank you for your time and assistance in this matter.

Respectfully yours,

Laiza N. Otero

Subject Documents for viewing

Good morning,

Hope all is well. I'm preparing an announcement regarding your project for our website and I would like to have the final version of the focus group materials with the OMB info on them (number, expiration, disclaimer). We'll post the info under the Research and Reports section of our main page. It's just for informational purposes - it will include the background and scope of the project, the focus group materials, and a link to our ICR (OMB) documents. Thank you!

Laiza

Subject First Time Voters Web Text

Hello,

Hope you feel better. I've pasted below for your review the draft text for the First-Time Voters study to post on our website. I've also asked Meredith for the final copy of the focus group materials with the OMB info on them so we can post that version. Thank you!

L.

## **U.S. Election Assistance Commission (EAC)**

### **Research in Progress: Study on First-Time Voters Who Register by Mail – Focus Groups (OMB Control No. 3265-0007 – ICR Ref. No. 200611-3265-002)**

#### **Background:**

Section 244 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the EAC to conduct a study assessing the impact of HAVA §303(b) on: 1) first-time mail registrants who vote in person; 2) voter registration; 3) the accuracy of voter rolls; and 4) existing state practices. HAVA §303(b) requires citizens who (1) registered to vote by mail and (2) will be voting for the first time in their jurisdiction to supply a copy of a current valid photo identification or government document displaying their name and address before they cast their first ballot. First-time voters can avoid the heightened identification requirements by (1) sending a copy of such identification with their registration materials or (2) providing their driver's license number or a minimum of the last four digits of their social security number. If a first-time voter does not comply with any of these requirements, §303(b) allows citizens to cast provisional ballots.

To meet its requirements under HAVA §244, the EAC awarded a contract on September 2006 to Winner's Circle Communications, LLC to conduct case studies and focus groups on the effect that implementation of §303(b) has on first-time voters, voter registration, the accuracy of voter rolls, and existing state practices. The case study and focus groups will analyze the issues and impediments associated with implementation of §303(b) and provide the basis for recommendations regarding program administration and voter education should states choose to implement more stringent identification requirements in the future. Upon completion of the study, the EAC is required to submit a report to the President and Congress on the study together with such recommendations for administrative and legislative action as the EAC determines appropriate. In addition, the report will be made available on the EAC website at [www.eac.gov](http://www.eac.gov).

In accordance with the information clearance process under the Paperwork Reduction Act (PRA) of 1995, the EAC received approval from the Office of Management and Budget (OMB) to carry out the focus groups for this study; a copy of the survey and OMB documentation are available below.

UNITED STATES ELECTION ASSISTANCE COMMISSION  
Study of First-Time Voters Who Register to Vote by Mail

---

Focus Group Script and Questions

---

**Background**

---

*Introduction*

Thank you for joining us today and agreeing to participate in this focus group discussion of your experiences as first-time voters who registered to vote by mail. My name is Meredith Imwalle and I'll be your facilitator, which means it's my job to keep today's session on track by asking a series of open-ended questions, and some more specific ones, intended to stimulate discussion. My colleague, Adam Bourne, will serve as a co-facilitator.

We've organized this focus group as part of a study our company, Winner's Circle Communications, is conducting on behalf of the United States Election Assistance Commission, a federal government agency created to provide guidance to states implementing election reforms that are required by the federal Help America Vote Act, often referred to as HAVA. Since HAVA requires that every state implement certain minimum identification, or ID, requirements for first-time voters like you, we've been asked to find out what your experiences were with registering to vote and voting this year. We hope to use your input to help us determine what state practices are working and how states can best communicate ID requirements to voters.

First let's go over a few ground rules for today:

- Your participation in this focus group is voluntary, and you may stop at any time. The entire session will last approximately two hours and 15 minutes.
- We hope to gather information about your voting experiences. There are no wrong answers today; please let everyone speak and respect everyone's opinion, even if it is different from your own.
- We will make an audio recording of this session, so that we can be sure not to miss any of your important comments today. The recording will not be released publicly, and it will not be shared with anyone outside of our company.

## **Voters' Level of Understanding of New Requirements**

---

Before we start our discussion today, we'd like to get a sense of how well each of you understand [STATE'S] voter ID requirements for first-time voters. Adam is handing out a quick quiz that we will give you 15 minutes to complete.

By testing your knowledge of [STATE'S] ID requirements, we are hoping to gauge how effectively your state's election officials communicated the requirements to you, the voters. So please answer the questions as best you can and don't worry if you don't have all of the answers.

*Distribute quizzes; allow participants 15 minutes to complete.*

## **Voters' Experiences Registering to Vote by Mail**

---

### *Introduction*

Now that we've collected your completed quizzes, let's talk about your experiences registering to vote by mail.

### *Questions*

1. We'd like to ask each of you to describe the process of filling out your voter registration application. Please provide an estimate of how long it took you to complete the application and tell us whether you thought the form's instructions for submitting the required identification information (your driver's license number, Social Security number or the last four digits of your Social Security number) were easy to understand.
2. If you didn't include your driver's license number, Social Security number or the last four digits of your Social Security number with your application, why not?

### *Prompts*

Were the instructions unclear? Do you have a driver's license or Social Security number? Did you hesitate to include one of these numbers due to privacy or security concerns?

3. If you included a copy of your utility bill or some other document that includes your name and address with your application, why did you choose to do so?

### *Prompts*

Did you believe you were required to include such information with your voter registration application? Were you hoping to save time at the polls by including the information with your application?

## **Voters' Experiences at the Polls on Election Day**

---

### *Introduction*

Now we'd like to move on and discuss your experiences at the polling place on Election Day.

### *Questions*

4. Were you required to show ID at the polls before you could vote? What kind of ID were you asked to present?
5. Did a poll worker or election official clearly explain what kinds of ID would be accepted?
6. Did you know before you arrived at the polling place that you would be required to show ID? Did you know what kinds of ID would be accepted?
7. Were you able to present an acceptable form of ID at the polling place?
8. Which statement best represents your feelings about being required to present ID and why:
  - "I felt comfortable showing my ID to the poll worker."
  - "I felt singled out or intimidated when I was asked to present ID at the polling place."

**\*Fifteen Minute Break: Let's take a short break and reconvene here in 15 minutes.\***

## **Voters' Overall Perceptions of Voter ID Requirements**

---

### *Introduction*

Let's discuss your overall perceptions of [STATE'S] voter ID requirements. Remember, we're interested in your opinions so there are no right or wrong answers. Any feedback you can offer may help the state improve upon current procedures.

### *Questions*

9. Did you find it to be easy or difficult to understand and comply with [STATE'S] voter ID requirements? Why?
10. Do you think [STATE'S] ID requirements for first-time voters are too strict, not strict enough or appropriate?

11. Do you think the requirements made registering to vote more complicated than it should be, less complicated, or do you believe they had no noticeable effect?

12. How about the requirement to show ID at the polling place? Do you think it contributed to a longer wait time at your polling place? Did showing ID make voting more complicated than it would have been if you had not been required to show ID?

13. Do you feel ID requirements are necessary to prevent voters from attempting to commit fraud?

*Prompts*

Instances of voter fraud may include an individual impersonating a registered voter in order to vote in his or her name or an individual voting in more than one precinct.

14. How effectively do you think your state and local election officials communicated the ID requirements to first-time voters?

*Prompts*

What were the most effective or memorable techniques used? Television and radio spots? Mailers? Other voter education materials?

15. What are the advantages of requiring first-time voters who registered to vote by mail to show ID at the polls? What are your concerns or reservations about the requirement?

**Voters' Perceptions of the General Advisability of Unique ID**

---

*Introduction*

Now we'd like to get your impressions of whether or not it's a good idea for states to require voters to present ID at the polls.

*Questions*

16. Do you support requiring every voter to provide his or her driver's license number, Social Security number or the last four digits of his or her Social Security number as part of his or her application to register to vote?

*Prompts*

Are you concerned about privacy or security issues? Do you believe the requirement helps prevent voter fraud?

17. Do you support requiring first-time voters who registered to vote by mail to provide ID at the polling place?

18. Should **all** voters be required to show ID at the polls, or just first-time voters?

*Prompts*

Are you concerned that some voters may not have the ID they need or may be intimidated by ID requirements? Do you believe that ID requirements could help prevent voter fraud?

19. Would you find it useful to have access to some form of special ID, provided by the state, that you could show at the polls in order to vote? Do you think such an ID should be provided free of charge to voters, or should voters pay to obtain this ID?

**Final Solicitation**

---

20. Do you have any other thoughts about your experiences registering to vote and casting a ballot for the first time this year that we haven't covered?

21. What recommendations do you have for states working to educate first-time voters about ID requirements?

*Prompts*

What methods did your state use to educate voters about ID requirements? Were they effective? What did you like or dislike about them?

**Conclusion**

---

That concludes our focus group discussion. Thank you all for participating. The input you provided today will be studied and compiled into a report that we are preparing on behalf of the U.S. Election Assistance Commission. We expect it to be released some time in June 2007. To learn more about the EAC, visit their website: [www.eac.gov](http://www.eac.gov).

**About This Study**

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a series of studies, including this study of first-time voters who register to vote by mail. The EAC will submit a report on the results of this study to Congress and the White House; and the agency will make the document publicly available on its website: [www.eac.gov](http://www.eac.gov). Focus group participants will include first-time voters who registered to vote by mail.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0007, which expires 05/31/2007. The time required to complete this information collection is estimated to average 2 hours and 15 minutes per focus group participant and 4 hours per state/local election office. This estimate includes the time it will take each focus group participant to complete the focus group discussion and a short quiz. The time burden estimate for state/local election offices includes the time it will take to identify potential focus group participants. Comments regarding this burden estimate should be sent to the Program Manager – Study on First-Time Voters Who Register to Vote by Mail, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Quiz for Focus Group Participants

---

**PART ONE**

**Instructions**

Please select the answer that best describes your state's laws, rules and/or requirements as you understand them. Your answers to these questions will be used to determine how effectively [STATE] communicated its first-time voter identification, or ID, requirements.

1. What types of ID does [STATE] require each person applying to register to vote, or applicant, to include with his or her voter registration form when that form is submitted via mail? Please circle all that apply.

Driver's License Number

Last Four Digits of Social Security  
Number

Copy of Driver's License

Copy of Social Security Card

Entire Social Security Number

Copy of Utility Bill

Copy of Photo ID

Any Government Document that  
Includes the Voter's Name and Address

All of the Above

None of the Above

2. If the applicant does not have a driver's license or Social Security number, the state will assign the applicant a number which will serve to identify the applicant for voter registration purposes. Please circle one.

True

False

3. At the polls, [STATE] has different ID requirements for first-time voters who registered to vote by mail than it does for voters who have cast a ballot in another recent election. Please circle one.

True

False

4. All first-time voters in [STATE] are required to show government-issued photo ID at the polls. Please circle one.

True

False

5. Which of the following types of ID may first-time voters who registered to vote by mail show at the polls in order to meet [STATE'S] identification requirements? Please circle all that apply.

Any Current and Valid Photo ID

Government-Issued Photo ID

Current Utility Bill

Bank Statement

Government Check

Paycheck

Any Government Document that  
Includes the Voter's Name and Address

All of the Above

None of the Above

**PART TWO**

**Instructions**

Please base your answers to the following questions on your own opinions and experiences.

1. On a scale of one to 10, with one being the least confident and 10 being the most confident, how confident are you that you understand [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle one.

1      2      3      4      5      6      7      8      9      10

2. How did you learn of [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle all that apply.

Subject Re: OMB Control Number

At the beginning preferably, but it can go at the end as well. For the number and exp date, it can either be a header or a footer - depends on the layout of your document and your personal preference. Also, when I submitted the documents to OMB, I placed the EAC logo on the upper right hand corner of the documents to make it "official" - I'm attaching the document so you can see it and also a separate file containing the logo in case you want to use it in other documents. Let me know if you have any questions.

Subject Re: OMB Control Number

Thanks Laiza. Have other projects included this information as a header or footer on every page or just at the beginning or end of each document?

----- Original Message -----

**From:** [lotero@eac.gov](mailto:lotero@eac.gov)  
**To:** [mimwalle@winnerscirclecomm.com](mailto:mimwalle@winnerscirclecomm.com)  
**Sent:** Tuesday, December 12, 2006 11:32 AM  
**Subject:** Re: OMB Control Number

No need to put the ICR reference number. Below is the boiler plate information - just insert your information on the parts I have emphasized:

**This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301), the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.), and the Uniformed and Overseas**

009756

**Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1). Respondent's obligation to reply to this information collection is mandatory as required under NVRA (42 U.S.C. 1973gg-1 et seq.) and UOCAVA (42 U.S.C. 1973ff-1); respondents include the 50 States, the District of Columbia, and the U.S. Territories.** This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is **OMB Control No. 3265-0006 (expires 11/30/2009)**. The time required to complete this information collection is estimated to average **115.07 hours per response**. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Below is how it was modified for one of the other projects:

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process; the EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

**Subject:** OMB Control Number

Greetings to all,

The OMB Control number for the focus groups collection is: 3265-0007. The expiration date is 5/31/2007. Both these pieces of information need to appear everywhere on the collection instrument - my suggestion is to make them part of the heading or footer of the pages. In addition, there is boiler plate information I am working on today with our general counsel's office that needs to be included as well - the latter is info on the time and cost burden on respondents, the response requirements (voluntary/mandatory), and compliance with the PRA process - I should have that information by the end of today.

Also, for your records the ICR Reference Number is: 200611-3265-002. This is an internal OMB number given to the request we made. This may or may not have to be included - waiting to hear on that.

If you have any questions or need more information, please, do not hesitate to contact me at your earliest convenience. Have a great day!

Sincerely,

Laiza N. Otero

## WINNER'S CIRCLE COMMUNICATIONS, LLC Study of First-Time Voters Who Register to Vote by Mail

### Quiz for Focus Group Participants

#### PART ONE

##### Instructions

Please select the answer that best describes your state's laws, rules and/or requirements as you understand them. Your answers to these questions will be used to determine how effectively [STATE] communicated its first-time voter identification, or ID, requirements.

1. What types of ID does [STATE] require each person applying to register to vote, or applicant, to include with his or her voter registration form when that form is submitted via mail? Please circle all that apply.

Driver's License Number

Last four digits of Social Security Number

Copy of Driver's License

Copy of Social Security Card

Entire Social Security Number

Copy of Utility Bill

Copy of photo ID

Any government document with the voter's name and address

All of the above

None of the above

2. If the applicant does not have a driver's license or social security number, the state will assign the applicant a number which will serve to identify the applicant for voter registration purposes. Please circle one.

True

False

009760

3. At the polls, [STATE] has different ID requirements for first-time voters who registered to vote by mail than it does for voters who have cast a ballot in another recent election. Please circle one.

True

False

4. All first-time voters in [STATE] are required to show government-issued photo ID at the polls. Please circle one.

True

False

5. Which of the following types of ID may first-time voters who registered to vote by mail show at the polls in order to meet [STATE'S] identification requirements? Please circle all that apply.

Any current and valid photo ID

Government-issued photo ID

Current utility bill

Bank statement

Government check

Paycheck

Any government document that includes the voter's name and address

All of the above

None of the above

**PART TWO**

**Instructions**

Please base your answers to the following questions on your own opinions and experiences.

1. On a scale of one to 10, with one being the least confident and 10 being the most confident, how confident are you that you understand [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle one.

1    2    3    4    5    6    7    8    9    10

2. How did you learn of [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle all that apply.

TV or radio advertisement(s)

State elections website

News reports

Local elections website

I contacted my state election office

I contacted my local election office

Instructions on voter registration form

From a poll worker at the polling place

All of the above

None of the above

Other (please explain)

---

---

---

---

---

---

3. How effectively do you believe [STATE] communicated its ID requirements for first-time voters? Please rate the state on a scale of one to 10, with one being the least effective and 10 being the most effective.

1    2    3    4    5    6    7    8    9    10

**Subject:** Re: OMB Control Number

At the beginning preferably, but it can go at the end as well. For the number and exp date, it can either be a header or a footer - depends on the layout of your document and your personal preference. Also, when I submitted the documents to OMB, I placed the EAC logo on the upper right hand corner of the documents to make it "official" - I'm attaching the document so you can see it and also a separate file containing the logo in case you want to use it in other documents. Let me know if you have any questions.

**Subject:** Re: OMB Control Number

No need to put the ICR reference number. Below is the boiler plate information - just insert your information on the parts I have emphasized:

**This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301), the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.), and the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1). Respondent's obligation to reply to this information collection is mandatory as required under NVRA (42 U.S.C. 1973gg-1 et seq.) and UOCAVA (42 U.S.C. 1973ff-1); respondents include the 50 States, the District of Columbia, and the U.S. Territories.** This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is **OMB Control No. 3265-0006 (expires 11/30/2009)**. The time required to complete this information collection is estimated to average **115.07 hours per response**. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Below is how it was modified for one of the other projects:

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process; the EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

**Study contact's telephone number:** (703) 786-1823

**Study contact's email address:** admin@winnerscirclecomm.com

---

**What are some general things you should know about research studies?**

You are being asked to take part in a focus group for a research study. Your participation is voluntary. You may decline the invitation to participate or withdraw your consent for any reason without penalty.

Research studies are designed to obtain new knowledge that may help individuals and organizations in the future. You may not receive any direct benefit, other than the designated stipend and reimbursement for travel expenses, for participating in the study.

Details about this study are included below. It is important that you read and understand this information so that you can make an informed decision about whether or not you would like to participate in the study. You will be given a copy of this consent form. You should feel free to ask the study contact named above any questions you have about this study at any time.

**What is the purpose of this study?**

The purpose of this research study is to assess the impact that certain provisions of the federal Help America Vote Act of 2002 (HAVA) have had on first-time voters who register by mail and vote in person; voter registration; the accuracy of state voter rolls; and existing state practices.

Section 303(b) of HAVA requires citizens who registered to vote by mail and who will be voting for the first time in their jurisdiction to supply a copy of a current valid photo identification or government document displaying their name and address before they cast their first ballot. First-time voters can avoid the heightened identification requirements by sending a copy of such identification with their registration materials or providing their driver's license number or a minimum of the last four digits of their Social Security number. If a first-time voter does not comply with any of these requirements, §303(b) allows citizens to cast provisional ballots.

This study will analyze the issues and impediments associated with implementing these federal mandates and make recommendations for program administration and voter education should states choose to implement more stringent voter identification requirements in the future.

The U.S. Election Assistance Commission (EAC), a federal agency established by Congress to provide guidance to the states with regard to administering federal elections, is required by HAVA to complete this study and submit a report on the results to Congress and the White House.

**How many people will take part in this study?**

Approximately 30 people will take part in this research study, which is being conducted in three states: Indiana, North Carolina and Pennsylvania. All participants were chosen in consultation with state and local election offices in order to ensure that each group is representative of first-time voters in the state.

**How long will your part in this study last?**

Your participation in this focus group will last approximately two hours and fifteen minutes.

**What can you expect if you take part in the study?**

The focus group will be asked questions designed to assess their actual experiences with voter identification requirements for first-time voters. No questions will be directed to you individually, but instead will be posed to the group. You may choose to respond or not respond at any point during the discussion. The focus group discussion will be recorded on audio tape so that the study contact may capture all comments for future analysis.

**What are the possible benefits from being in this study?**

This particular study will provide state and federal officials with information designed to help them develop future voter identification requirements and related voter education materials and programs. You may not receive any direct benefit, other than the designated stipend and reimbursement for travel expenses, for participating in the study.

009769

**What are the possible risks involved?**

We do not anticipate any risks to you as a result of participating in this study. It is possible that participants may repeat comments outside of the group at some time in the future. Therefore, we encourage you to be as honest and open as you can, but remain aware of our limits in protecting confidentiality.

**How will your privacy be protected?**

You will not be specifically identified in any report or publication of this study or its results. Your name will not appear on any transcripts. You will instead be assigned a code number. The list which matches names and code numbers will be kept in a locked file cabinet. After the focus group audio recording has been transcribed, the tape and the list of names and corresponding code numbers will be destroyed.

**Will you receive anything for being in this study?**

You will receive a \$100 stipend for your participation in the study.

**Will it cost you anything to be in this study?**

There will be no costs to you for being in the study. You will be reimbursed for up to \$20 in travel expenses.

**What if you have questions about this study?**

You have the right to ask, and have answered, any questions you may have about this research. If you have questions or concerns you should contact the study contact listed on the first page of this form.

---

**Participant's Agreement:**

I have read the information provided above. I have asked and had answered all of the questions I have at this time. I voluntarily agree to participate in this research study.

OMB Control No. 3265-007, expires 05/31/2007

**About This Study**

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a series of studies, including this study of first-time voters who register to vote by mail. The EAC will submit a report on the results of this study to Congress and the White House; and the agency will make the document publicly available on its website: [www.eac.gov](http://www.eac.gov). Focus group participants will include first-time voters who registered to vote by mail.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-007, which expires 05/31/2007. The time required to complete this information collection is estimated to average 2 hours and 15 minutes per focus group participant and 4 hours per state/local election office. This estimate includes the time it will take each focus group participant to complete the focus group discussion and a short quiz. The time burden estimate for state/local election offices includes the time it will take to identify potential focus group participants. Comments regarding this burden estimate should be sent to the Program Manager – Study on First-Time Voters Who Register to Vote by Mail, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

History:

This message has been replied to.

Laiza:

I've attached the focus group script and quiz, as approved by OMB, including the required OMB information. I tried to paste the OMB info on the first page of each document, but then thought all of that gov-speak at the beginning might be overwhelming to our focus group participants. I ended up putting it at the end instead. Please let me know if these versions will work.

Thanks!

Quiz for Focus Group Participants

---

**PART ONE**

**Instructions**

Please select the answer that best describes your state's laws, rules and/or requirements as you understand them. Your answers to these questions will be used to determine how effectively [STATE] communicated its first-time voter identification, or ID, requirements.

1. What types of ID does [STATE] require each person applying to register to vote, or applicant, to include with his or her voter registration form when that form is submitted via mail? Please circle all that apply.

Driver's License Number

Last four digits of Social Security Number

Copy of Driver's License

Copy of Social Security Card

Entire Social Security Number

Copy of Utility Bill

Copy of photo ID

Any government document with the voter's name and address

All of the above

None of the above

2. If the applicant does not have a driver's license or social security number, the state will assign the applicant a number which will serve to identify the applicant for voter registration purposes. Please circle one.

True

False

3. At the polls, [STATE] has different ID requirements for first-time voters who registered to vote by mail than it does for voters who have cast a ballot in another recent election. Please circle one.

True

False

4. All first-time voters in [STATE] are required to show government-issued photo ID at the polls. Please circle one.

True

False

5. Which of the following types of ID may first-time voters who registered to vote by mail show at the polls in order to meet [STATE'S] identification requirements? Please circle all that apply.

Any current and valid photo ID

Government-issued photo ID

Current utility bill

Bank statement

Government check

Paycheck

Any government document that includes the voter's name and address

All of the above

None of the above

**PART TWO**

**Instructions**

Please base your answers to the following questions on your own opinions and experiences.

1. On a scale of one to 10, with one being the least confident and 10 being the most confident, how confident are you that you understand [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle one.

1      2      3      4      5      6      7      8      9      10

2. How did you learn of [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle all that apply.

### ***About This Study***

*Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a series of studies, including this study of first-time voters who register to vote by mail. The EAC will submit a report on the results of this study to Congress and the White House; and the agency will make the document publicly available on its website: [www.eac.gov](http://www.eac.gov). Focus group participants will include first-time voters who registered to vote by mail.*

*According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-007, which expires 05/31/2007. The time required to complete this information collection is estimated to average 2 hours and 15 minutes per focus group participant and 4 hours per state/local election office. This estimate includes the time it will take each focus group participant to complete the focus group discussion and a short quiz. The time burden estimate for state/local election offices includes the time it will take to identify potential focus group participants. Comments regarding this burden estimate should be sent to the Program Manager – Study on First-Time Voters Who Register to Vote by Mail, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.*

Focus Group Script and Questions

---

**Background**

---

*Introduction*

Thank you for joining us today and agreeing to participate in this focus group discussion of your experiences as first-time voters who registered to vote by mail. My name is Meredith Imwalle and I'll be your facilitator, which means it's my job to keep today's session on track by asking a series of open-ended questions, and some more specific ones, intended to stimulate discussion. My colleague, Adam Bourne, will serve as a co-facilitator.

We've organized this focus group as part of a study our company, Winner's Circle Communications, is conducting on behalf of the United States Election Assistance Commission, a federal government agency created to provide guidance to states implementing election reforms that are required by the federal Help America Vote Act, often referred to as HAVA. Since HAVA require that every state implement certain minimum identification, or ID, requirements for first-time voters like you, we've been asked to find out what your experiences were with registering to vote and voting this year. We hope to use your input to help us determine what state practices are working and how states can best communicate ID requirements to voters.

First let's go over a few ground rules for today:

- Your participation in this focus group is voluntary, and you may stop at any time.
- We hope to gather information about your voting experiences. There are no wrong answers today; please let everyone speak and respect everyone's opinion, even if it is different from your own.
- We will make an audio recording of this session, so that we can be sure not to miss any of your important comments today. The recording will not be released publicly, and it will not be shared with anyone outside of our company.

## **Voters' Level of Understanding of New Requirements**

---

Before we start our discussion today, we'd like to get a sense of how well each of you understand [STATE'S] voter ID requirements for first-time voters. Adam is handing out a quick quiz that we will give you 15 minutes to complete.

By testing your knowledge of [STATE'S] ID requirements, we are hoping to gauge how effectively your state's elections officials communicated the requirements to you, the voters. So please answer the questions as best you can and don't worry if you don't have all of the answers.

*Distribute quizzes; allow participants 15 minutes to complete.*

## **Voters' Experiences Registering to Vote by Mail**

---

### *Introduction*

Now that we've collected your completed quizzes, let's talk about your experiences registering to vote by mail.

### *Questions*

1. We'd like to ask each of you to describe the process of filling out your voter registration application. Please provide an estimate of how long it took you to complete the application and tell us whether you thought the form's instructions for submitting the required identification information (your driver's license number, Social Security Number or the last four digits of your Social Security Number) were easy to understand.
2. If you didn't include your driver's license number, Social Security Number or the last four digits of your Social Security Number with your application, why not?

### *Prompts*

Were the instructions unclear? Do you have a driver's license or Social Security Number? Did you hesitate to include one of these numbers due to privacy or security concerns?

3. If you included a copy of your utility bill or some other document that includes your name and address with your application, why did you choose to do so?

### *Prompts*

Did you believe you were required to include such information with your voter registration application? Were you hoping to save time at the polls by including the information with your application?

## **Voters' Experiences at the Polls on Election Day**

---

### *Introduction*

Now we'd like to move on and discuss your experiences at the polling place on Election Day.

### *Questions*

4. Were you required to show ID at the polls before you could vote? What kind of ID were you asked to present?
5. Did a poll worker or election official clearly explain what kinds of ID would be accepted?
6. Did you know before you arrived at the polling place that you would be required to show ID? Did you know what kinds of ID would be accepted?
7. Were you able to present an acceptable form of ID at the polling place?
8. Which statement best represents your feelings about being required to present ID and why:
  - "I felt comfortable showing my ID to the poll worker."
  - "I felt singled out or intimidated when I was asked to present ID at the polling place."

**\*Fifteen Minute Break: Let's take a short break and reconvene here in 15 minutes.\***

## **Voters' Overall Perceptions of Voter ID Requirements**

---

### *Introduction*

Let's discuss your overall perceptions of [STATE'S] voter ID requirements. Remember, we're interested in your opinions so there are no right or wrong answers. Any feedback you can offer may help the state improve upon current procedures.

### *Questions*

9. Did you find it to be easy or difficult to understand and comply with [STATE'S] voter ID requirements? Why?
10. Do you think [STATE'S] ID requirements for first-time voters are too strict, not strict enough or appropriate?

11. Do you think the requirements made registering to vote more complicated than it should be, less complicated, or do you believe they had no noticeable effect?

12. How about the requirement to show ID at the polling place? Do you think it contributed to a longer wait time at your polling place? Did showing ID make voting more complicated than it would have been if you had not been required to show ID?

13. Do you feel ID requirements are necessary to prevent voters from attempting to commit fraud?

*Prompts*

Instances of voter fraud may include an individual impersonating a registered voter in order to vote in his or her name or an individual voting in more than one precinct.

14. How effectively do you think your state and local election officials communicated the ID requirements to first-time voters?

*Prompts*

What were the most effective or memorable techniques used? Television and radio spots? Mailers? Other voter education materials?

15. What are the advantages of requiring first-time voters who registered to vote by mail to show ID at the polls? What are your concerns or reservations about the requirement?

**Voters' Perceptions of the General Advisability of Unique ID**

---

*Introduction*

Now we'd like to get your impressions of whether or not it's a good idea for states to require voters to present ID at the polls.

*Questions*

16. Do you support requiring every voter to provide his or her driver's license number, Social Security Number or the last four digits of his or her Social Security Number as part of his or her application to register to vote?

*Prompts*

Are you concerned about privacy or security issues? Do you believe the requirement helps prevent voter fraud?

17. Do you support requiring first-time voters who registered to vote by mail to provide ID at the polling place?

18. Should all voters be required to show ID at the polls, or just first-time voters?

*Prompts*

Are you concerned that some voters may not have the ID they need or may be intimidated by ID requirements? Do you believe that ID requirements could help prevent voter fraud?

19. Would you find it useful to have access to some form of special ID, provided by the state, that you could show at the polls in order to vote? Do you think such an ID should be provided free of charge to voters, or should voters pay to obtain this ID?

**Final Solicitation**

---

20. Do you have any other thoughts about your experiences registering to vote and casting a ballot for the first time this year that we haven't covered?

21. What recommendations do you have for states working to educate first-time voters about ID requirements?

*Prompts*

What methods did your state use to educate voters about ID requirements? Were they effective? What did you like or dislike about them?

**Conclusion**

---

That concludes our focus group discussion. Thank you all for participating. The input you provided today will be studied and compiled into a report that we are preparing on behalf of the U.S. Election Assistance Commission. We expect it to be released some time in June 2007. To learn more about the EAC, visit their website: [www.eac.gov](http://www.eac.gov).

**About This Study**

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a series of studies, including this study of first-time voters who register to vote by mail. The EAC will submit a report on the results of this study to Congress and the White House; and the agency will make the document publicly available on its website: [www.eac.gov](http://www.eac.gov). Focus group participants will include first-time voters who registered to vote by mail.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-007, which expires 05/31/2007. The time required to complete this information collection is estimated to average 2 hours and 15 minutes per focus group participant and 4 hours per state/local election office. This estimate includes the time it will take each focus group participant to complete the focus group discussion and a short quiz. The time burden estimate for state/local election offices includes the time it will take to identify potential focus group participants. Comments regarding this burden estimate should be sent to the Program Manager – Study on First-Time Voters Who Register to Vote by Mail, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

**Subject:** Re: OMB Control Number

Hi again!

They look great in my opinion - the only thing you should note is that you're missing a "0" in the OMB Control Number- it should be 3265-0007 instead of 3265-007 :-)

Should you mention in the beginning the estimated time it will take to complete the focus group session?

Subject Re: OMB Control Number

Laiza:

I've attached the focus group script and quiz, as approved by OMB, including the required OMB information. I tried to paste the OMB info on the first page of each document, but then thought all of that gov-speak at the beginning might be overwhelming to our focus group participants. I ended up putting it

009785

at the end instead. Please let me know if these versions will work.

Thanks!

**Subject:** Re: OMB Control Number

At the beginning preferably, but it can go at the end as well. For the number and exp date, it can either be a header or a footer - depends on the layout of your document and your personal preference. Also, when I submitted the documents to OMB, I placed the EAC logo on the upper right hand corner of the documents to make it "official" - I'm attaching the document so you can see it and also a separate file containing the logo in case you want to use it in other documents. Let me know if you have any questions.

009786

**Subject:** Re: OMB Control Number

No need to put the ICR reference number. Below is the boiler plate information - just insert your information on the parts I have emphasized:

**This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301), the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.), and the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1). Respondent's obligation to reply to this information collection is mandatory as required under NVRA (42 U.S.C. 1973gg-1 et seq.) and UOCAVA (42 U.S.C. 1973ff-1); respondents include the 50 States, the District of Columbia, and the U.S. Territories.** This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is **OMB Control No. 3265-0006 (expires 11/30/2009)**. The time required to complete this information collection is estimated to average **115.07 hours per response**. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Below is how it was modified for one of the other projects:

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process; the EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

**Subject:** OMB Control Number

Greetings to all,

The OMB Control number for the focus groups collection is: 3265-0007. The expiration date is 5/31/2007. Both these pieces of information need to appear everywhere on the collection instrument - my suggestion is to make them part of the heading or footer of the pages. In addition, there is boiler plate information I am working on today with our general counsel's office that needs to be included as well - the latter is info on the time and cost burden on respondents, the response requirements (voluntary/mandatory), and compliance with the PRA process - I should have that information by the end of today.

Also, for your records the ICR Reference Number is: 200611-3265-002. This is an internal OMB number given to the request we made. This may or may not have to be included - waiting to hear on that.

If you have any questions or need more information, please, do not hesitate to contact me at your earliest

Quiz for Focus Group Participants

---

PART ONE

**Instructions**

Please select the answer that best describes your state's laws, rules and/or requirements as you understand them. Your answers to these questions will be used to determine how effectively [STATE] communicated its first-time voter identification, or ID, requirements.

1. What types of ID does [STATE] require each person applying to register to vote, or applicant, to include with his or her voter registration form when that form is submitted via mail? Please circle all that apply.

Driver's License Number

Last Four Digits of Social Security  
Number

Copy of Driver's License

Copy of Social Security Card

Entire Social Security Number

Copy of Utility Bill

Copy of Photo ID

Any Government Document that  
Includes the Voter's Name and Address

All of the Above

None of the Above

2. If the applicant does not have a driver's license or Social Security number, the state will assign the applicant a number which will serve to identify the applicant for voter registration purposes. Please circle one.

True

False

3. At the polls, [STATE] has different ID requirements for first-time voters who registered to vote by mail than it does for voters who have cast a ballot in another recent election. Please circle one.

True

False

4. All first-time voters in [STATE] are required to show government-issued photo ID at the polls. Please circle one.

True

False

5. Which of the following types of ID may first-time voters who registered to vote by mail show at the polls in order to meet [STATE'S] identification requirements? Please circle all that apply.

Any Current and Valid Photo ID

Government-Issued Photo ID

Current Utility Bill

Bank Statement

Government Check

Paycheck

Any Government Document that  
Includes the Voter's Name and Address

All of the Above

None of the Above

**PART TWO**

**Instructions**

Please base your answers to the following questions on your own opinions and experiences.

1. On a scale of one to 10, with one being the least confident and 10 being the most confident, how confident are you that you understand [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle one.

1      2      3      4      5      6      7      8      9      10

2. How did you learn of [STATE'S] ID requirements for first-time voters who register to vote by mail? Please circle all that apply.

Before we start our discussion today, we'd like to get a sense of how well each of you understand [STATE'S] voter ID requirements for first-time voters. Adam is handing out a quick quiz that we will give you 15 minutes to complete.

By testing your knowledge of [STATE'S] ID requirements, we are hoping to gauge how effectively your state's election officials communicated the requirements to you, the voters. So please answer the questions as best you can and don't worry if you don't have all of the answers.

*Distribute quizzes; allow participants 15 minutes to complete.*

## **Voters' Experiences Registering to Vote by Mail**

---

### *Introduction*

Now that we've collected your completed quizzes, let's talk about your experiences registering to vote by mail.

### *Questions*

1. We'd like to ask each of you to describe the process of filling out your voter registration application. Please provide an estimate of how long it took you to complete the application and tell us whether you thought the form's instructions for submitting the required identification information (your driver's license number, Social Security number or the last four digits of your Social Security number) were easy to understand.
2. If you didn't include your driver's license number, Social Security number or the last four digits of your Social Security number with your application, why not?

### *Prompts*

Were the instructions unclear? Do you have a driver's license or Social Security number? Did you hesitate to include one of these numbers due to privacy or security concerns?

3. If you included a copy of your utility bill or some other document that includes your name and address with your application, why did you choose to do so?

### *Prompts*

Did you believe you were required to include such information with your voter registration application? Were you hoping to save time at the polls by including the information with your application?

## **Voters' Experiences at the Polls on Election Day**

---

### *Introduction*

Now we'd like to move on and discuss your experiences at the polling place on Election Day.

### *Questions*

4. Were you required to show ID at the polls before you could vote? What kind of ID were you asked to present?
5. Did a poll worker or election official clearly explain what kinds of ID would be accepted?
6. Did you know before you arrived at the polling place that you would be required to show ID? Did you know what kinds of ID would be accepted?
7. Were you able to present an acceptable form of ID at the polling place?
8. Which statement best represents your feelings about being required to present ID and why:
  - "I felt comfortable showing my ID to the poll worker."
  - "I felt singled out or intimidated when I was asked to present ID at the polling place."

**\*Fifteen Minute Break: Let's take a short break and reconvene here in 15 minutes.\***

## **Voters' Overall Perceptions of Voter ID Requirements**

---

### *Introduction*

Let's discuss your overall perceptions of [STATE'S] voter ID requirements. Remember, we're interested in your opinions so there are no right or wrong answers. Any feedback you can offer may help the state improve upon current procedures.

### *Questions*

9. Did you find it to be easy or difficult to understand and comply with [STATE'S] voter ID requirements? Why?
10. Do you think [STATE'S] ID requirements for first-time voters are too strict, not strict enough or appropriate?

11. Do you think the requirements made registering to vote more complicated than it should be, less complicated, or do you believe they had no noticeable effect?

12. How about the requirement to show ID at the polling place? Do you think it contributed to a longer wait time at your polling place? Did showing ID make voting more complicated than it would have been if you had not been required to show ID?

13. Do you feel ID requirements are necessary to prevent voters from attempting to commit fraud?

*Prompts*

Instances of voter fraud may include an individual impersonating a registered voter in order to vote in his or her name or an individual voting in more than one precinct.

14. How effectively do you think your state and local election officials communicated the ID requirements to first-time voters?

*Prompts*

What were the most effective or memorable techniques used? Television and radio spots? Mailers? Other voter education materials?

15. What are the advantages of requiring first-time voters who registered to vote by mail to show ID at the polls? What are your concerns or reservations about the requirement?

**Voters' Perceptions of the General Advisability of Unique ID**

---

*Introduction*

Now we'd like to get your impressions of whether or not it's a good idea for states to require voters to present ID at the polls.

*Questions*

16. Do you support requiring every voter to provide his or her driver's license number, Social Security number or the last four digits of his or her Social Security number as part of his or her application to register to vote?

*Prompts*

Are you concerned about privacy or security issues? Do you believe the requirement helps prevent voter fraud?

17. Do you support requiring first-time voters who registered to vote by mail to provide ID at the polling place?

18. Should **all** voters be required to show ID at the polls, or just first-time voters?

*Prompts*

Are you concerned that some voters may not have the ID they need or may be intimidated by ID requirements? Do you believe that ID requirements could help prevent voter fraud?

19. Would you find it useful to have access to some form of special ID, provided by the state, that you could show at the polls in order to vote? Do you think such an ID should be provided free of charge to voters, or should voters pay to obtain this ID?

**Final Solicitation**

---

20. Do you have any other thoughts about your experiences registering to vote and casting a ballot for the first time this year that we haven't covered?

21. What recommendations do you have for states working to educate first-time voters about ID requirements?

*Prompts*

What methods did your state use to educate voters about ID requirements? Were they effective? What did you like or dislike about them?

**Conclusion**

---

That concludes our focus group discussion. Thank you all for participating. The input you provided today will be studied and compiled into a report that we are preparing on behalf of the U.S. Election Assistance Commission. We expect it to be released some time in June 2007. To learn more about the EAC, visit their website: [www.eac.gov](http://www.eac.gov).

**About This Study**

*Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a series of studies, including this study of first-time voters who register to vote by mail. The EAC will submit a report on the results of this study to Congress and the White House; and the agency will make the document publicly available on its website: [www.eac.gov](http://www.eac.gov). Focus group participants will include first-time voters who registered to vote by mail.*

*According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0007, which expires 05/31/2007. The time required to complete this information collection is estimated to average 2 hours and 15 minutes per focus group participant and 4 hours per state/local election office. This estimate includes the time it will take each focus group participant to complete the focus group discussion and a short quiz. The time burden estimate for state/local election offices includes the time it will take to identify potential focus group participants. Comments regarding this burden estimate should be sent to the Program Manager – Study on First-Time Voters Who Register to Vote by Mail, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.*

Hi again!

They look great in my opinion - the only thing you should note is that you're missing a "0" in the OMB Control Number- it should be 3265-0007 instead of 3265-007 :-)

Should you mention in the beginning the estimated time it will take to complete the focus group session?

**Subject:** Re: OMB Control Number

At the beginning preferably, but it can go at the end as well. For the number and exp date, it can either be a header or a footer - depends on the layout of your document and your personal preference. Also, when I submitted the documents to OMB, I placed the EAC logo on the upper right hand corner of the documents to make it "official" - I'm attaching the document so you can see it and also a separate file containing the logo in case you want to use it in other documents. Let me know if you have any questions.

009800

**Subject:** Re: OMB Control Number

No need to put the ICR reference number. Below is the boiler plate information - just insert your information on the parts I have emphasized:

**This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301), the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.), and the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1). Respondent's obligation to reply to this information collection is mandatory as required under NVRA (42 U.S.C. 1973gg-1 et seq.) and UOCAVA (42 U.S.C. 1973ff-1); respondents include the 50 States, the District of Columbia, and the U.S. Territories.** This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is **OMB Control No. 3265-0006 (expires 11/30/2009)**. The time required to complete this information collection is estimated to average **115.07 hours per response**. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Below is how it was modified for one of the other projects:

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process; the EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

**Subject:** OMB Control Number

Greetings to all,

The OMB Control number for the focus groups collection is: 3265-0007. The expiration date is 5/31/2007. Both these pieces of information need to appear everywhere on the collection instrument - my suggestion is to make them part of the heading or footer of the pages. In addition, there is boiler plate information I am working on today with our general counsel's office that needs to be included as well - the latter is info on the time and cost burden on respondents, the response requirements (voluntary/mandatory), and compliance with the PRA process - I should have that information by the end of today.

Also, for your records the ICR Reference Number is: 200611-3265-002. This is an internal OMB number given to the request we made. This may or may not have to be included - waiting to hear on that.

If you have any questions or need more information, please, do not hesitate to contact me at your earliest

**What are some general things you should know about research studies?**

You are being asked to take part in a focus group for a research study. Your participation is voluntary. You may decline the invitation to participate or withdraw your consent for any reason without penalty.

Research studies are designed to obtain new knowledge that may help individuals and organizations in the future. You may not receive any direct benefit, other than the designated stipend and reimbursement for travel expenses, for participating in the study.

Details about this study are included below. It is important that you read and understand this information so that you can make an informed decision about whether or not you would like to participate in the study. You will be given a copy of this consent form. You should feel free to ask the study contact named above any questions you have about this study at any time.

*OMB Control No. 3265-0007, expires 05/31/2007*

009804

**What is the purpose of this study?**

The purpose of this research study is to assess the impact that certain provisions of the federal Help America Vote Act of 2002 (HAVA) have had on first-time voters who register by mail and vote in person; voter registration; the accuracy of state voter rolls; and existing state practices.

Section 303(b) of HAVA requires citizens who registered to vote by mail and who will be voting for the first time in their jurisdiction to supply a copy of a current valid photo identification or government document displaying their name and address before they cast their first ballot. First-time voters can avoid the heightened identification requirements by sending a copy of such identification with their registration materials or providing their driver's license number or a minimum of the last four digits of their Social Security number. If a first-time voter does not comply with any of these requirements, §303(b) allows citizens to cast provisional ballots.

This study will analyze the issues and impediments associated with implementing these federal mandates and make recommendations for program administration and voter education should states choose to implement more stringent voter identification requirements in the future.

The U.S. Election Assistance Commission (EAC), a federal agency established by Congress to provide guidance to the states with regard to administering federal elections, is required by HAVA to complete this study and submit a report on the results to Congress and the White House.

**How many people will take part in this study?**

Approximately 30 people will take part in this research study, which is being conducted in three states: Indiana, North Carolina and Pennsylvania. All participants were chosen in consultation with state and local election offices in order to ensure that each group is representative of first-time voters in the state.

**How long will your part in this study last?**

Your participation in this focus group will last approximately two hours and fifteen minutes.

**What can you expect if you take part in the study?**

The focus group will be asked questions designed to assess their actual experiences with voter identification requirements for first-time voters. No questions will be directed to you individually, but instead will be posed to the group. You may choose to respond or not respond at any point during the discussion. The focus group discussion will be recorded on audio tape so that the study contact may capture all comments for future analysis.

**What are the possible benefits from being in this study?**

This particular study will provide state and federal officials with information designed to help them develop future voter identification requirements and related voter education materials and programs. You may not receive any direct benefit, other than the designated stipend and reimbursement for travel expenses, for participating in the study.

**What are the possible risks involved?**

We do not anticipate any risks to you as a result of participating in this study. It is possible that participants may repeat comments outside of the group at some time in the future. Therefore, we encourage you to be as honest and open as you can, but remain aware of our limits in protecting confidentiality.

**How will your privacy be protected?**

You will not be specifically identified in any report or publication of this study or its results. Your name will not appear on any transcripts. You will instead be assigned a code number. The list which matches names and code numbers will be kept in a locked file cabinet. After the focus group audio recording has been transcribed, the tape and the list of names and corresponding code numbers will be destroyed.

**Will you receive anything for being in this study?**

You will receive a \$100 stipend for your participation in the study.

**Will it cost you anything to be in this study?**

There will be no costs to you for being in the study. You will be reimbursed for up to \$20 in travel expenses.

**What if you have questions about this study?**

You have the right to ask, and have answered, any questions you may have about this research. If you have questions or concerns you should contact the study contact listed on the first page of this form.

---

**Participant's Agreement:**

I have read the information provided above. I have asked and had answered all of the questions I have at this time. I voluntarily agree to participate in this research study.

**About This Study**

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a series of studies, including this study of first-time voters who register to vote by mail. The EAC will submit a report on the results of this study to Congress and the White House; and the agency will make the document publicly available on its website: [www.eac.gov](http://www.eac.gov). Focus group participants will include first-time voters who registered to vote by mail.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0007, which expires 05/31/2007. The time required to complete this information collection is estimated to average 2 hours and 15 minutes per focus group participant and 4 hours per state/local election office. This estimate includes the time it will take each focus group participant to complete the focus group discussion and a short quiz. The time burden estimate for state/local election offices includes the time it will take to identify potential focus group participants. Comments regarding this burden estimate should be sent to the Program Manager – Study on First-Time Voters Who Register to Vote by Mail, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

**Subject:** Re: OMB Control Number

:-)

Did a quick search and it seems like generally we should have given the consent form along with the rest of the docs, but since he already approved it, he may just have me upload the form onto their site - I'll let you know as soon as he responds. Also, this information may be useful - I think most if not all is covered in the documents:

**What should respondents be told about their participation in an information collection?**

- The reasons the information is to be collected;
- The way the information will be used to further agency purposes and serve agency needs;
- An estimate of the average burden of the collection and whom to contact about the estimate;
- Whether responses to the collection of information are voluntary or mandatory, or required to obtain a benefit;
- The nature and extent of confidentiality to be provided, if any; (In our Supporting Statement A we said "There is no assurance of confidentiality.")
- The duration of respondents' expected involvement (e.g., if this is a longitudinal survey, they should be informed that they will be contacted in the future); and
- If the agency is collecting "sensitive information," respondents should be informed about what type(s) of sensitive information will be requested. (In our Supporting Statement A we said "There are no questions of a sensitive nature.")

Agencies that conduct research studies involving human subjects may also be required by Institutional Review Boards (IRBs) to provide additional information such as informed consent statements that are signed by the respondent. Typically, statistical surveys do not require formal consent forms.

For more info - see OMB's guide on surveys and statistical information collections at:  
[http://www.whitehouse.gov/omb/inforeg/pmc\\_survey\\_guidance\\_2006.pdf](http://www.whitehouse.gov/omb/inforeg/pmc_survey_guidance_2006.pdf)

No need to put the ICR reference number. Below is the boiler plate information - just insert your information on the parts I have emphasized:

**This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301), the National Voter Registration Act (NVRA) (42 U.S.C. 1973gg-1 et seq.), and the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1). Respondent's obligation to reply to this information collection is mandatory as required under NVRA (42 U.S.C. 1973gg-1 et seq.) and UOCAVA (42 U.S.C. 1973ff-1); respondents include the 50 States, the District of Columbia, and the U.S. Territories.** This information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is **OMB Control No. 3265-0006 (expires 11/30/2009)**. The time required to complete this information collection is estimated to average **115.07 hours per response**. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election Administration and Voting Survey, U.S. Election Assistance Commission, 1225 New York Ave, NW, Suite 1100, Washington, DC 20005.

Below is how it was modified for one of the other projects:

Section 245 of the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301) requires the U.S. Election Assistance Commission (EAC) to conduct a study of issues and challenges, including the potential for election fraud, that are presented by the incorporation of communications and Internet technologies in the Federal, State, and local electoral process; the EAC is required to submit a report on the results of the study to Congress. In addition, this information will be made publicly available on the EAC website at [www.eac.gov](http://www.eac.gov). Respondents to this survey are uniformed and overseas voters. According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0005 (expires 5/31/2007). The time required to complete this information collection is estimated to average .25 hours per response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent to the Program Manager - 2006 Election

Subject Re: OMB Control Number

Laiza:

I have the OMB control number and expiration date, but I don't think we ever received the boiler plate information you mentioned below. If you'll send that over, I'll add it to the documents and send them to you today. Also, were you able to determine whether we are required to include the ICR reference number?

Thanks,

*Meredith Battle Imwalle*

009812

Greetings to all,

The OMB Control number for the focus groups collection is: 3265-0007. The expiration date is 5/31/2007. Both these pieces of information need to appear everywhere on the collection instrument - my suggestion is to make them part of the heading or footer of the pages. In addition, there is boiler plate information I am working on today with our general counsel's office that needs to be included as well - the latter is info on the time and cost burden on respondents, the response requirements (voluntary/mandatory), and compliance with the PRA process - I should have that information by the end of today.

Also, for your records the ICR Reference Number is: 200611-3265-002. This is an internal OMB number given to the request we made. This may or may not have to be included - waiting to hear on that.

If you have any questions or need more information, please, do not hesitate to contact me at your earliest convenience. Have a great day!

**Subject:** Question regarding focus groups - consent forms

Alex,

For focus group ICRs, do you require a copy of the consent form given to participants? For the recently approved ICR (3265-0007) regarding First-Time Voters, this was not part of the package - and in hindsight, we were wondering if we have/had to provide you a copy of this form before we proceed with the collection. Thank you.

**Subject:** Request for Extension of a previously approved collection with changes

Dear Mr. Hunt,

I am writing to inform you that we will be submitting next week a request for an extension with revisions of a previously approved collection (Title: EAC Voting System Testing and Certification Manual, OMB Control Number 3265-0004, expiration 3/31/2007). This collection had been approved under the emergency approval process on 9/29/2006. The 60-day Federal Register notice is set to conclude on March 24th, at which time we will proceed with the second 30-day FR notice and the submission of the ICR package to you via ROCIS. So as not to disrupt the program, may we continue to use the current number while you review our submission?

If you have any questions, please, do not hesitate to contact me at your earliest convenience. As always, thank you for your time and assistance in this process; it is greatly appreciated.

**To:** Hunt, Alexander T.

**Cc:** bhancock@eac.gov; ggilmour@eac.gov

**Subject:** RE: Supporting Statement

Hello Mr. Hunt,

Just to make sure we have understood the process: for an emergency review:

1. do we need to publish a notice in the Federal Register?
2. if we are going to publish it, can we publish it before we complete our ROCIS submission?
3. is there any guidance on how to create the Supporting Statement A other than the instructions on form OMB 83-1? --- since it's no longer in effect and references the form.

Thank you as always,

Sincerely,

Subject RE: Supporting Statement

009816

Per 1320.13, the emergency processing concerns "submissions of collections of information," which include completed supporting statements. Just because OMB is waiving the full notice-and-comment process does not mean that the agency can submit incomplete information collections requests.

You can request 180 days, and you can use the following for the OMB contact:

*OMB Reviewer:* Alexander T. Hunt

Office of Management and Budget, Room 10235

New Executive Office Building

Washington, DC 20503, (202) 395-7316.

**From:** ggilmour@eac.gov [mailto:ggilmour@eac.gov]

**To:** Hunt, Alexander T.  
**Cc:** bhancock@eac.gov; lotero@eac.gov  
**Subject:** RE: Supporting Statement

Mr. Hunt,

two additional questions...

(1) in the example you gave us, the emergency request asks for more than 90 days (180) is this acceptable?

(2) is there a specific name and address at OMB that we give, other than the example.

Mr. Hunt,

A couple of quick questions...

1) Are we to have the same informational headings and content as the example, ie:

1. Type of Information Collection Request:

009819

2. Title of Information Collection:
3. Use:
4. Form Number: (HOW WOULD WE KNOW THIS?)
5. Frequency:
6. Affected Public:
7. Number of Respondents:
8. Total Annual Responses:
9. Total Annual Hours:

4) are we to use the same comment areas or subjects as the example? i.e.:

(1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Subject OMB

FYI:

I just spoke with Alex Hunt at OMB. He said to wait until the 30 days are over and then go ahead and publish the 60-day notice. We will be seeking an "Extension of a currently approved collection." The paperwork is the same, but it is much easier since we have most if not all of it done already.

Subject OMB Control Number

Gavin,

Check the following document for how they placed the OMB control number - it's on the cover page and on the bottom they have the disclaimer - they also have the number on the forms within the document.

**Subject:** Fw: Request for Extension of a previously approved collection with changes

---

FYI: (per my communications with OMB - read below) First thing Monday, we need to send out the second FR notice for the T&C Manual. I was informed that only Tom or the Commissioners may sign for an FR Notice - that's why we need to wait until Monday. I will draft it and send it to you; then we need to meet to go over the other documentation to make sure it's all there for the OMB package. Thank you!

L.

Subject: RE: Request for Extension of a previously approved collection with changes

Yes. As long as you submit the 3-year extension request before the end of the month, OMB's approval will remain in effect while the request is pending.

Thanks.

**Subject:** Request for Extension of a previously approved collection with changes

Dear Mr. Hunt,

I am writing to inform you that we will be submitting next week a request for an extension with revisions of a previously approved collection (Title: EAC Voting System Testing and Certification Manual, OMB Control Number 3265-0004, expiration 3/31/2007). This

009831

collection had been approved under the emergency approval process on 9/29/2006. The 60-day Federal Register notice is set to conclude on March 24th, at which time we will proceed with the second 30-day FR notice and the submission of the ICR package to you via ROCIS. So as not to disrupt the program, may we continue to use the current number while you review our submission?

If you have any questions, please, do not hesitate to contact me at your earliest convenience. As always, thank you for your time and assistance in this process; it is greatly appreciated.

Sincerely,

Laiza N. Otero

**Abstract:** HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operate in a reliable and affective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may effect system's certification.

**Emergency Justification:** HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and affective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials and the public to report events which may effect a voting system's certification. The EAC is requesting an emergency review of the collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to provide for the certification of voting system

688600

by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedure failure to implement this program in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.1. Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). Hence, that the EAC certify and decertify voting systems. This mandate represents the first time the Federal government will provide for the testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC is developing the Voting System Testing and Certification Program. This program requires the collection and retention of information by voting system manufacturers. Until national voting system certification was conducted by a private membership organization, the National Association of State Election Officials (NASEO). NASEO certified voting systems for over a decade, using standards issued by the Federal government. The organization certification efforts on July 10, 2006. While the EAC and NASEO have worked together to provide for the certification of emergency modifications necessary to properly field voting systems for the 2006 General Election, there is presently no mechanism in place to certify new systems or to process modifications for the 2008 Federal elections. Given the fact that (1) it can take years to develop, test, sell, and field a new or modified voting systems; and (2) a large volume of voting systems (new, existing and modified) are expected submitted to the EAC upon initiation of the new Certification Program, it is imperative that the EAC's Voting System Testing and Certification Program begin on the earliest possible date. The 2008 Federal elections are less than 2 years away. Ensuring that certified voting systems are available for the 2008 Election Cycle is essential to the public welfare.

---

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 132 related provisions of 5 CFR 1320.8(b)(3).

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous language that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention periods for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8 (b)(3) about:
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;
  - (iv) Nature of response (voluntary, required for a benefit, or mandatory);
  - (v) Nature and extent of confidentiality; and
  - (vi) Need to display currently valid OMB control number;
- (h) It was developed by an office that has planned and allocated resources for the efficient and effective management of the information to be collected.
- (i) It uses effective and efficient statistical survey methodology (if applicable); and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item by leaving the box unchecked and explain the Supporting Statement.

**Certification Date:** 09/22/2006

# Application for Voting System Testing

1. Manufacturer Name:

2. Manufacturer Code:

3. Version of Standards to be Used for Testing:

4. Voting System Name:

5. System Model/Version Number:

6. EAC Accredited VSTL:

7. Requested EAC Certification number:

8. Brief Description of System or system modification:

Signature:

Date:

009842

# Instructions

This form provides manufacturers with the means to apply for a certification of a voting system. Completion of a voting system application is a required step in the EAC Voting System Certification Program. This form is prescribed by Section 4.3 of the Manual. For more information on registration requirements please see Section 4.3.

This form is generally self-explanatory, however the numbers and the instructions below correspond to the numbered sections of the form.

**1. Manufacturer Name:** Full legal name of the manufacturer.

**2. Manufacturer Code:** The three letter identification code provided by the EAC upon manufacturer registration.

**3. Version of Standards to be Used for Testing:** Select the version of the EAC approved voting system standards to which the candidate system or modification is to be tested and certified.

**4-5** Provide information as requested.

**6. EAC Accredited VSTL:** Provide the name of the EAC accredited voting system test laboratory which will perform testing on the candidate system.

**7. Requested EAC Certification Number:** Provide the certification number to be carried by the candidate system following certification. This number must begin with the three letter manufacturer identification code and be unique only to the specific candidate voting system. The number may be alpha-numeric and contain no more than 20 characters.

**8. Brief Description of the System or System Modification:** Describe the system, carefully listing all components submitted for certification.

This information is required for the EAC to provide for the certification of voting systems as required by 42 U.S.C. Section 15371. This information will be used solely to administer the EAC Testing and Certification Program. This program is voluntary, however, individuals who wish to participate must meet the requirements of the Program. This information will be made public consistent with the requirements of the Freedom of Information Act, the Trade Secrets Act, and any other applicable Federal law or regulation. Public reporting burden for this collection of information is estimated to average about XX hours for completion of this form. This estimate includes the time for reviewing the instructions, gathering information and completing the form. Send comments regarding this burden estimate to the Testing and Certification Program Director, Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington, DC 20005. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to respond to, or comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

First Name:  Title:

Last Name:  Middle Initial:

Address:

City:  State

Zip Code:  Email:

Phone Number:  FAX Number:

**4. Briefly describe your quality system ( i.e. ISO 9001). Provide your written policies supporting this description as a part of this application :**

**5. Briefly describe your internal requirements for managing change control/version control for both hardware/firmware and software . Provide your written policies supporting this description as a part of this application :**

**6. Please list the Name, Street Address, City, State/Province, Country, Postal Code, and Telephone Number for all facilities used by your company to manufacture your voting system product :**

## 7. Manufacturer Certification Agreement:

To maintain a voting system certification under the Election Assistance Commission (EAC) program, the manufacturer must agree to:

1. Represent a voting system as certified only when it is authorized by the EAC and consistent with the procedures and requirements of the Testing and Certification Program Manual (the Manual).
2. Produce and permanently affix an EAC certification label to all production units of the certified system.
3. Notify the EAC of changes to any system previously certified by the EAC pursuant to the requirements of the Manual.
4. Permit an EAC representative to verify manufacturer quality control by coordinating with EAC efforts to test and review fielded voting systems consistent with Section 8.6 of the Manual.
5. Permit an EAC representative to verify manufacturer quality control by conducting periodic inspections of manufacturing facilities consistent with Chapter 8 of the Manual.
6. Cooperate with any EAC inquiries and investigations into a certified systems compliance with voting system standards or the procedural requirements of the Manual.
7. Report to the Program Director any known malfunction of a voting system holding a current EAC Certification. A malfunction is defined as a failure of the voting system, not caused by operator or administrative error, which causes the system to fail or otherwise not operate as designed.
8. Certify that the manufacturer is not bared or otherwise prohibited by statute regulation or ruling from doing business in the United States.
9. Adhere to all procedural requirements of the Manual.

Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to respond to, or comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

009850

**SUPPORTING STATEMENT**  
**U.S. Election Assistance Commission**  
**Voting System Testing and Certification Program**

**A. JUSTIFICATION**

**1. Explain the circumstances that make the collection of information necessary.**

HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software by accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and affective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials and other members of the public to report events which may effect a voting system's certification.

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR Part 1320(a)(2)(ii). The information collection at issue is necessary in order to provide for the certification of voting systems as mandated by the Help America Vote Act of 2002 (42 U.S.C. §15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this program in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). HAVA requires that the EAC certify and decertify voting systems. This mandate represents the first time the Federal government will provide for the voluntary testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC is developing the Voting System Testing and Certification Program. This program requires the collection and retention of information by voting system manufacturers.

Until recently, national voting system certification was conducted by a private membership organization, the National Association of State Election Directors (NASD). NASD certified voting systems for over a decade, using standards issued by the Federal government. The organization terminated its certification efforts on July 10, 2006. While the EAC and NASD have worked together to provide for the certification of emergency modifications necessary to properly field voting systems for the 2006 General Election, there is presently no mechanism in place to test and certify new systems or to process modifications for the 2008 Federal elections. Given the fact that (1) it can take years to develop, test, certify, sell,

009851

and field a new or modified voting systems; and (2) a large volume of voting systems (new, existing and modified) are expected to be submitted to the EAC upon initiation of the new Certification Program, it is imperative that the EAC's Voting System Testing and Certification Program begin on the earliest possible date. The 2008 Federal elections are less than 2 years away. Ensuring that certified voting systems are available for the 2008 Election Cycle is essential to the public welfare.

**2. Explain how, by whom, how frequently, and for what purpose the information will be used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

The information collected under the EAC Voting System Testing and Certification Program will be used solely by EAC personnel to determine whether a voting system meets voluntary Federal voting system standards. Ultimately, EAC determination regarding whether a voting system is certified will be published. However, the information provided to the EAC to support a grant of certification will be made public subject to the requirements of the Freedom of Information Act and the Trade Secrets Act. A detailed guide regarding the publication of information collected for this program is found in Chapter 10 of the EAC's Voting System Testing and Certification Manual. A copy of the manual has been provided.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The EAC will provide for the secure collection of information using its website. Submission will be accepted using a secure, automated, form-fillable web application. Information will also be accepted via e-mail from identified parties. The EAC is committed to making the submission of information to the agency as secure, efficient, and easy as possible through the use of technology. Ultimately, given the technical sophistication of the group from which we are collecting information, the limited nature of the collection and the small number of participants, electronic filing is an ideal methodology.

**4. Describe efforts to identify duplication.**

The Voting System Testing and Certification Program is new to the EAC. It is the first Federal program of its type. As such, the information we seek has not been collected and is not available from other Federal agencies. As for collection within the program itself, the amount of information sought in Paper Work Reduction Act collections is not significant. This fact, itself, reduces the potential for duplication. Further, in developing the program, the EAC was focused on efficiency. The EAC will assign each participant an identification number. This number can be used to pull all information submitted by the participant and, thus, prevent them from having to provide previously provided information in new contexts or collection efforts.

**5. If the collection of information involves small businesses or other small entities, describe**

003852

**the methods used to minimize burden.**

This collection of information does not have a significant economic effect on a substantial number of small entities; however, some small businesses or other small entities are among potential respondents. The EAC has made efforts to limit the information requested and burden on all participants. The information sought is limited to that information necessary to certify and maintain a certification for voting systems.

**6. Describe the consequences to the Federal program or policy activities if the collection is not conducted or is conducted less frequently.**

If the EAC does not collect this information, it will be unable to provide for the certification and decertification of voting system hardware and software in accordance with the Help America Voting Act of 2002. As no national body presently exists to perform this function, such a consequence could have a significant negative impact on the nation's election administration.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

*(a) Requiring respondents to report information to the agency more often than quarterly.*

Not applicable in this collection.

*(b) Requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it.*

Not applicable in this collection

*(c) Requiring respondents to submit more than an original and two copies of any document.*

Not applicable in this collection.

*(d) Requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than 3 years.*

Not applicable in this collection.

*(e) In connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study.*

Not applicable in this collection.

*(f) Requiring the use of statistical data classification that has been reviewed and approved by OMB.*

009853

Not applicable in this collection.

*(g) That includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use.*

This collection does not include a pledge of confidentiality not supported by statute or regulation.

*(h) requiring respondents to submit proprietary trade secrets or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.*

This collection does require the collection of proprietary or trade secret information protected by agency procedures. Proprietary technical information on voting systems is necessary to make a determination on certification. The EAC has set procedures and policy for the identification and protection of this information consistent with the requirements of the Freedom of Information Act and the Trade Secrets Act. These policies are laid out in Chapter 10 of the EAC Voting System Testing and Certification Manual. A copy of this manual has been provided.

**8. Provide a copy of the PRA Federal Register notice that solicited public comments on the information collection prior to this submission. Summarize the public comments received in response to that notice and describe the actions taken by the agency in response to those comments. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

The EAC is requesting an emergency approval to collect this information. We are requesting a waiver of the 60-day and 30-day *Federal Register* notices required in 5 CFR 1320.13(d) in order to ensure that we comply the Help America Vote Act at meet the needs of the public. However, we intend to publish the program manual and IC forms for a period of 30 days starting on or about October 1, 2006. This will be done before any information collection begins on December 7, 2006.

We have contacted specific manufacturers of voting systems to gather information on the burdens imposed by this collection. We have also gathered them together to discuss the program as a whole and expect another (second) meeting with program participants before the collection of information commences.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

We will not provide any payment or gift to respondents in this collection.

**10. Describe any assurance of confidentiality provided to respondents and the basis for**

009854

**assurance in statute, regulation, or agency policy.**

No assurance of confidentiality has been provided to respondents. Information provided will be made public consistent with the requirements of the Freedom of Information Act and the Trade Secrets Act.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

The collection does not include sensitive or private questions.

**12. Provide an estimate in hours of the burden of the collection of information.**

- (a) Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Generally, estimates should not include burden hours for customary and usual business practices.*
- (b) If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.*
- (c) Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate. The cost of contracting out or paying outside parties for information collection activities should not be included here.*

The EAC will be collecting information on voting systems and their manufacturers. The agency will use three forms to collect this information (1) a manufacturer registration form, (2) a voting system certification application form and (3) a field anomaly reporting form. The program requires the submission and retention of other information regarding the manufacturer and its business practices, the technical aspects of its voting systems and the testing of its voting systems. However this information is not part of this burden analysis as its creation is part of the industry's customary and usual business practices. Moreover, much of the information is and was required by state and local governments, independent of, and prior to, any federal requirement proposed by this voluntary program. The estimated total annual hourly burden on the voting system manufacturing industry and election officials is 114 hours. The estimated annual cost burden to these parties is \$4,610.

- **Manufacturer Registration Form:** The EAC estimates that there are approximately 13 potential respondents. This estimate reflects the number of known entities manufacturing and selling voting systems in the United States. This form is required to be submitted once for participation in the EAC's program. However, it is estimated that based upon organizational changes the form will be amended once every 4 years. Thus, submission is expected once every 4 years or .25 annually. Based upon discussions with industry, completion of this form is estimated to take approximately 3 hours. Therefore, the total estimated, annual, hourly burden for this form will be 9.75 hours (13 respondents X 3

009855

hours X .25 annual rate). Based on an hourly cost factor of \$80, the total cost to the industry of this information collection is \$780.

- Voting System Certification Application Form: The EAC estimates that there are approximately 13 potential respondents. This estimate reflects the number of known entities selling and manufacturing voting systems in the United States. This form is required to be submitted each time a voting system is submitted for EAC certification. The number of submissions will vary significantly between respondents and from year to year. Based upon the experience of the National Association of State Election Directors, a private organization that previously operated a similar program, the EAC estimates it will receive an average of 54 submissions per year. This averages over 4 submissions per potential respondents, annually. Based upon discussions with industry, completion of this form is estimated to take approximately .5 hours. Therefore, the total annual hourly burden for this form will be 27 hours. Based on an hourly cost factor of \$80, the total cost to the industry of this information collection is \$2,160.
- Field Anomaly Reporting Form. This form may be used by election officials (state employees), in a purely voluntary capacity, to report problems with certified voting systems. Respondents are election officials who have witnessed a voting system anomaly. This is a new Federal program. No historic data exists to quantify the number of respondents. There are approximately 8,100 election officials in the United States. Assuming an anomaly rate of 1% per election year, the EAC estimates the submission of 81 responses and respondents per election year. As Federal elections take place once every 2 years, the annual submission and respondent estimate is 41, annually. The EAC estimates that this form will take 2 hours to complete. Therefore, the total annual hourly burden for this form will be 82 hours a year. Based upon an average hourly cost factor of \$25 for election officials, the total estimated cost of such submissions is \$2,050.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

- (a) The cost estimate should be split into two components: (1) a total capital and start-up cost component (annualized over its expected useful life) and (2) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information [including filing fees paid]. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.*
- (b) If cost estimates are expected to vary widely, agencies should present ranges of cost burden and explain the reasons for the variance. The cost of purchasing or contracting out information collection services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents.*

*(fewer than 10), utilize the 60-day pre-OMB submission public comment process and use existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.*

- (c) Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.*

The EAC has identified no “non-hour” cost burdens for this collection of information that are not part of the effected industry’s customary and usual business practices.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated annual cost to the Federal Government is \$902,000. This estimate includes \$624,000 for technical experts to review and accept collections, \$180,000 for personnel to administer and manage collections, \$46,000 in training costs, \$42,000 for program printing and website management and \$10,000 for equipment and overhead.

- We estimate \$624,000 to provide for technical experts to review and accept collections. These experts have an average pay \$100 an hour. We expect to have six experts working half time (1040 Hrs a year).
- We estimate \$180,000 for personnel to administer and manage the collections. Two full time personnel will be assigned to this program. With an average cost (pay and benefits) of approximately \$90,000 a year.
- We estimate \$46,000 in training program costs. This includes travel costs, training program development costs and training personnel.
- We estimate \$42,000 for program printing and website development, maintenance and administration.
- We estimate \$10,000 for equipment costs and overhead.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection or the program upon which it is based has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

Not applicable to this collection.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

009857

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the “Certification for Paperwork Reduction Act Submissions.”

**B. COLLECTIONS OF INFORMATION EMPLOYING STATISTICAL METHODS**

*(This collection does not employ statistical methods)*

Appendix D, Field Anomaly Reporting Form.....	79

## 1. Introduction

- 1.1. Background.** The Federal Election Commission adopted the first formal set of voluntary national standards for computer-based voting systems in January 1990. At that time, no national program or organization existed to test and certify such systems to the standards. The National Association of State Election Directors (NASSED) stepped up to fill this void in 1994. NASSED is an independent, non-governmental organization of state election officials. The organization formed the nation's first national program to test and qualify voting systems to the new Federal standards. The organization worked for over a decade, on a strictly voluntary basis, to help assure the reliability, consistency and accuracy of voting systems fielded in the United States. In late 2002, Congress passed the Help America Vote Act of 2002 (HAVA). HAVA created the U.S. Election Assistance Commission (EAC) and assigned to the EAC the responsibility for both setting voting system standards and providing for the testing and certification of voting systems. This mandate represented the first time the Federal government provided for the voluntary testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC has developed the Federal Voting System Testing and Certification Program (Certification Program).
- 1.2. Authority.** HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software by accredited laboratories." The EAC has the sole authority to grant certification or withdraw certification at the Federal level. This includes the authority to grant, maintain, extend, suspend and withdraw the right to retain or use any certificates, marks or other indicators of certification.
- 1.3. Scope.** This manual provides the procedural requirements of the EAC Voting System Testing and Certification Program. While participation in the program is voluntary, adherence to the program's procedural requirements is mandatory for participants. The procedural requirements of the manual supersede any prior voting system certification requirements issued by the EAC.
- 1.4. Purpose.** The primary purpose of this program is to provide for the testing and certification of voting systems to specified Federal standards consistent with the requirements of HAVA Section 321(a)(1). However, the program also serves to:
- 1.4.1. Support state certification programs;
  - 1.4.2. Support local election officials in the areas of acceptance testing and pre-election system verification;
  - 1.4.3. Increase quality control in voting system manufacturing; and
  - 1.4.4. Increase voter confidence in the use of voting systems.
- 1.5. Manual.** This manual is a comprehensive presentation of the EAC Voting System Testing and Certification Program. It is intended to establish all of the program requirements.

009861

- 1.5.1. Contents. The contents of the manual serve as an overview to the program itself. The manual contains the following chapters:
- 1.5.1.1. *Manufacturer Registration*. Under the program, manufacturers are required to register with the EAC prior to participation. This registration provides the EAC with needed information and requires the manufacture to agree to the requirements of the Certification Program. This chapter sets out the requirements and procedure for registration.
  - 1.5.1.2. *When Voting Systems Must Be Submitted for Testing and Certification*. All systems must be submitted consistent with this manual before they may receive a certification from the EAC. This chapter discusses the various circumstances that require submission in order to obtain or maintain a certification.
  - 1.5.1.3. *Certification Testing and Review*. Under this program, the testing and review process requires the completion of an application, employment of an EAC accredited laboratory for system testing, and technical analysis of the laboratory test report by the EAC. The result of this process is an Initial Decision on Certification. This chapter discusses the required step for voting system testing and review.
  - 1.5.1.4. *Grant of Certification*. If an initial decision to grant certification is made, the manufacturer must take additional steps before it may be issued a certification. These steps require the Manufacturer to document the performance of a trusted build, the deposit of software into a repository and the creation of system identification tools. This chapter outlines the action that manufacturers must take to receive a certification and its post certification responsibilities.
  - 1.5.1.5. *Denial of Certification*. If an initial decision to deny certification is made, the manufacturer has certain rights and responsibilities under the program. This chapter contains procedures for requesting reconsideration, opportunity to cure defects, and appeal.
  - 1.5.1.6. *Decertification*. Decertification is the process by which the EAC revokes a Certification it previously granted to a voting system. It is an important part of the Certification Program, as it serves to ensure that the requirements of the program are followed and that certified voting systems fielded for use in our Federal elections maintain the same level of quality as those presented for testing. This chapter sets procedures for decertification and explains the manufacturer's rights and responsibilities during that process.
  - 1.5.1.7. *Quality Monitoring Program*. Under the Certification Program, EAC will implement a quality monitoring process that will help ensure that voting systems certified by the EAC are the same systems sold by manufacturers. The quality monitoring process is a mandatory part of the program and

includes elements such as fielded voting system review, anomaly reporting, and manufacturing site visits. This chapter sets forth the requirements of the Quality Monitoring Program.

1.5.1.8. *Interpretation.* An interpretation is a means by which a registered manufacturer or VSTL may seek clarification on a specific Voluntary Voting System Guideline standard. This chapter outlines the policy, requirements, and procedure for requesting an Interpretation.

1.5.1.9. *Trade Secrets, Confidential Commercial and Personal Information.* Federal law protects certain types of information individuals provided the government from release. This chapter outlines the program's policies, sets procedures and discusses responsibilities associated with the public release of potential protected commercial information.

1.5.2. Maintenance and Revision. This manual sets the procedural requirements for a new Federal program and is expected to be improved and expanded as experience and circumstances dictate. The manual will be reviewed periodically and updated to meet the needs of the EAC, Manufactures, VSTLs, election officials and public policy. The EAC is responsible for revisions of this document. All revisions will be made consistent with Federal law. Substantive input from stakeholders and the public will be sought whenever possible, at the discretion of the agency. Changes in policy requiring immediate implementation will be noticed via policy memorandum and issued to each registered manufacturer. Changes, addendums, or updated versions will also be posted to the EAC website at [www.eac.gov](http://www.eac.gov).

**1.6. Program Methodology.** EAC's Voting System Testing and Certification Program is but one part of the overall conformity assessment process that includes companion efforts at the state and local levels:

1.6.1. Federal and State Roles. The process to assure that voting equipment meets the technical requirements is a distributed, cooperative effort of federal, state and local officials in the United States. Working with voting equipment manufacturers these officials each have unique responsibility for assuring that the equipment a voter uses on Election Day meets specific requirements.

1.6.1.1. The EAC testing and certification program plays a vital role in the process. The EAC program has primary responsibility for assuring that system designs meet the foundational requirements for all voting equipment in the US.

1.6.1.2. State officials have responsibility for testing voting systems to ensure that they will support the specific requirements of each individual state. Typically state officials will perform mock elections to confirm that a voting system will perform as intended within the election management process of that particular state.

009863

- 1.6.1.3. State or local officials are responsible for making the final purchase choice. They are responsible to decide which system offers the best fit and total value for their specific state or local jurisdiction.
- 1.6.1.4. In addition, state or local officials are also responsible for acceptance testing, to assure that the equipment delivered is identical to the equipment certified on the federal and state level is fully operational and meets the contractual requirements of the purchase.
- 1.6.1.5. State or local officials perform pre-election logic and accuracy testing to confirm that equipment is operating properly and is unmodified from its certified state.
- 1.6.2. Conformity Assessment, Generally. Conformity assessment is a system established to ensure that a product or service meets the requirements that apply to it. Many conformity assessment systems exist to protect the quality and assure compliance with requirements of products and services. All conformity assessment systems attempt to answer some simple yet difficult questions:
  - 1.6.2.1. *What specifications are required of an acceptable system?* For voting systems, the EAC voting system standards (VVSG and VSS) address this issue. States and local jurisdiction also have supplementing standards.
  - 1.6.2.2. *How are systems tested against required specifications?* The EAC Voting System Testing and Certification Program is a central element of the larger conformity assessment system. The program, as set forth in this manual, provides for the testing and certification of voting systems to identified versions of the VVSG. The testing and certification program's purpose is to assure that state and local jurisdictions receive voting systems that meet the requirements of the VVSG.
  - 1.6.2.3. *Are the testing authorities qualified to make an accurate evaluation?* The EAC accredits Voting System Testing Laboratories (VSTLs), after the National Institute of Standards and Technology (NIST) National Voluntary Lab Accreditation Program (NVLAP) has reviewed their technical competence and lab practices, to ensure these test authorities are fully qualified. Furthermore, EAC technical experts review all test reports from accredited laboratories to ensure accurate and complete evaluation. Many states provide similar reviews of laboratory reports.
  - 1.6.2.4. *Will Manufacturers deliver units within manufacturing tolerances to those tested?* The VVSG and this manual require that vendors have appropriate change management and quality control processes to control the quality and configuration of their products. The Certification Program provides mechanisms for the EAC to verify manufacturer quality processes through

field system testing and manufacturing site visits. States have implemented policies for acceptance of delivered units.

- 1.7. Program Personnel.** All EAC personnel and contractors associated with this program will be held to the highest ethical standards. All agents of the EAC involved in the certification program will be subject to a conflict of interest reporting and review, consistent with Federal law and regulation.
- 1.8. Program Records.** The EAC Program Director is responsible for maintaining accurate records to demonstrate that the testing and certification program procedures have been effectively fulfilled and to ensure the traceability, repeatability, and reproducibility of testing and test report review. All records will be maintained, managed, secured, stored, archived and disposed of in accordance with Federal law, regulation and procedures of the EAC.
- 1.9. Submission of Documents.** Any documents submitted pursuant to the requirements of this manual shall be submitted:
- 1.9.1. Electronically, either via secure e-mail or physical delivery of CD-ROM, unless otherwise specified;
  - 1.9.2. In an unalterable Microsoft Word or Adobe PDF format.
  - 1.9.3. Using an electronic signature. Documents that require an authorized signature shall be signed with the electronic signature (digitized) of an authorized management representative and must meet any and all subsequent requirements established by the Program Director regarding security.
  - 1.9.4. If via physical delivery, shall be sent by certified mail (or similar means that allow tracking) to:  

Testing and Certification Program Director,  
U.S. Election Assistance Commission  
1225 New York Ave, Suite 1100  
Washington, DC 20005
- 1.10. Receipt of Documents.** For the purposes of this manual, a document, notice or other communication is considered received by a manufacturer upon the earlier of:
- 1.10.1. The actual, documented date the correspondence was received (either electronically or physically) at the manufacturer's place of business; or
  - 1.10.2. The date of constructive receipt for the communication. For electronic correspondence, documents will be constructively received the day after the date sent. For mail correspondence, document will be constructively received three days after the date sent.

009865

1.10.3. The term receipt shall mean the date a document or correspondence arrived (either electronically or physically) at the Manufacturer's place of business. Arrival does not require that an agent of the manufacturer opened, read or review the correspondence.

**1.11. Records Retention.** The manufacturer is responsible for ensuring that all documents submitted to the EAC or that otherwise serve as the basis for the certification of a voting system are retained. A copy of all such records shall be retained as long as the voting system is in use or for sale in the United States and for three years thereafter.

**1.12. Publication and Release of Documents.** The EAC will release documents consistent with the requirements of Federal law. It is EAC policy to make the certification process as open and public as possible. To this end, any documents submitted under this program and not protected from release by law, will be made available to the public. The primary means for making this information available is through the EAC website.

**1.13. Definitions.** For the purpose of this manual, the terms listed below have the following definitions.

Appeal: A formal process by which the EAC is petitioned to reconsider a final agency decision.

Appeal Authority: The individual or individuals appointed to serve as the determination authority on appeal.

Build Environment: The disk or other media which holds the source code, compiler and other necessary files for the compilation and on which the compiler will store the resulting executable code. A compiler is a computer program that translates programs expressed in a high-order language into their machine language equivalents.

Certificate of Conformance: The certificate issued by the EAC when a system has been found to meet the requirements of the VVSG. The document conveys certification of a system.

Commission: The U.S. Election Assistance Commission, as an agency.

Commissioners: The serving commissioners of the U.S. Election Assistance Commission.

Days: The term days shall refer to calendar days, unless otherwise noted. When counting days, for the purpose of submitting or receiving a document, the count shall begin on the first full calendar day after the day the document was received.

Digital Signature: The signature of a file produced using a HASH algorithm. A digital signature creates a value that is "Computationally infeasible" for two different files less than 264 bits in size produce the same value. Digital signatures are utilized to verify that files are unmodified from their original. For the purposes of this manual, the HASH algorithm shall be the minimum current recommendation of the NIST NSRL, which is currently the Secure Hash Algorithm (SHA-1) specified in FIPS 180-1.

Disk Image: An exact copy of the entire contents of a computer disk.

Election Official: A state or local government employee, who has as one of his or her primary duties the management or administration of a Federal Election.

Federal Election: Any primary, general, run-off or special election in which a candidate for Federal office (President, Senator or Representative) appears on the ballot.

Fielded Voting System: A voting system purchased or leased by a state or local government that is being use in a Federal Election.

Installation Disk: A computer disk containing program files and software to install them onto a computer or other device.

Memorandum for the Record: A written statement drafted to document an event or finding, without a specific addressee other than the pertinent file.

Manufacturer: The entity with ownership and control over a voting system submitted for certification.

Mark of Conformance: A uniform notice permanently posted on a voting system which signifies that it has been certified by the EAC.

Proprietary Information: Commercial information or trade secrets protected from release under the Freedom of Information Act and the Trade Secrets Act.

Receipt (of a document): For the purposes of this manual

Technical Reviewers: Technical experts in the areas of voting system technology and conformity assessment used by the EAC to provide expert guidance.

Testing and Certification Decision Authority: The EAC Executive Director or individual appointed by the Executive Director authorized to make final agency determinations on certification.

Testing and Certification Program Director: The individual appointed by the EAC Executive Director to administer and manage the Testing and Certification Program.

Voting System: The total combination of mechanical, electromechanical and electronic equipment that is used to define ballots; to cast and count votes; to report or display election results; to connect the voting system to the voter registration system; and to maintain and produce any audit trail information.

Voting System Test Laboratories: Laboratories accredited by the EAC to test voting systems to the VVSG, consistent with the requirements of this manual.

Voting System Standards: Voluntary voting system standards developed by the Federal Election Commission. Voting System Standards have been published twice, once in 1990 and again in 2002. The Help America Vote Act made the 2002 Voting System Standards EAC guidance. All new voting system standards are issued by the EAC as Voluntary Voting System Guidelines.

Voluntary Voting System Guidelines: Voluntary voting system standards developed, adopted and published by the EAC. The guidelines are identified by version number and date.

**1.14. Acronyms and Abbreviations.** For the purpose of this manual, the acronyms and abbreviations listed below represent the following terms.

Certification Program: The EAC Voting System Testing and Certification Program

EAC: United States Election Assistance Commission

Decision Authority: Testing and Certification Decision Authority

HAVA: Help America Vote Act of 2002

Labs or Laboratories: Voting System Test Laboratories

NIST: National Institute of Standards and Technology

NVLAP: National Voluntary Laboratory Accreditation Program

Program Director: Director of the EAC's Testing and Certification Program

VSTL: Voting System Test Laboratory

VSS: Voting System Standards

VVSG: Voluntary Voting System Guidelines

009868

## 2. Manufacturer Registration

**2.1. Overview.** Manufacturer Registration is the process by which voting system manufacturers make initial contact with the EAC and provide information essential to participate in the EAC's voting system testing and certification program. Before a manufacturer of a voting system can submit an application to have a voting system certified by the EAC, the vendor must be registered. This process requires the manufacturer to provide certain contact information and agree to certain requirements of the Certification Program. Once successfully registered, the manufacturer will receive an identification code.

**2.2. Registration Required.** In order to submit a voting system for certification or otherwise participate in the EAC Voluntary Voting System Certification Program, a manufacturer must register with the EAC.

**2.3. Registration Requirements.** The registration process will require the voting system manufacturer to provide certain information to the EAC. This information is necessary to enable the EAC to administer the Certification program and communicate effectively with the Manufacturer. The registration process also requires the Manufacturer to agree to certain certification program requirements. These requirements deal with some of the manufacturer's duties and responsibilities under the program. In order for this program to succeed it is vital that a manufacturer know and assent to these duties at the outset of the program.

**2.3.1. Information.** Manufactures are required to provide the following information:

2.3.1.1. The manufacturer's organizational information, including:

2.3.1.1.1. The official name of the manufacturer;

2.3.1.1.2. Address of manufacturer's official place of business;

2.3.1.1.3. A description of how the manufacturer is organized (i.e. type of corporation or partnership);

2.3.1.1.4. Names of officers and/or members of the board of directors;

2.3.1.1.5. Names of any and all partners;

2.3.1.1.6. Identification of any individual, organization or entity with a controlling ownership interest in the manufacturer;

2.3.1.2. The identity of an individual authorized to represent and make binding commitments and management determinations for the Manufacturer (management representative). The information required for the individual includes:

2.3.1.2.1. Name and title;

009869

- 2.3.1.2.2. Mailing and physical addresses;
- 2.3.1.2.3. Telephone number, fax number and email address.
- 2.3.1.3. The identity an individual authorized to provide technical information on behalf of the manufacturer (technical representative). The information required for the individual includes:
  - 2.3.1.3.1. Name and title;
  - 2.3.1.3.2. Mailing and physical addresses;
  - 2.3.1.3.3. Telephone number, fax number and email address
- 2.3.1.4. The Manufacturer's written policies regarding its quality assurance system. This policy must be consistent with guidance provided in the VVSG and this manual.
- 2.3.1.5. The Manufacturer's written polices regarding internal procedures for controlling and managing changes to and versions of its voting systems. Such polices shall be consistent with this manual and guidance provided in the VVSG.
- 2.3.1.6. The Manufacturer's written polices on document retention. Such policies must be consistent with the requirements of this manual.
- 2.3.1.7. A list of production facilities used by the Manufacturer and the name and contact information of a person at each facility. The information required for each individual, includes:
  - 2.3.1.7.1. Name and title;
  - 2.3.1.7.2. Mailing and physical addresses; and
  - 2.3.1.7.3. Telephone number, fax number and email address.
- 2.3.2. Agreements. Manufacturers are required to take or abstain from certain actions in order to protect the integrity of the certification program and promote quality assurance. Manufacturers are required to agree to the following program requirements:
  - 2.3.2.1. Represent a voting system as certified only when authorized by the EAC and consistent with the procedures and requirements of this manual.

009870

- 2.3.2.2. Produce and permanently affix an EAC certification label to all production units of the certified system. Such labels must meet the requirements put forth in Chapter 5.
- 2.3.2.3. Notify the EAC of changes to any system previously certified by the EAC pursuant to the requirements of this Manual (see Chapter 3). Such systems shall be submitted for testing and additional certification when required.
- 2.3.2.4. Permit an EAC representative to verify manufacturer quality control, by cooperation with EAC efforts to test and review fielded voting systems consistent with Section 8.6 of this Manual.
- 2.3.2.5. Permit an EAC representative to verify manufacturer quality control, by conducting periodic inspections of manufacturing facilities consistent with Chapter 8 of this Manual.
- 2.3.2.6. Cooperate with any EAC inquiries and investigations into a certified systems compliance with VVSG standards or the procedural requirements of this manual consistent with Chapter 10.
- 2.3.2.7. Report to the Program Director any known malfunction of a voting system holding an EAC Certification. A malfunction is failure of a voting system, not caused by operator or administrative error, which causes the system to fail or otherwise not operate as designed.
- 2.3.2.8. Certify that the entity is not bared or otherwise prohibited by statute, regulation or ruling from doing business in the United States.
- 2.3.2.9. Adhere to all procedural requirements of this Manual.

**2.4. Registration Process.** Generally, registration is accomplished through use of the EAC registration form. Once a registration form and other required registration documents have been received by the EAC, the information is reviewed for completeness and approved.

2.4.1. Application Process. To become a registered voting system manufacturer, one must apply by submitting a Manufacturer Registration Application Form (Appendix A). This form will be used as the means for the manufacturer to provide the information and agree to the responsibilities required in section 2.3, above.

2.4.1.1. *Application Form.* In order for the EAC to accept and process the registration form:

2.4.1.1.1. All fields must be completed by the manufacturer;

009871

- 2.4.1.1.2. All required attachments prescribed by the form and this manual are identified, complete and timely forwarded to the EAC (i.e. Manufacturer's quality control and system change policies); and
- 2.4.1.1.3. The application form is affixed with the signature (including a digital representation of a hand written signature) of the authorized representative of the vendor.

2.4.1.2. *Availability and Use of the Form.* The Manufacturer Registration Application Form may be accessed through the EAC web site at [www.eac.gov](http://www.eac.gov). Instructions for completing and submitting the form are included on the website. The website will also provide contact information regarding questions about the form or the application process.

#### 2.4.2. EAC Review Process.

- 2.4.2.1. Once the application form and required attachments have been submitted, the applicant will receive an acknowledgement that the EAC has received the submission and that the application will be processed.
- 2.4.2.2. If a form is submitted incomplete or an attachment is not provided, the EAC will notify the manufacturer and request the information. Registration applications will not be processed unless they are complete.
- 2.4.2.3. Upon receipt of the completed registration form and accompanying documentation, the EAC will review the information for sufficiency. If the EAC requires clarification or additional information, the EAC will contact the manufacturer and request the needed information.
- 2.4.2.4. Upon satisfactory completion of a registration application's sufficiency review, the EAC will notify the Manufacturer that it has been registered.

**2.5. Registered Manufacturers.** Once a manufacturer has received notice that it is registered, it will receive an identification code, password and will be eligible to participate in the voluntary voting system certification program.

2.5.1. Manufacturer Code. Registered manufacturers will be issued a unique, three-letter identification code. This code will be used to identify the manufacturer and its products.

2.5.2. Continuing Responsibility to Report. Registered Manufacturers are required to keep all registration information up-to-date. Manufacturers must submit a revised application form to the EAC within 30 days of any changes to the information required on the

application form. Manufacturers will remain registered participants in the program during this up-date process.

2.5.3. Program Information Updates. Registered manufacturers will be automatically provided timely information relevant to the certification program.

2.5.4. Website Postings. The EAC will add the Manufacturer to the EAC listing of registered voting system Manufacturers publicly available at [www.eac.gov](http://www.eac.gov).

**2.6. Suspension of Registration.** Manufacturers are required to establish policies and operate within the EAC certification program consistent with the procedural requirements laid out in this Manual. When manufacturers are engaging in management activities that violate the program's requirements, their registration may be suspended until such time as the problem is remedied.

2.6.1. Procedures. Where a manufacturer's activities violate the procedural requirements of this manual they will be notified of the violations, given an opportunity to respond and provided the steps required to bring themselves into compliance.

2.6.1.1. *Notice*. Manufacturers shall be provided written notice that they have taken action inconsistent with or failed to act in violation of the requirements of this manual. The notice will state the violations and the specific steps required to cure them. The notice will also provide them with 30 days (or a greater period of time as stated by the Program Director) to (1) respond to the notice and/or (2) cure the defect.

2.6.1.2. *Manufacturer Action*. The Manufacturer is required to either timely respond to the notice (demonstrating that it was not in violation of program requirements) or timely cure the violations identified. In any case, Manufacturer action must be approved by the Program Director to prevent suspension.

2.6.1.3. *Non-Compliance*. If the Manufacturer fails to timely respond, is unable to provide a cure or response acceptable the Program Director, or otherwise refuses to cooperate, the Program Director may suspend the Manufacturer's registration. The Program Director shall issue a notice of his or her intent to suspend and provide the Manufacturer five working days to object to the action and submit information in support of the objection.

2.6.1.4. *Suspension*. After notice and opportunity to be heard (consistent with the above), the Program Director may suspend a Manufacturer's registration. The suspension shall be noticed in writing. The notice must inform the Manufacturer of the steps that can be taken to remedy the violations and lift the suspension.

009873

2.6.2. Effect of Suspension. A suspended Manufacturer may not submit a system for certification under this program. A suspension shall remain in effect until lifted. Manufacturers always have the right to remedy a non-compliance and lift a suspension consistent with EAC guidance. Failure of a Manufacturer to follow the requirements of this section may also result in decertification of voting systems consistent with Chapter 7 of this Manual.

DRAFT

### 3. When Voting Systems Must Be Submitted for Testing and Certification.

**3.1. Overview.** An EAC Certification signifies that a voting system has been successfully tested to identified, voting system standards adopted by the EAC. Only the EAC can issue a Federal Certification. Ultimately, systems must be submitted for testing and certification under this program to receive this certification. Systems will usually be submitted when (1) they are new to the marketplace, (2) they have never before received an EAC Certification, (3) they are modified and (4) the manufacturer wishes to test a previously certified system to a different (newer) standard.

**3.2. What is an EAC Certification?** Certification is the process by which the EAC, through testing and evaluation conducted by an accredited Voting System Test Laboratory (VSTL), validates that a voting system meets the requirements set forth in existing voting system testing standards (VSS or VVSG), and performs according to the manufacturer's specifications for the system. An EAC Certification may only be issued by the EAC in accordance with the procedures laid out in this manual. Certifications issued by other bodies (e.g. NASED and state certification programs) are not EAC Certifications.

**3.2.1. Types of voting systems certified.** The EAC Certification Program is designed to test and certify electromechanical and electronic voting systems. The EAC will not accept for certification review voting systems that do not contain any electronic components. Ultimately, the determination of whether a voting system meets these requirements is a determination of the EAC.

**3.2.2. Voting system standards.** Voting systems certified under this program are tested to a set of voluntary standards providing requirements that voting systems must meet to receive a Federal Certification. Presently, these standards are referred to as Voluntary Voting System Guidelines (in the past they were called Voting System Standards).

**3.2.2.1. Versions—availability and identification.** Voluntary Voting System Guidelines (or applicable Voting System Standards) are published by the EAC and available on the EAC website ([www.eac.gov](http://www.eac.gov)). The standards will be routinely updated. Versions will be identified by version number and/or release date.

**3.2.2.2. Versions—basis for certification.** The EAC will promulgate which version or versions of the standards it will accept as the basis for testing and certification. This may be accomplished through the setting of an implementation date for a particular version's applicability or the setting a date by which testing to a particular version is mandatory. The EAC will only certify voting systems tested to standards it has identified as valid for certification.

**3.2.2.2.1. End date.** When a version's status as the basis of an EAC Certification is set to expire on a date certain, the submission of the system's test report will be the controlling event (See Chapter 4). This means the system's test report must be received by the EAC

on or before the end date to be certified to the terminating standard.

3.2.2.2.2. **Start date.** When a version's status as the basis of an EAC Certification is set to begin on a date certain, the submission of the system's application for certification will be the controlling event (See Chapter 4). This means the system's application, requesting certification to the new standard, will not be accepted by the EAC until the start date.

3.2.2.3. **Version—manufacturer's option.** When the EAC has authorized certification to more than one version of the standards, the manufacturer must choose which version it wishes to have its voting system tested against. The voting system will then be certified to that version of the standard. Manufacturers must ensure that all applications for certification identify a particular version of the standards.

3.2.2.4. **Emerging technologies.** If a voting system or component thereof is eligible for a certification under this program (see Section 3.2.1.) and employs technology which is not addressed by a presently accepted version of the VVSG or VSS, the system shall be subjected to full integration testing and testing to ensure that it operates to the manufacturer's specifications. Information on emerging technologies will be forwarded to the U.S. Election Assistance Commission's Technical Guidelines Development Committee.

3.2.3. **Significance of an EAC Certification.** An EAC certification is an official recognition that a voting system (in a specific configuration) has been tested to and met an identified set of Federal voting standards. An EAC Certification is not:

3.2.3.1. an endorsement of a manufacturer, voting system or any of the system's components;

3.2.3.2. a Federal warranty of the voting system or any of its components;

3.2.3.3. a determination that a voting system, when fielded, will meet all HAVA requirements;

3.2.3.4. a substitute for State or local certification and testing;

3.2.3.5. a determination that the system is ready for use in an election; or

3.2.3.6. a determination that any particular component of a certified system is itself certified for use outside the certified configuration.

**3.3. Effect of EAC Certification Program on Other National Certifications.** Prior to the creation of the EAC Certification Program, national voting system qualification was conducted

by a private membership organization, the National Association of State Election Directors (NASED). NASED offered a qualification for voting systems for over a decade, using standards issued by the Federal government. EAC's certification program does not repeal NASED issued qualifications. All voting systems previously qualified under the NASED program retain their NASED qualification consistent with state law. In any event, a NASED qualified voting system is not EAC Certified and is treated like an uncertified system for the purposes of this program.

**3.4. When Certification is Required under the Program.** In order to obtain or maintain an EAC Certification, manufacturers must submit a voting system for testing and certification under this program. Such action is usually required for (1) new systems not previously tested to any standard; (2) existing systems not previously certified by the EAC; (3) previously certified systems that have been modified; or (4) previously certified systems which the manufacturer seeks to upgrade to a higher standard (i.e. more recent version of the VVSG).

3.4.1. New System Certification. New systems are defined, for the purposes of this manual, as voting systems which have not been previously tested to applicable Federal standards. New voting systems must be fully tested and submitted to the EAC per the requirements of Chapter 4 of this manual.

3.4.2. Systems not previously EAC Certified. This term describes any voting system not previously certified by the EAC. This includes systems previously tested and qualified by NASED or systems previously test and denied certification by the EAC. Such systems must be fully tested and submitted to the EAC per the requirements of Chapter 4 of this manual.

3.4.3. Modifications. A modification is any change to a *previously EAC Certified voting system's* hardware, software or firmware. Modifications to voting systems will require testing and review by the EAC in accordance with the requirements of Chapter 4 of this manual.

3.4.4. Certification Upgrade. This term defines any system previously certified by the EAC, but submitted for additional testing and certification to a higher standard (i.e. to a newer version of the VVSG). Such systems must be tested to the new standards and submitted to the EAC per Chapter 4 of this manual.

**3.5. Provisional, Pre-Election Emergency Modifications.** In order to deal with extraordinary, pre-election, emergency situations, the EAC has developed a special provisional modification process. This process is **only** to be used for the emergency situations indicated, and **only** when there is a clear and compelling need for temporary relief until the regular certification process can be followed.

3.5.1. Purpose. The purpose of this section is to allow a mechanism within the EAC Certification Program for manufacturers to modify EAC certified voting systems in emergency situations immediately prior to an election. This situation arises when a modification to a voting system is required and an election deadline is imminent,

009877

preventing the completion of the full certification process (and State and/or local testing process) in time for Election Day. In such situations the EAC may issue a waiver to the manufacturer, granting it leave to make the modification without submission for modification testing and certification.

- 3.5.2. General Requirements. A request for an emergency modification waiver may only be made by a manufacturer *in conjunction* with the State or local election official whose jurisdiction(s) would be adversely affected if the requested modification were not implemented before Election Day. Requests must be submitted at least five calendar day prior to an election. Only systems previously certified are eligible for such a waiver. To receive a waiver a manufacturer must demonstrate:
- 3.5.2.1. The modification is functionally or legally required, such that the system cannot be fielded in an election without the change.
  - 3.5.2.2. The voting system requiring modification is need by state or local election officials to conduct a pending Federal election.
  - 3.5.2.3. The voting system to be modified has previously been certified by the EAC.
  - 3.5.2.4. The modification cannot be tested by a VSTL and submitted to the EAC for certification, consistent with the procedural requirements of this manual, at least 30 days before the pending Federal election.
  - 3.5.2.5. Relevant state law requires Federal certification of the requested modification.
  - 3.5.2.6. The manufacturer has taken steps to ensure that the modification will properly function as designed, is suitably integrated with the system and otherwise will not negatively affect system reliability, functionality and accuracy.
  - 3.5.2.7. The Manufacturer has completed as much of the evaluation testing as possible for the modification and has provided the results of such testing to the EAC.
  - 3.5.2.8. The emergency modification is required and otherwise supported by an election official seeking to field the voting system in an impending Federal election.
- 3.5.3. Request for Waiver. A Manufacturer's request for waiver shall be made in writing to the Decision Authority and shall include:
- 3.5.3.1. A statement providing sufficient description, background, information, documentation and other evidence necessary to demonstrate that the request for a waiver meets each of the eight requirements stated in section 3.5.2., above.

- 3.5.3.2. A signed statement from the chief election official in the locality or state which is requiring the emergency modification. This signed statement shall identify the pending election creating the emergency situation and attest that (1) the modification is required to field the system, (2) state law requires EAC action in order to field the system in an election, and (3) normal timelines required under the EAC Certification Program cannot be met.
- 3.5.3.3. A signed statement from a VSTL that there is insufficient time to perform necessary testing and complete the certification process. The statement shall also state what testing has been performed on the modification to date, provide the results of such tests and state the schedule for completion of testing.
- 3.5.3.4. A detailed description of the modification, the need for the modification, how it was developed, how it addresses the need for which it was designed, its impact on the voting system, and how the modification will be timely fielded or implemented.
- 3.5.3.5. Any and all documentation of tests performed on modification by the manufacturer, a laboratory or other third party.
- 3.5.3.6. A stated agreement signed by the manufacturer's representative agreeing to:
- 3.5.3.6.1. Submit for testing and certification, consistent with Chapter 4 of this manual, any voting system receiving a waiver under this section which has not already been submitted. This shall be done immediately.
- 3.5.3.6.2. Abstain from representing the modified system as EAC certified. The modified system has not been certified; rather the originally certified system has received a waiver providing the manufacturer leave to modify it.
- 3.5.3.6.3. Submit a report to the EAC regarding the performance of the modified voting system within 60 days of the Federal election which served as the basis for the waiver. This report shall identify and describe any (1) performance failures, (2) technical failures, (3) security failures, and/or (4) accuracy problems.
- 3.5.4. EAC review. EAC will review all waiver requests timely submitted and make determinations regarding the requests. Incomplete requests will be returned for resubmission with a written notification regarding its deficiencies.
- 3.5.5. Letter of Approval. If the EAC approves the modification waiver, the Decision Authority shall issue a letter granting the temporary waiver.

009879

- 3.5.6. Effect of Grant of Waiver. An EAC grant of waiver for an emergency modification is not an EAC certification of the modification. Waivers under this program only grant manufacturers leave to temporarily amend previously certified systems without testing and certification for the specific election noted in the request. Without such a waiver, such action would ordinarily result in decertification of the modified system. Systems receiving a waiver shall satisfy any state requirement that a system be nationally or Federally certified. Additionally:
- 3.5.6.1. All waivers are temporary and expire 60 days after the Federal Election for which the system was modified and waiver granted.
  - 3.5.6.2. Any system granted a waiver must be submitted for testing and certification immediately following the Federal election for which the waiver was granted.
  - 3.5.6.3. The grant of a waiver is no indication that the modified system will ultimately be granted a certification.
- 3.5.7. Denial of Request for Waiver. A denial of a request for emergency modification by the EAC shall be final and not subject to appeal. Manufacturers may submit for certification, consistent with Chapter 4 of this manual, modifications for which emergency waivers were denied.

DRAFT

## 4. Certification Testing and Technical Review

- 4.1. Overview.** This chapter discusses the procedural requirements for submitting a voting system to the EAC for testing and review. The testing and review process requires an application, employment of an EAC accredited testing laboratory and technical analysis of the laboratory test report by the EAC. The result of this process is an Initial Decision on Certification by the Decision Authority.
- 4.2. Policy.** Generally, in order to receive an initial determination on an EAC Certification for a voting system, a registered Manufacturer must have (1) submitted an EAC-approved application for certification, (2) submitted an EAC-approved test plan created by an accredited laboratory, (3) tested a voting system to applicable voting system standards using an accredited VSTL, (4) submitted a test report (through the VSTL) to the EAC for technical review and approval and (5) received EAC approval of the report in an Initial Decision on Certification.
- 4.3. Certification Application.** The first step in submitting a voting system for certification is submission of an application package. The Package contains an application form and a copy of the Technical Data Package for the system submitted for testing and certification. The process initiates the certification process and provides the EAC with needed information.
- 4.3.1. Information.** The application (application form) provides certain pieces of information to the EAC which are essential at the outset of the certification process. This information includes:
- 4.3.1.1. Manufacturer Information.** Identification of the Manufacturer (name and three letter identification code);
- 4.3.1.2. Accredited Laboratory Information.** Identification of the accredited laboratory which will perform voting system testing and other prescribed laboratory action consistent with the requirements of this manual;
- 4.3.1.3. Voting System Standards Information.** Identification of the Voluntary Voting System Guidelines or Voting Systems Standards, including the document's date and version number, to which the manufacture wishes to have the identified voting system test and certified;
- 4.3.1.4. Nature of the submission.** Manufacturers must identify nature of their submission by selecting one of four submission types:
- **New Systems.** New systems are defined, for the purposes of this manual, as voting systems which have not been previously tested to any applicable Federal standards.
  - **Systems not previously EAC Certified.** This term describes any voting system not previously certified by the EAC. This includes systems

009881

previously tested and qualified by NASED or systems previously test and denied certification by the EAC.

- **Modifications.** A modification is any change to a *previously EAC Certified voting system's* hardware, software or firmware.
- **Certification Upgrade.** This term defines any system previously certified by the EAC, but submitted (without modification) for additional testing and certification to a higher standard (i.e. to a newer version of the VVSG).

4.3.1.5. *Identification of the Voting System.* Manufacturers must identify the system submitted for testing by providing its name and applicable version number. If the system submitted has been previously fielded, but the manufacturer wishes to change its name or version number after receipt of EAC Certification, it must provide identification information on both the past name or names and the new, proposed name. This might occur in systems submitted for modification, for their first EAC certification or for a certification upgrade.

4.3.1.6. *Description of Voting System.* Manufacturers must provide a brief description of the system or modification being submitted for testing and certification. This information shall include:

4.3.1.6.1. A listing of all components of the system submitted,

4.3.1.6.2. Each component's version number,

4.3.1.6.3. Any other information necessary to identify the specific configuration being submitted for certification.

4.3.1.7. *Date submitted.* Manufacturers must note the date the application was submitted for EAC approval.

4.3.1.8. *Signature.* The Manufacturer must affix the signature of the authorized management representative.

4.3.2. Submission of the Application Package. Manufacturers must submit a copy of the application form described above and copies of all relevant Technical Data Packages.

4.3.2.1. *Application Form.* Application forms will be available on EAC's website. The application form submitted to the EAC must be signed, dated and fully, accurately and completely filled out. Incomplete or inaccurate application forms will not be accepted.

4.3.2.2. *Technical Data Package(s).* The manufacture must submit with the application form a copy of the voting system's technical data package. This

009882

technical data package must meet the requirements of the VVSG. If an existing system is being submitted with a modification, the manufacturer must submit a copy of the revised Technical Data Package. The Manufacturer shall also submit the original data package which served as a basis for the prior EAC certification.

4.3.2.3. *Submission.* Applications and Technical Data Packages shall be submitted in Adobe PDF, Microsoft Word or other electronic formats as prescribed by the Program Director. Information on how to submit packages will be posted on EAC's website.

4.3.3. EAC Review. Upon receipt of a Manufacturer's application package, the EAC will review the submission for completeness and accuracy. If the application package is incomplete, it will be returned to the manufacturer with instructions for resubmission. If the form submitted is acceptable, the manufacturer will be notified and provided a unique application number within five working days of the EAC's receipt of the application.

4.4. **Test Plan.** The manufacturer shall authorize the accredited lab identified in its application to submit a test plan. This plan shall provide for testing of the system sufficient to ensure it is functional and meets all applicable voting system standards.

4.4.1. Development. Test Plans shall be developed by an accredited laboratory. The plans shall utilize appropriate test protocols, standards or test suites developed by the laboratory. Laboratories must use all applicable protocols, standards or test suites issued by the EAC.

4.4.2. Required Testing. Test plans shall be developed to ensure that a voting system is functional and meets all requirements of the applicable voting system standards. The highest level of care and vigilance is required to ensure that comprehensive test plans are created. A test plan should ensure that the voting system meets all applicable standards and that test results and other factual evidence of the testing is clearly documented. System testing must meet the requirements of the VVSG. Generally, full testing will be required of any voting system applying for certification, regardless of prior certification history.

4.4.2.1. *New Systems.* New systems shall be subject to full testing of all hardware and software according to applicable voting system standards.

4.4.2.2. *Systems not previously EAC Certified.* Systems not previously certified by the EAC shall be fully tested as new systems.

4.4.2.3. *Modifications.* A modification to a previously EAC Certified voting systems shall be tested in manner to ensure all changes meet applicable voting system standards and that the modified system (as a whole) will properly and reliable function. The systems submitted for modification shall be subject to full

testing of the modifications and those systems or subsystems altered or impacted by the modification. The system will also be subject to system integration testing to ensure overall functionality. The modification will be tested to the version or versions of the VVSG presently accepted for testing and certification by the EAC. However, this does not mean that the full system must be tested to such standards. If the system has been previously certified to a VVSG version deemed acceptable by the EAC, it may retain that level of certification with only the modification being tested to the present version(s).

- 4.4.2.4. *Certification Upgrade.* Systems submitted for testing to new voting system standard (without modification) shall be tested in manner necessary to ensure that the systems meet all requirements of the new standards. Test Plans shall ensure that hardware and software components affected by changes in the standards are fully retested according to the new standards.
- 4.4.3. *Format.* Test labs shall issue test plans consistent with the requirements in the VVSG and any applicable EAC guidance.
- 4.4.4. *EAC Approval.* All test plans are subject to EAC approval. No test report will be accepted for technical review unless the test plan upon which it is based has been approved by EAC's Program Director.
- 4.4.4.1. *Review.* All test plans must be reviewed for adequacy by the Program Director. For each submission the Program Director will determine whether the test report is acceptable or unacceptable. Unacceptable plans will returned to the laboratory for further action. Acceptable plans will be approved. While manufacturers may direct test labs to begin testing before approval of a test plan, the manufacturer bears the full risk that the test plan (and thus any tests performed) will be deemed unacceptable.
- 4.4.4.2. *Unaccepted Plans.* If a plan is not accepted, the Program Director will return the submission to the Manufacturer's identified laboratory for additional action. Notice of unacceptability will be provided in writing to the laboratory and include a description of the problems identified and steps required to remedy the test plan. Questions concerning the notice shall be forwarded to Program Director in writing. Plans that have not been accepted may be resubmitted for review after remedial action is taken.
- 4.4.4.3. *Effect of Approval.* Approval of a test plan is required before a test report may be filed. In most cases, approval of a test plan signifies that the tests proposed, if performed properly, are sufficient to fully test the system. However, a test plan is approved based upon the information submitted. New or additional information may require a change in testing requirements at any point in the certification process.

- 4.5. Testing.** During testing, manufacturers are responsible for ensuring that VSTLs report any changes to a voting system or an approved test plan to the EAC. Manufacturers shall also ensure that VSTLs report all test failures or anomalies to the EAC.
- 4.5.1. Changes. Any changes to the voting system, initiated as a result of the testing process, will require submission of a new Technical Data Package and, potentially, an updated test plan. Any changes to or deviation from the test plan by a lab during the testing process will require resubmission of an updated test plan.
- 4.5.2. Test Anomalies or Failures. Manufacturers shall ensure that accredited laboratories notify the EAC of any test anomalies or failures during testing. This notice shall be in writing. Unless the laboratory can document (for EAC approval) that a failure was a result of testing methodology or execution, effected systems must be modified and the Technical Data Packages and Test Plans resubmitted.
- 4.6. Test Report.** Manufactures shall have their identified test lab submit test reports directly to the EAC. Test reports shall be submitted only if the voting system has been successfully tested and all tests identified in the test report have been performed.
- 4.6.1. Submission. The test reports shall be submitted to the Program Director. The Program Director shall review the submission for completeness. Any reports showing incomplete or unsuccessful testing will be returned to the test laboratory for action and resubmission. Test reports shall be submitted in Adobe PDF, Microsoft Word or other electronic formats as prescribed by the Program Director. Information on how to submit reports will be posted on EAC's website.
- 4.6.2. Format. Manufacturers shall ensure that test labs submit reports consistent with the requirements in the VVSG.
- 4.6.3. Technical Review. A technical review of the test report, Technical Data Package and test plan will be conducted by technical experts. These EAC experts will submit a report outlining their findings to the Program Director. The report will provide an assessment of the completeness, appropriateness and adequacy of the VSTL's testing as documented in the test report.
- 4.6.4. Program Director's Recommendation. The program director shall review the report. The Program Director shall either:
- 4.6.4.1. Recommend certification of the candidate system consistent with the reviewed test report and forward it to the Decision Authority for action (Initial Decision); or
- 4.6.4.2. Refer the matter back to the technical reviewers for additional specified action and resubmission.

**4.7. Initial Decision on Certification.** Upon receipt of the report and recommendation forwarded by the Program Director, the Decision Authority shall issue an Initial Decision on Certification. The decision shall be forwarded to the Manufacturer consistent with the requirements of this manual.

4.7.1. An Initial Decision granting certification shall be processed consistent with Chapter 5 of this manual.

4.7.2. An Initial Decision denying certification shall be processed consistent with Chapter 6 of this manual.

DRAFT

## 5. Grant of Certification

- 5.1. Overview.** The grant of certification is the formal process through which EAC acknowledges that a voting system has successfully completed conformance testing to an appropriate set of standards or guidelines. The grant of certification begins with the initial decision of the Decision Authority. This decision becomes final after the manufacturer confirms that the final version of the software that was certified and which the manufacturer will deliver with the certified system has been subject to a trusted build, placed in an EAC approved repository and can be verified using the manufacturer's system identification tools. Once a certification is issued, the manufacturer is provided a Certificate of Conformance and relevant information about the system is added to the EAC website. Manufacturers with certified voting systems are responsible for ensuring that each system it produces is properly labeled as certified.
- 5.2. Applicability of this Chapter.** This chapter applies when the Decision Authority makes an initial decision to grant a certification to a voting system based upon the materials and recommendation provided by the program director.
- 5.3. Initial Decision.** The Decision Authority shall make and issue to a manufacturer a written decision on all voting systems submitted for certification. When such decisions result in a grant of certification, the decision shall be considered preliminary and referred to as an *Initial Decision* pending required action by the manufacturer. The Initial Decision shall:
- 5.3.1. State the preliminary determination reached (granting certification);
  - 5.3.2. Inform the manufacturer of the steps that must be taken to make the determination final and receive a certification. This shall include providing the manufacturer with specific instructions, guidance and procedures for confirming that the final certified version of the software meets the requirements for:
    - 5.3.2.1. Performing and documenting a trusted build pursuant to section 5.6 of this chapter, and
    - 5.3.2.2. Depositing software in an approved repository pursuant to section 5.7 of this chapter.
    - 5.3.2.3. Creating and making available system verification tools pursuant to section 5.8 of this chapter.
  - 5.3.3. Certification is not final until the manufacturer accepts the certification and any and all conditions placed on the certification.
- 5.4. Pre-Certification Requirements.** Before an initial decision becomes final and a certification is issued, manufacturers must ensure certain steps are taken. They must confirm that the final version of the software that was certified and which the manufacturer will deliver with the certified system has been subject to a trusted build (see section 5.6), deposited in an EAC approved repository (see section 5.7) and can be verified using manufacturer developed

identification tools (see section 5.8). The manufacturer must provide the EAC documentation demonstrating compliance with these requirements.

**5.5. Trusted Build.** A software build (also referred to as a compilation) is the process whereby source code is converted to machine readable binary instructions (executable code) for the computer. A “trusted build” (or trusted compilation) is a build performed with adequate security measures implemented to give confidence that the executable code is a verifiable and faithful representation of the source code. A trusted build creates a chain of evidence from the Technical Data Package and source code submitted for certification to the actual executable programs that are run on the system. Specifically, the build will:

- 5.5.1.1. Demonstrate that the software was built as described in the Technical Data Package;
- 5.5.1.2. Show that the tested and approved source code was actually used to build the executable code used on the system;
- 5.5.1.3. Demonstrate that no elements other than those included in the Technical Data Package were introduced in the software build; and
- 5.5.1.4. Document for future reference the configuration of the system certified.

**5.6. Trusted Build Procedure.** A trusted build is three step process: (1) the build environment is constructed, (2) the source code is loaded onto the build environment, and (3) the executable code is compiled and installation disk created. The process may be simplified for modification to previously certified systems. In each step, a minimum of two witnesses from different organizations are required to participate. These participants must include a VSTL representative and vendor representative. Prior to creating the trusted build the VSTL must complete the source code review of the software delivered from the vendor for compliance with the VVSG, and produce and record digital signatures of all source code modules. An instructive discussion of this process may be found in Appendix C.

**5.6.1. Constructing the Build Environment.** The VSTL shall construct the build environment in an isolated environment controlled by the VSTL, as follows:

- 5.6.1.1. The disk that will hold the build environment shall be completely erased by the VSTL to assure a total and complete cleaning of the disk. The VSTL shall use commercial off-the-shelf software (COTS), purchased by the laboratory, for cleaning the disk.
- 5.6.1.2. The VSTL, with vendor consultation and observation, shall construct the build environment.
- 5.6.1.3. After construction of the build environment, the VSTL shall produce and record a digital signature of the build environment.

5.6.2. Loading Source Code onto the Build Environment. After successful source code review, the VSTL shall load source code onto the build environment as follows:

5.6.2.1. The VSTL shall check the digital signatures of the source code modules and build environment to assure that they are unchanged from their original form.

5.6.2.2. The VSTL shall load the source code onto the build environment and produce and record the digital signature of the resulting combination.

5.6.2.3. The VSTL shall capture a disk image of the combination build environment and source code modules immediately prior to performing the build.

5.6.2.4. The VSTL shall deposit the disk image into an authorized archive to assure that the build can be reproduced if necessary, at a later date.

5.6.3. Creating the Executable Code. Upon completion of all the tasks outlined above, the VSTL shall produce the executable code.

5.6.3.1. The VSTL shall produce and record a digital signature of the executable code.

5.6.3.2. The VSTL shall deposit into an EAC approved software repository the executable code and create installation disk(s) from the executable code.

5.6.3.3. The VSTL shall produce and record digital signatures of the installation disk(s) in order to provide a mechanism to validate the software prior to installation on the voting system in a purchasing jurisdictions.

5.6.3.4. The VSTL shall install the executable code onto the system submitted for testing and certification prior to completion of system testing.

5.6.4. Trusted Build for Modifications. The process of building new executable code when a previously certified system has been modified is somewhat simplified.

5.6.4.1. The build environment used in the original certification is removed from storage and its digital signature verified.

5.6.4.2. After source code review the modified files are placed onto the verified build environment and new executable files are produced.

5.6.4.3. If the original build environment is unavailable or its digital signatures cannot be verified against those recorded from the original certification then the more labor intensive process of creating the build environment must be performed. Further source code review may be required of unmodified files to validate that they are unmodified from their originally certified versions.

009889

**5.7. Depositing Software in an Approved Repository.** After EAC certification has been granted, the VSTL project manager, or an appropriate delegate of the project manager, shall deposit the following in one or more trusted archive(s) (repositories) designated by the EAC, such as the NIST NSRL.

5.7.1. Source code used for the trusted build and its digital signatures.

5.7.2. Disk image of the pre-build, build environment and any digital signatures to validate that it is unmodified.

5.7.3. Disk image of the post-build, build environment and any digital signatures to validate that it is unmodified.

5.7.4. Executable code produced by the trusted build and its digital signatures of all files produced.

5.7.5. Installation disk(s) and its digital signatures.

**5.8. System Identification Tools.** The manufacturer shall provide tools through which a fielded voting system may be identified and demonstrated to be unmodified from the system which was certified. The purpose of this requirement is to make such tools available to state, local and Federal officials to identify and verify that the equipment used in elections is unmodified from its certified version. Manufacturers may develop and provide these tools as they see fit. However, the tools must provide the means to identify and verify hardware and software. The EAC may review the system identification tools developed by the manufacture to ensure compliance. Examples of system identification methodology include:

5.8.1. Hardware is commonly identified by model and revision numbers on the unit, its printed wiring boards (PWB) and major subunits. Typically hardware is verified as unmodified by providing detailed photographs of the PWB's and internal construction of the unit. These may be used to compare to the unit being verified.

5.8.2. Software operating in on a host computer will typically be verified by providing a self-booting CD or similar device that verifies the digital signatures of the voting system application files AND the signatures of all non-volatile files that the application files access during their operation. Note that the creation of such a CD requires having a file map of all non-volatile files that are used by the voting system. Such a tool must be provided for verification using the digital signatures of the original executable files provided for testing. If during the certification process modifications are made and new executable files created then the tool must be updated to reflect the digital signatures of the final files to be distributed for use. For software operating on devices where a self-booting CD or similar device cannot be used a procedure must be provided to allow identification and verification of the software that is being used on the device.

**5.9. Documentation.** Manufacturers' shall provide documentation to the Program Director verifying that the trusted build has been performed, software has been deposited in an approved repository and that system identification tools are available to election officials. The Manufacturer shall submit a letter, signed by both its management representative and a VSTL

official, stating (under penalty of law) that it has (1) performed a trusted build consistent with the requirements of Section 5.6 of this Manual; (2) deposited software consistent with Section 5.7 of this Manual and (3) created and made available system identification tools consistent with Section 5.8 of this Manual. This letter shall also include (as attachments) a copy and description of the system identification tool developed under Section 5.8, above.

**5.10. Agency Decision.** Upon receipt of documentation demonstrating the successful completion of the requirements above and recommendation of the Program Director, the Decision Authority will issue an Agency Decision granting certification and providing the manufacturer with a certification number and Certificate of Conformance.

**5.11. Certification Document.** A Certificate of Conformance will be provided to manufacturers for voting systems which have successfully met the requirements of this program. The document will serve as the manufacturer's evidence that a particular system is certified to a particular set of voting system standards. The EAC certification and certificate applies only to the specific voting system configuration submitted and evaluated under the program. Any modification to the system not authorized by the EAC will void the certificate. The certificate will include the product (voting system) name, the specific model or version of the product tested, the name of the VSTL conducting the testing, identification of the standards to which the system was tested, the EAC Certification Number for the product, and the signature of the EAC Executive Director.

**5.12. Certification Number and Version Control.** Each system certified by the EAC will receive a certification number. This number is unique to the system and will remain with the system until such time as the system is decertified, sufficiently modified or tested and certified to newer standards. Generally, when a previously certified system is issued a new certification number, the manufacturer will be required to change the system's name or version number.

**5.12.1. New voting systems and those not previously Certified by the EAC.** All systems receiving their first certification from the EAC will receive a new Certification Number. Manufacturers must provide the EAC with the voting system's name and version number during the application process (Chapter 4). Systems previously certified by another body may retain the prior system name and version number unless the system was modified prior to its submission to the EAC. Such modified systems must be submitted with a new naming convention (i.e. new version number).

**5.12.2. Modifications.** Voting systems previously certified by the EAC and submitted for certification of a modification will generally receive a new voting system certification number. Such modified systems must be submitted with a new naming convention (i.e. new version number). In rare instances, the EAC may authorize retention of the same certification and naming convention when the modification is so minor that it does not represent a substantive change in the voting system. Request for such authorization must be made and approved by the EAC during application phase of the program.

**5.12.3. Certification upgrade.** Voting systems previously certified and submitted (without modification) for testing to a new version of the VVSG will receive a new certification

number. However, in such cases the manufacturer will not be required to change the systems name or version.

**5.13. Publication of EAC Certification.** The EAC will publish and maintain on its website a list of all certified voting systems including copies of all Certificates of Conformance, the supporting test report and information about the manufacturer. Note that ALL information contained in the test report and Technical Data Package EXCEPT that identified as confidential AT THE TIME OF SUBMISSION will be posted to the website. Such information will be posted immediately following the Manufacturer's receipt of the EAC Final Decision and Certificate of Conformance.

**5.14. Representation of EAC Certification.** Manufacturers may not represent or imply that a voting system is certified unless it has received a Certificate of Conformance for that system. Statements regarding EAC certification in brochures, websites, displays and advertising/sales literature must be made solely in reference to specific systems. Any action by a manufacturer to suggest EAC endorsement of their product or organization is strictly prohibited.

**5.15. Mark of Certification Requirement.** Manufacturers shall post a mark of certification on all EAC Certified voting systems produced. This mark or label must be permanently attached to the system prior to sale, lease or release to third parties. A mark of certification shall be made through the use of an EAC mandated template available for download on the EAC website. These templates identify the version of the VVSG or VSS to which the system is certified. Use of this template shall be mandatory. The EAC mark must be displayed as follows:

5.15.1. The Manufacturer may only use the mark of certification which accurately reflects the certification held by the system. In the event a system has components or modifications tested to various versions of the VVSG (or VSS) the system shall bear only one mark of certification. This shall be the mark of the oldest or least rigorous standard to which any component or modification of the system was tested.

5.15.2. The mark shall be placed on the outside of the voting system in a place readily available to election officials.

5.15.3. The notice shall be permanently affixed to the voting system. The label shall not be a paper label. "Permanently affixed" means that the label is etched, engraved, stamped, silk-screened, indelibly printed, or otherwise permanently marked on a permanently attached part of the equipment or on a nameplate of metal, plastic, or other material fastened to the equipment by welding, riveting, or a permanent adhesive.

5.15.4. The label must be designed to last the expected lifetime of the voting system in the environment in which the system may be operated and must not be readily detachable.

**5.16. Information to Election officials purchasing voting systems.** The user's manual or instruction manual for a certified voting system shall warn purchasers that changes or modifications not tested and certified by EAC will void the EAC certification of the voting system. In cases where the manual is provided only in a form other than paper, such as on a

009892

computer disk or over the internet, the information required in this section may be included in this alternative format provided that the election official can reasonably be expected to have the capability to access information in that format.

DRAFT

## 6. Denial of Certification

- 6.1. Overview.** When the Decision Authority issues an Initial Decision denying certification, the Manufacturer has certain rights and responsibilities. The Manufacturer may request an opportunity to cure the defects identified by the Decision Authority. Additionally, the Manufacturer may request the Decision Authority to reconsider the Initial Decision after the Manufacturer has had the opportunity to review the record and submit supporting written materials, data and rational for its position. Finally, in the event reconsideration is denied, the Manufacturer may appeal the decision to the Appeal Authority.
- 6.2. Applicability of this Chapter.** This chapter applies when the Decision Authority makes an initial decision to deny an application for voting system certification based upon the materials and recommendation provided by the program director.
- 6.3. Form of Decisions.** All agency determinations shall be made in writing. Moreover, all materials and recommendations reviewed or used by agency decision makers in arriving at an official determination shall be in written form.
- 6.4. Effect of Denial of Certification.** Upon receipt of the agency's decision denying certification—or in the event of an appeal, the decision on appeal—the manufacturer's application for certification is finally denied. Such systems will not be reviewed again by the EAC for certification unless the manufacturer alters the system, retest it and submits a new application for system certification.
- 6.5. The Record.** The Program Director shall maintain all documents related to a denial of certification. Such documents shall constitute the procedural and substantive record of the decision making process. Examples include:
- 6.5.1. The Program Director's report and recommendation to the Decision Authority;
  - 6.5.2. The Decision Authority's Initial Decision and Final Decision;
  - 6.5.3. Any materials gathered by the Decision Authority that served as a basis for a certification determination;
  - 6.5.4. All relevant and allowable materials submitted by the Manufacturer upon request for reconsideration or appeal;
  - 6.5.5. All correspondence between the EAC and a Manufacturer after the issuance of an Initial Decision denying certification.
- 6.6. Initial Decision.** The Decision Authority shall make and issue a written decision on voting systems submitted for certification. When such decisions result in a denial of certification, the decision shall be considered preliminary and referred to as an *Initial Decision*. Initial Decisions shall be in writing and contain (1) the Decision Authority's basis and explanation for the decision and (2) notice of the manufacturer's rights in the denial of certification process:

6.6.1. Basis and Explanation. The Initial Decision of the Decision Authority shall:

6.6.1.1. Clearly state the agency's decision on Certification;

6.6.1.2. Explain the basis for the decision, including identifying:

6.6.1.2.1. the relevant facts,

6.6.1.2.2. the applicable EAC voting system standards (VVSG or VSS),

6.6.1.2.3. relevant analysis in the Program Director's recommendation, and

6.6.1.2.4. the reasoning behind the determination.

6.6.1.3. State the actions the manufacturer must take, if any, to cure all defects in the voting system and obtain a certification.

6.6.2. Manufacturer's Rights. The written Initial Decision must also inform the manufacture of its procedural rights under the program. These include:

6.6.2.1. Right to request reconsideration. The manufacturer shall be informed of its right to request a timely reconsideration. (see Section 6.9). Such request must be made within 20 days of the manufacturer's receipt of the Initial Decision.

6.6.2.2. Right to request a copy or otherwise have access to the information that served as the basis of the Initial Decision ("the record").

6.6.2.3. Right to cure system defects prior to final agency decision (see Section 6.8). A manufacturer may request an opportunity to cure within 20 days of its receipt of the Initial Decision.

**6.7. No Manufacturer Action on Initial Decision.** If a manufacturer takes no action (by either failing to request an opportunity to cure or request reconsideration) within 20 calendar days of its receipt of the initial decision, the initial decision shall become the agency's final decision on certification. In such cases, the manufacture is determined to have forgone its right to reconsideration, cure and appeal. The certification application shall be considered finally denied.

**6.8. Opportunity to Cure.** Within 20 calendar days of receiving the EAC's Initial Decision on certification, a manufacturer may request an opportunity to cure the defects identified in the EAC's Initial Decision. If the request is approved, a compliance plan must be created, approved and followed. If this cure process is successfully completed, a voting system denied certification in an Initial Decision may receive a certification without resubmission.

009895

- 6.8.1. Manufacturer's Request to Cure. The Manufacturer must send a request to cure within 20 calendar days of receipt of an initial decision. The request must be sent to the Program Director.
- 6.8.2. EAC Action on Request. The Decision Authority will review the request and approve it. The Decision Authority will deny a request to cure only if the proposed plan to cure is inadequate or does not present a viable way to remedy the identified defects. Approval or denial of a request to cure shall be provided the manufacturer in writing. If the manufacturer's Request to Cure is denied, it shall have 20 days from the date it received such notice to request reconsideration of the Initial Decision pursuant to section 6.6.2.
- 6.8.3. Manufacturer's Compliance Plan. Upon approval of the manufacturer's request for an opportunity to cure, it shall submit a compliance plan to the Decision Authority for approval. This compliance plan must set forth steps to be taken to cure all identified defects. It shall include the proposed changes to the system, an updated technical data package, a test plan (limited to those tests required by the proposed changes), and provide for the testing of the amended system and submission of the test report to the EAC for approval. It should also provide an estimated date for receipt of the test report and include a schedule of periodic progress reports to the Program Director.
- 6.8.4. EAC Action on the Compliance Plan. The Decision Authority must review and approve the compliance plan. The Decision Authority may require the manufacturer to provide additional information and modify the plan as required. If the Manufacturer is unable or unwilling to provide a compliance plan acceptable to the Decision Authority, the Decision Authority shall provide written notice terminating the "opportunity to cure" process. The Manufacturer shall have 20 calendar days from the date it received such notice to request reconsideration of the Initial Decision pursuant to section 6.6.2.
- 6.8.5. Manufacturer's Issuance of the Compliance Plan Test Report. The manufacturer shall submit the test report created pursuant to its EAC-approved compliance plan. The EAC shall review the test report, along with the original test report and other materials originally provided. The report will be technically reviewed by the EAC consistent with the procedures laid out in Chapter 4 of this Manual.
- 6.8.6. EAC Decision on the System. After receipt of the test plan, the Decision Authority shall issue a decision on a voting system amended pursuant to an approved compliance plan. This decision shall be issued in the same manner and with the same process and rights as an initial decision on certification.

**6.9. Requests for Reconsideration.** Manufacturers may request reconsideration of an Initial Decision.

- 6.9.1. Submission of Request. A request for reconsideration must be made within 20 days of the Manufacturer's receipt of an Initial Decision. The request shall be made and sent to the Decision Authority.

6.9.2. Acknowledgement of Request. The Decision Authority shall acknowledge receipt of the manufacturer's request for reconsideration. This acknowledgement shall either enclose all information that served as the basis for the Initial Decision (the record) or provide a date by which the record will be forwarded to the manufacturer.

6.9.3. Manufacturer Submissions. Within 30 days of receipt of the record, a manufacturer may submit written materials in support of its position. This includes:

6.9.3.1. A written argument responding to the conclusions in the Initial Decision.

6.9.3.2. Documentary evidence relevant to the issues raised in the Initial Decision.

6.9.3.3. Other written materials created to provide relevant facts (such as additional test data, technical analyses and statements).

6.9.4. Decision Authority's Review of Request. The Decision Authority shall review and consider all relevant submissions of the manufacturer. In making a decision on reconsideration, the Decision Authority shall also consider all documents that make up the record and any other documentary information he or she determines relevant.

**6.10. Agency Final Decision.** The Decision Authority shall issue a written Agency Decision after review of the manufacturer's request for reconsideration. This Decision shall be the decision of the agency. The decision shall:

6.10.1.1. Clearly state the agency's determination on the application for certification;

6.10.1.2. Address the issues raised by the manufacturer in its request for reconsideration;

6.10.1.3. Identify all facts, evidence and EAC voting system standards (VVSG or VSS), that served as the basis for the decision;

6.10.1.4. Provide the reasoning behind the determination;

6.10.1.5. Identify and provide, as an attachment, any additional documentary information that served as a basis for the decision and that was not part of the manufacturer's submission or the prior record; and

6.10.1.6. Provide the manufacturer notice of its right to appeal.

**6.11. Appeal of Agency Final Decision.** A manufacturer may, upon receipt of an Agency Final Decision denying certification, issue a request for appeal.

6.11.1. Requesting Appeal.

009897

6.11.1.1. *Submission.* Requests must be submitted in writing to the Program Director, addressed to Chair of the U.S. Election Assistance Commission.

6.11.1.2. *Timing of Appeal.* The manufacturer may request an appeal within 20 calendar days of receipt of the Agency Final Decision. Late requests will not be considered.

6.11.1.3. *Contents of Request.*

6.11.1.3.1. The request must clearly state the specific conclusions of the Final Decision it wishes to appeal.

6.11.1.3.2. The request may include additional written argument.

6.11.1.3.3. The request may not reference or include any factual material not in the record.

6.11.2. Consideration of Appeal. All timely appeals will be considered by the appeal authority.

6.11.2.1. The appeal authority shall be two or more U.S. EAC Commissioners or other individual or individuals appointed by the Commissioners who have not previously served as the initial or reconsideration authority on the matter.

6.11.2.2. All decisions on appeal shall be based on the record.

6.11.2.3. The decision of the Decision Authority shall be given deference by the appeal authority. While it is unlikely that the scientific certification process will produce factual disputes, in such cases, the burden of proof shall belong to the Manufacturer to demonstrate by clear and convincing evidence that their voting system met all substantive and procedural requirements for certification. In other words, the determination of the Decision Authority will be overturned only when the appeal authority finds the ultimate facts in controversy highly probable.

**6.12. Decision on Appeal.** The appeal authority shall make a written, final Decision on Appeal. This Decision on Appeal shall be provided the Manufacturer.

6.12.1. Contents. The Decision on Appeal shall:

6.12.1.1. State the final determination of the agency;

6.12.1.2. Address the matters raised by the Manufacturer on appeal;

6.12.1.3. Provide the reasoning behind the decisions; and

6.12.1.4. State that the decision on appeal is final.

009898

6.12.2. Determinations. The appeal authority may make one of three determinations.

6.12.2.1. *Approval of Certification*. The Appeal Authority may overturn the decision of the Decision Authority and grant the appeal in full. In such cases, certification will be approved subject to the requirements of Chapter 5.

6.12.2.2. *Denial of Certification*. The Appeal Authority may uphold the decision of the Decision Authority and deny the appeal in full. In such cases the application for appeal is finally denied.

6.12.2.3. *Grant of Appeal in Part with Opportunity to Cure*. The Appeal Authority may grant the appeal in part. This will only occur in instances where the denied issues on appeal may be cured. In such cases, the Manufacturer must cure the identified discrepancies prior to the grant of certification. The appeal authority shall remand the matter to the Decision Authority to initiate to cure process consistent with the decision.

6.12.2.3.1. If the Manufacturer successfully completes the cure process, the certification will be approved by the Decision Authority subject to the requirements in Chapter 5.

6.12.2.3.2. If the Decision Authority determines the cure process to have failed, he or she shall submit a report to the Appeal Authority (with a copy to the Manufacturer) for final determination. If the Appeal Authority concurs with the report, the Appeal Authority shall issue a Second Decision on Appeal denying certification. If the Appeal Authority disagrees with the Decision Authority, the matter shall be remanded back to the Decision Authority with specific instructions.

6.12.3. Effect. All Decisions on Appeal shall be final and binding on the Manufacturer. No additional appeal shall be granted.

## 7. Decertification

**7.1. Overview.** Decertification is the process by which the EAC revokes a Certification previously granted to a voting system. It is an important part of the Certification Program, as it serves to ensure that the requirements of the program are followed and that certified voting systems fielded for use in our Federal elections maintain the same level of quality as those presented for testing. Decertification, is a serious matter. Its use will have a significant impact on Manufacturers, State and local governments, the public and the administration of elections. As such, the process for decertification is involved. It is initiated when the EAC receives information that a voting system may not be in compliance with the Voluntary Voting System Guidelines or the procedural requirements of this manual. Upon receipt of such information, the Program Director may initiate an Informal Inquiry to determine the credibility of the information. If the information is credible and suggests the system is noncompliant, a Formal Investigation will be initiated. If the results of the Formal Investigation demonstrate noncompliance, the manufacturer will be provided a Notice of Non-Compliance. Before a final decision on decertification is made, the manufacturer will have the opportunity to remedy any defects identified in the voting system and present information for consideration by the decertification authority. A decertification of a voting system may be timely appealed.

**7.2. Decertification Policy.** Voting systems certified by the EAC are subject to Decertification. Systems shall be decertified if they (1) are shown not to meet applicable Voluntary Voting System Guideline Standards, (2) have been modified without following the requirements of this manual or (3) the Manufacturer has otherwise failed to follow the procedures outlined in this manual such that the quality, configuration or compliance of the system is in question. Decertification of a voting system is a serious matter. Systems will be decertified only after completion of the process outlined in this chapter.

**7.3. Informal inquiry.** An Informal Inquiry is the first step taken when information is presented to the EAC that suggests a voting system may not be in compliance with the Voluntary Voting System Standards or the procedural requirements of this Manual.

**7.3.1. Informal Inquiry Authority.** The authority to conduct an Informal Inquiry shall rest with the Program Director.

**7.3.2. Purpose.** The purpose of the informal inquiry is solely to determine whether a formal investigation is warranted. The outcome of an informal inquiry is limited to a decision on referral for investigation.

**7.3.3. Procedure.** Informal Inquiries do not follow a formal process.

**7.3.3.1. *Initiation.*** Informal Inquiries are initiated at the discretion of the Program Director. They may be initiated any time the Program Director receives attributable, relevant information that suggests a certified voting system may require decertification. The information shall come from a source which has directly observed or witnessed the reported occurrence. Such information may be a product of the Certification Quality Monitoring Program (see

009900

Chapter 8). Information may also come from state and local election officials or voters who have used a given voting system. The Program Director may notify a Manufacturer that an Informal Inquiry has been initiated, but this is not required. Initiation of an inquiry shall be documented through the creation of a memorandum for the record.

- 7.3.3.2. *Inquiry.* The informal inquiry process is limited to that inquiry necessary to determine whether a Formal Investigation is required. In other words, the Program Director shall conduct such inquiry necessary to determine (1) that the information obtained is credible and (2) that the information, if true, would serve as a basis for decertification. There is no set procedure for an inquiry. The nature and extent of the inquiry process will vary depending upon the source of the information. For example, an informal inquiry initiated as a result of action taken under the Quality Monitoring Program will often require the Program Director merely to read the report issued as a result of the Quality Monitoring action. On the other hand, information provided by voters who have used a voting system or election officials may require the Program Director (or assigned technical experts) to perform an in-person inspection or make inquiries of the manufacturer.
- 7.3.3.3. *Conclusion.* An inquiry shall be concluded once the Program Director is in a position to determine the credibility of the information which initiated the inquiry and whether that information, if true, would require decertification. The Program Director may make only two conclusions: (1) Refer the matter for a formal investigation or (2) Close the matter without additional action.
- 7.3.4. Closing the Matter without Referral. If the Program Director determines, after informal inquiry, that a matter does not require a Formal Investigation, the Program Director shall close the inquiry by filing a Memorandum for Record. This document shall state the findings of the inquiry and the reasons a Formal Investigation was not warranted.
- 7.3.5. Referral. If the Program Director determines, after informal inquiry, that a matter requires a Formal Investigation, the Program Director shall refer the matter in writing to the Decision Authority. This referral shall:
- 7.3.5.1. State the facts that served as the basis for the referral.
- 7.3.5.2. State the findings of the Program Director.
- 7.3.5.3. Attach all documentary evidence that served as the basis for the conclusion.
- 7.3.5.4. Recommend a formal investigation, specifically stating the system to be investigated and the scope and focus of the proposed investigation.

009901

**7.4. Formal Investigation.** A Formal Investigation is an official investigation to determine whether a voting system requires decertification. The end result of a Formal Investigation is a Report of Investigation.

7.4.1. Formal Investigation Authority. The Decision Authority shall have the authority to initiate and conclude a Formal Investigation by the EAC.

7.4.2. Purpose. The purpose of a Formal Investigation is to gather and document relevant information sufficient to make a determination on whether an EAC certified voting system requires decertification consistent with the policy put forth in Section 7.2, above.

7.4.3. Initiation of Investigation. The Decision Authority shall authorize the initiation of an EAC Formal Investigation.

7.4.3.1. *Scope.* The Decision Authority shall clearly set the scope of the investigation by identifying (in writing) the voting system (or systems) and specific procedural or operational non-conformance to be investigated. The non-conformance or non-conformances to be investigated shall be set forth in the form of numbered allegations.

7.4.3.2. *Investigator.* The Program Director shall be responsible for conducting the investigation unless another individual is appointed by the Decision Authority. The Program Director (or Decision Authority appointee) may assign staff or technical experts as required to investigate the matter.

7.4.4. Notice of Formal Investigation. Upon initiation of a Formal Investigation, notice shall be given the Manufacturer of the scope of the investigation. This notice shall:

7.4.4.1. Identify the voting system and specific procedural or operation non-conformance being investigated (scope of investigation).

7.4.4.2. Provide the Manufacturer an opportunity to provide relevant information in writing.

7.4.4.3. Provide an estimated timeline for the investigation.

7.4.5. Investigation. Due to the vital role voting systems play in our democratic process, investigations shall be conducted impartially, diligently, promptly and confidentially. Investigators shall use techniques to gather necessary information that meet these requirements.

7.4.5.1. *Fair and Impartial Investigation.* All Formal Investigations shall be conducted in a fair and impartial manner. All individuals assigned to an investigation must be free from any financial conflict of interest.

- 7.4.5.2. *Diligent Collection of Information.* All investigations shall be conducted in a meticulous and thorough manner. Investigations shall gather all relevant information and documentation that is reasonably available. The diligent collection of information is vital for informed decision making.
- 7.4.5.3. *Prompt Collection of Information.* Determinations which may affect the administration of Federal Elections must be made with all reasonable speed. EAC determinations on decertification will impact the actions of state and local election officials conducting elections. As such, all investigations regarding decertification must proceed with an appropriate sense of urgency.
- 7.4.5.4. *Confidential Collection of Information.* Consistent with Federal Law, information pertaining to a Formal Investigation should not be made public until the Report of Investigation is complete. The release of incomplete and unsubstantiated information or pre-decisional opinions which may be contrary or inconsistent with the final determination of the EAC, could cause public confusion or unnecessarily negatively effect public confidence in active voting systems. Such actions could serve to impermissibly impact election administration and voter turnout. All pre-decisional investigative materials must be appropriately safeguarded.
- 7.4.5.5. *Methodologies.* Investigators shall gather information by means consistent with the four principals noted above. Investigative tools include (but are not limited to):
- 7.4.5.5.1. *Interviews.* Investigators may interview individuals with relevant information (such as state and local election officials, voters with relevant information or representatives of the Manufacturer). All interviews shall be reduced to written form, the interview should be summarized in a statement that is reviewed, approved and signed by the subject.
  - 7.4.5.5.2. *Field Audits.*
  - 7.4.5.5.3. *Manufacturer Site Audits.*
  - 7.4.5.5.4. *Written Interrogatories.* Investigators may pose specific, written questions to the manufacturers for the purpose of gathering information relevant to the investigation. The manufacturer shall respond to the queries within a reasonable timeframe (as specified in the request).
  - 7.4.5.5.5. *System Testing.* Testing may be performed in an attempt to reproduce a condition or failure that has been reported.

009903

- 7.4.5.6. *Report of Investigation.* The end result of a Formal Investigation is a Report of Investigation.
- 7.4.6. Report of Investigation. The Report of Investigation serves, primarily, to document (1) all relevant and reliable information gathered in the course of the investigation and (2) the conclusion reached by the Decision Authority.
- 7.4.6.1. *When Complete.* The report is complete and final when certified and signed by the Decision Authority.
- 7.4.6.2. *Contents of Report.* The written report shall:
- 7.4.6.2.1. Restate the scope of the investigation, identifying the voting system and specific matter investigated;
  - 7.4.6.2.2. Briefly describe the investigative process employed;
  - 7.4.6.2.3. Summarize the relevant and reliable facts and information gathered in the course of investigation;
  - 7.4.6.2.4. Attach all relevant and reliable evidence collected in the course of investigation that documents the facts. All fact shall be documented in written form;
  - 7.4.6.2.5. Analyze the information gathered; and
  - 7.4.6.2.6. Clearly state the findings of the investigation.
- 7.4.7. Findings Report of Investigation. The Report of Investigation shall state one of two conclusions. After gathering and reviewing all applicable facts the report shall find each allegation investigated to be either (1) substantiated or (2) unsubstantiated.
- 7.4.7.1. *Substantiated Allegations.* An allegation is substantiated if a preponderance of the relevant and reliable information gathered requires that the voting system at issue be decertified (consistent with the policy set out in Section 7.2). If any allegation is substantiated a Notice of Non-Compliance must be issued.
- 7.4.7.2. *Unsubstantiated Allegations.* An allegation is unsubstantial if the preponderance of the relevant and reliable information gathered does not require decertification (see Section 7.2). If all allegations are unsubstantiated, the matter shall be closed and a copy of the report forwarded to the Manufacturer.
- 7.4.8. Publication of Report. The report shall not be made public nor released to the public until final.

009904

- 7.5. Effect of Informal Inquiry or Formal Investigation on Certification.** A voting system's EAC Certification is not affected by the initiation or conclusion of an Informal Inquiry or Formal Investigation. Systems under investigation remain certified until a final Decision on Decertification is issued by the EAC.
- 7.6. Notice of Non-Compliance.** If an allegation in a Formal Investigation is substantiated, the Decision Authority shall send the Manufacturer a Notice of Non-Compliance. The Notice of Non-Compliance is not, itself, a decertification of the voting system. The purpose of the notice is (1) to notify the Manufacturer of the non-compliance and (2) inform the Manufacturer of its procedural rights so that it may be heard prior to decertification.
- 7.6.1. Noncompliance Information.** The Notice of Non-Compliance shall:
- 7.6.1.1. Provide Manufacturer a copy of the Report of Investigation;
  - 7.6.1.2. Identify the noncompliance, consistent with the Report of investigation;
  - 7.6.1.3. Inform Manufacturer that if the voting system is not made compliant, the voting system will be decertified.
  - 7.6.1.4. State the actions the manufacturer must take, if any, to bring the voting system into compliance and avoid decertification.
- 7.6.2. Manufacturer's Rights.** The written Initial Decision must also inform the manufacturer of its procedural rights under the program. These include:
- 7.6.2.1. *Right to Present Information Prior to Decertification Decision.* The manufacturer shall be informed of its right to present information to the Decision Authority prior to a determination of decertification.
  - 7.6.2.2. *Right to have access to the information that will serve as the basis of the Decertification Decision.* The manufacturer shall be provided the Report of Investigation and any other materials that will serve as the basis of an agency Decision on Decertification.
  - 7.6.2.3. *Right to cure system defects prior to Decertification Decision.* A manufacturer may request an opportunity to cure within 20 days of its receipt of the Notice of Non-Compliance.
- 7.7. Procedure for Decision on Decertification.** The Decision Authority shall make and issue a written Decision on Decertification whenever a Notice of Non-Compliance is issued. The Decision Authority will not take such action until the Manufacturer has had a reasonable opportunity to cure the non-compliance and submit information for consideration.
- 7.7.1. Opportunity to Cure.** The Manufacturer shall have an opportunity to *timely* cure a non-conformant voting system prior to decertification. Cure is timely when the cure process

can be completed prior to the next Federal Election. This means that any proposed cure must be in place before *any* individual jurisdiction fielding the system holds a Federal election. The Manufacturer must request the opportunity to cure. If the request is approved, a compliance plan must be created, approved and followed. If this cure process is successfully completed, a Manufacturer may modify a non-compliant voting system, remedy procedural discrepancies or otherwise bring its system into compliance without resubmission or decertification.

- 7.7.1.1. *Manufacturer's Request to Cure.* Within 20 calendar days of receiving the EAC's Notice of Non-Compliance, a manufacturer may request an opportunity to *timely* cure all defects identified in the Notice of Non-Compliance. The request must be sent to the Decision Authority and outline how the Manufacturer would modify the system, update the technical data package, create a test plan, test the system and obtain EAC approval prior to the next election for Federal office.
- 7.7.1.2. *EAC Action on Request.* The Decision Authority will review the request and approve it if the defects identified in the Notice of Non-Compliance may reasonably be cured prior to the next election for Federal office.
- 7.7.1.3. *Manufacturer's Compliance Plan.* Upon approval of the manufacturer's request for an opportunity to cure, the manufacturer shall submit a compliance plan to the Decision Authority for approval. This compliance plan must put forth the steps to be taken (including time frames) to cure all identified defects in a timely manner. The plan shall describe the proposed changes to the system, provide for modification of the system, update the technical data package, create a test plan (limited to those tests required by the proposed changes), and provide for the testing of the system and submission of the test report to the EAC for approval. The plan shall also include a schedule of periodic progress reports to the Program Director.
- 7.7.1.4. *EAC Action on the Compliance Plan.* The Decision Authority must review and approve the compliance plan. The Decision Authority may require the manufacturer to provide additional information and modify the plan as required. If the Manufacturer is unable or unwilling to provide a Compliance Plan acceptable to the Decision Authority, the Decision Authority shall provide written notice terminating the "opportunity to cure" process.
- 7.7.1.5. *Manufacturer's Submission of the Compliance Plan Test Report.* The manufacturer shall submit the test report created pursuant to its EAC approved Compliance Plan. The EAC shall review the test report and any other necessary or relevant materials. The report will be technically reviewed by the EAC in a manner similar to the procedures laid out in Chapter 4 of this Manual.

009906

- 7.7.1.6. *EAC Decision on the System.* After receipt of the test plan, the Decision Authority shall issue a decision on a voting system amended pursuant to an approved Compliance Plan. For the purposes of planning, manufacturers should allow at least 20 working days for this process.
- 7.7.2. Opportunity to be Heard. The Manufacturer may submit written materials in response to the Notice of Non-Compliance and Report of Investigation. These documents shall be considered by the Decision Authority when making a determination on decertification. The Manufacturer shall ordinarily have 20 calendar days from the date it received the Notice of Non-Compliance (or in the case of a failed effort to cure, the termination of that process) to deliver its submissions to the Decision Authority. However, when warranted by the public interest (because a delay in making a determination on decertification would effect the timely, fair and effective administration of Federal elections), the Decision Authority may provide a Manufacturer less time to submit information. This alternative period (and the basis for it) must be stated in the Notice of Non-Compliance. The alternative time period must allow the manufacturer a reasonable amount of time to gather its submissions. Submissions may include:
- 7.7.2.1. A written argument responding to the conclusions in the Notice of Non-Compliance or Report of Investigation.
  - 7.7.2.2. Documentary evidence relevant to the allegations or conclusions in the Notice of Non-Compliance.
  - 7.7.2.3. Other written materials created to provide relevant facts (such as technical information, testing data or statements).
- 7.7.3. Decision on Decertification. The Decision Authority shall make an agency determination on Decertification.
- 7.7.3.1. *Timing.* The Decision Authority shall promptly make a decision on Decertification. However, the Decision Authority may not issue such a decision until the Manufacturer has provided all of its written materials for consideration or the time allotted for submission (usually 20 calendar days) has run.
  - 7.7.3.2. *Considered Materials.* The Decision Authority shall review and consider all relevant submissions of the manufacturer. In make a decision on decertification, the Decision Authority shall also consider all documents that make up the record and any other documentary information he or she determines relevant.
  - 7.7.3.3. *Agency Decision.* The Decision Authority shall issue a written Agency Decision after review of applicable materials. This decision shall be the final decision of the agency. The decision shall:

- 7.7.3.3.1. Clearly state the agency's determination on the decertification, specifically addressing the areas of non-compliance investigated;
- 7.7.3.3.2. Address the issues raised by the manufacturer in the materials it submitted for consideration;
- 7.7.3.3.3. Identify all facts, evidence, procedural requirements and/or voting system standards (VVSG or VSS) that served as the basis for the decision;
- 7.7.3.3.4. Provide the reasoning behind the determination;
- 7.7.3.3.5. Identify and provide, as an attachment, any additional documentary information that served as a basis for the decision and that was not part of the manufacturer's submission or the Report of Investigation; and
- 7.7.3.3.6. Provide the manufacturer notice of its right to appeal.

**7.8. Effect of Decision Authority's Decision on Decertification.** The Decision Authority's Decision on Decertification is the decision of the agency. A decertification is effective upon the manufacturer's receipt of the decision. A manufacturer that has had a voting system decertified may appeal that decision.

**7.9. Appeal of Decertification.** A manufacturer may, upon receipt of an Agency Final Decision on Decertification, timely request an appeal.

**7.9.1. Requesting Appeal.**

7.9.1.1. *Submission.* Requests must be submitted in writing to the Chair of the U.S. Election Assistance Commission.

7.9.1.2. *Timing of Appeal.* The manufacturer may request an appeal within 20 days of receipt of the Agency Final Decision on Decertification. Late requests will not be considered.

7.9.1.3. *Contents of Request.*

- 7.9.1.3.1. The request must clearly state the specific conclusions of the Final Decision it wishes to appeal.
- 7.9.1.3.2. The request may include additional written argument.
- 7.9.1.3.3. The request may not reference or include any factual material not previously considered or submitted to the EAC.

009908

- 7.9.1.4. *Effect of Appeal on Decertification.* The initiation of an appeal does not impact the decertified status of a voting system. Systems are decertified upon notice of decertification in the agency's Decision on Decertification (see Section 7.8).
- 7.9.2. Consideration of Appeal. All timely appeals will be considered by the appeal authority.
- 7.9.2.1. The appeal authority shall be two or more U.S. EAC Commissioners or other individual or individuals appointed by the Commissioners who have not previously served as investigators, advisors or decision makers in the decertification process.
- 7.9.2.2. All decisions on appeal shall be based on the record.
- 7.9.2.3. The decision of the Decision Authority shall be given deference by the appeal authority. While it is unlikely that the scientific certification process will produce factual disputes, in such cases, the burden of proof shall belong to the Manufacturer to demonstrate by clear and convincing evidence that their voting system met all substantive and procedural requirements for certification. In other words, the determination of the Decision Authority will be overturned only when the appeal authority finds the ultimate facts in controversy highly probable.
- 7.9.3. Decision on Appeal. The appeal authority shall make a written, final Decision on Appeal. This decision shall be provided the Manufacturer. All Decisions on Appeal shall be final and binding on the Manufacturer. No additional appeal shall be granted. The Decision on Appeal shall:
- 7.9.3.1. State the final determination of the agency;
- 7.9.3.2. Address the matters raised by the Manufacturer on appeal;
- 7.9.3.3. Provide the reasoning behind the decisions; and
- 7.9.3.4. State that the decision on appeal is final.
- 7.9.4. Effect of Appeal.
- 7.9.4.1. *Grant of Appeal.* If a manufacturer's appeal is granted in whole, the decision of the Decision Authority is reversed. The voting system shall have its certification reinstated. For the purposes of this program, the system shall be treated as though it was never decertified.

009909

7.9.4.2. *Denial of Appeal.* If a manufacturer's appeal is denied (in whole or in part), the decision of the Decision Authority is upheld. The voting system remains decertified and no additional appeal is available.

**7.10. Effect of Decertification.** Voting systems that have been decertified no longer hold an EAC Certification under the program. For the purposes of this manual and the program, such systems will be treated as any other uncertified voting system. As such:

7.10.1. The manufacturer may not represent the voting system as certified;

7.10.2. The voting system may not be labeled as certified;

7.10.3. The voting system will be removed from the EAC list of Certified Systems; and

7.10.4. The EAC will notify state and local election officials of the decertification.

**7.11. Recertification.** A decertified system may be re-submitted for certification. Such systems shall be treated as any other system seeking certification. The Manufacturer shall present an application for certification consistent with this manual.

DRAFT

## 8. Quality Monitoring Program

- 8.1. Overview.** The quality of any product, including a voting system, depends on two specific elements: (1) the design of the product or system; and (2) the care and consistency of the manufacturing process. The EAC testing and certification process focuses on voting system design by ensuring that a representative sample of a system meets the technical specifications of the applicable EAC voting system standards. This process is commonly called 'type acceptance'. It determines whether the representative sample submitted for testing meets the requirements. What type acceptance does not do is explore whether variations in manufacturing may allow production of non-compliant systems. Generally, the quality of the manufacturing is the responsibility of the manufacturer. Once a system is certified, the vendor assumes primary responsibility for compliance of the produced products. This is accomplished by the manufacturer's configuration management and quality control processes. However, the EAC's Quality Monitoring Program, as outlined in this chapter, provides an additional layer of quality control by allowing the EAC to perform manufacturing site reviews, carry out fielded system reviews and gather information on voting system anomalies from election officials. These are additional tools to help assure that voting systems continue to meet the requirements of EAC's voting system standards as they are manufactured, delivered and used in elections. These aspects of the program allow the EAC to independently monitor the continued compliance of fielded voting systems.
- 8.2. Purpose.** The purpose of the Quality Monitoring Program is to ensure that the voting systems certified by the EAC are identical to those fielded in election jurisdictions. This is done primarily by identifying: (1) potential quality problems in manufacturing, (2) uncertified voting system configurations and (3) field performance issues with certified systems.
- 8.3. Manufacturer Quality Control.** EAC's Quality Monitoring Program is not a substitute for the manufacturer's quality control program. As stated in Chapter 2 of this manual, all manufacturers must have an acceptable quality control program in place before they may be registered. The EAC's program serves as an independent and complimentary process of quality control which works in tandem with manufacturer's efforts.
- 8.4. Quality Monitoring Methodology.** This chapter provides the EAC with three primary tools it will use to assess the level of effectiveness of the certification process and the compliance of fielded voting systems. These tools include (1) manufacturing site reviews, (2) fielded system reviews and (3) a means to receive anomaly reports from the field.
- 8.5. Manufacturing Site Review.** Facilities that produce certified voting systems will be reviewed periodically, at the discretion of the EAC, to verify that the system being manufactured, shipped and sold is the same as the sample submitted for certification testing. All registered manufacturers must cooperate with such audits as a condition of program participation.
- 8.5.1. Notice.** The site review may be scheduled or unscheduled, at the discretion of the EAC. Unscheduled reviews will be performed with at least 24 hours notice. Scheduling and notice of site reviews will be coordinated with and provided to both the manufacturing facility representative and the Manufacturer's representative.

- 8.5.2. Frequency. At a minimum, one or more manufacturing facilities of a registered manufacturer shall be subject to a site review at least once every four years.
- 8.5.3. The Review. The production facility and production test records must be made available for review. When requested, production schedules must be provided to the EAC. Production or production testing may be witnessed by EAC representatives. If equipment is not being produced during the inspection, the review may be limited to production records. During the inspection, the manufacturer must make available to the EAC representative the manufacturer's quality manual and other documentation sufficient to enable the inspector to evaluate the facility's:
  - 8.5.3.1. Manufacturing quality controls;
  - 8.5.3.2. Final inspection and testing;
  - 8.5.3.3. History of deficiencies or anomalies and corrective actions taken;
  - 8.5.3.4. Equipment calibration and maintenance;
  - 8.5.3.5. Corrective action program;
  - 8.5.3.6. Policies on product labeling and the application of the EAC mark of certification; and
- 8.5.4. Exit Briefing. Site reviewers will provide the manufacturing facility representative a verbal exit briefing regarding the preliminary observations of the review.
- 8.5.5. Written Report. A written report documenting the review will be drafted by the EAC representative and provided to the manufacturer. The report will detail the findings of the review and identify actions that are required to correct any deficiencies.

**8.6. Fielded System Review and Testing.** Upon invitation or with the permission of a state or local election authority, the EAC may, at its discretion, conduct a review of fielded voting systems. Such reviews will be done to ensure that a fielded system is in the same configuration as that certified by the EAC and that it has the proper mark of certification. This review may include the testing of a fielded system, if deemed necessary. Any anomalies found during this review and testing will be provided to the election jurisdiction and the manufacturer.

**8.7. Field Anomaly Reporting.** The EAC will collect information from election officials who field EAC certified voting systems as another means of gathering field data. Information on actual voting system field performance is a basic means to assess the effectiveness of certification program and the manufacturing quality and version control. The EAC will provide a mechanism for election officials to provide real world input on voting system anomalies.

8.7.1. Anomaly Report. An anomaly report is a form that election officials may use to report voting system anomalies to the EAC. The form (and instructions for its completion) are available at Appendix D or on the EAC website, [www.eac.gov](http://www.eac.gov). The form may be filed with the EAC on-line or by mail. Use of the form is required.

8.7.2. Who May Report? Reports may be filed by state or local election officials who have experienced voting system anomalies in their jurisdiction. The individuals reporting must identify themselves and have firsthand knowledge or official responsibility over the anomaly being reported. Anonymous or hearsay reporting will not be accepted.

8.7.3. What Is Reported? Election officials shall report voting system anomalies. An “anomaly” is defined as an irregular or inconsistent action or response from the voting system or system component resulting in some disruption to the election process. Incidents resulting from administrator error or procedural deficiencies are not considered an anomaly for the purposes of this chapter. Officials must report:

8.7.3.1. Their name, title, contact information and jurisdiction;

8.7.3.2. A description of the voting system at issue;

8.7.3.3. The date and location of the reported occurrence;

8.7.3.4. The type of election; and

8.7.3.5. A description of the anomaly witnessed.

8.7.4. Report Distribution. Credible reports will be distributed to state and local election jurisdictions who field similar systems and the manufacturer of the voting system at issue.

**8.8. Use of Quality Monitoring Information.** Ultimately, the information the EAC gathers from manufacturing site reviews, fielded system reviews and field anomaly reports will be used to improve the program and ensure the quality of voting systems. The system is not designed to be punitive, but focused on improvement of the process. Information gathered will be used to:

8.8.1. Identify areas for improvement in the EAC’s testing and certification program;

8.8.2. Improve manufacturing quality and change control processes;

8.8.3. increase voter confidence in voting technology;

8.8.4. Inform manufacturers, election officials and the EAC of issues associated with voting systems in a real world environment;

8.8.5. Share information between jurisdictions who utilize similar voting systems;

- 8.8.6. Resolve problems associated with voting technology or manufacturing in a timely fashion by involving manufacturers, election officials and the EAC;
- 8.8.7. Provide feedback to the EAC, NIST and the TDGC regarding issues which may need to be addressed through a revision to the Voluntary Voting System Guidelines;
- 8.8.8. Initiate an investigation where information suggests that decertification is warranted (See Chapter 7).

DRAFT

## 9. Interpretations

- 9.1. Overview.** A request for Interpretation is a means by which a registered manufacturer or VSTL may seek clarification on a specific EAC voting system standard (VVSG or VSS). Interpretations are clarifications of the voting system standards and guidance on how to properly evaluate conformance to it. Suggestions or requests for modifications to the standards are provided by other processes. This chapter outlines the policy, requirements and procedure for requesting an Interpretation.
- 9.2. Policy.** Registered Manufacturers or VSTLs may request that the EAC provide a definitive interpretation of EAC accepted voting system standards (VVSG or VSS) when, in the course of developing or testing a voting system, facts arise which make the meaning of a particular standard ambiguous or unclear. The EAC may self-initiate such a request when its agents identify a need for interpretation within the program. An interpretation issued by the EAC will serve to clarify what a given standard requires and how to properly evaluate compliance. Ultimately, interpretations do not amend voting system standards, but serve only to clarify existing standards.
- 9.3. Requirements for Requesting an Interpretation.** EAC interpretations are limited in scope. The purpose of the interpretation process is to provide manufacturers, who are in the process of developing a voting system, a means to resolve the meaning of a voting system standard in light of a specific voting system technology without having to present a finished product to EAC for certification. In order to submit a request for interpretation, one must (1) be a proper requester, (2) request interpretation of an applicable voting system standard, (3) present an actual controversy and (4) seek clarification on a matter of unsettled ambiguity.
- 9.3.1. Proper Requestors.** A request for interpretation may only be submitted by a registered manufacturer or agent of the manufacturer acting on its behalf (such as a VSTL). Requests for interpretation will not be accepted from any other party.
- 9.3.2. Applicable Standard.** Requests for interpretation are limited to queries on EAC voting system standards (i.e. VVSG or VSS). Moreover, a manufacturer may only request an interpretation on a version of EAC voting system standards to which the EAC currently offers certification.
- 9.3.3. Existing Factual Controversy.** In order to request an interpretation, a manufacturer must present a question relative to a specific voting system or technology proposed for use in a voting system. Requests for interpretation on hypothetical issues will not be addressed by the EAC. In order to request interpretation, the need for clarification must have arisen from the development or testing of a voting system. A factual controversy exists when an attempt to apply a specific section of the VVSG or VSS to a specific system or piece of technology creates ambiguity.
- 9.3.4. Unsettled, Ambiguous Matter.** Requests for interpretation must involve actual controversies which have not been previously settled. This is a two part requirement:

9.3.4.1. *Actual Ambiguity.* A proper request must contain an actual ambiguity. The interpretation process is not a means to challenge a clear EAC voting system standard. Recommended changes to voting system standards are welcome and may be forwarded to the EAC, but are not part of the Certification Program. An Ambiguity arises when (in applying a voting system standard to a specific technology):

9.3.4.1.1. The language of the standard is unclear on its face;

9.3.4.1.2. One section of the standards seems to contradict another, relevant section;

9.3.4.1.3. The language of the standard, though clear on its face, lacks sufficient detail or breadth to determine its proper application to a particular technology;

9.3.4.1.4. The language of a particular standard, when applied to a specific technology, clearly conflicts with the established purpose or intent of the standard; or

9.3.4.1.5. The language of the standard is clear, but the proper means to assess compliance is unclear.

9.3.4.2. *Not Previously Clarified.* The EAC will not accept a request for interpretation where the issues raised have previously been clarified.

**9.4. Procedure for Requesting an Interpretation.** Requests for an interpretation shall be made in writing to the Program Director. All requests should be complete and as detailed as possible, as interpretations issued by the EAC are based upon, and limited to, the facts presented. Failure to provide complete information may result in an Interpretation that is off point and ultimately immaterial to the issue at hand. Requests for Interpretation must:

9.4.1. Establish Standing to Make the Request. In order to make a request one must meet the requirements identified in section 9.3, above. Thus the written request must provide sufficient information for the Program Director to conclude that the requestor is (1) a proper requester, (2) requesting interpretation of an applicable voting system standard, (3) presenting an actual factual controversy and (4) seeking clarification on a matter of unsettled ambiguity.

9.4.2. Identify the EAC Voting System Standard to be Clarified. The request must identify the specific standard or standards to which the requestor seeks clarification. The request must state the version of the voting system standards at issue (if applicable) and quote and correctly cite the applicable standards.

9.4.3. State the Facts Giving Rise to the Ambiguity. The request must provide the facts associated with the voting system technology that gave rise to the ambiguity in the

identified standard. The request must be careful to provide all necessary information in a clear and concise fashion. Any interpretation issued by the EAC will be based upon the facts provided.

9.4.4. **Identify the Ambiguity.** The request must identify the ambiguity it seeks to resolve. The ambiguity shall be identified by stating a concise question. This question:

9.4.4.1. Shall be clearly stated.

9.4.4.2. Shall be related to and reference the voting system standard and voting system technology information provided.

9.4.4.3. *Shall be limited to a single issue.* Each question or issue arising from an ambiguous standard must be stated separately. Compound questions are unacceptable. If multiple issues exist, they should be presented as individual, numbered questions.

9.4.4.4. Shall be stated in a way that can ultimately be answered yes or no.

9.4.5. **Provide a Proposed Interpretation.** A request for interpretation should propose an answer to the question posed. The answer should interpret the voting system standard in the context of the facts presented. It should also provide the basis and reasoning behind the proposal.

**9.5. EAC Action on Request for Interpretation.** Upon receipt of a Request for Interpretation the EAC shall:

9.5.1. **Review of Request.** The Program Director shall review the request to ensure it is complete, clear and meets the requirements of Section 9.3. Upon review the Program Director may:

9.5.1.1. *Request Clarification.* If the Request of Interpretation is incomplete or additional information is otherwise required, the Program Director may send the Manufacturer a request for clarification. This request will identify the additional information required.

9.5.1.2. *Reject the Request for Interpretation.* If the Request for Interpretation does not meet the requirements of Section 9.3 the Program Director may reject it. Such rejection must be provided the Manufacturer in writing and state the basis for the rejection.

9.5.1.3. *Notice Acceptance of the Request.* If the Request of Interpretation is acceptable the Program Director will notify the manufacturer in writing, providing it with an estimated date of completion. Requests for Interpretation may be accepted in whole or in part. A notice of acceptance shall state the issues accepted for interpretation.

9.5.2. **Consideration of the Request.** Once a Request for Interpretation has been accepted, the matter shall be investigated and researched. Such action may require the EAC to employ technical experts. It may also require the EAC to request additional information from the Manufacturer. The Manufacturer shall respond promptly to such requests.

9.5.3. **Interpretation.** The Decision Authority shall be responsible for making determinations on requests for interpretation. Once this determination has been made, a written Interpretation shall be sent to the Manufacturer. This written Interpretation shall:

9.5.3.1. State the question or questions investigated;

9.5.3.2. Outline the relevant facts that served as the basis of the Interpretation;

9.5.3.3. Identify the voting system standards interpreted;

9.5.3.4. State the conclusion reached.

9.5.3.5. Inform the Manufacturer of the effect of an interpretation (see Section 9.6, below).

**9.6. Effect of Interpretation.** Interpretations are fact and case specific. They are not tools of policy, but specific, fact based guidance useful for resolving a particular problem. Ultimately, an interpretation is determinative and conclusive only with regard to the case presented. Nevertheless, interpretations do have some value as precedence. Interpretations published by the EAC shall serve as reliable guidance and authority over identical or similar questions of interpretation. These Interpretations will assist users of EAC voting system standards in understanding and applying its provisions.

**9.7. Library of Interpretations.** To better serve Manufacturers and those interested in the EAC voting system standards, the Program Director shall select Interpretations for general publication. All proprietary information contained in an Interpretation will be redacted before publication consistent with Chapter 10 of this Manual. The library of published opinions may be found at [www.eac.gov](http://www.eac.gov).

009918

## 10. Trade Secret, Confidential Commercial and Personal Information

**10.1. Overview.** Participants in the Certification Program will be required to provide the EAC a variety of documents, some of these documents may include trade secret, confidential commercial or personal information protected from release by Federal law. This chapter discusses the certification program's standards, processes and requirements that work to identify, document and protect such information from improper release.

**10.2. Policy on Trade Secret and Confidential Commercial Information.** The Freedom of Information Action (FOIA) and EAC policy promote an open and transparent government process. FOIA generally provides for the release of documents to the public upon request. In most cases, access to government held documents benefit Federal agencies by creating an informed and involved public. However, in some instances the release of information can be harmful to both the individual who submitted it and a Federal agency's ability to perform its mission. Confidential commercial or trade secret information falls into this category. Such information has value in the marketplace. Requiring release of the information would result in competitive harm to its submitter and damage the government's ability to gather such information in the future. Because of this fact, FOIA (5 U.S.C. §522) along with the Trade Secrets Act (18 U.S.C. §1905) protect from public release (1) trade secrets information and (2) privileged or confidential commercial information.

**10.3. Trade Secrets.** A trade secret is a secret, commercially valuable plan, process, or device that is used for the making or processing of a product and that is the end result of either innovation or substantial effort. It relates to the productive process itself, describing how a product is made. It does not relate to information describing end product capabilities, features, or performance.

10.3.1. For illustrative purposes, examples of trade secrets may include:

10.3.1.1. Plans schematics and other drawings useful in production;

10.3.1.2. Specifications of materials used in production;

10.3.1.3. Voting system source code used to develop or manufacture software where release would reveal actual programming;

10.3.1.4. Technical descriptions of manufacturing processes and other secret information relating directly to the production process.

10.3.2. Examples of documents that are likely not trade secrets include:

10.3.2.1. Information pertaining to a finished products capabilities or features;

10.3.2.2. Information pertaining to a finished products performance.

10.3.2.3. Information regarding product components that would not reveal any commercially valuable information regarding production.

**10.4. Privileged or Confidential Commercial Information.** Privileged or confidential commercial information is that information submitted by a manufacturer that is *commercial or financial* in nature and *privileged or confidential*.

10.4.1. *Commercial or Financial Information.* The terms “commercial” and “financial” should be given their ordinary meanings. They include records in which a submitting manufacturer has any *commercial interest*.

10.4.2. *Privileged or Confidential.* Commercial or financial information is privileged or confidential if its disclosure would likely cause substantial harm to the competitive position of the submitter. The concept of harm to one’s competitive position focuses on harm flowing from a competitor’s affirmative use of the proprietary information. It does not include incidental harm associated with upset customers or employees.

**10.5. Documents Submitted Voluntarily.** Documents submitted voluntarily to a Federal agency are granted a greater degree of protection from public release than those documents submitted involuntarily. Information the EAC requires Manufacturers to submit as a function of the Certification Program are not provided voluntarily. Voluntarily submitted documents are those the manufacturer chooses to submit outside the Certification Program requirements. If a manufacturer wishes to provide such information, it should contact and coordinate with the certification Program Director. If the Program Director determines the information to be voluntary in nature, the manufacturer should label the information appropriately. Such action will prevent the inappropriate or inadvertent release of protected information.

**10.6. EAC’s Responsibilities.** The EAC is ultimately responsible for determining whether or not a document must be released pursuant to Federal law. In doing so, however, the EAC will require information and input from the manufacturers submitting the documents. This is essential for the EAC to identify, track and make determinations on the large volume of documentation it receives. The EAC has the following responsibilities.

10.6.1. Document and information management. The EAC will control the documentation it receives. It will do so in a manner that:

10.6.1.1. Ensures documents are secure and only released to third parties after the appropriate review and determination;

10.6.1.2. Track documents manufactures have previously identified as proprietary and requiring protection under FOIA.

10.6.2. Contact manufacturers upon proposed release of potentially protected documents. In the event a member of the public submits a FOIA request for documents provided by a manufacturer or the EAC otherwise proposes the release of such documents, the EAC will:

10.6.2.1. Review the documents to determine if they are potentially protected from release as trade secrets or confidential commercial information. The documents at issue may have been previously identified as protected by the manufacturer when submitted (see section 10.7.1, below) or identified by the EAC upon review.

10.6.2.2. Grant submitting manufacturer an opportunity to provide input. In the event the information has been identified as potentially protected from release as a trade secret or confidential, commercial information, the EAC will notify the submitter and allow them an opportunity to submit their position on the issue. The submitter shall respond consistent with section 10.7.1, below.

10.6.3. Make a final determination on release. After providing the submitter of the information an opportunity to be heard, the EAC will make a final decision on release. The EAC will inform the submitter of this decision.

**10.7. Manufacture's Responsibilities.** While the EAC is ultimately responsible for determining if a document, or a portion of it, is protected from release as a trade secret or confidential commercial information, the Manufacturer shall be responsible for identifying documents it believes warrant such protection. This responsibility arises in two situations (1) upon the initial submission of information, and (2) upon notification by the EAC that it is considering the release of potentially protected information.

10.7.1. Initial submission of information. When a manufacturer is submitting documents to the EAC as required by the certification program, it is responsible for identifying any document or portion of a document that it believes is protected from release by law. Examples of submissions required under this program include information submitted during the manufacturer registration process, Technical Data Packages, Test Plans and Test Reports. Manufacturers shall identify protected information by:

10.7.1.1. *Submitting a Notice of Protected Information.* This notice shall identify the document, document page or portion of a page that is believed to be protected from release. This must be done with specificity. For each piece of information identified, state the legal basis for its protected status.

10.7.1.1.1. Cite the applicable law which exempts the information from release.

10.7.1.1.2. Clearly discuss why that legal authority applies and why the document must be protected from release.

10.7.1.1.3. If necessary, provide additional documentation or information. For example, if a document is claimed to contain confidential commercial information, evidence and analysis of the competitive harm that would result upon release would have to be provided.

10.7.1.2. *Label Submissions.* Label all submissions identified in the notice as “Proprietary Commercial Information.” Only those submission that are identified as protected should be labeled. Attempts to indiscriminately label all materials as proprietary will render the markings moot.

10.7.2. Notification of potential release. In the event a manufacturer is notified that the EAC is considering the release of information that may be protected, the manufacturer shall:

10.7.2.1. Respond to the notice within 15 days. If additional time is needed, the manufacturer must promptly notify the Program Director. Requests for additional time will be granted only for good cause and must be made before the 15 day deadline. Manufacturers that do not timely respond, will be viewed as not objecting to release.

10.7.2.2. Clearly state in the response:

10.7.2.2.1. That there is no objection to release; OR

10.7.2.2.2. That the manufacturer objects to release. In this case, the response must clearly state which portions of the document are believed to be protected from release. The manufacture shall follow the procedures discussed in section 10.7.1, above.

**10.8. Personal Information.** Certain personal information is protected from release under FOIA and the Privacy Act (5 U.S.C. §552a). This information includes private information about a person which if released would cause the individual embarrassment or constitute and unwarranted invasion of personal privacy. Generally, the EAC will not require the submission of private information about individuals. The incidental submission of such information should be avoided. If a manufacturer believes it is required to submit such information, it should contact the Program Director. If the information will be submitted, it must be properly identified. Examples of such information include:

10.8.1. Social Security Numbers;

10.8.2. Bank account numbers;

10.8.3. Home addresses and

10.8.4. Home phone numbers.

# Delivery and Validation of Trusted Voting System Software

## Overview

This document discusses the design of a proposed system for delivery and validation of trusted voting system software and the rationale for this system. The purpose of the system is to provide a high level of confidence that software used in elections is a faithful and unmodified copy of the certified version. This foundation of trust is built upon two pillars. The first pillar is that the certification process is effective and will prevent deficient or malicious software from being approved. The second pillar, and the subject of this document, is that the software that was certified is what is being used in elections and can be verified as that.

We begin with a discussion of how software is built and delivered. Next the security risks of the system are discussed and the security principles used to protect the system are set forth. The main part of the document then discusses how those security principles are or could be implemented to protect the delivery of voting system software. In some cases the features described future possibilities. In other cases features are already in use in some states, but not in others.

## Building and Delivering Software

Computers only understand numbers. In fact they only understand 1's and 0's. This is called binary coding. Back in ancient computing times (the 1950's and 1960's), some people actually wrote computer programs as long strings of numbers. The computer's central processing unit (CPU) that understood certain numbers were instructions for different actions like add, subtract, read memory or write to the disk. It also understood that some of the numbers were its data. For example the number that meant read memory would be followed by a number that wasn't another instruction but pointed to the location in the memory to be read.

People soon grew tired of writing computer programs as long lists of numbers and so computer languages were developed. These computer languages were meant to allow people to write programs in something that looked more like speech. So now programmers would write lists of commands like "read", "print" or "if..else.."

However, the computers still only understood numbers so a special program was developed that translated the programming instructions to the numbers the computer would understand. This program is usually called a compiler and the process of converting the programming instructions into the numbers a computer can read is called a compilation or a build. The result of a build is called executable code, because it is in a form the computer can execute.

Today computer programmers use very sophisticated computer languages to write programs. Some of these languages even start to look like human language, if you are a computer geek. These programs are called source code because they are the input or source for the next steps in

the process. When they are ready they use a compiler to build their program into executable code and run it on a computer. So the steps in the process are:

1. Write a source code program in computer language.
2. Build the source code into executable code.
3. Take the executable code to a computer.
4. Load the executable onto the computer and run it.

This is all pretty simple. Now let's see what could go wrong.

## **Securing the System**

Once the system for producing, delivering and installing executable code is understood the system must be examined to identify any security vulnerabilities. The first step in a security analysis is to develop a threat model. What are we worried about? What threat do we need to protect the system against?

We could hypothesize a conspiracy involving two or more people. However, large conspiracies are almost impossible to keep secret. Even two people, if they work for different organizations, are hard to co-opt successfully. Once you start assuming that a conspiracy is possible then the situation starts becoming increasingly complex and there is more debate over how likely that is to happen. Debating the possibility of conspiracy scenarios is not within the scope of this document. Everyone seems to agree that the system should be protected in a way that one rogue employee could not do anything bad without being detected.

Once we have agreed on the threats then we can talk about how to protect the system from those threats. Developing a complete security system is a very complex and involved task. This document only focuses on some of the issues that are important for protecting the production, delivery and installation of executable code in a voting system.

### *The Threat Model*

So what are we worried about? There are many, many possible answers to that question. This document deals with preventing a single threat of a rogue actor in the system. Let's assume we may get a rogue person who wants to manipulate the voting system. An insider probably has the most potential for doing damage, so let's assume this person is an employee of an organization that is involved with the voting system. The person may work for a local elections office, an equipment manufacturer, a test house or any other organization that deals with voting equipment.

What could one rogue employee do and how would we protect the system against them?

### *Security Principles*

The system should be designed with multiple protections. This is called a defense in depth. Some of these protections will try and prevent a malicious person from doing what they want to do. Other features will try and detect if somehow they were able to do it anyway. Still other features will document what happened and provide evidence in an investigation if there is ever suspicion that something bad happened.

### **Multiple Independent Knowledgeable Witnesses**

One principle the system should follow is that nothing is done without multiple, independent and knowledgeable witnesses. At least two witnesses should be present at every step in the process. Witnesses should be independent of each other, meaning they work for different organizations and don't have any connection other than coming together to complete a task related to the voting system. Both of our witnesses should be sufficiently knowledgeable about the task so that they can be expected to spot an action that might potentially compromise the system. The first principle then is that every action in the process must be witnessed by two or more people, from different organizations who understand what is being done.

### **Documented Chain of Custody**

A voting system should have a documented chain of custody. Officials should be able to track the software on a voting system back to the source code that was delivered to the national lab for certification. We want to be able to prove that the executable code used in an election is exactly the same as that certified at the national and state level.

### **Protection, Detection and Recording Mechanisms**

A voting system should also have multiple levels of protection. It isn't unusual for our homes to have locks on the door, a light on the porch, a dog and, for some, a shotgun under the bed. That is one form of defense in depth. A thief might easily get by any one of those things but together they make it reasonably hard and potentially unpleasant for a thief to successfully break in. Similarly the voting system should also have multiple levels of protection. Some features will prevent something bad from happening. Other features will serve to detect if somehow the system is compromised. If the protections work, the detection features should never be needed. However, we live in an imperfect world so we need to provide for both prevention and detection. Even more, we want good records so that if there is ever a reason to investigate we can prove or disprove that the system worked. If these records show that despite all of the protections, someone corrupted the system, then the courts can decide the appropriate action. The system should be able to give the courts the evidence to determine what has happened.

### *Security System Design*

A certification system with three major elements flows from our security discussion. These elements are:

- Build source code into executable code
- Delivery unmodified version of the executable code to state and local authorities

- Verify that the code in use is unmodified from the certified code

To accomplish our security objectives the following principles are applied to each step of the process:

- Multiple independent knowledgeable witnesses
- Documented chain of custody
- Protection, detection and recording mechanisms

The application of these security principles to the different stages of the delivery process gives us the system design that will be discussed in the remainder of this document.

## Source Code Review

The first step in the process is an independent review of the source code. This is a requirement for national certification and also for some State certifications. This is one example of using multiple independent witnesses in which the manufacturer's programmer writes the programs for the voting system and then the national test lab review those programs, line-by-line, to make sure they do what they are supposed to do and only what they are supposed to do.

After the source code is built into executable code, there is testing of the software as it is used in a voting system. The source code review, together with the operational testing, provides multiple checks that the software operates correctly and doesn't have hidden code in it.

## Building Software

Once the source code has been reviewed by the national laboratory it must be compiled to build the executable code that will actually run on the voting system. A software build is a complex process and a lot goes on under the control of the computer during the process. When this process is completed, we need to be very confident that the source code reviewed is exactly what is in the executable code that is produced and that there hasn't been anything else added. This is easier said than done, but let's take a look at some options.

### *Witness Build*

The national certification system, under NASED and the ITA's, required a witness build. The manufacturer delivered source code to the ITA. The source code was reviewed. Then the manufacturer with a witness from the ITA performed the build. The executable code created was then loaded onto the machines and the rest of the testing on the voting system was performed. This system was a great improvement over what had existed before, which was no national certification system. Prior to the NASED national certification system every state conducted its own system review with very uneven levels of scrutiny.

There are notable weaknesses in the witness build process. First, the manufacturer's employee provided the build environment, without any kind of qualification. A computer loaded with a build environment is a very complex environment with numerous files and programs. It is quite

conceivable that someone could hide some additional software module and instructions to insert that software into the executable code. The ITA's witness and even the manufacturer's employee who performs the build might perform the build in good conscience, unaware that more was happening than they were aware of.

A second major weakness is that the records of the build process were inadequate to recreate it. If at a later time there was a need to investigate an allegation the records of the witness build process have been insufficient to recreate the original build environment or validate that the build environment is unchanged from that which was originally used.

A third weakness is that the witness build, while valuable, was not constructed with a view to its being an important part of a verifiable chain of custody from the national certification process to the software used in an election.

### *Trusted Build*

The concept of a trusted build may be considered a generational revision of the original witness build. The trusted build is constructed with the intent that it serve as an important component of a verifiable chain of custody. The role of the test authority witness is revised to make them the primary operator of the build process. Records and file signatures are significantly enhanced to allow recreation of the build environment and verification that the original build environment has been reproduced without modification. Significant added supervision is given to the creation of the build environment itself to assure that the environment itself is free of unknown elements.

The trusted build, depicted in Figure 1, begins with delivery of the source code from the manufacturer. The source code is reviewed for compliance with the EAC's applicable voting systems standards. File signatures of the source code modules are produced and recorded.

The build environment is then constructed. The disk that will hold the environment is completely erased using special software that assures complete and total cleaning of the disk, including the root sectors. It is preferred that the build environment be created by test authority personnel using commercial software purchased by them from the open market. Once the build environment is created its file signature is recorded so that if there is ever a need to recreated it the fidelity of the recreation may be verified.

After the source code has successfully passed the source code review it is time to perform the build. First the file signatures of the source code modules and the build environment are checked to assure that they are unchanged from their original form. Then the source code is loaded onto the build environment and file signatures are taken of the resulting combination. A disk image is also taken of the combination just before the build is performed. The disk image is archived in a trusted archive to assure that the build can be reproduced should there ever be a need to do so. Having this disk image available is a great help in incorporating modifications to software. For modifications, having the original build environment allows focus on only the modified software modules. The rest of the modules can be verified as unchanged and therefore can be trusted based on the original certification.

The executable code is then produced. File signatures of the executable code are taken and recorded. The executable code is then archived and also used to create installation disks. File signatures are also taken of the installation disks so that they may be validated by those who will later install the software into voting systems.

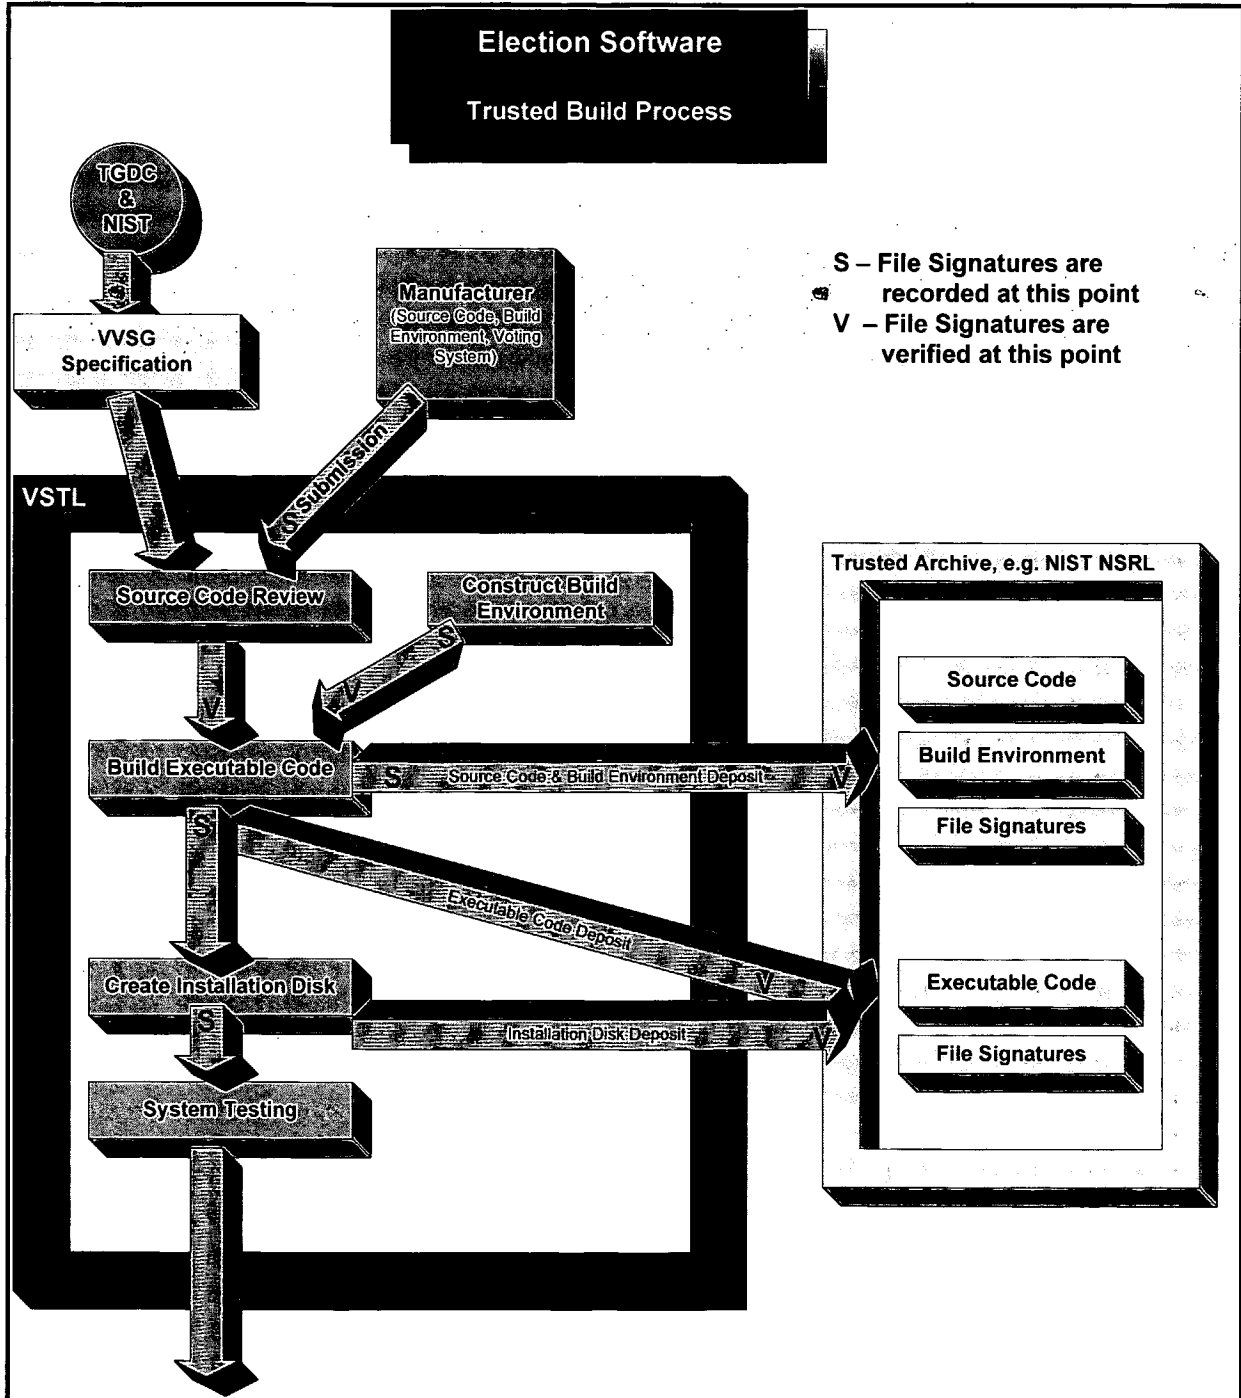

Figure 1 – The Trusted Build Process

The executable code is then installed on the system submitted for certification and the rest of the certification testing is performed.

The combination of recording file signatures and using trusted archives allows a well documented chain of custody to the end user of the software and a mechanism for the end user to independently verify that the software loaded onto their voting systems is unmodified from the certified version.

### **Protecting Delivery**

Delivery of voting system software is challenging because of the wide geographical distribution of users and the many different scenarios under which new software is required. In some cases large purchases are made of new voting systems. Typically the purchasing authority wants complete delivery of system as ready to use as possible. In these circumstances the purchaser would prefer that the software be installed before delivering the systems. Independent verification that the installed software is unmodified from the certified version is particularly important in this case. In other situations new software version must be delivered and installed on equipment already deployed for use.

Regardless of the scenario there should be carefully constructed and documented delivery of the software from the source through installation on the equipment. Once the software is installed the voting systems should be locked with tamper-proof seals and maintained under careful physical security. These requirements are part of good election administration, and are mentioned simply to highlight the role election administration plays in conjunction with the certification process to safeguard the election system.

DRAFT

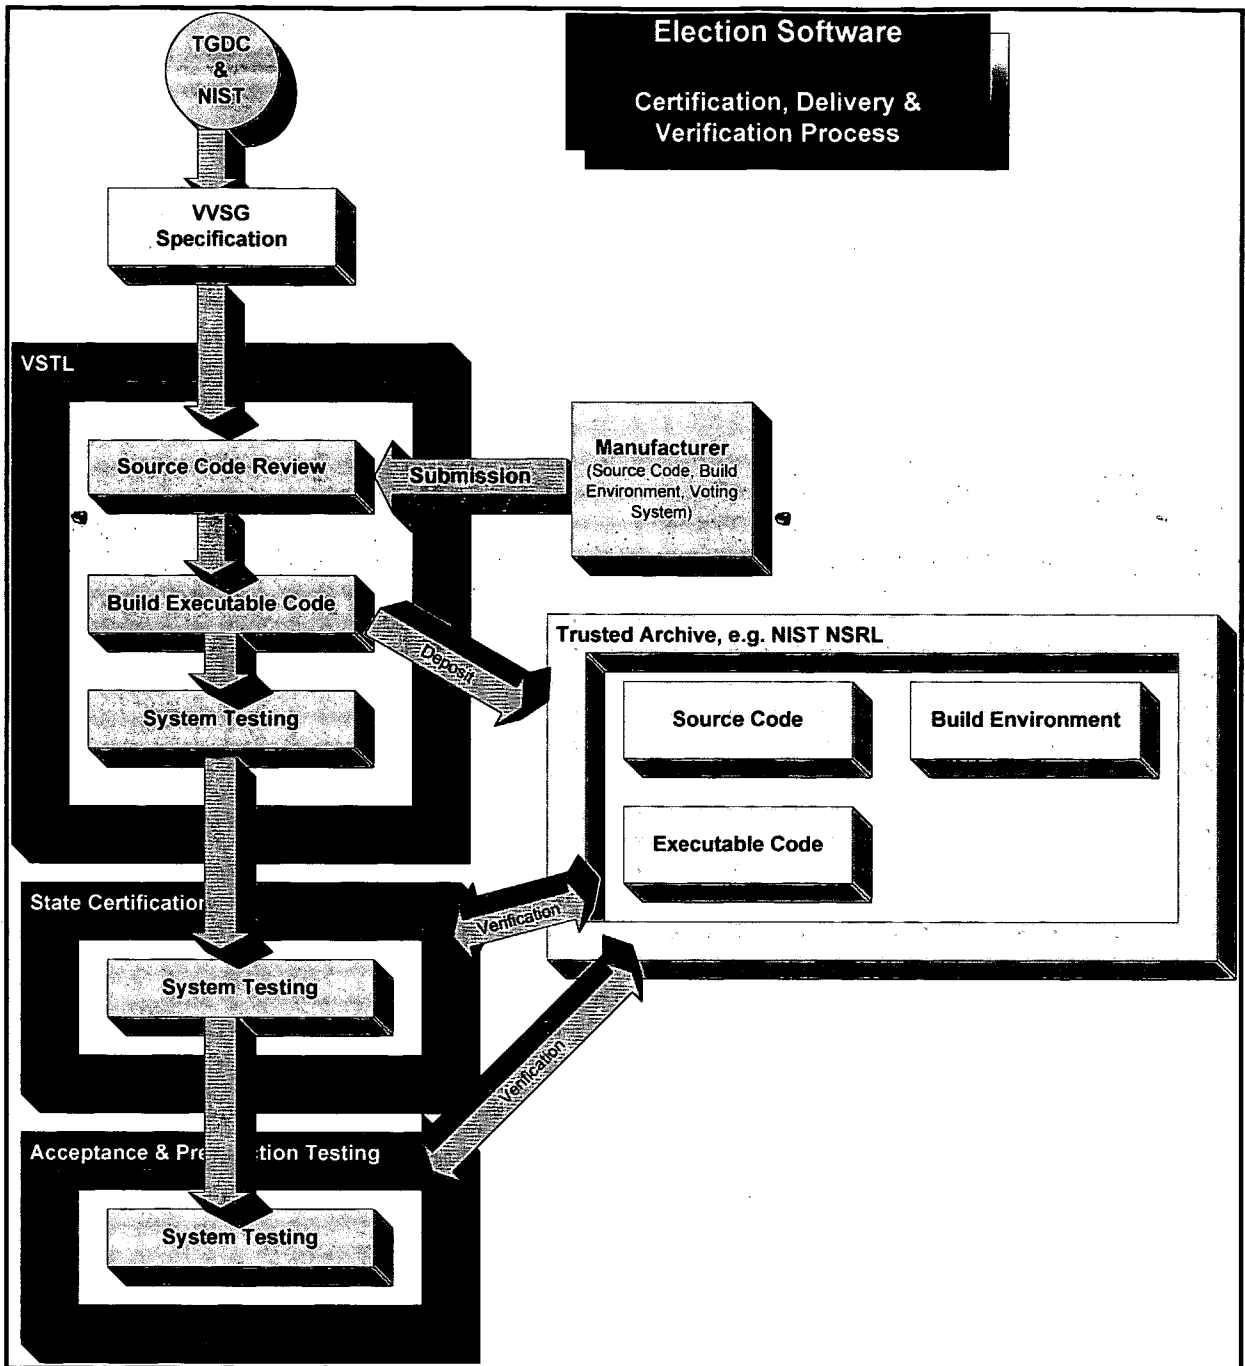

Figure 2 – Process Model for the Certification, Delivery and Verification of Voting System Software

## Verifying Delivery

### *Value of File Signatures*

File signatures, commonly called HASH codes, are a valuable tool for verifying that the chain of custody has not been violated. File signatures give a high confidence that the software being used has not been modified from the version that was certified. They can be used by local election administrators to assure that the software to be used in an election is identical to what was certified and that no modifications have been made.

It is recommended that the file signatures be checked and confirmed at critical junctures in the process. State officials should check file signatures as part of conducting a state examination. When this is done it creates an independent verification that the chain of custody was performed properly.

### *Trusted Archive*

Archiving of information is an important function. It creates a trusted source to hold certified software. When the file signatures are made available independent verification of software is possible. Further archiving provides a secure record providing detailed evidence should serious allegations need to be investigated.

### *On-Site Signature Verification*

It is recommended that when practical the file signatures of the software used in elections be confirmed before every election. This simple mechanism serves to document that software is unmodified. If the signatures do not conform then an investigation will be required and further actions necessary to assure that only certified software is used in an election.

### *3rd Party Signature Verification*

An additional feature could be the use of 3rd party verification of file signatures. Checks of software file signatures sometimes require special equipment and expertise. For example once firmware has been loaded onto chips on a printed circuit board it may require special equipment to verify that the loaded software is a correct copy of the certified version.

A 3rd party verification also provides another independent witness along with other security features. If in addition to on-site signature verification an appropriately delegated official randomly selects and sends copies of software to a trusted and independent 3rd party then an additional level of verification can be created.

### *Private/Public Key Encryption*

The use of Private/Public Key encryption may offer some real benefits in assuring that only trusted software is loaded onto a voting system. If the system itself or election officials require

009934

that only software that can be authenticated through a public encryption key be installed then confidence is gained that the software has been encrypted by the corresponding private key. The private key would be carefully guarded by the EAC or state officials. This could be a simple mechanism to protect voting system software during transport from being modified.

Vulnerabilities in this mechanism are that the private key might be switched with another that would allow modified software to be loaded. Further the key validation software might be compromised to allow software encrypted by either of two keys to be loaded.

The protections against these vulnerabilities are the other security features of the system, e.g. the validation of file signatures after the software is loaded and the physical security used throughout the process. An alternative could be to return the software after it is loaded to the source or another trusted party to have an audit check of the software that was loaded. As long as the process and people involved in receiving the software were different from those sending back the software to be audited there is additional confidence that the software loaded was a faithful copy of the certified software.

DRAFT

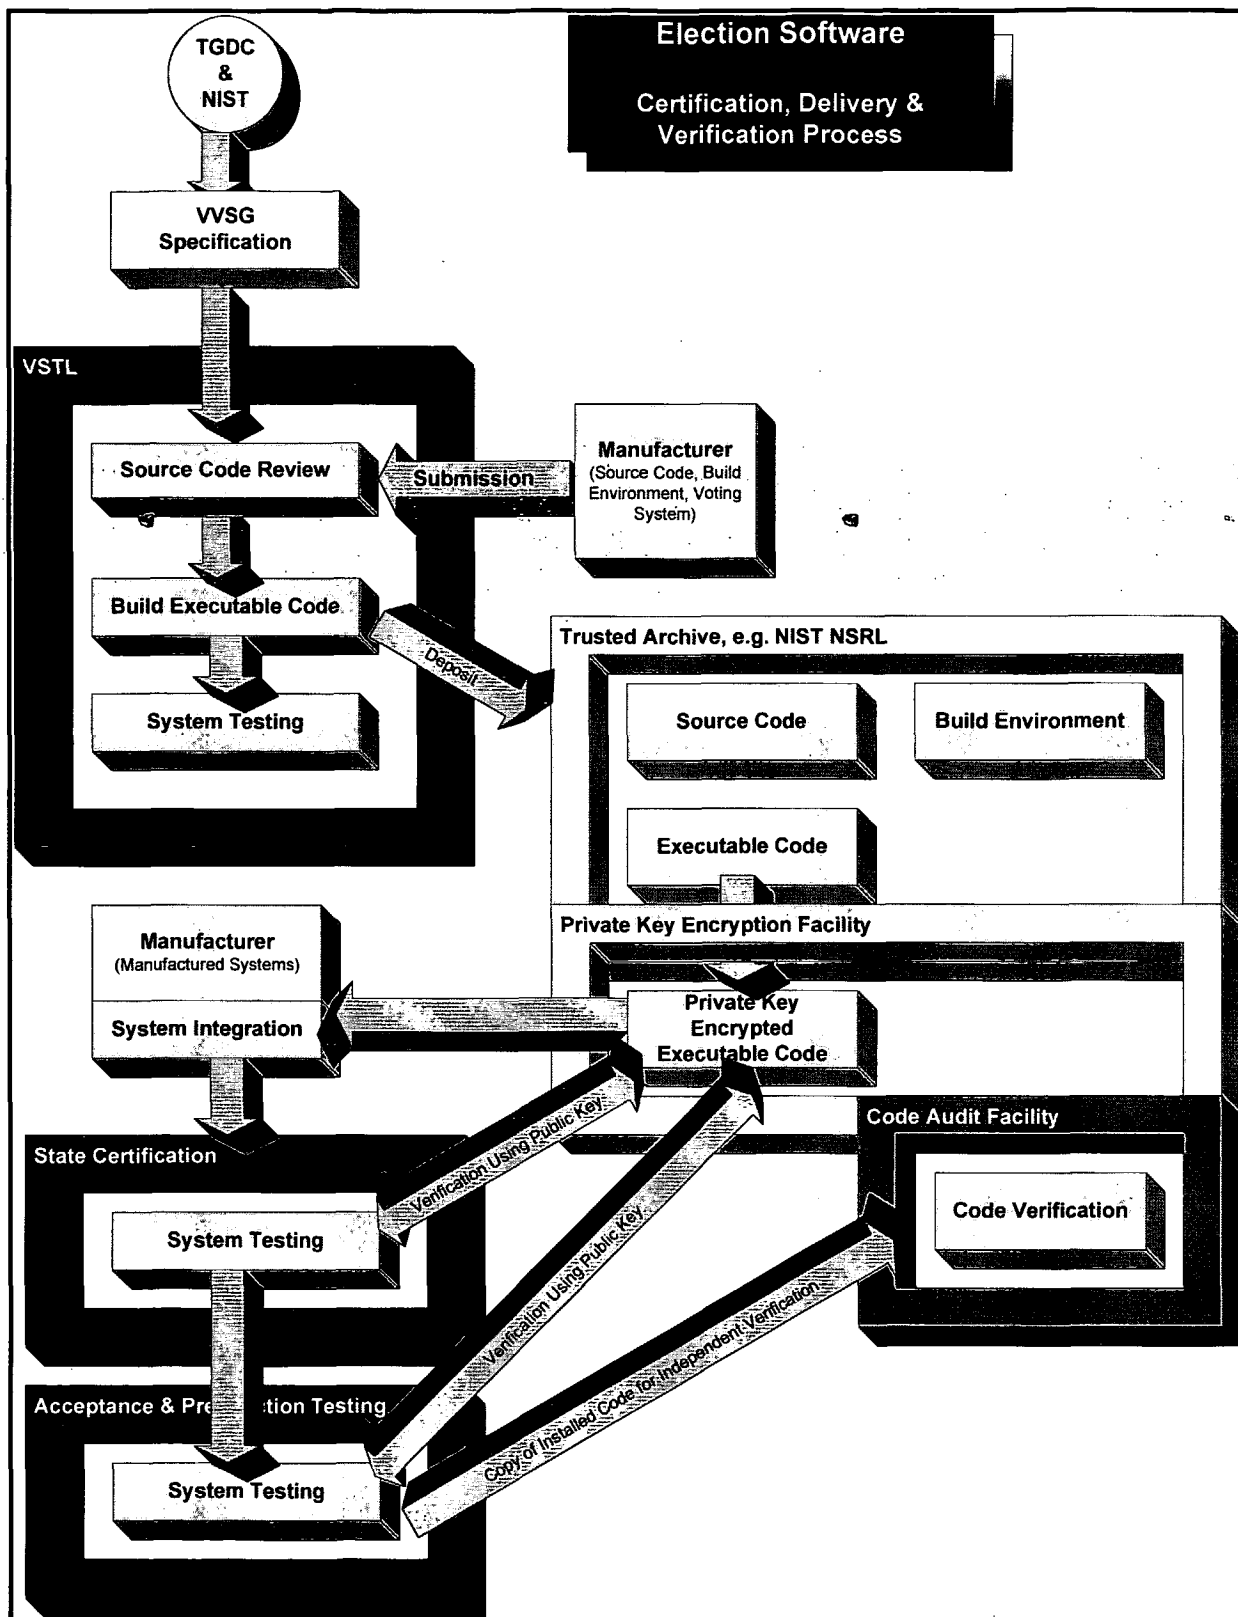

Figure 3 – Integration of PKI to delivery and verification process

## Preserving Evidence

The system described in this document makes extensive use of trusted archives and retains more material than is the practice currently. Specifically the following items are archived:

- The source code
- The build environment (pre and post build)
- The executable code
- The installation disks

Archiving these items provides evidence for any future investigations. Further these archives support other features of the system such as having 3rd party delivery of software after it is certified.

## Compounding Confidence

The certification process for voting equipment in the United States is a diverse system with federal, state and local participation. The design of the total system is that confidence is build as different participants perform their function and build increasing confidence. On the national level the EAC certification program assures that systems meet the technical standards established by the EAC. State certification efforts take an independent look at the same system and assure that the system meets the specific requirements of individual states. Local evaluation testing focuses on selecting the best system for a particular jurisdiction. Finally acceptance testing is intended to assure that the equipment received is in good operating condition and is identical to that certified on the national and state level.

## Conclusion

The voting system software deliver and validation system provides a safe and effective system, to assure that the software used in elections can be trusted. The system provides multiple security features, creating a defense in depth of the system. Some features are intended to assure that only certified software is delivered for use in voting systems. Other features are intended to detect if the system ever fails in any way to use certified software. Careful records and archiving provide trusted 3rd party sources for software and preserve evidence should investigations become necessary.

To achieve these ends the system for delivering and verifying voting system software has been analyzed as having three major components:

- Build source code into executable code
- Delivery unmodified version of the executable code to state and local authorities
- Verify that the code in use is unmodified from the certified code

The security objectives have been implemented by following the principles of:

- Multiple independent knowledgeable witnesses
- Documented chain of custody
- Protection, detection and recording mechanisms

The features suggested intend to first create a high confidence that the build process faithfully transforms the source code into executable code without any additional code or modifications being introduced. From the trusted build we then turn our attention to the delivery process. File signatures are recorded at the end of the build process. These allow verification of the code as it is delivered for use. Trusted archiving is used to give confidence that faithful copies of the source and executable code are available. Archiving further creates evidence that can later be used in investigations. Taken together these features create a robust system to assure that the software used in elections can be trusted.

**Abstract:** HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) of HAVA specifies that the EAC shall "... provide for the certification, de-certification and re-certification of voting system hardware and software by laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Only voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program be conducted in a reliable and affective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to provide information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may affect a voting system's certification.

**Authorizing Statute(s):** US Code: 42 USC 15371 Name of Law: Help America Vote Act of 2002

**Citations for New Statutory Requirements:** None

**Annual Cost to Federal Government: \$770,200**

**Does this IC contain surveys, censuses, or employ statistical methods? No**

**Is the Supporting Statement intended to be a Privacy Impact Assessment required by the E-Government Act of 2002? No**

**Agency Contact: Laiza Otero 202-566-2209 lotero@eac.gov**

On behalf of this Federal agency, I certify that the collection of information encompassed by this request complies with 5 CFR 132 related provisions of 5 CFR 1320.8(b)(3).

The following is a summary of the topics, regarding the proposed collection of information, that the certification covers:

- (a) It is necessary for the proper performance of agency functions;
- (b) It avoids unnecessary duplication;
- (c) It reduces burden on small entities;
- (d) It uses plain, coherent, and unambiguous language that is understandable to respondents;
- (e) Its implementation will be consistent and compatible with current reporting and recordkeeping practices;
- (f) It indicates the retention periods for recordkeeping requirements;
- (g) It informs respondents of the information called for under 5 CFR 1320.8 (b)(3) about:
  - (i) Why the information is being collected;
  - (ii) Use of information;
  - (iii) Burden estimate;

00994<sup>2</sup>

(iv) Nature of response (voluntary, required for a benefit, or mandatory);

(v) Nature and extent of confidentiality; and

(vi) Need to display currently valid OMB control number;

- (h) It was developed by an office that has planned and allocated resources for the efficient and effective manager the information to be collected.
- (i) It uses effective and efficient statistical survey methodology (if applicable); and
- (j) It makes appropriate use of information technology.

If you are unable to certify compliance with any of these provisions, identify the item by leaving the box unchecked and explain the Supporting Statement.

**Certification Date:** 03/30/2007

## **SUPPORTING STATEMENT A**

### **U.S. Election Assistance Commission**

#### **Voting System Testing and Certification Program**

##### **A. JUSTIFICATION**

###### **1. Explain the circumstances that make the collection of information necessary.**

HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. §15371). Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the certification, de-certification and re-certification of voting system hardware and software by accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and affective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials and other members of the public to report events which may effect a voting system's certification.

Approval of this collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. §15371). HAVA requires that the EAC certify and decertify voting systems. This mandate represents the first time the Federal government will provide for the voluntary testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC is developing the Voting System Testing and Certification Program. This program requires the collection and retention of information by voting system manufacturers.

Until recently, national voting system certification was conducted by a private membership organization, the National Association of State Election Directors (NASED). NASED certified voting systems for over a decade, using standards issued by the Federal government. The organization terminated its certification efforts on July 10, 2006. While the EAC and NASED have worked together to provide for the certification of emergency modifications necessary to properly field voting systems for the 2006 General Election, there is presently no mechanism in place to test and certify new systems or to process modifications for the 2008 Federal elections. Given the fact that (1) it can take years to develop, test, certify, sell, and field a new or modified voting systems; and (2) a large volume of voting systems (new, existing and modified) are expected to be submitted to the EAC upon initiation of the new Certification Program, it is imperative that the EAC's Voting System Testing and Certification Program begin on the earliest possible date. The 2008 Federal elections are less than 2 years away. Ensuring that certified voting systems are available for the 2008 Election Cycle is essential to the public welfare.

###### **2. Explain how, by whom, how frequently, and for what purpose the information will be**

009943

**used. If the information collected will be disseminated to the public or used to support information that will be disseminated to the public, then explain how the collection complies with all applicable Information Quality Guidelines.**

The information collected under the EAC Voting System Testing and Certification Program will be used solely by EAC personnel to determine whether a voting system meets voluntary Federal voting system standards. Ultimately, EAC determination regarding whether a voting system is certified will be published. However, the information provided to the EAC to support a grant of certification will be made public subject to the requirements of the Freedom of Information Act and the Trade Secrets Act. A detailed guide regarding the publication of information collected for this program is found in Chapter 10 of the EAC's Voting System Testing and Certification Manual. A copy of the manual has been provided.

**3. Describe whether, and to what extent, the collection of information involves the use of automated, electronic, mechanical, or other technological techniques or other forms of information technology.**

The EAC will provide for the secure collection of information using its website. Submission will be accepted using a secure, automated, form-fillable web application. Information will also be accepted via e-mail from identified parties. The EAC is committed to making the submission of information to the agency as secure, efficient, and easy as possible through the use of technology. Ultimately, given the technical sophistication of the group from which we are collecting information, the limited nature of the collection and the small number of participants, electronic filing is an ideal methodology.

**4. Describe efforts to identify duplication.**

The Voting System Testing and Certification Program is new to the EAC. It is the first Federal program of its type. As such, the information we seek has not been collected and is not available from other Federal agencies. As for collection within the program itself, the amount of information sought in Paper Work Reduction Act collections is not significant. This fact, itself, reduces the potential for duplication. Further, in developing the program, the EAC was focused on efficiency. The EAC will assign each participant an identification number. This number can be used to pull all information submitted by the participant and, thus, prevent them from having to provide previously provided information in new contexts or collection efforts.

**5. If the collection of information involves small businesses or other small entities, describe the methods used to minimize burden.**

This collection of information does not have a significant economic effect on a substantial number of small entities; however, some small businesses or other small entities are among potential respondents. The EAC has made efforts to limit the information requested and burden on all participants. The information sought is limited to that information necessary to certify and maintain a certification for voting systems.

**6. Describe the consequences to the Federal program or policy activities if the collection is**

003944

**not conducted or is conducted less frequently.**

If the EAC does not collect this information, it will be unable to provide for the certification and decertification of voting system hardware and software in accordance with the Help America Voting Act of 2002 (42 U.S.C. §15371). As no national body presently exists to perform this function, such a consequence could have a significant negative impact on the nation's election administration.

**7. Explain any special circumstances that require the collection to be conducted in a manner inconsistent with OMB guidelines.**

*(a) Requiring respondents to report information to the agency more often than quarterly.*

Not applicable in this collection.

*(b) Requiring respondents to prepare a written response to a collection of information in fewer than 30 days after receipt of it.*

Not applicable in this collection

*(c) Requiring respondents to submit more than an original and two copies of any document.*

Not applicable in this collection.

*(d) Requiring respondents to retain records, other than health, medical, government contract, grant-in-aid, or tax records, for more than 3 years.*

Not applicable in this collection.

*(e) In connection with a statistical survey, that is not designed to produce valid and reliable results that can be generalized to the universe of study.*

Not applicable in this collection.

*(f) Requiring the use of statistical data classification that has been reviewed and approved by OMB.*

Not applicable in this collection.

*(g) That includes a pledge of confidentiality that is not supported by authority established in statute or regulation, that is not supported by disclosure and data security policies that are consistent with the pledge, or which unnecessarily impedes sharing of data with other agencies for compatible confidential use.*

This collection does not include a pledge of confidentiality not supported by statute or regulation.

*(h) requiring respondents to submit proprietary trade secrets or other confidential information unless the agency can demonstrate that it has instituted procedures to protect the information's confidentiality to the extent permitted by law.*

This collection does require the collection of proprietary or trade secret information protected by agency procedures. Proprietary technical information on voting systems is necessary to make a determination on certification. The EAC has set procedures and policy for the identification and protection of this information consistent with the requirements of the Freedom of Information Act and the Trade Secrets Act. These policies are laid out in Chapter 10 of the EAC Voting System Testing and Certification Manual. A copy of this manual has been provided.

**8. Describe the efforts to consult with persons outside the agency to obtain their views on the availability of data, frequency of collection, the clarity of instructions and recordkeeping, disclosure, or reporting format (if any), and on the data elements to be recorded, disclosed, or reported.**

On two occasions, the EAC met with representatives from the voting system manufacturers and the testing laboratories impacted by this information collection to discuss the burdens imposed by this collection and methods for improving it. In addition, the EAC made revisions to the collection based on comments received during a public comment period. A copy of the Federal Register notices, a summary of the comments received, and an explanation of the revisions made have been submitted with this ICR.

**9. Explain any decisions to provide payments or gifts to respondents, other than remuneration of contractors or grantees.**

We will not provide any payment or gift to respondents in this collection.

**10. Describe any assurance of confidentiality provided to respondents and the basis for assurance in statute, regulation, or agency policy.**

No assurance of confidentiality has been provided to respondents. Information provided will be made public consistent with the requirements of the Freedom of Information Act and the Trade Secrets Act.

**11. Provide additional justification for any questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.**

The collection does not include sensitive or private questions.

**12. Provide an estimate in hours of the burden of the collection of information.**

*(a) Indicate the number of respondents, frequency of response, annual hour burden, and an explanation of how the burden was estimated. Generally, estimates should not include burden hours for customary and usual business practices.*

009946

***(b) If this request for approval covers more than one form, provide separate hour burden estimates for each form and aggregate the hour burdens in Item 13 of OMB Form 83-I.***

***(c) Provide estimates of annualized cost to respondents for the hour burdens for collections of information, identifying and using appropriate wage rate. The cost of contracting out or paying outside parties for information collection activities should not be included here.***

The EAC will be collecting information on voting systems and their manufacturers. The agency will use three forms to collect this information (1) a manufacturer registration form, (2) a voting system certification application form and (3) a field anomaly reporting form. The program requires the submission and retention of other information regarding the manufacturer and its business practices, the technical aspects of its voting systems and the testing of its voting systems. However this information is not part of this burden analysis as its creation is part of the industry's customary and usual business practices. Moreover, much of the information is and was required by state and local governments, independent of, and prior to, any federal requirement proposed by this voluntary program. The estimated total annual hourly burden on the voting system manufacturing industry and election officials is 114 hours. The estimated annual cost burden to these parties is \$4,610.

- Manufacturer Registration Form: The EAC estimates that there are approximately 13 potential respondents. This estimate reflects the number of known entities manufacturing and selling voting systems in the United States. This form is required to be submitted once for participation in the EAC's program. However, it is estimated that based upon organizational changes the form will be amended once every 4 years. Thus, submission is expected once every 4 years or .25 annually. Based upon discussions with industry, completion of this form is estimated to take approximately 3 hours. Therefore, the total estimated, annual, hourly burden for this form will be 9.75 hours (13 respondents X 3 hours X .25 annual rate). Based on an hourly cost factor of \$80, the total cost to the industry of this information collection is \$780.
- Voting System Certification Application Form: The EAC estimates that there are approximately 13 potential respondents. This estimate reflects the number of known entities selling and manufacturing voting systems in the United States. This form is required to be submitted each time a voting system is submitted for EAC certification. The number of submissions will vary significantly between respondents and from year to year. Based upon the experience of the National Association of State Election Directors, a private organization that previously operated a similar program, the EAC estimates it will receive an average of 54 submissions per year. This averages over 4 submissions per potential respondents, annually. Based upon discussions with industry, completion of this form is estimated to take approximately .5 hours. Therefore, the total annual hourly burden for this form will be 27 hours. Based on an hourly cost factor of \$80, the total cost to the industry of this information collection is \$2,160.
- Field Anomaly Reporting Form. This form may be used by election officials (state employees), in a purely voluntary capacity, to report problems with certified voting

009947

systems. Respondents are election officials who have witnessed a voting system anomaly. This is a new Federal program. No historic data exists to quantify the number of respondents. There are approximately 8,100 election officials in the United States. Assuming an anomaly rate of 1% per election year, the EAC estimates the submission of 81 responses and respondents per election year. As Federal elections take place once every 2 years, the annual submission and respondent estimate is 41, annually. The EAC estimates that this form will take 2 hours to complete. Therefore, the total annual hourly burden for this form will be 82 hours a year. Based upon an average hourly cost factor of \$25 for election officials, the total estimated cost of such submissions is \$2,050.

**13. Provide an estimate of the total annual cost burden to the respondents or record-keepers resulting from the collection (excluding the value of the burden hours in #12 above).**

- (a) The cost estimate should be split into two components: (1) a total capital and start-up cost component (annualized over its expected useful life) and (2) a total operation and maintenance and purchase of services component. The estimates should take into account costs associated with generating, maintaining, and disclosing or providing the information [including filing fees paid]. Include descriptions of methods used to estimate major cost factors including system and technology acquisition, expected useful life of capital equipment, the discount rate(s), and the time period over which costs will be incurred. Capital and start up costs include, among other items, preparations for collecting information such as purchasing computers and software; monitoring, sampling, drilling and testing equipment; and record storage facilities.*
- (b) If cost estimates are expected to vary widely, agencies should present ranges of cost burden and explain the reasons for the variance. The cost of purchasing or contracting out information collection services should be a part of this cost burden estimate. In developing cost burden estimates, agencies may consult with a sample of respondents (fewer than 10), utilize the 60-day pre-OMB submission public comment process and use existing economic or regulatory impact analysis associated with the rulemaking containing the information collection, as appropriate.*
- (c) Generally, estimates should not include purchases of equipment or services, or portions thereof, made: (1) prior to October 1, 1995, (2) to achieve regulatory compliance with requirements not associated with the information collection, (3) for reasons other than to provide information or keep records for the government, or (4) as part of customary and usual business or private practices.*

The EAC has identified no “non-hour” cost burdens for this collection of information that are not part of the effected industry’s customary and usual business practices.

**14. Provide estimates of annualized cost to the Federal government.**

The estimated annual cost to the Federal Government is \$770,200. This estimate includes \$499,200 for technical experts to review and accept collections, \$180,000 for personnel to

009948

administer and manage collections, \$46,000 in training costs, \$42,000 for program printing and website management and \$10,000 for equipment and overhead.

- We estimate \$499,200 to provide for technical experts to review and accept collections. These experts have an average pay of \$80 an hour. We expect to have six experts working half time (1040 Hrs a year).
- We estimate \$180,000 for personnel to administer and manage the collections. Two full time personnel will be assigned to this program. With an average cost (pay and benefits) of approximately \$90,000 a year.
- We estimate \$46,000 in training program costs. This includes travel costs, training program development costs and training personnel.
- We estimate \$42,000 for program printing and website development, maintenance and administration.
- We estimate \$10,000 for equipment costs and overhead.

**15. Explain the reasons for any program changes or adjustments reported in Items 13 or 14 of the OMB 83-I.**

This is the first time this information collection or the program upon which it is based has been performed by the Federal government.

**16. For collections whose results will be published, outline the plans for tabulation and publication.**

Not applicable to this collection.

**17. If seeking approval to not display the expiration date for OMB approval of the information collection, explain the reasons why display would be inappropriate.**

Not applicable to this collection.

**18. Explain each exception to the certification statement identified in Item 19 of the OMB 83-I.**

To the extent that the topics apply to this collection of information, we are not making any exceptions to the "Certification for Paperwork Reduction Act Submissions."

009949

## **Summary of and Response to Comments on the U.S. Election Assistance Commission's Voting System Testing and Certification Manual**

The U.S. Election Assistance Commission (EAC) issued its Voting System Testing and Certification Manual for public comments on October 2, 2006 (71 FR 57932), and on January 24, 2007 (72 FR 3127). The EAC received over 400 comments from the public. The majority of these comments came from voting system test laboratories, voting system manufacturers, and public interest groups. The EAC also received a number of comments from State and local officials and private individuals.

The majority of comments received by the Commission raised concerns or questioned the meaning or application of various provisions of the manual. These comments were requests for clarification. Another significant block of comments were less specific and focused on the fundamental purpose behind the program or its basic methodology. Comments in this category included individuals who noted that electronic voting machines should not be used in Federal elections and those who disagreed with the program's fundamental structure which utilizes EAC accredited laboratories to test voting systems through direct contracting with the system's manufacturer. Finally, there were a range of specific recommendations on a wide variety of topics. Examples include: (1) comments from manufacturers and interest groups requesting the EAC to provide specific timeframes or response times for various program elements or activities; (2) recommendations that the EAC Mark of Certification requirements be abolished or that the mark not be "permanently" affixed to voting machines to allow for its removal in the event of a voting system upgrade or decertification; (3) recommendations from test laboratories and public interest groups that the EAC clarify the role of its Voting System Test Laboratories, emphasizing that test plans, test reports, and other information submitted under this program be submitted directly and independently by the test labs; (4) comments from test laboratories recommending that the program provide a means for dealing with de minimis hardware changes; (5) recommendations from interest groups that the EAC utilize a third party group of technical advisors for all of its determinations under the program; (6) recommendations from interest groups urging the commission to make Certification Program documents available to the public; and (7) recommendations from State officials that the EAC contact and work with the Chief State Election Official when reviewing fielded voting systems, providing emergency modification waivers, or reviewing anomaly reports.

The EAC reviewed and considered each of the comments presented. In doing so, it also gathered additional information and performed research regarding the suggestions. The EAC's commitment to public participation is evident in the final version of the Certification Manual. The Manual has been enhanced in a number of areas in response to conscientious public comment. A total of six pages have been added to the Manual. Throughout the entire Manual the EAC added or amended language to clarify its procedures consistent with the comments it received. For example, to further clarify terminology used throughout the Manual almost a dozen terms were newly defined or

significantly clarified in the definition section of Chapter 1. Additionally, the EAC made changes to clarify the independent role of Voting System Test Labs in the program, require the EAC to publish its average response timeframes, and increase its coordination on State Election Officials. Examples of larger changes made in the document include an added section to Chapter 3 of the Manual, providing procedures for de minimis changes. This was put in place to deal with the numerous engineering change orders the Commission expects will be submitted to test laboratories under the program. Similarly, the EAC re-titled and re-wrote a major portion of Chapter 10 of the Manual (Release of Certification Program Information) to more clearly and affirmatively state EAC's policy on the release of Certification Program information.

## **Significant Changes to Manual by Chapter**

### **Chapter 1**

- 1.12 EAC Response Timeframes. We had a number of comments on setting EAC response times. Rather than setting arbitrary time periods we decided to use our website to note actual (average) timeframes for certain activities.
- Added Definitions for *Component, File Signature, HASH Algorithm, Installation Devise, Integration Testing, Linker, System Identification Tools, and Trusted Build.*

### **Chapter 2**

- 2.3.2.7 Defined malfunction for the purpose of the Manufacturer reporting requirement.
- 2.6 et al. Clarified that suspension of manufacturer registration can be triggered by a failure to meet program requirements and prohibits suspended manufacturers from submitting modifications and changes to certified systems.

### **Chapter 3**

- Added "EAC Identification" as another reason certification may be required.
- Added De Minimis Changes.
- Added that emergency modification requires consent of the Chief State Election Official (per State comments).
- Noted that EAC will make a decision on emergency modification within 5 Business days.
- Clarified basis for denial of request for emergency modification.
- Noted that info regarding emergency modifications will be posted on EAC Website.

### **Chapter 4**

- Clarified that manufacturers may NOT change VSTL once selected unless approved by the EAC.
- Added requirement for Manufacturers to identify all usable configurations of the voting system submitted for testing and certification.

- Replaced request for the TDP with requests for (1) Implementations statement, (2) Functional Diagram, and (3) System Overview Documentation.
- 4.5. Clarified VSTL's role as direct supplier of testing plan and report.
- 4.5.2 Clarified and added detail to the requirement that VSTLs notify the EAC of all failures and anomalies during testing.
- Clarified EAC authority to request additional information as needed during test report review.

### **Chapter 5**

- 5.4 - 5.7 Clarified Trusted Build procedure by replacing the term "digital signature" with the more correct (and inclusive) term "file signature".
- Elements of trusted build clarified by adding Definitions of "file signature" and "HASH Algorithm" in Chapter 1.
- 5.1 1 Clarified that the Certification Document will identify all legitimate configurations of a certified voting system.
- 5.15 Clarified that the mark of certification need be securely affixed as opposed to permanently affixed.
- Clarified that components of voting systems are not certified apart from the system itself.
- 5.1 5 Clarified that the mark of certification should only reflect the certification of the system as a whole and not a component.

### **Chapter 6**

- Reduced Manufacturers' time for responding to an initial decision from 20 days to 10 days.

### **Chapter 7**

- Clarified that the EAC will provide for (via contract with a VSTL) testing of a voting system during a decertification investigation.
- Stressed need for Manufacturer to consider EAC approval time and state certification time when creating a compliance plan (plan to cure during decertification).

### **Chapter 8**

- 8.7.4 Defined "credible" anomaly report.

### **Chapter 9**

- Clarified intent to publish all VVSG/VSS interpretations.

### **Chapter 10**

- 10.1 and 10.2 Redrafted to focus on information release rather than withholding. While not changing substance, the section now spotlights transparency.
- Added a list of areas where publication of documents or information is expected.

# Voting System Anomaly Reporting Form

For VOLUNTARY reporting of Voting System Anomalies

### A. Election Official:

1. Name, Title, Jurisdiction

2. Phone Number

3. Email

4. Reported to Manufacturer?

YES

NO

### B. Product Description:

5. Manufacturer Name

6. Type of Voting System

DRE

Ballot Marking Device

Optical Scan

Other

7. System Model

8. Hardware & Software version

9. Unit Serial Number

10. EAC Certification Number

### C. Description of Anomaly or Event:

11. Date of Occurrence

Polling Place Name or Location

12. Election Type

Primary

General

Special

13. Was this your first election using this system?

YES

NO

14. Description of Anomaly

# Instructions

This form provides for the reporting of voting system anomalies by election officials. This form is part of the EAC Quality Monitoring Program. The use of this form is voluntary. Information regarding its use can be found in Section 8.7 of the Manual.

This form is self-explanatory.

This information is required for the EAC to provide for the certification of voting systems as required by 42 U.S.C. Section 15371. This information will be used solely to administer the EAC Testing and Certification Program. This program is voluntary, however, individuals who wish to participate must meet the requirements of the Program. This information will be made public consistent with the requirements of the Freedom of Information Act, the Trade Secrets Act, and any other applicable Federal law or regulation. Public reporting burden for this collection of information is estimated to average about XX hours for completion of this form. This estimate includes the time for reviewing the instructions, gathering information and completing the form. Send comments regarding this burden estimate to the Testing and Certification Program Director, Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington, DC 20005. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to respond to, or comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

**6. Briefly describe your document retention requirements . Provide your written policies supporting this description as part of this application :**

---

**7. Please, list the Name, Street Address, City, State/Province, Country, Postal Code, and Telephone Number for all facilities used by your company to manufacture your voting system product :**

## 8. Manufacturer Certification Agreement:

To maintain a voting system certification under the Election Assistance Commission (EAC) program, the manufacturer must agree to:

1. Represent a voting system as certified only when it is authorized by the EAC and consistent with the procedures and requirements of the Testing and Certification Program Manual (the Manual).
2. Produce and permanently affix an EAC certification label to all production units of the certified system.
3. Notify the EAC of changes to any system previously certified by the EAC pursuant to the requirements of the Manual.
4. Permit an EAC representative to verify manufacturer quality control by coordinating with EAC efforts to test and review fielded voting systems consistent with Section 8.6 of the Manual.
5. Permit an EAC representative to verify manufacturer quality control by conducting periodic inspections of manufacturing facilities consistent with Chapter 8 of the Manual.
6. Cooperate with any EAC inquiries and investigations into a certified system's compliance with voting system standards or the procedural requirements of the Manual.
7. Report to the Program Director any known malfunction of a voting system holding a current EAC Certification. A malfunction is defined as a failure of the voting system, not caused by operator or administrative error, which causes the system to fail or otherwise not operate as designed.
8. Certify that the manufacturer is not barred or otherwise prohibited by statute regulation or ruling from doing business in the United States.
9. Adhere to all procedural requirements of the Manual.

### EAC Use Only

Manufacturer's  
Designation:

Notes:

# Instructions:

This form provides for the registration of voting system manufacturers. Registration is the initial required step in the EAC Voting System Certification Program. This form is prescribed by Section 2.4 of the Manual. For more information on registration requirements please see Section 2.4 of the Manual.

This form is generally self-explanatory however the numbers and the instructions below correspond to the numbered sections of the form.

## 1. Manufacturer Information.

**Names of Officers and/or Board of Directors and/or any and all Partners:** Ensure that all individuals are identified by name, and title.

**Name of Individual or Entity with Controlling Ownership in the Manufacturer:** Ensure that the controlling individual is properly named and an address is provided.

## 2. Management Representative.

Please provide the name and information requested for the designated Manufacturer Representative pursuant to Section 2.3 of the Manual.

## 3. Technical Representative.

Please provide the name and information requested for the designated Technical Representative pursuant to Section 2.3 of the Manual.

## 4, 5 and 6

Provide the information listed and attach to your submission the written documentation required by Section 2.3.1 of the Manual.

## 7. Manufacturer Certification Agreement

Manufacturers are required to take or abstain from certain actions consistent with the certification program. Your concurrence to these requirements is signified by affixing the signature of the manufacturer representative.

This information is required for the EAC to provide for the certification of voting systems as required by 42 U.S.C. Section 15371. This information will be used solely to administer the EAC Testing and Certification Program. This program is voluntary, however, individuals who wish to participate must meet the requirements of the Program. This information will be made public consistent with the requirements of the Freedom of Information Act, the Trade Secrets Act, and any other applicable Federal law or regulation. Public reporting burden for this collection of information is estimated to average about 9.75 hours for completion of this form. This estimate includes the time for reviewing the instructions, gathering information and completing the form. Send comments regarding this burden estimate to the Testing and Certification Program Director, Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington, DC 20005. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to respond to, or comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

# Instructions

This form provides manufacturers with the means to apply for a certification of a voting system. Completion of a voting system application is a required step in the EAC Voting System Certification Program. This form is prescribed by Section 4.3 of the Manual. For more information on registration requirements please see Section 4.3.

This form is generally self-explanatory, however the numbers and the instructions below correspond to the numbered sections of the form.

- 1. Manufacturer Name:** Full legal name of the manufacturer.
- 2. Manufacturer Code:** The three letter identification code provided by the EAC upon manufacturer registration.
- 3. Version of Standards to be Used for Testing:** Select the version of the EAC approved voting system standards to which the candidate system or modification is to be tested and certified.
- 4-5** Provide information as requested.
- 6. EAC Accredited VSTL:** Provide the name of the EAC accredited voting system test laboratory which will perform testing on the candidate system.
- 7. Requested EAC Certification Number:** Provide the certification number to be carried by the candidate system following certification. This number must begin with the three letter manufacturer identification code and be unique only to the specific candidate voting system. The number may be alpha-numeric and contain no more than 20 characters.
- 8. Brief Description of the System or System Modification:** Describe the system, carefully listing all components submitted for certification.

This information is required for the EAC to provide for the certification of voting systems as required by 42 U.S.C. Section 15371. This information will be used solely to administer the EAC Testing and Certification Program. This program is voluntary, however, individuals who wish to participate must meet the requirements of the Program. This information will be made public consistent with the requirements of the Freedom of Information Act, the Trade Secrets Act, and any other applicable Federal law or regulation. Public reporting burden for this collection of information is estimated to average about XX hours for completion of this form. This estimate includes the time for reviewing the instructions, gathering information and completing the form. Send comments regarding this burden estimate to the Testing and Certification Program Director, Election Assistance Commission, 1225 New York Avenue, N.W., Suite 1100, Washington, DC 20005. Notwithstanding any other provision of law, no person is required to respond to, nor shall any person be subject to a penalty for failure to respond to, or comply with, a collection of information subject to the requirements of the Paperwork Reduction Act, unless that collection of information displays a currently valid OMB Control Number.

System Certificatio Date:

System Certification Number:

without the consent of the individual if the disclosure is compatible with the purposes for which the record was collected. These disclosures may be made on a case-by-case basis or, if the Department has complied with the computer matching requirements of the Privacy Act, under a computer matching agreement. Any disclosure of individually identifiable information from a record in this system must also comply with the requirements of section 183 of the ESRA (20 U.S.C. 9573) providing for confidentiality standards that apply to all collections, reporting and publication of data by the Institute of Education Sciences (IES).

**Contract Disclosure.** If the Department contracts with an entity for the purposes of performing any function that requires disclosure of records in this system to employees of the contractor, the Department may disclose the records to those employees. Before entering into such a contract, the Department shall require the contractor to maintain Privacy Act safeguards as required under 5 U.S.C. 552a(m) with respect to the records in the system.

**DISCLOSURE TO CONSUMER REPORTING AGENCIES:**

Not applicable to this system notice.

**POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**

**STORAGE:**

The Department maintains records on CD-ROM, and the contractor and subcontractors maintain data for this system on computers and in hard copy.

**RETRIEVABILITY:**

Records in this system are indexed by a number assigned to each student, each teacher or other school staff member that is cross-referenced by the individual's name on a separate list. A list of names of the students whose parents have consented to their participation in the impact evaluation, as well as a list of names of participating teachers and other school staff members will be entered into a Microsoft Access database for purposes of tracking over the three years of the study.

**SAFEGUARDS:**

All physical access to the Department's site, and the site of the Department's contractor and subcontractors where this system of records is maintained, is controlled and monitored by security personnel. The computer system employed by the Department offers a high degree of resistance to tampering and circumvention. This computer system

permits data access to Department and contract staff only on a "need to know" basis, and controls individual users' ability to access and alter records within the system.

The Department's contractor, RTI, and its subcontractors, Tanglewood and PIRE, have established a set of procedures to ensure confidentiality of data. The systems of RTI, Tanglewood, and PIRE ensure that information identifying individuals is in files physically separated from other research data. RTI and its subcontractors will maintain security of the complete set of all master data files and documentation. Access to individually identifiable data will be strictly controlled. All data will be kept in locked file cabinets during nonworking hours and work on hardcopy data will take place in a single room except for data entry. Physical security of electronic data also will be maintained. Security features that protect project data include: Password-protected accounts that authorize users to use the system of records but to access only specific network directories and network software; user rights and directory and file attributes that limit those who can use particular directories and files and determine how they can use them; e-mail passwords that authorize the user to access mail services; and additional security features that the network administrator establishes for projects as needed. The contractor and subcontractor employees who maintain (collect, maintain, use, or disseminate) data in this system must comply with the requirements of the confidentiality standards in section 183 of the ESRA (20 U.S.C. 9573).

**RETENTION AND DISPOSAL:**

Records are maintained and disposed of in accordance with the Department's Records Disposition Schedules in Part 3 (Research Projects and Management Study Records) and Part 14 (Electronic Records).

**SYSTEM MANAGER AND ADDRESS:**

Ricky Takai, Associate Commissioner, Evaluation Division, National Center for Education Evaluation and Regional Assistance, Institute of Education Sciences, U.S. Department of Education, 555 New Jersey Avenue, NW., Room 502D, Washington, DC 20208-0001.

**NOTIFICATION PROCEDURE:**

If you wish to determine whether a record exists regarding you in the system of records, contact the systems manager. Your request must meet the requirements of regulations in 34 CFR 5b.5, including proof of identity.

**RECORD ACCESS PROCEDURE:**

If you wish to gain access to your record in the system of records, contact the system manager. Your request must meet the requirements of regulations in 34 CFR 5b.5, including proof of identity.

**CONTESTING RECORD PROCEDURES:**

If you wish to contest the content of a record regarding you in the system of records, contact the system manager. Your request must meet the requirements of regulations in 34 CFR 5b.7, including proof of identity.

**RECORD SOURCE CATEGORIES:**

The system includes students' names, demographic information (such as date of birth and race/ethnicity), self-reported attitudes about violence and feelings of safety, self-reported victimization, and self-reported violent and delinquent behaviors. The system also will include information from school records such as records of students' attendance, suspensions, expulsions, and school policy violations. The system also will include teachers' and other school staff members' self-reported victimization at school as well as their experiences with training and technical assistance related to the violence prevention program.

**EXEMPTIONS CLAIMED FOR THE SYSTEM:**

None.

BILLING CODE 4000-01-P

**ELECTION ASSISTANCE COMMISSION**

**Request for Substantive Comments on Procedural Manual for the Election Assistance Commission's Voting System Testing and Certification Program; Proposed Information Collection: Request for Comments on Information Collection Burden; U.S. EAC Voting System Testing and Certification Program**

**AGENCY:** United States Election Assistance Commission (EAC).

**ACTION:** Notice.

**SUMMARY:** The EAC has drafted a procedural manual for its Voting System Testing and Certification Program. This program sets administrative procedures for obtaining an EAC Certification for voting systems. Participation in the program is strictly voluntary. The program is mandated by 42 U.S.C. § 15371. The purpose of this notice is twofold: (1) To request public comment on the substantive aspects of the program (2) to request public comment on the proposed collection of

009962

information pursuant to the emergency processing provisions of the Paperwork Reduction Act as submitted to the Office of Management and Budget (OMB).

(1) *Substantive Comments:* The EAC seeks substantive comments from the public on its proposed procedural manual. Please submit comments consistent with the information below. Comments should identify and cite the section of the manual at issue. Where a substantive issue is raised, please propose a recommended change or alternative policy. This publication and request for comment is not required under the rulemaking, adjudicative or licensing provisions of the Administrative Procedures Act (APA). It is a voluntary effort by the EAC to gather input from the public on the EAC's administrative procedures for certifying or decertifying voting systems. Furthermore, this request by the EAC for public comment is not intended to make any of the APA's rulemaking provisions applicable to development of this or future EAC procedural programs.

**DATES:** (*Comments*): Submit written or electronic comments on this draft procedural manual on or before 5 p.m. EDT on October 31, 2006.

**ADDRESSES:** Submit comments on-line on EAC's Web site: <http://www.eac.gov>; via mail to Brian Hancock, Director of Voting System Certification, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, DC 20005; or via fax to 202-566-1392. An electronic copy of the proposed guidance may be found on the EAC's Web site <http://www.eac.gov>.

**FOR FURTHER INFORMATION CONTACT:** Brian Hancock, Director of Voting System Certification, 1225 New York Avenue, Suite 1100, Washington, DC, (202) 566-3100, Fax: (202) 566-1392.

(2) *Comments on the Proposed Collection of Information:* In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the EAC is publishing the following summary of proposed collections for public comment. Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to

minimize the information collection burden.

The EAC is requesting an emergency review of the information collection referenced below. In compliance with the requirement of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, we have submitted to the Office of Management and Budget (OMB) the following requirements for emergency review. The EAC is requesting an emergency review because the collection of this information is needed before the expiration of the normal time limits under OMB's regulations at 5 CFR part 1320(a)(2)(ii). The information collection at issue is necessary in order to provide for the certification of voting systems as mandated by the Help America Vote Act of 2002 (42 U.S.C. 15371). The EAC cannot reasonably comply with the normal clearance procedures because failure to implement this program in an expedited fashion is reasonably likely to result in a public harm, as stated in 5 CFR 1320.13(a)(2)(i).

Approval of this emergency collection is essential in order to comply with Help America Vote Act of 2002 (42 U.S.C. 15371). HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA specifically requires the EAC to "provide for the certification, decertification and re-certification of voting system hardware and software." This mandate represents the first time the Federal government will provide for the voluntary testing and certification of voting systems, nationwide. In response to this HAVA requirement, the EAC is developing the Voting System Testing and Certification Program. This program requires the submission and retention of information related to voting systems and voting system manufacturers.

Until recently, national voting system certification was conducted by a private membership organization, the National Association of State Election Directors (NASED). NASED certified voting systems for a over a decade, using standards issued by the Federal government. The organization terminated its certification efforts on July 10, 2006. While the EAC and NASED have worked together to provide for the certification of emergency modifications necessary to properly field voting systems for the 2006 General Election, there is presently no mechanism in place to test and certify new systems or to process modifications for the 2008 Federal elections. Given the fact that (1) it can take years to develop, test, certify, sell and field a new or modified voting system, and (2) a large volume of voting systems (new, existing

and modified) are expected to be submitted to the EAC upon initiation of the new Certification Program, it is imperative that the EAC's Voting System Testing and Certification Program begin on the earliest possible date. The 2008 Federal elections are less than 2 years away. Ensuring that the certified voting systems are available for the 2008 Election Cycle is essential to the public welfare.

1. *Type of Information Collection Request:* New collection;

2. *Title of Information Collection:* EAC Voting System Testing and Certification Program Manual;

3. *Use:* HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. 15371). Section 231(a)(1) of HAVA specifically requires the EAC to " \* \* \* provide for the certification, decertification and re-certification of voting system hardware and software by the accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and effective manner. In order to certify a voting system, it is necessary for the EAC to (1) require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may effect a voting system's certification.

4. *Form Numbers:* EAC-001C, 002C and 003C.

5. *Frequency:* Voluntary Reporting—(1) *Manufacturer Registration Form:* one time when a manufacturer registers for the program. (2) *Voting System Certification Application Form:* as needed, when a manufacturer submits a voting system for testing and certification, and (3) *Field Anomaly Reporting Form:* as needed, when an election official voluntarily notifies the EAC of a witnessed voting system anomaly.

6. *Affected Public:* Business or other for-profit institutions and state and local election officials;

7. *Number of Respondents:* 94 annually;

8. *Total Annual Responses:* 99 annually;

9. *Total Annual Hours:* 119 hours, annually.

EAC is requesting OMB review and approval of this collection by November 30, 2006, with a 180-day approval

period. Written comments and recommendations will be considered from the public if received by the individuals designated below by October 31, 2006.

To obtain copies of the supporting statement, the Voting System Testing and Certification Program Manual or EAC forms referenced above, access the EAC Web site at <http://www.eac.gov> or mail your request, including your address, phone number, to Director of Voting System Certification, U.S. Election Assistance Commission, 1225 New York Avenue, Suite 1100, Washington, DC 20005; or fax the EAC Director of Voting System Certification at 202-566-1392.

Interested persons are invited to send comments regarding the burden or any other aspect of these collections of information requirements. However, as noted above, comments on these information collection and recordkeeping requirements must be mailed and/or faxed to the designees referenced below by October 31, 2006: OMB Reviewer: Alexander T. Hunt, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, (202) 395-7316.

### Federal Energy Regulatory Commission

[Docket No. RP06-603-000]

#### CenterPoint Energy—Mississippi River Transmission Corporation; Notice of Annual Fuel Adjustment

September 26, 2006.

Take notice that on September 22, 2006, CenterPoint Energy—Mississippi River Transmission Corporation (MRT), filed with the Commission its annual fuel adjustment filing pursuant to Section 22 of the General Terms and Conditions of MRT's FERC Gas Tariff, Third Revised Volume No. 1, requesting an effective date of November 1, 2006, MRT filed the following sheets:

Fifty-Ninth Revised Sheet No. 5.  
Fifty-Ninth Revised Sheet No. 6.  
Fifty-Sixth Revised Sheet No. 7.  
Twenty-Sixth Revised Sheet No. 8.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed in accordance with the provisions of Section 154.210 of the Commission's regulations (18 CFR 154.210). Anyone filing an intervention or protest must serve a copy of that document on the Applicant. Anyone filing an intervention or protest on or before the intervention or protest date need not serve motions to intervene or protests on persons other than the Applicant.

The Commission encourages electronic submission of protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically should submit an original and 14 copies of the protest or intervention to the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

This filing is accessible on-line at <http://www.ferc.gov>, using the "eLibrary" link and is available for review in the Commission's Public Reference Room in Washington, DC. There is an "eSubscription" link on the Web site that enables subscribers to receive e-mail notification when a document is added to a subscribed docket(s). ## ELECTION ASSISTANCE COMMISSION

### Agency Information Collection Activities: Proposed Collection; Comment Request

**AGENCY:** Election Assistance Commission (EAC).

**ACTION:** Notice and request for comments.

**SUMMARY:** The EAC, as part of its continuing effort to reduce paperwork and respondent burden in accordance with the Paperwork Reduction Act of 1995, invites the general public and other Federal agencies to take this opportunity to comment on a proposed information collection. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

**DATES:** Written comments must be submitted on or before March 24, 2007.

**ADDRESSES:** Submit comments and recommendations on the proposed information collection in writing to the U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite

1100, Washington, DC 20005, ATTN: Brian Hancock, Director of Voting System Certification; or via fax to 202-566-1392.

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the EAC Voting System Testing and Certification Program Manual, please, write to the above address or call Brian Hancock, Director of Voting System Certification, 1225 New York Avenue, Suite 1100, Washington, DC, (202) 566-3100; Fax: (202) 566-1392. You may also view the proposed collection instrument by visiting the EAC Web site at <http://www.eac.gov>.

### SUPPLEMENTARY INFORMATION:

*Title:* EAC Voting System Testing and Certification Program Manual.

*OMB Number:* 3265-0004.

*Type of Review:* Extension with revisions of a currently approved collection.

*Needs and Uses:* HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. 15371). Section 231(a)(1) of HAVA specifically requires to EAC to “\* \* \* provide for the certification, decertification and recertification of voting system hardware and software by accredited laboratories.” The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and effective manner. In order to certify a voting system, it is necessary for the EAC to (1) Require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may effect a voting system's certification.

*Affected Public:* Business or other for-profit institutions and state and local election officials.

*Estimated Number of Respondents:* 94 annually.

*Total Annual Responses:* 99 annually.

*Estimated Total Annual Burden Hours:* 119 hours.

**Thomas R. Wilkey,**

*Executive Director, U.S. Election Assistance Commission.*

## DEPARTMENT OF ENERGY

### Office of Fossil Energy; Ultra-Deepwater Advisory Committee: Solicitation of Nominations for Appointment as a Member to the Ultra-Deepwater Advisory Committee

**AGENCY:** Department of Energy.

**ACTION:** Notice.

**SUMMARY:** The U.S. Department of Energy (DOE) Office of Fossil Energy is soliciting nominations for candidates to serve as members of the Ultra-Deepwater Advisory Committee. The Advisory Committee shall advise the Secretary of Energy on the development and implementation of programs under Subtitle J, Section 999 of the Energy Policy Act of 2005 (EPACT) related to ultra-deepwater natural gas and other petroleum resources and review and provide written comments on the annual plan as described in this subtitle of the EPACT. The membership of the Advisory Committee must be in accordance with the provisions of the Federal Advisory Committee Act and some members of the Advisory Committee may be appointed as special Government employees of the Department of Energy.

**DATES:** Nominations must be received by February 2, 2007.

**FOR FURTHER INFORMATION CONTACT:** For information regarding this Request for Nominations please contact Ms. Elena Melchert, Mr. Bill Hochheiser, or Mr. James Slutz, Designated Federal Official (DFO), Ultra-Deepwater Advisory Committee, at [ultradeepwater@hq.doe.gov](mailto:ultradeepwater@hq.doe.gov) or (202) 586-5600. Complete text of Subtitle J, Section 999 of the Energy Policy Act of 2005 can be found on the DOE Office of Fossil Energy Web site at <http://www.fe.doe.gov/programs/oilgas/advisorycommittees/UltraDeepwater.html>.

### SUPPLEMENTARY INFORMATION:

*Background:* Under Subtitle J, Section 999, the Secretary of Energy is required to carry out a program of research, development, demonstration, and commercial application of technologies for ultra-deepwater and unconventional natural gas and other petroleum resource exploration and production, including addressing the technology challenges for small producers, safe operations, and environmental mitigation (including reduction of greenhouse gas emissions and sequestration of carbon). The activities should maximize the value of natural gas and other petroleum resources of the United States by increasing the supply

009965

services are comprehensive and aligned with a school or district improvement plan. A school improvement plan may include the required two-year plan (under section 1116(b)(3) of the Elementary and Secondary Education Act of 1965, as amended by the No Child Left Behind Act of 2001) that addresses the academic issues that caused a school to be identified as in need of improvement. The plan could also include a voluntary plan developed by the school or district to improve academic achievement. The applicant must clearly describe the improvement plan that is in place, whether it is for the school or the entire district, the reasons why the plan was put in place, and how the proposed project and the operation of the school library media center will directly support the academic goals established in the improvement plan.

#### Executive Order 12866

This notice of proposed priority has been reviewed in accordance with Executive Order 12866. Under the terms of the order, we have assessed the potential costs and benefits of this regulatory action.

The potential costs associated with the notice of proposed priority are those resulting from statutory requirements and those we have determined as necessary for administering this program effectively and efficiently.

In assessing the potential costs and benefits—both quantitative and qualitative—of this notice of proposed priority, we have determined that the benefits of the proposed priority justify the costs.

We have also determined that this regulatory action does not unduly interfere with State, local, and tribal governments in the exercise of their governmental functions.

#### Intergovernmental Review

This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. One of the objectives of the Executive order is to foster an intergovernmental partnership and a strengthened federalism. The Executive order relies on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

This document provides early notification of our specific plans and actions for this program.

#### Electronic Access to This Document

You may view this document, as well as all other Department of Education documents published in the **Federal Register**, in text or Adobe Portable

Document Form (PDF) on the Internet at the following site: <http://www.ed.gov/news/fedregister>.

To use PDF, you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC, area at (202) 512-1530.

**Note:** The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.gpoaccess.gov/nara/index.html>.

## ELECTION ASSISTANCE COMMISSION

### Procedural Manual for the Election Assistance Commission's Voting System Testing and Certification Program

**AGENCY:** United States Election Assistance Commission (EAC).

**ACTION:** Notice; publication of Voting System Testing and Certification Manual.

**SUMMARY:** The U.S. Election Assistance Commission (EAC) is publishing a procedural manual for its Voting System Testing and Certification Program. This program sets the administrative procedures for obtaining an EAC Certification for voting systems. Participation in the program is strictly voluntary. The program is mandated by the Help America Vote Act (HAVA) at 42 U.S.C. 15371.

**FOR FURTHER INFORMATION CONTACT:** Brian Hancock, Director, Voting System Certification, Washington, DC, (202) 566-3100, Fax: (202) 566-1392.

#### SUPPLEMENTARY INFORMATION:

*Background.* HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA (42 U.S.C. 15371) specifically requires the EAC to "... provide for the testing, certification, decertification and recertification of voting system hardware and software by accredited laboratories." To meet this obligation, the EAC has created a voluntary

program to test voting systems to Federal voting system standards. The Voting System Testing and Certification Manual, published below, will set the procedures for this program.

In creating the Certification Manual the EAC sought input from experts and stakeholders. Specifically, the EAC conducted meetings with representatives from the voting system test laboratory and voting system manufacturing community. The Commission also held a public hearing in which it received testimony from State election officials, the National Institute of Standards and Technology, academics, electronic voting system experts and public interest groups. Finally, the EAC sought input from the public. A draft version of the EAC Voting System Testing and Certification Program Manual was published with a request for public comment on October 2, 2006. (71 FR 57934). The public comment period was open until 5 p.m. e.d.t. on October 31, 2006. While this publication and public comment period were not required under the rulemaking, adjudicative or licensing provisions of the Administrative Procedures Act, all comments received were considered in the drafting of this final administrative manual.

*Discussion of Comments.* The EAC received over 400 comments from the public. The majority of these comments came from voting system test laboratories, voting system manufacturers, and public interest groups. The EAC also received a number of comments from State and local officials and private individuals.

The majority of comments received by the Commission raised concerns or questioned the meaning or application of various provisions of the manual. These comments were requests for clarification. Another significant block of comments were less specific and focused on the fundamental purpose behind the program or its basic methodology. Comments in this category included individuals who noted that electronic voting machines should not be used in Federal elections and those who disagreed with the program's fundamental structure which utilizes EAC accredited laboratories to test voting systems through direct contracting with the system's manufacturer. Finally, there were a range of specific recommendations on a wide variety of topics. Examples include: (1) Comments from manufacturers and interest groups requesting the EAC to provide specific timeframes or response times for various program elements or activities; (2) recommendations that the EAC Mark of,

Certification requirements be abolished or that the mark not be "permanently" affixed to voting machines to allow for its removal in the event of a voting system upgrade or decertification; (3) recommendations from test laboratories and public interest groups that the EAC clarify the role of its Voting System Test Laboratories, emphasizing that test plans, test reports and other information submitted under this program be submitted directly and independently by the test labs; (4) Comments from test laboratories recommending that the program provide a means for dealing with *de minimis* hardware changes; (5) recommendations from interest groups that the EAC utilize a third party group of technical advisors for all of its determinations under the program; (6) recommendations from interest groups urging the commission to make Certification Program documents available to the public; and (7) recommendations from State officials

that the EAC contact and work with the Chief State Election Official when reviewing fielded voting systems, providing emergency modification waivers or reviewing anomaly reports.

The EAC reviewed and considered each of the comments presented. In doing so, it also gathered additional information and performed research regarding the suggestions. The EAC's commitment to public participation is evident in the final version of the Certification Manual. The Manual has been enhanced in a number of areas in response to conscientious public comment. A total of six pages have been added to the Manual. Throughout the entire Manual the EAC added or amended language to clarify its procedures consistent with the comments it received. For example, to further clarify terminology used throughout the Manual almost a dozen terms were newly defined or "Significantly clarified in the definition

section of Chapter 1. Additionally, the EAC made changes to clarify the independent role of Voting System Test Labs in the program, require the EAC to publish its average response timeframes, and increase its coordination on State Election Officials. Examples of larger changes made in the document include an added section to Chapter 3 of the Manual, providing procedures for *de minimis* changes. This was put in place to deal with the numerous engineering change orders the Commission expects will be submitted to test laboratories under the program. Similarly, the EAC re-titled and re-wrote a major portion of Chapter 10 of the Manual (Release of Certification Program Information) to more clearly and affirmatively state EAC's policy on the release of Certification Program information.

**Thomas R. Wilkey,**

*Executive Director, U.S. Election Assistance Commission.*

# **Voting System Testing & Certification Program Manual**

*Version 1.0 - Effective January 1, 2007*

[www.eac.gov](http://www.eac.gov)

OMB Control Number 3265-0004

BILLING CODE 6820-KF-C

009968

The reporting requirements in this manual have been approved under the Paperwork Reduction Act of 1995, Office of Management and Budget Control (OMB) Number 3265-0004, expiring March 31, 2007. Persons are not required to respond to this collection of information unless it displays a currently valid OMB number. Information gathered pursuant to this document and its forms will be used solely to administer the EAC Testing and Certification Program. This program is voluntary. Individuals who wish to participate in the program, however, must meet its requirements. The estimated total annual hourly burden on the voting system manufacturing industry and election officials is 114 hours. This estimate includes the time required for reviewing the instructions, gathering information, and completing the prescribed forms. Send comments regarding this burden estimate or any other aspect of this collection, including suggestions for reducing this burden, to the U.S. Election Assistance Commission, Voting System Testing and Certification Program, Office of the Program Director, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005.

#### Table of Contents

1. Introduction
2. Manufacturer Registration
3. When Voting Systems Must Be Submitted for Testing and Certification
4. Certification Testing and Technical Review
5. Grant of Certification
6. Denial of Certification
7. Decertification
8. Quality Monitoring Program
9. Requests for Interpretations
10. Release of Certification Program Information
Appendix A. Manufacturer Registration Application Form
Appendix B. Application for Voting System Testing Form
Appendix C. Voting System Anomaly Reporting Form

#### Introduction

1.1. Background. The Federal Election Commission (FEC) adopted the first formal set of voluntary Federal standards for computer-based voting systems in January 1990. At that time, no national program or organization existed to test and certify such systems to the standards. The National Association of State Election Directors (NASD) stepped up to fill this void in 1994. NASD is an independent, nongovernmental organization of State election officials. The organization formed the Nation's first national program to test and qualify voting systems to the new Federal standards. The organization worked for more than a decade, on a strictly voluntary basis, to help ensure the reliability, consistency, and accuracy of voting systems fielded in the United States. In late 2002, Congress passed the Help

America Vote Act of 2002 (HAVA). HAVA created the U.S. Election Assistance Commission (EAC) and assigned to the EAC the responsibility for both setting voting system standards and providing for the testing and certification of voting systems. This mandate represented the first time the Federal government provided for the voluntary testing, certification, and decertification of voting systems nationwide. In response to this HAVA requirement, the EAC has developed the Voting System Testing and Certification Program (Certification Program).

1.2. Authority. HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA specifically requires the EAC to " \* \* \* provide for the testing, certification, decertification and recertification of voting system hardware and software by accredited laboratories." The EAC has the sole authority to grant certification or withdraw certification at the Federal level, including the authority to grant, maintain, extend, suspend, and withdraw the right to retain or use any certificates, marks, or other indicators of certification.

1.3. Scope. This Manual provides the procedural requirements of the EAC Voting System Testing and Certification Program. Although participation in the program is voluntary, adherence to the program's procedural requirements is mandatory for participants. The procedural requirements of this Manual supersede any prior voting system certification requirements issued by the EAC.

1.4. Purpose. The primary purpose of the EAC Certification Program Manual is to provide clear procedures to Manufacturers for the testing and certification of voting systems to specified Federal standards consistent with the requirements of HAVA Section 231(a)(1). The program, however, also serves to do the following:

- 1.4.1. Support State certification programs.
- 1.4.2. Support local election officials in the areas of acceptance testing and pre-election system verification.
- 1.4.3. Increase quality control in voting system manufacturing.
- 1.4.4. Increase voter confidence in the use of voting systems.

1.5. Manual. This Manual is a comprehensive presentation of the EAC Voting System Testing and Certification Program. It is intended to establish all of the program's administrative requirements.

1.5.1. Contents. The contents of the Manual serve as an overview of the program itself. The Manual contains the following chapters:

1.5.1.1. *Manufacturer Registration*. Under the program, a Manufacturer is required to register with the EAC prior to participation. This registration provides the EAC with needed information and requires the Manufacturer to agree to the requirements of the Certification Program. This chapter sets out the requirements and procedures for registration.

1.5.1.2. *When Voting Systems Must Be Submitted for Testing and Certification*. All voting systems must be submitted consistent with this Manual before they may receive a certification from the EAC. This chapter

discusses the various circumstances that require submission to obtain or maintain a certification.

1.5.1.3. *Certification Testing and Review*. Under this program, the testing and review process requires the completion of an application, employment of an EAC-accredited laboratory for system testing, and technical analysis of the laboratory test report by the EAC. The result of this process is an Initial Decision on Certification. This chapter discusses the required steps for voting system testing and review.

1.5.1.4. *Grant of Certification*. If an Initial Decision to grant certification is made, the Manufacturer must take additional steps before the Manufacturer may be issued a certification. These steps require the Manufacturer to document the performance of a trusted build (see definition at Section 1.16), the deposit of software into a repository, and the creation of system identification tools. This chapter outlines the action that a Manufacturer must take to receive a certification and the Manufacturer's post-certification responsibilities.

1.5.1.5. *Denial of Certification*. If an Initial Decision to deny certification is made, the Manufacturer has certain rights and responsibilities under the program. This chapter contains procedures for requesting reconsideration, opportunity to cure defects, and appeal.

1.5.1.6. *Decertification*. Decertification is the process by which the EAC revokes a certification it previously granted to a voting system. It is an important part of the Certification Program because it serves to ensure that the requirements of the program are followed and that certified voting systems fielded for use in Federal elections maintain the same level of quality as those presented for testing. This chapter sets procedures for Decertification and explains the Manufacturer's rights and responsibilities during that process.

1.5.1.7. *Quality Monitoring Program*. Under the Certification Program, EAC will implement a quality monitoring process that will help ensure that voting systems certified by the EAC are the same systems sold by Manufacturers. The quality monitoring process is a mandatory part of the program and includes elements such as fielded voting system review, anomaly reporting, and manufacturing site visits. This chapter sets forth the requirements of the Quality Monitoring Program.

1.5.1.8. *Requests for Interpretations*. An Interpretation is a means by which a registered Manufacturer or Voting System Test Laboratory (VSTL) may seek clarification on a specific Voluntary Voting System Guidelines (VVSG) standard. This chapter outlines the policy, requirements, and procedures for requesting an Interpretation.

1.5.1.9. *Release of Certification Program Information*. Federal law protects certain types of information individuals provided the government from release. This chapter outlines the program's policies, sets procedures, and discusses responsibilities associated with the public release of potential protected commercial information.

1.5.2. *Maintenance and Revision*. This Manual, which sets the procedural

requirements for a new Federal program, is expected to be improved and expanded as experience and circumstances dictate. The Manual will be reviewed periodically and updated to meet the needs of the EAC, Manufacturers, VSTLs, election officials, and public policy. The EAC is responsible for revising this document. All revisions will be made consistent with Federal law. Substantive input from stakeholders and the public will be sought whenever possible, at the discretion of the agency. Changes in policy requiring immediate implementation will be noticed via policy memoranda and will be issued to each registered Manufacturer. Changes, addendums, or updated versions will also be posted to the EAC Web site at <http://www.eac.gov>.

1.6. Program Methodology. EAC's Voting System Testing and Certification Program is but one part of the overall conformity assessment process that includes companion efforts at the State and local levels.

1.6.1. *Federal and State Roles*. The process to ensure that voting equipment meets the technical requirements is a distributed, cooperative effort of Federal, State, and local officials in the United States. Working with voting equipment Manufacturers, these officials each have unique responsibility for ensuring that the equipment a voter uses on Election Day meets specific requirements.

1.6.1.1. The EAC Program has primary responsibility for ensuring that voting systems submitted under this program meet Federal standards established for voting systems.

1.6.1.2. State officials have responsibility for testing voting systems to ensure that they will support the specific requirements of each individual State. States may use EAC VSTLs to perform testing of voting systems to unique State requirements while the systems are being tested to Federal standards. The EAC will not, however, certify voting systems to State requirements.

1.6.1.3. State or local officials are responsible for making the final purchase choice. They are responsible for deciding which system offers the best fit and total value for their specific State or local jurisdiction.

1.6.1.4. State or local officials are also responsible for acceptance testing to ensure that the equipment delivered is identical to the equipment certified on the Federal and State levels, is fully operational, and meets the contractual requirements of the purchase.

1.6.1.5. State or local officials should perform pre-election logic and accuracy testing to confirm that equipment is operating properly and is unmodified from its certified state.

1.6.2. *Conformity Assessment Generally*. Conformity assessment is a system established to ensure that a product or service meets the requirements that apply to it. Many conformity assessment systems exist to protect the quality and ensure compliance with requirements of products and services. All conformity assessment systems attempt to answer a variety of questions:

1.6.2.1. What specifications are required of an acceptable system? For voting systems, the EAC voting system standards (VVSG and Voting System Standards [VSS]) address this

issue. States and local jurisdictions also have supplementing standards.

1.6.2.2. How are systems tested against required specifications? The EAC Voting System Testing and Certification Program is a central element of the larger conformity assessment system. The program, as set forth in this Manual, provides for the testing and certification of voting systems to identified versions of the VVSG. The Testing and Certification Program's purpose is to ensure that State and local jurisdictions receive voting systems that meet the requirements of the VVSG.

1.6.2.3. Are the testing authorities qualified to make an accurate evaluation? The EAC accredits VSTLs, after the National Institute of Standards and Technology (NIST) National Voluntary Lab Accreditation Program (NVLAP) has reviewed their technical competence and lab practices, to ensure these test authorities are fully qualified. Furthermore, EAC technical experts review all test reports from accredited laboratories to ensure an accurate and complete evaluation. Many States provide similar reviews of laboratory reports.

1.6.2.4. Will Manufacturers deliver units within manufacturing tolerances to those tested? The VVSG and this Manual require that vendors have appropriate change management and quality control processes to control the quality and configuration of their products. The Certification Program provides mechanisms for the EAC to verify Manufacturer quality processes through field system testing and manufacturing site visits. States have implemented policies for acceptance of delivered units.

1.7. Program Personnel. All EAC personnel and contractors associated with this program will be held to the highest ethical standards. All agents of the EAC involved in the Certification Program will be subject to conflict-of-interest reporting and review, consistent with Federal law and regulation.

1.8. Program Records. The EAC Program Director is responsible for maintaining accurate records to demonstrate that the testing and certification program procedures have been effectively fulfilled and to ensure the traceability, repeatability, and reproducibility of testing and test report review. All records will be maintained, managed, secured, stored, archived, and disposed of in accordance with Federal law, Federal regulations, and procedures of the EAC.

1.9. Submission of Documents. Any documents submitted pursuant to the requirements of this Manual shall be submitted:

1.9.1. If sent electronically, via secure e-mail or physical delivery of a compact disk, unless otherwise specified.

1.9.2. In a Microsoft Word or Adobe PDF file, formatted to protect the document from alteration.

1.9.3. With a proper signature when required by this Manual. Documents that require an authorized signature may be signed with an electronic representation or image of the signature of an authorized management representative and must meet any and all subsequent requirements established by the Program Director regarding security.

1.9.4. If sent via physical delivery, by Certified Mail™ (or similar means that allows tracking) to the following address: Testing and Certification Program Director, U.S. Election Assistance Commission, 1225 New York Avenue, NW., Suite 1100, Washington, DC 20005.

1.10. Receipt of Documents—Manufacturer. For purposes of this Manual, a document, notice, or other communication is considered received by a Manufacturer upon one of the following:

1.10.1. The actual, documented date the correspondence was received (either electronically or physically) at the Manufacturer's place of business, or

1.10.2. If no documentation of the actual delivery date exists, the date of constructive receipt of the communication. For electronic correspondence, documents will be constructively received the day after the date sent. For mail correspondence, the document will be constructively received 3 days after the date sent.

1.10.3. The term "receipt" shall mean the date a document or correspondence arrives (either electronically or physically) at the Manufacturer's place of business. Arrival does not require that an agent of the Manufacturer open, read, or review the correspondence.

1.11. Receipt of Documents—EAC. For purposes of this Manual, a document, notice, or other communication is considered received by the EAC upon its physical or electronic arrival at the agency. All documents received by the agency will be physically or electronically date stamped. This stamp shall serve as the date of receipt. Documents received after the regular business day (5 p.m. Eastern Standard Time), will be treated as if received on the next business day.

1.12. EAC Response Timeframes. In recognition of the responsibilities and challenges facing Manufacturers as they work to meet the requirements imposed by this program, State certification programs, customers, State law and production schedules, the EAC will provide timeframes for its response to significant program elements. This shall be done by providing current metrics on EAC's Web site regarding the actual average EAC response time for (1) approving Test Plans, (2) issuing Initial Decisions, and (3) issuing Certificates of Conformance.

1.13. Records Retention—Manufacturers. The Manufacturer is responsible for ensuring that all documents submitted to the EAC or that otherwise serve as the basis for the certification of a voting system are retained. A copy of all such records shall be retained as long as a voting system is offered for sale or supported by a Manufacturer and for 5 years thereafter.

1.14. Record Retention—EAC. The EAC shall retain all records associated with the certification of a voting system as long as such system is fielded in a State or local election jurisdiction for use in Federal elections. The records shall otherwise be retained or disposed of consistent with Federal statutes and regulations.

1.15. Publication and Release of Documents. The EAC will release documents

009976

consistent with the requirements of Federal law. It is EAC policy to make the certification process as open and public as possible. Any documents (or portions thereof) submitted under this program will be made available to the public unless specifically protected from release by law. The primary means for making this information available is through the EAC Web site.

1.16. Definitions. For purposes of this Manual, the terms listed below have the following definitions.

**Appeal.** A formal process by which the EAC is petitioned to reconsider an Agency Decision.

**Appeal Authority.** The individual or individuals appointed to serve as the determination authority on appeal.

**Build Environment.** The disk or other media that holds the source code, compiler, linker, integrated development environments (IDE), and/or other necessary files for the compilation and on which the compiler will store the resulting executable code.

**Certificate of Conformance.** The certificate issued by the EAC when a system has been found to meet the requirements of the VVSG. The document conveys certification of a system.

**Commission.** The U.S. Election Assistance Commission, as an agency.

**Commissioners.** The serving commissioners of the U.S. Election Assistance Commission.

**Component.** A discrete and identifiable element of hardware or software within a larger voting system.

**Compiler.** A computer program that translates programs expressed in a high-level language into machine language equivalents.

**Days.** Calendar days, unless otherwise noted. When counting days, for the purpose of submitting or receiving a document, the count shall begin on the first full calendar day after the date the document was received.

**Disk Image.** An exact copy of the entire contents of a computer disk.

**Election Official.** A State or local government employee who has as one of his or her primary duties the management or administration of a Federal election.

**Federal Election.** Any primary, general, runoff, or special Election in which a candidate for Federal office (President, Senator, or Representative) appears on the ballot.

**Fielded Voting System.** A voting system purchased or leased by a State or local government that is being used in a Federal election.

**File Signature.** A signature of a file or set of files produced using a HASH algorithm. A file signature, sometimes called a HASH value, creates a value that is computationally infeasible of being produced by two similar but different files. File signatures are used to verify that files are unmodified from their original versions.

**HASH Algorithm.** An algorithm that maps a bit string of arbitrary length to a shorter, fixed-length bit string. (A HASH uniquely identifies a file similar to the way a fingerprint identifies an individual. Likewise, as an individual cannot be recreated from his or her fingerprint, a file cannot be recreated

from a HASH. The HASH algorithm used primarily in the NIST (National Software Reference Library), and this program is the Secure HASH Algorithm (SHA-1) specified in Federal Information Processing Standard (FIPS) 180-1.)

**Installation Device.** A device containing program files, software, and installation instructions for installing an application (program) onto a computer. Examples of such devices include installation disks, flash memory cards, and PCMCIA cards.

**Integration Testing.** The end-to-end testing of a full system configured for use in an election to assure that all legitimate configurations meet applicable standards.

**Linker.** A computer program that takes one or more objects generated by compilers and assembles them into a single executable program.

**Manufacturer.** The entity with ownership and control over a voting system submitted for certification.

**Mark of Conformance.** A uniform notice permanently posted on a voting system that signifies that it has been certified by the EAC.

**Memorandum for the Record.** A written statement drafted to document an event or finding, without a specific addressee other than the pertinent file.

**Proprietary Information.** Commercial information or trade secrets protected from release under the Freedom of Information Act (FOIA) and the Trade Secrets Act.

**System Identification Tools.** Tools created by a Manufacturer of voting systems that allow elections officials to verify that the hardware and software of systems purchased are identical to the systems certified by the EAC.

**Technical Reviewers.** Technical experts in the areas of voting system technology and conformity assessment appointed by the EAC to provide expert guidance.

**Testing and Certification Decision Authority.** The EAC Executive Director or Acting Executive Director.

**Testing and Certification Program Director.** The individual appointed by the EAC Executive Director to administer and manage the Testing and Certification Program.

**Trusted Build.** A witnessed software build where source code is converted to machine-readable binary instructions (executable code) in a manner providing security measures that help ensure that the executable code is a verifiable and faithful representation of the source code.

**Voting System.** The total combination of mechanical, electromechanical, and electronic equipment (including the software, firmware, and documentation required to program, control, and support the equipment) that is used to define ballots, cast and count votes, report or display election results, connect the voting system to the voter registration system, and maintain and produce any audit trail information.

**Voting System Standards.** Voluntary voting system standards developed by the FEC. Voting System Standards have been published twice: once in 1990 and again in 2002. The Help America Vote Act made the 2002 Voting System Standards EAC guidance. All new voting system standards are issued by the EAC as Voluntary Voting System Guidelines.

#### *Voting System Test Laboratories.*

Laboratories accredited by the EAC to test voting systems to EAC approved voting system standards. Each Voting System Test Laboratory (VSTL) must be accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) and recommended by the National Institute of Standards Technology (NIST) before it may receive an EAC accreditation. NVLAP provides third party accreditation to testing and calibration laboratories. NVLAP is in full conformance with the standards of the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC), including ISO/IEC Guide 17025 and 17011.

#### *Voluntary Voting System Guidelines.*

Voluntary voting system standards developed, adopted, and published by the EAC. The guidelines are identified by version number and date.

1.17. Acronyms and Abbreviations. For purposes of this Manual, the acronyms and abbreviations listed below represent the following terms.

**Certification Program.** The EAC Voting System Testing and Certification Program

**Decision Authority.** Testing and Certification Decision Authority

**EAC.** United States Election Assistance Commission

**FEC.** Federal Election Commission

**HAVA.** Help America Vote Act of 2002 (42 U.S.C. 15301 *et seq.*)

**Labs or Laboratories.** Voting System Test Laboratories

**NASED.** National Association of State Election Directors

**NIST.** National Institute of Standards and Technology

**NVLAP.** National Voluntary Laboratory Accreditation Program

**Program Director.** Director of the EAC Testing and Certification Program

**VSS.** Voting System Standards

**VSTL.** Voting System Test Laboratory

**VVSG.** Voluntary Voting System Guidelines

## 2. Manufacturer Registration

2.1. Overview. Manufacturer Registration is the process by which voting system Manufacturers make initial contact with the EAC and provide information essential to participate in the EAC Voting System Testing and Certification Program. Before a Manufacturer of a voting system can submit an application to have a voting system certified by the EAC, the Manufacturer must be registered. This process requires the Manufacturer to provide certain contact information and agree to certain requirements of the Certification Program. After successfully registering, the Manufacturer will receive an identification code.

2.2. Registration Required. To submit a voting system for certification or otherwise participate in the EAC voluntary Voting System Testing and Certification Program, a Manufacturer must register with the EAC. Registration does not constitute an EAC endorsement of the Manufacturer or its products. Registration of a Manufacturer is not a certification of that Manufacturer's products.

2.3. Registration Requirements. The registration process will require the voting system Manufacturer to provide certain information to the EAC. This information is necessary to enable the EAC to administer the Certification Program and communicate effectively with the Manufacturer. The registration process also requires the Manufacturer to agree to certain Certification Program requirements. These requirements relate to the Manufacturer's duties and responsibilities under the program. For this program to succeed, it is vital that a Manufacturer know and assent to these duties at the outset of the program.

2.3.1. *Information.* Manufacturers are required to provide the following information.

2.3.1.1. The Manufacturer's organizational information:

2.3.1.1.1. The official name of the Manufacturer.

2.3.1.1.2. The address of the Manufacturer's official place of business.

2.3.1.1.3. A description of how the Manufacturer is organized (*i.e.*, type of corporation or partnership).

2.3.1.1.4. Names of officers and/or members of the board of directors.

2.3.1.1.5. Names of all partners and members (if organized as a partnership or limited liability corporation).

2.3.1.1.6. Identification of any individual, organization, or entity with a controlling ownership interest in the Manufacturer.

2.3.1.2. The identity of an individual authorized to represent and make binding commitments and management determinations for the Manufacturer (management representative). The following information is required for the management representative:

2.3.1.2.1. Name and title.

2.3.1.2.2. Mailing and physical addresses.

2.3.1.2.3. Telephone number, fax number, and e-mail address.

2.3.1.3. The identity of an individual authorized to provide technical information on behalf of the Manufacturer (technical representative). The following information is required for the technical representative:

2.3.1.3.1. Name and title.

2.3.1.3.2. Mailing and physical addresses.

2.3.1.3.3. Telephone number, fax number, and e-mail address.

2.3.1.4. The Manufacturer's written policies regarding its quality assurance system. This policy must be consistent with guidance provided in the VVSG and this Manual.

2.3.1.5. The Manufacturer's written policies regarding internal procedures for controlling and managing changes to and versions of its voting systems. Such policies shall be consistent with this Manual and guidance provided in the VVSG.

2.3.1.6. The Manufacturer's written policies on document retention. Such policies must be consistent with the requirements of this Manual.

2.3.1.7. A list of all manufacturing and/or assembly facilities used by the Manufacturer and the name and contact information of a person at each facility. The following information is required for a person at each facility:

2.3.1.7.1. Name and title.

2.3.1.7.2. Mailing and physical addresses.

2.3.1.7.3. Telephone number, fax number, and e-mail address.

2.3.2. *Agreements.* Manufacturers are required to take or abstain from certain actions to protect the integrity of the Certification Program and promote quality assurance. Manufacturers are required to agree to the following program requirements:

2.3.2.1. Represent a voting system as certified only when it is authorized by the EAC and is consistent with the procedures and requirements of this Manual.

2.3.2.2. Produce and affix an EAC certification label to all production units of the certified system. Such labels must meet the requirements set forth in Chapter 5 of this Manual.

2.3.2.3. Notify the EAC of changes to any system previously certified by the EAC pursuant to the requirements of this Manual (see Chapter 3). Such systems shall be submitted for testing and additional certification when required.

2.3.2.4. Permit an EAC representative to verify the Manufacturer's quality control procedures by cooperating with EAC efforts to test and review fielded voting systems consistent with Section 8.6 of this Manual.

2.3.2.5. Permit an EAC representative to verify the Manufacturer's quality control procedures by conducting periodic inspections of manufacturing facilities consistent with Chapter 8 of this Manual.

2.3.2.6. Cooperate with any EAC inquiries and investigations into a certified system's compliance with VVSG standards or the procedural requirements of this Manual consistent with Chapter 7.

2.3.2.7. Report to the Program Director any known malfunction of a voting system holding an EAC Certification. A malfunction is a failure of a voting system, not caused solely by operator or administrative error, which causes the system to cease operation during a Federal election or otherwise results in data loss. Malfunction notifications should be consolidated into one report. This report should identify the location, nature, date, impact, and resolution (if any) of the malfunction and be filed within 60 days of any Federal election.

2.3.2.8. Certify that the entity is not barred or otherwise prohibited by statute, regulation, or ruling from doing business in the United States.

2.3.2.9. Adhere to all procedural requirements of this Manual.

2.4. Registration Process. Generally, registration is accomplished through use of an EAC registration form. After the EAC has received a registration form and other required registration documents, the agency reviews the information for completeness before approval.

2.4.1. *Application Process.* To become a registered voting system Manufacturer, one must apply by submitting a Manufacturer Registration Application Form (Appendix A). This form will be used as the means for the Manufacturer to provide the information and agree to the responsibilities required in Section 2.3, above.

2.4.1.1. Application Form. In order for the EAC to accept and process the registration

form, the applicant must adhere to the following requirements:

2.4.1.1.1. All fields must be completed by the Manufacturer.

2.4.1.1.2. All required attachments prescribed by the form and this Manual must be identified, completed, and forwarded in a timely manner to the EAC (*e.g.*, Manufacturer's quality control and system change policies).

2.4.1.1.3. The application form must be affixed with the handwritten signature (including a digital representation of the handwritten signature) of the authorized representative of the vendor.

2.4.1.2. Availability and Use of the Form. The Manufacturer Registration Application Form may be accessed through the EAC Web site at <http://www.eac.gov>. Instructions for completing and submitting the form are included on the Web site. The Web site will also provide contact information regarding questions about the form or the application process.

2.4.2. *EAC Review Process.* The EAC will review all registration applications.

2.4.2.1. After the application form and required attachments have been submitted, the applicant will receive an acknowledgment that the EAC has received the submission and that the application will be processed.

2.4.2.2. If an incomplete form is submitted or an attachment is not provided, the EAC will notify the Manufacturer and request the information. Registration applications will not be processed until they are complete.

2.4.2.3. Upon receipt of the completed registration form and accompanying documentation, the EAC will review the information for sufficiency. If the EAC requires clarification or additional information, the EAC will contact the Manufacturer and request the needed information.

2.4.2.4. Upon satisfactory completion of a registration application's sufficiency review, the EAC will notify the Manufacturer that it has been registered.

2.5. Registered Manufacturers. After a Manufacturer has received notice that it is registered, it will receive an identification code and will be eligible to participate in the voluntary voting system Certification Program.

2.5.1. *Manufacturer Code.* Registered Manufacturers will be issued a unique, three-letter identification code. This code will be used to identify the Manufacturer and its products.

2.5.2. *Continuing Responsibility To Report.* Registered Manufacturers are required to keep all registration information up to date. Manufacturers must submit a revised application form to the EAC within 30 days of any changes to the information required on the application form. Manufacturers will remain registered participants in the program during this update process.

2.5.3. *Program Information Updates.*

Registered Manufacturers will be automatically provided timely information relevant to the Certification Program.

2.5.4. *Web site Postings.* The EAC will add the Manufacturer to the EAC listing of registered voting system Manufacturers publicly available at <http://www.eac.gov>.

009972

### 2.6. Suspension of Registration.

Manufacturers are required to establish policies and operate within the EAC Certification Program consistent with the procedural requirements presented in this Manual. When Manufacturers engage in management activities that are inconsistent with this Manual or fail to cooperate with the EAC in violation of the Certification Program's requirements, their registration may be suspended until such time as the problem is remedied.

2.6.1. *Procedures.* When a Manufacturer's activities violate the procedural requirements of this Manual, the Manufacturer will be notified of the violations, given an opportunity to respond, and provided the steps required to bring itself into compliance.

2.6.1.1. *Notice.* Manufacturers shall be provided written notice that they have taken action inconsistent with or acted in violation of the requirements of this Manual. The notice will state the violations and the specific steps required to cure them. The notice will also provide Manufacturers with 30 days (or a greater period of time as stated by the Program Director) to (1) respond to the notice and/or (2) cure the defect.

2.6.1.2. *Manufacturer Action.* The Manufacturer is required to either respond in a timely manner to the notice (demonstrating that it was not in violation of program requirements) or cure the violations identified in a timely manner. In any case, the Manufacturer's action must be approved by the Program Director to prevent suspension.

2.6.1.3. *Non-Compliance.* If the Manufacturer fails to respond in a timely manner, is unable to provide a cure or response that is acceptable to the Program Director, or otherwise refuses to cooperate, the Program Director may suspend the Manufacturer's registration. The Program Director shall issue a notice of his or her intent to suspend the registration and provide the Manufacturer five (5) business days to object to the action and submit information in support of the objection.

2.6.1.4. *Suspension.* After notice and opportunity to be heard (consistent with the above), the Program Director may suspend a Manufacturer's registration. The suspension shall be noticed in writing. The notice must inform the Manufacturer of the steps that can be taken to remedy the violations and lift the suspension.

2.6.2. *Effect of Suspension.* A suspended Manufacturer may not submit a voting system for certification under this program. This prohibition includes a ban on the submission of modifications and changes to certified system. A suspension shall remain in effect until lifted. Suspended Manufacturers will have their registration status reflected on the EAC Web site. Manufacturers have the right to remedy a non-compliance issue at any time and lift a suspension consistent with EAC guidance. Failure of a Manufacturer to follow the requirements of this section may also result in Decertification of voting systems consistent with Chapter 7 of this Manual.

### 3. When Voting Systems Must Be Submitted for Testing and Certification

3.1. *Overview.* An EAC certification signifies that a voting system has been successfully tested to identified voting system standards adopted by the EAC. Only the EAC can issue a Federal certification. Ultimately, systems must be submitted for testing and certification under this program to receive this certification. Systems will usually be submitted when (1) they are new to the marketplace, (2) they have never before received an EAC certification, (3) they are modified, or (4) the Manufacturer wishes to test a previously certified system to a different (newer) standard. This chapter also discusses the submission of *de minimis* changes, which may not require additional testing and certification, as well as provisional, pre-election emergency modifications, which provide for pre-election, emergency waivers.

3.2. *What Is an EAC Certification?* Certification is the process by which the EAC, through testing and evaluation conducted by an accredited Voting System Test Laboratory, validates that a voting system meets the requirements set forth in existing voting system testing standards (Voting System Standards [VSS] or VVSG), and performs according to the Manufacturers specifications for the system. An EAC certification may be issued only by the EAC in accordance with the procedures presented in this Manual. Certifications issued by other bodies (e.g., the National Association of State Election Directors and State certification programs) are not EAC certifications.

3.2.1. *Type of Voting Systems Certified.* The EAC Certification Program is designed to test and certify electromechanical and electronic voting systems. The EAC will not accept for certification review voting systems that do not contain any electronic components. Ultimately, the determination of whether a voting system may be submitted for testing and certification under this program is solely at the discretion of the EAC.

3.2.2. *Voting System Standards.* Voting systems certified under this program are tested to a set of voluntary standards providing requirements that voting systems must meet to receive a Federal certification. Currently, these standards are referred to as Voluntary Voting System Guidelines (in the past they were called Voting System Standards).

3.2.2.1. *Versions—Availability and Identification.* Voluntary Voting System Guidelines (or applicable Voting System Standards) are published by the EAC and are available on the EAC Web site (<http://www.eac.gov>). The standards will be routinely updated. Versions will be identified by version number and/or release date.

3.2.2.2. *Versions—Basis for Certification.* The EAC will promulgate which version or versions of the standards it will accept as the basis for testing and certification.

This effort may be accomplished through the setting of an implementation date for a particular version's applicability, the setting of a date by which testing to a particular version is mandatory, or the setting of a date

by which the EAC will no longer test to a particular standard. The EAC will certify only those voting systems tested to standards that the EAC has identified as valid for certification.

3.2.2.2.1. *End date.* When a version's status as the basis of an EAC certification is set to expire on a certain date, the submission of the system's test report will be the controlling event (see Chapter 4). This requirement means the system's test report must be received by the EAC on or before the end date to be certified to the terminating standard.

3.2.2.2.2. *Start date.* When a version's status as the basis of an EAC certification is set to begin on a certain date, the submission of the system's application for certification will be the controlling event (see Chapter 4). This requirement means the system's application, requesting certification to the new standard, will not be accepted by the EAC until the start date.

3.2.2.3. *Version—Manufacturer's Option.* When the EAC has authorized certification to more than one version of the standards, the Manufacturer must choose which version it wishes to have its voting system tested against. The voting system will then be certified to that version of the standards. Manufacturers must ensure that all applications for certification identify a particular version of the standards.

3.2.2.4. *Emerging Technologies.* If a voting system or component thereof is eligible for a certification under this program (see Section 3.2.1.) and employs technology that is not addressed by a currently accepted version of the VVSG or VSS, the relevant technology shall be subjected to full integration testing and shall be tested to ensure that it operates to the Manufacturer's specifications. The remainder of the system will be tested to the applicable Federal standards. Information on emerging technologies will be forwarded to the EAC's Technical Guidelines Development Committee (TGDC).

3.2.3. *Significance of an EAC Certification.* An EAC certification is an official recognition that a voting system (in a specific configuration or configurations) has been tested to and has met an identified set of Federal voting standards. An EAC certification is not any of the following:

3.2.3.1. An endorsement of a Manufacturer, voting system, or any of the system's components.

3.2.3.2. A Federal warranty of the voting system or any of its components.

3.2.3.3. A determination that a voting system, when fielded, will be operated in a manner that meets all HAVA requirements.

3.2.3.4. A substitute for State or local certification and testing.

3.2.3.5. A determination that the system is ready for use in an election.

3.2.3.6. A determination that any particular component of a certified system is itself certified for use outside the certified configuration.

3.3. *Effect of the EAC Certification Program on Other National Certifications.* Before the creation of the EAC Certification Program, national voting system qualification was conducted by a private membership organization, the National Association of

009973

State Election Directors (NASED). NASED offered a qualification for voting systems for more than a decade, using standards issued by the Federal government. The EAC Certification Program does not repeal NASED-issued qualifications. All voting systems previously qualified under the NASED program retain their NASED qualification consistent with State law; however, a NASED-qualified voting system is not an EAC-certified system and is treated like an uncertified system for purposes of the EAC Certification Program.

3.4. When Certification Is Required Under the Program. To obtain or maintain an EAC certification, Manufacturers must submit a voting system for testing and certification under this program. Such action is usually required for (1) new systems not previously tested to any standard; (2) existing systems not previously certified by the EAC; (3) previously certified systems that have been modified; (4) systems or technology specifically identified for retesting by the EAC; or (5) previously certified systems that the Manufacturer seeks to upgrade to a higher standard (e.g., a more recent version of the VVSG).

3.4.1. *New System Certification.* For purposes of this Manual, new systems are defined as voting systems that have not been previously tested to applicable Federal standards. New voting systems must be fully tested and submitted to the EAC according to the requirements of Chapter 4 of this Manual.

3.4.2. *System Not Previously EAC Certified.* This term describes any voting system not previously certified by the EAC, including systems previously tested and qualified by NASED or systems previously tested and denied certification by the EAC. Such systems must be fully tested and submitted to the EAC according to the requirements of Chapter 4 of this Manual.

3.4.3. *Modification.* A modification is any change to a previously EAC-certified voting system's hardware, software, or firmware that is not a *de minimis* change. Any modification to a voting system will require testing and review by the EAC according to the requirements of Chapter 4 of this Manual.

3.4.4. *EAC Identified Systems.* Manufacturers may be required to submit systems previously certified by the EAC for retesting. This may occur when the EAC determines that the original tests conducted on the voting system are now insufficient to demonstrate compliance with Federal standards in light of newly discovered threats or information.

3.4.5. *Certification Upgrade.* This term defines any system previously certified by the EAC but submitted for additional testing and certification to a higher standard (e.g., to a newer version of the VVSG). Any such system must be tested to the new standards and submitted to the EAC per Chapter 4 of this Manual.

3.5. *De Minimis Changes.* A *de minimis* change is a change to voting system hardware that is so minor in nature and effect that it requires no additional testing and certification. Such changes, however, require VSTL review and endorsement as well as EAC approval. Any proposed change not accepted as a *de minimis* change is a

modification and shall be submitted for testing and review consistent with the requirements of this Manual. An approved *de minimis* change is not a modification.

3.5.1. *De Minimis Change—Defined.* A *de minimis* change is a change to a certified voting system's hardware, the nature of which will not materially alter the system's reliability, functionality, capability, or operation. Software and firmware modifications are not *de minimis* changes. In order for a hardware change to qualify as a *de minimis* change, it must not only maintain, unaltered, the reliability, functionality, capability and operability of a system, it shall also ensure that when hardware is replaced, the original hardware and the replacement hardware are electronically and mechanically interchangeable and have identical functionality and tolerances. Under no circumstance shall a change be considered a *de minimis* change if it has reasonable and identifiable potential to impact the system's operation and compliance with applicable voting system standards.

3.5.2. *De Minimis Change—Procedure.* Manufacturers who wish to implement a proposed *de minimis* change must submit it for VSTL review and endorsement and EAC approval. A proposed change is not a *de minimis* change and may not be implemented as such until it has been approved in writing by the EAC.

3.5.2.1. *VSTL Review.* Manufacturers must submit any proposed *de minimis* change to an EAC VSTL for review and endorsement. The Manufacturer will provide the VSTL (1) a detailed description of the change; (2) a description of the facts giving rise to or necessitating the change; (3) the basis for its determination that the change will not alter the system's reliability, functionality, or operation; and (4) upon request of the VSTL, a sample voting system at issue or any relevant technical information needed to make the determination. The VSTL will review the proposed *de minimis* change and make an independent determination as to whether the change meets the definition of *de minimis* change or requires the voting system to go through additional testing as a system modification. If the VSTL determines that a *de minimis* change is appropriate, it shall endorse the proposed change as a *de minimis* change. If the VSTL determines that modification testing and certification should be performed, it shall reject the proposed change. Endorsed changes shall be forwarded to the EAC Program Director for final approval. Rejected changes shall be returned to the Manufacturer for resubmission as system modifications.

3.5.2.2. *VSTL Endorsed Changes.* The VSTL shall forward to the EAC any change it has endorsed as *de minimis*. The VSTL shall forward its endorsement in a package that includes:

3.5.2.2.1. The Manufacturer's initial description of the *de minimis* change, a narrative of facts giving rise to or necessitating the change, and the determination that the change will not alter the system's reliability, functionality, or operation.

3.5.2.2.2. The written determination of the VSTL endorsement of the *de minimis* change.

The endorsement document must explain why the VSTL, in its engineering judgment, determined that the proposed *de minimis* change met the definition in this section and otherwise does not require additional testing and certification.

3.5.2.3. *EAC Action.* The EAC will review all proposed *de minimis* changes endorsed by the VSTL. The EAC has sole authority to determine whether any VSTL endorsed change constitutes a *de minimis* change under this section. The EAC will inform the Manufacturer and VSTL of its determination in writing.

3.5.2.3.1. *EAC approval.* If the EAC approves the change as a *de minimis* change, it shall provide written notice to the Manufacturer and VSTL. The EAC will maintain copies of all approved *de minimis* changes and otherwise track such changes.

3.5.2.3.2. *EAC denial.* If the EAC determines that a proposed *de minimis* change cannot be approved, it will inform the VSTL and Manufacturer of its decision. The proposed change will be considered a modification and require testing and certification consistent with this Manual.

3.5.3. *De Minimis Change—Effect of EAC Approval.* EAC approval of a *de minimis* change permits the Manufacturer to implement the proposed change (as identified, endorsed, and approved) without additional modification testing and certification. Fielding an engineering change not approved by the EAC is a basis for system Decertification.

3.6. *Provisional, Pre-Election Emergency Modification.* To deal with extraordinary pre-election emergency situations, the EAC has developed a special provisional modification process. This process is to be used only for the emergency situations indicated and only when there is a clear and compelling need for temporary relief until the regular certification process can be followed.

3.6.1. *Purpose.* The purpose of this section is to allow a mechanism within the EAC Certification Program for Manufacturers to modify EAC-certified voting systems in emergency situations immediately before an election. This situation arises when a modification to a voting system is required and an election deadline is imminent, preventing the completion of the full certification process (and State and/or local testing process) in time for Election Day. In such situations the EAC may issue a waiver to the Manufacturer, granting it leave to make the modification without submission for modification testing and certification.

3.6.2. *General Requirements.* A request for an emergency modification waiver may be made by a Manufacturer only in conjunction with the State election official whose jurisdiction(s) would be adversely affected if the requested modification were not implemented before Election Day. Requests must be submitted at least 5 calendar days before an election. Only systems previously certified are eligible for such a waiver. To receive a waiver, a Manufacturer must demonstrate the following:

3.6.2.1. The modification is functionally or legally required; that is, the system cannot be fielded in an election without the change.

3.6.2.2. The voting system requiring modification is needed by State or local

election officials to conduct a pending Federal election.

3.6.2.3. The voting system to be modified has previously been certified by the EAC.

3.6.2.4. The modification cannot be tested by a VSTL and submitted to the EAC for certification, consistent with the procedural requirements of this Manual, at least 30 days before the pending Federal election.

3.6.2.5. Relevant State law requires Federal certification of the requested modification.

3.6.2.6. The Manufacturer has taken steps to ensure that the modification will properly function as designed, is suitably integrated with the system, and otherwise will not negatively affect system reliability, functionality, or accuracy.

3.6.2.7. The Manufacturer (through a VSTL) has completed as much of the evaluation testing as possible for the modification and has provided the results of such testing to the EAC.

3.6.2.8. The emergency modification is required and otherwise supported by the Chief State Election Official seeking to field the voting system in an impending Federal election.

3.6.3. *Request for Waiver.* A Manufacturer's request for waiver shall be made in writing to the Decision Authority and shall include the following elements:

3.6.3.1. A signed statement providing sufficient description, background, information, documentation, and other evidence necessary to demonstrate that the request for a waiver meets each of the eight requirements stated in Section 3.5.2 above.

3.6.3.2. A signed statement from the Chief State Election Official requiring the emergency modification. This signed statement shall identify the pending election creating the emergency situation and attest that (1) the modification is required to field the system, (2) State law (citation) requires EAC action to field the system in an election, and (3) normal timelines required under the EAC Certification Program cannot be met.

3.6.3.3. A signed statement from a VSTL that there is insufficient time to perform necessary testing and complete the certification process. The statement shall also state what testing the VSTL has performed on the modification to date, provide the results of such tests, and state the schedule for completion of testing.

3.6.3.4. A detailed description of the modification, the need for the modification, how it was developed, how it addresses the need for which it was designed, its impact on the voting system, and how the modification will be fielded or implemented in a timely manner consistent with the Manufacturer's quality control program.

3.6.3.5. All documentation of tests performed on the modification by the Manufacturer, a laboratory, or other third party.

3.6.3.6. A stated agreement signed by the Manufacturer's representative agreeing to take the following action:

3.6.3.6.1. Submit for testing and certification, consistent with Chapter 4 of this Manual, any voting system receiving a waiver under this section that has not already been submitted. This action shall be taken immediately.

3.6.3.6.2. Abstain from representing the modified system as EAC certified. The modified system has not been certified; rather, the originally certified system has received a waiver providing the Manufacturer leave to modify it.

3.6.3.6.3. Submit a report to the EAC regarding the performance of the modified voting system within 60 days of the Federal election that served as the basis for the waiver. This report shall (at a minimum) identify and describe any (1) performance failures, (2) technical failures, (3) security failures, and/or (4) accuracy problems.

3.6.4. *EAC Review.* The EAC will review all waiver requests submitted in a timely manner and make determinations regarding the requests. Incomplete requests will be returned for resubmission with a written notification regarding its deficiencies.

3.6.5. *Letter of Approval.* If the EAC approves the modification waiver, the Decision Authority shall issue a letter granting the temporary waiver within five (5) business days of receiving a complete request.

3.6.6. *Effect of Grant of Waiver.* An EAC grant of waiver for an emergency modification is not an EAC certification of the modification. Waivers under this program grant Manufacturers leave to only temporarily amend previously certified systems without testing and certification for the specific election noted in the request. Without such a waiver, such action would ordinarily result in Decertification of the modified system (See Chapter 7). Systems receiving a waiver shall satisfy any State requirement that a system be nationally or federally certified. In addition—

3.6.6.1. All waivers are temporary and expire 60 days after the Federal election for which the system was modified and the waiver granted.

3.6.6.2. Any system granted a waiver must be submitted for testing and certification. This shall be accomplished as soon as possible.

3.6.6.3. The grant of a waiver is no indication that the modified system will ultimately be granted a certification.

3.6.7. *Denial of Request for Waiver.* A request for waiver may be denied by the EAC if the request does not meet the requirements noted above, fails to follow the procedure established by this section or otherwise fails to sufficiently support a conclusion that the modification at issue is needed, will function properly, and is in the public interest. A denial of a request for emergency modification by the EAC shall be final and not subject to appeal. Manufacturers may submit for certification, consistent with Chapter 4 of this Manual, modifications for which emergency waivers were denied.

3.6.8. *Publication Notice of Waiver.* The EAC will post relevant information relating to the temporary grant of an emergency waiver on its Web site. This information will be posted upon grant of the waiver and removed upon the waiver's expiration. This posting will include information concerning the limited nature and effect of the waiver.

#### 4. Certification Testing and Technical Review

4.1. Overview. This chapter discusses the procedural requirements for submitting a voting system to the EAC for testing and review. The testing and review process requires an application, employment of an EAC-accredited testing laboratory, and technical analysis of the laboratory test report by the EAC. The result of this process is an Initial Decision on Certification by the Decision Authority.

4.2. Policy. Generally, to receive an initial determination on an EAC certification for a voting system, a registered Manufacturer must have (1) submitted an EAC-approved application for certification, (2) had a VSTL submit an EAC-approved test plan, (3) had a VSTL test a voting system to applicable voting system standards, (4) had a VSTL submit a test report to the EAC for technical review and approval, and (5) received EAC approval of the report in an Initial Decision on Certification.

4.3. Certification Application. The first step in submitting a voting system for certification is submission of an application package. The package contains an application form and a copy of the voting system's Implementation Statement (see VVSG 2005—Version 1.0, Vol. I, Section 1.6.4), functional diagram, and System Overview documentation submitted to the VSTL as a part of the Technical Data Package (see VVSG 2005—Version 1.0, Vol. II, Section 2.2). This application process initiates the certification process and provides the EAC with needed information.

4.3.1. *Information on Application Form.* The application (application form) provides the EAC certain pieces of information that are essential at the outset of the certification process. This information includes the following:

4.3.1.1. *Manufacturer Information.* Identification of the Manufacturer (name and three-letter identification code).

4.3.1.2. *Selection of Accredited Laboratory.* Selection and identification of the VSTL that will perform voting system testing and other prescribed laboratory action consistent with the requirements of this Manual. Once selected, a Manufacturer may NOT replace the selected VSTL without the express written consent of the Program Director. Such permission will be granted solely at the discretion of the Program Director and only upon demonstration of good cause.

4.3.1.3. *Voting System Standards Information.* Identification of the VVSG or VSS, including the document's date and version number, to which the Manufacturer wishes to have the identified voting system tested and certified.

4.3.1.4. *Nature of the Submission.* Manufacturers must identify the nature of their submission by selecting one of the following four submission types:

4.3.1.4.1. New system. For purposes of this Manual, a new system is defined as a voting system that has not been previously tested to any applicable Federal standards.

4.3.1.4.2. System not previously EAC certified. This term describes any voting system not previously certified by the EAC, including systems previously tested and

009975

qualified by NASED or systems previously tested and denied certification by the EAC.

4.3.1.4.3. *Modification.* A modification is any change to a previously EAC-certified voting system's hardware, software, or firmware.

4.3.1.4.4. *Certification upgrade.* This term defines any system previously certified by the EAC but submitted (without modification) for additional testing and certification to a higher standard (e.g., to a newer version of the VVSG).

4.3.1.5. *Identification of the Voting System.* Manufacturers must identify the system submitted for testing by providing its name and applicable version number. If the system submitted has been previously fielded, but the Manufacturer wishes to change its name or version number after receipt of EAC certification, it must provide identification information on both the past name or names and the new, proposed name. This requirement might occur in systems submitted for modification, for their first EAC certification, or for a certification upgrade.

4.3.1.6. *Description of the Voting System.* Manufacturers must provide a brief description of the system or modification being submitted for testing and certification. This description shall include the following information:

4.3.1.6.1. A listing of all components of the system submitted.

4.3.1.6.2. Each component's version number.

4.3.1.6.3. A complete list of each configuration of the system's components that could be fielded as the certified voting system.<sup>1</sup>

4.3.1.6.4. Any other information necessary to identify the specific configuration being submitted for certification.

4.3.1.7. *Date Submitted.* Manufacturers must note the date the application was submitted for EAC approval.

4.3.1.8. *Signature.* The Manufacturer must affix the signature of the authorized management representative.

4.3.2. *Submission of the Application Package.* Manufacturers must submit a copy of the application form described above and copies of the voting system's (1) Implementation Statement, (2) functional diagram, and (3) System Overview documentation submitted to the VSTL as a part of the Technical Data Package.

4.3.2.1. *Application Form.* Application forms will be available on the EAC Web site: <http://www.eac.gov>. The application form submitted to the EAC must be signed; dated; and fully, accurately, and completely filled out. The EAC will not accept incomplete or inaccurate applications.

<sup>1</sup> An EAC certification applies to the configuration of components (the voting system) presented for testing. A voting system may be fielded without using each of the components that formed the system presented, since voting systems, as certified, may contain optional or redundant components to meet the varying needs of election officials. Systems may not be fielded with additional components or without sufficient components to properly prosecute an election, as neither individual components nor separately tested systems may be combined to create new certified voting systems.

4.3.2.2. *Implementation Statement.* The Manufacturer must submit with the application form a copy of the voting system's Implementation Statement, which must meet the requirements of the VVSG (VVSG 2005—Version 1.0, Vol. I, Section 1.6.4). If an existing system is being submitted with a modification, the Manufacturer must submit a copy of a revised Implementation Statement.

4.3.2.3. *Functional Diagram.* The Manufacturer must submit with the application form a high-level Functional Diagram of the voting system that includes all of its components. The diagram must portray how the various components relate and interact.

4.3.2.4. *System Overview.* The Manufacturer must submit with the application form a copy of the voting system's System Overview documentation submitted to the VSTL as a part of the Technical Data Package. This document must meet the requirements of the VVSG (VVSG 2005—Version 1.0, Vol. II, Section 2.2).

4.3.2.5. *Submission.* Applications, with the accompanying documentation, shall be submitted in Adobe PDF, Microsoft Word, or other electronic formats as prescribed by the Program Director. Information on how to submit packages will be posted on the EAC Web site: <http://www.eac.gov>.

4.3.3. *EAC Review.* Upon receipt of a Manufacturer's application package, the EAC will review the submission for completeness and accuracy. If the application package is incomplete, the EAC will return it to the Manufacturer with instructions for resubmission. If the form submitted is acceptable, the Manufacturer will be notified and provided a unique application number within five (5) business days of the EAC's receipt of the application.

4.4. *Test Plan.* The Manufacturer shall authorize the VSTL identified in its application to submit a test plan directly to the EAC. This plan shall provide for testing of the system sufficient to ensure it is functional and meets all applicable voting system standards.

4.4.1. *Development.* An accredited laboratory will develop test plans that use appropriate test protocols, standards, or test suites developed by the laboratory. Laboratories must use all applicable protocols, standards, or test suites issued by the EAC.

4.4.2. *Required Testing.* Test plans shall be developed to ensure that a voting system is functional and meets all requirements of the applicable, approved voting system standards. The highest level of care and vigilance is required to ensure that comprehensive test plans are created. A test plan should ensure that the voting system meets all applicable standards and that test results and other factual evidence of the testing are clearly documented. System testing must meet the requirements of the VVSG. Generally, full testing will be required of any voting system applying for certification, regardless of previous certification history.

4.4.2.1. *New System.* A new system shall be subject to full testing of all hardware and software according to applicable voting system standards.

4.4.2.2. *System Not Previously EAC Certified.* A system not previously certified by the EAC shall be fully tested as a new system.

4.4.2.3. *Modification.* A modification to a previously EAC-certified voting system shall be tested in a manner necessary to ensure that all changes meet applicable voting system standards and that the modified system (as a whole) will properly and reliably function. Any system submitted for modification shall be subject to full testing of the modifications (delta testing) and those systems or subsystems altered or impacted by the modification (regression testing). The system will also be subject to system integration testing to ensure overall functionality. The modification will be tested to the version or versions of the VVSG/VSS currently accepted for testing and certification by the EAC. This requirement, however, does not mean that the full system must be tested to such standards. If the system has been previously certified to a VVSG/VSS version deemed acceptable by the EAC (see Section 3.2.2.2), it may retain that level of certification with only the modification being tested to the present version(s).

4.4.2.4. *EAC Identified Systems.* Previously certified systems identified for retesting by the EAC (see Section 3.4.4) shall be tested as directed by the Program Director (after consultation with NIST, VSTLs, or other technical experts as necessary).

4.4.2.5. *Certification Upgrade.* A previously certified system submitted for testing to a new voting system standard (without modification) shall be tested in a manner necessary to ensure that the system meets all requirements of the new standards. The VSTL shall create a test plan that identifies the differences between the new and old standards and, based upon the differences, fully retest all hardware and software components affected.

4.4.3. *Format.* Test labs shall issue test plans consistent with the requirements in VVSG, Vol. II and any applicable EAC guidance.

4.4.4. *EAC Approval.* All test plans are subject to EAC approval. No test report will be accepted for technical review unless the test plan on which it is based has been approved by EAC's Program Director.

4.4.4.1. *Review.* All test plans must be reviewed for adequacy by the Program Director. For each submission, the Program Director will determine whether the test plan is acceptable or unacceptable. Unacceptable plans will be returned to the laboratory for further action. Acceptable plans will be approved. Although Manufacturers may direct test labs to begin testing before approval of a test plan, the Manufacturer bears the full risk that the test plan (and thus any tests performed) will be deemed unacceptable.

4.4.4.2. *Unaccepted Plans.* If a plan is not accepted, the Program Director will return the submission to the Manufacturer's identified VSTL for additional action. Notice of unacceptability will be provided in writing to the laboratory and include a description of the problems identified and steps required to remedy the test plan. A copy of this notice

009976

will also be sent to the Manufacturer. Questions concerning the notice shall be forwarded to the Program Director in writing. Plans that have not been accepted may be resubmitted for review after remedial action is taken.

4.4.4.3. *Effect of Approval.* Approval of a test plan is required before a test report may be filed. In most cases, approval of a test plan signifies that the tests proposed, if performed properly, are sufficient to fully test the system. A test plan, however, is approved based on the information submitted. New or additional information may require a change in testing requirements at any point in the certification process.

4.5. *Testing.* During testing, Manufacturers are responsible for enabling VSTLs to report any changes to a voting system or an approved test plan directly to the EAC. Manufacturers shall also enable VSTLs to report all test failures or anomalies directly to the EAC.

4.5.1. *Changes.* Any changes to a voting system, initiated as a result of the testing process, will require submission of an updated Implementation Statement, functional diagram, and System Overview document and, potentially, an updated test plan. Test plans must be updated whenever a change to a voting system requires deviation from the test plan originally approved by the EAC. Changes requiring alteration or deviation from the originally approved test plan must be submitted to the EAC (by the VSTL) for approval before the completion of testing. The submission shall include an updated Implementation Statement, functional diagram, and System Overview document, as needed.

4.5.2. *Test Anomalies or Failures.* Manufacturers shall enable VSTLs to notify the EAC directly and independently of any test anomalies, or failures during testing. The VSTLs shall ensure that all anomalies or failures are addressed and resolved before testing is completed. All test failures, anomalies and actions taken to resolve such failures and anomalies shall be documented by the VSTL in an appendix to the test report submitted to the EAC. These matters shall be reported in a matrix, or similar format, that identifies the failure or anomaly, the applicable voting system standards, and a description of how the failure or anomaly was resolved. Associated or similar anomalies/failures may be summarized and reported in a single entry on the report (matrix) as long as the nature and scope of the anomaly/failure is clearly identified.

4.6. *Test Report.* Manufacturers shall enable their identified VSTL to submit test reports directly to the EAC. The VSTL shall submit test reports only if the voting system has been tested and all tests identified in the test plan have been successfully performed.

4.6.1. *Submission.* The test reports shall be submitted to the Program Director. The Program Director shall review the submission for completeness. Any reports showing incomplete or unsuccessful testing will be

returned to the test laboratory for action and resubmission. Notice of this action will be provided to the Manufacturer. Test reports shall be submitted in Adobe PDF, Microsoft Word, or other electronic formats as prescribed by the Program Director. Information on how to submit reports will be posted on the EAC Web site: <http://www.eac.gov>.

4.6.2. *Format.* Manufacturers shall ensure that test labs submit reports consistent with the requirements in the VVSG and this Manual.

4.6.3. *Technical Review.* A technical review of the test report, technical documents, and test plan will be conducted by EAC technical experts. The EAC may require the submission of additional information from the VSTL or Manufacturer if deemed necessary to complete the review. These experts will submit a report outlining their findings to the Program Director. The report will provide an assessment of the completeness, appropriateness, and adequacy of the VSTL's testing as documented in the test report.

4.6.4. *Program Director's Recommendation.* The Program Director shall review the report and take one of the following actions:

4.6.4.1. Recommend certification of the candidate system consistent with the reviewed test report and forward it to the Decision Authority for action (Initial Decision); or

4.6.4.2. Refer the matter back to the technical reviewers for additional specified action and resubmission.

4.7. *Initial Decision on Certification.* Upon receipt of the report and recommendation forwarded by the Program Director, the Decision Authority shall issue an Initial Decision on Certification. The decision shall be forwarded to the Manufacturer consistent with the requirements of this Manual.

4.7.1. An Initial Decision granting certification shall be processed consistent with Chapter 5 of this Manual.

4.7.2. An Initial Decision denying certification shall be processed consistent with Chapter 6 of this Manual.

## 5. Grant of Certification

5.1. *Overview.* The grant of certification is the formal process through which EAC acknowledges that a voting system has successfully completed conformance testing to an appropriate set of standards or guidelines. The grant of certification begins with the Initial Decision of the Decision Authority. This decision becomes final after the Manufacturer confirms that the final version of the software that was certified and which the Manufacturer will deliver with the certified system has been subject to a trusted build, placed in an EAC-approved repository, and can be verified using the Manufacturer's system identification tools. After a certification is issued, the Manufacturer is provided a Certificate of Conformance and relevant information about the system is added to the EAC Web site. Manufacturers with certified voting systems are responsible for ensuring that each system they produce is properly labeled as certified.

5.2. *Applicability of This Chapter.* This chapter applies when the Decision Authority

makes an Initial Decision to grant a certification to a voting system based on the materials and recommendation provided by the Program Director.

5.3. *Initial Decision.* The Decision Authority shall make a written decision on all voting systems submitted for certification and issue the decision to a Manufacturer. When such decisions result in a grant of certification, the decision shall be considered preliminary and referred to as an Initial Decision pending required action by the Manufacturer. The Initial Decision shall:

5.3.1. State the preliminary determination reached (granting certification).

5.3.2. Inform the Manufacturer of the steps that must be taken to make the determination final and receive a certification. This action shall include providing the Manufacturer with specific instructions, guidance, and procedures for confirming and documenting that the final certified version of the software meets the requirements for:

5.3.2.1. Performing and documenting a trusted build pursuant to Section 5.6 of this chapter.

5.3.2.2. Depositing software in an approved repository pursuant to Section 5.7 of this chapter.

5.3.2.3. Creating and making available system verification tools pursuant to Section 5.8 of this chapter.

5.3.3. Certification is not final until the Manufacturer accepts the certification and all conditions placed on the certification.

5.4. *Pre-Certification Requirements.* Before an Initial Decision becomes final and a certification is issued, Manufacturers must ensure certain steps are taken. They must confirm that the final version of the software that was certified and which the Manufacturer will deliver with the certified system has been subject to a trusted build (see Section 5.6), has been delivered for deposit in an EAC-approved repository (see Section 5.7), and can be verified using Manufacturer-developed identification tools (see Section 5.8). The Manufacturer must provide the EAC documentation demonstrating compliance with these requirements.

5.5. *Trusted Build.* A software build (also referred to as a compilation) is the process whereby source code is converted to machine-readable binary instructions (executable code) for the computer. A "trusted build" (or trusted compilation) is a build performed with adequate security measures implemented to give confidence that the executable code is a verifiable and faithful representation of the source code. A trusted build creates a chain of evidence from the Technical Data Package and source code submitted to the VSTLs to the actual executable programs that are run on the system. Specifically, the build will do the following:

5.5.1. Demonstrate that the software was built as described in the Technical Data Package.

5.5.2. Show that the tested and approved source code was actually used to build the executable code used on the system.

5.5.3. Demonstrate that no elements other than those included in the Technical Data Package were introduced in the software build.

009977

5.5.4. Document for future reference the configuration of the system certified.

5.6. **Trusted Build Procedure.** A trusted build is a three-step process: (1) The build environment is constructed, (2) the source code is loaded onto the build environment, and (3) the executable code is compiled and the installation device is created. The process may be simplified for modification to previously certified systems. In each step, a minimum of two witnesses from different organizations is required to participate. These participants must include a VSTL representative and vendor representative. Before creating the trusted build, the VSTL must complete the source code review of the software delivered from the vendor for compliance with the VVSG and must produce and record file signatures of all source code modules.

5.6.1. **Constructing the Build Environment.** The VSTL shall construct the build environment in an isolated environment controlled by the VSTL, as follows:

5.6.1.1. The device that will hold the build environment shall be completely erased by the VSTL to ensure a total and complete cleaning of it. The VSTL shall use commercial off-the-shelf software, purchased by the laboratory, for cleaning the device.

5.6.1.2. The VSTL, with vendor consultation and observation, shall construct the build environment.

5.6.1.3. After construction of the build environment, the VSTL shall produce and record a file signature of the build environment.

5.6.2. **Loading Source Code Onto the Build Environment.** After successful source code review, the VSTL shall load source code onto the build environment as follows:

5.6.2.1. The VSTL shall check the file signatures of the source code modules and build environment to ensure that they are unchanged from their original form.

5.6.2.2. The VSTL shall load the source code onto the build environment and produce and record the file signature of the resulting combination.

5.6.2.3. The VSTL shall capture a disk image of the combination build environment and source code modules immediately before performing the build.

5.6.2.4. The VSTL shall deposit the disk image into an authorized archive to ensure that the build can be reproduced, if necessary, at a later date.

5.6.3. **Creating the Executable Code.** Upon completion of all the tasks outlined above, the VSTL shall produce the executable code.

5.6.3.1. The VSTL shall produce and record a file signature of the executable code.

5.6.3.2. The VSTL shall deposit the executable code into an EAC-approved software repository and create installation disk(s) from the executable code.

5.6.3.3. The VSTL shall produce and record file signatures of the installation disk(s) in order to provide a mechanism to validate the software before installation on the voting system in a purchasing jurisdiction.

5.6.3.4. The VSTL shall install the executable code onto the system submitted for testing and certification before completion of system testing.

5.6.4. **Trusted Build for Modifications.** The process of building new executable code when a previously certified system has been modified is somewhat simplified.

5.6.4.1. The build environment used in the original certification is removed from storage and its file signature verified.

5.6.4.2. After source code review, the modified files are placed onto the verified build environment and new executable files are produced.

5.6.4.3. If the original build environment is unavailable or its file signatures cannot be verified against those recorded from the original certification, then the more labor-intensive process of creating the build environment must be performed. Further source code review may be required of unmodified files to validate that they are unmodified from their originally certified versions.

5.7. **Depositing Software in an Approved Repository.** After EAC certification has been granted, the VSTL project manager, or an appropriate delegate of the project manager, shall deliver for deposit the following elements in one or more trusted archive(s) (repositories) designated by the EAC:

5.7.1. Source code used for the trusted build and its file signatures.

5.7.2. Disk image of the pre-build, build environment, and any file signatures to validate that it is unmodified.

5.7.3. Disk image of the post-build, build environment, and any file signatures to validate that it is unmodified.

5.7.4. Executable code produced by the trusted build and its file signatures of all files produced.

5.7.5. Installation device(s) and file signatures.

5.8. **System Identification Tools.** The Manufacturer shall provide tools through which a fielded voting system may be identified and demonstrated to be unmodified from the system that was certified. The purpose of this requirement is to make such tools available to Federal, State, and local officials to identify and verify that the equipment used in elections is unmodified from its certified version. Manufacturers may develop and provide these tools as they see fit. The tools, however, must provide the means to identify and verify hardware and software. The EAC may review the system identification tools developed by the Manufacturer to ensure compliance. System identification tools include the following examples:

5.8.1. Hardware is commonly identified by model number and revision number on the unit, its printed wiring boards (PWBs), and major subunits. Typically, hardware is verified as unmodified by providing detailed photographs of the PWBs and internal construction of the unit. These images may be used to compare with the unit being verified.

5.8.2. Software operating on a host computer will typically be verified by providing a selfbooting compact disk (CD) or similar device that verifies the file signatures of the voting system application files AND the signatures of all nonvolatile files that the application files access during their operation. Note that the creation of such a CD

requires having a file map of all nonvolatile files that are used by the voting system. Such a tool must be provided for verification using the file signatures of the original executable files provided for testing. If during the certification process modifications are made and new executable files created, then the tool must be updated to reflect the file signatures of the final files to be distributed for use. For software operating on devices in which a self-booting CD or similar device cannot be used, a procedure must be provided to allow identification and verification of the software that is being used on the device.

5.9. **Documentation.** Manufacturers shall provide documentation to the Program Director verifying that the trusted build has been performed, software has been deposited in an approved repository, and system identification tools are available to election officials. The Manufacturer shall submit a letter, signed by both its management representative and a VSTL official, stating (under penalty of law) that it has (1) performed a trusted build consistent with the requirements of Section 5.6 of this Manual, (2) deposited software consistent with Section 5.7 of this Manual, and (3) created and made available system identification tools consistent with Section 5.8 of this Manual. This letter shall also include (as attachments) a copy and description of the system identification tool developed under Section 5.8 above.

5.10. **Agency Decision.** Upon receipt of documentation demonstrating the successful completion of the requirements above and recommendation of the Program Director, the Decision Authority will issue an Agency Decision granting certification and providing the Manufacturer with a certification number and Certificate of Conformance.

5.11. **Certification Document.** A Certificate of Conformance will be provided to Manufacturers for voting systems that have successfully met the requirements of the EAC Certification Program. The document will serve as the Manufacturer's evidence that a particular system is certified to a particular set of voting system standards. The EAC certification and certificate apply only to the specific voting system configuration(s) identified, submitted and evaluated under the Certification Program. Any modification to the system not authorized by the EAC will void the certificate. The certificate will include the product (voting system) name, the specific model or version of the product tested, the name of the VSTL conducting the testing, identification of the standards to which the system was tested, the EAC certification number for the product, and the signature of the EAC Executive Director. The certificate will also identify each of the various configurations of the voting system's components that may be represented as certified.

5.12. **Certification Number and Version Control.** Each system certified by the EAC will receive a certification number that is unique to the system and will remain with the system until such time as the system is decertified, sufficiently modified, or tested and certified to newer standards. Generally, when a previously certified system is issued

a new certification number, the Manufacturer will be required to change the system's name or version number.

**5.12.1. New Voting Systems and Those Not Previously Certified by the EAC.** All systems receiving their first certification from the EAC will receive a new certification number. Manufacturers must provide the EAC with the voting system's name and version number during the application process (see Chapter 4). Systems previously certified by another body may retain the previous system name and version number unless the system was modified before its submission to the EAC. Such modified systems must be submitted with a new naming convention (i.e., a new version number).

**5.12.2. Modifications.** Voting systems previously certified by the EAC and submitted for certification of a modification will generally receive a new voting system certification number. Such modified systems must be submitted with a new naming convention (i.e., a new version number). In rare instances, the EAC may authorize retention of the same certification and naming convention when the modification is so minor that it does not represent a substantive change in the voting system. A request for such authorization must be made and approved by the EAC during the application phase of the program.

**5.12.3. Certification Upgrade.** Voting systems previously certified and submitted (without modification) for testing to a new version of the VVSG will receive a new certification number. In such cases, however, the Manufacturer will not be required to change the system name or version.

**5.12.4. De Minimis Change.** Voting systems previously certified and implementing an approved de minimis change (per Chapter 3) will not be issued a new certification number and are not required to implement a new naming convention.

**5.13. Publication of EAC Certification.** The EAC will publish and maintain on its Web site a list of all certified voting systems, including copies of all Certificates of Conformance, the supporting test report, and information about the voting system and Manufacturer. Such information will be posted immediately following the Manufacturer's receipt of the EAC Final Decision and Certificate of Conformance.

**5.14. Representation of EAC Certification.** Manufacturers may not represent or imply that a voting system is certified unless it has received a Certificate of Conformance for that system. Statements regarding EAC certification in brochures, on Web sites, on displays, and in advertising/sales literature must be made solely in reference to specific systems. Any action by a Manufacturer to suggest EAC endorsement of its product or organization is strictly prohibited and may result in a Manufacturer's suspension or other action pursuant to Federal civil and criminal law.

**5.15. Mark of Certification Requirement.** Manufacturers shall post a mark of certification on all EAC-certified voting systems produced. This mark or label must be securely attached to the system before sale, lease, or release to third parties. A mark of certification shall be made using an EAC-

mandated template available for download on the EAC Web site: <http://www.eac.gov>. These templates identify the version of the VVSG or VSS to which the system is certified. Use of this template shall be mandatory. The EAC mark must be displayed as follows:

**5.15.1.** The Manufacturer may use only the mark of certification that accurately reflects the certification held by the voting system as a whole. The certification of individual components or modifications shall not be independently represented by a mark of certification. In the event a system has components or modifications tested to various (later) versions of the VVSG, the system shall bear only the mark of certification of the standard to which the system (as a whole) was tested and certified (i.e. the lesser standard). Ultimately, a voting system shall only display the mark of certification of the oldest or least rigorous standard to which any of its components are certified.

**5.15.2.** The mark shall be placed on the outside of a unit of voting equipment in a place readily visible to election officials. The mark need not be affixed to each of the voting system's components. The mark shall be affixed to either (1) each unit that is used to cast ballots or (2) each unit that is used to tabulate ballots.

**5.15.3.** The notice shall be securely affixed to the voting system. The label shall not be a paper label. "Securely affixed" means that the label is etched, engraved, stamped, silk-screened, indelibly printed, or otherwise securely marked on a permanently attached part of the equipment or on a nameplate of metal, plastic, or other sturdy material fastened to the equipment by use of welding, riveting, or adhesive.

**5.15.4.** The label must be designed to last the expected lifetime of the voting system in the environment in which the system may be operated and must not be readily detachable.

**5.16. Information to Election Officials Purchasing Voting Systems.** The user's manual or instruction manual for a certified voting system shall warn purchasers that changes or modifications not tested and certified by the EAC will void the EAC certification of the voting system. In cases in which the manual is provided only in a form other than paper, such as on a CD or over the Internet, the information required in this section may be included in this alternative format provided the election official can reasonably be expected to have the capability to access information in that format.

## 6. Denial of Certification

**6.1. Overview.** When the Decision Authority issues an Initial Decision denying certification, the Manufacturer has certain rights and responsibilities. The Manufacturer may request an opportunity to cure the defects identified by the Decision Authority. In addition, the Manufacturer may request that the Decision Authority reconsider the Initial Decision after the Manufacturer has had the opportunity to review the record and submit supporting written materials, data, and the rationale for its position. Finally, in the event reconsideration is denied, the Manufacturer may appeal the decision to the Appeal Authority.

**6.2. Applicability of This Chapter.** This chapter applies when the Decision Authority makes an Initial Decision to deny an application for voting system certification based on the materials and recommendation provided by the Program Director.

**6.3. Form of Decisions.** All agency determinations shall be made in writing. Moreover, all materials and recommendations reviewed or used by agency decision makers in arriving at an official determination shall be in written form.

**6.4. Effect of Denial of Certification.** Upon receipt of the agency's decision denying certification—or in the event of an appeal, subject to the Decision on Appeal—the Manufacturer's application for certification is denied. Such systems will not be reviewed again by the EAC for certification unless the Manufacturer alters the system, retests it, and submits a new application for system certification.

**6.5. The Record.** The Program Director shall maintain all documents related to a denial of certification. Such documents shall constitute the procedural and substantive record of the decision making process. Records may include the following:

**6.5.1.** The Program Director's report and recommendation to the Decision Authority.

**6.5.2.** The Decision Authority's Initial Decision and Final Decision.

**6.5.3.** Any materials gathered by the Decision Authority that served as a basis for a certification determination.

**6.5.4.** All relevant and allowable materials submitted by the Manufacturer upon request for reconsideration or appeal.

**6.5.5.** All correspondence between the EAC and a Manufacturer after the issuance of an Initial Decision denying certification.

**6.6. Initial Decision.** The Decision Authority shall make and issue a written decision on voting systems submitted for certification. When such decisions result in a denial of certification, the decision shall be considered preliminary and referred to as an Initial Decision. Initial Decisions shall be in writing and contain (1) the Decision Authority's basis and explanation for the decision and (2) notice of the Manufacturer's rights in the denial of certification process.

**6.6.1. Basis and Explanation.** The Initial Decision of the Decision Authority shall accomplish the following:

**6.6.1.1.** Clearly state the agency's decision on certification.

**6.6.1.2.** Explain the basis for the decision, including identifying the following:

**6.6.1.2.1.** The relevant facts.

**6.6.1.2.2.** The applicable EAC voting system standards (VVSG or VSS).

**6.6.1.2.3.** The relevant analysis in the Program Director's recommendation.

**6.6.1.2.4.** The reasoning behind the decision.

**6.6.1.3.** State the actions the Manufacturer must take, if any, to cure all defects in the voting system and obtain a certification.

**6.6.2. Manufacturer's Rights.** The written Initial Decision must also inform the Manufacturer of its procedural rights under the program, including the following:

**6.6.2.1.** Right to request reconsideration. The Manufacturer shall be informed of its

right to request a timely reconsideration (see Section 6.9). Such request must be made within 10 calendar days of the Manufacturer's receipt of the Initial Decision.

6.6.2.2. Right to request a copy or otherwise have access to the information that served as the basis of the Initial Decision ("the record").

6.6.2.3. Right to cure system defects prior to final Agency Decision (see Section 6.8). A Manufacturer may request an opportunity to cure within 10 calendar days of its receipt of the Initial Decision.

6.7. No Manufacturer Action on Initial Decision. If a Manufacturer takes no action (by either failing to request an opportunity to cure or request reconsideration) within 10 calendar days of its receipt of the Initial Decision, the Initial Decision shall become the agency's Final Decision on Certification. In such cases, the Manufacturer is determined to have foregone its right to reconsideration, cure, and appeal. The certification application shall be considered finally denied.

6.8. Opportunity To Cure. Within 10 calendar days of receiving the EAC's Initial Decision on Certification, a Manufacturer may request an opportunity to cure the defects identified in the EAC's Initial Decision. If the request is approved, a compliance plan must be created, approved, and followed. If this cure process is successfully completed, a voting system denied certification in an Initial Decision may receive a certification without resubmission.

6.8.1. *Manufacturer's Request To Cure.* The Manufacturer must send a request to cure within 10 calendar days of receipt of an Initial Decision. The request must be sent to the Program Director.

6.8.2. *EAC Action on Request.* The Decision Authority will review the request and approve it. The Decision Authority will deny a request to cure only if the proposed plan to cure is inadequate or does not present a viable way to remedy the identified defects. Approval or denial of a request to cure shall be provided the Manufacturer in writing. If the Manufacturer's request to cure is denied, it shall have 10 calendar days from the date it received such notice to request reconsideration of the Initial Decision pursuant to Section 6.6.2.

6.8.3. *Manufacturer's Compliance Plan.* Upon approval of the Manufacturer's request for an opportunity to cure, it shall submit a compliance plan to the Decision Authority for approval. This compliance plan must set forth steps to be taken to cure all identified defects. It shall include the proposed changes to the system, updated technical information (as required by Section 4.3.2), and a new test plan created and submitted directly to the EAC by the VSTL (testing the system consistent with Section 4.4.2.3). The plan shall also provide for the testing of the amended system and submission of a test report by the VSTL to the EAC for approval. It should provide an estimated date for receipt of this test report and include a schedule of periodic VSTL progress reports to the Program Director.

6.8.4. *EAC Action on the Compliance Plan.* The Decision Authority must review and

approve the compliance plan. The Decision Authority may require the Manufacturer to provide additional information and modify the plan as required. If the Manufacturer is unable or unwilling to provide a compliance plan acceptable to the Decision Authority, the Decision Authority shall provide written notice terminating the "opportunity to cure" process. The Manufacturer shall have 10 calendar days from the date it receives such notice to request reconsideration of the Initial Decision pursuant to Section 6.6.2.

6.8.5. *Compliance Plan Test Report.* The VSTL shall submit the test report created pursuant to its EAC-approved compliance plan. The EAC shall review the test report, along with the original test report and other materials originally provided. The report will be technically reviewed by the EAC consistent with the procedures laid out in Chapter 4 of this Manual.

6.8.6. *EAC Decision on the System.* After receipt of the test plan, the Decision Authority shall issue a decision on a voting system amended pursuant to an approved compliance plan. This decision shall be issued in the same manner and with the same process and rights as an Initial Decision on Certification.

6.9. Requests for Reconsideration. Manufacturers may request reconsideration of an Initial Decision.

6.9.1. *Submission of Request.* A request for reconsideration must be made within 10 calendar days of the Manufacturer's receipt of an Initial Decision. The request shall be made and sent to the Decision Authority.

6.9.2. *Acknowledgment of Request.* The Decision Authority shall acknowledge receipt of the Manufacturer's request for reconsideration. This acknowledgment shall either enclose all information that served as the basis for the Initial Decision (the record) or provide a date by which the record will be forwarded to the Manufacturer.

6.9.3. *Manufacturer's Submission.* Within 30 calendar days of receipt of the record, a Manufacturer may submit written materials in support of its position, including the following:

6.9.3.1. A written argument responding to the conclusions in the Initial Decision.

6.9.3.2. Documentary evidence relevant to the issues raised in the Initial Decision.

6.9.4. *Decision Authority's Review of Request.* The Decision Authority shall review and consider all relevant submissions of the Manufacturer. In making a decision on reconsideration, the Decision Authority shall also consider all documents that make up the record and any other documentary information he or she determines relevant.

6.10. Agency Final Decision. The Decision Authority shall issue a written Agency Decision after review of the Manufacturer's request for reconsideration. This Decision shall be the decision of the agency. The following actions are necessary for writing the decision:

6.10.1.1. Clearly state the agency's determination on the application for certification.

6.10.1.2. Address the issues raised by the Manufacturer in its request for reconsideration.

6.10.1.3. Identify all facts, evidence, and EAC voting system standards (VVSG or VSS) that served as the basis for the decision.

6.10.1.4. Provide the reasoning behind the determination.

6.10.1.5. Identify and provide, as an attachment, any additional documentary information that served as a basis for the decision and that was not part of the Manufacturer's submission or the prior record.

6.10.1.6. Provide the Manufacturer notice of its right to appeal.

6.11. Appeal of Agency Final Decision. A Manufacturer may, upon receipt of an Agency Final Decision denying certification, issue a request for appeal.

6.11.1. *Requesting Appeal.* A Manufacturer may appeal a final decision of the agency by issuing a written request for appeal.

6.11.1.1. *Submission.* Requests must be submitted in writing to the Program Director, addressed to the Chair of the U.S. Election Assistance Commission.

6.11.1.2. *Timing of Appeal.* The Manufacturer may request an appeal within 20 calendar days of receipt of the Agency Final Decision. Late requests will not be considered.

6.11.1.3. *Contents of Request.*

6.11.1.3.1. The request must clearly state the specific conclusions of the Final Decision the Manufacturer wishes to appeal.

6.11.1.3.2. The request may include additional written argument.

6.11.1.3.3. The request may not reference or include any factual material not in the record.

6.11.2. *Consideration of Appeal.* All timely appeals will be considered by the Appeal Authority.

6.11.2.1. The Appeal Authority shall be two or more EAC Commissioners or other individuals appointed by the Commissioners who have not previously served as the initial or reconsideration authority on the matter.

6.11.2.2. All decisions on appeal shall be based on the record.

6.11.2.3. The determination of the Decision Authority shall be given deference by the Appeal Authority. Although it is unlikely that the scientific certification process will produce factual disputes, in such cases, the burden of proof shall belong to the Manufacturer to demonstrate by clear and convincing evidence that its voting system met all substantive and procedural requirements for certification. In other words, the determination of the Decision Authority will be overturned only when the Appeal Authority finds the ultimate facts in controversy highly probable.

6.12. Decision on Appeal. The Appeal Authority shall make a written, final Decision on Appeal and shall provide it to the Manufacturer.

6.12.1. *Contents.* The following actions are necessary to write the Decision on Appeal:

6.12.1.1. State the final determination of the agency.

6.12.1.2. Address the matters raised by the Manufacturer on appeal.

6.12.1.3. Provide the reasoning behind the decisions.

6.12.1.4. State that the Decision on Appeal is final.

009980

6.12.2. *Determinations.* The Appeal Authority may make one of two determinations:

6.12.2.1. *Grant of Appeal.* If the Appeal Authority determines that the conclusions of the Decision Authority shall be overturned in full, the appeal shall be granted. In such cases, certification will be approved subject to the requirements of Chapter 5.

6.12.2.2. *Denial of Appeal.* If the Appeal Authority determines that any part of the Decision Authority's determination shall be upheld, the appeal shall be denied. In such cases, the application for appeal is finally denied.

6.12.3. *Effect.* All Decisions on Appeal shall be final and binding on the Manufacturer. No additional appeal shall be granted.

## 7. Decertification

7.1. *Overview.* Decertification is the process by which the EAC revokes a certification previously granted to a voting system. It is an important part of the Certification Program because it serves to ensure that the requirements of the program are followed and that certified voting systems fielded for use in Federal elections maintain the same level of quality as those presented for testing. Decertification is a serious matter. Its use will significantly affect Manufacturers, State and local governments, the public, and the administration of elections. As such, the process for Decertification is complex. It is initiated when the EAC receives information that a voting system may not be in compliance with the applicable voting system standard or the procedural requirements of this Manual. Upon receipt of such information, the Program Director may initiate an Informal Inquiry to determine the credibility of the information. If the information is credible and suggests the system is non-compliant, a Formal Investigation will be initiated. If the results of the Formal Investigation demonstrate non-compliance, the Manufacturer will be provided a Notice of Non-Compliance. Before a Final Decision on Decertification is made, the Manufacturer will have the opportunity to remedy any defects identified in the voting system and present information for consideration by the Decertification Authority. A Decertification of a voting system may be appealed in a timely manner.

7.2. *Decertification Policy.* Voting systems certified by the EAC are subject to Decertification. Systems shall be decertified if (1) they are shown not to meet applicable voting system standard, (2) they have been modified or changed without following the requirements of this Manual, or (3) the Manufacturer has otherwise failed to follow the procedures outlined in this Manual so that the quality, configuration, or compliance of the system is in question. Decertification of a voting system is a serious matter. Systems will be decertified only after completion of the process outlined in this chapter.

7.3. *Informal Inquiry.* An Informal Inquiry is the first step taken when information is presented to the EAC that suggests a voting system may not be in compliance with the

applicable voting system standard or the procedural requirements of this Manual.

7.3.1. *Informal Inquiry Authority.* The authority to conduct an Informal Inquiry shall rest with the Program Director.

7.3.2. *Purpose.* The sole purpose of the Informal Inquiry is to determine whether a Formal Investigation is warranted. The outcome of an Informal Inquiry is limited to a decision on referral for investigation.

7.3.3. *Procedure.* Informal Inquiries do not follow a formal process.

7.3.3.1. *Initiation.* Informal Inquiries are initiated at the discretion of the Program Director. They may be initiated any time the Program Director receives attributable, relevant information that suggests a certified voting system may require Decertification. The information shall come from a source that has directly observed or witnessed the reported occurrence. Such information may be a product of the Certification Quality Monitoring Program (see Chapter 8). Information may also come from State and local election officials, voters, or others who have used or tested a given voting system. The Program Director may notify a Manufacturer that an Informal Inquiry has been initiated, but such notification is not required. Initiation of an inquiry shall be documented through the creation of a Memorandum for the Record.

7.3.3.2. *Inquiry.* The Informal Inquiry process is limited to that inquiry necessary to determine whether a Formal Investigation is required. In other words, the Program Director shall conduct such inquiry necessary to determine (1) that the information obtained is credible and (2) that the information, if true, would serve as a basis for Decertification. The nature and extent of the inquiry process will vary depending on the source of the information. For example, an Informal Inquiry initiated as a result of action taken under the Certification Quality Monitoring Program will often require the Program Director merely to read the report issued as a result of the Quality Monitoring action. On the other hand, information provided by election officials or by voters who have used a voting system may require the Program Director (or assigned technical experts) to perform an in-person inspection or make inquiries of the Manufacturer.

7.3.3.3. *Conclusion.* An Informal Inquiry shall be concluded after the Program Director is in a position to determine the credibility of the information that initiated the inquiry and whether that information, if true, would require Decertification. The Program Director may make only two conclusions: (1) refer the matter for a Formal Investigation or (2) close the matter without additional action or referral.

7.3.4. *Closing the Matter Without Referral.* If the Program Director determines, after Informal Inquiry, that a matter does not require a Formal Investigation, the Program Director shall close the inquiry by filing a Memorandum for the Record. This document shall state the focus of the inquiry, the findings of the inquiry and the reasons a Formal Investigation was not warranted.

7.3.5. *Referral.* If the Program Director determines, after Informal Inquiry, that a

matter requires a Formal Investigation, the Program Director shall refer the matter in writing to the Decision Authority. In preparing this referral, the Program Director shall do the following:

7.3.5.1. State the facts that served as the basis for the referral.

7.3.5.2. State the findings of the Program Director.

7.3.5.3. Attach all documentary evidence that served as the basis for the conclusion.

7.3.5.4. Recommend a Formal Investigation, specifically stating the system to be investigated and the scope and focus of the proposed investigation.

7.4. *Formal Investigation.* A Formal Investigation is an official investigation to determine whether a voting system requires Decertification. The end result of a Formal Investigation is a Report of Investigation.

7.4.1. *Formal Investigation Authority.* The Decision Authority shall have the authority to initiate and conclude a Formal Investigation by the EAC.

7.4.2. *Purpose.* The purpose of a Formal Investigation is to gather and document relevant information sufficient to make a determination on whether an EAC-certified voting system requires Decertification consistent with the policy put forth in Section 7.2 above.

7.4.3. *Initiation of Investigation.* The Decision Authority shall authorize the initiation of an EAC Formal Investigation.

7.4.3.1. *Scope.* The Decision Authority shall clearly set the scope of the investigation by identifying (in writing) the voting system (or systems) and specific procedural or operational non-conformance to be investigated. The nonconformance or non-conformances to be investigated shall be set forth in the form of numbered allegations.

7.4.3.2. *Investigator.* The Program Director shall be responsible for conducting the investigation unless the Decision Authority appoints another individual to conduct the investigation. The Program Director (or Decision Authority appointee) may assign staff or technical experts, as required, to investigate the matter.

7.4.4. *Notice of Formal Investigation.* Upon initiation of a Formal Investigation, notice shall be given the Manufacturer of the scope of the investigation. The following actions are necessary to prepare this notice:

7.4.4.1. Identify the voting system and specific procedural or operation nonconformance being investigated (scope of investigation).

7.4.4.2. Provide the Manufacturer an opportunity to provide relevant information in writing.

7.4.4.3. Provide an estimated timeline for the investigation.

7.4.5. *Investigation.* Because voting systems play a vital role in our democratic process, investigations shall be conducted impartially, diligently, promptly, and confidentially. Investigators shall use techniques to gather necessary information that meet these requirements.

7.4.5.1. *Fair and Impartial Investigation.* All Formal Investigations shall be conducted in a fair and impartial manner. All individuals assigned to an investigation must be free from any financial conflicts of interest.

**7.4.5.2. Diligent Collection of Information.**

All investigations shall be conducted in a meticulous and thorough manner. Investigations shall gather all relevant information and documentation that is reasonably available. The diligent collection of information is vital for informed decision making.

**7.4.5.3. Prompt Collection of Information.**

Determinations that may affect the administration of Federal elections must be made with all reasonable speed. EAC determinations on Decertification will affect the actions of State and local election officials conducting elections. As such, all investigations regarding Decertification must proceed with an appropriate sense of urgency.

**7.4.5.4. Confidential Collection of Information.**

Consistent with Federal law, information pertaining to a Formal Investigation should not be made public until the Report of Investigation is complete. The release of incomplete and unsubstantiated information or predecisional opinions that may be contrary or inconsistent with the final determination of the EAC could cause public confusion or could unnecessarily negatively affect public confidence in active voting systems. Such actions could serve to impermissibly affect election administration and voter turnout. All predecisional investigative materials must be appropriately safeguarded.

**7.4.5.5. Methodologies.** Investigators shall gather information by means consistent with the four principles noted above. Investigative tools include (but are not limited to) the following:

**7.4.5.5.1. Interviews.** Investigators may interview individuals (such as State and local election officials, voters, or representatives of the Manufacturer) with relevant information. All interviews shall be reduced to written form; each interview should be summarized in a statement that is reviewed, approved, and signed by the subject.

**7.4.5.5.2. Field audits.****7.4.5.5.3. Manufacturer site audits.****7.4.5.5.4. Written interrogatories.**

Investigators may pose specific, written questions to the Manufacturer for the purpose of gathering information relevant to the investigation. The Manufacturer shall respond to the queries within a reasonable timeframe (as specified in the request).

**7.4.5.5.5. System testing.** Testing may be performed in an attempt to reproduce a condition or failure that has been reported. This testing will be conducted at a VSTL under contract with the EAC.

**7.4.5.6. Report of Investigation.** The end result of a Formal Investigation is a Report of Investigation.

**7.4.6. Report of Investigation.** The Report of Investigation serves, primarily, to document (1) all relevant and reliable information gathered in the course of the investigation, and (2) the conclusion reached by the Decision Authority.

**7.4.6.1. When Complete.** The report is complete and final when certified and signed by the Decision Authority.

**7.4.6.2. Contents of the Report of Investigation.** The following actions are necessary to prepare the written report:

**7.4.6.2.1.** Restate the scope of the investigation, identifying the voting system and specific matter investigated.

**7.4.6.2.2.** Briefly describe the investigative process employed.

**7.4.6.2.3.** Summarize the relevant and reliable facts and information gathered in the course of the investigation.

**7.4.6.2.4.** Attach all relevant and reliable evidence collected in the course of the investigation that documents the facts. All facts shall be documented in written form.

**7.4.6.2.5.** Analyze the information gathered.

**7.4.6.2.6.** Clearly state the findings of the investigation.

**7.4.7. Findings, Report of Investigation.**

The Report of Investigation shall state one of two conclusions. After gathering and reviewing all applicable facts, the report shall find each allegation investigated to be either (1) substantiated, or (2) unsubstantiated.

**7.4.7.1. Substantiated Allegation.** An allegation is substantiated if a preponderance of the relevant and reliable information gathered requires that the voting system at issue be decertified (consistent with the policy set out in Section 7.2). If any allegation is substantiated, a Notice of Non-Compliance must be issued.

**7.4.7.2. Unsubstantiated Allegation.** An allegation is unsubstantiated if the preponderance of the relevant and reliable information gathered does not require Decertification (see Section 7.2). If all allegations are unsubstantiated, the matter shall be closed and a copy of the report forwarded to the Manufacturer.

**7.4.8. Publication of Report.** The report shall not be made public nor released to the public until final.

**7.5. Effect of Informal Inquiry or Formal Investigation on Certification.** A voting system's EAC certification is not affected by the initiation or conclusion of an Informal Inquiry or Formal Investigation. Systems under investigation remain certified until a final Decision on Decertification is issued by the EAC.

**7.6. Notice of Non-Compliance.** If an allegation in a Formal Investigation is substantiated, the Decision Authority shall send the Manufacturer a Notice of Non-Compliance. The Notice of Non-Compliance is not, itself, a Decertification of the voting system. The purpose of the notice is to (1) notify the Manufacturer of the non-compliance and the EAC's intent to Decertify the system and (2) inform the Manufacturer of its procedural rights so that it may be heard prior to Decertification.

**7.6.1. Non-Compliance Information.** The following actions are necessary for preparing a Notice of Non-Compliance:

**7.6.1.1.** Provide a copy of the Report of Investigation to the Manufacturer.

**7.6.1.2.** Identify the non-compliance, consistent with the Report of Investigation.

**7.6.1.3.** Inform the Manufacturer that if the voting system is not made compliant, the voting system will be decertified.

**7.6.1.4.** State the actions the Manufacturer must take, if any, to bring the voting system into compliance and avoid Decertification.

**7.6.2. Manufacturer's Rights.** The written Notice of Non-Compliance must also inform

the Manufacturer of its procedural rights under the program, which include the following:

**7.6.2.1. Right to Present Information Prior to Decertification Decision.** The Manufacturer shall be informed of its right to present information to the Decision Authority prior to a determination of Decertification.

**7.6.2.2. Right to Have Access to the Information That Will Serve as the Basis of the Decertification Decision.** The Manufacturer shall be provided the Report of Investigation and any other materials that will serve as the basis of an Agency Decision on Decertification.

**7.6.2.3. Right to Cure System Defects Prior to the Decertification Decision.** A Manufacturer may request an opportunity to cure within 20 calendar days of its receipt of the Notice of Non-Compliance.

**7.7. Procedure for Decision on Decertification.** The Decision Authority shall make and issue a written Decision on Decertification whenever a Notice of Non-Compliance is issued. The Decision Authority will not take such action until the Manufacturer has had a reasonable opportunity to cure the non-compliance and submit information for consideration.

**7.7.1. Opportunity to Cure.** The Manufacturer shall have an opportunity to cure a nonconforming voting system in a timely manner prior to Decertification. A cure is timely when the cure process can be completed before the next Federal election, meaning that any proposed cure must be in place before any individual jurisdiction fielding the system holds a Federal election. The Manufacturer must request the opportunity to cure. If the request is approved, a compliance plan must be created, approved, and followed. If this cure process is successfully completed, a Manufacturer may modify a non-compliant voting system, remedy procedural discrepancies, or otherwise bring its system into compliance without resubmission or Decertification.

**7.7.1.1. Manufacturer's Request to Cure.** Within 10 calendar days of receiving the EAC's Notice of Non-Compliance, a Manufacturer may request an opportunity to cure all defects identified in the Notice of Non-Compliance in a timely manner. The request must be sent to the Decision Authority and outline how the Manufacturer would modify the system, update the technical information (as required by Section 4.3.2), have the VSTL create a test plan and test the system, and obtain EAC approval before the next election for Federal office.

**7.7.1.2. EAC Action on Request.** The Decision Authority will review the request and approve it if the defects identified in the Notice of Non-Compliance may reasonably be cured before the next election for Federal office.

**7.7.1.3. Manufacturer's Compliance Plan.** Upon approval of the Manufacturer's request for an opportunity to cure, the Manufacturer shall submit a compliance plan to the Decision Authority for approval. This compliance plan must set forth the steps to be taken (including time frames) to cure all identified defects in a timely manner. The

009982

plan shall describe the proposed changes to the system, provide for modification of the system, update the technical information required by Section 4.3.2, include a test plan delivered to the EAC by the VSTL (testing the system consistent with Section 4.4.2.3), and provide for the VSTL's testing of the system and submission of the test report to the EAC for approval (assume at least 20 working days). The plan shall also include a schedule of periodic progress reports to the Program Director.<sup>2</sup>

7.7.1.4. EAC Action on the Compliance Plan. The Decision Authority must review and approve the compliance plan. The Decision Authority may require the Manufacturer to provide additional information and modify the plan as required. If the Manufacturer is unable or unwilling to provide a Compliance Plan acceptable to the Decision Authority, the Decision Authority shall provide written notice terminating the "opportunity to cure" process.

7.7.1.5. VSTL's Submission of the Compliance Plan Test Report. The VSTL shall submit the test report created pursuant to the Manufacturer's EAC-approved Compliance Plan. The EAC shall review the test report and any other necessary or relevant materials. The report will be technically reviewed by the EAC in a manner similar to the procedures described in Chapter 4 of this Manual.

7.7.1.6. EAC Decision on the System. After receipt of the VSTL's test report, the Decision Authority shall issue a decision on a voting system amended pursuant to an approved Compliance Plan. For the purpose of planning, the Manufacturer should allow at least 20 working days for this process.

7.7.2. *Opportunity to Be Heard.* The Manufacturer may submit written materials in response to the Notice of Non-Compliance and Report of Investigation. These documents shall be considered by the Decision Authority when making a determination on Decertification. The Manufacturer shall ordinarily have 20 calendar days from the date it received the Notice of Non-Compliance (or in the case of a failed effort to cure, the termination of that process) to deliver its submissions to the Decision Authority. When warranted by public interest (because a delay in making a determination on Decertification would affect the timely, fair, and effective administration of a Federal election), however, the Decision Authority may provide a Manufacturer less time to submit information. This alternative period (and the basis for it) must be stated in the Notice of Non-Compliance. The alternative time period must allow the Manufacturer a reasonable amount of time to gather its submissions. Submissions may include the following materials:

7.7.2.1. A written argument responding to the conclusions in the Notice of Non-Compliance or Report of Investigation.

7.7.2.2. Documentary evidence relevant to the allegations or conclusions in the Notice of Non-Compliance.

7.7.3. *Decision on Decertification.* The Decision Authority shall make an agency determination on Decertification.

7.7.3.1. Timing. The Decision Authority shall promptly make a decision on Decertification. The Decision Authority may not issue such a decision, however, until the Manufacturer has provided all of its written materials for consideration or the time allotted for submission (usually 20 calendar days) has run out.

7.7.3.2. Considered Materials. The Decision Authority shall review and consider all relevant submissions of the Manufacturer. In making a Decision on Decertification, the Decision Authority shall also consider all documents that make up the record and any other documentary information he or she determines relevant.

7.7.3.3. Agency Decision. The Decision Authority shall issue a written Agency Decision after review of applicable materials. This decision shall be the final decision of the agency. The following actions are necessary to write the decision:

7.7.3.3.1. Clearly state the agency's determination on the Decertification, specifically addressing the areas of non-compliance investigated.

7.7.3.3.2. Address the issues raised by the Manufacturer in the materials it submitted for consideration.

7.7.3.3.3. Identify all facts, evidence, procedural requirements, and/or voting system standards (VVSC or VSS) that served as the basis for the decision.

7.7.3.3.4. Provide the reasoning behind the decision.

7.7.3.3.5. Identify, and provide as an attachment, any additional documentary information that served as a basis for the decision and that was not part of the Manufacturer's submission or the Report of Investigation.

7.7.3.3.6. Provide the Manufacturer notice of its right to appeal.

7.8. Effect of Decision Authority's Decision on Decertification. The Decision Authority's Decision on Decertification is the determination of the agency. A Decertification is effective upon the EAC's publication or Manufacturer's receipt of the decision (whichever is earlier). A Manufacturer that has had a voting system decertified may appeal that decision.

7.9. Appeal of Decertification. A Manufacturer may, upon receipt of an Agency Final Decision on Decertification, request an appeal in a timely manner.

7.9.1. *Requesting Appeal.*

7.9.1.1. Submission. Requests must be submitted by the Manufacturer in writing to the Chair of the U.S. Election Assistance Commission.

7.9.1.2. Timing of Appeal. The Manufacturer may request an appeal within 20 calendar days of receipt of the Agency Final Decision on Decertification. Late requests will not be considered.

7.9.1.3. Contents of Request. The following actions are necessary for the Manufacturer to write and submit a request for appeal:

7.9.1.3.1. Clearly state the specific conclusions of the Final Decision the Manufacturer wishes to appeal.

7.9.1.3.2. Include additional written argument, if any.

7.9.1.3.3. Do not reference or include any factual material not previously considered or submitted to the EAC.

7.9.1.4. Effect of Appeal on Decertification. The initiation of an appeal does not affect the decertified status of a voting system. Systems are decertified upon notice of Decertification in the agency's Decision on Decertification (see Section 7.8).

7.9.2. *Consideration of Appeal.* All timely appeals will be considered by the Appeal Authority.

7.9.2.1. The Appeal Authority shall be two or more EAC Commissioners or other individual or individuals appointed by the Commissioners who have not previously served as investigators, advisors, or decision makers in the Decertification process.

7.9.2.2. All decisions on appeal shall be based on the record.

7.9.2.3. The decision of the Decision Authority shall be given deference by the Appeal Authority. Although it is unlikely that the scientific certification process will produce factual disputes, in such cases the burden of proof shall belong to the Manufacturer to demonstrate by clear and convincing evidence that its voting system met all substantive and procedural requirements for certification. In other words, the determination of the Decision Authority will be overturned only when the Appeal Authority finds the ultimate facts in controversy to be highly probable.

7.9.3. *Decision on Appeal.* The Appeal Authority shall make a written, final Decision on Appeal that it shall provide to the Manufacturer. Each Decision on Appeal shall be final and binding on the Manufacturer. No additional appeal shall be granted. The following actions are necessary to write a Decision on Appeal:

7.9.3.1. State the final determination of the agency.

7.9.3.2. Address the matters raised by the Manufacturer on appeal.

7.9.3.3. Provide the reasoning behind the decision.

7.9.3.4. State that the Decision on Appeal is final.

7.9.4. *Effect of Appeal.*

7.9.4.1. Grant of Appeal. If a Manufacturer's appeal is granted in whole, the decision of the Decision Authority is reversed. The voting system shall have its certification reinstated. For purposes of this program, the system shall be treated as though it was never decertified.

7.9.4.2. Denial of Appeal. If a Manufacturer's appeal is denied in whole or in part, the decision of the Decision Authority is upheld. The voting system remains decertified and no additional appeal is available.

7.10. Effect of Decertification. A voting system that has been decertified no longer holds an EAC certification under the Certification Program. For purposes of this Manual and the program, a decertified system will be treated as any other uncertified voting system. As such, the effects of Decertification are as follows:

<sup>2</sup> Manufacturers should also be cognizant of State certification procedures and local pre-election logic and accuracy testing. Systems that meet EAC guidelines will also be impacted by independent State and local requirements. These requirements may also prevent a system from being fielded, irrespective of EAC Certification.

7.10.1. The Manufacturer may not represent the voting system as certified.

7.10.2. The voting system may not be labeled with a mark of certification.

7.10.3. The voting system will be removed from the EAC list of certified systems.

7.10.4. The EAC will notify State and local election officials of the Decertification.

7.11. Recertification. A decertified system may be resubmitted for certification. Such systems shall be treated as any other system seeking certification. The Manufacturer shall present an application for certification consistent with the instructions of this Manual.

## 8. Quality Monitoring Program

8.1. Overview. The quality of any product, including a voting system, depends on two specific elements: (1) the design of the product or system and (2) the care and consistency of the manufacturing process. The EAC testing and certification process focuses on voting system design by ensuring that a representative sample of a system meets the technical specifications of the applicable EAC voting system standards. This process, commonly called "type acceptance," determines whether the representative sample submitted for testing meets the requirements. What type acceptance does not do is explore whether variations in manufacturing may allow production of non-compliant systems. Generally, the quality of the manufacturing is the responsibility of the Manufacturer. After a system is certified, the vendor assumes primary responsibility for compliance of the products produced. This level of compliance is accomplished by the Manufacturer's configuration management and quality control processes. The EAC's Quality Monitoring Program, as outlined in this chapter, however, provides an additional layer of quality control by allowing the EAC to perform manufacturing site reviews, carry out fielded system reviews, and gather information on voting system anomalies from election officials. These additional tools help ensure that voting systems continue to meet the requirements of EAC's voting system standards as the systems are manufactured, delivered, and used in Federal elections. These aspects of the program enable the EAC to independently monitor the continued compliance of fielded voting systems.

8.2. Purpose. The purpose of the Quality Monitoring Program is to ensure that EAC-certified voting systems are identical to those fielded in election jurisdictions. This level of quality control is accomplished primarily by identifying (1) potential quality problems in manufacturing, (2) uncertified voting system configurations, and (3) field performance issues with certified systems.

8.3. Manufacturer's Quality Control. EAC's Quality Monitoring Program is not a substitute for the Manufacturer's quality control program. As stated in Chapter 2 of this Manual, all Manufacturers must have an acceptable quality control program in place before they may be registered. The EAC's program serves as an independent and complementary process of quality control that works in tandem with the Manufacturer's efforts.

8.4. Quality Monitoring Methodology. This chapter provides the EAC with three primary tools for assessing the level of effectiveness of the certification process and the compliance of fielded voting systems. These tools include (1) manufacturing site reviews, (2) fielded system reviews, and (3) a means for receiving anomaly reports from the field.

8.5. Manufacturing Site Review. Facilities that produce certified voting systems will be reviewed periodically, at the discretion of the EAC, to verify that the system being manufactured, shipped, and sold is the same as the sample submitted for certification testing. All registered Manufacturers must cooperate with such audits as a condition of program participation.

8.5.1. Notice. The site review may be scheduled or unscheduled, at the discretion of the EAC. Unscheduled reviews will be performed with at least 24 hours notice. Scheduling and notice of site reviews will be coordinated with and provided to both the manufacturing facility's representative and the Manufacturer's representative.

8.5.2. Frequency. At a minimum, at least one manufacturing facility of a registered Manufacturer shall be subject to a site review at least once every 4 years.

8.5.3. The Review. The production facility and production test records must be made available for review. When requested, production schedules must be provided to the EAC. Production or production testing may be witnessed by EAC representatives. If equipment is not being produced during the inspection, the review may be limited to production records. During the inspection, the Manufacturer must make available to the EAC representative the Manufacturer's quality manual and other documentation sufficient to enable the inspector to evaluate the following factors of the facility's production:

8.5.3.1. Manufacturing quality controls.

8.5.3.2. Final inspection and testing.

8.5.3.3. History of deficiencies or anomalies and corrective actions taken.

8.5.3.4. Equipment calibration and maintenance.

8.5.3.5. Corrective action program.

8.5.3.6. Policies on product labeling and the application of the EAC mark of certification.

8.5.4. Exit Briefing. Site reviewers will provide the manufacturing facility representative a verbal exit briefing regarding the preliminary observations of the review.

8.5.5. Written Report. A written report documenting the review will be drafted by the EAC representative and provided to the Manufacturer. The report will detail the findings of the review and identify actions that are required to correct any deficiencies.

8.6. Fielded System Review and Testing. Upon invitation or with the permission of a State or local election authority, the EAC may, at its discretion, conduct a review of fielded voting systems. Such reviews will be done to ensure that a fielded system is in the same configuration as that certified by the EAC and that it has the proper mark of certification. This review may include the testing of a fielded system, if deemed necessary. Any anomalies found during this review and testing will be provided to the election jurisdiction and the Manufacturer.

8.7. Field Anomaly Reporting. As another means of gathering field data, the EAC will collect information from election officials who field EAC-certified voting systems. Information on actual voting system field performance is a basic means for assessing the effectiveness of the Certification Program and the manufacturing quality and version control. The EAC will provide a mechanism for election officials to provide real-world input on voting system anomalies.

8.7.1. Anomaly Report. Election officials may use the Voting System Anomaly Reporting Form to report voting system anomalies to the EAC. The form and instructions for its completion are available as Appendix C in this Manual or on the EAC Web site, <http://www.eac.gov>. The form may be filed with the EAC on line, by mail or by facsimile. Use of the form is required.

8.7.2. Who May Report? State or local election officials who have experienced voting system anomalies in their jurisdiction may file anomaly reports. The individuals reporting must identify themselves and have firsthand knowledge of or official responsibility over the anomaly being reported. Anonymous or hearsay reporting will not be accepted.

8.7.3. What Is Reported? Election officials shall report voting system anomalies. An anomaly is defined as an irregular or inconsistent action or response from the voting system or system component resulting in some disruption to the election process. Incidents resulting from administrator error or procedural deficiencies are not considered anomalies for purposes of this chapter. The report must include the following information:

8.7.3.1. The official's name, title, contact information, and jurisdiction.

8.7.3.2. A description of the voting system at issue.

8.7.3.3. The date and location of the reported occurrence.

8.7.3.4. The type of election.

8.7.3.5. A description of the anomaly witnessed.

8.7.4. Distribution of Credible Reports. Credible reports will be distributed to State and local election jurisdictions who field similar systems, the Manufacturer of the voting system at issue, and the VSTLs. Reports are reviewed by EAC staff in coordination with relevant State officials. Credible reports:

8.7.4.1. Meet the definition of anomaly under Section 8.7.3,

8.7.4.2. Constitute a complete report per the requirements of Sections 8.7.3.1 through 8.7.3.5,

8.7.4.3. Have had alleged facts confirmed by contacting filer and/or others present at the time of the incident, and

8.7.4.4. Have been verified by the relevant State's chief election official.

8.8. Use of Quality Monitoring Information. Ultimately, the information the EAC gathers from manufacturing site reviews, fielded system reviews, and field anomaly reports will be used to improve the program and ensure the quality of voting systems. The Quality Monitoring Program is not designed to be punitive but to be focused on improving the process. Information gathered will be used to accomplish the following:

8.8.1. Identify areas for improvement in the EAC Testing and Certification Program.

8.8.2. Improve manufacturing quality and change control processes.

8.8.3. Increase voter confidence in voting technology.

8.8.4. Inform Manufacturers, election officials, and the EAC of issues associated with voting systems in a real-world environment.

8.8.5. Share information among jurisdictions that use similar voting systems.

8.8.6. Resolve problems associated with voting technology or manufacturing in a timely manner by involving Manufacturers, election officials, and the EAC.

8.8.7. Provide feedback to the EAC and the Technical Guidelines Development Committee (TGDC) regarding issues that may need to be addressed through a revision to the Voluntary Voting System Guidelines.

8.8.8. Initiate an investigation when information suggests that Decertification is warranted (see Chapter 7).

## 9. Requests for Interpretations

9.1. Overview. A Request for Interpretation is a means by which a registered Manufacturer or VSTL may seek clarification on a specific EAC voting system standard (VVSG or VSS). An Interpretation is a clarification of the voting system standards and guidance on how to properly evaluate conformance to it. Suggestions or requests for modifications to the standards are provided by other processes. This chapter outlines the policy, requirements, and procedures for submitting a Request for Interpretation.

9.2. Policy. Registered Manufacturers or VSTLs may request that the EAC provide a definitive Interpretation of EAC-accepted voting system standards (VVSG or VSS) when, in the course of developing or testing a voting system, facts arise that make the meaning of a particular standard ambiguous or unclear. The EAC may self-initiate such a request when its agents identify a need for interpretation within the program. An Interpretation issued by the EAC will serve to clarify what a given standard requires and how to properly evaluate compliance. Ultimately, an Interpretation does not amend voting system standards, but serves only to clarify existing standards.

9.3. Requirements for Submitting a Request for Interpretation. An EAC Interpretation is limited in scope. The purpose of the Interpretation process is to provide Manufacturers or VSTLs who are in the process of developing or testing a voting system a means for resolving the meaning of a voting system standard in light of a specific voting system technology without having to present a finished product to EAC for certification. To submit a Request for Interpretation, one must (1) be a proper requester, (2) request interpretation of an applicable voting system standard, (3) present an actual controversy, and (4) seek clarification on a matter of unsettled ambiguity.

9.3.1. *Proper Requestor.* A Request for Interpretation may be submitted only by a registered Manufacturer or a VSTL. Requests for Interpretation will not be accepted from any other parties.

9.3.2. *Applicable Standard.* A Request for Interpretation is limited to queries on EAC voting system standards (i.e., VVSG or VSS). Moreover, a Manufacturer or VSTL may submit a Request for Interpretation only on a version of EAC voting system standards to which the EAC currently offers certification.

9.3.3. *Existing Factual Controversy.* To submit a Request for Interpretation, a Manufacturer or VSTL must present a question relative to a specific voting system or technology proposed for use in a voting system. A Request for Interpretation on hypothetical issues will not be addressed by the EAC. To submit a Request for Interpretation, the need for clarification must have arisen from the development or testing of a voting system. A factual controversy exists when an attempt to apply a specific section of the VVSG or VSS to a specific system or piece of technology creates ambiguity.

9.3.4. *Unsettled, Ambiguous Matter.* Requests for Interpretation must involve actual controversies that have not been previously settled. This requirement mandates that interpretations contain actual ambiguities not previously clarified.

9.3.4.1. *Actual Ambiguity.* A proper Request for Interpretation must contain an actual ambiguity. The interpretation process is not a means for challenging a clear EAC voting system standard. Recommended changes to voting system standards are welcome and may be forwarded to the EAC, but they are not part of this program. An ambiguity arises (in applying a voting system standard to a specific technology) when one of the following occurs:

9.3.4.1.1. The language of the standard is unclear on its face.

9.3.4.1.2. One section of the standard seems to contradict another, relevant section.

9.3.4.1.3. The language of the standard, though clear on its face, lacks sufficient detail or breadth to determine its proper application to a particular technology.

9.3.4.1.4. The language of a particular standard, when applied to a specific technology, clearly conflicts with the established purpose or intent of the standard.

9.3.4.1.5. The language of the standard is clear, but the proper means to assess compliance is unclear.

9.3.4.2. *Not Previously Clarified.* The EAC will not accept a Request for Interpretation when the issue has previously been clarified.

9.4. Procedure for Submitting a Request for Interpretation. A Request for Interpretation shall be made in writing to the Program Director. All requests should be complete and as detailed as possible because Interpretations issued by the EAC are based on, and limited to, the facts presented. Failure to provide complete information may result in an Interpretation that is off point and ultimately immaterial to the issue at hand. The following steps must be taken when writing a Request for Interpretation:

9.4.1. *Establish Standing To Make the Request.* To make a request, one must meet the requirements identified in Section 9.3 above. Thus, the written request must provide sufficient information for the Program Director to conclude that the requestor is (1) a proper requester, (2)

requesting an Interpretation of an applicable voting system standard, (3) presenting an actual factual controversy, and (4) seeking clarification on a matter of unsettled ambiguity.

9.4.2. *Identify the EAC Voting System Standard To Be Clarified.* The request must identify the specific standard or standards to which the requestor seeks clarification. The request must state the version of the voting system standards at issue (if applicable) and quote and correctly cite the applicable standards.

9.4.3. *State the Facts Giving Rise to the Ambiguity.* The request must provide the facts associated with the voting system technology that gave rise to the ambiguity in the identified standard. The requestor must be careful to provide all necessary information in a clear, concise manner. Any Interpretation issued by the EAC will be based on the facts provided.

9.4.4. *Identify the Ambiguity.* The request must identify the ambiguity it seeks to resolve. The ambiguity shall be identified by stating a concise question that meets the following requirements:

9.4.4.1. Shall be clearly stated.

9.4.4.2. Shall be related to and reference the voting system standard and voting system technology information provided.

9.4.4.3. Shall be limited to a single issue. Each question or issue arising from an ambiguous standard must be stated separately. Compound questions are unacceptable. If multiple issues exist, they should be presented as individual, numbered questions.

9.4.4.4. Shall be stated in a way that can ultimately be answered yes or no.

9.4.5. *Provide a Proposed Interpretation.* A Request for Interpretation should propose an answer to the question posed. The answer should interpret the voting system standard in the context of the facts presented. It should also provide the basis and reasoning behind the proposal.

9.5. EAC Action on a Request for Interpretation. Upon receipt of a Request for Interpretation, the EAC shall take the following action:

9.5.1. *Review the Request.* The Program Director shall review the request to ensure it is complete, is clear, and meets the requirements of Section 9.3. Upon review, the Program Director may take the following action:

9.5.1.1. *Request Clarification.* If the Request for Interpretation is incomplete or additional information is otherwise required, the Program Director may request that the Manufacturer or VSTL clarify its Request for Interpretation and identify any additional information required.

9.5.1.2. *Reject the Request for Interpretation.* If the Request for Interpretation does not meet the requirements of Section 9.3, the Program Director may reject it. Such rejection must be provided in writing to the Manufacturer or VSTL and must state the basis for the rejection.

9.5.1.3. *Notify Acceptance of the Request.* If the Request for Interpretation is acceptable, the Program Director will notify the Manufacturer or VSTL in writing and provide

it with an estimated date of completion. A Request for Interpretation may be accepted in whole or in part. A notice of acceptance shall state the issues accepted for interpretation.

9.5.2. *Consideration of the Request.* After a Request for Interpretation has been accepted, the matter shall be investigated and researched. Such action may require the EAC to employ technical experts. It may also require the EAC to request additional information from the Manufacturer or VSTL. The Manufacturer or VSTL shall respond promptly to such requests.

9.5.3. *Interpretation.* The Decision Authority shall be responsible for making determinations on a Request for Interpretation. After this determination has been made, a written Interpretation shall be sent to the Manufacturer or VSTL. The following actions are necessary to prepare this written Interpretation:

9.5.3.1. State the question or questions investigated.

9.5.3.2. Outline the relevant facts that served as the basis of the Interpretation.

9.5.3.3. Identify the voting system standards interpreted.

9.5.3.4. State the conclusion reached.

9.5.3.5. Inform the Manufacturer or VSTL of the effect of an Interpretation (see Section 9.6).

9.6. *Effect of Interpretation.* Interpretations are fact specific and case specific. They are not tools of policy, but specific, fact-based guidance useful for resolving a particular problem. Ultimately, an Interpretation is determinative and conclusive only with regard to the case presented. Nevertheless, Interpretations do have some value as precedent. Interpretations published by the EAC shall serve as reliable/guidance and authority over identical or similar questions of interpretation. These Interpretations will help users understand and apply the provisions of EAC voting system standards.

9.7. *Library of Interpretations.* To better serve Manufacturers, VSTLs, and those interested in the EAC voting system standards, the Program Director shall publish EAC Interpretations. All proprietary information contained in an Interpretation will be redacted before publication consistent with Chapter 10 of this Manual. The library of published opinions is posted on the EAC Web site: <http://www.eac.gov>.

## 10. Release of Certification Program Information

10.1. *Overview.* Manufacturers participating in the Certification Program will be required to provide the EAC a variety of documents. In general, these documents will be releasable to the public. Moreover, in many cases, the information provided will be affirmatively published by the EAC. In limited cases, however, documents may not be released if they include trade secrets, confidential commercial information, or personal information. While the EAC is ultimately responsible for determining which documents Federal law protects from release, Manufacturers must identify the information they believe is protected and ultimately provide substantiation and a legal basis for withholding. This chapter discusses EAC's general policy on the release of information

and provides Manufacturers with standards, procedures, and requirements for identifying documents as trade secrets or confidential commercial information.

10.2. *EAC Policy on the Release of Certification Program Information.* The EAC seeks to make its Voting System Testing and Certification Program as transparent as possible. The agency believes that such action benefits the program by increasing public confidence in the process and creating a more informed and involved public. As such, it is the policy of the EAC to make all documents, or severable portions thereof, available to the public consistent with Federal law (e.g. Freedom of Information Act (FOIA) and the Trade Secrets Act).

10.2.1. *Requests for information.* As in any Federal program, members of the public may request access to Certification Program documents under FOIA (5 U.S.C. § 552). The EAC will promptly process such requests per the requirements of that Act.

10.2.2. *Publication of documents.* Beyond the requirements of FOIA, the EAC intends to affirmatively publish program documents (or portions of documents) it believes will be of interest to the public. This publication will be accomplished through the use of the EAC Web site (<http://www.eac.gov>). The published documents will cover the full spectrum of the program, including information pertaining to:

- 10.2.2.1. Registered Manufacturers;
- 10.2.2.2. VSTL test plans;
- 10.2.2.3. VSTL test reports;
- 10.2.2.4. Agency decisions;
- 10.2.2.5. Denials of Certification;
- 10.2.2.6. Issuance of Certifications;
- 10.2.2.7. Information on a certified voting system's operation, components, features or capabilities;
- 10.2.2.8. Appeals;
- 10.2.2.9. Reports of investigation and Notice of Non-compliance;
- 10.2.2.10. Decertification actions;
- 10.2.2.11. Manufacturing facility review reports;
- 10.2.2.12. Official Interpretations (VVSG or VSS); and
- 10.2.2.13. Other topics as determined by the EAC.

10.2.3. *Trade Secret and Confidential Commercial Information.* Federal law places a number of restrictions on a Federal agency's authority to release information to the public. Two such restrictions are particularly relevant to the Certification program: (1) trade secrets information and (2) privileged or confidential commercial information. Both types of information are explicitly prohibited from release by the FOIA and the Trade Secrets Act (18 U.S.C. 1905).

10.3. *Trade Secrets.* A trade secret is a secret, commercially valuable plan, process, or device that is used for the making or processing of a product and that is the end result of either innovation or substantial effort. It relates to the productive process itself, describing how a product is made. It does not relate to information describing end product capabilities, features, or performance.

10.3.1. The following examples illustrate productive processes that may be trade secrets:

10.3.1.1. Plans, schematics, and other drawings useful in production.

10.3.1.2. Specifications of materials used in production.

10.3.1.3. Voting system source code used to develop or manufacture software where release would reveal actual programming.

10.3.1.4. Technical descriptions of manufacturing processes and other secret information relating directly to the production process.

10.3.2. The following examples are likely not trade secrets:

10.3.2.1. Information pertaining to a finished product's capabilities or features.

10.3.2.2. Information pertaining to a finished product's performance.

10.3.2.3. Information regarding product components that would not reveal any commercially valuable information regarding production.

10.4. *Privileged or Confidential Commercial Information.* Privileged or confidential commercial information is that information submitted by a Manufacturer that is commercial or financial in nature and privileged or confidential.

10.4.1. *Commercial or Financial Information.* The terms *commercial* and *financial* should be given their ordinary meanings. They include records in which a submitting Manufacturer has any *commercial interest*.

10.4.2. *Privileged or Confidential Information.* Commercial or financial information is privileged or confidential if its disclosure would likely cause substantial harm to the competitive position of the submitter. The concept of harm to one's competitive position focuses on harm flowing from a competitor's affirmative use of the proprietary information. It does not include incidental harm associated with upset customers or employees.

10.5. *EAC's Responsibilities.* The EAC is ultimately responsible for determining whether or not a document (in whole or in part) may be released pursuant to Federal law. In doing so, however, the EAC will require information and input from the Manufacturer submitting the documents. This requirement is essential for the EAC to identify, track, and make determinations on the large volume of documentation it receives. The EAC has the following responsibilities:

10.5.1. *Managing Documentation and Information.* The EAC will control the documentation it receives by ensuring that documents are secure and released to third parties only after the appropriate review and determination.

10.5.2. *Contacting Manufacturer on Proposed Release of Potentially Protected Documents.* In the event a member of the public submits a FOIA request for documents provided by a Manufacturer or the EAC otherwise proposes the release of such documents, the EAC will take the following actions:

10.5.2.1. Review the documents to determine if they are potentially protected from release as trade secrets or confidential commercial information. The documents at issue may have been previously identified as protected by the Manufacturer when

submitted (see Section 10.7.1 below) or identified by the EAC on review.

10.5.2.2. Grant the submitting Manufacturer an opportunity to provide input. In the event the information has been identified as potentially protected from release as a trade secret or confidential commercial information, the EAC will notify the submitter and allow it an opportunity to submit its position on the issue prior to release of the information. The submitter shall respond consistent with Section 10.7.1 below.

10.5.3. *Final Determination on Release.* After providing the submitter of the information an opportunity to be heard, the EAC will make a final decision on release. The EAC will inform the submitter of this decision.

10.6. *Manufacturer's Responsibilities.* Although the EAC is ultimately responsible for determining if a document, or any portion thereof, is protected from release as a trade secret or confidential commercial information, the Manufacturer shall be responsible for identifying documents, or portions of documents, it believes warrant such protection. Moreover, the Manufacturer will be responsible for providing the legal basis and substantiation for its determination regarding the withholding of a document. This responsibility arises in two situations: (1) upon the initial submission of information, and (2) upon notification by the EAC that it is considering the release of potentially protected information.

10.6.1. *Initial Submission of Information.* When a Manufacturer is submitting documents to the EAC as required by the Certification Program, it is responsible for identifying any document or portion of a

document that it believes is protected from release by Federal law. Manufacturers shall identify protected information by taking the following action:

10.6.1.1. Submitting a Notice of Protected Information. This notice shall identify the document, document page, or portion of a page that the Manufacturer believes should be protected from release. This identification must be done with specificity. For each piece of information identified, the Manufacturer must state the legal basis for its protected status.

10.6.1.1.1. Cite the applicable law that exempts the information from release.

10.6.1.1.2. Clearly discuss why that legal authority applies and why the document must be protected from release.

10.6.1.1.3. If necessary, provide additional documentation or information. For example, if the Manufacturer claims a document contains confidential commercial information, it would also have to provide evidence and analysis of the competitive harm that would result upon release.

10.6.1.2. *Label Submissions.* Label all submissions identified in the notice as "Proprietary Commercial Information." Label only those submissions identified as protected. Attempts to indiscriminately label all materials as proprietary will render the markings moot.

10.6.2. *Notification of Potential Release.* In the event a Manufacturer is notified that the EAC is considering the release of information that may be protected, the Manufacturer shall take the following action:

10.6.2.1. Respond to the notice within 15 calendar days. If additional time is needed, the Manufacturer must promptly notify the Program Director. Requests for additional

time will be granted only for good cause and must be made before the 15-day deadline. Manufacturers that do not respond in a timely manner will be viewed as not objecting to release.

10.6.2.2. Clearly state one of the following in the response:

10.6.2.2.1. There is no objection to release, or

10.6.2.2.2. The Manufacturer objects to release. In this case, the response must clearly state which portions of the document the Manufacturer believes should be protected from release. The Manufacturer shall follow the procedures discussed in Section 10.7.1 above.

10.7. *Personal Information.* Certain personal information is protected from release under FOIA and the Privacy Act (5 U.S.C. 552a). This information includes private information about a person that, if released, would cause the individual embarrassment or constitute an unwarranted invasion of personal privacy. Generally, the EAC will not require the submission of private information about individuals. The incidental submission of such information should be avoided. If a Manufacturer believes it is required to submit such information, it should contact the Program Director. If the information will be submitted, it must be properly identified. Examples of such information include the following:

10.7.1. Social Security Number.

10.7.2. Bank account numbers.

10.7.3. Home address.

10.7.4. Home phone number.

BILLING CODE 6820-KF-M

## Appendix A

# Manufacturer Registration Application Form

Available in electronic format at [www.eac.gov](http://www.eac.gov)

## Appendix B

# Application for Voting System Testing Form

Available in electronic format at [www.eac.gov](http://www.eac.gov)

## Appendix C

# Voting System Anomaly Reporting Form

Available in electronic format at [www.eac.gov](http://www.eac.gov)

impact of mandatory-random drug testing policies in high schools and to determine if mandatory-random drug testing policies result in less reported use of tobacco, alcohol, and illicit substances among a group of students in participating high schools compared to a comparable group of students in high schools that do not operate a mandatory-random drug testing program.

**ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:**

The Department may disclose information contained in a record in this system of records under the routine uses listed in this system of records without the consent of the individual if the disclosure is compatible with the purposes for which the record was collected. These disclosures may be made on a case-by-case basis or, if the Department has complied with the computer matching requirements of the Privacy Act, under a computer matching agreement. Any disclosure of individually identifiable information from a record in this system must also comply with the requirements of section 183 of the ESRA (20 U.S.C. 9573) providing for confidentiality standards that apply to all collections, reporting, and publication of data by IES.

**Contract Disclosure.** If the Department contracts with an entity for the purposes of performing any function that requires disclosure of records in this system to employees of the contractor, the Department may disclose the records to those employees. Before entering into such a contract, the Department shall require the contractor to maintain Privacy Act safeguards as required under 5 U.S.C. 552a(m) with respect to the records in the system.

**DISCLOSURE TO CONSUMER REPORTING AGENCIES:**

Not applicable to this system notice.

**POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**

**STORAGE:**

The Department maintains records on CD-ROM, and the contractor and subcontractor maintain data for this system on computers and in hard copy.

**RETRIEVABILITY:**

Records in this system are indexed by a number assigned to each individual that is cross referenced by the individual's name on a separate list.

**SAFEGUARDS:**

All physical access to the Department's site and to the sites of the

Department's contractor and subcontractor, where this system of records is maintained, is controlled and monitored by security personnel. The computer system employed by the Department offers a high degree of resistance to tampering and circumvention. This security system limits data access to Department and contract staff on a "need to know" basis, and controls individual users' ability to access and alter records within the system. The contractor and subcontractor will establish similar sets of procedures at their sites to ensure confidentiality of data. Their systems are required to ensure that information identifying individuals is in files physically separated from other research data. The contractor and subcontractor will maintain security of the complete set of all master data files and documentation. Access to individually identifiable data will be strictly controlled. At each site all data will be kept in locked file cabinets during nonworking hours, and work on hardcopy data will take place in a single room, except for data entry. Physical security of electronic data will also be maintained. *Security features that protect project data include:* password-protected accounts that authorize users to use the contractor's and subcontractor's systems but to access only specific network directories and network software; user rights and directory and file attributes that limit those who can use particular directories and files and determine how they can use them; e-mail passwords that authorize the user to access mail services; and additional security features that the network administrators will establish for projects as needed. The contractor and subcontractor employees who "maintain" (collect, maintain, use, or disseminate) data in this system shall comply with the requirements of the confidentiality standards in section 183 of the ESRA (20 U.S.C. 9573).

**RETENTION AND DISPOSAL:**

Records are maintained and disposed of in accordance with the Department's Records Disposition Schedules (Section Ed/RDS, Part 3, Item 2b and Part 3, Item 5a).

**SYSTEM MANAGER AND ADDRESS:**

Director, Evaluation Division, National Center for Education Evaluation and Regional Assistance, Institute of Education Sciences, U.S. Department of Education, 555 New Jersey Avenue, NW., room 502D, Washington, DC 20208.

**NOTIFICATION PROCEDURE:**

If you wish to determine whether a record exists regarding you in the system of records, contact the systems manager. Your request must meet the requirements of regulations at 34 CFR 5b.5, including proof of identity.

**RECORD ACCESS PROCEDURE:**

If you wish to gain access to your record in the system of records, contact the system manager. Your request must meet the requirements of regulations at 34 CFR 5b.5, including proof of identity.

**CONTESTING RECORD PROCEDURE:**

If you wish to contest the content of a record regarding you in the system of records, contact the system manager. Your request must meet the requirements of the regulations at 34 CFR 5b.7, including proof of identity.

**RECORD SOURCE CATEGORIES:**

The system will contain information about two cohorts of approximately 200 high school students each of (i) 26 high schools operating the mandatory-random drug testing program and (ii) 26 high schools that will not operate the program but that will serve as control high schools for this evaluation. The total number of high school students included in this system of records will be approximately 10,400 in each of school years 2006-07 and 2007-08. The 52 participating high schools will be from school districts that are recipients of the grants for School-Based Student Drug-Testing Programs that were announced in 2006 by OSDFS.

The system of records will include information about the high school students participating in the evaluation including the students' names; addresses; demographic information such as race/ethnicity, gender, age, and educational background; and attitudes and beliefs concerning substance use, and substance use itself.

**EXEMPTIONS CLAIMED FOR THE SYSTEM:**

None.

[FR Doc. E7-5933 Filed 3-29-07; 8:45 am]  
BILLING CODE 4000-01-P

**ELECTION ASSISTANCE COMMISSION**

**Notice of Request for Extension and Revision of a Currently Approved Information Collection**

**AGENCY:** U.S. Election Assistance Commission (EAC).

**ACTION:** Notice and request for comments.

**SUMMARY:** In accordance with the Paperwork Reduction Act of 1995, this

009991

notice announces the U.S. Election Assistance Commission's (EAC) intention to request an extension and revision of a currently approved collection. The information collection was previously published in the **Federal Register** on January 24, 2007, at 72 FR 3127. The notice allowed for a 60-day public comment period. No comments were received on this information collection. The purpose of this notice is to allow an additional 30 days for public comments. Comments are encouraged and will be accepted until April 27, 2007. This process is conducted in accordance with 5 CFR 1320.10. Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

**DATES:** Written comments must be submitted on or before April 27, 2007.

**ADDRESSES:** Written comments and recommendations on the proposed information collection should be sent to *OMB Reviewer:* Alexander T. Hunt, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, (202) 395-7316.

**FOR FURTHER INFORMATION CONTACT:** To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to the above address or call Mr. Brian Hancock at (202) 566-3100.

**SUPPLEMENTARY INFORMATION:**

*Title:* EAC Voting System Testing and Certification Program Manual.

*OMB Number:* 3265-0004.

*Type of Review:* Extension with change of a currently approved collection.

*Needs and Uses:* HAVA requires that the EAC certify and decertify voting systems (42 U.S.C. 15371). Section 231(a)(1) of HAVA specifically requires the EAC to " \* \* \* provide for the certification, decertification and recertification of voting system hardware and software by accredited laboratories." The EAC will perform this mandated function through the use of its Voting System Testing and Certification Program. Voting systems certified by the EAC will be used by

citizens to cast votes in Federal Elections. Therefore, it is paramount that the program operates in a reliable and effective manner. In order to certify a voting system, it is necessary for the EAC to (1) Require voting system manufacturers to submit information about their organization and the voting systems they submit for testing and certification; (2) require voting system manufacturers to retain voting system technical and test records; and (3) to provide a mechanism for election officials to report events which may effect a voting system's certification.

*Affected Public:* Business or other for-profit institutions and state and local election officials.

*Estimated Number of Respondents:* 94 annually.

*Total Annual Responses:* 99 annually.

*Estimated Total Annual Burden Hours:* 119 hours.

**Donetta L. Davidson,**

*Chair, U.S. Election Assistance Commission.*

**STATUS:** Audio recordings of working subcommittee teleconferences are

available upon conclusion of each meeting at: [http://vote.nist.gov/subcomm\\_mtg.htm](http://vote.nist.gov/subcomm_mtg.htm). Agendas for each teleconference will be posted one week in advance of each meeting at the above Web site.

**SUMMARY:** The Technical Guidelines Development Committee (the "Development Committee") was established to act in the public interest to assist the Executive Director of the U.S. Election Assistance Commission (EAC) in the development of voluntary voting system guidelines. The Committee held their first plenary meeting on July 9, 2004. At this meeting, the Development Committee agreed to a resolution forming three working groups: (1) Human Factors & Privacy; (2) Security & Transparency; and (3) Core Requirements & Testing to gather and analyze information on relevant issues. These working subcommittees propose resolutions to the TGDC on best practices, specifications and standards. Specifically, NIST staff and Committee members will meet via the above scheduled teleconferences to review and discuss progress on tasks defined in resolutions passed at Development Committee plenary meetings. The resolutions define technical work tasks for NIST that will assist the Committee in developing recommendations for voluntary voting system guidelines. The Committee met in its eighth plenary session on March 22-23, 2007.

Documents and transcriptions of Committee proceedings are available at: <http://vote.nist.gov/PublicHearingsandMeeting.html>.

**SUPPLEMENTARY INFORMATION:** The Technical Guidelines Development Committee (the "Development Committee") was established pursuant to 42 U.S.C. 15361, to act in the public interest to assist the Executive Director of the Election Assistance Commission in the development of the voluntary voting system guidelines. The information gathered and analyzed by the working subcommittees during their teleconference meetings will be reviewed at future Development Committee plenary meetings.

**FOR FURTHER INFORMATION CONTACT:** Allan Eustis 301-975-5099. If a member of the public would like to submit written comments concerning the Committee's affairs at any time before or after subcommittee teleconference meetings, written comments should be

**Testing and Certification  
Program Manual**

*Version 1.0 - Effective January 1, 2007*

[www.eac.gov](http://www.eac.gov)

OMB Control Number 3265-0004

009993

*The reporting requirements in this manual have been approved under the Paperwork Reduction Act of 1995, Office of Management and Budget Control (OMB) Number 3265-0004, expiring March 31, 2007. Persons are not required to respond to this collection of information unless it displays a currently valid OMB number. Information gathered pursuant to this document and its forms will be used solely to administer the EAC Testing and Certification Program. This program is voluntary. Individuals who wish to participate in the program, however, must meet its requirements. The estimated total annual hourly burden on the voting system manufacturing industry and election officials is 114 hours. This estimate includes the time required for reviewing the instructions, gathering information, and completing the prescribed forms. Send comments regarding this burden estimate or any other aspect of this collection, including suggestions for reducing this burden, to the U.S. Election Assistance Commission, Voting System Testing and Certification Program, Office of the Program Director, 1225 New York Avenue, NW, Suite 1100, Washington, D.C. 20005.*

Appendix C. Voting System Anomaly Reporting Form .....	71

## 1. Introduction

- 1.1. Background.** The Federal Election Commission (FEC) adopted the first formal set of voluntary Federal standards for computer-based voting systems in January 1990. At that time, no national program or organization existed to test and certify such systems to the standards. The National Association of State Election Directors (NASED) stepped up to fill this void in 1994. NASED is an independent, nongovernmental organization of State election officials. The organization formed the Nation's first national program to test and qualify voting systems to the new Federal standards. The organization worked for more than a decade, on a strictly voluntary basis, to help ensure the reliability, consistency, and accuracy of voting systems fielded in the United States. In late 2002, Congress passed the Help America Vote Act of 2002 (HAVA). HAVA created the U.S. Election Assistance Commission (EAC) and assigned to the EAC the responsibility for both setting voting system standards and providing for the testing and certification of voting systems. This mandate represented the first time the Federal government provided for the voluntary testing, certification, and decertification of voting systems nationwide. In response to this HAVA requirement, the EAC has developed the Voting System Testing and Certification Program (Certification Program).
- 1.2. Authority.** HAVA requires that the EAC certify and decertify voting systems. Section 231(a)(1) of HAVA specifically requires the EAC to "... provide for the testing, certification, decertification and recertification of voting system hardware and software by accredited laboratories." The EAC has the sole authority to grant certification or withdraw certification at the Federal level, including the authority to grant, maintain, extend, suspend, and withdraw the right to retain or use any certificates, marks, or other indicators of certification.
- 1.3. Scope.** This Manual provides the procedural requirements of the EAC Voting System Testing and Certification Program. Although participation in the program is voluntary, adherence to the program's procedural requirements is mandatory for participants. The procedural requirements of this Manual supersede any prior voting system certification requirements issued by the EAC.
- 1.4. Purpose.** The primary purpose of the EAC Certification Program Manual is to provide clear procedures to Manufacturers for the testing and certification of voting systems to specified Federal standards consistent with the requirements of HAVA Section 231(a)(1). The program, however, also serves to do the following:
- 1.4.1. Support State certification programs.
  - 1.4.2. Support local election officials in the areas of acceptance testing and pre-election system verification.
  - 1.4.3. Increase quality control in voting system manufacturing.
  - 1.4.4. Increase voter confidence in the use of voting systems.

009996

**1.5. Manual.** This Manual is a comprehensive presentation of the EAC Voting System Testing and Certification Program. It is intended to establish all of the program's administrative requirements.

1.5.1. Contents. The contents of the Manual serve as an overview of the program itself. The Manual contains the following chapters:

1.5.1.1. *Manufacturer Registration.* Under the program, a Manufacturer is required to register with the EAC prior to participation. This registration provides the EAC with needed information and requires the Manufacturer to agree to the requirements of the Certification Program. This chapter sets out the requirements and procedures for registration.

1.5.1.2. *When Voting Systems Must Be Submitted for Testing and Certification.* All voting systems must be submitted consistent with this Manual before they may receive a certification from the EAC. This chapter discusses the various circumstances that require submission to obtain or maintain a certification.

1.5.1.3. *Certification Testing and Review.* Under this program, the testing and review process requires the completion of an application, employment of an EAC-accredited laboratory for system testing, and technical analysis of the laboratory test report by the EAC. The result of this process is an Initial Decision on Certification. This chapter discusses the required steps for voting system testing and review.

1.5.1.4. *Grant of Certification.* If an Initial Decision to grant certification is made, the Manufacturer must take additional steps before the Manufacturer may be issued a certification. These steps require the Manufacturer to document the performance of a trusted build (*see* definition at Section 1.16), the deposit of software into a repository, and the creation of system identification tools. This chapter outlines the action that a Manufacturer must take to receive a certification and the Manufacturer's post-certification responsibilities.

1.5.1.5. *Denial of Certification.* If an Initial Decision to deny certification is made, the Manufacturer has certain rights and responsibilities under the program. This chapter contains procedures for requesting reconsideration, opportunity to cure defects, and appeal.

1.5.1.6. *Decertification.* Decertification is the process by which the EAC revokes a certification it previously granted to a voting system. It is an important part of the Certification Program because it serves to ensure that the requirements of the program are followed and that certified voting systems fielded for use in Federal elections maintain the same level of quality as those presented for testing. This chapter sets procedures for Decertification and explains the Manufacturer's rights and responsibilities during that process.

- 1.5.1.7. *Quality Monitoring Program.* Under the Certification Program, EAC will implement a quality monitoring process that will help ensure that voting systems certified by the EAC are the same systems sold by Manufacturers. The quality monitoring process is a mandatory part of the program and includes elements such as fielded voting system review, anomaly reporting, and manufacturing site visits. This chapter sets forth the requirements of the Quality Monitoring Program.
- 1.5.1.8. *Requests for Interpretations.* An Interpretation is a means by which a registered Manufacturer or Voting System Test Laboratory (VSTL) may seek clarification on a specific Voluntary Voting System Guidelines (VVSG) standard. This chapter outlines the policy, requirements, and procedures for requesting an Interpretation.
- 1.5.1.9. *Release of Certification Program Information.* Federal law protects certain types of information individuals provided the government from release. This chapter outlines the program's policies, sets procedures, and discusses responsibilities associated with the public release of potential protected commercial information.

1.5.2. Maintenance and Revision. This Manual, which sets the procedural requirements for a new Federal program, is expected to be improved and expanded as experience and circumstances dictate. The Manual will be reviewed periodically and updated to meet the needs of the EAC, Manufacturers, VSTLs, election officials, and public policy. The EAC is responsible for revising this document. All revisions will be made consistent with Federal law. Substantive input from stakeholders and the public will be sought whenever possible, at the discretion of the agency. Changes in policy requiring immediate implementation will be noticed via policy memoranda and will be issued to each registered Manufacturer. Changes, addendums, or updated versions will also be posted to the EAC Web site at [www.eac.gov](http://www.eac.gov).

**1.6. Program Methodology.** EAC's Voting System Testing and Certification Program is but one part of the overall conformity assessment process that includes companion efforts at the State and local levels.

1.6.1. Federal and State Roles. The process to ensure that voting equipment meets the technical requirements is a distributed, cooperative effort of Federal, State, and local officials in the United States. Working with voting equipment Manufacturers, these officials each have unique responsibility for ensuring that the equipment a voter uses on Election Day meets specific requirements.

1.6.1.1. The EAC Program has primary responsibility for ensuring that voting systems submitted under this program meet Federal standards established for voting systems.

009998

- 1.6.1.2. State officials have responsibility for testing voting systems to ensure that they will support the specific requirements of each individual State. States may use EAC VSTLs to perform testing of voting systems to unique State requirements while the systems are being tested to Federal standards. The EAC will not, however, certify voting systems to State requirements.
  - 1.6.1.3. State or local officials are responsible for making the final purchase choice. They are responsible for deciding which system offers the best fit and total value for their specific State or local jurisdiction.
  - 1.6.1.4. State or local officials are also responsible for acceptance testing to ensure that the equipment delivered is identical to the equipment certified on the Federal and State levels, is fully operational, and meets the contractual requirements of the purchase.
  - 1.6.1.5. State or local officials should perform pre-election logic and accuracy testing to confirm that equipment is operating properly and is unmodified from its certified state.
- 1.6.2. Conformity Assessment, Generally. Conformity assessment is a system established to ensure that a product or service meets the requirements that apply to it. Many conformity assessment systems exist to protect the quality and ensure compliance with requirements of products and services. All conformity assessment systems attempt to answer a variety of questions:
- 1.6.2.1. *What specifications are required of an acceptable system?* For voting systems, the EAC voting system standards (VVSG and Voting System Standards [VSS]) address this issue. States and local jurisdictions also have supplementing standards.
  - 1.6.2.2. *How are systems tested against required specifications?* The EAC Voting System Testing and Certification Program is a central element of the larger conformity assessment system. The program, as set forth in this Manual, provides for the testing and certification of voting systems to identified versions of the VVSG. The Testing and Certification Program's purpose is to ensure that State and local jurisdictions receive voting systems that meet the requirements of the VVSG.
  - 1.6.2.3. *Are the testing authorities qualified to make an accurate evaluation?* The EAC accredits VSTLs, after the National Institute of Standards and Technology (NIST) National Voluntary Lab Accreditation Program (NVLAP) has reviewed their technical competence and lab practices, to ensure these test authorities are fully qualified. Furthermore, EAC technical experts review all test reports from accredited laboratories to ensure an accurate and complete evaluation. Many States provide similar reviews of laboratory reports.

009999

1.6.2.4. *Will Manufacturers deliver units within manufacturing tolerances to those tested?* The VVSG and this Manual require that vendors have appropriate change management and quality control processes to control the quality and configuration of their products. The Certification Program provides mechanisms for the EAC to verify Manufacturer quality processes through field system testing and manufacturing site visits. States have implemented policies for acceptance of delivered units.

**1.7. Program Personnel.** All EAC personnel and contractors associated with this program will be held to the highest ethical standards. All agents of the EAC involved in the Certification Program will be subject to conflict-of-interest reporting and review, consistent with Federal law and regulation.

**1.8. Program Records.** The EAC Program Director is responsible for maintaining accurate records to demonstrate that the testing and certification program procedures have been effectively fulfilled and to ensure the traceability, repeatability, and reproducibility of testing and test report review. All records will be maintained, managed, secured, stored, archived, and disposed of in accordance with Federal law, Federal regulations, and procedures of the EAC.

**1.9. Submission of Documents.** Any documents submitted pursuant to the requirements of this Manual shall be submitted:

1.9.1. If sent electronically, via secure e-mail or physical delivery of a compact disk, unless otherwise specified.

1.9.2. In a Microsoft Word or Adobe PDF file, formatted to protect the document from alteration.

1.9.3. With a proper signature when required by this Manual. Documents that require an authorized signature may be signed with an electronic representation or image of the signature of an authorized management representative and must meet any and all subsequent requirements established by the Program Director regarding security.

1.9.4. If sent via physical delivery, by Certified Mail™ (or similar means that allows tracking) to the following address:

Testing and Certification Program Director  
U.S. Election Assistance Commission  
1225 New York Avenue, NW, Suite 1100  
Washington, D.C. 20005

**1.10. Receipt of Documents—Manufacturer.** For purposes of this Manual, a document, notice, or other communication is considered received by a Manufacturer upon one of the following:

1.10.1. The actual, documented date the correspondence was received (either electronically or physically) at the Manufacturer's place of business, or

1.10.2. If no documentation of the actual delivery date exists, the date of constructive receipt of the communication. For electronic correspondence, documents will be constructively received the day after the date sent. For mail correspondence, the document will be constructively received 3 days after the date sent.

1.10.3. The term “receipt” shall mean the date a document or correspondence arrives (either electronically or physically) at the Manufacturer’s place of business. Arrival does not require that an agent of the Manufacturer open, read, or review the correspondence.

**1.11. Receipt of Documents—EAC.** For purposes of this Manual, a document, notice, or other communication is considered received by the EAC upon its physical or electronic arrival at the agency. All documents received by the agency will be physically or electronically date stamped. This stamp shall serve as the date of receipt. Documents received after the regular business day (5:00 PM Eastern Standard Time), will be treated as if received on the next business day.

**1.12. EAC Response Timeframes.** In recognition of the responsibilities and challenges facing Manufacturers as they work to meet the requirements imposed by this program, State certification programs, customers, State law and production schedules, the EAC will provide timeframes for its response to significant program elements. This shall be done by providing current metrics on EAC’s Web site regarding the actual average EAC response time for (1) approving Test Plans, (2) issuing Initial Decisions, and (3) issuing Certificates of Conformance.

**1.13. Records Retention—Manufacturers.** The Manufacturer is responsible for ensuring that all documents submitted to the EAC or that otherwise serve as the basis for the certification of a voting system are retained. A copy of all such records shall be retained as long as a voting system is offered for sale or supported by a Manufacturer and for 5 years thereafter.

**1.14. Record Retention—EAC.** The EAC shall retain all records associated with the certification of a voting system as long as such system is fielded in a State or local election jurisdiction for use in Federal elections. The records shall otherwise be retained or disposed of consistent with Federal statutes and regulations.

**1.15. Publication and Release of Documents.** The EAC will release documents consistent with the requirements of Federal law. It is EAC policy to make the certification process as open and public as possible. Any documents (or portions thereof) submitted under this program will be made available to the public unless specifically protected from release by law. The primary means for making this information available is through the EAC Web site.

010001

**1.16. Definitions.** For purposes of this Manual, the terms listed below have the following definitions.

Appeal. A formal process by which the EAC is petitioned to reconsider an Agency Decision.

Appeal Authority. The individual or individuals appointed to serve as the determination authority on appeal.

Build Environment. The disk or other media that holds the source code, compiler, linker, integrated development environments (IDE), and/or other necessary files for the compilation and on which the compiler will store the resulting executable code.

Certificate of Conformance. The certificate issued by the EAC when a system has been found to meet the requirements of the VVSG. The document conveys certification of a system.

Commission. The U.S. Election Assistance Commission, as an agency.

Commissioners. The serving commissioners of the U.S. Election Assistance Commission.

Component. A discrete and identifiable element of hardware or software within a larger voting system.

Compiler. A computer program that translates programs expressed in a high-level language into machine language equivalents.

Days. Calendar days, unless otherwise noted. When counting days, for the purpose of submitting or receiving a document, the count shall begin on the first full calendar day after the date the document was received.

Disk Image. An exact copy of the entire contents of a computer disk.

Election Official. A State or local government employee who has as one of his or her primary duties the management or administration of a Federal election.

Federal Election. Any primary, general, runoff, or special Election in which a candidate for Federal office (President, Senator, or Representative) appears on the ballot.

Fielded Voting System. A voting system purchased or leased by a State or local government that is being use in a Federal election.

File Signature. A signature of a file or set of files produced using a HASH algorithm. A file signature, sometimes called a HASH value, creates a value that is computationally infeasible of being produced by two similar but different files. File signatures are used to verify that files are unmodified from their original versions.

HASH Algorithm. An algorithm that maps a bit string of arbitrary length to a shorter, fixed-length bit string. (A HASH uniquely identifies a file similar to the way a fingerprint identifies an individual. Likewise, as an individual cannot be recreated from his or her fingerprint, a file cannot be recreated from a HASH. The HASH algorithm used primarily in the NIST (National Software Reference Library), and this program is the Secure HASH Algorithm (SHA-1) specified in Federal Information Processing Standard (FIPS) 180-1.)

Installation Device. A device containing program files, software, and installation instructions for installing an application (program) onto a computer. Examples of such devices include installation disks, flash memory cards, and PCMCIA cards.

Integration Testing. The end-to-end testing of a full system configured for use in an election to assure that all legitimate configurations meet applicable standards.

Linker. A computer program that takes one or more objects generated by compilers and assembles them into a single executable program.

Manufacturer. The entity with ownership and control over a voting system submitted for certification.

Mark of Conformance. A uniform notice permanently posted on a voting system that signifies that it has been certified by the EAC.

Memorandum for the Record. A written statement drafted to document an event or finding, without a specific addressee other than the pertinent file.

Proprietary Information. Commercial information or trade secrets protected from release under the Freedom of Information Act (FOIA) and the Trade Secrets Act.

System Identification Tools. Tools created by a Manufacturer of voting systems that allow elections officials to verify that the hardware and software of systems purchased are identical to the systems certified by the EAC.

Technical Reviewers. Technical experts in the areas of voting system technology and conformity assessment appointed by the EAC to provide expert guidance.

Testing and Certification Decision Authority. The EAC Executive Director or Acting Executive Director.

Testing and Certification Program Director. The individual appointed by the EAC Executive Director to administer and manage the Testing and Certification Program.

Trusted Build. A witnessed software build where source code is converted to machine-readable binary instructions (executable code) in a manner providing security measures that help ensure that the executable code is a verifiable and faithful representation of the source code.

010003

Voting System. The total combination of mechanical, electromechanical, and electronic equipment (including the software, firmware, and documentation required to program, control, and support the equipment) that is used to define ballots, cast and count votes, report or display election results, connect the voting system to the voter registration system, and maintain and produce any audit trail information.

Voting System Standards. Voluntary voting system standards developed by the FEC. Voting System Standards have been published twice: once in 1990 and again in 2002. The Help America Vote Act made the 2002 Voting System Standards EAC guidance. All new voting system standards are issued by the EAC as Voluntary Voting System Guidelines.

Voting System Test Laboratories. Laboratories accredited by the EAC to test voting systems to EAC approved voting system standards. Each Voting System Test Laboratory (VSTL) must be accredited by the National Voluntary Laboratory Accreditation Program (NVLAP) and recommended by the National Institute of Standards Technology (NIST) before it may receive an EAC accreditation. NVLAP provides third party accreditation to testing and calibration laboratories. NVLAP is in full conformance with the standards of the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC), including ISO/IEC Guide 17025 and 17011.

Voluntary Voting System Guidelines. Voluntary voting system standards developed, adopted, and published by the EAC. The guidelines are identified by version number and date.

**1.17. Acronyms and Abbreviations.** For purposes of this Manual, the acronyms and abbreviations listed below represent the following terms.

Certification Program. The EAC Voting System Testing and Certification Program

Decision Authority. Testing and Certification Decision Authority

EAC. United States Election Assistance Commission

FEC. Federal Election Commission

HAVA. Help America Vote Act of 2002 (42 U.S.C. §15301 et seq.)

Labs or Laboratories. Voting System Test Laboratories

NASED. National Association of State Election Directors

NIST. National Institute of Standards and Technology

NVLAP. National Voluntary Laboratory Accreditation Program

Program Director. Director of the EAC Testing and Certification Program

VSS. Voting System Standards

VSTL. Voting System Test Laboratory

VVSG. Voluntary Voting System Guidelines

010005

## 2. Manufacturer Registration

**2.1. Overview.** Manufacturer Registration is the process by which voting system Manufacturers make initial contact with the EAC and provide information essential to participate in the EAC Voting System Testing and Certification Program. Before a Manufacturer of a voting system can submit an application to have a voting system certified by the EAC, the Manufacturer must be registered. This process requires the Manufacturer to provide certain contact information and agree to certain requirements of the Certification Program. After successfully registering, the Manufacturer will receive an identification code.

**2.2. Registration Required.** To submit a voting system for certification or otherwise participate in the EAC voluntary Voting System Testing and Certification Program, a Manufacturer must register with the EAC. Registration does not constitute an EAC endorsement of the Manufacturer or its products. Registration of a Manufacturer is not a certification of that Manufacturer's products.

**2.3. Registration Requirements.** The registration process will require the voting system Manufacturer to provide certain information to the EAC. This information is necessary to enable the EAC to administer the Certification Program and communicate effectively with the Manufacturer. The registration process also requires the Manufacturer to agree to certain Certification Program requirements. These requirements relate to the Manufacturer's duties and responsibilities under the program. For this program to succeed, it is vital that a Manufacturer know and assent to these duties at the outset of the program.

**2.3.1. Information.** Manufacturers are required to provide the following information.

2.3.1.1. The Manufacturer's organizational information:

2.3.1.1.1. The official name of the Manufacturer.

2.3.1.1.2. The address of the Manufacturer's official place of business.

2.3.1.1.3. A description of how the Manufacturer is organized (i.e., type of corporation or partnership).

2.3.1.1.4. Names of officers and/or members of the board of directors.

2.3.1.1.5. Names of all partners and members (if organized as a partnership or limited liability corporation).

2.3.1.1.6. Identification of any individual, organization, or entity with a controlling ownership interest in the Manufacturer.

010006

- 2.3.1.2. The identity of an individual authorized to represent and make binding commitments and management determinations for the Manufacturer (management representative). The following information is required for the management representative:
  - 2.3.1.2.1. Name and title.
  - 2.3.1.2.2. Mailing and physical addresses.
  - 2.3.1.2.3. Telephone number, fax number, and e-mail address.
- 2.3.1.3. The identity of an individual authorized to provide technical information on behalf of the Manufacturer (technical representative). The following information is required for the technical representative:
  - 2.3.1.3.1. Name and title.
  - 2.3.1.3.2. Mailing and physical addresses.
  - 2.3.1.3.3. Telephone number, fax number, and e-mail address.
- 2.3.1.4. The Manufacturer's written policies regarding its quality assurance system. This policy must be consistent with guidance provided in the VVSG and this Manual.
- 2.3.1.5. The Manufacturer's written policies regarding internal procedures for controlling and managing changes to and versions of its voting systems. Such policies shall be consistent with this Manual and guidance provided in the VVSG.
- 2.3.1.6. The Manufacturer's written policies on document retention. Such policies must be consistent with the requirements of this Manual.
- 2.3.1.7. A list of all manufacturing and/or assembly facilities used by the Manufacturer and the name and contact information of a person at each facility. The following information is required for a person at each facility:
  - 2.3.1.7.1. Name and title.
  - 2.3.1.7.2. Mailing and physical addresses.
  - 2.3.1.7.3. Telephone number, fax number, and e-mail address.

010007

2.3.2. Agreements. Manufacturers are required to take or abstain from certain actions to protect the integrity of the Certification Program and promote quality assurance. Manufacturers are required to agree to the following program requirements:

- 2.3.2.1. Represent a voting system as certified only when it is authorized by the EAC and is consistent with the procedures and requirements of this Manual.
- 2.3.2.2. Produce and affix an EAC certification label to all production units of the certified system. Such labels must meet the requirements set forth in Chapter 5 of this Manual.
- 2.3.2.3. Notify the EAC of changes to any system previously certified by the EAC pursuant to the requirements of this Manual (see Chapter 3). Such systems shall be submitted for testing and additional certification when required.
- 2.3.2.4. Permit an EAC representative to verify the Manufacturer's quality control procedures by cooperating with EAC efforts to test and review fielded voting systems consistent with Section 8.6 of this Manual.
- 2.3.2.5. Permit an EAC representative to verify the Manufacturer's quality control procedures by conducting periodic inspections of manufacturing facilities consistent with Chapter 8 of this Manual.
- 2.3.2.6. Cooperate with any EAC inquiries and investigations into a certified system's compliance with VVSG standards or the procedural requirements of this Manual consistent with Chapter 7.
- 2.3.2.7. Report to the Program Director any known malfunction of a voting system holding an EAC Certification. A malfunction is a failure of a voting system, not caused solely by operator or administrative error, which causes the system to cease operation during a Federal election or otherwise results in data loss. Malfunction notifications should be consolidated into one report. This report should identify the location, nature, date, impact, and resolution (if any) of the malfunction and be filed within 60 days of any Federal election.
- 2.3.2.8. Certify that the entity is not barred or otherwise prohibited by statute, regulation, or ruling from doing business in the United States.
- 2.3.2.9. Adhere to all procedural requirements of this Manual.

2.4. **Registration Process**. Generally, registration is accomplished through use of an EAC registration form. After the EAC has received a registration form and other required registration documents, the agency reviews the information for completeness before approval.

2.4.1. Application Process. To become a registered voting system Manufacturer, one must apply by submitting a Manufacturer Registration Application Form (Appendix A). This

form will be used as the means for the Manufacturer to provide the information and agree to the responsibilities required in Section 2.3, above.

2.4.1.1. *Application Form.* In order for the EAC to accept and process the registration form, the applicant must adhere to the following requirements:

2.4.1.1.1. All fields must be completed by the Manufacturer.

2.4.1.1.2. All required attachments prescribed by the form and this Manual must be identified, completed, and forwarded in a timely manner to the EAC (e.g., Manufacturer's quality control and system change policies).

2.4.1.1.3. The application form must be affixed with the handwritten signature (including a digital representation of the handwritten signature) of the authorized representative of the vendor.

2.4.1.2. *Availability and Use of the Form.* The Manufacturer Registration Application Form may be accessed through the EAC Web site at [www.eac.gov](http://www.eac.gov). Instructions for completing and submitting the form are included on the Web site. The Web site will also provide contact information regarding questions about the form or the application process.

2.4.2. EAC Review Process. The EAC will review all registration applications.

2.4.2.1. After the application form and required attachments have been submitted, the applicant will receive an acknowledgment that the EAC has received the submission and that the application will be processed.

2.4.2.2. If an incomplete form is submitted or an attachment is not provided, the EAC will notify the Manufacturer and request the information. Registration applications will not be processed until they are complete.

2.4.2.3. Upon receipt of the completed registration form and accompanying documentation, the EAC will review the information for sufficiency. If the EAC requires clarification or additional information, the EAC will contact the Manufacturer and request the needed information.

2.4.2.4. Upon satisfactory completion of a registration application's sufficiency review, the EAC will notify the Manufacturer that it has been registered.

**2.5. Registered Manufacturers.** After a Manufacturer has received notice that it is registered, it will receive an identification code and will be eligible to participate in the voluntary voting system Certification Program.

- 2.5.1. Manufacturer Code. Registered Manufacturers will be issued a unique, three-letter identification code. This code will be used to identify the Manufacturer and its products.
  - 2.5.2. Continuing Responsibility To Report. Registered Manufacturers are required to keep all registration information up to date. Manufacturers must submit a revised application form to the EAC within 30 days of any changes to the information required on the application form. Manufacturers will remain registered participants in the program during this update process.
  - 2.5.3. Program Information Updates. Registered Manufacturers will be automatically provided timely information relevant to the Certification Program.
  - 2.5.4. Web site Postings. The EAC will add the Manufacturer to the EAC listing of registered voting system Manufacturers publicly available at [www.eac.gov](http://www.eac.gov).
- 2.6. Suspension of Registration.** Manufacturers are required to establish policies and operate within the EAC Certification Program consistent with the procedural requirements presented in this Manual. When Manufacturers engage in management activities that are inconsistent with this Manual or fail to cooperate with the EAC in violation the Certification Program's requirements, their registration may be suspended until such time as the problem is remedied.
- 2.6.1. Procedures. When a Manufacturer's activities violate the procedural requirements of this Manual, the Manufacturer will be notified of the violations, given an opportunity to respond, and provided the steps required to bring itself into compliance.
    - 2.6.1.1. *Notice*. Manufacturers shall be provided written notice that they have taken action inconsistent with or acted in violation of the requirements of this Manual. The notice will state the violations and the specific steps required to cure them. The notice will also provide Manufacturers with 30 days (or a greater period of time as stated by the Program Director) to (1) respond to the notice and/or (2) cure the defect.
    - 2.6.1.2. *Manufacturer Action*. The Manufacturer is required to either respond in a timely manner to the notice (demonstrating that it was not in violation of program requirements) or cure the violations identified in a timely manner. In any case, the Manufacturer's action must be approved by the Program Director to prevent suspension.

- 2.6.1.3. *Non-Compliance.* If the Manufacturer fails to respond in a timely manner, is unable to provide a cure or response that is acceptable to the Program Director, or otherwise refuses to cooperate, the Program Director may suspend the Manufacturer's registration. The Program Director shall issue a notice of his or her intent to suspend the registration and provide the Manufacturer five (5) business days to object to the action and submit information in support of the objection.
- 2.6.1.4. *Suspension.* After notice and opportunity to be heard (consistent with the above), the Program Director may suspend a Manufacturer's registration. The suspension shall be noticed in writing. The notice must inform the Manufacturer of the steps that can be taken to remedy the violations and lift the suspension.
- 2.6.2. Effect of Suspension. A suspended Manufacturer may not submit a voting system for certification under this program. This prohibition includes a ban on the submission of modifications and changes to certified system. A suspension shall remain in effect until lifted. Suspended Manufacturers will have their registration status reflected on the EAC Web site. Manufacturers have the right to remedy a non-compliance issue at any time and lift a suspension consistent with EAC guidance. Failure of a Manufacturer to follow the requirements of this section may also result in Decertification of voting systems consistent with Chapter 7 of this Manual.

### 3. When Voting Systems Must Be Submitted for Testing and Certification

3.1. **Overview.** An EAC certification signifies that a voting system has been successfully tested to identified voting system standards adopted by the EAC. Only the EAC can issue a Federal certification. Ultimately, systems must be submitted for testing and certification under this program to receive this certification. Systems will usually be submitted when (1) they are new to the marketplace, (2) they have never before received an EAC certification, (3) they are modified, or (4) the Manufacturer wishes to test a previously certified system to a different (newer) standard. This chapter also discusses the submission of de minimis changes, which may not require additional testing and certification, as well as provisional, pre-election emergency modifications, which provide for pre-election, emergency waivers.

3.2. **What Is an EAC Certification?** Certification is the process by which the EAC, through testing and evaluation conducted by an accredited Voting System Test Laboratory, validates that a voting system meets the requirements set forth in existing voting system testing standards (Voting System Standards [VSS] or VVSG), and performs according to the Manufacturer's specifications for the system. An EAC certification may be issued only by the EAC in accordance with the procedures presented in this Manual. Certifications issued by other bodies (e.g., the National Association of State Election Directors and State certification programs) are not EAC certifications.

3.2.1. **Types of Voting Systems Certified.** The EAC Certification Program is designed to test and certify electromechanical and electronic voting systems. The EAC will not accept for certification review voting systems that do not contain any electronic components. Ultimately, the determination of whether a voting system may be submitted for testing and certification under this program is solely at the discretion of the EAC.

3.2.2. **Voting System Standards.** Voting systems certified under this program are tested to a set of voluntary standards providing requirements that voting systems must meet to receive a Federal certification. Currently, these standards are referred to as Voluntary Voting System Guidelines (in the past they were called Voting System Standards).

3.2.2.1. *Versions—Availability and Identification.* Voluntary Voting System Guidelines (or applicable Voting System Standards) are published by the EAC and are available on the EAC Web site ([www.eac.gov](http://www.eac.gov)). The standards will be routinely updated. Versions will be identified by version number and/or release date.

3.2.2.2. *Versions—Basis for Certification.* The EAC will promulgate which version or versions of the standards it will accept as the basis for testing and certification. This effort may be accomplished through the setting of an implementation date for a particular version's applicability, the setting of a date by which testing to a particular version is mandatory, or the setting of a date by which the EAC will no longer test to a particular standard. **The EAC will certify only those voting systems tested to standards that the EAC has identified as valid for certification.**

- 3.2.2.2.1. End date. When a version's status as the basis of an EAC certification is set to expire on a certain date, the submission of the system's test report will be the controlling event (see Chapter 4). This requirement means the system's test report must be received by the EAC on or before the end date to be certified to the terminating standard.
- 3.2.2.2.2. Start date. When a version's status as the basis of an EAC certification is set to begin on a certain date, the submission of the system's application for certification will be the controlling event (see Chapter 4). This requirement means the system's application, requesting certification to the new standard, will not be accepted by the EAC until the start date.
- 3.2.2.3. *Version—Manufacturer's Option.* When the EAC has authorized certification to more than one version of the standards, the Manufacturer must choose which version it wishes to have its voting system tested against. The voting system will then be certified to that version of the standards. Manufacturers must ensure that all applications for certification identify a particular version of the standards.
- 3.2.2.4. *Emerging Technologies.* If a voting system or component thereof is eligible for a certification under this program (see Section 3.2.1.) and employs technology that is not addressed by a currently accepted version of the VVSG or VSS, the relevant technology shall be subjected to full integration testing and shall be tested to ensure that it operates to the Manufacturer's specifications. The remainder of the system will be tested to the applicable Federal standards. Information on emerging technologies will be forwarded to the EAC's Technical Guidelines Development Committee (TGDC).
- 3.2.3. Significance of an EAC Certification. An EAC certification is an official recognition that a voting system (in a specific configuration or configurations) has been tested to and has met an identified set of Federal voting standards. An EAC certification is **not** any of the following:
  - 3.2.3.1. An endorsement of a Manufacturer, voting system, or any of the system's components.
  - 3.2.3.2. A Federal warranty of the voting system or any of its components.
  - 3.2.3.3. A determination that a voting system, when fielded, will be operated in a manner that meets all HAVA requirements.
  - 3.2.3.4. A substitute for State or local certification and testing.

3.2.3.5. A determination that the system is ready for use in an election.

3.2.3.6. A determination that any particular component of a certified system is itself certified for use outside the certified configuration.

**3.3. Effect of the EAC Certification Program on Other National Certifications.** Before the creation of the EAC Certification Program, national voting system qualification was conducted by a private membership organization, the National Association of State Election Directors (NASED). NASED offered a qualification for voting systems for more than a decade, using standards issued by the Federal government. The EAC Certification Program does not repeal NASED-issued qualifications. All voting systems previously qualified under the NASED program retain their NASED qualification consistent with State law; however, a NASED-qualified voting system is not an EAC-certified system and is treated like an uncertified system for purposes of the EAC Certification Program.

**3.4. When Certification Is Required Under the Program.** To obtain or maintain an EAC certification, Manufacturers must submit a voting system for testing and certification under this program. Such action is usually required for (1) new systems not previously tested to any standard; (2) existing systems not previously certified by the EAC; (3) previously certified systems that have been modified; (4) systems or technology specifically identified for retesting by the EAC; or (5) previously certified systems that the Manufacturer seeks to upgrade to a higher standard (e.g., a more recent version of the VVSG).

3.4.1. New System Certification. For purposes of this Manual, new systems are defined as voting systems that have not been previously tested to applicable Federal standards. New voting systems must be fully tested and submitted to the EAC according to the requirements of Chapter 4 of this Manual.

3.4.2. System Not Previously EAC Certified. This term describes any voting system not previously certified by the EAC, including systems previously tested and qualified by NASED or systems previously tested and denied certification by the EAC. Such systems must be fully tested and submitted to the EAC according to the requirements of Chapter 4 of this Manual.

3.4.3. Modification. A modification is any change to a *previously EAC-certified voting system's* hardware, software, or firmware that is not a de minimis change. Any modification to a voting system will require testing and review by the EAC according to the requirements of Chapter 4 of this Manual.

3.4.4. EAC Identified Systems. Manufacturers may be required to submit systems previously certified by the EAC for retesting. This may occur when the EAC determines that the original tests conducted on the voting system are now insufficient to demonstrate compliance with Federal standards in light of newly discovered threats or information.

3.4.5. Certification Upgrade. This term defines any system previously certified by the EAC but submitted for additional testing and certification to a higher standard (e.g., to a newer version of the VVSG). Any such system must be tested to the new standards and submitted to the EAC per Chapter 4 of this Manual.

3.5. **De Minimis Changes**. A de minimis change is a change to voting system hardware that is so minor in nature and effect that it requires no additional testing and certification. Such changes, however, require VSTL review and endorsement as well as EAC approval. Any proposed change not accepted as a de minimis change is a modification and shall be submitted for testing and review consistent with the requirements of this Manual. An approved de minimis change is not a modification.

3.5.1. De Minimis Change—Defined. A de minimis change is a change to a certified voting system's hardware, the nature of which will not materially alter the system's reliability, functionality, capability, or operation. Software and firmware modifications are not de minimis changes. In order for a hardware change to qualify as a de minimis change, it must not only maintain, unaltered, the reliability, functionality, capability and operability of a system, it shall also ensure that when hardware is replaced, the original hardware and the replacement hardware are electronically and mechanically interchangeable and have identical functionality and tolerances. Under no circumstance shall a change be considered a de minimis change if it has reasonable and identifiable potential to impact the system's operation and compliance with applicable voting system standards.

3.5.2. De Minimis Change—Procedure. Manufacturers who wish to implement a proposed de minimis change must submit it for VSTL review and endorsement and EAC approval. A proposed change is not a de minimis change and may not be implemented as such until it has been approved in writing by the EAC.

3.5.2.1. *VSTL Review*. Manufacturers must submit any proposed de minimis change to an EAC VSTL for review and endorsement. The Manufacturer will provide the VSTL (1) a detailed description of the change; (2) a description of the facts giving rise to or necessitating the change; (3) the basis for its determination that the change will not alter the system's reliability, functionality, or operation; and (4) upon request of the VSTL, a sample voting system at issue or any relevant technical information needed to make the determination. The VSTL will review the proposed de minimis change and make an independent determination as to whether the change meets the definition of de minimis change or requires the voting system to go through additional testing as a system modification. If the VSTL determines that a de minimis change is appropriate, it shall endorse the proposed change as a de minimis change. If the VSTL determines that modification testing and certification should be performed, it shall reject the proposed change. Endorsed changes shall be forwarded to the EAC Program Director for final

approval. Rejected changes shall be returned to the Manufacturer for resubmission as system modifications.

3.5.2.2. *VSTL Endorsed Changes.* The VSTL shall forward to the EAC any change it has endorsed as de minimis. The VSTL shall forward its endorsement in a package that includes:

3.5.2.2.1. The Manufacturer's initial description of the de minimis change, a narrative of facts giving rise to or necessitating the change, and the determination that the change will not alter the system's reliability, functionality, or operation.

3.5.2.2.2. The written determination of the VSTL endorsement of the de minimis change. The endorsement document must explain why the VSTL, in its engineering judgment, determined that the proposed de minimis change met the definition in this section and otherwise does not require additional testing and certification.

3.5.2.3. *EAC Action.* The EAC will review all proposed de minimis changes endorsed by the VSTL. The EAC has sole authority to determine whether any VSTL endorsed change constitutes a de minimis change under this section. The EAC will inform the Manufacturer and VSTL of its determination in writing.

3.5.2.3.1. EAC approval. If the EAC approves the change as a de minimis change, it shall provide written notice to the Manufacturer and VSTL. The EAC will maintain copies of all approved de minimis changes and otherwise track such changes.

3.5.2.3.2. EAC denial. If the EAC determines that a proposed de minimis change cannot be approved, it will inform the VSTL and Manufacturer of its decision. The proposed change will be considered a modification and require testing and certification consistent with this Manual.

3.5.3. De Minimis Change—Effect of EAC Approval. EAC approval of a de minimis change permits the Manufacturer to implement the proposed change (as identified, endorsed, and approved) without additional modification testing and certification. Fielding an engineering change not approved by the EAC is a basis for system Decertification.

**3.6. Provisional, Pre-Election Emergency Modification.** To deal with extraordinary pre-election emergency situations, the EAC has developed a special provisional modification process. This process is to be used **only** for the emergency situations indicated and **only** when there is a clear and compelling need for temporary relief until the regular certification process can be followed.

- 3.6.1. Purpose. The purpose of this section is to allow a mechanism within the EAC Certification Program for Manufacturers to modify EAC-certified voting systems in emergency situations immediately before an election. This situation arises when a modification to a voting system is required and an election deadline is imminent, preventing the completion of the full certification process (and State and/or local testing process) in time for Election Day. In such situations the EAC may issue a waiver to the Manufacturer, granting it leave to make the modification without submission for modification testing and certification.
- 3.6.2. General Requirements. A request for an emergency modification waiver may be made by a Manufacturer only *in conjunction with* the State election official whose jurisdiction(s) would be adversely affected if the requested modification were not implemented before Election Day. Requests must be submitted at least 5 calendar days before an election. Only systems previously certified are eligible for such a waiver. To receive a waiver, a Manufacturer must demonstrate the following:
- 3.6.2.1. The modification is functionally or legally required; that is, the system cannot be fielded in an election without the change.
  - 3.6.2.2. The voting system requiring modification is needed by State or local election officials to conduct a pending Federal election.
  - 3.6.2.3. The voting system to be modified has previously been certified by the EAC.
  - 3.6.2.4. The modification cannot be tested by a VSTL and submitted to the EAC for certification, consistent with the procedural requirements of this Manual, at least 30 days before the pending Federal election.
  - 3.6.2.5. Relevant State law requires Federal certification of the requested modification.
  - 3.6.2.6. The Manufacturer has taken steps to ensure that the modification will properly function as designed, is suitably integrated with the system, and otherwise will not negatively affect system reliability, functionality, or accuracy.
  - 3.6.2.7. The Manufacturer (through a VSTL) has completed as much of the evaluation testing as possible for the modification and has provided the results of such testing to the EAC.
  - 3.6.2.8. The emergency modification is required and otherwise supported by the Chief State Election Official seeking to field the voting system in an impending Federal election.
- 3.6.3. Request for Waiver. A Manufacturer's request for waiver shall be made in writing to the Decision Authority and shall include the following elements:

- 3.6.3.1. A signed statement providing sufficient description, background, information, documentation, and other evidence necessary to demonstrate that the request for a waiver meets each of the eight requirements stated in Section 3.5.2 above.
- 3.6.3.2. A signed statement from the Chief State Election Official requiring the emergency modification. This signed statement shall identify the pending election creating the emergency situation and attest that (1) the modification is required to field the system, (2) State law (citation) requires EAC action to field the system in an election, and (3) normal timelines required under the EAC Certification Program cannot be met.
- 3.6.3.3. A signed statement from a VSTL that there is insufficient time to perform necessary testing and complete the certification process. The statement shall also state what testing the VSTL has performed on the modification to date, provide the results of such tests, and state the schedule for completion of testing.
- 3.6.3.4. A detailed description of the modification, the need for the modification, how it was developed, how it addresses the need for which it was designed, its impact on the voting system, and how the modification will be fielded or implemented in a timely manner consistent with the Manufacturer's quality control program.
- 3.6.3.5. All documentation of tests performed on the modification by the Manufacturer, a laboratory, or other third party.
- 3.6.3.6. A stated agreement signed by the Manufacturer's representative agreeing to take the following action:
  - 3.6.3.6.1. Submit for testing and certification, consistent with Chapter 4 of this Manual, any voting system receiving a waiver under this section that has not already been submitted. This action shall be taken immediately.
  - 3.6.3.6.2. Abstain from representing the modified system as EAC certified. The modified system has not been certified; rather, the originally certified system has received a waiver providing the Manufacturer leave to modify it.
  - 3.6.3.6.3. Submit a report to the EAC regarding the performance of the modified voting system within 60 days of the Federal election that served as the basis for the waiver. This report shall (at a minimum) identify and describe any (1) performance failures, (2) technical failures, (3) security failures, and/or (4) accuracy problems.

- 3.6.4. EAC Review. The EAC will review all waiver requests submitted in a timely manner and make determinations regarding the requests. Incomplete requests will be returned for resubmission with a written notification regarding its deficiencies.
- 3.6.5. Letter of Approval. If the EAC approves the modification waiver, the Decision Authority shall issue a letter granting the temporary waiver within five (5) business days of receiving a complete request.
- 3.6.6. Effect of Grant of Waiver. An EAC grant of waiver for an emergency modification is not an EAC certification of the modification. Waivers under this program grant Manufacturers leave to only temporarily amend previously certified systems without testing and certification for the specific election noted in the request. Without such a waiver, such action would ordinarily result in Decertification of the modified system (See Chapter 7). Systems receiving a waiver shall satisfy any State requirement that a system be nationally or federally certified. In addition—
- 3.6.6.1. All waivers are temporary and expire 60 days after the Federal election for which the system was modified and the waiver granted.
- 3.6.6.2. Any system granted a waiver must be submitted for testing and certification. This shall be accomplished as soon as possible.
- 3.6.6.3. The grant of a waiver is no indication that the modified system will ultimately be granted a certification.
- 3.6.7. Denial of Request for Waiver. A request for waiver may be denied by the EAC if the request does not meet the requirements noted above, fails to follow the procedure established by this section or otherwise fails to sufficiently support a conclusion that the modification at issue is needed, will function properly, and is in the public interest. A denial of a request for emergency modification by the EAC shall be final and not subject to appeal. Manufacturers may submit for certification, consistent with Chapter 4 of this Manual, modifications for which emergency waivers were denied.
- 3.6.8. Publication Notice of Waiver. The EAC will post relevant information relating to the temporary grant of an emergency waiver on its Web site. This information will be posted upon grant of the waiver and removed upon the waiver's expiration. This posting will include information concerning the limited nature and effect of the waiver.

## 4. Certification Testing and Technical Review

- 4.1. Overview.** This chapter discusses the procedural requirements for submitting a voting system to the EAC for testing and review. The testing and review process requires an application, employment of an EAC-accredited testing laboratory, and technical analysis of the laboratory test report by the EAC. The result of this process is an Initial Decision on Certification by the Decision Authority.
- 4.2. Policy.** Generally, to receive an initial determination on an EAC certification for a voting system, a registered Manufacturer must have (1) submitted an EAC-approved application for certification, (2) had a VSTL submit an EAC-approved test plan, (3) had a VSTL test a voting system to applicable voting system standards, (4) had a VSTL submit a test report to the EAC for technical review and approval, and (5) received EAC approval of the report in an Initial Decision on Certification.
- 4.3. Certification Application.** The first step in submitting a voting system for certification is submission of an application package. The package contains an application form and a copy of the voting system's Implementation Statement (see VVSG 2005—Version 1.0, Vol. I, Section 1.6.4), functional diagram, and System Overview documentation submitted to the VSTL as a part of the Technical Data Package (see VVSG 2005—Version 1.0, Vol. II, Section 2.2). This application process initiates the certification process and provides the EAC with needed information.
- 4.3.1. Information on Application Form.** The application (application form) provides the EAC certain pieces of information that are essential at the outset of the certification process. This information includes the following:
- 4.3.1.1. *Manufacturer Information.* Identification of the Manufacturer (name and three-letter identification code).
  - 4.3.1.2. *Selection of Accredited Laboratory.* Selection and identification of the VSTL that will perform voting system testing and other prescribed laboratory action consistent with the requirements of this Manual. Once selected, a Manufacturer may NOT replace the selected VSTL without the express written consent of the Program Director. Such permission will be granted solely at the discretion of the Program Director and only upon demonstration of good cause.
  - 4.3.1.3. *Voting System Standards Information.* Identification of the VVSG or VSS, including the document's date and version number, to which the Manufacturer wishes to have the identified voting system tested and certified.
  - 4.3.1.4. *Nature of the Submission.* Manufacturers must identify the nature of their submission by selecting one of the following four submission types:

- 4.3.1.4.1. New system. For purposes of this Manual, a new system is defined as a voting system that has not been previously tested to any applicable Federal standards.
- 4.3.1.4.2. System not previously EAC certified. This term describes any voting system not previously certified by the EAC, including systems previously tested and qualified by NASED or systems previously tested and denied certification by the EAC.
- 4.3.1.4.3. Modification. A modification is any change to a *previously EAC-certified voting system's* hardware, software, or firmware.
- 4.3.1.4.4. Certification upgrade. This term defines any system previously certified by the EAC but submitted (without modification) for additional testing and certification to a higher standard (e.g., to a newer version of the VVSG).
- 4.3.1.5. *Identification of the Voting System.* Manufacturers must identify the system submitted for testing by providing its name and applicable version number. If the system submitted has been previously fielded, but the Manufacturer wishes to change its name or version number after receipt of EAC certification, it must provide identification information on both the past name or names and the new, proposed name. This requirement might occur in systems submitted for modification, for their first EAC certification, or for a certification upgrade.
- 4.3.1.6. *Description of the Voting System.* Manufacturers must provide a brief description of the system or modification being submitted for testing and certification. This description shall include the following information:
  - 4.3.1.6.1. A listing of all components of the system submitted.
  - 4.3.1.6.2. Each component's version number.
  - 4.3.1.6.3. A complete list of each configuration of the system's components that could be fielded as the certified voting system.<sup>1</sup>
  - 4.3.1.6.4. Any other information necessary to identify the specific configuration being submitted for certification.

---

<sup>1</sup> An EAC certification applies to the configuration of components (the voting system) presented for testing. A voting system may be fielded without using each of the components that formed the system presented, since voting systems, as certified, may contain optional or redundant components to meet the varying needs of election officials. Systems may not be fielded with additional components or without sufficient components to properly prosecute an election, as neither individual components nor separately tested systems may be combined to create new certified voting systems.

- 4.3.1.7. *Date Submitted.* Manufacturers must note the date the application was submitted for EAC approval.
- 4.3.1.8. *Signature.* The Manufacturer must affix the signature of the authorized management representative.
- 4.3.2. Submission of the Application Package. Manufacturers must submit a copy of the application form described above and copies of the voting system's (1) Implementation Statement, (2) functional diagram, and (3) System Overview documentation submitted to the VSTL as a part of the Technical Data Package
- 4.3.2.1. *Application Form.* Application forms will be available on the EAC Web site: [www.eac.gov](http://www.eac.gov). The application form submitted to the EAC must be signed; dated; and fully, accurately, and completely filled out. The EAC will not accept incomplete or inaccurate applications.
- 4.3.2.2. *Implementation Statement.* The Manufacturer must submit with the application form a copy of the voting system's Implementation Statement, which must meet the requirements of the VVSG (VVSG 2005—Version 1.0, Vol. I, Section 1.6.4). If an existing system is being submitted with a modification, the Manufacturer must submit a copy of a revised Implementation Statement.
- 4.3.2.3. *Functional Diagram.* The Manufacturer must submit with the application form a high-level Functional Diagram of the voting system that includes all of its components. The diagram must portray how the various components relate and interact.
- 4.3.2.4. *System Overview.* The Manufacturer must submit with the application form a copy of the voting system's System Overview documentation submitted to the VSTL as a part of the Technical Data Package. This document must meet the requirements of the VVSG (VVSG 2005—Version 1.0, Vol. II, Section 2.2).
- 4.3.2.5. *Submission.* Applications, with the accompanying documentation, shall be submitted in Adobe PDF, Microsoft Word, or other electronic formats as prescribed by the Program Director. Information on how to submit packages will be posted on the EAC Web site: [www.eac.gov](http://www.eac.gov).
- 4.3.3. EAC Review. Upon receipt of a Manufacturer's application package, the EAC will review the submission for completeness and accuracy. If the application package is incomplete, the EAC will return it to the Manufacturer with instructions for resubmission. If the form submitted is acceptable, the Manufacturer will be notified and provided a unique application number within five (5) business days of the EAC's receipt of the application.

- 4.4. Test Plan.** The Manufacturer shall authorize the VSTL identified in its application to submit a test plan directly to the EAC. This plan shall provide for testing of the system sufficient to ensure it is functional and meets all applicable voting system standards.
- 4.4.1. **Development.** An accredited laboratory will develop test plans that use appropriate test protocols, standards, or test suites developed by the laboratory. Laboratories must use all applicable protocols, standards, or test suites issued by the EAC.
- 4.4.2. **Required Testing.** Test plans shall be developed to ensure that a voting system is functional and meets all requirements of the applicable, approved voting system standards. The highest level of care and vigilance is required to ensure that comprehensive test plans are created. A test plan should ensure that the voting system meets all applicable standards and that test results and other factual evidence of the testing are clearly documented. System testing must meet the requirements of the VVSG. Generally, full testing will be required of any voting system applying for certification, regardless of previous certification history.
- 4.4.2.1. *New System.* A new system shall be subject to full testing of all hardware and software according to applicable voting system standards.
- 4.4.2.2. *System Not Previously EAC Certified.* A system not previously certified by the EAC shall be fully tested as a new system.
- 4.4.2.3. *Modification.* A modification to a previously EAC-certified voting system shall be tested in a manner necessary to ensure that all changes meet applicable voting system standards and that the modified system (as a whole) will properly and reliably function. Any system submitted for modification shall be subject to full testing of the modifications (delta testing) and those systems or subsystems altered or impacted by the modification (regression testing). The system will also be subject to system integration testing to ensure overall functionality. The modification will be tested to the version or versions of the VVSG/VSS currently accepted for testing and certification by the EAC. This requirement, however, does not mean that the full system must be tested to such standards. If the system has been previously certified to a VVSG/VSS version deemed acceptable by the EAC (see Section 3.2.2.2), it may retain that level of certification with only the modification being tested to the present version(s).
- 4.4.2.4. *EAC Identified Systems.* Previously certified systems identified for retesting by the EAC (see Section 3.4.4) shall be tested as directed by the Program Director (after consultation with NIST, VSTLs, or other technical experts as necessary).
- 4.4.2.5. *Certification Upgrade.* A previously certified system submitted for testing to a new voting system standard (without modification) shall be tested in a manner necessary to ensure that the system meets all requirements of the new

standards. The VSTL shall create a test plan that identifies the differences between the new and old standards and, based upon the differences, fully retest all hardware and software components affected.

4.4.3. Format. Test labs shall issue test plans consistent with the requirements in VVSG, Vol. II and any applicable EAC guidance.

4.4.4. EAC Approval. All test plans are subject to EAC approval. No test report will be accepted for technical review unless the test plan on which it is based has been approved by EAC's Program Director.

4.4.4.1. *Review*. All test plans must be reviewed for adequacy by the Program Director. For each submission, the Program Director will determine whether the test plan is acceptable or unacceptable. Unacceptable plans will be returned to the laboratory for further action. Acceptable plans will be approved. Although Manufacturers may direct test labs to begin testing before approval of a test plan, the Manufacturer bears the full risk that the test plan (and thus any tests performed) will be deemed unacceptable.

4.4.4.2. *Unaccepted Plans*. If a plan is not accepted, the Program Director will return the submission to the Manufacturer's identified VSTL for additional action. Notice of unacceptability will be provided in writing to the laboratory and include a description of the problems identified and steps required to remedy the test plan. A copy of this notice will also be sent to the Manufacturer. Questions concerning the notice shall be forwarded to the Program Director in writing. Plans that have not been accepted may be resubmitted for review after remedial action is taken.

4.4.4.3. *Effect of Approval*. Approval of a test plan is required before a test report may be filed. In most cases, approval of a test plan signifies that the tests proposed, if performed properly, are sufficient to fully test the system. A test plan, however, is approved based on the information submitted. New or additional information may require a change in testing requirements at any point in the certification process.

4.5. **Testing**. During testing, Manufacturers are responsible for enabling VSTLs to report any changes to a voting system or an approved test plan directly to the EAC. Manufacturers shall also enable VSTLs to report all test failures or anomalies directly to the EAC.

4.5.1. Changes. Any changes to a voting system, initiated as a result of the testing process, will require submission of an updated Implementation Statement, functional diagram, and System Overview document and, potentially, an updated test plan. Test plans must be updated whenever a change to a voting system requires deviation from the test plan originally approved by the EAC. Changes requiring alteration or deviation from the originally approved test plan must be submitted to the EAC (by the VSTL) for approval before the completion of testing. The submission shall include an updated

Implementation Statement, functional diagram, and System Overview, as needed. Changes not affecting the test plan shall be reported in the test report. The submission shall include an updated Implementation Statement, functional diagram, and System Overview document, as needed.

- 4.5.2. Test Anomalies or Failures. Manufacturers shall enable VSTLs to notify the EAC directly and independently of any test anomalies, or failures during testing. The VSTLs shall ensure that all anomalies or failures are addressed and resolved before testing is completed. All test failures, anomalies and actions taken to resolve such failures and anomalies shall be documented by the VSTL in an appendix to the test report submitted to the EAC. These matters shall be reported in a matrix, or similar format, that identifies the failure or anomaly, the applicable voting system standards, and a description of how the failure or anomaly was resolved. Associated or similar anomalies/failures may be summarized and reported in a single entry on the report (matrix) as long as the nature and scope of the anomaly/failure is clearly identified.
- 4.6. **Test Report.** Manufacturers shall enable their identified VSTL to submit test reports directly to the EAC. The VSTL shall submit test reports only if the voting system has been tested and all tests identified in the test plan have been successfully performed.
  - 4.6.1. Submission. The test reports shall be submitted to the Program Director. The Program Director shall review the submission for completeness. Any reports showing incomplete or unsuccessful testing will be returned to the test laboratory for action and resubmission. Notice of this action will be provided to the Manufacturer. Test reports shall be submitted in Adobe PDF, Microsoft Word, or other electronic formats as prescribed by the Program Director. Information on how to submit reports will be posted on the EAC Web site: [www.eac.gov](http://www.eac.gov).
  - 4.6.2. Format. Manufacturers shall ensure that test labs submit reports consistent with the requirements in the VVSG and this Manual.
  - 4.6.3. Technical Review. A technical review of the test report, technical documents, and test plan will be conducted by EAC technical experts. The EAC may require the submission of additional information from the VSTL or Manufacturer if deemed necessary to complete the review. These experts will submit a report outlining their findings to the Program Director. The report will provide an assessment of the completeness, appropriateness, and adequacy of the VSTL's testing as documented in the test report.
  - 4.6.4. Program Director's Recommendation. The Program Director shall review the report and take one of the following actions:
    - 4.6.4.1. Recommend certification of the candidate system consistent with the reviewed test report and forward it to the Decision Authority for action (Initial Decision); or

4.6.4.2. Refer the matter back to the technical reviewers for additional specified action and resubmission.

**4.7. Initial Decision on Certification.** Upon receipt of the report and recommendation forwarded by the Program Director, the Decision Authority shall issue an Initial Decision on Certification. The decision shall be forwarded to the Manufacturer consistent with the requirements of this Manual.

4.7.1. An Initial Decision granting certification shall be processed consistent with Chapter 5 of this Manual.

4.7.2. An Initial Decision denying certification shall be processed consistent with Chapter 6 of this Manual.

## 5. Grant of Certification

**5.1. Overview.** The grant of certification is the formal process through which EAC acknowledges that a voting system has successfully completed conformance testing to an appropriate set of standards or guidelines. The grant of certification begins with the Initial Decision of the Decision Authority. This decision becomes final after the Manufacturer confirms that the final version of the software that was certified and which the Manufacturer will deliver with the certified system has been subject to a trusted build, placed in an EAC-approved repository, and can be verified using the Manufacturer's system identification tools. After a certification is issued, the Manufacturer is provided a Certificate of Conformance and relevant information about the system is added to the EAC Web site. Manufacturers with certified voting systems are responsible for ensuring that each system they produce is properly labeled as certified.

**5.2. Applicability of This Chapter.** This chapter applies when the Decision Authority makes an Initial Decision to grant a certification to a voting system based on the materials and recommendation provided by the Program Director.

**5.3. Initial Decision.** The Decision Authority shall make a written decision on all voting systems submitted for certification and issue the decision to a Manufacturer. When such decisions result in a grant of certification, the decision shall be considered preliminary and referred to as an *Initial Decision* pending required action by the Manufacturer. The Initial Decision shall:

5.3.1. State the preliminary determination reached (granting certification).

5.3.2. Inform the Manufacturer of the steps that must be taken to make the determination final and receive a certification. This action shall include providing the Manufacturer with specific instructions, guidance, and procedures for confirming and documenting that the final certified version of the software meets the requirements for:

5.3.2.1. Performing and documenting a trusted build pursuant to Section 5.6 of this chapter.

5.3.2.2. Depositing software in an approved repository pursuant to Section 5.7 of this chapter.

5.3.2.3. Creating and making available system verification tools pursuant to Section 5.8 of this chapter.

5.3.3. Certification is not final until the Manufacturer accepts the certification and all conditions placed on the certification.

**5.4. Pre-Certification Requirements.** Before an Initial Decision becomes final and a certification is issued, Manufacturers must ensure certain steps are taken. They must confirm that the final version of the software that was certified and which the Manufacturer will deliver with the certified system has been subject to a trusted build (see Section 5.6), has been delivered for deposit in an EAC-approved repository (see Section 5.7), and can be verified using

Manufacturer-developed identification tools (see Section 5.8). The Manufacturer must provide the EAC documentation demonstrating compliance with these requirements.

**5.5. Trusted Build.** A software build (also referred to as a compilation) is the process whereby source code is converted to machine-readable binary instructions (executable code) for the computer. A “trusted build” (or trusted compilation) is a build performed with adequate security measures implemented to give confidence that the executable code is a verifiable and faithful representation of the source code. A trusted build creates a chain of evidence from the Technical Data Package and source code submitted to the VSTLs to the actual executable programs that are run on the system. Specifically, the build will do the following:

- 5.5.1. Demonstrate that the software was built as described in the Technical Data Package.
- 5.5.2. Show that the tested and approved source code was actually used to build the executable code used on the system.
- 5.5.3. Demonstrate that no elements other than those included in the Technical Data Package were introduced in the software build.
- 5.5.4. Document for future reference the configuration of the system certified.

**5.6. Trusted Build Procedure.** A trusted build is a three-step process: (1) the build environment is constructed, (2) the source code is loaded onto the build environment, and (3) the executable code is compiled and the installation device is created. The process may be simplified for modification to previously certified systems. In each step, a minimum of two witnesses from different organizations is required to participate. These participants must include a VSTL representative and vendor representative. Before creating the trusted build, the VSTL must complete the source code review of the software delivered from the vendor for compliance with the VVSG and must produce and record file signatures of all source code modules.

5.6.1. Constructing the Build Environment. The VSTL shall construct the build environment in an isolated environment controlled by the VSTL, as follows:

- 5.6.1.1. The device that will hold the build environment shall be completely erased by the VSTL to ensure a total and complete cleaning of it. The VSTL shall use commercial off-the-shelf software, purchased by the laboratory, for cleaning the device.
- 5.6.1.2. The VSTL, with vendor consultation and observation, shall construct the build environment.
- 5.6.1.3. After construction of the build environment, the VSTL shall produce and record a file signature of the build environment.

- 5.6.2. Loading Source Code Onto the Build Environment. After successful source code review, the VSTL shall load source code onto the build environment as follows:
- 5.6.2.1. The VSTL shall check the file signatures of the source code modules and build environment to ensure that they are unchanged from their original form.
  - 5.6.2.2. The VSTL shall load the source code onto the build environment and produce and record the file signature of the resulting combination.
  - 5.6.2.3. The VSTL shall capture a disk image of the combination build environment and source code modules immediately before performing the build.
  - 5.6.2.4. The VSTL shall deposit the disk image into an authorized archive to ensure that the build can be reproduced, if necessary, at a later date.
- 5.6.3. Creating the Executable Code. Upon completion of all the tasks outlined above, the VSTL shall produce the executable code.
- 5.6.3.1. The VSTL shall produce and record a file signature of the executable code.
  - 5.6.3.2. The VSTL shall deposit the executable code into an EAC-approved software repository and create installation disk(s) from the executable code.
  - 5.6.3.3. The VSTL shall produce and record file signatures of the installation disk(s) in order to provide a mechanism to validate the software before installation on the voting system in a purchasing jurisdiction.
  - 5.6.3.4. The VSTL shall install the executable code onto the system submitted for testing and certification before completion of system testing.
- 5.6.4. Trusted Build for Modifications. The process of building new executable code when a previously certified system has been modified is somewhat simplified.
- 5.6.4.1. The build environment used in the original certification is removed from storage and its file signature verified.
  - 5.6.4.2. After source code review, the modified files are placed onto the verified build environment and new executable files are produced.
  - 5.6.4.3. If the original build environment is unavailable or its file signatures cannot be verified against those recorded from the original certification, then the more labor-intensive process of creating the build environment must be performed. Further source code review may be required of unmodified files to validate that they are unmodified from their originally certified versions.

**5.7. Depositing Software in an Approved Repository.** After EAC certification has been granted, the VSTL project manager, or an appropriate delegate of the project manager, shall deliver for deposit the following elements in one or more trusted archive(s) (repositories) designated by the EAC:

- 5.7.1. Source code used for the trusted build and its file signatures.
- 5.7.2. Disk image of the pre-build, build environment, and any file signatures to validate that it is unmodified.
- 5.7.3. Disk image of the post-build, build environment, and any file signatures to validate that it is unmodified.
- 5.7.4. Executable code produced by the trusted build and its file signatures of all files produced.
- 5.7.5. Installation device(s) and file signatures.

**5.8. System Identification Tools.** The Manufacturer shall provide tools through which a fielded voting system may be identified and demonstrated to be unmodified from the system that was certified. The purpose of this requirement is to make such tools available to Federal, State, and local officials to identify and verify that the equipment used in elections is unmodified from its certified version. Manufacturers may develop and provide these tools as they see fit. The tools, however, must provide the means to identify and verify hardware and software. The EAC may review the system identification tools developed by the Manufacturer to ensure compliance. System identification tools include the following examples:

- 5.8.1. Hardware is commonly identified by model number and revision number on the unit, its printed wiring boards (PWBs), and major subunits. Typically, hardware is verified as unmodified by providing detailed photographs of the PWBs and internal construction of the unit. These images may be used to compare with the unit being verified.
- 5.8.2. Software operating on a host computer will typically be verified by providing a self-booting compact disk (CD) or similar device that verifies the file signatures of the voting system application files AND the signatures of all nonvolatile files that the application files access during their operation. Note that the creation of such a CD requires having a file map of all nonvolatile files that are used by the voting system. Such a tool must be provided for verification using the file signatures of the original executable files provided for testing. If during the certification process modifications are made and new executable files created, then the tool must be updated to reflect the file signatures of the final files to be distributed for use. For software operating on devices in which a self-booting CD or similar device cannot be used, a procedure must be provided to allow identification and verification of the software that is being used on the device.

**5.9. Documentation.** Manufacturers shall provide documentation to the Program Director verifying that the trusted build has been performed, software has been deposited in an approved repository, and system identification tools are available to election officials. The Manufacturer

shall submit a letter, signed by both its management representative and a VSTL official, stating (under penalty of law) that it has (1) performed a trusted build consistent with the requirements of Section 5.6 of this Manual, (2) deposited software consistent with Section 5.7 of this Manual, and (3) created and made available system identification tools consistent with Section 5.8 of this Manual. This letter shall also include (as attachments) a copy and description of the system identification tool developed under Section 5.8 above.

**5.10. Agency Decision.** Upon receipt of documentation demonstrating the successful completion of the requirements above and recommendation of the Program Director, the Decision Authority will issue an Agency Decision granting certification and providing the Manufacturer with a certification number and Certificate of Conformance.

**5.11. Certification Document.** A Certificate of Conformance will be provided to Manufacturers for voting systems that have successfully met the requirements of the EAC Certification Program. The document will serve as the Manufacturer's evidence that a particular system is certified to a particular set of voting system standards. The EAC certification and certificate apply only to the specific voting system configuration(s) identified, submitted and evaluated under the Certification Program. Any modification to the system not authorized by the EAC will void the certificate. The certificate will include the product (voting system) name, the specific model or version of the product tested, the name of the VSTL conducting the testing, identification of the standards to which the system was tested, the EAC certification number for the product, and the signature of the EAC Executive Director. The certificate will also identify each of the various configurations of the voting system's components that may be represented as certified.

**5.12. Certification Number and Version Control.** Each system certified by the EAC will receive a certification number that is unique to the system and will remain with the system until such time as the system is decertified, sufficiently modified, or tested and certified to newer standards. Generally, when a previously certified system is issued a new certification number, the Manufacturer will be required to change the system's name or version number.

**5.12.1. New Voting Systems and Those Not Previously Certified by the EAC.** All systems receiving their first certification from the EAC will receive a new certification number. Manufacturers must provide the EAC with the voting system's name and version number during the application process (see Chapter 4). Systems previously certified by another body may retain the previous system name and version number unless the system was modified before its submission to the EAC. Such modified systems must be submitted with a new naming convention (i.e., a new version number).

**5.12.2. Modifications.** Voting systems previously certified by the EAC and submitted for certification of a modification will generally receive a new voting system certification number. Such modified systems must be submitted with a new naming convention (i.e., a new version number). In rare instances, the EAC may authorize retention of the same certification and naming convention when the modification is so minor that it does not represent a substantive change in the voting system. A request for such authorization must be made and approved by the EAC during the application phase of the program.

5.12.3. **Certification Upgrade.** Voting systems previously certified and submitted (without modification) for testing to a new version of the VVSG will receive a new certification number. In such cases, however, the Manufacturer will not be required to change the system name or version.

5.12.4. **De Minimis Change.** Voting systems previously certified and implementing an approved de minimis change (per Chapter 3) will not be issued a new certification number and are not required to implement a new naming convention.

**5.13. Publication of EAC Certification.** The EAC will publish and maintain on its Web site a list of all certified voting systems, including copies of all Certificates of Conformance, the supporting test report, and information about the voting system and Manufacturer. Such information will be posted immediately following the Manufacturer's receipt of the EAC Final Decision and Certificate of Conformance.

**5.14. Representation of EAC Certification.** Manufacturers may not represent or imply that a voting system is certified unless it has received a Certificate of Conformance for that system. Statements regarding EAC certification in brochures, on Web sites, on displays, and in advertising/sales literature must be made solely in reference to specific systems. Any action by a Manufacturer to suggest EAC endorsement of its product or organization is strictly prohibited and may result in a Manufacturer's suspension or other action pursuant to Federal civil and criminal law.

**5.15. Mark of Certification Requirement.** Manufacturers shall post a mark of certification on all EAC-certified voting systems produced. This mark or label must be securely attached to the system before sale, lease, or release to third parties. A mark of certification shall be made using an EAC-mandated template available for download on the EAC Web site: [www.eac.gov](http://www.eac.gov). These templates identify the version of the VVSG or VSS to which the system is certified. Use of this template shall be mandatory. The EAC mark must be displayed as follows:

5.15.1. The Manufacturer may use only the mark of certification that accurately reflects the certification held by the voting system as a whole. The certification of individual components or modifications shall not be independently represented by a mark of certification. In the event a system has components or modifications tested to various (later) versions of the VVSG, the system shall bear only the mark of certification of the standard to which the system (as a whole) was tested and certified (i.e. the lesser standard). Ultimately, a voting system shall only display the mark of certification of the oldest or least rigorous standard to which any of its components are certified.

5.15.2. The mark shall be placed on the outside of a unit of voting equipment in a place readily visible to election officials. The mark need not be affixed to each of the voting system's components. The mark shall be affixed to either (1) each unit that is used to cast ballots or (2) each unit that is used to tabulate ballots.

5.15.3. The notice shall be securely affixed to the voting system. The label shall not be a paper label. "Securely affixed" means that the label is etched, engraved, stamped, silk-

screened, indelibly printed, or otherwise securely marked on a permanently attached part of the equipment or on a nameplate of metal, plastic, or other sturdy material fastened to the equipment by use of welding, riveting, or adhesive.

5.15.4. The label must be designed to last the expected lifetime of the voting system in the environment in which the system may be operated and must not be readily detachable.

**5.16. Information to Election Officials Purchasing Voting Systems.** The user's manual or instruction manual for a certified voting system shall warn purchasers that changes or modifications not tested and certified by the EAC will void the EAC certification of the voting system. In cases in which the manual is provided only in a form other than paper, such as on a CD or over the Internet, the information required in this section may be included in this alternative format provided the election official can reasonably be expected to have the capability to access information in that format.

## 6. Denial of Certification

- 6.1. Overview.** When the Decision Authority issues an Initial Decision denying certification, the Manufacturer has certain rights and responsibilities. The Manufacturer may request an opportunity to cure the defects identified by the Decision Authority. In addition, the Manufacturer may request that the Decision Authority reconsider the Initial Decision after the Manufacturer has had the opportunity to review the record and submit supporting written materials, data, and the rationale for its position. Finally, in the event reconsideration is denied, the Manufacturer may appeal the decision to the Appeal Authority.
- 6.2. Applicability of This Chapter.** This chapter applies when the Decision Authority makes an Initial Decision to deny an application for voting system certification based on the materials and recommendation provided by the Program Director.
- 6.3. Form of Decisions.** All agency determinations shall be made in writing. Moreover, all materials and recommendations reviewed or used by agency decision makers in arriving at an official determination shall be in written form.
- 6.4. Effect of Denial of Certification.** Upon receipt of the agency's decision denying certification—or in the event of an appeal, subject to the Decision on Appeal—the Manufacturer's application for certification is denied. Such systems will not be reviewed again by the EAC for certification unless the Manufacturer alters the system, retests it, and submits a new application for system certification.
- 6.5. The Record.** The Program Director shall maintain all documents related to a denial of certification. Such documents shall constitute the procedural and substantive record of the decision making process. Records may include the following:
- 6.5.1. The Program Director's report and recommendation to the Decision Authority.
  - 6.5.2. The Decision Authority's Initial Decision and Final Decision.
  - 6.5.3. Any materials gathered by the Decision Authority that served as a basis for a certification determination.
  - 6.5.4. All relevant and allowable materials submitted by the Manufacturer upon request for reconsideration or appeal.
  - 6.5.5. All correspondence between the EAC and a Manufacturer after the issuance of an Initial Decision denying certification.
