Partisan Allegation	Other Source for Allegation	Investigation?	Other Official Involvement?	Charged (Individuals)	Acquitted/Dismissal	Convicted/guilty pleas (Individuals)	Other Determination	Follow-up possible? (Open investigations and/or pending charges)	City/County	State	Date	Type of Election	Alleged instance of fraud	Original Source	Source 1	Resolution of Incident / allegation	Source of Resolution 1	Source of Resolution 2
		Federal						Yes	Arkansas		23-Oct-02		At least six dead people tried to register to vote, including one helped by a person also listed on campaign-spending reports as having received \$100 from the state Democratic party, said Marty Ryall, Republican Party chairman. Michael Cook, executive director of the Arkansas Democratic Party, said a former staffer had hired two teenagers to register voters and that they took names directly from the phone book. He said the incident happened seven months ago and that party officials are cooperating with the U.S. Attorney's Office.	Washington Times				
				1				Yes	California		16-May-02		A Lafayette man has been charged with voter fraud after registering his toy poodle, Barnabas, to vote, a move he says was meant to show lax registration oversight. Donald Miller, 78, has been charged with misdemeanor voter fraud. The Contra Costa County district attorney's office found out about the stunt after reports about Barnabas being called for jury duty in March.	AP				
									18th CD	California	3-Jun-02	congressional	Several voters have said they were tricked into registering to vote as Republicans when they were told they were signing a petition to lower taxes or applying for a rebate from the power company or some other falsehood.	Roll Call				
						1			Stockton	California	13-Jul-02	congressional	A Stockton man hired to register Republican voters pleaded guilty to forging someone's name on a voter registration card. The conviction is the first arising from a Republican funded voter registration drive that Democrats allege involved fraud.	Modesto Bee				
				8				Yes	Lynwood	California	16-Oct-03	city council	Eight family members of a councilman are charged with registering at nonexistent addresses	Los Angeles Times				
						1			Stockton	California	24-Mar-	unclear	paid worker pleads guilty to a misdemeanor charge of forging six registration cards in 2001	Recordnet				
	State								Solano	California	20-Oct-04	presidential	Solano County elections officers, suspecting fraud, have sent about 150 voter registration forms to the California Secretary of State's Office for examination. Officials say the questionable forms are the products of intense efforts by both Democrats and Republicans to register voters for the upcoming presidential election. That zeal, further fueled by cash given to so-called "bounty hunters" who sign up voters, may lead to intentional errors on voter forms, officials said - a misspelled name, a fabricated street address, a rearranged Social Security number.	Tri-Valley Herald (Pleasanton, CA)				
				1				Yes	Hayward City	California	1-Nov-05	school board	Roger Treskunoff, 51, a former school board candidate and former Hayward City Councilman was charged with creating fictitious names and registering those names as voters with the Alameda County Registrar of Voters.	Contra Costa Times

						1			San Joaquin	California	March 24, 2005; 6/16/2005	state senate	County says it is examining 1500 voter registration cards for fraud because of similar looking signatures.	Recordnet		June 2005: Paid worker charged with five felony counts of forging voter registration cards (none resulted in fraudulent votes) He admittedly forged 35 voter registration cards in 2004 when he was being paid \$5 for each voter he registered.	Modesto Bee	
		BOE					Yes		Denver	Colorado	16-Oct-04	presidential	A worker at the Election Commission found a registration form with her own name on it. When another form was cross-referenced with Vital Records, it was found to be from a dead person. Denver workers have forwarded 200 suspicious registrants to the DA. The voter outreach coordinator says the computer immediately flags names of voters who have registered more than once. Several other counties have found suspect voter registration forms.	Rocky Mountain News				
	Yes									Colorado	17-Oct-04	presidential	The Secretary of State accused the Attorney General of not doing enough to prosecute potential ballot crimes. The Secretary confirmed that 6,000 felons are registered to vote. A Denver woman told a TV station she had registered to vote 25 times and signed up several friends up to 40 times to help her boyfriend, a paid staffer for a community group registering voters	Atlanta Journal Constitution				
		State					Yes			Colorado	18-Oct-04	presidential	With just two weeks before the Nov. 2 election, the state has been rocked by evidence that some voter-registration drives have submitted applications with forged signatures. In other cases, would-be voters have applied to vote as many as 40 times. At the same time, some registration drives have collected applications and then failed to submit them by the Oct. 4 deadline, prompting Secretary of State Donetta Davidson to announce the use of provisional ballots last week. At yesterday's meeting with county clerks and district attorneys, Mrs. Davidson announced procedures for accepting provisional ballots, which are issued to people who say they have registered but whose names fail to appear on the voter roll. Such ballots would be marked "VRD," for "Voter Registration Drive." The would-be voter would have to produce identification and tell when and where they registered. The ballot later would be checked against the state's voter data-bases. The clerks are referring cases that appear to be blatant fraud, such as forged signatures, to the county attorneys. Bill Ritter, the Denver	Washington Times				
		Local		6			Yes		Denver	Colorado	28-Oct-04	presidential	Denver prosecutors charged two people Wednesday with falsely filling out multiple voter forms to boost their pay in a paid registration drive. Criminal cases are pending against four people for questionable registrations in the metro area, and there may be more before investigations are completed.	Rocky Mountain News				
		State					Yes		Orange	Florida	31-Oct-02	state senate	The State Attorney is investigating charges of illegal changes to party affiliations on voter registration cards for a primary. The scheme seems to have been targeted at Hispanics.	Orlando Sentinel

								Yes	Florida	Florida	23-Oct-04	presidential	Officials say that more than 4,200 students from many colleges and universities in the state had their party affiliation switched without them knowing and tricked into registering Republican when they were asked to sign an assortment of petitions and forms. Some students attributed the work to a company working for the Republican Party	AP				
		Local						Yes	Duval	Florida	29-Oct-04	presidential	Elections officials asked prosecutors to investigate possible voter fraud involving 25 registration forms with apparently bogus addresses.	Telegraph Herald (IA)				
								Yes		Florida	31-Oct-04	presidential	Students at Florida State and Florida A&M universities, some of whom signed petitions to legalize medical marijuana or impose stiffer penalties for child molesters, unknowingly had their party registration switched to Republican and their addresses changed. Officials say students at the University of Florida in Alachua County have made similar complaints and that about 4,000 potential voters in all have been affected. Local papers have traced some of the problems to a group hired by the Florida Republican Party, which has denounced the shenanigans. Switching voters' party affiliations does not affect their ability to vote, but changing addresses does, because when voters shows up at their proper polling places, they will not be registered there.	Washington Post				
							Charges dismissed as baseless			Florida	15-Dec-05	constitutional amendment	Fourteen months after a campaign to increase Florida's minimum wage drew allegations of voter fraud, a federal judge in South Florida has ruled at least some of those accusations against grass roots political group ACORN were so baseless they amount to defamation. Stuart alleged that ACORN improperly handled registration forms when it conducted voter registration drives, including not submitting Republican registrations to election officials. The judge upheld ACORN's counterclaim that Stuart's lack of evidence made his allegations libel and slander. An investigation by the Florida Department of Law Enforcement also found no evidence of criminal activity at ACORN, department officials confirmed Wednesday.	St. Petersburg Times				
	Federal							Yes	Fulton County	Georgia	4-Nov-05	presidential	The U.S. attorney for Georgia's Northern District is investigating the circumstances surrounding more than 2,400 "entirely fraudulent" voter registration applications submitted to Fulton County prior to the November 2004 elections, county elections officials say. Most of those suspect applications were submitted to the Georgia Secretary of State in September 2004 by the Georgia Coalition for the Peoples' Agenda, according to Atlanta attorney Harry W. MacDougald, a member of the Fulton County Board of Registration and Elections. Details of the federal investigation surfaced as part of litigation that challenges as unconstitutional Georgia's new voter photo identification law. Common Cause v. Billups. No. 4:05CV201 (N.D. Ga.). MacDougald made the investigation public in an affidavit submitted on behalf of defendants in the case	Fulton County Daily Report

				1				Yes	Minneapolis	Minnesota	17-Oct-04	presidential	A former ACORN official arrested for running a stop sign had 300 voter registration forms, some of them months old, in his trunk. State law requires they be submitted to the secretary of state within 10 days.	Atlanta Journal Constitution				
		Local		9				Yes	St. Louis	Missouri	7-Mar-01	city	St. Louis Prosecutor Jennifer Joyce convened a grand jury that is investigating 3,800 suspect voter registration cards, including several for dead aldermen. The cards were turned in Feb. 7, the deadline to register voters. Joyce said there have been no indictments.	St. Louis Post-Dispatch		Nine people are slated to be indicted today on charges of collecting or de-stroying 3,800 bogus voter registration cards that were submitted to the St. Louis Election Board on Feb. 7, 2001, the last day for registering to vote in the hotly contested mayoral primary in March. Nine people have been indicted for trying to register fraudulent voters and destroy the evidence. State registration forms now are numbered and a record is kept of which cards have gone to which groups for voter registration drives. The fake registrations are linked to four temporary workers who had been employed by ACORN.	11/7/2003, St. Louis Post Dispatch	11/11/2003, St. Louis Post Dispatch
		Federal		3				Yes	St. Louis	Missouri	17-Apr-01	presidential general election and mayoral primary	FBI subpoenas election board records on all people who registered to vote, cast ballots, was turned away at the polls, or whose voter registration was rejected from October 1 [2000] through March 6 [2001]; Senator Bond calls for further investigations because his office learned from state election officials that 24,000 registered voters in the city and 33,000 voters in the county were registered to vote somewhere else	St. Louis Post-Dispatch		Three workers are charged with turning in fraudulent voter registration applications a few weeks before the mayoral primary	St. Louis Post-Dispatch (March 5, 2002)	
						6			St. Louis	Missouri	17-Dec-04	mayoral	Six plead guilty to dozens of crimes involving falsifying voter registration forms ("6 plead guilty in vote fraud case")	St. Louis Post Dispatch		Prosecutor says all the cards were caught and no one voted illegally	St. Louis Post-Dispatch	
Yes	Federal							Yes	Nevada		17-Oct-04	presidential	Democrats said Voters Outreach of America, a Republican funded registration group run by Sprouls & Associates, destroyed Democratic voter registration forms. A former employee of the group told a Nevada TV station that registrations collected from Democrats had been destroyed instead of filed with the elections office. The head of the company denied the accusations	Atlanta Journal Constitution

								Yes	Clark County	Nevada	31-Oct-04	presidential	Voting Registrar Lomax said he found that canvassers returned stacks of 1,000 completed registration forms that often contained 30 to 50 applications filled out in the same handwriting. Lomax had no total figure for such fraudulent registrations. He also found that canvassers registered the same individuals several times over the span of a week. Some legitimately registered voters called to ask why they were getting registration forms--with their party affiliation changed, Lomax said. Apparently some canvassers went through the phone book and reregistered people without their consent, listing their parties incorrectly, Lomax said. Though registration drive organizers told Lomax's office that canvassers were paid by the hour, many canvassers told his staff and even provided pay stubs that showed they were paid \$2 for every completed registration form they collected in malls, stores and neighborhoods, Lomax said. "They were on both sides. It wasn't just Democrats, it wasn't just Republicans," Lomax said. "The money was clearly the root of all evil here. They were paying people to register the voters. And the people doing this were way down the economic scale, and they wanted their money and they were just filling in forms.	Chicago Tribune				
		Federal					Yes		New Mexico		10-Sep-04		US Attorney forms a task force after finding two teenagers registered to vote	Albuquerque Journal				
Yes							Yes	Bernalillo County	New Mexico		15-Sep-04	presidential	Three Republican candidates want to examine all voter registration forms submitted by a woman who, while working for a group that signs up new voters, registered a 13-year-old New Mexico boy.	AP

		State						Yes	Charlotte	North Carolina	24-Oct-04	presidential	Officials are investigating ACORN because an ACORN organizer found that one of its workers had faked about 70 registrations. The worker was fired and the information turned over to the state board. A similar problem with a consumer interest group in Wake County has also been turned over to state officials	Charlotte Observer				
							BOE and DMV find small # of questionable registrations			North Carolina	24-Oct-04		The Charlotte Observer found more than 60,000 people who appear to be registered in both Carolinas. Alamance County Sheriff says illegal immigrants are registering to vote using false documents at drivers license offices. North Carolina is investigating two groups that may have falsely registered new voters. Some are worried that noncitizens could vote because in North Carolina one can get a drivers license without a social security number. The Elections division and the DMV ran two checks of people who received drivers licenses without proof of citizenship and found only a handful who had registered to vote.	AP				
								Yes	Mecklenburg County	North Carolina	28-Sep-05		Mecklenburg County commissioner Bill James and Libertarian Lewis Guignard formally challenged the registration of more than 400 homeless voters Tuesday, saying they had improperly registered using commercial addresses. James and Guignard said the 464 voters challenged in their complaint incorrectly used the addresses of the Urban Ministries at 945 N. College St., the Charlotte Rescue Mission at 907 W. First St. or the Salvation Army at 534 Spratt St. to register, even though those are commercial addresses where the voters could not permanently live.	Charlotte Observer				
								Yes	Cincinnati	Ohio	20-Aug-03	city council	More than 70 people have claimed a Walnut Hills tailoring shop as their home address while registering to vote, leading the Hamilton County Board of Elections to subpoena the tailor, who is a candidate for Cincinnati City Council.	Cincinnati Enquirer				
				1				Yes	Franklin	Ohio	8-Sep-04	presidential	A part-time worker for ACORN was indicted for falsely filling out and signing a voter registration card	Columbus Dispatch				
		BOE/State		1				Yes		Ohio	15-Oct-04	presidential	In Hamilton County, the Board of Elections has subpoenaed 19 registered voters who elections officials don't believe exist. The Summit County Board of Elections in Akron has asked Ohio Attorney General Jim Petro to investigate 803 allegedly fraudulent voter-registration cards, many of which appeared to be in the same handwriting. In Lake County, east of Cleveland, several voter-registration cards seem to have forged signatures, elections officials say.	Cincinnati Enquirer		An Akron woman was charged with filling out false registration cards. She may be the only person to face criminal charges after a yearlong state and federal investigation. A task force of state, federal and local investigators was launched last year after hundreds of fake registrations were apparently filed throughout Ohio. The investigation resulted in no federal indictments. The two fake registration cards traced to the woman were turned in by Project Vote and not submitted to the Board because the organization thought they were suspicious.	11/8/2005	Beacon Journal

				1				Yes	Defiance	Ohio	31-Oct-04	presidential	The sheriff arrested a man for submitting 130 phony registration forms with such names as Mary Poppins and Dick Tracy. Authorities say he confessed to being paid in crack cocaine by an NAACP volunteer.	Dallas Morning News			11/8/2005	Akron Beacon Journal
		Unknown						Yes	Parma	Ohio	9-Jan-05	presidential	Three police officers are being investigated on accusations that they listed police headquarters as their home addresses when registering for the Nov. 2 election, officials said.	AP				
		State						Yes	Oregon	Oregon	17-Oct-04	presidential	The Secretary of State announced an investigation into allegations that a paid canvasser with Sproul & Associates had been told to register only Republicans. The head of the organization denied the accusations.	Atlanta Journal Constitution				
									Oregon	Oregon	30-Oct-04	presidential	In interviews, students at Mt. Hood and Chemeketa community colleges, Western Oregon University and the University of Oregon all told similar stories: They were approached on campus and asked to sign a petition, often urging lower auto-mobile insurance rates for students, and then asked to sign or initial a second document, which turned out to be a voter registration card. Many of the students were urged to mark Republican as their party affiliation; others were told to leave the party affiliation section blank but to put their initials next to Republican on that part of the form. Many of the students already were registered voters. Some students didn't realize they were registering to vote, or that their party affiliation was about to change. Nathan Sproul, whose company conducted the registration drive, did not respond to calls seeking comment. His firm has been accused of using similar tactics involving bogus petitions at colleges in Pennsylvania, according to the Pittsburgh Post-Gazette. In an earlier interview with The Oregonian, Sproul confirmed that his canvassers are paid a "bounty" of extra money for registering Republicans but said he did not think that was a problem. Yes									Milwaukee	Wisconsin	31-Oct-04	presidential	Citing a new list of more than 37,000 questionable addresses, the state Republican Party demanded that city officials require identification from all of those voters. If the city doesn't, the party says it is prepared to have volunteers challenge each individual -- including thousands who might be missing an apartment number on their registration -- at the polls. Democrats say this is a last minute effort to suppress turnout by creating long delays at the polls. This is in addition to the 5,619 bad addresses the party claimed. The state GOP chair said they had just focussed on Milwaukee because its voter list is a mess and cause for great alarm.	Milwaukee Journal Sentinel				
		Unknown						Yes	Madison	Wisconsin	10-May-05	presidential	The vast majority of voters alleged to have been phantoms because their verification forms were returned as undeliverable really exist and their cards were returned because of innocent mistakes in filling out voter registration forms. Of 1,194 verification cards returned, 16 are still be examined	Wisconsin State Journal

Pulaski	Arkansas	16-Apr-04		The US Department of Justice says county officials have violated election law and proposed a consent decree with the county regarding ballot gathering and counting. The Department investigated registration practices that may have disenfranchised numerous voters, including sending voters to multiple poll sites and voters wrongly missing from the registration list. Under the agreement, the county will fix the problems in the database and DOJ lawyers will monitor polling places and the clerk's office	AP			
	Colorado	31-Oct-04	presidential	Democrats are complaining about an attempt to remove up to 6,000 convicted felons from the electoral roll, at the behest of the state's Republican secretary of state, Donetta Davidson, despite a US federal law that prohibits eliminating a voter's rights within 90 days of an election to give time for the voter to protest.	The Observer			
	Florida	29-Sep-04	presidential	Secretary of State Hood tried to revive the discredited 2000 statewide purge list of suspected felons and ex-felons for 2004. That list disproportionately removed black voters from the rolls. The state tried to keep the list secret until forced to release it by court order. When it was released, it was found to contain a disproportionate number of black voters, including 2,000 who had had their rights restored and included several people who could show they had not criminal record at all. In addition, the list of 48,000 contained only 61 Hispanic names, way out of line with the strength of both the general Hispanic population and prison population. Hood was forced to drop the list	The Independent (UK)			
Newark	New Jersey	2-Nov-04	presidential	More than 200 voters sought court orders because they were turned away from a polling place, mostly because their names were not on voter lists. In 95% of the cases the judges ruled they could cast ballots.	AP			
Albany	New York	2-Nov-04	presidential	Students at SUNY Albany found their names no longer on the voter registration rolls, even though they had voted at the same location in the past	AP

 Nexis Articles - Voter Registration Fraud

Denver	Colorado	16-Oct-04	presidential	A worker at the Election Commission found a registration form with her own name on it. When another form was cross-referenced with Vital Records, it was found to be from a dead person. Denver workers have forwarded 200 suspicious registrants to the DA. The voter outreach coordinator says the computer immediately flags names of voters who have registered more than once. Several other counties have found suspect voter registration forms.	Rocky Mountain News		
	Colorado	17-Oct-04	presidential	The Secretary of State accused the Attorney General of not doing enough to prosecute potential ballot crimes. The Secretary confirmed that 8,000 felons are registered to vote. A Denver woman told a TV station she had registered to vote 25 times and signed up several friends up to 40 times to help her boyfriend, a paid staffer for a community group registering voters	Atlanta Journal Constitution		
	Colorado	18-Oct-04	presidential	With just two weeks before the Nov. 2 election, the state has been rocked by evidence that some voter-registration drives have submitted applications with forged signatures. In other cases, would-be voters have applied to vote as many as 40 times. At the same time, some registration drives have collected applications and then failed to submit them by the Oct. 4 deadline, prompting Secretary of State Donetta Davidson to announce the use of provisional ballots last week. At yesterday's meeting with county clerks and district attorneys, Mrs. Davidson announced procedures for accepting provisional ballots, which are issued to people who say they have registered but whose names fail to appear on the voter roll. Such ballots would be marked "VRD," for "Voter Registration Drive." The would-be voter would have to produce identification and tell when and where they registered. The ballot later would be checked against the state's voter data-bases. The clerks are referring cases that appear to be blatant fraud, such as forged signatures, to the county attorneys. Bill Ritter, the Denver district attorney. But he said he saw no pattern of a conspiracy to	Washington Times		
Denver	Colorado	28-Oct-04	presidential	Denver prosecutors charged two people Wednesday with falsely filling out multiple voter forms to boost their pay in a paid registration drive. Criminal cases are pending against four people for questionable registrations in the metro area, and there may be more before investigations are completed.	Rocky Mountain News		
Orange	Florida	31-Oct-02	state senate	The State Attorney is investigating charges of illegal changes to party affiliations on voter registration cards for a primary. The scheme seems to have been targetted at Hispanics.	Orlando Sentinel

	Florida	23-Oct-04	presidential	Officials say that more than 4,200 students from many colleges and universities in the state had their party affiliation switched without them knowing and tricked into registering Republican when they were asked to sign an assortment of petitions and forms. Some students attributed the work to a company working for the Republican Party	AP			
Duval	Florida	29-Oct-04	presidential	Elections officials asked prosecutors to investigate possible voter fraud involving 25 registration forms with apparently bogus addresses.	Telegraph Herald (IA)			
	Florida	31-Oct-04	presidential	Students at Florida State and Florida A&M universities, some of whom signed petitions to legalize medical marijuana or impose stiffer penalties for child molesters, unknowingly had their party registration switched to Republican and their addresses changed. Officials say students at the University of Florida in Alachua County have made similar complaints and that about 4,000 potential voters in all have been affected. Local papers have traced some of the problems to a group hired by the Florida Republican Party, which has denounced the shenanigans. Switching voters' party affiliations does not affect their ability to vote, but changing addresses does, because when voters shows up at their proper polling places, they will not be registered there.	Washington Post			
	Florida	16-Dec-05	constitutional amendment	Fourteen months after a campaign to increase Florida's minimum wage drew allegations of voter fraud, a federal judge in South Florida has ruled at least some of those accusations against grass roots political group ACORN were so baseless they amount to defamation. Stuart alleged that ACORN improperly handled registration forms when it conducted voter registration drives, including not submitting Republican registrations to election officials. The judge upheld ACORN's counterclaim that Stuart's lack of evidence made his allegations libel and slander. An investigation by the Florida Department of Law Enforcement also found no evidence of criminal activity at ACORN, department officials confirmed Wednesday.	St. Petersburg Times

 Nexis Articles - Voter Registration Fraud

Fulton County	Georgia	4-Nov-05	presidential	The U.S. attorney for Georgia's Northern District is investigating the circumstances surrounding more than 2,400 "entirely fraudulent" voter registration applications submitted to Fulton County prior to the November 2004 elections, county elections officials say. Most of those suspect applications were submitted to the Georgia Secretary of State in September 2004 by the Georgia Coalition for the Peoples' Agenda, according to Atlanta attorney Harry W. MacDougald, a member of the Fulton County Board of Registration and Elections. Details of the federal investigation surfaced as part of litigation that challenges as unconstitutional Georgia's new voter photo identification law. Common Cause v. Billups. No. 4:05CV201 (N.D. Ga.). MacDougald made the investigation public in an affidavit submitted on behalf of defendants in the case	Fulton County Daily Report			
Chicago	Illinois	12-Mar-04	primary	Chicago election officials say as many as 2,000 fraudulent voter registrations have turned up in advance of Tuesday's primary election. Two suspects are under investigation, the Chicago Tribune said, both of whom gathered registrations on behalf of the Puerto Rico Federal Affairs Administration.	UPI			
East St. Louis	Illinois	30-Oct-04	supreme court	Illinois Republicans on Friday urged officials to look into "potential instances of massive voter fraud" in East St. Louis, showing pictures of an East St. Louis Democratic precinct committeemen's home that dozens of people registered to vote have listed as their address. But it turns out that that address and another called into question aren't single-family homes but are boarding houses or apartments that may house dozens of people.	St. Louis Post Dispatch

	Oregon	17-Oct-04	presidential	The Secretary of State announced an investigation into allegations that a paid canvasser with Sproul & Associates had been told to register only Republicans. The head of the organization denied the accusations.	Atlanta Journal Constitution			
	Oregon	30-Oct-04	presidential	Chemeketa community colleges, Western Oregon University and the University of Oregon all told similar stories: They were approached on campus and asked to sign a petition, often urging lower auto-mobile insurance rates for students, and then asked to sign or initial a second document, which turned out to be a voter registration card. Many of the students were urged to mark Republican as their party affiliation; others were told to leave the party affiliation section blank but to put their initials next to Republican on that part of the form. Many of the students already were registered voters. Some students didn't realize they were registering to vote, or that their party affiliation was about to change. Nathan Sproul, whose company conducted the registration drive, did not respond to calls seeking comment. His firm has been accused of using similar tactics involving bogus petitions at colleges in Pennsylvania, according to the Pittsburgh Post-Gazette. In an earlier interview with The Oregonian, Sproul confirmed that his canvassers are paid a "bounty"	Newhouse News Service

					1			San Joaquin	California	March 24, 2005; 6/16/2005	state senate	County says it is examining 1500 voter registration cards for fraud because of similar looking signatures.	Recordnet		June 2005: Paid worker charged with five felony counts of forging voter registration cards (none resulted in fraudulent votes) He admittedly forged 35 voter registration cards in 2004 when he was being paid \$5 for each voter he registered.	Modesto Bee	
	BOE					Yes		Denver	Colorado	16-Oct-04	presidential	A worker at the Election Commission found a registration form with her own name on it. When another form was cross-referenced with Vital Records, it was found to be from a dead person. Denver workers have forwarded 200 suspicious registrants to the DA. The voter outreach coordinator says the computer immediately flags names of voters who have registered more than once. Several other counties have found suspect voter registration forms.	Rocky Mountain News				
Yes									Colorado	17-Oct-04	presidential	The Secretary of State accused the Attorney General of not doing enough to prosecute potential ballot crimes. The Secretary confirmed that 6,000 felons are registered to vote. A Denver woman told a TV station she had registered to vote 25 times and signed up several friends up to 40 times to help her boyfriend, a paid staffer for a community group registering voters	Atlanta Journal Constitution				
	State					Yes			Colorado	18-Oct-04	presidential	With just two weeks before the Nov. 2 election, the state has been rocked by evidence that some voter-registration drives have submitted applications with forged signatures. In other cases, would-be voters have applied to vote as many as 40 times. At the same time, some registration drives have collected applications and then failed to submit them by the Oct. 4 deadline, prompting Secretary of State Donetta Davidson to announce the use of provisional ballots last week. At yesterday's meeting with county clerks and district attorneys, Mrs. Davidson announced procedures for accepting provisional ballots, which are issued to people who say they have registered but whose names fail to appear on the voter roll. Such ballots would be marked "VRD," for "Voter Registration Drive." The would-be voter would have to produce identification and tell when and where they registered. The ballot later would be checked against the state's voter data-bases. The clerks are referring cases that appear to be blatant fraud, such as forged signatures, to the county attorneys. Bill Ritter, the Denver	Washington Times				
	Local		6			Yes		Denver	Colorado	28-Oct-04	presidential	Denver prosecutors charged two people Wednesday with falsely filling out multiple voter forms to boost their pay in a paid registration drive. Criminal cases are pending against four people for questionable registrations in the metro area, and there may be more before investigations are completed.	Rocky Mountain News				
	State					Yes		Orange	Florida	31-Oct-02	state senate	The State Attorney is investigating charges of illegal changes to party affiliations on voter registration cards for a primary. The scheme seems to have been targeted at Hispanics.	Orlando Sentinel

							Yes		Florida	23-Oct-04	presidential	Officials say that more than 4,200 students from many colleges and universities in the state had their party affiliation switched without them knowing and tricked into registering Republican when they were asked to sign an assortment of petitions and forms. Some students attributed the work to a company working for the Republican Party	AP				
		Local					Yes	Duval	Florida	29-Oct-04	presidential	Elections officials asked prosecutors to investigate possible voter fraud involving 25 registration forms with apparently bogus addresses.	Telegraph Herald (IA)				
							Yes		Florida	31-Oct-04	presidential	Students at Florida State and Florida A&M universities, some of whom signed petitions to legalize medical marijuana or impose stiffer penalties for child molesters, unknowingly had their party registration switched to Republican and their addresses changed. Officials say students at the University of Florida in Alachua County have made similar complaints and that about 4,000 potential voters in all have been affected. Local papers have traced some of the problems to a group hired by the Florida Republican Party, which has denounced the shenanigans. Switching voters' party affiliations does not affect their ability to vote, but changing addresses does, because when voters shows up at their proper polling places, they will not be registered there.	Washington Post				
						Charges dismissed as baseless			Florida	15-Dec-05	constitutional amendment	Fourteen months after a campaign to increase Florida's minimum wage drew allegations of voter fraud, a federal judge in South Florida has ruled at least some of those accusations against grass roots political group ACORN were so baseless they amount to defamation. Stuart alleged that ACORN improperly handled registration forms when it conducted voter registration drives, including not submitting Republican registrations to election officials. The judge upheld ACORN's counterclaim that Stuart's lack of evidence made his allegations libel and slander. An investigation by the Florida Department of Law Enforcement also found no evidence of criminal activity at ACORN, department officials confirmed Wednesday.	St. Petersburg Times				
	Federal						Yes	Fulton County	Georgia	4-Nov-05	presidential	The U.S. attorney for Georgia's Northern District is investigating the circumstances surrounding more than 2,400 "entirely fraudulent" voter registration applications submitted to Fulton County prior to the November 2004 elections, county elections officials say. Most of those suspect applications were submitted to the Georgia Secretary of State in September 2004 by the Georgia Coalition for the Peoples' Agenda, according to Atlanta attorney Harry W. MacDougald, a member of the Fulton County Board of Registration and Elections. Details of the federal investigation surfaced as part of litigation that challenges as unconstitutional Georgia's new voter photo identification law. Common Cause v. Billups. No. 4:05CV201 (N.D. Ga.). MacDougald made the investigation public in an affidavit submitted on behalf of defendants in the case	Fulton County Daily Report

								Yes	Clark County	Nevada	31-Oct-04	presidential	Voting Registrar Lomax said he found that canvassers returned stacks of 1,000 completed registration forms that often contained 30 to 50 applications filled out in the same handwriting. Lomax had no total figure for such fraudulent registrations. He also found that canvassers registered the same individuals several times over the span of a week. Some legitimately registered voters called to ask why they were getting registration forms--with their party affiliation changed, Lomax said. Apparently some canvassers went through the phone book and reregistered people without their consent, listing their parties incorrectly, Lomax said. Though registration drive organizers told Lomax's office that canvassers were paid by the hour, many canvassers told his staff and even provided pay stubs that showed they were paid \$2 for every completed registration form they collected in malls, stores and neighborhoods, Lomax said. "They were on both sides. It wasn't just Democrats, it wasn't just Republicans," Lomax said. "The money was clearly the root of all evil here. They were paying people to register the voters. And the people doing this were way down the economic scale, and they wanted their money and they were just filling in forms.	Chicago Tribune

		Unknown						Yes	Parma	Ohio	9-Jan-05	presidential	Three police officers are being investigated on accusations that they listed police headquarters as their home addresses when registering for the Nov. 2 election, officials said.	AP				
		State						Yes		Oregon	17-Oct-04	presidential	The Secretary of State announced an investigation into allegations that a paid canvasser with Sproul & Associates had been told to register only Republicans. The head of the organization denied the accusations.	Atlanta Journal Constitution				
										Oregon	30-Oct-04	presidential	In interviews, students at Mt. Hood and Chemeketa community colleges, Western Oregon University and the University of Oregon all told similar stories: They were approached on campus and asked to sign a petition, often urging lower auto-mobile insurance rates for students, and then asked to sign or initial a second document, which turned out to be a voter registration card. Many of the students were urged to mark Republican as their party affiliation; others were told to leave the party affiliation section blank but to put their initials next to Republican on that part of the form. Many of the students already were registered voters. Some students didn't realize they were registering to vote, or that their party affiliation was about to change. Nathan Sproul, whose company conducted the registration drive, did not respond to calls seeking comment. His firm has been accused of using similar tactics involving bogus petitions at colleges in Pennsylvania, according to the Pittsburgh Post-Gazette. In an earlier interview with The Oregonian, Sproul confirmed that his canvassers are paid a "bounty" of extra money for registering Republicans but said he did not think that was a problem. EAC Voting Fraud-Voter Intimidation Preliminary Research
 Nexis Articles - Wrongful Removal from Registration Lists

City / County	State	Date	Type of Election	Alleged Instance of fraud	Original Source	Source1	Source 2	Source 3
Pulaski	Arkansas	16-Apr-04		The US Department of Justice says county officials have violated election law and proposed a consent decree with the county regarding ballot gathering and counting. The Department investigated registration practices that may have disenfranchised numerous voters, including sending voters to multiple poll sites and voters wrongly missing from the registration list. Under the agreement, the county will fix the problems in the database and DOJ lawyers will monitor polling places and the clerk's office	AP			
	Colorado	31-Oct-04	presidential	Democrats are complaining about an attempt to remove up to 6,000 convicted felons from the electoral roll, at the behest of the state's Republican secretary of state, Donetta Davidson, despite a US federal law that prohibits eliminating a voter's rights within 90 days of an election to give time for the voter to protest.	The Observer			
	Florida	29-Sep-04	presidential	Secretary of State Hood tried to revive the discredited 2000 statewide purge list of suspected felons and ex-felons for 2004. That list disproportionately removed black voters from the rolls. The state tried to keep the list secret until forced to release it by court order. When it was released, it was found to contain a disproportionate number of black voters, including 2,000 who had had their rights restored and included several people who could show they had not criminal record at all. In addition, the list of 48,000 contained only 61 Hispanic names, way out of line with the strength of both the general Hispanic population and prison population. Hood was forced to drop the list	The Independent (UK)			
Newark	New Jersey	2-Nov-04	presidential	More than 200 voters sought court orders because they were turned away from a polling place, mostly because their names were not on voter lists. In 95% of the cases the judges ruled they could cast ballots.	AP			
Albany	New York	2-Nov-04	presidential	Students at SUNY Albany found their names no longer on the voter registration rolls, even though they had voted at the same location in the past	AP

 Nexis Articles - Voter Registration Fraud

City/ County	State	Date	Type of Election	Alleged Instance of fraud	Original Source	Source 1	Source 2	Source 3
	Arkansas	23-Oct-02		At least six dead people tried to register to vote, including one helped by a person also listed on campaign-spending reports as having received \$100 from the state Democratic party, said Marty Ryall, Republican Party chairman. Michael Cook, executive director of the Arkansas Democratic Party, said a former staffer had hired two teenagers to register voters and that they took names directly from the phone book. He said the incident happened seven months ago and that party officials are cooperating with the U.S. Attorney's Office.	Washington Times			
0	California	16-May-02		A Lafayette man has been charged with voter fraud after registering his toy poodle, Barnabas, to vote, a move he says was meant to show lax registration oversight. Donald Miller, 78, has been charged with misdemeanor voter fraud. The Contra Costa County district attorney's office found out about the stunt after reports about Barnabas being called for jury duty in March.	AP			
18th CD	California	3-Jun-02	congressional	Several voters have said they were tricked into registering to vote as Republicans when they were told they were signing a petition to lower taxes or applying for a rebate from the power company or some other falsehood.	Roll Call			
Stockton	California	13-Jul-02	congressional	A Stockton man hired to register Republican voters pleaded guilty to forging someone's name on a voter registration card. The conviction is the first arising from a Republican funded voter registration drive that Democrats allege involved fraud.	Modesto Bee			
Lynwood	California	16-Oct-03	city council	Eight family members of a councilman are charged with registering at nonexistent addresses	Los Angeles Times			
Stockton	California	24-Mar-04	unclear	paid worker pleads guilty to a misdemeanor charge of forging six registration cards in 2001	Recordnet			
Solano	California	20-Oct-04	presidential	Solano County elections officers, suspecting fraud, have sent about 150 voter registration forms to the California Secretary of State's Office for examination. Officials say the questionable forms are the products of intense efforts by both Democrats and Republicans to register voters for the upcoming presidential election. That zeal, further fueled by cash given to so-called "bounty hunters" who sign up voters, may lead to intentional errors on voter forms, officials said - a misspelled name, a fabricated street address, a rearranged Social Security number.	Tri-Valley Herald (Pleasanton, CA)			
Hayward City	California	1-Nov-05	school board	Roger Treskunoff, 51, a former school board candidate and former Hayward City Councilman was charged with creating fictitious names and registering those names as voters with the Alameda County Registrar of Voters.	Contra Costa Times			
San Joaquin	California	March 24, 200; 4/8/16/2005	state senate	County says it is examining 1500 voter registration cards for fraud because of similar looking signatures.	Recordnet

 Nexis Articles - Voter Registration Fraud

Denver	Colorado	16-Oct-04	presidential	A worker at the Election Commission found a registration form with her own name on it. When another form was cross-referenced with Vital Records, it was found to be from a dead person. Denver workers have forwarded 200 suspicious registrants to the DA. The voter outreach coordinator says the computer immediately flags names of voters who have registered more than once. Several other counties have found suspect voter registration forms.	Rocky Mountain News			
	Colorado	17-Oct-04	presidential	The Secretary of State accused the Attorney General of not doing enough to prosecute potential ballot crimes. The Secretary confirmed that 6,000 felons are registered to vote. A Denver woman told a TV station she had registered to vote 25 times and signed up several friends up to 40 times to help her boyfriend, a paid staffer for a community group registering voters	Atlanta Journal Constitution			
	Colorado	18-Oct-04	presidential	With just two weeks before the Nov. 2 election, the state has been rocked by evidence that some voter-registration drives have submitted applications with forged signatures. In other cases, would-be voters have applied to vote as many as 40 times. At the same time, some registration drives have collected applications and then failed to submit them by the Oct. 4 deadline, prompting Secretary of State Donetta Davidson to announce the use of provisional ballots last week. At yesterday's meeting with county clerks and district attorneys, Mrs. Davidson announced procedures for accepting provisional ballots, which are issued to people who say they have registered but whose names fail to appear on the voter roll. Such ballots would be marked "VRD," for "Voter Registration Drive." The would-be voter would have to produce identification and tell when and where they registered. The ballot later would be checked against the state's voter data-bases. The clerks are referring cases that appear to be blatant fraud, such as forged signatures, to the county attorneys. Bill Ritter, the Denver district attorney, said he saw no pattern of a conspiracy to	Washington Times			
Denver	Colorado	28-Oct-04	presidential	Denver prosecutors charged two people Wednesday with falsely filling out multiple voter forms to boost their pay in a paid registration drive. Criminal cases are pending against four people for questionable registrations in the metro area, and there may be more before investigations are completed.	Rocky Mountain News			
Orange	Florida	31-Oct-02	state senate	The State Attorney is investigating charges of illegal changes to party affiliations on voter registration cards for a primary. The scheme seems to have been targeted at Hispanics.	Orlando Sentinel

	Florida	23-Oct-04	presidential	Officials say that more than 4,200 students from many colleges and universities in the state had their party affiliation switched without them knowing and tricked into registering Republican when they were asked to sign an assortment of petitions and forms. Some students attributed the work to a company working for the Republican Party	AP			
Duval	Florida	29-Oct-04	presidential	Elections officials asked prosecutors to investigate possible voter fraud involving 25 registration forms with apparently bogus addresses.	Telegraph Herald (IA)			
	Florida	31-Oct-04	presidential	Students at Florida State and Florida A&M universities, some of whom signed petitions to legalize medical marijuana or impose stiffer penalties for child molesters, unknowingly had their party registration switched to Republican and their addresses changed. Officials say students at the University of Florida in Alachua County have made similar complaints and that about 4,000 potential voters in all have been affected. Local papers have traced some of the problems to a group hired by the Florida Republican Party, which has denounced the shenanigans. Switching voters' party affiliations does not affect their ability to vote, but changing addresses does, because when voters shows up at their proper polling places, they will not be registered there.	Washington Post			
	Florida	15-Dec-05	constitutional amendment	Fourteen months after a campaign to increase Florida's minimum wage drew allegations of voter fraud, a federal judge in South Florida has ruled at least some of those accusations against grass roots political group ACORN were so baseless they amount to defamation. Stuart alleged that ACORN improperly handled registration forms when it conducted voter registration drives, including not submitting Republican registrations to election officials. The judge upheld ACORN's counterclaim that Stuart's lack of evidence made his allegations libel and slander. An investigation by the Florida Department of Law Enforcement also found no evidence of criminal activity at ACORN, department officials confirmed Wednesday.	St. Petersburg Times

 Nexis Articles - Voter Registration Fraud

Fulton County	Georgia	4-Nov-05	presidential	The U.S. attorney for Georgia's Northern District is investigating the circumstances surrounding more than 2,400 "entirely fraudulent" voter registration applications submitted to Fulton County prior to the November 2004 elections, county elections officials say. Most of those suspect applications were submitted to the Georgia Secretary of State in September 2004 by the Georgia Coalition for the Peoples' Agenda, according to Atlanta attorney Harry W. MacDougald, a member of the Fulton County Board of Registration and Elections. Details of the federal investigation surfaced as part of litigation that challenges as unconstitutional Georgia's new voter photo identification law. Common Cause v. Billups. No. 4:05CV201 (N.D. Ga.). MacDougald made the investigation public in an affidavit submitted on behalf of defendants in the case	Fulton County Daily Report			
Chicago	Illinois	12-Mar-04	primary	Chicago election officials say as many as 2,000 fraudulent voter registrations have turned up in advance of Tuesday's primary election. Two suspects are under investigation, the Chicago Tribune said, both of whom gathered registrations on behalf of the Puerto Rico Federal Affairs Administration.	UPI			
East St. Louis	Illinois	30-Oct-04	supreme court	Illinois Republicans on Friday urged officials to look into "potential instances of massive voter fraud" in East St. Louis, showing pictures of an East St. Louis Democratic precinct committeemen's home that dozens of people registered to vote have listed as their address. But it turns out that that address and another called into question aren't single-family homes but are boarding houses or apartments that may house dozens of people.	St. Louis Post Dispatch

	Oregon	17-Oct-04	presidential	The Secretary of State announced an investigation into allegations that a paid canvasser with Sproul & Associates had been told to register only Republicans. The head of the organization denied the accusations.	Atlanta Journal Constitution			
	Oregon	30-Oct-04	presidential	Chemeketa community colleges, Western Oregon University and the University of Oregon all told similar stories: They were approached on campus and asked to sign a petition, often urging lower auto-mobile insurance rates for students, and then asked to sign or initial a second document, which turned out to be a voter registration card. Many of the students were urged to mark Republican as their party affiliation; others were told to leave the party affiliation section blank but to put their initials next to Republican on that part of the form. Many of the students already were registered voters. Some students didn't realize they were registering to vote, or that their party affiliation was about to change. Nathan Sproul, whose company conducted the registration drive, did not respond to calls seeking comment. His firm has been accused of using similar tactics involving bogus petitions at colleges in Pennsylvania, according to the Pittsburgh Post-Gazette. In an earlier interview with The Oregonian, Sproul confirmed that his canvassers are paid a "bounty"	Newhouse News Service

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Wade Henderson, Executive Director, Leadership Conference for Civil Rights

Data Collection

Mr. Henderson had **several recommendations as to how to better gather additional information and data on election fraud and intimidation in recent years.** He suggested interviewing the following individuals who have been actively involved in Election Protection and other similar efforts:

- Jon Greenbaum, Lawyers Committee for Civil Rights
- Tanya Clay, People for the American Way
- Melanie, Campbell, National Coalition for Black Political Participation
- Larry Gonzalez, National Association of Latino Election Officers
- Jacqueline Johnson, National Congress of American Indians
- Chellie Pingree, Common Cause
- Jim Dickson, disability rights advocate
- Mary Berry, former Chair of the US Commission on Civil Rights, currently at the University of Pennsylvania
- Judith Browne and Eddie Hailes, Advancement Project (former counsel to the US Commission on Civil Rights)
- Robert Rubin, Lawyers Committee for Civil Rights – San Francisco Office
- Former Senator Tom Daschle (currently a fellow at The Center for American Progress)

He also recommended we **review the following documents and reports:**

- The 2004 litigation brought by the Advancement Project and SEIU under the 1981 New Jersey Consent Decree
- Forthcoming LCCR state-by-state report on violations of the Voting Rights Act
- Forthcoming Lawyers Committee report on violations of the Voting Rights Act (February 21)

Types of Fraud and Intimidation Occurring

Mr. Henderson said he believed that the kinds of **voter intimidation and suppression tactics employed over the last five years are ones that have evolved over many years.** They are **sometimes racially based, sometimes based on partisan motives.** He believes the **following types of activity have actually occurred, and are not just a matter of anecdote and innuendo, and rise to the level of either voter intimidation or vote suppression:**

- **Flyers with intentional misinformation, such as ones claiming that if you do not have identification, you cannot vote, and providing false dates for the election**
- **Observers with cameras, which people associate with potential political retribution or even violence**
- **Intimidating police presence at the polls**
- **Especially in jurisdictions that authorize challenges, the use of challenge lists and challengers goes beyond partisanship to racial suppression and intimidation**
- **Unequal deployment of voting equipment, such as occurred in Ohio. Also, he has seen situations in which historically Black colleges will have one voting machine while other schools will have more.**

Mr. Henderson believes that these matters are not pursued formally because often they involve activities that current law does not reach. For example, there is no law prohibiting a Secretary of State from being the head of a political campaign, and then deploying voting machines in an uneven manner. There is no way to pursue that. Also, **once the election is over, civil litigation becomes moot.** Finally, sometimes upon reflection **after the campaign, some of the activities are not as sinister as believed at the time.**

Mr. Henderson believes **government does not engage in a sustained investigation of these matters or pursue any kind of resolution to**

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

them. LCCR has filed a FOIA request with both the Civil Rights Division and the Criminal Division of the Department of Justice to examine this issue.

Election Protection activities will be intensified for the 2006 elections, although the focus may shift somewhat given the implementation of new HAVA requirements.

Recommendations for Reform

There was tremendous concern after the 2004 election about conflicts of interest – the “Blackwell problem” – whereby a campaign chair is also in charge of the voting system. We need to get away from that.

He also **supports Senator Barak Obama’s bill regarding deceptive practices**, and is opposed to the voter identification laws passing many state legislatures.

- States should adopt **election-day registration**, in order to boost turnout as well as to allow eligible voters to immediately rectify erroneous or improperly purged registration records
- **Expansion of early voting & no-excuse absentee voting**, to boost turnout and reduce the strain on election-day resources.
- **Provisional ballot reforms:**
 - Should be **counted statewide** – if cast in the wrong polling place, votes should still be counted in races for which the voter was eligible to vote (governor, etc.)
 - Provisional ballots should also **function as voter registration applications**, to increase the likelihood that voters will be properly registered in future elections
- Voter ID requirements: **states should allow voters to use signature attestation to establish their identity**
- The **Department of Justice should increase enforcement of Americans with Disabilities Act and the accessibility requirements of the Help America Vote Act**
- **Statewide registration databases should be linked to social service agency databases**
- **Prohibit chief state election officials from simultaneously participating in partisan electoral campaigns within their states**
- Create and enforce **strong penalties for deceptive or misleading voting practices**

Wendy Weiser, Deputy Director, Democracy Program, The Brennan Center

Brennan Center findings on fraud

The Brennan Center's primary work on fraud is their report for the Carter Baker Commission with commissioner Spencer Overton, written in response to the Commission's ID recommendations. Brennan reviewed all existing reports and election contests related to voter fraud. They believe the contests serve as an especially good record of whether or not fraud exists, as the parties involved in contested elections have a large incentive to root out fraudulent voters. Yet despite this, the incidence of voter impersonation fraud discovered is extremely low—something on the order 1/10000th of a percentage of voters. See also the brief Brennan filed on 11th circuit in Georgia photo ID case which cites sources in Carter Baker report and argues the incidence of voter fraud too low to justify countermeasures.

Among types of fraud, they **found impersonation, or polling place fraud, is probably the least frequent type, although other types, such as absentee ballot fraud are also very infrequent. Weiser believes this is because impersonation fraud is more likely to be caught and is therefore not worth the risk. Unlike in an absentee situation, actual poll workers are present to disrupt impersonation fraud, for instance, by catching the same individual voting twice. She believes perhaps one half to one quarter of the time the person will be caught.** Also, there is a chance the pollworker will have personal knowledge of the person. Georgia Secretary of State Cathy Cox has mentioned that there are many opportunities for discovery of in person fraud as well. For example, **if one votes in the name of another voter, and that**

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

voter shows up at the polls, the fraud will be discovered.

Weiser believes court proceedings in election contests are especially useful. Some are very extensive, with hundreds of voters brought up by each side and litigated. In both pre-election challenges and post-election contests, **parties have devoted extraordinary resources into 'smoking out' fraudulent voters.** Justin Leavitt at Brennan scoured such proceedings for the Carter Baker report, which includes these citations. Contact him for answers to particular questions.

Countermeasures/statewide databases

Brennan has also considered what **states are doing to combat impersonation fraud besides photo ID laws**, although again, it seems to be the rarest kind of fraud, beyond statistically insignificant. In the **brief Brennan filed in the Georgia case, the Center detailed what states are already doing to effectively address fraud.** In another **on the web site includes measures that can be taken that no states have adopted yet.** Weiser adds that an effort to look at strategies states have to prevent fraud, state variations, effectiveness, ease of enforcement would be very useful.

Weiser believes the **best defense against fraud will be better voter lists**—she argues the fraud debate is actually premature because states have yet to fully implement the HAVA database requirement. This should eliminate a great deal of 'deadwood' on voter rolls and undermine the common argument that fraud is made possible by this deadwood. This was the experience for Michigan, which was able to remove 600,000 names initially, and later removed almost 1 million names from their rolls. It is fairly easy to cull deadwood from lists due to consolidation at the state level—most deadwood is due to individuals moving within the state and poor communication between jurisdictions. (Also discuss with Chris Thomas, who masterminded the Michigan database for more information and a historical perspective.)

Regarding the question of whether the effect of this maintenance on fraud in Michigan can be quantified, Weiser would caution against drawing direct lines between list problems and fraud. **Brennan has found various groups abusing the existence of list deadwood to make claims about fraudulent voting.** This is analyzed in greater detail in the Brennan Center's critique of a purge list produced by the NJ Republican party, and was illustrated by the purge list produced by the state of Florida. **When compiling such lists and doing comparisons, sound statistical methods must be utilized, and often are not.**

The NJ GOP created a list and asked NJ election officials to purge names of ineligible voters on it. Their list assumed that people appearing on the list twice had voted twice. Brennan found their assumptions shoddy and based on incorrect statistical practices, such as treating individuals with the same name and birthdays as duplicates, although this is highly unlikely according to proper statistical methods. **Simply running algorithms on voter lists creates a number of false positives, does not provide an accurate basis for purging, and should not be taken as an indicator of fraud.**

Regarding the Florida purge list, faulty assumptions caused the list to systematically exclude Hispanics while overestimating African Americans. **Matching protocols required that race fields match exactly, despite inconsistent fields across databases.**

The kinds of list comparisons that are frequently done to allege fraud are unreliable. Moreover, **even if someone is on a voter list twice, that does not mean that voter has voted twice. That, in fact, is almost never the case.**

Ultimately, **even matching protocols without faulty assumptions will have a 4 percent to 35 percent error rate—that's simply the nature of database work.** Private industry has been working on improving this for years. Now that HAVA has introduced a matching requirement, even greater skepticism is called for in judging the accuracy of list maintenance.

Intimidation and Suppression

Brennan does not have a specific focus here, although they do come across it and have provided assistance on bills to prevent suppression and intimidation. They happen to have **an extensive paper file of intimidating fliers and related stories from before the 2004 election.** (They can supply copies after this week).

Challengers

Brennan has analyzed cases where challenger laws have been beneficial and where they have been abused. See the decision and record

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

from the 1982 NJ vs. RNC case for some of the history of these laws. **Brennan is currently working on developing a model challenger law. Weiser believes challenge laws with no requirement that the challenger have any specific basis for the challenge or showing of ineligibility are an invitation to blanket harassing challenges and have a range of pitfalls.** State laws are vague and broad and often involve arcane processes such as where voters are required to meet a challenge within 5 days. **There are incentives for political abuse, potential for delaying votes and disrupting the polls, and they are not necessarily directed toward the best result.** Furthermore, **when a voter receives a mailer alleging vote fraud with no basis, even the mere fact of a challenge can be chilling.** A voter does not want to have to go through a quasi-court proceeding in order to vote.

Brennan recommends challenge processes that get results before election, minimize the burden for voters, and are restricted at polling place to challenges by poll workers and election officials, not voters. They believe limitless challenges can lead to pandemonium—that once the floodgates are open they won't stop.

Recommendations

- **Intimidation— Weiser believes Sen. Barak Obama's bill is a good one for combating voter harassment and deceptive practices. Many jurisdictions do not currently have laws prohibiting voter harassment and deceptive practices.**
- **Fraud— Current state and federal codes seem sufficient for prosecuting fraud. Weiser doesn't consider them under-enforced, and sees no need for additional laws.**
- **Voter lists— New legislation or regulations are needed to provide clear guidance and standards for generating voter lists and purging voters, otherwise states could wrongfully disenfranchise eligible voters.**
- **Challengers—Challenge laws need to be reformed, especially ones that allow for pre-election mass challenges with no real basis. There is no one size fits all model for challenger legislation, but some bad models involving hurdles for voters lead to abuse and should be reformed. There should be room for poll workers to challenge fraudulent voters, but not for abuse.**

Also useful would be recommendations for prosecutors investigating fraudulent activity, How should they approach these cases? How should they approach cases of large scale fraud/intimidation? While there is sufficient legislative cover to get at any election fraud activity, questions remain about what proper approaches and enforcement strategies should be.

William Groth, attorney for the plaintiffs in the Indiana voter identification litigation

Fraud in Indiana

Indiana has never charged or prosecuted anyone for polling place fraud. Nor has any empirical evidence of voter impersonation fraud or dead voter fraud been presented. In addition, there is **no record of any credible complaint about voter impersonation fraud in Indiana.** State legislators signed an affidavit that said there had never been impostor voting in Indiana. At the same time, the Indiana Supreme Court has not necessarily required evidence of voter fraud before *approving* legislative attempts to address fraud.

The state attorney general has conceded that there is no concrete fraud in Indiana, but has instead referred to instances of fraud in other states. Groth filed a detailed motion to strike evidence such as John Fund's book relating to other states, arguing that none of that evidence was presented to the legislature and that it should have been in the form of sworn affidavits, so that it would have some indicia of verifiability.

Photo ID law

By imposing restrictive ID measures, Groth contends you will discourage 1,000 times more legitimate voters than illegitimate voters you might protect against. He feels the implementation of a REAL ID requirement is an inadequate justification for the law, as it will not affect the upcoming 2006 election where thousands of registered voters will be left without proper ID. In addition, he questions whether REAL ID will be

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

implemented as planned in 2008 considering the backlash against the law so far. **He also feels ID laws are unconstitutional because of inconsistent application.**

Statewide database as remedy

Groth believes **many problems will be addressed by the statewide database required under HAVA.** To the extent that the rolls in Indiana are bloated, it is because state officials have not complied with NVRA list maintenance requirements. Thus, it is somewhat disingenuous for them to use bloated voter rolls as a reason for imposing additional measures such as the photo ID law. Furthermore, the state has ceded to the counties the obligation to do maintenance programs, which results in a hit or miss process (see discussion in reply brief, p 26 through p. 28).

Absentee fraud

To the extent that there has been an incidence of fraud, these have all been confined to absentee balloting. Most notably the East Chicago mayoral election case where courts found absentee voting fraud had occurred. See: Pabey vs. Pastrick 816 NE 2nd 1138 Decision by the Indiana Supreme Court in 2004.

Intimidation and vote suppression

Groth is only aware of anecdotal evidence supporting intimidation and suppression activities. While he considers the sources of this evidence credible, it is still decidedly anecdotal. Instances he is aware of include **police cars parked in front of African American polling places.** However, **most incidents of suppression which are discussed occurred well in the past.** Trevor Davidson claims a fairly large scale intimidation program in Louisville.

Challengers

There was **widespread information that the state Republican Party had planned a large scale challenger operation in Democratic precincts for 2004, but abandoned the plan at the last minute.**

Last year the legislature made a **crucial change to election laws which will allow partisan challengers to be physically inside the polling area next to members of the precinct board.** Previously, **challengers at the polling place have been restricted to the 'chute,'** which provides a buffer zone between voting and people engaging in political activity. That change will make **it much easier to challenge voters.** As there is no recorded legislative history in Indiana, it is difficult to determine the justification behind this change. As both chambers and the governorship are under single-party control, the challenger statute was passed under the radar screen.

Photo ID and Challengers

Observers are especially concerned **about how this change will work in conjunction with the photo ID provision.** Under the law, there are at least two reasons why a member of the precinct board or a challenger can raise object to an ID: whether a presented ID conforms to ID standards, and whether the photo on an ID is actually a picture of the voter presenting it. The law does not require bipartisan agreement that a challenge is valid. **All it takes is one challenge to raise a challenge to that voter, and that will lead to the voter voting by provisional ballot.**

Provisional ballot voting means that voter must make a second trip to the election board (located at the county seat) within 13 days to produce the conforming ID or to swear out an affidavit that they are who they claim to be. This may pose a considerable burden to voters. For example, Indianapolis and Marion County are coterminous—anyone challenged under the law will be required to make second trip to seat of government in downtown Indianapolis. If the voter in question did not have a driver's license in the first place, they will likely need to arrange transportation. Furthermore, in most cases the election result will already be known.

The law is **vague about acceptable cause for challenging a voter's ID.** Some requirements for valid photo ID include being issued by state or fed gov't, w/ expiration date, and the names must conform exactly. The **League of Women Voters is concerned about voters with hyphenated names, as the Indiana DMV fails to put hyphens on driver's licenses potentially leading to a basis for challenge.** Misspelling of names would also be a problem. The other primary mode of challenge is saying the photo doesn't look like the voter, which could be happen in a range of instances. Essentially, the law gives unbridled discretion to challengers to decide what conforms and what does not.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Furthermore, there is **no way to determine whether a challenge is in good or bad faith, and *there is little penalty for making a bad faith challenge.*** The fact that there are no checks on the challenges at the precinct level, or even a requirement of concurrence from an opposing party challenger leads to the concern that challenge process will be abused. The voter on the other hand, will need to get majority approval of county election board members to defeat the challenge.

Groth suggests the political situation in Indianapolis also presents a temptation to abuse this process, as electoral margins are growing increasingly close due to shifting political calculus.

Other cases

Groth's other election law work has included a redistricting dispute, a dispute over ballot format, NVRA issues, and a case related to improper list purging, but nothing else related to fraud or intimidation. The purging case involved the election board attempting to refine its voter list by sending registration postcards to everyone on the list. When postcards didn't come back they wanted to purge those voters. Groth blames this error more on incompetence, than malevolence, however, as the county board is bipartisan. (The Indiana Election Commission and the Indiana election division are both bipartisan, but the 92 county election boards which will be administering photo id are controlled by one political party or the other—they are always an odd number, with the partisan majority determined by who controls the clerk of circuit court office.)

Recommendations

- **Supports nonpartisan administration of elections.**
- Indiana specific recommendations including a longer voting day, time off for workers to vote, and an extended registration period.
- He views the central problem of the Indiana photo ID law is that the list of acceptable forms of ID is too narrow and provides no fallback to voters without ID. At the least, he believes the state **needs to expand the list so that most people will have at least one.** If not, **they should be allowed to swear an affidavit regarding their identity, under penalty of perjury/felony prosecution. This would provide sufficient deterrence for anyone considering impersonation fraud. He believes absentee ballot fraud should be addressed by requiring those voters to produce ID as well, as under HAVA.**
- His personal preference would be **signature comparison.** Indiana has never encountered an instance of someone trying to forge a name in the poll book, and while this leaves open the prospect of dead voters, that danger will be substantially diminished by the statewide database. But if we are going to have some form of ID, he believes we should apply it to everyone and avoid disenfranchisement, provided they swear an affidavit.

Lori Minnite, Barnard College, Columbia University

Securing the Vote

In Securing the Vote, Ms. Minnite found very **little evidence of voter fraud because the historical conditions giving rise to fraud have weakened over the past twenty years.** She stated that for fraud to take root a conspiracy was needed with a strong local political party and a complicit voter administration system. **Since parties have weakened and there has been much improvement in the administration of elections and voting technology, the conditions no longer exist for large scale incidents of polling place fraud.**

Ms. Minnite concentrates on fraud committed by voters not fraud committed by voting officials. She has looked at this issue on the national level and also concentrated on analyzing certain specific states. Ms. Minnite stressed that it is **important to keep clear who the perpetrators of the fraud are and where the fraud occurs because that effects what the remedy should be.** Often, voters are punished for fraud committed by voting officials.

Other Fraud Issues

Ms. Minnite found **no evidence that NVRA was leading to more voter fraud.** She supports non-partisan election administration. Ms.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Minnite has found evidence that there is absentee ballot fraud. She can't establish that there is a certain amount of absentee ballot fraud or that it is the major kind of voter fraud.

Recommendations

- **Assure there are accurate voter records and centralize voter databases**
- **Reduce partisanship in electoral administration.**

Neil Bradley, ACLU Voting Rights Project

Voter Impersonation Cases (issue the Georgia ID litigation revolves around)

Mr. Bradley asserted that Georgia **Secretary of State Cox** stated in the case at issue: that she clearly would know if there had been any instances of voter impersonation at the polls; that she works very closely with the county and local officials and she **would have heard about voter impersonation** from them if she did not learn about it directly; and that she said that she had not heard of "any incident"---which includes acts that did not rise to the level of an official investigation or charges.

Mr. Bradley said that it is also **possible to establish if someone has impersonated another voter at the polls. Officials must check off the type of voter identification the voter used. Voters without ID may vote by affidavit ballot. One could conduct a survey of those voters to see if they in fact voted or not.**

The type of **voter fraud that involves impersonating someone else is very unlikely to occur.** If someone wants to steal an election, it is **much more effective to do so using absentee ballots.** In order to change an election outcome, one must steal many votes. Therefore, one would have to have lots of people involved in the enterprise, meaning there would be many people who know you committed a felony. It's simply not an efficient way to steal an election.

Mr. Bradley is not **aware of any instance of voter impersonation anywhere in the country except in local races. He does not believe it occurs in statewide elections.**

Voter fraud and intimidation in Georgia

Georgia's **process for preventing ineligible ex-felons from casting ballots has been improved** since the Secretary of State now has the power to create the felon purge list. When this was the responsibility of the counties, there were many difficulties in purging felons because local officials did not want to have to call someone and ask if he or she was a criminal.

The **State Board of Elections has a docket of irregularity complaints. The most common involve an ineligible person mailing in absentee ballots on behalf of another voter.**

In general, Mr. Bradley **does not think voter fraud and intimidation is a huge problem in Georgia** and that people have confidence in the vote. The biggest problems are the new ID law; misinformation put out by elections officials; and **advertisements that remind people that vote fraud is a felony, which are really meant to be intimidating. Most fraud that does occur involves an insider, and that's where you find the most prosecutions. Any large scale fraud involves someone who knows the system or is in the courthouse.**

Prosecution of Fraud and Intimidation

Mr. Bradley stated that **fraud and intimidation are hard to prosecute.** However, Mr. Bradley made contradictory statements. When asked whether the decision to prosecute on the county level was politically motivated, he first said "no." Later, Mr. Bradley reversed himself stating the opposite.

Mr. Bradley also stated that **with respect to US Attorneys, the message to them from the top is that this is not a priority. The Georgia ACLU has turned over information about violations of the Voting Rights Act that were felonies, and the US Attorney has done nothing with the information. The Department of Justice has never been very aggressive in pursuing cases of vote suppression, intimidation**

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

and fraud. But, the Georgia ACLU has not contacted Craig Donsanto in DC with information of voter fraud. Mr. Bradley believes that **voter fraud and intimidation is difficult to prove. It is very hard to collect the necessary factual evidence to make a case, and doing so is very labor-intensive.**

Recommendations

In Georgia, the Secretary of State puts a lot of work into training local officials and poll workers, and much of her budget is put into that work. **Increased and improved training of poll workers**, including training on how to respectfully treat voters, is the most important reform that could be made. Mr. Bradley also suggested that **increased election monitoring** would be helpful.

Nina Perales, Counsel, Mexican American Legal Defense and Education Fund

Ms. Perales did not seem to have a sense of the overall electoral issues in her working region (the southwest) effecting Hispanic voters and did not seem to want to offer her individual experiences and work activities as necessarily a perfect reflection of the challenges Hispanic voters face.

Largest Election Problems Since 2000

- Santa Anna County, New Mexico-2004-intimidated voters by video taping them.
- San Antonio-One African American voter subjected to a racial slur.
- San Antonio-Relocated polling places at the last minute without Section 5 pre-clearance.
- San Antonio-Closed polls while voters were still in line.
- San Antonio-2003-only left open early voting polls in predominantly white districts.
- San Antonio-2005-racially contested mayoral run-off election switched from touch screen voting to paper ballots.

Voter Fraud and Intimidation

In Texas, the counties are refusing to open their records with respect to Section 203 compliance (bilingual voting assistance), and those that did respond to MALDEF's request submitted incomplete information. Ms. Perales believes this in itself is a form of voter intimidation.

Ms. Perales said it is hard to say if the obstacles minorities confront in voting are a result of intentional acts or not because the county commission is totally incompetent. There have continuously been problems with too few ballots, causing long lines, especially in places that had historically lower turnout. There is no formula in Texas for allocating ballots – each county makes these determinations.

When there is not enough language assistance at the polls, forcing a non-English speaker to rely on a family member to vote, that can suppress voter turnout.

Ms. Perales is not aware of deceptive practices or dirty tricks targeted at the Latino community.

There have been no allegations of illegal noncitizen voting in Texas. Indeed, the sponsor of a bill that would require proof of citizenship to vote could not provide any documentation of noncitizen voting in support of the bill. The bill was defeated in part because of the racist comments of the sponsor. In Arizona, such a measure was passed. Ms. Perales was only aware of one case of noncitizen voting in Arizona, involving a man of limited mental capacity who said he was told he was allowed to register and vote. Ms. Perales believes proof of citizenship requirements discriminate against Latinos.

Recommendations

Ms. Perales feels the laws are adequate, but that her organization does not have enough staff to do the monitoring necessary. This could be done by the federal government. However, even though the Department of Justice is focusing on Section 203 cases now, they have not even begun to scratch the surface. Moreover, the choices DOJ has made with respect to where they have brought claims do not seem to be based on any systematic analysis of where the biggest problems are. This may be because the administration is so ideological and partisan.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Ms. Perales does not believe making election administration nonpartisan would have a big impact. In Texas, administrators are appointed in a nonpartisan manner, but they still do not always have a nonpartisan approach. Each administrator tends to promote his or her personal view regardless of party.

Pat Rogers, attorney, New Mexico

Major issues in NM w/ regard to vote fraud

Registration fraud seems to be the major issue, and while the legislature has taken some steps, Rogers is skeptical of the effect they will have, considering the history of unequal application of election laws. He also believes there are **holes in the 3rd party registration requirement deadlines**.

Rogers **views a national law requiring ID as the best solution to registration problems**. Rather than imposing a burden he contends it will enhance public confidence in the simplest way possible.

Registration Fraud in 2004 election

It came to light that **ACORN had registered a 13 year old**. The father was an APD officer and received the confirmation, but it was sent to the next door address, a vacant house. They traced this to an ACORN employee and it was established that this employee had been registering others under 18.

Two weeks later, in a crack cocaine bust of Cuban nationals, one of those raided said his job was registering voters for ACORN, and the police found signatures in his possession for fictitious persons.

In a suspicious break-in at an entity that advertised itself as nonpartisan, only GOP registrations were stolen.

In another instance, **a college student was allegedly fired for registering too many Republicans.**

Rogers said he **believed these workers were paid by the registration rather than hourly.**

There have been **no prosecution or convictions related to these incidents**. In fact, there have been no prosecutions for election fraud in New Mexico in recent history. However, Rogers is skeptical that much action can be expected considering the positions of Attorney General, Governor, and Secretary of State are all held by Democrats. Nor has there been any interest from the U.S. attorney—**Rogers heard that U.S. attorneys were given instruction to hold off until after the election in 2004 because it would seem too political.**

As part of the case against the Secretary of State regarding the identification requirement, the parties also sued ACORN. At a hearing, the head of ACORN, and others aligned with the Democratic Party called as witnesses, took the 5th on the stand as to their registration practices.

Other incidents

Very recently, there have been reports of vote buying in the town of Espanola. Originally reported by the *Rio Grande Sun*, a resident of a low-income housing project is quoted as saying it has been going on for 10-12 years. The Albuquerque Journal is now reporting this as well. So far the investigation has been extremely limited.

In 1996, there were some prosecutions in Espanola, where a state district judge found registration fraud.

In 1991, the chair of Democratic Party of Bertolino County was convicted on fraud. Yet she was pardoned by Clinton on same day as Marc Rich.

Intimidation/Suppression

Rogers believes the most notable example of intimidation in the 2004 election was the discovery of a DNC Handbook from Colorado advising Democratic operatives to widely report intimidation regardless of confirmation in order to gain media attention.

In-person polling place fraud

There have **only been isolated instances of people reporting that someone had voted in their name, and Rogers doesn't believe there is any large scale conspiracy**. Yet he contends that **perspective misses the larger point of voter confidence**. Although there has been a large

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

public outcry for voter ID in New Mexico, it has been deflected and avoided by Democrats.

In 2004, there were more Democratic lawyers at the polls than there are lawyers in New Mexico. Rogers believes these lawyers had a positive impact because they deterred people from committing bad acts.

Counting Procedures

The **Secretary of State has also taken the position that canvassing of the vote should be done in private.** In NM, they have a 'county canvas' where they review and certify, after which all materials—machine tapes, etc.—are centralized with the Secretary of State who does a final canvass for final certification. Conducting this in private is a serious issue, especially considering the margin in the 2000 presidential vote in New Mexico was only 366 votes. **They wouldn't be changing machine numbers, but paper numbers are vulnerable.**

On a related note, NM has adopted state procedures that will ensure their reports are slower and very late, considering the 2000 late discovery of ballots. In a close race, potential for fraud and mischief goes up astronomically in the period between poll closing and reporting. Rogers believes these changes are going to cause national embarrassment in the future.

Rogers attributes other harmful effects to what he terms the Secretary of State's incompetence and inability to discern a nonpartisan application of the law. **In the 2004 election, no standards were issued for counting provisional ballots.** Furthermore, the Secretary of State spent over \$1 million of HAVA money for 'voter education' in blatant self-promotional ads.

Recommendations

- Rogers believes it would be unfeasible to have nonpartisan election administration and favors transparency instead. To make sure people have confidence in the election, there must be transparency in the whole process. Then you don't have the 1960 vote coming down to Illinois, or the Espanola ballot or Dona Anna County (ballots found there in the 2000 election). HAVA funds should also be restricted when you have an incompetent, partisan Secretary of State.
- There should be national standards for reporting voting results so there is less opportunity for fraud in a close race. Although he is not generally an advocate of national laws, he does agree there should be more national uniformity into how votes are counted and recorded.

Rebecca Vigil-Giron, Secretary of State, New Mexico

Complaints of election fraud and intimidation are filed with the SOS office. She then decides whether to refer it to the local district attorney or the attorney general. Because the complaints are few and far between, the office does not keep a log of complaints; however, they do have all of the written complaints on file in the office.

Incidents of Fraud and Intimidation

During the **2004** election, there were a couple of complaints of polling place observers telling people outside the polling place who had just voted, and then **the people outside were following the voters to their cars and videotaping them. This happened in areas that are mostly second and third generation Latinos.** The Secretary sent out the sheriff in one instance of this. The perpetrators moved to a different polling place. This was the **only incident of fraud or intimidation Vigil-Giron was aware of in New Mexico.**

There have **not been many problems on Native reservations because, unlike in many other states, in New Mexico the polling place is on the reservation and is run by local Native Americans.** Vigil-Giron said that it does not make sense to have non-Natives running those polls because it is necessary to have people there who can translate. Because most of the languages are unwritten, the HAVA requirement of accessibility through an audio device will be very helpful in this regard. Vigil-Giron said she was surprised to learn while testifying at the Voting Rights Act commission hearings of the lack of sensitivity to these issues and the common failure to provide assistance in language minority areas.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

In 2004 the U.S. Attorney, a Republican, suddenly announced he was launching an investigation into voter fraud without consulting the Secretary of State's office. After all of that, there was maybe one prosecution. Even the allegations involving third party groups and voter registration are often misleading. People doing voter registration drives encourage voters to register if they are unsure if they are already registered, and the voter does not even realize that his or her name will then appear on the voter list twice. The bigger problem is where registrations do not get forwarded to election administrators and the voter does not end up on the voting list on Election Day. This is voter intimidation in itself, Vigil-Giron believes. It is very discouraging for that voter and she wonders whether he or she will try again.

Under the bill passed in 2004, third parties are required to turn around voter registration forms very quickly between the time they get them and when they must be returned. If they fail to return them within 48 hours of getting them, they are penalized. This, Vigil-Giron believes, is unfair. She has tried to get the Legislature to look at this issue again.

Regarding allegations of vote buying in Espanola, Vigil-Giron said that the Attorney General is investigating. The problem in that area of New Mexico is that they are still using rural routes, so they have not been able to properly district. There has, as a result, been manipulation of where people vote. Now they seem to have pushed the envelope too far on this. The investigation is not just about vote buying, however. There have also been allegations of voters being denied translators as well as assistance at the polls.

Vigil-Giron believes there was voter suppression in Ohio in 2004. County officials knew thirty days out how many people had registered to vote, they knew how many voters there would be. Administrators are supposed to use a formula for allocation of voting machines based on registered voters. Administrators in Ohio ignored this. As a result, people were turned away at the polls or left because of the huge lines. This, she believes, was a case of intentional vote suppression.

A few years ago, Vigil-Giron heard that there may have been people voting in New Mexico and a bordering town in Colorado. She exchanged information with Colorado administrators and it turned out that there were no cases of double voting.

Recommendations

- Vigil-Giron believes that linking voter registration databases across states may be a way to see if people who are registered twice are in fact voting twice.
- The key to improving the process is better trained poll workers, who are certified, and know what to look for on Election Day. These poll workers should then work with law enforcement to ensure there are no transgressions.
- There should be stronger teeth in the voter fraud laws. For example, it should be more than a fourth degree felony, as is currently the case.

Sarah Ball Johnson, Executive Director of the State Board of Elections, Kentucky

Procedures for Handling Fraud

Fraud complaints are directed first to the state Board of Elections. Unlike boards in other states, Kentucky's has no investigative powers. Instead, they work closely with both the Attorney General and the U.S. Attorney. Especially since the current administration took office, they have found the U.S. Attorney an excellent partner in pursuing fraud cases, and have seen many prosecutions in the last six years. She believes that there has been no increase in the incidence of fraud, but rather the increase in prosecutions is related to increased scrutiny and more resources.

Major Types of Fraud and Intimidation

Johnson says that vote buying and voter intimidation go hand in hand in Kentucky. While historically fraud activity focused on election day, in the last 20 years it has moved into absentee voting. In part, this is because new voting machines aren't easy to manipulate in the way

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

that paper ballots were open to manipulation in the past, especially in distant rural counties. For this reason, she is troubled by the proliferation of states with early voting, but notes that there is a difference between absentee ballot and early voting on machines, which is far more difficult to manipulate.

Among the cases of absentee ballot fraud they have seen, **common practice involves a group of candidates conspiring together to elect their specific slate. Nursing homes are an especially frequent target.** Elderly residents request absentee ballots, and then workers show up and 'help' them vote their ballots. **Though there have been some cases in the Eastern district of election day fraud, most have been absentee.**

Johnson argues that it is **hard to distinguish between intimidation and vote buying.** They have also **seen instances where civic groups and church groups intimidate members to vote in a specific manner, not for reward, but under threat of being ostracized or even telling them they will go to hell.**

While she is **aware of allegations of intimidation by the parties regarding minority precincts in Louisville, the board hasn't received calls about it and there haven't been any prosecutions.**

Challengers

Challengers are permitted at the polls in Kentucky. Each party is allowed two per location, and they must file proper paperwork. **There is a set list of defined reasons for which they can challenge a voter, such as residency, and the challengers must also fill out paperwork to conduct a challenge.**

As for allegations of challengers engaging in intimidation in minority districts, Johnson notes that challengers did indeed register in Jefferson County, and filed the proper paperwork, although they ultimately did not show up on election day.

She finds that **relatively few challengers end up being officially registered, and that the practice has grown less common in recent years.** This is due more to a change of fashion than anything. And after all, **those wishing to affect election outcomes have little need for challengers in the precinct when they can target absentee voting instead.**

In the event that intimidation is taking place, Kentucky has provisions to remove disruptive challengers, but this hasn't been used to her knowledge.

Prosecutions

Election fraud prosecutions in Kentucky have only involved vote buying. This may be because that it is easier to investigate, by virtue of a cash and paper trail which investigators can follow. It is difficult to quantify any average numbers about the practice from this, due in part to the five year statute of limitations on vote buying charges. However, she does not believe that vote-buying is pervasive across the state, but rather confined to certain pockets.

Vote-hauling Legislation

Vote hauling is a common form of vote buying by another name. Individuals are legally paid to drive others to the polls, and then divide that cash in order to purchase votes. Prosecutions have confirmed that vote hauling is used for this purpose. While the Secretary of State has been committed to legislation which would ban the practice, it has failed to pass in the past two sessions.

Paying Voter Registration Workers Legislation

A law forbidding people to pay workers by the voter registration card or for obtaining cards with registrations for a specific party was passed this session. Individuals working as part of a registration campaign may still be paid by hour. Kentucky's experience in the last presidential election illustrates the problems arising from paying individuals by the card. That contest included a constitutional amendment to ban gay marriage on the ballot, which naturally attracted the attention of many national groups. **One group paying people by the card resulted in the registrar being inundated with cards, including many duplicates in the same bundle, variants on names, and variants on addresses.** As this practice threatens to overwhelm the voter registration process, Kentucky views it as constituting malicious fraud.

Deceptive practices

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Other than general reports in the news, Johnson hasn't received any separate confirmation or reports of deceptive practices, i.e., false and misleading information being distributed to confuse voters.

Effect of Kentucky's Database

Johnson believes Kentucky's widely praised voter registration database is a key reason why the state doesn't have as much fraud as it might, especially the types alleged elsewhere like double and felon voting. While no database is going to be perfect, the connections with other state databases such as the DMV and vital statistics have been invaluable in allowing them to aggressively purge dead weight and create a cleaner list. When parties use their database list they are notably more successful. Johnson wonders how other states are able to conduct elections without a similar system.

Some factors have made especially important to their success.

- When the database was instituted in 1973, they were able to make everyone in the state re-register and thus start with a clean database. However, it is unlikely any state could get away with this today.
- She is also a big supporter of a full Social Security number standard, as practiced in Kentucky. The full Social Security, which is compared to date of birth and letters in the first and last name, automatically makes matching far more accurate. The huge benefits Kentucky has reaped make Johnson skeptical of privacy concerns arguing for an abbreviated Social Security number. Individuals are willing to submit their Social Security number for many lesser purposes, so why not voting? And in any event, they don't require a Social Security number to register (unlike others such as Georgia). Less than a percent of voters in Kentucky are registered under unique identifiers, which the Board of Elections then works to fill in the number through cross referencing with the DMV.

Recommendations

- Johnson believes the backbone of effective elections administration must be standardized procedures, strong record keeping, and detailed statutes. In Kentucky, all counties use the same database and the same pre election day forms. Rather than seeing that as oppressive, county officials report that the uniformity makes their jobs easier.
- This philosophy extends to the provisional ballot question. While they did not have a standard in place like HAVA's at the time of enactment, they worked quickly to put a uniform standard in place.
- They have also modified forms and procedures based on feedback from prosecutors. Johnson believes a key to enforcing voting laws is working with investigators and prosecutors and ensuring that they have the information they need to mount cases.
- She also believes public education is important, and that the media could do more to provide information about what is legal and what is illegal. Kentucky tries to fulfill this role by information in polling places, press releases, and high profile press conferences before elections. She notes that they deliberately use language focusing on fraud and intimidation.
- Johnson is somewhat pessimistic about reducing absentee ballot fraud. Absentee ballots do have a useful function for the military and others who cannot get to the polling place, and motivated individuals will always find a way to abuse the system if possible. At a minimum, however, she recommends that absentee ballots should require an excuse. She believes this has helped reduce abuse in Kentucky, and is wary of no-excuse practices in other states.

Stephen Ansolobhere, Massachusetts Institute of Technology

Chandler Davidson, Rice University

Methodology suggestions

In analyzing instances of alleged fraud and intimidation, we should look to criminology as a model. In criminology, experts use two sources:

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

the Uniform Crime Reports, which are all reports made to the police, and the Victimization Survey, which asks the general public whether a particular incident has happened to them. After surveying what the most common allegations are, we should conduct a survey of the general public that asks whether they have committed certain acts or been subjected to any incidents of fraud or intimidation. This would require using a very large sample, and we would need to employ the services of an expert in survey data collection. Mr. Ansolobehere recommended Jonathan Krosnick, Doug Rivers, and Paul Sniderman at Stanford; Donald Kinder and Arthur Lupia at Michigan; Edward Carmines at Indiana; and Phil Tetlock at Berkeley. In the alternative, Mr. Ansolobehere suggested that the EAC might work with the Census Bureau to have them ask different, additional questions in their Voter Population Surveys.

Mr. Chandler further suggested it is important to talk to private election lawyers, such as Randall Wood, who represented Ciro Rodriguez in his congressional election in Texas. Mr. Ansolobehere also recommended looking at experiments conducted by the British Election Commission.

Incidents of Fraud and Intimidation

Mr. Davidson's study for the Lawyers Committee for Civil Rights on the Voting Rights Act documented evidence of widespread difficulty in the voting process. However, he did not attempt to quantify whether this was due to intentional, malevolent acts. In his 2005 report on ballot security programs, he found that there were many allegations of fraud made, but not very many prosecutions or convictions. He saw many cases that did go to trial and the prosecutors lost on the merits.

In terms of voter intimidation and vote suppression, Mr. Davidson said he believes the following types of activities do occur:

- videotaping of voters' license plates;
- poll workers asking intimidating questions;
- groups of officious-looking poll watchers at the poll sites who seem to be some sort of authority looking for wrongdoing;
- spreading of false information, such as phone calls, flyers, and radio ads that intentionally mislead as to voting procedures.

Mr. Ansolobehere believes the biggest problem is absentee ballot fraud. However, many of these cases involve people who do not realize what they are doing is illegal, for example, telling someone else how to vote. Sometimes there is real illegality occurring however.

For example:

- vote selling involving absentee ballots,
- the filling out of absentee ballots en masse,
- people at nursing homes filling out the ballots of residents, and
- there are stories about union leaders getting members to vote a certain way by absentee ballot.

This problem will only get bigger as more states liberalize their absentee ballot rules. Mr. Chandler agreed that absentee ballot fraud was a major problem.

Recommendations

- Go back to "for cause" absentee ballot rules, because it is truly impossible to ever ensure the security of a mail ballot. Even in Oregon, there was a study showing fraud in their vote by mail system.
- False information campaigns should be combated with greater voter education. Los Angeles County's voter education program should be used as a model.

Tracey Campbell, author, *Deliver the Vote*

While less blatant than in previous eras, fraud certainly still occurs, and he mentions some examples in his book. The major trend of the past 60-70 years has been that these tactics have grown more subtle.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

While he hasn't conducted any scientific study of the current state of fraud, his sense as a historian is that it seems naive, after generations of watching the same patterns and practices influence elections, to view suspect election results today as merely attributable to simple error.

Vote-buying and absentee fraud

Campbell sees fraud by absentee ballot and vote buying as the greatest threats to fair elections today. He says vote fraud is like real estate: location, location, location—the closer you can keep the ballots to the courthouse the better. **Absentee ballots create a much easier target for vote brokers who can manage voting away from the polling place, or even mark a ballot directly, in exchange for, say, \$50— or even more if an individual can bring their entire family. He has noted some small counties where absentee ballots outnumber in-person ballots.**

However, few people engaged in this activity would call it 'purchasing' a vote. Instead, it is candidate Jones' way of 'thanking' you for a vote you would have cast in any event. The issue is what happens if candidate Smith offers you more. Likewise, the politicians who engage in vote fraud don't see it as a threat to the republic but rather as a game they have to play in order to get elected.

Regional patterns

Campbell suggests such practices are more prevalent in the South than the Northern states, and even more so compared to the West. The South has long been characterized as particularly dangerous in intimidation and suppression practices—throughout history, one can find routine stories of deaths at the polls each year. While he maintains that fraud seems less likely in the Western states, he sees the explosion of mail in and absentee ballots there as asking for trouble.

Poll site closings as a means to suppress votes

Campbell points to a long historical record of moving poll sites in order to suppress votes. Polling places in the 1800s were frequently set-up on rail cars and moved further down the line to suppress black votes. He would include door-to-door canvassing practices here, as well as voting in homes, which was in use in Kentucky until only a few years ago. All of these practices have been justified as making polling places 'more accessible' while their real purpose has been to suppress votes.

Purge lists

Purge lists are, of course, needed in theory, yet Campbell believes the authority to mark names off the voter rolls presents extensive opportunity for abuse. For this reason, purging must be done in a manner that uses the best databases, and looks at only the most relevant information. When voters discover their names aren't on the list when they go to vote, for example, because they are "dead," it has a considerable demoralizing effect. **Wrongful purging takes place both because of incompetence and as a tool to intentionally disenfranchise.**

Campbell believes transparency is the real issue here. An hour after the polls close, we tend to just throw up our hands and look the other way, denying voters the chance to see that discrepancies are being rectified. He believes the cost in not immediately knowing election outcomes is a small price to pay for getting results right and showing the public a transparent process.

Deceptive practices

Today's deceptive practices have are solidly rooted in Reconstruction-era practices—i.e. phony ballots, the Texas 'elimination' ballot. The ability to confuse voters is a powerful tool for those looking to sway elections.

Language minorities

Campbell argues there is a fine line between offering help to non-English speakers and using that help against them. A related issue, particularly in the South, is taking advantage of the illiterate.

Current intimidation

Another tactic Campbell considers an issue today is polling place layout: the further vote suppressers can keep people away from the

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

polls, the better. Practices such as **photographing people leaving a polling place may also tie into vote-buying, where photos are used to intimidate and validate purchased votes. A good way to combat such practices is by keeping electioneering as far from the polls as possible.**

Recommendations

- Specific voting administration recommendations Campbell advocates would include **reducing the use of absentee ballots and improving the protective zone around polling places.**
- Campbell would also like to see **enforcement against fraud stepped up and stiffer penalties enacted, as current penalties make the risk of committing fraud relatively low.** He compares the risk in election fraud similar to steroid use in professional sports—the potential value of the outcome is far higher than the risk of being caught or penalized for the infraction, so it is hard to prevent people from doing it. People need to believe they will pay a price for engaging in fraud or intimidation. Moreover, we need to have the will to kick people out of office if necessary.
- He is **skeptical of the feasibility of nonpartisan election administration**, as he believes it would be difficult to find people who care about politics yet won't lean one way or the other—such an attempt would be unlikely to get very far before accusations of partisanship emerged. He **considers the judiciary the only legitimate check on election fraud.**

Douglas Webber, Assistant Attorney General, Indiana, (defendant in the Indiana voter identification litigation)

Litigation

Status of litigation in Indiana: On January 12 the briefing was completed. The parties are waiting for a decision from the U.S. district judge. The judge understood that one of the parties would seek a stay from the 7th Circuit Court of Appeals. The parties anticipate a decision in late March or early April. Mr. Webber did the discovery and depositions for the litigation. Mr. Webber feared the plaintiffs were going to state in their reply brief that HAVA's statewide database requirement would resolve the problems alleged by the state. However, the plaintiffs failed to do so, relying on a Motor Voter Act argument instead. **Mr. Webber believes that the voter ID at issue will make the system much more user-friendly for the poll workers.** The Legislature passed the ID legislation, and the state is defending it, on the basis of the problem of the *perception* of fraud.

Incidents of fraud and intimidation

Mr. Webber thinks that **no one can put his or her thumb on whether there has been voter fraud in Indiana.** For instance, **if someone votes in place of another, no one knows about it. There have been no prosecuted cases of polling place fraud in Indiana. There is no recorded history of documented cases, but it does happen.** In the litigation, he used articles from around the country about instances of voter fraud, but even in those examples there were ultimately no prosecutions, for example the case of Milwaukee. He also stated **in the litigation that there are all kinds of examples of dead people voting---totaling in the hundreds of thousands of votes across the country.**

One interesting **example of actual fraud in Indiana occurred when a poll worker, in a poll using punch cards, glued the chads back and then punched out other chads for his candidate.** But this would not be something that would be addressed by an ID requirement.

He also believes that the perception that the polls are loose can be addressed by the legislature. The legislature does not need to wait to see if the statewide database solves the problems and therefore affect the determination of whether an ID requirement is necessary. When he took the deposition of the Republican Co-Director, he said he thought Indiana was getting ahead of the curve. That is, there have been problems around the country, and confidence in elections is low. Therefore Indiana is now in front of getting that confidence back.

Mr. Webber stated that the **largest vote problem in Indiana is absentee ballots. Absentee ballot fraud and vote buying are the most documented cases.** It used to be the law that applications for absentee ballots could be sent anywhere. **In one case absentee votes were**

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

exchanged for "a job on election day"---meaning one vote for a certain price. The election was contested and the trial judge found that although there was vote fraud, the incidents of such were less than the margin of victory and so he refused to overturn the election. Mr. Webber appealed the case for the state and argued the judge used the wrong statute. The Indiana Supreme Court agreed and reversed. **Several people were prosecuted as a result – those cases are still pending.**

Process

In Indiana, voter complaints first come to the attorney for the county election board who can recommend that a hearing be held. If criminal activity was found, the case could be referred to the county prosecutor or in certain instances to the Indiana Attorney General's Office. In practice, the Attorney General almost never handles such cases.

Mr. Webber has had experience training county of election boards in preserving the integrity and security of the polling place from political or party officials. Mr. Webber stated that **the Indiana voter rolls need to be culled.** He also stated that **in Southern Indiana a large problem was vote buying while in Northern Indiana a large problem was based on government workers feeling compelled to vote for the party that gave them their jobs.**

Recommendations

- Mr. Webber believes that **all election fraud and intimidation complaints should be referred to the Attorney General's Office to circumvent the problem of local political prosecutions. The Attorney General should take more responsibility for complaints of fraud because at the local level, politics interferes.** At the local level, everyone knows each other, making it harder prosecute.
- Indiana currently votes 6 am to 6 pm on a weekday. Government workers and retirees are the only people who are available to work the polls. Mr. Webber suggested that the biggest change should be to **move elections to weekends. This would involve more people acting as poll workers who would be much more careful about what was going on.**
- **Early voting at the clerk's office is good because the people there know what they are doing. People would be unlikely to commit fraud at the clerk's office. This should be expanded to other polling places in addition to that of the county clerk.**
- Finally, Mr. Webber believes **polling places should be open longer, run more professionally but that there needs to be fewer of them so that they are staffed by only the best, most professional people.**

Heather Dawn Thompson, Director of Government Relations, National Congress of American Indians

Recent trends

Native election protection operations have intensified recently for several reasons. While election protection efforts in Native areas have been ongoing, leaders realized that they were failing to develop internal infrastructure or cultivate locally any of the knowledge and expertise which would arrive and leave with external protection groups.

Moreover, in recent years partisan groups have become more aware of the power of the native vote, and have become more active in native communities. This has partly resulted in an **extreme increase in voter intimidation tactics. As native communities are easy to identify, easy to target, and generally dominated by a single party, they are especially vulnerable to such tactics.**

Initially, reports of intimidation were only passed along by word of mouth. But it became such a problem in the past 5 to 6 years that tribal leaders decided to raise the issue to the national level. Thompson points to the Cantwell election in 2000 and the Johnson election in South Dakota in 2002 as tipping points where many began to realize the Indian vote could matter in Senate and national elections.

Thompson stressed that Native Vote places a great deal of importance on being nonpartisan. While a majority of native communities vote Democratic, there are notable exceptions, including communities in Oklahoma and Alaska, and they have both parties engaging in aggressive tactics. However, she believes the most recent increase in suppression and intimidation tactics have come from Republican Party organizations.

Nature of Suppression/Intimidation of Native Voters

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Thompson categorizes suppression into judge related and poll-watcher related incidents, both of which may be purposeful or inadvertent, as well as longstanding legal-structural constraints.

Structural problems

One example of inadvertent suppression built into the system stems from the fact that many Indian communities also include significant numbers of non-Indians due to allotment. Non-Indians tend to be most active in the state and local government while Indians tend to be more involved in the tribal government. Thus, the individuals running elections end up being non-Indian. Having Indians vote at polling places staffed by non-Indians often results in incidents of disrespect towards Native voters (Thompson emphasized the considerable racism which persists against Indians in these areas). Also, judges aren't familiar with Indian last names and are more dismissive of solving discrepancies with native voters.

Structural problems also arise from laws which mandate that the tribal government cannot run state or local elections. In places like South Dakota, political leaders used to make it intentionally difficult for Native Americans to participate in elections. For example, state, local and federal elections could not be held in the same location as tribal elections, leading to confusion when tribal and other elections are held in different locations. Also, it is common to have native communities with few suitable sites, meaning that a state election held in a secondary location can suddenly impose transportation obstacles.

Photo ID Issues

Thompson believes both state level and HAVA photo ID requirements have a considerable negative impact. For a number of reasons, many Indian voters don't have photo ID. Poor health care and poverty on reservations means that many children are born at home, leading to a lack of birth certificates necessary to obtain ID. Also, election workers and others may assume they are Hispanic, causing additional skepticism due to citizenship questions. There is a cultural issue as well—historically, whenever Indians register with the federal government it has been associated with a taking of land or removal of children. Thus many Indians avoid registering for anything with the government, even for tribal ID.

Thompson also offered examples of how the impact of ID requirements had been worsened by certain rules and the discriminatory way they have been carried out. In the South Dakota special election of 2003, poll workers told Native American voters that if they did not have ID with them and they lived within sixty miles of the precinct, the voter had to come back with ID. The poll workers did not tell the voters that they could vote by affidavit ballot and not need to return, as required by law. This was exacerbated by the fact that the poll workers didn't know the voters—as would be the case with non-Indian poll workers and Indian voters. Many left the poll site without voting and did not return.

In Minnesota, the state tried to prohibit the use of tribal ID's for voting outside of a reservation, even though Minnesota has a large urban Native population. Thompson believes this move was very purposeful, and despite any reasonable arguments from the Secretary of State, they had to file a lawsuit to stop the rule. They were very surprised to find national party representatives in the courtroom when they went to deal with lawsuit, representatives who could only have been alerted through a discussion with the Secretary of State.

Partisan Poll-Monitoring

Thompson believes the most purposeful suppression has been perpetrated by the party structures on an individual basis, of which South Dakota is a great example.

Some negative instances of poll monitoring are not purposeful. Both parties send in non-Indian, non-Western lawyers, largely from the East Coast, which can lead to uncomfortable cultural clashes. These efforts display a keen lack of understanding of these communities and the best way to negotiate within in them. But while it may be intimidating, it is not purposeful.

Yet there are also many instances of purposeful abuse of poll monitoring. While there were indeed problems during the 2002 Johnson election, it was small compared to the Janklow special election. Thompson says Republican workers shunned cultural understanding outreach, and had an extensive pamphlet of what to say at polls and were very aggressive about it. In one tactic, every time a voter

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

would come up with no ID, poll monitors would repeat “You can’t vote” over and over again, causing many voters to leave. This same tactic appeared across reservations, and eventually they looked to the Secretary of State to intervene. In another example, the head of poll watchers drove from poll to poll and told voters without IDs to go home, to the point where the chief of police was going to evict him from the reservation. In Minnesota, on the Red Lake reservation, police actually did evict an aggressive poll watcher—the fact that the same strategies are employed several hundred miles apart points to standardized instructions.

None of these incidents ever went to court. Thompson argues this is due to few avenues for legal recourse. In addition, it is inherently difficult to settle these things, as they are he said-she said incidents and take place amidst the confusion of Election Day. Furthermore, poll watchers know what the outline of the law is, and they are careful to work within those parameters, leaving little room for legal action.

Other seeming instances of intimidation may be purely inadvertent, such as when, in 2002, the U.S. Attorney chose Election Day to give out subpoenas, and native voters stayed in their homes. In all fairness, she believes this was a misunderstanding.

The effect of intimidation on small communities is especially strong and is impossible to ultimately measure, as the ripple effect of rumors in insular communities can’t be traced. In some communities, they try to combat this by using the Native radio to encourage people to vote and dispel myths.

She has suggestions for people who can describe incidents at a greater level of detail if interested.

Vote Buying and Fraud

They haven’t found a great deal of evidence on vote-buying and fraud. When cash is offered to register voters, individuals may abuse this, although Thompson believes this is not necessarily unique to the Native community, but a reflection of high rates of poverty. This doesn’t amount to a concerted effort at conspiracy, but instead represents isolated incidents of people not observing the rules. While Thompson believes looking into such incidents is a completely fair inquiry, she also believes it has been exploited for political purposes and to intimidate. For example, large law enforcement contingents were sent to investigate these incidents. As Native voters tend not to draw distinctions between law enforcement and other officials, this made them unlikely to help with elections.

Remedies

- As far as voter suppression is concerned, Native Vote has been asking the Department of Justice to look into what might be done, and to place more emphasis on law enforcement and combating intimidation. They have been urging the Department to focus on this at least much as it is focusing on enforcement of Section 203. Native groups have complained to DOJ repeatedly and DOJ has the entire log of handwritten incident reports they have collected. Therefore, Thompson recommends more DOJ enforcement of voting rights laws with respect to intimidation. People who would seek to abuse the process need to believe a penalty will be paid for doing so. Right now, there is no recourse and DOJ does not care, so both parties do it because they can.
- Certain states should rescind bars on nonpartisan poll watchers on Election Day; Thompson believes this is contrary to the nonpartisan, pro-Indian presence which would best facilitate voting in Native communities.
- As discussed above, Thompson believes ID requirements are a huge impediment to native voters. At a minimum, Thompson believes all states should be explicit about accepting tribal ID on Election Day.
- Liberalized absentee ballot rules would also be helpful to Native communities. As many Indian voters are disabled and elderly, live far away from their precinct, and don’t have transportation, tribes encourage members to vote by absentee ballot. Yet obstacles remain. Some voters are denied a chance to vote if they have requested a ballot and then show up at the polls. Thompson believes South Dakota’s practice of tossing absentee ballots if a voter shows up at the ED would serve as an effective built-in protection. In addition, she believes there should be greater scrutiny of GOTV groups requesting absentee ballots without permission. Precinct location is a longstanding issue, but Thompson recognizes that states have limited resources. In the

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

absence of those resources, better absentee ballot procedures are needed.

- **Basic voter registration issues and access** are also important in native communities and **need to be addressed.**
- Thompson is **mixed on what restrictions should be placed on poll watcher behavior, as she believes open elections and third party helpers are both important.** However, she would be **willing to explore some sort of stronger recourse and set of rules concerning poll watchers' behavior. Currently, the parties are aware that no recourse exists, and try to get away with what they will.** This is not unique to a single party—both try to stay within law while shaking people up. The existing VRA provision is 'fluffy'—unless you have a consent decree, you have very little power. Thompson thinks **a general voter intimidation law that is left a bit broad but that nonetheless makes people aware of some sort of kickback could be helpful.**

Jason Torchinsky, Assistant General Counsel, American Center for Voting Rights

Regarding the August 2005 Report

ACVR has not followed up on any of the cases it cited in the 2005 report to see if the allegations had been resolved in some manner. Mr. Torchinsky stated that **there are problems with allegations of fraud in the report and prosecution---just because there was no prosecution, does not mean there was no vote fraud.** He believes that it is **very hard to come up with a measure of voter fraud short of prosecution.** Mr. Torchinsky does not have a good answer to resolve this problem.

P. 35 of the Report indicates that there were coordinated efforts by groups to coordinate fraudulent voter registrations. P. 12 of the Ohio Report references a RICO suit filed against organizations regarding fraudulent voter registrations. Mr. Torchinsky does not know what happened in that case. He stated that there was a drive to increase voter registration numbers regardless of whether there was an actual person to register. He stated that when you have an organization like ACORN involved all over the place, there is reason to believe it is national in scope. When it is the same groups in multiple states, this leads to the belief that it is a concerted effort.

Voting Problems

Mr. Torchinsky stated **there were incidents of double voting---ex. a double voter in Kansas City, MO. If the statewide voter registration database requirement of HAVA is properly implemented, he believes it will stop multiple voting in the same state. He supports the HAVA requirement, if implemented correctly. Since Washington State implemented its statewide database, the Secretary of State has initiated investigations into felons who voted. In Philadelphia the major problem is permitting polling places in private homes and bars – even the homes of party chairs.**

Mr. Torchinsky believes that **voter ID would help, especially in cities in places like Ohio and Philadelphia, PA. The ACVR legislative fund supports the Real ID requirements suggested by the Carter-Baker Commission. Since federal real ID requirements will be in place in 2010, any objection to a voter ID requirement should be moot.**

Mr. Torchinsky stated that there are **two major poll and absentee voting problems---(1) fraudulent votes-ex. dead people voting in St. Louis and (2) people voting who are not legally eligible-ex. felons in most places.** He also believes that **problems could arise in places that still transport paper ballots from the voting location to a counting room. However, he does not believe this is as widespread a problem now as it once was.**

Suggestions

Implement the Carter-Baker Commission recommendations because they represent a reasonable compromise between the political parties.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Robin DeJarnette, Executive Director, American Center for Voting Rights

[NO SUMMARY FOUND]

Joseph Rich, former Director of the Voting Section, Civil Rights Division, U.S. Department of Justice

Data Collection and Monitoring

- The (Voting) section developed a new database before the 2004 election to log complaint calls and what was done to follow up on them. They opened many investigations as a result of these complaints, including one on the long lines in Ohio (see DOJ letter on website, as well as critical commentary on the DOJ letter's analysis). DOJ found no Section 2 violation in Ohio. John Tanner should be able to give us this data. However, the database does not include complaints that were received by monitors and observers in the field.
- All attorney observers in the field are required to submit reports after Election Day to the Department. These reports would give us a very good sense of the scope and type of problems that arose on that day and whether they were resolved on the spot or required further action.
- The monitoring in 2004 was the biggest operation ever. Prior to 2000, only certain jurisdictions could be observed – a VRA covered jurisdiction that was certified or a jurisdiction that had been certified by a court, e.g. through a consent decree. Since that time, and especially in 2004, the Department has engaged in more informal "monitoring." In those cases, monitors assigned to certain jurisdictions, as opposed to observers, can only watch in the polling place with permission from the jurisdiction. The Department picked locations based on whether they had been monitored in the past, there had been problems before, or there had been allegations in the past. Many problems that arose were resolved by monitors on the spot.

Processes for Cases not Resolved at the Polling Site

- If the monitor or observer believes that a criminal act has taken place, he refers it to the Public Integrity Section (PIN). If it is an instance of racial intimidation, it is referred to the Civil Rights Criminal Division. However, very few such cases are prosecuted because they are very hard to prove. The statutes covering such crimes require actual violence or the threat of violence in order to make a case. As a result, most matters are referred to PIN because they operate under statutes that make these cases easier to prove. In general, there are not a high number of prosecutions for intimidation and suppression.
- If the act is not criminal, it may be brought as a civil matter, but only if it violated the Voting Rights Act – in other words, only if there is a racial aspect to the case. Otherwise the only recourse is to refer it to PIN.
- However, PIN tends not to focus on intimidation and suppression cases, but rather cases such as alleged noncitizen voting, etc. Public Integrity used to only go after systematic efforts to corrupt the system. Now they focus on scattered individuals, which is a questionable resource choice. Criminal prosecutors over the past 5 years have been given more resources and more leeway because of a shift in focus and policy toward noncitizens and double voting, etc.
- There have been very few cases brought involving African American voters. There have been 7 Section 2 cases brought since 2001 – only one was brought on behalf of African American voters. That case was initiated under the Clinton administration. The others have included Latinos and discrimination against whites.

Types of Fraud and Intimidation Occurring

- There is no evidence that polling place fraud is a problem. There is also no evidence that the NVRA has increased the opportunity for fraud. Moreover, regardless of NVRA's provisions, an election official can always look into a voter's registration if he or she believes that person should no longer be on the list. The Department is now suing Missouri because of its poor registration list.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

- The **biggest problem is with absentee ballots**. The **photo ID movement is a vote suppression strategy**. This type of suppression is a bigger problem than intimidation. There has been an increase in vote suppression over the last five years, but it has been indirect, often in the way that laws are interpreted and implemented. Unequal implementation of ID requirements at the polls based on race would be a VRA violation.
- The **most common type of intimidation occurring is open hostility by poll workers toward minorities**. It is a judgment call whether this is a crime or not – Craig Donsanto of PIN decides if it rises to a criminal matter.
- **Election Day challenges at the polls could be a VRA violation but such a case has never been formally pursued**. Such cases are often resolved on the spot. **Development of a pre-election challenge list targeted at minorities would be a VRA violation but this also has never been pursued**. These are choices of current enforcement policy.
- **Long lines due to unequal distribution of voting machines based on race, list purges based on race and refusal to offer a provisional ballot on the basis of race would also be VRA violations**.

Recommendations

- Congress should **pass a new law that allows the Department to bring civil actions for suppression that is NOT race based, for example, deceptive practices or wholesale challenges to voters in jurisdictions that tend to vote heavily for one party**.
- **Given the additional resources and latitude given to the enforcement of acts such as double voting and noncitizen voting, there should be an equal commitment to enforcement of acts of intimidation and suppression cases**.
- There should also be increased **resources dedicated to expanded monitoring efforts**. This might be the best use of resources **since monitors and observers act as a deterrent to fraud and intimidation**.

Joseph Sandler, Counsel to the Democratic National Committee

2004-Administrative Incompetence v. Fraud

Sandler believes the **2004 election was a combination of administrative incompetence and fraud**. Sandler stated there was a deliberate effort by the Republicans to disenfranchise voters across the country. This was accomplished by **mailing out cards to registered voters and then moving to purge from the voters list those whose cards were returned**. Sandler indicated that in **New Mexico there was a deliberate attempt by Republicans to purge people registered by third parties**. He stated that there were intentional efforts to disenfranchise voters by election officials like Ken Blackwell in Ohio.

The problems with machine distribution in 2004 were not deliberate. However, Sandler believes that a large problem exists in the states because there are no laws that spell out a formula to allocate so many voting machines per voter.

Sandler was asked how often names were intentionally purged from the voter lists. He responded that there will be a lot of names purged as a result of the creation of the voter lists under HAVA. However, Sandler stated **most wrongful purging results from incompetence**.

Sandler also said there was not much intimidation at the polls because most such efforts are deterred and that the last systematic effort was in Philadelphia in 2003 where Republicans had official looking cars and people with badges and uniforms, etc.

Sandler stated that **deliberate dissemination of misinformation was more incidental, with individuals misinforming and not a political party**. **Disinformation did occur in small Spanish speaking communities**.

Republicans point to instances of voter registration fraud but Sandler believes it did not occur, except for once in a blue moon. Sandler did not believe non-citizen voting was a problem. He also does not believe that there is voter impersonation at the polls and that

Republicans allege this as a way of disenfranchising voters through restrictive voter identification rules.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Fraud and Intimidation Trends

- Sandler stated that over the years there has been a shift from organized efforts to intimidate minority voters through voter identification requirements, improper purging, failure to properly register voters, not allocating enough voting machines, failure to properly use the provisional ballot, etc., by voter officials as well as systematic efforts by Republicans to deregister voters.
- At the federal level, Sandler said, the voting division has become so politicized that it is basically useless now on intimidation claims. At the local level, Sandler does not believe politics prevents or hinders prosecution for vote fraud.

Sandler's Recommendations:

- Moving the voter lists to the state level is a good idea where carefully done
- Provisional ballots rules should follow the law and not be over-used
- No voter ID
- Partisanship should be taken out of election administration, perhaps by giving that responsibility by someone other than the Secretary of State. There should at least be conflict of interest rules
- Enact laws that allow private citizens to bring suit under state law

All suggestions from the DNC Ohio Report:

1. The Democratic Party must continue its efforts to monitor election law reform in all fifty states, the District of Columbia and territories.
2. States should be encouraged to codify into law all required election practices, including requirements for the adequate training of official poll workers.
3. States should adopt uniform and clear published standards for the distribution of voting equipment and the assignment of official pollworkers among precincts, to ensure adequate and nondiscriminatory access. These standards should be based on set ratios of numbers of machines and pollworkers per number of voters expected to turn out, and should be made available for public comment before being adopting.
4. States should adopt legislation to make clear and uniform the rules on voter registration.
5. The Democratic Party should monitor the processing of voter registrations by local election authorities on an ongoing basis to ensure the timely processing of registrations and changes, including both newly registered voters and voters who move within a jurisdiction or the state, and the Party should ask state Attorneys General to take action where necessary to force the timely updating of voter lists.
6. States should be urged to implement statewide voter lists in accordance with the Help America Vote Act ("HAVA"), the election reform law enacted by Congress in 2002 following the Florida debacle.
7. State and local jurisdictions should adopt clear and uniform rules on the use of, and the counting of, provisional ballots, and distribute them for public comment well in advance of each election day.
8. The Democratic Party should monitor the purging and updating of registered voter lists by local officials, and the Party should challenge, and ask state Attorneys General to challenge, unlawful purges and other improper list maintenance practices.
9. States should not adopt requirements that voters show identification at the polls, beyond those already required by federal law (requiring that identification be shown only by first time voters who did not show identification when registering.)
10. State Attorneys General and local authorities should vigorously enforce, to the full extent permitted by state law, a voter's right to vote without showing identification.
11. Jurisdictions should be encouraged to use precinct-tabulated optical scan systems with a computer assisted device at each precinct, in preference to touchscreen ("direct recording equipment" or "DRE") machines.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

12. Touchscreen (DRE) machines should not be used until a reliable voter verifiable audit feature can be uniformly incorporated into these systems. In the event of a recount, the paper or other auditable record should be considered the official record.
13. Remaining punchcard systems should be discontinued.
14. **States should ask state Attorneys General to challenge unfair or discriminatory distribution of equipment and resources** where necessary, and the Democratic Party should bring litigation as necessary.
15. Voting equipment vendors should be required to disclose their source code so that it can be examined by third parties. No voting machine should have wireless connections or be able to connect to the Internet.
16. Any equipment used by voters to vote or by officials to tabulate the votes should be used exclusively for that purpose. That is particularly important for tabulating/aggregating computers.
17. States should adopt "no excuse required" standards for absentee voting.

Multiple			Yes		BOE				BOE Dismissed		Apache	Arizona	31-Aug-04	2002 general	County Attorney alleges some Navajo Nation voters cast multiple ballots. The Election Director dismisses many of the allegations and questioned why the county attorney had waited more than a year and a half to make them.	Arizona Republic			
Multiple	In person				DA	1				Yes	Eureka Springs	Arkansas	29-Jun-01	county judge	A special judge rules prosecutors must show the mayor intended to vote twice - he says he got confused when he voted early for a city bond election and the voting clerk offered him a primary ballot at the same time. He then voted in the primary at his precinct on election day.	AP			
Multiple	Absentee					4				Yes	La Puente	California	3-Aug-02	municipal	Four family members of a councilman were charged with voting twice because they voted absentee and on election day.	Los Angeles Times			
Dead	Both	Yes	Press							Yes	San Francisco	California	1-Mar-04	mayoral run-off	One of the candidates alleged that 400 people who are dead cast votes. The allegation was based on a computer program that cross-referenced voters and the social security death index using first and last names and date of birth. When the Chronicle also used middle initials and other identifying indicators, the list was whittled to five cases. Some were by absentee but a couple were in person.	San Francisco Chronicle			
Multiple				State								Colorado	25-Mar-05		58 of 64 counties responded to a request by the Secretary of State to report on fraud investigations. Only 13 counties have referred cases to prosecutors. Those cases included 41 instances of citizens voting twice. Denver County officials said they had 81 instances of double voting.	Denver Post			
Multiple	In person	Yes	State						Found Untrue	Yes		Connecticut	22-Oct-02	all	Secretary of State says that RNC allegations that 54 Connecticut voters cast ballots in 2 different states have been investigated and found to be false. 15 voted only in CT, 29 voted only in another state, four names were wrong because they had different birth dates, and three were referred to the FBI and US Attorney because information from the other state could not be obtained.	New Haven Register			
Multiple	In person	Yes									Bridgport	Connecticut	23-Sep-03	mayoral primary	Losing candidate alleges some voters were able to vote twice	News 12			
Multiple	In person								Voters Deny/Possible mistakes		DC and Maryland		31-Oct-02	state primary and presidential election	Records indicate that 24 voters cast ballots in both DC and Maryland in the September 2002 primary and 90 voters did so in the 2000 election. Voters denied they had done so and election officials said it was possible for precinct workers to make mistakes when recording who voted.	Washington Post

Type	Absentee/In person	Partisan Allegation	Other Source for Allegation?	Investigation?	Other Official involvement?	Charged (Individuals)	Acquittal/Dismissal	Convicted/guilty pleas (Individuals)	Other determination	Follow-up possible? (Open investigations and/or pending charges)	City / County	State	Date	Type of Election	Alleged instance of fraud	Original Source	Resolution of incident / allegation	Source of Resolution 1	Source of Resolution 2
Multiple	Absentee			County					Ballots not counted	Yes	Palm Beach	Florida	5-Dec-02	2002 general	The County State Attorney will be investigating about a dozen people accused of voting twice. Each cast an absentee ballot and voted on Election Day. The Secretary of State says they may have forgotten they voted absentee. They all had to vote by provisional ballots so none of the second votes were counted. This is the first time the Secretary's office has found people who voted twice.	Sun-Sentinel			
Multiple	Absentee								Ballots discarded		Indian River	Florida	2-Nov-04	presidential	One voter returned two absentee ballots -- the first one was counted and the second discarded. A woman voted by absentee and then during early voting. Her absentee ballot will be thrown out.	Press Journal (Vero Beach)			
Multiple	Absentee			Press						Yes	Palm Beach	Florida	6-Nov-04	presidential	The Palm Beach Post reports that three voters cast absentee ballots and then filled out provisional ballots on Election Day. Local officials have asked the Attorney General to investigate. The Post reached two of the voters and they said they cast provisional ballots because when they tried to check on their absentee ballots they were unable to confirm they had been received.	Florida Times Union			
Multiple	Both			State		12				Yes	Volusia	Florida	6-Nov-04	presidential	Volusia officials said Friday they have identified 12 cases of suspected election fraud stemming from Tuesday's presidential election. All involved people trying to vote twice, said County Judge Steven deLarocche, a member of the county canvassing board. In one case, which occurred during early voting, a person was caught trying to feed an absentee ballot into a tabulating machine after casting a traditional ballot, deLarocche said. That person was stopped by a poll worker. In the other 11 cases, people who had voted by absentee ballot or at an early-voting site tried to vote a second time on Election Day, he said. In those cases, election workers discovered the attempts when computers showed those voters had already cast ballots. All the cases will be forwarded to the State Attorney's Office for prosecution.	Orlando Sentinel

Multiple	Absentee			Federal					Clerical Error		Duval	Florida	31-Jul-05	presidential	Officials said in January that a review of records found more than 50 cases in which the same person had cast an absentee and in person ballot. An FBI investigation found that every one of those instances was due to a clerical error, such as someone signing the voter rolls before they were told they had to vote elsewhere.	AP			
Multiple	In person			County					Ballot discarded		Fulton	Georgia	30-Sep-04	primary	A man who may be facing felony charges for voting twice says he voted during the early period and that when he went to his precinct on election day to make sure that vote had been recorded, he was told it was not. The poll worker told him he should vote again. Fulton County investigated and found no other advance voters had voted again on the day of the election. The registration chief acknowledged the county was late getting names of advance voters to the polls. The advance vote was tossed out after it was discovered.	Atlanta Journal Constitution			
Multiple						1			Yes		Marshall	Illinois	13-Nov-04 and 2004		A man has been charged for voting twice, in both Kane County and Marshall County	South Bend Tribune			
Dead				Press					Yes		Lake County	Indiana	16-May-04	county primary	A newspaper analysis shows that five votes cast were attributed to people who were dead well before the election.	AP			
Multiple	Absentee							1			Prairie Village	Kansas	8-Jan-05	2002 general	A woman who voted twice pled guilty -- she had voted from her business address and cast an absentee ballot from a different location in the same election.	Kansas City Star			
Multiple	In person			County							Hancock	Louisiana	3-Nov-04	presidential	A woman called a radio talk show Tuesday and admitted casting fraudulent votes in Hancock County. The woman said she voted once using her own name, but after realizing she was not required to show identification, she waited several hours and returned to the polls and used a friend's name. The county clerks said the incident seems to be isolated and her office has not received evidence of other fraudulent votes elsewhere in the county.	The Sun Herald			
Multiple											Duluth	Minnesota	3-Nov-04	presidential	A voter claims someone forged his signature to vote under his name. He reported the incident to City Hall	Duluth News-Tribune

Multiple	In person					1				Yes	Minneapolis	Minnesota	23-Feb-05	presidential	A felony charge filed Tuesday in Hennepin County District Court accuses Darin Randall Johnson, 34, of registering to vote and casting ballots in three different places in the November election. The criminal complaint alleges he filed out same-day registration forms and voted once in Brooklyn Park and twice in Minneapolis.	Saint Paul Pioneer Press			
Multiple	In person							1			Kansas City	Missouri	28-Mar-05	various	Man pleads guilty to casting double votes in four elections by voting in both Kansas and Missouri	Kansas City Star			
Multiple				Press		2				Yes	Kansas City	Missouri	September 8, 2004	all	Kansas City Star reports that their investigation shows there may be more than 300 voters voting twice in different counties. The exact number is impossible to determine because many counties have shredded their poll books and state computer files are rife with data errors. In fact, the number may be lower because the state computer files contain many errors that show people voting who did not actually vote. The study only flagged people registered in two places under exactly the same name and date of birth.	Kansas City Star, Belleville News-Democrat	Two people are charged	Kansas City Star (January 8, 2005)	
Dead/Multiple		Yes								Yes		New Jersey	16-Sep-05	presidential	Republican Party claims 4,755 people who have died voted in the election and 4,397 people registered to vote in more than one county voted twice	New York Times			
Multiple	Absentee										Sandoval	New Mexico	9-Nov-02	state house	A comparison of names on absentee-ballot-request rosters and affidavits for the absentee-in-lieu-of-ballots made it appear that 5 people had voted twice absentee by mail and absentee-in-lieu-of at the polls.	Albuquerque Journal			
Multiple	In person			DA						Yes	Sandoval	New Mexico	24-Nov-04	presidential	Bureau of Elections employees found a woman who voted on a provisional ballot at one precinct also had voted at the regular precinct where she is registered. The signatures at both precincts appeared to be the same, so elections officials sent the case to the district attorney.	AP			
Multiple						1				Yes	New York	New York	23-Oct-02 and 2001	2000 and 2001	Former conservative party candidate for lieutenant governor is arraigned on an indictment for voting twice, from two different Manhattan addresses. He denies the charge	Newsday

Multiple				Press					Many likely errors		North Carolina		24-Oct-04 and 2002		The Observer found up to 180 people who were listed as having voted in both Carolinas in either the 2000 or 2002 elections. Reporters found no one who admitted to double voting and discovered plausible explanations for many of the duplications. In one case, an Army captain in North Carolina shared the same name as his father in South Carolina. The father was likely mistakenly recorded under his son's name when he cast his ballot.	AP			
Multiple	Absentee					4			Yes		Jones	North Carolina	30-Oct-04	primary	Four men were charged with voting by absentee and on election day. Three denied the allegations or said they misunderstood the process.	AP			
Multiple				State							Gaston	North Carolina	16-Dec-04	presidential	There are differences in most precincts between the number of ballots cast and the number of people recorded as voting. State investigators have concluded there is no way to rule out double-voting or missing votes because poll workers cannot explain the discrepancies.	Charlotte Observer			
Multiple		Yes		Press					Turned out to be untrue		Ohio		2-Nov-04	presidential	Republican attorney cites a Plain Dealer report saying more than 27,000 people are registered to vote in both Ohio and Florida and that 100 people cast votes in both places four years ago. A Dispatch investigation of the allegations found little proof of duplicate voting after comparing the Ohio and Florida state databases and conducting further research. After culling the list through those methods, the Dispatch interviewed the people left in question. This failed to turn up anyone who had ever voted twice. Many had never been to Florida; some had never lived in Ohio.	Columbus Dispatch			
Multiple					BOE				1 of 18 found worthy of investigation	Yes	Summit	Ohio	8-Dec-04	local	The Director of the Board of Elections says the number of people under investigation for voting twice has decreased from 19 to 10. The board already determined that there were legitimate explanations for about half of the votes. In one case it appeared a man voted absentee and at the polling place but it turned out the absentee ballot had been cast by his son who has the same name.	Akron Beacon Journal		2/24/2005, Akron Beacon	
Multiple	Absentee								No indictment		London	Ohio	9-Dec-04	presidential	A couple who admitted voting twice were not indicted -- they voted by absentee ballot and then voted in person because they thought their absentee ballots had been lost	AP

Dead				Press						Yes		Tennessee	14-Dec-05	state senate	A second dead voter cast a ballot in the September special election held to fill the seat vacated by former state senator John Ford. Like a similar case documented earlier this week, this one involves an elderly voter who died weeks before the Sept. 15 election, an investigation by The Commercial Appeal found. Both of the suspect votes occurred in Precinct 27-1, in the heart of heavily Democratic North Memphis. By law, health officials report deaths once a month to the state Election Commission, which then purges the dead from voter registration rolls. In that window of time - a month or so before the election - there's a good chance dead voters will remain on the rolls on Election Day.	Commercial Appeal			
Multiple		Yes							Found to be mistakes		Houston	Texas	25-Nov-04	state legislature	State legislator who lost by 32 votes alleges 32 people voted twice and 101 residents from other districts cast ballots	Austin American Statesman	Most of the allegations seem to be cases of innocent mistakes that may have been technically illegal but not fraud	Houston Chronicle (January 16, 2005)

Broward	Florida	27-Jan-03	ohi	The lawyer for a board of elections employee said she discovered more than 500 unopened absentee ballots in the office mailroom two days after the election. According to the story she laid out to prosecutors, she notified her supervisor and was told there had been a mix-up and that the votes needed to disappear.	Brandenton Herald						
Detroit	Michigan	12-Nov-05	mayoral	Nearly 3000 votes were lost for two days as some were taken home by poll workers, others misplaced. Vote totals failed to add up correctly when the votes were restored.	Detroit Free Press						
Detroit	Michigan	26-Nov-05	mayoral	Detroit officials lost track of ballots in nine precincts and did not count them until two days after the polls closed; a poll worker took home two computer data packs containing ballot information and did not return them until the next day, leading to tampering allegations. Judge overseeing the recount orders more security for the ballots	Detroit Free Press						
Middlesex County	New Jersey	19-Jun-03	assembly primary	Assemblywoman Friscia's suit alleges that election workers told voters who to vote for; allowed two or three people to enter voting booths at the same time; permitted people to vote even though their home addresses and signatures did not match the elections register; allowed registered Republicans to vote in a Democratic primary; provided faulty voting machines; paid people to vote for Vas; allowed non-citizens to vote; refused to accept absentee ballots, and closed Friscia's own polling station in Woodbridge.	Home News Tribune						
Atlantic City	New Jersey	11-Nov-05	mayoral and city council	city council member accused of filing absentee ballot applications for 10 people without their authorization. The Attorney General charges councilman with 10 counts of tampering with public records and one count of hindering or preventing voting	AP						
Cleveland	Ohio	20-Jun-05	presidenti al	A Cleveland elections board employee is charged with changing the votes on ballots completed by five nursing home residents in favor of Bush	Yahoo News						

Hamilton County	Tennessee	18-Jan-03	district primary	The Tennessee Bureau of Investigation searched the home of former Hamilton County Election Commission employee Rita Jones on Friday and seized an undiscovered number of documents. Ms. Jones, a 14-year employee of the Election Commission, was fired two days after the Nov. 5 general election when officials discovered a box of 189 ballots had not been counted on Election Day.	Chattanooga Times Free Press						
San Antonio	Texas	10-Dec-02	unclear	The county election administrator found that ballot counters switched ballots from Republican to Democrat	San Antonio Express News						
Alamo	Texas	15-Dec-03	county commission	A supporter of one of the candidates alleges that he saw the mayor in the city secretary's office going over a list of residents that showed who had voted and who had not and that there were open mail-in ballots in front of them	The Monitor						
Ector County	Texas	15-Dec-04	county commission	On Election Day, Republican David Dunn had one more vote than his opponent for an Ector County commission seat. After a recount, he lost by a vote. He filed a lawsuit Tuesday accusing opponent Barbara Graff and elections administrator Sharon Wilson of election fraud. He accused Graff of ballot tampering during the recount, claiming she or her supporters doctored tally sheets. Wilson mishandled the recount, tossing out two duplicate ballots for Dunn, according to the suit.	AP						
Forney	Texas	13-Dec-05	mayoral	A judge found that votes cast by several people, including City Council member Andy Parker, could not be found in the ballot box. Mr. Parker testified during the seven-day trial that he had used ballot No. 331, but the No. 331 in the box did not match the way he voted. In all, 165 people testified that they had voted early for Mr. Wilson, while just 152 early votes were counted for him - something Judge Kupper called an "irreconcilable discrepancy." The Sheriff's Department is investigating	Dallas Morning News						
Salt Lake	Utah	20-Nov-02	County Council	County clerk candidate writes a letter to the Attorney General alleging altering of vote counts	Salt Lake Tribune						
King	Washington	26-May-05	gubernatorial	An election administrator admitted she falsified a report to make it appear that all absentee ballots were accounted for. It later proved inaccurate when workers discovered 95 unopened, uncounted absentee ballots in a warehouse. Republicans say of the 96 ballots, 47 came from Rossi districts and 28 Gregoire. Gregoire won four of the five King County precincts that recorded more votes than voters. Rossi won four of the six King County precincts that recorded more voters than votes. Republicans claim this proves ballot boxes were stuffed in precincts that favored Gregoire and ballots vanished in precincts favoring Rossi.	News Tribune				See Washington summary -- judge eventually found no fraud		

	Washington	30-May-05	gubernatorial	Republican attorneys allege King County election officials committee fraud by allowing illegal ballots in Democratic districts, ballot box stuffing and thefts of votes from the Republican candidate	The Olympian						
King	Washington		24-May-05 gubernatorial	GOP lawyer contends claim that the Democrats rigged the election by stuffing ballot boxes in the Democrat's two strongest precincts and by "losing" votes in two of the Republican's strongest precincts.	AP						

Los Angeles	California	7-Feb-03	neighborhood council	In the 2002 election two candidates had to be physically removed from the polling place, one for allegedly attempting to steal ballots. Charges of fraud and improprieties included photocopying ballots and stuffing ballot boxes. 135 more ballots than stakeholders were cast. After investigating, the city found no cause to dismiss the election and the League of Women Voters did not find any stuffing of the ballot boxes.	LA Weekly						
Durham	North Carolina	29-Mar-04	city council	poll worker adds ballots -- state board investigates but does not recommend criminal charges, instead recommending that the poll judges in that precinct step down	Herald Sun						
Gaston	North Carolina	16-Dec-04	presidential	There are differences in most precincts between the number of ballots cast and the number of people recorded as voting. State investigators have concluded there is no way to rule out double voting or missing votes because poll workers cannot explain the discrepancies. More than 13,000 votes were omitted from the county's unofficial results, including 1,200 votes from a Dallas precinct and about 12,000 early votes.	Charlotte Observer

Multiple										Senate District 30	South Carolina	27-Sep-04	state senate primary	A person with connections to the Williams campaign nicknamed "The Voter Man" convinced elderly voters, some living in residential care facilities, to fill out absentee ballot registration forms. Some say they never received a ballot, even though records indicate a ballot was cast in their names. * At least one staff member at a Mullins care facility said non-communicative Alzheimer's patients were coaxed into casting absentee ballots. * Another person with ties to the Williams campaign turned in nearly 60 absentee ballots to election officials, many from elderly voters. While not technically illegal, the volume of absentee votes raised eyebrows within the Norwood campaign. As a result of suspected fraud the party ordered a new election and the cases are being criminally investigated.	The State

Challenges	Yes		third-party							Alabama	29-Aug-04	city council	About 50 challenged ballots in a Bayou La Batre City Council contest have stirred discrimination concerns because they were all demanded from Asian-American voters. Fred Marceaux of Coden, an advocate for the Asian community, called the challenged ballots "scare tactics." By all accounts, the voters were challenged to their faces as they walked into the polling place at the Bayou La Batre Community Center. Being publicly confronted on their first trip to the voting booth visibly up-set many of those who were challenged. Until this year, Asians here have seemed reluctant to step into local politics, preferring to live as a self-contained community for the most part.	AP		
Polling Place Harassment			Pollworker/third-party						Yes	Arizona	1-Oct-04	presidential	A pollworker says that during the primary two men came in and said they were checking the polls to see if illegal aliens were voting. They said the name of their organization was Truth in Action. A voting rights advocate says the group was visiting many poll sites. The editor of the organization's website says he visited the polls wearing a black t-shirt with "US Constitutional Enforcement" on the back and the image of a badge on the front. He carried tools, a camera and a video recorder to "film all the conversations I had." He said that for the general election, if he sees "a busload of Hispanic individuals who didn't speak English and who voted," he plans to follow that bus to make sure they aren't voting more than once.	The Progressive		
Structural Barrier									Yes	Arizona	6-Nov-05		In Phoenix (Maricopa County) more than 10,000 people trying to register have been rejected for being unable to prove their citizenship. Yvonne Reed, a spokesman for the recorder's office, said that most are probably U.S. citizens whose married names differ from the ones on their birth certificates or who have lost documentation. She hopes the number of rejected voters shrinks as election officials explain the new requirements. But, she said, "there will be an amount of people who we will not be able to get on the rolls because of not being able to find the right documents or just losing interest." In Tucson (Pima County) 60 percent of those who tried to register initially could not. Elections chief Chris Roads said that all appeared to be U.S. citizens, but many had moved to Arizona recently and couldn't access their birth certificates or passports. Many of those prospective voters have since been able to register, but Roads said about 1,000 citizens are still unable to vote in this week's election because of Proposition 200 requirements. Challenges	Yes				Court				Yes	Georgia	28-Oct-04	presidential	<p>95 people who make up more than three-quarters of a rural Georgia county's registered Hispanic voters were summoned to a courthouse Thursday to defend their right to vote after a complaint alleged a county commissioner attempted to register non-U.S. citizens. The Atkinson County Board of Registrars, however, dismissed most of the complaint at the beginning of the hearing, saying the case could open the county to charges of violating the Voting Rights Act. Remaining complaints against two voters were dropped when the complainants declined to present any evidence against them. The three men who filed the complaint had said they have evidence a county commissioner attempted to help non-U.S. citizens register so they could vote for him in the July 20 Democratic primary. Lawyers from the ACLU and the Mexican American Legal Defense and Education Fund got involved because the men filed the challenges based on a list they had received from the Board of Registrars of all Hispanics registered in the south Georgia county.</p> <p>Linda Davis, chief registrar in Atkinson County, said she provided the men with a list of the 121 voters on the rolls who listed their race as Hispanic or Mexican. She said the men decided to challenge 95 of them.</p>			
State Suppression	Yes			Federal					Yes	Indiana	21-Apr-04	mayoral	<p>The Mexican American Legal Defense and Educational Fund filed a federal law-suit last October alleging that election officials conspired to persuade Hispanics to vote by absentee ballot and limit their access to the polls in the 2003 Democratic primary. The U.S. Attorney's Office is investigating similar allegations. The lawsuit seeks to overturn the election of Mayor Robert Pastrick, who de-feated challenger George Pabey, who is of Puerto Rican descent.</p>	AP

Suppression	Yes									Indiana	7-Oct-04	presidential	<p>Persistent warnings about terrorism also have drawn skepticism from some Democratic election officials and civil rights advocates who have accused the Republican White House of creating a climate of fear that, among other things, could suppress voter turnout. Heavy voter turnout historically has favored Democrats in U.S. elections.</p> <p>Some local officials in Indiana accused Secretary of State Todd Rokita, a Republican, of trying to intimidate voters after he asked election clerks to develop responses to "an immediate and present danger." Engy Abdelkader, civil rights director for the Council on American-Islamic Relations, says that Arab-Americans and other minorities could choose to stay away from the polls if they believe that federal agents will be questioning people there.</p>	USA Today		
Challenges					Police Action					Kentucky	29-May-02	county clerk primary	<p>A poll worker, Jeff Farmer, was stationed at Horse Creek Elementary School as a "challenger," someone who observes the process and can ask voters to prove identities or addresses. The sheriff said Farmer was warned after interfering with voters. "I told him to sit his ass down," Jordan said.</p> <p>When Farmer went outside about 10:30 a.m. and began "pulling voters out of line," according to Jordan, a sheriff's deputy told him to leave or face arrest. Farmer had a different version of events, saying he went out to smoke and wasn't allowed back in.</p>	Lexington Herald Leader		
Challenges	Yes		Third-party							Kentucky	31-Oct-03	gubernatorial	<p>A flyer written and distributed by the Republican in charge of recruiting poll workers asserts that in three previous races the NAACP and the Philip Randolph Institute have targeted "poor, black voters" and encouraged them to "commit voter fraud." Civil rights leaders say this shows that the Republican plan to put challengers in predominantly African American poll sites is racially based. The Republican County chair had announced that Republicans would place challengers at 59 precincts that were either chosen at random or because there were too few election workers.</p>	The Courier-Journal

Challenges	Yes				Court				Yes	Kentucky	2-Nov-03	gubernatorial	Black voters in Louisville sued Friday over a Republican plan to put vote "challengers" in dozens of black precincts	AP	A judge turned down a request Monday to block Republican poll challengers from observing Tuesday's election in predominantly black neighborhoods of the city. Jefferson County Circuit Judge Thomas Wine denied a restraining order sought by the American Civil Liberties Union of Kentucky, which claimed the poll watch-ers could intimidate minority voters or slow voting. The ACLU also filed suit in federal court seeking to bar the poll challeng-ers, but there has been no hearing.	AP, November 4, 2003
Challenges	Yes		Third-party							Kentucky	4-Nov-03	gubernatorial	Republicans plan to deploy "a small army" of challengers in Jefferson County. Critics say the mobilization of mostly white challengers in poorer minority districts is intended to intimidate. Black leaders held a rally decrying the Republican initiative.	Christian Science Monitor	Precinct workers in western Louisville and Newburg reported no problems with Republican vote challengers and predicted a high voter turnout yesterday - in contrast to fears that the challengers would intimidate black voters and keep them from the polls. Even as the number of targeted precincts dropped to 18 because of staffing and training issues, the controversy drew national attention, with the Democratic National Committee and the National Association for the Advancement of Colored People sending personnel to help organize a get-out-the-vote effort. The NAACP also stationed volunteers outside polling places to ensure that voters were treated fairly.	The Courier Journal, November 5, 2003
Challenges	Yes									Kentucky	3-Aug-04	presidential	A group of Republicans called on the county party chair to resign because of plans to use voter challengers in the election. In 2003, the party used Republicans from across the county to watch voting in 18 predominantly Democratic districts -- most of them with large numbers of black voters.	Courier Journal		
Police				Police						Louisiana	7-Oct-03	sheriff	Tangipahoa Parish Sheriff Ed Layrisson said Monday he has suspended two deputies while his office investigates allegations of public intimidation against them. The deputies were at a polling place Saturday and allegedly asked several people in a group how they planned to vote in the sheriff's race, authorities said. The deputies "have adamantly denied the allegation," Layrisson said. He said the deputies were not in uniform, but were carrying their badges and weapons.	The Advocate		
Pollworkers/ID			third-party							Louisiana	2-Nov-04	presidential	Louisiana Election Protection says it received many complaints of voters being denied the right to vote if they did not have a drivers license.	AP

Challenges	Yes		Precinct Chair		Police					Michigan	6-Nov-02		Trouble was reported at Bowen Recreation Center in Pontiac, where police were called after voters and election workers complained that a Republican Party volunteer was harassing people. Precinct chairwoman Linda Nichols said the woman, who identified herself as Teresa Sayer, came to the poll after leaving another location where voters had complained that she was questioning whether they were eligible to vote. "She would be behind the shoulder of the poll worker telling them what they could and could not do," Nichols said. "She even got behind the voter when they were going into the voting booth, asking them if they had identification." State election officials say challengers are not allowed to talk directly to voters but can question the veracity of a voter with poll chairpersons. State Republican officials denied that the woman was intimidating voters at the polling place. The precinct, on Bagley near Orchard Lake, is heavily Democratic and black.	Detroit News		
Other	Yes									Michigan	18-Sep-04	presidential	Democrats were outraged when Republican state representative John Pappageorge was quoted in July as warning that "if we do not suppress the Detroit vote, we're going to have a tough time in this election." Detroit is 83% black.	San Francisco Chronicle		
Challenges	Yes	Yes							Yes	Michigan	4-Nov-04	presidential	Reggie Turner, a Detroit lawyer with the Kerry campaign, complained of voter intimidation by GOP challengers at Detroit sites. "The documented incidents of intimidation and harassment that we have in our files are right out of the stories regarding harassment and intimidation in the South in the 1950s and 1960s," Turner said. GOP challengers harassed people in line to vote, requesting identification when they had no right to, and had lists of voters "they intended to challenge without any legal basis for such challenges." The GOP's Paolino said the lists were of newly registered Detroit voters to whom the GOP had sent mailings that came back from the post office as address unknown.	Detroit Free Press

Challenges	Yes		Third-party		Federal Court					Michigan	8-Nov-05	mayoral	The NAACP has received more than 100 complaints including ones involving intimidation at the polls. There were many fights between challengers and poll workers.	Detroit Free Press	A US District judge ordered all political parties to refrain from talking to voters at the polls. The ruling came in response to a suit filed by the Detroit NAACP which said it had received complaints from 19 polling places that state and national GOP poll monitors were harassing voters. Republicans disputed the claim. The suit charged GOP workers were harassing voters in violation of a state law that prohibits challengers from talking to voters. The suit also said the watchers challenged the eligibility of Detroit voters to cast ballots, prompting some to leave without voting. The Detroit NAACP president said it was an attempt to reduce the black vote in next years state and congressional elections.	November 9, 2003 Detroit Free Press
Challenges	Yes		third-party					Yes		Minnesota	3-Nov-04	presidential	Republicans systematically challenged a group of voters brought in by a nonprofit group and a group from a shelter. At another site, a minority group advocate accused a Republican challenger of intimidating American Indian and black voters.	Duluth News-Tribune		
Pollsite Intimidation (third-party)					Court					Minnesota	3-Nov-04	presidential	Secretary of State Kiffmeyer said her office received about 140 complaints about MoveOn. Minnesota Republican Party leaders tried and failed to get a restraining order against the MoveOn organization, which they accused of stationing activists too close to polling places Tuesday. But the judge disagreed. "The evidence has consisted almost entirely of hearsay," said Hennepin County District Judge Francis Connelly after a two-hour hearing Tuesday afternoon.	St. Paul Pioneer Press		
Challenges	Yes		Local Officials						Yes	Minnesota	3-Nov-04	presidential	Officials in Beltrami County and throughout the Twin Cities reported seeing poll challengers increasingly focused on polling places with particularly heavy populations of specific groups. Examples of those specific groups were college students, Indians on reservations, minorities or the homeless. In one case, the chairman of a Minnesota Indian tribe accused Republican poll challengers of intimidating legitimate voters by aggressively challenging their residency.	Star Tribune

Pollworkers/ID	Yes			third-party					Yes	national	4-Nov-04	presidential	Racial slurs from election workers, missing bilingual ballots and unwarranted demands to check voter identification turned away Asian American voters across the nation, according to reports by the Asian American Legal Defense and Education Fund. "There were racist remarks in New York City – poll workers were blaming them for holding up the lines. One of them said, "You Oriental guys are taking too long to vote," she said. Although the legal fund continues to tally its exiting poll surveys and has no firm estimate for the number of incidents, Fung said repeated requests from poll workers to check identification hindered the high turnout of Asian American voters. With their patience worn thin by the inadequacy of their voting site, many simply left without voting. In polling sites across Detroit, University of Michigan student volunteers monitoring the polling sites said they not only encountered deficient polling sites, but also challengers from the Republican Party deliberately aiming to drive voters away through tactics of intimidation.	University Wire		
N/A	Yes	Yes								national	18-Jan-05	presidential	In his first high-profile address since conceding the presidential election, Senator John F. Kerry decried what he called the suppression of thousands of would-be voters last November. "Thousands of people were suppressed in their efforts to vote. Voting machines were distributed in uneven ways," he told an enthusiastic audience of 1,200. "In Democratic districts, it took people four, five, 11 hours to vote, while Republicans [went] through in 10 minutes. Same voting machines, same process, our America," Kerry said. Critics of the election process in Ohio say there were not enough voting machines in urban, Democrat-leaning precincts, leading to long lines that dissuaded many voters from casting ballots. In some cases, polls were held open after the announced closing time to allow everyone in line to vote, but some left without voting after standing in line for hours. Some blacks in particular have also charged that there were organized efforts to send voters to the wrong voting places, and troubling disparities in the way voting machines counted Democratic votes.	Boston Globe		
Challenges			third-party	DA					Yes	Nevada	23-Oct-02	local	A group called "Concerned Citizens for Fair Elections" filed 1,200 voter challenges, nearly 200 of which were duplicates or triplicates of the same challenge; 220 were improper; several of those who signed the challenges under penalty of perjury said they never inspected the residence they claimed was abandoned or not occupied by a registered voter. District Attorney investigates whether there was perjury	Pahrump Valley Times

Challenges					Court					Ohio	23-Oct-04	presidential	Republicans formally challenged the validity of 35,000 voter registrations across the state	Cleveland Plain Dealer	After a court fight, scheduled hearings on the challenges were canceled, but voters still received mail notifying them they were being challenged.	January 7, 2005, Columbus Dispatch
Challenges					BOE					Ohio	24-Oct-04	presidential	Dozens of Republican challenges to newly registered voters in Franklin County will be tossed out because they were not properly filed, a local elections official said yesterday. An initial review of 50 challenge forms filed by GOP activists shows 40 with an incorrect ward or precinct listed for the voter, said Michael Hackett, deputy director of the Franklin County Board of Elections. He said such mistakes will nullify requests to have people removed from the list of eligible voters. Voters whose eligibility is challenged need to prove Thursday that they're registered at their correct address. If they don't show up, elections board members can decide whether to keep them on the rolls. Franklin County Republican Chairman Doug Priebe said his party's challenges of voters' eligibility is not an attempt to deny legitimately registered people the right to cast a ballot. In Franklin County, beyond the challenges with incorrect information, it appears Republicans included some legitimately registered voters, including members of the military.	Columbus Dispatch		
Challenges	Yes	Yes							Yes	Ohio	29-Oct-04	presidential	In a lawsuit, a voter and Democrats contend Republican challenges to voters around Cleveland and Columbus are designed to keep poor and minority voters from voting.	AP		
Challenges	Yes		third-party							Ohio	30-Oct-04	presidential	Jeff Ganso of the ACLU said in Hamilton County, 250 of 251 precincts targeted by Republicans with challengers are majority African-American precincts.	Toledo Blade

Challenges				Federal	BOE				Yes	Ohio	5-Nov-04	presidential	The Board of Elections threw out 976 of the challenges filed by the Republican Party without prejudice after a volunteer who brought the challenges revealed she did not have any personal information about the eligibility of the challenged voters. A member of the Board told the volunteer she could be indicted for signing a sworn challenge without personal knowledge of eligibility. The Board has indicated they plan to call the Department of Justice to conduct a criminal investigation of the challenges.	Philadelphia Tribune		
State Suppression	Yes									Ohio	11-Dec-04	presidential	Because blue-collar and lower-income workers tend to vote Democratic, the long lines in Akron and other urban areas fueled suspicion of a deliberate tactic to hold down the turnout - especially in largely African-American precincts for presidential challenger John Kerry.	Akron Beacon Journal		
Multiple	Yes									Ohio	23-Jun-05	presidential	Blacks and young voters in Ohio faced widespread voter suppression - mostly because of long lines and improper identification checks - during last year's presidential election, according to a new Democratic Party report. DNC Chairman Howard Dean said that while it's unclear whether the suppression was intentional or whether it influenced the election results, the party's five-month, \$260,000 investigation showed that 28 per-cent of Ohio voters - and twice as many black voters - reported facing challenges on Election Day. "You have a particular ethnic group that has to wait three times as long as other voters, then clearly there is something going on that is aimed at particular precincts," Dean said blacks waited an average of 52 minutes to vote while white voters waited about 18 minutes. It also found that 37 percent of Ohio voters reported being asked for identification. Ohio law requires only new voters to produce identification, and new registrants accounted for 7 percent of all voters. Blacks and voters under 30 were asked for ID's at higher rates than other voters.	The Cincinnati Enquirer		
State Suppression	Yes	Yes								Ohio	23-Jun-05	presidential	Long lines were caused by the scarcity of voting machines in a number of precincts, particularly in minority areas, a report by the DNC on the election in Ohio says.	Washington Post		
Intimidation			Election Officials							Oregon	21-Oct-04	presidential	Officials are concerned about voter intimidation at ballot drop-off sites the evening of the Nov. 2 deadline. A Republican manual instructs GOP volunteers to take video cameras. Party officials say this is to make sure no ballots are collected after the 8 pm cutoff, but Democrats worry that it could frighten away some voters.	Christian Science Monitor

Challenges		Yes								Pennsylvania	6-Nov-02	statewide	Democrats in the state are concerned about Operation Swarm and Storm -- the name they say was given to an effort by the George Gekas campaign to challenge voters based on old information. A pamphlet was allegedly prepared by the campaign, which instructed Republican poll workers to challenge voters who had recently moved to new districts. The laws had been changed, however, and such challenges could have been wrongly made. Voters in some districts were also challenged to produce identification, charged state Democratic Party spokeswoman Mia DeVane. Voters she said need only provide a matching signature to vote in the state.	UPI		
Polling Place Harassment/Pollworkers				Police/local	Court					Pennsylvania	5-Nov-03	mayoral	Complaints filed with the police, the district attorney's office, and the Committee of Seventy alleging physical violence, harassment and intimidation were the highest in modern history. The DA's office reported it had received at least 171 complaints, nearly quadruple the 41 complaints of four years ago. Most charged that voters and poll workers had been intimidated or interfered with. Inspector William Colarulo said the Police Department had received at least 110 complaints, most dealing with simple assaults, vandalism and disturbances. In the course of the day, Common Pleas Judge Benjamin Lemer signed two orders directing Republican workers at polling places in Germantown and North Philadelphia to stop demanding identification from people showing up to vote.	Philadelphia Daily News		
Challenges										Pennsylvania	26-Oct-04	presidential	Republican Representative John Perzel, speaker of the state house, told US News and World Report that "The Kerry campaign needs to come out with humongous numbers here in Philadelphia. Its important for me to keep that number down." At the same time, he said campaign workers are examining voting records for evidence of Democrats registering more than once or otherwise violating election rules. An aide to Perzel said challengers will have lists of questionable registrations at the polls.	AP		
Pollsite Location	Yes	Yes								Pennsylvania	31-Oct-04	presidential	In Philadelphia, Republicans unsuccessfully sought last week to change locations of 63 polling places, contending that their placement in closed bars or in homes would intimidate voters. Democrats pointed out that most of those locations were in minority neighborhoods and branded the move an effort to suppress black votes.	Philadelphia Inquirer

Challenges			BOE							Pennsylvania	2-Nov-04	presidential	Philadelphia's voter-registration administrator cried foul last night over a letter sent from the state GOP to judges of elections, the men and women who run the city's 1,681 polling places. He said the letter had wrongly instructed those poll workers to check and compare voters' various signatures "at will." He pointed to state law, which limits such checks to prevent long voting delays. State Republicans released additional details yesterday from their list of 10,000 letters to Philadelphia voters that they said were returned as undeliverable. They said they would use this list to challenge voters at the polls today. Counsel to the state Republican Party said there were multiple reports yesterday that elderly voters in Lancaster and York Counties in Central Pennsylvania - an area the Bush campaign has been heavily courting - got phone calls telling them they would not be allowed to vote and urging them not to show up at the polls.	Philadelphia Inquirer		
Pollworkers					Court					Pennsylvania	3-Nov-04	presidential	While overwhelmed poll workers pushed provisional ballots on some voters who should not have been using them, other voters who could have used provisional ballots were being turned away. In Allentown, about 10 lawyers and community activists rushed to the Salvation Army building on North Eighth Street to challenge poll workers who were stopping about eight people whose names were not in the registration list.	Morning Call		
State Suppression										Pennsylvania	4-Nov-04	presidential	There were long lines throughout the state, leading voters to wait for several hours in order to vote. Some voters waited into the night in order to vote. Some reportedly left without voting.	Philadelphia Inquirer		
Police										Pennsylvania	8-Dec-04	presidential	In Philadelphia, some voters were sent to police stations to cast provisional ballots, House Minority Whip Steny H. Hoyer (D-Md.) told a voting rights forum. "Clearly an intimidation," he said.	Los Angeles Times		
Pollworkers			Voters		BOE					Pennsylvania	24-Apr-05	presidential	The Board of Elections fired three elections officials because of charges they intimidated Democratic voters. One voter said a poll worker was aggressive in challenging his eligibility. Another said a worker yelled at her and then grabbed her arm and forced her out of the polling place because she was wearing a Kerry button.	Lancaster Sunday News

Challenges	Yes				Court				Yes	South Carolina	5-Nov-02		Voters in Beaufort County who only have rural route addresses or post office box numbers on their voter registration cards might face problems at the polls today, a federal lawsuit filed in Charleston late Monday alleges. The lawsuit said that poll workers could challenge these voters' ballots, and that if this happens, black voters would be disproportionately affected. The chair of the election commission said poll workers will ask these voters to identify exactly where they live, possibly by having them point out their homes on a map. He said the purpose of doing this is not to discourage or embarrass the voter, it's to ensure they get the correct ballot. He said if there is any confusion, voters will be given failsafe ballots that exclude district races but still allow voters to cast ballots in federal, state and countywide races.	The Post and Courier		
Police	Yes	Yes								South Carolina	12-Aug-04	county council	Candidate says he plans to have observers at the polls and may call for sheriff's deputies to enforce voting laws when voters try for a third time to nominate a Republican County Council candidate. His opponent alleges he is trying to intimidate black voters from voting.	Greenville News		
Challenges										South Carolina	2-Nov-04	presidential	Dozens of voters, many students, were turned away from a precinct at Benedict College after Republican poll watchers contested the legality of their vote. Challenges slowed voting at the precinct causing waits as long as four hours. The Republican Party executive director said poll watchers were challenging people who did not have proper state identification, such as a drivers license. Alternate forms of identification permit student to vote provisional ballots.	AP		
Suppression	Yes	Yes								South Dakota	31-Oct-02	US Senate	Senator Daschle says Republicans have targeted Native American communities in making allegations of vote fraud and launching initiatives in order to suppress the Native American vote	Washington Times

Other	Yes			State						South Dakota	1-Jan-03	senate	Republican attorneys fanned out across the state on Election Day to gather affidavits to show vote buying. The State Attorney General (a Republican) says that of the 50 affidavits only three alleged criminal activity, and two of those proved to be false. One person is being investigated. Two of the affidavits were found to have been forged or perjurious. Each affidavit states that the person allegedly signing it claimed to have been picked up by a van driver, offered 10 to vote, taken to the polling place and home again and again offered the 10. Most of the allegations focused on the Rosebud Reservation	Indian Country Today (Lakota Times)		
Pollworkers/ID	Yes									South Dakota	30-Jun-04	special election	During the June 1 special election, several Native American voters were told they could not vote if they did not have ID and were not told about the affidavit option. Most of the complaints came from across the state, many from reservations and some from Rapid City, where there is a large American Indian population. A Republican poll watcher denied this was the case. He said Indian voting rights workers were intimidating poll workers.	Indian Country Today (Lakota Times)		
Pollworkers/ID	Yes									South Dakota	26-Aug-04	presidential	Some American Indians were not allowed to vote in the primary because they did not have photo ID and some said they were not told they could instead sign an affidavit.	Newsday		
Polling Place Harassment	Yes				Court					South Dakota	2-Nov-04	senatorial	On Election Day, a district court judge ruled Republican poll watchers in Charles Mix County had to stop following American Indian voters after they cast ballots. The GOP workers were also ordered to stop writing down those people's license plate numbers.	AP		
Challenges					State Election Director					Tennessee	5-Nov-02		A GOP memo to its poll watchers said, "There are problems" with the instructions [state election director]Thompson's office provided to local officials, and focuses on whether the would-be voters are legitimately qualified. "If the officers at the precinct are not screening voters for their qualifications to vote, including their citizenship, they should be challenged so that the election officials will carry out the law and make sure they are qualified to vote if they are first-time voters," the memo says Thompson said the U.S. Department of Justice, part of President Bush's administration, notified him of the GOP memo last week and expressed concerns about it. After conferring with the Justice Department and state Attorney General's office, Thompson sent a four-page memo to local election officials Friday that makes it clear that poll watchers are forbidden by law to question or challenge voters directly and that election officials are not to require would-be voters to provide proof of eligibility, as the GOP memo seeks.	Commercial Appeal

State Suppression	Yes								Yes	Texas	6-Oct-04		Students at historically black college Prairie View A & M filed several lawsuits against a Texas district attorney for making comments that he would prosecute students that falsely declared the school as their place of residency. In 1979, the US Supreme Court ruled in favor of Prairie View A & M, upholding a student's right to vote.	Los Angeles Sentinel		
Challenges	Yes									Utah	18-Jun-04	congressional primary	An immigration-issues group is mounting a last-minute bid to challenge hundreds of foreign-born voters in Utah's Republican primary Tuesday. The effort is the work of ProjectUSA, based in Washington, D.C. The Utah voter challenge would require those singled out in the state's 3rd Congressional District by ProjectUSA to confirm at the polls that they are U.S. citizens and registered voters. State elections director Amy Naccarato is concerned ProjectUSA might scare off some legitimate voters.	Deseret Morning News	The Washington-based immigration issues group ProjectUSA has backed down on its plan to challenge blocs of Utah voters in areas with high immigrant populations. Craig Nelsen, president of ProjectUSA, had said he intended to challenge the voters in Utah's 3rd Congressional District based on concerns that illegal immigrants would vote for Congressman Chris Cannon in Tuesday's primary. Nelsen said Friday that after analyzing voter registration rolls and U.S. Census Bureau data for Utah's 3rd Congressional District, his group "didn't find any (patterns) that would warrant a challenge." Election officials in Salt Lake and Utah counties echoed Naccarato's relief Friday afternoon that no challenge had been filed. Attorneys in both counties had been scrambling to review the legality of any such challenges. "Our biggest concern was the message it was sending to voters," said Utah County Clerk Jim Jackson. "It almost smacked of discrimination against a group. That's just not right."	Deseret Morning News, June 19, 2004
Challenges					County Clerk					Utah	6-Nov-04	congressional	The Republican candidate challenged the legal registration of 1,495 residents of the Holladay-area neighborhoods in the days before the election. 1,494 were Democrats, and one was from the American Party. The County Clerk determined the claims were groundless and said he could be subject to a charge of voter intimidation.	Salt Lake Tribune

State Suppression		Yes			Court					Washington	20-Dec-04	gubernatorial	Procedures for validating ballot signatures vary widely from county to county in Washington state, a fact that has become significant given the razor-thin margin of the governor's race. A survey by The Seattle Times showed that counties use different procedures for evaluating signatures, the newspaper reported Sunday. More than 3,400 absentee and provisional ballots in Washington were rejected in the November election because the signatures didn't match those on file with elections officials. The state Supreme Court last week rejected an argument by the Democratic Party that counties have disenfranchised voters by handling mismatched signatures so differently.	AP		
State Suppression										Washington	20-Dec-04	gubernatorial	King County election workers were told as early as May that if an absentee ballot came in without a matching signature on file they were required to make a concerted effort to verify that the vote was valid. Before a special election in May, King County election workers routinely violated state law by counting such ballots without making any attempt to verify the signatures. In this November's general election, the county's absentee-ballot staff still didn't make the effort to find matching signatures. But instead of counting the ballots automatically, they rejected them.	Seattle Times		
Challenges	Yes			Press						Washington	31-Mar-05		A Soap Lake man is challenging the voting credentials of hundreds of Washington voters, saying he thinks they're illegal immigrants who registered and cast ballots illegally. But Martin Ringhofer may have a hard time proving the challenges he has filed in Spokane and 10 other Washington counties. For one thing, there's the methodology of his research. Ringhofer said he obtained a list of people who registered to vote when they obtained or renewed a driver's license, then culled the list for names "that appear to be from outside the United States," particularly those that appeared to be Hispanic or Asian. For another, there's the fact that many of the people on his list are citizens. In fact, The Spokesman-Review contacted a dozen of the 161 people on Ringhofer's Spokane County list, and all of them are citizens.	Spokesman Review

Challenges			Voters		BOE				Yes	Washington	5-Nov-05	county	Elections officials said hundreds of angry voters called to complain about a Republican backed effort challenging their right to vote. Several voters said the GOP County Vice-Chair was wrong that their registrations did not have their legitimate address. Those voters challenged will have to either re-submit registration forms or when challenged, vote by provisional ballot. Democrats called it a voter intimidation and suppression effort.	Seattle Post-Intelligencer	The GOP withdrew 140 of 1500 claims, admitting they were faulty. Democrats charged that Republicans' real aim was to discourage voters from voting. Voters whose registrations were challenged will have to vote by paper and the Canvassing Board will conduct hearings on whether the votes should count. Challenged voters may make their case at the hearings, at which the burden of proof is on the Republican challengers.	Seattle Post-Intelligencer, November 8, 2005
Challenges		Yes		County					Yes	Washington	10-Nov-05	presidential	A county councilman asks the county prosecutor to investigate whether a Republican challenger committed perjury in filing some of the challenges without justification. The challenger was the head of the county GOP's Voter Registration Integrity Project" which challenged the registrations of 1,944 voters saying they were registered at private mailbox businesses and storage complexes. Many of the challenges turned out to be baseless. Others did not know it was illegal. Those voters had to file a challenge ballot. The validity of those ballots will be determined at a canvassing board hearing. County Democrats claim the challenges were an attempt to intimidate and disenfranchise voters.	Seattle Times		
Federal Agents			Defendants in case							West Virginia	31-May-05	primary	Defendants in a vote buying case allege that federal agents intimidated voters by videotaping and photographing voters as they visited the polls	AP		
State Suppression		Yes								Wisconsin	13-Oct-04	presidential	Milwaukee County Executive Scott Walker, citing vote-fraud concerns, is publicly balking at a City of Milwaukee request for almost 260,000 additional ballots in anticipation of high turnout for the Nov. 2 presidential election. Mayor Tom Barrett blasted Walker's stance, and Common Council President Willie Hines Jr. immediately joined in, saying it was an attempt to suppress the central-city vote.	Milwaukee Journal Sentinel		
Third Party Suppression	Yes			State						Wisconsin	27-Oct-04	presidential	Federation for American Immigration Reform sent Michigan residents to Wisconsin voter registration stations set up by an immigrant rights groups to see whether an illegal immigrant was registering illegal voters. The group said it refused to register the Michigan voters and if they insisted they discarded their forms. Prosecutors will check to ensure the registrations were not mailed in.	AP

Challenges					City Attorney/D A	BOE - dismissed				Wisconsin	29-Oct-04	presidential	Although the Board of Elections refused a request by the state Republican Party to have 5,619 names and addresses removed from Milwaukee voting lists, the party plans to challenge anyone who tries to vote from those addresses at the polls. A Journal Sentinel review shows many of the names and addresses confirmed some of the problems cited by the GOP, as well as uncovered additional missing addresses. Some cited by the GOP may be explained by clerical errors, however.	Milwaukee Journal Sentinel	Amid a renewed push Friday by Republicans to get some 6,600 names removed from Milwaukee voting lists, prosecutors began examining 500 new registrants that a city review indicated are from non-existent addresses. The same review by the city attorney's office, however, raised doubts about the quality of the GOP's original list, finding that hundreds of the addresses that the Republicans claim are invalid and want removed do, in fact, exist. Some others, according to City Attorney Grant Langley, can be explained by data entry errors, not attempted fraud. Late Friday, Langley outlined the review situation in a letter to Lisa Artison, head of the city Election Commission. The letter said the review by his staff and the district attorney's office found cases where the database used by the GOP was corrupted, dropping digits on some homes so otherwise valid addresses showed up as non-existent. In other cases, a check of the original handwritten registration cards showed digits had been transposed by clerks, something that can be corrected at the polls. Langley's letter says the review casts "doubt on the overall accuracy" of the GOP list and the way it was compiled. At least some of the addresses will be investigated for possible fraud, however. Republican and City of Milwaukee leaders reached an agreement Sunday ending a faceoff over thousands of registered voters with questionable addresses. 2) Under an agreement reached, a list of 5,512 prospective city voters whose addresses are questionable will be distributed to polling places. Those on the list who show up to vote will be asked to fill out a change of address card or registration form, and to show proof of residency -- a driver's license, utility bill or some other document showing an address -- before casting their ballot. Anyone without proof of residency at an address on the list will have to take an oath, and that person's ballot will be marked as being challenged by the poll worker.	Milwaukee Journal Sentinel, October 30, 2004

Challenges		Yes								Wisconsin	31-Oct-04	presidential	Citing a new list of more than 37,000 questionable addresses, the state Republican Party demanded that city officials require identification from all of those voters. If the city doesn't, the party says it is prepared to have volunteers challenge each individual -- including thousands who might be missing an apartment number on their registration -- at the polls. Democrats say this is a last minute effort to suppress turnout by creating long delays at the polls. This is in addition to the 5,619 bad addresses the party claimed. The state GOP chair said they had just focussed on Milwaukee because its voter list is a mess and cause for great alarm.	Milwaukee Journal Sentinel		
Suppression								Yes		Wisconsin	2-Nov-04	presidential	The tires of 30 vans Republicans had rented to help get out the vote were slashed.	AP

Maricopa County	Arizona	5-Nov-05		159 noncitizens were found on the voting rolls. The county recorder said all of the cases involved people who misunderstood voting requirements. The county attorney nonetheless has charged ten of the immigrants with felonies.	LA Times						
Compton	California	12-Feb-02	mayor and city council	After an election legal challenge, two incumbents who originally lost were reinstated. In her ruling, the judge said numerous noncitizens voted illegally.	Los Angeles Times						
Pontiac	Michigan	11-Dec-01	mayor	Losing candidate claims there was "suspect" noncitizen voting	Detroit Free Press						
	Minnesota	23-Feb-05	presidential	Secretary of State Kiffmeyer said that she has asked several county attorneys across Minnesota to investigate evidence her staff uncovered that suggests some noncitizens illegally registered to vote in the November election. "So far, at least, we have 32 people who have registered to vote and seem to be -- allegedly -- not U.S. citizens," Kiffmeyer said. Some of the 32 also voted in the election. Both registering and voting are illegal for noncitizens. Kiffmeyer said her staff discovered the possible criminal offenses by comparing voter registration cards to driver's license records, which now identify noncitizens visiting the United States on visas.	Saint Paul Pioneer Press						
	North Carolina	24-Oct-04		A Washington-based advocacy group for tougher immigration laws recently said that it believes illegal immigrants may be registered to vote in North Carolina because they were able to sign up when obtaining driver's licenses without Social Security numbers. State elections and Division of Motor Vehicles officials say they've run two checks - one in 2002 and again this year - of people who received driver's licenses without proof of citizenship and found only a handful who had registered to vote. Those cases are being investigated, they said.	AP						
Houston	Texas	28-Jan-05	state house	Republican representative ousted narrowly by Democratic opponent alleges there was noncitizen voting in the election	Dallas Morning News						
	Utah	30-Aug-05		The Attorney General will investigate allegations in a legislative audit that found evidence of fourteen people believed to be noncitizens who have voted in a past election. The auditors office has said that a follow up investigation found that 6 of the 14 were actually citizens, two were confirmed by immigration authorities as having prior deportation orders and the other 6 are still under review. Of the six that were citizens, three had their Social Security numbers mistyped in the database and three were naturalized citizens.	Desert Morning News

Ann Arbor	Michigan	2-Nov-04	presidential	The Secretary of State had to put out a statement about where to send absentee ballots after voters in Ann Arbor received calls telling them to mail the ballots to the wrong address	AP							
Clark	Nevada	2-Nov-04	presidential	15-20 Democrats received calls claiming to be from the Board of Elections in which voters were told their poll site had moved. One woman contacted the party Monday and said a group of people visited her home over the weekend and told her that if she filled out her sample ballot, they would deliver it to the election division and save her a trip to the polls today. Hispanic residents have complained of phone calls from Republican representatives who said they can register their vote over the phone, Nevada Democratic Party spokesman Jon Summers said.	Las Vegas Review Journal							
Passaic	New Jersey	4-Dec-01	sheriff	Federal monitor reports that voters in Passaic City and Patterson received phone calls reminding them, falsely, that they would need identification such as a drivers license to vote. He said it seemed aimed at minority voters.	The Record							
	New Mexico	25-Oct-04	presidential	In a mass mailing, the Republican National Committee is citing Hispanic voter registration campaigns in New Mexico as proof that "Democrats...will cheat in order to win."	Washington Post							
	Ohio	26-Oct-04	presidential	In Ohio, within little more than a week, the Board of Elections in Cuyahoga County received complaints of voters being contacted by people they said claimed to be from the election board: One Cleveland woman said her mother got a call from such a man telling her, falsely, that the location of her polling station had changed. Another woman said two men posing as election officials knocked on her door and said they had come to pick up her absentee ballot. An elderly woman in a suburban senior center complained about a call telling her the Nov. 2 election had been postponed until Nov. 3. The deputy director of the Board of Elections in Franklin County, which includes the capital Columbus, said his office was getting similar calls. At first they were "sporadic," he said, but now there are "a lot of them."	Los Angeles Times							
	Ohio	28-Oct-04	presidential	State officials say people have been impersonating party and elections officials on the phone directing people to go to the wrong polling place or to vote November 3. Tricks appeared targeted at African Americans, senior citizens and new voters. Democrats say Republican plans to engage in mass challenges is an effort to deny minorities access to the polls.	UPI

Lake County	Ohio	29-Oct-04	presidential	A memo with a Lake County Board of Elections letterhead tells residents not to vote if registered by certain Democratic or progressive groups. Many voters received an "urgent advisory" claiming voters registered by the NAACP, the Democratic presidential campaign, their local congressional campaign, or America Coming Together are not eligible to vote	Cleveland Plain Dealer						
	Ohio	31-Oct-04	presidential	In Franklin, both Democrats and Republicans have been receiving phone calls from phony Board of Elections workers telling them that their polling places have been changed. A Republican spokesman say that Ohio Republicans have received calls telling them their absentee ballots will be picked up by election workers, which is illegal. In West Dayton, Democrats received calls reminding them to vote on November 5, three days after the election.	New York Post						
Cleveland	Ohio	3-Nov-04	presidential	In a suburb of Cleveland, some voters reported being told that "if they went in to vote and had any traffic violations, they would be arrested or fined," said Chellie Pingree, president of Common Cause.	Chicago Tribune						
	Oregon	10-Nov-04	presidential	There are more than a dozen allegations of that would-be voters's registration cards were destroyed, altered or thrown away by canvassers. The cases are under investigation by the AG.	AP						
Philadelphia	Pennsylvania	25-Oct-04	presidential	An official said at a meeting of the city election board that he had received calls from about 30 longtime voters who said that they had received calls from someone telling them not to bother going to the polls because their registrations had expired. They had not.	Philadelphia Inquirer						
Allegheny	Pennsylvania	28-Oct-04	presidential	At the Ross Park Mall people are distributing leaflets printed on bogus, but official-looking, county stationery telling Republicans to vote Tuesday, Nov. 2, and Democrats to wait a day. The election will be over on Nov. 3. The fliers have succeeded in spreading confusion, and county officials spent parts of Wednesday fielding phone calls from residents. Officials say the fliers also turned up in mailboxes of homes in the North Hills. The letter reads in part: "Due to the immense voter turnout that is expected on Tuesday November 2 the state of Pennsylvania has requested and extended the voting period ... Voters will be able to vote on both November 2 and November 3." The letter is signed by "Anne Ryan," and a phone number on the flier rings in Tampa, Fla. Workers there reached by telephone denied any knowledge of the flier. Police are investigating.	Pittsburgh Tribune Review						
Westmoreland	Pennsylvania	3-Nov-04	presidential	Lawyers working for the Election Protection program got a call that in Westmoreland a radio station told listeners that people who had outstanding warrants against them would not be allowed to vote.	The New York Times

		BOE					Yes		Denver	Colorado	16-Oct-04	presidential	A worker at the Election Commission found a registration form with her own name on it. When another form was cross-referenced with Vital Records, it was found to be from a dead person. Denver workers have forwarded 200 suspicious registrants to the DA. The voter outreach coordinator says the computer immediately flags names of voters who have registered more than once. Several other counties have found suspect voter registration forms.	Rocky Mountain News				
Yes										Colorado	17-Oct-04	presidential	The Secretary of State accused the Attorney General of not doing enough to prosecute potential ballot crimes. The Secretary confirmed that 6,000 felons are registered to vote. A Denver woman told a TV station she had registered to vote 25 times and signed up several friends up to 40 times to help her boyfriend, a paid staffer for a community group registering voters	Atlanta Journal Constitution				
		State					Yes			Colorado	18-Oct-04	presidential	With just two weeks before the Nov. 2 election, the state has been rocked by evidence that some voter-registration drives have submitted applications with forged signatures. In other cases, would-be voters have applied to vote as many as 40 times. At the same time, some registration drives have collected applications and then failed to submit them by the Oct. 4 deadline, prompting Secretary of State Donetta Davidson to announce the use of provisional ballots last week. At yesterday's meeting with county clerks and district attorneys, Mrs. Davidson announced procedures for accepting provisional ballots, which are issued to people who say they have registered but whose names fail to appear on the voter roll. Such ballots would be marked "VRD," for "Voter Registration Drive." The would-be voter would have to produce identification and tell when and where they registered. The ballot later would be checked against the state's voter data-bases. The clerks are referring cases that appear to be blatant fraud, such as forged signatures, to the county attorneys. Bill Ritter, the Denver	Washington Times				
		Local		6			Yes		Denver	Colorado	28-Oct-04	presidential	Denver prosecutors charged two people Wednesday with falsely filling out multiple voter forms to boost their pay in a paid registration drive. Criminal cases are pending against four people for questionable registrations in the metro area, and there may be more before investigations are completed.	Rocky Mountain News				
		State					Yes		Orange	Florida	31-Oct-02	state senate	The State Attorney is investigating charges of illegal changes to party affiliations on voter registration cards for a primary. The scheme seems to have been targeted at Hispanics.	Orlando Sentinel

								Yes	Florida		23-Oct-04	presidential	Officials say that more than 4,200 students from many colleges and universities in the state had their party affiliation switched without them knowing and tricked into registering Republican when they were asked to sign an assortment of petitions and forms. Some students attributed the work to a company working for the Republican Party	AP			
		Local						Yes	Duval	Florida	29-Oct-04	presidential	Elections officials asked prosecutors to investigate possible voter fraud involving 25 registration forms with apparently bogus addresses.	Telegraph Herald (IA)			
								Yes	Florida		31-Oct-04	presidential	Students at Florida State and Florida A&M universities, some of whom signed petitions to legalize medical marijuana or impose stiffer penalties for child molesters, unknowingly had their party registration switched to Republican and their addresses changed. Officials say students at the University of Florida in Alachua County have made similar complaints and that about 4,000 potential voters in all have been affected. Local papers have traced some of the problems to a group hired by the Florida Republican Party, which has denounced the shenanigans. Switching voters' party affiliations does not affect their ability to vote, but changing addresses does, because when voters shows up at their proper polling places, they will not be registered there.	Washington Post			
							Charges dismissed as baseless		Florida		15-Dec-05	constitutional amendment	Fourteen months after a campaign to increase Florida's minimum wage drew allegations of voter fraud, a federal judge in South Florida has ruled at least some of those accusations against grass roots political group ACORN were so baseless they amount to defamation. Stuart alleged that ACORN improperly handled registration forms when it conducted voter registration drives, including not submitting Republican registrations to election officials. The judge upheld ACORN's counterclaim that Stuart's lack of evidence made his allegations libel and slander. An investigation by the Florida Department of Law Enforcement also found no evidence of criminal activity at ACORN, department officials confirmed Wednesday.	St. Petersburg Times			
		Federal						Yes	Fulton County	Georgia	4-Nov-05	presidential	The U.S. attorney for Georgia's Northern District is investigating the circumstances surrounding more than 2,400 "entirely fraudulent" voter registration applications submitted to Fulton County prior to the November 2004 elections, county elections officials say. Most of those suspect applications were submitted to the Georgia Secretary of State in September 2004 by the Georgia Coalition for the Peoples' Agenda, according to Atlanta attorney Harry W. MacDougald, a member of the Fulton County Board of Registration and Elections. Details of the federal investigation surfaced as part of litigation that challenges as unconstitutional Georgia's new voter photo identification law. Common Cause v. Billups. No. 4:05CV201 (N.D. Ga.). MacDougald made the investigation public in an affidavit submitted on behalf of defendants in the case	Fulton County Daily Report

								Yes	Clark County	Nevada	31-Oct-04	presidential	Voting Registrar Lomax said he found that canvassers returned stacks of 1,000 completed registration forms that often contained 30 to 50 applications filled out in the same handwriting. Lomax had no total figure for such fraudulent registrations. He also found that canvassers registered the same individuals several times over the span of a week. Some legitimately registered voters called to ask why they were getting registration forms--with their party affiliation changed, Lomax said. Apparently some canvassers went through the phone book and reregistered people without their consent, listing their parties incorrectly, Lomax said. Though registration drive organizers told Lomax's office that canvassers were paid by the hour, many canvassers told his staff and even provided pay stubs that showed they were paid \$2 for every completed registration form they collected in malls, stores and neighborhoods. Lomax said. *They were on both sides. It wasn't just Democrats, it wasn't just Republicans,* Lomax said. *The money was clearly the root of all evil here. They were paying people to register the voters. And the people doing this were way down the economic scale, and they wanted their money and they were just filling in forms.	Chicago Tribune

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Interview with Commissioner Harry Van Sickle and Deputy Chief Counsel to the Secretary of State Larry Boyle, State of Pennsylvania

March 1, 2006

As Commissioner Van Sickle has only been in office for about a year, Mr. Boyle answered most of our questions.

Fraud and Intimidation

Neither Van Sickle nor Boyle was aware of any fraud of any kind in the state of Pennsylvania over the last five years. They are not aware of the commission of any deceptive practices, such as flyers that intentionally misinform as to voting procedures. They also have never heard of any incidents of voter intimidation. With respect to the mayoral election of 2003, the local commission would know about that.

Since the Berks County case of 2003, where the Department of Justice found poll workers who treated Latino voters with hostility among other voting rights violations, the Secretary's office has brought together Eastern Pennsylvania election administrators and voting advocates to discuss the problems. As a result, other counties have voluntarily chosen to follow the guidance of the Berks County federal court order.

Regarding the allegations of fraud that surrounded the voter identification debate, Mr. Boyle said was not aware of any instances of fraud involving identity. He believes this is because Pennsylvania has laws in place to prevent this. For example, in 2002 the state legislature passed an ID law that is stricter than HAVA's – it requires all first time voters to present identification. In addition, the SURE System – the state's statewide voter registration database – is a great anti-fraud mechanism. The system will be in place statewide in the May 2006 election.

In addition, the state took many steps before the 2004 election to make sure it would be smooth. They had attorneys in the counties to consult on problems as well as staff at the central office to take calls regarding problems. In addition, in 2004 the state used provisional ballots for the first time. This resolved many of the problems that used to occur on Election Day.

Mr. Boyle is not aware of any voter registration fraud. This is because when someone registers to vote, the administrator does a duplicate check. In addition, under new laws a person registering to vote must provide their drivers license or Social Security number which are verified through the Department of Motor Vehicles and the Social Security Administration. Therefore, it would be unlikely that someone would be able to register to vote falsely.

Process

Most problems are dealt with at the local level and do not come within the review of the Secretary of State's office. For instance, if there is a complaint of intimidation, this is generally dealt with by the county courts which are specially designated solely to election cases on

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Election Day. The Secretary does not keep track of these cases. Since the passage of NVRA and HAVA counties will increasingly call the office when problems arise.

Recommendations

Mr. Boyle suggested we review the recommendations of the Pennsylvania Election Reform Task Force which is on the Secretary's website. Many of those recommendations have been introduced in the legislature.

Interview with Craig Donsanto, Director, Public Integrity Section, U.S. Department of Justice

January 13, 2006

Questions

How are Prosecution Decisions Made?

Craig Donsanto must approve all investigations that go beyond a preliminary stage, all charges, search warrant applications and subpoenas and all prosecutions. The decision to investigate is very sensitive because of the public officials involved. If a charge seems political, Donsanto will reject it. Donsanto gives possible theories for investigation. Donsanto and Noel Hillman will decide whether to farm out the case to an AUSA. Donsanto uses a concept called predication. In-other-words, there must be enough evidence to suggest a crime has been committed. The method of evaluation of this evidence depends on the type of evidence and its source. There are two types of evidence---factual (antisocial behavior) and legal (antisocial behavior leading to statutory violations). Whether an indictment will be brought depends on the likelihood of success before a jury. Much depends on the type of evidence and the source. Donsanto said he "knows it when he sees it." Donsanto will only indict if he is confident of a conviction assuming the worst case scenario -- a jury trial.

A person under investigation will first receive a target letter. Often, a defendant who gets a target letter will ask for a departmental hearing. The defendant's case will be heard by Donsanto and Hillman. On occasion, the assistant attorney general will review the case. The department grants such hearings easily because such defendants are likely to provide information about others involved.

The Civil Rights Division, Voting Rights Section makes its own decisions on prosecution. The head of that division is John Tanner. There is a lot of cooperation between

Does the Decision to Prosecute Incorporate Particular Political Considerations within a State Such as a One Party System or a System in which the Party in Power Controls the Means of Prosecution and Suppresses Opposition Complaints?

Yes. Before, the department would leave it to the states. Now, if there is racial animus involved in the case, there is political bias involved, or the prosecutor is not impartial, the department will take it over.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Does it Matter if the Complaint Comes from a Member of a Racial Minority?

No. But if the question involves racial animus, that has also always been an aggravating factor, making it more likely the Department will take it over

What Kinds of Complaints Would Routinely Override Principles of Federalism?

Federalism is no longer big issue. DOJ is permitted to prosecute whenever there is a candidate for federal office.

Are There Too Few Prosecutions?

DOJ can't prosecute everything.

What Should Be Done to Improve the System?

The problem is asserting federal jurisdiction in non-federal elections. It is preferable for the federal government to pursue these cases for the following reasons: federal districts draw from a bigger and more diverse jury pool; the DOJ is politically detached; local district attorneys are hamstrung by the need to be re-elected; DOJ has more resources – local prosecutors need to focus on personal and property crimes---fraud cases are too big and too complex for them; DOJ can use the grand jury process as a discovery technique and to test the strength of the case.

In *U.S. v. McNally*, the court ruled that the mail fraud statute does not apply to election fraud. It was through the mail fraud statute that the department had routinely gotten federal jurisdiction over election fraud cases. 18 USC 1346, the congressional effort to “fix” *McNally*, did not include voter fraud.

As a result, the department needs a new federal law that allows federal prosecution whenever a federal instrumentality is used, e.g. the mail, federal funding, interstate commerce. The department has drafted such legislation, which was introduced but not passed in the early 1990s. A federal law is needed that permits prosecution in any election where any federal instrumentality is used.

Other Information

The Department has held four symposia for DEOs and FBI agents since the initiation of the Ballot Access and Voting Integrity Initiative. In 2003, civil rights leaders were invited to make speeches, but were not permitted to take part in the rest of the symposium. All other symposia have been closed to the public. (Peg will be sending us the complete training materials used at those sessions. These are confidential and are the subject of FOIA litigation).

There are two types of attorneys in the division: prosecutors, who take on cases when the jurisdiction of the section requires it; the US Attorney has recused him or herself; or when the

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

US Attorney is unable to handle the case (most frequent reason) and braintrust attorneys who analyze the facts, formulate theories, and draft legal documents.

Cases:

Donsanto provided us with three case lists: Open cases (still being investigated) as of January 13, 2006 – confidential; election fraud prosecutions and convictions as a result of the Ballot Access and Voting Integrity Initiative October 2002-January 13, 2006 and cases closed for lack of evidence as of January 13, 2006

If we want more documents related to any case, we must get those documents from the states. The department will not release them to us.

Although the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate complaints of fraud, *the number of cases that the department is investigating and the number of indictments the department is pursuing are both up dramatically.*

Since 2002, the department has brought more cases against alien voters, felon voters, and double voters than ever before. Previously, cases were only brought when there was a pattern or scheme to corrupt the process. Charges were not brought against individuals – those cases went un-prosecuted. This change in direction, focus, and level of aggression was by the decision of the Attorney General. The reason for the change was for deterrence purposes.

The department is currently undertaking three pilot projects to determine what works in developing the cases and obtaining convictions and what works with juries in such matters to gain convictions:

Felon voters in Milwaukee.

Alien voters in the Southern District of Florida. FYI – under 18 USC 611, to prosecute for “alien voting” there is no intent requirement. Conviction can lead to deportation. Nonetheless, the department feels compelled to look at mitigating factors such as was the alien told it was OK to vote, does the alien have a spouse that is a citizen.

Double voters in a variety of jurisdictions.

The department does not maintain records of the complaints that come in from DEOs, U.S attorneys and others during the election that are not pursued by the department. Donsanto asserted that U.S. attorneys never initiate frivolous investigations.

According to the new handbook, the department can take on a case whenever there is a federal candidate on the ballot

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Interview with Douglas Webber, Assistant Attorney General, Indiana

February 15, 2006

Background

Mr. Webber was an attorney for the Marion County Election Board and was also part of the Indianapolis Ballot Security Team (sometimes called the Goon Squad). This Team was a group of attorneys well trained in election law whose mission was to enforce ballot security.

Litigation

Status of litigation in Indiana: On January 12 the briefing was completed. The parties are waiting for a decision from the U.S. district judge. The judge understood that one of the parties would seek a stay from the 7th Circuit Court of Appeals. The parties anticipate a decision in late March or early April. Mr. Webber did the discovery and depositions for the litigation. Mr. Webber feared the plaintiffs were going to state in their reply brief that HAVA's statewide database requirement would resolve the problems alleged by the state. However, the plaintiffs failed to do so, relying on a Motor Voter Act argument instead. Mr. Webber believes that the voter ID at issue will make the system much more user-friendly for the poll workers. The Legislature passed the ID legislation, and the state is defending it, on the basis of the problem of the *perception* of fraud.

Incidents of fraud and intimidation

Mr. Webber thinks that no one can put his or her thumb on whether there has been voter fraud in Indiana. For instance, if someone votes in place of another, no one knows about it. There have been no prosecuted cases of polling place fraud in Indiana. There is no recorded history of documented cases, but it does happen. In the litigation, he used articles from around the country about instances of voter fraud, but even in those examples there were ultimately no prosecutions, for example the case of Milwaukee. He also stated in the litigation that there are all kinds of examples of dead people voting---totaling in the hundreds of thousands of votes across the country.

One interesting example of actual fraud in Indiana occurred when a poll worker, in a poll using punch cards, glued the chads back and then punched out other chads for his candidate. But this would not be something that would be addressed by an ID requirement.

He also believes that the perception that the polls are loose can be addressed by the legislature. The legislature does not need to wait to see if the statewide database solve the problems and therefore affect the determination of whether an ID requirement is necessary. When he took the deposition of the Republican Co-Director, he said he thought Indiana was getting ahead of the curve. That is, there have been problems around the country, and confidence in elections is low. Therefore Indiana is now in front of getting that confidence back.

Mr. Webber stated that the largest vote problem in Indiana is absentee ballots. Absentee ballot fraud and vote buying are the most documented cases. It used to be the law that applications for absentee ballots could be sent anywhere. In one case absentee votes were exchanged for "a job on election day"---meaning one vote for a certain price. The election was contested and the trial

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

judge found that although there was vote fraud, the incidents of such were less than the margin of victory and so he refused to overturn the election. Mr. Webber appealed the case for the state and argued the judge used the wrong statute. The Indiana Supreme Court agreed and reversed. Several people were prosecuted as a result – those cases are still pending.

Process

In Indiana, voter complaints first come to the attorney for the county election board who can recommend that a hearing be held. If criminal activity was found, the case could be referred to the county prosecutor or in certain instances to the Indiana Attorney General's Office. In practice, the Attorney General almost never handles such cases.

Mr. Webber has had experience training county of election boards in preserving the integrity and security of the polling place from political or party officials. Mr. Webber stated that the Indiana voter rolls need to be culled. He also stated that in Southern Indiana a large problem was vote buying while in Northern Indiana a large problem was based on government workers feeling compelled to vote for the party that gave them their jobs.

Recommendations

- Mr. Webber believes that all election fraud and intimidation complaints should be referred to the Attorney General's Office to circumvent the problem of local political prosecutions. The Attorney General should take more responsibility for complaints of fraud because at the local level, politics interferes. At the local level, everyone knows each other, making it harder prosecute.
- Indiana currently votes 6 am to 6 pm on a weekday. Government workers and retirees are the only people who are available to work the polls. Mr. Webber suggested that the biggest change should be to move elections to weekends. This would involve more people acting as poll workers who would be much more careful about what was going on.
- Early voting at the clerk's office is good because the people there know what they are doing. People would be unlikely to commit fraud at the clerk's office. This should be expanded to other polling places in addition to that of the county clerk.
- Finally, Mr. Webber believes polling places should be open longer, run more professionally but that there needs to be fewer of them so that they are staffed by only the best, most professional people.

**Interview Sharon Priest, former Secretary of State, Arkansas
January 24, 2006**

Process:

When there is an allegation of election fraud or intimidation, the county clerk refers it to the local district attorney. Most often, the DA does not pursue the claim. There is little that state administrators can do about this because in Arkansas, county clerks are partisanly elected and completely autonomous. Indeed, county clerks have total authority to determine who is an eligible voter.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Data:

There is very little data collected in Arkansas on fraud and intimidation cases. Any information there might be stays at the county level. This again is largely because the clerks have so much control and authority, and will not release information. Any statewide data that does exist might be gotten from Susie Storms from the State Board of Elections.

Most Common Problems

The perception of fraud is much greater than the actual incidence of fraud.

- The DMV does not implement NVRA in that it does not take the necessary steps when providing the voter registration forms and does not process them properly. This leads to both ineligible voters potentially getting on the voting rolls (e.g. noncitizens, who have come to get a drivers license, fill out a voter registration form having no intention of actually voting) and voter thinking they are registered to vote to find they are not on the list on Election Day. Also, some people think they are automatically registered if they have applied for a drivers license.
- Absentee ballot fraud is the most frequent form of election fraud.
- In Arkansas, it is suspected that politicians pay ministers to tell their congregations to vote for them
- In 2003, the State Board documented 400 complaints against the Pulaski County Clerk for engaging in what was at least borderline fraud, e.g. certain people not receiving their absentee ballots. The case went to a grand jury but no indictment was brought.
- Transportation of ballot boxes is often insecure making it very easy for insiders to tamper with the ballots or stuff the ballot boxes. Priest has not actually witnessed this happen, but believes it may have.
- Intimidation at the poll sites in court houses. Many voters are afraid of the county judges or county employees and therefore will not vote. They justifiably believe their ballots will be opened by these employees to see who they voted for, and if they voted against the county people, retribution might ensue.
- Undue challenges to minority language voters at the poll sites
- Paid registration collectors fill out phony names, but these individuals are caught before anyone is able to cast an ineligible ballot.

Suggested Reforms for Improvement:

- Nonpartisan election administration
- Increased prosecution of election crimes through greater resources to district attorneys. In addition, during election time, there should be an attorney in the DA's office who is designated to handle election prosecution.
- There should be greater centralization of the process, especially with respect to the statewide database. Arkansas has a "bottom up" system. This means the counties still control the list and there is insufficient information sharing. For example, if someone

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

lives in one county but dies in another, the county in which the voter lived – and was registered to vote – will not be notified of the death.

Interview with Heather Dawn Thompson, Director of Government Relations, National Congress of American Indians

March 22, 2006

Background

Thompson is a member of the Cheyenne River Sioux tribe in South Dakota. For many years she worked locally on elections doing poll monitoring and legal work, from a nonpartisan perspective. In 2004, she headed the Native Vote Election Protection, a project run by the National Congress of American Indians, and was in charge of monitoring all Native American voting sites around the country, focusing on 10 or 15 states with the biggest Native populations. She is now permanently on staff of the National Congress of American Indians as the Director of Government relations. NCAI works jointly with NARF as well as the Election Protection Coalition.

Recent trends

Native election protection operations have intensified recently for several reasons. While election protection efforts in Native areas have been ongoing, leaders realized that they were failing to develop internal infrastructure or cultivate locally any of the knowledge and expertise which would arrive and leave with external protection groups.

Moreover, in recent years partisan groups have become more aware of the power of the native vote, and have become more active in native communities. This has partly resulted in an extreme increase in voter intimidation tactics. As native communities are easy to identify, easy to target, and generally dominated by a single party, they are especially vulnerable to such tactics.

Initially, reports of intimidation were only passed along by word of mouth. But it became such a problem in the past 5 to 6 years that tribal leaders decided to raise the issue to the national level. Thompson points to the Cantwell election in 2000 and the Johnson election in South Dakota in 2002 as tipping points where many began to realize the Indian vote could matter in Senate and national elections.

Thompson stressed that Native Vote places a great deal of importance on being nonpartisan. While a majority of native communities vote Democratic, there are notable exceptions, including communities in Oklahoma and Alaska, and they have both parties engaging in aggressive tactics. However, she believes the most recent increase in suppression and intimidation tactics have come from Republican Party organizations.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Nature of Suppression/Intimidation of Native Voters

Thompson categorizes suppression into judge related and poll-watcher related incidents, both of which may be purposeful or inadvertent, as well as longstanding legal-structural constraints.

Structural problems

One example of inadvertent suppression built into the system stems from the fact that many Indian communities also include significant numbers of non-Indians due to allotment. Non-Indians tend to be most active in the state and local government while Indians tend to be more involved in the tribal government. Thus, the individuals running elections end up being non-Indian. Having Indians vote at polling places staffed by non-Indians often results in incidents of disrespect towards Native voters (Thompson emphasized the considerable racism which persists against Indians in these areas). Also, judges aren't familiar with Indian last names and are more dismissive of solving discrepancies with native voters.

Structural problems also arise from laws which mandate that the tribal government cannot run state or local elections. In places like South Dakota, political leaders used to make it intentionally difficult for Native Americans to participate in elections. For example, state, local and federal elections could not be held in the same location as tribal elections, leading to confusion when tribal and other elections are held in different locations. Also, it is common to have native communities with few suitable sites, meaning that a state election held in a secondary location can suddenly impose transportation obstacles.

Photo ID Issues

Thompson believes both state level and HAVA photo ID requirements have a considerable negative impact. For a number of reasons, many Indian voters don't have photo ID. Poor health care and poverty on reservations means that many children are born at home, leading to a lack of birth certificates necessary to obtain ID. Also, election workers and others may assume they are Hispanic, causing additional skepticism due to citizenship questions. There is a cultural issue as well—historically, whenever Indians register with the federal government it has been associated with a taking of land or removal of children. Thus many Indians avoid registering for anything with the government, even for tribal ID.

Thompson also offered examples of how the impact of ID requirements had been worsened by certain rules and the discriminatory way they have been carried out. In the South Dakota special election of 2003, poll workers told Native American voters that if they did not have ID with them and they lived within sixty miles of the precinct, the voter had to come back with ID. The poll workers did not tell the voters that they could vote by affidavit ballot and not need to return, as required by law. This was exacerbated by the fact that the poll workers didn't know the voters—as would be the case with non-Indian poll workers and Indian voters. Many left the poll site without voting and did not return.

In Minnesota, the state tried to prohibit the use of tribal ID's for voting outside of a reservation, even though Minnesota has a large urban Native population. Thompson believes this move was

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

very purposeful, and despite any reasonable arguments from the Secretary of State, they had to file a lawsuit to stop the rule. They were very surprised to find national party representatives in the courtroom when they went to deal with lawsuit, representatives who could only have been alerted through a discussion with the Secretary of State.

Partisan Poll-Monitoring

Thompson believes the most purposeful suppression has been perpetrated by the party structures on an individual basis, of which South Dakota is a great example.

Some negative instances of poll monitoring are not purposeful. Both parties send in non-Indian, non-Western lawyers, largely from the East Coast, which can lead to uncomfortable cultural clashes. These efforts display a keen lack of understanding of these communities and the best way to negotiate within in them. But while it may be intimidating, it is not purposeful.

Yet there are also many instances of purposeful abuse of poll monitoring. While there were indeed problems during the 2002 Johnson election, it was small compared to the Janklow special election. Thompson says Republican workers shunned cultural understanding outreach, and had an extensive pamphlet of what to say at polls and were very aggressive about it. In one tactic, every time a voter would come up with no ID, poll monitors would repeat "You can't vote" over and over again, causing many voters to leave. This same tactic appeared across reservations, and eventually they looked to the Secretary of State to intervene.

In another example, the head of poll watchers drove from poll to poll and told voters without IDs to go home, to the point where the chief of police was going to evict him from the reservation. In Minnesota, on the Red Lake reservation, police actually did evict an aggressive poll watcher—the fact that the same strategies are employed several hundred miles apart points to standardized instructions.

None of these incidents ever went to court. Thompson argues this is due to few avenues for legal recourse. In addition, it is inherently difficult to settle these things, as they are he said-she said incidents and take place amidst the confusion of Election Day. Furthermore, poll watchers know what the outline of the law is, and they are careful to work within those parameters, leaving little room for legal action.

Other seeming instances of intimidation may be purely inadvertent, such as when, in 2002, the U.S. Attorney chose Election Day to give out subpoenas, and native voters stayed in their homes. In all fairness, she believes this was a misunderstanding.

The effect of intimidation on small communities is especially strong and is impossible to ultimately measure, as the ripple effect of rumors in insular communities can't be traced. In some communities, they try to combat this by using the Native radio to encourage people to vote and dispel myths.

She has suggestions for people who can describe incidents at a greater level of detail if interested.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Vote Buying and Fraud

They haven't found a great deal of evidence on vote-buying and fraud. When cash is offered to register voters, individuals may abuse this, although Thompson believes this is not necessarily unique to the Native community, but a reflection of high rates of poverty. This doesn't amount to a concerted effort at conspiracy, but instead represents isolated incidents of people not observing the rules. While Thompson believes looking into such incidents is a completely fair inquiry, she also believes it has been exploited for political purposes and to intimidate. For example, large law enforcement contingents were sent to investigate these incidents. As Native voters tend not to draw distinctions between law enforcement and other officials, this made them unlikely to help with elections.

Remedies

As far as voter suppression is concerned, Native Vote has been asking the Department of Justice to look into what might be done, and to place more emphasis on law enforcement and combating intimidation. They have been urging the Department to focus on this at least much as it is focusing on enforcement of Section 203. Native groups have complained to DOJ repeatedly and DOJ has the entire log of handwritten incident reports they have collected. Therefore, Thompson recommends more DOJ enforcement of voting rights laws with respect to intimidation. People who would seek to abuse the process need to believe a penalty will be paid for doing so. Right now, there is no recourse and DOJ does not care, so both parties do it because they can.

Certain states should rescind bars on nonpartisan poll watchers on Election Day; Thompson believes this is contrary to the nonpartisan, pro-Indian presence which would best facilitate voting in Native communities.

As discussed above, Thompson believes ID requirements are a huge impediment to native voters. At a minimum, Thompson believes all states should be explicit about accepting tribal ID on Election Day.

Liberalized absentee ballot rules would also be helpful to Native communities. As many Indian voters are disabled and elderly, live far away from their precinct, and don't have transportation, tribes encourage members to vote by absentee ballot. Yet obstacles remain. Some voters are denied a chance to vote if they have requested a ballot and then show up at the polls. Thompson believes South Dakota's practice of tossing absentee ballots if a voter shows up at the ED would serve as an effective built-in protection. In addition, she believes there should be greater scrutiny of GOTV groups requesting absentee ballots without permission. Precinct location is a longstanding issue, but Thompson recognizes that states have limited resources. In the absence of those resources, better absentee ballot procedures are needed.

Basic voter registration issues and access are also important in native communities and need to be addressed.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Thompson is mixed on what restrictions should be placed on poll watcher behavior, as she believes open elections and third party helpers are both important. However, she would be willing to explore some sort of stronger recourse and set of rules concerning poll watchers' behavior. Currently, the parties are aware that no recourse exists, and try to get away with what they will. This is not unique to a single party—both try to stay within law while shaking people up. The existing VRA provision is 'fluffy'—unless you have a consent decree, you have very little power. Thompson thinks a general voter intimidation law that is left a bit broad but that nonetheless makes people aware of some sort of kickback could be helpful.

Interview with Jason Torchinsky, former attorney with the Civil Rights Section of the Department of Justice, assistant general counsel for the American Center for Voting Rights (ACVR) and Robin DeJarnette, political consultant for C4 and C5 organizations and executive director for the ACVR.

February 16, 2006

ACVR Generally

Other officers of the ACVR-Thor Hearne II-general counsel and Brian Lunde, former executive director of the Democratic National Committee.

Board of Directors of ACVR-Brian Lunde, Thor Hearne II, and Cameron Quinn

ACVR works with a network of attorneys around the country and has been recently involved with lobbying in PA and MO.

Regarding the August 2005 Report

ACVR has not followed up on any of the cases it cited in the 2005 report to see if the allegations had been resolved in some manner. Mr. Torchinsky stated that there are problems with allegations of fraud in the report and prosecution---just because there was no prosecution, does not mean there was no vote fraud. He believes that it is very hard to come up with a measure of voter fraud short of prosecution. Mr. Torchinsky does not have a good answer to resolve this problem.

P. 35 of the Report indicates that there were coordinated efforts by groups to coordinate fraudulent voter registrations. P. 12 of the Ohio Report references a RICO suit filed against organizations regarding fraudulent voter registrations. Mr. Torchinsky does not know what happened in that case. He stated that there was a drive to increase voter registration numbers regardless of whether there was an actual person to register. He stated that when you have an organization like ACORN involved all over the place, there is reason to believe it is national in scope. When it is the same groups in multiple states, this leads to the belief that it is a concerted effort.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Voting Problems

Mr. Torchinsky stated there were incidents of double voting---ex. a double voter in Kansas City, MO. If the statewide voter registration database requirement of HAVA is properly implemented, he believes it will stop multiple voting in the same state. He supports the HAVA requirement, if implemented correctly. Since Washington State implemented its statewide database, the Secretary of State has initiated investigations into felons who voted. In Philadelphia the major problem is permitting polling places in private homes and bars – even the homes of party chairs.

Mr. Torchinsky believes that voter ID would help, especially in cities in places like Ohio and Philadelphia, PA. The ACVR legislative fund supports the Real ID requirements suggested by the Carter-Baker Commission. Since federal real ID requirements will be in place in 2010, any objection to a voter ID requirement should be moot.

Mr. Torchinsky stated that there are two major poll and absentee voting problems---(1) fraudulent votes-ex. dead people voting in St. Louis and (2) people voting who are not legally eligible-ex. felons in most places. He also believes that problems could arise in places that still transport paper ballots from the voting location to a counting room. However, he does not believe this is as widespread a problem now as it once was.

Suggestions

Implement the Carter-Baker Commission recommendations because they represent a reasonable compromise between the political parties.

**Interview with Joe Rich, former Chief of the Voting Section,
US Department of Justice
February 7, 2006**

Background

Mr. Rich went to Yale undergraduate and received his law degree from the University of Michigan. He served as Chief of the Voting Section from 1999-2005. Prior to that he served in other leadership roles in the Civil Rights Division and litigated several civil rights cases.

Data Collection and Monitoring

The section developed a new database before the 2004 election to log complaint calls and what was done to follow up on them. They opened many investigations as a result of these complaints, including one on the long lines in Ohio (see DOJ letter on website, as well as critical commentary on the DOJ letter's analysis). DOJ found no Section 2 violation in Ohio. John Tanner should be able to give us this data. However, the database does not include complaints that were received by monitors and observers in the field.

All attorney observers in the field are required to submit reports after Election Day to the Department. These reports would give us a very good sense of the scope and type of problems that arose on that day and whether they were resolved on the spot or required further action.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

The monitoring in 2004 was the biggest operation ever. Prior to 2000, only certain jurisdictions could be observed – a VRA covered jurisdiction that was certified or a jurisdiction that had been certified by a court, e.g. through a consent decree. Since that time, and especially in 2004, the Department has engaged in more informal “monitoring.” In those cases, monitors assigned to certain jurisdictions, as opposed to observers, can only watch in the polling place with permission from the jurisdiction. The Department picked locations based on whether they had been monitored in the past, there had been problems before, or there had been allegations in the past. Many problems that arose were resolved by monitors on the spot.

Processes for Cases not Resolved at the Polling Site

If the monitor or observer believes that a criminal act has taken place, he refers it to the Public Integrity Section (PIN). If it is an instance of racial intimidation, it is referred to the Civil Rights Criminal Division. However, very few such cases are prosecuted because they are very hard to prove. The statutes covering such crimes require actual violence or the threat of violence in order to make a case. As a result, most matters are referred to PIN because they operate under statutes that make these cases easier to prove. In general, there are not a high number of prosecutions for intimidation and suppression.

If the act is not criminal, it may be brought as a civil matter, but only if it violated the Voting Rights Act – in other words, only if there is a racial aspect to the case. Otherwise the only recourse is to refer it to PIN.

However, PIN tends not to focus on intimidation and suppression cases, but rather cases such as alleged noncitizen voting, etc. Public Integrity used to only go after systematic efforts to corrupt the system. Now they focus on scattered individuals, which is a questionable resource choice. Criminal prosecutors over the past 5 years have been given more resources and more leeway because of a shift in focus and policy toward noncitizens and double voting, etc.

There have been very few cases brought involving African American voters. There have been 7 Section 2 cases brought since 2001 – only one was brought on behalf of African American voters. That case was initiated under the Clinton administration. The others have included Latinos and discrimination against whites.

Types of Fraud and Intimidation Occurring

There is no evidence that polling place fraud is a problem. There is also no evidence that the NVRA has increased the opportunity for fraud. Moreover, regardless of NVRA’s provisions, an election official can always look into a voter’s registration if he or she believes that person should no longer be on the list. The Department is now suing Missouri because of its poor registration list.

The biggest problem is with absentee ballots. The photo ID movement is a vote suppression strategy. This type of suppression is a bigger problem than intimidation. There has been an increase in vote suppression over the last five years, but it has been indirect, often in the way that

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

laws are interpreted and implemented. Unequal implementation of ID requirements at the polls based on race would be a VRA violation.

The most common type of intimidation occurring is open hostility by poll workers toward minorities. It is a judgment call whether this is a crime or not – Craig Donsanto of PIN decides if it rises to a criminal matter.

Election Day challenges at the polls could be a VRA violation but such a case has never been formally pursued. Such cases are often resolved on the spot. Development of a pre-election challenge list targeted at minorities would be a VRA violation but this also has never been pursued. These are choices of current enforcement policy.

Long lines due to unequal distribution of voting machines based on race, list purges based on race and refusal to offer a provisional ballot on the basis of race would also be VRA violations.

Recommendations

Congress should pass a new law that allows the Department to bring civil actions for suppression that is NOT race based, for example, deceptive practices or wholesale challenges to voters in jurisdictions that tend to vote heavily for one party.

Given the additional resources and latitude given to the enforcement of acts such as double voting and noncitizen voting, there should be an equal commitment to enforcement of acts of intimidation and suppression cases.

There should also be increased resources dedicated to expanded monitoring efforts. This might be the best use of resources since monitors and observers act as a deterrent to fraud and intimidation.

Interview with Joe Sandler, Counsel to the DNC

February 24, 2006

Background

Sandler is an election attorney. He worked for the DNC in 1986, was in-house counsel from 1993-1998, and currently is outside counsel to the DNC and most state Democratic Parties. Sandler was part of the recount team in Florida in both 2002 and 2004. He recruited and trained attorneys in voting issues---starting in 2002 Sandler recruited in excess of 15, 000 attorneys in twenty-two states. He is now putting together a national lawyers council in each state.

2004-Administrative Incompetence v. Fraud

Sandler believes the 2004 election was a combination of administrative incompetence and fraud. Sandler stated there was a deliberate effort by the Republicans to disenfranchise voters across the

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

country. This was accomplished by mailing out cards to registered voters and then moving to purge from the voters list those whose cards were returned. Sandler indicated that in New Mexico there was a deliberate attempt by Republicans to purge people registered by third parties. He stated that there were intentional efforts to disenfranchise voters by election officials like Ken Blackwell in Ohio.

The problems with machine distribution in 2004 were not deliberate. However, Sandler believes that a large problem exists in the states because there are no laws that spell out a formula to allocate so many voting machines per voter.

Sandler was asked how often names were intentionally purged from the voter lists. He responded that there will be a lot of names purged as a result of the creation of the voter lists under HAVA. However, Sandler stated most wrongful purging results from incompetence. Sandler also said there was not much intimidation at the polls because most such efforts are deterred and that the last systematic effort was in Philadelphia in 2003 where Republicans had official looking cars and people with badges and uniforms, etc.

Sandler stated that deliberate dissemination of misinformation was more incidental, with individuals misinforming and not a political party. Disinformation did occur in small Spanish speaking communities.

Republicans point to instances of voter registration fraud but Sandler believes it did not occur, except for once in a blue moon. Sandler did not believe non-citizen voting was a problem. He also does not believe that there is voter impersonation at the polls and that Republicans allege this as a way of disenfranchising voters through restrictive voter identification rules.

Fraud and Intimidation Trends

Sandler stated that over the years there has been a shift from organized efforts to intimidate minority voters through voter identification requirements, improper purging, failure to properly register voters, not allocating enough voting machines, failure to properly use the provisional ballot, etc., by voter officials as well as systematic efforts by Republicans to deregister voters.

At the federal level, Sandler said, the voting division has become so politicized that it is basically useless now on intimidation claims. At the local level, Sandler does not believe politics prevents or hinders prosecution for vote fraud.

Sandler's Recommendations

Moving the voter lists to the state level is a good idea where carefully done

Provisional ballots rules should follow the law and not be over-used

No voter ID

Partisanship should be taken out of election administration, perhaps by giving that responsibility by someone other than the Secretary of State. There should at least be conflict of interest rules

Enact laws that allow private citizens to bring suit under state law

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

All suggestions from the DNC Ohio Report:

1. The Democratic Party must continue its efforts to monitor election law reform in all fifty states, the District of Columbia and territories.
2. States should be encouraged to codify into law all required election practices, including requirements for the adequate training of official poll workers.
3. States should adopt uniform and clear published standards for the distribution of voting equipment and the assignment of official pollworkers among precincts, to ensure adequate and nondiscriminatory access. These standards should be based on set ratios of numbers of machines and pollworkers per number of voters expected to turn out, and should be made available for public comment before being adopting.
4. States should adopt legislation to make clear and uniform the rules on voter registration.
5. The Democratic Party should monitor the processing of voter registrations by local election authorities on an ongoing basis to ensure the timely processing of registrations and changes, including both newly registered voters and voters who move within a jurisdiction or the state, and the Party should ask state Attorneys General to take action where necessary to force the timely updating of voter lists.
6. States should be urged to implement statewide voter lists in accordance with the Help America Vote Act (“HAVA”), the election reform law enacted by Congress in 2002 following the Florida debacle.
7. State and local jurisdictions should adopt clear and uniform rules on the use of, and the counting of, provisional ballots, and distribute them for public comment well in advance of each election day.
8. The Democratic Party should monitor the purging and updating of registered voter lists by local officials, and the Party should challenge, and ask state Attorneys General to challenge, unlawful purges and other improper list maintenance practices.
9. States should not adopt requirements that voters show identification at the polls, beyond those already required by federal law (requiring that identification be shown only by first time voters who did not show identification when registering.)
10. State Attorneys General and local authorities should vigorously enforce, to the full extent permitted by state law, a voter’s right to vote without showing identification.
11. Jurisdictions should be encouraged to use precinct-tabulated optical scan systems with a computer assisted device at each precinct, in preference to touchscreen (“direct recording equipment” or “DRE”) machines.
12. Touchscreen (DRE) machines should not be used until a reliable voter verifiable audit feature can be uniformly incorporated into these systems. In the event of a recount, the paper or other auditable record should be considered the official record.
13. Remaining punchcard systems should be discontinued.
14. States should ask state Attorneys General to challenge unfair or discriminatory distribution of equipment and resources where necessary, and the Democratic Party should bring litigation as necessary.
15. Voting equipment vendors should be required to disclose their source code so that it can be examined by third parties. No voting machine should have wireless connections or be able to connect to the Internet.
16. Any equipment used by voters to vote or by officials to tabulate the votes should be used

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

exclusively for that purpose. That is particularly important for tabulating/aggregating computers.

17. States should adopt "no excuse required" standards for absentee voting.
18. States should make it easier for college students to vote in the jurisdiction in which their school is located.
19. States should develop procedures to ensure that voting is facilitated, without compromising security or privacy, for all eligible voters living overseas.
20. States should make voter suppression a criminal offense at the state level, in all states.
21. States should improve the training of pollworkers.
22. States should expend significantly more resources in educating voters on where, when and how to vote.
23. Partisan officials who volunteer to work for a candidate should not oversee or administer any elections.

Interview with John Ravitz, Executive Director, New York City Board of Elections
February 16, 2006

Process

If there is an allegation of fraud or intimidation, the commissioners can rule to act on it. For example, in 2004 there were allegations in Queens that people had registered to vote using the addresses of warehouses and stores. The Board sent out teams of investigators to look into this. The Board then developed a challenge list that was to be used at the polls if any of the suspect voters showed up to vote.

If the allegation rises to a criminal level, the Board will refer it to the county district attorney. If a poll worker or election official is involved, the Board may conduct an internal investigation. That individual would be interviewed, and if there is validity to the claim, the Board would take action.

Incidences of Fraud and Intimidation

Mr. Ravitz says there have been no complaints about voter intimidation since he has been at the Board. There have been instances of over-aggressive poll workers, but nothing threatening. Voter fraud has also generally not been a problem.

In 2004, the problem was monitors from the Department of Justice intimidating voters. They were not properly trained, and were doing things like going into the booth with voters. The Board had to contact their Department supervisors to put a stop to it.

Charges regarding "ballot security teams" have generally just been political posturing.

The problem of people entering false information on voter registration forms is a problem. However, sometimes a name people allege is false actually turns out to be the voter's real name. Moreover, these types of acts do not involve anyone actually casting a fraudulent ballot.

EAC SUMMARY OF EXPERT INTERVIEWS FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

With respect to the issue of voters being registered in both New York and Florida, the Board now compares its list with that of Florida and other places to address the problem. This will be less of an issue with the use of statewide voter registration databases, as information becomes easier to share. Despite the number of people who were on the voter registration lists of both jurisdictions, there was no one from those lists who voted twice.

Most of the problems at the polls have to do with poll workers not doing what they are supposed to do, not any sort of malfeasance. This indicates that improved training is the most important measure we can take.

There have been instances in which poll workers ask voters for identification when they shouldn't. However, the poll workers seem to do it when they cannot understand the name when the voter tells it to them. The Board has tried to train them that no matter what, the poll worker cannot ask for identification in order to get the person's name.

Absentee ballot fraud has also not been a problem in New York City. This is likely because absentee ballots are counted last – eight days after election day. This is so that they can be checked thoroughly and verified. This is a practice other jurisdictions might consider.

New York City has not had a problem with ex-felons voting or with ex-felons not knowing their voting rights. The City has not had any problems in recent years with deceptive practices, such as flyers providing misinformation about voting procedures.

Recommendations

- Better poll worker training
- Thorough inspection of absentee ballots subsequent to the election

Interview with John Tanner, Director, Civil Rights Division, U.S. Department of Justice

February 24, 2006

Note: Mr. Tanner's reluctance to share data, information and his perspective on solving the problems presented an obstacle to conducting the type of interview that would help inform this project as much as we would have hoped. Mr. Tanner would not give us any information about or data from the section's election complaint in-take phone logs; data or even general information from the Interactive Case Management (ICM) system-its formal process for tracking and managing work activities in pursuing complaints and potential violations of the voting laws; and would give us only a selected few samples of attorney-observer reports, reports that every Voting Section attorney who is observing elections at poll sites on Election Day is required to submit. He would not discuss in any manner any current investigations or cases the section is involved in. He also did not believe it was his position to offer us recommendations as to how his office, elections, or the voting process might be improved.

Authority and Process

The Voting Section, in contrast to the Public Integrity section as Craig Donsanto described it, typically looks only at systemic problems, not problems caused by individuals. Indeed, the section never goes after individuals because it does not have the statutory authority to do so. In

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

situations in which individuals are causing problems at the polls and interfering with voting rights, the section calls the local election officials to resolve it.

Federal voting laws only apply to state action, so the section only sues local governments – it does not have any enforcement power over individuals. Most often, the section enters into consent agreements with governments that focus on poll worker training, takes steps to restructure how polls are run, and deals with problems on Election Day on the spot. Doing it this way has been most effective – for example, while the section used to have the most observers in the South, systematic changes forced upon those jurisdictions have made it so now the section does not get complaints from the South.

The section can get involved even where there is no federal candidate on the ballot if there is a racial issue under the 14th and 15th Amendments.

When the section receives a complaint, attorneys first determine whether it is a matter of individuals or systemic. When deciding what to do with the complaint, the section errs on the side of referring it criminally because they do not want civil litigation to complicate a possible criminal case.

When a complaint comes in, the attorneys ask questions to see if there are even problems there that the complainant is not aware are violations of the law. For example, in the Boston case, the attorney did not just look at Spanish language cases under section 203, but also brought a Section 2 case for violations regarding Chinese and Vietnamese voters. When looking into a case, the attorneys look for specificity, witnesses and supporting evidence.

Often, lawsuits bring voluntary compliance.

Voter Intimidation

Many instances of what some people refer to as voter intimidation are more unclear now. For example, photographing voters at the polls has been called intimidating, but now everyone is at the polls with a camera. It is hard to know when something is intimidation and it is difficult to show that it was an act of intimidation.

The fact that both parties are engaging in these tactics now makes it more complicated. It makes it difficult to point the finger at any one side.

The inappropriate use of challengers on the basis of race would be a violation of the law. Mr. Tanner was unaware that such allegations were made in Ohio in 2004. He said there had never been an investigation into the abusive use of challengers.

Mr. Tanner said a lot of the challenges are legitimate because you have a lot of voter registration fraud as a result of groups paying people to register voters by the form. They turn in bogus registration forms. Then the parties examine the registration forms and challenge them because 200 of them, for example, have addresses of a vacant lot.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

However, Mr. Tanner said the Department was able to informally intervene in challenger situations in Florida, Atkinson County, Georgia and in Alabama, as was referenced in a February 23 Op-Ed in USA Today. Mr. Tanner reiterated the section takes racial targeting very seriously.

Refusal to provide provisional ballots would be a violation of the law that the section would investigate.

Deceptive practices are committed by individuals and would be a matter for the Public Integrity Section. Local government would have to be involved for the voting section to become involved.

Unequal implementation of ID rules, or asking minority voters only for ID would be something the section would go after. Mr. Tanner was unaware of allegations of this in 2004. He said this is usually a problem where you have language minorities and the poll workers cannot understand the voters when they say their names. The section has never formally investigated or solely focused a case based on abuse of ID provisions. However, implementation of ID rules was part of the Section 2 case in San Diego. Mr. Tanner reiterated that the section is doing more than ever before.

When asked about the section's references to incidents of vote fraud in the documents related to the new state photo identification requirements, Mr. Tanner said the section only looks at retrogression, not at the wisdom of what a legislature does. In Georgia, for example, everyone statistically has identification, and more blacks have ID than whites. With respect to the letter to Senator Kit Bond regarding voter ID, the section did refer to the perception of concern about dead voters because of reporting by the Atlanta Journal-Constitution. It is understandable that when you have thousands of bogus registrations that there would be concerns about polling place fraud. Very close elections make this even more of an understandable concern. Putting control of registration lists in the hands of the states will be helpful because at this higher level of government you find a higher level of professionalism.

It is hard to know how much vote suppression and intimidation is taking place because it depends on one's definition of the terms – they are used very loosely by some people. However, the enforcement of federal law over the years has made an astounding difference so that the level of discrimination has plummeted. Registration of minorities has soared, as can be seen on the section's website. Mr. Tanner was unsure if the same was true with respect to turnout, but the gap is less. That information is not on the section's website.

The section is not filing as many Section 2 cases as compared to Section 203 cases because many of the jurisdictions sued under Section 2 in the past do not have issues anymore. Mr. Tanner said that race based problems are rare now.

NVRA has been effective in opening up the registration process. In terms of enforcement, Mr. Tanner said they do what they can when they have credible allegations. There is a big gap between complaints and what can be substantiated. Mr. Tanner stated that given the high quality of the attorneys now in the section, if they do not investigate it or bring action, that act complained of did not happen.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Recommendations

Mr. Tanner did not feel it was appropriate to make recommendations.

Interview with Kevin Kennedy, State Elections Director, State of Wisconsin

April 11, 2006

Background

Kennedy is a nonpartisan, appointed official. He has been in this position since 1983.

Complaints of fraud and intimidation do not usually come to Kennedy's office. Kennedy says that complainants usually take their allegations to the media first because they are trying to make a political point.

2004 Election Incidents of Fraud

The investigations into the 2004 election uncovered some cases of double voting and voting by felons who did not know they were not eligible to vote, but found no concerted effort to commit fraud. There have been a couple of guilty pleas as a result, although not a number in the double digits. The task force and news reports initially referred to 100 cases of double voting and 200 cases of felon voting, but there were not nearly that many prosecutions. Further investigation since the task force investigation uncovered that in some instances there were mis-marks by poll workers, fathers and sons mistaken for the same voter, and even a husband and wife marked as the same voter. The double votes that are believed to have occurred were a mixture of absentee and polling place votes. It is unclear how many of these cases were instances of voting in two different locations.

In discussing the case from 2000 in which a student claimed – falsely – that he had voted several times, Kennedy said that double voting can be done. The deterrent is that it's a felony, and that one person voting twice is not an effective way to influence an election. One would need to get a lot of people involved for it to work.

The task force set up to investigate the 2004 election found a small number of illegal votes but given the 7,000 alleged, it was a relatively small number. There was no pattern of fraud.

The one case Kennedy could recall of an organized effort to commit fraud was in the spring of 2003 or 2004. A community service agency had voters request that absentee ballots be sent to the agency instead of to the voters and some of those ballots were signed without the voters' knowledge. One person was convicted, the leader of the enterprise.

In Milwaukee, the main contention was that there were more ballots than voters. However, it was found that the 7,000 vote disparity was tied to poll worker error. The task force found that there was no concerted effort involved. Kennedy explained that there are many ways a ballot

EAC SUMMARY OF EXPERT INTERVIEWS FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

can get into a machine without a voter getting a number. These include a poll worker forgetting to give the voter one; someone does Election Day registration and fills out a registration form but does not get a number because the transaction all takes place at one table; and in Milwaukee, 20,000 voters who registered were not put on the list in time and as a short term solution the department sent the original registration forms to the polling places to be used instead of the list to provide proof of registration. This added another element of confusion that might have led to someone not getting a voter number.

The Republican Party used this original list and contracted with a private vendor to do a comparison with the U.S. postal list. They found initially that there were 5,000 bad addresses, and then later said there were 35,000 illegitimate addresses. When the party filed a complaint, the department told them they could force the voters on their list to cast a challenge ballot. On Election Day, the party used the list but found no actually voting from those addresses. Kennedy suspects that the private vendor made significant errors when doing the comparison.

In terms of noncitizen voting, Kennedy said that there is a Russian community in Milwaukee that the Republican Party singles out every year but it doesn't go very far. Kennedy has not seen much in the way of allegations of noncitizen voting.

However, when applying for a drivers license, a noncitizen could register to vote. There is no process for checking citizenship at this point, and the statewide registration database will not address this. Kennedy is not aware of any cases of noncitizen voting as a result, but it might have happened.

Kennedy said that the biggest concern seemed to be suspicions raised when groups of people are brought into the polling site from group homes, usually homes for the disabled. There are allegations that these voters are being told how to vote.

Incidents of Voter Intimidation

In 2004, there was a lot of hype about challenges, but in Wisconsin, a challenger must articulate a basis under oath. This acts as a deterrent, but at the same time it creates the potential that someone might challenge everyone and create long lines, keeping people from voting. In 2004, the Republican Party could use its list of suspect addresses as a legitimate basis for challenges, so there is the potential for abuse. It is also hard to train poll workers on that process. In 2004, there were isolated cases of problems with challengers.

In 2002, a flyer was circulated only in Milwaukee claiming that you had vote by noon. This was taken as an intimidation tactic by the Democrats.

Reforms

Wisconsin has had difficulty with its database because 1) they have had a hard time getting a good product out of the vendor and 2) until now there was no registration record for one-quarter of the voters. Any jurisdiction with fewer than 5000 voters was not required to have a registration list.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

In any case, once these performance issues are worked out, Kennedy does believe the statewide voter registration database will be very valuable. In particular, it will mean that people who move will not be on more than one list anymore. It should also address the double voting issue by identifying who is doing it, catching people who do it, and identifying where it could occur.

Recommendations

Better trained poll workers

Ensure good security procedures for the tabulation process and more transparency in the vote counting process

Conduct post-election audits

Interview with Lori Minnite, Barnard College

February 22, 2006

Background

Ms. Minnite is an assistant professor of political science at Barnard College. She has done substantial research on voter fraud and wrote the report "Securing the Vote." Ms. Minnite also did work related to an election lawsuit. The main question that she was asked to address in the lawsuit was---did election-day registration increase the possibility of fraud?

Securing the Vote

In Securing the Vote, Ms. Minnite found very little evidence of voter fraud because the historical conditions giving rise to fraud have weakened over the past twenty years. She stated that for fraud to take root a conspiracy was needed with a strong local political party and a complicit voter administration system. Since parties have weakened and there has been much improvement in the administration of elections and voting technology, the conditions no longer exist for large scale incidents of polling place fraud.

Ms. Minnite concentrates on fraud committed by voters not fraud committed by voting officials. She has looked at this issue on the national level and also concentrated on analyzing certain specific states. Ms. Minnite stressed that it is important to keep clear who the perpetrators of the fraud are and where the fraud occurs because that effects what the remedy should be. Often, voters are punished for fraud committed by voting officials.

Other Fraud Issues

Ms. Minnite found no evidence that NVRA was leading to more voter fraud. She supports non-partisan election administration. Ms. Minnite has found evidence that there is absentee ballot fraud. She can't establish that there is a certain amount of absentee ballot fraud or that it is the major kind of voter fraud.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Recommendations

Assure there are accurate voter records and centralize voter databases

Reduce partisanship in electoral administration.

Interview with Nina Perales, Counsel, Mexican American Legal Defense and Education Fund

March 7, 2006

Background

Ms. Perales is an attorney with the Mexican American Legal Defense Fund (MALDEF). MALDEF's mission is to foster sound public policies, laws and programs to safeguard the civil rights of the 40 million Latinos living in the United States and to empower the Latino community to fully participate in our society. One of the areas MALDEF works in is electoral issues, predominately centered on the Voting Rights Act. Ms. Perales did not seem to have a sense of the overall electoral issues in her working region (the southwest) effecting Hispanic voters and did not seem to want to offer her individual experiences and work activities as necessarily a perfect reflection of the challenges Hispanic voters face.

Largest Election Problems Since 2000

Santa Anna County, New Mexico-2004-intimidated voters by video taping them.

San Antonio-One African American voter subjected to a racial slur.

San Antonio-Relocated polling places at the last minute without Section 5 pre-clearance.

San Antonio-Closed polls while voters were still in line.

San Antonio-2003-only left open early voting polls in predominantly white districts.

San Antonio-2005-racially contested mayoral run-off election switched from touch screen voting to paper ballots.

Voter Fraud and Intimidation

In Texas, the counties are refusing to open their records with respect to Section 203 compliance (bilingual voting assistance), and those that did respond to MALDEF's request submitted incomplete information. Ms. Perales believes this in itself is a form of voter intimidation.

Ms. Perales said it is hard to say if the obstacles minorities confront in voting are a result of intentional acts or not because the county commission is totally incompetent. There have

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

continuously been problems with too few ballots, causing long lines, especially in places that had historically lower turnout. There is no formula in Texas for allocating ballots – each county makes these determinations.

When there is not enough language assistance at the polls, forcing a non-English speaker to rely on a family member to vote, that can suppress voter turnout.

Ms. Perales is not aware of deceptive practices or dirty tricks targeted at the Latino community.

There have been no allegations of illegal noncitizen voting in Texas. Indeed, the sponsor of a bill that would require proof of citizenship to vote could not provide any documentation of noncitizen voting in support of the bill. The bill was defeated in part because of the racist comments of the sponsor. In Arizona, such a measure was passed. Ms. Perales was only aware of one case of noncitizen voting in Arizona, involving a man of limited mental capacity who said he was told he was allowed to register and vote. Ms. Perales believes proof of citizenship requirements discriminate against Latinos.

Recommendations

Ms. Perales feels the laws are adequate, but that her organization does not have enough staff to do the monitoring necessary. This could be done by the federal government. However, even though the Department of Justice is focusing on Section 203 cases now, they have not even begun to scratch the surface. Moreover, the choices DOJ has made with respect to where they have brought claims do not seem to be based on any systematic analysis of where the biggest problems are. This may be because the administration is so ideological and partisan.

Ms. Perales does not believe making election administration nonpartisan would have a big impact. In Texas, administrators are appointed in a nonpartisan manner, but they still do not always have a nonpartisan approach. Each administrator tends to promote his or her personal view regardless of party.

Interview with Pat Rogers, private attorney

March 3, 2006

Background

In addition to his legal practice with *Modrall, Sperling, Roehl, Harris & Sisk*, Rogers also does some state-level lobbying for Verizon Wireless, GM, Dumont and other companies. His experience in election law goes back to 1988, where his first elections case was a defense against Bill Richardson, who had sued to get another candidate tossed off a ballot because of petition fraud. Since 1988, he has been involved in election cases at least once every two years.

2004 Litigation

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

In a case that ended before the New Mexico Supreme Court, Rogers represented the Green Party and other plaintiffs against the New Mexico Secretary of State for sending a directive telling local boards not to require ID for first time voters registering by mail. He argued that this watered-down ID check conflicted with what seemed fairly clear statutory requirements for first time voters. In 2004 these requirements were especially important due to the large presence of 3rd party organizations registering voters such as a 527 funded by Governor Richardson, ACORN, and others.

Plaintiffs were seeking a temporary restraining order requiring Secretary of State to follow the law. Yet the Supreme Court ultimately decided that, whether the directive was right or wrong, it was too late to require ID lest Bush v. Gore issues be raised.

Today, the issue is moot as the state legislature has changed the law, and the Secretary of State will no longer be in office. It seems unlikely they will send any policy directives to county clerks lest they violate due process/public notice.

Major issues in NM w/ regard to vote fraud

Registration fraud seems to be the major issue, and while the legislature has taken some steps, Rogers is skeptical of the effect they will have, considering the history of unequal application of election laws. He also believes there are holes in the 3rd party registration requirement deadlines.

Rogers views a national law requiring ID as the best solution to registration problems. Rather than imposing a burden he contends it will enhance public confidence in the simplest way possible.

Registration Fraud in 2004 election

It came to light that ACORN had registered a 13 year old. The father was an APD officer and received the confirmation, but it was sent to the next door address, a vacant house. They traced this to an ACORN employee and it was established that this employee had been registering others under 18.

Two weeks later, in a crack cocaine bust of Cuban nationals, one of those raided said his job was registering voters for ACORN, and the police found signatures in his possession for fictitious persons.

In a suspicious break-in at an entity that advertised itself as nonpartisan, only GOP registrations were stolen.

In another instance, a college student was allegedly fired for registering too many Republicans.

Rogers said he believed these workers were paid by the registration rather than hourly.

There have been no prosecution or convictions related to these incidents. In fact, there have been no prosecutions for election fraud in New Mexico in recent history. However, Rogers is

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

skeptical that much action can be expected considering the positions of Attorney General, Governor, and Secretary of State are all held by Democrats. Nor has there been any interest from the U.S. attorney—Rogers heard that U.S. attorneys were given instruction to hold off until after the election in 2004 because it would seem too political.

As part of the case against the Secretary of State regarding the identification requirement, the parties also sued ACORN. At a hearing, the head of ACORN, and others aligned with the Democratic Party called as witnesses, took the 5th on the stand as to their registration practices.

Other incidents

Very recently, there have been reports of vote buying in the town of Espanola. Originally reported by the *Rio Grande Sun*, a resident of a low-income housing project is quoted as saying it has been going on for 10-12 years. The Albuquerque Journal is now reporting this as well. So far the investigation has been extremely limited.

In 1996, there were some prosecutions in Espanola, where a state district judge found registration fraud.

In 1991, the chair of Democratic Party of Bertolino County was convicted on fraud. Yet she was pardoned by Clinton on same day as Marc Rich.

Intimidation/Suppression

Rogers believes the most notable example of intimidation in the 2004 election was the discovery of a DNC Handbook from Colorado advising Democratic operatives to widely report intimidation regardless of confirmation in order to gain media attention.

In-person polling place fraud

There have only been isolated instances of people reporting that someone had voted in their name, and Rogers doesn't believe there is any large scale conspiracy. Yet he contends that perspective misses the larger point of voter confidence. Although there has been a large public outcry for voter ID in New Mexico, it has been deflected and avoided by Democrats.

In 2004, there were more Democratic lawyers at the polls than there are lawyers in New Mexico. Rogers believes these lawyers had a positive impact because they deterred people from committing bad acts.

Counting Procedures

The Secretary of State has also taken the position that canvassing of the vote should be done in private. In NM, they have a 'county canvas' where they review and certify, after which all materials—machine tapes, etc.,—are centralized with the Secretary of State who does a final canvass for final certification. Conducting this in private is a serious issue, especially considering the margin in the 2000 presidential vote in New Mexico was only 366 votes. They wouldn't be

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

changing machine numbers, but paper numbers are vulnerable.

On a related note, NM has adopted state procedures that will ensure their reports are slower and very late, considering the 2000 late discovery of ballots. In a close race, potential for fraud and mischief goes up astronomically in the period between poll closing and reporting. Rogers believes these changes are going to cause national embarrassment in the future.

Rogers attributes other harmful effects to what he terms the Secretary of State's incompetence and inability to discern a nonpartisan application of the law. In the 2004 election, no standards were issued for counting provisional ballots. Furthermore, the Secretary of State spent over \$1 million of HAVA money for 'voter education' in blatant self-promotional ads.

Recommendations

Rogers believes it would be unfeasible to have nonpartisan election administration and favors transparency instead. To make sure people have confidence in the election, there must be transparency in the whole process. Then you don't have the 1960 vote coming down to Illinois, or the Espanola ballot or Dona Anna County (ballots found there in the 2000 election). HAVA funds should also be restricted when you have an incompetent, partisan Secretary of State.

There should be national standards for reporting voting results so there is less opportunity for fraud in a close race. Although he is not generally an advocate of national laws, he does agree there should be more national uniformity into how votes are counted and recorded.

Interview with Rebecca Vigil-Giron, Secretary of State, New Mexico

March 24, 2006

Background

Vigil-Giron has been Secretary of State for twelve years and was the President of the National Association of Secretaries of State in 2004. Complaints of election fraud and intimidation are filed with the SOS office. She then decides whether to refer it to the local district attorney or the attorney general. Because the complaints are few and far between, the office does not keep a log of complaints; however, they do have all of the written complaints on file in the office.

Incidents of Fraud and Intimidation

During the 2004 election, there were a couple of complaints of polling place observers telling people outside the polling place who had just voted, and then the people outside were following the voters to their cars and videotaping them. This happened in areas that are mostly second and third generation Latinos. The Secretary sent out the sheriff in one instance of this. The perpetrators moved to a different polling place. This was the only incident of fraud or intimidation Vigil-Giron was aware of in New Mexico.

016170

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

There have not been many problems on Native reservations because, unlike in many other states, in New Mexico the polling place is on the reservation and is run by local Native Americans. Vigil-Giron said that it does not make sense to have non-Natives running those polls because it is necessary to have people there who can translate. Because most of the languages are unwritten, the HAVA requirement of accessibility through an audio device will be very helpful in this regard. Vigil-Giron said she was surprised to learn while testifying at the Voting Rights Act commission hearings of the lack of sensitivity to these issues and the common failure to provide assistance in language minority areas.

In 2004 the U.S. Attorney, a Republican, suddenly announced he was launching an investigation into voter fraud without consulting the Secretary of State's office. After all of that, there was maybe one prosecution. Even the allegations involving third party groups and voter registration are often misleading. People doing voter registration drives encourage voters to register if they are unsure if they are already registered, and the voter does not even realize that his or her name will then appear on the voter list twice. The bigger problem is where registrations do not get forwarded to election administrators and the voter does not end up on the voting list on Election Day. This is voter intimidation in itself, Vigil-Giron believes. It is very discouraging for that voter and she wonders whether he or she will try again.

Under the bill passed in 2004, third parties are required to turn around voter registration forms very quickly between the time they get them and when they must be returned. If they fail to return them within 48 hours of getting them, they are penalized. This, Vigil-Giron believes, is unfair. She has tried to get the Legislature to look at this issue again.

Regarding allegations of vote buying in Espanola, Vigil-Giron said that the Attorney General is investigating. The problem in that area of New Mexico is that they are still using rural routes, so they have not been able to properly district. There has, as a result, been manipulation of where people vote. Now they seem to have pushed the envelope too far on this. The investigation is not just about vote buying, however. There have also been allegations of voters being denied translators as well as assistance at the polls.

Vigil-Giron believes there was voter suppression in Ohio in 2004. County officials knew thirty days out how many people had registered to vote, they knew how many voters there would be. Administrators are supposed to use a formula for allocation of voting machines based on registered voters. Administrators in Ohio ignored this. As a result, people were turned away at the polls or left because of the huge lines. This, she believes, was a case of intentional vote suppression.

A few years ago, Vigil-Giron heard that there may have been people voting in New Mexico and a bordering town in Colorado. She exchanged information with Colorado administrators and it turned out that there were no cases of double voting.

Recommendations

Vigil-Giron believes that linking voter registration databases across states may be a way to see if people who are registered twice are in fact voting twice.

016171

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

The key to improving the process is better trained poll workers, who are certified, and know what to look for on Election Day. These poll workers should then work with law enforcement to ensure there are no transgressions.

There should be stronger teeth in the voter fraud laws. For example, it should be more than a fourth degree felony, as is currently the case.

Interview with Sarah Bell Johnson Interview

April 19, 2006

Procedures for Handling Fraud

Fraud complaints are directed first to the state Board of Elections. Unlike boards in other states, Kentucky's has no investigative powers. Instead, they work closely with both the Attorney General and the U.S. Attorney. Especially since the current administration took office, they have found the U.S. Attorney an excellent partner in pursuing fraud cases, and have seen many prosecutions in the last six years. She believes that there has been no increase in the incidence of fraud, but rather the increase in prosecutions is related to increased scrutiny and more resources.

Major Types of Fraud and Intimidation

Johnson says that vote buying and voter intimidation go hand in hand in Kentucky. While historically fraud activity focused on election day, in the last 20 years it has moved into absentee voting. In part, this is because new voting machines aren't easy to manipulate in the way that paper ballots were open to manipulation in the past, especially in distant rural counties. For this reason, she is troubled by the proliferation of states with early voting, but notes that there is a difference between absentee ballot and early voting on machines, which is far more difficult to manipulate.

Among the cases of absentee ballot fraud they have seen, common practice involves a group of candidates conspiring together to elect their specific slate. Nursing homes are an especially frequent target. Elderly residents request absentee ballots, and then workers show up and 'help' them vote their ballots. Though there have been some cases in the Eastern district of election day fraud, most have been absentee.

Johnson argues that it is hard to distinguish between intimidation and vote buying. They have also seen instances where civic groups and church groups intimidate members to vote in a specific manner, not for reward, but under threat of being ostracized or even telling them they will go to hell.

While she is aware of allegations of intimidation by the parties regarding minority precincts in Louisville, the board hasn't received calls about it and there haven't been any prosecutions.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Challengers

Challengers are permitted at the polls in Kentucky. Each party is allowed two per location, and they must file proper paperwork. There is a set list of defined reasons for which they can challenge a voter, such as residency, and the challengers must also fill out paperwork to conduct a challenge.

As for allegations of challengers engaging in intimidation in minority districts, Johnson notes that challengers did indeed register in Jefferson County, and filed the proper paperwork, although they ultimately did not show up on election day.

She finds that relatively few challengers end up being officially registered, and that the practice has grown less common in recent years. This is due more to a change of fashion than anything. And after all, those wishing to affect election outcomes have little need for challengers in the precinct when they can target absentee voting instead.

In the event that intimidation is taking place, Kentucky has provisions to remove disruptive challengers, but this hasn't been used to her knowledge.

Prosecutions

Election fraud prosecutions in Kentucky have only involved vote buying. This may be because that it is easier to investigate, by virtue of a cash and paper trail which investigators can follow. It is difficult to quantify any average numbers about the practice from this, due in part to the five year statute of limitations on vote buying charges. However, she does not believe that vote-buying is pervasive across the state, but rather confined to certain pockets.

Vote-hauling Legislation

Vote hauling is a common form of vote buying by another name. Individuals are legally paid to drive others to the polls, and then divide that cash in order to purchase votes. Prosecutions have confirmed that vote hauling is used for this purpose. While the Secretary of State has been committed to legislation which would ban the practice, it has failed to pass in the past two sessions.

Paying Voter Registration Workers Legislation

A law forbidding people to pay workers by the voter registration card or for obtaining cards with registrations for a specific party was passed this session. Individuals working as part of a registration campaign may still be paid by hour. Kentucky's experience in the last presidential election illustrates the problems arising from paying individuals by the card. That contest included a constitutional amendment to ban gay marriage on the ballot, which naturally attracted the attention of many national groups. One group paying people by the card resulted in the registrar being inundated with cards, including many duplicates in the same bundle, variants on names, and variants on addresses. As this practice threatens to overwhelm the voter registration process, Kentucky views it as constituting malicious fraud.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Deceptive practices

Other than general reports in the news, Johnson hasn't received any separate confirmation or reports of deceptive practices, i.e., false and misleading information being distributed to confuse voters.

Effect of Kentucky's Database

Johnson believes Kentucky's widely praised voter registration database is a key reason why the state doesn't have as much fraud as it might, especially the types alleged elsewhere like double and felon voting. While no database is going to be perfect, the connections with other state databases such as the DMV and vital statistics have been invaluable in allowing them to aggressively purge dead weight and create a cleaner list. When parties use their database list they are notably more successful. Johnson wonders how other states are able to conduct elections without a similar system.

Some factors have made especially important to their success. When the database was instituted in 1973, they were able to make everyone in the state re-register and thus start with a clean database. However, it is unlikely any state could get away with this today.

She is also a big supporter of a full Social Security number standard, as practiced in Kentucky. The full Social Security, which is compared to date of birth and letters in the first and last name, automatically makes matching far more accurate. The huge benefits Kentucky has reaped make Johnson skeptical of privacy concerns arguing for an abbreviated Social Security number. Individuals are willing to submit their Social Security number for many lesser purposes, so why not voting? And in any event, they don't require a Social Security number to register (unlike others such as Georgia). Less than a percent of voters in Kentucky are registered under unique identifiers, which the Board of Elections then works to fill in the number through cross referencing with the DMV.

Recommendations

Johnson believes the backbone of effective elections administration must be standardized procedures, strong record keeping, and detailed statutes. In Kentucky, all counties use the same database and the same pre election day forms. Rather than seeing that as oppressive, county officials report that the uniformity makes their jobs easier.

This philosophy extends to the provisional ballot question. While they did not have a standard in place like HAVA's at the time of enactment, they worked quickly to put a uniform standard in place.

They have also modified forms and procedures based on feedback from prosecutors. Johnson believes a key to enforcing voting laws is working with investigators and prosecutors and ensuring that they have the information they need to mount cases.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

She also believes public education is important, and that the media could do more to provide information about what is legal and what is illegal. Kentucky tries to fulfill this role by information in polling places, press releases, and high profile press conferences before elections. She notes that they deliberately use language focusing on fraud *and* intimidation.

Johnson is somewhat pessimistic about reducing absentee ballot fraud. Absentee ballots do have a useful function for the military and others who cannot get to the polling place, and motivated individuals will always find a way to abuse the system if possible. At a minimum, however, she recommends that absentee ballots should require an excuse. She believes this has helped reduce abuse in Kentucky, and is wary of no-excuse practices in other states.

Interview with Steve Ansolobhere and Chandler Davidson
February 17, 2006

Methodology suggestions

In analyzing instances of alleged fraud and intimidation, we should look to criminology as a model. In criminology, experts use two sources: the Uniform Crime Reports, which are all reports made to the police, and the Victimization Survey, which asks the general public whether a particular incident has happened to them. After surveying what the most common allegations are, we should conduct a survey of the general public that asks whether they have committed certain acts or been subjected to any incidents of fraud or intimidation. This would require using a very large sample, and we would need to employ the services of an expert in survey data collection. Mr. Ansolobhere recommended Jonathan Krosnick, Doug Rivers, and Paul Sniderman at Stanford; Donald Kinder and Arthur Lupia at Michigan; Edward Carmines at Indiana; and Phil Tetlock at Berkeley. In the alternative, Mr. Ansolobhere suggested that the EAC might work with the Census Bureau to have them ask different, additional questions in their Voter Population Surveys.

Mr. Chandler further suggested it is important to talk to private election lawyers, such as Randall Wood, who represented *Ciro Rodriguez* in his congressional election in Texas. Mr. Ansolobhere also recommended looking at experiments conducted by the British Election Commission.

Incidents of Fraud and Intimidation

Mr. Davidson's study for the Lawyers Committee for Civil Rights on the Voting Rights Act documented evidence of widespread difficulty in the voting process. However, he did not attempt to quantify whether this was due to intentional, malevolent acts. In his 2005 report on ballot security programs, he found that there were many allegations of fraud made, but not very many prosecutions or convictions. He saw many cases that did go to trial and the prosecutors lost on the merits.

In terms of voter intimidation and vote suppression, Mr. Davidson said he believes the following types of activities do occur: videotaping of voters' license plates; poll workers asking

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

intimidating questions; groups of officious-looking poll watchers at the poll sites who seem to be some sort of authority looking for wrongdoing; spreading of false information, such as phone calls, flyers, and radio ads that intentionally mislead as to voting procedures.

Mr. Ansolobhere believes the biggest problem is absentee ballot fraud. However, many of these cases involve people who do not realize what they are doing is illegal, for example, telling someone else how to vote. Sometimes there is real illegality occurring however. For example, vote selling involving absentee ballots, the filling out of absentee ballots en masse, people at nursing homes filling out the ballots of residents, and there are stories about union leaders getting members to vote a certain way by absentee ballot. This problem will only get bigger as more states liberalize their absentee ballot rules. Mr. Chandler agreed that absentee ballot fraud was a major problem.

Recommendations

Go back to “for cause” absentee ballot rules, because it is truly impossible to ever ensure the security of a mail ballot. Even in Oregon, there was a study showing fraud in their vote by mail system.

False information campaigns should be combated with greater voter education. Los Angeles County’s voter education program should be used as a model.

Interview with Tracy Campbell, author

March 3, 2006

Background

Campbell’s first book on election fraud looked at Ed Pritchard, a New Deal figure who went to jail for stuffing ballot boxes. While his initial goal in writing that book was to find out why Pritchard had engaged in vote stealing, his growing understanding of a pervasive culture of electoral corruption led him to consider instead how it was that Pritchard was ever caught. In 1998, he started working on a book regarding fraud in Kentucky, which quickly became a national study. He hoped to convey the ‘real politics’ which he feels readers, not to mention academics, have little sense about. While less blatant than in previous eras, fraud certainly still occurs, and he mentions some examples in his book. The major trend of the past 60-70 years has been that these tactics have grown more subtle.

While he hasn’t conducted any scientific study of the current state of fraud, his sense as a historian is that it seems naive, after generations of watching the same patterns and practices influence elections, to view suspect election results today as merely attributable to simple error.

Vote-buying and absentee fraud

EAC SUMMARY OF EXPERT INTERVIEWS FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Campbell sees fraud by absentee ballot and vote buying as the greatest threats to fair elections today. He says vote fraud is like real estate: location, location, location—the closer you can keep the ballots to the courthouse the better. Absentee ballots create a much easier target for vote brokers who can manage voting away from the polling place, or even mark a ballot directly, in exchange for, say, \$50—or even more if an individual can bring their entire family. He has noted some small counties where absentee ballots outnumber in-person ballots.

However, few people engaged in this activity would call it ‘purchasing’ a vote. Instead, it is candidate Jones’ way of ‘thanking’ you for a vote you would have cast in any event. The issue is what happens if candidate Smith offers you more. Likewise, the politicians who engage in vote fraud don’t see it as a threat to the republic but rather as a game they have to play in order to get elected.

Regional patterns

Campbell suggests such practices are more prevalent in the South than the Northern states, and even more so compared to the West. The South has long been characterized as particularly dangerous in intimidation and suppression practices—throughout history, one can find routine stories of deaths at the polls each year. While he maintains that fraud seems less likely in the Western states, he sees the explosion of mail in and absentee ballots there as asking for trouble.

Poll site closings as a means to suppress votes

Campbell points to a long historical record of moving poll sites in order to suppress votes. Polling places in the 1800s were frequently set-up on rail cars and moved further down the line to suppress black votes.

He would include door-to-door canvassing practices here, as well as voting in homes, which was in use in Kentucky until only a few years ago. All of these practices have been justified as making polling places ‘more accessible’ while their real purpose has been to suppress votes.

Purge lists

Purge lists are, of course, needed in theory, yet Campbell believes the authority to mark names off the voter rolls presents extensive opportunity for abuse. For this reason, purging must be done in a manner that uses the best databases, and looks at only the most relevant information. When voters discover their names aren’t on the list when they go to vote, for example, because they are “dead,” it has a considerable demoralizing effect. Wrongful purging takes place both because of incompetence and as a tool to intentionally disenfranchise.

Campbell believes transparency is the real issue here. An hour after the polls close, we tend to just throw up our hands and look the other way, denying voters the chance to see that discrepancies are being rectified. He believes the cost in not immediately knowing election outcomes is a small price to pay for getting results right and showing the public a transparent process.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Deceptive practices

Today's deceptive practices have are solidly rooted in Reconstruction-era practices—i.e. phony ballots, the Texas 'elimination' ballot. The ability to confuse voters is a powerful tool for those looking to sway elections.

Language minorities

Campbell argues there is a fine line between offering help to non-English speakers and using that help against them. A related issue, particularly in the South, is taking advantage of the illiterate.

Current intimidation

Another tactic Campbell considers an issue today is polling place layout: the further vote suppressers can keep people away from the polls, the better. Practices such as photographing people leaving a polling place may also tie into vote-buying, where photos are used to intimidate and validate purchased votes. A good way to combat such practices is by keeping electioneering as far from the polls as possible.

Recommendations

Specific voting administration recommendations Campbell advocates would include reducing the use of absentee ballots and improving the protective zone around polling places.

Campbell would also like to see enforcement against fraud stepped up and stiffer penalties enacted, as current penalties make the risk of committing fraud relatively low. He compares the risk in election fraud similar to steroid use in professional sports—the potential value of the outcome is far higher than the risk of being caught or penalized for the infraction, so it is hard to prevent people from doing it. People need to believe they will pay a price for engaging in fraud or intimidation. Moreover, we need to have the will to kick people out of office if necessary.

He is skeptical of the feasibility of nonpartisan election administration, as he believes it would be difficult to find people who care about politics yet won't lean one way or the other—such an attempt would be unlikely to get very far before accusations of partisanship emerged. He considers the judiciary the only legitimate check on election fraud.

Interview with Wade Henderson, Executive Director, Leadership Conference for Civil Rights

February 14, 2006

Data Collection

Mr. Henderson had several recommendations as to how to better gather additional information and data on election fraud and intimidation in recent years. He suggested interviewing the

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

following individuals who have been actively involved in Election Protection and other similar efforts:

- Jon Greenbaum, Lawyers Committee for Civil Rights
- Tanya Clay, People for the American Way
- Melanie, Campbell, National Coalition for Black Political Participation
- Larry Gonzalez, National Association of Latino Election Officers
- Jacqueline Johnson, National Congress of American Indians
- Chellie Pingree, Common Cause
- Jim Dickson, disability rights advocate
- Mary Berry, former Chair of the US Commission on Civil Rights, currently at the University of Pennsylvania
- Judith Browne and Eddie Hailes, Advancement Project (former counsel to the US Commission on Civil Rights)
- Robert Rubin, Lawyers Committee for Civil Rights – San Francisco Office
- Former Senator Tom Daschle (currently a fellow at The Center for American Progress)

He also recommended we review the following documents and reports:

- The 2004 litigation brought by the Advancement Project and SEIU under the 1981 New Jersey Consent Decree
- Forthcoming LCCR state-by-state report on violations of the Voting Rights Act
- Forthcoming Lawyers Committee report on violations of the Voting Rights Act (February 21)

Types of Fraud and Intimidation Occurring

Mr. Henderson said he believed that the kinds of voter intimidation and suppression tactics employed over the last five years are ones that have evolved over many years. They are sometimes racially based, sometimes based on partisan motives. He believes the following types of activity have actually occurred, and are not just a matter of anecdote and innuendo, and rise to the level of either voter intimidation or vote suppression:

- Flyers with intentional misinformation, such as ones claiming that if you do not have identification, you cannot vote, and providing false dates for the election
- Observers with cameras, which people associate with potential political retribution or even violence
- Intimidating police presence at the polls
- Especially in jurisdictions that authorize challenges, the use of challenge lists and challengers goes beyond partisanship to racial suppression and intimidation
- Unequal deployment of voting equipment, such as occurred in Ohio. Also, he has seen situations in which historically Black colleges will have one voting machine while other schools will have more.

Mr. Henderson believes that these matters are not pursued formally because often they involve activities that current law does not reach. For example, there is no law prohibiting a Secretary of State from being the head of a political campaign, and then deploying voting machines in an uneven manner. There is no way to pursue that. Also, once the election is over, civil litigation

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

becomes moot. Finally, sometimes upon reflection after the campaign, some of the activities are not as sinister as believed at the time.

Mr. Henderson believes government does not engage in a sustained investigation of these matters or pursue any kind of resolution to them. LCCR has filed a FOIA request with both the Civil Rights Division and the Criminal Division of the Department of Justice to examine this issue.

Election Protection activities will be intensified for the 2006 elections, although the focus may shift somewhat given the implementation of new HAVA requirements.

Recommendations for Reform

There was tremendous concern after the 2004 election about conflicts of interest – the “Blackwell problem” – whereby a campaign chair is also in charge of the voting system. We need to get away from that.

He also supports Senator Barak Obama’s bill regarding deceptive practices, and is opposed to the voter identification laws passing many state legislatures.

- States should adopt election-day registration, in order to boost turnout as well as to allow eligible voters to immediately rectify erroneous or improperly purged registration records
- Expansion of early voting & no-excuse absentee voting, to boost turnout and reduce the strain on election-day resources.
- Provisional ballot reforms:
 - Should be counted statewide – if cast in the wrong polling place, votes should still be counted in races for which the voter was eligible to vote (governor, etc.)
 - Provisional ballots should also function as voter registration applications, to increase the likelihood that voters will be properly registered in future elections
- Voter ID requirements: states should allow voters to use signature attestation to establish their identity
- The Department of Justice should increase enforcement of Americans with Disabilities Act and the accessibility requirements of the Help America Vote Act
- Statewide registration databases should be linked to social service agency databases
- Prohibit chief state election officials from simultaneously participating in partisan electoral campaigns within their states
- Create and enforce strong penalties for deceptive or misleading voting practices

Interview with Wendy Weiser, Deputy Director, Democracy Program, The Brennan Center

Brennan Center findings on fraud

The Brennan Center’s primary work on fraud is their report for the Carter Baker Commission with commissioner Spencer Overton, written in response to the Commission’s ID

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

recommendations. Brennan reviewed all existing reports and election contests related to voter fraud. They believe the contests serve as an especially good record of whether or not fraud exists, as the parties involved in contested elections have a large incentive to root out fraudulent voters. Yet despite this, the incidence of voter impersonation fraud discovered is extremely low—something on the order 1/10000th of a percentage of voters. See also the brief Brennan filed on 11th circuit in Georgia photo ID case which cites sources in Carter Baker report and argues the incidence of voter fraud too low to justify countermeasures.

Among types of fraud, they found impersonation, or polling place fraud, is probably the least frequent type, although other types, such as absentee ballot fraud are also very infrequent. Weiser believes this is because impersonation fraud is more likely to be caught and is therefore not worth the risk. Unlike in an absentee situation, actual poll workers are present to disrupt impersonation fraud, for instance, by catching the same individual voting twice. She believes perhaps one half to one quarter of the time the person will be caught. Also, there is a chance the pollworker will have personal knowledge of the person. Georgia Secretary of State Cathy Cox has mentioned that there are many opportunities for discovery of in person fraud as well. For example, if one votes in the name of another voter, and that voter shows up at the polls, the fraud will be discovered.

Weiser believes court proceedings in election contests are especially useful. Some are very extensive, with hundreds of voters brought up by each side and litigated. In both pre-election challenges and post-election contests, parties have devoted extraordinary resources into 'smoking out' fraudulent voters. Justin Leavitt at Brennan scoured such proceedings for the Carter Baker report, which includes these citations. Contact him for answers to particular questions.

Countermeasures/statewide databases

Brennan has also considered what states are doing to combat impersonation fraud besides photo ID laws, although again, it seems to be the rarest kind of fraud, beyond statistically insignificant. In the brief Brennan filed in the Georgia case, the Center detailed what states are already doing to effectively address fraud. In another on the web site includes measures that can be taken that no states have adopted yet. Weiser adds that an effort to look at strategies states have to prevent fraud, state variations, effectiveness, ease of enforcement would be very useful.

Weiser believes the best defense against fraud will be better voter lists—she argues the fraud debate is actually premature because states have yet to fully implement the HAVA database requirement. This should eliminate a great deal of 'deadwood' on voter rolls and undermine the common argument that fraud is made possible by this deadwood. This was the experience for Michigan, which was able to remove 600,000 names initially, and later removed almost 1 million names from their rolls. It is fairly easy to cull deadwood from lists due to consolidation at the state level—most deadwood is due to individuals moving within the state and poor communication between jurisdictions. (Also discuss with Chris Thomas, who masterminded the Michigan database for more information and a historical perspective.)

016181

EAC SUMMARY OF EXPERT INTERVIEWS FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Regarding the question of whether the effect of this maintenance on fraud in Michigan can be quantified, Weiser would caution against drawing direct lines between list problems and fraud. Brennan has found various groups abusing the existence of list deadwood to make claims about fraudulent voting. This is analyzed in greater detail in the Brennan Center's critique of a purge list produced by the NJ Republican party, and was illustrated by the purge list produced by the state of Florida. When compiling such lists and doing comparisons, sound statistical methods must be utilized, and often are not.

The NJ GOP created a list and asked NJ election officials to purge names of ineligible voters on it. Their list assumed that people appearing on the list twice had voted twice. Brennan found their assumptions shoddy and based on incorrect statistical practices, such as treating individuals with the same name and birthdays as duplicates, although this is highly unlikely according to proper statistical methods. Simply running algorithms on voter lists creates a number of false positives, does not provide an accurate basis for purging, and should not be taken as an indicator of fraud.

Regarding the Florida purge list, faulty assumptions caused the list to systematically exclude Hispanics while overestimating African Americans. Matching protocols required that race fields match exactly, despite inconsistent fields across databases.

The kinds of list comparisons that are frequently done to allege fraud are unreliable. Moreover, even if someone is on a voter list twice, that does not mean that voter has voted twice. That, in fact, is almost never the case.

Ultimately, even matching protocols without faulty assumptions will have a 4 percent to 35 percent error rate—that's simply the nature of database work. Private industry has been working on improving this for years. Now that HAVA has introduced a matching requirement, even greater skepticism is called for in judging the accuracy of list maintenance.

Intimidation and Suppression

Brennan does not have a specific focus here, although they do come across it and have provided assistance on bills to prevent suppression and intimidation. They happen to have an extensive paper file of intimidating fliers and related stories from before the 2004 election. (They can supply copies after this week).

Challengers

Brennan has analyzed cases where challenger laws have been beneficial and where they have been abused. See the decision and record from the 1982 NJ vs. RNC case for some of the history of these laws. Brennan is currently working on developing a model challenger law.

Weiser believes challenge laws with no requirement that the challenger have any specific basis for the challenge or showing of ineligibility are an invitation to blanket harassing challenges and have a range of pitfalls. State laws are vague and broad and often involve arcane processes such as where voters are required to meet a challenge within 5 days. There are incentives for political abuse, potential for delaying votes and disrupting the polls, and they are not necessarily directed

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

toward the best result. Furthermore, when a voter receives a mailer alleging vote fraud with no basis, even the mere fact of a challenge can be chilling. A voter does not want to have to go through a quasi-court proceeding in order to vote.

Brennan recommends challenge processes that get results before election, minimize the burden for voters, and are restricted at polling place to challenges by poll workers and election officials, not voters. They believe limitless challenges can lead to pandemonium—that once the floodgates are open they won't stop.

Recommendations

Intimidation— Weiser believes Sen. Barak Obama's bill is a good one for combating voter harassment and deceptive practices. Many jurisdictions do not currently have laws prohibiting voter harassment and deceptive practices.

Fraud— Current state and federal codes seem sufficient for prosecuting fraud. Weiser doesn't consider them under-enforced, and sees no need for additional laws.

Voter lists— New legislation or regulations are needed to provide clear guidance and standards for generating voter lists and purging voters, otherwise states could wrongfully disenfranchise eligible voters.

Challengers— Challenge laws need to be reformed, especially ones that allow for pre-election mass challenges with no real basis. There is no one size fits all model for challenger legislation, but some bad models involving hurdles for voters lead to abuse and should be reformed. There should be room for poll workers to challenge fraudulent voters, but not for abuse.

Also useful would be recommendations for prosecutors investigating fraudulent activity, How should they approach these cases? How should they approach cases of large scale fraud/intimidation? While there is sufficient legislative cover to get at any election fraud activity, questions remain about what proper approaches and enforcement strategies should be.

Interview with Bill Groth, Attorney for the Plaintiffs in Indiana Identification Litigation
February 22, 2006

Fraud in Indiana

Indiana has never charged or prosecuted anyone for polling place fraud. Nor has any empirical evidence of *voter impersonation* fraud or dead voter fraud been presented. In addition, there is no record of any credible complaint about *voter impersonation* fraud in Indiana. State legislators signed an affidavit that said there had never been impostor voting in Indiana. At the same time, the Indiana Supreme Court has not necessarily required evidence of voter fraud before *approving* legislative attempts to address fraud.

016183

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

The state attorney general has conceded that there is no concrete fraud in Indiana, but has instead referred to instances of fraud in other states. Groth filed a detailed motion to strike evidence such as John Fund's book relating to other states, arguing that none of that evidence was presented to the legislature and that it should have been in the form of sworn affidavits, so that it would have some indicia of verifiability.

Photo ID law

By imposing restrictive ID measures, Groth contends you will discourage 1,000 times more legitimate voters than illegitimate voters you might protect against. He feels the implementation of a REAL ID requirement is an inadequate justification for the law, as it will not affect the upcoming 2006 election where thousands of registered voters will be left without proper ID. In addition, he questions whether REAL ID will be implemented as planned in 2008 considering the backlash against the law so far. He also feels ID laws are unconstitutional because of inconsistent application.

Statewide database as remedy

Groth believes many problems will be addressed by the statewide database required under HAVA. To the extent that the rolls in Indiana are bloated, it is because state officials have not complied with NVRA list maintenance requirements. Thus, it is somewhat disingenuous for them to use bloated voter rolls as a reason for imposing additional measures such as the photo ID law. Furthermore, the state has ceded to the counties the obligation to do maintenance programs, which results in a hit or miss process (see discussion in reply brief, p 26 through p. 28).

Absentee fraud

To the extent that there has been an incidence of fraud, these have all been confined to absentee balloting. Most notably the East Chicago mayoral election case where courts found absentee voting fraud had occurred. See: Pabey vs. Pastrick 816 NE 2nd 1138 Decision by the Indiana Supreme Court in 2004.

Intimidation and vote suppression

Groth is only aware of anecdotal evidence supporting intimidation and suppression activities. While he considers the sources of this evidence credible, it is still decidedly anecdotal. Instances he is aware of include police cars parked in front of African American polling places. However, most incidents of suppression which are discussed occurred well in the past. Trevor Davidson claims a fairly large scale intimidation program in Louisville.

Challengers

There was widespread information that the state Republican Party had planned a large scale challenger operation in Democratic precincts for 2004, but abandoned the plan at the last minute.

EAC SUMMARY OF EXPERT INTERVIEWS FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Last year the legislature made a crucial change to election laws which will allow partisan challengers to be physically inside the polling area next to members of the precinct board. Previously, challengers at the polling place have been restricted to the 'chute,' which provides a buffer zone between voting and people engaging in political activity. That change will make it much easier to challenge voters. As there is no recorded legislative history in Indiana, it is difficult to determine the justification behind this change. As both chambers and the governorship are under single-party control, the challenger statute was passed under the radar screen.

Photo ID and Challengers

Observers are especially concerned about how this change will work in conjunction with the photo ID provision. Under the law, there are at least two reasons why a member of the precinct board or a challenger can raise object to an ID: whether a presented ID conforms to ID standards, and whether the photo on an ID is actually a picture of the voter presenting it. The law does not require bipartisan agreement that a challenge is valid. All it takes is one challenge to raise a challenge to that voter, and that will lead to the voter voting by provisional ballot.

Provisional ballot voting means that voter must make a second trip to the election board (located at the county seat) within 13 days to produce the conforming ID or to swear out an affidavit that they are who they claim to be. This may pose a considerable burden to voters. For example, Indianapolis and Marion County are coterminous—anyone challenged under the law will be required to make second trip to seat of government in downtown Indianapolis. If the voter in question did not have a driver's license in the first place, they will likely need to arrange transportation. Furthermore, in most cases the election result will already be known.

The law is vague about acceptable cause for challenging a voter's ID. Some requirements for valid photo ID include being issued by state or fed gov't, w/ expiration date, and the names must conform exactly. The League of Women Voters is concerned about voters with hyphenated names, as the Indiana DMV fails to put hyphens on driver's licenses potentially leading to a basis for challenge. Misspelling of names would also be a problem. The other primary mode of challenge is saying the photo doesn't look like the voter, which could be happen in a range of instances. Essentially, the law gives unbridled discretion to challengers to decide what conforms and what does not.

Furthermore, there is no way to determine whether a challenge is in good or bad faith, and *there is* little penalty for making a bad faith challenge. The fact that there are no checks on the challenges at the precinct level, or even a requirement of concurrence from an opposing party challenger leads to the concern that challenge process will be abused. The voter on the other hand, will need to get majority approval of county election board members to defeat the challenge.

Groth suggests the political situation in Indianapolis also presents a temptation to abuse this process, as electoral margins are growing increasingly close due to shifting political calculus.

Other cases

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Groth's other election law work has included a redistricting dispute, a dispute over ballot format, NVRA issues, and a case related to improper list purging, but nothing else related to fraud or intimidation. The purging case involved the election board attempting to refine its voter list by sending registration postcards to everyone on the list. When postcards didn't come back they wanted to purge those voters. Groth blames this error more on incompetence, than malevolence, however, as the county board is bipartisan. (The Indiana Election Commission and the Indiana election division are both bipartisan, but the 92 county election boards which will be administering photo id are controlled by one political party or the other—they are always an odd number, with the partisan majority determined by who controls the clerk of circuit court office.)

Recommendations

Supports nonpartisan administration of elections. Indiana specific recommendations including a longer voting day, time off for workers to vote, and an extended registration period.

He views the central problem of the Indiana photo ID law is that the list of acceptable forms of ID is too narrow and provides no fallback to voters without ID. At the least, he believes the state needs to expand the list so that most people will have at least one. If not, they should be allowed to swear an affidavit regarding their identity, under penalty of perjury/felony prosecution. This would provide sufficient deterrence for anyone considering impersonation fraud. He believes absentee ballot fraud should be addressed by requiring those voters to produce ID as well, as under HAVA.

His personal preference would be signature comparison. Indiana has never encountered an instance of someone trying to forge a name in the poll book, and while this leaves open the prospect of dead voters, that danger will be substantially diminished by the statewide database. But if we are going to have some form of ID, he believes we should apply it to everyone and avoid disenfranchisement, provided they swear an affidavit.

Interview with Neil Bradley, February 21, 2004

Voter Impersonation Cases (issue the Georgia ID litigation revolves around)

Mr. Bradley asserted that Georgia Secretary of State Cox stated in the case at issue: that she clearly would know if there had been any instances of voter impersonation at the polls; that she works very closely with the county and local officials and she would have heard about voter impersonation from them if she did not learn about it directly; and that she said that she had not heard of "any incident"---which includes acts that did not rise to the level of an official investigation or charges.

Mr. Bradley said that it is also possible to establish if someone has impersonated another voter at the polls. Officials must check off the type of voter identification the voter used. Voters without ID may vote by affidavit ballot. One could conduct a survey of those voters to see if they in fact voted or not.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

The type of voter fraud that involves impersonating someone else is very unlikely to occur. If someone wants to steal an election, it is much more effective to do so using absentee ballots. In order to change an election outcome, one must steal many votes. Therefore, one would have to have lots of people involved in the enterprise, meaning there would be many people who know you committed a felony. It's simply not an efficient way to steal an election.

Mr. Bradley is not aware of any instance of voter impersonation anywhere in the country except in local races. He does not believe it occurs in statewide elections.

Voter fraud and intimidation in Georgia

Georgia's process for preventing ineligible ex-felons from casting ballots has been improved since the Secretary of State now has the power to create the felon purge list. When this was the responsibility of the counties, there were many difficulties in purging felons because local officials did not want to have to call someone and ask if he or she was a criminal.

The State Board of Elections has a docket of irregularity complaints. The most common involve an ineligible person mailing in absentee ballots on behalf of another voter.

In general, Mr. Bradley does not think voter fraud and intimidation is a huge problem in Georgia and that people have confidence in the vote. The biggest problems are the new ID law; misinformation put out by elections officials; and advertisements that remind people that vote fraud is a felony, which are really meant to be intimidating. Most fraud that does occur involves an insider, and that's where you find the most prosecutions. Any large scale fraud involves someone who knows the system or is in the courthouse.

Prosecution of Fraud and Intimidation

Mr. Bradley stated that fraud and intimidation are hard to prosecute. However, Mr. Bradley made contradictory statements. When asked whether the decision to prosecute on the county level was politically motivated, he first said "no." Later, Mr. Bradley reversed himself stating the opposite.

Mr. Bradley also stated that with respect to US Attorneys, the message to them from the top is that this is not a priority. The Georgia ACLU has turned over information about violations of the Voting Rights Act that were felonies, and the US Attorney has done nothing with the information. The Department of Justice has never been very aggressive in pursuing cases of vote suppression, intimidation and fraud. But, the Georgia ACLU has not contacted Craig Donsanto in DC with information of voter fraud.

Mr. Bradley believes that voter fraud and intimidation is difficult to prove. It is very hard to collect the necessary factual evidence to make a case, and doing so is very labor-intensive.

Recommendations

In Georgia, the Secretary of State puts a lot of work into training local officials and poll workers,

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

and much of her budget is put into that work. Increased and improved training of poll workers, including training on how to respectfully treat voters, is the most important reform that could be made.

Mr. Bradley also suggested that increased election monitoring would be helpful.

Interview with Justice Evelyn Stratton, Supreme Court of Ohio

February 17, 2006

The 2004 Election

Justice Stratton stated that usually in the period right before an election filings die down due to the Ohio expedited procedures for electoral challenges. However, the 2004 election was unusual because there were motions and cases decided up to the day of the election. Justice Stratton believed that most of the allegations were knee-jerk reactions without any substance. For example, without any factual claims, suit was brought alleging that all voter challengers posed a threat to voters. Thematically, allegations were either everyday voting problems or "conspiracies" depending on where the complaint came from. The major election cases in 2004 revolved around Secretary of State Blackwell.

Justice Stratton made a point that the Ohio Supreme Court bent over backwards in the 2004 election to be fair to both sides. There was never any discussion about a ruling helping one political party more than the other.

Justice Stratton cited two cases that summarize and refute the 2004 complaints---819 NE 2d 1125 (Ohio 2004) and 105 Ohio St. 3d 458 (2004).

General Election Fraud Issues

Justice Stratton has seen very few fraud cases in Ohio. Most challenges are for technical statutory reasons. She remembered one instance where a man who assisted handicapped voters marked the ballot differently than the voter wanted. Criminal charges were brought against this man and the question that the Ohio Supreme Court had to decide was whether ballots could be opened and inspected to see how votes were cast.

Justice Stratton claimed she knew of isolated incidences of fictitious voter registration but these were not prosecuted. She has not seen any evidence of ballots being stuffed, dead people voting, etc.

Suggestions for Changes in Voting Procedures

The Ohio Supreme Court is very strict about laches---if a person sits on their rights too long, they lose the right to file suit. The Ohio expedited procedures make election challenges run very smooth. Justice Stratton does not remember any suits brought on the day of the election. She supports a non-partisan head of state elections. Justice Stratton believes that last minute

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

challenges should not be permitted and that lower courts need to follow the rules for the expedited procedures. Even given the anomalies with lower courts permitting late election challenges in 2004, the Ohio Supreme Court does not want to make a new rule unless this pattern repeats itself in 2008.

Interview with Tony Sirvello, Executive Director, IACREOT

April 12, 2006

Biographical

Sirvello is currently the executive director of the International Association of Clerks, Recorders, Election Officials and Treasurers, an organization of 1700 members. Formerly, he ran elections in Harris County, Texas for 29 years.

Incidents of Election Fraud

Sirvello stated that one problem with election crimes is that they are not high on the priority list of either district attorneys or grand juries. Therefore, complaints of election crime very rarely are prosecuted or are indicted by the grand jury. In 1996 in Harris County, 14 people voted twice but the grand jury refused to indict. One woman voted twice, once during early voting and once on Election Day. She said she thought there were two elections. The jury believed her. Sirvello believes none of the people intentionally voted more than once. He said that he believes double voting is not as big of an issue as people make it out to be.

In 1986, it was found that there were 300 more ballots than voter signatures. It was clear that the elections officials stuffed the ballot boxes. The case was brought before a grand jury, but there was no indictment because all of the defendants were friends and relatives of each other and none would admit what had been done.

Sirvello stated that there have been isolated circumstances where a voter would show up at the poll and his name had already been signed and he had voted.

Finally, Sirvello indicated that some people who worked in Houston but did not live in Harris County were permitted to vote.

Specific Absentee Ballot/Vote By Mail Issues

Sirvello said that mail voting presents the largest problem. With mail voting there is too much opportunity to influence voters or to fraudulently request a ballot.

If one applied for an absentee ballot, their name and address was made available to candidates and political consultants who would often send people to collect the ballot. Many did not want to give up the ballot but wanted to mail it personally. The result was to discourage voting.

EAC SUMMARY OF EXPERT INTERVIEWS FOR
VOTING FRAUD-VOTER INTIMIDATION RESEARCH

In Texas, a person could only apply for an absentee ballot if over 65 years of age. Parties, candidates and consultants would get the list of voters over 65 and send them a professional mail piece telling them they could vote by mail and a ballot with everything filled out except the signature. Problems ensued -- for example, voters would print their names rather than sign them, and the ballot was rejected. In other cases, the elderly would give their absentee ballot to someone else.

If a person applied for an absentee ballot but then decided not to cast it but to vote in person, that person had to bring the non-voted absentee ballot to the poll and surrender it. If they did not they would not be permitted to vote at the polling place.

Incidents of Voter Intimidation

Sirvello only reported isolated cases of intimidation or suppression in Harris County. These mostly occurred in Presidential elections. Some people perceived intimidation when being told they were not eligible to vote under the law. Sirvello stated that the big issue in elections now is whether there should be a paper trail for touch screen voting.

Recommendations

District attorneys need to put more emphasis on election crime so people will not believe that it goes unpunished.

There should be either a national holiday for Election Day or a day should be given off of work without counting as a vacation day so that better poll workers are available and there can be more public education on election administration procedures.

Interview with Craig Donsanto, Director, Elections Crimes Branch, Public Integrity Section, U.S. Department of Justice
January 13, 2006

The Department of Justice's (DOJ) Election Crimes Branch is responsible for supervising federal criminal investigations and prosecutions of election crimes.

Questions

How are Prosecution Decisions Made?

Craig Donsanto must approve all investigations that go beyond a preliminary stage, all charges, search warrant applications and subpoenas and all prosecutions. The decision to investigate is very sensitive because of the public officials involved. If a charge seems political, Donsanto will reject it. Donsanto gives possible theories for investigation. Donsanto and Noel Hillman will decide whether to farm out the case to an Assistant U.S. Attorney (AUSA). Donsanto uses a concept called predication. In-other-words, there must be enough evidence to suggest a crime has been committed. The method of evaluation of this evidence depends on the type of evidence and its source. There are two types of evidence---factual (antisocial behavior) and legal (antisocial behavior leading to statutory violations). Whether an indictment will be brought depends on the likelihood of success before a jury. Much depends on the type of evidence and the source. Donsanto said he "knows it when he sees it." Donsanto will only indict if he is confident of a conviction assuming the worst case scenario – a jury trial.

A person under investigation will first receive a target letter. Often, a defendant who gets a target letter will ask for a departmental hearing. The defendant's case will be heard by Donsanto and Hillman. On occasion, the assistant attorney general will review the case.

Deleted:
Deleted:
Deleted:
Deleted: The department grants such hearings easily because such defendants are likely to provide information about others involved.

The Civil Rights Division, Voting Rights Section makes its own decisions on prosecution. The head of that division is John Tanner. There is a lot of cooperation between the Voting Section and the Election Crimes Branch.

Does the Decision to Prosecute Incorporate Particular Political Considerations within a State Such as a One Party System or a System in which the Party in Power Controls the Means of Prosecution and Suppresses Opposition Complaints?

Yes. Before, the department would leave it to the states. Now, if there is racial animus involved in the case, there is political bias involved, or the prosecutor is not impartial, the department will take it over.

Deleted: .1

Does it Matter if the Complaint Comes from a Member of a Racial Minority?

No. But if the question involves racial animus, that has also always been an aggravating factor, making it more likely the department will take it over

Deleted: D

What Kinds of Complaints Would Routinely Override Principles of Federalism?

Federalism is no longer big issue. DOJ is permitted to prosecute whenever there is a candidate for federal office on the ballot.

Are There Too Few Prosecutions?

DOJ can't prosecute everything.

What Should Be Done to Improve the System?

The problem is asserting federal jurisdiction in non-federal elections. It is preferable for the federal government to pursue these cases for the following reasons: federal districts draw from a bigger and more diverse jury pool; the DOJ is politically detached; local district attorneys are hamstrung by the need to be re-elected; DOJ has more resources – local prosecutors need to focus on personal and property crimes---fraud cases are too big and too complex for them; DOJ can use the grand jury process as a discovery technique and to test the strength of the case.

In *U.S. v. McNally*, the court ruled that the mail fraud statute does not apply to election fraud. It was through the mail fraud statute that the department had routinely gotten federal jurisdiction over election fraud cases. 18 USC 1346, the congressional effort to "fix" *McNally*, did not include voter fraud.

As a result, the department needs a new federal law that allows federal prosecution whenever a federal instrumentality is used, e.g. the mail, federal funding, interstate commerce. The department has drafted such legislation, which was introduced but not passed in the early 1990s. A federal law is needed that permits prosecution in any election where any federal instrumentality is used.

Other Information

The Department has held four symposia for District Election Officers (DEOs) and FBI agents since the initiation of the Ballot Access and Voting Integrity Initiative. In 2003, civil rights leaders were invited to make speeches, but were not permitted to take part in the rest of the symposium. All other symposia have been closed to the public.

Deleted: (Peg will be sending us the complete training materials used at those sessions. These are confidential and are the subject of FOIA litigation).

There are two types of attorneys in the division: prosecutors, who take on cases when the jurisdiction of the section requires it; the US Attorney has recused him or herself; or when the US Attorney is unable to handle the case (most frequent reason) and braintrust attorneys who analyze the facts, formulate theories, and draft legal documents.

Cases

Donsanto provided us with three case lists: cases still being investigated as of January

Formatted: Underline
Deleted: :
Deleted: Open
Deleted: (
Deleted:)

13, 2006 – confidential; election fraud prosecutions and convictions as a result of the Ballot Access and Voting Integrity Initiative October 2002-January 13, 2006; and cases closed for lack of evidence as of January 13, 2006.

Although the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate complaints of fraud, *the number of cases that the department is investigating and the number of indictments the department is pursuing are both up dramatically.*

Deleted: ¶
If we want more documents related to any case, we must get those documents from the states. The department will not release them to us.¶

Since 2002, the department has brought more cases against alien voters, felon voters, and double voters than ever before. Previously, cases were only brought against conspiracies to corrupt the process rather than individual offenders acting alone. For deterrence purposes, the Attorney General decided to add the pursuit of individuals who vote when not eligible to vote (noncitizens, felons) or who vote more than once. The department is currently undertaking three pilot projects to determine what works in developing the cases and obtaining convictions and what works with juries in such matters to gain convictions:

Deleted: when there was a pattern or scheme

Deleted: .

Deleted: Charges were not brought against individuals – those cases went unprosecuted. This change in direction, focus, and level of aggression was by the decision of the Attorney General. The reason for the change was for deterrence purposes.

1. Felon voters in Milwaukee.

Deleted: ¶

2. Alien voters in the Southern District of Florida. FYI – under 18 USC 611, to prosecute for “alien voting” there is no intent requirement. Conviction can lead to deportation. Nonetheless, the department feels compelled to look at mitigating factors such as was the alien told it was OK to vote, does the alien have a spouse that is a citizen.

Formatted: Bullets and Numbering

Formatted: Bullets and Numbering

3. Double voters in a variety of jurisdictions.

Formatted: Bullets and Numbering

The department does not maintain records of the complaints that come in from DEOs, U.S attorneys and others during the election that are not pursued by the department. Donsanto asserted that U.S. attorneys never initiate frivolous investigations.

Deleted: According to the new handbook, the department can take on a case whenever there is a federal candidate on the ballot ¶

Interview with John Tanner, Chief, Voting Section, Civil Rights Division, U.S. Department of Justice

Deleted: Director

February 24, 2006

The Department of Justice's (DOJ) Voting Section is charged with the civil enforcement of the Voting Rights Act, the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA), the National Voter Registration Act (NVRA), and Title III of the Help America Vote Act (HAVA).

Authority and Process

The Voting Section, in contrast to the Public Integrity Section as Craig Donsanto described it, typically focuses only on systemic problems resulting from government action or inaction, not problems caused by individuals. Indeed, the section never goes after individuals because it does not have the statutory authority to do so. In situations in which individuals are causing problems at the polls and interfering with voting rights, the section calls the local election officials to resolve it.

Deleted: Note: Mr. Tanner's reluctance to share data, information and his perspective on solving the problems presented an obstacle to conducting the type of interview that would help inform this project as much as we would have hoped. Mr. Tanner would not give us any information about or data from the section's election complaint in-take phone logs; data or even general information from the Interactive Case Management (ICM) system-its formal process for tracking and managing work activities in pursuing complaints and potential violations of the voting laws; and would give us only a selected few samples of attorney-observer reports, reports that every Voting Section attorney who is observing elections at poll sites on Election Day is required to submit. He would not discuss in any manner any current investigations or cases the section is involved in. He also did not believe it was his position to offer us recommendations as to how his office, elections, or the voting process might be improved.¶

Federal voting laws enforced by the section only apply to state action, so the section only sues state and local governments – it does not have any enforcement power over individuals. Most often, the section enters into consent agreements with governments that focus on poll worker training, takes steps to restructure how polls are run, and deals with problems on Election Day on the spot. Doing it this way has been most effective – for example, while the section used to have the most observers in the South, with systematic changes forced upon those jurisdictions, the section now does not get complaints from the South.

The section can get involved even where there is no federal candidate on the ballot if there is a racial issue under the 14th and 15th Amendments.

Deleted: s
Deleted: looks
Deleted: at
Deleted: have made it so now
Deleted: of
Deleted: because they do not want
Deleted: to

When the section receives a complaint, attorneys first determine whether it is a matter that involves individual offenders or a systemic problem. When deciding what to do with the complaint, the section errs on the side of referring it criminally to avoid having any civil litigation complicate a possible criminal case.

When a complaint comes in, the attorneys ask questions to see if there are even problems there that the complainant is not aware are violations of the law. For example, in the Boston case, the attorney did not just look at Spanish language cases under section 203, but also brought a Section 2 case for violations regarding Chinese and Vietnamese voters. When looking into a case, the attorneys look for specificity, witnesses and supporting evidence.

Often, lawsuits bring voluntary compliance.

Voter Intimidation

Many instances of what some people refer to as voter intimidation are more unclear now. For example, photographing voters at the polls has been called intimidating, but now everyone is at the polls with a camera. It is hard to know when something is intimidation and it is difficult to show that it was an act of intimidation.

The fact that both parties are engaging in these tactics now makes it more complicated. It makes it difficult to point the finger at any one side.

The inappropriate use of challengers on the basis of race would be a violation of the law. Mr. Tanner was unaware that such allegations were made in Ohio in 2004. He said there had never been a formal investigation into the abusive use of challengers.

Deleted: n

Mr. Tanner said a lot of the challenges are legitimate because you have a lot of voter registration fraud as a result of groups paying people to register voters by the form. They turn in bogus registration forms. Then the parties examine the registration forms and challenge them because 200 of them, for example, have addresses of a vacant lot.

However, Mr. Tanner said the department was able to informally intervene in challenger situations in Florida, Atkinson County, Georgia and in Alabama, as was referenced in a February 23 Op-Ed in USA Today. Mr. Tanner reiterated the section takes racial targeting very seriously.

Deleted: D

Refusal to provide provisional ballots would be a violation of the law that the section would investigate.

Deceptive practices are committed by individuals and would be a matter for the Public Integrity Section. Local government would have to be involved for the Voting Section to become involved.

Deleted: voting

Deleted: s

Unequal implementation of ID rules, or asking minority voters only for ID would be something the section would go after. Mr. Tanner was unaware of allegations of this in 2004. He said this is usually a problem where you have language minorities and the poll workers cannot understand the voters when they say their names. The section has never formally investigated or solely focused a case based on abuse of ID provisions. However, implementation of ID rules was part of the Section 2 case in San Diego. Mr. Tanner reiterated that the section is doing more than ever before.

When asked about the section's references to incidents of vote fraud in the documents related to the new state photo identification requirements, Mr. Tanner said the section only looks at retrogression, not at the wisdom of what a legislature does. In Georgia, for example, everyone statistically has identification, and more blacks have ID than whites. With respect to the letter to Senator Kit Bond regarding voter ID, the section did refer to the perception of concern about dead voters because of reporting by the Atlanta Journal-Constitution. It is understandable that when you have thousands of bogus registrations that there would be concerns about polling place fraud. Very close elections make this even more of an understandable concern. Putting control of registration lists in the hands

of the states will be helpful because at this higher level of government you find a higher level of professionalism.

It is hard to know how much vote suppression and intimidation is taking place because it depends on one's definition of the terms – they are used very loosely by some people. However, the enforcement of federal law over the years has made an astounding difference so that the level of discrimination has plummeted. Registration of minorities has soared, as can be seen on the section's website. Mr. Tanner was unsure if the same was true with respect to turnout, but the gap is less. That information is not on the section's website.

The section is not filing as many Section 2 cases as compared to Section 203 cases because many of the jurisdictions sued under Section 2 in the past do not have issues anymore. Mr. Tanner said that race based problems are rare now.

NVRA has been effective in opening up the registration process. In terms of enforcement, Mr. Tanner said they do what they can when they have credible allegations. There is a big gap between complaints and what can be substantiated. Mr. Tanner stated that given the high quality of the attorneys now in the section, if they do not investigate it or bring action, that act complained of did not happen.

Recommendations

Mr. Tanner did not feel it was appropriate to make recommendations.

Note: We contend that Mr. Tanner's reluctance to share data, information and his perspective on solving the problems presented an obstacle to conducting the type of interview that would help inform this project as much as we would have hoped. We did not have access to any information about or data from the section's election complaint intake phone logs or data or even general information from the Interactive Case Management (ICM) system - its formal process for tracking and managing work activities in pursuing complaints and potential violations of the voting laws. Only a selected few samples of attorney-observer reports were provided; reports that every Voting Section attorney who is observing elections at poll sites on Election Day is required to submit. Mr. Tanner would not discuss any current investigations or cases the section is involved in.

Introduction

Charge Under HAVA

Under the Help America Vote Act, Pub. L. No. 107-252, 116 Stat. 1666 (2002) (“HAVA”), the United States Election Assistance Commission is charged with developing national statistics on voter fraud and developing methods of deterring and investigating voter fraud. Also, the Commission is charged with developing methods of identifying, deterring, and investigating methods of voter intimidation.

Scope of Project

The Commission employed a bipartisan team of legal consultants, Tova Wang and Job Serebrov to develop a preliminary overview work product to determine the quantity and quality of vote fraud and voter intimidation that is present on a national scale. The consultants’ work is neither comprehensive nor conclusive. This first phase of an envisioned two-phase project was constrained by both time and funding. The consultants’ conclusions and recommendations for phase II will be contained in this report.

The consultants, working without the aid of a support staff, divided most of the work. However, the final work product was mutually checked and approved. They agreed upon the steps that were taken needed and the method employed. For all of the documentary sources, the consultants limited the time period under review from January 1, 2001 to January 1, 2006. The research performed by the consultants included interviews, an extensive Nexis search, a review of existing literature, and case research.

Interviews: The consultants chose the interviewees by first coming up with a list of the categories of types of people they wanted to interview. Then the consultants separately, equally filled those categories with a certain number of people. Due to time and resource constraints, the consultants had to pare down this list substantially – for instance, they had to rule out interviewing prosecutors altogether – but still got a good range of people to talk to. The ultimate categories were academics, advocates, elections officials, lawyers and judges. Although the consultants were able to talk to most of the people they wanted to, some were unavailable and a few were not comfortable speaking to them, particularly judges. The consultants together conducted all of the interviews, either by phone or in person. Then the consultants split up drafting the summaries. All summaries were reviewed and mutually approved. Most of the interviews were extremely informative and the consultants found the interviewees to be extremely knowledgeable and insightful for the most part.

Nexis: Initially, the consultants developed an enormous list of possible Nexis search terms. It soon became obvious that it would be impossible to conduct the research that way. As a result, consultant Wang performed the Nexis search by finding search term combinations that would yield virtually every article on a particular subject from the last

five years. Consultant Serebrov approved the search terms. Then Wang created an excel spreadsheet in order to break down the articles in way in which they could be effectively analyzed for patterns. Each type of fraud is broken down in a separate chart according to where it took place, the date, the type of election it occurred in, what the allegation was, the publication it came from. Where there was a follow up article, any information that that suggested there had been some further action taken or some resolution to the allegation was also included. For four very complicated and long drawn out situations – Washington State, Wisconsin, South Dakota in 2004, and the vote buying cases in a couple of particular jurisdictions over the last several years –written summaries with news citations are provided.

Existing Literature: Part of the selections made by the consultants resulted from consultant Wang’s long-term familiarity with the material while part was the result of a joint web search for articles and books on vote fraud and voter intimidation and suggestions from those interviewed by the consultants. The consultants reviewed a wide range of materials from government reports and investigations, to academic literature, to reports published by advocacy groups. The consultants believe that they covered the landscape of available sources.

Cases: In order to properly identify all applicable cases, the consultants first developed an extensive word search term list. A WestLaw search was performed and the first one hundred cases under each word search term were then gathered in individual files. This resulted in a total of approximately 44,000 cases. Most of these cases were federal as opposed to state and appellate as opposed to trial. Consultant Serebrov analyzed the cases in each file to determine if they were on point. If he found that the first twenty cases were inapplicable, Serebrov would sample forty to fifty other file cases at random to determine applicability. If the entire file did not yield any cases, the file would be discarded. All discarded word search terms were recorded in a separate file. Likewise, if the file only yielded a few applicable cases, it would also be discarded. However, if a small but significant number of cases were on point, the file was later charted. The results of the case search were stark because relatively few applicable cases were found.

Working Definition of Fraud and Intimidation

Note: The definition provided below is for the purposes of this EAC project. Most of the acts described come within the federal criminal definition of fraud, but some may not.

Election fraud is any intentional action, or intentional failure to act when there is a duty to do so, that corrupts the election process in a manner that can impact on election outcomes. This includes interfering in the process by which persons register to vote; the way in which ballots are obtained, marked, or tabulated; and the process by which election results are canvassed and certified.

Examples include the following:

- falsifying voter registration information pertinent to eligibility to cast a vote, (e.g. residence, criminal status, etc).;
- altering completed voter registration applications by entering false information;
- knowingly destroying completed voter registration applications (other than spoiled applications) before they can be submitted to the proper election authority;
- knowingly removing eligible voters from voter registration lists, in violation of HAVA, NVRA, or state election laws;
- intentional destruction by election officials of voter registration records or balloting records, in violation of records retention laws, to remove evidence of election fraud;
- vote buying;
- voting in the name of another;
- voting more than once;
- coercing a voter's choice on an absentee ballot;
- using a false name and/or signature on an absentee ballot;
- destroying or misappropriating an absentee ballot;
- felons, or in some states ex-felons, who vote when they know they are ineligible to do so;
- misleading an ex-felon about his or her right to vote;
- voting by non-citizens who know they are ineligible to do so;
- intimidating practices aimed at vote suppression or deterrence, including the abuse of challenge laws;
- deceiving voters with false information (e.g.; deliberately directing voters to the wrong polling place or providing false information on polling hours and dates);
- knowingly failing to accept voter registration applications, to provide ballots, or to accept and count voted ballots in accordance with the Uniformed and Overseas Citizens Absentee Voting Act;
- intentional miscounting of ballots by election officials;
- intentional misrepresentation of vote tallies by election officials;
- acting in any other manner with the intention of suppressing voter registration or voting, or interfering with vote counting and the certification of the vote.

Voting fraud does not include mistakes made in the course of voter registration, balloting, or tabulating ballots and certifying results. For purposes of the EAC study, it also does not include violations of campaign finance laws.

DRAFT

Summaries of Research Conducted

Interviews

Common Themes

- There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.
- There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud, although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.
- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.
- Several people indicate – including representatives from DOJ -- that for various reasons, the Department of Justice is bringing fewer voter intimidation and suppression cases now and is focusing on matters such as noncitizen voting, double voting and felon voting. While the civil rights section continues to focus on systemic patterns of malfeasance, the public integrity section is focusing now on individuals, on isolated instances of fraud.
- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full

implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

Common Recommendations:

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed
- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
 - With respect to the civil rights section, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one’s definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and the section has not pursued any such cases.
 - Craig Donsanto of the public integrity section says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases the department is investigating and the number of indictments the section is pursuing are both up dramatically. Since 2002, the department has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so it can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.
- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.
- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud. Of particular note, Sarah Ball Johnson, Executive Director of Elections for Kentucky, emphasized that having had an effective statewide voter registration database for more than thirty years has helped that state avoid most of the fraud problems that have been alleged elsewhere, such as double voting and felon voting.
- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.
- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment

- Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill
- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected nonpartisanly they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas is a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states’ office; increasing transparency in the process; and enacting conflict of interest rules.
- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.
- A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the scheme contemplated in the Carter-Baker Commission Report.
- A couple of interviewees indicated the need for clear standards for the distribution of voting machines

Nexis Research

Absentee Ballot Fraud

According to press reports, absentee ballots are abused in a variety of ways:

- Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters
- Workers for groups and individuals have attempted to vote absentee in the names of the deceased
- Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.

Voter Registration Fraud

According to press reports, the following types of allegations of voter registration fraud are most common:

- Registering in the name of dead people
- Fake names and other information on voter registration forms
- Illegitimate addresses used on voter registration forms
- Voters being tricked into registering for a particular party under false pretenses
- Destruction of voter registration forms depending on the party the voter registered with

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported on included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota and Wisconsin.

Voter Intimidation and Suppression

This is the area which had the most articles in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters' registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places.
- Improper demands for identification
- Poll watchers harassing voters
- Poll workers being hostile to or aggressively challenging voters
- Disproportionate police presence
- Poll watchers wearing clothes with messages that seemed intended to intimidate
- Insufficient voting machines and unmanageably long lines

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio and Pennsylvania.

“Dead Voters and Multiple Voting”

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking of voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person taking criminal advantage of that. In total, the San Francisco Chronicle found 5 such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.

As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

Vote Buying

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations in three particular jurisdictions as detailed in the vote buying summary. There were more official investigations, indictments and convictions/pleas in this area. All of these cases are concentrated in the Midwest and South.

Deceptive Practices

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of voter registration forms. There were no reports of prosecutions or any other legal proceeding.

Non-citizen Voting

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case charges were filed against ten individuals. In one case a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this nexis search, remained just allegations of noncitizen voting.

Felon Voting

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem has been the large number of ineligible felons that remained on the voting list.

Election Official Fraud

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker's possession. In two cases workers were said to have changed peoples' votes. The one instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

Existing Research

There are many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. There is little research that is truly systematic or scientific. The most systematic look at fraud is the report written by Lori Minnite. The most systematic look at voter intimidation is the report by Laughlin McDonald. Books

written about this subject seem to all have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists. It is hoped that this gap will be filled in the “second phase” of this EAC project.

Moreover, reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund’s frequently cited book. Again, this is something that it is hoped will be addressed in the “second phase” of this EAC project by doing follow up research on allegations made in reports, books and newspaper articles.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate, but some reports say it is a major problem, albeit hard to identify.
- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.
- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

Cases

After reviewing over 40,000 cases, the majority of which came from appeals courts, I have found comparatively very few which are applicable to this study. Of those that are applicable, no apparent thematic pattern emerges. However, it seems that the greatest areas of fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility. But because so few cases provided a picture of these current problems, I suggest that case research for the second phase of this project concentrate on state trial-level decisions.

Methodology

The following is a summary of interviews conducted with a number of political scientists and experts in the field as to how one might undertake a comprehensive examination of voter fraud and intimidation. A list of the individuals interviewed and their ideas are available, and all of the individuals welcome any further questions or explanations of their recommended procedures.

- In analyzing instances of alleged fraud and intimidation, we should look to criminology as a model. In criminology, experts use two sources: the Uniform Crime Reports, which are all reports made to the police, and the Victimization Survey, which asks the general public whether a particular incident has happened to them. After surveying what the most common allegations are, we should conduct a survey of the general public that ask whether they have committed certain acts or been subjected to any incidents of fraud or intimidation. This would require using a very large sample, and we would need to employ the services of an expert in survey data collection. (Stephen Ansolobhere, MIT)
- Several political scientists with expertise in these types of studies recommended a methodology that includes interviews, focus groups, and a limited survey. In determining who to interview and where the focus groups should be drawn from, they recommend the following procedure:
 - Pick a number of places that have historically had many reports of fraud and/or intimidation; from that pool pick 10 that are geographically and demographically diverse, and have had a diversity of problems
 - Pick a number of places that have not had many reports of fraud and/or intimidation; from that pool pick 10 places that match the geographic and demographic make-up of the previous ten above (and, if possible, have comparable elections practices)

- Assess the resulting overall reports and impressions resulting from these interviews and focus groups, and examine comparisons and differences among the states and what may give rise to them.

In conducting a survey of elections officials, district attorneys, district election officers, they recommend that:

- The survey sample be large in order to be able to get the necessary subsets
- The survey must include a random set of counties where there have and have not been a large number of allegations

(Allan Lichtman, American University; Thad Hall, University of Utah; Bernard Grofman, UC – Irvine)

- Another political scientist recommended employing a methodology that relies on qualitative data drawn from in-depth interviews with key critics and experts on all sides of the debate on fraud; quantitative data collected through a survey of state and local elections and law enforcement officials; and case studies. Case studies should focus on the five or ten states, regions or cities where there has been a history of election fraud to examine past and present problems. The survey should be mailed to each state's attorney general and secretary of state, each county district attorney's office and each county board of elections in the 50 states. (Lorraine Minnite, Barnard College)
- The research should be a two-step process. Using LexisNexis and other research tools, a search should be conducted of news media accounts over the past decade. Second, interviews with a systematic sample of election officials nationwide and in selected states should be conducted. (Chandler Davidson, Rice University)
- One expert in the field posits that we can never come up with a number that accurately represents either the incidence of fraud or the incidence of voter intimidation. Therefore, the better approach is to do an assessment of what is most likely to happen, what election violations are most likely to be committed – in other words, a risk analysis. This would include an analysis of what it would actually take to commit various acts, e.g. the cost/benefit of each kind of violation. From there we could rank the likely prevalence of each type of activity and examine what measures are or could be effective in combating them. (Wendy Weiser, Brennan Center of New York University)
- Replicate a study in the United States done abroad by Susan Hyde of the University of California- San Diego examining the impact of impartial poll site observers on the incidence of election fraud. Doing this retrospectively would require the following steps:
 - Find out where there were federal observers
 - Get precinct level voting information for those places

- Analyze whether there was any difference in election outcomes in those places with and without observers, and whether any of these results seem anomalous.

Despite the tremendous differences in the political landscapes of the countries examined by Hyde in previous studies and the U.S., Hyde believes this study could be effectively replicated in this country by sending observers to a random sample of precincts. Rather than compare the incumbent's vote share, such factors such as voter complaints, voter turnout, number of provisional ballots used, composition of the electorate, as well as any anomalous voting results could be compared between sites with and without monitors.

For example, if intimidation is occurring, and if reputable monitors make intimidation less likely or voters more confident, then turnout should be higher on average in monitored precincts than in unmonitored precincts. If polling station officials are intentionally refusing to issue provisional ballots, and the polling station officials are more likely to adhere to regulations while being monitored, the average number of provisional ballots should be higher in monitored precincts than in unmonitored precincts. If monitors cause polling station officials to adhere more closely to regulations, then there should be fewer complaints (in general) about monitored than unmonitored precincts (this could also be reversed if monitors made voters more likely to complain).

Again, random assignment controls for all of the other factors that otherwise influence these variables.

One of the downsides of this approach is it does not get at some forms of fraud, e.g. absentee ballot fraud; those would have to be analyzed separately.

- Another political scientist recommends conducting an analysis of vote fraud claims and purging of registration rolls by list matching. Allegations of illegal voting often are based on matching of names and birth dates. Alleged instances of double voting are based on matching the names and birth dates of persons found on voting records. Allegations of ineligible felon (depending on state law), deceased, and of non-citizen voting are based on matching lists of names, birth dates, and sometimes addresses of such people against a voting records. Anyone with basic relational database skills can perform such matching in a matter of minutes.

However, there are a number of pitfalls for the unwary that can lead to grossly over-estimating the number of fraudulent votes, such as missing or ignored middle names and suffixes or matching on missing birth dates. Furthermore, there is a surprising statistical fact that a group of about three hundred people with the same first and last name are almost assured to share the exact same birth date, including year. In a large state, it is not uncommon for hundreds of Robert Smiths (and other common names) to have voted. Thus, allegations of vote fraud

or purging of voter registration rolls by list matching almost assuredly will find a large proportion of false positives: people who voted legally or are registered to vote legally.

Statistics can be rigorously applied to determine how many names would be expected to be matched by chance. A simulation approach is best applied here: randomly assign a birth date to an arbitrary number of people and observe how many match within the list or across lists. The simulation is repeated many times to average out the variation due to chance. The results can then be matched back to actual voting records and purge lists, for example, in the hotly contested states of Ohio or Florida, or in states with Election Day registration where there are concerns that easy access to voting permits double voting. This analysis will rigorously identify the magnitude alleged voter fraud, and may very well find instances of alleged fraud that exceed what might have otherwise happened by chance.

This same political scientist also recommends another way to examine the problem: look at statistics on provisional voting: the number cast might provide indications of intimidation (people being challenged at the polls) and the number of those not counted would be indications of "vote fraud." One could look at those jurisdictions in the Election Day Survey with a disproportionate number of provisional ballots cast and cross reference it with demographics and number of provisional ballots discarded. (Michael McDonald, George Mason University)

- Spencer Overton, in a forthcoming law review article entitled *Voter Identification*, suggests a methodology that employs three approaches—investigations of voter fraud, random surveys of voters who purported to vote, and an examination of death rolls provide a better understanding of the frequency of fraud. He says all three approaches have strengths and weaknesses, and thus the best studies would employ all three to assess the extent of voter fraud. An excerpt follows:

1. *Investigations and Prosecutions of Voter Fraud*

Policymakers should develop databases that record all investigations, allegations, charges, trials, convictions, acquittals, and plea bargains regarding voter fraud. Existing studies are incomplete but provide some insight. For example, a statewide survey of each of Ohio's 88 county boards of elections found only four instances of ineligible persons attempting to vote out of a total of 9,078,728 votes cast in the state's 2002 and 2004 general elections. This is a fraud rate of 0.00000045 percent. The Carter-Baker Commission's Report noted that since October 2002, federal officials had charged 89 individuals with casting multiple votes, providing false information about their felon status, buying votes, submitting false voter registration information, and voting improperly as a non-citizen. Examined in the context of the 196,139,871 ballots cast between October 2002 and

August 2005, this represents a fraud rate of 0.0000005 percent (note also that not all of the activities charged would have been prevented by a photo identification requirement).

A more comprehensive study should distinguish voter fraud that could be prevented by a photo identification requirement from other types of fraud — such as absentee voting and stuffing ballot boxes — and obtain statistics on the factors that led law enforcement to prosecute fraud. The study would demand significant resources because it would require that researchers interview and pour over the records of local district attorneys and election boards.

Hard data on investigations, allegations, charges, pleas, and prosecutions is important because it quantifies the amount of fraud officials detect. Even if prosecutors vigorously pursue voter fraud, however, the number of fraud cases charged probably does not capture the total amount of voter fraud. Information on official investigations, charges, and prosecutions should be supplemented by surveys of voters and a comparison of voting rolls to death rolls.

2. Random Surveys of Voters

Random surveys could give insight about the percentage of votes cast fraudulently. For example, political scientists could contact a statistically representative sampling of 1,000 people who purportedly voted at the polls in the last election, ask them if they actually voted, and confirm the percentage who are valid voters. Researchers should conduct the survey soon after an election to locate as many legitimate voters as possible with fresh memories.

Because many respondents would perceive voting as a social good, some who did not vote might claim that they did, which may underestimate the extent of fraud. A surveyor might mitigate this skew through the framing of the question (“I’ve got a record that you voted. Is that true?”).

Further, some voters will not be located by researchers and others will refuse to talk to researchers. Photo identification proponents might construe these non-respondents as improper registrations that were used to commit voter fraud.

Instead of surveying all voters to determine the amount of fraud, researchers might reduce the margin of error by focusing on a random sampling of voters who signed affidavits in the three states that request photo identification but also allow voters to establish their identity through affidavit—Florida, Louisiana, and South Dakota. In

South Dakota, for example, only two percent of voters signed affidavits to establish their identity. If the survey indicates that 95 percent of those who signed affidavits are legitimate voters (and the other 5 percent were shown to be either fraudulent or were non-responsive), this suggests that voter fraud accounts for, at the maximum, 0.1 percent of ballots cast.

The affidavit study, however, is limited to three states, and it is unclear whether this sample is representative of other states (the difficulty may be magnified in Louisiana in the aftermath of Hurricane Katrina's displacement of hundreds of thousands of voters). Further, the affidavit study reveals information about the amount of fraud in a photo identification state with an affidavit exception—more voter fraud may exist in a state that does not request photo identification.

3. *Examining Death Rolls*

A comparison of death rolls to voting rolls might also provide an estimate of fraud.

Imagine that one million people live in state A, which has no documentary identification requirement. Death records show that 20,000 people passed away in state A in 2003. A cross-referencing of this list to the voter rolls shows that 10,000 of those who died were registered voters, and these names remained on the voter rolls during the November 2004 election. Researchers would look at what percentage of the 10,000 dead-but-registered people who “voted” in the November 2004 election. A researcher should distinguish the votes cast in the name of the dead at the polls from those cast absentee (which a photo identification requirement would not prevent). This number would be extrapolated to the electorate as a whole.

This methodology also has its strengths and weaknesses. If fraudulent voters target the dead, the study might overestimate the fraud that exists among living voters (although a low incidence of fraud among deceased voters might suggest that fraud among all voters is low). The appearance of fraud also might be inflated by false positives produced by a computer match of different people with the same name. Photo identification advocates would likely assert that the rate of voter fraud could be higher among fictitious names registered, and that the death record survey would not capture that type of fraud because fictitious names registered would not show up in the death records. Nevertheless, this study, combined with the other two, would provide important insight into the magnitude of fraud likely to exist in the absence of a photo identification requirement.

**Recommendations for Further EAC Activity
on Voting Fraud and Voter Intimidation**

Consultants' Recommendations

Recommendation 1: Conduct More Interviews

Time and resource constraints prevented the consultants from interviewing the full range of participants in the process. As a result, we recommend that any future activity in this area include conducting further interviews.

In particular, we recommend that more election officials from all levels of government, parts of the country, and parties be interviewed. These individuals have the most direct inside information on how the system works -- and at times does not work. They are often the first people voters go to when something goes wrong and are often responsible for fixing it. They are the ones who must carry out the measures that are designed to both prevent fraud and voter intimidation and suppression. They will most likely know what, therefore, is and is not working.

It would also be especially beneficial to talk to people in law enforcement, specifically federal District Election Officers ("DEOs") and local district attorneys, as well as civil and criminal defense attorneys.

The Public Integrity Section of the Criminal Division of the Department of Justice has all of the 93 U.S. Attorneys appoint Assistant U.S. Attorneys to serve as DEOs for two years. DEOs are required to

- screen and conduct preliminary investigations of complaints, in conjunction with the FBI and PIN, to determine whether they constitute potential election crimes and should become matters for investigation;
- oversee the investigation and prosecution of election fraud and other election crimes in their districts;
- coordinate their district's (investigative and prosecutorial) efforts with DOJ headquarters prosecutors;
- coordinate election matters with state and local election and law enforcement officials and make them aware of their availability to assist with election-related matters;
- issue press releases to the public announcing the names and telephone numbers of DOJ and FBI officials to contact on election day with complaints about voting or election irregularities and answer telephones on election day to receive these complaints; and
- supervise a team of Assistant U.S. Attorneys and FBI special agents who are appointed to handle election-related allegations while the polls are open on election day.¹

Given the great responsibilities of the DEOs, and the breadth of issues they must deal with, they undoubtedly are great resources for information and insight as to what types of fraud and intimidation/suppression are occurring in their districts.

In many situations, however, it is the local district attorneys who will investigate election fraud and suppression tactics, especially in local elections. They will be able to provide information on what has gone on in their jurisdictions, as well as which matters get pursued and why.

Finally, those who defend people accused of election related crimes would also be useful to speak to. They may have a different perspective on how well the system is working to detect, prevent, and prosecute election fraud.

Recommendation 2: Follow Up on Nexis Research

The Nexis search conducted for this phase of the research was based on a list of search terms agreed upon by both consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contain allegations of fraud or intimidation. Similarly, many of the articles contain information about investigations into such activities or even charges brought. However, without being able to go beyond the agreed search terms, it could not be determined whether there was any later determination regarding the allegations, investigation or charges brought. This leaves a gaping hole: it is impossible to know if the article is just reporting on “talk” or what turns out to be a serious affront to the system.

As a result, we recommend that follow up Nexis research be conducted to determine what, if any, resolutions or further activity there was in each case. This would provide a much more accurate picture of what types of activities are actually taking place.

Recommendation 3: Follow Up on Allegations Found in Literature Review

Similarly, many allegations are made in the reports and books that we analyzed and summarized. Those allegations are often not substantiated in any way and are inherently time limited by the date of the writing. Despite this, such reports and books are frequently cited by various interested parties as evidence of fraud or intimidation.

Therefore, we recommend follow up to the literature review: for those reports and books that make or cite specific instances of fraud or intimidation, a research effort should be made to follow up on those references to see if and how they were resolved.

Recommendation 4: Review Complaints File With MyVote1 Project Voter Hotline

During the 2004 election and the statewide elections of 2005, the University of Pennsylvania led a consortium of groups and researchers in conducting the MyVote1 Project. This project involved using a 1-800 voter hotline where voters could call for poll location, be transferred to a local hotline, or leave a recorded message with a complaint.

In 2004, this resulted in over 200,000 calls received and over 56,000 recorded complaints.ⁱⁱ The researchers in charge of this project have done a great deal of work to parse and analyze the data collected through this process, including going through the audio messages and categorizing them by the nature of the complaint. These categories include registration, absentee ballot, poll access, ballot/screen, coercion/intimidation, identification, mechanical, provisional (ballot).

We recommend that further research include making full use of this data with the cooperation of the project leaders. While perhaps not a fully scientific survey given the self-selection of the callers, the information regarding 200,000 complaints should provide a good deal of insight into the problems voters experienced, especially those in the nature of intimidation or suppression.

Recommendation 5: Further Review of Complaints Filed With U.S. Department of Justice

Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice has a variety in ways it tracks complaints of voter intimidation,ⁱⁱⁱ the Section was extremely reluctant to provide the consultants with useful information. Further attempts should be made to obtain relevant data. This includes the telephone logs of complaints the Section keeps and information from the database – the Interactive Case Management (ICM) system – the Section maintains on complaints received and the corresponding action taken. We also recommend that further research include a review and analysis of the observer and monitor field reports from Election Day that must be filed with the Section.

Recommendation 6: Review Reports Filed By District Election Officers

Similarly, the consultants believe it would be useful for any further research to include a review of the reports that must be filed by every District Election Officer to the Public Integrity Section of the Criminal Division of the Department of Justice. As noted above, the DEOs play a central role in receiving reports of voter fraud and investigating and pursuing them. Their reports back to the Department would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or made confidential.

Recommendation 7: Attend Ballot Access and Voting Integrity Symposium

The consultants also believe it would be useful for any further activity in this area to include attendance at the next Ballot Access and Voting Integrity Symposium. According to the Department,^{iv}

Prosecutors serving as District Election Officers in the 94 U.S. Attorneys' Offices are required to attend annual training conferences on fighting election fraud and voting rights abuses... These conferences are sponsored by the Voting Section of the Civil Rights Division and the Public Integrity

Section of the Criminal Division, and feature presentations by Civil Rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys' Offices. As a result of these conferences, there is a nationwide increase in Department expertise relating to the prosecution of election crimes and the enforcement of voting rights.

By attending the symposium researchers could learn more about the following:

- How District Election Officers are trained, e.g. what they are taught to focus their resources on, how they are instructed to respond to various types of complaints
- How information about previous election and voting issues is presented
- How the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants

Recommendation 8: Employ Academic or Individual to Conduct Statistical Research

Included in this report is a summary of various methodologies political scientists and others suggested to measure voter fraud and intimidation. While we note the skepticism of the Working Group in this regard, we nonetheless recommend that in order to further the mission of providing unbiased data, further activity in this area include an academic institution and/or individual that focuses on sound, statistical methods for political science research.

Recommendation 9: Explore Improvements to Federal Law

Finally, consultant Tova Wang recommends that future researchers review federal law to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threat.

According to Craig Donsanto, long-time Director of the Election Crimes Branch, Public Integrity Section, Criminal Division of the U.S. Department of Justice:

As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation which is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.^y

Mr. Donsanto reiterated these points to us on several occasions, including at the working group meeting.

As a result, researchers should examine if there is some way in which current law might be revised or new laws passed that would reach voter intimidation that does not threaten the voter physically or financially, but rather threatens the voter's right to vote as a tangible value in itself. Such an amendment or law would reach all forms of voter intimidation, no matter if it is motivated by race, party, ethnicity or any other criteria. The law would then *potentially* cover, for example, letters and postcards with language meant to deter voters from voting and both pre-election and Election Day challengers that are clearly mounting challenges solely on illegitimate bases.

In the alternative to finding a way to criminalize such behavior, researchers might examine ways to invigorate measures to deter and punish voter intimidation under the civil law. For example, there might be a private right of action created for voters or groups who have been subjected to intimidation tactics in the voting process. Such an action could be brought against individual offenders; any state or local actor where there is a pattern of repeated abuse in the jurisdiction that such officials did not take sufficient action against; and organizations that intentionally engage in intimidating practices. As a penalty upon finding liability, civil damages could be available plus perhaps attorney's fees.

Another, more modest measure would be, as has been suggested by Ana Henderson and Christopher Edley,^{vi} to bring parity to fines for violations under the Voting Rights Act. Currently the penalty for fraud is \$10,000 while the penalty for acts to deprive the right to vote is \$5,000.

Working Group Recommendations

Recommendation 1: Employ Observers To Collect Data in the 2006 and/or 2008 Elections

At the working group meeting, there was much discussion about using observers to collect data regarding fraud and intimidation at the polls in the upcoming elections. Mr. Ginsberg recommended using representatives of both parties for the task. Mr. Bauer and others objected to this, believing that using partisans as observers would be unworkable and would not be credible to the public.

There was even greater concern about the difficulties in getting access to poll sites for the purposes of observation. Most states strictly limit who can be in the polling place. In addition, there are already so many groups doing observation and monitoring at the polls, administrators might object. There was further concern that observers would introduce a variable into the process that would impact the outcome. The very fact that observers were present would influence behavior and skew the results.

Moreover, it was pointed out, many of the problems we see now with respect to fraud and intimidation does not take place at the polling place, e.g. absentee ballot fraud and deceptive practices. Poll site monitoring would not capture this activity. Moreover, with

increased use of early voting, poll site monitoring might have to go on for weeks to be effective, which would require tremendous resources.

Mr. Weinberg suggested using observers in the way they are utilized in international elections. Such observers come into a jurisdiction prior to the election, and use standardized forms at the polling sites to collect data.

Recommendation 2: Do a Study on Absentee Ballot Fraud

The working group agreed that since absentee ballot fraud is the main form of fraud occurring, and is a practice that is great expanding throughout the country, it would make sense to do a stand-alone study of absentee ballot fraud. Such a study would be facilitated by the fact that there already is a great deal of information on how, when, where and why such practices are carried out based on cases successfully prosecuted. Researchers could look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing them.

Recommendation 3: Use Risk Analysis Methodology to Study Fraud¹

Working group members were supportive of one of the methodologies recommended for studying this issue, risk analysis. As Mr. Bauer put it, based on the assumption that people act rationally, do an examination of what types of fraud people are most likely to commit, given the relative costs and benefits. In that way, researchers can rank the types of fraud that are the easiest to commit at the least cost with the greatest effect, from most to least likely to occur. This might prove a more practical way of measuring the problems than trying to actually get a number of acts of fraud and/or intimidation occurring. Mr. Greenbaum added that one would want to examine what conditions surrounding an election would be most likely to lead to an increase in fraud. Mr. Rokita objected based on his belief that the passions of partisanship lead people to not act rationally in an election.

Recommendation 4: Conduct Research Using Database Comparisons

Picking up on a suggestion made by Spencer Overton and explained in the suggested methodology section, Mr. Hearne recommended studying the issue using statistical database matching. Researchers should compare the voter roll and the list of people who actually voted to see if there are “dead” and felon voters. Because of the inconsistent quality of the databases, however, a political scientist would need to work in an appropriate margin of error when using such a methodology.

Recommendation 5: Conduct a Study of Deceptive Practices

The working group discussed the increasing use of deceptive practices, such as flyers with false and/or intimidating information, to suppress voter participation. A number of

¹ See Appendix C, and section on methodology

groups, including the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such practices, which may be available for review and analysis. This is also an area in which there is often tangible evidence, such as copies of the flyers and postcards themselves. All of this information should be reviewed and analyzed to see how such practices are being conducted and what can be done about them.

Recommendation 6: Study Use of HAVA Administrative Complaint Procedure As Vehicle for Measuring Fraud and Intimidation

The EAC should study the extent to which states are actually utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.

Recommendation 7: Examine the Use of Special Election Courts

Given that many state and local judges are elected, it may be worth exploring whether special election courts that are running before, during and after election day would be an effective means of disposing with complaints and violations in an expeditious manner. Pennsylvania employs such a system, and the EAC should consider investigating how well it is working to deal with fraud and intimidation problems.

Key Working Group Observations and Concerns

Working Group Observations

1. ***The main problems today are structural barriers to voting and administrative error.*** Mr. Perez observed that, in accordance with the research, the biggest issues today are structural barriers to voting, not stealing votes. Election administrators share this view. Election fraud is negligible, and to the extent it occurs, it needs to be prosecuted with stronger criminal laws. The biggest problem is properly preparing people, which is the responsibility of election administrators.
2. ***Most fraud and intimidation is happening outside of the polling place.*** Mr. Greenbaum observed that with respect to both voter fraud and voter suppression, such as deceptive practices and tearing up voter registration forms, most of that is taking place outside of the polling place.
3. ***This issue cannot be addressed through one study or one methodology alone.*** Mr. Weinberg observed that since there is such a variety in types of fraud and intimidation, one solution will not fit all. It will be impossible to obtain data or resolve any of these problems through a single method.
4. ***The preliminary research conducted for this project is extremely valuable.*** Several of the working group members complimented the quality of the research done and although it is only preliminary, thought it would be useful and informative in the immediate future.
5. ***The Department of Justice is exploring expanding its reach over voter suppression activities.*** In the context of the conversation about defining voter intimidation, Mr. Donsanto pointed out that while voter intimidation was strictly defined by the criminal law, his section is beginning to explore the slightly different concept of vote suppression, and how to pursue it. He mentioned the phone-jamming case in New Hampshire as an initial success in this effort. He noted that he believes that vote suppression in the form of deceptive practices ought to be a crime and the section is exploring ways to go after it within the existing statutory construct. Mr. Bauer raised the example of a party sending people dressed in paramilitary outfits to yell at people as they go to the polls, telling them they have to show identification. Mr. Donsanto said that under the laws he has to work with today, such activity is not considered corrupt. He said that his lawyers are trying to “bend” the current laws to address aggravated cases of vote suppression, and the phone-jamming case is an example of that. Mr. Donsanto said that within the Department, the term vote “suppression” and translating it into a crime is a “work in progress.”

6. **Registration fraud does not translate into vote fraud.** Ms. Rogers, Mr. Donsanto and others stated that although phony voter registration applications turned in by people being paid by the form was a problem, it has not been found in their experience to lead to fraudulent voters at the polls. Ms. Rogers said such people were motivated by money, not defrauding the election.
7. **Handling of voter fraud and intimidation complaints varies widely across states and localities.** Ms. Rogers and others observed that every state has its own process for intake and review of complaints of fraud and intimidation, and that procedures often vary within states. The amount of authority secretaries of state have to address such problems also is different in every state. Mr. Weinberg stated he believed that most secretaries of state did not have authority to do anything about these matters. Participants discussed whether secretaries ought to be given greater authority so as to centralize the process, as HAVA has mandated in other areas.

Working Group Concerns

1. Mr. Rokita questioned whether the purpose of the present project ought to be on assessing the level of fraud and where it is, rather than on developing methods for making such measurements. He believed that methodology should be the focus, “rather than opinions of interviewees.” He was concerned that the EAC would be in a position of “adding to the universe of opinions.”
2. Mr. Rokita questioned whether the “opinions” accumulated in the research “is a fair sampling of what’s out there.” Ms. Wang responded that one of the purposes of the research was to explore whether there is a method available to actually quantify in some way how much fraud there is and where it is occurring in the electoral process. Mr. Rokita replied that “Maybe at the end of the day we stop spending taxpayer money or it’s going to be too much to spend to find that kind of data. Otherwise, we will stop it here and recognize there is a huge difference of opinion on that issue of fraud, when it occurs is obtainable, and that would possibly be a conclusion of the EAC.” Ms. Sims responded that she thought it would be possible to get better statistics on fraud and there might be a way of “identifying at this point certain parts in the election process that are more vulnerable, that we should be addressing.”
3. Mr. Rokita stated that, “We’re not sure that fraud at the polling place doesn’t exist. We can’t conclude that.”
4. Mr. Rokita expressed concern about working with a political scientist. He believes that the “EAC needs to be very careful in who they select, because all the time and effort and money that’s been spent up to date and would be spent in the future could be invalidated by a wrong selection in the eyes of some group.”

Excerpt from “Machinery of Democracy,” a Brennan Center Report

APPENDIX C

BRENNAN CENTER TASK FORCE ON VOTING SYSTEM SECURITY, LAWRENCE NORDEN, CHAIR

Excerpted from pp. 8-19

METHODOLOGY

The Task Force concluded, and the peer review team at NIST agreed, that the best approach for comprehensively evaluating voting system threats was to: (1) identify and categorize the potential threats against voting systems, (2) prioritize these threats based upon an agreed upon metric (which would tell us how difficult each threat is to accomplish from the attacker’s point of view), and (3) determine, utilizing the same metric employed to prioritize threats, how much more difficult each of the catalogued attacks would become after various sets of countermeasures are implemented.

This model allows us to identify the attacks we should be most concerned about (*i.e.*, the most practical and least difficult attacks). Furthermore, it allows us to quantify the potential effectiveness of various sets of countermeasures (*i.e.*, how difficult the least difficult attack is after the countermeasure has been implemented). Other potential models considered, but ultimately rejected by the Task Force, are detailed in Appendix B.

IDENTIFICATION OF THREATS

The first step in creating a threat model for voting systems was to identify as many potential attacks as possible. To that end, the Task Force, together with the participating election officials, spent several months identifying voting system vulnerabilities. Following this work, NIST held a Voting Systems Threat Analysis Workshop on October 7, 2005. Members of the public were invited to write up and post additional potential attacks. Taken together, this work produced over 120 potential attacks on the three voting systems. They are detailed in the catalogs annexed.²⁰ Many of the attacks are described in more detail at <http://vote.nist.gov/threats/papers.htm>.

The types of threats detailed in the catalogs can be broken down into nine categories: (1) the insertion of corrupt software into machines prior to Election Day; (2) wireless and other remote control attacks on voting machines on Election Day; (3) attacks on tally servers; (4) miscalibration of voting machines; (5) shut off of voting machine features intended to assist voters; (6) denial of service attacks; (7) actions by corrupt poll workers or others at the polling place to affect votes cast; (8) vote buying schemes; (9) attacks on ballots or VVPT. Often, the actual attacks

involve some combination of these categories. We provide a discussion of each type of attack in “Categories of Attacks,” *infra* at pp. 24–27.

PRIORITIZING THREATS: NUMBER OF INFORMED PARTICIPANTS AS METRIC

Without some form of prioritization, a compilation of the threats is of limited value. Only by prioritizing these various threats could we help election officials identify which attacks they should be most concerned about, and what steps could be taken to make such attacks as difficult as possible. As discussed below, we have determined the level of difficulty for each attack where the attacker is attempting to affect the outcome of a close statewide election.²¹

There is no perfect way to determine which attacks are the least difficult, because each attack requires a different mix of resources – well-placed insiders, money, programming skills, security expertise, *etc.* Different attackers would find certain resources easier to acquire than others. For example, election fraud committed by local election officials would always involve well-placed insiders and a thorough understanding of election procedures; at the same time, there is no reason to expect such officials to have highly skilled hackers or first-rate programmers working with them. By contrast, election fraud carried out by a foreign government would likely start with plenty of money and technically skilled attackers, but probably without many conveniently placed insiders or detailed knowledge of election procedures.

Ultimately, we decided to use the “number of informed participants” as the metric for determining attack difficulty. An attack which uses fewer participants is deemed the easier attack.

We have defined “informed participant” as someone whose participation is needed to make the attack work, and who knows enough about the attack to foil or expose it. This is to be distinguished from a participant who unknowingly assists the attack by performing a task that is integral to the attack’s successful execution without understanding that the task is part of an attack on voting systems.

The reason for using the security metric “number of informed participants” is relatively straightforward: the larger a conspiracy is, the more difficult it would be to keep it secret. Where an attacker can carry out an attack by herself, she need only trust herself. On the other hand, a conspiracy that requires thousands of people to take part (like a vote-buying scheme) also requires thousands of people to keep quiet. The larger the number of people involved, the greater the likelihood that one of them (or one who was approached, but declined to take part) would either inform the public or authorities about the attack, or commit some kind of error that causes the attack to fail or become known.

Moreover, recruiting a large number of people who are willing to undermine the integrity of a statewide election is also presumably difficult. It is not hard to imagine two or three people agreeing to work to change the outcome of an election. It seems far less likely that an attacker could identify and employ hundreds or thousands of similarly corrupt people without being discovered.

We can get an idea of how this metric works by looking at one of the threats listed in our catalogs: the vote-buying threat, where an attacker or attackers pay individuals to vote for a particular candidate. This is Attack Number 26 in the PCOS Attack Catalog²² (though this attack would not be substantially different against DREs or DREs w/ VVPT).²³ In order to work under our current types of voting systems, this attack requires (1) at least one person to purchase votes, (2) many people to agree to sell their votes, and (3) some way for the purchaser to confirm that the voters she pays actually voted for the candidate she supported. Ultimately, we determined that, while practical in smaller contests, a vote-buying attack would be an exceptionally difficult way to affect the outcome of a statewide election. This is because, even in a typically close statewide election, an attacker would need to involve thousands of voters to ensure that she could affect the outcome of a statewide race.²⁴

For a discussion of other metrics we considered, but ultimately rejected, see Appendix C.

DETERMINING NUMBER OF INFORMED PARTICIPANTS

DETERMINING THE STEPS AND VALUES FOR EACH ATTACK

The Task Force members broke down each of the catalogued attacks into its necessary steps. For instance, Attack 12 in the PCOS Attack Catalog is “Stuffing Ballot Box with Additional Marked Ballots.”²⁵ We determined that, at a minimum, there were three component parts to this attack: (1) stealing or creating the ballots and then marking them, (2) scanning marked ballots through the PCOS scanners, probably before the polls opened, and (3) modifying the poll books in each location to ensure that the total number of votes in the ballot boxes was not greater than the number of voters who signed in at the polling place.

Task Force members then assigned a value representing the minimum number of persons they believed would be necessary to accomplish each goal. For PCOS Attack 12, the following values were assigned:²⁶

Minimum number required to steal or create ballots: 5 persons total.²⁷

Minimum number required to scan marked ballots: 1 per polling place attacked.

Minimum number required to modify poll books: 1 per polling place attacked.²⁸

After these values were assigned, the Brennan Center interviewed several election officials to see whether they agreed with the steps and values assigned to each attack.²⁹ When necessary, the values and steps were modified. The new catalogs, including attack steps and values, were then reviewed by Task Force members. The purpose of this review was to ensure, among other things, that the steps and values were sound.

These steps and values tell us how difficult it would be to accomplish a *single attack in a single polling place*. They do not tell us how many people it would take to change the outcome of an election successfully – that depends, of course, on specific facts about the jurisdiction: how many votes are generally recorded in each polling

place, how many polling places are there in the jurisdiction, and how close is the race? For this reason, we determined that it was necessary to construct a hypothetical jurisdiction, to which we now turn.

NUMBER OF INFORMED PARTICIPANTS NEEDED TO CHANGE STATEWIDE ELECTION

We have decided to examine the difficulty of each attack in the context of changing the outcome of a reasonably close statewide election. While we are concerned by potential attacks on voting systems in any type of election, we are most troubled by attacks that have the potential to affect large numbers of votes. These are the attacks that could actually change the outcome of a statewide election with just a handful of attack participants.

We are less troubled by attacks on voting systems that can only affect a small number of votes (and might therefore be more useful in local elections). This is because there are many non-system attacks that can also affect a small number of votes (*i.e.*, sending out misleading information about polling places, physically intimidating voters, submitting multiple absentee ballots, *etc.*). Given the fact that these non-system attacks are likely to be less difficult in terms of number of participants, financial cost, risk of detection, and time commitment, we are uncertain that an attacker would target *voting machines* to alter a small number of votes.

In order to evaluate how difficult it would be for an attacker to change the outcome of a statewide election, we created a composite jurisdiction. The composite jurisdiction was created to be representative of a relatively close statewide election. We did not want to examine a statewide election where results were so skewed toward one candidate (for instance, the re-election of Senator Edward M. Kennedy in 2000, where he won 73% of the vote³⁰), that reversing the election results would be impossible without causing extreme public suspicion. Nor did we want to look at races where changing only a relative handful of votes (for instance, the Governor's race in Washington State in 2004, which was decided by a mere 129 votes³¹) could affect the outcome of an election; under this scenario, many of the potential attacks would involve few people, and therefore look equally difficult.

We have named our composite jurisdiction "the State of Pennasota." The State of Pennasota is a composite of ten states: Colorado, Florida, Iowa, Ohio, New Mexico, Pennsylvania, Michigan, Nevada, Wisconsin and Minnesota. These states were chosen because they were the ten "battleground" states that Zogby International consistently polled in the spring, summer, and fall 2004.³² These are statewide elections that an attacker would have expected, ahead of time, to be fairly close.

We have also created a composite election, which we label the "Governor's Race" in Pennasota. The results of this election are a composite of the actual results in the same ten states in the 2004 Presidential Election.

We have used these composites as the framework by which to evaluate the difficulty of the various catalogued attacks.³³ For instance, we know a ballot-box stuffing attack would require roughly five people to create and mark fake ballots, as

well as one person per polling place to stuff the boxes, and one person per polling place to modify the poll books. But, in order to determine how many informed participants would be needed to affect a statewide race, we need to know how many polling places would need to be attacked.

The composite jurisdiction and composite election provide us with information needed to answer these questions: *i.e.*, how many extra votes our attackers would need to add to their favored candidate's total for him to win, how many ballots our attackers can stuff into a particular polling place's ballot box without arousing suspicion (and related to this, how many votes are generally cast in the average polling place), how many polling places are there in the state, *etc.* We provide details about both the composite jurisdiction and election in the section entitled "Governor's Race, State of Pennasota, 2007," *infra* at pp 20–27.

LIMITS OF INFORMED PARTICIPANTS AS METRIC

Of the possible metrics we considered, we believe that measuring the number of people who know they are involved in an attack (and thus could provide evidence of the attack to the authorities and/or the media), is the best single measure of attack difficulty; as already discussed, we have concluded that the more people an attacker is forced to involve in his attack, the more likely it is that one of the participants would reveal the attack's existence and foil the attack, perhaps sending attackers to jail. However, we are aware of a number of places where the methodology could provide us with questionable results.

By deciding to concentrate on size of attack team, we mostly ignore the need for other resources when planning an attack. Thus, a software attack on DREs which makes use of steganography³⁴ to hide attack instruction files (*see* "DRE w/ VVPT Attack No. 1a", discussed in greater detail, *infra* at pp. 62–65) is considered easier than an attack program delivered over a wireless network at the polling place (*see* discussion of wireless networks, *infra* at pp. 85–91). However, the former attack probably requires a much more technologically sophisticated attacker.

Another imperfection with this metric is that we do not have an easy way to represent how much choice the attacker has in finding members of his attack team.

Thus, with PCOS voting, we conclude that the cost of subverting a routine audit of ballots is roughly equal to the cost of intercepting ballot boxes in transit and substituting altered ballots (*see* discussion of PCOS attacks, *infra* at pp. 77–83). However, subverting the audit team requires getting a specific set of trusted people to cooperate with the attacker. By contrast, the attacker may be able to decide which precincts to tamper with based on which people he has already recruited for his attack.

In an attempt to address this concern, we considered looking at the number of "insiders" necessary to take part in each attack. Under this theory, getting five people to take part in a conspiracy to attack a voting system might not be particularly difficult. But getting five well-placed county election officials to take part in the attack would be (and should be labeled) the more difficult of the two attacks. Because, for the most part, the low-cost attacks we have identified do not necessarily involve well placed insiders (but could, for instance, involve one of many people with access to commercial off the shelf software ("COTS") during development

or at the vendor), we do not believe that using this metric would have substantially changed our analysis.³⁵

Finally, these attack team sizes do not always capture the logistical complexity of an attack. For example, an attack on VVPT machines involving tampering with the voting machine software and also replacing the paper records in transit requires the attacker to determine what votes were falsely produced by the voting machine and print replacement records in time to substitute them. While this is clearly possible, it raises a lot of operational difficulties – a single failed substitution leaves the possibility that the attack would be detected during the audit of ballots.

We have tried to keep these imperfections in mind when analyzing and discussing our least difficult attacks.

We suspect that much of the disagreement between voting officials and computer security experts in the last several years stems from a difference of opinion in prioritizing the difficulty of attacks. Election officials, with extensive experience in the logistics of handling tons of paper ballots, have little faith in paper and understand the kind of breakdowns in procedures that lead to traditional attacks like ballot box stuffing; in contrast, sophisticated attacks on computer voting systems appear very difficult to many of them. Computer security experts understand sophisticated attacks on computer systems, and recognize the availability of tools and expertise that makes these attacks practical to launch, but have no clear idea how they would manage the logistics of attacking a paper-based system. Looking at attack team size is one way to bridge this difference in perspective.

EFFECTS OF IMPLEMENTING COUNTERMEASURE SETS

The final step of our threat analysis is to measure the effect of certain countermeasures against the catalogued attacks. How much more difficult would the attacks become once the countermeasures are put into effect? How many more informed participants (if any) would be needed to counter or defeat these countermeasures?

Our process for examining the effectiveness of a countermeasure mirrors the process for determining the difficulty of an attack: we first asked whether the countermeasure would allow us to detect an attack with near certainty. If we agreed that the countermeasure would expose the attack, we identified the steps that would be necessary to circumvent or defeat the countermeasure. For each step to defeat the countermeasure, we determined the number of additional informed participants (if any) that an attacker would need to add to his team. As with the process for determining attack difficulty, the Brennan Center interviewed numerous election officials to see whether they agreed with the steps and values assigned. When necessary, the values and steps for defeating the countermeasures were altered to reflect the input of election officials.

COUNTERMEASURES EXAMINED

BASIC SET OF COUNTERMEASURES

The first set of countermeasures we looked at is the “Basic Set” of countermeasures. This Basic Set was derived from security survey responses³⁶ we received

from county election officials around the country, as well as additional interviews with more than a dozen current and former election officials. Within the Basic Set of countermeasures are the following procedures:

Inspection

The jurisdiction is not knowingly using any uncertified software that is subject to inspection by the Independent Testing Authority (often referred to as the “ITA”).³⁷

Physical Security for Machines

- Ballot boxes (to the extent they exist) are examined (to ensure they are empty) and locked by poll workers immediately before the polls are opened.
- Before and after being brought to the polls for Election Day, voting systems for each county are locked in a single room, in a county warehouse.
- The warehouse has perimeter alarms, secure locks, video surveillance and regular visits by security guards.
- Access to the warehouse is controlled by sign-in, possibly with card keys or similar automatic logging of entry and exit for regular staff.
- Some form of “tamper evident” seals are placed on machines before and after each election.
- The machines are transported to polling locations five to fifteen days before Election Day.

Chain of Custody/Physical Security of Election Day Records

- At close of the polls, vote tallies for each machine are totaled and compared with number of persons that have signed the poll books.
- A copy of totals for each machine is posted at each polling place on Election Night and taken home by poll workers to check against what is posted publicly at election headquarters, on the web, in the papers, or elsewhere.³⁸
- All audit information (*i.e.*, Event Logs, VVPT records, paper ballots, machine printouts of totals) that is not electronically transmitted as part of the unofficial upload to the central election office, is delivered in official, sealed and hand-delivered information packets or boxes. All seals are numbered and tamper-evident.
- Transportation of information packets is completed by two election officials representing opposing parties who have been instructed to remain in joint custody of the information packets or boxes from the moment it leaves the precinct to the moment it arrives at the county election center.

- Each polling place sends its information packets or boxes to the county election center separately, rather than having one truck or person pick up this data from multiple polling locations.
- Once the sealed information packets or boxes have reached the county election center, they are logged. Numbers on the seals are checked to ensure that they have not been replaced. Any broken or replaced seals are logged. Intact seals are left intact.
- After the packets and/or boxes have been logged, they are provided with physical security precautions at least as great as those listed for voting machines, above. Specifically, for Pennasota, we have assumed the room in which the packets are stored have perimeter alarms, secure locks, video surveillance and regular visits by security guards and county police officers; and access to the room is controlled by sign-in, possibly with card keys or similar automatic logging of entry and exit for regular staff.

Testing³⁹

- An Independent Testing Authority has certified the model of voting machine used in the polling place.
- Acceptance Testing⁴⁰ is performed on machines at time, or soon after they are received by County.
- Pre-election Logic and Accuracy⁴¹ testing is performed by the relevant election official.
- Prior to opening the polls, every voting machine and vote tabulation system is checked to see that it is still configured for the correct election, including the correct precinct, ballot style, and other applicable details.

REGIMEN FOR AUTOMATIC ROUTINE AUDIT PLUS BASIC SET OF COUNTERMEASURES.

The second set of countermeasures is the Regimen for an Automatic Routine Audit Plus Basic Set of Countermeasures.

Some form of routine auditing of voter-verified paper records occurs in 12 states, to test the accuracy of electronic voting machines. They generally require between 1 and 10% of all precinct voting machines to be audited after each election. ⁴²

Jurisdictions can implement this set of countermeasures only if their voting systems produce some sort of voter-verified paper record of each vote. This could be in the form of a paper ballot, in the case of PCOS, or a voter-verified paper trail (“VVPT”), in the case of DREs.

We have assumed that jurisdictions take the following steps when conducting an Automatic Routine Audit (when referring to this set of assumptions “Regimen for an Automatic Routine Audit”):

The Audit

- Leaders of the major parties in each county are responsible for selecting a sufficient number of audit-team members to be used in that county.⁴³
- Using a highly transparent random selection mechanism (*see point ii, below*), the voter-verified paper records for between a small percentage of all voting machines in the State are selected for auditing.
- Using a transparent random selection method, auditors are assigned to the selected machines (two or three people, with representatives of each major political party, would comprise each audit team).
- The selection of voting machines, and the assignment of auditors to machines, occurs immediately before the audits take place. The audits take place as soon after polls close as possible – for example, at 9 a.m. the morning after polls close.
- Using a transparent random selection method, county police officers, security personnel and the video monitor assigned to guard the voter-verified records are chosen from a large pool of on-duty officers and employees on election night.
- The auditors are provided the machine tallies and are able to see that the county tally reflects the sums of the machine tallies before the start of the inspection of the paper.
- The audit would include a tally of spoiled ballots (in the case of VVPT, the number of cancellations recorded), overvotes, and undervotes.

Transparent Random Selection Process

In this report, we have assumed that random auditing procedures are in place for both the Regimen for an Automatic Routine Audit and Regimen for Parallel Testing. We have further assumed procedures to prevent a single, corrupt person from being able to fix the results. This implies a kind of transparent and public random procedure.

For the Regimen for an Automatic Routine Audit there are at least two places where transparent, random selection processes are important: in the selection of precincts to audit, and in the assignment of auditors to the precincts they will be auditing.

Good election security can employ Transparent Random Selection in other places with good effect:

- the selection of parallel testers from a pool of qualified individuals.
- the assignment of police and other security professionals from on-duty lists, to monitor key materials, for example, the VVPT records between the time that they arrive at election central and the time of the completion of the ARA.

If a selection process for auditing is to be trustworthy and trusted, ideally:

- The whole process will be publicly observable or videotaped;⁴⁴
- The random selection will be publicly verifiable, *i.e.*, anyone observing will be able to verify that the sample was chosen randomly (or at least that the number selected is not under the control of any small number of people); and
- The process will be simple and practical within the context of current election practice so as to avoid imposing unnecessary burdens on election officials.

There are a number of ways that election officials can ensure some kind of transparent randomness. One way would be to use a state lottery machine to select precincts or polling places for auditing. We have included two potential examples of transparent random selection processes in Appendix F. These apply to the Regimen for Parallel Testing as well.

REGIMEN FOR PARALLEL TESTING PLUS BASIC SET OF COUNTERMEASURES

The final set of countermeasures we have examined is “Parallel Testing” plus the Basic Set of countermeasures. Parallel Testing, also known as election-day testing, involves selecting voting machines at random and testing them as realistically as possible during the period that votes are being cast.

Parallel Testing

In developing our set of assumptions for Parallel Testing, we relied heavily upon interviews with Jocelyn Whitney, Project Manager for Parallel Testing in the State of California, and conclusions drawn from this Report.⁴⁵ In our analysis, we assume that the following procedures would be included in the Parallel Testing regimen (when referring to this regimen “Regimen for Parallel Testing”) that we evaluate:

- At least two of each DRE model (meaning both vendor and model) would be selected for Parallel Testing;
- At least two DREs from each of the three largest counties would be parallel tested;
- Counties to be parallel tested would be chosen by the Secretary of State in a transparent and random manner.
- Counties would be notified as late as possible that machines from one of their precincts would be selected for Parallel Testing;⁴⁶
- Precincts would be selected through a transparent random mechanism;
- A video camera would record testing;
- For each test, there would be one tester and one observer;

- Parallel Testing would occur at the polling place;
- The script for Parallel Testing would be generated in a way that mimics voter behavior and voting patterns for the polling place;
- At the end of the Parallel Testing, the tester and observer would reconcile vote totals in the script with vote totals reported on the machine.

Transparent Random Selection Process

We further assume that the same type of transparent random selection process that would be used for the Regimen for Automatic Routine Audit would also be employed for the Regimen for Parallel Testing to determine which machines would be subjected to testing on Election Day.

APPENDIX C

ALTERNATIVE SECURITY METRICS CONSIDERED

Dollars Spent

The decision to use the number of informed participants as the metric for attack level difficulty came after considering several other potential metrics. One of the first metrics we considered was the dollar cost of attacks. This metric makes sense when looking at attacks that seek financial gain – for instance, misappropriating corporate funds. It is not rational to spend \$100,000 on the misappropriation of corporate funds if the total value of those funds is \$90,000. Ultimately, we rejected this metric as the basis for our analysis because the dollar cost of the attacks we considered were dwarfed by both (1) current federal and state budgets, and (2) the amounts currently spent legally in state and federal political campaigns.

Time of Attack

The relative security of safes and other safety measures are often rated in terms of “time to defeat.” This was rejected as metric of difficulty because it did not seem relevant to voting systems. Attackers breaking into a house are concerned with the amount of time it might take to complete their robbery because the homeowners or police might show up. With regard to election fraud, many attackers may be willing to start months or years before an election if they believe they can control the outcome. As discussed *supra* at pp. 35–48, attackers may be confident that they can circumvent the independent testing authorities and other measures meant to identify attacks, so that the amount of time an attack takes becomes less relevant.

DRAFT

EAC REPORT ON VOTING FRAUD AND VOTER INTIMIDATION STUDY

INTRODUCTION

Voting fraud and voter intimidation are phrases familiar to many voting-aged Americans. However, they mean different things to different people. Voting fraud and voter intimidation are phrases used to refer to crimes, civil rights violations, and, at times, even the lawful application of state or federal laws to the voting process. Past study of these topics has been as varied as its perceived meaning. In an effort to help understand the realities of voting fraud and voter intimidation in our elections, the U.S. Election Assistance Commission (EAC) has begun this, phase one, of a comprehensive study on election crimes. In this phase of its examination, EAC has developed a working definition of election crimes and adopted research methodology on how to assess the existence and enforcement of election crimes in the United States.

PURPOSE AND METHODOLOGY OF THE EAC STUDY

Section 241 of the Help America Vote Act of 2002 (HAVA) calls on the EAC to research and study various issues related to the administration of elections. During Fiscal Year 2006, EAC began projects to research several of the listed topics. These topics for research were chosen in consultation with the EAC Standards Board and Board of Advisors. Voting fraud and voter intimidation are topics that the EAC as well as its advisory boards felt were important to study to help improve the administration of elections for federal office.

EAC began this study with the intention of identifying a common understanding of voting fraud and voter intimidation and devising a plan for a comprehensive study of these issues. The initial study was not intended to be a comprehensive review of existing voting fraud and voter intimidation actions, laws, or prosecutions. To conduct that type of extensive research, a basic understanding had to first be established regarding what is commonly referred to as voting fraud and voter intimidation. Once that understanding was reached, a definition had to be crafted to refine and in some cases limit the scope of what reasonably can be researched and studied as evidence of voting fraud and voter intimidation. That definition will serve as the basis for recommending a plan for a comprehensive study of the area.

To accomplish these tasks, EAC employed two consultants, Job Serebrov and Tova Wang,¹ who worked with EAC staff and interns to conduct the research that forms the basis of this report. The consultants were chosen based upon their experience with the topic and the need to assure a bipartisan representation in this study. The consultants and EAC staff were charged with (1) researching the current state of information on the topic of voting fraud and voter intimidation; (2) developing a uniform definition of voting

¹ Biographies for Job Serebrov and Tova Wang, the two consultants hired by EAC, are attached as Appendix "1".

fraud and voter intimidation; and (3) proposing recommended strategies for researching this subject.

EAC consultants reviewed existing studies, articles, reports and case law on voting fraud and intimidation and conducted interviews with experts in the field. EAC consultants and staff then presented their initial findings to a working group that provided feedback. The working group participants were:

The Honorable Todd Rokita

Indiana Secretary of State
Member, EAC Standards Board and the
Executive Board of the Standards Board

Kathy Rogers

Georgia Director of Elections, Office of
the Secretary of State
Member, EAC Standards Board

J.R. Perez

Guadalupe County Elections
Administrator, Texas

Barbara Arnwine

Technical Advisor:

Craig Donsanto

Director, Election Crimes Branch, U.S.
Department of Justice

Throughout the process, EAC staff assisted the consultants by providing statutes and cases on this subject as well as supervision on the direction, scope and product of this research.

The consultants drafted a report for EAC that included their summaries of relevant cases, studies and reports on voting fraud and voter intimidation as well as summaries of the interviews that they conducted. The draft report also provided a definition of voting fraud and intimidation and made certain recommendations developed by the consultants or by the working group on how to pursue further study of this subject. This document was vetted and edited by EAC staff to produce this final report.

EXISTING INFORMATION ABOUT FRAUD AND INTIMIDATION

To begin our study of voting fraud and voter intimidation, EAC consultants reviewed the current body of information on voting fraud and voter intimidation. The information available about these issues comes largely from a very limited body of reports, articles, and books. There are volumes of case law and statutes in the various states that also impact our understanding of what actions or inactions are legally considered fraud or intimidation. Last, there is anecdotal information available through media reports and interviews with persons who have administered elections, prosecuted fraud, and studied these problems. All of these resources were used by EAC consultants to provide an introductory look at the available knowledge of voting fraud and voter intimidation.

Reports and Studies of Voting fraud and Intimidation

Over the years, there have been a number of studies conducted and reports published about voting fraud and voter intimidation. EAC reviewed many of these studies and reports to develop a base-line understanding of the information that is currently available about voting fraud and voter intimidation. EAC consultants reviewed the following articles, reports and books, summaries of which are available in Appendix “2”:

Articles and Reports

- People for the American Way and the NAACP, “The Long Shadow of Jim Crow,” December 6, 2004.
- Laughlin McDonald, "The New Poll Tax," *The American Prospect* vol. 13 no. 23, December 30, 2002.
- Wisconsin Legislative Audit Bureau, “An Evaluation: Voter Registration Elections Board” Report 05-12, September, 2005.
- Milwaukee Police Department, Milwaukee County District Attorney’s Office, Federal Bureau of Investigation, United States Attorney’s Office “Preliminary Findings of Joint Task Force Investigating Possible Election Fraud,” May 10, 2005.
- National Commission on Federal Election Reform, “Building Confidence in U.S. Elections,” Center for Democracy and Election Management, American University, September 2005.
- The Brennan Center for Justice at NYU School of Law and Spencer Overton, Commissioner and Law Professor at George Washington University School of Law “Response to the Report of the 2005 Commission on Federal Election Reform,” September 19, 2005.

- Chandler Davidson, Tanya Dunlap, Gale Kenny, and Benjamin Wise, “Republican Ballot Security Programs: Vote Protection or Minority Vote Suppression – or Both?” A Report to the Center for Voting Rights & Protection, September, 2004.
- Alec Ewald, “A Crazy Quilt of Tiny Pieces: State and Local Administration of American Criminal Disenfranchisement Law,” The Sentencing Project, November 2005.
- American Center for Voting Rights “Vote Fraud, Intimidation and Suppression in the 2004 Presidential Election,” August 2, 2005.
- The Advancement Project, “America’s Modern Poll Tax: How Structural Disenfranchisement Erodes Democracy” November 7, 2001

- Lori Minnite and David Callahan, "Securing the Vote: An Analysis of Election Fraud," Demos: A Network of Ideas and Action, 2003.
- People for the American Way, NAACP, Lawyers Committee for Civil Rights, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," December 2004.

Books

- John Fund, *Stealing Elections: How Voting fraud Threatens Our Democracy*, Encounter Books, 2004.
- Andrew Gumbel, *Steal this Vote: Dirty Elections and the Rotten History of Democracy in American*, Nation Books, 2005.
- Tracy Campbell, *Deliver the Vote: A History of Election Fraud, An American Political Tradition – 1742-2004*, Carroll & Graf Publishers, 2005.
- David E. Johnson and Jonny R. Johnson, *A Funny Thing Happened on the Way to the White House: Foolhardiness, Folly, and Fraud in the Presidential Elections, from Andrew Jackson to George W. Bush*, Taylor Trade Publishing, 2004.
- Mark Crispin Miller, *Fooled Again*, Basic Books, 2005.

During our review of these documents, we learned a great deal about the type of research that has been conducted in the past concerning voting fraud and voter intimidation. None of the studies or reports was based on a comprehensive, nationwide study, survey or review of all allegations, prosecutions or convictions of state or federal crimes related to voting fraud or voter intimidation in the United States. Most reports focused on a limited number of case studies or instances of alleged voting fraud or voter intimidation. For example, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," a report produced by the People for the American Way, focused exclusively on citizen reports of fraud or intimidation to the Election Protection program during the 2004 Presidential election. Similarly, reports produced annually by the Department of Justice, Public Integrity Division, deal exclusively with crimes reported to and prosecuted by the United States Attorneys and/or the Department of Justice through the Public Integrity Section.

It is also apparent from a review of these articles and books that there is no consensus on the pervasiveness of voting fraud and voter intimidation. Some reports, such as

“Building Confidence in U.S. Elections,” suggest that there is little or no evidence of extensive fraud in U.S. elections or of multiple voting. This conflicts directly with other reports, such as the “Preliminary Findings of Joint Task Force Investigating Possible Election Fraud,” produced by the Milwaukee Police Department, Milwaukee County District Attorney’s Office, FBI and U.S. Attorney’s Office. That report cited evidence of more than 100 individual instances of suspected double-voting, voting in the name of persons who likely did not vote, and/or voting using a name believed to be fake.

Voter intimidation is also a topic of some debate because there is little agreement concerning what constitutes actionable voter intimidation. Some studies and reports cover only intimidation that involves physical or financial threats, while others cover non-criminal intimidation, including legal practices that allegedly cause vote suppression.

One point of agreement is that absentee voting and voter registration by nongovernmental groups create opportunities for fraud. For example, a number of studies cited circumstances in which voter registration drives have falsified voter registration applications or have destroyed voter registration applications of persons affiliated with a certain political party. Others conclude that paying persons per voter registration application creates the opportunity and perhaps the incentive for fraud.

Interviews with Experts

In addition to reviewing prior studies and reports on voting fraud and intimidation, EAC consultants interviewed a number of persons regarding their experiences and research of voting fraud and voter intimidation. Persons interviewed included:

Wade Henderson
Executive Director,
Leadership Conference for Civil Rights

Wendy Weiser
Deputy Director,
Democracy Program, The Brennan
Center

William Groth
Attorney for the plaintiffs in the Indiana
voter identification litigation

Lori Minnite
Barnard College, Columbia University

Neil Bradley
ACLU Voting Rights Project

Pat Rogers
Attorney, New Mexico

Nina Perales
Counsel,
Mexican American Legal Defense and
Education Fund

Rebecca Vigil-Giron
Secretary of State, New Mexico

Sarah Ball Johnson
Executive Director,
State Board of Elections, Kentucky

Stephen Ansolobhere
Massachusetts Institute of Technology

Chandler Davidson
Rice University

Tracey Campbell

Author, *Deliver the Vote*

Douglas Webber

Assistant Attorney General, Indiana

Heather Dawn Thompson

Director of Government Relations,
National Congress of American Indians

Jason Torchinsky

Assistant General Counsel,
American Center for Voting Rights

Robin DeJarnette

Executive Director,
American Center for Voting Rights

Harry Van Sickle

Commissioner of Elections,
Pennsylvania

Tony Sirvello

Executive Director
International Association of Clerks,
Recorders, Election Officials and
Treasurers

Joseph Sandler

Counsel
Democratic National Committee

John Ravitz

Executive Director
New York City Board of Elections

Sharon Priest

Former Secretary of State, Arkansas

Kevin Kennedy

Executive Director
State Board of Elections, Wisconsin

Evelyn Stratton

Justice
Supreme Court of Ohio

Joseph Rich

Former Director
Voting Section, Civil Rights Division
U.S. Department of Justice

Craig Donsanto

Director, Public Integrity Section
U.S. Department of Justice

John Tanner

Director
Voting Section, Civil Rights Division
U.S. Department of Justice

These interviews in large part confirmed the conclusions that were gleaned from the articles, reports and books that were analyzed. For example, the interviewees largely agreed that absentee balloting is subject to the greatest proportion of fraudulent acts, followed by vote buying and voter registration fraud. They similarly pointed to voter registration drives by nongovernmental groups as a source of fraud, particularly when the workers are paid per registration. Many asserted that impersonation of voters is probably the least frequent type of fraud because it is the most likely type of fraud to be discovered, there are stiff penalties associated with this type of fraud, and it is an inefficient method of influencing an election.

Interviewees differed on what they believe constitutes actionable voter intimidation. Law enforcement and prosecutorial agencies tend to look to the criminal definitions of voter intimidation, which generally require some threat of physical or financial harm. On the other hand, voter rights advocates tended to point to activities such as challenger laws,

voter identification laws, polling place locations, and distribution of voting machines as activities that can constitute voter intimidation.

Those interviewed also expressed opinions on the enforcement of voting fraud and voter intimidation laws. States have varying authorities to enforce these laws. In some states, enforcement is left to the county or district attorney, and in others enforcement is managed by the state's attorney general. Regardless, voting fraud and voter intimidation are difficult to prove and require resources and time that many local law enforcement and prosecutorial agencies do not have. Federal law enforcement and prosecutorial agencies have more time and resources but have limited jurisdiction and can only prosecute election crimes perpetrated in elections with a federal candidate on the ballot or perpetrated by a public official under the color of law. Those interviewed differed on the effectiveness of the current system of enforcement. Some allege that prosecutions are not sufficiently aggressive. Others feel that the current laws are sufficient for prosecuting fraud and intimidation.

A summary of the each of the interviews conducted is attached as Appendix "3".

Case Law and Statutes

Consultants reviewed more than 40,000 cases that were identified using a series of search terms related to voting fraud and voter intimidation. The majority of these cases came from courts of appeal. This is not surprising, since most cases that are publicly reported come from courts of appeal. Very few cases that are decided at the district court level are reported for public review.

Very few of the identified cases were applicable to this study. Of those that were applicable, no apparent thematic pattern emerged. However, it did seem that the greatest number of cases reported on fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying, and challenges to felon eligibility.

A listing of the cases reviewed in this study is attached as Appendix "4".

Media Reports

EAC consultants reviewed thousands of media reports concerning a wide variety of potential voting fraud or voter intimidation, including:

- absentee ballot fraud,
- voter registration fraud,
- voter intimidation and suppression,
- deceased voters on voter registration list and/or voting,
- multiple voting,
- felons voting,

- non-citizens voting,
- vote buying,
- deceptive practices, and
- fraud by election officials.

While these reports showed that there were a large number of allegations of voting fraud and voter intimidation, they provided much less information as to whether the allegations were ever formalized as complaints to law enforcement, whether charges were filed, whether prosecutions ensued, and whether any convictions were made. The media reports were enlightening as to the pervasiveness of complaints of fraud and intimidation throughout the country, the correlation between fraud allegations and the perception that the state was a “battleground” or “swing” state, and the fact that there were reports of almost all types of voting fraud and voter intimidation. However, these reports do not provide much data for analysis as to the number of complaints, charges and prosecutions of voting fraud and intimidation throughout the country.

DEFINITION OF ELECTION CRIMES

From our study of available information on voting fraud and voter intimidation, we have learned that these terms mean many things to many different people. These terms are used casually to refer to anything from vote buying to refusing to register a voter to falsifying voter registration applications. Upon further inspection, however, it is apparent that there is no common understanding or agreement of what constitutes “voting fraud” and “voter intimidation.” Some think of voting fraud and voter intimidation only as criminal acts, while others include actions that may constitute civil wrongs, civil rights violations, and even legal activities. To arrive at a common definition and list of activities that can be studied, EAC assessed the appropriateness of the terminology that is currently in use and applied certain factors to limit the scope and reach of what can and will be studied by EAC in the future. As a result, EAC has adopted the use of the term “election crimes” for its future study.

Current Terminology

The phrase “voting fraud” is really a misnomer for a concept that is much broader. “Fraud” is a concept that connotes an intentional act of deception, which may constitute either a criminal act or civil tort depending upon the willfulness of the act.

Fraud, n. 1. A knowing misrepresentation of the truth or concealment of a material fact to induce another to act to his or her detriment. • Fraud is usu[ally] a tort, but in some cases (esp. when the conduct is willful) it may be a crime.

Black’s Law Dictionary, Eighth Edition, p. 685.

“Voting” is the act of casting votes to decide an issue or contest. Black’s Law Dictionary, Eighth Edition, p. 1608. Using these terms to form a definition of “voting fraud,” it means fraudulent or deceptive acts committed to influence the act of voting.

Thus, a voter who intentionally impersonates another registered voter and attempts to vote for that person would be committing "voting fraud." Similarly, a person who knowingly provides false information to a voter about the location of the voter's polling place commits fraud on the voter.

The phrase "voting fraud" does not capture a myriad of other criminal acts that are related to elections which are not related to the act of voting and/or do not involve an act of deception. For example, "voting fraud" does not capture actions or willful inaction in the voter registration process. When an election official willfully and knowingly refuses to register to vote a legally eligible person it is a crime. This is a crime that involves neither the act of voting nor an act of deception.

To further complicate matters, the phrases "voting fraud" and "voter intimidation" are used to refer to actions or inactions that are criminal as well as those that are potentially civil wrongs and even those that are legal. Obviously, criminal acts and civil wrongs are pursued in a very different manner. Criminal acts are prosecuted by the local, state or federal government. Generally, civil wrongs are prosecuted by the individual who believes that they were harmed. In some cases, when civil rights are involved, the Civil Rights Division of the Department of Justice may become involved.

New Terminology

The goal of this study was to develop a common definition of what is generically referred to as "voting fraud" and "voter intimidation" that would serve as the basis for a future comprehensive study of the existence of these problems. Because the current terminology has such a variety of applications and meanings, "voting fraud" and "voter intimidation" can be read to encompass almost any bad act associated with an election. Such broad terminology is not useful in setting the boundaries of a future study. A definition must set parameters for future study by applying limitations on what is included in the concepts to be studied. The current terminology applies no such limitations.

Thus, EAC has adopted the use of the phrase "election crimes" to limit the scope of its future study. This term captures all crimes related to the voter registration and voting processes and excludes civil wrongs and non-election related crimes. EAC adopted this definition because it better represents the spectrum of activities that we are able to and desire to study. In addition, we recognize that the resources, both financial and human capital, needed to study all "voting fraud" and "voter intimidation," including criminal acts, civil actions, as well as allegations of voter suppression through the use of legal election processes are well beyond the resources available to EAC. Finally, by limiting this definition to criminal acts, EAC can focus its study on a set of more readily measurable data. Criminal behavior is readily defined through state and federal statutes and is prosecuted by government agencies. This is not the case with civil matters. Civil actions can be prosecuted by individuals and/or government entities. Furthermore, what constitutes civil action is far less defined, subject to change, and can vary from case to

016274

case. A more complete discussion of the concept of “election crimes” follows along with a list of excluded actions.

The Definition of an Election Crime for Purposes of this Study

Election crimes are intentional acts or willful failures to act, prohibited by state or federal law, that are designed to cause ineligible persons to participate in the election process; eligible persons to be excluded from the election process; ineligible votes to be cast in an election; eligible votes not to be cast or counted; or other interference with or invalidation of election results. Election crimes generally fall into one of four categories: acts of deception, acts of coercion, acts of damage or destruction, and failures or refusals to act.

Election crimes can be committed by voters, candidates, election officials, or any other members of the public who desire to criminally impact the result of an election. However, crimes that are based upon intentional or willful failure to act assume that a duty to act exists. Election officials have affirmative duties to act with regard to elections. By and large, other groups and individuals do not have such duties.

The victim of an election crime can be a voter, a group of voters, an election official, a candidate, or the public in general. Election crimes can occur during any stage of the election process, including but not limited to qualification of candidates; voter registration; campaigning; voting system preparation and programming; voting either early, absentee, or on election day; vote tabulation; recounts; and recalls.

The following are examples of activities that may constitute election crimes. This list is not intended to be exhaustive, but is representative of what states and the federal government consider criminal activity related to elections.

Acts of Deception

- Knowingly causing to be mailed or distributed, or knowingly mailing or distributing, literature that includes false information about the voter’s precinct or polling place, the date and time of the election or a candidate;
- Possessing an official ballot outside the voting location, unless the person is an election official or other person authorized by law or local ordinance to possess a ballot outside of the polling location;
- Making or knowingly possessing a counterfeit of an official election ballot;
- Signing a name other than his/her own to a petition proposing an initiative, referendum, recall, or nomination of a candidate for office;
- Knowingly signing more than once for the proposition, question, or candidate in one election;
- Signing a petition proposing an initiative or referendum when the signer is not a qualified voter.
- Voting or attempting to vote in the name of another person;
- Voting or attempting to vote more than once during the same election;

- Intentionally making a false affidavit, swearing falsely, or falsely affirming under an oath required by a statute regarding their voting status, including when registering to vote, requesting an absentee ballot or presenting to vote in person;
- Registering to vote without being entitled to register;
- Knowingly making a materially false statement on an application for voter registration or re-registration; and
- Voting or attempting to vote in an election after being disqualified or when the person knows that he/she is not eligible to vote.

Acts of Coercion

- Using, threatening to use, or causing to be used force, coercion, violence, restraint, or inflicting, threatening to inflict, or causing to be inflicted damage harm, or loss, upon or against another person to induce or compel that person to vote or refrain from voting or to register or refrain from registering to vote;
- Knowingly paying, offering to pay, or causing to be paid money or other thing of value to a person to vote or refrain from voting for a candidate or for or against an election proposition or question;
- Knowingly soliciting or encouraging a person who is not qualified to vote in an election;
- Knowingly challenging a person's right to vote without probable cause or on fraudulent grounds, or engaging in mass, indiscriminate, and groundless challenging of voters solely for the purpose of preventing voter from voting or to delay the process of voting;
- As an employer, attempting by coercion, intimidation, threats to discharge or to lessen the remuneration of an employee, to influence his/her vote in any election, or who requires or demands an examination or inspection by himself/herself or another of an employee's ballot;
- Soliciting, accepting, or agreeing to accept money or other valuable thing in exchange for signing or refraining from signing a petition proposing an initiative;
- Inducing or attempting to induce an election official to fail in the official's duty by force, threat, intimidation, or offers of reward;
- Directly or through any other person advancing, paying, soliciting, or receiving or causing to be advanced, paid, solicited, or received, any money or other valuable consideration to or for the use of any person in order to induce a person not to become or to withdraw as a candidate for public office; and
- Soliciting, accepting, or agreeing to accept money or other thing of value in exchange for registering to vote.

Acts of Damage or Destruction

- Destroying completed voter registration applications;
- Removing or destroying any of the supplies or other conveniences placed in the voting booths or compartments;
- Removing, tearing down, or defacing election materials, instructions or ballots;

- Fraudulently altering or changing the vote of any elector, by which such elector is prevented from voting as the person intended;
- Knowingly removing, altering, defacing or covering any political sign of any candidate for public office for a prescribed period prior to and following the election;
- Intentionally changing, attempting to change, or causing to be changed an official election document including ballots, tallies, and returns; and
- Intentionally delaying, attempting to delay, or causing to be delayed the sending of certificate, register, ballots, or other materials whether original or duplicate, required to be sent by jurisdictional law.

Failure or Refusal to Act

- Intentionally failing to perform an election duty, or knowingly committing an unauthorized act with the intent to effect the election;
- Knowingly permitting, making, or attempting to make a false count of election returns;
- Intentionally concealing, withholding, or destroying election returns or attempts to do so;
- Marking a ballot by folding or physically altering the ballot so as to recognize the ballot at a later time;
- Attempting to learn or actually and unlawfully learning how a voter marked a ballot;
- Distributing or attempting to distribute election material knowing it to be fraudulent;
- Knowingly refusing to register a person who is entitled to register under the rules of that jurisdiction;
- Knowingly removing the eligibility status of a voter who is eligible to vote; and
- Knowingly refusing to allow an eligible voter to cast his/her ballot.

What is not an Election Crime for Purposes of this Study

There are some actions or inactions that may constitute crimes or civil wrongs that we do not include in our definition of “election crimes.” All criminal or civil violations related to campaign finance contribution limitations, prohibitions, and reporting either at the state or federal level are not “election crimes” for purposes of this study and any future study conducted by EAC. Similarly, criminal acts that are unrelated to elections, voting, or voter registration are not “election crimes,” even when those offenses occur in a polling place, voter registration office, or a candidate’s office or appearance. For example, an assault or battery that results from a fight in a polling place or at a candidate’s office is not an election crime. Last, violations of ethical provisions and the Hatch Act are not “election crimes.” Similarly, civil or other wrongs that do not rise to the level of criminal activity (i.e., a misdemeanor, relative felony or felony) are not “election crimes.”

RECOMMENDATIONS ON HOW TO STUDY ELECTION CRIMES

As a part of its study, EAC sought recommendations on ways that EAC can research the existence of election crimes. EAC consultants, the working groups and some of the persons interviewed as a part of this study provided the following recommendations.

Recommendation 1: Conduct More Interviews

Future activity in this area should include conducting additional interviews. In particular, more election officials from all levels of government, parts of the country, and political parties should be interviewed. It would also be especially beneficial to talk to law enforcement officials, specifically federal District Election Officers (“DEOs”) and local district attorneys, as well as civil and criminal defense attorneys.

Recommendation 2: Follow Up on Media Research

The media search conducted for this phase of the research was based on a list of search terms agreed upon by EAC consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contained allegations of fraud or intimidation. Similarly, some of the articles contained information about investigations into such activities or even charges brought. Additional media research should be conducted to determine what, if any, resolutions or further activity there was in each case.

Recommendation 3: Follow Up on Allegations Found in Literature Review

Many of the allegations made in the reports and books that were analyzed and summarized by EAC consultants were not substantiated and were certainly limited by the date of publication of those pieces. Despite this, such reports and books are frequently cited by various interested parties as evidence of fraud or intimidation. Further research should include follow up on the allegations discovered in the literature review.

Recommendation 4: Review Complaints Filed With “MyVote1” Voter Hotline

During the 2004 election and the statewide elections of 2005, the University of Pennsylvania led a consortium of groups and researchers in conducting the MyVote1 Project. This project involved using a toll-free voter hotline that voters could call for poll locations, be transferred to a local hotline, or leave a recorded message with a complaint. In 2004, this resulted in more than 200,000 calls received and more than 56,000 recorded complaints.

Further research should be conducted using the MyVote1 data with the cooperation of the project leaders. While perhaps not a fully scientific survey given the self-selection of the callers, the information regarding 56,000 complaints may provide insight into the problems voters may have experienced, especially issues regarding intimidation or suppression.

Recommendation 5: Further Review of Complaints Filed With U.S. Department of Justice

According to a recent GAO report, the Voting Section of the Civil Rights Division of the Department of Justice has a variety of ways it tracks complaints of voter intimidation. Attempts should be made to obtain relevant data, including the telephone logs of complaints and information from the Interactive Case Management (ICM) system. Further research should also include a review and analysis of the DOJ/OPM observer and “monitor field reports” from Election Day.

Recommendation 6: Review Reports Filed By District Election Officers

Further research should include a review of the reports that must be filed by every District Election Officer to the Public Integrity Section of the Criminal Division of the Department of Justice. The DEOs play a central role in receiving reports of voting fraud and investigating and pursuing them. Their reports back to the Department would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or made confidential.

Recommendation 7: Attend Ballot Access and Voting Integrity Symposium

Further activity in this area should include attending the next Ballot Access and Voting Integrity Symposium. At this conference, prosecutors serving as District Election Officers in the 94 U.S. Attorneys’ Offices obtain annual training on fighting election fraud and voting rights abuses. These conferences are sponsored by the Voting Section of the Civil Rights Division and the Public Integrity Section of the Criminal Division, and feature presentations by Civil Rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys’ Offices. By attending the symposium researchers could learn more about the following: how District Election Officers are trained; how information about previous election and voting issues is presented; and how the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants.

Recommendation 8: Conduct Statistical Research

EAC should measure voting fraud and intimidation using interviews, focus groups, and a survey and statistical analysis of the results of these efforts. The sample should be based on the following factors:

- Ten locations that are geographically and demographically diverse where there have been many reports of fraud and/or intimidation;
- Ten locations (geographically and demographically diverse) that have not had many reports of fraud and/or intimidation;

EAC should also conduct a survey of elections officials, district attorneys, and district election officers. The survey sample should be large in order to be able to get the necessary subsets, and it must include a random set of counties where there have and have not been a large number of allegations.

Recommendation 9: Explore Improvements to Federal Law

Future researchers should review federal law to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threat.

Recommendation 10: Use Observers to Collect Data on Election Day

Use observers to collect data regarding fraud and intimidation at the polls on Election Day. There may be some limitations to the ability to conduct this type of research, including difficulty gaining access to polling places for the purposes of observation, and concerns regarding how the observers themselves may inadvertently or deliberately influence the occurrence of election crimes.

Recommendation 11: Study Absentee Ballot Fraud

Because absentee ballot fraud constitutes a large portion of election crimes, a stand-alone study of absentee ballot fraud should be conducted. Researchers should look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing fraud when absentee ballots are used.

Recommendation 12: Use Risk Analysis Methodology to Study Fraud

Conduct an analysis of what types of fraud people are most likely to commit. Researchers will use that risk analysis to rank the types of fraud based on the “ease of commission” and the impact of the fraud.

Recommendation 13: Conduct Research Using Database Comparisons

Researchers should compare information on databases to determine whether the voter rolls contain deceased persons and felons. In addition, the voter rolls can then be compared with the list of persons who voted to determine whether a vote was recorded by someone who is deceased or if felons are noted as having voted.

Recommendation 14: Conduct a Study of Deceptive Practices

The working group discussed the increasing use of deceptive practices, such as flyers and phone calls with false and/or intimidating information, to suppress voter participation. A number of groups, such as the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such

practices. These logs should be reviewed and analyzed to see how and where such practices are being conducted and what can be done about them.

Recommendation 15: Study Use of HAVA Administrative Complaint Procedure as Vehicle for Measuring Fraud and Intimidation

EAC should study the extent to which states are utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.

Recommendation 16: Examine the Use of Special Election Courts

Given that many state and local judges are elected, it may be worth exploring whether special election courts should be established to handle fraud and intimidation complaints before, during, and after Election Day. Pennsylvania employs such a system and could investigate how well that system is working.

Accepted Recommendations

There has never been a comprehensive, national study that gathered data regarding all claims, charges, and prosecutions of voting crimes. EAC feels that a comprehensive study is the most important research that it can offer the election community and the public. As such, EAC has adopted all or a part of six of the 16 recommendations made by EAC consultants and the working group.

While several of the other recommendations could be used to obtain more anecdotal information regarding election crimes, EAC believes that what is needed is a comprehensive survey and study of the information available from investigatory agencies, prosecutorial bodies and courts on the number and types of complaints, charges and prosecutions of election crimes. Additional media reviews, additional interviews and the use of observers to collect information from voters on Election Day will only serve to continue the use of anecdotal data to report on election crimes. Hard data on complaints, charges and prosecutions exists and we should gather and use that data, rather than rely on the perceptions of the media or the members of the public as to what might be fraud or intimidation.

Some of the recommendations are beyond the scope of the current study. While election courts may be a reasonable conclusion to reach after we determine the volume and type of election crimes being reported, charged or prosecuted, it is premature to embark on an analysis of that solution without more information. Last, some of the recommendations do not support a comprehensive study of election crimes. While a risk analysis might be appropriate in a smaller scale study, EAC desires to conduct a broader survey to avoid the existing problem of anecdotal and limited scope of information.

In order to further its goal of developing a comprehensive data set regarding election crimes and the laws and procedures used to identify and prosecute them, EAC intends to engage in the following research activities in studying the existence and enforcement of election crimes:

Survey Chief Election Officers Regarding Administrative Complaints

Likely sources of complaints concerning election crimes are the administrative complaint processes that states were required to establish to comply with Section 402 of HAVA. These complaint procedures were required to be in place prior to a state receiving any funds under HAVA. Citizens are permitted to file complaints alleging violations of HAVA Title III provisions under these procedures with the state's chief election official. Those complaints must be resolved within 60 days. The procedures also allow for alternative dispute resolution of claims. Some states have expanded this process to include complaints of other violations, such as election crimes.

In order to determine how many of these complaints allege the commission of election crimes, EAC will survey the states' chief election officers regarding complaints that have been filed, investigated, and resolved since January 1, 2004. EAC will use the definition of election crimes provided above in this report in its survey so that data regarding a uniform set of offenses will be collected.

Survey State Election Crime Investigation Units Regarding Complaints Filed and Referred

Several chief state election officials have developed investigation units focused on receiving, investigating, and referring complaints of election crimes. These units were established to bolster the abilities of state and local law enforcement to investigate allegations of election crimes. California, New York and Florida are just three examples of states that have these types of units.

EAC will use a survey instrument to gather information on the numbers and types of complaints that have been received by, investigated, and ultimately referred to local or state law enforcement by election crime investigation units since January 1, 2004. These data will help us understand the pervasiveness of perceived fraud, as well as the number of claims that state election officials felt were meritorious of being referred to local and state law enforcement or prosecutorial agencies for further action.

Survey Law Enforcement and Prosecutorial Agencies Regarding Complaints and Charge of Voting Crimes

While voters, candidates and citizens may call national hotlines or the news media to report allegations of election crimes, it is those complaints that are made to law enforcement that can be investigated and ultimately prosecuted. Thus, it is critical to the study of election crimes to obtain statistics regarding the number and types of complaints that are made to law enforcement, how many of those complaints result in the perpetrator

being charged or indicted, and how many of those charges or indictments result in pleas or convictions.

Thus, EAC will survey law enforcement and prosecutorial agencies at the local, state and federal level to determine the number and types of complaints, charges or indictments, and pleas or convictions of election crimes since January 1, 2004. In addition, EAC will seek to obtain an understanding of why some complaints are not charged or indicted and why some charges or indictments are not prosecuted.

Analyze Survey Data in Light of State Laws and Procedures

Once a reliable data set concerning the existence and enforcement of election crimes is assembled, a real analysis of the effectiveness of fraud prevention measures can be conducted. For example, data can be analyzed to determine if criminal activities related to elections are isolated to certain areas or regions of the country. Data collected from the election official surveys can be compared to the data regarding complaints, charges and prosecutions gathered from the respective law enforcement and prosecutorial agencies in each jurisdiction. The effect and/or effectiveness of provisions such as voter identification laws and challenger provisions can be assessed based on hard data from areas where these laws exist. Last, analyses such as the effectiveness of enforcement can be conducted in light of the resources available to the effort.

CONCLUSION

Election crimes are nothing new to our election process. The pervasiveness of these crimes and the fervor with which they have been enforced has created a great deal of debate among academics, election officials, and voters. Past studies of these issues have been limited in scope and some have been riddled with bias. These are issues that deserve comprehensive and nonpartisan review. EAC, through its clearinghouse role, will collect and analyze data on election crimes throughout the country. These data not only will tell us what types of election crimes are committed and where fraud exists, but also inform us of what factors impact the existence, prevention, and prosecution of election crimes.

EAC REPORT ON VOTER FRAUD AND VOTER INTIMIDATION STUDY

INTRODUCTION

Voter fraud and intimidation is a phrase familiar to many voting-aged Americans. However, it means different things to different people. Voter fraud and intimidation is a phrase used to refer to crimes, civil rights violations, and at times even the correct application of state or federal laws to the voting process. Past study of this topic has been as varied as its perceived meaning. In an effort to help understand the realities of voter fraud and voter intimidation in our elections, EAC has begun this, phase one, of a comprehensive study on election crimes. In this phase of its examination, EAC has developed a definition of election crimes and adopted some research methodology on how to assess the true existence and enforcement of election crimes in this country.

PURPOSE AND METHODOLOGY OF THE EAC STUDY

Section 241 of the Help America Vote Act of 2002 (HAVA) calls on the U.S. Election Assistance Commission (EAC) to research and study various issues related to the administration of elections. During Fiscal Year 2006, EAC began projects to research several of the listed topics. These topics for research were chosen in consultation with the EAC Standards Board and Board of Advisors. Voter fraud and voter intimidation was a topic that EAC as well as its advisory boards felt were important to study to help improve the administration of elections for federal office.

EAC began this study with the intention of identifying a common understanding of voter fraud and intimidation and devising a plan for a comprehensive study of these issues. This study was not intended to be a comprehensive review of existing voter fraud and voter intimidation actions, laws, or prosecutions. That type of research is well beyond the basic understanding that had to be established regarding what is commonly referred to as voter fraud and voter intimidation. Once that understanding was reached, a definition had to be crafted to refine and in some cases limit the scope of what reasonably can be researched and studied as evidence of voter fraud and voter intimidation. That definition will serve as the basis for recommending a plan for a comprehensive study of the area.

To accomplish these tasks, EAC employed two consultants, who along with EAC staff and interns conducted the research that forms the basis of this report. Consultants were chosen based upon their experience with the topic. In addition, consultants were chosen to assure a bipartisan representation in this study. The consultants and EAC staff were charged (1) to research the current state of information on the topics of voter fraud and voter intimidation, (2) to develop a uniform definition of voter fraud and voter intimidation, and (3) to propose recommended strategies for researching this subject.

EAC consultants reviewed existing studies, articles, reports and case law on voter fraud and intimidation. In addition, EAC consultants conducted interviews with selected

experts in the field. Last, EAC consultants and staff presented their study to a working group that provided feed back. The working group participants were:

The Honorable Todd Rokita
Indiana Secretary of State
Member, EAC Standards Board and the
Executive Board of the Standards Board

Kathy Rogers
Georgia Director of Elections, Office of
the Secretary of State
Member, EAC Standards Board

J.R. Perez
Guadalupe County Elections
Administrator, Texas

Barbara Arnwine
Executive Director, Lawyers Committee
for Civil Rights under Law
Leader of Election Protection Coalition

Benjamin L. Ginsberg
Partner, Patton Boggs LLP
Counsel to national Republican
campaign committees and Republican
candidates

Robert Bauer
Chair of the Political Law Practice at the
law firm of Perkins Coie, District of
Columbia
National Counsel for Voter Protection,
Democratic National Committee

Mark (Thor) Hearne II
Partner-Member, Lathrop & Gage, St
Louis, Missouri
National Counsel to the American
Center for Voting Rights

Barry Weinberg
Former Deputy Chief and Acting Chief,
Voting Section, Civil Rights Division,
U.S. Department of Justice

Technical Advisor:

Craig Donsanto
Director, Election Crimes Branch, U.S.
Department of Justice

Throughout the process, EAC staff assisted the consultants by providing statutes and cases on this subject as well as supervision on the direction, scope and product of this research.

The consultants drafted a report for EAC that included their summaries of existing laws, cases, studies and reports on voter fraud and intimidation as well as summaries of the interviews that they conducted. The draft report also provided a definition of voter fraud and intimidation and made certain recommendations developed by the consultants or by the working group on how to pursue further study of this subject. This document was vetted and edited to produce this final report.

EXISTING INFORMATION ABOUT FRAUD AND INTIMIDATION

To begin our study of voter fraud and voter intimidation, EAC consultants reviewed the current body of information on voter fraud and intimidation. What the world knows about these issues comes largely from a very limited body of reports, articles and books. There are volumes of case law and statutes in the various states that also impact our understanding of what actions or inactions are legally considered fraud or intimidation.

Last, there is anecdotal information available through media reports and interviews with persons who have administered elections, prosecuted fraud, and studied these problems. All of these resources were used by EAC consultants to provide an introductory look at the available knowledge of voter fraud and voter intimidation.

Reports and Studies of Voter Fraud and Intimidation

Over the years, there have been a number of studies conducted about the concepts of voter fraud and voter intimidation. EAC reviewed many of these studies and reports to develop a base-line understanding of the information that is currently available about voter fraud and voter intimidation. EAC consultants reviewed the following articles, reports and books, summaries of which are available in Appendix “__”:

Articles and Reports

- People for the American Way and the NAACP, “The Long Shadow of Jim Crow,” December 6, 2004.
- Laughlin McDonald, “The New Poll Tax,” *The American Prospect* vol. 13 no. 23, December 30, 2002.
- Wisconsin Legislative Audit Bureau, “An Evaluation: Voter Registration Elections Board” Report 05-12, September, 2005.
- Milwaukee Police Department, Milwaukee County District Attorney’s Office, Federal Bureau of Investigation, United States Attorney’s Office “Preliminary Findings of Joint Task Force Investigating Possible Election Fraud,” May 10, 2005.
- National Commission on Federal Election Reform, “Building Confidence in U.S. Elections,” Center for Democracy and Election Management, American University, September 2005.
- The Brennan Center for Justice at NYU School of Law and Spencer Overton, Commissioner and Law Professor at George Washington University School of Law “Response to the Report of the 2005 Commission on Federal Election Reform,” September 19, 2005.
- Chandler Davidson, Tanya Dunlap, Gale Kenny, and Benjamin Wise, “Republican Ballot Security Programs: Vote Protection or Minority Vote Suppression – or Both?” A Report to the Center for Voting Rights & Protection, September, 2004.
- Alec Ewald, “A Crazy Quilt of Tiny Pieces: State and Local Administration of American Criminal Disenfranchisement Law,” The Sentencing Project, November 2005.

- American Center for Voting Rights “Vote Fraud, Intimidation and Suppression in the 2004 Presidential Election,” August 2, 2005.
- The Advancement Project, “America’s Modern Poll Tax: How Structural Disenfranchisement Erodes Democracy” November 7, 2001
- The Brennan Center and Professor Michael McDonald “Analysis of the September 15, 2005 Voter Fraud Report Submitted to the New Jersey Attorney General,” The Brennan Center for Justice at NYU School of Law, December 2005.
- Democratic National Committee, “Democracy at Risk: The November 2004 Election in Ohio,” DNC Services Corporation, 2005
- Public Integrity Section, Criminal Division, United States Department of Justice, "Report to Congress on the Activities and Operations of the Public Integrity Section for 2002."
- Public Integrity Section, Criminal Division, United States Department of Justice, "Report to Congress on the Activities and Operations of the Public Integrity Section for 2003."
- Public Integrity Section, Criminal Division, United States Department of Justice, "Report to Congress on the Activities and Operations of the Public Integrity Section for 2004."
- Craig Donsanto, "The Federal Crime of Election Fraud," Public Integrity Section, Department of Justice, prepared for Democracy.Ru, n.d., at http://www.democracy.ru/english/library/international/eng_1999-11.html
- People for the American Way, Election Protection 2004, Election Protection Coalition, at <http://www.electionprotection2004.org/edaynews.htm>
- Craig Donsanto, "Prosecution of Electoral Fraud under United State Federal Law," *IFES Political Finance White Paper Series*, IFES, 2006.
- General Accounting Office, "Elections: Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote," Report to Congressional Requesters, September 2005.
- Lori Minnite and David Callahan, "Securing the Vote: An Analysis of Election Fraud," Demos: A Network of Ideas and Action, 2003.

- People for the American Way, NAACP, Lawyers Committee for Civil Rights, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," December 2004.

Books

- John Fund, *Stealing Elections: How Voter Fraud Threatens Our Democracy*, Encounter Books, 2004.
- Andrew Gumbel, *Steal this Vote: Dirty Elections and the Rotten History of Democracy in American*, Nation Books, 2005.
- Tracy Campbell, *Deliver the Vote: A History of Election Fraud, An American Political Tradition – 1742-2004*, Carroll & Graf Publishers, 2005.
- David E. Johnson and Jonny R. Johnson, *A Funny Thing Happened on the Way to the White House: Foolhardiness, Folly, and Fraud in the Presidential Elections, from Andrew Jackson to George W. Bush*, Taylor Trade Publishing, 2004.
- Mark Crispin Miller, *Fooled Again*, Basic Books, 2005.

During our review of these documents, we learned a great deal about the type of research that has been conducted in the past concerning voter fraud and voter intimidation. None of the studies or reports was based on a comprehensive study, survey or review of all allegations, prosecutions or convictions of state or federal crimes related to voter fraud or voter intimidation. Most reports focused on a limited number of case studies or instances of alleged voter fraud or intimidation. For example, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," a report produced by the People for the American Way, focused exclusively on citizen reports of fraud or intimidation to the Election Protection program during the 2004 presidential election. Similarly, reports produced annually by the Department of Justice, Public Integrity Division, deal exclusively with crimes reported to and prosecuted by the United States Attorneys and/or the Department of Justice through the Public Integrity Section.

It is also apparent from a review of these articles and books that there is no consensus on the pervasiveness of voter fraud and voter intimidation. Some reports, such as "Building Confidence in U.S. Elections," suggest that there is little or no evidence of extensive fraud in U.S. elections or of multiple voting. This conflicts directly with other reports, such as the "Preliminary findings of Joint Task Force Investigating Possible Election Fraud," produced by the Milwaukee Police Department, Milwaukee County District Attorney's Office, FBI and U.S. Attorney's Office. That report cited evidence of more than 100 individual instances of suspected double-voting, voting in the name of persons who likely did not vote, and/or voting using a name believed to be fake.

Voter intimidation is also a topic of some debate. Generally, speaking there is little agreement on what constitutes actionable voter intimidation. Some studies and reports cover only intimidation that involves physical or financial threats, while others cover non-criminal intimidation even legal practices that they allege suppress the vote.

One point of agreement is that absentee voting and voter registration by third-party groups create opportunities for fraud. A number of studies cited circumstances in which voter registration drives have falsified voter registration applications or have destroyed voter registration applications of voters of a certain party. Others conclude that paying persons per voter registration application creates the opportunity and perhaps the incentive for fraud.

Interviews with Experts

In addition to reviewing prior studies and reports on voter fraud and intimidation, EAC consultants interviewed a number of persons regarding their experiences and research of voter fraud and voter intimidation. Persons interviewed included

Wade Henderson
Executive Director,
Leadership Conference for Civil Rights

Wendy Weiser
Deputy Director,
Democracy Program, The Brennan
Center

William Groth
Attorney for the plaintiffs in the Indiana
voter identification litigation

Lori Minnite
Barnard College, Columbia University

Neil Bradley
ACLU Voting Rights Project

Nina Perales
Counsel,
Mexican American Legal Defense and
Education Fund

Pat Rogers
Attorney, New Mexico

Rebecca Vigil-Giron
Secretary of State, New Mexico

Sarah Ball Johnson
Executive Director,
State Board of Elections, Kentucky

Stephen Ansolobhere
Massachusetts Institute of Technology

Chandler Davidson
Rice University

Tracey Campbell
Author, *Deliver the Vote*

Douglas Webber
Assistant Attorney General, Indiana

Heather Dawn Thompson
Director of Government Relations,
National Congress of American Indians

Jason Torchinsky
Assistant General Counsel,
American Center for Voting Rights

Robin DeJarnette
Executive Director,
American Center for Voting Rights

Evelyn Stratton
Justice
Supreme Court of Ohio

Harry Van Sickle
Commissioner of Elections,
Pennsylvania

Tony Sirvello
Executive Director
International Association of Clerks,
Recorders, Election Officials and
Treasurers

Joseph Sandler
Counsel
Democratic National Committee

Joseph Rich
Former Director
Voting Section, Civil Rights Division
U.S. Department of Justice

John Ravitz
Executive Director
New York City Board of Elections

Craig Donsanto
Director, Public Integrity Section
U.S. Department of Justice

Sharon Priest
Former Secretary of State, Arkansas

Kevin Kennedy
Executive Director
State Board of Elections, Wisconsin

John Tanner
Director
Voting Section, Civil Rights Division
U.S. Department of Justice

These interviews in large part confirmed the conclusions that were gleaned from the articles, reports and books that were analyzed. For example, the interviewees largely agreed that absentee balloting is subject to the greatest proportion of fraudulent acts, followed by vote buying and voter registration fraud. They similarly pointed to voter registration drives by third-party groups as a source of fraud, particularly when the workers are paid per registration. Many asserted that impersonation of voters is probably the least frequent type of fraud, citing as reasons that it was the most likely type of fraud to be discovered and that there are stiff penalties associated with this type of fraud.

Interviewees differed on what they believe constitutes actionable voter intimidation. Law enforcement and prosecutorial agencies tend to look to the criminal definitions of voter intimidation which generally require some threat of physical or financial harm. On the other hand, voter rights advocates tended to point to activities such as challenger laws, voter identification laws, the location of polling places, and distribution of voting machines as activities that can constitute voter intimidation.

Those interviewed also expressed opinions on the enforcement of voter fraud and voter intimidation laws. States have varying authorities to enforce these laws. In some states, enforcement is left to the county or district attorney, and in others enforcement is managed by the state's attorney general. Regardless, voter fraud and voter intimidation are difficult to prove and require resources and time that local law enforcement and prosecutorial agencies do not have. Federal law enforcement and prosecutorial agencies

have more time and resources but have limited jurisdiction. They can only prosecute crimes related to elections involving federal candidates. Those interviewed differed on the effectiveness of the current system of enforcement, including those that allege that prosecutions are not sufficiently aggressive and those that feel that the current laws are sufficient for prosecuting fraud and intimidation.

A summary of the each of the interviews conducted is attached as Appendix “ ___”.

Case Law and Statutes

Consultants reviewed over 40,000 cases that were identified using a series of search terms related to voter fraud and voter intimidation. The majority of these cases came from appeal courts. This is not a surprising situation, since most cases that are publicly reported come from courts of appeal. Very few cases that are decided at the district court level are reported for public review.

Very few of the identified cases were applicable to this study. Of those that were applicable, no apparent thematic pattern emerged. However, it did seem that the greatest number of cases reported on fraud and intimidation have shifted from past patterns of stealing votes to present problems with voter registration, voter identification, the proper delivery and counting of absentee and overseas ballots, provisional voting, vote buying and challenges to felon eligibility.

A listing of the cases reviewed in this study is attached as Appendix “ ___”.

Media Reports

EAC consultants reviewed thousands of media reports concerning a wide variety of potential voter fraud or voter intimidation, including:

- absentee ballot fraud,
- voter registration fraud,
- voter intimidation and suppression,
- deceased voters,
- multiple voting,
- felons voting,
- non-citizens voting,
- vote buying,
- deceptive practices, and
- fraud by election officials.

While these reports showed that there were a large number of allegations of voter fraud and voter intimidation, they provided much less information as to whether the allegations were ever formalized as complaints to law enforcement, whether charges were filed, whether prosecutions ensued, and whether any convictions were made. The media reports were enlightening as to the pervasiveness of complaints of fraud and intimidation

throughout the country, the correlation between fraud allegations and the perception that the state was a “battleground” or “swing” state, and the fact that there were reports of almost all types of voter fraud and voter intimidation. However, these reports do not provide much data for analysis as to the number of complaints, charge and prosecutions of voter fraud and intimidation throughout the country.

DEFINITION OF ELECTION CRIMES

From our study of available information on voter fraud and voter intimidation, we have learned that these terms mean many things to many different people. These terms are used casually to refer to anything from vote buying to refusing to register a voter to falsifying voter registration applications. Upon further inspection, however, it is apparent that there is no common understanding of what is and what is not “voter fraud” and “voter intimidation.” Some think of voter fraud and voter intimidation only as criminal acts, while others include actions that may constitute civil wrongs, civil rights violations, and even legal and appropriate activities. In order to come up with a common definition and list of activities that can be studied, EAC assessed the appropriateness of the terminology that is currently in use and applied certain factors to limit the scope and reach of what can and will be studied by EAC in the future.

New Terminology

The phrase “voter fraud” is really a misnomer for a concept that is much broader. “Fraud” is a concept that connotes an intentional act of deception, which may constitute either a criminal act or civil tort depending upon the willfulness of the act.

Fraud, n. 1. A knowing misrepresentation of the truth or concealment of a material fact to induce another to act to his or her detriment. • Fraud is usu. a tort, but in some cases (esp. when the conduct is willful) it may be a crime.

Black’s Law Dictionary, Eighth Edition, p. 685.

A “voter” is a person who is eligible to and engages in the act of voting. Black’s Law Dictionary, Eighth Edition, p. 1608. Using these terms to form a definition of “voter fraud,” it means fraudulent or deceptive acts committed by the voter or in which the voter is the victim. Thus, a voter who intentionally provides false information on a voter registration application or intentionally impersonates another registered voter and attempts to vote for that person would be committing “voter fraud.” Similarly, a person who knowingly provides false information to a voter about the location of the voter’s polling place commits fraud on the voter.

The phrase “voter fraud” does not capture a myriad of other criminal acts that are related to elections which are not perpetrated by the voter and/or do not involve an act of deception. For example, “voter fraud” does not capture actions or willful inaction by candidates and election workers. When an election official willfully and knowingly

refuses to register to vote an otherwise legally eligible person it is a crime. This is a crime that involves neither the voter nor an act of deception.

To further complicate matters, the phrases “voter fraud” and “voter intimidation” are used to refer to actions or inactions that are criminal as well as those that are potentially civil wrongs and even those that are legal. Obviously, criminal acts and civil wrongs are pursued in a very different manner. Criminal acts are prosecuted by the local, state or federal government. Generally, civil wrongs are prosecuted by the individual who believes that they were harmed. In some cases, when civil rights are involved, the civil division of the Department of Justice may become involved.

The goal of this study was to develop a common definition of what is generically referred to as “voter fraud” and “voter intimidation” that would serve as the basis of a future, comprehensive study of the existence of these problems. In order to meet that goal, we recognize that the current terminology does not accurately represent the spectrum of activities that we desire to study. Furthermore, we recognize that the resources, both financial and human capital, needed to study allegations and prosecutions of criminal acts, suits involving civil torts, and allegations of potential voter suppression through the use legal election processes are well beyond the resources available to EAC. As such, EAC has defined “election crimes,” a phrase that captures all crimes related to the voter registration and voting processes.

What is an Election Crime for Purposes of this Study

Election crimes are intentional acts or willful failures to act, prohibited by state or federal law, that are designed to cause ineligible persons to participate in the election process, eligible persons to be excluded from the election process, ineligible votes to be cast in an election, eligible votes not to be cast or counted, or other interference with or invalidation of election results. Election crimes generally fall into one of four categories: acts of deception, acts of coercion, acts of damage or destruction, and failures or refusals to act.

Generally speaking, election crimes can be committed by voters, candidates, election officials, or any other members of the public that desire to criminally impact the result of an election. However, crimes that are based upon knowing or willful failure to act assume that a duty to act exists. Election officials have affirmative duties to act with regard to elections. By and large, other groups and individuals do not have such duties.

The victim of an election crime can be a voter, a group of voters, or the public, in general. Election crimes can occur during any stage of the election process, including but not limited to qualification of candidates; voter registration; campaigning; voting system preparation and programming; voting either early, absentee, or election day; vote tabulation; recounts; and recalls.

The following are examples of activities that may constitute election crimes. This list is not intended to be exhaustive, but is representative of what states and the federal government consider criminal activity related to elections.

Acts of Deception

- Knowingly causing to be mailed or distributed, or knowingly mailing or distributing, literature that includes false information about the voter's precinct or polling place, regarding the date and time of the election or regarding a candidate;
- Possessing an official ballot outside the voting location, unless the person is an election official or other person authorized by law or local ordinance possess a ballot outside of the polling location;
- Making, or knowingly possessing, a counterfeit of an official election ballot;
- Signing a name other than his/her own to a petition proposing an initiative, referendum, recall, or nomination of a candidate for office;
- Knowingly signing more than once for the proposition, question, or candidate at one election;
- Signing a petition proposing an initiative or referendum when the signer is not a qualified voter.
- Voting or attempting to vote in the name of another person;
- Voting or attempting to vote more than once at the same election;
- Intentionally making a false affidavit, swearing falsely, or falsely affirming under an oath required by a statute regarding their voting status, including when registering to vote, requesting an absentee ballot or presenting to vote in person;
- Registering to vote without being entitled to register;
- Knowingly making a material false statement on an application for voter registration or re-registration; and
- Voting or attempting to vote in an election after being disqualified or when the person knows that he/she is not eligible to vote.

Acts of Coercion

- Using, threatening to use, or causing to be used force, coercion, violence, restraint, or inflicting, threatening to inflict, or causing to be inflicted damage harm, or loss, upon or against another person to induce or compel that person to vote or refrain from voting or to register or refrain from registering to vote;
- Knowingly paying, offering to pay, or causing to be paid money or other valuable thing to a person to vote or refrain from voting for a candidate or for or against an election proposition or question;
- Knowingly soliciting or encouraging a person who is not qualified to vote in an election;
- Knowingly challenging a person's right to vote without probable cause or on fraudulent grounds, or engaging in mass, indiscriminate, and groundless challenging of voters solely for the purpose of preventing voter from voting or delay the process of voting;
- As an employer, attempting by coercion, intimidation, threats to discharge or to lessen the remuneration of an employee, to influence his vote in any election, or who requires or demands an examination or inspection by himself or another of an employee's ballot;

- Soliciting, accepting, or agreeing to accept money or other valuable thing in exchange for signing or refraining from signing a petition proposing an initiative;
- Inducing or attempting to induce an election official to fail in the official's duty by force, threat, intimidation, or offers of reward;
- Directly or through any other person advancing, paying, soliciting, or receiving or causing to be advanced, paid, solicited, or received, any money or other valuable consideration to or for the use of any person in order to induce a person not to become or to withdraw as a candidate for public office; and
- Soliciting, accepting, or agreeing to accept money or other valuable thing in exchange for registering to vote.

Acts of Damage or Destruction

- Removing or destroying any of the supplies or other conveniences placed in the voting booths or compartments for the purpose of enabling the voter to vote his or her ballot;
- Removing, tearing down, or defacing election materials, instructions or ballots;
- Fraudulently altering or changing the vote of any elector, by which such elector is prevented from voting as he intended;
- Knowingly removing, altering, defacing or covering any political sign of any candidate for public office for a prescribed period prior to and following the election;
- Intentionally changing, attempting to change, or causing to be changed an official election document including ballots, tallies, and returns; and
- Intentionally delaying, attempting to delay, or causing to be delayed the sending of certificate, register, ballots, or other materials whether original or duplicate, required to be sent by jurisdictional law.

Failure or Refusal to Act

- Intentionally failing to perform an election duty, or knowingly committing an unauthorized act with the intent to effect the election;
- Knowingly permitting, making, or attempting to make a false count of election returns;
- Intentionally concealing, withholding, or destroying election returns or attempts to do so;
- Marking a ballot by folding or physically altering the ballot so as to recognize the ballot at a later time;
- Attempting to learn or actually and unlawfully learning how a voter marked a ballot;
- Distributing or attempting to distribute election material knowing it to be fraudulent;
- Knowingly refusing to register a person who is entitled to register under the rules of that jurisdiction; and
- Knowingly refusing to allow an eligible voter to cast his/her ballot.

What is not an Election Crime for Purposes of this Study

There are some actions or inactions that may constitute crimes or civil wrongs that we do not include in our definition of “election crimes.” All crimes or civil violations related to campaign finance reporting either at the state or federal level are not “election crimes” for purposes of this study and any future study conducted by EAC. Similarly, criminal acts that are unrelated to elections, voting, or voter registration are not “election crimes,” even when those offenses occur in a polling place, voter registration office, or a candidate’s office or appearance. For example, an assault or battery that results from a fight in a polling place or at a candidate’s office is not an election crime. Similarly, violations of ethical provisions such as the Hatch Act are not “election crimes.” Last, actions that do not rise to the level of criminal activity, that is a misdemeanor, relative felony or felony, are not “election crimes.”

RECOMMENDATIONS ON HOW TO STUDY ELECTION CRIMES

As a part of its study, EAC sought recommendations on ways that EAC can study the existence of election crimes. EAC consultants developed recommendations. In addition, the working group and some of the persons interviewed as a part of this study provided recommendations.

Recommendation 1: Conduct More Interviews

Future activity in this area should include conducting additional interviews. In particular, more election officials from all levels of government, parts of the country, and parties should be interviewed. It would also be especially beneficial to talk to people in law enforcement, specifically federal District Election Officers (“DEOs”) and local district attorneys, as well as civil and criminal defense attorneys.

Recommendation 2: Follow Up on Media Research

The media search conducted for this phase of the research was based on a list of search terms agreed upon by EAC consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contain allegations of fraud or intimidation. Similarly, many of the articles contain information about investigations into such activities or even charges brought. Additional media research should be conducted to determine what, if any, resolutions or further activity there was in each case.

Recommendation 3: Follow Up on Allegations Found in Literature Review

Many of the allegations made in the reports and books that were analyzed and summarized by EAC consultants were not substantiated and were certainly limited by the date of publication of those pieces. Despite this, such reports and books are frequently cited by various interested parties as evidence of fraud or intimidation. Further research should include follow up on the allegations discovered in the literature review.

Recommendation 4: Review Complaints Filed With “MyVote1” Voter Hotline

During the 2004 election and the statewide elections of 2005, the University of Pennsylvania led a consortium of groups and researchers in conducting the MyVote1 Project. This project involved using a 1-800 voter hotline where voters could call for poll location, be transferred to a local hotline, or leave a recorded message with a complaint. In 2004, this resulted in over 200,000 calls received and over 56,000 recorded complaints.

Further research should be conducted using the MyVote1 data with the cooperation of the project leaders. While perhaps not a fully scientific survey given the self-selection of the callers, the information regarding 200,000 complaints may provide a good deal of insight into the problems voters experienced, especially those in the nature of intimidation or suppression.

Recommendation 5: Further Review of Complaints Filed With U.S. Department of Justice

Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice has a variety in ways it tracks complaints of voter intimidation. Attempts should be made to obtain relevant data, including the telephone logs of complaints and information from the Interactive Case Management (ICM) system. Further research should also include a review and analysis of the DOJ/OPM observer and monitor field reports from Election Day.

Recommendation 6: Review Reports Filed By District Election Officers

Further research should include a review of the reports that must be filed by every District Election Officer to the Public Integrity Section of the Criminal Division of the Department of Justice. The DEOs play a central role in receiving reports of voter fraud and investigating and pursuing them. Their reports back to the Department would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or made confidential.

Recommendation 7: Attend Ballot Access and Voting Integrity Symposium

Further activity in this area should include attending the next Ballot Access and Voting Integrity Symposium. At this conference, prosecutors serving as District Election Officers in the 94 U.S. Attorneys’ Offices obtain annual training on fighting election fraud and voting rights abuses. These conferences are sponsored by the Voting Section of the Civil Rights Division and the Public Integrity Section of the Criminal Division, and feature presentations by Civil Rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys’ Offices. By attending the symposium researchers could learn more about the following how District Election Officers are trained; how information about previous election and voting issues is presented; and how the Voting Rights Act, the criminal laws governing election fraud and intimidation, the

National Voter Registration Act, and the Help America Vote Act are described and explained to participants

Recommendation 8: Conduct Statistical Research

EAC should measure voter fraud and intimidation using interviews, focus groups, and a survey and statistical analysis of the results of these efforts. The sample should be based on the following factors:

- Ten locations that are geographically and demographically diverse where there have historically been many reports of fraud and/or intimidation;
- Ten locations (geographically and demographically diverse) that have not had many reports of fraud and/or intimidation;

EAC should also conduct a survey of elections officials, district attorneys, and district election officers. The survey sample should be large in order to be able to get the necessary subsets. The sample must include a random set of counties where there have and have not been a large number of allegations

Recommendation 9: Explore Improvements to Federal Law

Future researchers should review federal law to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threat.

Recommendation 10: Use Observers to Collect Data on Election Day

Use observers to collect data regarding fraud and intimidation at the polls in on Election Day. There may be some limitations to the ability to conduct this type of research, including difficulty gaining access to polling places for the purposes of observation.

Recommendation 11: Study Absentee Ballot Fraud

Because absentee ballot fraud constitutes a large portion of election crimes, a stand-alone study of absentee ballot fraud should be conducted. Researchers should look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing them.

Recommendation 12: Use Risk Analysis Methodology to Study Fraud

Conduct an analysis of what types of fraud people are most likely to commit. Researchers can use that risk analysis to rank the types of fraud based on the ease of commission and the impact of the fraud.

Recommendation 13: Conduct Research Using Database Comparisons

Researchers should compare information on databases to determine whether the voter rolls contain deceased persons and felons. In addition, the voter rolls can then be compared with the list of persons who voted to determine whether deceased voters or felons actually voted.

Recommendation 14: Conduct a Study of Deceptive Practices

The working group discussed the increasing use of deceptive practices, such as flyers with false and/or intimidating information, to suppress voter participation. A number of groups, such as the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such practices. These logs should be reviewed and analyzed to see how such practices are being conducted and what can be done about them.

Recommendation 15: Study Use of HAVA Administrative Complaint Procedure as Vehicle for Measuring Fraud and Intimidation

EAC should study the extent to which states are actually utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.

Recommendation 16: Examine the Use of Special Election Courts

Given that many state and local judges are elected, it may be worth exploring whether special election courts should be established to handle fraud and intimidation complaints before, during and after Election Day. Pennsylvania employs such a system and could investigate how well that system is working.

Accepted Recommendations

There has never been a comprehensive study that gathered data regarding all claims, charges and prosecutions of voting crimes. EAC feels that a comprehensive study is the most important research that it can offer the election community and the public. As such, EAC has adopted all or a part of six of the 16 recommendations made by EAC consultants and working group.

While several of the other recommendations could be used to obtain more anecdotal information regarding election crimes, EAC believes that what is needed is a comprehensive survey and study of the information available from investigatory agencies, prosecutorial bodies and courts on the number and types of complaints, charges and prosecutions of election crimes. Additional media reviews, additional interviews and the use of observers to collect information from voters on Election Day will only serve to continue the use of anecdotal data to report on election crimes. Hard data on complaints, charges and prosecutions exists and we should gather and use that data, rather than rely on the perceptions of the media or the members of the public as to what might be fraud or intimidation.

Some of the recommendations are beyond the scope of the current study. While election courts may be a reasonable conclusion to reach after we determine what volume and type of election crimes are being reported, charged or prosecuted, it is premature to embark on an analysis of that solution without more information. Last, some of the recommendations do not support a comprehensive study of election crimes. While a risk analysis might be appropriate in a smaller scale study, EAC desires to conduct a broader survey to avoid the existing problem of anecdotal and limited scope of information.

In order to further its goal of developing a comprehensive data set regarding election crimes, EAC intends to engage in the following research activities in studying the existence and enforcement of election crimes:

Survey Chief Election Officers Regarding Administrative Complaints

Likely sources of complaints concerning voting crimes are the administrative complaint processes that states were required to establish as a part of complying with HAVA. Those complaint procedures were required to be in place prior to a state receiving any funds under HAVA. Citizens are permitted to file complaints under those procedures with the state's chief election official and those complaints must be resolved within 60 days. The procedures also allow for alternative dispute resolution of claims.

In order to determine how many of these complaints allege the commission of election crimes, EAC will survey the states' chief election officers regarding complaints that have been filed, investigated and resolved since January 1, 2004. EAC will use the definition of election crimes provided above in this report in its survey so that data regarding a uniform set of offenses can be collected.

Survey State Election Crime Investigation Units Regarding Complaints Filed and Referred

Several chief state election officials have developed investigation units focused on receiving, investigating and referring complaints of election crimes. These units were established to bolster the abilities of state and local law enforcement to investigate allegations of election crimes. California, New York and Florida are just three examples of states that have these types of units.

EAC will use a survey instrument to gather information on the numbers and types of complaints that have been received by, investigated and ultimately referred to local or state law enforcement by election crime investigation units since January 1, 2004. This data will help us understand the pervasiveness of perceived fraud, as well as the number of claims that state election officials felt were meritorious of being referred to local and state law enforcement or prosecutorial agencies for further action.

Survey Law Enforcement and Prosecutorial Agencies Regarding Complaints and Charge of Voting Crimes

While voters, candidates and citizens may call national hotlines or the news media to report allegations of election crimes, it is those complaints that are made to law enforcement that can be investigated and ultimately prosecuted. Thus, it is critical to the study of election crimes to obtain statistics regarding the number and types of complaints that are made to law enforcement, how many of those complaints result in the perpetrator being charged or indicted, and how many of those charges or indictments result in pleas or convictions.

Thus, EAC will survey law enforcement and prosecutorial agencies at the local, state and federal level to determine the number and types of complaints, charges or indictments, and pleas or convictions of election crimes since January 1, 2004. In addition, EAC will seek to obtain an understanding of why some complaints are not charged or indicted and why some charges or indictments are not prosecuted.

Analyze Survey Data in Light of State Laws and Procedures

Once a reliable data set concerning the existence and enforcement of election crimes is assembled, a real analysis of the effectiveness of fraud prevention measures can be conducted. For example, data can be analyzed to determine if criminal activities related to elections are isolated to certain areas or regions of the country. Data collected from the election official surveys can be compared to the data regarding complaints, charges and prosecutions gathered from the respective law enforcement and prosecutorial agencies in each jurisdiction. The effect and/or effectiveness of provisions such as voter identification laws and challenger provisions can be assessed based on hard data from areas where these laws exist. Last, analyses such as the effectiveness of enforcement can be conducted in light of the resources available to the effort.

CONCLUSION

Election crimes are nothing new to our election process. The pervasiveness of these crimes and the fervor with which they have been enforced has created a great deal of debate among academics, election officials, and political pundits. Past studies of these issues have been limited in scope and some have been riddled with bias. These are issues that deserve comprehensive and nonpartisan review. EAC through its clearinghouse role will collect and analyze data on election crimes throughout the country. These data not only will tell us what types of election crimes are committed and where fraud exists, but also inform us of what factors impact the existence, prevention and prosecution of election crimes.

<http://www.usdoj.gov/crt/voting/misc/faq.htm#faq18> (as of 8-2-06)**

What responsibilities does the Justice Department have with regard to voter fraud or intimidation?

The administration of elections is chiefly a function of state government. However, federal authorities sometimes become involved in election fraud matters when a state prosecutor asks for federal assistance. In addition, the Justice Department can become involved when allegations arise that criminal vote fraud has occurred in a federal election. And, in some exceptional cases, where voting fraud or intimidation involving racial bias occurs in local or state elections, federal criminal charges may also be brought and are handled by the Criminal Section of the Civil Rights Division.

If you have information about vote fraud, you should contact the nearest office of the FBI or your local U.S. Attorney's office. If you know of vote fraud that was driven by racial animus, you can either contact the Voting Section, or contact the Criminal Section of the Civil Rights Division:

Existing Research Analysis

There are many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. There is little research that is truly systematic or scientific. The most systematic look at fraud is the report written by Lori Minnite. The most systematic look at voter intimidation is the report by Laughlin McDonald. Books written about this subject seem to all have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists. It is hoped that this gap will be filled in the "second phase" of this EAC project.

Moreover, reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund's frequently cited book. Again, this is something that it is hoped will be addressed in the "second phase" of this EAC project by doing follow up research on allegations made in reports, books and newspaper articles.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate, but some reports say it is a major problem, albeit hard to identify.
- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

APPENDIX C

BRENNAN CENTER TASK FORCE ON VOTING SYSTEM SECURITY, LAWRENCE NORDEN, CHAIR

Excerpted from p.p. 8-19

METHODOLOGY

The Task Force concluded, and the peer review team at NIST agreed, that the best approach for comprehensively evaluating voting system threats was to: (1) identify and categorize the potential threats against voting systems, (2) prioritize these threats based upon an agreed upon metric (which would tell us how difficult each threat is to accomplish from the attacker's point of view), and (3) determine, utilizing the same metric employed to prioritize threats, how much more difficult each of the catalogued attacks would become after various sets of countermeasures are implemented.

This model allows us to identify the attacks we should be most concerned about (*i.e.*, the most practical and least difficult attacks). Furthermore, it allows us to quantify the potential effectiveness of various sets of countermeasures (*i.e.*, how difficult the least difficult attack is after the countermeasure has been implemented). Other potential models considered, but ultimately rejected by the Task Force, are detailed in Appendix B.

IDENTIFICATION OF THREATS

The first step in creating a threat model for voting systems was to identify as many potential attacks as possible. To that end, the Task Force, together with the participating election officials, spent several months identifying voting system vulnerabilities. Following this work, NIST held a Voting Systems Threat Analysis Workshop on October 7, 2005. Members of the public were invited to write up and post additional potential attacks. Taken together, this work produced over 120 potential attacks on the three voting systems. They are detailed in the catalogs annexed.²⁰ Many of the attacks are described in more detail at <http://vote.nist.gov/threats/papers.htm>.

The types of threats detailed in the catalogs can be broken down into nine categories: (1) the insertion of corrupt software into machines prior to Election Day; (2) wireless and other remote control attacks on voting machines on Election Day; (3) attacks on tally servers; (4) miscalibration of voting machines; (5) shut off of voting machine features intended to assist voters; (6) denial of service attacks; (7) actions by corrupt poll workers or others at the polling place to affect votes cast; (8) vote buying schemes; (9) attacks on ballots or VVPT. Often, the actual attacks involve some combination of these categories. We provide a discussion of each type of attack in "Categories of Attacks," *infra* at pp. 24–27.

PRIORITIZING THREATS: NUMBER OF INFORMED PARTICIPANTS AS METRIC

016307

Without some form of prioritization, a compilation of the threats is of limited value. Only by prioritizing these various threats could we help election officials identify which attacks they should be most concerned about, and what steps could be taken to make such attacks as difficult as possible. As discussed below, we have determined the level of difficulty for each attack where the attacker is attempting to affect the outcome of a close statewide election.²¹

There is no perfect way to determine which attacks are the least difficult, because each attack requires a different mix of resources – well-placed insiders, money, programming skills, security expertise, *etc.* Different attackers would find certain resources easier to acquire than others. For example, election fraud committed by local election officials would always involve well-placed insiders and a thorough understanding of election procedures; at the same time, there is no reason to expect such officials to have highly skilled hackers or first-rate programmers working with them. By contrast, election fraud carried out by a foreign government would likely start with plenty of money and technically skilled attackers, but probably without many conveniently placed insiders or detailed knowledge of election procedures.

Ultimately, we decided to use the “number of informed participants” as the metric for determining attack difficulty. An attack which uses fewer participants is deemed the easier attack.

We have defined “informed participant” as someone whose participation is needed to make the attack work, and who knows enough about the attack to foil or expose it. This is to be distinguished from a participant who unknowingly assists the attack by performing a task that is integral to the attack’s successful execution without understanding that the task is part of an attack on voting systems.

The reason for using the security metric “number of informed participants” is relatively straightforward: the larger a conspiracy is, the more difficult it would be to keep it secret. Where an attacker can carry out an attack by herself, she need only trust herself. On the other hand, a conspiracy that requires thousands of people to take part (like a vote-buying scheme) also requires thousands of people to keep quiet. The larger the number of people involved, the greater the likelihood that one of them (or one who was approached, but declined to take part) would either inform the public or authorities about the attack, or commit some kind of error that causes the attack to fail or become known.

Moreover, recruiting a large number of people who are willing to undermine the integrity of a statewide election is also presumably difficult. It is not hard to imagine two or three people agreeing to work to change the outcome of an election. It seems far less likely that an attacker could identify and employ hundreds or thousands of similarly corrupt people without being discovered.

We can get an idea of how this metric works by looking at one of the threats listed in our catalogs: the vote-buying threat, where an attacker or attackers pay individuals to vote for a particular candidate. This is Attack Number 26 in the PCOS Attack Catalog²² (though this attack would not be substantially different against DREs or DREs w/ VVPT).²³ In order to work under our current types of voting

systems, this attack requires (1) at least one person to purchase votes, (2) many people to agree to sell their votes, and (3) some way for the purchaser to confirm that the voters she pays actually voted for the candidate she supported. Ultimately, we determined that, while practical in smaller contests, a vote-buying attack would be an exceptionally difficult way to affect the outcome of a statewide election. This is because, even in a typically close statewide election, an attacker would need to involve thousands of voters to ensure that she could affect the outcome of a statewide race.²⁴

For a discussion of other metrics we considered, but ultimately rejected, *see* Appendix C.

DETERMINING NUMBER OF INFORMED PARTICIPANTS

DETERMINING THE STEPS AND VALUES FOR EACH ATTACK

The Task Force members broke down each of the catalogued attacks into its necessary steps. For instance, Attack 12 in the PCOS Attack Catalog is “Stuffing Ballot Box with Additional Marked Ballots.”²⁵ We determined that, at a minimum, there were three component parts to this attack: (1) stealing or creating the ballots and then marking them, (2) scanning marked ballots through the PCOS scanners, probably before the polls opened, and (3) modifying the poll books in each location to ensure that the total number of votes in the ballot boxes was not greater than the number of voters who signed in at the polling place.

Task Force members then assigned a value representing the minimum number of persons they believed would be necessary to accomplish each goal. For PCOS Attack 12, the following values were assigned:²⁶

Minimum number required to steal or create ballots: 5 persons total.²⁷

Minimum number required to scan marked ballots: 1 per polling place attacked.

Minimum number required to modify poll books: 1 per polling place attacked.²⁸

After these values were assigned, the Brennan Center interviewed several election officials to see whether they agreed with the steps and values assigned to each attack.²⁹ When necessary, the values and steps were modified. The new catalogs, including attack steps and values, were then reviewed by Task Force members. The purpose of this review was to ensure, among other things, that the steps and values were sound.

These steps and values tell us how difficult it would be to accomplish a *single attack in a single polling place*. They do not tell us how many people it would take to change the outcome of an election successfully – that depends, of course, on specific facts about the jurisdiction: how many votes are generally recorded in each polling place, how many polling places are there in the jurisdiction, and how close is the race? For this reason, we determined that it was necessary to construct a hypothetical jurisdiction, to which we now turn.

NUMBER OF INFORMED PARTICIPANTS NEEDED TO CHANGE STATEWIDE ELECTION

We have decided to examine the difficulty of each attack in the context of changing the outcome of a reasonably close statewide election. While we are concerned by potential attacks on voting systems in any type of election, we are most troubled by attacks that have the potential to affect large numbers of votes. These are the attacks that could actually change the outcome of a statewide election with just a handful of attack participants.

We are less troubled by attacks on voting systems that can only affect a small number of votes (and might therefore be more useful in local elections). This is because there are many non-system attacks that can also affect a small number of votes (*i.e.*, sending out misleading information about polling places, physically intimidating voters, submitting multiple absentee ballots, *etc.*). Given the fact that these non-system attacks are likely to be less difficult in terms of number of participants, financial cost, risk of detection, and time commitment, we are uncertain that an attacker would target *voting machines* to alter a small number of votes.

In order to evaluate how difficult it would be for an attacker to change the outcome of a statewide election, we created a composite jurisdiction. The composite jurisdiction was created to be representative of a relatively close statewide election. We did not want to examine a statewide election where results were so skewed toward one candidate (for instance, the re-election of Senator Edward M. Kennedy in 2000, where he won 73% of the vote³⁰), that reversing the election results would be impossible without causing extreme public suspicion. Nor did we want to look at races where changing only a relative handful of votes (for instance, the Governor's race in Washington State in 2004, which was decided by a mere 129 votes³¹) could affect the outcome of an election; under this scenario, many of the potential attacks would involve few people, and therefore look equally difficult.

We have named our composite jurisdiction "the State of Pennasota." The State of Pennasota is a composite of ten states: Colorado, Florida, Iowa, Ohio, New Mexico, Pennsylvania, Michigan, Nevada, Wisconsin and Minnesota. These states were chosen because they were the ten "battleground" states that Zogby International consistently polled in the spring, summer, and fall 2004.³² These are statewide elections that an attacker would have expected, ahead of time, to be fairly close.

We have also created a composite election, which we label the "Governor's Race" in Pennasota. The results of this election are a composite of the actual results in the same ten states in the 2004 Presidential Election.

We have used these composites as the framework by which to evaluate the difficulty of the various catalogued attacks.³³ For instance, we know a ballot-box stuffing attack would require roughly five people to create and mark fake ballots, as well as one person per polling place to stuff the boxes, and one person per polling place to modify the poll books. But, in order to determine how many informed participants would be needed to affect a statewide race, we need to know how many polling places would need to be attacked.

The composite jurisdiction and composite election provide us with information needed to answer these questions: *i.e.*, how many extra votes our attackers would

need to add to their favored candidate's total for him to win, how many ballots our attackers can stuff into a particular polling place's ballot box without arousing suspicion (and related to this, how many votes are generally cast in the average polling place), how many polling places are there in the state, *etc.* We provide details about both the composite jurisdiction and election in the section entitled "Governor's Race, State of Pennasota, 2007," *infra* at pp 20–27.

LIMITS OF INFORMED PARTICIPANTS AS METRIC

Of the possible metrics we considered, we believe that measuring the number of people who know they are involved in an attack (and thus could provide evidence of the attack to the authorities and/or the media), is the best single measure of attack difficulty; as already discussed, we have concluded that the more people an attacker is forced to involve in his attack, the more likely it is that one of the participants would reveal the attack's existence and foil the attack, perhaps sending attackers to jail. However, we are aware of a number of places where the methodology could provide us with questionable results.

By deciding to concentrate on size of attack team, we mostly ignore the need for other resources when planning an attack. Thus, a software attack on DREs which makes use of steganography³⁴ to hide attack instruction files (*see* "DRE w/ VVPT Attack No. 1a", discussed in greater detail, *infra* at pp. 62–65) is considered easier than an attack program delivered over a wireless network at the polling place (*see* discussion of wireless networks, *infra* at pp. 85–91). However, the former attack probably requires a much more technologically sophisticated attacker.

Another imperfection with this metric is that we do not have an easy way to represent how much choice the attacker has in finding members of his attack team. Thus, with PCOS voting, we conclude that the cost of subverting a routine audit of ballots is roughly equal to the cost of intercepting ballot boxes in transit and substituting altered ballots (*see* discussion of PCOS attacks, *infra* at pp. 77–83). However, subverting the audit team requires getting a specific set of trusted people to cooperate with the attacker. By contrast, the attacker may be able to decide which precincts to tamper with based on which people he has already recruited for his attack.

In an attempt to address this concern, we considered looking at the number of "insiders" necessary to take part in each attack. Under this theory, getting five people to take part in a conspiracy to attack a voting system might not be particularly difficult. But getting five well-placed county election officials to take part in the attack would be (and should be labeled) the more difficult of the two attacks. Because, for the most part, the low-cost attacks we have identified do not necessarily involve well placed insiders (but could, for instance, involve one of many people with access to commercial off the shelf software ("COTS") during development or at the vendor), we do not believe that using this metric would have substantially changed our analysis.³⁵

Finally, these attack team sizes do not always capture the logistical complexity of an attack. For example, an attack on VVPT machines involving tampering with the voting machine software and also replacing the paper records in transit requires the attacker to determine what votes were falsely produced by the voting

machine and print replacement records in time to substitute them. While this is clearly possible, it raises a lot of operational difficulties – a single failed substitution leaves the possibility that the attack would be detected during the audit of ballots.

We have tried to keep these imperfections in mind when analyzing and discussing our least difficult attacks.

We suspect that much of the disagreement between voting officials and computer security experts in the last several years stems from a difference of opinion in prioritizing the difficulty of attacks. Election officials, with extensive experience in the logistics of handling tons of paper ballots, have little faith in paper and understand the kind of breakdowns in procedures that lead to traditional attacks like ballot box stuffing; in contrast, sophisticated attacks on computer voting systems appear very difficult to many of them. Computer security experts understand sophisticated attacks on computer systems, and recognize the availability of tools and expertise that makes these attacks practical to launch, but have no clear idea how they would manage the logistics of attacking a paper-based system. Looking at attack team size is one way to bridge this difference in perspective.

EFFECTS OF IMPLEMENTING COUNTERMEASURE SETS

The final step of our threat analysis is to measure the effect of certain countermeasures against the catalogued attacks. How much more difficult would the attacks become once the countermeasures are put into effect? How many more informed participants (if any) would be needed to counter or defeat these countermeasures? Our process for examining the effectiveness of a countermeasure mirrors the process for determining the difficulty of an attack: we first asked whether the countermeasure would allow us to detect an attack with near certainty. If we agreed that the countermeasure would expose the attack, we identified the steps that would be necessary to circumvent or defeat the countermeasure. For each step to defeat the countermeasure, we determined the number of additional informed participants (if any) that an attacker would need to add to his team. As with the process for determining attack difficulty, the Brennan Center interviewed numerous election officials to see whether they agreed with the steps and values assigned. When necessary, the values and steps for defeating the countermeasures were altered to reflect the input of election officials.

COUNTERMEASURES EXAMINED

BASIC SET OF COUNTERMEASURES

The first set of countermeasures we looked at is the “Basic Set” of countermeasures. This Basic Set was derived from security survey responses³⁶ we received from county election officials around the country, as well as additional interviews with more than a dozen current and former election officials. Within the Basic Set of countermeasures are the following procedures:

Inspection

The jurisdiction is not knowingly using any uncertified software that is subject

to inspection by the Independent Testing Authority (often referred to as the "ITA").³⁷

Physical Security for Machines

Ballot boxes (to the extent they exist) are examined (to ensure they are empty) and locked by poll workers immediately before the polls are opened.

Before and after being brought to the polls for Election Day, voting systems for each county are locked in a single room, in a county warehouse.

The warehouse has perimeter alarms, secure locks, video surveillance and regular visits by security guards.

Access to the warehouse is controlled by sign-in, possibly with card keys or similar automatic logging of entry and exit for regular staff.

Some form of "tamper evident" seals are placed on machines before and after each election.

The machines are transported to polling locations five to fifteen days before Election Day.

Chain of Custody/Physical Security of Election Day Records

At close of the polls, vote tallies for each machine are totaled and compared with number of persons that have signed the poll books.

A copy of totals for each machine is posted at each polling place on Election Night and taken home by poll workers to check against what is posted publicly at election headquarters, on the web, in the papers, or elsewhere.³⁸

All audit information (*i.e.*, Event Logs, VVPT records, paper ballots, machine printouts of totals) that is not electronically transmitted as part of the unofficial upload to the central election office, is delivered in official, sealed and hand-delivered information packets or boxes. All seals are numbered and tamper-evident.

Transportation of information packets is completed by two election officials representing opposing parties who have been instructed to remain in joint custody of the information packets or boxes from the moment it leaves the precinct to the moment it arrives at the county election center.

Each polling place sends its information packets or boxes to the county election center separately, rather than having one truck or person pick up this data from multiple polling locations.

Once the sealed information packets or boxes have reached the county election center, they are logged. Numbers on the seals are checked to ensure that they have not been replaced. Any broken or replaced seals are logged. Intact seals are left intact.

After the packets and/or boxes have been logged, they are provided with physical security precautions at least as great as those listed for voting machines, above. Specifically, for Pennasota, we have assumed the room in which the packets are stored have perimeter alarms, secure locks, video surveillance and regular visits by security guards and county police officers; and access to the room is controlled by sign-in, possibly with card keys or similar automatic logging of entry and exit for regular staff.

Testing³⁹

An Independent Testing Authority has certified the model of voting machine used in the polling place.

Acceptance Testing⁴⁰ is performed on machines at time, or soon after they are received by County.

Pre-election Logic and Accuracy⁴¹ testing is performed by the relevant election official.

Prior to opening the polls, every voting machine and vote tabulation system is checked to see that it is still configured for the correct election, including the correct precinct, ballot style, and other applicable details.

REGIMEN FOR AUTOMATIC ROUTINE AUDIT PLUS BASIC SET OF COUNTERMEASURES.

The second set of countermeasures is the Regimen for an Automatic Routine Audit Plus Basic Set of Countermeasures.

Some form of routine auditing of voter-verified paper records occurs in 12 states, to test the accuracy of electronic voting machines. They generally require between 1 and 10% of all precinct voting machines to be audited after each election. ⁴²

Jurisdictions can implement this set of countermeasures only if their voting systems produce some sort of voter-verified paper record of each vote. This could be in the form of a paper ballot, in the case of PCOS, or a voter-verified paper trail ("VVPT"), in the case of DREs.

We have assumed that jurisdictions take the following steps when conducting an Automatic Routine Audit (when referring to this set of assumptions "Regimen for an Automatic Routine Audit"):

The Audit

Leaders of the major parties in each county are responsible for selecting a sufficient number of audit-team members to be used in that county.⁴³

Using a highly transparent random selection mechanism (*see* point ii, below), the voter-verified paper records for between a small percentage of all voting machines in the State are selected for auditing.

Using a transparent random selection method, auditors are assigned to the selected machines (two or three people, with representatives of each major

political party, would comprise each audit team).

The selection of voting machines, and the assignment of auditors to machines, occurs immediately before the audits take place. The audits take place as soon after polls close as possible – for example, at 9 a.m. the morning after polls close.

Using a transparent random selection method, county police officers, security personnel and the video monitor assigned to guard the voter-verified records are chosen from a large pool of on-duty officers and employees on election night.

The auditors are provided the machine tallies and are able to see that the county tally reflects the sums of the machine tallies before the start of the inspection of the paper.

The audit would include a tally of spoiled ballots (in the case of VVPT, the number of cancellations recorded), overvotes, and undervotes.

Transparent Random Selection Process

In this report, we have assumed that random auditing procedures are in place for both the Regimen for an Automatic Routine Audit and Regimen for Parallel Testing. We have further assumed procedures to prevent a single, corrupt person from being able to fix the results. This implies a kind of transparent and public random procedure.

For the Regimen for an Automatic Routine Audit there are at least two places where transparent, random selection processes are important: in the selection of precincts to audit, and in the assignment of auditors to the precincts they will be auditing.

Good election security can employ Transparent Random Selection in other places with good effect:

- the selection of parallel testers from a pool of qualified individuals.

- the assignment of police and other security professionals from on-duty lists, to monitor key materials, for example, the VVPT records between the time that they arrive at election central and the time of the completion of the ARA.

If a selection process for auditing is to be trustworthy and trusted, ideally:

- The whole process will be publicly observable or videotaped;⁴⁴

- The random selection will be publicly verifiable, *i.e.*, anyone observing will be able to verify that the sample was chosen randomly (or at least that the number selected is not under the control of any small number of people); and

- The process will be simple and practical within the context of current election

016315

practice so as to avoid imposing unnecessary burdens on election officials. There are a number of ways that election officials can ensure some kind of transparent randomness. One way would be to use a state lottery machine to select precincts or polling places for auditing. We have included two potential examples of transparent random selection processes in Appendix F. These apply to the Regimen for Parallel Testing as well.

REGIMEN FOR PARALLEL TESTING PLUS BASIC SET OF COUNTERMEASURES

The final set of countermeasures we have examined is “Parallel Testing” plus the Basic Set of countermeasures. Parallel Testing, also known as election-day testing, involves selecting voting machines at random and testing them as realistically as possible during the period that votes are being cast.

Parallel Testing

In developing our set of assumptions for Parallel Testing, we relied heavily upon interviews with Jocelyn Whitney, Project Manager for Parallel Testing in the State of California, and conclusions drawn from this Report.⁴⁵ In our analysis, we assume that the following procedures would be included in the Parallel Testing regimen (when referring to this regimen “Regimen for Parallel Testing”) that we evaluate:

At least two of each DRE model (meaning both vendor and model) would be selected for Parallel Testing;

At least two DREs from each of the three largest counties would be parallel tested;

Counties to be parallel tested would be chosen by the Secretary of State in a transparent and random manner.

Counties would be notified as late as possible that machines from one of their precincts would be selected for Parallel Testing;⁴⁶

Precincts would be selected through a transparent random mechanism;

A video camera would record testing;

For each test, there would be one tester and one observer;

Parallel Testing would occur at the polling place;

The script for Parallel Testing would be generated in a way that mimics voter behavior and voting patterns for the polling place;

At the end of the Parallel Testing, the tester and observer would reconcile vote totals in the script with vote totals reported on the machine.

Transparent Random Selection Process

We further assume that the same type of transparent random selection process that would be used for the Regimen for Automatic Routine Audit would also be employed for the Regimen for Parallel Testing to determine which machines would be subjected to testing on Election Day.

APPENDIX C

ALTERNATIVE SECURITY METRICS CONSIDERED

Dollars Spent

The decision to use the number of informed participants as the metric for attack level difficulty came after considering several other potential metrics. One of the first metrics we considered was the dollar cost of attacks. This metric makes sense when looking at attacks that seek financial gain – for instance, misappropriating corporate funds. It is not rational to spend \$100,000 on the misappropriation of corporate funds if the total value of those funds is \$90,000. Ultimately, we rejected this metric as the basis for our analysis because the dollar cost of the attacks we considered were dwarfed by both (1) current federal and state budgets, and (2) the amounts currently spent legally in state and federal political campaigns.

Time of Attack

The relative security of safes and other safety measures are often rated in terms of “time to defeat.” This was rejected as metric of difficulty because it did not seem relevant to voting systems. Attackers breaking into a house are concerned with the amount of time it might take to complete their robbery because the homeowners or police might show up. With regard to election fraud, many attackers may be willing to start months or years before an election if they believe they can control the outcome. As discussed *supra* at pp. 35–48, attackers may be confident that they can circumvent the independent testing authorities and other measures meant to identify attacks, so that the amount of time an attack takes becomes less relevant.

RECOMMENDATIONS FOR FURTHER EAC ACTIVITY ON VOTER FRAUD AND INTIMIDATION

- Time and resource constraints prevented the consultants from interviewing the full range of participants in the process. As a result, we recommend that any future activity in this area include conducting further interviews.

In particular, we recommend that more election officials from all levels of government, parts of the country, and parties be interviewed. These individuals have the most direct inside information on how the system works -- and at times does not work. They are often the first people voters go to when something goes wrong and are often responsible for fixing it. They are the ones who must carry out the measures that are designed to both prevent fraud and voter intimidation and suppression. They will most likely know what, therefore, is and is not working.

It would also be especially beneficial to talk to people in law enforcement, specifically federal District Election Officers ("DEOs") and local district attorneys, as well as civil and criminal defense attorneys.

The Public Integrity Section of the Criminal Division of the Department of Justice has all of the 93 U.S. Attorneys appoint Assistant U.S. Attorneys to serve as DEOs for two years. DEOs are required to

- screen and conduct preliminary investigations of complaints, in conjunction with the FBI and PIN, to determine whether they constitute potential election crimes and should become matters for investigation;
- oversee the investigation and prosecution of election fraud and other election crimes in their districts;
- coordinate their district's (investigative and prosecutorial) efforts with DOJ headquarters prosecutors;
- coordinate election matters with state and local election and law enforcement officials and make them aware of their availability to assist with election-related matters;
- issue press releases to the public announcing the names and telephone numbers of DOJ and FBI officials to contact on election day with complaints about voting or election irregularities and answer telephones on election day to receive these complaints; and
- supervise a team of Assistant U.S. Attorneys and FBI special agents who are appointed to handle election-related allegations while the polls are open on election day.¹

Given the great responsibilities of the DEOs, and the breadth of issues they must deal with, they undoubtedly are great resources for information and insight as to what types of fraud and intimidation/suppression are occurring in their districts.

016318

**Deliberative Process
Privilege**

In many situations, however, it is the local district attorneys who will investigate election fraud and suppression tactics, especially in local elections. They will be able to provide information on what has gone on in their jurisdictions, as well as which matters get pursued and why.

Finally, those who defend people accused of election related crimes would also be useful to speak to. They may have a different perspective on how well the system is working to detect, prevent, and prosecute election fraud.

- The Nexis search conducted for this phase of the research was based on a list of search terms agreed upon by both consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contain allegations of fraud or intimidation. Similarly, many of the articles contain information about investigations into such activities or even charges brought. However, without being able to go beyond the agreed search terms, it could not be determined whether there was any later determination regarding the allegations, investigation or charges brought. This leaves a gaping hole: it is impossible to know if the article is just reporting on “talk” or what turns out to be a serious affront to the system.

As a result, we recommend that follow up Nexis research be conducted to determine what, if any, resolutions or further activity there was in each case. This would provide a much more accurate picture of what types of activities are actually taking place.

- Similarly, many allegations are made in the reports and books that we analyzed and summarized. Those allegations are often not substantiated in any way and are inherently time limited by the date of the writing. Despite this, such reports and books are frequently cited by various interested parties as evidence of fraud or intimidation.

Therefore, we recommend follow up to the literature review: for those reports and books that make or cite specific instances of fraud or intimidation, a research effort should be made to follow up on those references to see if and how they were resolved.

- During the 2004 election and the statewide elections of 2005, the University of Pennsylvania led a consortium of groups and researchers in conducting the MyVote1 Project. This project involved using a 1-800 voter hotline where voters could call for poll location, be transferred to a local hotline, or leave a recorded message with a complaint. In 2004, this resulted in over 200,000 calls received and over 56,000 recorded complaints.ⁱⁱ The researchers in charge of this project have done a great deal of work to parse and analyze the data collected through this process, including going through the audio messages and categorizing them by the nature of the complaint. These categories include registration, absentee

ballot, poll access, ballot/screen, coercion/intimidation, identification, mechanical, provisional (ballot).

We recommend that further research include making full use of this data with the cooperation of the project leaders. While perhaps not a fully scientific survey given the self-selection of the callers, the information regarding 200,000 complaints should provide a good deal of insight into the problems voters experienced, especially those in the nature of intimidation or suppression.

- Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice has a variety in ways it tracks complaints of voter intimidation,ⁱⁱⁱ the Section was extremely reluctant to provide the consultants with useful information. Further attempts should be made to obtain relevant data. This includes the telephone logs of complaints the Section keeps and information from the database – the Interactive Case Management (ICM) system – the Section maintains on complaints received and the corresponding action taken. We also recommend that further research include a review and analysis of the observer and monitor field reports from Election Day that must be filed with the Section.
- Similarly, the consultants believe it would be useful for any further research to include a review of the reports that must be filed by every District Election Officer to the Public Integrity Section of the Criminal Division of the Department of Justice. As noted above, the DEOs play a central role in receiving reports of voter fraud and investigating and pursuing them. Their reports back to the Department would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or made confidential.
- The consultants also believe it would be useful for any further activity in this area to include attendance at the next Ballot Access and Voting Integrity Symposium. According to the Department,^{iv}

Prosecutors serving as District Election Officers in the 94 U.S. Attorneys' Offices are required to attend annual training conferences on fighting election fraud and voting rights abuses... These conferences are sponsored by the Voting Section of the Civil Rights Division and the Public Integrity Section of the Criminal Division, and feature presentations by Civil Rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys' Offices. As a result of these conferences, there is a nationwide increase in Department expertise relating to the prosecution of election crimes and the enforcement of voting rights.

By attending the symposium researchers could learn more about the following:

- How District Election Officers are trained, e.g. what they are taught to focus their resources on, how they are instructed to respond to various types of complaints
 - How information about previous election and voting issues is presented
 - How the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants
- Included in this report is a summary of various methodologies political scientists and others suggested to measure voter fraud and intimidation. While we note the skepticism of the Working Group in this regard, we nonetheless recommend that in order to further the mission of providing unbiased data, further activity in this area include an academic institution and/or individual that focuses on sound, statistical methods for political science research.
 - Finally, consultant Tova Wang recommends that future researchers review federal law to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threat .

According to Craig Donsanto, long-time director of the Public Integrity Section of the Criminal Division of the Department of Justice,

As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation which is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.^v

Mr. Donsanto reiterated these points to us on several occasions, including at the working group meeting.

As a result, researchers should examine if there is some way in which current law might be revised or new laws passed that would reach voter intimidation that does not threaten the voter physically or financially, but rather threatens the voter's right to vote as a tangible value in itself. Such an amendment or law would reach all forms of voter intimidation, no matter if it is motivated by race, party, ethnicity or any other criteria. The law would then *potentially* cover, for example, letters and postcards with language meant to deter voters from voting and both pre-election and Election Day challengers that are clearly mounting challenges solely on illegitimate bases.

In the alternative to finding a way to criminalize such behavior, researchers might examine ways to invigorate measures to deter and punish voter intimidation under the civil law. For example, there might be a private right of action created for

voters or groups who have been subjected to intimidation tactics in the voting process. Such an action could be brought against individual offenders; any state or local actor where there is a pattern of repeated abuse in the jurisdiction that such officials did not take sufficient action against; and organizations that intentionally engage in intimidating practices. As a penalty upon finding liability, civil damages could be available plus perhaps attorney's fees.

Another, more modest measure would be, as has been suggested by Ana Henderson and Christopher Edley,^{vi} to bring parity to fines for violations under the Voting Rights Act. Currently the penalty for fraud is \$10,000 while the penalty for acts to deprive the right to vote is \$5,000.

ⁱ Department of Justice's Activities to Address Past Election-Related Voting Irregularities, General Accounting Office, October 14, 2004, GAO-04-1041R

ⁱⁱ The MyVote1 Project Final Report, Fels Institute of Government, University of Pennsylvania, November 1, 2005, Pg. 12

ⁱⁱⁱ Department of Justice's Activities to Address Past Election-Related Voting Irregularities, General Accounting Office, October 14, 2004, GAO-04-1041R, p. 4. This same report criticizes some of the procedures the Section used for these systems and urged the Department to improve upon them in time for the 2004 presidential election. No follow-up report has been done since that time to the best of our knowledge.

Interviews

Common Themes

- There is virtually universal agreement that absentee ballot fraud is the biggest problem, with vote buying and registration fraud coming in after that. The vote buying often comes in the form of payment for absentee ballots, although not always. Some absentee ballot fraud is part of an organized effort; some is by individuals, who sometimes are not even aware that what they are doing is illegal. Voter registration fraud seems to take the form of people signing up with false names. Registration fraud seems to be most common where people doing the registration were paid by the signature.
- There is widespread but not unanimous agreement that there is little polling place fraud, or at least much less than is claimed, including voter impersonation, “dead” voters, noncitizen voting and felon voters. Those few who believe it occurs often enough to be a concern say that it is impossible to show the extent to which it happens, but do point to instances in the press of such incidents. Most people believe that false registration forms have not resulted in polling place fraud, although it may create the perception that vote fraud is possible. Those who believe there is more polling place fraud than reported/investigated/prosecuted believe that registration fraud does lead to fraudulent votes. Jason Torchinsky from the American Center for Voting Rights is the only interviewee who believes that polling place fraud is widespread and among the most significant problems in the system.
- Abuse of challenger laws and abusive challengers seem to be the biggest intimidation/suppression concerns, and many of those interviewed assert that the new identification requirements are the modern version of voter intimidation and suppression. However there is evidence of some continued outright intimidation and suppression, especially in some Native American communities. A number of people also raise the problem of poll workers engaging in harassment of minority voters. Other activities commonly raised were the issue of polling places being moved at the last moment, unequal distribution of voting machines, videotaping of voters at the polls, and targeted misinformation campaigns.
- Several people indicate – including representatives from DOJ -- that for various reasons, the Department of Justice is bringing fewer voter intimidation and suppression cases now and is focusing on matters such as noncitizen voting, double voting and felon voting. While the civil rights section continues to focus on systemic patterns of malfeasance, the public integrity section is focusing now on individuals, on isolated instances of fraud.
- The problem of badly kept voter registration lists, with both ineligible voters remaining on the rolls and eligible voters being taken off, remains a common concern. A few people are also troubled by voters being on registration lists in two states. They said that there was no evidence that this had led to double voting, but it opens the door to the possibility. There is great hope that full implementation of the new requirements of HAVA – done well, a major caveat – will reduce this problem dramatically.

016323

**Deliberative Process
Privilege**

Common Recommendations:

- Many of those interviewed recommend better poll worker training as the best way to improve the process; a few also recommended longer voting times or voting on days other than election day (such as weekends) but fewer polling places so only the best poll workers would be employed
- Many interviewed support stronger criminal laws and increased enforcement of existing laws with respect to both fraud and intimidation. Advocates from across the spectrum expressed frustration with the failure of the Department of Justice to pursue complaints.
 - With respect to the civil rights section, John Tanner indicated that fewer cases are being brought because fewer are warranted – it has become increasingly difficult to know when allegations of intimidation and suppression are credible since it depends on one’s definition of intimidation, and because both parties are doing it. Moreover prior enforcement of the laws has now changed the entire landscape – race based problems are rare now. Although challenges based on race and unequal implementation of identification rules would be actionable, Mr. Tanner was unaware of such situations actually occurring and the section has not pursued any such cases.
 - Craig Donsanto of the public integrity section says that while the number of election fraud related complaints have not gone up since 2002, nor has the proportion of legitimate to illegitimate claims of fraud, the number of cases the department is investigating and the number of indictments the section is pursuing are both up dramatically. Since 2002, the department has brought more cases against alien voters, felon voters and double voters than ever before. Mr. Donsanto would like more resources so it can do more and would like to have laws that make it easier for the federal government to assume jurisdiction over voter fraud cases.
- A couple of interviewees recommend a new law that would make it easier to criminally prosecute people for intimidation even when there is not racial animus.
- Almost everyone hopes that administrators will maximize the potential of statewide voter registration databases to prevent fraud. Of particular note, Sarah Ball Johnson, Executive Director of Elections for Kentucky, emphasized that having had an effective statewide voter registration database for more than thirty years has helped that state avoid most of the fraud problems that have been alleged elsewhere, such as double voting and felon voting.
- Several advocate expanded monitoring of the polls, including some associated with the Department of Justice.
- Challenge laws, both with respect to pre-election day challenges and challengers at the polls, need to be revised by all states to ensure they are not used for purposes of wrongful disenfranchisement and harassment
- Several people advocate passage of Senator Barak Obama’s “deceptive practices” bill

- There is a split on whether it would be helpful to have nonpartisan election officials – some indicated they thought even if elections officials are elected nonpartisanly they will carry out their duties in biased ways nonetheless. However, most agree that elections officials pursuing partisan agendas is a problem that must be addressed in some fashion. Suggestions included moving election responsibilities out of the secretary of states' office; increasing transparency in the process; and enacting conflict of interest rules.
- A few recommend returning to allowing use of absentee ballots “for cause” only if it were politically feasible.
- A few recommend enacting a national identification card, including Pat Rogers, an attorney in New Mexico, and Jason Torchinsky from ACVR, who advocates the scheme contemplated in the Carter-Baker Commission Report.
- A couple of interviewees indicated the need for clear standards for the distribution of voting machines

Defining Election Fraud

Note: The definition provided below is for the purposes of this EAC project. Most of the acts described come within the federal criminal definition of fraud, but some may not.

Election fraud is any intentional action, or intentional failure to act when there is a duty to do so, that corrupts the election process in a manner that can impact on election outcomes. This includes interfering in the process by which persons register to vote; the way in which ballots are obtained, marked, or tabulated; and the process by which election results are canvassed and certified.

Examples include the following:

- falsifying voter registration information pertinent to eligibility to cast a vote, (e.g. residence, criminal status, etc).;
- altering completed voter registration applications by entering false information;
- knowingly destroying completed voter registration applications (other than spoiled applications) before they can be submitted to the proper election authority;
- knowingly removing eligible voters from voter registration lists, in violation of HAVA, NVRA, or state election laws;
- intentional destruction by election officials of voter registration records or balloting records, in violation of records retention laws, to remove evidence of election fraud;
- vote buying;
- voting in the name of another;
- voting more than once;
- coercing a voter's choice on an absentee ballot;
- using a false name and/or signature on an absentee ballot;
- destroying or misappropriating an absentee ballot;
- felons, or in some states ex-felons, who vote when they know they are ineligible to do so;
- misleading an ex-felon about his or her right to vote;
- voting by non-citizens who know they are ineligible to do so;
- intimidating practices aimed at vote suppression or deterrence, including the abuse of challenge laws;
- deceiving voters with false information (e.g.; deliberately directing voters to the wrong polling place or providing false information on polling hours and dates);

- knowingly failing to accept voter registration applications, to provide ballots, or to accept and count voted ballots in accordance with the Uniformed and Overseas Citizens Absentee Voting Act;
- intentional miscounting of ballots by election officials;
- intentional misrepresentation of vote tallies by election officials;
- acting in any other manner with the intention of suppressing voter registration or voting, or interfering with vote counting and the certification of the vote.

Voting fraud does not include mistakes made in the course of voter registration, balloting, or tabulating ballots and certifying results. For purposes of the EAC study, it also does not include violations of campaign finance laws.

List of Experts Interviewed

Wade Henderson, Executive Director, Leadership Conference for Civil Rights

Wendy Weiser, Deputy Director, Democracy Program, The Brennan Center

William Groth, attorney for the plaintiffs in the Indiana voter identification litigation

Lori Minnite, Barnard College, Columbia University

Neil Bradley, ACLU Voting Rights Project

Nina Perales, Counsel, Mexican American Legal Defense and Education Fund

Pat Rogers, attorney, New Mexico

Rebecca Vigil-Giron, Secretary of State, New Mexico

Sarah Ball Johnson, Executive Director of the State Board of Elections, Kentucky

Stephen Ansolobhere, Massachusetts Institute of Technology

Chandler Davidson, Rice University

Tracey Campbell, author, *Deliver the Vote*

Douglas Webber, Assistant Attorney General, Indiana, (defendant in the Indiana voter identification litigation)

Heather Dawn Thompson, Director of Government Relations, National Congress of American Indians

Jason Torchinsky, Assistant General Counsel, American Center for Voting Rights

Robin DeJarnette, Executive Director, American Center for Voting Rights

Joseph Rich, former Director of the Voting Section, Civil Rights Division, U.S. Department of Justice

Joseph Sandler, Counsel to the Democratic National Committee

John Ravitz, Executive Director, New York City Board of Elections

John Tanner, Director, Voting Section, Civil Rights Division, U.S. Department of Justice

Kevin Kennedy, Executive Director of the State Board of Elections, Wisconsin

Evelyn Stratton, Justice, Supreme Court of Ohio

Tony Sirvello, Executive Director, International Association of
Clerks, Recorders, Election Officials and Treasurers

Harry Van Sickle, Commissioner of Elections, Pennsylvania

Craig Donsanto, Director, Public Integrity Section, U.S. Department of Justice

Sharon Priest, former Secretary of State, Arkansas

Key Working Group Comments and Observations

1. **The main problems today are structural barriers to voting and administrative error.** Mr. Perez observed that, in accordance with the research, the biggest issues today are structural barriers to voting, not stealing votes. Election administrators share this view. Election fraud is negligible, and to the extent it occurs, it needs to be prosecuted with stronger criminal laws. The biggest problem is properly preparing people, which is the responsibility of election administrators.
2. **Most fraud and intimidation is happening outside of the polling place.** Mr. Greenbaum observed that with respect to both voter fraud and voter suppression, such as deceptive practices and tearing up voter registration forms, most of that is taking place outside of the polling place.
3. **This issue cannot be addressed through one study or one methodology alone.** Mr. Weinberg observed that since there is such a variety in types of fraud and intimidation, one solution will not fit all. It will be impossible to obtain data or resolve any of these problems through a single method.
4. **The preliminary research conducted for this project is extremely valuable.** Several of the working group members complimented the quality of the research done and although it is only preliminary, thought it would be useful and informative in the immediate future.
5. **The Department of Justice is exploring expanding its reach over voter suppression activities.** In the context of the conversation about defining voter intimidation, Mr. Donsanto pointed out that while voter intimidation was strictly defined by the criminal law, his section is beginning to explore the slightly different concept of vote suppression, and how to pursue it. He mentioned the phone-jamming case in New Hampshire as an initial success in this effort. He noted that he believes that vote suppression in the form of deceptive practices ought to be a crime and the section is exploring ways to go after it within the existing statutory construct. Mr. Bauer raised the example of a party sending people dressed in paramilitary outfits to yell at people as they go to the polls, telling them they have to show identification. Mr. Donsanto said that under the laws he has to work with today, such activity is not considered corrupt. He said that his lawyers are trying to "bend" the current laws to address aggravated cases of vote suppression, and the phone-jamming case is an example of that. Mr. Donsanto said that within the Department, the term vote "suppression" and translating it into a crime is a "work in progress."
6. **Registration fraud does not translate into vote fraud.** Ms. Rogers, Mr. Donsanto and others stated that although phony voter registration applications turned in by people being paid by the form was a problem, it has not been found

016330

Deliberative Process
Privilege

in their experience to lead to fraudulent voters at the polls. Ms. Rogers said such people were motivated by money, not defrauding the election.

7. **Handling of voter fraud and intimidation complaints varies widely across states and localities.** Ms. Rogers and others observed that every state has its own process for intake and review of complaints of fraud and intimidation, and that procedures often vary within states. The amount of authority secretaries of state have to address such problems also is different in every state. Mr. Weinberg stated he believed that most secretaries of state did not have authority to do anything about these matters. Participants discussed whether secretaries ought to be given greater authority so as to centralize the process, as HAVA has mandated in other areas.

Working Group Concerns

1. Mr. Rokita questioned whether the purpose of the present project ought to be on assessing the level of fraud and where it is, rather than on developing methods for making such measurements. He believed that methodology should be the focus, “rather than opinions of interviewees.” He was concerned that the EAC would be in a position of “adding to the universe of opinions.”
2. Mr. Rokita questioned whether the “opinions” accumulated in the research “is a fair sampling of what’s out there.” Ms. Wang responded that one of the purposes of the research was to explore whether there is a method available to actually quantify in some way how much fraud there is and where it is occurring in the electoral process. Mr. Rokita replied that “Maybe at the end of the day we stop spending taxpayer money or it’s going to be too much to spend to find that kind of data. Otherwise, we will stop it here and recognize there is a huge difference of opinion on that issue of fraud, when it occurs is obtainable, and that would possibly be a conclusion of the EAC.” Ms. Sims responded that she thought it would be possible to get better statistics on fraud and there might be a way of “identifying at this point certain parts in the election process that are more vulnerable, that we should be addressing.”
3. Mr. Rokita stated that, “We’re not sure that fraud at the polling place doesn’t exist. We can’t conclude that.”
4. Mr. Rokita expressed concern about working with a political scientist. He believes that the “EAC needs to be very careful in who they select, because all the time and effort and money that’s been spent up to date and would be spent in the future could be invalidated by a wrong selection in the eyes of some group.”

Determining a Methodology for Measuring Voter Fraud and Intimidation: Recommendations of Political Scientists

The following is a summary of interviews conducted with a number of political scientists and experts in the field as to how one might undertake a comprehensive examination of voter fraud and intimidation. A list of the individuals interviewed and their ideas are available, and all of the individuals welcome any further questions or explanations of their recommended procedures.

- 1) In analyzing instances of alleged fraud and intimidation, we should look to criminology as a model. In criminology, experts use two sources: the Uniform Crime Reports, which are all reports made to the police, and the Victimization Survey, which asks the general public whether a particular incident has happened to them. After surveying what the most common allegations are, we should conduct a survey of the general public that ask whether they have committed certain acts or been subjected to any incidents of fraud or intimidation. This would require using a very large sample, and we would need to employ the services of an expert in survey data collection. (Stephen Ansolobehere, MIT)
- 2) Several political scientists with expertise in these types of studies recommended a methodology that includes interviews, focus groups, and a limited survey. In determining who to interview and where the focus groups should be drawn from, they recommend the following procedure:
 - Pick a number of places that have historically had many reports of fraud and/or intimidation; from that pool pick 10 that are geographically and demographically diverse, and have had a diversity of problems
 - Pick a number of places that have not had many reports of fraud and/or intimidation; from that pool pick 10 places that match the geographic and demographic make-up of the previous ten above (and, if possible, have comparable elections practices)
 - Assess the resulting overall reports and impressions resulting from these interviews and focus groups, and examine comparisons and differences among the states and what may give rise to them.

In conducting a survey of elections officials, district attorneys, district election officers, they recommend that:

- The survey sample be large in order to be able to get the necessary subsets
- The survey must include a random set of counties where there have and have not been a large number of allegations

(Allan Lichtman, American University; Thad Hall, University of Utah; Bernard Grofman, UC – Irvine)

- 3) Another political scientist recommended employing a methodology that relies on qualitative data drawn from in-depth interviews with key critics and experts on all sides of the debate on fraud; quantitative data collected through a survey of state and local elections and law enforcement officials; and case studies. Case studies should focus on the five or ten states, regions or cities where there has been a history of election fraud to examine past and present problems. The survey should be mailed to each state's attorney general and secretary of state, each county district attorney's office and each county board of elections in the 50 states. (Lorraine Minnite, Barnard College)
- 4) The research should be a two-step process. Using LexisNexis and other research tools, a search should be conducted of news media accounts over the past decade. Second, interviews with a systematic sample of election officials nationwide and in selected states should be conducted. (Chandler Davidson, Rice University)
- 5) One expert in the field posits that we can never come up with a number that accurately represents either the incidence of fraud or the incidence of voter intimidation. Therefore, the better approach is to do an assessment of what is most likely to happen, what election violations are most likely to be committed – in other words, a risk analysis. This would include an analysis of what it would actually take to commit various acts, e.g. the cost/benefit of each kind of violation. From there we could rank the likely prevalence of each type of activity and examine what measures are or could be effective in combating them. (Wendy Weiser, Brennan Center of New York University)
- 6) Replicate a study in the United States done abroad by Susan Hyde of the University of California- San Diego examining the impact of impartial poll site observers on the incidence of election fraud. Doing this retrospectively would require the following steps:
 - Find out where there were federal observers
 - Get precinct level voting information for those places
 - Analyze whether there was any difference in election outcomes in those places with and without observers, and whether any of these results seem anomalous.

Despite the tremendous differences in the political landscapes of the countries examined by Hyde in previous studies and the U.S., Hyde believes this study could be effectively replicated in this country by sending observers to a random sample of precincts. Rather than compare the incumbent's vote share, such factors such as voter complaints, voter turnout, number of provisional ballots used, composition of the electorate, as well as any anomalous voting results could be compared between sites with and without monitors.

For example, if intimidation is occurring, and if reputable monitors make intimidation less likely or voters more confident, then turnout should be higher on average in monitored precincts than in unmonitored precincts. If polling station officials are intentionally refusing to issue provisional ballots, and the polling station officials are

more likely to adhere to regulations while being monitored, the average number of provisional ballots should be higher in monitored precincts than in unmonitored precincts. If monitors cause polling station officials to adhere more closely to regulations, then there should be fewer complaints (in general) about monitored than unmonitored precincts (this could also be reversed if monitors made voters more likely to complain).

Again, random assignment controls for all of the other factors that otherwise influence these variables.

One of the downsides of this approach is it does not get at some forms of fraud, e.g. absentee ballot fraud; those would have to be analyzed separately

7) Another political scientist recommends conducting an analysis of vote fraud claims and purging of registration rolls by list matching. Allegations of illegal voting often are based on matching of names and birth dates. Alleged instances of double voting are based on matching the names and birth dates of persons found on voting records. Allegations of ineligible felon (depending on state law), deceased, and of non-citizen voting are based on matching lists of names, birth dates, and sometimes addresses of such people against a voting records. Anyone with basic relational database skills can perform such matching in a matter of minutes.

However, there are a number of pitfalls for the unwary that can lead to grossly over-estimating the number of fraudulent votes, such as missing or ignored middle names and suffixes or matching on missing birth dates. Furthermore, there is a surprising statistical fact that a group of about three hundred people with the same first and last name are almost assured to share the exact same birth date, including year. In a large state, it is not uncommon for hundreds of Robert Smiths (and other common names) to have voted. Thus, allegations of vote fraud or purging of voter registration rolls by list matching almost assuredly will find a large proportion of false positives: people who voted legally or are registered to vote legally.

Statistics can be rigorously applied to determine how many names would be expected to be matched by chance. A simulation approach is best applied here: randomly assign a birth date to an arbitrary number of people and observe how many match within the list or across lists. The simulation is repeated many times to average out the variation due to chance. The results can then be matched back to actual voting records and purge lists, for example, in the hotly contested states of Ohio or Florida, or in states with Election Day registration where there are concerns that easy access to voting permits double voting. This analysis will rigorously identify the magnitude alleged voter fraud, and may very well find instances of alleged fraud that exceed what might have otherwise happened by chance.

This same political scientist also recommends another way to examine the problem: look at statistics on provisional voting: the number cast might provide indications of intimidation (people being challenged at the polls) and the number of those not counted

would be indications of "vote fraud." One could look at those jurisdictions in the Election Day Survey with a disproportionate number of provisional ballots cast and cross reference it with demographics and number of provisional ballots discarded. (Michael McDonald, George Mason University)

- 8) Spencer Overton, in a forthcoming law review article entitled *Voter Identification*, suggests a methodology that employs three approaches— investigations of voter fraud, random surveys of voters who purported to vote, and an examination of death rolls provide a better understanding of the frequency of fraud. He says all three approaches have strengths and weaknesses, and thus the best studies would employ all three to assess the extent of voter fraud. An excerpt follows:

1. *Investigations and Prosecutions of Voter Fraud*

Policymakers should develop databases that record all investigations, allegations, charges, trials, convictions, acquittals, and plea bargains regarding voter fraud. Existing studies are incomplete but provide some insight. For example, a statewide survey of each of Ohio's 88 county boards of elections found only four instances of ineligible persons attempting to vote out of a total of 9,078,728 votes cast in the state's 2002 and 2004 general elections. This is a fraud rate of 0.00000045 percent. The Carter-Baker Commission's Report noted that since October 2002, federal officials had charged 89 individuals with casting multiple votes, providing false information about their felon status, buying votes, submitting false voter registration information, and voting improperly as a non-citizen. Examined in the context of the 196,139,871 ballots cast between October 2002 and August 2005, this represents a fraud rate of 0.0000005 percent (note also that not all of the activities charged would have been prevented by a photo identification requirement).

A more comprehensive study should distinguish voter fraud that could be prevented by a photo identification requirement from other types of fraud — such as absentee voting and stuffing ballot boxes — and obtain statistics on the factors that led law enforcement to prosecute fraud. The study would demand significant resources because it would require that researchers interview and pour over the records of local district attorneys and election boards.

Hard data on investigations, allegations, charges, pleas, and prosecutions is important because it quantifies the amount of fraud officials detect. Even if prosecutors vigorously pursue voter fraud, however, the number of fraud cases charged probably does not capture the total amount of voter fraud. Information on official investigations, charges, and prosecutions should be supplemented by surveys of voters and a comparison of voting rolls to death rolls.

2. *Random Surveys of Voters*

Random surveys could give insight about the percentage of votes cast fraudulently. For example, political scientists could contact a statistically representative sampling of 1,000 people who purportedly voted at the polls in the last election, ask them if they actually voted, and confirm the percentage who are valid voters. Researchers should conduct the survey soon after an election to locate as many legitimate voters as possible with fresh memories.

Because many respondents would perceive voting as a social good, some who did not vote might claim that they did, which may underestimate the extent of fraud. A surveyor might mitigate this skew through the framing of the question (“I’ve got a record that you voted. Is that true?”).

Further, some voters will not be located by researchers and others will refuse to talk to researchers. Photo identification proponents might construe these non-respondents as improper registrations that were used to commit voter fraud.

Instead of surveying all voters to determine the amount of fraud, researchers might reduce the margin of error by focusing on a random sampling of voters who signed affidavits in the three states that request photo identification but also allow voters to establish their identity through affidavit—Florida, Louisiana, and South Dakota. In South Dakota, for example, only two percent of voters signed affidavits to establish their identity. If the survey indicates that 95 percent of those who signed affidavits are legitimate voters (and the other 5 percent were shown to be either fraudulent or were non-responsive), this suggests that voter fraud accounts for, at the maximum, 0.1 percent of ballots cast.

The affidavit study, however, is limited to three states, and it is unclear whether this sample is representative of other states (the difficulty may be magnified in Louisiana in the aftermath of Hurricane Katrina’s displacement of hundreds of thousands of voters). Further, the affidavit study reveals information about the amount of fraud in a photo identification state with an affidavit exception—more voter fraud may exist in a state that does not request photo identification.

3. *Examining Death Rolls*

A comparison of death rolls to voting rolls might also provide an estimate of fraud.

Imagine that one million people live in state A, which has no documentary identification requirement. Death records show that 20,000 people passed away in state A in 2003. A cross-referencing of this list to the voter rolls shows that 10,000 of those who died were registered voters, and these names remained on the voter rolls during the November 2004 election. Researchers would look at what percentage of the 10,000 dead-but-registered people who “voted” in the November 2004 election. A researcher should distinguish the votes cast in the name of the dead at the polls from those cast

absentee (which a photo identification requirement would not prevent). This number would be extrapolated to the electorate as a whole.

This methodology also has its strengths and weaknesses. If fraudulent voters target the dead, the study might overestimate the fraud that exists among living voters (although a low incidence of fraud among deceased voters might suggest that fraud among all voters is low). The appearance of fraud also might be inflated by false positives produced by a computer match of different people with the same name. Photo identification advocates would likely assert that the rate of voter fraud could be higher among fictitious names registered, and that the death record survey would not capture that type of fraud because fictitious names registered would not show up in the death records. Nevertheless, this study, combined with the other two, would provide important insight into the magnitude of fraud likely to exist in the absence of a photo identification requirement.

Introduction

Charge

Under the Help America Vote Act, Pub. L. No. 107-252, 116 Stat. 1666 (2002) (“HAVA”), the United States Election Assistance Commission is charged with developing national statistics on voter fraud and developing methods of deterring and investigating voter fraud. Also, the Commission is charged with developing methods of identifying, deterring, and investigating methods of voter intimidation. The Commission employed a bipartisan team of legal consultants, Tova Wang and Job Serebrov to develop a preliminary overview work product to determine the quantity and quality of vote fraud and voter intimidation that is present on a national scale. The consultants’ work is neither comprehensive nor conclusive. This first phase of an envisioned two-phase project was constrained by both time and funding. The consultants’ conclusions and recommendations for phase II will be contained in this Report.

Scope of Work

The consultants, working without the aid of a support staff, divided most of the work. However, the final work product was mutually checked and approved. They agreed upon the steps that were taken needed and the method employed. For all of the documentary sources, the consultants limited the time period under review from January 1, 2001 to January 1, 2006. The research performed by the consultants included an extensive Nexis search, interviews, a review of existing literature, and case research.

The Project

Nexis: Initially, the consultants developed an enormous list of possible Nexis search terms. It soon became obvious that it would be impossible to conduct the research that way. As a result, consultant Wang performed the Nexis search by finding search term combinations that would yield virtually every article on a particular subject from the last five years. Consultant Serebrov approved the search terms. Then Wang created an excel spreadsheet in order to break down the articles in way in which they could be effectively analyzed for patterns. Each type of fraud is broken down in a separate chart according to where it took place, the date, the type of election it occurred in, what the allegation was, the publication it came from. Where there was a follow up article, any information that that suggested there had been some further action taken or some resolution to the allegation was also included. For four very complicated and long drawn out situations – Washington State, Wisconsin, South Dakota in 2004, and the vote buying cases in a couple of particular jurisdictions over the last several years –written summaries with news citations are provided.

Interviews: The consultants chose the interviewees by first coming up with a list of the categories of types of people they wanted to interview. Then the consultants separately, equally filled those categories with a certain number of people. Due to time and resource

016338

**Deliberative Process
Privilege**

constraints, the consultants had to pare down this list substantially – for instance, they had to rule out interviewing prosecutors altogether – but still got a good range of people to talk to. The ultimate categories were academics, advocates, elections officials, lawyers and judges. Although the consultants were able to talk to most of the people they wanted to, some were unavailable and a few were not comfortable speaking to them, particularly judges. The consultants together conducted all of the interviews, either by phone or in person. Then the consultants split up drafting the summaries. All summaries were reviewed and mutually approved. Most of the interviews were extremely informative and the consultants found the interviewees to be extremely knowledgeable and insightful for the most part.

Existing Literature: Part of the selections made by the consultants resulted from consultant Wang’s long-term familiarity with the material while part was the result of a joint web search for articles and books on vote fraud and voter intimidation and suggestions from those interviewed by the consultants. The consultants reviewed a wide range of materials from government reports and investigations, to academic literature, to reports published by advocacy groups. The consultants believe that they covered the landscape of available sources.

Cases: In order to properly identify all applicable cases the consultants first developed an extensive word search term list. A WestLaw search was performed and the first one hundred cases under each word search term were then gathered in individual files. This resulted in a total of approximately 44,000 cases. Most of these cases were federal as opposed to state and appellate as opposed to trial. Consultant Serebrov analyzed the cases in each file to determine if they were on point. If he found that the first twenty cases were inapplicable, Serebrov would sample forty to fifty other file cases at random to determine applicability. If the entire file did not yield any cases, the file would be discarded. All discarded word search terms were recorded in a separate file. Likewise, if the file only yielded a few applicable cases, it would also be discarded. However, if a small but significant number of cases were on point, the file was later charted. The results of the case search were stark because relatively few applicable cases were found.

Nexis Search Articles Analysis

Absentee Ballots

According to press reports, absentee ballots are abused in a variety of ways:

1. Campaign workers, candidates and others coerce the voting choices of vulnerable populations, usually elderly voters
2. Workers for groups and individuals have attempted to vote absentee in the names of the deceased
3. Workers for groups, campaign workers and individuals have attempted to forge the names of other voters on absentee ballot requests and absentee ballots and thus vote multiple times

It is unclear how often actual convictions result from these activities (a handful of articles indicate convictions and guilty pleas), but this is an area in which there have been a substantial number of official investigations and actual charges filed, according to news reports where such information is available. A few of the allegations became part of civil court proceedings contesting the outcome of the election.

While absentee fraud allegations turn up throughout the country, a few states have had several such cases. Especially of note are Indiana, New Jersey, South Dakota, and most particularly, Texas. Interestingly, there were no articles regarding Oregon, where the entire system is vote by mail.

Voter Registration Fraud

According to press reports, the following types of allegations of voter registration fraud are most common:

1. Registering in the name of dead people
2. Fake names and other information on voter registration forms
3. Illegitimate addresses used on voter registration forms
4. Voters being tricked into registering for a particular party under false pretenses
5. Destruction of voter registration forms depending on the party the voter registered with

There was only one self evident instance of a noncitizen registering to vote. Many of the instances reported on included official investigations and charges filed, but few actual convictions, at least from the news reporting. There have been multiple reports of registration fraud in California, Colorado, Florida, Missouri, New York, North Carolina, Ohio, South Dakota and Wisconsin.

Voter Intimidation and Suppression

This is the area which had the most articles in part because there were so many allegations of intimidation and suppression during the 2004 election. Most of these remained allegations and no criminal investigation or prosecution ensued. Some of the cases did end up in civil litigation.

This is not to say that these alleged activities were confined to 2004 – there were several allegations made during every year studied. Most notable were the high number of allegations of voter intimidation and harassment reported during the 2003 Philadelphia mayoral race.

A very high number of the articles were about the issue of challenges to voters' registration status and challengers at the polling places. There were many allegations that planned challenge activities were targeted at minority communities. Some of the challenges were concentrated in immigrant communities.

However, the tactics alleged varied greatly. The types of activities discussed also include the following:

- Photographing or videotaping voters coming out of polling places.
- Improper demands for identification
- Poll watchers harassing voters
- Poll workers being hostile to or aggressively challenging voters
- Disproportionate police presence
- Poll watchers wearing clothes with messages that seemed intended to intimidate
- Insufficient voting machines and unmanageably long lines

Although the incidents reported on occurred everywhere, not surprisingly, many came from “battleground” states. There were several such reports out of Florida, Ohio and Pennsylvania.

“Dead Voters and Multiple Voting”

There were a high number of articles about people voting in the names of the dead and voting more than once. Many of these articles were marked by allegations of big numbers of people committing these frauds, and relatively few of these allegations turning out to be accurate according to investigations by the newspapers themselves, elections officials and criminal investigators. Often the problem turned out to be a result of administrative error, poll workers mis-marking of voter lists, a flawed registration list and/or errors made in the attempt to match names of voters on the list with the names of the people who voted. In a good number of cases, there were allegations that charges of double voting by political leaders were an effort to scare people away from the voting process.

Nonetheless there were a few cases of people actually being charged and/or convicted for these kinds of activities. Most of the cases involved a person voting both by absentee ballot and in person. A few instances involved people voting both during early voting

and on Election Day, which calls into question the proper marking and maintenance of the voting lists. In many instances, the person charged claimed not to have voted twice on purpose. A very small handful of cases involved a voter voting in more than one county and there was one substantiated case involving a person voting in more than one state. Other instances in which such efforts were alleged were disproved by officials.

In the case of voting in the name of a dead person, the problem lay in the voter registration list not being properly maintained, i.e. the person was still on the registration list as eligible to vote, and a person taking criminal advantage of that. In total, the San Francisco Chronicle found 5 such cases in March 2004; the AP cited a newspaper analysis of five such persons in an Indiana primary in May 2004; and a senate committee found two people to have voted in the names of the dead in 2005.

As usual, there were a disproportionate number of such articles coming out of Florida. Notably, there were three articles out of Oregon, which has one hundred percent vote-by-mail.

Vote Buying

There were a surprising number of articles about vote buying cases. A few of these instances involved long-time investigations in three particular jurisdictions as detailed in the vote buying summary. There were more official investigations, indictments and convictions/pleas in this area. All of these cases are concentrated in the Midwest and South.

Deceptive Practices

In 2004 there were numerous reports of intentional disinformation about voting eligibility and the voting process meant to confuse voters about their rights and when and where to vote. Misinformation came in the form of flyers, phone calls, letters, and even people going door to door. Many of the efforts were reportedly targeted at minority communities. A disproportionate number of them came from key battleground states, particularly Florida, Ohio, and Pennsylvania. From the news reports found, only one of these instances was officially investigated, the case in Oregon involving the destruction of voter registration forms. There were no reports of prosecutions or any other legal proceeding.

Non-citizen Voting

There were surprisingly few articles regarding noncitizen registration and voting – just seven all together, in seven different states across the country. They were also evenly split between allegations of noncitizens registering and noncitizens voting. In one case charges were filed against ten individuals. In one case a judge in a civil suit found there was illegal noncitizen voting. Three instances prompted official investigations. Two cases, from this nexis search, remained just allegations of noncitizen voting.

Felon Voting

Although there were only thirteen cases of felon voting, some of them involved large numbers of voters. Most notably, of course, are the cases that came to light in the Washington gubernatorial election contest (see Washington summary) and in Wisconsin (see Wisconsin summary). In several states, the main problem has the large number of ineligible felons that remained on the voting list.

Election Official Fraud

In most of the cases in which fraud by elections officials is suspected or alleged, it is difficult to determine whether it is incompetence or a crime. There are several cases of ballots gone missing, ballots unaccounted for and ballots ending up in a worker's possession. In two cases workers were said to have changed peoples' votes. The one instance in which widespread ballot box stuffing by elections workers was alleged was in Washington State. The judge in the civil trial of that election contest did not find that elections workers had committed fraud. Four of the cases are from Texas.

Appendix 3: Members of the Working Group

Working Group Recommendations

1. **Use the 2006 and/or 2008 elections as a laboratory by employing observers.**

At the working group meeting, there was much discussion about using observers to collect data regarding fraud and intimidation at the polls in the upcoming elections. Mr. Ginsberg recommended using representatives of both parties for the task. Mr. Bauer and others objected to this, believing that using partisans as observers would be unworkable and would not be credible to the public.

There was even greater concern about the difficulties in getting access to poll sites for the purposes of observation. Most states strictly limit who can be in the polling place. In addition, there are already so many groups doing observation and monitoring at the polls, administrators might object. There was further concern that observers would introduce a variable into the process that would impact the outcome. The very fact that observers were present would influence behavior and skew the results.

Moreover, it was pointed out, many of the problems we see now with respect to fraud and intimidation does not take place at the polling place, e.g. absentee ballot fraud and deceptive practices. Poll site monitoring would not capture this activity. Moreover, with increased use of early voting, poll site monitoring might have to go on for weeks to be effective, which would require tremendous resources.

Mr. Weinberg suggested using observers in the way they are utilized in international elections. Such observers come into a jurisdiction prior to the election, and use standardized forms at the polling sites to collect data.

2. **Do a study on absentee ballot fraud.** The working group agreed that since absentee ballot fraud is the main form of fraud occurring, and is a practice that is great expanding throughout the country, it would make sense to do a stand-alone study of absentee ballot fraud. Such a study would be facilitated by the fact that there already is a great deal of information on how, when, where and why such practices are carried out based on cases successfully prosecuted. Researchers could look at actual cases to see how absentee ballot fraud schemes are conducted in an effort to provide recommendations on more effective measures for preventing them.
3. **Use risk analysis methodology to study fraud.**¹ Working group members were supportive of one of the methodologies recommended for studying this issue, risk analysis. As Mr. Bauer put it, based on the assumption that people act rationally, do an examination of what types of fraud people are most likely to commit, given the relative costs and benefits. In that way, researchers can rank the types of fraud that are the easiest to commit at the least cost with the greatest effect, from

¹ See Appendix C, and section on methodology

most to least likely to occur. This might prove a more practical way of measuring the problems than trying to actually get a number of acts of fraud and/or intimidation occurring. Mr. Greenbaum added that one would want to examine what conditions surrounding an election would be most likely to lead to an increase in fraud. Mr. Rokita objected based on his belief that the passions of partisanship lead people to not act rationally in an election.

4. **Conduct research using a methodology of database comparison.** Picking up on a suggestion made by Spencer Overton and explained in the suggested methodology section, Mr. Hearne recommended studying the issue using statistical database matching. Researchers should compare the voter roll and the list of people who actually voted to see if there are “dead” and felon voters. Because of the inconsistent quality of the databases, however, a political scientist would need to work in an appropriate margin of error when using such a methodology.
5. **Conduct a study of deceptive practices.** The working group discussed the increasing use of deceptive practices, such as flyers with false and/or intimidating information, to suppress voter participation. A number of groups, including the Department of Justice, the EAC, and organizations such as the Lawyers Committee for Civil Rights, keep phone logs regarding complaints of such practices, which may be available for review and analysis. This is also an area in which there is often tangible evidence, such as copies of the flyers and postcards themselves. All of this information should be reviewed and analyzed to see how such practices are being conducted and what can be done about them.
6. **Study use of HAVA’s administrative complaint procedure to see if it can be used to measure some forms of fraud and intimidation.** The EAC should study the extent to which states are actually utilizing the administrative complaint procedure mandated by HAVA. In addition, the EAC should study whether data collected through the administrative complaint procedure can be used as another source of information for measuring fraud and intimidation.
7. **Examine the use of special election courts.** Given that many state and local judges are elected, it may be worth exploring whether special election courts that are running before, during and after election day would be an effective means of disposing with complaints and violations in an expeditious manner. Pennsylvania employs such a system, and the EAC should consider investigating how well it is working to deal with fraud and intimidation problems.

RECOMMENDATIONS FOR FURTHER EAC ACTIVITY ON VOTER FRAUD AND INTIMIDATION

Consultant Recommendations

- **Greatly expand the scope of individuals interviewed.** Time and resource constraints prevented the consultants from interviewing the full range of participants in the electoral process. As a result, we recommend that in the next phase of this project, further interviews be conducted. In particular, a greater sampling of state and local election officials from different parts of the country should be interviewed. These individuals have first hand information and experience in the operation of elections.

We also recommend that in the next phase interviews be conducted with people in law enforcement, specifically Federal District Election Officers (“DEOs”)¹ and local district attorneys and attorneys defending those accused of election crimes or civil violations. In many instances it is the local district attorney who will investigate election fraud and suppression complaints. Attorneys who defend people accused of election crimes will have a different perspective on how the system is working to detect, prevent, and prosecute election fraud.

- **Conduct Follow-Up Nexis Research.** The Nexis search conducted for this phase of the research was based on a list of search terms agreed upon by both consultants. Thousands of articles were reviewed and hundreds analyzed. Many of the articles contain allegations of fraud or intimidation. Similarly, many of the articles contain information about investigations into such activities or even charges brought. However, without being able to go beyond the search terms, we

¹ The Public Integrity Section of the Criminal Division of the Department of Justice has all of the 93 U.S. Attorneys appoint Assistant U.S. Attorneys to serve as DEOs for two years. DEOs are required to screen and conduct preliminary investigations of complaints, in conjunction with the FBI and PIN, to determine whether they constitute potential election crimes and should become matters for investigation; oversee the investigation and prosecution of election fraud and other election crimes in their districts; coordinate their district’s (investigative and prosecutorial) efforts with DOJ headquarters prosecutors; coordinate election matters with state and local election and law enforcement officials and make them aware of their availability to assist with election-related matters; issue press releases to the public announcing the names and telephone numbers of DOJ and FBI officials to contact on election day with complaints about voting or election irregularities and answer telephones on election day to receive these complaints; and supervise a team of Assistant U.S. Attorneys and FBI special agents who are appointed to handle election-related allegations while the polls are open on election day. *Department of Justice’s Activities to Address Past Election-Related Voting Irregularities*: General Accounting Office, October 14, 2004, GAO-04-1041R

**Deliberative Process
Privilege**

016350

could not determine whether there was any action taken regarding the allegations, investigation or charges brought. Consequently, it is impossible to know if the article is just reporting on “talk” or what turns out to be a serious affront to the system. We recommend that follow up Nexis research be conducted to establish what, if any, resolutions or further activity there was in each case.

We also believe that in the second phase of this project, there should be a sampling of local newspapers from around the country to analyze for articles on voter fraud and voter intimidation. This will lead to a better idea of problems that occur on city and county levels that are often not reported statewide.

- **Conduct follow-up research to the literature reviews.** Similarly, many allegations are made in the reports and books that we analyzed and summarized. Those allegations are often not substantiated in any way and are inherently time limited by the date of the writing. Despite this, various interested parties frequently cite such reports and books as evidence of fraud or intimidation. Therefore, we recommend as a follow up to the literature review, an analysis of the resolution, if any, of specific instances of fraud and intimidation cited in the books and reports reviewed in the first phase.
- **Review a sampling of state district court cases.** In the first phase, we read and analyzed over 44,000 cases. Unfortunately, few of these were found to be on point. We therefore recommend that in the second phase, research should be concentrated on a national sampling of state district court level electoral cases. Often the district courts settle important issues that are not subsequently appealed. We believe that there could be a storehouse of information regarding vote fraud and intimidation in these cases.
- **Survey state election fraud and intimidation laws.** We recommend that there be a sampling of state electoral laws (including criminal penalty provisions), in order to aid in the development of model legislation that would address voter fraud and intimidation.
- **Review which states collect data on fraud and intimidation.** Evidently a few states, such as Arkansas and Georgia, collect and maintain data on complaints of fraud and intimidation and the disposition of those allegations at the state level. Phase two should examine what other states have such information and seek to obtain it for review and analysis. Policies and protocols on gathering such information in these states should also be looked at as possible models for the states that do not employ this practice.
- **Analyze data collected by various organizations in the 2006 election.** Several organizations, such as Election Protection, 1-800-MYVOTE1, and the parties will be setting up hotlines and sending people into the field during the upcoming mid-term elections both to assist voters and compile complete records of complaints and incidents from the period of voter registration through Election Day. Some of

these organizations have already agreed to share their data with the phase two EAC project consultants. We recommend that such data be used to the greatest extent possible to assess the incidence and the nature of the fraud and intimidation that occurred.

- **Obtain and analyze data retained by the Department of Justice.** Although according to a recent GAO report the Voting Section of the Civil Rights Division of the Department of Justice tracks complaints of voter intimidation in a variety of ways,¹ the Section was extremely reluctant to provide the consultants with useful information. Further attempts should be made to obtain relevant data. This includes the telephone logs of complaints the Section keeps and information from the database – the Interactive Case Management (ICM) system – the Section maintains on complaints received and the corresponding action taken. We also recommend that further research include a review and analysis of the observer and monitor field reports from Election Day that must be filed with the Section.
- **Obtain and analyze a sampling of DEO Reports.** Similarly, the consultants believe it would be useful for any further research to include a review of the reports that must be filed by every DEO to the Public Integrity Section of the Criminal Division of the Department of Justice. As noted above, the DEOs play a central role in receiving reports of voter fraud and investigating and pursuing them. Their reports would likely provide tremendous insight into what actually transpired during the last several elections. Where necessary, information could be redacted or kept confidential.
- **Attend the Department of Justice’s Ballot Access and Voting Integrity Symposium.** The consultants also believe it would be useful for any further activity in this area to include attendance at the next Ballot Access and Voting Integrity Symposium.² According to the Department, DEOs are required to attend annual training conferences centered on combating election fraud and voting rights abuses. These conferences sponsored by the Voting Section of the Civil Rights Division and the Public Integrity Section of the Criminal Division, feature presentations by civil rights officials and senior prosecutors from the Public Integrity Section and the U.S. Attorneys’ Offices.ⁱⁱ
- **Consult with an academic/academic institution with unimpeachable political science statistical research credentials.** Included in this report is a summary of

² By attending the symposium researchers could learn more about the following:

How *DEOs* are trained, e.g. what they are taught to focus their resources on; How they are instructed to respond to various types of complaints; How information about previous elections and voting issues is presented; and, How the Voting Rights Act, the criminal laws governing election fraud and intimidation, the National Voter Registration Act, and the Help America Vote Act are described and explained to participants.

various methodologies political scientists and others suggested to measure voter fraud and intimidation. While we note the skepticism of the Working Group in this regard, we nonetheless recommend that in order to further the mission of providing unbiased data, further activity in this area include an academic institution and/or individual that focuses on sound, statistical methods for political science research.

- **Review and Assess Whether Current Federal Laws on Fraud and Intimidation are Adequate.** Finally, we recommend that phase two project researchers review federal laws to explore ways to make it easier to impose either civil or criminal penalties for acts of intimidation that do not necessarily involve racial animus and/or a physical or economic threats.

According to Craig Donsanto, long-time director of the Public Integrity Section of the Criminal Division of the Department of Justice,

As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation which is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.ⁱⁱⁱ

Mr. Donsanto reiterated these points to us on several occasions, including at the working group meeting.

The second phase of this project should examine if current laws can be revised or new laws drafted that would address voter intimidation that does not threaten the voter physically or financially, but rather threatens the voter's right to vote as *something of tangible value in itself*. Such legislation would penalize all forms of voter intimidation, regardless of the motivation. The law would, *for example*, potentially cover letters and postcards with contain language meant to deter voters from voting and pre-Election and Election Day challenges that are clearly illegitimate.

In the alternative to finding a way to penalize such behavior, researchers might examine ways to deter and punish voter intimidation under civil law. For example, there might be a private right of action created for voters or groups who have been subjected to intimidation tactics in the voting process. Such an action could be brought against individual offenders; any state or local actor where there is an unchecked pattern of repeated abuse; and organizations that intentionally engage in intimidating practices. Civil damage penalties and attorney fees should be included. Another, more modest measure, as has been suggested by Ana Henderson

and Christopher Edley,^{iv} would be to bring fines for violations under the Voting Rights Act up to parity. Currently, the penalty for fraud is \$10,000 while the penalty for acts to deprive the right to vote is \$5,000.

ⁱ *Department of Justice's Activities to Address Past Election-Related Voting Irregularities*: General Accounting Office, October 14, 2004, GAO-04-1041R, p. 4. This same report criticizes some of the procedures the Section used for these systems and urged the Department to improve upon them in time for the 2004 presidential election. No follow-up report has been done since that time to the best of our knowledge.

Vote Fraud, Intimidation & Suppression In The 2004 Presidential Election

American Center for Voting Rights Report

According to its website," the American Center For Voting Rights Legislative Fund was founded in February 2005 on the belief that public confidence in our electoral system is the cornerstone of our democracy... ACVR Legislative Fund supports election reform that protects the right of all citizens to participate in the election process free of intimidation, discrimination or harassment and which will make it easy to vote but tough to cheat.

Using court records, police reports and news articles, ACVR Legislative Fund presented this Report documenting hundreds of reported incidents and allegations from around the country. ACVR Legislative Fund found that thousands of Americans were disenfranchised by illegal votes cast on Election Day 2004. For every illegal vote cast and counted on Election Day, a legitimate voter is disenfranchised. This report alleges a coordinated effort by members of some organizations to rig the election system through voter registration fraud, the first step in any vote fraud scheme that corrupts the election process by burying local officials in fraudulent and suspicious registration forms. ACVR Legislative Fund further found that, despite their heated rhetoric, paid Democrat operatives were far more involved in voter intimidation and suppression activities than were their Republican counterparts during the 2004 presidential election.

In addition to recommended changes and a zero-tolerance commitment by the political parties, ACVR Legislative Fund has identified five cities as "hot spots" which require additional immediate attention. These cities were identified based on the findings of this report and the cities' documented history of fraud and intimidation. These cities are: Philadelphia, PA, Milwaukee, WI, Seattle, WA, St. Louis/East St. Louis, MO/IL, and Cleveland, OH.

Without going into great detail in this review, this Report: refutes charges of voter intimidation and suppression made against Republican supporters, discusses similar charges against Democrats, details incidents vote fraud and illegal voting and finally discusses problems with vote fraud, voter registration fraud and election irregularities around the country. The majority of this Report is an attempt to redeem Republicans and vilify Democrats.

In terms of sheer numbers, the report most often alleges voter intimidation and voter registration fraud, and to a lesser degree absentee ballot fraud and vote buying.

The Report presented the following recommendations for future action:

* Both national political parties should formally adopt a zero-tolerance fraud and intimidation policy that commits the party to pursuing and fully prosecuting individuals and allied organizations who commit vote fraud or who seek to deter any eligible voter from participating in the election through fraud or intimidation. No amount of legislative

reform can effectively deter those who commit acts of fraud if there is no punishment for the crime and these acts continue to be tolerated.

* States should adopt legislation requiring government-issued photo ID at the polls and for any voter seeking to vote by mail or by absentee ballot. Government-issued photo identification should be readily available to all citizens without cost and provisions made to assure availability of government-issued identification to disabled and low-income citizens.

* States should adopt legislation requiring that all polling places be fully accessible and accommodating to all voters regardless of race, disability or political persuasion and that polling locations are free of intimidation or harassment.

* States should create and maintain current and accurate statewide voter registration databases as mandated by the federal Help America Vote Act ("HAVA") and establish procedures to assure that the statewide voter roll is current and accurate and that the names of eligible voters on the roll are consistent with the voter roll used by local election authorities in conducting the election.

* States should adopt legislation establishing a 30-day voter registration cutoff to assure that all voter rolls are accurate and that all registrants can cast a regular ballot on Election Day and the election officials have opportunity to establish a current and accurate voter roll without duplicate or fictional names and assure that all eligible voters (including all recently registered voters) are included on the voter roll at their proper precinct.

* States should adopt legislation requiring voter registration applications to be delivered to the elections office within one week of being completed so that they are processed in a timely manner and to assure the individuals registered by third party organizations are properly included on the voter roll.

* States should adopt legislation and penalties for groups violating voter registration laws, and provide the list of violations and penalties to all registration solicitors. Legislation should require those organizations obtaining a voter's registration to deliver that registration to election officials in a timely manner and should impose appropriate penalties upon any individual or organization that obtains an eligible voter's registration and fails to deliver it to election authorities.

* States should adopt legislation prohibiting "bounty" payment to voter registration solicitors based on the number of registration cards they collect.

America's Modern Poll Tax: How Structural Disenfranchisement Erodes Democracy

Advancement Project

The thesis of the Report, America's Modern Poll Tax, written after the 2000 election, is that structural disenfranchisement—the effect of breakdowns in the electoral system, is the new poll tax. Structural disenfranchisement includes “bureaucratic blunders, governmental indifference, and flagrant disregard for voting rights.” The blame for structural disenfranchisement is laid squarely at the feet of states and localities that “shirk their responsibilities or otherwise manipulate election systems,” resulting in voters “either turned away from the polls or their votes are thrown out.”

The interlocking practices and mechanics that comprise structural disenfranchisement are referred to a “ballot blockers” in the report. Most ballot blockers involve the structural elements of electoral administration: “ill-trained poll workers, failures to process registration cards on time or at all, inaccurate registration rolls, overbroad purges of voter rolls, unreasonably long lines, inaccurate ballot translations and a shortage of translators to assist voters who have limited English language skills.” The Report argues that a culture of indifference overlays these issues that both tolerates and excuses widespread disenfranchisement. This culture of indifference is exemplified by legislatures that do not properly fund election systems, officials that send antiquated equipment into poor and minority areas, poorly translated ballots and polling places that are not wheelchair accessible.

The data and conclusions in the Report are taken from eight sample case studies of states and cities across the country and a survey of state election directors that reinforces the findings of the case studies. Examples of state and city problems were: New York City—in six polling places Chinese translations inverted the Democrats with the Republicans; Georgia—the state computer crashed two weeks before the election, dropping thousands of voters from the rolls; Virginia—registration problems kept an untold number from voting; Chicago—in inner-city precincts with predominately minority populations, almost four out of every ten votes cast for President (in 2000) were discarded; St. Louis—thousands of qualified voters were placed on inactive lists due to an overbroad purge; Florida—a voting list purge of voters whose name and birth date closely resembled those of people convicted of felonies; and, Texas—significant Jim Crow like barriers to minority voting.

The survey of state election directors found: election directors lack the resources to effectively do their jobs and some lack the “ability or will to force local election officials to fix serious problems”; election officials are highly under funded and legislatures refuse to grant their requests for more money; due to a lack of funds, election officials must use old and inferior equipment and can't improve training or meet structural needs; election officials are generally unaware of racial disparities in voting; only three of the 50 state election administrators are non-white.

The Report “concludes that affected communities and democracy advocates should mobilize to force change.” A number of recommendations are made to protect the

electoral franchise including: Federal policies that set nationwide and uniform election policies; federal guarantee of access to provisional ballots; enforcement of voter disability laws; automatic restoration of voting rights to those convicted of a crime after they have completed their sentence; a centralized data base of voters administered by non-partisan individuals; federal standards limiting precinct discarded vote rates to .25 %; federal requirements that jurisdiction provide voter education, including how to protect their right to vote; and laws that strengthen the ability of individuals to bring actions to enforce voting rights and anti-discrimination laws.

A Funny Thing Happened on the Way to the White House by David E. Johnson & Jonny R. Johnson

A Funny Thing Happened adds almost nothing to the present study. It contains no footnotes and no references to primary source material, save what may be able to be gleaned from the bibliography. The Johnsons take a historical look at United States Presidential elections from Andrew Jackson to George Bush by providing interesting stories and other historical information. Unfortunately, there are only three pages out of the entire book that touches on vote fraud in the first Bush election.

The authors assert that the exit polls in Florida were probably correct. The problem was the pollsters had no way of knowing that thousands of votes would be invalidated. But the authors do not believe that fraud was the cause of the tabulation inaccuracy. The major cause was undervotes and overvotes which, if all counted, would have altered the result, compounded by the use of the butterfly ballot in some strategic counties. Additionally, Ralph Nader's votes were primarily a bleed off of needed Gore votes. The authors accused Katherine Harris, then Florida Secretary of State and co-chair of the Bush campaign in Florida for prematurely certifying the state vote. The authors also ridiculed United States Secretary of State James A. Baker III, for using the courts to block attempts to hand count votes. Finally, the authors indicated that a mob of Republican partisans descended on the vote counters in Dade County and effectively stopped the count.

Analysis of the September 15, 2005 Voter Fraud Report Submitted to the New Jersey Attorney General

By The Brennan Center for Justice at NYU School of Law and Dr. Michael McDonald of George Mason University

General

A September 15, 2005 Report submitted to the New Jersey Attorney General included lists of purportedly illegitimate votes in New Jersey in the 2004 general election, including lists of 10,969 individuals who purportedly voted twice and lists of 4,756 voters who were purportedly dead or incarcerated in November 2004. For the present Analysis of the Report, the lists of voters submitted to the New Jersey Attorney General, as well as a copy of the New Jersey county voter registration files were obtained, and an initial investigation of the report's claims was conducted. The analysis shows that the lists submitted are substantially flawed.

The Analysis is based on methodology only: its authors did not gain access to original documents related to registration or original pollbook records; only recently were copies of the counties' original registration data files acquired and compiled, which contain some notable gaps; and the lists submitted to the Attorney General contain significant errors and little documentation, which complicated the analysis. Nonetheless, the analysts say that information collected is sufficient for generally assessing the quality of evidence presented to support the September 15 report. Analysis of the suspect lists reveals that the evidence submitted does not show what it purports to show: cause for concern that there is serious risk of widespread fraud given the state of the New Jersey voter registration rolls.

These suspect lists were compiled by attempting to match the first name, last name, and birth date of persons on county voter registration files. Entries that supposedly "matched" other entries were apparently deemed to represent the same individual, voting twice. This methodology was similar to the method used in compiling the notoriously inaccurate Florida "purge lists" of suspected ineligible felons in 2000 and 2004. As Florida's experience shows, matching names and birth dates in the voter registration context can easily lead to false conclusions – as was almost certainly the case here.

This Analysis reveals several serious problems with the methodology used to compile the suspect lists that compromise the lists' practical value. For example, the data used in the Report from one county appears to be particularly suspect and anomalous, and may have substantially skewed the overall results. In addition, middle initials were ignored throughout all counties, so that "J _____ A. Smith" was presumed to be the same person as "J _____ G. Smith." Suffixes were also ignored, so that fathers and sons – like "B _____ Johnson" and "B _____ Johnson, Jr." – were said to be the same person.

Underlying many of the entries on these lists, and similar lists compiled in Florida and elsewhere, is a presumption that two records with the same name and date of birth must

represent the same person. As *explained* in this analysis, this presumption is not consistent with basic statistical principles. Even when votes appear to have been cast in two different cities under the same name and birth date, statistics show that voter fraud is not necessarily to blame. With 3.6 million persons who voted in the 2004 election in New Jersey, the chance that some have the same name and birth date is not far-fetched.

Analysis of the Claim of Double Voting by 4,497 Individuals

Attempts to match data on one list to data on another list will often yield “false positives:” two records that at first appear to be a match but do not actually represent the same person. The natural incidence of “false positives” for a matching exercise of this scale – especially when, as here, conducted with relatively little attention to detail – readily explains the ostensible number of double votes.

1,803 of these 4,397 records of ostensibly illegal votes seem to be the product of a glitch in the compilation of the registration files. These records reflect two registration entries by the same person from the same address, with a notation next to each that the individual has voted. For example, 55-year-old W _____ A. Connors, living at 253 B _____ Ave. in a New York commuter suburb, is listed on the data files with an (erroneous) first registration date in 1901 and a second registration date in 1993; Mr. Connors is thus represented twice on the data files submitted. Each of these entries also indicates that W _____ A. Connors at 253 B _____ Ave voted in 2004. There is no credible indication, however, that Mr. Connors actually voted twice; indeed, given the clearly erroneous registration date on the files, it is far more likely that data error is to blame for the doubly logged vote as well.

More plausibly, the bulk of these 1,803 records may be traced to irregularities in the data processing and compilation process for one single county: the Middlesex County registration file accounts for only 10% of registered voters in the state but 78% of these alleged double votes. The suspect lists themselves contain an acknowledgment that the problem in Middlesex is probably not fraud: 99% of these Middlesex voters are labeled on the lists submitted to the Attorney General with a notation that the record is “less likely” to indicate an illegal double vote.

Another 1,257 entries of the 4,397 records probably represent similar data errors – also largely driven by a likely glitch in the Middlesex County file, which is also vastly over represented in this category. These records show ever-so-slight variations in records listed with the same date of birth at the same address: for example, the same first and last names, but different middle initials or suffixes (e.g., J _____ T. Kearns, Sr., and J _____ T. Kearns, Jr., both born the same day and living at the same address; or J _____ E. Allen and J _____ P. Allen, born the same day and living at the same address).

Approximately 800 of the entries on the list likely represent different people, with different addresses and different middle initials or suffixes. For example, W _____ S. Smith, living in a northern New Jersey town, and W _____ C. Smith, living in another town two hours away, share the same date of birth but are not the same person. Nor are

T ____ Brown, living in a New York commuter suburb, and T ____ H. Brown, Jr., living in a small town over an hour west, despite the fact that they also share the same birth date. About three-quarters of the entries in this category reveal data that affirmatively conflict – for example, a middle initial (“W ____ S.”) in one case, and a different middle initial (“W ____ C.”) in another, listed at different addresses. There is absolutely no good reason to conclude that these individuals are in fact the same, when the available evidence indicates the contrary.

For approximately 200 of the entries in this category, however, less information is available. These entries show a middle initial (“J ____ W. Davis”) in one case, and no middle initial (“J ____ Davis”) in another – again, at different addresses. The lack of the middle initial is ambiguous: it could mean that one of the J ____ Davis in question has no middle name, or it could mean that the middle initial was simply omitted in a particular registration entry. Although these entries involve less conclusive affirmative evidence of a false match than the entries noted above, there is still no good reason to believe that “J ____ W. Davis” and “J ____ Davis,” at different addresses, represent the same person.

Of the individuals remaining, there are serious concerns with the accuracy of the dates of birth. Seven voters were apparently born in January 1, 1880 – which is most likely a system default for registrations lacking date-of-birth information. For 227 voters, only the month and year of birth are listed: this means only that two voters with the same name were born in the same month and year, an unsurprising coincidence in a state of several million people.

That leaves approximately 289 votes cast under the same name and birth date – like votes cast by “P ____ S. Rosen,” born in the middle of the baby boom – but from two different addresses. It may appear strange, but there may be two P ____ S. Rosens, born on the same date in 1948 – and such coincidences are surprisingly common. For any one person, the odds of someone else having the same name and birth date is small. But because there are so many voters in New Jersey, a sizable number will have the same name and birth date simply by chance. In a group of just 23 people, it is more likely than not that two will share the same birthday. For 40 people, the probability is 90%. Many, if not most, of the 289 alleged double votes of persons registered at different addresses most likely reflect two separate individuals sharing a first name, last name, middle initial, and birth date.

The September 15 Report makes much of the raw potential for foul play based on the unsurprising fact that there are voters who appear on the New Jersey registration rolls more than once. As noted above, many of the names identified reflect two different individuals and not simply duplicate entries. But there is no doubt that there are duplicate entries on New Jersey’s registration rolls. It is well known that voter registration rolls contain “deadwood” – registration entries for individuals no longer living at a given address or deceased. There is no evidence, however, that these extra registrations are used for widespread illegal voting. Moreover, the problem of deadwood will soon be largely resolved: both the National Voter Registration Act of 1993 and the Help America

Vote Act of 2002 require states to implement several systems and procedures as of January 1, 2006, that will clean the voter rolls of duplicate or invalid entries while protecting eligible voters from unintended disfranchisement.

Response to the Report of the 2005 Commission on Federal Election Reform

**By The Brennan Center for Justice at NYU School of Law and Spencer Overton,
Commissioner and Law Professor at George Washington University School of Law**

Introduction

On September 19, 2005, the Commission on Federal Election Reform, co-chaired by former President Jimmy Carter and former Secretary of State James Baker III, issued a report with recommendations for reforming the administration of U.S. elections. This Response addresses the main substantive flaws in the Report, refuting in detail its recommendations that “Real ID” cards be used for voter identification, that Social Security numbers be spread through interstate databases and on ID cards, and that states restore voting rights to people convicted of felony convictions only in certain cases and only after they have completed all the terms of their sentence.

Voter Identification Recommendation

According to the Response, the Report’s most troubling recommendation is that states require voters to present a Real ID card or a similar “template” ID as a condition of voting. This recommendation is more onerous than the photo ID proposal rejected by the Commission’s predecessor in 2001 and is more restrictive than any ID requirement adopted in any state to date. It would impose substantial – and for some, insurmountable – burdens on the right to vote. This ID requirement is purportedly intended to prevent “voter fraud,” and yet the Report itself concedes that “[t]here is no evidence of extensive fraud in U.S. elections or of multiple voting” before asserting, without any meaningful support, that “both occur.” Not only does the Report fail to justify the creation of stringent identification requirements, but it also does not explain why the goals of improved election integrity will not be met through the existing provisions in the Help America Vote Act of 2002 (HAVA). Additionally, the Report fails to consider alternative measures to advance its goals that are less restrictive to voters.

The Commission’s recommendation that eligible citizens be barred from voting unless they are able to present a souped-up “Real ID” card is a proposal guaranteed to disenfranchise a substantial number of eligible voters. Millions of Americans currently do not have driver’s licenses or government-issued photo ID cards. As the 2001 National Commission on Federal Election Reform recognized, research shows that between six and ten percent of voting-age Americans do not have driver’s licenses or state-issued non-driver’s photo ID. That translates into as many as 20 million eligible voters. Millions more may never get the new Real ID card, which requires substantially more cost and effort. The percentage of Americans without the documentary proof of citizenship necessary to obtain Real IDs is likely to remain high because, as discussed below, the requisite documents are both expensive and burdensome to obtain. The Report’s proposal to use Real ID as a condition of voting is so excessive that it would prevent eligible voters from proving their identity with even a valid U.S. passport or a U.S. military photo ID card. While Americans of all backgrounds would be excluded by the Report’s ID proposal, the burden would fall disproportionately on the elderly, the disabled, students, the poor, and people of color.

According to the Georgia chapter of the AARP, 36 percent of Georgians over age 75 do not have a driver's license. In Wisconsin, approximately 23 percent of persons aged 65 and older do not have driver's licenses or photo ID, and fewer than 3 percent of students have driver's licenses listing their current address. Across the country, more than 3 million Americans with disabilities do not have a driver's license or other form of state-issued photo ID. Moreover, given the frequency with which Americans move residences, it is likely that a far greater percentage of citizens lack driver's licenses or photo IDs bearing their current addresses. Since voting generally depends on the voter's address, and since many states will not accept IDs that do not bear an individual's current voting address, an additional 41.5 million Americans each year will have ID that they may not be able to use to vote.

As the Report recognizes, government-issued photo identification costs money. Thus, if required as a precondition for voting, photo identification would operate as a de facto poll tax that could disenfranchise low-income voters. To alleviate this burden, the Report appropriately recommends that the "Real ID" card itself be issued free of charge. This safeguard, however, does not address some of the most significant predicate costs in obtaining photo identification – costs incurred whether or not the card itself is free. First, each of the documents an individual is required to show in order to obtain a "Real ID" card or other government-issued photo ID card costs money or presumes a minimal level of economic resources. A certified copy of a birth certificate costs from \$10.00 to \$45.00, depending on the state; a passport costs \$85.00; and certified naturalization papers cost \$19.95. Unless the federal and all state governments waive the cost of each of these other forms of identification, the indirect costs of photo IDs will be even greater than their direct costs. In addition, since government-issued IDs may only be obtained at specified government offices, which may be far from voters' residences and workplaces, individuals seeking such IDs will have to incur transportation costs and the costs of taking time off from work to visit those offices during often-abbreviated business hours. These are not insignificant burdens.

Strong empirical evidence also shows that photo ID requirements disproportionately burden people of color. The ID recommendations reduce the benefits of voter registration at disability and other social service agencies provided by the National Voter Registration Act of 1993. Individuals who seek to register at those offices—which generally do not issue IDs – will also have to make an additional visit to the motor vehicle department in order to obtain the documentation necessary to vote. Census data demonstrate that African Americans and Latinos are more than three times more likely than whites to register to vote at a public assistance agency, and that whites are more likely than African Americans and Latinos to register when seeking a driver's license. Accordingly, the voter registration procedure far more likely to be used by minorities than by whites will no longer provide Americans with full eligibility to vote. Not only are minority voters less likely to possess the requisite ID, but they are also more likely than white voters to be asked to furnish ID at the polls. As the Task Force Report of the prior Commission found, identification requirements create the opportunity for selective enforcement – either innocuous or invidious – when poll workers request photo ID only from voters

unknown to them. This discretion has often led to special scrutiny of minority voters at the polls.

Faced with overwhelming evidence that Real IDs are both costly and difficult to obtain, the Report suggests that Real ID cards be made “easily available and issued free of charge.” While this is a laudable goal, the evidence suggests that it will not be attained. First, no State currently issues photo IDs free of charge to all voters. And even if the card itself were free, the Real ID would not be “free of charge” unless all documents required to obtain the Real ID were also “free of charge.” In addition, no State makes photo IDs “easily available” to all its citizens.

The Report premises its burdensome identification proposals on the need to ensure ballot integrity and on the existence of or potential for widespread fraud. However, the Report admits that there is simply “no evidence” that the type of fraud that could be solved by stricter voter identification – individual voters who misrepresent their identity at the polls – is a widespread problem. Indeed, the evidence that does exist shows that this sort of fraud occurs only at an extremely low rate. The Report’s photo ID proposal guards against only one type of fraud: individuals arriving at the polls to vote using false information, such as the name of another registered voter, or a recent but not current address. Since the costs of this form of fraud are extremely high (federal law provides for up to five years’ imprisonment), and the benefits to any individual voter are extremely low, it is highly unlikely that this will ever occur with any frequency. The limited types of fraud that could be prevented by a Real ID requirement are extremely rare and difficult. As the Report concedes, there is “no evidence of extensive fraud in U.S. elections” of the sort that can be cured by photo identification requirements. This admission – and not the hypothetical specter of fraud represented in the remainder of the Report – is amply borne out by independent research.

In the most comprehensive survey of alleged election fraud to date, Professor Loraine Minnite and David Callahan have shown that the incidence of individual voter fraud at the polls is negligible. A few prominent examples support their findings. In Ohio, a statewide survey found four instances of ineligible persons voting or attempting to vote in 2002 and 2004, out of 9,078,728 votes cast – a rate of 0.00004%. Earlier this year, Georgia Secretary of State Cathy Cox stated that she could not recall one documented case of voter fraud relating to the impersonation of a registered voter at the polls during her ten-year tenure as Secretary of State or Assistant Secretary of State. The Report attempts to support its burdensome identification requirements on four specific examples of purported fraud or potential fraud. **None of the Report’s cited examples of fraud stand up under closer scrutiny.** This response report goes through each instance of fraud raised by the Commission report and demonstrates that in each case the allegation in fact turned out later not to be true or the fraud cited was not of the type that would be addressed by a photo identification requirement. _

The Report fails to provide a good reason to create greater hurdles for voters who vote at the polls than for those who vote absentee. Despite the fact that absentee ballots are more

susceptible to fraud than regular ballots, the Report exempts absentee voters from its proposed Real ID and proof of citizenship requirements.

To the extent that any limited fraud by individuals at the polls does trickle into the system, it can be addressed by far less restrictive alternatives. The first step is to recognize that only voters who appear on the registration list may vote a regular ballot. Proper cleaning of registration lists – and proper use of the lists at the poll–will therefore go a long way toward ensuring that every single ballot is cast by an eligible voter. Existing law has already accounted for this need – with proper safeguards for individual voters – and needs only adequate implementation. If inflated rolls create the specter of potential fraud, for example, the problem will be addressed by proper execution of the registration list related provisions of NVRA and HAVA, which are designed in part to remove ineligible voters from the rolls. In addition to the better registration lists that full implementation will provide, better record keeping and administration at the polls will reduce the limited potential for voting by ineligible persons. In the unlikely event that implementation of current law is not able to wipe out whatever potential for individual fraud remains, there are several effective and less burdensome alternatives to the Report’s Real ID recommendation that received wholly insufficient consideration.

Recommendation on Database Information Sharing Across States

It is unquestionably beneficial to account for voters who move across state lines. Nonetheless, the Report fails to consider the serious efficacy, privacy, and security concerns raised by a nationally distributed database of the magnitude it contemplates. These problems are exacerbated by the Report’s recommendation that an individual’s Social Security number be used as the broadly disseminated unique voting identifier. The Report’s recommendation creates substantial privacy and security hazards. The Report recommends –without any discussion–that the information used as an individual’s unique fingerprint to track a voter across state lines include not merely the date of birth, but also the person’s “place of birth.” As with the Social Security number, this information is often used as a key to private information wholly unrelated to voting, and as such, disclosure presents a substantial security hazard. Moreover, this information seems particularly susceptible to use in harassing legitimate voters, particularly naturalized citizens.

Recommendation on Voting Rights of Ex-Felons

The Report recommends that states restore voting rights only to certain people with criminal convictions, and only after they have “fully served their sentence.” This overly restrictive standard places the Commission out of step with the states, the American public, and the laws of other nations. This recommendation would set a standard more generous than the policies of the most regressive thirteen states in the nation but more restrictive than the remaining thirty-seven. The trend in the states is toward extension of the franchise. Since 1997, twelve states have reformed their laws or policies to allow more people with convictions to vote. These reforms are driven by some startling numbers. Approximately 4.7 million Americans have lost the right to vote because of a criminal conviction. This number includes 1.4 million African-American men, whose 13% rate of disenfranchisement is seven times the national average. More than 670,000

of the disenfranchised are women; more than 580,000 are veterans; and 1.7 million have completed their sentences.

The American people also support more generous re-enfranchisement than the Commission Report recommends. In a 2002 telephone survey of 1,000 Americans nationwide, researchers found that substantial majorities (64% and 62% respectively) supported allowing probationers and parolees to vote. Fully 80% favored restoring the franchise to people who had completed felony sentences. Even when questions were asked about certain unpopular offenses, majorities supported voting rights. Two-thirds of respondents supported allowing violent ex-felons to vote; 63% supported allowing ex-felons convicted of illegal stock-trading to vote; and 52% supported restoring the franchise to ex-felons who had been convicted of a sex crime. International norms are even more favorable to voting rights. Moreover, the Report's recommendation is unworkable. The general rule – that reenfranchisement should follow the completion of a criminal sentence – is itself difficult to administer.

Republican Ballot Security Programs: Vote Protection or Minority Vote Suppression – Or Both?

By Chandler Davidson

As the author describes it, this Report focuses on vote suppression through “ballot security programs”:

These are programs that, in the name of protecting against vote fraud, almost exclusively target heavily black, Latino, or Indian voting precincts and have the intent or effect of discouraging or preventing voters in those precincts from casting a ballot. In some cases, these programs have been found by courts to be illegal. Still, they continue to exist in spite of strong criticism by leaders of minority communities, their allies, and voting rights lawyers.

There are several noteworthy characteristics of these programs. They focus on minority precincts almost exclusively. There is often only the flimsiest evidence that vote fraud is likely to be perpetrated in such precincts. In addition to encouraging the presence of sometimes intimidating Republican poll watchers or challengers who may slow down voting lines and embarrass potential voters by asking them humiliating questions, these programs have sometimes posted people in official-looking uniforms with badges and side arms who question voters about their citizenship or their registration. In addition, warning signs may be posted near the polls, or radio ads may be targeted to minority listeners containing dire threats of prison terms for people who are not properly registered—messages that seem designed to put minority voters on the defensive. Sometimes false information about voting qualifications is sent to minority voters through the mail.”

He further states that a most common theme of the programs over the last 50 years is that of sending white challengers to minority precincts. He says that the tactic of doing mailings, collecting returned materials, and using that as a basis for creating challenger lists and challenging voters at the polls, started in the 1950s and continues to today. The problem with this practice is that reasons for a mailing to be returned include a wrong address, out of date or inaccurate addresses, poor mail delivery in minority areas, and matching mistakes. Davidson also sets out to demonstrate through documentary evidence that the practices have been and are approved of or winked at by high ups in the party.

Davidson goes on to provide numerous examples from the last 50 years to demonstrate his thesis, going through the historical development of Republican ballot security programs from the 1950s through to the present. The author cites and quotes internal Republican letters and memoranda, primary sources and original documents, media

reports, scholarly works, as well as the words of judges' rulings in some of the cases that ended up in litigation to prove his argument.

In addition to describing how the schemes really were brought to the fore in the 1964 election, he describes more recent incidents such as 1981 in New Jersey, 1982 Dallas, Louisiana 1986, Houston 1986, Hidalgo 1988 Orange County 1988, North Carolina 1990, South Carolina 1980-1990, and South Dakota 2002. (Summaries of these examples are available)

Davidson concludes with an outline of some of the features of vote suppression efforts put forth by Republicans under the guise of ballot security programs, as described in the Report, from the 1950s to the present day:

1. An organized, often widely publicized effort to field poll watchers in what Republicans call "heavily Democratic," but what are usually minority, precincts;
2. Stated concerns about vote fraud in these precincts, which are occasionally justified but often are not;
3. Misinformation and fear campaigns directed at these same precincts, spread by radio, posted signs in the neighborhoods, newspapers, fliers, and phone calls, which are often anonymously perpetrated;
4. Posting "official-looking" personnel at polling places, including but not limited to off-duty police—sometimes in uniform, sometimes armed;
5. Aggressive face-to-face challenging techniques at the polls that can confuse, humiliate, and intimidate—as well as slow the voting process—in these same minority precincts;
6. Challenging voters using inaccurate, unofficial lists of registrants derived from "do-not-forward" letters sent to low-income and minority neighborhoods;
7. Photographing, tape recording, or videotaping voters; and
8. Employing language and metaphors that trade on stereotypes of minority voters as venal and credulous.

The report ends with some observations on the state of research on the incidence of fraud, which the author finds lacking. He suggests that vote suppression of qualified minority voters by officials and partisan poll-watchers, challengers, and uniformed guards should also be considered as included in any definition of election fraud. Davidson also offers a few recommendations for reform, noting that Democrats should not protest all programs aimed at ballot integrity, but rather work with Republicans to find solutions to problems that confront both parties and the system as a whole.

A 'Crazy-Quilt' of Tiny Pieces: State and Local Administration of American Criminal Disenfranchisement Law

By Alec Ewald

"A Crazy-Quilt of Tiny Pieces" presents results from the first nationwide study to document the implementation of American felony disenfranchisement law. Data came from two main sources: a 33-state survey of state elections officials and telephone interviews with almost one hundred city, county, town, and parish officials drawn from 10 selected states. In the spring of 2004, a two-page survey consisting of questions regarding disqualification and restoration procedures was sent to the offices of the statewide elections director in each of the fifty states. Responses were collected through the summer and early fall of 2004. Thirty-three states responded. No state currently administers and enforces its criminal disqualification and restoration laws in an efficient, universally-understood and equitable way. Some do not appear to notify local elections officials of convictions, or do not do so in a clear and timely way; others risk "false positives" in disqualification, particularly with suspended sentences or offenses not subject to disenfranchisement; many ask local officials to handle disqualification and restoration with little or no guidance or supervision from the state; none have clear policies regarding new arrivals from other states with old convictions.

The report reaches seven major conclusions:

1. Broad variation and misunderstanding in interpretation and enforcement of voting laws:
 - More than one-third (37%) of local officials interviewed in ten states either described their state's fundamental eligibility law incorrectly, or stated that they did not know a central aspect of that law.
 - Local registrars differ in their knowledge of basic eligibility law, often within the same state. Differences also emerge in how they are notified of criminal convictions, what process they use to suspend, cancel, or "purge" voters from the rolls, whether particular documents are required to restore a voter to eligibility, and whether they have information about the criminal background of new arrivals to the state.
2. Misdemeanants disenfranchised in at least five states:
 - The commonly-used term "felon disenfranchisement" is not entirely accurate, since at least five states – Colorado, Illinois, Michigan, South Carolina, and Maryland -- also formally bar some or all people convicted of misdemeanors from voting.
 - It is likely that misdemeanants in other states who do retain the formal right to vote could have difficulty exercising that right, given ignorance of their eligibility and the lack of clear rules and procedures for absentee voting by people in jail who have not been convicted of a felony.
 - Maryland excludes persons convicted of many misdemeanors, such as "Unlawful operation of vending machines," "Misrepresentation of tobacco leaf weight," and "Racing horse under false name."
3. Significant ambiguities in voting laws:
 - Disenfranchisement in Tennessee is dependent on which of five different time periods a felony conviction occurred between 1973 and the present.
 - In Oregon, disenfranchisement is determined not by conviction or imprisonment for a felony, but for being placed under Department of Corrections supervision. Since 1997, some persons

convicted of a felony and sentenced to less than 12 months' custody have been sent to county jails and hence, are eligible to vote.

4. Disenfranchisement results in contradictory policies within states:

- The "crazy-quilt" pattern of disenfranchisement laws exists even within states. Alabama and Mississippi have both the most and least restrictive laws in the country, a result which is brought about by the fact that certain felonies result in the loss of voting rights for life, while others at least theoretically permit people in prison to vote.
- Most felonies in Alabama result in permanent disenfranchisement, but drug and DUI offenses have been determined to not involve the "moral turpitude" that triggers the loss of voting rights.
- In Mississippi, ten felonies result in disenfranchisement, but do not include such common offenses as burglary and drug crimes.

5. Confusing policies lead to the exclusion of legal voters and the inclusion of illegal voters:

- The complexity of state disenfranchisement policies results in frequent misidentification of voter eligibility, largely because officials differ in their knowledge and application of disqualification and restoration law and procedures.

6. Significant variation and uncertainty in how states respond to persons with a felony conviction from other states:

- No state has a systematic mechanism in place to address the immigration of persons with a felony conviction, and there is no consensus among indefinite-disenfranchisement states on whether the disqualification is properly confined to the state of conviction, or should be considered in the new state of residence.
- Interpretation and enforcement of this part of disenfranchisement law varies not only across state lines, but also from one county to another within states. Local officials have no way of knowing about convictions in other states, and many are unsure what they would do if a would-be voter acknowledged an old conviction. Because there is no prospect of a national voter roll, this situation will continue even after full HAVA implementation.

7. Disenfranchisement is a time-consuming, expensive practice:

- Enforcement requires elections officials to gather records from different agencies and bureaucracies, including state and federal courts, Departments of Corrections, Probation and Parole, the state Board of Elections, the state police, and other counties' elections offices.

Policy Implications

1. Policies disenfranchising people living in the community on probation or parole, or who have completed a sentence are particularly difficult to enforce:

- States which disenfranchise only persons who are currently incarcerated appear able to enforce their laws more consistently than those barring non-incarcerated citizens from voting.

2. Given large-scale misunderstanding of disenfranchisement law, many eligible persons incorrectly believe they cannot vote, or have been misinformed by election officials:

- More than one-third of election officials interviewed incorrectly described their state's law on voting eligibility.
- More than 85% of the officials who misidentified their state's law either did not know the eligibility standard or specified that the law was more restrictive than was actually the case.

3. Occasional violation of disenfranchisement law by non-incarcerated voters not surprising:

- Given the complexity of state laws and the number of state officials who lack an understanding of restoration and disqualification procedures, it should come as no surprise that many voters are ignorant of their voting status, a fact that is likely to have resulted in hundreds of persons with a felony conviction registering and voting illegally in recent years.
4. Taken together, these findings undermine the most prominent rationale for disenfranchisement: that the policy reflects a strong, clear consensus that persons with a felony conviction are unfit to vote and constitute a threat to the polity:
- First, when significant numbers of the people who administer elections do not know important aspects of disenfranchisement law, it is hard to conclude that the restriction is necessary to protect social order and the “purity” of the ballot box.
 - Second, because they are all but invisible in the sentencing process, “collateral” sanctions like disenfranchisement simply cannot accomplish the denunciatory, expressive purposes their supporters claim. We now know that disenfranchisement is not entirely “visible” even to the people running American elections.
 - Third, deep uncertainty regarding the voting rights of people with felony convictions who move from one state to another indicates that we do not even know what purpose disenfranchisement is supposed to serve – whether it is meant to be a punishment, or simply a non-penal regulation of the franchise.

Recommendations

1. Clarify Policies Regarding Out-of-State Convictions:
 - State officials should clarify their policies and incorporate into training programs the means by which a felony conviction in another state affects an applicant’s voting eligibility. For example, sentence-only disenfranchisement states should clarify that newcomers with old felony convictions from indefinite disenfranchisement states are eligible to vote. And those states which bar some people from voting even after their sentences are completed must clarify whether new arrivals with old felony convictions from sentence-only disenfranchisement states are automatically eligible, and must explain what procedures, if any, should be followed for restoration.
2. Train Election Officials:
 - Clarify disenfranchisement policies and procedures for all state and local election officials through development of materials and training programs in each state. At a minimum, this should include distribution of posters, brochures and FAQ sheets to local and state elections offices.
3. Train Criminal Justice Officials:
 - Provide training on disqualification and restoration policies for all correctional and criminal justice officials, particularly probation and parole staff. Correctional and criminal justice officials should also be actively engaged in describing these policies to persons under criminal justice supervision.
4. Review Voting Restrictions on Non-Incarcerated People:
 - Given the serious practical difficulty of enforcing laws disqualifying people who are not incarcerated from voting – problems which clearly include both excluding eligible people from voting and allowing those who should be ineligible to vote -- state policymakers should review such policies to determine if they serve a useful public purpose.

Deliver the Vote: A History of Election Fraud, An American Political Tradition---1742-2004

by Tracy Campbell.

In Deliver the Vote, Campbell traces the historical persistence of voter fraud from colonial times through the 2004 Bush-Kerry election. From the textual information, it quickly becomes obvious that voter fraud was not limited to certain types of people or to certain political parties. Major American political figures fail to emerge unscathed. For instance, before independence, George Washington plied potential voters with drink as payment for their vote. This type of early vote buying succeeded in electing Washington to the Virginia Assembly over a heavily favored candidate. Both the Democrat and Republican Parties also participated in vote fraud. Finally, there were several regions of the country know for fraudulent voting problems such as Chicago, St. Louis, Texas, and Kentucky, especially Louisville.

Germane to the voter fraud project, Campbell indicates that in the Bush-Gore election, both camps committed major errors. Campbell contends that the central problem in that election was the 175,000 invalidated votes. It is evident that Florida was procedurally unprepared to deal with the voluminous questions that arose in determining valid from invalid votes. Campbell glosses over the Bush-Kerry election but does note from one who opposed Kerry, that there was something amiss with the Ohio final vote tally. This book is well researched and provided numerous citations to source material.

Building Confidence in U.S. Election, National Commission on Federal Election Reform ("Carter/Baker Commission)

The impetus for the Carter-Baker Commission and its report was the sense of the members that not enough had been done to reform the system since the 2000 election and that Americans had lost confidence in elections. The report makes several observations about the current system and makes 87 recommendations. Several of those recommendations are meant to be implemented in conjunction with one another in order to be effective, so the report is really a push for a comprehensive overhaul of the system as it works today.

Among the observations made that are relevant to the EAC study of fraud and intimidation are the following:

- The November 2004 elections showed that irregularities and fraud still occur.
- Failure to provide voters with such basic information as their registration status and their polling site location raises a barrier to voting as significant as inconsistent procedures on provisional ballots or voter ID requirements.
- There is no evidence of extensive fraud in U.S. elections or of multiple voting, but both occur, and it could affect the outcome of a close election.
- The Commission is concerned that the different approaches to identification cards might prove to be a serious impediment to voting.
- Voter registration lists are often inflated by the inclusion of citizens who have moved out of state but remain on the lists. Moreover, under the National Voter Registration Act, names are often added to the list, but counties and municipalities often do not delete the names of those who moved. Inflated voter lists are also caused by phony registrations and efforts to register individuals who are ineligible. At the same time, inaccurate purges of voter lists have removed citizens who are eligible and are properly registered.
- Political party and nonpartisan voter registration drives generally contribute to the electoral process by generating interest in upcoming elections and expanding participation. However, they are occasionally abused. There were reports in 2004 that some party activists failed to deliver voter registration forms of citizens who expressed a preference for the opposing party.
- Vote by mail raises concerns about privacy, as citizens voting at home may come under pressure to vote for certain candidates, and it increases the risk of fraud.
- While election fraud is difficult to measure, it occurs. The U.S. Department of Justice has launched more than 180 investigations into election fraud since October 2002. These investigations have resulted in charges for multiple voting, providing false information on their felon status, and other offenses against 89 individuals and in convictions of 52 individuals. The convictions related to a variety of election fraud offenses, from vote buying to submitting false voter registration information and voting-related offenses by non-citizens. In addition to the federal investigations, state attorneys general and local prosecutors handle cases of election fraud. Other cases are never pursued because of the difficulty in

obtaining sufficient evidence for prosecution or because of the low priority given to election fraud cases.

- Absentee ballots remain the largest source of potential voter fraud
- Non-citizens have registered to vote in several recent elections
- The growth of "third-party" (unofficial) voter registration drives in recent elections has led to a rise in reports of voter registration fraud.
- Many states allow the representatives of candidates or political parties to challenge a person's eligibility to register or vote or to challenge an inaccurate name on a voter roll. This practice of challenges may contribute to ballot integrity, but it can have the effect of intimidating eligible voters, preventing them from casting their ballot, or otherwise disrupting the voting process.

Its pertinent recommendations for reform are as follows:

- Interoperable state voter databases are needed to facilitate updates in the registration of voters who move to another state and to eliminate duplicate registrations, which are a source of potential fraud.
- Voters should be informed of their right to cast a provisional ballot if their name does not appear on the voter roll, or if an election official asserts that the individual is not eligible to vote, but States should take additional and effective steps to inform voters as to the location of their precinct
- The Commission recommends that states use "REAL ID" cards for voting purposes.
- To verify the identity of voters who cast absentee ballots, the voter's signature on the absentee ballot can be matched with a digitized version of the signature that the election administrator maintains. While such signature matches are usually done, they should be done consistently in all cases, so that election officials can verify the identity of every new registrant who casts an absentee ballot.
- Each state needs to audit its voter registration files to determine the extent to which they are accurate (with correct and current information on individuals), complete (including all eligible voters), valid (excluding ineligible voters), and secure (with protections against unauthorized use). This can be done by matching voter files with records in other state agency databases in a regular and timely manner, contacting individuals when the matches are inconclusive, and conducting survey research to estimate the number of voters who believe they are registered but who are not in fact listed in the voter files.
- Each state should oversee political party and nonpartisan voter registration drives to ensure that they operate effectively, that registration forms are delivered promptly to election officials, that all completed registration forms are delivered to the election officials, and that none are "culled" and omitted according to the registrant's partisan affiliation. Measures should also be adopted to track and hold accountable those who are engaged in submitting fraudulent voter registrations. Such oversight might consist of training activists who conduct voter registration drives and tracking voter registration forms to make sure they are all accounted for. In addition, states should apply a criminal penalty to any activist who deliberately fails to deliver a completed voter registration form.

- Investigation and prosecution of election fraud should include those acts committed by individuals, including election officials, poll workers, volunteers, challengers or other nonvoters associated with the administration of elections, and not just fraud by voters.
- In July of even-numbered years, the U.S. Department of Justice should issue a public report on its investigations of election fraud. This report should specify the numbers of allegations made, matters investigated, cases prosecuted, and individuals convicted for various crimes. Each state's attorney general and each local prosecutor should issue a similar report.
- The U.S. Department of Justice's Office of Public Integrity should increase its staff to investigate and prosecute election-related fraud.
- In addition to the penalties set by the Voting Rights Act, it should be a federal felony for any individual, group of individuals, or organization to engage in any act of violence, property destruction (of more than \$500 value), or threatened act of violence that is intended to deny any individual his or her lawful right to vote or to participate in a federal election.
- To deter systemic efforts to deceive or intimidate voters, the Commission recommends federal legislation to prohibit any individual or group from deliberately providing the public with incorrect information about election procedures for the purpose of preventing voters from going to the polls.
- States should define clear procedures for challenges, which should mainly be raised and resolved before the deadline for voter registration. After that, challengers will need to defend their late actions. On Election Day, they should direct their concerns to poll workers, not to voters directly, and should in no way interfere with the smooth operation of the polling station.
- State and local jurisdictions should prohibit a person from handling absentee ballots other than the voter, an acknowledged family member, the U.S. Postal Service or other legitimate shipper, or election officials. The practice in some states of allowing candidates or party workers to pick up and deliver absentee ballots should be eliminated.
- All states should consider passing legislation that attempts to minimize the fraud that has resulted from "payment by the piece" to anyone in exchange for their efforts in voter registration, absentee ballot, or signature collection.
- Nonpartisan structures of election administration are very important, and election administrators should be neutral, professional, and impartial.
- No matter what institutions are responsible for conducting elections, conflict-of-interest standards should be introduced for all federal, state, and local election officials. Election officials should be prohibited by federal and/or state laws from serving on any political campaign committee, making any public comments in support of a candidate, taking a public position on any ballot measure, soliciting campaign funds, or otherwise campaigning for or against a candidate for public office. A decision by a secretary of state to serve as co-chair of his or her party's presidential election committee would clearly violate these standards.

Existing Research Analysis

There are many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. There is little research that is truly systematic or scientific. The most systematic look at fraud is the report written by Lori Minnite. The most systematic look at voter intimidation is the report by Laughlin McDonald. Books written about this subject seem to all have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists. It is hoped that this gap will be filled in the "second phase" of this EAC project.

Moreover, reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund's frequently cited book. Again, this is something that it is hoped will be addressed in the "second phase" of this EAC project by doing follow up research on allegations made in reports, books and newspaper articles.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate, but some reports say it is a major problem, albeit hard to identify.
- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

DOJ Public Integrity Reports 2002, 2003, and 2004

General Background

The Public Integrity Reports are submitted to Congress pursuant to the Ethics in Government Act of 1978, which requires the Attorney General to report annually to Congress on the operations and activities of the Justice Department's Public Integrity Section. The Report describes the activities of the Public Integrity Section. It also provides statistics on the nationwide federal effort against public corruption. The Public Integrity Section was created in 1976 in order to consolidate in one unit of the Criminal Division the Department's oversight responsibilities for the prosecution of criminal abuses of the public trust by government officials. Section attorneys prosecute selected cases involving federal, state, or local officials, and also provide advice and assistance to prosecutors and agents in the field regarding the handling of public corruption cases. In addition, the Section serves as the Justice Department's center for handling various issues that arise regarding public corruption statutes and cases. An Election Crimes Branch was created within the Section in 1980 to supervise the Department's nationwide response to election crimes, such as ballot fraud and campaign financing offenses. The Branch reviews all major election crime investigations throughout the country and all proposed criminal charges relating to election crime.

One of the Section's law enforcement priorities is its supervision of the Justice Department's nationwide response to election crimes. The purpose of Headquarters' oversight of election crime matters is to ensure that the Department's nationwide response to election crime is uniform, impartial, and effective. An Election Crimes Branch, headed by a Director and staffed by Section attorneys on a case-by-case basis, was created within the Section in 1980 to handle this supervisory responsibility.

The Election Crimes Branch oversees the Department's handling of all election crime allegations other than those involving civil rights violations, which are supervised by the Voting Section of the Civil Rights Division. Specifically, the Branch supervises four types of corruption cases: crimes that involve the voting process, crimes involving the financing of federal election campaigns, crimes relating to political shakedowns and other patronage abuses, and illegal lobbying with appropriated funds. Vote frauds and campaign-financing offenses are the most significant and also the most common types of election crimes.

Divisions of the Election Crimes Branch

As affecting the present EAC study, the appropriate divisions of the Election Crimes Branch are:

Vote frauds-During 2002 the Branch assisted United States Attorneys' Offices in Alabama, Arkansas, California, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Nevada, North Carolina, Rhode Island, South Carolina, South Dakota, Texas, Utah, West Virginia, and

Wisconsin in handling vote fraud matters that occurred in their respective districts. This assistance included providing expertise in the evaluation of allegations to determine whether investigation would produce prosecutable federal criminal cases, helping to structure investigations, providing legal assistance with respect to the formulation of charges, and assisting in establishing task force teams of federal and state law enforcement officials to investigate vote fraud matters.

During 2003 the Branch assisted United States Attorneys' Offices in Alabama, Arkansas, California, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, New Jersey, Nevada, North Carolina, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Virgin Islands, West Virginia, and Wisconsin in handling vote fraud matters that occurred in their respective districts. This assistance included providing expertise in the evaluation of allegations to determine whether investigation would produce prosecutable federal criminal cases, helping to structure investigations, providing legal assistance with respect to the formulation of charges, and assisting in establishing task force teams of federal and state law enforcement officials to investigate vote fraud matters.

During 2004 the Branch assisted United States Attorneys' Offices in the following states in the handling of vote fraud matters that occurred in their respective districts: Alabama, Alaska, Arizona, Arkansas, California, Colorado, Florida, Georgia, Illinois, Indiana, Kansas, Kentucky, Louisiana, Massachusetts, Maryland, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New Mexico, Nevada, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Puerto Rico, South Carolina, South Dakota, Texas, Utah, Virginia, West Virginia, Washington, and Wisconsin. This assistance included evaluating vote fraud allegations to determine whether investigation would produce a prosecutable federal criminal case, helping to structure investigations, providing legal advice concerning the formulation of charges, and assisting in establishing several task force teams of federal and state law enforcement officials to investigate vote fraud matters.

Litigation-The Branch Director or Section attorneys also prosecute selected election crimes, either by assuming total operational responsibility for the case or by handling the case jointly with a United States Attorney's Office. The Section also may be asked to supervise the handling of a case in the event of a partial recusal of the local office. For example, in 2002 the Branch continued to supervise the prosecution of a sheriff and his election attorney for using data from the National Crime Information Center regarding voters' criminal histories to wage an election contest.

District Election Officer Program-The Branch also assists in implementing the Department's long-standing District Election Officer (DEO) Program. This Program is designed to ensure that each of the 93 United States Attorneys' Offices has a trained prosecutor available to oversee the handling of election crime matters within the district and to coordinate district responses with Headquarters regarding these matters. The DEO Program involves the appointment of an Assistant United States Attorney in each federal district to serve a two-year term as a District Election Officer; the training of these

prosecutors in the investigation and prosecution of election crimes; and the coordination of election-related initiatives and other law enforcement activities between Headquarters and the field. In addition, the DEO Program is a crucial feature of the Department's nationwide Election Day Program, which occurs in connection with the federal general elections held in November of even-numbered years. The Election Day Program ensures that federal prosecutors and investigators are available both at the Department's Headquarters in Washington and in each district to receive and handle complaints of election irregularities from the public while the polls are open and that the public is aware of how these individuals can be contacted on election day. In 2002 the Department enhanced the DEO Program by establishing a Ballot Integrity Initiative.

Ballot Integrity Initiative-Beginning in September of 2002, the Public Integrity Section, acting at the request of the Attorney General, assisted in the implementation of a Ballot Integrity Initiative for the 2002 general election and subsequent elections. This initiative included increasing the law enforcement priority the Department gives to election crimes; holding a special day-long training event in Washington, DC for representatives of the 93 United States Attorneys' Offices; publicizing the identities and telephone numbers of the DEOs through press releases issued shortly before the November elections; and requiring the 93 U.S. Attorneys to communicate the enhanced federal prioritization of election crime matters to state and local election and law enforcement authorities. As part of Ballot Integrity Initiative, on October 8, 2002, the Public Integrity Section and the Voting Rights Section of the Department's Civil Rights Division co-sponsored a Voting Integrity Symposium for District Election Officers representing each of the 93 federal judicial districts. Topics discussed included the types of conduct that are prosecutable as federal election crimes and the federal statutes used to prosecute such cases. Attorney General John Ashcroft delivered the keynote address on the importance of election crime and ballot integrity enforcement. Assistant Attorney General of the Civil Rights Division Ralph Boyd and Assistant Attorney General of the Criminal Division Michael Chertoff also spoke to attendees on the protection of voting rights and the prosecution of election cases.

As part of Ballot Access and Voting Integrity Initiative, on September 23 and 24, 2003, the Public Integrity Section and the Voting Rights Section of the Department's Civil Rights Division co-sponsored a two-day Symposium for DEOs representing each of the 93 federal judicial districts. Topics discussed included the types of conduct that are prosecutable as federal election crimes and the federal statutes used to prosecute such cases. Assistant Attorney General of the Civil Rights Division Alexander Acosta and Assistant Attorney General of the Criminal Division Christopher A. Wray delivered the keynote addresses on the importance of protecting voting rights and the prosecution of election cases.

On July 20 and 21, 2004, the Public Integrity Section and the Voting Section of the Department's Civil Rights Division co-sponsored a two-day symposium for DEOs representing each of the 93 federal judicial districts. Topics discussed included the types of conduct that are prosecutable as federal election crimes and the federal statutes available to prosecute such cases, and the handling of civil rights matters involving

voting. Attorney General John Ashcroft delivered the keynote address on the importance of protecting voting rights and the prosecution of election fraud. In addition, Assistant Attorney General Christopher A. Wray of the Criminal Division and Assistant Attorney General R. Alexander Acosta of the Civil Rights Division addressed conference attendees on voting rights and election fraud enforcement issues respectively.

Federal Election Crimes

During 2002 the Public Integrity Section continued its nationwide oversight role regarding the handling of election crime allegations. As part of a general Department effort to increase its effectiveness in this important area, the Section assisted in the planning and execution of the Department's 2002 Ballot Integrity Initiative. The purpose of this ongoing Initiative is to increase the Department's ability to deter, detect, and prosecute election crimes and voting abuses by prioritizing election crime cases. As a result of the Initiative, during 2002 the number of election crime matters opened by federal prosecutors throughout the country increased significantly, as did the Section's active involvement in election crime matters stemming from the Initiative. At the end of 2002, the Section was supervising and providing advice on approximately 43 election crime matters nationwide. In addition, as of December 31, 2002, 11 matters involving possible election crimes were pending in the Section.

During 2002 the Section closed two election crime matters and continued its operational supervision of the following election crime case: *United States v. Woodward and Jordan*, Northern District of Alabama. Jimmy Woodward, the former Sheriff of Jefferson County, Alabama, and Albert Jordan, an attorney from Birmingham, were indicted in 2000 for conspiring to obtain criminal history records from the National Crime Information Center (NCIC) for use in an election contest, for converting NCIC records, and for accessing government computers without authority. The indictment charged that Woodward and Jordan conspired to use Sheriff's office personnel to access NCIC computers to run criminal history checks on hundreds of voters in Jefferson County who had voted by absentee ballot in the 1998 general election, in the hopes they would find criminal histories they could use to challenge the qualifications of voters who cast votes for Woodward's opponent. The charges were dismissed in 2000 on procedural grounds. The Department appealed the dismissal of the charges. In 2001 the case was argued before the Eleventh Circuit Court of Appeals by the Appellate Section of the Criminal Division. The Court of Appeals subsequently reversed the trial court's dismissal of the charges and remanded the case for retrial. The former United States Attorney for the Northern District of Alabama was recused from the case. The case is being prosecuted by an Assistant United States Attorney under the supervision of the Public Integrity Section.

The following cases are the result of an extensive federal investigation into vote-buying in the May 1998 primary election in Knott County, Kentucky, an Appalachian county in the Eastern District of Kentucky. The primary was contested by two slates of candidates. The ballot included the race for the position of Knott County Judge Executive, which controls local government hiring, contracting, and services. The ballot also included a primary contest for the office of United States Senator, conferring federal jurisdiction

over vote buying in the election even though the electoral corruption was directed at local races.

The following cases are being handled jointly by the Section and the United States Attorney's Office for the Eastern District of Kentucky:

United States v. Calhoun. On March 28, 2003, a federal grand jury indicted Jimmy Calhoun on two counts of vote-buying. On August 19, 2003, Calhoun pled guilty to two counts of vote-buying on behalf of a slate of candidates headed by Donnie Newsome, the successful candidate for County Judge Executive in the May 1998 Knott County, Kentucky primary election. Calhoun paid two persons to vote by absentee ballot. On April 7, 2004, Calhoun was sentenced to six months in prison and two years of supervised release. Calhoun pled guilty to two counts of vote-buying on behalf of a slate of candidates headed by Donnie Newsome, the successful candidate for County Judge Executive in the May 1998 Knott County, Kentucky primary election. Calhoun paid two persons to vote by absentee ballot.

United States v. Conley. On March 28, 2003, a federal grand jury indicted Jimmy Lee Conley on five counts of vote-buying and one count of making a false statement in a matter within federal jurisdiction. Conley was charged with paying five persons to vote by absentee ballot for a slate of candidates headed by Donnie Newsome, the successful candidate for County Judge Executive. During the investigation, Conley allegedly made false statements to an agent of the FBI. A jury acquitted Conley on June 19, 2003.

United States v. Johnson. On April 24, 2003, a federal grand jury indicted Newton Johnson on four counts of vote-buying, one count of making a false statement in a matter within federal jurisdiction, and two counts of obstructing justice. On June 2, 2003, Johnson pled guilty pursuant to a plea agreement to one count of vote-buying, and one count of obstructing justice. Johnson paid four persons to vote by absentee ballot in the May 1998 Knott County, Kentucky primary election. Johnson paid the voters to vote for a slate of candidates headed by Donnie Newsome, the successful candidate for County Judge Executive. During the investigation of this vote-buying, Johnson made a false statement to an agent of the FBI, and pressured grand jury witnesses to falsely deny that he bought their votes. Pursuant to his plea agreement, Johnson pled guilty to paying one of the voters for her vote, and to endeavoring to obstruct the grand jury investigation by urging her to lie under oath. Johnson agreed to cooperate with the government. On October 6, 2003, Johnson was sentenced to three years of probation. Johnson had previously testified at the trial of Donnie Newsome to the nature and extent of the broader conspiracy to approach and pay numerous impoverished, handicapped, illiterate, or otherwise impaired persons to vote for the slate of candidates headed by Newsome. Newsome offered Johnson a road improvement and a county job in exchange for participation in the conspiracy. Johnson, who is impoverished, illiterate, and unable to leave his remote mountain hollow without the road improvement, agreed and purchased the votes of four persons. A jury convicted Newsome on all counts.

United States v. Madden. On March 28, 2003, a federal grand jury indicted Patrick Wayne Madden on three counts of vote-buying and one count of making a false statement in a matter within federal jurisdiction. On October 6, 2003, Madden pled guilty to one count of vote-buying. Madden paid three persons to vote by absentee ballot for a slate of candidates headed by Donnie Newsome, the successful candidate for County Judge Executive in the May 1998 Knott County, Kentucky primary election. During the investigation of this vote-buying, Madden made a false statement to an agent of the FBI. On February 2, 2004, Madden was sentenced to 20 months in prison and two years of supervised release. Madden pled guilty to one count of vote-buying. Madden paid three persons to vote by absentee ballot for a slate of candidates headed by Newsome.

United States v. Newsome, Pigman, and Smith. On April 24, 2003, a federal grand jury indicted sitting County Judge Executive Donnie Newsome and two of his supporters, Willard Smith and Keith Pigman, on one count of conspiracy to commit vote-buying. The grand jury further charged five substantive counts of vote-buying, one count charging Newsome, two counts charging Smith, one count charging Smith and Pigman, and one count charging all three defendants. Newsome, Pigman, and Smith, working together and with other conspirators, approached and paid numerous impoverished, handicapped, illiterate, or otherwise impaired persons to vote for Newsome by absentee ballot, resulting in a large increase in the rate of absentee voting, and long lines at the County Clerk's Office. Newsome won the election to remain the County Judge Executive.

On July 8, 2003, Pigman pled guilty pursuant to a plea agreement to conspiracy to commit vote-buying, and one count of vote-buying. Pigman cooperated with the government following his plea, and provided substantial assistance by testifying against Newsome and Smith. Pigman explained the nature and extent of the broader conspiracy to approach and pay numerous impoverished, handicapped, illiterate, or otherwise impaired persons to vote for the slate of candidates headed by Newsome. Pigman further explained that such voters were purposefully chosen because they would present severe credibility problems for the government in any investigation and prosecution of their conspiracy. Newsome offered and ultimately gave Pigman a county job in exchange for Pigman's participation in the conspiracy. On October 30, 2003, Pigman was sentenced to four months of imprisonment, four months of community confinement, and two years of supervised release. On October 1, 2003, a jury convicted both Newsome and Smith on all counts. Newsome, while in office as a Kentucky State Representative, became a candidate for County Judge Executive. Newsome, Pigman, and Smith, working together and with other conspirators, approached and paid numerous persons to vote for Newsome and certain other candidates by absentee ballot, resulting in a large increase in the rate of absentee voting, and long lines at the County Clerk's Office. Newsome, who won the primary election and subsequent elections, was ordered detained pending sentencing, together with Smith, in light of threats to government witnesses during the trial.

On March 16, 2004, Newsome, the former County Judge Executive for Knott County, Kentucky, was sentenced to 26 months of in prison, a \$20,000 fine, and three years of supervised release. Smith was sentenced to 24 months in prison, a \$5,000 fine, and three

years of supervised release. A jury previously convicted Newsome and Smith on all counts of an indictment that charged them with conspiracy to buy votes and five counts of vote-buying. Pigman, previously pled guilty to the conspiracy charge, and was sentenced to four months in prison, four months of community service, and two years of supervised release.

United States v. Ronnie Slone and Brady Slone. On March 28, 2003, a federal grand jury indicted Ronnie Neal Slone and Brady Warren Slone (who are brothers) on three counts of vote-buying, and on one count each of making a false statement in a matter within federal jurisdiction. The Slones allegedly paid three persons to vote by absentee ballot for a slate of candidates headed by Donnie Newsome. During the investigation of this vote-buying, each of the Slones allegedly made a false statement to an agent of the FBI. On August 15, 2003, a jury acquitted both defendants.

United States v. Phillip Slone. On March 28, 2003, a federal grand jury indicted Phillip Slone (who is not directly related to Ronnie and Brady Slone) on seven counts of vote-buying and one count of making a false statement in a matter within federal jurisdiction. On June 4, 2003, Slone pled guilty pursuant to a plea agreement to one count of vote-buying. Slone paid seven persons to vote for a slate of candidates headed by Homer Sawyer, the unsuccessful incumbent candidate for County Judge Executive in the May 1998 Knott County, Kentucky primary election. During the investigation of this vote-buying, Slone made a false statement to an agent of the FBI. On October 15, 2003, Slone was sentenced to ten months in prison and two years supervised release. Slone appealed his sentence and the district court's jurisdiction, and that appeal is pending.

Democracy At Risk: The November 2004 Election in Ohio
Democratic National Committee

In December 2004, the DNC announced a comprehensive investigative study and analysis of election administration issues arising from the conduct of the 2004 general election in Ohio. The DNC decided to undertake this study because of the many reports, made to the Democratic Party, appearing in the press and made to advocacy groups, immediately after the election, of problems in the administration of the election in that state—problems that prevented many Ohio citizens who showed up at the polls to be able to vote and to have their vote counted. This study was intended to address the legitimate questions and concerns that have been raised and to develop factual information that would be important and useful in crafting further necessary election reforms.

Most Pertinent Findings

- Overall, 28 percent of Ohio voters reported problems with their voting experience, including ballot problems, locating their proper polling place and/or intimidation.
- Twice as many African American voters as white voters reported experiencing problems at the polls (52 percent vs. 25 percent).
- Scarcity of voting machines caused long lines that deterred many people from voting. Three percent of voters who went to the polls left their polling places and did not return due to the long lines.
- Statewide, African American voters reported waiting an average of 52 minutes before voting while white voters reported waiting an average of 18 minutes.
- Overall, 20 percent of white Ohio voters reported waiting more than twenty minutes, while 44 percent of African American voters reported doing so.
- Of provisional voters in Cuyahoga County, 35 percent were African American, compared to 25 percent of non-provisional voters, matched by geography. African American voters were 1.2 times more likely than white voters to be required to vote provisionally.
- Under Ohio law, the only voters who should have been asked for identification were those voting in their first Federal election who had registered by mail but did **not** provide identification in their registration application. Although only 7 percent of all Ohio voters were newly registered (and only a small percentage of those voters registered by mail and failed to provide identification in their registration application), more than one third (37 percent) reported being asked to provide identification.—meaning large numbers of voters were illegally required to produce identification.
- African American voters statewide were 47 percent more likely to be required to show identification than white voters. Indeed, 61 percent of

African American men reported being asked to provide identification at the polls.

- 6 percent of all voters reported feelings of intimidation.
- Statewide, 16 percent of African Americans reported experiencing intimidation versus only 5 percent of white voters.

The report also includes a useful summary and description of the reports that came through Ohio Election Protection on Election Day, which included a wide variety of problems, including voter intimidation and discrimination.

Most Pertinent Recommendations

- States should be encouraged to codify into law all required election practices, including requirements for the adequate training of official poll workers.
- States should adopt uniform and clear published standards for the distribution of voting equipment and the assignment of official pollworkers among precincts, to ensure adequate and nondiscriminatory access. These standards should be based on set ratios of numbers of machines and pollworkers per number of voters expected to turn out, and should be made available for public comment before being adopting.
- States should adopt legislation to make clear and uniform the rules on voter registration.
- States should be urged to implement statewide voter lists in accordance with the Help America Vote Act (“HAVA”), the election reform law enacted by Congress in 2002 following the Florida debacle.
- State and local jurisdictions should adopt clear and uniform rules on the use of, and the counting of, provisional ballots, and distribute them for public comment well in advance of each election day.
- States should not adopt requirements that voters show identification at the polls, beyond those already required by federal law (requiring that identification be shown only by first time voters who did not show identification when registering.)
- State Attorneys General and local authorities should vigorously enforce, to the full extent permitted by state law, a voter’s right to vote without showing identification.
- States should make voter suppression a criminal offense at the state level, in all states.
- States should improve the training of pollworkers.
- States should expend significantly more resources in educating voters on where, when and how to vote.
- Partisan officials who volunteer to work for a candidate should not oversee or administer any elections.

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Articles

People for the American Way and the NAACP, "The Long Shadow of Jim Crow," December 6, 2004.

This report **describes the pervasive and repeated practices of voter intimidation and vote suppression that have taken place in very recent years and during contemporary American history.** It goes on to describe the numerous instances of voter intimidation and suppression during the 2000 election, the 1990s, the 1980s and back through the civil rights movement of the 1960s, putting current efforts in historical perspective.

Describing the chronology of events in this way demonstrates the developing patterns and strategic underpinnings of the tactics used over the last forty years. **Examples** include:

- **Florida law enforcement questioned elderly African American voters** in Orlando regarding the 2003 mayoral race, which had already been resolved, shortly before the 2004 election;
- **the 2004 Florida felon purge list;**
- **the case of South Dakota in 2004 in which Native Americans were improperly and illegally required to show photo identification at the polls or denied the right to vote, and similar improper demands for ID from minorities in other parts of the country;**
- **the use of challengers in minority districts in many locations;**
- **the challenge to the right of African American students to vote in Texas in 2004;**
- **the presence of men looking like law enforcement challenging African American voters at the polls in Philadelphia in 2003;**
- **the distribution of flyers in Louisiana and elsewhere in a number of elections over the last few years in minority areas telling them to vote on the wrong day; and**
- **the FBI investigation into thousands of Native American voters in South Dakota in 2002.**

Laughlin McDonald, "The New Poll Tax," *The American Prospect* vol. 13 no. 23, December 30, 2002.

Argues that "the discriminatory use of so-called 'ballot security' programs" has been a reoccurring scandal since the passage of the Voting Rights Act of 1965. These programs are deceptively presented as preventing voter fraud and thereby furthering good government. However, McDonald states "but far too often they [the ballot security programs] are actually designed to suppress minority voting -- and for nakedly partisan purposes." Blames the federal government as well as the states for use of suspect ballot security programs. McDonald cites several ballot security efforts that were really disguised **attempts at minority voter suppression:**

- **SD-DOJ "voting integrity initiative".**
- **AR - poll watchers driving away voters in predominantly black precincts by taking photos of them and demanding identification during pre-election day balloting.**
- **MI - "spotters" at heavily Democratic precincts was an effort to intimidate black voters and suppress Democratic turnout**
- **SC - one county's officials instituted a new and unauthorized policy allowing them to challenge voters who gave rural route or box numbers for their registration address (disproportionately affecting African Americans).**
- **the 1981 gubernatorial election anti-fraud initiative leading to the well known consent decree prohibiting the Republicans from repeating this, a similar Republican effort in Louisiana in 1986 in Senator John Breaux's race which again resulted in prohibition by a state court judge, and a similar effort by Republicans in Senator Jesse Helms 1990 reelection.**

States that HAVA "contains provisions that may enhance the opportunities for harassment and intimidation of minorities through ballot-security

016389

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

programs (especially voter ID). Indicates that the crux of the problem is **lax enforcement of federal voters rights laws** ("there is no record of the purveyors of any ballot-security program being criminally prosecuted by federal authorities for interfering with the right to vote." The only positive case law McDonald cited was a decision by the United States Court of Appeals for the Eighth Circuit that affirmed "an award of damages ranging from \$500 to \$2,000, payable by individual poll officials to each of seven black voters who had been unlawfully challenged, harassed, denied assistance in voting or purged from the rolls in the town of Crawfordville [Arkansas].")
Recommends that Congress and the states should adopt "nondiscriminatory, evenly applied measures to ensure the integrity of the ballot."

Wisconsin Legislative Audit Bureau, "An Evaluation: Voter Registration Elections Board" Report 05-12, September, 2005.

Current voter registration practices were determined to be insufficient to ensure the accuracy of voter registration lists used by poll workers or to prevent ineligible persons from registering to vote. **In six municipalities where sufficient information was available, there was 105 instances of potentially improper or fraudulent voting in the 2004 elections. These included: 98 ineligible felons who may have voted; 2 individuals who may have voted twice; 1 voter who may have been underage; and 4 absentee ballots that should not have been counted because the voters who cast them died before Election Day** (all but dead voters were forwarded to appropriate district attorneys for investigation). Statutes require that clerks send cards to everyone who registers by mail or on Election Day. However, only 42.7 % of the 150 municipalities surveyed sent cards to both groups, and 46 % did not send any address verification cards to those registering to vote on Election Day in November 2004. Statutes also require clerks to provide the local district attorney with the names of any Election Day registrants whose cards are undeliverable at the address provided. However, only 24.3 % of the clerks who sent cards also forwarded names from undeliverable cards to district attorneys. District attorneys surveyed indicated that they require more information than is typically provided to conduct effective investigations. To ensure that voter registration lists contain only the names of qualified electors, municipal clerks are required by statute to remove or inactivate the names of individuals who have not voted in four years, to update registration information for individuals who move or change their names, and to remove or inactivate the names of deceased individuals. They are also required to notify registered voters before removing their names from registration lists. These statutory requirements are not consistently followed:

- 85.3 % of municipalities removed the names of inactive voters from their voter registration lists;
- 71.4 % sometimes or always notified registered voters before removing their names; and
- 54.0 % reported removing the names of ineligible felons.
- registration lists contain duplicate records and the names of ineligible individuals (e.g.; more than 348,000 electronic voter registration records from eight municipalities were reviewed, identifying 3,116 records that appear to show individuals who are registered more than once in the same municipality).

Recommendations:

- adjust the early registration deadline to provide clerks more time to prepare registration lists;
- establish more stringent requirements for special registration deputies, including prohibiting compensation based on the number of individuals registered;
- establish uniform requirements for demonstrating proof of residence for all registrants;
- provide municipal clerks with more flexibility in the use of address verification cards;
- Authorize civil penalties for local election officials and municipalities that fail to comply with election laws; and
- implement mandatory elections training requirements for municipal clerks.

Report also recognized that the new **HAVA registration procedures would help with existing registration problems.**

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Milwaukee Police Department, Milwaukee County District Attorney's Office, Federal Bureau of Investigation, United States Attorney's Office "Preliminary Findings of Joint Task Force Investigating Possible Election Fraud," May 10, 2005.

On January 26, 2005, the Milwaukee Police Department, Milwaukee County District Attorney's Office, Federal Bureau of Investigation, and the United States Attorney's Office formed a task force to investigate alleged voting irregularities during the November 2004 elections. The task force has made the following specific determinations based on evidence examined to date:

- **evidence of more than 100 individual instances of suspected double-voting, voting in names of persons who likely did not vote, and/or voting in names believed to be fake.**
- **more than 200 felons voted when they were not eligible to do so. (In order to establish criminal cases, the government must establish willful violations in individual instances);**
- **persons who had been paid to register voters as "deputy registrars" falsely listed approximately 65 names in order to receive compensation for the registrations. (The evidence does not indicate that these particular false registrations were later used to cast votes); and,**
- **the number of votes counted from the City of Milwaukee exceeds the number of persons recorded as voting by more than 4,500. (Evidence indicates widespread record keeping errors with respect to recording the number of voters)**

The investigation concentrated on the 70,000+ same-day registrations. It found that a large majority of the reported errors were the result of data entry errors, such as street address numbers being transposed. However, the investigation also found more than 100 instances where votes were cast in a manner suggesting fraud. These include:

- persons with the same name and date of birth recorded as voting more than once;
- persons who live outside Milwaukee, but who used non-existent City addresses to register and vote in the City (141 of them were same day registrants; in several instances, the voter explicitly listed municipality names other than Milwaukee on the registration cards);
- persons who registered and voted with identities and addresses that cannot in any way be linked to a real person;
- persons listed as voting under a name and identity of a person known to be deceased;
- persons whose identities were used to vote, but who in subsequent interviews told task force investigators that they did not, in fact, vote in the City of Milwaukee.

Investigation also found:

- **persons who were paid money to obtain registrations allegedly falsified approximately 65 names on registration forms, allegedly to obtain more money for each name submitted.**
- **more than 200 felons who were not eligible to vote in the 2004 election, but who are recorded as having done so.**
- **same-day registrations were accepted in which the card had incomplete information that would help establish identity. For example: 48 original cards for persons listed as voting had no name; 548 had no address; 28 did not have signatures; and another 23 cards had illegible information (part of approximately 1,300 same-day registrations for which votes were cast, but which election officials could not authenticate as proper voters within the City).**
- **the post-election misfiling or loss of original green registration cards that were considered duplicates, but that in fact corresponded to additional votes. These cards were used to record votes, but approximately 100 cards of interest to investigators can no longer be located. In addition, other original green registration cards continue to be found.**

016391

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

National Commission on Federal Election Reform, "Building Confidence in U.S. Elections," Center for Democracy and Election Management, American University, September 2005.

Among the observations made that are relevant to the EAC study of fraud and intimidation are the following:

- The November 2004 elections showed that irregularities and fraud still occur.
- Failure to provide voters with such basic information as their registration status and their polling site location raises a barrier to voting as significant as inconsistent procedures on provisional ballots or voter ID requirements.
- **There is no evidence of extensive fraud in U.S. elections or of multiple voting, but both occur, and it could affect the outcome of a close election.**
- The Commission is concerned that the different approaches to identification cards might prove to be a serious impediment to voting.
- **Voter registration lists are often inflated by the inclusion of citizens who have moved out of state but remain on the lists.** Moreover, under the National Voter Registration Act, names are often added to the list, but counties and municipalities often do not delete the names of those who moved. Inflated voter lists are also caused by phony registrations and efforts to register individuals who are ineligible. At the same time, inaccurate purges of voter lists have removed citizens who are eligible and are properly registered.
- Political party and nonpartisan voter registration drives generally contribute to the electoral process by generating interest in upcoming elections and expanding participation. However, they are occasionally abused. **There were reports in 2004 that some party activists failed to deliver voter registration forms of citizens who expressed a preference for the opposing party.**
- **Vote by mail raises concerns about privacy**, as citizens voting at home may come under pressure to vote for certain candidates, and it **increases the risk of fraud.**
- **While election fraud is difficult to measure, it occurs.** The U.S. Department of Justice has launched more than 180 investigations into election fraud since October 2002. These investigations have resulted in **charges for multiple voting, providing false information on their felon status, and other offenses** against 89 individuals and in convictions of 52 individuals. The convictions related to a **variety of election fraud offenses, from vote buying to submitting false voter registration information and voting-related offenses by non-citizens.** In addition to the federal investigations, **state attorneys general and local prosecutors handle cases of election fraud. Other cases are never pursued because of the difficulty in obtaining sufficient evidence for prosecution or because of the low priority given to election fraud cases.**
- **Absentee ballots remain the largest source of potential voter fraud**
- **Non-citizens have registered to vote in several recent elections**
- **The growth of "third-party" (unofficial) voter registration drives in recent elections has led to a rise in reports of voter registration fraud.**
- **Many states allow the representatives of candidates or political parties to challenge a person's eligibility to register or vote or to challenge an inaccurate name on a voter roll. This practice of challenges may contribute to ballot integrity, but it can have the effect of intimidating eligible voters, preventing them from casting their ballot, or otherwise disrupting the voting process.**

Its pertinent recommendations for reform are as follows:

- **Interoperable state voter databases** are needed to facilitate updates in the registration of voters who move to another state and to eliminate duplicate registrations, which are a source of potential fraud.
- **Voters should be informed of their right to cast a provisional ballot** if their name does not appear on the voter roll, or if an election official asserts that the individual is not eligible to vote, but **States should take additional and effective steps to inform voters as to the location of their precinct**
- The Commission recommends that states use **"REAL ID" cards for voting purposes.**
- **To verify the identity of voters who cast absentee ballots, the voter's signature on the absentee ballot can be matched with a digitized**

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

version of the signature that the election administrator maintains. While such signature matches are usually done, they should be done consistently in all cases, so that election officials can verify the identity of every new registrant who casts an absentee ballot.

- **Each state needs to audit its voter registration files** to determine the extent to which they are accurate (with correct and current information on individuals), complete (including all eligible voters), valid (excluding ineligible voters), and secure (with protections against unauthorized use). This can be done by matching voter files with records in other state agency databases in a regular and timely manner, contacting individuals when the matches are inconclusive, and conducting survey research to estimate the number of voters who believe they are registered but who are not in fact listed in the voter files.
- **Each state should oversee political party and nonpartisan voter registration drives** to ensure that they operate effectively, that registration forms are delivered promptly to election officials, that all completed registration forms are delivered to the election officials, and that none are "culled" and omitted according to the registrant's partisan affiliation. Measures should also be adopted to track and hold accountable those who are engaged in submitting fraudulent voter registrations. Such oversight might consist of training activists who conduct voter registration drives and tracking voter registration forms to make sure they are all accounted for. In addition, states should apply a criminal penalty to any activist who deliberately fails to deliver a completed voter registration form.
- **Investigation and prosecution of election fraud should include those acts committed by individuals, including election officials, poll workers, volunteers, challengers or other nonvoters associated with the administration of elections, and not just fraud by voters.**
- **In July of even-numbered years, the U.S. Department of Justice should issue a public report on its investigations of election fraud.** This report should specify the numbers of allegations made, matters investigated, cases prosecuted, and individuals convicted for various crimes. **Each state's attorney general and each local prosecutor should issue a similar report.**
- **The U.S. Department of Justice's Office of Public Integrity should increase its staff to investigate and prosecute election-related fraud.**
- In addition to the penalties set by the Voting Rights Act, **it should be a federal felony for any individual, group of individuals, or organization to engage in any act of violence, property destruction (of more than \$500 value), or threatened act of violence that is intended to deny any individual his or her lawful right to vote or to participate in a federal election.**
- **To deter systemic efforts to deceive or intimidate voters, the Commission recommends federal legislation to prohibit any individual or group from deliberately providing the public with incorrect information about election procedures for the purpose of preventing voters from going to the polls.**
- **States should define clear procedures for challenges, which should mainly be raised and resolved before the deadline for voter registration.** After that, challengers will need to defend their late actions. **On Election Day, they should direct their concerns to poll workers, not to voters directly, and should in no way interfere with the smooth operation of the polling station.**
- **State and local jurisdictions should prohibit a person from handling absentee ballots other than the voter, an acknowledged family member, the U.S. Postal Service or other legitimate shipper, or election officials.** The practice in some states of allowing candidates or party workers to pick up and deliver absentee ballots should be eliminated.
- All states should **consider passing legislation that attempts to minimize the fraud that has resulted from "payment by the piece" to anyone in exchange for their efforts in voter registration, absentee ballot, or signature collection.**
- Nonpartisan structures of election administration are very important, and **election administrators should be neutral, professional, and impartial.**
- No matter what institutions are responsible for conducting elections, **conflict-of-interest standards should be introduced for all federal, state, and local election officials.** Election officials should be prohibited by federal and/or state laws from serving on any political campaign committee, making any public comments in support of a candidate, taking a public position on any ballot measure, soliciting campaign funds, or otherwise campaigning for or against a candidate for public office. A decision by a secretary of state to serve as co-chair of his or her party's presidential

016393

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

election committee would clearly violate these standards.

The Brennan Center for Justice at NYU School of Law and Spencer Overton, Commissioner and Law Professor at George Washington University School of Law "Response to the Report of the 2005 Commission on Federal Election Reform," September 19, 2005.

Recommendation on Voter Identification -

- Report premises its burdensome identification proposals on the need to ensure ballot integrity and on the existence of or potential for widespread fraud. However, the **Report admits that there is simply "no evidence" that the type of fraud that could be solved by stricter voter identification** – individual voters who misrepresent their identity at the polls – is a widespread problem.
- The photo ID proposal guards against only one type of fraud: individuals arriving at the polls to vote using false information, such as the name of another registered voter, or a recent but not current address. Since the costs of this form of fraud are extremely high (federal law provides for up to five years' imprisonment), and the benefits to any individual voter are extremely low, it is highly unlikely that this will ever occur with any frequency. **The limited types of fraud that could be prevented by a Real ID requirement are extremely rare and difficult.**
- In the most comprehensive survey of alleged election fraud to date, Professor Loraine Minnite and David Callahan have shown that the **incidence of individual voter fraud at the polls is negligible**. A few prominent examples support their findings. In Ohio, a statewide survey found four instances of ineligible persons voting or attempting to vote in 2002 and 2004, out of 9,078,728 votes cast – a rate of 0.00004%. Earlier this year, Georgia Secretary of State Cathy Cox stated that she could not recall one documented case of voter fraud relating to the impersonation of a registered voter at the polls during her ten-year tenure as Secretary of State or Assistant Secretary of State.
- The Report attempts to support its burdensome identification requirements on four specific examples of purported fraud or potential fraud. **None of the Report's cited examples of fraud stand up under closer scrutiny**. This response report goes through each instance of fraud raised by the Commission report and demonstrates that in each case the allegation in fact turned out later not to be true or the fraud cited was not of the type that would be addressed by a photo identification requirement.
- The Report fails to provide a good reason to create greater hurdles for voters who vote at the polls than for those who vote absentee. Despite the fact that **absentee ballots are more susceptible to fraud than regular ballots**, the Report exempts absentee voters from its proposed Real ID and proof of citizenship requirements.

Other points in ID requirement:

- **Report does not explain why the goals of improved election integrity will not be met through the existing provisions in the Help America Vote Act of 2002 (HAVA).**
- Report fails to consider alternative measures to advance its goals that are less restrictive to voters. To the extent that any limited fraud by **individuals at the polls does trickle into the system, it can be addressed by far less restrictive alternatives**. The first step is to recognize that only voters who appear on the registration list may vote a regular ballot. Proper cleaning of registration lists – and proper use of the lists at the poll–will therefore go a long way toward ensuring that every single ballot is cast by an eligible voter.
- In addition to the **better registration lists that full implementation will provide, better record keeping and administration at the polls will reduce the limited potential for voting by ineligible persons**. In the unlikely event that implementation of current law is not able to wipe out whatever potential for individual fraud remains, there are several effective and less burdensome alternatives to the Report's Real ID recommendation that received wholly insufficient consideration.
- Costs - If required as a precondition for voting, photo identification would operate as a de facto poll tax that could disenfranchise low-income voters. To alleviate this burden, the Report appropriately recommends that the "Real ID" card itself be issued free of charge. Nevertheless, the

016394

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

percentage of Americans without the documentary proof of citizenship necessary to obtain Real IDs is likely to remain high because the requisite documents are both expensive and burdensome to obtain. (Each of the documents an individual is required to show in order to obtain a "Real ID" card or other government-issued photo ID card costs money or presumes a minimal level of economic resources. Unless the federal and all state governments waive the cost of each of these other forms of identification, the indirect costs of photo IDs will be even greater than their direct costs. In addition, since government-issued IDs may only be obtained at specified government offices, which may be far from voters' residences and workplaces, individuals seeking such IDs will have to incur transportation costs and the costs of taking time off from work to visit those offices during often-abbreviated business hours.)

- Since voting generally depends on the voter's address, and since many states will not accept IDs that do not bear an individual's current voting address, an additional 41.5 million Americans each year will have ID that they may not be able to use to vote.
- The burden would fall disproportionately on the elderly, the disabled, students, the poor, and people of color.
- The ID recommendations reduce the benefits of voter registration at disability and other social service agencies provided by the National Voter Registration Act of 1993. Individuals who seek to register at those offices—which generally do not issue IDs Census data demonstrate that African Americans and Latinos are more than three times more likely than whites to register to vote at a public assistance agency, and that whites are more likely than African Americans and Latinos to register when seeking a driver's license. Accordingly, the voter registration procedure far more likely to be used by minorities than by whites will no longer provide Americans with full eligibility to vote.
- The Report's proposal to use Real ID as a condition of voting is so excessive that it would prevent eligible voters from proving their identity with even a valid U.S. passport or a U.S. military photo ID card. The Report's proposal to use Real ID as a condition of voting is so excessive that it would prevent eligible voters from proving their identity with even a valid U.S. passport or a U.S. military photo ID card

Recommendation on Database Information Sharing Across States -serious efficacy, privacy, and security concerns raised by a nationally distributed database of the magnitude it contemplates. These problems are exacerbated by the Report's recommendation that an individual's Social Security number be used as the broadly disseminated unique voting identifier.

Recommendation on Voting Rights of Ex-Felons - This recommendation would set a standard more generous than the policies of the most regressive thirteen states in the nation but more restrictive than the remaining thirty-seven. The trend in the states is toward extension of the franchise.

Chandler Davidson, Tanya Dunlap, Gale Kenny, and Benjamin Wise, "Republican Ballot Security Programs: Vote Protection or Minority Vote Suppression – or Both?" A Report to the Center for Voting Rights & Protection, September, 2004.

Focuses on **vote suppression through "ballot security programs"** (programs that, in the name of protecting against vote fraud, almost exclusively target heavily black, Latino, or Indian voting precincts and have the intent or effect of discouraging or preventing voters in those precincts from casting a ballot). Noteworthy **characteristics of these programs:**

- **focus on minority precincts almost exclusively**
- **is often on only the flimsiest evidence that vote fraud is likely to be perpetrated in such precincts;**
- **in addition to encouraging the presence of sometimes intimidating white Republican poll watchers or challengers who may slow down voting lines and embarrass potential voters by asking them humiliating questions, these programs have sometimes posted people in official-looking uniforms with badges and side arms who question voters about their citizenship or their registration**
- **warning signs may be posted near the polls, or radio ads may be targeted to minority listeners** containing dire threats of prison terms for people who are not properly registered—messages that seem designed to put minority voters on the defensive.
- **sometimes false information about voting qualifications** is sent to minority voters through the mail."
- **doing mailings, collecting returned materials, and using that as a basis for creating challenger lists** and challenging voters at the polls,

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

started in the 1950s and continues to today (problem with this practice is that reasons for a mailing to be returned include a wrong address, out of date or inaccurate addresses, poor mail delivery in minority areas, and matching mistakes)

Provide numerous examples from the last 50 years to demonstrate his thesis, going through the historical development of Republican ballot security programs from the 1950s through to the present (including more recent incidents, such as 1981 in New Jersey, 1982 Dallas, Louisiana 1986, Houston 1986, Hidalgo 1988 Orange County 1988, North Carolina 1990, South Carolina 1980-1990, and South Dakota 2002). Author cites and quotes internal Republican letters and memoranda, primary sources and original documents, media reports, scholarly works, as well as the words of judges' rulings in some of the cases that ended up in litigation to prove his argument. author cites and quotes internal Republican letters and memoranda, primary sources and original documents, media reports, scholarly works, as well as the words of judges' rulings in some of the cases that ended up in litigation to prove his argument.

Some of the features of vote suppression efforts put forth by Republicans under the guise of ballot security programs:

1. **An organized, often widely publicized effort to field poll watchers in what Republicans call "heavily Democratic," but what are usually minority, precincts;**
2. **Stated concerns about vote fraud in these precincts, which are occasionally justified but often are not;**
3. **Misinformation and fear campaigns directed at these same precincts, spread by radio, posted signs in the neighborhoods, newspapers, fliers, and phone calls, which are often anonymously perpetrated;**
4. **Posting "official-looking" personnel at polling places, including but not limited to off-duty police—sometimes in uniform, sometimes armed;**
5. **Aggressive face-to-face challenging techniques at the polls that can confuse, humiliate, and intimidate—as well as slow the voting process—in these same minority precincts;**
6. **Challenging voters using inaccurate, unofficial lists of registrants derived from "do-not-forward" letters sent to low-income and minority neighborhoods;**
7. **Photographing, tape recording, or videotaping voters; and**
8. **Employing language and metaphors that trade on stereotypes of minority voters as venal and credulous.**

The report ends with some observations on the state of research on the incidence of fraud, which the author finds lacking. He **suggests that vote suppression of qualified minority voters by officials and partisan poll-watchers, challengers, and uniformed guards should also be considered as included in any definition of election fraud.** Recommends Democrats should not protest all programs aimed at ballot integrity, but rather work with Republicans to find solutions to problems that confront both parties and the system as a whole.

Alec Ewald, "A Crazy Quilt of Tiny Pieces: State and Local Administration of American Criminal Disenfranchisement Law," The Sentencing Project, November 2005.

Presents results from the first nationwide study to document the implementation of American felony disenfranchisement law. Data came from two main sources: a 33-state survey of state elections officials (spring 2004) and telephone interviews with almost one hundred city, county, town, and parish officials drawn from 10 selected states.

Major Conclusions:

1. **Broad variation and misunderstanding in interpretation and enforcement of voting laws** (more than one-third [37%] of local officials interviewed in ten states either described their state's fundamental eligibility law incorrectly, or stated that they did not know a central aspect of that law. / Local registrars differ in their knowledge of basic eligibility law, often within the same state. Differences also emerge in how they are notified of criminal convictions, what process they use to suspend, cancel, or "purge" voters from the rolls, whether particular documents are required to restore a voter to eligibility, and whether they have information about the criminal background of new arrivals to the state.)
2. **Misdemeanants disenfranchised in at least five states** (the commonly-used term "felon disenfranchisement" is not entirely accurate, since at

016396

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

least five states – Colorado, Illinois, Michigan, South Carolina, and Maryland -- also formally bar some or all people convicted of misdemeanors from voting [it is likely that misdemeanants in other states who do retain the formal right to vote could have difficulty exercising that right, given ignorance of their eligibility and the lack of clear rules and procedures for absentee voting by people in jail who have not been convicted of a felony / Maryland excludes persons convicted of many misdemeanors, such as "Unlawful operation of vending machines," "Misrepresentation of tobacco leaf weight," and "Racing horse under false name."]

3. **Significant ambiguities in voting laws (disenfranchisement in Tennessee is dependent on which of five different time periods a felony conviction occurred between 1973 and the present** / in Oregon, disenfranchisement is determined not by conviction or imprisonment for a felony, but for being placed under Department of Corrections supervision / since 1997, some persons convicted of a felony and sentenced to less than 12 months' custody have been sent to county jails and hence, are eligible to vote.
4. **Disenfranchisement results in contradictory policies within states (the "crazy-quilt" pattern of disenfranchisement laws exists even within states** / Alabama and Mississippi have both the most and least restrictive laws in the country, a result which is brought about by the fact that certain felonies result in the loss of voting rights for life, while others at least theoretically permit people in prison to vote / most felonies in Alabama result in permanent disenfranchisement, but drug and DUI offenses have been determined to not involve the "moral turpitude" that triggers the loss of voting rights / in Mississippi, ten felonies result in disenfranchisement, but do not include such common offenses as burglary and drug crimes.
5. **Confusing policies lead to the exclusion of legal voters and the inclusion of illegal voters:** The complexity of state disenfranchisement policies results in frequent misidentification of voter eligibility, largely because officials differ in their knowledge and application of disqualification and restoration law and procedures.
6. **Significant variation and uncertainty in how states respond to persons with a felony conviction from other states:** No state has a systematic mechanism in place to address the immigration of persons with a felony conviction, and there is no consensus among indefinite-disenfranchisement states on whether the disqualification is properly confined to the state of conviction, or should be considered in the new state of residence. Interpretation and enforcement of this part of disenfranchisement law varies not only across state lines, but also from one county to another within states. Local officials have no way of knowing about convictions in other states, and many are unsure what they would do if a would-be voter acknowledged an old conviction. Because there is no prospect of a national voter roll, this situation will continue even after full HAVA implementation.
7. **Disenfranchisement is a time-consuming, expensive practice:** Enforcement requires elections officials to gather records from different agencies and bureaucracies, including state and federal courts, Departments of Corrections, Probation and Parole, the state Board of Elections, the state police, and other counties' elections offices.

Policy Implications

1. **Policies disenfranchising people living in the community on probation or parole, or who have completed a sentence are particularly difficult to enforce:** States which disenfranchise only persons who are currently incarcerated appear able to enforce their laws more consistently than those barring non-incarcerated citizens from voting.
2. Given large-scale misunderstanding of disenfranchisement law, **many eligible persons incorrectly believe they cannot vote, or have been misinformed by election officials:** More than one-third of election officials interviewed incorrectly described their state's law on voting eligibility. More than 85% of the officials who misidentified their state's law either did not know the eligibility standard or specified that the law was more restrictive than was actually the case.
3. **Occasional violation of disenfranchisement law by non-incarcerated voters not surprising:** Given the complexity of state laws and the number of state officials who lack an understanding of restoration and disqualification procedures, it should come as no surprise that many voters are ignorant of their voting status, a fact that is likely to have resulted in hundreds of persons with a felony conviction registering and voting illegally in recent years.

016397

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

4. Taken together, these findings undermine the most prominent rationale for disenfranchisement: that the policy reflects a strong, clear consensus that persons with a felony conviction are unfit to vote and constitute a threat to the polity: First, when significant numbers of the people who administer elections do not know important aspects of disenfranchisement law, it is hard to conclude that the restriction is necessary to protect social order and the "purity" of the ballot box. Second, because they are all but invisible in the sentencing process, "collateral" sanctions like disenfranchisement simply cannot accomplish the denunciatory, expressive purposes their supporters claim. We now know that disenfranchisement is not entirely "visible" even to the people running American elections. Third, deep uncertainty regarding the voting rights of people with felony convictions who move from one state to another indicates that we do not even know what purpose disenfranchisement is supposed to serve – whether it is meant to be a punishment, or simply a non-penal regulation of the franchise.

Recommendations

1. **Clarify Policies Regarding Out-of-State Convictions:** State officials should clarify their policies and incorporate into training programs the means by which a felony conviction in another state affects an applicant's voting eligibility. For example, sentence-only disenfranchisement states should clarify that newcomers with old felony convictions from indefinite disenfranchisement states are eligible to vote. And those states which bar some people from voting even after their sentences are completed must clarify whether new arrivals with old felony convictions from sentence-only disenfranchisement states are automatically eligible, and must explain what procedures, if any, should be followed for restoration.
2. **Train Election Officials:** Clarify disenfranchisement policies and procedures for all state and local election officials through development of materials and training programs in each state. At a minimum, this should include distribution of posters, brochures and FAQ sheets to local and state elections offices.
3. **Train Criminal Justice Officials:** Provide training on disqualification and restoration policies for all correctional and criminal justice officials, particularly probation and parole staff. Correctional and criminal justice officials should also be actively engaged in describing these policies to persons under criminal justice supervision.
4. **Review Voting Restrictions on Non-Incarcerated People:** Given the serious practical difficulty of enforcing laws disqualifying people who are not incarcerated from voting – problems which clearly include both excluding eligible people from voting and allowing those who should be ineligible to vote -- state policymakers should review such policies to determine if they serve a useful public purpose.

American Center for Voting Rights "Vote Fraud, Intimidation and Suppression in the 2004 Presidential Election," August 2, 2005.

Using court records, police reports and news articles, ACVR Legislative Fund presented this Report documenting hundreds of reported incidents and allegations from around the country. The report **most often alleges voter intimidation and voter registration fraud, and to a lesser degree absentee ballot fraud and vote buying.** This report alleges a coordinated effort by members of some organizations to rig the election system through voter registration fraud, the first step in any vote fraud scheme that corrupts the election process by burying local officials in fraudulent and suspicious registration forms. paid Democrat operatives were far more involved in voter intimidation and suppression activities than were their Republican counterparts during the 2004 presidential election. Identified five cities as "hot spots" which require additional immediate attention, based on the findings of this report and the cities' documented history of fraud and intimidation: Philadelphia, PA, Milwaukee, WI, Seattle, WA, St. Louis/East St. Louis, MO/IL, and Cleveland, OH. Refutes charges of voter intimidation and suppression made against Republican supporters, discusses similar charges against Democrats, details incidents vote fraud and illegal voting and finally discusses problems with vote fraud, voter registration fraud and election irregularities around the country. Recommends:

- **Both national political parties should formally adopt a zero-tolerance fraud and intimidation policy that commits the party to pursuing and fully prosecuting individuals and allied organizations who commit vote fraud or who seek to deter any eligible voter from participating in the election through fraud or intimidation.** No amount of legislative reform can effectively deter those who commit acts of fraud if there is no punishment for the crime and these acts continue to be tolerated.

016395

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

- **States should adopt legislation requiring government-issued photo ID at the polls and for any voter seeking to vote by mail or by absentee ballot.** Government-issued photo identification should be readily available to all citizens without cost and provisions made to assure availability of government-issued identification to disabled and low-income citizens.
- **States should adopt legislation requiring that all polling places be fully accessible and accommodating to all voters regardless of race, disability or political persuasion and that polling locations are free of intimidation or harassment.**
- **States should create and maintain current and accurate statewide voter registration databases as mandated by the federal Help America Vote Act (“HAVA”) and establish procedures to assure that the statewide voter roll is current and accurate and that the names of eligible voters on the roll are consistent with the voter roll used by local election authorities in conducting the election.**
- **States should adopt legislation establishing a 30-day voter registration cutoff to assure that all voter rolls are accurate and that all registrants can cast a regular ballot on Election Day and the election officials have opportunity to establish a current and accurate voter roll without duplicate or fictional names and assure that all eligible voters (including all recently registered voters) are included on the voter roll at their proper precinct.**
- **States should adopt legislation requiring voter registration applications to be delivered to the elections office within one week of being completed so that they are processed in a timely manner and to assure the individuals registered by third party organizations are properly included on the voter roll.**
- **States should adopt legislation and penalties for groups violating voter registration laws, and provide the list of violations and penalties to all registration solicitors.** Legislation should require those organizations obtaining a voter's registration to deliver that registration to election officials in a timely manner and should impose appropriate penalties upon any individual or organization that obtains an eligible voter's registration and fails to deliver it to election authorities.
- **States should adopt legislation prohibiting “bounty” payment to voter registration solicitors based on the number of registration cards they collect.**

The Advancement Project, “America’s Modern Poll Tax: How Structural Disenfranchisement Erodes Democracy” November 7, 2001

Written after the 2000 election, thesis of report is that **structural disenfranchisement**—the effect of breakdowns in the electoral system, is the new poll tax. Structural disenfranchisement includes “bureaucratic blunders, governmental indifference, and flagrant disregard for voting rights.” Blame for structural disenfranchisement is laid squarely at the feet of **states and localities that “shirk their responsibilities or otherwise manipulate election systems,” resulting in voters “either turned away from the polls or their votes are thrown out.”** Data and conclusions in the Report are taken from **eight sample case studies** of states and cities across the country and a survey of state election directors that reinforces the findings of the case studies (New York City—in six polling places Chinese translations inverted the Democrats with the Republicans; Georgia—the state computer crashed two weeks before the election, dropping thousands of voters from the rolls; Virginia—registration problems kept an untold number from voting; Chicago—in inner-city precincts with predominately minority populations, almost four out of every ten votes cast for President (in 2000) were discarded; St. Louis—thousands of qualified voters were placed on inactive lists due to an overbroad purge; Florida—a voting list purge of voters whose name and birth date closely resembled those of people convicted of felonies; and, Texas—significant Jim Crow like barriers to minority voting.) Most ballot blockers involve the structural elements of electoral administration: “ill-trained poll workers, failures to process registration cards on time or at all, inaccurate registration rolls, overbroad purges of voter rolls, unreasonably long lines, inaccurate ballot translations and a shortage of translators to assist voters who have limited English language skills.”

Findings:

- election directors lack the resources to effectively do their jobs and some lack the “ability or will to force local election officials to fix serious

016399

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

problems”;

- election officials are highly under funded and legislatures refuse to grant their requests for more money;
- due to a lack of funds, election officials must use old and inferior equipment and can't improve training or meet structural needs;
- election officials are generally unaware of racial disparities in voting; only three of the 50 state election administrators are non-white.

Recommendations:

- federal policies that set nationwide and uniform election policies;
- federal guarantee of access to provisional ballots;
- enforcement of voter disability laws;
- automatic restoration of voting rights to those convicted of a crime after they have completed their sentence;
- a centralized data base of voters administered by non-partisan individuals;
- federal standards limiting precinct discarded vote rates to .25 %;
- federal requirements that jurisdiction provide voter education, including how to protect their right to vote; and laws that strengthen the ability of individuals to bring actions to enforce voting rights and anti-discrimination laws.

The Brennan Center and Professor Michael McDonald "Analysis of the September 15, 2005 Voter Fraud Report Submitted to the New Jersey Attorney General," The Brennan Center for Justice at NYU School of Law, December 2005.

A September 15, 2005 Report submitted to the New Jersey Attorney General included lists of purportedly illegitimate votes in New Jersey in the 2004 general election, including lists of 10,969 individuals who purportedly voted twice and lists of 4,756 voters who were purportedly dead or incarcerated in November 2004. **Analysis of the suspect lists reveals that the evidence submitted does not show what it purports to show: cause for concern that there is serious risk of widespread fraud given the state of the New Jersey voter registration rolls.** These suspect lists were compiled by attempting to match the first name, last name, and birth date of persons on county voter registration files. **Analysis reveals several serious problems with the methodology used to compile the suspect lists that compromise the lists' practical value.** For example, middle initials were ignored throughout all counties, so that "J_____ A. Smith" was presumed to be the same person as "J_____ G. Smith." Suffixes were also ignored, so that fathers and sons – like "B_____ Johnson" and "B_____ Johnson, Jr." – were said to be the same person. **A presumption that two records with the same name and date of birth must represent the same person is not consistent with basic statistical principles.**

Re Claim of Double Voting by 4,497 Individuals:

- 1,803 of these 4,397 records of ostensibly illegal votes seem to be the product of a glitch in the compilation of the registration files (far more likely that data error is to blame for the doubly logged vote - to irregularities in the data processing and compilation process for one single county);
- another 1,257 entries of the 4,397 records probably represent similar data errors;
- approximately 800 of the entries on the list likely represent different people, with different addresses and different middle initials or suffixes;
- for approximately 200 of the entries in this category, however, less information is available (lack of or differences in middle initial or middle name);
- 7 voters were apparently born in January 1, 1880 – which is most likely a system default for registrations lacking date-of-birth information;
- for 227 voters, only the month and year of birth are listed: this means only that two voters with the same name were born in the same month and year, an unsurprising coincidence in a state of several million people;
- leaves approximately 289 votes cast under the same name and birth date – like votes cast by "P_____ S. Rosen," born in the middle of the baby boom – but from two different addresses. It may appear strange, but there may be two P_____ S. Rosens, born on the same date in 1948 – and

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

such coincidences are surprisingly common. . In a group of just 23 people, it is more likely than not that two will share the same birthday. For 40 people, the probability is 90%. Many, if not most, of the 289 alleged double votes of persons registered at different addresses most likely reflect two separate individuals sharing a first name, last name, middle initial, and birth date.

But there is **no doubt that there are duplicate entries on New Jersey's registration rolls**. It is well known that voter registration rolls contain "deadwood" – registration entries for individuals no longer living at a given address or deceased. There is no evidence, however, that these extra registrations are used for widespread illegal voting. Moreover, **the problem of deadwood will soon be largely resolved: both the National Voter Registration Act of 1993 and the Help America Vote Act of 2002 require states to implement several systems and procedures as of January 1, 2006, that will clean the voter rolls of duplicate or invalid entries while protecting eligible voters from unintended disfranchisement.**

Democratic National Committee, "Democracy at Risk: The November 2004 Election in Ohio," DNC Services Corporation, 2005

Study re 2004 election in Ohio. Findings considered related to EAC study:

- **Statewide, 6 %of all voters reported feelings of intimidation: 16 percent of African Americans reported experiencing intimidation versus only 5 %of white voters.**
- **African American voters were 1.2 times more likely than white voters to be required to vote provisionally.** Of provisional voters in Cuyahoga County, 35% were African American, compared to 25% of non-provisional voters, matched by geography.
- Under Ohio law, the only voters who should have been asked for identification were those voting in their first Federal election who had registered by mail but did **not** provide identification in their registration application. **Although only 7% of all Ohio voters were newly registered (and only a small percentage of those voters registered by mail and failed to provide identification in their registration application), more than one third (37% reported being asked to provide identification.—meaning large numbers of voters were illegally required to produce identification. African American voters statewide were 47% more likely to be required to show identification than white voters. Indeed, 61% of African American men reported being asked to provide identification at the polls.**
- **Scarcity of voting machines caused long lines that deterred many people from voting: 3% of voters who went to the polls left their polling places and did not return due to the long lines; statewide, African American voters reported waiting an average of 52 minutes before voting while white voters reported waiting an average of 18 minutes; overall, 20% of white Ohio voters reported waiting more than twenty minutes, while 44% of African American voters reported doing so.**

The report also includes a useful summary and description of the reports that came through Ohio Election Protection on Election Day, which included a wide variety of problems, including voter intimidation and discrimination.

Pertinent recommendations:

- **codify into law all required election practices**, including requirements for the adequate training of official poll workers
- adopt legislation to **make clear and uniform the rules on voter registration.**
- adopt uniform and clear published standards for the distribution of voting equipment and the assignment of official pollworkers among precincts, to ensure adequate and nondiscriminatory access
- improve training of official poll workers
- adopt clear and uniform rules on the use of, and the counting of, provisional ballots, and distribute them for public comment well in advance of each election day
- not adopt requirements that voters show identification at the polls, beyond those already required by federal law; **vigorously enforce**, to the full extent permitted by state law, a **voter's right to vote without showing identification.**

016401

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

- **make voter suppression a criminal offense at the state level**, in all states
- **implement statewide voter lists** in accordance with the Help America Vote Act ("HAVA")
- **expend significantly more resources in educating voters on where, when and how to vote.**
- **partisan officials who volunteer to work for a candidate should not oversee or administer any elections.**

Public Integrity Section, Criminal Division, United States Department of Justice, "Report to Congress on the Activities and Operations of the Public Integrity Section for 2002."

Public Integrity Section, Criminal Division, United States Department of Justice, "Report to Congress on the Activities and Operations of the Public Integrity Section for 2003."

Public Integrity Section, Criminal Division, United States Department of Justice, "Report to Congress on the Activities and Operations of the Public Integrity Section for 2004."

Supervision of the Justice Department's nationwide response to election crimes:

Election Crimes Branch oversees the Department's handling of all election crime allegations other than those involving civil rights violations, which are supervised by the Voting Section of the Civil Rights Division. Specifically, the Branch supervises four types of corruption cases: crimes that involve the voting process, crimes involving the financing of federal election campaigns, crimes relating to political shakedowns and other patronage abuses, and illegal lobbying with appropriated funds. Vote frauds and campaign-financing offenses are the most significant and also the most common types of election crimes. The purpose of Headquarters' oversight of election crime matters is to ensure that the Department's nationwide response to election crime is uniform, impartial, and effective. An Election Crimes Branch, headed by a Director and staffed by Section attorneys on a case-by-case basis, was created within the Section in 1980 to handle this supervisory responsibility.

Voting Fraud:

During **2002** the Branch assisted United States Attorneys' Offices in Alabama, Arkansas, California, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Nevada, North Carolina, Rhode Island, South Carolina, South Dakota, Texas, Utah, West Virginia, and Wisconsin in handling vote fraud matters that occurred in their respective districts. During **2003** the Branch assisted United States Attorneys' Offices in Alabama, Arkansas, California, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, New Jersey, Nevada, North Carolina, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Virgin Islands, West Virginia, and Wisconsin in handling vote fraud matters that occurred in their respective districts. During **2004** the Branch assisted United States Attorneys' Offices in the following states in the handling of vote fraud matters that occurred in their respective districts: Alabama, Alaska, Arizona, Arkansas, California, Colorado, Florida, Georgia, Illinois, Indiana, Kansas, Kentucky, Louisiana, Massachusetts, Maryland, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New Jersey, New Mexico, Nevada, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Puerto Rico, South Carolina, South Dakota, Texas, Utah, Virginia, West Virginia, Washington, and Wisconsin. This assistance included evaluating vote fraud allegations to determine whether investigation would produce a prosecutable federal criminal case, helping to structure investigations, providing legal advice concerning the formulation of charges, and assisting in establishing several task force teams of federal and state law enforcement officials to investigate vote fraud matters.

Litigation:

The Branch Director or Section attorneys also prosecute selected election crimes, either by assuming total operational responsibility for the case or by handling the case jointly with a United States Attorney's Office. The Section also may be asked to supervise the handling of a case in the event of a partial recusal of the local office. For example, in 2002 the Branch continued to supervise the prosecution of a sheriff and his election attorney for using data from the National Crime Information Center regarding voters' criminal histories to wage an election contest.

016402

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

District Election Officer Program:

The Branch also assists in implementing the Department's long-standing District Election Officer (DEO) Program. This Program is designed to ensure that each of the 93 United States Attorneys' Offices has a trained prosecutor available to oversee the handling of election crime matters within the district and to coordinate district responses with Headquarters regarding these matters. The DEO Program involves the appointment of an Assistant United States Attorney in each federal district to serve a two-year term as a District Election Officer; the training of these prosecutors in the investigation and prosecution of election crimes; and the coordination of election-related initiatives and other law enforcement activities between Headquarters and the field. In addition, the DEO Program is a crucial feature of the Department's nationwide Election Day Program, which occurs in connection with the federal general elections held in November of even-numbered years. The Election Day Program ensures that federal prosecutors and investigators are available both at the Department's Headquarters in Washington and in each district to receive and handle complaints of election irregularities from the public while the polls are open and that the public is aware of how these individuals can be contacted on election day. In 2002 the Department enhanced the DEO Program by establishing a Ballot Integrity Initiative.

Ballot Integrity Initiative:

Beginning in September of 2002, the Public Integrity Section, acting at the request of the Attorney General, assisted in the implementation of a Ballot Integrity Initiative for the 2002 general election and subsequent elections. This initiative included increasing the law enforcement priority the Department gives to election crimes; holding a special day-long training event in Washington, DC for representatives of the 93 United States Attorneys' Offices; publicizing the identities and telephone numbers of the DEOs through press releases issued shortly before the November elections; and requiring the 93 U.S. Attorneys to communicate the enhanced federal prioritization of election crime matters to state and local election and law enforcement authorities. As part of Ballot Integrity Initiative, on October 8, **2002**, the Public Integrity Section and the Voting Rights Section of the Department's Civil Rights Division co-sponsored a Voting Integrity Symposium for District Election Officers representing each of the 93 federal judicial districts. Topics discussed included the types of conduct that are prosecutable as federal election crimes and the federal statutes used to prosecute such cases. Attorney General John Ashcroft delivered the keynote address on the importance of election crime and ballot integrity enforcement. Assistant Attorney General of the Civil Rights Division Ralph Boyd and Assistant Attorney General of the Criminal Division Michael Chertoff also spoke to attendees on the protection of voting rights and the prosecution of election cases. As part of Ballot Access and Voting Integrity Initiative, on September 23 and 24, **2003**, the Public Integrity Section and the Voting Rights Section of the Department's Civil Rights Division co-sponsored a two-day Symposium for DEOs representing each of the 93 federal judicial districts. Topics discussed included the types of conduct that are prosecutable as federal election crimes and the federal statutes used to prosecute such cases. Assistant Attorney General of the Civil Rights Division Alexander Acosta and Assistant Attorney General of the Criminal Division Christopher A. Wray delivered the keynote addresses on the importance of protecting voting rights and the prosecution of election cases. On July 20 and 21, **2004**, the Public Integrity Section and the Voting Section of the Department's Civil Rights Division co-sponsored a two-day symposium for DEOs representing each of the 93 federal judicial districts. Topics discussed included the types of conduct that are prosecutable as federal election crimes and the federal statutes available to prosecute such cases, and the handling of civil rights matters involving voting. Attorney General John Ashcroft delivered the keynote address on the importance of protecting voting rights and the prosecution of election fraud. In addition, Assistant Attorney General Christopher A. Wray of the Criminal Division and Assistant Attorney General R. Alexander Acosta of the Civil Rights Division addressed conference attendees on voting rights and election fraud enforcement issues respectively.

As a result of the Initiative, during **2002** the number of election crime matters opened by federal prosecutors throughout the country increased significantly, as did the Section's active involvement in election crime matters stemming from the Initiative. At the end of 2002, the Section was supervising and providing advice on approximately 43 election crime matters nationwide. In addition, as of December 31, 2002, 11 matters involving possible election crimes were pending in the Section. During 2002 the Section closed two election crime matters and continued its operational supervision of 8 voting fraud cases (conspiracy to illegally obtain criminal history records to use to challenge voters (AL) and 7 cases of vote buying involving 10 defendants (KY).

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Craig Donsanto, "The Federal Crime of Election Fraud," Public Integrity Section, Department of Justice, prepared for Democracy.Ru, n.d., at http://www.democracy.ru/english/library/international/eng_1999-11.html

Addresses the role of the United States Department of Justice in matters of election fraud, specifically: what sort of election-related conduct is potentially actionable as a federal crime; what specific statutory theories apply to frauds occurring in elections lacking federal candidates on the ballot, what federalism; procedural, and policy considerations impact on the federalization of this type of case; and how Assistant United States Attorneys should respond to this type of complaint. As a general rule, the federal crime of voter fraud embraces only organized efforts to corrupt of the election process itself: i.e., the registration of voters, the casting of ballots, and the tabulation and certification of election results. Moreover, this definition excludes all activities that occur in connection with the political campaigning process, unless those activities are themselves illegal under some other specific law or prosecutorial theory. This definition also excludes isolated acts of individual wrongdoing that are not part of an organized effort to corrupt the voting process. Mistakes and other gaffs that inevitably occur are not included as voter fraud. Prosecuting election fraud offenses in federal court is further complicated by the constitutional limits that are placed on federal power over the election process. The conduct of elections is primarily a state rather than a federal activity.

Four situations where federal prosecution is appropriate:

1. Where the objective of the conduct is to corrupt the outcome of a federal elective contest, or where the consequential effect of the corrupt conduct impacts upon the vote count for federal office;
2. Where the object of the scheme is to discriminate against racial, ethnic or language minority groups, the voting rights of which have been specifically protected by federal statutes such as the Voting Rights Act, 42 U.S.C. section 1973 et seq.;
3. Where federalization is required in order to redress longstanding patterns of electoral fraud, either at the request of state or local authorities, or in the face of longstanding inaction by state authorities who appear to be unwilling or unable to respond under local law; and,
4. Where there is a factual basis to believe that fraudulent registration or voting activity is sufficiently connected to other forms of criminal activity that perusing the voter fraud angle will yield evidence useful in the prosecution of other categories of federal offense

Four advantages to federal prosecution:

1. Voter fraud investigations are labor intensive - local law enforcement agencies often lack the manpower and the financial resources to take these cases on;
2. Voter fraud matters are always politically sensitive and very high profile endeavors at the local level - local prosecutors (who are usually themselves elected) often shy away from prosecuting them for that reason; the successful prosecution of voter fraud cases demands that critical witnesses be examined under oath before criminal charges based on their testimony are filed.
3. Many states lack the broad grand jury process that exists in the federal system; and
4. The defendants in voter fraud cases are apt to be politicians - or agents of politicians - and it is often impossible for either the government or the defendant to obtain a fair trial in a case that is about politics and is tried to a locally-drawn jury. The federal court system provides for juries to be drawn from broader geographic base, thus often avoiding this problem.

Several prosecutorial theories used by United States Attorneys to federalize election frauds are discussed.

Four questions used by prosecutors in evaluating the credibility of election complaints:

1. does the substance of the complaint assuming it can be proven through investigation - suggest a potential crime;
2. is the complaint sufficiently fact-specific that it provides leads for investigators to pursue;
3. is there a federal statute that can be used to federalize the criminal activity at issue; and,
4. is there a special federal interest in the matter that warrants federalization rather than deferral to state law enforcement.

All federal election investigations must avoid the following: non-interference in elections unless absolutely necessary to preserve evidence; interviewing voters during active voting periods; seizing official election documentation; investigative activity inside open polls; and prosecutors must adhere to 18 U.S.C. section 592, prohibiting the stationing of armed men at places where voting activity is taking place.

016404

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Election crimes based on race or language minority status are treated as civil rights matters under the Voting Rights Act.

People for the American Way, Election Protection 2004, Election Protection Coalition, at <http://www.electionprotection2004.org/edaynews.htm>

Election Protection 2004 was the nation's most far-reaching effort to protect voter rights before and on Election Day. The historic nonpartisan program included: (1) a toll-free number, 1-866-OUR-VOTE, with free, immediate and multi-lingual assistance to help voters with questions about registration and voting, and assist voters who encounter barriers to the ballot box; (2) distribution of more than five million "Voters' Bills of Rights" with state-specific information; (3) 25,000 volunteers, including 6,000 lawyers and law students, who watched for problems and assisted voters on the spot at more than 3,500 predominantly African-American and Latino precincts with a history of disenfranchisement in at least 17 states; and (4) civil rights lawyers and advocates represented voters in lawsuits, preserved access to the polls, exposed and prevented voter intimidation, worked with election officials to identify and solve problems with new voting machines, technology and ballot forms, and protected voter rights in advance and on Election Day.

Voter Intimidation and Suppression Stories (Abridged):

- An Associated Press story noted Election Protection's exposure of reported voter suppression tactics in **Colorado: Officials with the Election Protection Coalition, a voter-rights group, also said some voters in a predominantly black neighborhood north of Denver found papers on their doorsteps giving them the wrong address for their precinct.**
- Election Protection received a report from Boulder County, **Colorado** that a **poll worker made racist comments to Asian American voter and then told her she was not on the list and turned her away.** The voter saw others filling out provisional ballots and asked for one but was denied. Another Asian American woman behind her in line was also given trouble by the same poll worker (he questioned her nationality and also turned her away).
- Election Protection received a report from Florissant County, **Missouri** from a voter who lives in predominantly white neighborhood. While waiting in line to vote, a **Republican challenger challenged the black voters by requesting more proof of identification, residence, and signature match, while asking nothing from white voters.** Also, the same voter reportedly asked a few questions about voting but an election officials refused to provide any meaningful answer, insisting that "it's very simple", but provided white voters with information when requested. **There was one other black voter in line who was also singled out for same treatment while white voters were not.**
- The Election Protection hotline received reports from **Pinellas County, Florida** that **individuals purporting to be from the Kerry campaign are going door-to-door handing out absentee ballots, and asking voters to fill them out, and then taking the ballots from them, saying "Vote here for Kerry. Don't bother going to the polls."**
- The Election Protection Coalition received a report from a woman whose sister lives in **Milwaukee** and is on government assistance. Her **sister was reportedly told by her "case manager" that if she voted for Kerry, she would stop receiving her checks.**
- An illiterate, older and disabled voter in **Miami-Dade** asked for assistance reading the ballot and reported that a poll worker yelled at him and refused to assist him and also refused to allow him to bring a friend into the booth in order to read the ballot to him.
- The Election Protection Coalition have gathered reports that **flyers are circulating in a black community in Lexington, South Carolina claiming they those who are behind on child support payments will be arrested as the polls.**
- **Minority voters from Palm Beach County, Florida** reported to the hotline that they received middle-of-the-night, live harassing phone calls warning them away from the polls.
- A volunteer for Rock the Vote reported that **two illiterate voters in Michigan** requested assistance with their ballots but were refused and **reportedly mocked by poll workers.**
- The hotline received a call from a radio DJ in **Hillsborough County, Florida**, who stated that he has received many calls (most of which were from **African-Americans**) claiming that poll workers were turning voters away and not "letting" them vote.

016405

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

- The hotline received a call from **Pima County, Arizona**, indicating that **Democratic voters received calls throughout Monday evening, providing incorrect information about the precinct location**. Voters have had to be transported en masse in order to correct the problem.
- A caller from **Alabama** claims that he was told at his polling place that he could vote there for everything but the President and that he would have to go elsewhere in order to vote for a presidential candidate.
- Poll monitors in **Philadelphia** reports groups of lawyers, traveling in threes, who pull voters out of line and challenge them to provide ID, but when challenged themselves, they hop into waiting cars or vans and leave. Similar activity by Republican lawyers in Philadelphia was reported in the 2002 election.
- In **Cuyahoga, Ohio**, a caller reported that all black voters are being asked to show ID, while white voters are not. Caller report that he is black and had to show ID while his girlfriend is white and did not have to show ID.
- Two months ago, **suspicious phone calls to newly registered Democrats —telling them they weren't, in fact, registered to vote —** were traced to the Republican headquarters in the **Eastern Panhandle**. On **Monday, Democrats there said the calls have started again, even after the Berkeley County Clerk — a Republican — sent the party a cease-and-desist letter**. The Berkeley prosecutor, who also is county Democratic chairman, has called on the U.S. attorney to investigate.
- In **Tuscon, Arizona** a misleading call informing voters that they should vote on **November 3** has been traced back to the state GOP headquarters. The FBI is investigating.
- **A man driving around in a big van covered in American flags and a big picture of a policeman was reportedly parked in front of a polling place; he then got out and moved within the 75 ft limit**, until he was asked to leave; he then was found inside the polling place and was again asked to leave. Election Protection volunteers contacted officials and the man was eventually removed.
- The Election Protection hotline has received a report from **individuals who claim to have received recorded telephone message coming from Bill Clinton and ACT and reminding them to vote on Nov. 3rd**.
- In **Massachusetts**, the EP Hotline has received a report that a **radio station (WILD) is broadcasting that voters will be arrested on the spot if they have outstanding parking tickets**.
- In **Richland, South Carolina** Election Protection has received a report of a **poll manager turning away individuals who do not have photo ID issued to the county or a driver's license**; an EP lawyer spoke with the Poll Manager at 8:20 am and told her that people with other forms of ID should be allowed to vote by provisional ballot.
- In **Greenville**, a caller reported that a **white poll worker was asking Blacks for multiple form of I.D.** Fortunately, the voter who reported the problem did have a second I.D. but reported that some others were turned away. Election Protection attorneys have alerted election officials.
- In **Allegheny County, Pennsylvania**, an official looking flyer advises **Democratic voters to "create a peaceful voting environment" by voting on Wednesday, November 3**
- The week before the election, flyers were circulated in **Milwaukee** under the heading **"Milwaukee Black Voters League" with some "warnings for election time."** The flyer listed false reasons for which you would be barred from voting (such as a traffic ticket) and then warned that **"If you violate any of these laws you can get ten years in prison and your children will get taken away from you."**
- There is a **Jefferson County** flyer which tells voters **"See you at the Poles[sic]"... on November 4.**

Craig Donsanto, "Prosecution of Electoral Fraud Under United State Federal Law," *IFES Political Finance White Paper Series*, IFES, 2006.

[NO SUMMARY FOUND] This is summary of federal role in prosecuting election crimes.

General Accounting Office, "Elections: Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote,"

016406

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Report to Congressional Requesters, September 2005.

[SUMMARY FAILS TO NOTE ELECTION OFFICIALS' RESPONSES THAT LITTLE VOTING FRAUD OR VOTER INTIMIDATION WAS DETECTED. DETECTED VOTING FRAUD WAS RELATED TO SUBMISSION OF FALSE/MATERIALLY INCORRECT VOTER REGISTRATION APPLICATIONS AND TO ABSENTEE BALLOT FRAUD. VOTER SUPPRESSION EFFORTS OCCUR.] This Report focuses on the efforts of local election officials in 14 jurisdictions within 7 states to manage the registration process, maintain accurate voter registration lists, and ensure that eligible citizens in those jurisdictions had the opportunity to cast ballots during the 2004 election. The Report concentrates on election officials' characterization of their experiences with regard to (1) managing the voter registration process and any challenges related to receiving voter registration applications; checking them for completeness, accuracy, and duplication; and entering information into voter registration lists; (2) removing voters' names from voter registration lists and ensuring that the names of eligible voters were not inadvertently removed; and (3) implementing HAVA provisional voting and identification requirements and addressing any challenges encountered related to these requirements. The Report also provides information on motor vehicle agency (MVA) officials' characterization of their experiences assisting citizens who apply to register to vote at MVA offices and forwarding voter registration applications to election offices. The Report analyzed information collected from elections and motor vehicle agency offices in seven states—Arizona, California, Michigan, New York, Texas, Virginia, and Wisconsin. The 14 jurisdictions we selected were Gila and Maricopa Counties, Arizona; Los Angeles and Yolo Counties, California; City of Detroit and Delta Township, Michigan; New York City and Rensselaer County, New York; Bexar and Webb Counties, Texas; Albemarle and Arlington Counties, Virginia; and the cities of Franklin and Madison, Wisconsin. Election officials representing all but one of the jurisdictions surveyed following the November 2004 election said they faced some challenges managing the voter registration process, including (1) receiving voter registration applications; (2) checking them for completeness, accuracy, and duplication; and (3) entering information into voter registration lists; when challenges occurred, election officials reported they took various steps to address them. All but 1 of the jurisdictions reported removing names from registration lists during 2004 for various reasons, including that voters requested that their names be removed from the voter registration list; information from the U.S. Postal Service (USPS) showing that voters had moved outside the jurisdiction; felony records received from federal, state, or local governments identifying voters as ineligible due to felony convictions; and death records received from state or local vital statistics offices. All of the jurisdictions reported that they permitted citizens to cast provisional ballots during the November 2004 election. In addition, 12 of the 14 jurisdictions to which this was applicable reported that they offered certain first-time voters who registered by mail the opportunity to cast provisional ballots. Local election officials in 12 of the 13 jurisdictions we surveyed reported that they set up mechanisms to inform voters—without cost—about the outcome of their provisional votes during the November 2004 election. These mechanisms included toll-free telephone numbers, Web sites, and letters sent to the voters who cast provisional ballots. Election officials representing 8 of the 14 jurisdictions reported facing challenges implementing provisional voting for various reasons, including some poll workers not being familiar with provisional voting or, in one jurisdiction representing a large number of precincts, staff not having sufficient time to process provisional ballots.

Lori Minnite and David Callahan, "Securing the Vote: An Analysis of Election Fraud," Demos: A Network of Ideas and Action, 2003.

A comprehensive survey and analysis of vote fraud in the United States. The methodology included doing nexis searches for all 50 states and surveying existing research and reports. In addition, Minnite did a more in-depth study of 12 diverse states by doing nexis searches, studying statutory and case law, and conducting interviews with election officials and attorneys general. Finally, the study includes an analysis of a few of the most high profile cases of alleged fraud in the last 10 years, including the Miami mayoral election (1997), Orange County congressional race (1996), and the general election in Missouri (2000). In these cases, **Minnite shows that many allegations of fraud do not end up being meritorious.** Minnite finds that **available evidence suggests that the incidence of election fraud is minimal and rarely affects election outcomes.** Election officials generally do a very good job of protecting against fraud. **Conditions that give rise to election fraud have steadily declined over the last century as a result of weakened political parties, strengthened election administration, and improved voting technology.** There is little available evidence that election reforms such as the National Voter Registration Act, election day registration, and mail-in voting have resulted in increases in election fraud. Election

016407

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

fraud appears also to be very rare in the 12 states examined more in-depth. Legal and news records turned up little evidence of significant fraud in these states or any indication that fraud is more than a minor problem. Interviews with state officials further confirmed this impression. Minnite found that, **overall, the absentee mail-in ballot process is the feature most vulnerable to voter fraud.** There is not a lot of evidence of absentee ballot fraud but the potential for fraud is greatest in this area because of a lack of uniformly strong security measures in place in all states to prevent fraud.

Suggested reforms to prevent what voter fraud does take place:

1. effective use of new statewide voter registration databases;
2. identification requirements for first time voters who register by mail should be modified to expand the list of acceptable identifying documents;
3. fill important election administration positions with nonpartisan professionals;
4. strengthen enforcement through adequate funding and authority for offices responsible for detecting and prosecuting fraud; and
5. establish Election Day Registration because it usually requires voter identification and authorization in person before a trained election worker, which reduces the opportunity for registration error or fraud.
- 6.

People for the American Way, NAACP, Lawyers Committee for Civil Rights, "Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections," December 2004.

A description and analysis of the complaints and allegations of voting irregularities gathered by the Election Protection program during the 2004 presidential election. Election Protection received more than a thousand complaints of voter suppression or intimidation. Complaints ranged from intimidating experiences at polling places to coordinated suppression tactics. For example:

- Police stationed outside a Cook County, Illinois, polling place were requesting photo ID and telling voters if they had been convicted of a felony that they could not vote.
- In Pima, Arizona, voters at multiple polls were confronted by an individual, wearing a black tee shirt with "US Constitution Enforcer" and a military-style belt that gave the appearance he was armed. He asked voters if they were citizens, accompanied by a cameraman who filmed the encounters.
- There were numerous incidents of intimidation by partisan challengers at predominately low income and minority precincts
- Voters repeatedly complained about misinformation campaigns via flyers or phone calls encouraging them to vote on a day other than November 2, 2004 or of false information regarding their right to vote. In Polk County, Florida, for example, a voter received a call telling her to vote on November 3. Similar complaints were also reported in other counties throughout Florida. In Wisconsin and elsewhere voters received flyers that said:
 - "If you already voted in any election this year, you can't vote in the Presidential Election."
 - "If anybody in your family has ever been found guilty of anything you can't vote in the Presidential Election."
 - "If you violate any of these laws, you can get 10 years in prison and your children will be taken away from you."

There were also numerous reports of poll workers refusing to give voters provisional ballots.

The following is a summary of the types of acts of suppression and intimidation included in the report and a list of the states in which they took place. All instances of irregularities that were more administrative in nature have been omitted:

1. **Improper implementation of voter identification rules, especially asking only African Americans for proof of identity:** Florida, Ohio, Pennsylvania, Illinois, Missouri, Arkansas, Georgia, Louisiana
2. **Individuals at the polls posing as some sort of law enforcement authority and intimidating and harassing voters:** Arizona, Missouri
3. **Intimidating and harassing challengers at the polls:** Ohio, Michigan, Wisconsin, Missouri, Minnesota
4. **Deceptive practices and disinformation campaigns, such as the use of flyers with intentional misinformation about voting rights or voting procedures, often directed at minority communities; the use of phone calls giving people misinformation about polling sites and**

016403

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

other procedures; and providing verbal misinformation at the polls in a way that appears to have been intentionally misleading: Florida, Pennsylvania, Illinois, Wisconsin, Missouri, North Carolina, Arkansas, Texas

5. **Refusal to provide provisional ballots to certain voters:** Ohio, Pennsylvania, Illinois, Michigan, Colorado, Missouri, Texas, Georgia, Louisiana
6. **Registration applications submitted through third parties that were not processed:** Arizona, Michigan, Nevada (registration forms **destroyed by Sproul Associates**)
7. **Improper removal from the voter registration list:** Arizona
8. **Individuals questioning voters' citizenship:** Arizona
9. **Police officers at the polls intimidating voters:** Illinois, Michigan, Wisconsin, Missouri, North Carolina

The report does not provide corroborating evidence for the allegations it describes. However, especially in the absence of a log of complaints received by the Department of Justice, this report provides a very useful overview of the types of experiences some voters more than likely endured on Election Day in 2004.

Books

John Fund, *Stealing Elections: How Voter Fraud Threatens Our Democracy*, Encounter Books, 2004.

Focuses almost entirely on alleged transgressions by Democrats. Fund's accusations, if credible, would indicate that fraud such as voter registration fraud, absentee ballot fraud, dead people voting, and felon voting is prevalent throughout the country. However, due to its possible biases, lack of specific footnoting, and insufficient identification of primary source material, caution is strongly urged with respect to utilizing this book for assessing the amount and types of voter fraud and voter intimidation occurring.

Fund says that "Election fraud, whether its phony voter registrations, illegal absentee ballots, shady recounts or old-fashioned ballot-box stuffing, can be found in every part of the United States, although it is probably spreading because of the ever-so-tight divisions that have polarized the country and created so many close elections lately. Fund argues that fraud **has been made easier by the passage of the National Voting Rights Act** because it allows ineligible voters to remain on the voter rolls, allowing a voter to vote in the name of someone else. He claims dead people, people who have moved, and people in jail remain on the voting list. He believes because of NVRA illegal aliens have been allowed to vote.

Absentee balloting makes it even worse: someone can register under false names and then use absentee ballots to cast multiple votes. Groups can get absentee ballots for the poor and elderly and then manipulate their choices.

Provides a number of examples of alleged voter fraud, mostly perpetrated by Democrats. For example, he claims much fraud in St. Louis in 2000, including illegal court orders allowing people to vote, **felons voting, people voting twice, dead people voting, voters were registered to vacant lots, election judges were not registered and evidence of false registrations.** Another case he pays a great deal of attention to are the alleged transgressions by Democrats in Indian Country in South Dakota 2002, including **voter registration fraud, suspicious absentee ballot requests, vote hauling, possible polling place fraud, abusive lawyers at polling sites, and possible vote buying.**

Andrew Gumbel, *Steal this Vote: Dirty Elections and the Rotten History of Democracy in American*, Nation Books, 2005.

Bulk of the book comprises stories from United States electoral history outside the scope of this project; however, tales are instructive in showing how far back irregular and illegal voting practices go. Focuses almost entirely on alleged transgressions by Republican, although at times it does include complaints about Democratic tactics. Gumbel's accusations, if credible, especially in the Bush-Gore election, would indicate there were a number of problems in key states in such areas as **intimidation, vote counting, and absentee ballots.** However, due to its possible biases, lack of specific footnoting, and insufficient identification of primary source material, caution is strongly urged with respect to utilizing this book for assessing the amount

016409

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

and types of voter fraud and voter intimidation occurring.

Tracy Campbell, *Deliver the Vote: A History of Election Fraud, An American Political Tradition – 1742-2004*, Carroll & Graf Publishers, 2005.

Traces the historical persistence of voter fraud from colonial times through the 2004 Bush-Kerry election. From the textual information, it quickly becomes obvious that voter fraud was not limited to certain types of people or to certain political parties. [SKIMPY SUMMARY-DOES NOT SAY MUCH.]

David E. Johnson and Jonny R. Johnson, *A Funny Thing Happened on the Way to the White House: Foolhardiness, Folly, and Fraud in the Presidential Elections, from Andrew Jackson to George W. Bush*, Taylor Trade Publishing, 2004.

Adds almost nothing to the present study. It contains no footnotes and no references to primary source material, save what may be able to be gleaned from the bibliography. Takes a historical look at United States Presidential elections from Andrew Jackson to George Bush by providing interesting stories and other historical information. There are only three pages out of the entire book that touches on vote fraud in the first Bush election. The authors assert that the exit polls in Florida were probably correct. The problem was the pollsters had no way of knowing that thousands of votes would be invalidated. But the authors do not believe that fraud was the cause of the tabulation inaccuracy.

Mark Crispin Miller, *Fooled Again*, Basic Books, 2005.

Sets out to show that the 2004 election was won by Bush through nefarious means, and indicts the news media for not taking anomalies, irregularities, and **alleged malfeasance** in the process seriously enough. However, book is well sourced, and individual instances of alleged malfeasance discussed may be worth looking at. He accuses Republicans of committing crimes and improprieties throughout the country, including:

1. **deliberate disparities in voting machine distribution and long lines in Democratic jurisdictions;**
2. **misinterpretation of voting laws by elections officials to the detriment of Democratic voters;**
3. **dirty tricks and deceptive practices to mislead Democratic and minority voters about voting times, places and conditions;**
4. **machine irregularities in Democratic jurisdictions;**
5. **relocating polling sites in Democratic and minority areas;**
6. **suspicious mishandling of absentee ballots;**
7. **refusing to dispense voter registration forms to certain voter registration groups;**
8. **intimidation of students;**
9. **suspicious ballot spoilage rates in certain jurisdictions;**
10. **“strategic distribution of provisional ballots,” and trashing of provisional ballots;**
11. **harassment of Native American voters;**
12. **a Republican backed organization engaging in voter registration efforts throughout the country that allegedly destroyed the voter registration forms of Democrats;**
13. **illegitimate challenges at the polls by Republican poll watchers;**
14. **improper demands for identification in certain areas;**
15. **Republican challenges to the voter registration status of thousands of voters before the election, and the creation of lists of voters to challenge at the polls;**
16. **wrongful purging of eligible voters from voting rolls;**
17. **partisan harassment;**
18. **the selective placement of early voting sites; and**
19. **failure to send out absentee ballots in time for people to vote.**

Details what he says was the inappropriate use of the Federal Voter Assistance Program that made voting for the military easy while throwing up obstacles

016410

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

for civilians overseas in their efforts to vote by absentee ballot, leading many of them to be disenfranchised.

Legal

Indiana Democratic Party vs. Rokita, U.S. District Court Southern District of Indiana (Indianapolis) 1:05-cv-00634, U.S. Court of Appeals, 7th Circuit 06-2218

Although the proponents of SEA 483 asserted that the law was intended to combat voter fraud, no evidence of the existence of such fraud has ever been provided. No voter has been convicted of or even charged with the offense of misrepresenting his identity for purposes of casting a fraudulent ballot in person, King Dep. 95-96; Mahern Aff. ¶¶ 2-3, though there have been documented instances of absentee ballot fraud. King Dep. 120. Indeed, no evidence of in person, on-site voting fraud was presented to the General Assembly during the legislative process leading up to the enactment of the Photo ID Law. Mahern Aff. ¶¶ 2-

The State cannot show any compelling justification for subjecting only voters who vote in person to the new requirements of the Photo ID Law, while exempting absentee voters who vote by mail or persons who live in state-certified residential facilities.

On the other hand, absentee ballots are peculiarly vulnerable to coercion and vote tampering since there is no election official or independent election observer available to ensure that there is no illegal coercion by family members, employers, churches, union officials, nursing home administrators, and others.

Law gives virtually unbridled discretion to partisan precinct workers and challengers to make subjective determinations such as (a) whether a form of photo identification produced by a voter conforms to what is required by the Law, and (b) whether the voter presenting himself or herself at the polls is in fact the voter depicted in the photo Robertson Dep. 29-34, 45; King Dep. 86, 89. This is significant because any voter who is challenged under this Law will be required to vote by provisional ballot and to make a special trip to the election board's office in order to have his vote counted. Robertson Dep. 37; King Dep. 58.

The Photo ID Law confers substantial discretion, not on law enforcement officials, but on partisan precinct poll workers and challengers appointed by partisan political officials, to determine both whether a voter has presented a form of identification which conforms to that required by the Law and whether the person presenting the identification is the person depicted on it. Conferring this degree of discretion upon partisan precinct officials and members of election boards to enforce the facially neutral requirements of the Law has the potential for becoming a means of suppressing a particular point of view.

The State arguably might be justified in imposing uniform, narrowly-tailored and not overly-burdensome voter identification requirements if the State were able to show that there is an intolerably high incidence of fraud among voters misidentifying themselves at the polls for the purpose of casting a fraudulent ballot. But here, the State has utterly failed to show that this genre of fraud is rampant or even that it has ever occurred in the context of on-site, in-person voting (as opposed to absentee voting by mail) so as to justify these extra burdens, which will fall disproportionately on the poor and elderly.

And where the State has already provided a mechanism for matching signatures, has made it a crime to misrepresent one's identity for purposes of voting, and requires the swearing out of an affidavit if the voter's identity is challenged, it already has provisions more than adequate to prevent or minimize fraud in the context of in-person voting, particularly in the absence of any evidence that the problem the Law seeks to address is anything more than the product of hypothesis, speculation and fantasy.

In-person voter-identity fraud is notoriously difficult to detect and investigate. In his book *Stealing Elections*, John Fund observes that actual in-person voter fraud is nearly undetectable without a voter photo-identification requirement because anybody who provides a name that is on the rolls may vote and then walk away with no record of the person's actual identity. The problem is only exacerbated by the increasingly transient nature of society. Documentation of in-person voter fraud often occurs only when a legitimate voter at the polls hears a fraudulent voter trying to use her name, as happened to a woman in California in 1994. See Larry J. Sabato & Glenn R. Simpson, *Dirty Little Secrets* 292 (1996).

Regardless of the lack of extensive evidence of in-person voter fraud, the Commission on

016411

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

Federal Election Reform (known as the Baker-Carter Commission) recently concluded that "there is no doubt that it occurs." State Ex. 1, p. 18.1 **Legal cases as well as newspaper and other reports confirm that in-person voter-identity fraud, including voter impersonation, double votes, dead votes, and fake addresses, plague federal and state elections. [The memorandum details several specific cases of various types of alleged voting fraud from the past several years]**

Though they are largely unable to study verifiable data concerning in-person voter fraud, scholars are well aware of the conditions that foster fraudulent voting. See Fund, *supra*; Sabato & Simpson, *supra*, 321. In particular, fraud has become ever more likely as "it has become more difficult to keep the voting rolls clean of 'deadwood' voters who have moved or died" because such an environment makes "fraudulent voting easier and therefore more tempting for those so inclined." Sabato & Simpson, *supra*, 321. "In general, experts believe that one in five names on the rolls in Indiana do not belong there." State Ex. 25.

For this case, Clark Benson, a nationally recognized expert in the collection and analysis of voter-registration and population data, conducted his own examination of **Indiana's voter registration lists and concluded that they are among the most highly inflated in the nation.**

The Crawford Plaintiffs cite the **concessions** by Indiana Election Division Co-Director King and the Intervenor-State that they are **unaware of any historical in-person incidence of voter fraud occurring at the polling place (Crawford Brief, p. 23) as conclusive evidence that in-person voter fraud does not exist in Indiana.** They also seek to support this conclusion with the testimony of two "veteran poll watchers," Plaintiff Crawford and former president of the Plaintiff NAACP, Indianapolis Chapter, Roderick E. Bohannon, who testified that they had never seen any instances of in-person voter fraud.

(*Id.*)

While common sense, the **experiences of many other states, and the findings of the Baker-Carter Commission all lead to the reasonable inferences that (a) in-person polling place fraud likely exists, but (b) is nearly impossible to detect without requiring photo identification, the State can cite to no confirmed instances of such fraud. On the other hand, the Plaintiffs have no proof that it does not occur.**

At the level of logic, moreover, it is **just reasonable to conclude that the lack of confirmed incidents of in-person voting fraud in Indiana is the result of an ineffective identification security system as it is to conclude there is no in-person voting fraud in Indiana.** So while it is undisputed that the state has no proof that in-person polling place fraud has occurred in Indiana, there does in fact remain a dispute over the existence *vel non* of in-person polling place fraud.

It is also important to understand that the **nature of in-person election fraud is such that it is nearly impossible to detect or investigate. Unless a voter stumbles across someone else trying to use her identity, see Sabato & Simpson, supra, 292, or unless the over-taxed poll worker happens to notice that the voter's signature is different from her registration signature State Ext. 37, ¶ 9, the chances of detecting such in-person voter fraud are extremely small. Yet, inflated voter-registration rolls provide ample opportunity for those who wish to commit in-person voter fraud.**

See Fund, *supra*, 24, 65, 69, 138; Sabato & Simpson, *supra*, 321. And there is **concrete evidence that the names of dead people have been used to cast fraudulent ballots.** See Fund, *supra*, 64. Particularly in light of Indiana's highly inflated voter rolls State Ex. 27, p. 9, Plaintiffs' repeated claims that there has never been any in-person voter fraud in Indiana can hardly be plausible, even if the state is unable to prove that such fraud has in fact occurred.

Common Cause of Georgia vs. Billups, U.S. District Court, Northern District of Georgia (Rome) 4:05-cv-00201-HLM U.S. Court of Appeals, 11th Circuit 05-15784

The Secretary of State, as the Chief Election Officer in Georgia, informed the General Assembly before the passage of Act 53 in a letter (attached hereto as Exhibit A), and also informed the Governor in a letter (attached hereto as Exhibit B) before he signed the bill into law, that **there had been no documented cases of fraudulent voting by persons who obtained ballots unlawfully by misrepresenting their identities as registered voters to poll workers reported to her office during her nine years as Secretary of State .**

Although the Secretary of State had informed the members of the General Assembly and the Governor prior to the enactment of Act 53, that her office had

016412

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

received many complaints of voter fraud involving absentee ballots and no documented complaints of fraud that involve ballots that were cast in person at the polls, the General Assembly ignored this information and arbitrarily chose instead to require only those registered voters who vote in person to present a Photo ID as a condition of voting, but deliberately refused to impose the same requirement on absentee voters.

The Stated Purpose Of The Photo ID Requirement Fraud Is A Pretext.

According to a press release prepared by the Communications Office of the Georgia House of Representatives, the purpose of Act 53 is: to address the issue of voter fraud by placing tighter restrictions on voter identification procedures. Those casting ballots will now be required to bring a photo ID with them before they will be allowed to vote.

Al Marks, Vice Chairman for Public Affairs and Communication of the Hall County GOP told the Gainesville Times: I don't think we need it for voting, because I don't think there's a voter fraud problem. Gainesville Times, "States Voters Must Present Picture IDs" (September 15, 2005) (www.gainesvilletimes.com).

There is **no evidence that the existing provisions of Georgia law have not been effective in deterring and preventing imposters from fraudulently obtaining and casting ballots at the polls by misrepresenting their true identities** to election officials and passing themselves off as registered voters whose names appear on the official voter registration list.

The pretextual nature of the purported justification for the burden which the Photo ID requirement imposes on the right to vote is shown by the following facts:

(a) Fraudulent voting was already prohibited by existing Georgia law without unduly burdening the right of a citizen to vote.

(i) Fraudulent voting was already prohibited as a crime under O.C.G.A. §§ 21-2-561, 21-2-562, 21-2-566, 21-2-571, 21-2-572 and 21-2-600, punishable by a fine of up to \$10,000 or imprisonment for up to ten years, or both.

(ii) Voter registration records are updated periodically by the Secretary of State and local election officials to eliminate people who have died, have moved, or are no longer eligible to vote in Georgia for some other reason.

(iii) Existing Georgia law also required election officials in each precinct to maintain a list of names and addresses of registered voters residing in that precinct, and to check off the names of each person from that official list as they cast their ballots.

(iv) Registered voters were also required by existing Georgia law to present at least one of the seventeen forms of documentary identification to election officials who were required, before issuing the voter a ballot, to match the name and address shown on the document to the name and address on the official roll of registered voters residing in the particular precinct. O.C.G.A. § 21-2-417 .

(b) There is no evidence that the existing Georgia law has not been effective in deterring or preventing fraudulent in-person voting by impersonators - the only kind of fraudulent voting that might be prevented by the Photo ID requirement. To the contrary, the

Secretary of State, who, as the Superintendent of Elections, is the highest election official in Georgia, informed both the General Assembly (Exhibit A) and the Governor (Exhibit B) in writing that there had been no documented cases of fraudulent in person voting by imposters reported to her during her nine years in office .

(c) If the true intention of the General Assembly had been to prevent fraudulent voting by imposters, the General Assembly would have imposed the same restrictions on the casting of absentee ballots - particularly after the Secretary of State had called to their attention the fact that there had been many documented instances of fraudulent casting of absentee ballots reported to her office.

(d) Fraudulent in-person voting is unlikely, would be easily detected if it had occurred in significant numbers, and would not be likely to have a substantial impact on the outcome of an election:

(i) Many people vote at a local neighborhood polling place where they are likely to be known to and recognized by neighbors or poll workers.

(ii) Voters were required by existing Georgia law (O.C.G.A. § 21-2-417), to provide one of the seventeen means of identification to election officials.

(iii) Election officials are required, before issuing the ballot to the voter, to check off the name of either voter from an up-to-date list of the names and addresses of every registered voter residing in the precinct. If an imposter arrived at a poll and was successful in fraudulently obtaining a ballot before

016419

EAC SUMMARY OF LITERATURE REVIEW FOR VOTING FRAUD-VOTER INTIMIDATION RESEARCH

the registered voter arrived at the poll, a registered voter, who having taken the time to go to the polls to vote, would undoubtedly complain to elections officials if he or she were refused a ballot and not allowed to vote because his or her name had already been checked off the list of registered voters as having voted. Likewise, if an imposter arrived at the polls after the registered voter had voted and attempted to pass himself off as someone he was not, the election official would instantly know of the attempted fraud, would not issue the imposter a ballot or allow him to vote, and presumably would have the imposter arrested or at least investigate the attempted fraud and report the attempt to the Secretary of State as Superintendent of Elections.

U.S. Department of Justice Section 5 Recommendation Memorandum (regarding HB 244), August 25, 2005 at <http://www.votingrights.org/news/downloads/Section%205%20Recommendation%20Memorandum.pdf>

Overview: Five career attorneys with the civil rights department investigated and analyzed Georgia's election reform law. Four of those attorneys recommended objecting to Section 59, the voter identification requirement. The provision required all voters to present government issued photo identification in order to vote. The objection was based on the attorneys' findings that there was little to no evidence of polling place fraud, the only kind of fraud an ID requirement would address, and that the measure would disenfranchise many voters, predominantly minority voters, in violation of Section 5 of the Voting Rights Act.

Factual Analysis: **The sponsor of the measure in the state legislature said she was motivated by the fact that she is aware of vote buying in certain districts; she read John Fund's book; and that "if there are fewer black voters because of this bill, it will only be because there is less opportunity for fraud. She said that when black voters in her black precincts are not paid to vote, they do not go to the polls."**

A member of the Fulton County Board of Registrations and Elections said that prior to November 2004, Fulton County received 8,112 applications containing "missing or irregular" information. Only 55 of those registrants responded to BOE letters. The member concluded that the rest must be "bogus" as a result. He also stated that 15,237 of 105,553 precinct cards came back as undeliverable, as did 3,071 cards sent to 45,907 new voters. Of these 3,071, 921 voted.

Secretary of State Cathy Cox submitted a letter testifying to the absence of any complaints of voter fraud via impersonation during her tenure. In the legal analysis, the attorneys state that if they determine that Georgia could have fulfilled its stated purpose of election fraud, while preventing or ameliorating the retrogression, an objection is appropriate. They conclude that the state could have avoided retrogression by retaining various forms of currently accepted voter ID for which no substantiated security concerns were raised. Another non-retrogressive alternative would have been to maintain the affidavit alternative for those without ID, since "There is no evidence that penalty of law is an insufficient deterrent to falsely signing an affidavit of identity." The attorneys point out that the state's recitation of a case upholding voter fraud in Dodge County does not support the purpose of the Act because that case involved vote buying and selling, not impersonation or voting under a false identity.

016414

1. Everyone does not define voting fraud and voter intimidation the same way.

In some cases, what may have been honest administrative mistakes or errors due to poor poll worker training are lumped together with genuine voter suppression efforts and labeled as voter intimidation or voting fraud. Examples: (1) many authors consider certain voter suppression tactics to be voter intimidation that do not rise to the definition used in criminal enforcement of election crimes; (2) some charge that a DOJ ballot integrity measure in South Dakota was voter intimidation; and (3) some mistakes made in the maintenance of voter registration lists are labeled as fraud.

2. There seems to be no systematic *nationwide* study that reports all (or most) verified instances of voting fraud and voter intimidation or suppression efforts in a particular election or a particular period in U.S. history.

Some sources focus on certain areas of the country, which can bias the study if these areas are more or less susceptible to fraud and suppression. Some focus on the alleged (but not necessarily verified) misdeeds of one political party or another. Still others focus on unverified allegations reported to a toll-free phone line. In some cases, it is not clear if the incidents were intentional voter suppression or genuine poll worker mistakes (e.g.; not providing provisional ballots or in appropriately asking voters for ID). Minnite's study is as close as they get to a systematic study.

3. There are a number of obstacles to gathering compete data on voting fraud and voter intimidation/suppression nationwide in any election.

Authors often have limited resources (time and money) to collect such information. Investigation and prosecution of voting fraud and voter intimidation or suppression occurs at different levels of government (Federal, state and local). These investigations and prosecutions are not reported to and recorded by a central authority. Some voting fraud is inherently more difficult to identify and to prove than others (e.g.; impersonation of another voter at the polls is more difficult, due to the transient nature of some jurisdictions and the fact that impersonators not identified as a fraud at the polls are hard to identify later, than voter registration, vote buying, and absentee ballot fraud). At least some voting fraud and voter intimidation appears to go unreported and uninvestigated, and some prosecutions are unsuccessful due to local politics and law enforcement affiliations and the lack of sufficient resources at the Federal, state, and local levels to support the labor intensive effort.

4. Most sources seem to agree that voter registration and absentee balloting fraud are the most common forms of voting fraud. Absentee ballot fraud often is accompanied by vote buying or voter coercion. Also frequently alleged were instances of ineligible voters (usually felons, but sometime non-citizens, under aged individuals, or non-residents) that voted. But not all agree that these are the only common forms of fraud.

Some contend that voting in the name of another at the polling place is common, but that such instances are extremely hard to prove. Most instances of ineligible voters voting were linked to improper voter list maintenance or confusion on the part of local election officials as to state law on felon disenfranchisement.

5. A number of sources have identified numerous instances of attempted voter suppression, but no instances of voter intimidation that could be prosecuted under Federal criminal laws is alleged.

Examples of voter suppression efforts include: (1) phone calls and mailings deliberately directing targeted voters to vote on the wrong day or to go to the wrong polling place, or that provide incorrect and threatening information about the voter qualifications and legal consequences of voting; (2) targeted, inappropriate challenges to voters at the polls or shortly before election day; (3) people posing as law enforcement agents at targeted polling places. When such tactics target minority communities, they may be attacked through civil action by DOJ under Voting Rights Act provisions, but they do not qualify for criminal penalties under Federal voter intimidation law. Currently, there is no Federal election law providing criminal penalties for voter suppression efforts. When the suppression adversely affects a political party, but does not have a racial component, DOJ may be hard pressed to pursue the matter unless other Federal criminal law has been violated (e.g.; suppression of phone banks in New Hampshire).

6. Unsupervised voter registration drives by political parties and advocacy groups are a primary source of fraudulent voter registration applications and missing (perhaps deliberately) voter registration applications.

The practice of paying persons to man voter registration drives (particularly, but not only, when the person is paid by the head) is a frequent source of fraudulent voter registration applications. Partisan drives have resulted in applications from persons of “the wrong party” being held back or destroyed. Therefore, while the applicant believes they have registered, the election official has no record of that registration.

7. Many authors contend that proper implementation of the National Voter Registration Act of 1993 (NVRA) and the Help America Vote Act of 2002 (HAVA) will reduce or at least not increase the potential for fraud and voter suppression, but some argue that provisions in these laws increase the likelihood of fraud or voter suppression.

Many argue that proper implementation of the list maintenance and fail-safe voting provisions of the NVRA and HAVA’s requirements for the statewide voter registration list, voter ID for certain first-time voters, and provisional voting will reduce the potential for voting fraud and voter intimidation. Others argue that the list maintenance provisions of NVRA cause “dead wood” to be left on the voter rolls, providing opportunity for fraud, or that HAVA’s voter ID and list matching requirements can be used as voter suppression tactics.

- 8. Proper recordkeeping and post-election auditing is an important key to identifying and preventing voting fraud, and for subsequent prosecution of such activities; but is not being done consistently.**
- 9. Poll worker recruitment and training is a key component to combating actions that are perceived as suppressing or intimidating voters.**
- 10. Both sides on election reform debates are using incomplete data to bolster their arguments.**

Prosecution Of Electoral Fraud Under United States Federal Law

By Craig Donsanto

In Prosecution of Electoral Fraud, Donsanto discusses what sort of conduct is currently considered to be actionable as vote fraud, the historical background for the role of the criminal prosecutor in this area, and the various federal laws and juridical precedents governing the prosecution of vote fraud. It is a very useful document for understanding the current Department of Justice's view of its mission in this area, its interpretation of the federal laws governing its work, and how the Department has and has not been able to utilize applicable provisions.

Donsanto stresses that because electoral administration is primarily a state rather than a federal matter, the federal government usually only has authority over electoral issues where: federal candidates are standing for election; a corrupt act occurs; a federal instrumentality is employed in the fraud; the fraud involves the participation of public officials "acting under color of law" in such a manner that the constitutional right to Due Process and/or Equal Protection is violated; and/or the fraud is motivated by an intent to deprive a class of voters who's rights have been specifically guaranteed by the United States Constitution.

Donsanto defines election fraud as "a substantive irregularity relating to the voting act--- such as bribery, intimidation, or forgery---which has the potential to taint the election itself." Specifically, this includes:

- * Preventing voters from participating in elections where a federal candidate is on the ballot, or when done "under color of law" in any election—18 U.S.C. sections 241 & 242.
- * Vote buying, 42 U.S.C. section 1973i(c).
- * Voting more than once, 42 U.S.C. section 1973i(e).
- * Fraudulent voting, 42 U.S.C. sections 1973i(c), 1973i(e) & 1973gg-10.
- * Intimidating voters through physical duress in any election, 18 U.S.C. section 245(b)(1)(A), or through physical or economic threats in connection with their registering to vote or their voting in federal elections, 42 U.S.C. section 1973gg-10, or to vote for a federal candidate, 18 U.S.C. section 594.
- * Malfeasance by election officials acting "under color of law" for actions such as ballot-box stuffing, falsely tabulating votes, or preventing valid voter registrations or votes from being given effect in any election, 18 U.S.C. sections 241 & 242, as well as in elections where federal candidates are on the ballot, 42 U.S.C. sections 1973i(c), 1973i(e) & 1973gg-10.

- * Submitting fictitious names on voter registration roles, 42 U.S.C. sections 1973i(c) & 1973gg-10.
- * Knowingly procuring eligibility to vote for federal office by persons who are not entitled to vote under applicable state law, 42 U.S.C. sections 1973i(c) & 1973gg-10 (criminal voting—prohibited in approximately 40 states) and 42 U.S.C. sections 1973i(c), 1972gg-10, 18 U.S.C. 1015(f) & 611 (non-citizen voting).
- * Knowingly making a false claim of United States citizenship to register to vote in any election, 18 U.S.C. section 1015(f), or falsely claiming United States citizenship for registering or voting in any election, 18 U.S.C. section 911.
- * Providing false information concerning a person's name, address or period of residence in a district in order to establish that person's eligibility to register or to vote in a federal election, 42 U.S.C. sections 1973i(c) & 1973gg-10.
- * Causing the production of voter registrations that qualify alleged voters to vote for federal candidates, or the production of ballots in federal elections, that the actor knows are materially defective under applicable state law, 42 U.S.C. section 1973gg-10.
- * Using the United States mails, or interstate wire facilities, to obtain the salary and emoluments of an elected official through any of the activities mentioned above, 18 U.S.C. sections 1341 & 1343.
- * Ordering, keeping or having under one's authority or control any troops or armed men at any polling place in any election. The actor must be an active civilian or military officer or an employee of the United States government, 18 U.S.C. section 592.
- * Intimidating or coercing a federal employee to induce or discourage "any political activity" by that employee, 18 U.S.C. section 610.

Other Points of Interest

- Most election fraud is aimed at corrupting elections for local offices, which control or influence patronage positions. Election fraud occurs most frequently where there are fairly equal political factions, and where the stakes involved in who controls public offices are weighty -- as is often the case where patronage jobs are a major source of employment, or where illicit activities are being protected from law enforcement scrutiny
- Vote buying offenses have represented a sizable segment of the federal election crime docket in modern times.
- Voter intimidation requires proof of a difficult element: the existence of physical or economic intimidation that is intended by the defendant and felt by the victim. The crime of voter "intimidation" normally requires evidence of threats, duress, economic coercion, or some other aggravating factor which tends to improperly induce conduct on the part of the victim. If such evidence is lacking, an

alternative prosecutive theory may apply to the facts, such as multiple voting in violation of 42 U.S.C. ' 1973i(e). As with other statutes addressing voter intimidation, in the absence of any jurisprudence to the contrary, it is the Criminal Division's position that section 1973gg-10(1) applies only to intimidation that is accomplished through the use of threats of physical or economic duress. Voter "intimidation" accomplished through less drastic means may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.

- Section 1973gg-10(2) is a specific intent offense. This means that the offender must have been aware that citizenship is a requirement for voting and that the registrant did not possess United States citizenship. In most instances, proof of the first element is relatively easy because the citizenship requirement is stated on the voter registration form, and the form requires that the voter check a box indicating that he or she is a citizen. Proof of the second element, however, may be more problematic, since the technicalities of acquiring United States citizenship may not have existed in the culture of the registrant's country of birth, or otherwise been evident to him, and because the registrant may have received bad advice concerning the citizenship requirement. These issues can also usually be overcome by the fact that all voter registration forms now require a registrant to certify that he or she is a citizen. Section 611 is a relatively new statute that creates an additional crime for voting by persons who are not United States Citizens .It applies to voting by non-citizens in an election where a federal candidate is on the ballot, except when: (1) non-citizens are authorized to vote by state or local law on non-federal candidates or issues, and (2) the ballot is formatted in a way that the non-citizen has the opportunity to vote solely for the non-federal candidate or issues on which he is entitled to vote under state law. Unlike section 1015(f), section 611 is directed at the act of voting, rather than the act of lying. But unlike section 1015(f), Section 611 is a strict liability offense in the sense that the prosecution must only prove that the defendant was not a citizen when he registered or voted. Section 611 does not require proof that the offender be aware that citizenship is a prerequisite to voting.

The Federal Crime of Election Fraud

By Craig Donsanto

In The Federal Crime of Election Fraud, Donsanto addresses the role of the United States Department of Justice in matters of election fraud. Specifically, it answers the most frequently asked questions concerning the federal law enforcement role in election matters. Particularly, what sort of election-related conduct is potentially actionable as a federal crime, what specific statutory theories apply to frauds occurring in elections lacking federal candidates on the ballot, what federalism, procedural, and policy considerations impact on the federalization of this type of case, and how Assistant United States Attorneys should respond to this type of complaint.

Donsanto indicates that as a general rule, the federal crime of voter fraud embraces only organized efforts to corrupt of the election process itself: i.e., the registration of voters, the casting of ballots, and the tabulation and certification of election results. Moreover, this definition excludes all activities that occur in connection with the political campaigning process, unless those activities are themselves illegal under some other specific law or prosecutorial theory. This definition also excludes isolated acts of individual wrongdoing that are not part of an organized effort to corrupt the voting process. Finally, Donsanto points out that mistakes and other gaffs that inevitably occur are not included as voter fraud. Where mistakes occur on a significant enough level to potentially affect the outcome of an election, the appropriate remedy is an election contest brought by the loser seeking civil judicial redress through the appropriate state election contest process.

Along with the limits discussed above, prosecuting election fraud offenses in federal court is further complicated by the constitutional limits that are placed on federal power over the election process. The conduct of elections is primarily a state rather than a federal activity.

Donsanto lists four types of election fraud: schemes to purposely and corruptly register voters who either do not exist, or who are known by the putative defendant to be ineligible to vote under applicable state law; schemes to cast, record or fraudulently tabulate votes for voters who do not participate in the voting act at all; schemes to corrupt the voting act of voters who do participate in the voting act to a limited extent; and, schemes to knowingly prevent voters qualified voters from voting.

Donsanto lists four situations where federal prosecution is appropriate: Where the objective of the conduct is to corrupt the outcome of a federal elective contest, or where the consequential effect of the corrupt conduct impacts upon the vote count for federal office; Where the object of the scheme is to discriminate against racial, ethnic or language minority groups, the voting rights of which have been specifically protected by federal statues such as the Voting Rights Act, 42 U.S.C. section 1973 et seq.; Where federalization is required in order to redress longstanding patters of electoral fraud, either at the request of state or local authorities, or in the face of longstanding inaction by state authorities who appear to be unwilling or unable to respond under local law; and, Where there is a factual basis to believe that fraudulent registration or voting activity is sufficiently connected to other from of criminal activity that perusing the voter fraud

angle will yield evidence useful in the prosecution of other categories of federal offense.

Donsanto lists four advantages to federal prosecution: voter fraud investigations are labor intensive. Local law enforcement agencies often lack the manpower and the financial resources to take these cases on; voter fraud matters are always politically sensitive and very high profile endeavors at the local level. Local prosecutors (who are usually themselves elected) often shy away from prosecuting them for that reason; the successful prosecution of voter fraud cases demands that critical witnesses be examined under oath before criminal charges based on their testimony are filed. Many states lack the broad grand jury process that exists in the federal system; and, the defendants in voter fraud cases are apt to be politicians - or agents of politicians - and it is often impossible for either the government or the defendant to obtain a fair trial in a case that is about politics and is tried to a locally-drawn jury. The federal court system provides for juries to be drawn from broader geographic base, thus often avoiding this problem.

Several prosecutorial theories used by United States Attorneys to federalize election frauds are discussed. These include: schemes by polling officers to violate their duty under state law to safeguard the integrity of the election process by purposefully allowing void ballots to be cast (stuffing the ballot box), or by intentionally rendering fraudulent vote tallies which can be prosecuted as civil rights violations under 18 U.S.C. sections 241 or 242; schemes to stimulate or reward voter registration by offering or giving voters things having monetary value violate the "payment for registering" clause of 42 U.S.C. section 19731(c); schemes to register voters fraudulently through providing election officials materially false information about the voter's eligibility for the franchise; and, schemes to obtain and cast ballots that are materially defective in nonfederal elections can still be prosecuted under 18 U.S.C. section 1341. There are also some other federal statutes involved in election fraud cases such as 18 U.S.C. section 597 that prohibits making expenditures for the specific purpose of stimulating voters to cast ballots for candidates seeking the federal offices of Senator, Congressman or President and 42 U.S.C. section 1973i (e) that prohibits voting more than once in elections where federal candidates are on the ballot.

Donsanto lists four questions used by prosecutors in evaluating the credibility of election complaints: does the substance of the complaint assuming it can be proven through investigation - suggest a potential crime; is the complaint sufficiently fact-specific that it provides leads for investigators to pursue; is there a federal statute that can be used to federalize the criminal activity at issue; and, is there a special federal interest in the matter that warrants federalization rather than deferral to state law enforcement.

All federal election investigations must avoid the following: non-interference in elections unless absolutely necessary to preserve evidence; interviewing voters during active voting periods; seizing official election documentation; investigative activity inside open polls; and prosecutors must adhere to 18 U.S.C. section 592, prohibiting the stationing of armed men at places where voting activity is taking place.

Finally, Donsanto indicates that election crimes based on race or language minority status are treated as civil rights matters under the Voting Rights Act.

Fooled Again, Mark Crispin Miller

Fooled Again sets out to show that the 2004 election was won by Bush through nefarious means, and indicts the news media for not taking anomalies, irregularities, and alleged malfeasance in the process seriously enough.

Miller identifies a number of statistical anomalies based on polling and turnout results that he alleges puts the validity of the 2004 election in doubt. He accuses Republicans of committing crimes and improprieties throughout the country. These include deliberate disparities in voting machine distribution and long lines in Democratic jurisdictions; misinterpretation of voting laws by elections officials to the detriment of Democratic voters; dirty tricks and deceptive practices to mislead Democratic and minority voters about voting times, places and conditions; machine irregularities in Democratic jurisdictions; relocating polling sites in Democratic and minority areas; suspicious mishandling of absentee ballots; refusing to dispense voter registration forms to certain voter registration groups; intimidation of students; suspicious ballot spoilage rates in certain jurisdictions; "strategic distribution of provisional ballots," and trashing of provisional ballots; harassment of Native American voters; a Republican backed organization engaging in voter registration efforts throughout the country that allegedly destroyed the voter registration forms of Democrats; illegitimate challenges at the polls by Republican poll watchers; improper demands for identification in certain areas; Republican challenges to the voter registration status of thousands of voters before the election, and the creation of lists of voters to challenge at the polls; wrongful purging of eligible voters from voting rolls; partisan harassment; the selective placement of early voting sites; and the failure to send out absentee ballots in time for people to vote.

Miller details what he says was the inappropriate use of the Federal Voter Assistance Program that made voting for the military easy while throwing up obstacles for civilians overseas in their efforts to vote by absentee ballot, leading many of them to be disenfranchised. Miller says that most of the military voters would be Republicans and most of the overseas civilians Kerry voters.

In this book, Miller clearly tries to prove the Republican Party won the 2004 through illegitimate means. This must be kept strongly in mind in making any use of this work. However, the book is well sourced, and individual instances of alleged malfeasance discussed may be worth looking at.

Election Protection 2004

By the Election Protection Coalition

Election Protection – the Program

Election Protection 2004 was the nation's most far-reaching effort to protect voter rights before and on Election Day. The historic nonpartisan program included:

- A toll-free number, 1-866-OUR-VOTE, with free, immediate and multi-lingual assistance to help voters with questions about registration and voting, and assist voters who encounter barriers to the ballot box.
- Distribution of more than five million "Voters' Bills of Rights" with state-specific information
- 25,000 volunteers, including 6,000 lawyers and law students, who watched for problems and assisted voters on the spot at more than 3,500 predominantly African-American and Latino precincts with a history of disenfranchisement in at least 17 states.
- Civil rights lawyers and advocates represented voters in lawsuits, preserved access to the polls, exposed and prevented voter intimidation, worked with election officials to identify and solve problems with new voting machines, technology and ballot forms, and protected voter rights in advance and on Election Day.

Voter Intimidation and Suppression Stories (Abridged)

- An Associated Press story noted Election Protection's exposure of reported voter suppression tactics in Colorado: Officials with the Election Protection Coalition, a voter-rights group, also said some voters in a predominantly black neighborhood north of Denver found papers on their doorsteps giving them the wrong address for their precinct
- Election Protection received a report from Florissant County, Missouri from a voter who lives in predominantly white neighborhood. While waiting in line to vote, a Republican challenger challenged the black voters by requesting more proof of identification, residence, and signature match, while asking nothing from white voters. Also, the same voter reportedly asked a few questions about voting but an election officials refused to provide any meaningful answer, insisting that "it's very simple", but provided white voters with information when requested. There was one other black voter in line who was also singled out for same treatment while white voters were not.
- Election Protection received a report from Boulder County, Colorado that a poll worker made racist comments to Asian American voter and then told her she was not on the list and turned her away. The voter saw others filling out provisional ballots and asked for one but was denied. Another Asian American woman behind

her in line was also given trouble by the same poll worker (he questioned her nationality and also turned her away).

- The Election Protection hotline received reports from Pinellas County, Florida that individuals purporting to be from the Kerry campaign are going door-to-door handing out absentee ballots, and asking voters to fill them out, and then taking the ballots from them, saying "Vote here for Kerry. Don't bother going to the polls."
- The Election Protection Coalition received a report from a woman whose sister lives in Milwaukee and is on government assistance. Her sister was reportedly told by her "case manager" that if she voted for Kerry, she would stop receiving her checks.
- An illiterate, older and disabled voter in Miami-Dade asked for assistance reading the ballot and reported that a poll worker yelled at him and refused to assist him and also refused to allow him to bring a friend into the booth in order to read the ballot to him.
- The Election Protection Coalition have gathered reports that flyers are circulating in a black community in Lexington, South Carolina claiming they those who are behind on child support payments will be arrested as the polls.
- Minority voters from Palm Beach County, Florida reported to the hotline that they received middle-of-the-night, live harassing phone calls warning them away from the polls.
- A volunteer for Rock the Vote reported that two illiterate voters in Michigan requested assistance with their ballots but were refused and reportedly mocked by poll workers.
- The hotline received a call from a radio DJ in Hillsborough County, Florida, who stated that he has received many calls (most of which were from African-Americans) claiming that poll workers were turning voters away and not "letting" them vote.
- The hotline received a call from Pima County, Arizona, indicating that Democratic voters received calls throughout Monday evening, providing incorrect information about the precinct location. Voters have had to be transported en masse in order to correct the problem.
- A caller from Alabama claims that he was told at his polling place that he could vote there for everything but the President and that he would have to go elsewhere in order to vote for a presidential candidate.

- Poll monitors in Philadelphia reports groups of lawyers, traveling in threes, who pull voters out of line and challenge them to provide ID, but when challenged themselves, they hop into waiting cars or vans and leave. Similar activity by Republican lawyers in Philadelphia was reported in the 2002 election.
- In Cuyahoga, Ohio, a caller reported that all black voters are being asked to show ID, while white voters are not. Caller report that he is black and had to show ID while his girlfriend is white and did not have to show ID.
- Two months ago, suspicious phone calls to newly registered Democrats —telling them they weren't, in fact, registered to vote — were traced to the Republican headquarters in the Eastern Panhandle. On Monday, Democrats there said the calls have started again, even after the Berkeley County Clerk — a Republican — sent the party a cease-and-desist letter. The Berkeley prosecutor, who also is county Democratic chairman, has called on the U.S. attorney to investigate.
- In Tuscon, Arizona a misleading call informing voters that they should vote on November 3 has been traced back to the state GOP headquarters. The FBI is investigating.
- A man driving around in a big van covered in American flags and a big picture of a policeman was reportedly parked in front of a polling place; he then got out and moved within the 75 ft limit, until he was asked to leave; he then was found inside the polling place and was again asked to leave. Election Protection volunteers contacted officials and the man was eventually removed.
- The Election Protection hotline has received a report from individuals who claim to have received recorded telephone message coming from Bill Clinton and ACT and reminding them to vote on Nov. 3rd.
- In Massachusetts, the EP Hotline has received a report that a radio station (WILD) is broadcasting that voters will be arrested on the spot if they have outstanding parking tickets.
- In Richland, South Carolina Election Protection has received a report of a poll manager turning away individuals who do not have photo ID issued to the county or a driver's license; an EP lawyer spoke with the Poll Manager at 8:20 am and told her that people with other forms of ID should be allowed to vote by provisional ballot.
- In Greenville, a caller reported that a white poll worker was asking Blacks for multiple form of I.D. Fortunately, the voter who reported the problem did have a second I.D. but reported that some others were turned away. Election Protection attorneys have alerted election officials.

- In Allegheny County, Pennsylvania, an official looking flyer advises Democratic voters to "create a peaceful voting environment" by voting on Wednesday, November 3
- The week before the election, flyers were circulated in Milwaukee under the heading "Milwaukee Black Voters League" with some "warnings for election time." The flyer listed false reasons for which you would be barred from voting (such as a traffic ticket) and then warned that "If you violate any of these laws you can get ten years in prison and your children will get taken away from you."
- There is a Jefferson County flyer which tells voters "See you at the Poles![sic]"... on November 4.

Summary and Relevant Excerpts From Georgia Voter ID Litigation

Complaint For Declaratory And Injunctive Relief

The Secretary of State, as the Chief Election Officer in Georgia, informed the General Assembly before the passage of Act 53 in a letter (attached hereto as Exhibit A), and also informed the Governor in a letter (attached hereto as Exhibit B) before he signed the bill into law, that there had been no documented cases of fraudulent voting by persons who obtained ballots unlawfully by misrepresenting their identities as registered voters to poll workers reported to her office during her nine years as Secretary of State .

Although the Secretary of State had informed the members of the General Assembly and the Governor prior to the enactment of Act 53, that her office had received many complaints of voter fraud involving absentee ballots and no documented complaints of fraud that involve ballots that were cast in person at the polls, the General Assembly ignored this information and arbitrarily chose instead to require only those registered voters who vote in person to present a Photo ID as a condition of voting, but deliberately refused to impose the same requirement on absentee voters

The Stated Purpose Of The Photo ID Requirement Fraud Is A Pretext

According to a press release prepared by the Communications Office of the Georgia House of Representatives, the purpose of Act 53 is:

... to address the issue of voter fraud by placing tighter restrictions on voter identification procedures. Those casting ballots will now be required to bring a photo ID with them before they will be allowed to vote.

Al Marks, Vice Chairman for Public Affairs and Communication of the Hall County GOP told the Gainesville Times:

I don't think we need it for voting, because I don't think there's a voter fraud problem. Gainesville Times, "States Voters Must Present Picture IDs" (September 15, 2005) (www.gainesvilletimes.com).

There is no evidence that the existing provisions of Georgia law have not been effective in deterring and preventing imposters from fraudulently obtaining and casting ballots at the polls by misrepresenting their true identities to election officials and passing themselves off as registered voters whose names appear on the official voter registration list.

The pretextual nature of the purported justification for the burden which the Photo ID requirement imposes on the right to vote is shown by the following facts:

(a) Fraudulent voting was already prohibited by existing Georgia law without unduly burdening the right of a citizen to vote.

(i) Fraudulent voting was already prohibited as a crime under O.C .G.A. §§ 21-2-561, 21-2-562, 21-2-566, 21-2-571, 21-2-572 and 21-2-600, punishable by a fine of up to \$10,000 or imprisonment for up to ten years, or both.

(ii) Voter registration records are updated periodically by the Secretary of State and local election officials to eliminate people who have died, have moved, or are no longer eligible to vote in Georgia for some other reason.

(iii) Existing Georgia law also required election officials in each precinct to maintain a list of names and addresses of registered voters residing in that precinct, and to check off the names of each person from that official list as they cast their ballots.

(iv) Registered voters were also required by existing Georgia law to present at least one of the seventeen forms of documentary identification to election officials who were required, before issuing the voter a ballot, to match the name and address shown on the document to the name and address on the official roll of registered voters residing in the particular precinct. O .C .G.A. § 21-2-417 .

(b) There is no evidence that the existing Georgia law has not been effective in deterring or preventing fraudulent in-person voting by impersonators - the only kind of fraudulent voting that might be prevented by the Photo ID requirement. To the contrary, the Secretary of State, who, as the Superintendent of Elections, is the highest election official in Georgia, informed both the General Assembly (Exhibit A) and the Governor (Exhibit B) in writing that there had been no documented cases of fraudulent in person voting by imposters reported to her during her nine years in office .

(c) If the true intention of the General Assembly had been to prevent fraudulent voting by imposters, the General Assembly would have imposed the same restrictions on the casting of absentee ballots - particularly after the Secretary of State had called to their attention the fact that there had been many documented instances of fraudulent casting of absentee ballots reported to her office.

(d) Fraudulent in-person voting is unlikely, would be easily detected if it had occurred in significant numbers, and would not be likely to have a substantial impact on the outcome of an election:

(i) Many people vote at a local neighborhood polling place where they are likely to be known to and recognized by neighbors or poll workers.

(ii) Voters were required by existing Georgia law (O .C.G.A. § 21-2-417), to provide one of the seventeen means of identification to election officials.

(iii) Election officials are required, before issuing the ballot to the voter, to check off the name of either voter from an up-to-date list of the names and addresses of every registered voter residing in the precinct. If an imposter arrived at a poll and was successful in fraudulently obtaining a ballot before the registered voter arrived at the poll, a registered voter, who having taken the time to go to the polls to vote, would undoubtedly complain to elections officials if he or she were refused a ballot and not allowed to vote because his or her name had already been checked off the list of registered voters as having voted. Likewise, if an imposter arrived at the polls after the registered voter had voted and attempted to pass himself off as someone he was not, the election official would instantly know of the attempted fraud, would not issue the imposter a ballot or allow him to vote, and presumably would have the imposter arrested or at least investigate the attempted fraud and report the attempt to the Secretary of State as Superintendent of Elections.

EXHIBIT B

Letter from Secretary of State Cathy Cox to Governor Sonny Purdue, April 8, 2005

One of the primary justifications given by the Legislature for the passage of the photo identification provisions of House Bill 244 - the elimination of voter ID fraud at the polls is an unfounded justification I cannot recall one documented case of voter fraud during my tenure as Secretary of State or Assistant Secretary of State that specifically related to the impersonation of a registered voter at voting polls. Our state currently has several practices and procedures in existence to ensure that such cases of voter fraud would have been detected if they in fact occurred, and at the very least, we would have complaints of voters who were unable to vote because someone had previously represented himself or herself as such person on that respective Election Day. As a practical matter, there is no possibility that vote fraud of this type would have gone undetected if it had in fact occurred because there is a list of registered voters at each polling place that is checked off as each person votes. If the impersonator voted first and the legitimate voter came to the polling place later in the day and tried to vote, he or she would be told that they had already voted and would not be allowed to vote a second time in the same day. It is reasonable to suspect that a voter who cared enough to show up at the polls to cast a ballot would almost certainly have complained - but there have been no such complaints. If the opposite occurred, and the legitimate person came to the polls first and cast his ballot, the impersonator who showed up later would not be allowed to vote for the same reason and the attempted fraud would have been prevented.

In addition, this state has adopted severe criminal sanctions for the type of vote impersonation that is purportedly of concern and it is evident that such penalties have been a sufficient deterrent. In essence, there is no voter fraud problem currently in existence that House Bill 244 addresses.

In contrast to the lack of voter fraud relating to impersonation of voters at polls during my tenure the State Election Board has reviewed numerous cases of voter fraud relating to the use of absentee ballots.

State Defendants' Initial Brief In Opposition To Plaintiffs' Motion For Preliminary Injunction

There are 159 counties and an even larger number of municipalities in Georgia that conduct elections. Neither the Secretary of State nor her staff can be physically present at the polling places for those elections and therefore could not possibly be aware of all in-person voter fraud that might occur. (Cox Decl. ¶ 6.)

Under the prior law before enactment of HB 244, it is beyond argument that in person voter fraud could have taken place. (Id. ¶ 5.) The Secretary of State's view of the scenario in which voter fraud would occur is when an imposter votes at the polling place and the actual voter shows up later and is unable to cast a ballot. (Id. ¶ 5.) However, the Secretary of State agrees that the scenario she describes is only one instance of potential voter

fraud, and both her scenario and others were possible under the law as it existed prior to the enactment of HB 244. (Id.) As stated by the Director of Elections for the Forsyth County Board of Elections, the typical case of in-person voter fraud would be committed by identifying persons who do not typically vote and then having other individuals vote as those persons. (Smith Decl. ¶ 4.)

The Executive Director of the Richmond County Board of Elections has been aware of such complaints, but has been unable to gather evidence to prove the violations because the nature of the conduct makes such evidence hard to develop. (Bailey Decl. ¶ 9.) Indeed, past incidents of fraudulent registrations in Forsyth County and Fulton County were reported to the District Attorneys' offices in those respective counties. (Smith Decl. ¶ 6; MacDougald Decl. ¶ 4.) In Fulton County, the fraudulent registrations were also reported to the United States Attorney for the Northern District of Georgia, and he has opened an investigation of the fraudulent registrations. (MacDougald Decl. ¶ 4.)

Order for a Preliminary Injunction

As part of the order, Judge Murphy describes the testimony of Harry MacDougald, a member of the Fulton County Board of Registration and Election. Mr. MacDougald had stated he had observed voter registration fraud, which he referred to the U.S. Attorney and the District Attorney. In addition, since some precinct cards the Board sent out in 2004 were returned as undeliverable, MacDougald believes they were not eligible voters, yet they were allowed to vote.

Although the Secretary of State said she knew of no incidents of impersonation at the polls, she and her staff are not physically present in every polling site. Secretary Cox stated local officials are in the best position to know of such incidents. The State Election Board has received a number of complaints of irregularities with respect to absentee ballots. Cox is also aware of a case of vote buying of absentee ballots. She is also aware of efforts to submit fraudulent registrations.

According to Secretary of State Cox, Georgia has procedures and practices in place to detect voter fraud. Those procedures include verifying the voter's correct address, as well as the voter's name, during the check-in process for in-person voters. Georgia also imposes criminal penalties for voter impersonation. Most violations of Georgia election laws are punishable as felonies. No evidence indicates that the criminal penalties do not sufficiently deter in-person voter fraud.

The integrity of the voter list also is extremely important in preventing voter fraud. The Atlanta Journal Constitution published an article indicating that Georgia had experienced 5,412 instances of voter fraud during a twenty-year period. Secretary of State Cox's office undertook an investigation in response to that article. The investigation revealed that the specific instance of voter fraud outlined in the Atlanta Journal-Constitution, involving a report that Alan J. Mandel had voted after his death, actually did not occur. Instead, an individual with a similar name, Alan J. Mandle, had voted at the polls, and the poll worker had marked Alan J. Mandel's name rather than marking Alan J. Mandle, the name of the individual who actually voted. Secretary of State Cox's office compared the

signature on the voter certificate to the voter registration card of the living individual, and concluded that the living individual, Alan J. Mandle, rather than the deceased Alan J. Mandel, had voted.

The Secretary of State's Office subsequently attempted to ensure that voter records were maintained and up to date. The Secretary of State's Office sends information concerning dead voters to local elections officials on a monthly basis, and now has the authority to remove the names of deceased voters from the voter rolls if the local elections officials fail to do so in a timely manner. Secretary of State Cox is not aware of any reports of dead individuals voting since her office received authority to remove the names of deceased individuals from the voter rolls.

There seems to be little doubt that the Photo ID requirement fails the strict scrutiny test: accepting that preventing voter fraud is a legitimate and important State concern, the statute is not narrowly drawn to prevent voter fraud. Indeed, Secretary of State Cox pointed out that, to her knowledge, the State had not experienced one complaint of in-person fraudulent voting during her tenure. In contrast, Secretary of State Cox indicated that the State Election Board had received numerous complaints of voter fraud in the area of absentee voting. Furthermore, the Secretary of State's Office removes deceased voters from the voting rolls monthly, eliminating the potential for voter fraud noted by the Atlanta Journal-Constitution article alleging that more than 5,000 deceased people voted during a twenty-year period.

Further, although Defendants have presented evidence from elections officials of fraud in the area of voting, all of that evidence addresses fraud in the area of voter registration, rather than in-person voting. The Photo ID requirement does not apply to voter registration, and any Georgia citizen of appropriate age may register to vote without showing a Photo ID. Indeed, individuals may register to vote by producing copies of bank statements or utility bills, or without even producing identification at all. The Photo ID law thus does nothing to address the voter fraud issues that conceivably exist in Georgia.

Summary and Relevant Excerpts From Georgia Voter ID Litigation

Complaint For Declaratory And Injunctive Relief

The Secretary of State, as the Chief Election Officer in Georgia, informed the General Assembly before the passage of Act 53 in a letter (attached hereto as Exhibit A), and also informed the Governor in a letter (attached hereto as Exhibit B) before he signed the bill into law, that there had been no documented cases of fraudulent voting by persons who obtained ballots unlawfully by misrepresenting their identities as registered voters to poll workers reported to her office during her nine years as Secretary of State .

Although the Secretary of State had informed the members of the General Assembly and the Governor prior to the enactment of Act 53, that her office had received many complaints of voter fraud involving absentee ballots and no documented complaints of fraud that involve ballots that were cast in person at the polls, the General Assembly ignored this information and arbitrarily chose instead to require only those registered voters who vote in person to present a Photo ID as a condition of voting, but deliberately refused to impose the same requirement on absentee voters

The Stated Purpose Of The Photo ID Requirement Fraud Is A Pretext

According to a press release prepared by the Communications Office of the Georgia House of Representatives, the purpose of Act 53 is:

... to address the issue of voter fraud by placing tighter restrictions on voter identification procedures. Those casting ballots will now be required to bring a photo ID with them before they will be allowed to vote.

Al Marks, Vice Chairman for Public Affairs and Communication of the Hall County GOP told the Gainesville Times:

I don't think we need it for voting, because I don't think there's a voter fraud problem. Gainesville Times, "States Voters Must Present Picture IDs" (September 15, 2005) (www.gainesvilletimes.com).

There is no evidence that the existing provisions of Georgia law have not been effective in deterring and preventing imposters from fraudulently obtaining and casting ballots at the polls by misrepresenting their true identities to election officials and passing themselves off as registered voters whose names appear on the official voter registration list.

The pretextual nature of the purported justification for the burden which the Photo ID requirement imposes on the right to vote is shown by the following facts:

(a) Fraudulent voting was already prohibited by existing Georgia law without unduly burdening the right of a citizen to vote.

(i) Fraudulent voting was already prohibited as a crime under O.C .G.A. §§ 21-2-561, 21-2-562, 21-2-566, 21-2-571, 21-2-572 and 21-2-600, punishable by a fine of up to \$10,000 or imprisonment for up to ten years, or both.

(ii) Voter registration records are updated periodically by the Secretary of State and local election officials to eliminate people who have died, have moved, or are no longer eligible to vote in Georgia for some other reason.

(iii) Existing Georgia law also required election officials in each precinct to maintain a list of names and addresses of registered voters residing in that precinct, and to check off the names of each person from that official list as they cast their ballots.

(iv) Registered voters were also required by existing Georgia law to present at least one of the seventeen forms of documentary identification to election officials who were required, before issuing the voter a ballot, to match the name and address shown on the document to the name and address on the official roll of registered voters residing in the particular precinct. O .C .G.A. § 21-2-417 .

(b) There is no evidence that the existing Georgia law has not been effective in deterring or preventing fraudulent in-person voting by impersonators - the only kind of fraudulent voting that might be prevented by the Photo ID requirement. To the contrary, the Secretary of State, who, as the Superintendent of Elections, is the highest election official in Georgia, informed both the General Assembly (Exhibit A) and the Governor (Exhibit B) in writing that there had been no documented cases of fraudulent in person voting by imposters reported to her during her nine years in office .

(c) If the true intention of the General Assembly had been to prevent fraudulent voting by imposters, the General Assembly would have imposed the same restrictions on the casting of absentee ballots - particularly after the Secretary of State had called to their attention the fact that there had been many documented instances of fraudulent casting of absentee ballots reported to her office.

(d) Fraudulent in-person voting is unlikely, would be easily detected if it had occurred in significant numbers, and would not be likely to have a substantial impact on the outcome of an election:

(i) Many people vote at a local neighborhood polling place where they are likely to be known to and recognized by neighbors or poll workers.

(ii) Voters were required by existing Georgia law (O .C.G.A. § 21-2-417), to provide one of the seventeen means of identification to election officials.

(iii) Election officials are required, before issuing the ballot to the voter, to check off the name of either voter from an up-to-date list of the names and addresses of every registered voter residing in the precinct. If an imposter arrived at a poll and was successful in fraudulently obtaining a ballot before the registered voter arrived at the poll, a registered voter, who having taken the time to go to the polls to vote, would undoubtedly complain to elections officials if he or she were refused a ballot and not allowed to vote because his or her name had already been checked off the list of registered voters as having voted. Likewise, if an imposter arrived at the polls after the registered voter had voted and attempted to pass himself off as someone he was not, the election official would instantly know of the attempted fraud, would not issue the imposter a ballot or allow him to vote, and presumably would have the imposter arrested or at least investigate the attempted fraud and report the attempt to the Secretary of State as Superintendent of Elections.

EXHIBIT B

Letter from Secretary of State Cathy Cox to Governor Sonny Purdue, April 8, 2005

One of the primary justifications given by the Legislature for the passage of the photo identification provisions of House Bill 244 - the elimination of voter ID fraud at the polls is an unfounded justification I cannot recall one documented case of voter fraud during my tenure as Secretary of State or Assistant Secretary of State that specifically related to the impersonation of a registered voter at voting polls. Our state currently has several practices and procedures in existence to ensure that such cases of voter fraud would have been detected if they in fact occurred, and at the very least, we would have complaints of voters who were unable to vote because someone had previously represented himself or herself as such person on that respective Election Day. As a practical matter, there is no possibility that vote fraud of this type would have gone undetected if it had in fact occurred because there is a list of registered voters at each polling place that is checked off as each person votes. If the impersonator voted first and the legitimate voter came to the polling place later in the day and tried to vote, he or she would be told that they had already voted and would not be allowed to vote a second time in the same day. It is reasonable to suspect that a voter who cared enough to show up at the polls to cast a ballot would almost certainly have complained - but there have been no such complaints. If the opposite occurred, and the legitimate person came to the polls first and cast his ballot, the impersonator who showed up later would not be allowed to vote for the same reason and the attempted fraud would have been prevented.

In addition, this state has adopted severe criminal sanctions for the type of vote impersonation that is purportedly of concern and it is evident that such penalties have been a sufficient deterrent. In essence, there is no voter fraud problem currently in existence that House Bill 244 addresses.

In contrast to the lack of voter fraud relating to impersonation of voters at polls during my tenure the State Election Board has reviewed numerous cases of voter fraud relating to the use of absentee ballots.

State Defendants' Initial Brief In Opposition To Plaintiffs' Motion For Preliminary Injunction

There are 159 counties and an even larger number of municipalities in Georgia that conduct elections. Neither the Secretary of State nor her staff can be physically present at the polling places for those elections and therefore could not possibly be aware of all in-person voter fraud that might occur. (Cox Decl. ¶ 6.)

Under the prior law before enactment of HB 244, it is beyond argument that in person voter fraud could have taken place. (Id. ¶ 5.) The Secretary of State's view of the scenario in which voter fraud would occur is when an imposter votes at the polling place and the actual voter shows up later and is unable to cast a ballot. (Id. ¶ 5.) However, the Secretary of State agrees that the scenario she describes is only one instance of potential voter

fraud, and both her scenario and others were possible under the law as it existed prior to the enactment of HB 244. (Id.) As stated by the Director of Elections for the Forsyth County Board of Elections, the typical case of in-person voter fraud would be committed by identifying persons who do not typically vote and then having other individuals vote as those persons. (Smith Decl. ¶ 4.)

The Executive Director of the Richmond County Board of Elections has been aware of such complaints, but has been unable to gather evidence to prove the violations because the nature of the conduct makes such evidence hard to develop. (Bailey Decl. ¶ 9.) Indeed, past incidents of fraudulent registrations in Forsyth County and Fulton County were reported to the District Attorneys' offices in those respective counties. (Smith Decl. ¶ 6; MacDougald Decl. ¶ 4.) In Fulton County, the fraudulent registrations were also reported to the United States Attorney for the Northern District of Georgia, and he has opened an investigation of the fraudulent registrations. (MacDougald Decl. ¶ 4.)

Order for a Preliminary Injunction

As part of the order, Judge Murphy describes the testimony of Harry MacDougald, a member of the Fulton County Board of Registration and Election. Mr. MacDougald had stated he had observed voter registration fraud, which he referred to the U.S. Attorney and the District Attorney. In addition, since some precinct cards the Board sent out in 2004 were returned as undeliverable, MacDougald believes they were not eligible voters, yet they were allowed to vote.

Although the Secretary of State said she knew of no incidents of impersonation at the polls, she and her staff are not physically present in every polling site. Secretary Cox stated local officials are in the best position to know of such incidents. The State Election Board has received a number of complaints of irregularities with respect to absentee ballots. Cox is also aware of a case of vote buying of absentee ballots. She is also aware of efforts to submit fraudulent registrations.

According to Secretary of State Cox, Georgia has procedures and practices in place to detect voter fraud. Those procedures include verifying the voter's correct address, as well as the voter's name, during the check-in process for in-person voters. Georgia also imposes criminal penalties for voter impersonation. Most violations of Georgia election laws are punishable as felonies. No evidence indicates that the criminal penalties do not sufficiently deter in-person voter fraud.

The integrity of the voter list also is extremely important in preventing voter fraud. The Atlanta Journal Constitution published an article indicating that Georgia had experienced 5,412 instances of voter fraud during a twenty-year period. Secretary of State Cox's office undertook an investigation in response to that article. The investigation revealed that the specific instance of voter fraud outlined in the Atlanta Journal-Constitution, involving a report that Alan J. Mandel had voted after his death, actually did not occur. Instead, an individual with a similar name, Alan J. Mandle, had voted at the polls, and the poll worker had marked Alan J. Mandel's name rather than marking Alan J. Mandle, the name of the individual who actually voted. Secretary of State Cox's office compared the

signature on the voter certificate to the voter registration card of the living individual, and concluded that the living individual, Alan J. Mandle, rather than the deceased Alan J. Mandel, had voted.

The Secretary of State's Office subsequently attempted to ensure that voter records were maintained and up to date. The Secretary of State's Office sends information concerning dead voters to local elections officials on a monthly basis, and now has the authority to remove the names of deceased voters from the voter rolls if the local elections officials fail to do so in a timely manner. Secretary of State Cox is not aware of any reports of dead individuals voting since her office received authority to remove the names of deceased individuals from the voter rolls.

There seems to be little doubt that the Photo ID requirement fails the strict scrutiny test: accepting that preventing voter fraud is a legitimate and important State concern, the statute is not narrowly drawn to prevent voter fraud. Indeed, Secretary of State Cox pointed out that, to her knowledge, the State had not experienced one complaint of in-person fraudulent voting during her tenure. In contrast, Secretary of State Cox indicated that the State Election Board had received numerous complaints of voter fraud in the area of absentee voting. Furthermore, the Secretary of State's Office removes deceased voters from the voting rolls monthly, eliminating the potential for voter fraud noted by the Atlanta Journal-Constitution article alleging that more than 5,000 deceased people voted during a twenty-year period.

Further, although Defendants have presented evidence from elections officials of fraud in the area of voting, all of that evidence addresses fraud in the area of voter registration, rather than in-person voting. The Photo ID requirement does not apply to voter registration, and any Georgia citizen of appropriate age may register to vote without showing a Photo ID. Indeed, individuals may register to vote by producing copies of bank statements or utility bills, or without even producing identification at all. The Photo ID law thus does nothing to address the voter fraud issues that conceivably exist in Georgia.

Views of Selected Local Election Officials on Managing Voter Registration and Ensuring Eligible Citizens Can Vote

GAO Report

In 2002, the Help America Vote Act (HAVA) was enacted and, among other things, it requires states to implement provisional voting for elections for federal office. HAVA, in general, requires that individuals not listed as registered or whose eligibility is questioned by an election official must be notified about and permitted to cast a provisional ballot that is set aside for review by election officials at a later time so that they can determine whether the person is eligible to vote under state law. HAVA also requires that provisional ballots be provided to first-time voters who had registered to vote by mail on or after January 1, 2003, but were unable to show photo identification or another qualifying identification document when voting in person or by mail in a federal election. In addition, HAVA requires that election officials must provide access to information that permits voters to learn if their provisional ballot was counted, and, if not, why not.

This Report focuses on the efforts of local election officials in 14 jurisdictions within 7 states to manage the registration process, maintain accurate voter registration lists, and ensure that eligible citizens in those jurisdictions had the opportunity to cast ballots during the 2004 election. Specifically, for the 2004 election, the Report concentrates on election officials' characterization of their experiences with regard to (1) managing the voter registration process and any challenges related to receiving voter registration applications; checking them for completeness, accuracy, and duplication; and entering information into voter registration lists; (2) removing voters' names from voter registration lists and ensuring that the names of eligible voters were not inadvertently removed; and (3) implementing HAVA provisional voting and identification requirements and addressing any challenges encountered related to these requirements. The Report also provides information on motor vehicle agency (MVA) officials' characterization of their experiences assisting citizens who apply to register to vote at MVA offices and forwarding voter registration applications to election offices.

The Report analyzed information collected from elections and motor vehicle agency offices in seven states—Arizona, California, Michigan, New York, Texas, Virginia, and Wisconsin. These states take various approaches to administering elections. Within each of the seven states, using population data from the 2000 U.S. Census, two jurisdictions were selected: a local jurisdiction with a large population and a local jurisdiction with a small population. The 14 jurisdictions we selected were Gila and Maricopa Counties, Arizona; Los Angeles and Yolo Counties, California; City of Detroit and Delta Township, Michigan; New York City and Rensselaer County, New York; Bexar and Webb Counties, Texas; Albemarle and Arlington Counties, Virginia; and the cities of Franklin and Madison, Wisconsin.

Information was gathered for the Report in a number of ways. First, relevant laws, state reports, and documents related to the voter registration process in the seven states were reviewed. Second, state and local election officials in the 7 states and 14 jurisdictions

were interviewed to obtain information on their registration processes and implementation of the HAVA requirements for provisional voting and voter identification. Third, a survey was sent to election officials in the 14 jurisdictions to gather information about their experiences with the November 2004 election. Finally, a survey was sent to state and local MVA officials in 6 of the 7 states and 12 of the 14 jurisdictions. The survey primarily asked questions about the MVA offices' experiences with (1) assisting citizens with completing voter registration applications, (2) forwarding the applications to election offices, and (3) responding to individuals and state or local election officials who contacted their offices about individuals who declared they had applied to register to vote at MVA offices but their names were not on voter registration lists when they went to vote in the November 2004 election.

Election officials representing all but one of the jurisdictions surveyed following the November 2004 election said they faced some challenges managing the voter registration process, including (1) receiving voter registration applications; (2) checking them for completeness, accuracy, and duplication; and (3) entering information into voter registration lists; when challenges occurred, election officials reported they took various steps to address them. Officials in 7 of the 14 jurisdictions reported that their staff faced challenges checking voter registration applications for completeness, accuracy, or duplicates. According to these officials, these challenges occurred for a variety of reasons, including problems contacting individuals to obtain complete and accurate information and insufficient staffing to check the applications. They reported that, among other things, their staff addressed these challenges by sending letters or calling applicants to obtain correct information. Finally, 6 of the 14 election officials reported that their staff faced challenges entering or scanning voter information into registration lists for reasons such as the volume of applications received close to Election Day and problems with the scanning equipment. To address these challenges, they reported that more staff were hired and staff worked overtime.

All but 1 of the jurisdictions reported removing names from registration lists during 2004 for various reasons, including that voters requested that their names be removed from the voter registration list; information from the U.S. Postal Service (USPS) showing that voters had moved outside the jurisdiction; felony records received from federal, state, or local governments identifying voters as ineligible due to felony convictions; and death records received from state or local vital statistics offices. When removing names from registration lists, election officials reported that they took various steps to ensure that the names of eligible voters were not inadvertently removed from voter registration lists. These steps included sending letters or postcards to registrants to verify that voters wanted their names removed; matching voters' identifying information with USPS data and sending voters identified by USPS as having moved outside the jurisdiction notices of removal; and matching voter registration records with felony records or death records to confirm it was the same person.

All of the jurisdictions reported that they permitted citizens to cast provisional ballots during the November 2004 election. In addition, 12 of the 14 jurisdictions to which this was applicable reported that they offered certain first-time voters who registered by mail

the opportunity to cast provisional ballots. Election officials in 13 of the 14 jurisdictions reported that 423,149 provisional ballots were cast, and 70 percent (297,662) were counted. Not all provisional votes were counted because, as election officials reported, not all provisional ballots met states' criteria for determining which ballots should be counted. Reasons that provisional ballots cast during the 2004 election were not counted, as reported by election officials, included, among others, that individuals did not meet the residency eligibility requirements, had not registered or tried to register to vote with the election office, had not submitted the voter registration applications at motor vehicle agency offices, or election officials did not have time to enter information from applicants into their voter registration lists because applications were received at the election offices very close to or after the state registration deadline.

Local election officials in 12 of the 13 jurisdictions 13 we surveyed reported that they set up mechanisms to inform voters—without cost—about the outcome of their provisional votes during the November 2004 election. These mechanisms included toll-free telephone numbers, Web sites, and letters sent to the voters who cast provisional ballots. Election officials also reported that provisional voters in their jurisdictions received written information at their polling places about how to find out the outcome of their provisional ballots, and provisional voters in 8 of the 13 jurisdictions had the opportunity to access information about the outcome of their ballots within 10 days after the election. Finally, election officials representing 8 of the 14 jurisdictions reported facing challenges implementing provisional voting for various reasons, including some poll workers not being familiar with provisional voting or, in one jurisdiction representing a large number of precincts, staff not having sufficient time to process provisional ballots. To address these challenges, the officials reported that they provided additional training to poll workers and hired additional staff to count provisional ballots.

Existing Research Analysis

There are many reports and books that describe anecdotes and draw broad conclusions from a large array of incidents. There is little research that is truly systematic or scientific. The most systematic look at fraud is the report written by Lori Minnite. The most systematic look at voter intimidation is the report by Laughlin McDonald. Books written about this subject seem to all have a political bias and a pre-existing agenda that makes them somewhat less valuable.

Researchers agree that measuring something like the incidence of fraud and intimidation in a scientifically legitimate way is extremely difficult from a methodological perspective and would require resources beyond the means of most social and political scientists. As a result, there is much more written on this topic by advocacy groups than social scientists. It is hoped that this gap will be filled in the “second phase” of this EAC project.

Moreover, reports and books make allegations but, perhaps by their nature, have little follow up. As a result, it is difficult to know when something has remained in the stage of being an allegation and gone no further, or progressed to the point of being investigated or prosecuted or in any other way proven to be valid by an independent, neutral entity. This is true, for example, with respect to allegations of voter intimidation by civil rights organizations, and, with respect to fraud, John Fund’s frequently cited book. Again, this is something that it is hoped will be addressed in the “second phase” of this EAC project by doing follow up research on allegations made in reports, books and newspaper articles.

Other items of note:

- There is as much evidence, and as much concern, about structural forms of disenfranchisement as about intentional abuse of the system. These include felon disenfranchisement, poor maintenance of databases and identification requirements.
- There is tremendous disagreement about the extent to which polling place fraud, e.g. double voting, intentional felon voting, noncitizen voting, is a serious problem. On balance, more researchers find it to be less of a problem than is commonly described in the political debate, but some reports say it is a major problem, albeit hard to identify.
- There is substantial concern across the board about absentee balloting and the opportunity it presents for fraud.
- Federal law governing election fraud and intimidation is varied and complex and yet may nonetheless be insufficient or subject to too many limitations to be as effective as it might be.

- Deceptive practices, e.g. targeted flyers and phone calls providing misinformation, were a major problem in 2004.
- Voter intimidation continues to be focused on minority communities, although the American Center for Voting Rights uniquely alleges it is focused on Republicans.

INDIANA ID LITIGATION SUMMARY

MEMORANDUM IN SUPPORT OF DEMOCRATS. MOTION FOR SUMMARY JUDGMENT

Although the proponents of SEA 483 asserted that the law was intended to combat voter fraud, no evidence of the existence of such fraud has ever been provided. No voter has been convicted of or even charged with the offense of misrepresenting his identity for purposes of casting a fraudulent ballot in person, King Dep. 95-96; Mahern Aff. ¶¶ 2-3, though there have been documented instances of absentee ballot fraud. King Dep. 120. Indeed, no evidence of in person, on-site voting fraud was presented to the General Assembly during the legislative process leading up to the enactment of the Photo ID Law. Mahern Aff. ¶¶ 2-

The State cannot show any compelling justification for subjecting only voters who vote in person to the new requirements of the Photo ID Law, while exempting absentee voters who vote by mail or persons who live in state-certified residential facilities. On the other hand, absentee ballots are peculiarly vulnerable to coercion and vote tampering since there is no election official or independent election observer available to ensure that there is no illegal coercion by family members, employers, churches, union officials, nursing home administrators, and others.

The Law gives virtually unbridled discretion to partisan precinct workers and challengers to make subjective determinations such as (a) whether a form of photo identification produced by a voter conforms to what is required by the Law, and (b) whether the voter presenting himself or herself at the polls is in fact the voter depicted in the photo. Robertson Dep. 29-34, 45; King Dep. 86, 89. This is significant because any voter who is challenged under this Law will be required to vote by provisional ballot and to make a special trip to the election board's office in order to have his vote counted. Robertson Dep. 37; King Dep. 58.

The Photo ID Law confers substantial discretion, not on law enforcement officials, but on partisan precinct poll workers and challengers appointed by partisan political officials, to determine both whether a voter has presented a form of identification which conforms to that required by the Law and whether the person presenting the identification is the person depicted on it. Conferring this degree of discretion upon partisan precinct officials and members of election boards to enforce the facially neutral requirements of the Law has the potential for becoming a means of suppressing a particular point of view.

The State arguably might be justified in imposing uniform, narrowly-tailored and not overly-burdensome voter identification requirements if the State were able to show that there is an intolerably high incidence of fraud among voters misidentifying themselves at the polls for the purpose of casting a fraudulent ballot. But here, the State has utterly failed to show that this genre of fraud is rampant or even that it has ever occurred in the context of on-site, in-person voting (as opposed to absentee voting by mail) so as to justify these extra burdens, which will fall disproportionately on the poor and elderly.

In evaluating the breadth of the law and whether the State has used the least restrictive means for preventing fraud, the Court must take into account the other mechanisms the State currently employs to serve the statute's purported purposes, as well as other, less restrictive means it could reasonably employ. *Krislov*, 226 F.3d at 863. The State of Indiana has made it a felony for a voter to misrepresent his or her identity for purposes of casting a fraudulent ballot.

And where the State has already provided a mechanism for matching signatures, has made it a crime to misrepresent one's identity for purposes of voting, and requires the swearing out of an affidavit if the voter's identity is challenged, it already has provisions more than adequate to prevent or minimize fraud in the context of in-person voting, particularly in the absence of any evidence that the problem the Law seeks to address is anything more than the product of hypothesis, speculation and fantasy.

MEMORANDUM OF THE STATE OF INDIANA, THE INDIANA SECRETARY OF STATE, AND THE CO-DIRECTORS OF THE INDIANA ELECTION DIVISION IN SUPPORT OF THEIR JOINT MOTION FOR SUMMARY JUDGMENT AND IN OPPOSITION TO THE MOTIONS FOR SUMMARY JUDGMENT FILED BY BOTH SETS OF PLAINTIFFS

In-person voter-identity fraud is notoriously difficult to detect and investigate. In his book *Stealing Elections*, John Fund observes that actual in-person voter fraud is nearly undetectable without a voter photo-identification requirement because anybody who provides a name that is on the rolls may vote and then walk away with no record of the person's actual identity. *See generally* John Fund, *Stealing Elections* (2004). The problem is only exacerbated by the increasingly transient nature of society. Documentation of in-person voter fraud often occurs only when a legitimate voter at the polls hears a fraudulent voter trying to use her name, as happened to a woman in California in 1994. *See* Larry J. Sabato & Glenn R. Simpson, *Dirty Little Secrets* 292 (1996).

Regardless of the lack of extensive evidence of in-person voter fraud, the Commission on Federal Election Reform (known as the Baker-Carter Commission) recently concluded that "there is no doubt that it occurs." State Ex. 1, p. 18.¹ Legal cases as well as newspaper and other reports confirm that in-person voter-identity fraud, including voter impersonation, double votes, dead votes, and fake addresses, plague federal and state elections. [The memorandum details several specific cases of various types of alleged voting fraud from the past several years]

Though they are largely unable to study verifiable data concerning in-person voter fraud, scholars are well aware of the conditions that foster fraudulent voting. *See* Fund, *supra*; Sabato & Simpson, *supra*, 321. In particular, fraud has become ever more likely as "it has become more difficult to keep the voting rolls clean of 'deadwood' voters who have moved or died" because such an environment makes "fraudulent voting easier and therefore more tempting for those so inclined." Sabato & Simpson, *supra*, 321. "In

general, experts believe that one in five names on the rolls in Indiana do not belong there.” State Ex. 25.

For this case, Clark Benson, a nationally recognized expert in the collection and analysis of voter-registration and population data, conducted his own examination of Indiana’s voter registration lists and concluded that they are among the most highly inflated in the nation.

The Crawford Plaintiffs cite the concessions by Indiana Election Division Co-Director King and the Intervenor-State that they are unaware of any historical in-person incidence of voter fraud occurring at the polling place (Crawford Brief, p. 23) as conclusive evidence that in-person voter fraud does not exist in Indiana. They also seek to support this conclusion with the testimony of two “veteran poll watchers,” Plaintiff Crawford and former president of the Plaintiff NAACP, Indianapolis Chapter, Roderick E. Bohannon, who testified that they had never seen any instances of in-person voter fraud. (*Id.*)

At best, the evidence on this issue is in equipoise. While common sense, the experiences of many other states, and the findings of the Baker-Carter Commission all lead to the reasonable inferences that (a) in-person polling place fraud likely exists, but (b) is nearly impossible to detect without requiring photo identification, the State can cite to no confirmed instances of such fraud. On the other hand, the Plaintiffs have no proof that it does not occur.

At the level of logic, moreover, it is just reasonable to conclude that the lack of confirmed incidents of in-person voting fraud in Indiana is the result of an ineffective identification security system as it is to conclude there is no in-person voting fraud in Indiana. So while it is undisputed that the state has no proof that in-person polling place fraud has occurred in Indiana, there does in fact remain a dispute over the existence *vel non* of in-person polling place fraud.

It is also important to understand that the nature of in-person election fraud is such that it is nearly impossible to detect or investigate. Unless a voter stumbles across someone else trying to use her identity, *see* Sabato & Simpson, *supra*, 292, or unless the over-taxed poll worker happens to notice that the voter’s signature is different from her registration signature State Ext. 37, ¶ 9, the chances of detecting such in-person voter fraud are extremely small. Yet, inflated voter-registration rolls provide ample opportunity for those who wish to commit in-person voter fraud. *See* Fund, *supra*, 24, 65, 69, 138; Sabato & Simpson, *supra*, 321. And there is concrete evidence that the names of dead people have been used to cast fraudulent ballots. *See* Fund, *supra*, 64. Particularly in light of Indiana’s highly inflated voter rolls State Ex. 27, p. 9, Plaintiffs’ repeated claims that there has never been any in-person voter fraud in Indiana can hardly be plausible, even if the state is unable to prove that such fraud has in fact occurred.

Securing the Vote: An Analysis of Election Fraud, by Lorraine Minnite

Professor Lori Minnite conducted a comprehensive survey and analysis of vote fraud in the United States. The methodology included doing nexis searches for all 50 states and surveying existing research and reports. In addition, Minnite did a more in-depth study of 12 diverse states by doing nexis searches, studying statutory and case law, and conducting interviews with election officials and attorneys general. Finally, the study includes an analysis of a few of the most high profile cases of alleged fraud in the last 10 years, including the Miami mayoral election (1997), Orange County congressional race (1996), and the general election in Missouri (2000). In these cases, Minnite shows that many allegations of fraud do not end up being meritorious.

Minnite finds that available evidence suggests that the incidence of election fraud is minimal and rarely affects election outcomes. Election officials generally do a very good job of protecting against fraud. Conditions that give rise to election fraud have steadily declined over the last century as a result of weakened political parties, strengthened election administration, and improved voting technology. There is little available evidence that election reforms such as the National Voter Registration Act, election day registration, and mail-in voting have resulted in increases in election fraud.

Election fraud appears also to be very rare in the 12 states examined more in-depth. Legal and news records turned up little evidence of significant fraud in these states or any indication that fraud is more than a minor problem. Interviews with state officials further confirmed this impression.

Minnite found that, overall, the absentee mail-in ballot process is the feature most vulnerable to voter fraud. There is not a lot of evidence of absentee ballot fraud but the potential for fraud is greatest in this area because of a lack of uniformly strong security measures in place in all states to prevent fraud.

Minnite suggest several reforms to prevent what voter fraud does take place. These include effective use of new statewide voter registration databases; identification requirements for first time voters who register by mail should be modified to expand the list of acceptable identifying documents; fill important election administration positions with nonpartisan professionals; strengthen enforcement through adequate funding and authority for offices responsible for detecting and prosecuting fraud; and establish Election Day Registration because it usually requires voter identification and authorization in person before a trained election worker, which reduces the opportunity for registration error or fraud.

Shattering the Myth: An Initial Snapshot of Voter Disenfranchisement in the 2004 Elections, People for the American Way, NAACP, Lawyers Committee for Civil Rights

Shattering the Myth is a description and analysis of the complaints and allegations of voting irregularities gathered by the Election Protection program during the 2004 presidential election. Election Protection was an effort involving hundreds of organizations and thousands of citizens to protect the voting rights of Americans across the country. The project included sending thousands of monitors to the polls and hosting a national toll free voters' rights hotline. EP mounted extensive field efforts in 17 states.

Election Protection received more than a thousand complaints of voter suppression or intimidation. Complaints ranged from intimidating experiences at polling places to coordinated suppression tactics. For example:

- Police stationed outside a Cook County, Illinois, polling place were requesting photo ID and telling voters if they had been convicted of a felony that they could not vote.
- In Pima, Arizona, voters at multiple polls were confronted by an individual, wearing a black tee shirt with "US Constitution Enforcer" and a military-style belt that gave the appearance he was armed. He asked voters if they were citizens, accompanied by a cameraman who filmed the encounters.
- There were numerous incidents of intimidation by partisan challengers at predominately low income and minority precincts
- Voters repeatedly complained about misinformation campaigns via flyers or phone calls encouraging them to vote on a day other than November 2, 2004 or of false information regarding their right to vote. In Polk County, Florida, for example, a voter received a call telling her to vote on November 3. Similar complaints were also reported in other counties throughout Florida. In Wisconsin and elsewhere voters received flyers that said:
 - "If you already voted in any election this year, you can't vote in the Presidential Election."
 - "If anybody in your family has ever been found guilty of anything you can't vote in the Presidential Election."
 - "If you violate any of these laws, you can get 10 years in prison and your children will be taken away from you."

There were also numerous reports of poll workers refusing to give voters provisional ballots.

The following is a summary of the types of acts of suppression and intimidation included in the report and a list of the states in which they took place. All instances of irregularities that were more administrative in nature have been omitted:

1. Improper implementation of voter identification rules, especially asking only African Americans for proof of identity: Florida, Ohio, Pennsylvania, Illinois, Missouri, Arkansas, Georgia, Louisiana

2. Individuals at the polls posing as some sort of law enforcement authority and intimidating and harassing voters: Arizona, Missouri
3. Intimidating and harassing challengers at the polls: Ohio, Michigan, Wisconsin, Missouri, Minnesota
4. Deceptive practices and disinformation campaigns, such as the use of flyers with intentional misinformation about voting rights or voting procedures, often directed at minority communities; the use of phone calls giving people misinformation about polling sites and other procedures; and providing verbal misinformation at the polls in a way that appears to have been intentionally misleading: Florida, Pennsylvania, Illinois, Wisconsin, Missouri, North Carolina, Arkansas, Texas
5. Refusal to provide provisional ballots to certain voters: Ohio, Pennsylvania, Illinois, Michigan, Colorado, Missouri, Texas, Georgia, Louisiana
6. Registration applications submitted through third parties that were not processed: Arizona, Michigan, Nevada (registration forms destroyed by Sproul Associates)
7. Improper removal from the voter registration list: Arizona
8. Individuals questioning voters' citizenship: Arizona
9. Police officers at the polls intimidating voters: Illinois, Michigan, Wisconsin, Missouri, North Carolina

The report does not provide corroborating evidence for the allegations it describes. However, especially in the absence of a log of complaints received by the Department of Justice, this report provides a very useful overview of the types of experiences some voters more than likely endured on Election Day in 2004.

Summary of the U.S Department of Justice Section 5 Recommendation Memorandum:
August 25, 2005 regarding HB 244 – parts that pertain to the issue of voter fraud.

Overview: Five career attorneys with the civil rights department investigated and analyzed Georgia's election reform law. Four of those attorneys recommended objecting to Section 59, the voter identification requirement. The provision required all voters to present government issued photo identification in order to vote. The objection was based on the attorneys' findings that there was little to no evidence of polling place fraud, the only kind of fraud an ID requirement would address, and that the measure would disenfranchise many voters, predominantly minority voters, in violation of Section 5 of the Voting Rights Act.

Factual Analysis: The sponsor of the measure in the state legislature said she was motivated by the fact that she is aware of vote buying in certain districts; she read John Fund's book; and that "if there are fewer black voters because of this bill, it will only be because there is less opportunity for fraud. She said that when black voters in her black precincts are not paid to vote, they do not go to the polls."

A member of the Fulton County Board of Registrations and Elections said that prior to November 2004, Fulton County received 8,112 applications containing "missing or irregular" information. Only 55 of those registrants responded to BOE letters. The member concluded that the rest must be "bogus" as a result. He also stated that 15,237 of 105,553 precinct cards came back as undeliverable, as did 3,071 cards sent to 45,907 new voters. Of these 3,071, 921 voted.

Secretary of State Cathy Cox submitted a letter testifying to the absence of any complaints of voter fraud via impersonation during her tenure.

In the legal analysis, the attorneys state that if they determine that Georgia could have fulfilled its stated purpose of election fraud, while preventing or ameliorating the retrogression, an objection is appropriate. /They conclude that the state could have avoided retrogression by retaining various forms of currently accepted voter ID for which no substantiated security concerns were raised. Another non-retrogressive alternative would have been to maintain the affidavit alternative for those without ID, since "There is no evidence that penalty of law is an insufficient deterrent to falsely signing an affidavit of identity."

The attorneys point out that the state's recitation of a case upholding voter fraud in Dodge County does not support the purpose of the Act because that case involved vote buying and selling, not impersonation or voting under a false identity.

Stealing Elections, John Fund

In Stealing Elections, John Fund says that “Election fraud, whether its phony voter registrations, illegal absentee ballots, shady recounts or old-fashioned ballot-box stuffing, can be found in every part of the United States, although it is probably spreading because of the ever-so-tight divisions that have polarized the country and created so many close elections lately. Although most fraud is found in urban areas, there are current scandals in rural South Dakota and Texas.” Fund admits that “Democrats figure prominently in the vast majority of examples of election fraud described in this book.” He argues Republican fraud is less common because Republicans are middle class and Democrats are poor and most fraud occurs in inner cities where there are a lot of minorities. However, because of politics, state and local prosecutors are reluctant to go after fraud.

He also stipulates that Democrats and Republicans have different worldviews on voting: Democrats are concerned about intimidation and disenfranchisement while Republicans are concerned with fraud and the need to police the polls.

Fund argues that fraud has been made easier by the passage of the National Voting Rights Act because it allows ineligible voters to remain on the voter rolls, allowing a voter to vote in the name of someone else. He claims dead people, people who have moved, and people in jail remain on the voting list. He believes because of NVRA illegal aliens have been allowed to vote. Absentee balloting makes it even worse: someone can register under false names and then use absentee ballots to cast multiple votes. Groups can get absentee ballots for the poor and elderly and then manipulate their choices.

Fund goes through a number of examples of alleged voter fraud, mostly perpetrated by Democrats. For example, he claims much fraud in St. Louis in 2000, including illegal court orders allowing people to vote, felons voting, people voting twice, dead people voting, voters were registered to vacant lots, election judges were not registered and evidence of false registrations

Another case he pays a great deal of attention to are the alleged transgressions by Democrats in Indian Country in South Dakota 2002, including voter registration fraud, suspicious absentee ballot requests, vote hauling, possible polling place fraud, abusive lawyers at polling sites, and possible vote buying.

Fund criticizes and scorns “conspiracy theories” around electronic voting perpetuated by Democrats. He says that “By whipping up a frenzy of suspicion about electronic voting, Democrats will have built a platform from which, if the presidential or key Senate elections in November 2004 are close, the can launch endless lawsuits everywhere there were problems with electronic machines.”

Stealing Elections focuses almost entirely on alleged transgressions by Democrats. Fund’s accusations, if credible, would indicate that fraud such as voter registration fraud, absentee ballot fraud, dead people voting, and felon voting is prevalent throughout the country. However, due to its possible biases, lack of specific footnoting, and insufficient

identification of primary source material, caution is strongly urged with respect to utilizing this book for assessing the amount and types of voter fraud and voter intimidation occurring.

The Long Shadow of Jim Crow, People for the American Way and the National Association for the Advancement of Colored People

This report describes the pervasive and repeated practices of voter intimidation and vote suppression that have taken place in very recent years and during contemporary American history. The most recent cases included in the report are the incident in which Florida law enforcement questioned elderly African American voters in Orlando regarding the 2003 mayoral race, which had already been resolved, shortly before the 2004 election; the 2004 Florida felon purge list; the case of South Dakota in 2004 in which Native Americans were improperly and illegally required to show photo identification at the polls or denied the right to vote, and similar improper demands for ID from minorities in other parts of the country; the use of challengers in minority districts in many locations; the challenge to the right of African American students to vote in Texas in 2004; the presence of men looking like law enforcement challenging African American voters at the polls in Philadelphia in 2003; the distribution of flyers in Louisiana and elsewhere in a number of elections over the last few years in minority areas telling them to vote on the wrong day; and the FBI investigation into thousands of Native American voters in South Dakota in 2002, which resulted in no showing of wrongdoing.

The report also points out that, "Over the past two decades, the Republican Party has launched a series of 'ballot security' and 'voter integrity' initiatives which have targeted minority communities. At least three times, these initiatives were successfully challenged in federal courts as illegal attempts to suppress voter participation based on race.

It goes on to describe the numerous instances of voter intimidation and suppression during the 2000 election, the 1990s, the 1980s and back through the civil rights movement of the 1960s, putting current efforts in historical perspective. Describing the chronology of events in this way demonstrates the developing patterns and strategic underpinnings of the tactics used over the last forty years.

Steal this Vote-Dirty Elections and the Rotten History of Democracy in America by Andrew Gumbel

The bulk of the book comprises stories from United States electoral history outside the scope of this project. However, these tales are instructive in showing how far back irregular and illegal voting practices go. Cases include the 1868 New York City elections; the Tilden-Hayes election; the impact of the introduction of the secret ballot; the 1981 consent decree; the 1990 Helms campaign; the 1960 presidential election controversy in Chicago; the rise of the voting machine business, including the introduction of punch card machines; and allegations by Republicans regarding NVRA.

Steal this Vote focuses almost entirely on alleged transgressions by Republican, although at times it does include complaints about Democratic tactics. Gumbel's accusations, if credible, especially in the Bush-Gore election, would indicate there were a number of problems in key states in such areas as intimidation, vote counting, and absentee ballots. However, due to its possible biases, lack of specific footnoting, and insufficient identification of primary source material, caution is strongly urged with respect to utilizing this book for assessing the amount and types of voter fraud and voter intimidation occurring.

An Evaluation: Voter Registration Elections Board: Wisconsin Audit Report 05-12:
September 2005

The Joint Legislative Audit Committee of the Wisconsin Legislature required the Wisconsin Audit Report. The Report obviously does not include the 2006 statistics for statewide voter registration as required by HAVA. Wisconsin voter registration is required by statute in only 172 municipalities---those with populations of 5,000 or more. Another 167 smaller municipalities opted to maintain voter registration lists. Currently, 28.9 % of the voting-age population is not required to register before voting.

According to the Report, great variation was found in the implementation of existing voter registration laws. For example, 46 % of municipalities that responded to the survey did not send address verification cards to individuals who registered by mail or at the polls on Election Day in November 2004.

Further, only 85.3 % of survey respondents reported updating their voter registration lists to remove inactive voters, as required by law.

Current voter registration practices were determined to be insufficient to ensure the accuracy of voter registration lists used by poll workers or to prevent ineligible persons from registering to vote. The Report identified 105 instances of voting irregularities in six municipalities, including 98 ineligible felons who may have voted. The names of these individuals were forwarded to appropriate district attorneys for investigation.

Due to concerns about ineligible voting, stemming from the 2004 election, the Joint Legislative Audit Committee requested that voter registration procedures be evaluated. The following was investigated for this Report:

- * voter registration requirements and the methods by which voters register, including requirements in other states;
- * the address verification process, including the use of address verification cards to confirm the residency of those who register by mail or at the polls;
- * procedures and practices for updating voter registration lists; and,
- * the role of the Elections Board.

Wisconsin allows qualified electors to register in person, by mail, or with a special registration deputy before Election Day, and at the polls on Election Day. In municipalities where registration is required by statute, 20.3 % of Wisconsin voters registered at the polls on Election Day in November 2004. Municipal clerks rely on registrants to affirm their eligibility, including citizenship and age. However, requirements for providing identification or proof of residence vary depending on when an individual registers and by which method.

Address verification cards are the primary tool available to municipal clerks for verifying the residency of registered voters and detecting improper registrations by mail or at the polls. Statutes require that clerks send cards to everyone who registers by mail or on Election Day. However, only 42.7 % of the 150 municipalities surveyed sent cards to both groups, and 46 % did not send any address verification cards.

Statutes also require clerks to provide the local district attorney with the names of any Election Day registrants whose cards are undeliverable at the address provided. However, only 24.3 % of the clerks who sent cards also forwarded names from undeliverable cards to district attorneys. District attorneys surveyed indicated that they require more information than is typically provided to conduct effective investigations.

To ensure that voter registration lists contain only the names of qualified electors, municipal clerks are required by statute to remove or inactivate the names of individuals who have not voted in four years, to update registration information for individuals who move or change their names, and to remove or inactivate the names of deceased individuals. They are also required to notify registered voters before removing their names from registration lists. These statutory requirements are not consistently followed:

* 85.3 % of municipalities removed the names of inactive voters from their voter registration lists;

* 71.4 % sometimes or always notified registered voters before removing their names; and

* 54.0 % reported removing the names of ineligible felons.

Because of such inconsistencies, registration lists contain duplicate records and the names of ineligible individuals. For example, more than 348,000 electronic voter registration records from eight municipalities were reviewed, identifying 3,116 records that appear to show individuals who are registered more than once in the same municipality.

In six municipalities where sufficient information was available, there was 105 instances of potentially improper or fraudulent voting in the 2004 elections. These included: 98 ineligible felons who may have voted; 2 individuals who may have voted twice; 1 voter who may have been underage; and 4 absentee ballots that should not have been counted because the voters who cast them died before Election Day.

Recommendations:

* adjusting the early registration deadline to provide clerks more time to prepare registration lists;

* establishing more stringent requirements for special registration deputies, including prohibiting compensation based on the number of individuals registered;

- * establishing uniform requirements for demonstrating proof of residence for all registrants;
- * providing municipal clerks with more flexibility in the use of address verification cards;
- * Authorizing civil penalties for local election officials and municipalities that fail to comply with election laws; and,
- * implementing mandatory elections training requirements for municipal clerks.

The Report also recognized that the new HAVA registration procedures would help with existing registration problems.

Preliminary Findings of Joint Task Force Investigating Possible Election Fraud: May 10, 2005

On January 26, 2005, the Milwaukee Police Department, Milwaukee County District Attorney's Office, Federal Bureau of Investigation, and the United States Attorney's Office formed a task force to investigate alleged voting irregularities during the November 2004 elections. The purpose of the task force was to determine whether evidence of criminal fraud existed in the irregularities and, if evidence of fraud was found, to pursue criminal prosecutions.

The task force has made the following specific determinations based on evidence examined to date:

- * evidence of more than 100 individual instances of suspected double-voting, voting in names of persons who likely did not vote, and/or voting in names believed to be fake. Those investigations continue;
- * more than 200 felons voted when they were not eligible to do so. In order to establish criminal cases, the government must establish willful violations in individual instances;
- * persons who had been paid to register voters as "deputy registrars" falsely listed approximately 65 names in order to receive compensation for the registrations. The evidence does not indicate that these particular false registrations were later used to cast votes; and,
- * the number of votes counted from the City of Milwaukee exceeds the number of persons recorded as voting by more than 4,500.

The investigation concentrated on the 70,000+ same-day registrations. It found that a large majority of the reported errors were the result of data entry errors, such as street address numbers being transposed. However, the investigation also found more than 100 instances where votes were cast in a manner suggesting fraud. These include:

- * persons with the same name and date of birth recorded as voting more than once;
- * persons who live outside Milwaukee, but who used non-existent City addresses to register and vote in the City;
- * persons who registered and voted with identities and addresses that cannot in any way be linked to a real person;
- * persons listed as voting under a name and identity of a person known to be deceased; and
- * persons whose identities were used to vote, but who in subsequent interviews told task force investigators that they did not, in fact, vote in the City of Milwaukee.

The investigation found persons who were paid money to obtain registrations allegedly falsified approximately 65 names on registration forms, allegedly to obtain more money for each name submitted. There is no evidence gathered to date that votes were cast under these specific false names. Also found were more than 200 felons who were not eligible to vote in the 2004 election, but who are recorded as having done so.

An additional finding of the task force was that the number of votes cast far exceeds the total number of recorded voters. The day after the 2004 election, the City of Milwaukee reported the total number of votes as 277,344. In late November an additional 191 previously uncounted absentee ballots were added, for a total of 277,535 votes cast. Still later, an additional 30 ballots were added, bringing the total number of counted votes to 277,565. City records, however, have been unable to match this total to a similar number of names of voters who cast ballots – either at the polls (under a prior registration or same day registration) or cast absentee ballots. At present, the records show a total of 272,956 voter names – for a discrepancy of 4,609. This part of the investigation was hampered by widespread record keeping errors with respect to recording the number of voters.

In the 2004 election, same-day registrations were accepted in which the card had incomplete information that would help establish identity. For example: 48 original cards for persons listed as voting had no name; 548 had no address; 28 did not have signatures; and another 23 cards had illegible information. These were part of approximately 1,300 same-day registrations for which votes were cast, but which election officials could not authenticate as proper voters within the City. Included in this 1,300 were 141 same-day registrants from addresses outside the City of Milwaukee, but who voted within the City of Milwaukee. In several instances, the voter explicitly listed municipality names other than Milwaukee on the registration cards.

Another record keeping procedure hampering the investigation appears to be the post-election misfiling or loss of original green registration cards that were considered duplicates, but that in fact corresponded to additional votes. These cards were used to record votes, but approximately 100 cards of interest to investigators can no longer be located. In addition, other original green registration cards continue to be found.

The New Poll Tax: Republican-Sponsored Ballot-Security Measures are Being Used to Keep Minorities from Voting

By Laughlin McDonald

McDonald argues that “the discriminatory use of so-called ‘ballot security’ programs” has been a reoccurring scandal since the passage of the Voting Rights Act of 1965. These programs are deceptively presented as preventing voter fraud and thereby furthering good government. However, McDonald states “but far too often they [the ballot security programs] are actually designed to suppress minority voting -- and for nakedly partisan purposes.”

McDonald blames the federal government as well as the states for use of suspect ballot security programs. He cites the implementation of the U.S. Department of Justice’s in "Voting Integrity Initiative" in South Dakota as the worst example of a joint federal-state effort to prevent voter fraud. Alleged voter fraud only in counties with significant Native American populations was targeted. South Dakota Attorney General Mark Barnett “working with the FBI, announced plans to send state and federal agents to question almost 2,000 new Native-American registrants, many of whom were participating in the political process for the first time.” However, statistics show that these efforts only served to increase Native American voter participation. Native Americans “were targeted based on fraud allegations that proved to be grossly exaggerated; at the end of the investigation, only one Native American was even charged with a voting-rules violation.”

McDonald cites several other ballot security efforts that were really disguised attempts at minority voter suppression:

In Pine Bluff, Ark., Democrats accused Republican poll watchers of driving away voters in predominantly black precincts by taking photos of them and demanding identification during pre-election day balloting. Democrats in Michigan charged that a plan by Republicans to station hundreds of "spotters" at heavily Democratic precincts was an effort to intimidate black voters and suppress Democratic turnout. In South Carolina, a lawsuit filed the day before the election alleged that officials in Beaufort County had adopted a new and unauthorized policy allowing them to challenge voters who gave rural route or box numbers for their registration address. According to the complaint, a disproportionate number of those affected by the new rule would be African-American voters who lived in the rural areas of the county.

McDonald is also critical of the Help America Vote Act (HAVA). He states that HAVA “contains other provisions that may enhance the opportunities for harassment and intimidation of minorities through ballot-security programs.” McDonald specifically attacks the photo ID requirement for anyone who registered by mail but has not previously voted. McDonald argues that the ID requirement will suppress minority voting because minorities are less likely than non-minorities to have a photo ID, a photo ID is expensive to obtain and all the alternatives to photo ID present similar obstacles to minority voters. He also argues that there is no evidence that photo ID will combat voter

fraud but it only really provides “another opportunity for aggressive poll officials to single out minority voters and interrogate them.”

McDonald lists some classic past ballot security efforts by the Republicans that have been abused: the 1981 gubernatorial election anti-fraud initiative leading to the well known consent decree prohibiting the Republicans from repeating this, a similar Republican effort in Louisiana in 1986 in Senator John Breaux’s race which again resulted in prohibition by a state court judge, and a similar effort by Republicans in Senator Jesse Helms 1990 reelection. This time the Department of Justice sued the Republican Party and Helm’s reelection committee, resulting in another consent decree prohibiting future ballot security programs without court approval.

McDonald indicates that the crux of the problem is lax enforcement of federal voters rights laws. He states, “there is no record of the purveyors of any ballot-security program being criminally prosecuted by federal authorities for interfering with the right to vote.” The only positive case law McDonald cited was a decision by the United States Court of Appeals for the Eighth Circuit that affirmed “an award of damages ranging from \$500 to \$2,000, payable by individual poll officials to each of seven black voters who had been unlawfully challenged, harassed, denied assistance in voting or purged from the rolls in the town of Crawfordsville [Arkansas].”

McDonald concludes by stating that Congress and the states should adopt “nondiscriminatory, evenly applied measures to ensure the integrity of the ballot.”

**MEASURING PERCEPTIONS OF ELECTION THREATS: SURVEY DATA
FROM VOTERS AND ELITES**

R. Michael Alvarez*

Knight Foundation, the Caltech/MIT Voting Technology Project, and the Center for Public Policy and Administration at the University of Utah for their support of this research. We also thank Doug Chapin and electionline.org for their help with some of the data collection reported here, and Morgan Llewellyn for his assistance in our research.

016463

For an election to be meaningful, it must be seen as being fair. The public, the candidates, and the political parties all must have confidence in the outcome. Electoral irregularities—either intentional election fraud or unintentional problems in the election that result in an inaccurate (and thus sometimes in the eyes of the losing side, fraudulent) outcome—clearly can effect confidence in the outcome of an election.¹ In the United States, since the 2000 election there have been concerns raised regarding intentional and unintentional fraud.² The ongoing debate about the security of electronic voting technologies reflects one aspect of this debate. Concerns have also been raised about fraud in absentee voting, early voting, precinct voting, and voting by military personnel and overseas civilians (“UOCAVA” voters), that are all unrelated to the type of voting technologies used.³ Moreover, there have been convictions in New Hampshire related to jamming political party “get-out-the-vote” telephone banks in the 2002 gubernatorial election.⁴

There have been numerous claims in recent years that the public does not have confidence that their vote will be counted accurately. This claim was central to the report of the

⁴ As recently reported in the Boston Globe: “The episode began with a political dirty trick engineered by New Hampshire Republicans on Nov. 5, 2002. Republican John E. Sununu, then a House member, was locked in a tight Senate race against Democrat Jeanne Shaheen, then the governor, in a contest some observers thought could determine control of the Senate. In an effort to disrupt Democrats' get-out-the-vote efforts, officials with the state Republican Party hired a telemarketing company to tie up the hot lines that had been set up by Democrats and a firefighters' union to help get voters to the polls. For about 90 minutes, computer-dialed calls tied up the hotlines, until the scheme was halted by state Republican officials who grew concerned about its legality. Sununu won the race by about 20,000 votes on a day in which Republicans swept the major races in New Hampshire and much of the nation. The case has yielded three convictions so far, including those of the RNC's New England regional political director for the 2002 elections, James Tobin, and the then-executive director of the state Republican Party, Charles McGee. The third person convicted was Allen Raymond, a former Virginia telemarketing executive who was hired by the New Hampshire Republicans.” Rick Klein, *Boston Globe*, April 13, 2006, http://www.boston.com/news/nation/articles/2006/04/13/white_house_pressed_on_nh_tactic.

“Carter-Baker” Commission’s report on election reform.⁵ The commission’s work was predicted on the idea that the public lacks confidence in election outcomes and that this confidence can be restored only through the implementation of specific reforms. However, public data on this issue presents a mixed message. For example, data from recent surveys studied by Alvarez, Hall and Llewellyn indicate that roughly 9 of 10 voters report being confident that their ballots will be counted as intended. However, these authors also find that confidence among African American voters has dropped considerably between the 2000 and 2004 elections, as around 16% reported a lack of confidence after the 2000 elections, but over 30% expressed a lack of confidence in the 2004 election cycle.⁶

In this chapter, we explore the issue of confidence and fraud in elections. Since before the 2004 presidential election, we have been conducting periodic national sample public opinion polls to assess the perceptions of Americans about the electoral system. We have asked questions specifically about the potential problems associated with electronic voting systems in three successive surveys. More recently, we have asked respondents in a national probability sample about their perceptions of general security threats to the electoral process. We also conducted a pilot survey in 2005 that sought to obtain detailed threat assessment data from the “elite” population: election administrators, academics, policymakers, and advocates. In this paper we present data from these surveys, which provide important information on the perceptions of Americans about the security of their electoral system. Before we do so, we consider the potential threats and risks associated with the fair conduct of elections and provide the results of a small elite survey that considers the threats and risks associated with the voting process. The

potential for fraud is predicated on specific threats coming to fruition. We consider the potential problems that can arise in elections and the likelihood that they will occur, and we also examine the methodological question of whether a survey-based approach can elicit useful data for threat assessment analyses.

Elections as a Threat-Probability Environment

We often discuss risks in our daily lives. What are the risks of getting cancer or of being in an accident or of being eaten by a shark while swimming in the ocean? In order to understand these risks you have to understand four facets of risk. First, what is the threat you are concerned about encountering (e.g., being eaten by a shark)? Second, what is the level of disruption the threat would cause (e.g., being eaten by a shark could kill you, a very high level of life disruption!)? Third, what is the likelihood of being eaten by a shark (It is lower than the risk of being crushed by a pig)? Fourth, how easy is it to mitigate the risk (e.g., by not going into the ocean in areas where there are known sharks)? We can write this as an equation:

$$\text{Risk} = \text{Threat (Disruption + Likelihood)} - \text{Mitigation}$$

As this equation shows, all threats do not manifest themselves equally as risks. Some threats may not produce very high levels of disruption. Some threats may be problematic but be very unlikely to occur. Some threats may be problematic but be easy to mitigate. However, just as all threats are not equal when considered as risks, the calculation of the equation above will vary across different individuals who make the calculation. This is especially true in areas where there are different types of people involved in the evaluation process. When the Food and Drug Administration had a panel of medical experts consider the need to remove certain Cox-II

inhibitors, such as Vioxx, from the market, there was a difference of opinion between clinicians who treat patients and researchers who study risk.⁷ The clinicians understood the threat, the disruption problem, but calculated the likelihood and mitigation differently than the researchers. The clinicians thought they could effectively mitigate the risk, thus lowering the likelihood of a problem arising, through aggressive monitoring of patients. The risk researchers examined the aggregate data and had a different calculation of risk.

The issue of risk analysis varies across issue areas and the willingness to tolerate risk varies across these areas as well. For the public and for policy makers alike, the media often plays a critical role in framing our understanding of risk.⁸ One framework for understanding how risk is interpreted examines the social amplification and attenuation of risk.⁹ This framework has multiple components: a personal component (how the risk is perceived to affect the individual), an institutional component, and a social aspect, all of which affect how risks are interpreted and addressed.¹⁰ “Risk analysis, then, requires an approach that is capable of illuminating risk in its fully complexity, is sensitive to the social settings in which risk occurs, and also recognizes that social interactions may either amplify or attenuate the signals to society about the risk.”¹¹

Risk analysis is made difficult on an individual level by the fact that most individuals do not experience certain risks directly. Instead, an individual’s perceptions of risk are understood and “experienced” through the media. The media’s framing of an issue, the attention given, the tone of the coverage, the overall amount of information provided, and the symbolism used to

characterize the risk, shape how the public perceives a given risk. Additionally, all media are not created equally in how they discuss risks. There are obvious differences in how one might expect mass media—television, radio, and print newspapers—to cover risk compared to the Internet or specialized professional publications. However, even in the mass media, there are differences in how risks are studied and discussed in news stories versus opinion stories or opinion talk shows. Finally, the actual likelihood of a risk being serious can be inversely related to the amount of media coverage the risk receives. For example, the risk of dying from radiation exposure via the sun is much higher than the risk of dying from radiation exposure from an accident at a nuclear power plant, but the latter has received more attention, historically, than the former. Similarly, the coverage of West Nile Virus and the flu have been inversely related to the number of deaths they cause.

Measuring Risk Assessments in Survey Research

As far as we know, there is no existing literature on the use of survey approaches for collecting information on the assessments of a population regarding threats or risks to the electoral system. We are aware of literatures, especially regarding threat assessments of violence and violent behavior, where interview research has been employed in part to develop risk models.¹² Additionally there are a number of projects that aim to probe the expectations of target populations regarding propensities to engage in other types of risky behavior, for example, the likelihood that teenagers will engage in behaviors that present health risks.¹³ But while survey-

¹³ One long-standing project in this area is the "Youth Risk Behavior Surveillance System" (YRBSS), that uses surveys of teen-aged children every two years, with 2005. h national, state, and local samples, to collect data on health risk behaviors. See <http://www.cdc.gov/HealthyYouth/yrbs/overview.htm> for details.

based methods for studying expectations of future events and behavior are used in some areas of social and policy research, we are not aware of their use in developing risk or threat assessment in the field of election administration.

Partly, this is due to the lack of research on election administration.¹⁴ But that there is little research in the social sciences on survey measurement of threats to the electoral or political process is most likely due to a skepticism in the social science community about how individuals think about probabilities and expectations and whether the survey environment is one where they can provide accurate assessments of probabilities and expectations. On one hand, there is work in social science like that of Tversky and Kahneman that shows with experimental data that subjects use shortcuts to process information and develop expectations, thus implying that individuals may not be well-suited to form expectations or probability assessments about events like the possibility of threats to election systems in a way consistent with notions of rational expectations. On the other hand, there is research in political behavior that shows that survey respondents are poor predictors of the likelihood of candidate victories in elections, and that the process of expectation formation in the election setting is influenced by how much the respondent likes the candidate and not just information on how well they are doing in the race. And last, as recently reviewed by Manski, the economics profession has until very recently been reluctant to turn to survey methodologies to study economic expectations.¹⁵

Following in the path of recent work like Manski's and his collaborative work with Dominitz, we have experimented with different survey-based approaches, using different

populations and sampling strategies, of gathering data from survey respondents that might be used in threat assessment analysis for election administration. In the remainder of this paper we discuss two of these experiments, the first seeking to gather data on the likelihood of election system threats from well-informed and highly-knowledgeable populations, election officials, academics, policymakers, and election reform advocates. In the second experiment we tested a question on assessment of election system risks in a national probability telephone sample. Below we present data from the two different methods, and then in our conclusion we provide some tentative evaluations as to the utility of the survey method for developing threat assessments, and discuss some future research directions.¹⁶

Risk Assessments in Elections: Elite Perceptions

Working in conjunction with the Caltech/MIT Voting Technology Project, *electionline.org*, and the University of Utah's Center for Public Policy and Administration, we conducted an elite survey that examined potential risks to the conduct of a fair election. The complete survey instrument is shown at the end of this paper. This survey extensively examined a wide array of potential threats, ranging from outright types of election fraud, to tampering with the electoral process and unintentional problems:

- Illegal or double voting;
- Coercion or disrupting election;
- Voter registration;
- Problems with precinct voting;

¹⁶ Jeff Dominitz, and Charles F. Manski, "Using Expectations Data to Study Subjective Income Expectations." *Journal of the American Statistical Association*, 92 (1997), p. 855-867; Jeff Dominitz and Charles F. Manski, "Perceptions of Economic Uncertainty: Evidence from the Survey of Economic Expectations" *Public Opinion Quarterly*, 61 (1997), 261-287.

- Problems with early voting (in-person and absentee); and
- Problems with post-election ballot processing.

For each type of threat, the respondent was asked to score on a scale from one (1) to ten (10), with one being a low score and ten being a high score, the following:

1. What level of disruption would the event cause to an election?
2. The likelihood the threat would occur in the 2005 elections (if any)?
3. What is the likelihood the event could occur in the 2006 elections?
4. How would you rate the ease of mitigating against the threat?

This calculus requires a respondent to think about risk comprehensively. For each type of threat we identified, we required respondents to think through the components of the risk in a way that allowed its overall potential magnitude to be determined. The survey also asked additional questions, including an overall assessment of the risk threat presented by six types of substantive problems, in an effort to assess what the overall threat profile might be for the existing elections process.

To implement this survey, we posted it (in "fillable" PDF format) on a number of websites that are frequented by academic researchers, election officials, policymakers, and election reform advocates.¹⁷ Notices of the survey's availability were sent out, and electionline.org profiled this project in their newsletter. We advertised the survey in a number of conference or workshop presentations, and had paper copies available for potential respondents. In the end, we received only twenty-three complete survey responses; the poor response rate appears due to the complexity and length of the survey, to difficulties some had with the

¹⁷ The websites used were the Caltech/MIT Voting Technology Project's website (<http://votingtechnologyproject.org>), our weblog (<http://electionupdates.caltech.edu>), Electionline (electionline.org), and the University of Utah's Center for Public Policy and Administration (<http://www.cppa.utah.edu>).

“fillable” PDF file, and to concerns about how the information in the survey might be used.¹⁸

The survey was available on October 20, 2005; most responses were received in late 2005, though the final response was received on May 18, 2006. Respondents did come from a variety of backgrounds: academia, election administration, policymaking, and advocacy.¹⁹

Despite the low response rate to this elite survey, and the non-random method of respondent selection, we do feel that we there is interesting data that can help shed some light on elite perceptions of threats to the electoral process. The first set of threats we asked these subjects about were a wide variety of types of election fraud; we present the average ranking of the types of election fraud, for each dimensions we queried (the potential disruption it would cause, the likelihood in 2005, the likelihood in 2006, and the potential for mitigation) in Table 1.

[Table 1 about here]

When we examine the data in Table 1, it is clear that elite respondents see what might be called “denial of service” attacks on the electoral process (disruptions of early, absentee, or precinct voting) as ones likely to cause the greatest disruption --- and to be among some of the most difficult to mitigate. At the other end of the spectrum, our elite respondents saw illegal voting, the various types of double voting, and registration fraud as among the least disruptive types of election fraud. However, respondents perceived voting in multiple jurisdictions and registration fraud as difficult to mitigate. As to the relative likelihood of occurrence, in Table 1 it is clear that elite respondents see coercion as the most likely of the many types of election fraud to occur (both averaging 4.0 on the 1 to 10 scale we used), and disruptions of the process and voting in multiple precincts as the least likely to occur.

¹⁸ We return to this point in the conclusion. We heard, third-hand, that there were concerns expressed in the community of election officials about how the data from this survey effort might be used.

¹⁹ Unfortunately, due to the extremely limited response rate, confidentiality concerns prevent us from providing any detailed analysis of the profile of the respondents to this survey.

In the next section of Table 1, we provide information on the second set of potential threats: efforts to tamper with the process of voting itself, either early or precinct voting, or ballot transport and tabulation. Note that our elite respondents uniformly saw these as threats likely to disrupt the process; each of these threats ranked 5.0 or greater on the 1 to 10 point scale. Tampering with early voting had the greatest estimated potential of disruption (an average of 6.9), followed closely by the threat posed by tampering with precinct e-voting machines (an average of 6.8). Despite the potential for disruption, though, note as well that the elite respondents saw these as having a relatively low likelihood of occurrence in the current election cycle; tampering with precinct tabulators received the highest average ranking (2.4), the rest averaged right around 2 on the 1 to 10 point scale. Furthermore, none of these threats were perceived as highly difficult to mitigate, as tampering with early and precinct e-voting, as well as ballot transport and tabulation, received average ratings of around 3 on our ten-point scale.

Finally, in the bottom section of Table 1, we provide the same information for the third set of potential threats: an array of unintentional problems with early and precinct voting, as well as with ballot processing. Here we find that some of these unintentional problems were perceived as somewhat of a threat for disruption, especially unintentional problems with early and precinct e-voting machines and their associated paper trails. Interestingly, some of these unintentional problems were among some of the most likely to occur in the current election cycle, especially problems with early voting and precinct paper trails, and processing of absentee and provisional ballots. Elite respondents also saw the early and precinct voting paper trail problems as relatively more difficult to mitigate, relative to the other unintentional problems we posed to them.

Another question in our elite survey that produced helpful data was the third and final question: “For each part of the electoral process in the county where you vote, please rank the relative chance that the problems (intentional or unintentional) will occur in upcoming elections in November 2006. Please label the risk that is most likely as 1, and the one that is least likely as 6.” The set of problems we asked about included illegal or double voting, coercion or deception in voting, voter registration, problems with precinct voting, problems with absentee voting, and problems in post-election ballot processing and tabulation.

What we have done with these data is produce in a simple table (Table 2) the counts of responses in each of the categories.²⁰ Overwhelmingly, our elite respondents saw that voter registration was the most likely threat to the election process in their county (12 of 22 respondents rated that as most likely). Second in terms of likelihood were problems with absentee voting, as 4 respondents rated it as most likely to be a threat, and 7 respondents rated it as the second-most likely threat. Third most likely in terms of perceived threats are problems with precinct voting, as 3 rated that as the most likely threat and 5 rated it as the second most likely threat.

[Table 2 about here]

In conclusion, we see that a survey-based approach for eliciting data from election elites as to potential threats is a viable methodology. Of course, future efforts to gather similar data can learn important lessons from our pilot study. First, our survey instrument was lengthy and complex, even drawing complaints about length and complexity from experts in the field; thus future survey-based efforts might concentrate on gathering data in less complicated ways. Second, we were unable to obtain a large pool of survey respondents to this survey. This indicates that perhaps other efforts, including working more closely with organizations that have credibility with election administrators (in particular) might be productive, as would other

²⁰ There are only twenty two responses to this question; one of the survey respondents did not answer this question.

methods for increasing the sample size in future elite threat assessment surveys. Third, working to obtain data that is more representative of the various components of the population of election administrators, academics, policymakers and advocate representatives should be pursued, including both quantitative (survey) and qualitative (focus group) methods.

Risks Assessments in Elections: General Public Attitudes and Concerns

From 2004 to 2006, we have conducted several surveys asking American voters about their confidence in various voting technologies. In January 2006, we also asked 2,025 respondents in a national probability sample a survey question that was designed to mirror, as best as possible, the type of open-ended question that were included in the election threats questionnaire discussed in the previous section.²¹ The difference is that the January 2006 survey used a closed-ended question format and came at the end of a series of questions on election reforms and election problems.

The specific question asked of all survey respondents was: “What do you perceive as the greatest threat to the integrity of the electoral system?”

- a. Intentional voting fraud, such as by tampering with electronic voting machines or stuffing the ballot box,
- b. unintentional human errors by poll workers or election officials,
- c. voter registration fraud,
- d. illegal voting such as voting twice,

²¹ The survey was in the field from January 18-24, 2006. Interviewing was done by professional telephone survey interviewers from International Communications Research (ICR). We used ICR’s “national telephone omnibus survey”, which is national telephone probability sample, collected twice a week. The question on election threats came at the end of a series of questions on election confidence, election reforms, and voting technologies. The data we present here are weighted using the population weights provided by ICR with the data.

- e. intimidation through which voters are coerced to vote for a specific candidate or ballot measure,
- f. some other problem, or
- g. don't know".

In examining the descriptive statistics given in Table 3, there are two findings that are of immediate interest. First, it is relatively clear from these data that this is an issue that most American adults are relatively uncertain about. In the sample, 33.8 percent of respondents did not have an answer to this question and 0.9% of respondents refused to answer the question. In addition, 36% of respondents gave the answer "some other problem." That so many respondents answer "some other problem" can also be interpreted as another indication of uncertainty on the part of the respondent, some or all of these survey respondents may have seen this as a simple answer to provide interviewers to avoid the perception that the respondent was actually uninformed about this problem. As roughly 7 of 10 respondents might have no opinion about potential threats to the electoral system indicates that this issue may not have yet permeated into the minds of most Americans.

[Table 3 about here]

Second, if we examine the responses to the actual threats provided in the list, we see that the category "intentional voting fraud" has the highest incidence of response (12.3%), followed by "unintentional human errors" (6.9%), and "voter registration fraud" (5%). In addition, illegal voting—such as voting twice—and voter intimidation both were the greatest concern of between 2% and 3% of respondents. These four forms of fraud--intentional voting fraud, voter registration fraud, illegal voting, and intimidation—are forms of intentional fraud and together approximately 22% of the respondents in our sample indicated that some form of intentional

election fraud is a significant concern. By examining the data more closely, we can determine the subpopulations of voters who are most concerned about intentional election fraud.

The subpopulations of voters that are greatest interest initially are race, partisanship, and a voter's registration status.²² The differences between black and white voters are of especially high interest given the amount of discrimination that has occurred toward black voters in the past. In addition, the debates over election reform have traditionally had a very specific dynamic, with conservatives and Republicans being very concerned about voter registration fraud and liberals and Democrats being concerned about intimidation. Since 2003, the historical concern among Republicans about intentional fraud via ballot box stuffing—as was alleged in Cook County in 1960—has been compounded by concern among Democrats about intentional tampering with electronic voting machines to steal elections for the Republicans. Finally, we examine the differences between registered voters and the unregistered; if the unregistered have very high levels of concern about fraud, it could be playing into the cost component of their “calculus of voting” and keeping them from participating in the electoral process.

When we examine differences between White and Black respondents, we find that both groups have similar general concerns about election fraud. Nearly ten percent more Black respondents (almost 4 of ten Blacks in our sample) had no opinion about fraud concerns, relative to Whites (29.9% of White respondents expressed no opinion). But approximately 70 percent of both populations did not select a specific fraud concern; 77 percent of White respondents and 75 percent of Black respondents did not select an intentional fraud concern from the list offered. There are important differences between Blacks and Whites regarding the type of intentional election fraud that concerns them most. Black respondents were slightly more likely to be

²² Given that relatively few respondents provided a substantive answer to this question, we have little data that we can use for multivariate statistical analysis. Thus here we focus on the simple bivariate correlations, and leave more detailed multivariate statistical studies for future research.

concerned about intentional voting fraud, registration fraud, and voter intimidation. By contrast, Whites are more concerned about illegal voting.

Given the problems that have faced Black voters throughout history, these findings are not surprising. Even in 2000, the concerns about voter registration fraud—as exemplified in claims that Black voters were systematically purged from the rolls—were very high. Such concerns came to the fore again in 2004, with claims that the voter registration forms of Democrats in Nevada were not being submitted to the State correctly. Recent work by Alvarez, Hall, and Llewellyn found that Black voters have less confidence generally that their vote will be counted accurately compared to White respondents, so we are not surprised the minority voters have a specific concern focused on fraud that can be perpetrated against voters—such as intimidation or registration fraud.²³

When we examine fraud concerns among Democrats, Independents, and Republicans, we find that some of the anecdotal findings about fraud hold true but some do not. Specifically, Republicans are much more concerned about voter registration fraud than are Democrats. However, Democrats and Republicans are equally concerned about voter intimidation, just as they are equally concerned about illegal voting. One area where there is a large gap among partisans is in the area of concern about intentional voting fraud. Democrats are 4 percentage points more likely to be concerned about intentional election fraud than are Republicans or Independents. Given the close and contentious nature of both the 2000 and 2004 presidential elections and how liberal interest groups have used concerns about the security of electronic voting as an issue, it is not surprising that Democrats have this concern.

When we compare registered voters with those who are not registered, we find that there are interesting differences as well. Not surprisingly, those who are not registered to vote were

²³ Alvarez et al., “Are Americans Confident Their Ballots Are Counted?”

more likely to have no opinion about threats to the electoral system (39%, relative to 32.3% for registered voters). But registered voters were much more likely to be concerned about the threat of unintentional problems, such as human errors, to the electoral process. Registered voters are also more concerned than the unregistered in voter intimidation. Given that registered voters see more of the process than those who are not registered, the registered voters have likely encountered small issues at the polls that give rise to these concerns. The responses of the individuals who voted in 2004 are very similar to the responses of registered voters.

In addition to the groups of greatest interest shown in Table 3, we also examined perceptions of fraud across basic demographic characteristics of the population, we find some interesting variations but also much agreement across groups. For example, men are slightly more concerned about voter registration fraud than are women (6% to 4%) and women are more likely to answer “don’t know” (37% to 31%) as opposed to “some other problem” (34% female, 38% male). Concerns about election fraud vary little across various age cohorts, although young people (aged 18-27) are more likely to answer “don’t know” and not “some other problem.” There is a similar pattern of “don’t know” versus “some other problems” in the income data, with lower income individuals more likely to answer “don’t know” compared to other things. One interesting variation is among those individuals with some college education, but not a college degree. These individuals are 5 percentage points more likely to be concerned about intentional voter fraud—such as tampering with electronic voting machines or stuffing ballot boxes—than either (a) individuals with a high school education or less or (b) individuals with a college degree or advanced degree.

Electronic Voting and Threats to the System

There has been a large amount of attention paid to concerns that voters may have with electronic voting equipment. In several surveys, we have asked respondents if they agree, disagree, or don't know if electronic voting systems (1) increase the potential for fraud; (2) are more accurate; (3) make it easier for people with disabilities to vote; and (4) are prone to unintentional failures. Given the level of concern about electronic voting, we are interested in seeing whether people who are concerned about electronic voting have broader general concerns about election fraud. The descriptive analysis examining views of fraud and concerns about electronic voting are shown in Tables 4.

First, we present a simple analysis of whether people who are concerned about electronic voting fraud are concerned about fraud generally. Here, we find that individuals who think that electronic voting systems increase the potential for fraud are 10 percentage points more likely to think there is intentional election fraud compared to individuals who do not think electronic voting increases the potential for fraud. The concerned respondents are also twice as concerned as people who no opinion about electronic voting's potential for fraud. When we consider the specific election fraud concerns that individuals who are concerned about electronic voting have, we find that they are more concerned about fraud across the board than are the other respondents. Not surprisingly, more than half of the overall concern relates to concerns about intentional vote fraud. However, these individuals are also much more concerned about voter registration fraud and illegal voting as well. In general, people concerned about electronic voting are concerned about many facets of the voting process.

[Table 4 about here]

By contrast, people who agree that electronic voting systems are more accurate are much less likely to be concerned about fraud than those who disagree with that statement. Respondents who view electronic voting as being accurate are 10 percentage points less likely to be concerned about intentional fraud generally. Those with no opinion about the accuracy of electronic voting systems are also much less likely to be concerned about fraud. When we examine specific fraud concerns, people who think electronic voting is more accurate are less likely to be concerned about voter registration fraud and intentional voter fraud compared to those who do not think electronic voting is more accurate. However, those who think electronic voting is more accurate are also more concerned about unintentional human errors in the voting process and also with the possibility that some people will engage in illegal voting, such as voting twice.

Another interesting aspect of this study is that approximately one-third of respondents did not have an opinion about the positive or negative aspects of electronic voting. When we examine these individuals and their concerns about fraud, we find that they are less likely to be concerned about fraud generally than are those who have an opinion about electronic voting. Most starkly, the individuals who do not have an opinion about electronic voting increasing the potential for fraud are half as likely to be concerned about intentional voting fraud when compared to the individuals who think electronic voting increases the potential for fraud. The results are slightly less stark for those who think electronic voting is prone to unintentional failures compared to those with no opinion—here, the difference is 6.5 percentage points. For the two questions that explore the positive aspects of electronic voting, the difference between those who disagree with these positive attributes and those with no opinion are again quite large, with the gap between the two groups being 8.9 percentage points or more in size.

For the other two questions, we find similar results. Individuals who are concerned about unintentional failures with electronic voting systems are also concerned generally with fraud across the board. On the other hand, individuals who think that electronic voting will make voting easier for people with disabilities are generally less likely to be concerned about fraud. These data examining concerns about fraud by individuals who are generally supportive or concerned about electronic voting suggest that concerns about intentional fraud are linked to concerns about failures in the voting process generally. By contrast, individuals who are generally positive about the voting process are more positive about fraud not occurring.

Conclusions

The results from these survey experiments illustrate two key different and important issues regarding how we can study and prevent election fraud. First, the data from the national random sample survey show that Americans are poorly informed and relatively unconcerned about election fraud. For those voters who are concerned about election fraud, the concern centers on actual intentional voting fraud, where illegal ballots are cast in the election. The data also suggest a “sore loser” effect from the most recent elections, as Democrats are more likely to be concerned about illegal voting compared to Republicans. Fortunately, we do not see fraud as being a greater concern among non-voters or non-registered voters; concerns about fraud do not seem to be keeping people away from the polls.

We also see that some individuals are just more worried about fraud generally than are other individuals. For example, respondents who are concerned about electronic voting fraud specifically are more concerned about all types of fraud, especially intentional fraud, when compared to those individuals who either are not concerned or have no opinion about the potential for electronic voting fraud. Likewise, individuals who are concerned about the

accuracy of e-voting systems in counting ballots are also more likely to be concerned about intentional election fraud.

Thus, when we think about how national population survey data like ours that asks about threats to the electoral system or election fraud can be used in threat assessment analysis, we have two different reactions. On one hand, that the population seems generally uninformed about election fraud, and that their perceptions seems systematically affected by their political orientations, suggests caution in the use of this sort of data in threat assessment analysis. But on the other hand, as the general population is one of the ultimate consumers of election administration services, it is important to understand the public's concerns and level of knowledge, and to incorporate their concerns into fraud and threat prevention. To the extent that perceptions of threat and fraud influence public confidence in the integrity of the electoral process, studying the public's perceptions is important.

Second, a different set of implications arise from our study of the elite-level survey results. Substantively, when we examine the opinion of individuals about specific fraud risks and the ability to mitigate these risks, we find that disruptions to elections are the most highly disruptive are also among the easiest to mitigate. This is similar to the problems faced on the Internet; denial of service attacks are problematic but can be mitigated with effective deterrence and prevention.²⁴ However, there is a more basic reason to survey informed individuals about the likelihood that various threats to elections will occur. Basic theories of economics and psychology tell us that markets—be they stock markets, betting parlors, or in this case, decision or prediction markets—are highly effective at predicting the future. There is a wealth of literature discussing the efficiency of betting markets: such markets take advantage of collective

²⁴ The authors have both actually been to the location where the major Internet domains are managed. All we can say about the experience (we signed non-disclosure agreements to get in the door) is that it is incredibly impressive to see how the management process works and how attacks to the system are addressed.

knowledge and the aggregation of information to produce effective estimations of outcomes. Other types of markets, like The Iowa Electronic Market or the Hollywood Stock Exchange, have proven highly effective at predicting the outcomes of non-market outcomes (like presidential elections and weekend box office grosses for movies) that other methods sometimes have difficulty forecasting with accuracy.²⁵

Suggesting that such markets be used for predicting problems with elections could be controversial; witness the concerns raised about the Policy Analysis Market that the Defense Department attempted to develop in 2002-2003 to help predict changes in the conditions that are conducive to a terrorist incident occurring.²⁶ However, such approaches can be used to identify potential threats and determine where resources should be focused to develop a more secure election system. A prediction market trying to forecast election problems could be done at the state or local level, aggregating the knowledge of poll workers, poll watchers from political parties and interest groups, habitual voters, and other interested players in the election process. Given the wide variation that exist in state election laws and local implementation of these laws, conducting such work could be highly effective in improving our perceptions of the actual threats that exist in the election process.

But, using prediction markets to aggregate information might prove difficult or problematic in the area of forecasting election problems, as well-informed elites might perceive that they do not have an incentive to reveal what information they have about potential threats to election systems, as they might believe that the revelation of that information might strategically be used against them. As we noted above in our discussion of our elite survey, the low response

²⁵ Joyce Berg, Forrest Nelson, and Thomas Rietz, "Accuracy and Forecast Standard Error of Prediction Markets," 2003, <http://www.biz.uiowa.edu/iem/archive/forecasting.pdf>; Charles R. Plott, "Markets as Information Gathering Tools," *Southern Economic Journal*, 67,1 (2000), p. 1-15; James Surowiecki, *The Wisdom of Crowds*, (New York, Anchor, 2005).

²⁶ See <http://hanson.gmu.edu/policayanalysismarket.html> for further information about this project.

rate we received in reaction to our survey, especially from the election official community, might reflect such concern. If so, that indicates that much care is needed when it comes to the development of future elite surveys on threat assessment and election fraud, and careful presentation to potential survey respondents exactly how the data will be used. In any case, clearly more research on how we can obtain information from voters and elites about their perceptions of election threats, so that information can be used in threat assessment analysis, is required.

Table 1

Description	2005		2006	
	Disruption	Likelihood	Likelihood	Mitigation
Double voting: absentee and precinct	2.8	2.8	2.9	2.8
Double voting: multiple precincts	3.0	2.0	2.1	2.2
Double voting: multiple jurisdictions	2.9	3.0	3.4	4.1
Illegal voting	2.8	2.9	2.9	3.8
Vote buying	4.3	2.6	2.9	5.0
Registration fraud	3.1	3.2	3.3	4.5

Contemporary Election Fraud:
A Quantitative Analysis of Election Fraud Cases in California

The authors can be reached at: rma@hss.caltech.edu and frederick-boehmke@uiowa.edu, respectively. Boehmke is currently a Robert Wood Johnson Scholar in Health Policy Research at the University of Michigan. We wish to thank Alex Chang for his assistance with data collection. We also thank John Mott-Smith and Gillian Underwood, and the California Secretary of State's Office for providing us access to the data we use in this paper; Richard Ciaramella and the staff of the Election Fraud Investigation Unit provided detailed comments on earlier versions of this research. Melanie Goodrich, Thad Hall, Rick Hasen, Mary Sikora, Conny McCormack, Betsy Sinclair, Hans von Spakovsky, Charles Stewart, and Ray Wolfinger all provided helpful discussions and detailed comments about earlier versions of this research. An earlier version of this research was presented at the 2004 annual meetings of the Midwest Political Science Association, and we thank both Michael McDonald and panel participants for their helpful comments. This research was supported by grants from the Carnegie Corporation of New York and the John S. and James L. Knight Foundation to the Caltech/MIT Voting Technology Project; the conclusions reached in this paper reflect the views of the authors and not necessarily the Caltech/MIT Voting Technology Project.

Abstract

Studies of electoral fraud have generally consisted of demonstrating the existence and pervasiveness of fraud in various contexts based on elite interviews, voter surveys, newspaper stories or case-study analysis. Yet none of these studies has yielded data with sufficient variation across time or space to permit systematic testing of hypotheses regarding the frequency of electoral fraud. In addition, many of these studies have gone where the fraud is by intentionally studying cases or countries where fraud is considered problematic. In this paper we conduct a quantitative analysis of election fraud using data from California's 58 counties between 1994-2003. Our data consist of all electoral fraud cases filed during this period and are disaggregated by allegation and resolution. We conduct event count regressions to test hypotheses about the timing and location of fraud cases, including measures of competitiveness, ideology, economics and demographics. Our results provide evidence that fraud allegations are associated with competitiveness, ideology, race and county election outlays. Results are similar across a variety of specific violations as well as case outcomes.

1 Introduction

Maintaining the integrity of the electoral process is a fundamental goal of election administrators in democracies across the world. If questions arise about the integrity of balloting or vote tabulation, the legitimacy of the subsequent governing regime can — and often is — undermined. Thus election administrators have developed systems to monitor and protect the integrity of the electoral process in democratic elections.

But despite these protections, claims about significant election fraud arise quite frequently, even in long-established democratic nations like the United States. Allegations of election fraud in the United States have a long history, and have been documented as far back as the very early elections held during the founding of the republic. But while there are often allegations made about election fraud, there is a surprising lack of empirical evidence regarding how frequently election fraud arises, how many votes it potentially influences, and where in the electoral process fraudulent activities occur. This is especially true of the contemporary political period in the United States.

Allegations about election fraud in the United States also arise during debates about significant changes to the electoral process. Examples range from Congressional debates about voter registration (heard during debates about the “National Voter Registration Act”), or about broader election reform proposals like the recently enacted “Help America Vote Act” (2002). But these debates about election fraud also occur during state and local debates about changes to election procedures, with prominent examples being how allegations of potential election fraud derailed ballot measures that would have implemented election-day voter registration in California and Colorado in 2002.

In this paper we offer an analysis of a unique database. In the past decade, the California Secretary of State has established an office that investigates election fraud allegations throughout the state. This database provides information on all election fraud cases that were referred to this office between 1994 and 2003, and provides information on how each

case was resolved. This database is organized by year and by county, and by the precise nature of the allegation (for example, did it concern voter registration or absentee voting fraud). After merging our election fraud database with other political and demographic databases, we test a series of hypotheses about what factors produce higher levels of observed cases of election fraud across space and time. We find evidence that election fraud allegations are associated with competitiveness, ideology, race and election outlays.

2 Studying Electoral Fraud

Research on election fraud in the United States is difficult. First, obtaining data on election fraud is difficult, and sometimes impossible. There are no national regulations nor standards for reporting election statistics of any type, especially for reporting allegations, prosecutions, convictions, and other statistics on election fraud.¹ Second, election fraud might be difficult to detect; after all, those who might be motivated to perpetrate election fraud will take steps to minimize the odds that they are caught! So it might be possible that any statistical data that we obtain about election fraud underreports the true rate of fraud, and therefore any data we can collect and analyze might be subject to unknown selection biases.

Perhaps due to a lack of consistent data on election fraud, there has been relatively little empirical analysis of election fraud in the social science research literature. One extensive literature on election fraud in the United States focuses on historical studies of election fraud, including research on fraud during the "Gilded Age", during the late 1800's; much of this literature tries to estimate the extent of election fraud (e.g. Argersinger 1985-1986). There are other, largely historical, studies of American election fraud that focus

¹Eventually, the recently-passed "Help America Vote Act" (H.R. 3295) will require that states and counties collect and report statistical information on the conduct of elections under their jurisdictions. However the exact type of data, whether there will be reporting standards, and whether the data will be readily available to the interested public, are currently unclear. The "Help America Vote Act" established the "Election Assistance Commission", which is tasked with developing the statistical reporting guidelines; at the time we are writing this paper the Election Assistance Commission has just been formulated.

on different geographic locations or certain components of the election process. For example, there is a historical study of election fraud in the early twentieth-century in Pittsburgh (Mayfield 1993), and studies of nineteenth-century New York (Cox and Kousser 1981), Texas (Baum 1991), South Carolina (King 2001), and Mississippi (1989). Miller (1948) examined fraud allegations in absentee voting, while others have studied allegations of fraudulent voter registration, especially in historical perspectives (e.g., Keyssar (2000), Harris (1929)). Last, there is a chapter on election fraud with information from the contemporary period in Sabato and Simpson (1996), as well as studies by Fund (2004), Campbell (2005) and Gumbel (2005).

Outside of the United States, there have been studies of election fraud, especially in what Lehoucq (2003), in his review essay on election fraud, calls “pre-reform political systems”. These are nations that do not meet minimal requirements for a functioning democracy, and thus, have electoral administration systems that appear to allow for much more rampant election fraud. Important examples of this literature include Costa Rica (Lehoucq and Molina 2002), Imperial Germany (Anderson 2002), Argentina (Sabato 2001), and Brazil (Graham 1990).² The general conclusions of this literature are that there are many different ways in which political agents attempt to illegally manipulate election outcomes; however the evidence is weak that many of these manipulations are in fact decisive in determining electoral winners or losers (Lehoucq 2003).

Recently, following the 2000 American presidential election and the subsequent attention paid to observed electoral irregularities in that election (especially in Florida), there has been renewed interest in studying electoral irregularities and fraud. There is growing interest in using sophisticated statistical or econometric techniques to try to model election regularities — and to then identify election irregularities, or “outliers” (Wand et al. 2001; Mebane and Sekhon 2003).³ Detected “outliers”, say in precinct-by-precinct or

²Lehoucq (2003) provides an more extensive literature review, covering sources in French and Spanish, in addition to English.

³While this new interest is developing among methodologically-sophisticated social scientists, the basic idea of using outlier detection to identify potential electoral fraud has appeared earlier in some historical studies of fraud, including Baum (1991), Oberst and Weilage (1990) and Powell (1989).

county-by-county analyses, can then be examined in further detail to determine if their outlier status is due to actual fraud or to other idiosyncratic reasons. This is a promising avenue for future studies of election fraud.

Last, there is an extensive and growing literature on political corruption. This research literature spans an examination of historical political machines and corruption in American cities, for example Tammany Hall in New York (Riordan 1994). Other components of this literature are comparative in nature, especially studying political corruption across nations (e.g., Rose-Ackerman 1999; Myerson 1993; and Persson and Tabellini 2000). As this literature tends to cover the more general issues of political corruption, sometimes works in this area cover types of corruption that take place in the electoral arena; an example of this is vote buying (Hasen 2000).

Regarding the causes of electoral fraud, the research literature has pointed to a variety of potential explanations for why electoral fraud varies across time and space in specific nations, as well as across nations. Political factors, especially political competition, have been shown to explain the variance in election fraud, with there typically being a positive correlation between competitiveness and various measures of election fraud (Dominguez and McCann 1996; Eisenstadt 1999). Institutional factors, in particular the particular mechanisms used to elect members to legislative bodies (for example, whether majoritarian or proportional systems were used to translate votes into representation), appear to explain much of the variance in election fraud in Costa Rica, with more fraud occurring under majoritarian rules (Lehoucq and Molina 2002). Other studies have documented how economic interests (Anderson 2000), partisanship and incumbency (Botana 1979), and urbanization (Dominguez and McCann 1996) also appear to have correlations with the extent of election fraud across space and time. Below we operationalize variables that allow us to test for these various correlates of election fraud in our database.

3 Election Fraud in California, 1994-2003

To study the relationship between various factors and fraud allegations, we obtained a database from the California Secretary of State's Election Fraud Investigation Unit (EFIU).⁴ Our databases include information on all electoral fraud cases referred to the Secretary of State's Office from 1994 to 2003. They also indicate the nature of each allegation and the final action taken. It covers exclusively those cases that went through the Secretary of State's Office and were resolved (i.e., we do not have information on federal or local cases, nor cases which were unresolved at the time we received the data).⁵ Importantly, however, we also know which county and year the case originated in, allowing us to link allegations of fraud to county characteristics.

In Table 1 we provide summary data on the types of election fraud in our databases: the number of cases that were opened and resolved during this period. We partition the cases into four categories: voting fraud, registration fraud, absentee fraud and miscellaneous fraud. Voting fraud cases were allegations of: consideration for voting, corruption of voters, double voting, fraudulent voting, intimidation of voters, non-citizen voting, payment for voting, tampering with voting devices or violations of ballot secrecy. Voter registration fraud involved allegations of alteration of voter registration party affiliation, charging fees for registration, fraudulent voter registration, holding the voter registration card more than 3 days, non-citizen registration, residency, or voter registration after dead-

⁴This serves to distinguish our research from most of the previous research on election fraud. Lehoucq (2003) noted that there were six different methodological approaches to studying election fraud: collect survey data from voters or political agents; undertake qualitative studies and use in-depth interviews of political participants; study memoirs of political agents; analyze reports of fraud from political agents (typically parties) that are filed with appropriate authorities; study media reports of fraud; use data collected by nonpartisan electoral observers. The data we have appears to cut across two of Lehoucq's categories, as we are studying a database of reported allegations of election fraud, but they are not necessarily allegations with a political motivation as the allegations in our database can come from a wide variety of sources, including as far as we can determine any source, political or non-political.

⁵The other database we received breaks allegations of fraud down by type and year but not by county; this database covers all cases opened between 1994 and 2002, including all completed and pending cases over the same time period, and indicates that our data do not omit any cases filed before 2000. Given that this second database does not have geographic variation, we focus our attention in this paper on the more extensive database, which gives data for closed cases, by time, over time and counties.

lines. Absentee voting fraud was the violation of absentee voting requirements, fraudulent absentee voting, or the non-return of absentee ballot application. All other types of cases are included in the miscellaneous category.⁶

[Insert Table 1 Here.]

In Table 1 we see that the incidence rate of reported cases of election fraud in California during this period of time is 1285 cases opened and resolved. Overall, the specific types of election fraud with the highest incidence rates are fraudulent voter registration (469 cases), followed by double voting (153 cases opened) and non-citizen registration (153 cases opened), and falsified petitions (109 cases opened).

As two of the most prevalent types of fraud case involved voter registration (fraudulent voter registration and non-citizen registration), it is the most widely reported type in our dataset, with 703 cases reported during the time period of our data. Voter registration fraud constitutes approximately 54% of all cases of voter fraud reported to the Secretary of State's office during this period. On the other end is absentee voting fraud, of which there were only 9 cases reported in this time.

In Table 2 we provide data on the final action by type of fraud, during our period of study. We break the action down by the four broad categories of fraud — voting, registration, absentee and miscellaneous fraud. In the database we were provided, there are a broad range of actions that were taken; but in most cases the fraud allegations were dropped due to no evidence of a violation (336 cases were resolved this way), insufficient evidence (228 cases), the statute of limitations (184 cases) or a lack of intent (146). These four resolutions encompass 894 of the cases in our data, a total of nearly 70% of the cases.

[Insert Table 2 Here.]

⁶There was a large list of other types of miscellaneous fraud, including: alteration of election returns, electioneering, failure to file nomination papers, failure to maintain records on paid personnel, false declarations of candidacy, falsified petitions, fictitious name on nomination paper, handling of ballots, mass mailing of penal provisions, misleading of voters, misuse of information, misuse of signatures on petition, misuse of voter rolls, neglect to perform official duties, printing of simulated sample ballots, suppression of nomination papers, threats to circulator, vandalism of political signs, and other non-specified violations.

On the other hand, we see that in 66 cases convictions were the result of the investigation of the allegation — including 6 cases of voting fraud, and 34 cases of registration fraud. While 66 may seem like a relatively small number, it is also important to recognize that it is costly to investigate and prosecute election fraud, and that 66 convictions demonstrates a commitment in California to resolving election fraud cases in the courts when possible.

Again, our study is the first study to disaggregate election fraud cases and study them across space, time, and type of fraud. Figures 1 and 2 display the geographic variation in fraud allegations overall and for each of the four categories we constructed. It is clear from these figures that fraud allegations are spread across the state, though there are clearly more allegations in more populous counties. Further, southern California counties exhibit a concentration of fraud allegation, though there are similar counties both near the bay area and in the middle of the central valley. Examining the right-hand map in Figure 1 shows that these findings are partly driven by the populousness of these counties. When fraud allegations per capita are mapped, a somewhat different pattern emerges, with smaller, northern counties exhibiting greater fraud allegations per capita and the southern counties exhibiting relatively lower rates. Comparing the results across our categories of fraud in Figure 2 leads to similar conclusions about total fraud, with similar patterns emerging across each. A similar shift occurs in this figure when we map fraud cases per capita (not shown).

[Insert Figure 1 Here.]

[Insert Figure 2 Here.]

So, do these statistics indicate that election fraud is common or rare in contemporary California? On one hand, the fact that any election fraud cases are alleged indicates that some fraud must exist. But on the other hand, from 1994 through 2002 almost 73 million votes were cast in statewide primary and general elections alone in California, while there were 1,285 cases of alleged fraud that were opened by the EIFU in this period: this is about one case of alleged election fraud for about every 57,000 votes cast in California

statewide elections. That is a low incidence rate. However, these data only measure the number of cases that were opened; they do not describe, per allegation, how extensive the purported election fraud was. Thus, a case can represent allegations of only a handful of illegal votes, or it could represent an allegation that thousands of illegal votes were cast, and with only this data alone we do not know if a specific allegation regarded one illegal vote or thousands.

What is also interesting to note in Table 1 is the relative incidence rates for the different forms of election fraud. First, many discussions of absentee voting criticize the liberalization of vote-by-mail to include convenience absentee voters, in addition to those who should cast absentee ballots because of need. In fact, the Caltech/MIT Voting Technology Project's report recommended replacement of convenience absentee voting with early voting; one of the stated reasons for this recommendation was fraud and security. The evidence provided here indicates that these fraud concerns might be over-estimated, though clearly more analysis of data from California and elsewhere on this topic is necessary. Rather, most forms of election fraud concern voter registration. There are many issues with voter registration, as shown above. Some of these issues might be somewhat specific to California, especially the issue of non-citizens registering and voting. However, while there clearly are reasons to be concerned about fraud and security regarding voter registration, it seems from the data presented above that while most cases of fraud regard voter registration irregularities, the total number of illegal registrations perpetrated is quite low.

Of course, one additional dimension to our data is the over-time variation in fraud cases. During this period of time, California has experimented with many innovations and reforms, ranging from efforts to make voting more convenient (making voting by mail and early voting easier and more convenient), making the registration process easier (implementation of "Motor Voter" reforms), and many efforts associated with changing the process, procedures, and methods by which Californians vote on election day in their local precincts (for example, the elimination of punchcard voting systems, in favor of

either optical scan or electronic voting devices). Below, when we discuss our multivariate statistical results, we will dig deeper into the question as to whether these many changes have had any detectable effect on election fraud in California.

4 The Correlates of Fraud

In this section we use our unique data set on fraud allegations in California to study how different factors relate to the incidence of fraud charges. We also study whether there is variation across these factors in their influence on the four distinct categories of fraud we outlined previously. Finally, we study the ultimate resolution of allegations by investigating the number of allegations that are resolved in the five most common ways: administrative action, conviction, lack of intent, no violation and statute of limitations. This last set of analyses is important for a variety of reasons, but perhaps most importantly, it allows us to partially overcome some of the limitation of our data as a measurement of actual fraud. Of particular importance is our ability to isolate allegations that result in convictions.

But what factors explain the variation in fraud allegations across counties? With no similar quantitative studies of data like ours on election fraud to draw upon, we focus on variables suggested by the previous related research on election fraud. That literature has found a variety of potential correlates of election fraud, which we examine with our data below. Those correlates of election fraud are political competition (Dominguez and McCann 1996; Eisenstadt 1999), economic explanations (Anderson 2000), partisanship (Botana 1979) and demographic factors like urbanization (Dominguez and McCann 1996).

Perhaps the most critical variable to focus on is the opportunity for fraud to influence electoral outcomes — we would expect fraud attempts to occur mainly in electoral circumstances that are conducive to altering outcomes. Specifically, the potential benefits from fraud are much greater when only a handful of votes can change the outcome of an election. Thus we expect that fraud is most likely to occur in highly competitive races

with small margins of victory.

Unfortunately, we can not link our fraud allegations to specific races, which makes it more difficult to assess the effect of competitiveness on the occurrence of fraud. Of course, many fraud cases are not associated with specific races or the nature of the allegation is such that it would be impossible to know if any specific race motivated the actions (this would be true, for example, of many allegations of voter registration fraud). Because we have county-level data, however, we can study the effect of local competitiveness on fraud allegations. In practice, then, we test the effect of a county's average competitiveness on the incidence of fraud allegations. We hypothesize that counties that are more competitive exhibit a greater number of fraud cases.

To test this hypothesis, we include a measure of average district competitiveness. We construct this by using data from gubernatorial elections in 1994 and 1998 to calculate the absolute margin of victory in these two elections, then combine these values into one variable based on the most proximate election for each year. Thus competitiveness for 1994-1996 is constructed from the 1994 gubernatorial election results, and for 1997-1999 from the 1998 election. We also include the Democratic vote share in these two elections, constructed by assigning election results to years in the same way, to control for partisan effects. While our competitiveness measure may miss out on election-to-election incentives for committing fraud, we feel it is an appropriate measure since it would be impossible to control for vote margin in all races in each county. Thus we rely on results from a common, statewide election.⁷

In addition to competitiveness, there are a variety of other factors that we want to consider, including demographic measures, economic performance, population size and density, education, age and partisanship. To measure the effect of county demographic factors, we include measures of a county's *Total Population*, *Population Density*, the percent of the population that is *African American*, the percent that is *Hispanic*, the percent

⁷Our results are not affected by the choice of the gubernatorial returns — similar measures constructed using returns for other statewide elections produced almost identical results.

that has completed a *High School Education* and the *Median Age*. We expect that counties with larger, more dense populations experience greater levels of fraud. The effect of other variables may be different for different types of fraud. For example, we might expect the percent hispanic to increase registration fraud but not absentee fraud. Increased education and age should produce lower levels of voting and registration fraud, but may increase levels of absentee fraud.

We also control for economic factors, including the *Percent Unemployed* and *Per Capita Personal Income*. We expect fewer fraud allegations when economic performance is good. In addition, we include variables measuring county election expenditures, using data on *Election Operating Expenses* and *Election Capital Expenditures*. These variables capture county investment in staffing and monitoring elections and updating election machines, respectively, and we expect that they will be related to observed levels of fraud. We run versions of our analyses with these variables measured both in total and on a per capita basis. We control for changes in fraud over time by including a linear time trend variable. This variable helps us determine how various reforms in California over the last decade have resulted in greater amounts of fraud, or at least in more allegations of fraud. Descriptive statistics for the dependent and independent variables used in our analysis are contained in a table in the appendix (Table 7). Finally, we occasionally include an indicator variable for Los Angeles county in 1998 to account for the fact that it has an extremely large number of voter registration fraud allegations that year.

Because our dependent variable is the number of fraud allegations in a county per year, we do not use standard linear regression models for our analysis. Because they do not reflect the true nature of the data generating process, parameter estimates are usually biased and inconsistent (King 1988), particularly in cases like ours when the number of events is at or near zero for many observations. Because of the problems standard regression models suffer from when estimated on data corresponding to counts of discrete events we estimate models designed for count data, such as Poisson and negative bino-

mial regression.⁸ Because we expect that there are a variety of factors at the county level that may effect fraud allegations, we estimate a Poisson model with (Gaussian) random effects.

4.1 Total Allegations and Allegations by Category

The results for the total number of fraud allegations as well as the results for our four subcategories of allegations are presented in Table 3. Because measures of some of our county-level data are not available in 2000 and later years, our analysis covers 1994-1999. Since the fraud allegations data are more complete in this interval than for later years, restricting attention to these cases is reasonable. Overall the results demonstrate that a variety of factors influence allegations. And while the pattern of significance varies a little across the four categories of allegations, the direction of significant effects is generally consistent.

[Insert Table 3 Here.]

The results for the random effects Poisson specification with total election outlays are presented in Table 3, and the results for the models using per capita outlays are Table 4. In general, the results are similar, with the one exception arising as the competitiveness variable. This variable is significant when total outlays are used, but not when we substitute per capita outlays. As our margin variable is not strongly correlated with any of the outlays variables (all less than 0.08), we are not sure why the cause of the different findings. The effect of electoral margin is smaller across the board for each of the four categories of fraud. It is again significant for registration fraud when total outlays are used, and nearly so with per capita outlays.

[Insert Table 4 Here.]

Last, we include as a covariate in our models a time counter, that gives us the ability to test whether or not election fraud has changed significantly over the span of years

⁸For a good introduction to and overview of count models, see Box-Steffensmeier and Jones (2004) and Long (1997). For a more detailed presentation, see Cameron and Trivedi (1998).

in our dataset (here 1994-1999). We find that overall, the time counter has a positive but statistically insignificant sign in our total fraud model, indicating that in that way of studying the incidence of election fraud in California, there is no statistical support for the hypothesis that election fraud has increased or decreased during this period. When we turn to the four broad categories, though, we see that the sign on the time counter is negative (but insignificant) in the voting, absentee, and other models.

However, we see in the registration fraud model that the sign on the time counter is both **positive and significant**. This indicates that, controlling for all of the other variables in that model, there has been a statistically significant increase in voter registration fraud cases filed per county in this period of time. On one hand, this could be seen as evidence that voter registration fraud itself might have gone up during this period; but on the other hand, it might also be possible that this reflects increased attention to election fraud, especially voter registration fraud, between 1994 and 1999 in California. Further research as to what is behind this result is in order.

We are interested not just in the significance of the coefficients, but also in the substantive effect they imply for each independent variable. Because we estimate a negative binomial regression, the coefficients do not directly indicate how changes in each variable result in changes in the number of violations.⁹ To determine this relationship, we constructed first differences based on the coefficient estimates for each variable. These first differences are presented in Table 5. These numbers represent the change in the dependent variable resulting from an increase in each independent variable from one standard deviation below its mean to one standard deviation above its mean, holding all other independent variables constant at their mean values. In addition, we give the predicted number of violations when all variables are at their mean or mode in order to put the magnitude of the first differences in perspective.

[Insert Table 5 Here.]

For our competitiveness variable, the results in Table 5 indicate that a two standard

⁹Since $E[Y_i] = \exp(x_i\beta)$, the marginal effect of a variable x_k is $\beta_k \times \exp(x_i\beta) = \beta_k \times E[Y_i]$.

deviation decrease in competitiveness, corresponding to a change in average margin of victory from 12% to 28%, results in 0.21 fewer total fraud cases. Relative to the mean prediction of 1.0, this represents a fairly large substantive effect. For voting fraud, the first difference indicates 0.11 fewer allegations relative to a baseline of 0.43.

Turning to our other independent variables, we find that a variety of factors influence fraud allegations and that there are some differences for different types of cases. Counties with a greater Democratic vote share consistently have significantly fewer fraud cases, with significant coefficients in both tables for total and registration fraud. The first difference of -0.81 indicates that the marginal effect of partisanship on total fraud cases is reasonably large.

Our election expenditures variables demonstrate a systematic relationship between county spending and reduced levels of fraud. Counties with greater total election operating expenditures have fewer overall fraud allegations as well as fewer registration and absentee allegations. With the exception of absentee allegations (though recall the few number of positive cases here), these results persist when per capita expenditures are used. The first differences indicate that a two standard deviation change in this variable generally results in about a 100% change in allegations. Similar results obtain for total capital expenditures, which have a negative and significant coefficient for all categories save absentee; per capita capital expenditures have significant effects for total and registration fraud.

Demographic variables also exert an effect on fraud allegations. Median age has a significant and negative effect for total registration fraud as well. Race also matters: counties with a greater proportion of blacks have significantly more total fraud, registration fraud and voting fraud. At the same time, the percent Hispanic has no effect on fraud. Economic factors also have mixed effects, with wealthier counties associated with increased fraud allegations for all types of fraud except absentee.¹⁰ Unemployment is not found to

¹⁰There are very few allegations of absentee fraud in our data, which helps explain the general lack of findings for this category.

have a significant effect. For population characteristics, we find, not surprisingly, that larger counties have more fraud. The first differences are generally about 75% larger than the mean number of cases, indicating that this variable has a large effect.

4.2 The Resolution of Allegations

In this section, we study the outcomes of all fraud cases filed. While we have a total of fourteen different outcomes, only six of them happen with sufficient frequency to allow meaningful regression analysis. These six categories are Administrative Action, Conviction, Lack of Intent, No Action Taken, No Violation, and Statute of Limitations; they represent about 70% of all cases.¹¹ Our dependent variable in this section is the number of cases filed in a county that are resolved in each way.¹² Of course, the number of cases resolved varies not only with demographic and political characteristics, but also depends greatly on the number of cases filed. Fortunately, event count models can accommodate variation in the maximum number of possible events, commonly referred to as exposure, across units. We control for this by including the natural logarithm of the number of allegations in a county as an independent variable. If the coefficient on this variable is constrained to one, the model is equivalent to estimating the percent of cases reaching a resolution in a county. Rather than impose this constraint, however, we follow the recommendations of Maddala (1983) and King (1989) to estimate a coefficient for this variable. An implication of this approach is that we exclude counties with no allegations in a given year since the count of resolutions must be zero.

These models are particularly important due to our ability to isolate cases that end in convictions. Because our data measure the number of fraud allegations, they do not correspond directly to actual fraud. By separately studying cases that end in convictions

¹¹The other categories not analyzed separately are: Combined, Declined, Dismissed, Diversion Program, Pending Action, Turned Investigation Over To DA, and Unable to Locate Suspect.

¹²Specifically, the dependent variable is the number of cases filed in each year that ultimately end with a specific resolution. Of course, cases are not necessarily resolved in the same year that they are filed, but since we are studying the nature of the violation, we control for characteristics concurrent with the violation rather than the resolution.

we may obtain a better correspondence with actual fraud than just with alleged fraud. In addition, we also know which cases end with a finding of no violation, which gives us a sense of whether incorrect allegations of fraud are caused by factors similar to those that influence total allegations or convictions. Measures of other outcomes fall somewhere between these two extremes, such as lack of intent and no action taken.

The results for our random effects Poisson regression analysis of outcomes are presented in Table 6. Overall the results demonstrate that a variety of factors influence how allegations are resolved and that the direction and significance of these factors varies across our six different categories. Interestingly, while vote margin does not have a significant impact for most of the outcomes, it is significant and negative for cases that ended with findings of either lack of intent or no violation. While this does not demonstrate that more fraud happens in competitive counties, it suggests that fewer baseless cases are brought, which is consistent with our expectation that increased competitiveness leads to more fraud. On the other hand, the coefficient for cases with convictions is, while not significant, also negative.

[Insert Table 6 Here.]

Turning now to our other variables, we see that the proportion of blacks in a county significantly decreases the number of cases that expire due to the statute of limitations, increases the number of cases with no action taken and decreases the number of cases with no violations. The percent of a county's population that is Hispanic decreases the incidence of administrative action. But while it has no effect on statute of limitations, it does significantly increase the number of cases for which no action is taken.

Percent unemployed has a significant effect for two categories, decreasing the incidence of both administrative action and convictions. Per capita income increases administrative action and statute of limitation, but increases cases with no violation. More populous counties have less cases ended with administrative action or no action and more cases concluding with a finding of lack of intent; denser counties have the same negative finding for administrative action, but a positive finding for lack of intent. Median age

significantly increases both of these categories. Election operating expenditures decrease administrative action cases while capital outlays are associated with more cases in this category. The latter category also leads to more cases with no action taken. Lastly, we see that the likelihood of some outcomes changes over time. Administrative action is decreasing over time whereas cases ending with no action taken increase over time.

5 Discussion and Conclusion

In this paper we have argued, based on the database we have obtained about the number of election fraud cases opened and resolved in recent history in California, that election fraud — while it does clearly happen in California — appears to be a relatively rare phenomenon. Our argument that the incidence of election fraud is low in contemporary California elections flies in the face of “conventional wisdom”. For example, in a brief discussion of election fraud in California, Larry Sabato and Glenn R. Simpson title a chapter section “California: The Golden State for Vote Fraud”, and assert that fraud is widespread in California. Unfortunately, despite sweeping claims about widespread fraud in California’s electoral system, even Sabato and Simpson cannot point to more than a handful of allegations of election fraud, with few of these alleged cases actually being investigated thoroughly and carefully by election administrators and law enforcement officials. This suggests that even those who claim that election fraud is widespread in California might be misinterpreting their own evidence. Why, given the common assumption that election fraud is widespread, does election fraud seem so rare?

Of course, critics might argue that fraud is widespread, but undetected. This could be true, but it is impossible to verify. Yet, to assert that fraud is widespread and undetected is difficult to believe when we consider how closely scrutinized most elections are, even at the lower-levels, in California and the United States. Most elections, even those that are not very close, are contested, are followed by partisan or other interest groups, and do receive some media coverage. Also, election administrators, their staffs, and all of the

volunteers who help run elections, are involved and scrutinize the process. Given all of the interested and informed observers of elections in America, it is hard to imagine that widespread fraud goes undetected.

Additionally, there is now a relatively new group of observers who have economic and professional incentives to help clients monitor and detect election fraud — the growing field of lawyers who specialize in election law and the social scientists who assist their efforts as expert witnesses. Election law is rapidly growing as a legal field in its own right, with a peer-reviewed journal (the *Election Law Journal*), two casebooks, and specialized courses now taught in election law at many law schools throughout the nation. A search of the American Bar Association's membership data (September 15, 2006) reveals 806 lawyers who practice "election, campaign, and political law" in the United States. With such a strong and growing interest in legal and academic circles with election law, there is a much stronger possibility that monitoring of election outcomes by interested parties and their legal representatives is occurring, and that election fraud is being detected and possibly deterred.

Furthermore, to commit fraud of a scale large enough to influence even a very close election, say involving even just a few hundred votes, is a difficult endeavor. Either one would have to determine a way to recruit collaborators, each of whom would then cast dozens of illegal votes, or one would have to determine a way to illegally register and vote for hundreds of fictional people (or to illegally cast votes for previously registered people). Given the potential costs of being caught while committing fraud, and the small odds of being successful, even by a simple cost/benefit analysis, election fraud does not seem to be a good way to use resources to get elected to office (or to see a favored candidate elected).

Perhaps, instead, with so many observers fraud is deterred and prevented. Perhaps election administration has progressed to a point where sufficient systems are in place to prevent and detect fraud. Perhaps election regulations are sufficiently enforced, and the penalties are stiff enough, to also prevent fraud. At this point, without much additional

research, it is difficult to pinpoint a precise answer to this question. What we can say with some precision is that based on this analysis, it is clear that there is little evidence of widespread election fraud in recent years in California.

Furthermore, the data we have analyzed in this paper also shed some light on the relative frequencies of different types of election fraud in California. Somewhat surprisingly to us, we found that the incidence rate of allegations and substantiated cases of absentee voting fraud are extremely rare, despite many assertions to the contrary. Perhaps less surprisingly, we found that allegations and substantiated cases of various forms of voter registration fraud are more common, though still relatively rare when placed in the context of the millions and millions of votes cast during the period covered by our database.

Despite the relatively low incidence of fraud cases, we do find that allegations are more likely to occur in certain counties. Our results provide evidence consistent with many previous studies of fraud, indicating that race, population demographics, partisanship and competitiveness all have significant impacts for at least one of voter, registration, absentee or miscellaneous fraud. Despite these findings, however, our results also indicate that the most consistent substantive predictors of fraud allegations in a county are population size, per capita income, and county election expenditures, and that that these variables have relatively large substantive effects as well.

In addition, we find little evidence that fraud allegations increase in California over the ten-year period that our data cover. This results holds for total allegations and for each of four categories of allegations, with the exception of registration fraud, which shows a positive trend over the period studied. The good news is that extensive reforms that liberalized the voting process in California have not lead to a general increase in fraud allegations; at the same time there is some evidence that they may have influenced registration fraud in isolation. Because of the nature of our data, we can not say if this is because attempted fraud is on the rise or whether election officials have been more vigilant regarding registration fraud, particularly given the aforementioned reforms. We hope to investigate this question in further detail.

Besides providing information about the incidence of fraud cases in California counties, our approach suggests a method, similar to outlier detection approaches (Wand et al. 2001; Mebane and Sekhon 2003), that may be useful for detecting electoral fraud in California and elsewhere. Because our statistical approach provides information about how a variety of factors predict fraud allegations, one could generate predictions about how much fraud is expected to occur in a specific (but generally similar) county or other geographic unit. This approach could make it easier for researchers or election officials to focus their efforts on areas that have the potential to be particularly fraud-prone. Perhaps more importantly, it could also provide information about institutional, political or legal arrangements that reduce fraud by isolating specific political units that appear to be unusually successful in generating low levels of fraud.

We hope that our analysis presented here, in addition to the new interest in election fraud by other contemporary scholars, will lead to productive new approaches for studying — and hopefully preventing — election fraud. Obviously, the type of analysis we present in this paper needs to be conducted using data from other states. Accordingly, we encourage other states to begin to collect the statistical data necessary to study election fraud quantitatively in the future. Second, we need to collect more refined data, information that reveals not just that allegations of fraud were made, investigated, and prosecuted; additionally, we need to know how for each case how many illegal votes were cast, because only with that information can we determine whether election fraud influences election outcomes. Promising areas for studying illegal votes quantitatively are court records of election fraud litigation, and possibly media reports of election fraud.

**Administering Elections to Deter Fraud:
Applying Chain of Custody Procedures to Elections**

MICHAEL ALVAREZ, CALTECH AND USC ANNENBERG CENTER FOR COMMUNICATION
THAD E. HALL, UNIVERSITY OF UTAH
KATHY ROGERS, DIRECTOR OF ELECTIONS, STATE OF GEORGIA

1. Introduction

For anyone who has ever watched an episode of *CSI* or remembers the O.J. Simpson murder trial, the idea of a chain of custody is familiar. There is some item—a weapon, a blood droplet, a DNA sample—that is of interest. The challenge is to preserve this item so that it can be produced in court later in the same condition it was in at the crime scene. This is generally done by taking the item and recording its original condition—perhaps a photograph is taken or a written report describing the condition is made. Then, the item is secured in some container and sealed so that the item cannot be accessed without people knowing. Finally, each stage of this process is witnessed, often by various individuals signing reports, the seals, or logs that track the movements of the item of interest. When this process is followed correctly, at the end of the day both sides in the legal dispute do not question the authenticity of the item; the item is assumed to be the original. This chain of custody process is designed to ensure that a fraud is not perpetrated on the court—that the item produced in court is in fact the exact item found at the crime scene.

Such a process is common in the legal world and provides the item in question with evidentiary value; its provenance can be traced and confirmed. The beauty of this process is that it is also relatively simple to replicate in other settings; tracking and securing items through the use of seals, logs, and witnesses requires the establishment of processes and procedures but is not otherwise difficult to modify and replicate. However, as we discuss in this paper, this process and procedure has not been uniformly adopted across the various states for the security of voting systems. Many state laws assume a process without defining one. However, there are models for securing ballots and voting systems that provide a chain of custody for the ballots and machines and ensure that the votes produced at the end of the election are authentic.

This paper has five parts. First, we review the principle of chain of custody as it exists in a legal context and consider its application to elections. Second we consider the importance of standard operating procedures as mechanisms for standardizing certain operations within an organization. We then illustrate the chain of custody and standard operating procedure ideal by using two cases: the election law and regulations in the State of Georgia and the election processes in Travis County, Texas. Finally, we consider the most common gaps in state election laws that create potential problems for preserving the chain of custody of ballots in an election environment.

2. Chains of Custody

The concept of a “chain of custody” is a basic principle in the legal study of evidence. The following excerpt from *Evidence Law* provides a basic definition of the concept of a chain of custody:¹

Items that were actually involved in the transaction or occurrence that gave rise to the litigation are called ‘real evidence.’ ...Real evidence is authenticated by showing that the exhibit in court is the actual item from the transaction or event and that it has not undergone any significant change. ...‘Real evidence’ is frequently authenticated...by reference to its distinctive characteristics... [it] often can be authenticated by simple identification. Documents, for example, are probably the most common ‘real evidence’ and they are usually authenticated...by identification of the handwriting. Real evidence that is non-documentary is often authenticated...by distinctive characteristics or circumstances.

¹ Roger C. Park, David P. Leonard, and Steven H. Goldberg, *Evidence Law: A Student's Guide to the Law of Evidence as Applied in American Trials*. Thompson-West, 2004.

When the item of real evidence is not distinctive, or when its condition at the time of testing or trial is critical, a chain of custody is the most effective way to authenticate the exhibit. A perfect demonstration of the chain of custody would include testimony about every link in the chain, from the moment the item was picked up at the scene of the event to the time it was offered into evidence. Each person who touched the exhibit would describe how and from whom it was received, where it was and what happened to it when in the witness' possession, and the condition in which it was received and the condition in which it was delivered to the next link in the chain. The witness would describe the precautions taken to ensure there was no change in the condition of the exhibit and no opportunity for someone not the in chain to have possession of the item.

Chains of custody are especially important for "fungible evidence, because these items have no unique characteristics."² One observer has noted that such fungible items should be kept in locked or sealed containers (e.g., boxes or envelopes) that are also signed by the custodians. This process ensures that the fungible items are neither contaminated nor misidentified.³ In addition, chains of custody are critical "if the condition of the object, not merely its identity, is the relevant issue."⁴ One key to the maintenance of a chain of custody is to be able to account for the item in question throughout its handling. There should be no major breaks in the chain of custody for any given item. To give an example of a problematic chain of custody, drugs in a narcotics case were excluded when six people handled three pills

² Paul C. Giannelli, *Understanding Evidence*, Lexis-Nexis, 2006.

³ Giannelli, 2006.

⁴ Giannelli, 2006.

over a nine-day period and there were no marks made on the envelope containing the pills to show how they had been handled nor were there marks on the pills to show they were the same pills that had been seized.⁵

Another key aspect in chains of custody is to be able to provide that there are routine set of procedures in the office—standard operating procedures—for the processing and handling of items. This may also include the use of documentary processes, such as the use of property receipts, to show how an item was handled in the chain of custody. The requirements of chains of custody require that the chain be kept diligently and adequately, but the chain does not have to be “infallible.” For example, the “mere possibility of [item] tampering [is an] insufficient basis for excluding evidence.”⁶ The Seventh Circuit has ruled that “evidence kept in official custody is presumed to be authentic absent specific evidence of tampering”⁷ and the First Circuit has noted that “the links in a chain of custody need not be welded together but, rather, may be more loosely connected...chain-of-custody evidence must be adequate—not infallible.”⁸ Two key aspects of evaluating the adequacy of a chain of custody are (1) ensuring that there has not been an “abuse of discretion” by the government in handling the item in question—that is, they followed basic chain of custody rules—and (2) determining that there has not been bad faith or some proof of tampering in the handling of the evidence. Absent these problems, there is a general presumption that the evidence in question has integrity.⁹

There are interesting similarities and differences in the importance of chains of custody in elections versus a legal setting. The standard for introducing evidence in a legal setting requires first that the chain of custody meet a certain minimum threshold. Once this threshold

⁵ State v. Reese, 56 Ohio App. 2d 278, 382 N.E. 2d 1193, 1194-1195.

⁹ See *Park et al*, 2004, 566, especially footnote 23.

is met, the jury can determine if any questions with the chain of custody should cause the weight of the evidence to be discounted. Damning evidence against a defendant that has a weak chain of custody might be considered much less damning when weighted in this manner.

In an election, the same legal standard has to be considered—what standard has to be met for the courts to determine that ballots challenged are legitimate—but there is also another standard that has to be considered. Specifically, does the custody of the election materials—especially the ballots and voting machines—meet a standard whereby the candidates and the voters are confident that the election outcome was fair. If the chain of custody is robust, then everyone can be confident, regardless of the outcome, that the ballots cast are the official ballots and the count is correct. If the chain of custody rules or procedures are weak or questionable, then the losing side may argue that the outcome is unjust. There is research evidence showing that losers are generally disposed to be less confident in election outcomes than are winners.

Weak procedures can serve to exacerbate the loss of confidence among those on the losing side in an election.¹⁰ Ballots are the type of fungible item that requires a high level of care for the authenticity of the item to be maintained. Moreover, the use of the secret ballot means that a voter cannot authenticate their own ballot later.¹¹ Because of this inability to validate a transaction later, a voter has to be confident that the security of the ballot box is high and that that security remains high throughout the election process—from when it is cast to when the election is certified and a winner chosen. Breaks in the chain can break the confidence of voters and candidates.

3. How Can Chains Be Broken?

¹⁰ See Alvarez, Hall, and Llewellyn 2006 for a review of this literature.

¹¹ Many states have laws, in fact, that invalidate any ballot that contains any sort of distinguishing or identifying symbol, word, or name written on it.

One of the major problems that election administrators face is what social scientists call a “principal-agent” problem, which two of us have recently written about (Alvarez and Hall 2006). Take a typical, but stylized, election administration situation. The chief election official in a reasonably-sized county is faced with running an election involving a thousand voting precincts. She must then find these thousand sites, and they will come from a wide variety of sources (schools, churches, businesses, and private residences), all of which are outside of her direct control. She will need to recruit perhaps four to six individuals to staff each of the thousand voting locations (thus needing four to six thousand people). She will also need to recruit dozens (maybe even a few hundred) individuals to get materials to each voting location before the election, to get the materials back from each voting location after the election, and to assist in election night and post-election canvass procedures.

In a typical employment situation, the employer structures the working relationship via some type of contract: the employer specifies the tasks to be done, the compensation for the work, and then sets up some sort of monitoring system to insure that the employee does the task efficiently and effectively. But, the employee has the incentive to “shirk” — that is, to do the job with the least amount of effort, which is counter to the employer’s goals. Herein lies the basic “principal-agent” problem, how can the employer set up this relationship to minimize shirking behavior, while also not incurring excessive compensation or monitoring costs?

As we argued in our recent work, election officials face this problem in a particularly severe way: they typically have few resources to adequately compensate the many individuals who they rely heavily on for the proper conduct of an election, ranging from the thousand individuals or entities in our example who are donating the space for each voting location, to the thousands involved in balloting and election logistics.¹² Furthermore, election officials

¹² (Alvarez and Hall 2006)

have few resources to devote to monitoring, especially given that the bulk of the effort of conducting an election occurs on a single day (Election Day), often in geographic locations, which cover many square miles.

The principal-agent problem thus has implications for the chain of custody issue, in a variety of ways. If election officials lack resources to adequately train the thousands involved in the conduct of an election, the simple lack of training may lead some or many of the workers to not understand appropriate chain of custody procedures. If election officials lack resources to compensate the election workers, this may lead the workers to either pay insufficient attention to maintaining the chain of custody, and in some cases, may lead election workers to deliberately violate the chain of custody as they engage in activities that are unrelated to their election work. If election officials cannot adequately monitor Election Day workers, again chain of custody procedures may be violated, either because election workers are deliberately shirking their duties or because a lack of training leads them to misunderstand the chain of custody and to the election workers making incorrect decisions about how to handle election materials that violate the chain of custody.

Note, also, that the principal-agency problem that election officials face can lead to serious chain of custody problems, even without any necessary attempt at political manipulation of an election, or any deliberate malfeasance. That is, poorly trained election workers, who lack supervision, can violate the chain of custody without any incentive or desire on their part to actually affect the outcome of an election, in any particular way.

We have recently seen a variety of real-world cases where the chain of custody issue has arisen in election administration, most likely due to poorly trained and supervised election workers. For example, in the spring primary in Cuyahoga County, Ohio, where we had access

to a detailed precinct incident reporting system, we found that more than 15% of precincts reported a problem with seals and locks.¹³ The report noted these reports in detail:

Incidents related to the seals on the voting machines, the printer canisters, and the bags in which post-election materials were to be returned to the election offices accounted for a small number of incidents. A total of 4.2 percent of all incidents were related to seals. Seals were reported broken on machines and canisters most often, with some precincts reporting that they could not seal all of their machines at the beginning of the election. The chain of custody of a voting machine and its ballots can be, in part, confirmed through the sealing and locking of the machine and the tracking of the seals and locks used. If after the election the authenticity of the seals and locks cannot be effectively known—or there are questions as to whether the machines were in fact even sealed and locked throughout the process—it raises questions about the balloting (both the electronic and the associated paper ballots) [ESI 2006, page 60].

Thus, in this one example we have quantitative data that gives us some perspective on how extensive such chain of custody issues can be.

Another type of chain of custody issue arose, again in the spring of 2006, in Cook County, Illinois. There the county was (like Cuyahoga) implementing a new set of voting technologies, and thus was also implementing many new procedures along with the new voting machines. However, the election officials there appear not to have foreseen that a previously-effective procedure, election-night transmission of precinct tallies from the voting locations to the election tally center, might be not work as planned with the new voting technologies. In brief, in what has been reported as having occurred in “dozens” of voting locations, for some

¹³ (ESI 2006)

reason the electronic transmission of precinct tallies on election night failed for the election workers. Reportedly, these problems arose either because the election worker could not merge the tallies from the two different voting systems in place in each voting location, or because the electronic transmission technology failed.¹⁴

But upon failure of the electronic transmission procedure or technology, however, election workers resorted to a variety of mechanisms to get tallies (and data cards from voting machines) to the central election counting location. Reports were that some election officials took cabs, and no doubt other means of public and private transportation to get the data cards and tallies to election headquarters. While the immediate coverage of these innovative means of tally and data card transmission focused on the delays they produced in the early election-night tallies, subsequent coverage focused on how this produced breakdown in the chain of custody in this election: while election workers were probably simply trying to do the right thing, in the absence of training and supervision in this contingency, they were transporting these important election materials in insecure ways. This second example provides additional insight into how easy it is that procedural or technological problems, in a situation where election administrators have little control over election workers, can produce breakdowns in the chain of custody.

3. Standard Operating Procedures

The maintenance of chains of custody is not magical but they do require having standard operating procedures for the handling of items. Standard operating procedures (SOPs) form the basis for many organizational activities and they may or may not be explicitly documented by an organization. As Graham Allison noted,

¹⁴ See <http://electionupdates.caltech.edu/2006/03/ballot-chain-of-custody-questions-in.html> for details and links to contemporary media coverage of these problems.

Organizations must be capable of performing actions in which the behavior of large numbers of individuals is carefully coordinated. Assuming performance requires clusters of rehearsed SOPs for producing specific actions...Each cluster comprises a "program" (in terms both of drama and computers) which the organization has available for dealing with a situation. The list of programs relevant to a type of activity....constitutes an organizational repertoire.... When properly triggered, organizations execute programs... The more complex the action and the greater the number of individuals involved, the more important are programs and repertoires as determinants of organizational behavior.¹⁵

Allison goes on to note the benefits of SOPs. These include the reduction of uncertainty regarding how to handle standard situations, an improvement in average organizational performance in completing tasks involving SOPs, and an improvement in coordination among organizational actors.

The development of such SOPs is typically done in an iterative process.¹⁶ At the inception of a new organization or of a complex enterprise within an existing organization, the organization can either borrow SOPs from a similar organization/enterprise, or it can develop a set of simple SOPs that allow the organization to operate. However, simple SOPs can leave an organization in the position of having routines and procedures that treat all activities equally. Instead, an organization needs to have more complex SOPs that prioritize and structure its activities. The key here is for the organization to have experience, the ability to learn what is most important, and the ability to develop SOPs that routinize these activities.

¹⁵ (Graham Allison 1969, 700)

¹⁶ (Johnson 1990)

Such routines minimize uncertainty and create a stable operating environment for the organization.

As was noted at the outset, SOPs do not have to be formalized. However, SOPs function most effectively when they are created within a legal framework. Such a legal framework provides the organization with a rationale and authorization to engage in the activity in question and to create a process for tackling the issue. Typically, statutory language provides the broad framework for the activity in question; through regulatory activity, the agency can develop detailed SOPs to govern its activities. This legal framework has several benefits for the development of SOPs. Such a framework provides legitimacy to the organization's actions; it is acting within a clear legal mandate. It also formalizes the requirements on the actors implementing the activity. The answer to the question "Why do we do it this way?" is clear; we do it this way because the law requires it. Importantly, this process also allows agencies to learn. The use of regulations allows an organization to change the rules as new experiences and changes in the environment suggest problems or limitations with the current SOPs.

4. Georgia Election Law and Chains of Custody

Shortly after the November 2000 election, the Georgia Secretary of State took a hard look at the performance of voting equipment throughout the state and determined that Georgia actually fared worse than Florida in the total number of undervoted races which appeared at the top of the ballot. In response to those findings steps were undertaken to unite all 159 of Georgia's counties in the use of a single statewide uniform system of voting. During the 2002 General Assembly session, legislation was enacted which provided for the use of Direct Electronic Recording electronic voting machines (DRE's). This legislation provided the broad framework for the future implementation of a system which had yet to be selected. This

enabling legislation provided for the manner in which DRE's must function, the required format of the ballot design, maintenance and storage requirements, and basic procedures designed for the tabulation of votes.

In May of 2002 Georgia made its vendor selection and began the process of implementing a uniform system of electronic voting. Prior to this date, Georgia had four types of voting systems which comprised a myriad of different types of equipment developed by a number of different vendors. Each type of system functioned in a different manner and while each of these systems had some sort of governing legislation it was a nearly impossible task to maintain current up-to-date legislation which provided effective oversight and controls in how each jurisdiction applied the use of its particular brand of voting equipment.

One of the challenges faced during this period was the task of not only implementing a uniform system of voting but also that of ensuring that all 159 counties used the system in a consistent manner. With the framework of enabling legislation now in place one of the critical next steps was to develop rules which further defined the use of the system with particular focus on the issues of security and transparency. These procedures were adopted as Rules of the State Election Board, rules which have the effect of law.

The main goal in developing these rules was to draft them in such a manner that there could be no question as to the intent and purpose of the rule, leaving no room for various interpretations or applications of the requirements. Another critical objective was to create a workable set of rules to which election officials could easily adapt. To that end, Georgia convened a number of its forward thinking election officials to assist in proposing and reviewing these rules. To date Georgia still brings election officials to the table for constructive dialogue and review of any newly proposed rules or rule revisions.

The original set of rules were adopted in 2002 and consisted of uniform definitions, detailed descriptions of required ballot design, storage, maintenance, logic and accuracy requirements, and tabulation procedures just to name a few. Each and every year since that time the rules have been tweaked and revised to ensure consistency and uniformity. Since the adoption of the first set of rules in 2002, subsequent revisions and additions have focused on voting system security and include levels of detail designed to deter election fraud at all levels of the process. These security rules have proven to be the most cumbersome and time consuming to administrate but at the same time have been demonstrably effective by adding a level of protection and transparency which is vital to ensuring an elections process which can be proven to be reliable and trustworthy.

Prior to the implementation of a statewide uniform system, chain of custody was mainly relegated to the individual counties who developed procedures which fit their own individual form of voting equipment. Today's rules are specific to one form of voting equipment and they are mandatory not optional. These rules include documented evidence of storage, such as mandatory logs noting the location and custody of each voting unit and tabulation equipment. Election Officials are also required to submit a written request to the State prior to relocating tabulation servers and each move must be approved and reviewed. Oaths must be administered to any person who has contact with the voting equipment if such person is not an employee of the county elections office. In addition the election official must maintain a log of all persons who are allowed access to the storage facility; this includes maintenance and emergency workers.

Much emphasis has been placed on the right of the public to observe all phases of the elections process. One such example is the rule regarding Logic and Accuracy. The original version of these rules, first adopted in 2002, have been revised to provide for greater

transparency and public oversight while at the same time striking a necessary balance to protect the equipment from anyone who may wish to attempt fraud or deception during the critical phase of programming and sealing each unit.

Tighter controls have also been placed upon the storage of voting equipment once units have been delivered to the polls. If secure storage space at the poll, with restricted access, is unavailable election officials must provide interlocking padlocked cables to secure voting units. Poll officials are not allowed to use any voting unit whose seal numbers do not match those which were documented publicly during the Logic and Accuracy process without first notifying the elections office of the discrepancy.

Not only have the requirements been tightened for the actual voting units themselves but also for every component of the voting system, including memory cards, voter access cards, unit keys and encoders. Poll officials and election technicians must sign a receipt for each item which is entrusted to them and upon return of the equipment they must account for each item. Any item not returned must be noted on a form specified by the Office of the Secretary of State and the form shall then be returned to the Secretary of State at the time of certification.

Chain of custody rules also extend to the use of DRE's for in person absentee voting. Even though these units remain in the control and possession of election officials at all times, specific rules have been adopted which call for documented evidence of use of each unit on a daily basis. For example, each day the election official is required to record the opening and closing public count totals on every unit. If at any time the opening number does not match that of the previous days closing, the Secretary of State must be notified immediately and that unit shall not be used until the discrepancy can be resolved to the satisfaction of the Secretary of State.

Counties who have strictly adhered to the Georgia Election Code and the Rules of the State Election Board have found that while the added controls can be time consuming and in some instances even costly to perform, the advantage far outweighs the difficulty. Election Officials have been called upon in court contested elections to validate the elections process. Through the presentation of detailed logs and forms which clearly demonstrate a documented chain of custody and standard uniform operating procedures these election officials consistently affirm the dedication exhibited by Georgia Elections Officials to prevent election fraud.

5. Chains of Custody in Travis County

The election officials in Travis County, Texas developed a chain of custody process for their election materials when they transitioned to new electronic voting equipment.¹⁷ Two events—the 2000 election contest in Florida and the events of 9/11—served to shape this effort. The goal of this effort was rather simple: “to make sure that [the] election was protected and the public could trust that it was safe, fare and accurate, no matter what happened [in Travis County] or anywhere in the world.”¹⁸ Achieving this goal required creating a process of understanding what it meant to hold an election in Travis County, identifying the threats that existed in this election process, and developing SOPs that mitigate against these threats.

The centerpiece of the model used in Travis County is “the egg,” shown in the Figure below. The egg is a metaphor for the election process; the center yoke is most fragile part of the election process, when ballots are being voted. The storage of machines between elections—which are at the top and bottom of the process—also is an area where there are threats to the system, but the overall threat is smaller. By identifying these threats

¹⁷ This section draws from Dana DeBouivoir, Travis County Clerk, “Method for Developing Security Procedures in a DRE Environment,” an Election Center Professional Practices Submission, 2005 as well as from a two-day visit to Travis County by two of the authors (Alvarez and Hall) in 2005.

¹⁸ DeBouivoir 2005, 1.

systematically, Travis County has been able to develop SOPs that fit their election operations and mitigate against the specific threats that they face. Many of the threats that they have addressed are relatively low-risk threats but are ones that could be devastating to an election and can be addressed with relatively low-cost solutions. For example, the absentee ballots in Travis County are opened in a trailer outside the main election office. This is designed to ensure that any problem with the mail—such as someone putting anthrax or something that resembles anthrax—into a letter will not contaminate the entire election facility and undermine the ability to count ballots and operate the election.

The efforts in Travis County have centered around three types of activities: transparency, testing, and security. These activities are all key part of an efficient and effective voting process, as identified by the international election community. The Administration and Cost of Elections (ACE) Project – a collaboration of IFES, an international nonprofit organization that supports the building of democratic societies; the International Institute for Democracy and Electoral Assistance (IDEA); and the United Nations Department of Economic and Social Affairs (UNDESA)—has identified eight principles for effective vote counting. The underlying normative theory underlying this effort is: “to establish and maintain public confidence in the electoral process, vote counting systems and procedures should incorporate the fundamental principles of vote counting in a democratic election.”¹⁹ Achieving this requires that elections should (1) be transparent, (2) be secure, (3) be professionally run, (4) provide accurate results, (5) maintain voter ballot secrecy, (6) provide timely results, (7) have clear responsibility and accountability throughout the counting process, and (8) provide an equitable playing field to all election participants.

¹⁹ See <http://www.aceproject.org/main/english/vc/vc20.htm>

In Travis County, these various principles are achieved through specific SOPs. Take the issue of physical security. The county has an array of SOPs designed to promote a secure election environment. At the most basic level, there are procedures that govern who can have access to specific parts of the election offices. The public entry area is open to everyone. A next layer of the building is open only to election personnel who have specific keys. Still other parts of the facility are restricted to a smaller number of personnel. Finally, there is the area where the ballots and voting machines used in an actual election are stored. These areas cannot be opened by election officials—only the sheriff department can open them. However, the sheriff department cannot get to the room where these materials are located without being accompanied by an election official with access to the space where these items are stored. This two-key, two-person access rule creates a much higher level of security for the materials than would exist if a single individual could access these materials.

A second related issue is the testing of voting machines. The testing process requires that there be an extensive process for conducting logic and accuracy testing. Once an election is created, it is then tested by teams of election personnel, who vote the ballots and then ensure that the tabulation process works effectively. The County is also able to do a “hash code” test, where they can compare the software they are loading on the voting machines with the software that was certified and is on file with the National Institute of Standards and Technology (NIST). Such testing allows the county to ensure that the version of the software that is loaded onto the voting machines and is used in the election is the certified version of the software.

The final issue is transparency. Travis County addresses this by making all key activities in the election process, such as the logic and accuracy testing of machines or the tabulation process, open to the public. Moreover, designated party officials specifically witness

these activities, and are required to complete a form stating the activity that they have witnessed. In the event of a dispute, the County has witnesses and documentation that show who witnessed these key events and when, which provides documentation of a chain of custody of the election process. These documents are then stored within the physical security of the election office, again promoting the chain of custody of these documents.

6. Implications for Best Practice

Effective chain of custody rules provide all of the actors in the election process—candidates, parties, and voters alike—with confidence that the integrity of the voting process and the ballots produced in that process has been maintained. Maintaining the chain of custody will not completely eliminate the possibility for election fraud or election snafus; it will certainly minimize the changes that fraud or snafus can arise, and should help election officials and other interested parties determine where any malfeasance or other problems arose. After the election, the election official should be in a position to show to any interested party where the ballots or related election materials were in the process and who had custody over these items throughout all steps of the process. Outside observers should be able to trace the whereabouts of all election materials, before, during and after the election — and be able to replicate tabulations of election materials and ballots. There should never be a question regarding how ballots were stored or handled in such a situation because the election official will have put into place a process that accounts for how such handling and storage will be done.

The chain of custody process does presume that the election official will think through the voting process from start to finish so that there are no breaks in the chain. In the examples provided above of voting in Cuyahoga County and Cook County, the problems associated with the chain of custody in the voting process occurred because the election officials had not attempted to implement the chain of custody rules for the new voting equipment prior to

holding the election. Instead, the election officials either implemented old rules without considering how the new technology interacted with the new rules or implemented new rules without simulating how such rules would work in practice. Such problems strongly suggest that election officials had not trained poll workers clearly and carefully regarding how to implement the new rules. (If such training had been done, problems with the chain of custody would likely have been identified). Given preliminary evidence that has found that the voter-poll worker interaction is important to the confidence that the voter has in the fairness of the election process, such training is important for direct participants in the voting process to be confident that the election was conducted properly.²⁰

In our thinking, election administrators should proceed in two ways to develop and implement appropriate chain of custody procedures. The first is that election officials themselves should implement an audit of the procedures in their own jurisdictions, and determine exactly what procedures they have in place now to insure that they have a complete accounting in any election of the exact whereabouts of all election materials, and that there has been appropriate supervision of all election materials before, during and after an election. The results of these custody audits should then allow election administrators the opportunity to implement improvements in their procedures, and to better produce contingency plans for when these procedures go awry.

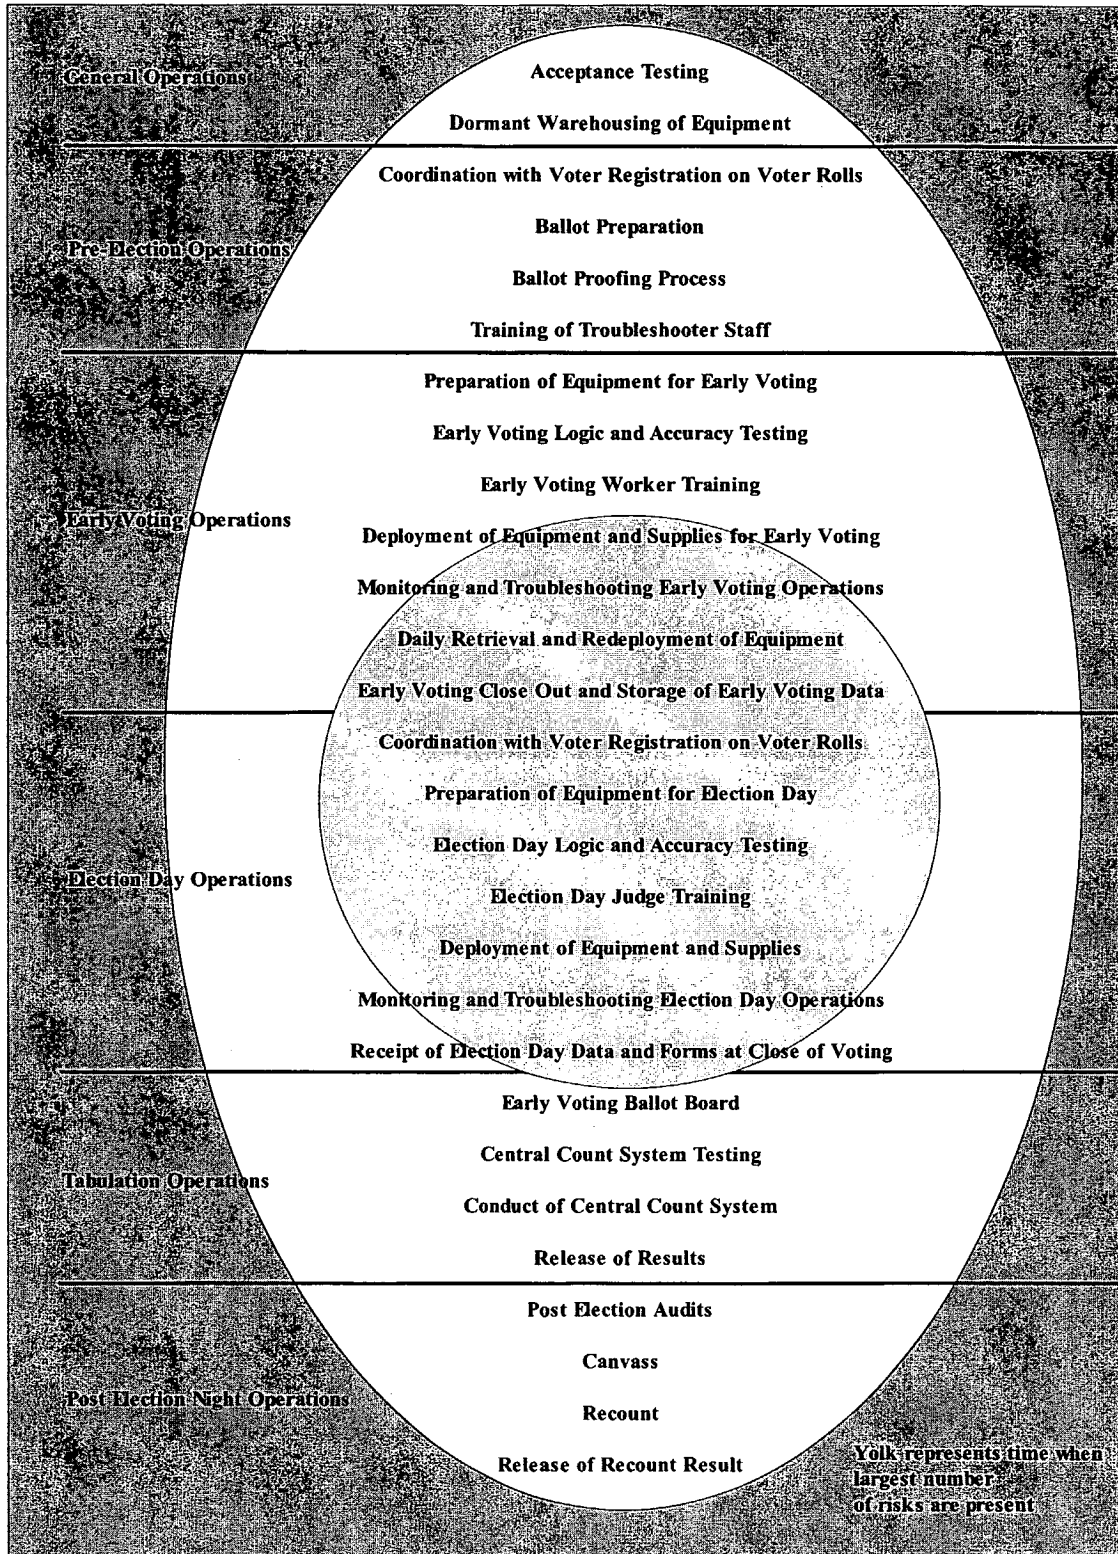

Second, the election official community, perhaps under the auspices of the Election Assistance Commission or another similar entity, should be to study the chain of custody procedures currently in place across all election jurisdictions in the United States, and after such a survey has been completed, suggest best practices that election officials can use as models for their own jurisdictions. Similarly, such best practice studies should be done

²⁰ Thad Hall, Quin Monson, Kelly Patterson, "The Human Dimension of Elections: How Poll Workers Shape Public Confidence in Elections," Unpublished Manuscript.

internationally, and lessons that can be learned (both positive and negative) from the international experience should be documented so that election administrators can learn from the experiences of others.

In the end, maintaining a thorough and appropriate chain of custody of election materials should be one of the primary mechanisms that election officials can use to prevent election fraud. In the event fraud is alleged, if there are strong controls and documentation of custody in place in a jurisdiction, forensic study of the controls and documentation may shed substantial light on whether fraud did occur and might help investigators identify the perpetrators. Furthermore, maintaining the custody of all election materials in an appropriate and controlled way should help election officials as they seek to demonstrate to their primary clients—voters, politicians, and the media—that the election process in their jurisdiction has integrity and that all concerned should be confident in the outcome of their administrative efforts.

Travis County Risk Assessment Process

Election Forensics: The Second-digit Benford's Law Test and
Recent American Presidential Elections *

Abstract

Election Forensics: The Second-digit Benford's Law Test and Recent American Presidential Elections

While the technology to conduct elections continues to be imperfect, it is useful to investigate methods for detecting problems that may occur. A method that seems to have many good properties is to test whether the second digits of reported vote counts occur with the frequencies specified by Benford's Law. I illustrate use of this test by applying it to precinct-level votes reported in recent American presidential elections. The test is significant for votes reported from some notorious places. But the test is not sensitive to distortions we know significantly affected many votes. In particular, the test does not indicate problems for Florida in 2000. Regarding Ohio in 2004, the test does not overturn previous judgments that manipulation of reported vote totals did not determine the election outcome, but it does suggest there were significant problems in the state. The test is worth taking seriously as a statistical test for election fraud.

Arguably we are not much closer than we were one hundred years ago to understanding how to administer elections that not only are secure and fair but are widely believed to be secure and fair. As long as there have been elections there have been election scandals, and certainly throughout the history of the United States (Gumbel 2005). Notoriously, serious defects in election administration produced the wrong outcome in the 2000 American election for president (Wand, Shotts, Sekhon, Mebane, Herron, and Brady 2001; Mebane 2004b). Responses to the 2000 election controversy have in some ways created as many problems as they have solved. In particular, the events of 2000 sparked a rush to replace older mechanical voting technologies with machines based on electronic computers. Some states made such changes on their own, notably Florida (MacManus 2004), while others were prompted to change by provisions of the Help America Vote Act of 2002 that made use of punchcard ballots and lever machines illegal and provided funds to help pay for their replacement.

Debates about the accuracy and security of different voting technologies have continued up to the present. In 1934, Joseph Harris wrote about a primary defect of paper ballots: “The counting of paper ballots, often lasting far into the night, and made by tired and frequently incompetent persons, is highly conducive to mistakes and frauds. Many election officers and men in public life have realized the inherent defects of this procedure and have sought to remedy it” (Harris 1934, 261). But in 2006, Aviel Rubin lamented the insecurity of a wholly electronic system being used in Maryland: “All of the votes from our entire precinct were right there in the palm of my hand. I could have substituted those five [memory] cards with five identical but bogus cards from my pocket, changing all the ballots, because Diebold did not protect the data with appropriate cryptographic measures.” (Rubin 2006, 256). It seems unlikely that technological developments alone will solve the problems and resolve the questions many have about election administration, at least not in the foreseeable future.

While the technology to conduct elections continues to be imperfect, it is useful to investigate methods for detecting problems that may occur. The class of such methods I refer to as *election forensics* are based on statistical tools and are intended to examine elections after the fact. Election forensics focus on the recorded votes, asking whether there are significant anomalies. Do the votes relate to covariates in ways we should expect, or are some votes outliers (Mebane and Sekhon 2004)? Are there other regularities the votes should exhibit? The analysis by Wand et al.

(2001) of the consequences of the butterfly ballot in the 2000 presidential election features both of these kinds of analysis. That study finds that the vote for Buchanan in Palm Beach County was a significant outlier, that the vote for Buchanan on election day ballots in Palm Beach County did not relate to the vote on absentee ballots in the same way as it did in other Florida counties, and that the vote for Buchanan did not track the vote for other Reform Party candidates running in Palm Beach County.

Of course the most challenging ambition for election forensics is to be able to detect election fraud. An examination merely of recorded votes and their correlates can never by itself prove that regularities or irregularities the recorded votes may exhibit are the result of fraudulent intentions. But allegations of fraud may identify specific methods purportedly used to perpetrate the fraud, and the forensic analysis may be able to check for traces of those methods. Such an analysis may help reduce suspicions that election results are fraudulent. A study of votes cast in Ohio in the presidential election of 2004 commissioned by the Democratic National Committee documents many problems with the way the election was administered, but it does not find evidence to support charges that George W. Bush won only because tens of thousands of votes that were cast in favor of John Kerry were instead counted as votes for Bush (Mebane and Herron 2005).

The ideal method for election forensics would be one that depends neither on special assumptions about the particular political configurations contesting the election nor on any particular theory about how the election was conducted. Ruled out, for instance, would be ideas about the coalitions supporting a particular party or candidate. In general we should expect a method that is based on particular theories to be more powerful than a method that eschews such foundations, at least if the theories are correct. But any particular theory is likely also to be controversial. A diagnosis of election fraud—or of its absence—that depends on such theorizing may only be as convincing as is the theory it depends on.

An ideal method for election forensics would also be one that could be applied routinely, perhaps even automatically, without requiring special expertise or sophisticated technical judgment. Such a method might be a foundation for routine election audits. For instance, election officials might apply a simple test to publicly available information and then perform some kind of intensive manual inspection of places or equipment that performed poorly on the test. All precincts might be subject to manual recounts, for example, with the subset chosen for

recounting selected at random but with selection probabilities that depend on the outcome of the routine test.

While such an ideal method may well not exist, in this paper I want to illustrate the use of one possible candidate. A method that may come close to satisfying our ideal set of requirements is to test whether the second digits of reported vote counts occur with the frequencies specified by Benford's Law (Raimi 1976; Hill 1995). In Mebane (2006) I study this second-digit Benford's Law (2BL) test for vote counts. I identify a pair of flexible mechanisms that may generally characterize vote counts and that satisfy the 2BL distribution in a wide range of circumstances. I show that the 2BL test is sensitive to many patterns of vote count manipulation, including patterns that would occur in some kinds of election fraud. I argue that while the 2BL test may be generally suitable for precinct-level data, it is not useful for vote counts at the level of individual voting machines.

The 2BL test is not precisely theory free, and its suitability for a wide variety of electoral contexts has yet to be demonstrated. But it does fulfill the goal to free tests for election fraud from being bound to a particular idea about the substance of the campaigns or about the grounds for voters' decisions. The 2BL test uses only the vote counts themselves. No covariates are involved, and no statistical models need to be estimated. Given precinct-level vote count data, the test is very quick to compute (the hard part is obtaining the precinct data). The test results are not sharply diagnostic: Mebane (2006) shows the test can be triggered when votes are not being manipulated at all, and even if manipulation is occurring the test cannot indicate whether the manipulation is due to fraudulent actions.

The relationship between the 2BL test and manual recounts is unclear. While the 2BL test is far from perfect, there are also limits on the kinds of fraud a manual recount may detect. Harris (1934) discusses many kinds of fraud, but there is a basic distinction between two broad classes. One class of frauds involve miscounting the ballots. For example, Harris writes, "The old form of voting fraud—that of repeating—has largely disappeared. It is safer and cheaper to have the election officers steal the election. This may be done by turning in an election return which is not based upon an actual count of the ballots, and does not at all correspond to the votes cast" (Harris 1934, 262). The other class of frauds involves falsifying ballots: "Another method of stealing an election is to stuff the ballot box with marked ballots, writing in the poll books the

names of voters who failed to vote or who have died or moved away” (Harris 1934, 262). A routine recount may uncover a fraud of the first kind, but it would do nothing to reveal a fraud of the second kind. But the 2BL test may be sensitive to either kind of fraud. A statistical test, such as the 2BL test, and a program of manual recounts may reinforce one another but they are not redundant.

This potential capacity for the 2BL test to signal frauds that a recount cannot catch is of course one of the strongest arguments in its favor during a time, such as now, when many jurisdictions are using electronic voting machines that do not produce a reliable audit trail, so that useful recounts are impossible. The Diebold system in Maryland that Rubin (2006, 256) writes about is one example. There is very little reason to believe such systems are secure. Rubin’s worry about memory cards being swapped is not the most serious potential problem. If malicious software is installed on the machines, as demonstrated by Feldman, Halderman, and Felten (2006), then all the vote counts and every available electronic record may be falsified. Such falsification may be done in ways that would escape detection by the 2BL test. Neither the 2BL test nor any other statistical test is a panacea.

I illustrate use of the 2BL test by applying it to some of the precinct-level votes reported in recent American presidential elections. Because the controversies attending some of these election outcomes have been examined using other tools, this kind of survey will one hopes help build intuition about what the 2BL test can and cannot do. After briefly describing how to perform the 2BL test, I return to Florida, 2000, to see whether the test flags any of the problems that are amply well documented to have happened there. Notwithstanding Florida’s comprehensive reform of election administration after 2000, problems occurred in some places—e.g., in Miami-Dade and Broward counties during the 2002 gubernatorial election (New York Times 2002, 2003)—and allegations arose regarding suspected manipulation of the presidential votes in 2004. So I look at data from the 2004 election in Florida. Next I consider whether 2BL test results support the conclusions reached by Mebane and Herron (2005) about the 2004 election in Ohio. After that I take a look at 2BL test results for presidential votes from across the U.S. in 2000 and 2004.

The Second-digit Benford's Law Test for Vote Counts

The 2BL test for vote counts in J precincts uses the distribution of second digits shown in Table 1. Let q_{B_2i} denote the expected relative frequency with which the second digit is i . These q_{B_2i} values are the values shown for each digit in Table 1. Let d_{2i} be the number of times the second digit is i among the J precincts being considered, and let $d_2 = \sum_{i=0}^9 d_{2i}$ denote the total number of second digits. If some precincts have vote counts less than 10, so those small counts lack a second digit, then $d_2 < J$. The statistic I use for a 2BL test is the Pearson chi-squared statistic:

$$X_{B_2}^2 = \sum_{i=0}^9 \frac{(d_{2i} - d_2 q_{B_2i})^2}{d_2 q_{B_2i}}.$$

These statistics may be compared to the chi-squared distribution with 9 degrees of freedom (χ_9^2), which has a critical value of 16.9 for a .05-level test.

*** Table 1 about here ***

In general we will not be examining only one set of precincts or one set of vote counts. We may be interested in the sets of precincts in different counties or different electoral districts. We may want to look at the votes cast for different candidates, for different offices or for different ballot items. To get a simple omnibus test result, one could pool all the different vote counts together. But especially in the case where the test rejects the hypothesis that the second digits of all the vote counts follow the 2BL distribution, it will be more perspicuous to test each natural subset of precincts separately. Doing so may allow one to identify for which set of precincts the test is signaling a problem. So the votes recorded for a presidential candidate in all the precincts in a county may be considered a set and tested together, but each county is treated separately.

When computing the 2BL test for multiple sets of precincts, we need to adjust any assessment of statistical significance for the fact that we are looking at multiple tests. The method I use to do this is to adjust the test level applied to hypothesis tests for the false discovery rate (FDR) (Benjamini and Hochberg 1995). Let $t = 1, \dots, T$ index the T independent sets of precincts being tested. For instance, if we were testing the precincts in a state separately for each county, T might denote the number of counties in the state. Let the significance probability of the test statistic for each set be denoted S_t . In our case this probability is the upper tail probability of the

χ^2_9 distribution. Sort the values S_t from all T sets from smallest to largest. Let $S_{(t)}$ denote these ordered values, with $S_{(1)}$ being the smallest. For a chosen test level α (e.g., $\alpha = .05$), let d be the smallest value such that $S_{(d+1)} > (d+1)\alpha/T$. This number d is the number of tests rejected by the FDR criterion. If the second digits of the vote counts in all of the sets do follow the 2BL distribution, then we should observe $d = 0$.

Florida 2000 and 2004

For the votes recorded for president in 2000, I have usable data for precincts in 34 of Florida's 67 counties. A few counties have too few precincts to support a useful analysis (e.g., Baker County has eight precincts plus a total for the absentee ballots). I use only counties that have at least ten precincts. But for other counties I simply do not have data. The counties I analyze include the largest Florida counties and most of the most controversial ones.¹

I compute the 2BL test for the votes recorded for George W. Bush and for Al Gore. I include the totals reported for absentee ballots. I treat the absentee totals as if they come from a separate precinct, sometimes as if they come from more than one if the totals are reported for multiple absentee aggregations. I treat each county's precincts as a separate set, and I also treat separately the Bush and Gore vote totals. For 34 counties and two candidates we have $T = 68$ separate test statistics. Adjusting for the FDR gives 28.7 as the critical value the 2BL statistic must exceed to signal a significant departure for the 2BL distribution.

None of the 2BL test statistics comes close to exceeding that FDR-aware critical value. The largest statistic is $X^2_{B_2} = 22.7$ for the vote for Gore in Gilchrist County. Four other statistics are larger than the single-test critical value of 16.9—one statistic is for votes recorded for Bush and three are for votes recorded for Gore. None of those counties (Bradford, Manatee, Pinellas and St. Lucie) is among those associated with the biggest controversies in 2000. Notably, both Duval and Palm Beach counties have small statistic values—in both, $X^2_{B_2}$ is just larger than 5 for Gore and slightly larger than 11 for Bush—even though in both counties high proportions of ballots were spoiled due to overvotes.

¹For 27 counties I obtained data from Dave Leip (<http://www.uselectionatlas.org>): Bay, Bradford, Brevard, Broward, Charlotte, Clay, Columbia, Duval, Flagler, Hillsborough, Lee, Leon, Marion, Martin, Miami-Dade, Okaloosa, Orange, Osceola, Palm Beach, Pasco, Pinellas, Polk, Putnam, St. Johns, St. Lucie, Seminole and Volusia. I downloaded data for Collier, Gilchrist, Gulf, Hernando, Manatee and Monroe counties from the counties' Board of Elections websites. Data for Escambia County were captured by Dave Rusin.

For the major party presidential votes recorded in Florida in 2000, then, the 2BL test does not signal any significant problems. Clearly the test is not responding to some major distortions that happened in some of the counties. Neither the overvotes nor the undervotes that plagued voters in the state cause the test to trigger.

Let's fast forward, then, to 2004.

By 2004, all of Florida's counties used either precinct-tabulated optical scan or electronic touch-screen voting machine technology. While these and other changes significantly improved election administration and reduced the frequency of errors (MacManus 2004), allegations nonetheless arose that vote totals had been manipulated using both modalities. Allegedly the scanners that tabulated the paper ballots were hacked, so that suspiciously many registered Democrats were recorded as voting for Bush (Washington Post 2004). These allegations largely evaporated in light of the finding that registered Democrats had long been voting for the Republican presidential nominee in the referent parts of Florida (Mebane 2004a). Moreover, careful comparisons between parts of the state that used different kinds of voting technology but were otherwise similar fail to turn up significant differences in voting patterns (Sekhon 2004; Wand 2004). Finally, a manual reinspection of the ballots in three of the supposedly affected counties finds no signs of manipulation (Miami Herald 2004). At the other end there were allegations that some counties that used electronic voting machines recorded a surprisingly large number of votes for Bush (Zetter 2004). The statistical analysis supporting these allegations was widely discredited as unsound, but nonetheless the suspicions they abetted remained in the air (e.g. Miller 2005).

For computing the 2BL test in Florida in 2004, I have usable precinct data from 50 counties.² I compute the 2BL test for the votes recorded for Bush and for Kerry. I include the totals reported for absentee ballots and for early voting, treating these totals as if they are from separate precincts as given in the reported data. For 50 counties and two candidates we have $T = 100$ separate test statistics, which implies an FDR-aware critical value for the 2BL statistic of 29.7.

Once again, none of the 2BL test statistics is larger than the FDR-aware critical value. One

²I obtained data for all 50 counties from Dave Leip. Added to the set of counties analyzed for 2000 are Alachua, Calhoun, Citrus, Dixie, Gadsden, Hamilton, Hardee, Hendry, Highlands, Holmes, Indian River, Jackson, Lake, Levy, Nassau, Okaloosa, Sarasota, Sumter, Suwannee, Taylor, Wakulla and Walton counties. Missing for 2004 are Hernando, Monroe, Osceola, Polk, St. Lucie and Volusia counties.

value comes close. For the vote for Bush in Manatee County, $X_{B_2}^2 = 28.5$. The next largest value is $X_{B_2}^2 = 21.4$, for the vote for Bush in Collier County. In all there are eight statistics larger than the single-test critical value of 16.9—three statistics are for votes recorded for Bush and five are for votes recorded for Kerry. Because we are looking at so many different tests, however, these single-test results are not a compelling indication of departures from the 2BL distribution. For the major party presidential votes recorded at the precinct level in Florida in 2004, the 2BL test does not signal any significant problems.

Ohio 2004

When measured in terms of controversies and challenges, clearly the most important state in the 2004 American presidential election was Ohio. The state's electoral votes were pivotal in determining the Electoral College winner, and indeed the votes from the state were challenged in Congress when the electoral votes were counted (New York Times 2005). That challenge was prompted in part by a report that documented extensive and serious difficulties voters in the state experienced due to partisan and poor election administration (House Judiciary Committee Democratic Staff 2005). The Democratic National Committee (DNC) sponsored a study to further document and diagnose what happened in Ohio (Voting Rights Institute 2005).

One of the principal findings of the DNC study was that an examination of precinct vote totals from across the state produces “strong evidence against the claim that widespread fraud systematically misallocated votes from Kerry to Bush” (Mebane and Herron 2005, 2). Specifically this claim refers to the results of matching precincts and wards that did not change boundaries between 2002 and 2004, and then robustly estimating an “overdispersed binomial regression model that has the proportion voting for Kerry depending on the proportion voting for the Democratic candidate for governor (Tim Hagan) in the 2002 election” (Mebane and Herron 2005, 13–14). Using $D2002$ to represent the proportion voting for Hagan (versus Republican candidate Bob Taft) and $\text{logit}(p) = \log(p/(1 - p))$ to denote the log-odds function, the model uses the following linear predictor:

$$Z_i = d_0 + d_1 \text{logit}(D2002_i) . \tag{1}$$

Mebane and Herron state, “If the vote for Kerry were the same as the vote for Hagan except uniformly higher, then we would have $d_0 > 0$ and $d_1 = 1$ ” (2005, 14). The stated parameter values are almost but not quite what they find. In Table 2 I reproduce the parameter estimates they report (Mebane and Herron 2005, 77, Table 30). The estimates for d_0 are positive, and “the estimate for d_1 is not substantially different from 1.0 in either the precinct analysis or the ward analysis” (Mebane and Herron 2005, 14). But careful examination shows the difference between the estimate for d_1 and the value 1.0 to be statistically significant. Does this small but significant difference point to a big hole in Mebane and Herron’s substantive conclusion?

*** Table 2 about here ***

Mebane and Herron’s explanation for equation (1) is a bit terse and does not fully articulate the rationale for the parameter values they focus on. Before I consider what the 2BL test may suggest about the matter, let me try to explain their model more explicitly.

First let’s think about the votes for Hagan and for Taft in the 2002 gubernatorial election. Suppose for simplicity that the differences in support for Hagan and Taft across precincts can be largely explained in terms of a single variable x —call this “precinct net party strength”—so that the number of votes expected for each candidate in precinct i is well described by the model

$$E(\text{number for Hagen}_i) = n_i \exp(a + bx_i)$$

$$E(\text{number for Taft}_i) = n_i \exp(c + dx_i).$$

Here n_i is a measure of the number of potential voters in precinct i , a , b , c and d are constants with $\text{sign}(b) = -\text{sign}(d)$, and x_i varies from precinct to precinct. This variable x does not perfectly capture the support for each candidate, so the actual number of votes each receives differs somewhat from the expected values. But given the value of x , the proportion of votes expected to go to Hagen is

$$E(D2002_i) = \frac{\exp(a + bx_i)}{\exp(a + bx_i) + \exp(c + dx_i)} = \frac{1}{1 + \exp[-(A + Bx_i)]},$$

where $A = a - c$ represents the difference between the candidates’ overall base levels of support and $B = b - d$ represents the net degree to which their support varies across precincts in relation

to x . Applying the logit function to this expectation recovers the linear predictor we would use in a binomial model if we could observe x , namely $\text{logit}[E(D2002_i)] = A + Bx_i$.

If the vote for Kerry were the same as the vote for Hagan and the vote for Bush were the same as the vote for Taft, then the same model would apply to Kerry's share of the votes as applies to Hagan's. In that case we might hope that our imagined model for $E(D2002_i)$ does not depart too far from the observable values $D2002_i$, so that $\text{logit}(D2002_i) \approx A + Bx_i$ is a good approximation. Since we are not committing to any particular definition for the unobservable variable x , the idea that the approximation is a good one should be easy to accept. But then it follows that if Kerry's vote share were the same as Hagan's, then the linear predictor in the model for Kerry's vote share should be the same as in the model for Hagan's vote share. Hence in equation (1) we would have $d_0 = 0$ and $d_1 = 1$. That is, using $D2004$ to represent the proportion voting for Kerry instead of Bush, we would have

$$E(D2004_i) = \frac{1}{1 + \exp[-(A + Bx_i)]} \approx \frac{1}{1 + \exp[-\text{logit}(D2002_i)]}.$$

In saying that Kerry's support may be "uniformly higher" than Hagan's, the idea is that the difference between the overall base levels of support for Kerry and Bush may be more favorable to Kerry than the corresponding difference between Hagan and Taft is to Hagan. This may happen even while Kerry's and Bush's support varies across precincts in relation to x in the same way as does Hagan's and Taft's. That is, if we use G to denote the difference between Kerry's and Bush's base levels of support and H to denote the net degree to which their support varies in relation to x , so that

$$E(D2004_i) = \frac{1}{1 + \exp[-(G + Hx_i)]},$$

then it may be that $G > A$ while $H = B$. In this case we would have

$$E(D2004_i) \approx \frac{1}{1 + \exp\{-[G - A + \text{logit}(D2002_i)]\}},$$

which is to say, in equation (1), $d_0 = G - A > 0$ and $d_1 = 1$.

Of course, both Kerry and Bush received more votes than, respectively, Hagan and Taft,

which is to say that overall voter turnout was higher in 2004 than in 2002. The increase in turnout reflects not only the difference that generally occurs between midterm and presidential election years, but also the intensive mobilization efforts undertaken in Ohio in 2004 by the candidates, by the political parties by and other groups. It is possible, but of course not necessary, that the mobilization worked in such a way that each candidate was able to increase turnout more in precincts where his party's base support was already stronger. In terms of a simple model expressing the support for Kerry or Bush in terms of the notional 2002 precinct net party strength variable x , the number of votes for each candidate in each precinct might be related to x_i through coefficients u and v , with $\text{sign}(u) = -\text{sign}(v)$ and $H = u - v$. Intense mobilization that was more effective in precincts where a party was already strong would mean that $|u| > |b|$ and $|v| > |d|$, in which case $H/B > 1$.

In this case, in the linear predictor of equation (1) we would no longer expect $d_1 = 1$. That is,

$$\begin{aligned} E(D2004_i) &= \frac{1}{1 + \exp[-(G + Hx_i)]} \\ &= \frac{1}{1 + \exp\{-[G - (H/B)A + (H/B)(A + Bx_i)]\}} \\ &\approx \frac{1}{1 + \exp\{-[G - (H/B)A + (H/B)\text{logit}(D2002_i)]\}} \end{aligned}$$

So in general in equation (1) we have $d_1 = H/B$ and $d_0 = G - (H/B)A$. If the parties in 2004 tended to mobilize more effectively in precincts where they were already strong in 2002, then we should see $d_1 > 1$.

The force of this more explicit motivation for equation (1), then, is to support a claim that the estimated values for d_1 that are significantly larger than 1.0 reflect the tremendous voter mobilization efforts undertaken on behalf of the candidates. If Bush tended to recruit new voters more effectively in precincts where he was already strong, or if Kerry tended to add voters more in places where he was already strong, then $d_1 > 1$ is what we should expect.

Evidently the analysis that refers to equation (1) depends on a relatively elaborate skein of modelling, even though the ideas it expresses are fairly simple. A serious critique of the model could lead one rapidly into some intricate issues. For instance, is the implicit reference to a single "precinct net party strength" dimension truly compelling if we are thinking about the variation in

support for Kerry and Bush over all 5,384 precincts (spread over 47 counties) being considered?

And even if we accept the simple framework of the model, do the results constitute a convincing case that there was not significant fraud? For instance, Mark Lindeman took the data used to produce the estimates reported in Table 2 and applied the following algorithm: “in approximately 10% of precincts, switch some uniform % of votes between 10% and 20% (or half of Kerry’s share, whichever is less) from Kerry to Bush” (Lindeman 2006). Using such manipulated data to estimate the model, Lindeman reports obtaining results very similar to the ones reported in Table 2: “no change in slope (of course the intercept decreased), essentially no change in the number of zero weights (18), a substantial increase in sigma” (2006). Leaving aside the important question of whether it was feasible in Ohio to switch a fraction of the votes in a random sample of precincts selected from across the state, the implication remains that there are conceivable patterns of fraud that the approach used by Mebane and Herron (2005), based on estimating equation (1), would fail to detect.

A pattern of vote manipulation such as Lindeman imagines may not be detectable by any kind of statistical analysis, but still it is worthwhile to see whether the 2BL test builds confidence in Mebane and Herron’s (2005) analysis or adds to skepticism about it.

To compute the 2BL test, I use the data collected as part of the DNC study for all Ohio precincts. To enhance comparability with the data analyzed by Mebane and Herron (2005), I exclude separately reported absentee vote counts. I compute the 2BL test for the votes recorded for Bush and for Kerry. For 88 Ohio counties and two candidates we have $T = 176$ separate test statistics, which implies an FDR-aware critical value for the 2BL statistic of 31.1.

Now, at last, we find a 2BL test statistic that is larger than the FDR-aware critical value. Of the 176 statistics, one is greater than 31.1. This is the statistic for the vote for Kerry in Summit County, which is $X_{B_2}^2 = 42.7$. The next largest value is $X_{B_2}^2 = 25.2$, for the vote for Kerry in Scioto county. In all there are 21 statistics larger than the single-test critical value of 16.9—nine statistics are for votes recorded for Bush and twelve are for votes recorded for Kerry. Three counties have statistics greater than 16.9 for both candidates’ votes, namely, Cuyahoga, Paulding and Summit counties.

These results do not in a strict sense call into question the conclusions Mebane and Herron (2005) reach, at least as far as the analysis based on estimating equation (1) is concerned.

Summit is not one of the counties that had constant precinct boundaries from 2002 to 2004, so precincts from Summit County were not included in the collection of precincts used to estimate equation (1). But the high proportion of the statistics that are greater than the critical value for a single test may indicate that there was vote manipulation that the earlier analysis failed to detect. Having set a single-test level of $\alpha = .05$, we might expect about five percent of the statistics to exceed the corresponding critical value. But about twelve percent ($21/176 = .119$) of the statistics exceed that value. Of the eighteen counties that have such a statistic, seven are not among the counties that had constant precinct boundaries. Nonetheless, finding that 13 of the 94 statistics that do come from such counties are larger than the single-test critical value is not especially reassuring. Since none of these 13 statistics is close to the FDR-aware critical value—for 94 tests this would be 29.5—the situation with the constant-boundary counties is one where the test signal has not been turned on but it is not clear that it is firmly off.

Presidential Votes across the United States in 2000 and 2004

We have looked at 2BL test statistics from Florida in 2000 and 2004 and from Ohio in 2004, and we have found only one that is large once we take into account the fact that we are considering many such statistics. Are significant 2BL test results in general rare? If so, it might mean either that election fraud that involves manipulation of the votes is genuinely rare, or that the 2BL test is just not sufficiently sensitive. Or perhaps it is simply that despite all the controversy attending the voting in Florida and Ohio in recent elections, in fact those states are exceptional in having relatively little of the kinds of vote shifting that the 2BL test in principle is able to detect.

Perhaps in other places—or in other notorious places—more large 2BL test statistics will appear.

To get some perspective on this, I analyze precinct data reporting votes for president across the U.S. in 2000 and 2004. Again I compute the 2BL test for the votes recorded for Bush and for Kerry. Precinct data are not readily available from every state, nor necessarily from every county in states for which some data are obtainable. I use data obtained from Dave Leip—for 35 states in 2000 and for 42 states in 2004—supplemented with other information.³ I include only counties that have at least ten precincts. Except for the data from Ohio in 2004, I include totals that are

³Data for Florida in 2000 and Ohio in 2004 are as described above. For Pennsylvania in 2004 I used data obtained from the Pennsylvania State Election Commission (in a file named PA-2004G-Presidential.xls). I downloaded data for Cook County, IL, in 2004 from Cook County and Chicago election board websites.

reported for absentee ballots as separate precincts. Overall, the analysis uses data from 1683 counties and 129,144 precincts in 2000 and from 1671 counties and 140,373 precincts in 2004.⁴ Doing the FDR adjustment for the 2BL test statistics taken over the whole country in each year—i.e., $T = 3366$ and $T = 3342$ —gives FDR-aware critical values of about 38.4.

From the boxplot display of the distribution of the 2BL test statistics shown in Figure 1, one can see that there are not many statistics as large as that global FDR-aware critical value. Indeed, in all there are six counties that have 2BL statistics larger than 38.4: Los Angeles, CA, and Cook, IL, in both 2000 and 2004; DuPage, IL, and Hamilton, OH, in 2000; and Summit, OH, and Davis, UT, in 2004. The largest statistics in both years occur for Los Angeles: the statistic for the votes for Gore is $X_{B_2}^2 = 54.8$, and for the votes for Kerry it is $X_{B_2}^2 = 70.2$.

*** Figure 1 about here ***

The omnibus FDR-aware critical value of 38.4 is lofty indeed. More realistically—but less skeptically—we might consider each county together only with the other counties in the same state. Such a perspective would be relevant, for instance, if each state’s election officials were to use the 2BL test to screen the election results from their state. In this case it is reasonable to determine the FDR-adjusted critical value for each state by taking into account only the number of test statistics that may be computed for that state. That is, T equals the number of counties in the state for which there is usable data, multiplied by the number of candidates for whose vote totals we are computing the test.

In 1934, Harris presented case studies detailing election frauds in four cities: Philadelphia, Chicago, Pittsburgh and Cleveland. He wrote, “Recent investigations have brought to light election scandals in the particular cities covered, but it would be a mistake to assume that other cities are free of election frauds” (Harris 1934, 320). Nearly seventy years later, three of these cities again are marked as worrisome. Of course the county containing Chicago (Cook, IL) has already been flagged as having significant 2BL test statistics even when the omnibus FDR adjustment is used.

Table 3, which shows the results of applying the state-specific FDR adjustment, includes

⁴The states with at least one county in the analysis in 2000 are AK, AL, AR, AZ, CA, DC, DE, FL, HI, IA, ID, IL, IN, KS, LA, ME, MI, MN, MT, NC, ND, NH, NJ, NY, OH, PA, RI, SC, SD, TN, VA, VT, WA, WI and WY. For 2004 the states with at least one county in the analysis are AK, AL, AR, AZ, CA, CO, DC, DE, FL, GA, HI, IA, ID, IL, IN, KS, LA, MD, ME, MI, MN, MO, MT, NC, ND, NH, NJ, NM, NV, NY, OH, OR, PA, RI, SC, SD, TN, TX, UT, VA, VT, WA, WI and WY.

among the counties with significantly large 2BL test statistics in 2000 not only Cook, IL, and adjacent counties DuPage and Lake, IL, but also Philadelphia, PA, and Summit, OH, which is adjacent to Cleveland.⁵ Cook, DuPage and Summit carry through into 2004, but the 2BL statistics for Philadelphia are not quite as large for that year. In 2004, Philadelphia has $X_{B_2}^2 = 21.8$ and $X_{B_2}^2 = 23.4$ respectively for Kerry's and Bush's vote totals. The other counties that appear in this list are a mix of urban and rural places.

*** Table 3 about here ***

Over the whole country, the frequency of large 2BL test statistics does not greatly exceed the nominally expected values. There are 230 2BL test statistics greater than the single-test critical value in 2000, and there are 224 test statistics in 2004 that are that large. These counts imply proportions of large statistics not much greater than the single-test level of $\alpha = .05$ would suggest. We have $230/3366 = .068$ in 2000 and $224/3342 = .067$ in 2004. Even more then, perhaps, does the much higher proportion of nominally large 2BL statistics found for Ohio 2004 stand out.

Discussion

The good news is that, as measured by the 2BL test, signs of election fraud in recent American presidential votes seem to be rare. Several of the places that turn up with significantly large 2BL test statistics have been notorious for a century or more. That the 2BL test finds these places suggests it is probably on to something. These results using data from actual American elections tend to reinforce the simulation results of Mebane (2006) that show the 2BL test can spot many patterns of manipulation in vote counts.

The 2BL test is strikingly insensitive to some kinds of distortions that we know significantly affected many votes. The most interesting case here is Florida, 2000. Notwithstanding the well established fact that tens of thousands of votes were lost to undervotes and overvotes throughout the state, the 2BL test does not signal any significant problems with the precinct vote totals. Perhaps the test would have indicated problems if we had 2000 precinct data from all of Florida's counties. But the current analysis does include the largest counties and most of the most controversial ones. The test finds nothing untoward about those places.

⁵Pittsburgh escapes inclusion. Allegheny County has $X_{B_2}^2 = 21.2$ for the votes for Gore but 2BL statistics less than 16.9 for Bush in 2000 and for both Bush and Kerry in 2004.

The 2BL test gives a mixed message about Ohio, 2004. We can clearly reject the hypothesis that precinct vote counts throughout the state follow the 2BL distribution. The 2BL test statistic for Summit County is significantly large even when we take the FDR fully into account. Also, suspiciously many counties have 2BL test statistics that exceed the critical value we would use if we were looking at only one test. The 2BL test results do not overturn previous judgments that manipulation of reported vote totals did not determine the election outcome in Ohio, but neither do they completely dissipate the foul odor of suspicion that continues to hang over the state's results.

On the whole, this look at recent presidential election results through the lens of the 2BL test seems to me to enhance the case that it is worth taking seriously as a statistical test for election fraud. The 2BL test cannot detect all kinds of fraud, and significant 2BL test results may occur even when vote counts are in no way fraudulent. But, considering the results from Florida in 2000, the test seems not to be confused by some kinds of distortions in elections that do not involve manipulating the vote totals. Further investigations of the test's performance are clearly warranted.

CORRUPTION OF THE ELECTION PROCESS UNDER U.S. FEDERAL LAW

- Craig C. Donsanto¹

A. HISTORICAL BACKGROUND

Federal concern over the integrity of the franchise has historically had two distinct areas of focus. The first, to ensure elections that are free from corruption for the general public, is the subject of this chapter. The second, to ensure there is no discrimination against minorities at the ballot box involves entirely different constitutional and federal interests, and is supervised by the Justice Department's Civil Rights Division.

Federal interest in the integrity of the franchise was first manifested immediately after the Civil War. Between 1868 and 1870, Congress passed the Enforcement Acts, which served as the basis for federal activism in prosecuting corruption of the franchise until most of them were repealed in the 1890s. See *Ex parte Coy*, 127 U.S. 731 (1888); *Ex parte Yarborough*, 110 U.S. 651 (1884); *Ex parte Siebold*, 100 U.S. 371 (1880).

Many of the Enforcement Acts had broad jurisdictional predicates that allowed them to be applied to a wide variety of corrupt election practices as long as a federal candidate was on the ballot. In *Coy*, the Supreme Court held that Congress had authority under the Constitution's Necessary and Proper Clause to regulate any activity during a mixed federal/state election that

¹Director, Election Crimes Branch, United States Department of Justice. The close cooperation of Nancy L. Simmons, Senior Counsel for Policy, Public Integrity Section, Department of Justice, in the preparation of this document is acknowledged and appreciated.

The views expressed in this paper represent solely those of Mr. Donsanto and do not necessarily reflect those of the Department of Justice. The discussion herein confers no substantive or procedural rights on those whose conduct may be regulated or affected by the issues discussed. This paper was prepared on September 9, 2006 and is current as of that time.

exposed the federal election to potential harm, whether that harm materialized or not. *Coy* is still applicable law. *United States v. Carmichael*, 685 F.2d 903, 908 (4th Cir. 1982), *cert. denied*, 459 U.S. 1202 (1983); *United States v. Mason*, 673 F.2d 737, 739 (4th Cir. 1982); *United States v. Malmay*, 671 F.2d 869, 874-75 (5th Cir. 1982); *United States v. Bowman*, 636 F.2d 1003, 1001 (5th Cir. 1981); *United States v. Cole*, 41 F.3d 303 (7th Cir. 1994); *United States v. McCrainie*, 169 F.3d 723 (11th Cir. 1999).

After Reconstruction, federal activism in election matters retrenched. The repeal of most of the Enforcement Acts eliminated the statutory tools that had encouraged federal activism in election fraud matters. Two surviving provisions of these Acts, now embodied in 18 U.S.C. §§ 241 and 242, covered only intentional deprivations of rights guaranteed directly by the Constitution or federal law. The courts during this period held that the Constitution directly conferred a right to vote only for federal officers, and that conduct aimed at corrupting nonfederal contests was not prosecutable in federal courts. See *United States v. Gradwell*, 243 U.S. 476 (1917); *Guinn v. United States*, 238 U.S. 347 (1915). Federal attention to election fraud was further limited by case law holding that primary elections were not part of the official election process, *Newberry v. United States*, 256 U.S. 232 (1918), and by cases like *United States v. Bathgate*, 246 U.S. 220 (1918), that read the entire subject of vote buying out of federal criminal law, even when it was directed at federal contests.

In 1941, the Supreme Court reversed direction, overturning *Newberry*. The Court recognized that primary elections are an integral part of the process by which candidates are elected to office. *United States v. Classic*, 313 U.S. 299 (1941). *Classic* changed the judicial attitude toward federal intervention in election matters and ushered in a new period of federal activism. Federal courts now regard the right to vote in a fairly conducted election as a constitutionally protected feature of United States citizenship. *Reynolds v. Sims*, 377 U.S. 533 (1964).

In 1973, the use of Section 241 to address election fraud began to expand. *United States v. Anderson*, 481 F.2d 685 (4th Cir. 1973), *aff'd on other grounds*, 417 U.S. 211 (1974). Since then, this statute has been successfully applied to prosecute certain types of local election fraud. *United States v. Howard*, 774 F.2d 838 (7th Cir. 1985); *United States v. Olinger*, 759 F.2d 1293 (7th Cir.), *cert. denied*, 474 U.S. 839 (1985); *United States v. Stollings*, 501 F.2d 954 (4th Cir. 1974); *United States v. Wadena*, 152 F.3d 831 (8th Cir. 1998).²

² As indicated in the cited cases, Section 241 has been used to prosecute election fraud that affects the vote for federal officials, as well as vote fraud directed at nonfederal candidates that involves the corruption of public officials – most often election officers – acting under color of law, *i.e.*, ballot-box stuffing schemes. This latter type of scheme will be referred to in this paper as a “public scheme.” A scheme that does not involve the necessary participation of corrupt officials acting under color of law but that affects the tabulation of votes for federal

The mail fraud statute, 18 U.S.C. § 1341, was used successfully for decades to reach local election fraud, under the theory that such schemes defrauded citizens of their right to fair and honest elections. *United States v. Clapps*, 732 F.2d 1148 (3d Cir.), *cert. denied*, 469 U.S. 1085 (1984); *United States v. States*, 488 F.2d 761 (8th Cir. 1973), *cert. denied*, 417 U.S. 909 (1974). However, this mail fraud theory has been barred since 1987 when the Supreme Court held that Section 1341 did not apply to schemes to defraud someone of intangible rights (such as the right to honest elections). *McNally v. United States*, 483 U.S. 350 (1987). Congress responded to *McNally* the following year by enacting a provision which specifically defined Section 1341 to include schemes to defraud someone of “honest services.” 18 U.S.C. § 1346. Accordingly, Section 1346 may not have restored use of Section 1341 for most election crimes, unless they involved the element of “honest services.”

Finally, over the past forty years Congress has enacted new criminal laws with broad jurisdictional bases to combat false registrations, vote buying, multiple voting, and fraudulent voting in elections in which a federal candidate is on the ballot. 42 U.S.C. §§ 1973i(c), 1973i(e), 1973gg-10. These statutes rest on Congress’s power to regulate federal elections (U.S. Const. art. I, § 4) and on its power under the Necessary and Proper Clause (U.S. Const. art. I, § 8, cl. 18) to enact laws to protect the federal election process from the potential of corruption. The federal jurisdictional predicate underlying these statutes is satisfied as long as either the name of a federal candidate is on the ballot or the fraud involves corruption of the voter registration process in a state where one registers to vote simultaneously for federal as well as other offices. *Bowman, Malmay, Mason, supra*; *United States v. Garcia*, 719 F.2d 99 (5th Cir. 1983); *United States v. Slone*, 411 F.3d 643 (6th Cir. 2005); *United States v. Olinger*, 759 F.2d 1293 (7th Cir.), *cert. denied*, 474 U.S. 839 (1985); *United States v. Howard*, 774 F.2d 838 (7th Cir. 1985); *United States v. McCrainie*, 169 F.3d 723 (11th Cir. 1999); *United States v. Barker*, 514 F.2d 1077 (7th Cir. 1975); *United States v. Cianciulli*, 482 F. Supp. 585 (E.D. Pa. 1979).

B. WHAT IS ELECTION FRAUD?

1. In General

Election fraud involves a substantive irregularity relating to the voting act – such as bribery, intimidation, or forgery – which has the potential to taint the election itself. During the past century and a half, Congress and the federal courts have articulated the following constitutional principles concerning the right to vote in the United States. Any activity intended to interfere corruptly with any of these principles may be actionable as a federal crime:

- All qualified citizens are eligible to vote.

candidates will be referred to as a “private scheme.”

- All qualified voters have the right to have their votes counted fairly and honestly.
- Invalid ballots dilute the worth of valid ballots and therefore will not be counted.
- Every qualified voter has the right to make a personal and independent election decision.
- Qualified voters may opt not to participate in an election.
- Voting shall not be influenced by bribery or intimidation.

Simply put, then, election fraud³ is conduct intended to corrupt:

- the process by which ballots are obtained, marked, or tabulated,
- the process by which election results are canvassed and certified, or
- the process by which voters are registered.

On the other hand, schemes that involve corruption of other political processes (*i.e.*, political campaigning, circulation of nominating petitions, etc.) do not normally serve as the basis for a federal election crime.

2. Conduct that Constitutes Federal Election Fraud⁴

The following activities provide a basis for federal prosecution under the statutes referenced in each category:

- Paying voters to register to vote, or to participate in elections, in which a federal candidate is on the ballot (42 U.S.C. § 1973i(c), 18 U.S.C. § 597), or through the use of the mails in those states in which vote buying is a “bribery” offense (18 U.S.C. § 1952), as well as in federal elections⁵ in those states in which purchased registrations or votes are voidable under applicable state election law (42 U.S.C. § 1973gg-10).

³ Whether any of these types of election fraud schemes are actionable under federal criminal law is discussed below.

⁴ As used throughout this paper, the terms “federal election fraud” and “election fraud” mean fraud relating to an election in which a federal criminal statute applies. As will be discussed below, this term is not limited to frauds aimed at federal elections.

⁵ For purposes of this paper, the term “federal election” means an election in which the name of a federal candidate is on the ballot, regardless of whether there is proof that the fraud caused a vote to be cast for the federal candidate. A “nonfederal election” is one in which no federal candidate was on the ballot.

- Preventing voters from participating in elections in which a federal candidate is on the ballot, or when done “under color of law” in *any* election, federal or nonfederal (18 U.S.C. §§ 241, 242).
- Voting for individuals in federal elections who do not personally participate in, and assent to, the voting act attributed to them, or impersonating voters or casting ballots in the names of voters who do not vote in federal elections (42 U.S.C. §§ 1973i(c), 1973i(e), 1973gg-10).
- Intimidating voters through physical duress in any type of election (18 U.S.C. § 245(b)(1)(A)), or through physical or economic threats in connection with their registering to vote or their voting in federal elections (42 U.S.C. § 1973gg-10), or their vote for a federal candidate (18 U.S.C. § 594). If the victim is a federal employee, intimidation in connection with *any* election, federal or nonfederal, is covered (18 U.S.C. § 610).
- Malfeasance by election officials acting “under color of law” by performing such acts as diluting valid ballots with invalid ones (ballot-box stuffing), rendering false tabulations of votes, or preventing valid voter registrations or votes from being given effect in *any* election, federal or nonfederal (18 U.S.C. §§ 241, 242), as well as in elections in which federal candidates are on the ballot (42 U.S.C. §§ 1973i(c), 1973i(e), 1973gg-10).
- Submitting fictitious names on voter registration rolls and thereby qualifying the ostensible voters to vote in federal elections (42 U.S.C. §§ 1973i(c), 1973gg-10).⁶
- Knowingly procuring eligibility to vote for federal office by persons who are not entitled to vote under applicable state law, notably persons who have committed serious crimes (approximately 40 states) (42 U.S.C. §§ 1973i(c), 1973gg-10), and persons who are not United States citizens (currently all states) (42 U.S.C. §§ 1973i(c), 1973gg-10; 18 U.S.C. §§ 1015(f), 611).
- Knowingly making a false claim of United States citizenship in order to register to vote or to vote in any election (18 U.S.C. § 1015(f)), or falsely and willfully claiming U.S. citizenship for, *inter alia*, registering or voting in any election (18 U.S.C. § 911).

⁶ With respect to fraudulent voter registrations, election registration is “unitary” in all 50 states in the sense that a person registers only once to become eligible to cast ballots for both federal and nonfederal candidates. Therefore false information given to establish eligibility to register to vote is actionable federally regardless of the type of election that motivated the subjects to act. *See, e.g., United States v. Cianciulli*, 482 F. Supp. 585 (E.D. Pa. 1979).

- Providing false information concerning a person's name, address, or period of residence in a voting district in order to establish that person's eligibility to register or to vote in a federal election (42 U.S.C. §§ 1973i(c), 1973gg-10).
- Causing the production of voter registrations that qualify alleged voters to vote for federal candidates, or the production of ballots in federal elections, that the actor knows are materially defective under applicable state law (42 U.S.C. § 1973gg-10).
- Using the United States mails, or interstate wire facilities, to obtain the salary and emoluments of an elected official through any of the activities mentioned above (18 U.S.C. §§ 1341, 1343). At the time this paper was written this so-called "salary theory" of mail and wire fraud had not yet received wide judicial support. Indeed, in *United States v. Turner*, ___ F.3d ___ (6th Cir. 2006) the Sixth Circuit expressly rejected its application to schemes aimed at corrupting elections.⁷
- Ordering, keeping, or having under one's authority or control any troops or armed men at any polling place in *any* election, federal or nonfederal. The actor must be an active civilian or military officer or employee of the United States government (18 U.S.C. § 592).

3. Conduct that Does Not Constitute Federal Election Fraud

Various types of conduct that might adversely affect the election of a federal candidate may not constitute federal election crimes, despite what in many instances may be their reprehensible character. For example, a federal election crime does not normally involve irregularities relating to: 1) issuing inaccurate campaign literature, 2) campaigning too close to the polls, 3) manipulating the process by which a candidate obtains the withdrawal of an opponent, and, 4) failing to comply with state-mandated voting procedures (by election officers). Also, "facilitation payments," that is things of value given to voters to make it easier for the voter to cast a ballot but that are not intended to stimulate or reward the voting act itself (*e.g.*, a ride to the polls, a stamp to mail in an absentee ballot) do not ordinarily involve a federal crime.

4. Conditions Conducive to Election Fraud

Most election fraud is aimed at corrupting elections for local offices, which control or influence patronage positions. Election fraud schemes are thus often linked to such other crimes

⁷ Title 18, 18 U.S.C. § 1346, likely did not restore the mail and wire statutes to all election fraud schemes because its "intangible rights" concept is confined to schemes that involve a "deprivation of honest services," a motive not usually found in election fraud schemes. In *United States v. Turner*, ___ F.3d ___ (6th cir. 2006) the Sixth Circuit expressly held that Section 1346 does not apply to schemes to corrupt elections. Thus, absent a public scheme or other deprivation of honest services by a public officer such as an election official or someone else acting under color of law, the utility of the mail and wire fraud statutes to address election fraud is currently questionable at best.

as protection of illegal activities, corruption of local governmental processes, and patronage abuses.

Election fraud does not normally occur in jurisdictions where one political faction enjoys widespread support among the electorate, because in such a situation it is usually unnecessary or impractical to resort to election fraud in order to control local public offices.⁸ Instead, election fraud occurs most frequently when there are fairly equal political factions, and when the stakes involved in who controls public offices are weighty – as is often the case where patronage jobs are a major source of employment, or where illicit activities are being protected from law enforcement scrutiny. In sum, election fraud is most likely to occur in electoral jurisdictions where there is close factional competition for an elected position that matters.

5. Voter Participation Versus Nonvoter Participation Cases

As a practical matter, election frauds fall into two basic categories: those in which individual voters do not participate in the fraud, and those in which they do. The investigative approach and prosecutive potential are different for each type of case.

a) Election frauds not involving the participation of voters

The first category involves cases when voters do not participate, in any way, in the voting act attributed to them. These cases include ballot-box stuffing cases, ghost voting cases, and “nursing home” frauds.⁹ All such matters are potential federal crimes. Proof of these crimes depends largely on evidence generated by the voting process, or on handwriting exemplars taken from persons who had access to voting equipment and thus the opportunity to misuse it. Some of the more common ways these crimes are committed include:

- Placing fictitious names on the voter rolls. This “deadwood” allows for fraudulent ballots, which can be used to stuff the ballot box.
- Casting bogus votes in the names of persons who did not vote.
- Obtaining and marking absentee ballots without the active input of the voters involved. Absentee ballots are particularly susceptible to fraudulent abuse because, by definition, they are marked and cast outside the presence of election officials.

⁸ Election fraud may occur at the local level in districts controlled by one political faction in order to affect a contested election in a larger jurisdiction. For example, a corrupt mayor assured of his own reelection may nevertheless engage in election fraud for the purpose of affecting a state-wide election that is perceived to be close.

⁹ An example of a nursing home fraud is *United States v. Odom*, 736 F.2d 104 (4th Cir. 1984), that involved a scheme by local law enforcement officials and others to vote the absentee ballots of mentally incompetent residents of a nursing home.

- Falsifying vote tallies.

b) Election frauds involving the participation of voters

The second category of election frauds includes cases in which the voters do participate, at least to some extent, in the voting acts attributed to them. Common examples include:

- Vote buying schemes,
- Absentee ballot frauds,
- Voter intimidation schemes,
- Migratory-voting (or floating-voter) schemes, and
- Voter “assistance” frauds, in which the wishes of the voters are ignored or not sought.

Successful prosecution of these cases usually requires the cooperation and testimony of the voters whose ballots were corrupted. This requirement presents several difficulties. An initial problem is that the voters themselves may be technically guilty of participating in the scheme. However, because these voters can often be considered victims, federal prosecutors may consider declining to prosecute them in exchange for truthful cooperation against organizers of such schemes.

The second difficulty encountered in cases where voters participate is that the voter’s presence alone may suggest that he or she “consented” to the defendant’s conduct (marking the ballot, taking the ballot, choosing the candidates, etc.). Compare *United States v. Salisbury*, 983 F.2d 1369 (6th Cir. 1993) (leaving unanswered the question whether a voter who signs a ballot envelope at the defendant’s instruction but is not allowed to choose the candidates has consented to having the defendant mark his or her ballot), with *United States v. Cole*, 41 F.3d 303 (7th Cir. 1994) (finding that voters who merely signed ballots subsequently marked by the defendant were not expressing their own electoral preferences).

While the presence of the ostensible voter when another marks his or her ballot does not negate whatever crime might be occurring, it thus may increase the difficulty of proving the crime. This difficulty is compounded because those who commit this type of crime generally target vulnerable members of society, such as persons who are uneducated, socially disadvantaged, or with little means of livelihood – precisely the types of people who are likely targets for manipulation or intimidation. Therefore, in cases where the voter is present when another person marks his or her ballot, the evidence should show that the defendant either procured the voter’s ballot through means that were themselves corrupt (such as bribery or threats), or that the defendant marked the voter’s ballot without the voter’s consent or input. See *United States v. Boards*, 10 F.3d 587 (8th Cir. 1993); *Salisbury*; *Cole*.

C. JURISDICTIONAL SUMMARY

Under the Constitution, the states retain broad jurisdiction over the elective process. When the federal government enters the field of elections, it does so to address specific federal interests, such as: 1) the protection of the voting rights of racial, ethnic, or language-minorities, a specific Constitutional protection, 2) the registration of voters to vote in federal elections; 3) the standardization and procurement of voting equipment purchased with federal funds; 4) the protection of the federal election process against corruption; 5) the protection of the voting process from corruption accomplished under color of law; and 6) the oversight of noncitizen and other voting by ineligible.

Most federal election crime statutes do not apply to all elections. Several apply only to elections in which federal candidates are on the ballot, and a few require proof that the fraud was either intended to influence a federal contest or that a federal contest was affected by the fraud.

For federal jurisdictional purposes, there are two fundamental types of elections in which federal election crimes may occur: federal elections, in which the ballot includes the name of one or more candidates running for federal office; and nonfederal elections, in which only the names of local or state candidates are on the ballot. Elections in which the ballot includes the names of both federal and nonfederal candidates, often referred to as “mixed” elections, are “federal elections” for the purpose of the federal election crime statutes.

1. Statutes Applicable to Nonfederal Elections

Several federal criminal statutes apply to purely nonfederal elections. Principal among these are:

- 42 U.S.C. § 1973i(c), § 1973gg-10, and 18 U.S.C. § 1015(f) - any fraud that is aimed at the process by which voters are registered, notably those to furnish materially false information to election registrars;
- 18 U.S.C. §§ 241 and 242 - any scheme that involves the necessary participation of public officials, usually election officers or notaries, “acting under color of law,” which is actionable under as a derogation of the “one person, one vote” principle of the 14th Amendment, *i.e.*, “public schemes;”¹⁰
- 18 U.S.C. § 245(b)(1)(A) - physical threats or reprisals against candidates, voters, poll watchers, or election officials;
- 18 U.S.C. § 592 - “armed men” stationed at the polls;

¹⁰ Federal prosecutors should also evaluate whether a public scheme involves a deprivation of honest services. 18 U.S.C. §§ 1341, 1343, 1346.

- 18 U.S.C. § 609 - coercion of voting among the military;
- 18 U.S.C. § 610 - coerced political activity by federal employees;
- 18 U.S.C. § 911 - fraudulent assertion of United States citizenship;
- 18 U.S.C. § 1341 - schemes involving the United States mails to corrupt elections that are predicted on the post-*McNally* “salary” or “pecuniary loss” theories (discussed *infra*), note however that this theory of mail fraud was recently rejected as applied to election fraud cases in *United States v. Turner* ___ F.3d ___ (6th Cir. 2006); and
- 18 U.S.C. § 1952 - schemes to use the mails in furtherance of vote buying activities in states that treat vote buying as bribery.

The statutes listed above also apply to elections in which a federal candidate is on the ballot.

2. Statutes Applicable to Federal Elections

The following additional statutes apply to federal (including “mixed”) elections, but not to purely nonfederal elections:¹¹

- 18 U.S.C. § 594 - intimidation of voters;
- 18 U.S.C. § 597 - payments to persons to vote, or to refrain from voting, for a federal candidate;
- 18 U.S.C. § 608(b) - vote buying and false registration under the Uniformed and Overseas Citizens Absentee Voting Act;
- 18 U.S.C. § 611 - voting by aliens;
- 42 U.S.C. § 1973i(c) - payments for registering to vote or voting, fraudulent registrations, and conspiracies to encourage illegal voting;
- 42 U.S.C. § 1973i(e) - multiple voting;
- 42 U.S.C. § 1973gg-10(1) - voter intimidation; and

¹¹ The presence of the name of a federal candidate on a ballot is sufficient to obtain federal jurisdiction.

- 42 U.S.C. § 1973gg-10(2) - fraudulent voting or registering.

D. STATUTES¹²

1. Conspiracy Against Rights: 18 U.S.C. § 241

Section 241 makes it unlawful for two or more persons to “conspire to injure, oppress, threaten, or intimidate any person in any state, territory or district in the free exercise or enjoyment of any right or privilege secured by the Constitution or laws of the United States.” Violations are punishable by imprisonment for up to ten years or, if death results, for any term of years or for life.

The Supreme Court long ago recognized that the right to vote for federal offices is among the rights secured by Article I, Sections 2 and 4, of the Constitution, and hence is protected by Section 241. *United States v. Classic*, 313 U.S. 299 (1941); *Ex parte Yarborough*, 110 U.S. 651 (1884). Although the statute was enacted just after the Civil War to address efforts to deprive the newly emancipated slaves of the basic rights of citizenship, such as the right to vote, it has been interpreted to include any effort to derogate any right that flows from the Constitution or from federal law.

Section 241 has been an important statutory tool in election crime prosecutions. Originally held to apply only to schemes to corrupt elections for federal office, it has recently been successfully applied to nonfederal elections as well, provided that state action was a necessary feature of the fraud. This state action requirement can be met not only by the participation of poll officials, but by activities of persons who clothe themselves with the appearance of state authority, *e.g.*, with uniforms, credentials, and badges. *Williams v. United States*, 341 U.S. 97 (1951).

Section 241 embraces conspiracies to stuff a ballot box with forged ballots, *United States v. Saylor*, 322 U.S. 385 (1944); *United States v. Mosley*, 238 U.S. 383 (1915); to impersonate qualified voters, *Crolich v. United States*, 196 F.2d 879 (5th Cir.), *cert. denied*, 344 U.S. 830 (1952); to alter legal ballots, *United States v. Powell*, 81 F. Supp. 288 (E.D. Mo. 1948); to fail to count votes and to alter votes counted, *Ryan v. United States*, 99 F.2d 864 (8th Cir. 1938), *cert. denied*, 306 U.S. 635 (1939); *Walker v. United States*, 93 F.2d 383 (8th Cir. 1937), *cert. denied*, 303 U.S. 644 (1938); to prevent the official count of ballots in primary elections, *Classic*; to destroy ballots, *United States v. Townsley*, 843 F.2d 1070 (8th Cir. 1988); to destroy voter registration applications, *United States v. Haynes*, 977 F.2d 583 (6th Cir. 1992) (table) (available at 1992 WL 296782); to illegally register voters and cast absentee ballots in their names, *United States v. Weston*, 417 F.2d 181 (4th Cir. 1969), *cert. denied*, 396 U.S. 1062 (1970); *United States*

¹² The text of the statutes discussed below is printed in Appendix A. Each statute carries, in addition to the prison term noted, fines applicable under 18 U.S.C. § 3571.

v. Morado, 454 F.2d 167 (5th Cir.), *cert. denied*, 406 U.S. 917 (1972); *Fields v. United States*, 228 F.2d 544 (4th Cir. 1955), *cert. denied*, 350 U.S. 982 (1956); and to injure, threaten, or intimidate a voter in the exercise of his right to vote, *Wilkins v. United States*, 376 F.2d 552 (5th Cir.), *cert. denied*, 389 U.S. 964 (1967).

Recently, Section 241 was used, along with telephone harassment charges under Section 223 of Title 47, to prosecute a scheme to jam telephone lines for a get-out-the-vote service that was done for the purpose of preventing voters from accessing that service in order to obtain rides to the polls in the 2002 general elections. *United States v. Tobin*, No. 04-216-01 (SM), 2005 WL 3199672 (D.N.N. Nov. 30, 2005) (convictions on conspiracy and aiding and abetting telephone harassment). While the defendant was acquitted on the 241 count, the Criminal Division continues to believe that the statute should be considered when addressing schemes to thwart voting in federal elections.

Section 241 does not require that the conspiracy be successful, *United States v. Bradberry*, 517 F.2d 498 (7th Cir. 1975), nor need there be proof of an overt act. *Williams v. United States*, 179 F.2d 644 (5th Cir. 1950), *aff'd on other grounds*, 341 U.S. 70 (1951); *Morado*. Section 241 reaches conduct affecting the integrity of the federal election process as a whole, and does not require fraudulent action with respect to any particular voter. *United States v. Nathan*, 238 F.2d 401 (7th Cir. 1956), *cert. denied*, 353 U.S. 910 (1957).

On the other hand, Section 241 does not reach schemes to corrupt the balloting process through voter bribery, *United States v. Bathgate*, 246 U.S. 220 (1918), even schemes that involve poll officers to ensure that the bribed voters mark their ballots as they were paid to do, *United States v. McLean*, 808 F.2d 1044 (4th Cir. 1987) (noting, however, that Section 241 may apply where vote buying occurs in conjunction with other corrupt practices, such as ballot-box stuffing).

Section 241 prohibits only conspiracies to interfere with rights flowing directly from the Constitution or federal statutes. This element has led to considerable judicial speculation over the extent to which the Constitution protects the right to vote for candidates running for nonfederal offices. *Oregon v. Mitchell*, 400 U.S. 112 (1970); *Reynolds v. Sims*, 377 U.S. 533 (1964); *Blitz v. United States*, 153 U.S. 308 (1894); *In re Coy*, 127 U.S. 731 (1888); *Ex parte Siebold*, 100 U.S. 371 (1880). *See also Duncan v. Poythress*, 657 F.2d 691 (5th Cir. 1981), *cert. dismissed*, 459 U.S. 1012 (1982). While *dicta* in *Reynolds* casts the parameters of the federally protected right to vote in extremely broad terms, in a ballot fraud case ten years later the Supreme Court specifically refused to decide whether the federally secured franchise extended to nonfederal contests. *Anderson v. United States*, 417 U.S. 211 (1974).

The use of Section 241 in election fraud cases has generally been confined to two types of situations: "public schemes" and "private schemes."

A public scheme is one that involves the necessary participation of a public official acting under the color of law. In election fraud cases, this public official is usually an election

officer using his office to dilute valid ballots with invalid ballots or to otherwise corrupt an honest vote tally in derogation of the equal protection and due process clauses of the 14th Amendment. See, e.g. *United States v. Anderson*, 482 F.2d 685 (4th Cir. 1973, *aff'd on other grounds*, 417 U.S. 211 (1974)); *United States v. Stollings*, 501 F.2d 954 (4th Cir. 1974); *United States v. Olinger*, 759 F.2d 1293 (7th Cir.), *cert. denied*, 474 U.S. 839 (1985); *United States v. Howard*, 774 F.2d 838 (7th Cir. 1985); *United States v. Townsley*, 843 F.2d 1070 (8th Cir. 1988); *United States v. Haynes*, 977 F.2d 583 (6th Cir. 1992) (table) (available at 1992 WL 296782). Another case involving a public scheme turned on the necessary participation of a notary public who falsely notarized forged voter signatures on absentee ballot materials in an Indian tribal election. *United States v. Wadena*, 152 F.3d 831 (8th Cir. 1998), *cert. denied*, 526 U.S. 1050 (1999).

A private scheme is a pattern of conduct that does not involve the necessary participation of a public official acting under color of law, but one that can be shown factually to have adversely affected the ability of qualified voters to vote in elections in which federal candidates were on the ballot. Examples of private schemes include: 1) voting fraudulent ballots in mixed elections, and 2) thwarting get-out-the-vote or ride-to-the-polls activities of political factions or parties through such methods as jamming telephone lines or vandalizing motor vehicles.

Public schemes may be prosecuted under Section 241 regardless of the nature of the election with respect to which the conspiracy occurs, *i.e.*, elections with or without a federal candidate. On the other hand, private schemes can be prosecuted under Section 241 only when the objective of the conspiracy was to corrupt a federal election or when the scheme can be shown to have affected, directly or indirectly, the vote count for a federal candidate, *e.g.*, when fraudulent ballots were cast for an entire party ticket that included a federal office.

2. Deprivation of Rights under Color of Law: 18 U.S.C. § 242

Section 242, also enacted as a post-Civil War statute, makes it unlawful for anyone acting under color of law, statute, ordinance, regulation, or custom to willfully deprive a person of any right, privilege, or immunity secured or protected by the Constitution or laws of the United States. Violations are misdemeanors unless bodily injury occurs, in which case the penalty is ten years, or unless death results, in which case imprisonment may be for any term of years or for life.

Prosecutions under Section 242 need not show the existence of a conspiracy. However, the defendants must have acted illegally “under color of law”, *i.e.*, the case must involve a public scheme, as discussed above. This element does not require that the defendant be a *de jure* officer or a government official; it is sufficient if he or she jointly acted with state agents in committing the offense, *United States v. Price*, 383 U.S. 787 (1966), or if his or her actions were made possible by the fact that they were clothed with the authority of state law, *United States v. Williams*, 341 U.S. 97 (1951); *United States v. Classic*, 313 U.S. 299 (1941).

Because a Section 242 violation can be a substantive offense for election fraud conspiracies prosecutable under Section 241, the cases cited in the discussion of Section 241 apply to Section 242.

**3. False Information in, and Payments for, Registering and Voting:
42 U.S.C. § 1973i(c)**

Section 1973i(c) makes it unlawful, in an election in which a federal candidate is on the ballot, to knowingly and willfully 1) give false information as to name, address, or period of residence to an election official for the purpose of establishing one's eligibility to register or to vote; 2) pay, offer to pay, or accept payment for registering to vote or for voting; or 3) conspire with another person to vote illegally. Violations are punishable by imprisonment for up to five years.

a) The basis for federal jurisdiction¹³

Congress added Section 1973i(c) to the 1965 Voting Rights Act to ensure the integrity of the balloting process in the context of an expanded franchise. In so doing, Congress intended that Section 1973i(c) have a broad reach. In fact, the original version of Section 1973i(c) would have applied to all elections. However, constitutional concerns were raised during Congressional debate on the bill and the provision's scope was narrowed to elections including a federal contest. Section 1973i(c) rests on Congress's power to regulate federal elections and on the Necessary and Proper Clause. U.S. Const. art. I, § 4, art. I § 8, cl. 18. *United States v. Slone*, 411 F.3d 643 (6th Cir. 2005); *United States v. Bowman*, 636 F.2d 1003 (5th Cir. 1981); *United States v. Malmy*, 671 F.2d 869 (5th Cir. 1982); *United States v. Carmichael*, 685 F.2d 903 (4th Cir. 1982), *cert. denied*, 459 U.S. 1202 (1983); *United States v. Cole*, 41 F.3d 303 (7th Cir. 1994); *United States v. McCranie*, 169 F.3d 723 (11th Cir. 1999); and *United States v. Cianciulli*, 482 F. Supp. 585 (E.D. Pa. 1979).

Section 1973i(c) has been held to protect two distinct aspects of a federal election: the actual results of the election, and the integrity of the process of electing federal officials. *United States v. Cole*, 41 F.3d 303 (7th Cir. 1994). In *Cole*, the Court held that federal jurisdiction is satisfied so long as a single federal candidate is on the ballot – even if the federal candidate is unopposed – because fraud in a mixed election automatically has an impact on the integrity of the election. *See also United States v. McCrainie*, 169 F.3d 723 (11th Cir. 1999), and *United*

¹³ The discussion presented here concerning the basis for federal jurisdiction under Section 1973i(c) applies equally to its companion statute, 42 U.S.C. § 1973i(e), which addresses multiple voting. This is because the federal jurisdictional predicate is phrased precisely the same way in both statutes.

States v. Slone, 411 F.3d 643 (6th Cir. 2005), both of which followed *Cole* and achieved the same result.

Section 1973i(c) is particularly useful for two reasons: 1) it eliminates the unresolved issue of the scope of the constitutional right to vote in matters not involving racial discrimination, and 2) it eliminates the need to prove that a given pattern of corrupt conduct had an actual impact on a federal election. It is sufficient under Section 1973i(c) that a pattern of corrupt conduct took place during a mixed election; in that situation it is presumed that the fraud will expose the federal race to potential harm. *Slone*, *Cole*, *supra*; *United States v. Olinger*, 759 F.2d 1293 (7th Cir.), *cert. denied*, 474 U.S. 839 (1985); *United States v. Saenz*, 747 F.2d 930 (5th Cir. 1984), *cert. denied*, 473 U.S. 906 (1985); *United States v. Garcia*, 719 F.2d 99 (5th Cir. 1983); *United States v. Carmichael*, 685 F.2d 903 (4th Cir. 1982), *cert. denied*, 459 U.S. 1202 (1983); *United States v. Mason*, 673 F.2d 737 (4th Cir. 1982); *United States v. Malmay*, 671 F.2d 869 (5th Cir. 1982); *United States v. Bowman*, 636 F.2d 1003 (5th Cir. 1981); *United States v. Sayre*, 522 F. Supp. 973 (W.D. Mo. 1981); *United States v. Simms*, 508 F. Supp. 1179 (W.D. La. 1979).

Cases arising under this statute that involve corruption of the process by which individuals register, as distinguished from the circumstances under which they vote, present a different federal jurisdictional issue that is easily satisfied. This is because voter registration in every state is “unitary” in the sense that one registers to vote only once in order to become eligible to vote for all candidates on the ballot - local, state, and federal. Although a state could choose to maintain separate registration lists for federal and nonfederal elections, at the time this paper was written no state had chosen to do so. Consequently, any corrupt act that impacts on the voter registration process and that can be reached under 42 U.S.C. § 1973i(c) satisfies this federal jurisdictional requirement. An excellent discussion of this issue is contained in *United States v. Cianciulli*, 462 F. Supp. 585 (E.D. Pa. 1979).

b) False information to an election official

The “false information” provision of Section 1973i(c) prohibits any person from furnishing certain false data to an election official to establish eligibility to register or vote. The statute applies to three types of information: name, address, and period of residence in the voting district. False information concerning other factors (such as citizenship, felon status, and mental competence) are not covered by this provision.¹⁴

As just discussed, registration to vote is “unitary,” *i.e.*, a single registration qualifies the applicant to cast ballots for all elections. Thus, the jurisdictional requirement that the false information was used to establish eligibility to vote in a federal election is satisfied automatically

¹⁴ Such matters might, however, be charged as conspiracies to encourage illegal voting under the conspiracy clause of Section 1973i(c), as citizenship offenses under, *inter alia*, 18 U.S.C. §§ 911 and 1015(f), or under the broad “false information” provision of 42 U.S.C. § 1973gg-10. These statutes will be discussed below.

wherever a false statement is made to get one's name on the registration rolls. *United States v. Barker*, 514 F.2d 1077 (7th Cir. 1975); *Cianciulli, supra*.

On the other hand, when the false data is furnished to poll officials for the purpose of enabling a voter to cast a ballot in a particular election (as when one voter attempts to impersonate another), it must be shown that a federal candidate was being voted upon at the time. In such situations, the evidence should show that the course of fraudulent conduct could have jeopardized the integrity of the federal race, or, at a minimum, that the name of a federal candidate was on the ballot. *Carmichael, Bowman, Malmay, McCrainie, supra*. See, e.g., *In re Coy*, 127 U.S. 731 (1888).

In *United States v. Boards*, 10 F.3d 587 (8th Cir. 1993), the Eighth Circuit confirmed the broad reach of the "false information" provision of Section 1973i(c). The defendants in this case, and their unidentified coconspirators, had obtained and marked the absentee ballots of other registered voters by forging the voters' names on ballot applications and directing that the ballots be sent to a post office box without the voters' knowledge. The District Court granted post-verdict judgments of acquittal as to those counts in which the defendant's role was limited to fraudulently completing an application for an absentee ballot, based on its conclusions that: 1) the statute did not extend to ballot applications, 2) the statute did not cover giving false information as to the names of real voters (as opposed to fictitious names), and 3) the defendants could not be convicted for completing the applications when others actually voted using ballots.

The Court of Appeals rejected each of these narrow interpretations of Section 1973i(c). It held that an application for a ballot falls within the broad definition of "vote" in the Voting Rights Act, "because an absentee voter must first apply for an absentee ballot as a 'prerequisite to voting.'" *United States v. Boards*, 10 F.3d at 589 (quoting 42 U.S.C. § 1973 (c)(1)). The Court also held that by using the names of real registered voters on the applications, the defendants "[gave] false information as to [their] name[s]" within the meaning of Section 1973i(c).¹⁵ *Id.* Finally, the Court held that one of the defendants, whose role was limited to completing absentee ballot applications for ballots that others used to fraudulently vote, was liable under 18 U.S.C. § 2 as an aider and abettor.

In *United States v. Smith*, 231 F.3d 800 (11th Cir. 2000), the Court of Appeals for the 11th Circuit held that each forgery of a voter's name on a ballot document or on an application for a ballot constituted a separate offense under the "false information as to name" clause of Section 1973i(c).

Section 1973i(c)'s false information clause is particularly useful when the evidence shows that a voters's signature (name) was forged on an election-related document, e.g.: 1) when

¹⁵ The Eighth Circuit observed, "[b]ecause only registered voters are eligible to apply for and vote absentee ballots, the use of real registered voters' names was essential to the scheme to obtain and vote absentee ballots" *Boards* at 589.

signatures on poll lists are forged by election officials who are stuffing a ballot box, 2) when a voter's signature on an application for an absent ballot is forged, or 3) when bogus voter registration documents are fabricated in order to get names on voter registries.

c) Commercialization of the vote

The clause of Section 1973i(c) that prohibits "vote buying" does so in broad terms, covering any payment made or offered to a would-be voter "to vote or for voting" in an election where the name of a federal candidate appears on the ballot, as well as payments made to induce unregistered persons to register.¹⁶ Section 1973i(c) applies as long as a pattern of vote buying exposes a federal election to potential corruption, even though it cannot be shown that the threat materialized.

This aspect of Section 1973i(c) is directed at eliminating pecuniary considerations from the voting process. *Garcia; Mason; Malmay; Bowman, supra*. The statute rests on the premises that potential voters can choose not to vote; that those who choose to vote have a right not to have the voting process diluted with ballots that have been procured through bribery; and that the selection of the nation's leaders should not degenerate into a spending contest, with the victor being the candidate who can pay the most voters. *See also United States v. Blanton*, 77 F. Supp. 812, 816 (E.D. Mo. 1948).

The bribe may be anything having monetary value, including cash, liquor, lottery chances, and welfare benefits such as food stamps. *Garcia*, 719 F.2d at 102. However, offering free rides to the polls or providing employees paid leave while they vote are not prohibited. *United States v. Lewin*, 467 F.2d 1132 (7th Cir. 1972). Such things are given to make it easier for people to vote, not to induce them to do so. This distinction is important. For an offer or a payment to violate Section 1973i(c) it must have been intended to induce or reward the voter for engaging in one or more acts necessary to cast a ballot. Section 1973i(c) does *not* prohibit offering or giving things having theoretical pecuniary value, such as a ride to the polls or time off from work, to individuals who have already made up their minds to vote solely to facilitate their doing so.

Moreover, payments made for some purpose other than to induce or reward voting activity, such as remuneration for campaign work, do not violate this statute. *See Canales v. United States*, 744 F.2d 413 (5th Cir. 1984), *cert. denied*, 473 U.S. 906 (1985). Similarly, Section 1973i(c) does not apply to payments made to signature-gatherers for voter registrations

¹⁶ The federal criminal code contains another vote-buying statute, 18 U.S.C. § 597, which has a narrower scope and provides for lesser penalties than Section 1973i(c). Section 597 prohibits making or offering to make an expenditure to any person to vote or withhold his or her vote for a federal candidate. Nonwillful violations of Section 597 are one-year misdemeanors; willful violations are two-year felonies. Sections 597 and 1973i(c) are distinct offenses, since each requires proof of an element that the other does not. *Whalen v. United States*, 445 U.S. 684 (1980); *Blockburger v. United States*, 284 U.S. 299 (1932). Section 597 requires that the payment be made to influence a federal election; Section 1973i(c) requires that the defendant acted "knowingly and willfully."

such individuals may obtain, a practice sometimes referred to as “bounty hunting.” However, such payments become actionable under Section 1973i(c) if they are shared with the person being registered.¹⁷

Finally, Section 1973i(c) does not require that the offer or payment be made with a specific intent to influence a federal contest. It is sufficient that the name of a federal candidate appeared on the ballot in the election where the payment or offer of payment occurred. *Slone* (payments to influence the vote for a county judge executive); *Garcia* (providing food stamps to influence the vote for candidates running for county judge and county commissioner); *United States v. Thompson*, 615 F.2d 329 (5th Cir. 1980), *Carmichael, Mason, Sayre* (payments to influence votes for candidates running for sheriff or other local offices); *Simms* (payments to vote for a state judicial post); *Malmay* (payments to vote for school board member); *United States v. Odom*, 858 F.2d 664 (11th Cir. 1988) (payments for votes for a state representative); *United States v. Campbell*, 845 F.2d 782 (8th Cir. 1988), *cert. denied*, 488 U.S. 965 (1989) (payments to benefit a candidate for county judge); *United States v. Daugherty*, 952 F.2d 969 (8th Cir. 1991) (payments to vote for a number of local candidates); *McCrainie* (payments to influence election for sheriff where the name of an unopposed federal candidate appeared on the ballot).

d) Conspiracy to cause illegal voting

The second clause of Section 1973i(c) criminalizes conspiracies to encourage “illegal voting.” The phrase “illegal voting” is not defined in the statute. On its face it encompasses unlawful conduct in connection with voting. Violations of this provision are felonies.

¹⁷ Federal prosecutors who encounter bounty hunting activity may see evidence that organizations that pay bounty hunters per piece victimize by the submission of voter registrations with forged signatures and fictitious information. Federal prosecutors should consider prosecuting bounty hunters who knowingly gather false registrations and also prosecute organizations that pay bounty hunters and forward registrations to election officials knowing they are false.

The “illegal voting” clause of Section 1973i(c) has potential application to those who undertake to cause others to register or vote in conscious derogation of state or federal laws. *Cianciulli*, 482 F. Supp. at 616 (noting that this clause would prohibit “vot[ing] illegally in an improper election district”). For example, all states require voters to be United States citizens, and most states disenfranchise people who have been convicted of certain crimes, who are mentally incompetent, or who possess other disabilities that may warrant restriction of the right to vote. This provision requires that the voters participate in the conspiracy.¹⁸

The conspiracy provision of Section 1973i(c) applies only to the statute’s “illegal voting” clause. *Olinger*, 759 F.2d at 1298-1300. Conspiracies arising under the other clauses of Section 1973i(c) (that is, those involving vote buying or fraudulent registration) should be charged under the general federal conspiracy statute, 18 U.S.C. § 371.

4. Voting More than Once: 42 U.S.C. § 1973i(e)

Section 1973i(e), enacted as part of the 1975 amendments to the Voting Rights Act of 1965, makes it a crime to vote “more than once” in any election in which a federal candidate is on the ballot. Violations are punishable by imprisonment for up to five years.

The federal jurisdictional basis for this statute is identical to that for 42 U.S.C. § 1973i(c), which is discussed in detail in the previous item.

Section 1973i(e) is most useful as a statutory weapon against frauds which do not involve the participation of voters in the balloting acts attributed to them. Examples of such frauds are schemes to cast ballots in the names of voters who were deceased or absent, *United States v. Olinger*, 759 F.2d 1293 (7th Cir.), *cert. denied*, 474 U.S. 839 (1985); schemes to exploit the infirmities of the mentally handicapped by casting ballots in their names. *United States v. Odom*, 736 F.2d 104 (4th Cir. 1984); and schemes to cast absentee ballots in the names of voters who did not participate in and consent to the marking of their ballots by the offender. *United States v. Smith*, 231 F.3d 800 (11th Cir. 2000).

Most cases prosecuted under the multiple voting statute have involved defendants who physically marked ballots outside the presence of the voters in whose names they were cast – in other words, without the voters’ participation or knowledge. The statute may also be applied successfully to schemes when the voters are present but do not participate in any way, or otherwise consent to the defendant’s assistance, in the voting process.

¹⁸ False statements involving any fact which is material to registering or voting under state law may also be prosecuted under 42 U.S.C. § 1973gg-10, as will be discussed below.

However, when the scheme involves “assisting” voters who are present and who also marginally participate in the process, such as by signing a ballot document, prosecuting the case under Section 1973i(e) may present difficulties. For instance, in *United States v. Salisbury*, 983 F.2d 1369 (6th Cir. 1993), the defendant got voters to sign their absentee ballot forms and then instructed them how to mark their ballots, generally without allowing them to choose the candidates – and in some cases even to know the identity of the candidates on the ballot. In a few cases the defendant also personally marked others’ ballots. The Sixth Circuit held that the concept “votes more than once” in Section 1973i(e) was unconstitutionally vague as applied to these facts. Because the phrase “votes more than once” was not defined in the statute, the Court found the phrase did not clearly apply when the defendant did not physically mark another’s ballot. The Court further held that, even if the defendant did mark another’s ballot, it wasn’t clear this was an act of “voting” by the defendant if the defendant got the ostensible voters to demonstrate “consent” by signing their names to the accompanying ballot forms. *Salisbury* at 1379.¹⁹

¹⁹ The *Salisbury* Court noted that in *United States v. Hogue*, 812 F.2d 1568 (11th Cir. 1987), the jury was instructed that illegal voting under Section 1973i(e) included marking another person’s ballot without his or her “express or implied consent,” but found that, based on the facts of *Salisbury*, the jury should also have been given definitions of “vote” and “consent.” *Salisbury* at 1377.

A year after *Salisbury*, the Seventh Circuit took a different approach, with the benefit of more detailed jury instructions. *United States v. Cole*, 41 F.3d 303 (7th Cir. 1994). In both cases, the defendants had marked absentee ballots of other persons after getting the voters to sign their ballot documents. The Seventh Circuit rejected the Sixth Circuit's contention that the term "vote" was unconstitutionally vague, finding that the term was broadly and adequately defined in the Voting Rights Act itself, 42 U.S.C. § 1973 (c)(1), and this statutory definition was supported by both the dictionary and commonly understood meaning of the word. The Court held that the facts established a clear violation by the defendant of the multiple voting prohibition in Section 1973i(c).²⁰

In addition to their conflicting holdings, the *Salisbury* and *Cole* opinions differ in their approach to so-called voter "assistance" cases. *Salisbury* focused on the issue of voter consent – that is, whether the voters had, by their conduct, in some way "consented" to having the defendant mark, or help them mark, their own ballots. *Cole*, on the other hand, focused on whether it was the voter or the defendant who actually expressed candidate preferences.

In a more recent case, the Eleventh Circuit followed the rationale in *Cole* with respect to a scheme to obtain and cast ballots for indigent voters without their knowledge or consent. *Smith, supra*. The Court even went so far as to note that, in its view, a Section 1973i(e) offense could lie regardless of whether the voter had consented to another's marking his ballot. *Smith* at 816, fn. 20.

While the approach taken in *Cole* and *Smith* is, from a prosecutor's perspective, preferable to *Salisbury*'s, the latter's discussion of the issue of possible voter "consent" remains important, since facts suggesting the possibility of consent may weaken the evidence of fraud. Taken together, these three cases suggest the following approach to voter "assistance" frauds:

- The use of Section 1973i(e) most clearly applies to cases of "ballot theft." Examples of such situations are when the defendant marked the ballots of others without their input; when voters did not knowingly consent to the defendant's participation in their voting transactions; when the voters' electoral preferences were disregarded; or when the defendant marked the ballots of voters who lacked the mental capacity to vote or to consent to the defendant's activities.
- Jury instructions for a Section 1973i(e) indictment should amplify the key term "votes more than once" in the context of the particular case, and specifically define the terms "vote," and, where appropriate, "consent" and "implied consent." See 42 U.S.C. § 1973 (c)(1) (containing an extremely broad definition of "vote") and *United*

²⁰ "Ordinary people can conclude that the absentee voters were not expressing their wills or preferences, i.e., that *Cole* was using the absentee voters' ballots to vote his will and preferences." *Cole* at 308.

States v. Boards, 10 F.3d 587, 589 (8th Cir. 1993) (holding that this definition encompasses applying for an absentee ballot).

Thus, while the clearest use of Section 1973i(e) is to prosecute pure ballot forgery schemes, the statute can also apply to other types of schemes when voters are manipulated, misled, or otherwise deprived of their votes. *See Cole* at 310-311 (witness believed the defendant was merely registering her to vote, not helping her vote). Schemes to steal the votes of the elderly, infirm, or economically disadvantaged may constitute multiple voting, especially if there is a clear absence of meaningful voter participation. Because of their vulnerability, these persons are frequent targets of ballot schemes, and often do not even know that their ballots have been stolen or their voting choices ignored. Furthermore, if they have been intimidated, they are generally reluctant to say so.

There is a significant evidentiary difference between voter intimidation and multiple voting that suggests that the multiple voting statute may often become the preferred charging statute for voter “assistance” frauds. Voter intimidation requires proof of a difficult element: the existence of physical or economic intimidation that is intended by the defendant and felt by the victim. In contrast, the key element in a multiple voting offense is whether the defendant voted the ballot of another person without consulting with that person or taking into account his or her electoral preferences.

In conclusion, if the facts show manipulation of “vulnerable victims” as referenced in the United States Sentencing Guidelines for the purpose of obtaining control over the victims’ ballot choices, the use of Section 1973i(e) as a prosecutive theory should always be considered.

5. Voter Intimidation

Voter intimidation schemes are the functional opposite of voter bribery schemes. In the case of voter bribery, voting activity is stimulated by offering or giving something of value to individuals to induce them to vote or reward them for having voted. The goal of voter intimidation, on the other hand, is to deter or influence voting activity through threats to deprive voters of something they already have, such as jobs, government benefits, or, in extreme cases, their personal safety. Another distinction between voter bribery and intimidation is that bribery generates concrete evidence: the bribe itself (generally money). Intimidation, on the other hand, is amorphous and largely subjective in nature, and lacks such concrete evidence.

Voter intimidation is an assault against both the individual and society, warranting prompt and effective redress by the criminal justice system. Yet a number of factors make it difficult to prosecute. The intimidation is likely to be both subtle and without witnesses. Furthermore, voters who have been intimidated are not merely victims; it is their testimony that proves the crime. These voters must testify, publicly and in an adversarial proceeding, against

the very person who intimidated them. Obtaining this crucial testimony must be done carefully and respectfully.²¹

The crime of voter “intimidation” normally requires evidence of threats, duress, economic coercion, or some other aggravating factor that tends to improperly induce conduct on the part of the victim. If such evidence is lacking, an alternative prosecutive theory may apply to the facts, such as multiple voting in violation of 42 U.S.C. § 1973i(e). Indeed, in certain cases the concepts of “intimidation” and voting “more than once” may overlap and even merge. For example, a scheme that targets the votes of persons who are mentally handicapped, economically depressed, or socially vulnerable may involve elements of both crimes. Because of their vulnerability, these persons are often easily manipulated – without the need for inducements, threats, or duress. In such cases, the use of Section 1973i(e) as a prosecutive theory should be considered. *See United States v. Odom*, 736 F.2d 104 (4th Cir. 1984).

The main federal criminal statutes that can apply to voter intimidation are: 18 U.S.C. §§ 241, 242, 245(b)(1)(A), 594, and two statutes enacted in 1993, 18 U.S.C. § 610 and 42 U.S.C. § 1973gg-10(1). Each of these statutes is discussed below.

a) Intimidation in voting and registering to vote: 42 U.S.C. § 1973gg-10(1)

²¹ Federal prosecutors should take advantage and be mindful of Department resources and policies regarding the rights of victims and the sensitivities regarding their use as witnesses by consulting with their victim-witness coordinator in their office or division.

Congress enacted the National Voter Registration Act (NVRA), 42 U.S.C. §§ 1973gg-1973gg-10, in 1993. The principal purpose of this legislation was to require that the states provide prospective voters with uniform and convenient means by which to register for the federal franchise. In response to concerns that relaxing registration requirements might lead to an increase in election fraud, the NVRA also included a new series of election crimes, one of which prohibited knowingly and willfully intimidating or coercing²² prospective voters for registering to vote, or for voting, in any election for federal office.²³ 42 U.S.C. § 1973gg-10(1). Violators are subject to imprisonment for up to five years.

b) Intimidation of voters: 18 U.S.C. § 594

Section 594 prohibits intimidating, threatening, or coercing anyone, or attempting to do so, for the purpose of interfering with an individual's right to vote or not vote in any election held solely or in part to elect a federal candidate. The statute does not apply to primaries. Violations are one-year misdemeanors.

The operative words in Section 594 are "intimidates," "threatens," and "coerces." The *scienter* element requires proof that the actor intended to force voters to act against their will by placing them in fear of losing something of value. The feared loss may be something tangible, such as money or economic benefits, or intangible, such as liberty or safety.

²² For guidance in determining what constitutes "intimidation" or "coercion" under this statute, *see* the discussion of 18 U.S.C. § 594 below. Voter "intimidation" accomplished through conduct not covered by this statute or Section 594 may present violations of the Voting Rights Act, 42 U.S.C. § 1973i(b), which are enforced by the Civil Rights Division through noncriminal remedies.

²³ The jurisdictional element for Section 1973gg-10(1) is "in any election for Federal office." This is slightly different phraseology than used in Sections 1973i(c) and i(e), as discussed above. In matters involving intimidation in connection with voter *registration*, this jurisdictional element is satisfied in every case because voter registration is unitary in all 50 states: *i.e.*, one registers to vote only once to become eligible to vote for federal as well as nonfederal candidates. However, when the intimidation occurs in connection with *voting*, the jurisdictional situation may not be as clear. Absent case law to the contrary, federal prosecutors should consider the position that "an election for Federal office" means any election in which a federal candidate is on the ballot.

Section 594 was enacted as part of the original 1939 Hatch Act, which aimed at prohibiting the blatant economic coercion used during the 1930s to force federal employees and recipients of federal relief benefits to perform political work and to vote for and contribute to the candidates supported by their supervisors. The congressional debates on the Hatch Act show that Congress intended Section 594 to apply when persons were placed in fear of losing something of value for the purpose of extracting involuntary political activities. 84 Cong. Rec. 9596-611 (1939). Although the impetus for the passage of Section 594 was Congress's concern over the use of threats of economic loss to induce political activity, the statute also applies to conduct which interferes, or attempts to interfere, with an individual's right to vote by placing him or her in fear of suffering other kinds of tangible and intangible losses. It thus criminalizes conduct intended to force prospective voters to vote against their preferences, or refrain from voting, through activity reasonably calculated to instill some form of fear in them.²⁴

c) Coercion of political activity: 18 U.S.C. § 610

Section 610 was enacted as part of the 1993 Hatch Act Reform Amendments to provide increased protection against political manipulation of federal employees in the Executive Branch.²⁵ It prohibits intimidating or coercing a federal employee to induce or discourage "any political activity" by the employee. Violators are subject to imprisonment for up to three years. This statute is discussed in detail in Chapter Three, which addresses patronage crimes.

Although the class of persons covered by Section 610 is limited to federal employees, the conduct covered by this new statute is broad: it reaches political activity that relates to any public office or election, whether federal, state, or local. The phrase "political activity" in Section 610 expressly includes, but is not limited to, "voting or refusing to vote for any

²⁴ The civil counterparts to Section 594, 42 U.S.C. §§ 1971(b) and 1973i(b), may also be used to combat nonviolent voter intimidation. See, e.g., *United States v. North Carolina Republican*, No. 91-161-Civ-5F (E.D.N.C., consent decree entered Feb. 27, 1992) (consent order entered against political organizations for mailing to thousands of minority voters postcards that contained false voting information and a threat of prosecution).

²⁵ A similar statute addresses political intimidation within the military. 18 U.S.C. § 609. It prohibits officers of the United States Armed Forces from misusing military authority to coerce members of the military to vote for a federal, state, or local candidate. Violations are five-year felonies. In addition, 18 U.S.C. § 593 makes it a five-year felony for a member of the military to interfere with a voter in any general or special election, and 18 U.S.C. § 596 makes it a misdemeanor to poll members of the armed forces regarding candidate preferences.

candidate or measure,” “making or refusing to make any political contribution,” and “working or refusing to work on behalf of any candidate.”

**d) Conspiracy against rights and deprivation of constitutional rights:
18 U.S.C. § 241 and § 242**

Section 241 makes it a ten-year felony to “conspire to injure, oppress, threaten, or intimidate any person in any state, territory or district in the free exercise or enjoyment of any right or privilege secured by the Constitution or laws of the United States” – including the right to vote. The statute, which is discussed in detail above, has potential application in two forms of voter intimidation: a conspiracy to prevent persons whom the subjects knew were qualified voters from entering the polls to vote in an election when a federal candidate is on the ballot, and a conspiracy to misuse state authority to prevent qualified voters from voting for any candidate in any election.

Section 241 has been successfully used to prosecute intimidation in connection with political activities. *Wilkins v. United States*, 376 F.2d 552 (5th Cir.) (*en banc*), *cert. denied*, 389 U.S. 964 (1967). *Wilkins* involved both violence and clear racial animus. It arose out of the shooting of a participant in the 1965 Selma-to-Montgomery voting rights march. The marchers had intended to present to the Governor of Alabama a petition for redress of grievances, including denial of their right to vote. The Fifth Circuit held that those marching to protest denial of their voting rights were exercising “an attribute of national citizenship, guaranteed by the United States,” and that shooting one of the marchers therefore violated Section 241. *Wilkins*, 376 F.2d at 561.

Section 242, as also discussed above, makes it a misdemeanor for any person to act “under color of any law, statute, ordinance, regulation, or custom,” knowingly and willfully to deprive any person in a state, territory, or district of a right guaranteed by the Constitution or federal law. For all practical purposes, this statute embodies the substantive offense for a Section 241 conspiracy and it therefore can apply to voter intimidation.

It is the Criminal Division’s position that Sections 241 and 242 may be used to prosecute schemes the object of which was to intimidate voters in federal elections through threats of physical or economic duress, or to prevent otherwise lawfully qualified voters from getting to the polls in elections where federal candidates are on the ballot. Examples of the latter include intentionally jamming telephone lines to disrupt a political party’s get-out-the-vote or “ride-to-the-polls” efforts, and schemes to vandalize motor vehicles a political faction or party intended to use to get voters to the polls.

e) Federally protected activities: 18 U.S.C. § 245(b)(1)(A)

The Civil Rights Act of 1968 contains a broad provision that addresses violence intended to intimidate voting in any election in this country. 18 U.S.C. § 245(b)(1)(A). This provision applies without regard to the presence of racial or ethnic factors.

Section 245(b)(1)(A) makes it illegal to use or threaten to use physical force to intimidate individuals from, among other things, “voting or qualifying to vote.” It reaches threats to use physical force against a victim because the victim has exercised his or her franchise, or to prevent the victim from doing so. Violations are misdemeanors if no bodily injury results, and ten-year felonies if it does; if death results, the penalty is life imprisonment.

Prosecutions under Section 245 require written authorization by the Attorney General, the Deputy Attorney General, the Associate Attorney General, or a specifically designated Assistant Attorney General, who must certify that federal prosecution of the matter is “in the public interest and necessary to secure substantial justice.” § 245(a)(1). This approval requirement was imposed in response to federalism issues that many Members of Congress believed were inherent in a statute giving the federal government prosecutive jurisdiction over what otherwise would be mere assault and battery cases. *See* 1968 U.S.C.C.A.N. 1837-67 (Judiciary Committee Report on H.R. 2516). In making the required certification under Section 245(b)(1)(A), the standard to be applied by the Attorney General is whether the facts of the particular matter are such that the appropriate state law enforcement authorities should, but either cannot or will not, effectively enforce the applicable state law, thereby creating an overriding need for federal intervention. 1968 U.S.C.C.A.N. 1845-48 (Judiciary Committee Report on H.R. 2516).

6. Fraudulent Registering and Voting: 42 U.S.C. § 1973gg-10(2)

This provision was enacted as part of the National Voter Registration Act of 1993 (NVRA). As discussed above, Congress enacted the NVRA to ease voter registration requirements throughout the country. The major goal of this legislation was to promote the exercise of the franchise by replacing diverse state voter registration requirements with uniform and more convenient registration options, such as registration by mail, when applying for a driver’s license, and at various government agencies.

In addition, the NVRA sought to protect the integrity of the electoral process and the accuracy of the country’s voter registration rolls. To further this goal, a new criminal statute was enacted that specifically addressed two common forms of electoral corruption: intimidation of voters (42 U.S.C. § 1973gg-10(1), discussed above), and fraudulent registration and voting (42 U.S.C. § 1973gg-10(2)). Violations of this statute are punishable by imprisonment for up to five years.

The NVRA’s criminal statute resulted from law enforcement concerns expressed during congressional debates on the proposed law. Opponents and supporters of the NVRA alike recognized that relaxing requirements for registering to vote had the unavoidable potential to increase the occurrence of election crime by making it easier for the unscrupulous to pack registration rolls with fraudulent applications and ballots.

The constitutional basis of the NVRA is Congress's broad power to regulate the election of federal officials. NVRA's criminal provision reflects this federal focus, and is limited to conduct that occurs "in any election to Federal office." The phrasing of this jurisdictional element differs somewhat from the jurisdictional language used by Congress in earlier election fraud statutes, which required only that the name of a federal candidate be on the ballot.²⁶ While the Department believes that the jurisdictional language used in Section 1973gg-10 was included to achieve the same result as the jurisdictional element for Sections 1973i(c) and i(e), prosecutors and investigators wishing to proceed under Section 1973gg-10 should be sensitive to the differences in its jurisdictional phraseology.

a) Fraudulent registration: § 1973gg-10(2)(A)

Subsection 1973gg-10(2)(A) prohibits any person, in an election for federal office, from defrauding or attempting to defraud state residents of a fair and an impartially conducted election by procuring or submitting voter registration applications that the offender knows are materially false or defective under state law. The scope of the statute is broader than that of the "false information" provision of Section 1973i(c), discussed above, which is limited to false information involving only name, address, or period of residence. The statute applies to any false information that is material to a registration decision by an election official. For this reason, the provision is likely to be the statute of preference for most false registration matters.

For schemes to submit fraudulent registration applications, the statute's "Federal office" jurisdictional element is automatically satisfied and hence does not present a problem. This is because registration to vote is unitary in all states, in the sense that in registering to vote an individual becomes eligible to vote in all elections, nonfederal as well as federal.

b) Fraudulent voting: § 1973gg-10(2)(B)

Subsection 1973gg-10(2)(B) prohibits any person, in an election for federal office, from defrauding or attempting to defraud the residents of a state of a fair election through casting or tabulating ballots that the offender knows are materially false or fraudulent under state law. Unlike other ballot fraud laws discussed in this chapter, the focus of this provision is not on any single type of fraud, but rather on the result of the false information: that is, whether the ballot generated through the false information was defective and void under state law. Because of the

²⁶ Those earlier statutes, Sections 1973i(c) and (e), contain express references to each federal office (Member of the House, Member of the Senate, President, Vice President, presidential elector) and type of election (primary, general, special) providing potential federal jurisdiction. The revised language seems to have been intended as a less cumbersome rephrasing of the required federal nexus. However, at the time this paper was written there was no jurisprudence on this point.

conceptual breadth of the new provision, it may become a useful alternative to general fraud statutes in reaching certain forms of election corruption.

The statute's jurisdictional element, "in any election for Federal office," restricts its usefulness for fraudulent voting (as opposed to fraudulent registration) schemes. This Subsection of the statute applies only to elections that include a federal candidate. Thus its scope is similar to that of 42 U.S.C. §§ 1973i(c) and (e), and arises from the fact that fraudulent activity aimed at any race in a mixed election has the potential to taint the integrity of the federal race.

7. Voting by Noncitizens

Federal law does not expressly require that persons be United States citizens in order to vote. Moreover, eligibility to vote is a matter that the Constitution leaves primarily to the states.²⁷ At the time this paper was written, all states required that prospective voters be United States citizens.

Historically, the states have regulated both the administrative and substantive facets of the election process, including how one registers to vote and who is eligible to do so. Federal requirements, on the other hand, generally have focused on specific federal interests, such as protecting the integrity of the federal elective process and the exercise of fundamental rights.²⁸

Federal laws do, however, have quite a bit to say about citizenship and voting. Specifically, in 1993 the federal role in the election process expanded significantly with the enactment of the National Voter Registration Act (NVRA). This legislation required, among other things, that forms used to register persons to vote in federal elections clearly state "each eligibility requirement (including citizenship)" and that persons registering to vote in federal elections affirm that they meet "each eligibility requirement (including citizenship)." [that citizenship is a voting prerequisite, and that persons registering to vote in federal elections affirm that they are United States citizens]. 42 U.S.C. §§ 1973gg-3(c)(2)(c), 1973gg-5(a)(6)(A)(i), 1973gg-7(b)(2). Nine years later, Congress passed the Help America Vote Act of 2002 (HAVA). HAVA reemphasized these requirements in the case of voters who register to vote by mail by requiring the states to place a citizenship question on forms used by individuals under the "registration by mail" feature of NVRA (42 U.S.C. § 1973gg-4). 42 U.S.C. § 15483(b)(4)(A)(i).

²⁷ See U.S. CONST. art. II, § 1, cl. 2 (presidential electors chosen as directed by state legislatures); art. I, § 2 and amend. XVII (electors for Members of the United States House of Representatives and the United States Senate have the qualifications for electors of the most numerous branch of the state legislatures).

²⁸ For example, the states are prohibited from depriving "citizens of the United States" of the franchise on account of any of the following factors: race (amend. XV), gender (amend. XIX), nonpayment of poll tax (amend. XXIV), age 18 or older (amend. XXVI and 42 U.S.C. § 1973bb), residency longer than 30 days (42 U.S.C. § 1973aa-1), or overseas residence (42 U.S.C. § 1973ff-1).

In addition to these federal requirements relating to voter registration, registering to vote and voting by noncitizens are covered by four separate federal criminal laws:

a) Fraudulent registration and voting under the NVRA: 42 U.S.C. § 1973gg-10(2)

The NVRA enacted a new criminal statute that reaches the knowing and willful submission to election authorities of false information which is material under state law. 42 U.S.C. § 1973gg-10(2). Because all states make citizenship a prerequisite for voting, statements by prospective voters concerning citizenship status are automatically “material” within the meaning of this statute.

Therefore, any false statement concerning an applicant’s citizenship status that is made on a registration form submitted to election authorities can involve a violation of the NVRA’s registration fraud statute. Such violations are felonies subject to imprisonment for up to five years.

For jurisdictional purposes, the statute requires that the fraud be in connection with a federal election. As discussed above, voter registration in every state is unitary in the sense that an individual registers to vote only once for all elective offices - local, state, and federal. Thus the jurisdictional element of Section 1973gg-10(2) is satisfied whenever a false statement concerning citizenship status is made on a voter registration form.

The use of the word “willful” suggests Section 1973gg-10(2) may be a specific intent offense. This means federal prosecutors may have to prove that the offender was aware that citizenship is a requirement for voting and that the registrant did not possess United States citizenship. In most instances, proof of the first element is relatively easy because the citizenship requirement is stated on the voter registration form, and the form requires that the voter check a box indicating that he or she is a citizen. Proof of the second element may be overcome by the fact that all voter registration forms now require a registrant to certify that he or she is a citizen.

b) Naturalization, citizenship, or alien registry: 18 U.S.C. § 1015(f)

Section 1015(f) was enacted in 1996 to provide an additional criminal prohibition addressing the participation of noncitizens in the voting process. This statute makes it an offense for an individual to make any false statement or claim that he or she is a citizen of the United States in order to register or to vote. Unlike all other statutes addressing alien voting, Section 1015(f) expressly applies to all elections – federal, state, and local – as well as to initiatives, recalls, and referenda.

Jurisdictionally, Section 1015(f) rests on Congress’s power over nationality (U.S. Const. art. I, § 8, cl. 3) rather than on the Election Clause (U.S. Const. art. I, § 4, cl. 1), which provides the basis for its broad reach.

Violations of Section 1015(f) are felonies, punishable by imprisonment for up to five years.

c) Citizen of the United States: 18 U.S.C. § 911

Section 911 prohibits the knowing and willful false assertion of United States citizenship by a noncitizen. *See, e.g., United States v. Franklin*, 188 F.2d 182 (7th Cir. 1951); *Fotie v. United States*, 137 F.2d 831 (8th Cir. 1943). Violations of Section 911 are punishable by imprisonment for up to three years of imprisonment.

As noted, all states require United States citizenship as a prerequisite for voting. However, historically, some states have not implemented the prerequisite through voter registration forms that clearly alerted prospective registrants that only citizens may vote. Under the NVRA, all states must now make this citizenship requirement clear, and prospective registrants must sign applications under penalty of perjury attesting that they meet this requirement. Therefore, falsely attesting to citizenship in any state is now more likely to be demonstrably willful, and therefore cognizable under Section 911.

Section 911 requires proof that the offender was aware he was not a United States citizen, and that he was falsely claiming to be a citizen. Violations of Section 911 are felonies, punishable by up to three years of imprisonment.

d) Voting by aliens: 18 U.S.C. § 611

Section 611 is a relatively new statute that creates an additional crime for voting by persons who are not United States citizens. It applies to voting by noncitizens in an election where a federal candidate is on the ballot, except when: 1) noncitizens are authorized to vote by state or local law for nonfederal candidates or issues, and 2) the ballot is formatted in a way that the noncitizen has the opportunity to vote solely for the nonfederal candidate or issues on which he is entitled to vote under state law. Unlike Section 1015(f), Section 611 is directed at the act of voting, rather than the act of lying. But unlike Section 1015(f), Section 611 is a strict liability offense in the sense that the prosecution must only prove that the defendant was not a citizen when he registered or voted. Section 611 does not require proof that the offender be aware that citizenship is a prerequisite to voting.

Violations of Section 611 are misdemeanors, punishable by up to one year of imprisonment.

8. Travel Act: 18 U.S.C. § 1952

The Travel Act, 18 U.S.C. § 1952, prohibits interstate travel, the interstate use of any other facility (such as a telephone), and any use of the mails to further specified “unlawful activity,” including bribery in violation of state or federal law. Violations are punishable by

imprisonment for up to five years. This statute is useful in election crime matters because it applies to vote buying offenses that occur in states where vote buying is a “bribery” offense, and it does so regardless of the type of election involved.

The predicate bribery under state law need not be common law bribery. The Travel Act applies as long as the conduct is classified as a “bribery” offense under applicable state law. *Perrin v. United States*, 444 U.S. 37 (1979). In addition, the Travel Act has been held to incorporate state crimes regardless of whether they are classified as felonies or misdemeanors. *United States v. Polizzi*, 500 F.2d 856, 873 (9th Cir. 1974), *cert. denied*, 419 U.S. 1120 (1975), *United States v. Karigiannis*, 430 F.2d 148, 150 (7th Cir.), *cert. denied*, 400 U.S. 904 (1970).

The first task in determining whether the Travel Act has potential application to a vote buying scheme is to examine the law of the state where the vote buying occurred to determine if it either: 1) is classified as a bribery offense, or 2) describes the offense of paying voters for voting in a way that requires proof of a *quid pro quo*, *i.e.*, that a voter be paid in consideration for his or her vote for one or more candidates. If the state offense meets either of these criteria, the Travel Act potentially applies.

In the past, Travel Act prosecutions have customarily rested on predicate acts of interstate travel or the use of interstate facilities. Since election fraud is a local crime, interstate predicate acts are rarely present, and the Travel Act has not been used to prosecute election crime. However, in *United States v. Riccardelli*, 794 F.2d 829 (2d Cir. 1986), the Act’s mail predicate was held to be satisfied by proof of an intrastate mailing. In reaching this conclusion, the Court conducted an exhaustive analysis of the Travel Act’s legislative history and Congress’s authority to regulate the mails. The Sixth Circuit subsequently reached a contrary result, holding that the Travel Act’s mail predicate required an interstate mailing. *United States v. Barry*, 888 F.2d 1092 (6th Cir. 1989). In 1990 Congress resolved this conflict by adopting the *Riccardelli* holding in an amendment to the Travel Act, expressly extending federal jurisdiction to any use of the mails in furtherance of a state predicate offense.

Thus, the Travel Act should be considered as a vehicle to prosecute vote buying schemes in which the mails were used in those states where vote buying is statutorily defined as bribery. This theory is one of the few available that do not require a federal candidate on the ballot.

As with the mail fraud statute, each use of the mails in the furtherance of the bribery scheme is a separate offense. *United States v. Jabara*, 644 F.2d 574 (6th Cir. 1981). The defendant need not actually have done the mailing, so long as it was a reasonably foreseeable consequence of his or her activities. *United States v. Kelly*, 395 F.2d 727 (2d Cir.), *cert. denied*, 393 U.S. 963 (1968). Nor need the mailing have in itself constituted the illegal activity, as long as it promoted it in some way. *United States v. Bagnariol*, 665 F.2d 877 (9th Cir. 1981), *cert. denied*, 456 U.S. 962 (1982); *United States v. Barbieri*, 614 F.2d 715 (10th Cir. 1980); *United States v. Peskin*, 527 F.2d 71 (7th Cir. 1975), *cert. denied*, 429 U.S. 818 (1976); *United States v. Wechsler*, 392 F.2d 344 (4th Cir.), *cert. denied*, 392 U.S. 932 (1968).

An unusual feature of the Travel Act is that it requires an overt act subsequent to the jurisdictional event charged in the indictment. Thus, if a Travel Act charge is predicated on a use of the mails, the government must allege and prove that the defendant or his or her agent subsequently acted to further the underlying unlawful activity. The subsequent overt act need not be unlawful in itself; this element has been generally held to be satisfied by the commission of a legal act as long as the act facilitated the unlawful activity. *See, e.g., United States v. Davis*, 780 F.2d 838 (10th Cir. 1985).

The Travel Act is particularly useful in voter bribery cases in nonfederal elections that involve the mailing of absentee ballot materials. Such matters usually involve a defendant who offers voters compensation for voting, followed by the voter applying for, obtaining, and ultimately casting an absentee ballot. Each voting transaction can involve as many as four separate mailings: 1) when the absentee ballot application is sent to the voter, 2) when the completed application is sent to the local election board, 3) when the absentee ballot is sent to the voter, and 4) when the voter sends the completed ballot back to the election authority for tabulation.

The mailing must be in furtherance of the scheme. Therefore, care should be taken to ensure that the voting transaction in question was corrupted by a bribe before the mailing charged. If, for example, the voter was not led to believe that he or she would be paid for voting until after applying for, and receiving, an absentee ballot package, then the only mailing affected by bribery would be the transmission of the ballot package to the election authority; the Travel Act charge is best predicated on this final mailing, with some other subsequent overt act charged.

9. Mail and Wire Fraud: 18 U.S.C. § 1341 and § 1343

The federal mail fraud statute prohibits use of the United States mails, or a private or commercial interstate carrier, to further a “scheme or artifice to defraud.” 18 U.S.C. § 1341.²⁹ Violations are punishable by imprisonment for up to five years.

At present, the most viable means of addressing election crime under the mail fraud statute is the “salary theory.” Under this approach, the pecuniary benefits of elective office are charged as the object of the scheme.

a) Background

Until *McNally v. United States*, 483 U.S. 350 (1987), the mail fraud statute was frequently and successfully used to attain federal jurisdiction over schemes to corrupt local elections. Because its jurisdictional basis is the broad power of Congress to regulate the mails,

²⁹ The federal wire fraud statute, 18 U.S.C. § 1343, is essentially identical to the mail fraud statute, except for its jurisdictional element. Accordingly, it also has potential application to election fraud schemes that are furthered by interstate wires.

Section 1341 was used to address corruption of the voting process in purely local or state elections. See *Badders v. United States*, 240 U.S. 391, 392 (1916) (the overt act of putting a letter in a United States post office is a matter Congress may regulate).

Courts had broadly interpreted the "scheme to defraud" element of Section 1341 to include nearly any effort to procure, cast, or tabulate ballots illegally under state law. The theory was that citizens were entitled to fair and honest elections, and a scheme to corrupt an election defrauded them of this right. *United States v. Girdner*, 754 F.2d 877, 880 (10th Cir. 1985) (scheme to cast votes for ineligible voters); *United States v. Clapps*, 732 F.2d 1148, 1152-53 (3d Cir.) (scheme to usurp absentee ballots of elderly voters), *cert. denied*, 469 U.S. 1085 (1984); *United States v. States*, 488 F.2d 761, 766 (8th Cir. 1973) (scheme to submit fraudulent absentee ballots), *cert. denied*, 417 U.S. 909 (1974). The mail fraud statute was even held to reach schemes to deprive the public of information required under state campaign finance disclosure statutes. *United States v. Buckley*, 689 F.2d 893, 897-98 (9th Cir. 1982), *cert. denied*, 460 U.S. 1086 (1983); *United States v. Curry*, 681 F.2d 406, 411 (5th Cir. 1982).

The jurisdictional mailing requirement of Section 1341, moreover, usually posed no substantial obstacle in election fraud cases. The Second Circuit may have adopted the most expansive position, holding in an unpublished opinion that the mail fraud statute applied to any fraudulent election practice resulting in postal delivery of a certificate of election to the winning candidate. See *Ingber v. Enzor*, 664 F. Supp. 814, 815-16 (S.D.N.Y. 1987) (*habeas* opinion quoting Second Circuit's opinion on direct appeal), *aff'd on other grounds*, 841 F.2d 450 (2d Cir. 1988). See also *United States v. Gordon*, 817 F.2d 1538 (11th Cir. 1987) (mailing the certificate of election to the winning candidate held to be in the furtherance of an election fraud scheme to elect that candidate). As most states mail such notices to victorious candidates, this theory would have allowed federal jurisdiction over election fraud by victorious politicians, both federal and nonfederal.

However, in *McNally*, the Supreme Court substantially restricted the utility of the mail fraud statute to combat election crimes. *McNally* held that "scheme to defraud" does not encompass schemes to deprive the public of intangible rights, such as the rights to good government and fair elections, but is limited to schemes to deprive others of property rights.

In 1988, Congress enacted 18 U.S.C. § 1346 in response to the *McNally* decision. Unfortunately, by its express terms, Section 1346 only applies to schemes to deprive another of the "intangible right of honest services," a concept that may not embrace all schemes to defraud the public of a fair election or information required to be disclosed under federal or state campaign financing laws. Federal prosecutors should consult the Public Integrity Section for current information on the scope of honest services fraud.

Even a narrow definition of honest services fraud does not entirely foreclose use of the mail fraud statute to address election fraud. If a pecuniary interest – such as money or salary – is sought through the scheme, the mail fraud statute still applies. See *McNally*, 483 U.S. at 360 (noting that the jury was not charged on a money or property theory).

b) Salary theory of mail and wire fraud

Schemes to obtain salaried positions by falsely representing one's credentials to a hiring authority remain prosecutable under the mail fraud statute after *McNally*. The objective of such "salary schemes" is to obtain pecuniary items by fraud; such schemes are therefore clearly within the scope of the common law concepts of fraud to which *McNally* sought to restrict the mail fraud statute. See *United States v. Granberry*, 908 F.2d 278, 280 (8th Cir. 1990) (scheme to obtain employment by falsifying application cognizable under salary theory), *cert. denied*, 500 U.S. 921 (1991); *United States v. Doherty*, 867 F.2d 47, 54-57 (1st Cir. 1989) (scheme to rig police promotion exam cognizable on salary theory); *United States v. Walters*, 711 F. Supp. 1435, 1442-46 (N.D. Ill. 1989) (scheme to obtain scholarships through false information), *rev'd on other grounds*, 913 F.2d 388 (7th Cir. 1990); *United States v. Ferrara*, 701 F. Supp. 39 (E.D.N.Y.) (scheme to obtain hospital salaries by falsifying medical training), *aff'd*, 868 F.2d 1268 (2d Cir. 1988); *United States v. Thomas*, 686 F. Supp. 1078, 1083-85 (M.D. Pa.) (scheme to rig police entrance exam), *aff'd*, 866 F.2d 1414 (3d Cir. 1988) (table), *cert. denied*, 490 U.S. 1048 (1989); *United States v. Cooper*, 677 F. Supp. 778, 781-82 (D. Del. 1988) (wire fraud scheme to obtain pay for person not performing work).³⁰

This theory of post-*McNally* mail fraud has potential application to some election fraud schemes, since most elected offices in the United States carry with them a salary and various emoluments that have monetary value. The criterion by which candidates for elected positions are selected by the public is who obtained the most valid votes, *i.e.*, popular or electoral, depending on the type of election. Thus, schemes to obtain salaried elected positions through procuring and tabulating invalid ballots are capable of being charged as traditional common law frauds: that is, schemes to obtain the salary of the office in question by concealing material facts about the critical issue of which candidate received the most valid votes. In addition, election fraud schemes can present related issues concerning the quality and value of the public officer hired thereby. The Supreme Court observed in *McNally* that deceit concerning the quality and value of a commodity or service remains within the scope of the mail fraud statute:

³⁰ Another district court has upheld application of Section 1341 to a commercial bribery scheme to pay salary to a dishonest procurement officer. *United States v. Johns*, 742 F. Supp. 196, 204-06, 212-13 (E.D. Pa. 1990) (collecting cases in an extended discussion of the salary theory). The Third Circuit, however, reversed *Johns's* mail fraud convictions with a cursory, unpublished order that held, enigmatically, that the "convictions for mail fraud must be reversed inasmuch as the evidence was insufficient, as a matter of law, to establish that appellant had defrauded his employer of money paid to him as salary." *United States v. Johns*, 972 F.2d 1333 (3d Cir. 1991) (table) (available at 1991 U.S. App. LEXIS 18586).

We note that as the action comes to us, there was no charge and that the jury was not required to find that the Commonwealth itself was defrauded of any money or property. It was not charged that in the absence of the alleged scheme the Commonwealth would have paid a lower premium or secured better insurance.

483 U.S. at 360 (emphasis added). Election fraud schemes involve an aspect of material concealment insofar as the “value” of the services the public is paying for are concerned: the public “hired” the candidate it was falsely led to believe received the most valid votes, and consequently received services of lower value.

The “salary theory” of post-*McNally* mail fraud has been applied to election frauds in only a few cases to date, most notably *United States v. Walker*, 97 F.3d 253 (8th Cir. 1996) (mail fraud convictions under both salary theory and intangible right to honest services theory arising from scheme to secretly finance local candidate to split vote of opposition party but validity of the theory was neither raised nor litigated in case where validity of the theory was neither raised nor litigated); and *United States v. Webb*, 689 F. Supp. 703 (W.D. Ky. 1988) (tax dollars paid to a public official elected by fraud are a loss to the citizens, who did not receive the benefit of the bargain). However, in *United States v. Turner*, ___ F.3d ___ (6th cir. 2006) the theory was solidly rejected as applied to election fraud cases.

c) “Honest services” frauds: 18 U.S.C. § 1346

As summarized above, prior to *McNally* nearly all of the Circuits had held that a scheme to defraud the public of a fair and impartial election was one of the “intangible rights” schemes to defraud that was reached by the mail and wire fraud statutes. *McNally* repudiated this theory in an opinion that not only rejected the intangible rights theory of mail and wire fraud, but did so by citing several election fraud cases as examples of the kinds of fraud the Court found outside these criminal laws.

The following year, Congress enacted 18 U.S.C. § 1346. However, the language Congress used to achieve this objective did not clearly restore the use of these statutes to election frauds. This is because Section 1346 is limited to schemes to deprive a victim of the “intangible right to honest services,” and election frauds may not involve such an objective. Moreover, jurisprudence in the arena of public corruption has generally confined Section 1346 to schemes involving traditional forms of corruption that involve a clear breach of a fiduciary duty of “honest services” owed by a public official to the body politic: *e.g.*, bribery, extortion, embezzlement, theft, conflicts of interest, and, in some instances, gratuities. *See, e.g., United States v. Panarella*, 277 F.3d 678 (3d Cir. 2002); *United States v. Sawyer*, 329 F.3d 31 (1st Cir. 2001); *United States v. Bloom*, 149 F.3d 649 (7th Cir. 1998); *United States v. Brumley*, 116 F.3d 728 (5th Cir. 1997) (*en banc*). *See also United States v. Grubb*, 11 F.3d 426 (4th Cir. 1993) (upholding multi-count convictions of a state judge, including honest services mail fraud, arising from a scheme to extort \$10,000 donation from the candidate); *United States v. D’Alessio*, 822 F.Supp. 1134 (D.N.J. 1993) (dismissing indictment due to ambiguity regarding applicability of

local gift rule but recognizing candidate's duty of honesty to contributors and the public). Federal prosecutors should consult with the Public Integrity Section before using Section 1346 in the context of election fraud.

In *United States v. Turner*, ___ F.3d ___ (6th Cir. 2006) the application of the "honest services" theory of mail fraud to election frauds was roundly rejected by the Sixth Circuit, which in the process ruled that candidates do not owe a fiduciary duty of "honest services" to the public they seek to serve.

d) "Cost-of-election" theory: 18 U.S.C. § 1341 and § 1343

One case, *United States v. DeFries*, 43 F.3d 707 (D.C. Cir. 1995), held that a scheme to cast invalid ballots in a labor union election which had the effect of tainting the election to a point that exposed it to being declared invalid involved, among other things, a scheme to defraud the election authority charged with running the election of the costs involved.

DeFries was not a traditional election fraud prosecution. Rather, it involved corruption of a union election where supporters for one candidate for union office cast fraudulent ballots for the candidate they supported. When the scheme was uncovered, the United States Department of Labor ordered that a new election be held, thereby causing the union to incur an actual pecuniary loss. The D.C. Circuit held that the relationship between that pecuniary loss and the voter fraud scheme was sufficient to satisfy the requirements of *McNally*.

This theory of prosecution has potential validity primarily where the mail and wire fraud statutes are needed to federalize voter frauds involving the counting of illegal ballots in nonfederal elections, particularly where the fraud has led to a successful election contest and the election authority has been ordered to hold a new election and thereby incur additional costs.

10. Troops at Polls: 18 U.S.C. § 592

This statute makes it unlawful to station troops or "armed men" at the polls in a general or special election (but not a primary), except when necessary "to repel armed enemies of the United States." Violations are punishable by imprisonment for up to five years and disqualification from any federal office.

Section 592 prohibits the use of official authority to order armed personnel to the polls; it does not reach the troops who actually go in response to those orders. The effect of this statute is to raise doubt as to whether the FBI may conduct investigations within the polls on election day, and whether United States Marshals may be stationed at open polls, as both are required to carry their weapons while on duty.

This statute applies only to agents of the United States government. It does not prohibit state or local law enforcement agencies from sending police officers to quell disturbances at

polling places, nor does it preempt state laws that require police officers to be stationed in polling places.

11. Campaign Dirty Tricks

Two federal statutes, both of which are part of the Federal Election Campaign Act (FECA), specifically address campaign tactics and practices: 2 U.S.C. § 441d and § 441h. As is the case with all other features of FECA, violations of these two statutes are subject to both civil and criminal penalties, 2 U.S.C. § 437g(a) and § 437g(d) respectively.

a) Communications and solicitations: 2 U.S.C. § 441d

Section 441d provides that whenever a person or political committee makes certain types of election-related disbursements, an expenditure for the purpose of financing a public communication advocating the election or defeat of a clearly identified federal candidate, or a solicitation for the purpose of influencing the election of a federal candidate, the communication must contain an attribution clause identifying the candidate, committee, or person who authorized and/or paid for the communication. The content of the attribution, as well as its size and location in the advertisement are described in the statute.

b) Fraudulent misrepresentation: 2 U.S.C. § 441h

Section 441h prohibits fraudulently representing one's authority to speak for a federal candidate or political party. As a result of the 2002 Bipartisan Campaign Reform Act, the provision contains two specific prohibitions:

i. Section 441h(a) forbids a federal candidate or an agent of a federal candidate from misrepresenting his or her authority to speak, write, or otherwise act for any other federal candidate or political party in a matter which is damaging to that other candidate or political party. For example, Section 441h(a) would prohibit an agent of federal candidate A from issuing a statement that was purportedly written by federal candidate B and which concerned a matter which was damaging to candidate B.

ii. Section 441h(b) forbids any person from fraudulently representing his or her authority to solicit contributions on behalf of a federal candidate or political party. This provision was added by BCRA and became effective on November 6, 2002. For example, this provision would prohibit any person from raising money by claiming that he or she represented federal candidate A when in fact the person had no such authority.

12. Retention of Federal Election Records: 42 U.S.C. § 1974

The detection, investigation, and proof of election crimes – and in many instances Voting Rights Act violations – often depends on documentation generated during the voter registration, voting, tabulation, and election certification processes. In recognition of this fact, and the length of time it can take for credible election fraud predication to develop, Congress enacted Section 1974 to require that documentation generated in connection with the voting and registration process be retained for twenty-two months if it pertained to an election that included a federal candidate. Absent this statute, the disposition of election documentation would be subject solely to state law, which in virtually all states permits its destruction within a few months after the election is certified.

Section 1974 provides for criminal misdemeanor penalties for any election administrator who knowingly and willfully fails to retain, or willfully steals, destroys, or conceals, records covered by the statute. 42 U.S.C. § 1974a.³¹ More importantly, the reach of this statute qualitatively to specific categories of election documentation is critical to prosecutors as well as election administrators, who must often resolve election disputes and answer challenges to the fairness of elections.³²

For this reason, a detailed discussion of Section 1974 and its application to particular types of election documentation generated in the current age of electronic voting will be presented here.

a) Legislative purpose and background

The voting process generates voluminous documents and records, ranging from voter registration forms and absentee ballot applications to ballots and tally reports. If election fraud occurs, these records often play an important role in the detection and prosecution of the crime. Documentation generated by the election process also plays an equally important role in the detection, investigation, and prosecution of federal civil rights violations.

State laws generally require that voting documents be retained for sixty to ninety days. Those relatively brief periods are usually insufficient to make certain that voting records will be preserved until more subtle forms of federal civil rights abuses and election crimes have been detected.

In 1960, Congress enacted a federal requirement that extended the document retention period for elections where federal candidates were on the ballot to *twenty-two months* after the election. Pub. L. 86-449, Title III, § 301, 74 Stat. 88; 42 U.S.C. §§ 1974-1974e. This election

³¹ Specifically, Section 1974a provides that any election administrator or document custodian who willfully fails to comply with the statute is subject to imprisonment for up to one year.

³² Indeed, the federal courts have recognized that the purpose of this federal document retention requirement is to protect the right to vote by facilitating the investigation of illegal election practices. *Kennedy v. Lynd*, 306 F.2d 222 (5th Cir. 1962), *cert. denied*, 371 U.S. 952 (1963).

documentation retention requirement is backed-up with criminal misdemeanor penalties that apply to election officers and document custodians who willfully destroy covered election records before the expiration of the twenty-two month federal retention period.

The retention requirements of Section 1974 are aimed specifically at election administrators. In a parochial sense, these laws place criminally sanctionable duties on election officials. However, in a broader sense, this federal retention law assists election administrators in performing the tasks of managing elections and determining winners of elective contests. It does this by requiring election managers to focus appropriate attention on the types of election records under their supervision and control that may be needed to resolve challenges to the election process, and by requiring that they take appropriate steps to insure that those records will be preserved intact until such time as they may become needed to resolve legitimate questions that frequently arise involving the election process. In this way, Section 1974 serves the election administrators by better equipping them to respond to legitimate questions concerning the voting process when they arise.

b) The basic requirements of Section 1974

Section 1974 requires that election administrators preserve for twenty-two months “all records and papers that come into their possession relating to any application, registration, payment of poll tax, or other act requisite to voting.” This retention requirement applies to all elections in which a candidate for federal office was on the ballot, that is, a candidate for the United States Senate, the United States House of Representatives, President or Vice President of the United States, or presidential elector. Section 1974 does not apply to records generated in connection with purely local or state elections.

Retention and disposition of records in purely nonfederal elections (those where no federal candidates were on the ballot) are governed by state document retention laws.

However, Section 1974 does apply to all records generated in connection with the process of registering voters and maintaining current electoral rolls. This is because voter registration in virtually all United States jurisdictions is “unitary” in the sense that a potential voter registers only once to become eligible to vote for both local and federal candidates. *See United States v. Cianciulli*, 482 F.Supp. 585 (E.D.Pa. 1979). Thus, registration records must be preserved as long as the voter registration to which they pertain is considered an “active” one under local law and practice, and those records cannot be disposed of until the expiration of twenty-two months following the date on which the registration ceased to be “active.”

This statute must be interpreted in keeping with its congressional objective: Under Section 1974, all documents and records that may be relevant to the detection or prosecution of federal civil rights or election crimes must be maintained if the documents or records were generated in connection with an election that included one or more federal candidates.

c) Section 1974 requires document preservation, not document generation

Section 1974 does *not* require that states or localities produce records in the course of their election processes. However, if a state or locality chooses to create a record that pertains to voting, this statute requires that documentation be retained if it relates to voting in an election covered by the statute.

d) Originals must be retained

Section 1974 further requires that the original documents be maintained, even in those jurisdictions that have the capability to reduce original records to digitized replicas. This is because handwriting analysis may be difficult to perform on digitized reproductions of signatures, and because the legislative purpose advanced by this statute is to preserve election records for their evidentiary value in criminal and civil rights lawsuits. Therefore, in states and localities that employ new digitization technology to archive election forms that were originally manually subscribed by voters, Section 1974 requires that the originals be maintained for the requisite twenty-two month period.

e) Election officials must supervise storage

Section 1974 requires that covered election documentation be retained either physically by election officials themselves, or under the direct administrative supervision of election officers. This is because the document retention requirements of this federal law place the retention and safekeeping duties squarely on the shoulders of election officers, and Section 1974 does not contemplate that this responsibility be shifted to other government agencies or officers.

An electoral jurisdiction may validly determine that election records subject to Section 1974 would most efficiently be kept under the physical supervision of government officers other than election officers (*e.g.*, motor vehicle departments, social service administrators). This is particularly likely to occur following the enactment of the NVRA, which for the first time in many states gives government agencies other than election administrators a substantive role in the voter registration process.

If an electoral jurisdiction makes such a determination, Section 1974 requires that administrative procedures be in place giving election officers ultimate management authority over the retention and security of those election records. Those administrative procedures should ensure that election officers retain ultimate responsibility for the retention and security of covered election documents and records, and that election officers retain the right to physically access and dispose of them.

f) Retention not required for certain records

Documentation generated in the course of elections held *solely* for local or state candidates, or bond issues, initiatives, referenda and the like, is not covered by Section 1974 and may be disposed of within the usually shorter time periods provided under state election laws.

However, if there is a federal candidate on the ballot in the election, the federal retention requirement of twenty-two months applies.

g) Retention under Section 1974 versus retention under the National Voter Registration Act

The retention requirements of Section 1974 interface significantly with somewhat similar retention requirements of the National Voter Registration Act, 42 U.S.C. § 1973gg-6(i).

The differences between these two provisions are threefold:

First, Section 1974 applies to all records generated by the election process, while Section 1973gg-6(i) applies only to registration records generated under the NVRA.

Second, Section 1974 requires only that records subject to its terms be retained intact for the requisite twenty-two month period, while Section 1973gg-6(i) requires that registration records be both retained and, with certain specifically noted exceptions, be made available to the public for inspection for 24 months.

Third, violations of Section 1974 by election administrators are subject to criminal sanctions, while violations of Section 1973gg-6(i) are subject only to noncriminal remedies.

E. CONCLUSION

I conclude this paper with an editorial printed in the March 19, 2004 edition of Big Sandy News, Eastern Kentucky, concerning a series of election fraud prosecutions in a rural jurisdiction in the Appalachian Mountains of Eastern Kentucky. The editorial comments on the sentencing of the County Judge-Executive of Knott County and a campaign worker for vote buying. It appears here with the permission of The Big Sandy News, whose late Publisher and Editor, Scott Perry, led a strong charge against public corruption and took a proactive role in this difficult and ongoing fight.³³

In Kentucky, county judge-executives are the chief operating officers of county government, and, as such, occupy a position of substantial power. The jury's conviction of Knott County Judge-Executive Donnie Newsome was the culmination of a series of vote-buying cases that were jointly prosecuted by the United States Attorney's Office for the Eastern District of Kentucky and the Public Integrity Section during 2003 and early 2004. The charges arose from a scheme to pay individuals for voting in the 1998 Kentucky federal primary in violation of 42 U.S.C. § 1973i(c). The investigation ultimately resulted in the indictment of 17 defendants. Thirteen of the defendants were

³³ The Big Sandy News, Eastern Kentucky's oldest newspaper and the most widely circulated non-daily in Kentucky, was established in 1885 in Louisa, Ky.

convicted, three were acquitted, and one defendant's case was dismissed on a motion to dismiss made by the government.

Subsequent to his conviction, Judge-Executive Newsome cooperated with the government and received a sentence reduction recommendation under U.S.S.G. §5K1.1. On March 16, 2004, he was sentenced to serve 26 months in prison.³⁴

The following editorial, reprinted here in its entirety, presents a concise and eloquent statement of why the investigation and prosecution of electoral corruption are important law enforcement priorities of the Justice Department.

Vote fraud sentencing sad, encouraging
-- by Susan Allen

Tuesday's sentencing in federal court of Knott County Judge-Executive Donnie Newsome and campaign worker Willard Smith on vote buying charges was both a sad and encouraging day for Eastern Kentucky.

Sad the people of Knott County were effectively robbed of their voting rights by Newsome and others doling out cash to buy a public office.

Sad that, as Federal Judge Danny C. Reeves pointed out, some people in Knott and other counties think that elections are supposed to be bought and the only reason to go to the polls is to get their pay off.

Sad those seeking public office in Knott County, and most assuredly in other counties, target poor, handicapped, addicted and uneducated voters to carry out their scheme to secure public office and a hefty paycheck.

Sad that voters in Knott and other counties have been reduced by years and years of political corruption to truly believing that selling their vote is not wrong, it's the norm.

Sad that Eastern Kentuckians have pretty much been left to the mercy of the political machines which serve as dictators of their lives, from their home towns all the way to Frankfort.

Sad that generations sacrificed their lives and their children's lives to the political bosses for mere bones from their local leaders while now their kids are dying from drug overdoses which, we strongly suspect, are directly tied to the years of iniquity and demoralization.

³⁴ The sentencing judge stated that had it not been for the prosecution's recommendation for a downward departure, he was prepared to sentence Newsome to five years of imprisonment.

Sad that even today some elected officials continue the abuse and either refuse or can't comprehend the impact of their past and current atrocities against their own people.

Sad that Judge Reeves could see and completely understand during just a one week trial the utter hopelessness and apathy in the area people feel regarding the so-called democratic process.

Sad that our state lawmakers have piddled away their time during this legislative session on petty political issues without even proposing laws that would bar convicted felons, especially vote buyers from retaining their offices while appealing their verdicts.

Sad that Donnie Newsome continues to rule Knott County from a jail cell.

Tuesday's events were encouraging in that prosecutors [AUSA E.D. Ky.] Tom Self and [Public Integrity Section Trial Attorney] Richard Pilger were willing to fight the hard battle for the people of Knott County, which hopefully will lead to at least a grassroots effort for people to take back their towns.

Encouraging that some light has been shed on the workings of the dark political underworld which might shock the good people of Eastern Kentucky into action, at least for their children's future.

Encouraging that what might be perceived as a baby step with Newsome's conviction could finally lead to that giant step Eastern Kentuckians must surely be ready to take to recapture control of their own destinies.

Encouraging that federal authorities have pledged to continue the fight they have started to restore to the people the right to govern themselves without dealing with a stacked deck.

Encouraging that Judge Reeves and prosecutors did see that the Knott Countians who sold their votes, in some cases for food, were victims of Newsome's plot and didn't need to be punished further.

Encouraging that there's some branch of government, in this case on the federal level, not shy about taking on political power houses, knowing the obstacles in their way will be many.

Encouraging that Newsome's lips have loosened regarding others involved in similar schemes to buy public office, even though we suspect it has nothing to do with righting the wrongs, only a self-serving move to spend less days behind bars.

Encouraging that maybe, for once, we are not in this fight alone and have a place to turn to for help when we are willing to stand up to the machine.

The feds have helped us take that first step toward getting back what is rightfully ours which has been traded away by others in the past in back room deals. Not only do they need our help, WE need our help.

This time, let's not let ourselves down.

How International Election Observers Detect and Deter Fraud*

September 14, 2006

**Susan D. Hyde
Yale University
Susan.hyde@yale.edu**

**Prepared for presentation at the conference on Election Fraud, September 28-29,
2006, Salt Lake City, UT.**

* The author is grateful to Eric Bjornlund, David Carroll, Avery Davis-Roberts, Clark Gibson, and David Pottie for (informally) answering numerous questions about election monitoring. Anders Eriksson, Vladimir Pran, and Mark Stevens were also helpful. All errors and omissions are my own.

By 2004, international election observers were invited to more than 80% of all elections in the developing world.¹ This trend has brought increased international focus to the practice of detecting election manipulation, as well as the ability of international observers to improve the quality of elections. The comparative experience of international election observers makes clear that there are dozens, if not hundreds, of ways to steal an election. This point has been widely documented (Lehoucq 2003, Schedler 2002) but exactly how international observers influence election fraud remains a subject of inquiry. Few of the many recent pieces on election monitoring have addressed this question for either academic or policy audiences.² How do international observers accurately detect election fraud, particularly when election manipulators have the incentive to conceal their activities from observers? Do international observers have the ability to reduce election fraud?

Within the democracy promotion community, international monitoring of elections is believed to promote democracy by providing an independent evaluation of whether a given election was democratic, detecting fraud when it exists, deterring fraud, and increasing voter confidence in the electoral process. The track record of election observation over the past four decades shows that many groups improved their ability to detect electoral fraud, and these organizations have also become more willing to denounce fraudulent elections. By improving the ability of international and domestic actors to identify whether an election was clean or fraudulent, the practice of international election observation has helped democracy-promoting countries, as well as domestic

¹ Hyde (2006).

² See, for example, Abbink and Hessling (2000); Beigbeder (1994); Bjornlund (2004); Bjornlund, Bratton and Gibson (1992); Carothers (1997); Chand (1997); Elklit and Svensson (1997); Geisler (1993); Kumar (1998); Laakso (2002); Lean (2004); Matlosa (2002); Middlebrook (1998); Pastor (1998); Rich (2001); Santa-Cruz (2005).

democracy advocates, identify and punish those governments that fail to hold clean elections. Some policy-makers have also defended the practice of election observation on the grounds that it improves the quality of elections. Can international observers also deter fraud or increase voter confidence in the process?

This piece first reviews the challenges international observers face in judging the quality of elections and then outlines current best-practice for fraud detection, including advancements in observer methodology such as the parallel vote tabulation, the voter registration audit, media monitoring, and coordination with domestic election observers. It then turns to the potential for fraud reduction or deterrence, and presents the randomization of international observers as a methodological innovation that will aid in the detection and measurement of fraud. Evidence from the 2003 presidential elections in Armenia is presented in order to show one way in which fraud may be detected (and how international observers may reduce fraud directly). In the Armenian election, the incumbent candidate, who was widely assumed to be cheating, performed significantly better in polling stations which were not internationally monitored, thus demonstrating that observers can deter election fraud.

The Challenges of Comparative Evaluation of Election Quality

Although international election observers report on many aspects of an electoral process, sometimes providing technical assistance to domestic observer groups or aiding civic education programs, they are best known for their post-election judgments. In the period immediately following an election, international observers issue a preliminary statement, and implicit in this evaluation is a judgment about whether the election was “clean,” “genuine,” “free and fair,” “democratic,” or “compliant with international

standards.” The process by which observers reach this judgment involves the ability to detect fraud when it exists and the ability to aggregate the various irregularities in a summary judgment on the quality of the election. Even when electoral imperfections are detected by observers, judging the degree to which the observed problems influenced the election is challenging (Elklit and Svensson 1997). It is precisely because most elections experience some imperfections that deciding when an electoral process warrants a negative evaluation is controversial. Overall, it is a process fraught with subjective judgments and sometimes conflicting evaluations by competent groups.

Given that some election fraud is observed during the course of an election, it does not necessarily follow that the election as a whole was fraudulent. Not all election irregularities are equally harmful to an electoral process. It is often difficult for international observers to distinguish between unintentional administrative mistakes and blatant attempts to manipulate the outcome of the election. Most observer organizations would agree that they do not wish to delegitimize an entire process because of a few isolated incidents, nor do they believe that administrative incompetence is as malignant to a democratic election as is intentional manipulation.

Observers have dealt with the challenges of aggregation in a variety of ways. One method employed in the public evaluations of elections is to use more diplomatic terms such as “irregularities” rather than more loaded terms like “fraud” and “manipulation” unless observers are absolutely certain that they have directly witnessed a stolen election. A second strategy used by some groups has been to consider the margin of victory. Fraud is more likely to change the outcome of an election when the candidates or parties are closely matched in popularity. It is in these cases that international observers have the

most confidence that observed irregularities changed the outcome of the election. If an election is not close, and one candidate or party is believed to be popular enough to win by a wide margin, even significant election fraud may not change the outcome of the election. Not all organizations agree with this strategy because even in uncompetitive elections, election fraud can have other negative effects such as decreasing public trust in the electoral process. This phenomenon can have long-term negative consequences by making citizens less likely to participate in the future. However, generally speaking, international observers are less severe in their criticism when it does not appear that observed irregularities would have influenced the winner of the election, even in cases in which irregularities are widespread (Abbink and Hessling 2000).³

Within this context, in which international monitors must offer a summary judgment on the quality of an election based on their observations, they must first be able to detect election fraud accurately.

International Observers and Fraud Detection

Detecting election fraud is a difficult business. Political actors who commit electoral manipulation have strong incentives to hide it from international observers. Other political actors may be motivated to accuse their opponents falsely of cheating. Methods of electoral manipulation vary widely between and within countries. Even as international observers improve their methods of detecting fraud, cheating parties and candidates are motivated to use methods of electoral manipulation that are less likely to be caught by international observers. Because each observer organization employs its

³ One potential exception to this generalization is the work of the OSCE/ODHIR. Because the organization only observes elections in OSCE member states, the organization can hold countries to a more specific set of standards for democratic elections which are clearly outlined and agreed to by all OSCE member states. This allows them to be less affected by the outcome of the election.

own methodology, any general statement about how international observers detect fraud will only be partially accurate for a given organization. Even within the same organization, practices are adapted between countries in order to meet unique logistical and technical challenges. With these caveats, the following section outlines best practice for fraud detection by international election observers.

One might suppose that all individuals or parties planning on engaging in electoral fraud would do their best to conceal their activities from international and domestic election observers. It is likely that this is often the case, and that some forms of election manipulation go undetected. However, the record of past election observation missions clearly demonstrates that blatant election manipulation is often carried out in front of international observers, and that observers have developed a variety of means to detect electoral manipulation throughout the electoral process.

One of the most understated successes of international election observation is that they have been able to detect and document widespread election fraud simply by deploying neutral and well-trained foreign observers throughout an electoral process. Because election manipulation can take place at any point before, during, or after an election, since the mid-1990s it has been best practice for missions to observe the entire electoral process whenever possible, including the registration of voters, the campaign period, election day, and the post-election announcement of results and resolution of disputes. To highlight the many forms of election manipulation detected by observers, Table 1 details signs of irregularities that are often discussed in post-election reports as evidence of election fraud. Table 2 lists signs of irregularities where the intention to manipulate the election is less clear. These more ambiguous irregularities may be

intentional attempts to bias the election toward a particular outcome, but could also be the result of lack of experience with voting, administrative incompetence, or other randomly occurring mistakes that are likely to occur with some frequency even in the most well-respected and legitimate elections.

Detecting Fraud Prior to the Campaign Period

Signs of election manipulation in the pre-campaign period include failures in voter registration, particularly when problems disproportionately target politically identifiable groups; banning of candidates or parties; an inadequate legal structure for election-related disputes; problems with the filing or appeals process; failure to prosecute previous violations of election law; and a politically biased election commission.

How do observers detect manipulation prior to the campaign period? Today, standard practice for organizations like the OSCE/ODIHR, the EU, the OAS, NDI, or the Carter Center is to deploy a pre-election assessment mission well in advance of the election. Although these missions vary widely in scope and timing, the most common purpose is to assess the possibilities for deploying a full-scale mission, determine the major issues surrounding the election and the broader political context, and negotiate with the host country on logistical issues like access to polling stations and the provision of visas for international observers. Without officially granted access to polling stations and other areas deemed relevant by election monitors, observers cannot successfully observe an election. Although prohibiting access by international observers to polling stations and vote tabulation centers on election day is rarely illegal, these actions by the government are often interpreted as signals that the government has something to hide.

Long Term Observers (LTOs) became a part of many election observation missions in the late 1990s. Generally speaking, their job is to observe the entire electoral process leading up to election day. They are deployed throughout the country. For some missions, components of the pre-election period are also observed by larger delegations of short-term observers, such as the joint OAS/Carter Center mission to observe the 2004 Venezuelan recall referendum signature verification process. LTOs watch voter and candidate registration, evaluate the legal framework for the election, monitor the actions of the election administration body, evaluate any perceived or actual bias of election administrators, and assess the preparations for the election throughout the country.⁴ These qualitative judgments are rarely aggregated or scored, but provide important context when observers evaluate the electoral process as a whole. When significant problems are noted in the pre-election period, observers issue statements suggesting that the problems be addressed. Often, simply calling attention to problems brings about resolution. In a handful of cases, controversy over the inadequacy of pre-election preparations has resulted in the postponement of elections, such as in Guyana 1992, Liberia 1997, and Venezuela 2000.

One of the most widespread problems in the pre-election period involves the registration of voters. Because the population of eligible voters is constantly shifting due to newly eligible voters, deaths, and migration; keeping voter registration accurate is a task that involves significant administrative investment even when there are no overt attempts to manipulate the election. Regulations for voter eligibility and requirements for registration vary widely. However, inaccurate voter registration lists can serve to disenfranchise large numbers of voters, can be used by the government to boost their own

⁴ See, for example, the *Handbook for European Union Election Observation Missions*.

vote share through the use “ghost voters,” or to decrease their opponents’ abilities to register their own voters.⁵

Measuring the accuracy of a voter registration list is difficult, particularly when registration is voluntary. International and domestic non-partisan election observers have used a voter registration audit in order to more precisely measure whether existing lists are up to date. The most comprehensive method used to date involves a “two-way” audit which is conducted by comparing the accuracy of information in two different random samples of the voting population (NDI 2004). This form of voter registration audit is intended to catch problems with ghost voters, problems with eligible voters who had difficulty registering, and individuals who are registered but are not aware that they are registered.

In order to determine how many voters are included in the voter list but are no longer eligible voters, a statistical sample of names and addresses is taken from the voter register and is then checked via face-to-face interviews for accuracy (called a “list-to-voters” comparison). In order to determine the rate of registered voters relative to the population of eligible voters and to determine whether voters who believed they are registered are actually registered (and vice versa), a statistical sample is also taken of all eligible voters. This “voter-to-list” comparison interviews eligible voters to determine whether they believe they are registered and compares this information to the actual voter register. This procedure is expensive and time consuming, but in relevant cases can provide an important check on the accuracy of a voter register (NDI 2004, fn 7).

⁵ The term “ghost voters” is most commonly used to refer to names on the voter register who do not correspond to living eligible voters. The most commonly used ghost voters are previously registered voter who are deceased.

Detecting Fraud During the Campaign Period

The campaign period can reveal other blatant attempts at manipulation including intimidation at political rallies, vote buying, distribution of patronage, jailing of political candidates and activists, and attempts by employers to require employees to vote for their favored candidate. Observers have been able to document these electoral abuses simply by deploying well-trained and neutral representatives throughout the country. Observers have often directly witnessed fraud during the campaign period, and in some cases observers have investigated and attempted to verify reports of attempts to manipulate the election prior to election day.

During the campaign period the playing field can be leveled or tilted further to benefit a particular party. Given that all political parties and potential candidates were given the opportunity to run (within the confines of the country's electoral rules), voter access to information about candidates is essential to a democratic election. Open competition is limited by a censored press (either officially censored or self-censoring), the use of state resources to campaign for the incumbent candidate or party, intimidation of political activists, patronage or money politics, or politically targeted violence or threats of violence. Depending on voter interest and normal channels of political communication, these issues vary in the degree to which they limit open political competition. However, because they can have a substantial effect on elections, the campaign period is closely watched by international observers. Individual missions rely primarily on the reports of LTOs deployed throughout the country. They may also utilize reports from domestic civil society groups or representatives from each political party.

Some observer organizations monitor the media, or coordinate with a domestic non-partisan organization engaging in media monitoring (Norris and Merloe 2002). Methods of media monitoring vary, but can include precise records of time given to each candidate, the relationship between state-controlled and private media, and the accuracy of paid advertising and political reporting. Very basic media monitoring consists of general impressions of coverage and fairness. In countries that lack a free and independent media, media monitoring can reveal the extent to which the communication of information to voters has been compromised. In extreme cases, opposition parties are all but prohibited from access to the news media and face significant hurdles in communicating with voters. Documenting media access and time can sometimes reveal significant barriers to democratic elections.

Election Day

Detailing all of the forms of election day fraud that have been detected by international observers would be a major undertaking and idiosyncratic to individual elections. The record clearly demonstrates that international observers are often able to witness blatant attempts to manipulate elections simply by traveling from polling site to polling site on election day. Somewhat surprisingly to political scientists, individuals engaging in election manipulation often make little attempt to hide their efforts from international observers.

On election day, short-term observers (STOs) collect qualitative and sometimes quantitative information on practices inside and around voting stations. They are prohibited from interfering in the process in anyway. STOs record their observations on standardized forms, which are then compiled by the observation mission's central office.

Observers usually travel between polling stations on election day in order to increase the number of polling stations that they may visit. Many observations that are collected are impressionistic, and are therefore difficult to aggregate. Direct observations of vote buying or voter intimidation do not always form part of a larger pattern. STOs typically collect information on the environment inside of the voting station, including the availability of materials and whether the physical arrangement of the polling station protects the secrecy of the ballot; the provision of materials and the security of unmarked ballots and ballot boxes; the presence of individuals inside polling stations (and whether they are authorized to be there); the conduct of election officials; the flow of voters (and the rejection of eligible voters); reports from domestic non-partisan observers and political party witnesses; the conduct of the voters and their compliance with electoral regulations; and the environment surrounding polling stations, including potentially intimidating individuals or interactions between voters and vote-buyers.

International observers also gain valuable information about election day by coordinating with domestic observers. Now viewed as complements rather than substitutes, international and domestic observers have developed slightly different approaches to monitoring elections. Domestic election observers are considered by some to be better able to evaluate elections because they are familiar with local practices and culture, and are typically able to deploy significantly more observers on election day (NDI 1995). However, they are not able to generate the same international media coverage of their evaluation of the election. It is also possible that individuals are more or less likely to attempt to manipulate the election in front of international observers than in front of domestic observers, but this is an empirical question that has not yet been

tested. Neutral, non-partisan domestic election observers most commonly deploy stationary election observers who remain in the same polling station for the entire election day. Although domestic election observers vary in their efficacy and commitment to non-partisan election monitoring, well respected domestic observers are an important check on election fraud, and can be a source of information for international observers. When visiting a polling station, international observers note the presence of domestic observers and may record domestic observers' observations of the process prior to the arrival of the international observers. Within problematic polling stations, they can help document the extent of problems that occurred throughout election day.

Although observers often catch many forms of election day irregularities, there is still room for international observers to improve election day observation. Observers may be able to be successful in detecting election day manipulation even when they are unable to observe it directly. In the final section of this paper I detail a proposed methodological improvement to election day observation. First, the next section discusses the tabulation of election results, one of the components of the electoral process in which international observers have been most successful in catching election fraud.

Tabulation of Results

STOs are typically deployed at the conclusion of election day to observe the first stage(s) of the vote tabulation process. To the extent that it is possible, observers report on the transparency of the ballot counting process, the presence of political party agents, the impartiality of the election officials, the ability of voters to access the results, the secrecy of the vote, the adherence to voting regulations, and the general atmosphere surrounding election day. Observers have witnessed signs of fraud such as pre-bundled

and uniformly marked ballots being removed from ballot boxes and counted. They have also found evidence of ballot box tampering such as broken seals, and uncovered “missing” ballot boxes. In several cases they have witnessed the theft of ballot boxes, as well as the intentional destruction of valid ballots.

Most notably, the parallel vote tabulation (PVT) has become one of the central means by which international and domestic observers detect fraud during the counting process (Estok, Nevitte, and Cowan 2002). In a PVT (also called a “quick count” when it is used to provide an early prediction of the election results) the tallies from a random sample of individual polling stations or vote counting centers are observed directly and the results are immediately communicated to a central location. Because the sample is random, and observers are usually able to see the actual counting of the ballots and conduct their own tally, a PVT provides an estimate of the outcome of the election. A PVT differs from an exit poll because it relies on direct observation of the vote count rather than on interviews with voters.

A PVT is preferable to exit polling in countries in which voters have the incentive to misrepresent their vote to pollsters or are unwilling to answer questions outside of the polling stations (especially if individuals that refuse to answer are disproportionately from one demographic or political group). In many cases in which both have been conducted, the results are largely similar. During the 2004 recall referendum in Venezuela there were huge differences between the PVT and the exit polls, resulting in a widely publicized controversy (Economist 2004). However, international and domestic observers are more likely to promote a PVT over an exit poll whenever possible because there are fewer means by which the results may be compromised.

In the majority of cases, parallel vote tabulations match the official results and further legitimate the electoral process. In a number of notable cases, PVTs have exposed election fraud, or are believed to have eliminated the possibility that the losing incumbent could engineer a last-minute theft of the election. To name a few examples, PVTs conducted for elections in the Philippines 1986, Chile 1988, Panama 1989, Nicaragua 1990, Zambia 1991, and Georgia 2003 are believed to have played a large role in creating the conditions for transfers of power (Garber and Cowan 1993).

Recently, the trend has been for domestic non-partisan observers to conduct most of the PVTs, often with the technical assistance of international organizations. The biggest drawback of PVT's is that they can only catch and deter manipulation that takes place during the counting and aggregation of votes. Other forms of election manipulation that may have been used on or before election day would go undetected by a parallel vote tabulation. For example, widespread vote-buying schemes would inflate the vote for the cheating candidate(s) during election day without raising any cautionary flags during the PVT process. Similarly, intimidation of voters and targeted voter suppression efforts would also directly influence the vote totals, but would not show up as fraud in a PVT.

In order for a PVT to be conducted, observers must have access to the site of vote counting, and to an accurate list of vote counting centers (most often polling stations). A PVT cannot be conducted without observer access to the vote counting process. The move toward electronic voting, particularly those forms of electronic voting without paper trails, creates a serious challenge to PVTs and any independent verification of the election results. If a paper trail is provided, parallel vote tabulation should still be possible.

Observers must also have access to a complete list of vote counting centers. If observers do not have access to a list of vote counting centers, there is more doubt cast over the accuracy of the PVT, although an accurate PVT may still be possible by sampling across other units such as neighborhoods, as in the 2004 presidential elections in Indonesia.

In addition to the PVT, some international observer mission have employed statisticians to monitor vote returns and turnout for suspicious patterns. Turnout that exceeds 100% of eligible voters in polling stations, impossibly large jumps in turnout over the course of election day, or politically competitive areas in which one candidate receives close to 100% of the vote draw attention. This form of fraud detection during the vote tabulation process remains less systematic, but is likely to become a more sophisticated and more common part of election observation missions in the future.

Acceptance of Results and Post-Election Dispute Resolution

The conclusion of an election observation mission depends on the official announcement and certification of results. Whereas in the early period of election observation, delegations left the country soon after election day was complete, current best practice is for delegations to remain in the country until the official results are announced and certified. Some missions have deployed long-term observers to closely monitor the dispute resolution process, such as in Ethiopia 2005. The mechanics of this process vary widely, but most missions focus on the acceptance of results by all parties, the use of official channels for dispute resolution, and the impartiality of the dispute resolution process.

International Observers and Fraud Deterrence

Thus far this paper has focused on how international observers may detect election fraud. International observers can also play another important role in elections by deterring attempts to manipulate the election. I now turn to a discussion of how fraud detection and fraud deterrence are related, and advocate the randomization of STOs to polling stations during election day. Randomization is a small methodological change from existing practice that will result in two improvements in fraud detection and fraud deterrence. First, randomization allows measurement of whether (and when) observers deter election day fraud. Second, and related to the first point, randomization will result in improved detection of voting fraud, particularly when election day fraud is concealed from international observers while they are present in polling stations.

It is well established in a number of experimental studies that humans often behave differently when they know they are being watched.⁶ Individuals within the election monitoring and democracy promotion community have extended this concept to suggest that one of the positive effects of international election monitors is that they reduce the rate of election fraud. Advocates of the PVT argue that the well-publicized existence of a PVT can deter attempted manipulation in the vote count (Garber and Cowan 1993). Many remain skeptical that observers actually influence the behavior of domestic political actors. Part of the reason that the question of whether international observers reduce election fraud remains unanswered is due to an endogeneity problem. Knowledge that international observers will be present at an election may prevent fraud from being attempted by political parties and candidates, but in hindsight, it is extremely

⁶ Commonly called the “observer effect” in which people behave differently when they know they are being observed. It has also been referred to as the “Hawthorne effect”, but this reference is ambiguous.

difficult to distinguish between an election that was clean because international observers were invited and an election that would have been clean regardless of their presence.

However, pre-election prevention of fraud is only one of several means by which international observers can deter fraud. It is also possible that international observers fail to prevent fraud ahead of the election, but that they nevertheless reduce fraud on election day by visiting hundreds of polling stations. Because individuals committing fraud, intimidation, or other electoral improprieties may not wish to carry out their intended actions in the physical presence of international observers, the fact that observers are present in a number of polling stations on election day may reduce the level of vote manipulation in those polling stations.

If observers visit a randomly selected sample of polling stations during the course of election day, the average election outcomes can be compared between the group of internationally monitored polling stations and the group of unmonitored polling stations. If observers reduce fraud directly on election day, there should be a statistically significant difference between observed and unobserved polling stations.

Unlike pre-election fraud prevention, this form of fraud reduction would not eliminate election day fraud. If there are enough observers relative to the size of the country, election day deterrence may translate into a sizable reduction in the planned fraud that is actually carried out, but perhaps more importantly, if fraud is occurring in an election but being concealed in those locations visited by international observers, this deterrent effect may compromise the ability of international observers to observe fraud directly.

The second positive effect of randomization is that observers can detect election day manipulation even if it is concealed from international observers. If a candidate or party does perform significantly better, on average, in unmonitored polling stations, this is a relatively unambiguous sign election manipulation was concealed from observers while they visited the polling stations.

From the perspective of observer missions, another substantial benefit of randomization is that if observers are randomly assigned and there is no observable difference in vote share or turnout between observed polling stations and unobserved polling stations, observers can be more confident in generalizing their observations to the entire electoral process. In other words, if observers are not deterring fraud on election day (and thereby recording upwardly biased election day observations of the electoral process), randomization of observers generates a representative sample of polling stations. The qualitative observations from a representative sample of polling stations can then be generalized to the entire process within a given confidence level and margin of error. Without randomization, international observers can not determine how well the observations they gather from (non-randomly selected polling stations) are representative of the entire electoral process.

The effect that observers may have is unlikely to be uniform across all elections. To illustrate this point, in an election in which election fraud is planned and international observers are invited, there are at least four types of election scenarios that could take place. In the first type of election, international observers witness a clean election and have no deterrent effect on election day fraud, but fraud occurs anyway, either in a manner that they do not notice, or before and after they visit a polling station. In the

second type of election, fraud is planned for election day, observers evaluate a fraudulent election, and have no deterrent effect on fraud (i.e. they do not reduce fraud at the polling stations they visit). In the third type of election, observers reduce fraud in the polling stations they visit but do not observe it directly. In this case, they have a localized deterrent effect on fraud. In the fourth type of election, election day fraud is planned, observers see some fraud, but also have some deterrent effect. In this case, local officials and party agents conduct a partially successful attempt to conceal fraud. Four potential outcomes are represented in Figure 1.

Figure 1: Potential Outcomes Given Fraud Detection or Fraud Deterrence

		Fraud Detection	
		Fraud Not Observed	Fraud Observed
Fraud Deterrence	Fraud Not Deterred	Type 1 Well Concealed Election Day Fraud While Observers are Present	Type 2 Blatant Manipulation
	Fraud Deterred	Type 3 Clean Election in Observed Polling Stations	Type 4 Partially Deterred Fraud

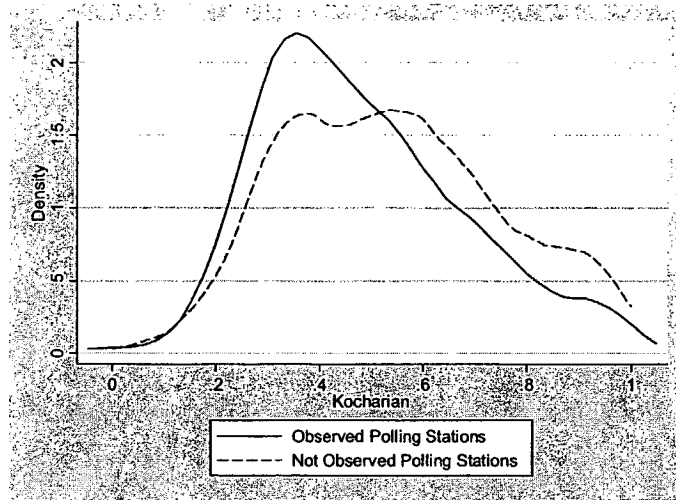

There is one additional type of election in which no fraud is planned and observers witness a clean election. They have no deterrent effect on fraud because there is none to deter. Given that fraud occurs on election day, the four scenarios in Figure 1 highlight the difficulty that observer missions face in their joint mandate to accurately evaluate elections and deter fraud. Particularly in the first, third, and fourth types of elections, if observers deter fraud, their ability to gauge the level of fraud and the degree to which it influenced the outcome is compromised. To further complicate matters, an election in which no fraud is intended or carried out may look to international observers

like Type 1 or 3, and observers could misjudge the election, even when election day fraud is not occurring. In practice, the coordination between international observers, domestic election observers, and political party witnesses make this type of confusion less likely. However, improved methodology by observers, specifically the random assignment of observers to polling stations on election day, can help election observer missions determine whether fraud occurs, particularly when election fraud is not blatant.

For example, Figure 2 shows the distribution of votes for the incumbent candidate in an actual election. The solid line shows the vote share in polling stations which were visited by international observers. The dashed line represents the vote share in polling stations that were not visited. Observers were assigned in this election using a method that is not common, but that is very close to random assignment of observers to polling stations. Randomization⁷ is equivalent to holding all other variables constant that may influence the incumbent's vote share. In this first round of the 2003 presidential elections in Armenia, the incumbent presidential candidate earned an average of 54.2% of the vote, but earned only 48.3% of the vote in polling stations that were visited by international observers. There were widely documented instances by international observers of violations by the incumbent candidate and his supporters, including ballot box stuffing, intimidation, and vote buying. However, even though international observers in this case directly observed election day fraud, Figure 1 suggests that they were also able to reduce the amount of election fraud which occurred on election day. This would be consistent with a "Type 4" election described above.

⁷ Or in this case, approximating randomization. This empirical test is described in detail in Hyde (2006), Chapter 7.

Figure 2: Kernel Density Plot of Incumbent Vote Share

This example suggests that observers can reduce election day fraud, but how this evidence can be generalized to other countries is not clear. It is possible that it was an atypical example. International observers should be randomly assigned to polling stations in the future so that observers will be able to measure whether their presence reduced fraud, whether their findings are generalizable to the entire election process, and whether election day fraud was successfully concealed in their presence. Thus far, randomization has only been attempted with these objectives in the 2004 Indonesian presidential elections, which turned out to have only minimal election day problems.⁸

Observers may also be able to better coordinate their work with domestic observers and other observer organizations. If all domestic and international observers were randomly assigned to polling stations, then coordination between their efforts could be significantly improved.

⁸ Observers have been randomly assigned for other purposes in several other cases, including in the 2006 Palestinian elections.

Conclusion

International election observers have dramatically improved their ability to judge the quality of elections, both in their methods to detect fraud and in their ability to aggregate the information they collect into an overall evaluation of elections within a wide variety of circumstances.

Extensive long-term qualitative monitoring of the election process, voter registration audits, media monitoring, the widespread presence of short term observers on election day, the parallel vote tabulation, and the potential randomization of observers during the voting process on election day are all methods used by international observers to detect fraud and to increase their ability to make summary judgments of elections. Because those engaging in election fraud will always have the incentive to find methods of manipulating the election that are less likely to be caught, observers will face continuing challenges to their mandate to evaluate election quality. Their presence may also deter attempts to manipulate elections, or reduce the rate of planned election day manipulation, as in the 2003 Armenian presidential elections. International observers and domestic non-partisan observers practice similar methodologies, and are believed to have similar effects on election quality. Rigorous, unbiased, and well-trained observers have become an integral part of elections throughout the developing world. Developed democracies are also beginning to recognize the advantages that officially accredited impartial observers may lend to an electoral process, but it remains to be seen whether these practices will become standard in all elections, including those that take place in long-term developed democracies.

Table 1: Examples of Unambiguous Signs of Election Manipulation

Pre-Election Period

- 1) No registered opposition candidates
- 2) Bans on candidates or political parties
- 3) Refusal to update inaccurate and biased voter registration lists
- 4) Gross misuse of state resources to support incumbent
- 5) Restrictions on universal adult suffrage for politically targeted populations
- 6) Campaign related violence and intimidation
- 7) Obviously biased campaign finance
- 8) State controlled media
- 9) Intimidation or harassment of media
- 10) Other unreasonable barriers to candidates wishing to communicate with voters
- 11) Blatantly partisan election commission
- 12) Selective use of legal sanctions against likely candidates
- 13) Jailing of candidates or political party officials

Election Day

- 1) Insecure ballots
- 2) Broken seals on ballot boxes
- 3) Multiple individuals inside voting booths
- 4) When ballot boxes are transparent: multiple ballots folded together, pre-marked ballots not in ballot box, too many ballots relative to number of voters checked on registration list, too few ballots relative to number of voters on list
- 5) During count: lack of transparency to international observers
- 6) Ballot boxes present outside of polling stations
- 7) Large collections of voter identification, either on election day or prior to election day
- 8) Carousel voting (also called the Tasmanian Dodge)
- 9) Exchange of money or goods following voting
- 10) Buses of voters from neighboring areas (multiple voting)
- 11) Multiple ballots given to one individual
- 12) Voters with proper identification turned away
- 13) Voters with proper identification listed as deceased
- 14) Deceased voters listed as having voted (usually reported through relatives and documented)
- 15) Systematically late or missing materials in opposition strongholds
- 16) Violence or intimidation against voters
- 17) Intimidating crowds in or outside of the polling station, particularly when their presence violates the election law
- 18) Attempts to influence voter choice inside the polling station
- 19) Interference by the military, police, or other unauthorized individuals
- 20) During the count, falsifying results
- 21) Arbitrary or inconsistent invalidation of votes cast
- 22) Stolen ballot boxes
- 23) Extra ballot boxes
- 24) Destruction of ballots

Announcement of Results

- 1) Parallel Vote Tabulation which differs significantly from official results (determines winner within margin of error)
 - 2) Changes in official results between those recorded by observers on election day and those published
 - 3) Suppression of official results
 - 4) Refusal by losing candidate to accept the results
 - 5) Large discrepancies between number of ballots distributed and official tallies of votes cast
 - 6) Government violence against protestors or bans or protest
-

Table 2: Examples of Election Irregularities when Intention to Manipulate is Unclear

Pre-Election Period

- 1) After international observers are invited, attempt to place restrictions on them
- 2) Barriers in the accreditation process to domestic election observers
- 3) Unbalanced media time for candidates
- 4) Election laws that favor one candidate or party
- 5) Controversial interpretation of election laws
- 6) Lack of an independent judiciary
- 7) Lack of transparency in election planning process
- 8) Lack of a procedure for filing election-related complaints
- 9) Lack of funding for election
- 10) Lack of training for polling station officials
- 11) Excessive requirements for candidate registration
- 12) Selective implementation of the law for particular candidates or parties
- 13) Lack of transparency of voter registration list
- 14) Voting practices or ballot design that present a barrier to voting for certain groups (illiterate, linguistic minorities, etc.)
- 15) Campaign materials near the polling station
- 16) Poorly designed voting booths that fail to ensure secrecy of the ballot
- 17) Election commission with unbalanced partisan representation

Election Day

- 1) Underage voting
- 2) Problems in identification verification
- 3) Problems with indelible ink
- 4) Family voting
- 5) Partisan polling station officials
- 6) Unbalance in political party witnesses or lack of political party witnesses
- 7) Handing out of ballots to individuals who are not checked off the voter list or otherwise recorded
- 8) Missing election materials
- 9) Disorganized polling stations
- 10) During the count, lack of political party observers and/or domestic observers
- 11) During the count, filling out official tallies in pencil
- 12) At any period, unsecured ballot boxes
- 13) Inconsistencies in interpretation of proper election day procedures

Post-Election Period

- 1) Slow legal system to deal with post-election disputes
 - 2) Post-election protest
-

BODY:

We - the former Libertarian and Green candidates for governor and attorney general - may disagree earnestly on many issues, but on this we both agree: If votes are not counted fairly, then all political rights are threatened.

We are terrified because we know that the voting process is being corrupted.

Despite valid citizen distrust, 30 of Colorado's county clerks are once again forcing voters to vote only by mail ballot. Election officials won't count a ballot if it gets lost in the mail; it arrives too late; the signature is missing; your signature looks different from the way you signed it at some earlier time (assuming that signatures are examined at all); and the like. In some cases, election officials will create a new ballot to replace yours.

Fraud is easy. Mail and absentee ballots get stolen as they make their way from the county clerks to your hands and back again. As National Public Radio reported in a story called 'Vote Fraud in Dallas' (www.npr.org), a Texas judge blamed mail-in voting for vote fraud.

Because your name is on the envelope and your party affiliation is public record, unscrupulous people can easily conclude how you probably voted - and intercept your ballot. With absentee ballots, it is legal for 'any person of the voter's choice' to pick up voted ballots for delivery to the clerk.

In 2000, a Castle Rock citizens' group challenged the results of a 1999 town council recall election. Among other things, the group alleged that election officials abused the process by differentiating between absentee ballots provided to recall supporters and ballots provided for supporters of the council.

A judge later ruled that problems were 'good-faith mistakes,' not fraud. But, the situation highlighted the security and privacy problems with absentee and all mail ballots.

Even if your ballot makes it to the ballot box without incident, it might not matter. Tens of thousands of insecure ballots are going to be floating around for people to pick up and vote. Nobody really knows who voted these ballots, as there are no witnesses. An absentee voter is not even required to have the ballot sent to his registered address.

016656

Someone can apply for an absentee ballot on your 'behalf,' have it sent to a post office box, vote on it and send it back, with you being entirely unaware.

Activities qualifying as criminal offenses at the polling place are, ironically, entirely legal with absentee and mail-in ballots. For example, it is a crime to even mention a candidate's name within 100 feet of a polling place. Also, you have only a few minutes to mark your ballot, and you do so in utter privacy. By law, no one but the voter can handle a voted paper ballot in the polling place prior to the vote being cast. With absentee and mail-in ballots, however, privacy and security are completely compromised. Groups can call members to 'vote together.' People can ask spouses, 'How shall I vote?' and mark their ballots accordingly. And someone can come to your door while the ballot is in your possession and lobby for your vote. The opportunities for intimidation and vote-selling are obvious and troubling.

It is impossible to guard against these abuses. Consider, for instance, Jeep Campbell, a candidate running for Boulder City Council. In a normal election, he could recruit friends to spend a day being poll-watchers. The election would be over and done with in a day. With mail-in balloting, the candidate and his friends will have to spend three or four weeks watching the election process as well as every single mailbox in the city of Boulder. Friends can't afford to do that. Only the rich and/or politically connected can.

Since the election fiasco in Florida in 2000, there has been an enormous push to install electronic voting machines. Voters, though, should understand that whatever the shortcomings of paper ballots, they are a physical thing that can be held and looked at. There is no such guarantee with electronic voting.

In Robert Heinlein's science-fiction novel, 'The Moon is a Harsh Mistress,' the self-aware computer announces, 'Eighty-six percent of our candidates were successful - approximately what I had expected.' Obviously, the computer rigged the election.

One author of this piece has been a computer programmer for nearly 35 years, and knows that it takes superhuman perseverance and skill to read computer programs to see that they are correct. Government has difficulty being competent - much less superhuman.

The other author is a lawyer. Experience has shown her that it is extremely difficult to prove vote fraud even when it is obvious that it has occurred.

The system is set up to count as many ballots as possible and look the other way when it comes to preventing fraud and abuse. Our representatives are looking for political legitimacy, no matter the cost in freedom and honesty.

We all know about computer viruses. Many hackers develop these viruses for fun. Imagine the effort that will be expended to influence elections. Someday soon, some hacker could gloat to his friends, 'Hey, I just got the Green Party candidate for attorney general and the Libertarian candidate for governor elected in Colorado!'

Terrifying.

Officials await election investigation

CA

Thursday, March 18, 2004

By Kollin Kosmicki/Staff Writer (kkosmick@freelancenews.com)

San Benito Co

As elections officials continue a routine canvass of the historically tight District 5 results, outside investigators haven't stepped foot in the Elections Office for a pending scrutiny into allegations of improper voting.

And even though county officials hope for a conclusion to the controversy soon, head elections official John Hodges doesn't expect anyone examining his office's documents until he's certified the votes, he said.

According to state law, that certification must happen by March 30, after which any resident or group has five days to request a recount.

Jaime De La Cruz has unofficially defeated incumbent Bob Cruz by 10 votes. But speculation has arisen regarding absentee ballots and suspicions over voting rights violations toward Spanish-speaking residents.

The local branch of the League of United Latin American Citizens (LULAC) has hired two private investigators. And the county Board of Supervisors has requested an investigation by the District Attorney's Office and the state.

Hodges said investigators rummaging through his office would "disrupt the canvass." That process includes hand-counting all ballots in one precinct of each district - and it is required after every election.

"And boy I'm looking, looking for anything," Hodges said. "Because I don't want any surprises."

He knows, however, there will be some type of recount or challenge to the contentious race, he said. It's just a matter of when, and he's advocating that potential outside involvement wait until after a certification.

The Board's hired lawyer Nancy Miller doesn't know a precise timeline, she said, but she expects some level of action soon.

"I don't think we're going to wait," Miller said. "And we shouldn't wait."

LULAC's local investigators, Dennis Stafford and Richard Boomer, have already requested access to Elections Office documents, Hodges said. They wanted to start a recount immediately.

But, Hodges said, the Elections Code "is pretty specific" about the process for a recount.

"They wanted to go through the process that you normally would go through after the canvass has been certified," Hodges said.

Despite Cruz's relationship with other supervisors and his wife's active involvement in LULAC, the two-term incumbent said he's "just staying in the background." He declined further comment.

Questions first arose regarding improper voting procedure for returning absentee ballots.

Voters are allowed to designate a family or household member to hand in their ballots at the Elections Office. Eight ballots in District 5 were returned by friends or other non-relatives, according to a log book signed by designees in the office.

Those ballots can't be canceled, though, because names are separated from ballots during the counting process.

Aside from a recount, the focus of any investigation would likely include a thorough examination of signatures on absentee ballots - to make sure voter fraud wasn't committed, Hodges said.

District Attorney John Sarsfield, who is on vacation this week, did not return phone calls placed to his cell phone Wednesday. So it is unclear if or when his office plans to start inspecting the issue.

Meanwhile, in District 1, Don Marcus unofficially defeated his two challengers and narrowly avoided a November runoff by gaining 50.1 percent of the vote - eight more votes than he needed.

The No. 2 candidate in the race, Marci Huston, was in Israel this past week so she only recently learned of the speculation over the March 2 election.

She said she hasn't considered whether she might request a recount in District 1.

"I hear all kinds of rumors, and I'm just waiting to see what happens," she said.

Woman charged with violating election law

04/30/03

TOM GORDON
News staff writer

A Bullock County woman has been charged with violating Alabama election law by removing a voter's absentee ballot from her mailbox during last year's primary runoff.

A county grand jury last week issued an indictment charging Mary Sue Martin of Union Springs with hindering Lisa Calloway's right to vote. If convicted, Martin could be fined no less than \$50 nor more than \$500.

District Attorney Boyd Whigham said Martin has denied any wrongdoing and will be arraigned next week before Circuit Judge Burt Smithart.

"Taking somebody's ballot out of a mailbox is a no-no," Whigham said.

Martin was a supporter of Bullock County Commissioner Alfonsa Ellis, who faced challenger Terry Jackson in the June Democratic primary and runoff, and defeated him with the help of absentee votes.

Whigham said that during the runoff campaign, Martin removed Calloway's ballot from Calloway's mailbox, then returned it to her when Calloway confronted her. Before the grand jury, one of Calloway's neighbors testified that she saw the ballot being removed from the mailbox. A friend of Calloway's testified that she went with her to get the ballot back from Martin.

Calloway later cast the ballot in the runoff election.

Bullock County is in the eastern Black Belt, and nearly 28 percent of the votes cast in its June 4, 2002, primary elections were absentee. That percentage was the highest in the state.

HIALEAH

Candidates question results

Earlier this week, a candidate in Hialeah's Nov. 4 election sued to have all absentee ballot votes thrown out.

Now, another candidate wants more absentee votes included.

BY MICHAEL VASQUEZ
mrvasquez@herald.com

Hialeah City Councilman Julio Ponce Jr. on Friday became the second candidate in the city's Nov. 4 election to file a legal challenge to the results.

Ponce, who lost his seat to challenger Cindy Miel by 45 votes, says Hialeah City Clerk Dan Deloach had no legal right to disqualify about 100 absentee ballots on election night.

Deloach, in effect, acted as a one-man canvassing board when two circuit court judges who had agreed to form the canvassing board did not show up. One judge arrived the next day to certify the results, Ponce's lawsuit says.

Ponce lost by 698 votes at the polls, but held nearly a 3-1 advantage in the absentee vote tally, as did the two other incumbents up for reelection. All three incumbents are allies of Mayor Raul Martinez.

If those disqualified absentee votes are counted, Ponce said, "it might take me over the hump and I might win this election."

The city clerk disqualified 21 absentee ballots as too late and 81 ballots as not meeting legal requirements, the lawsuit says. Many of the "illegal" ballots lacked necessary signatures or addresses, according to Deloach. If that is true, former U.S. Attorney Kendall Coffey predicted "an uphill battle" to get them counted.

Coffey led the successful challenge to overturn 1997 Miami election results tainted by absentee ballot fraud.

Absentee ballot fraud is at the center of the other lawsuit filed in connection with last week's Hialeah election. Challenger Adriana Narvaez received more votes at the polls but lost to incumbent Eduardo "Eddy" Gonzalez due to Gonzalez's strong advantage in absentee ballot votes.

Narvaez's suit alleges city leaders coerced residents of Hialeah public housing buildings, many of them elderly, to vote absentee for the three incumbents. Michael Pizzi, the attorney representing Narvaez, called Ponce's lawsuit "mind-boggling."

"Their solution for an absentee ballot process that was rife with abuse is to count more absentee ballots," Pizzi said.

Ponce's lawsuit also asks for a new election if an adequate recount of both machine and absentee votes is not conducted. County elections officials, who administered the Nov. 4 election, say they have already done all recounts required by state law.

ELECTION 2002

92

State attorney probes ballots

By David Damron
Sentinel Staff Writer

October 31, 2002

A suspected ballot-stuffing scheme aimed at Hispanics prompted Orange-Osceola State Attorney Lawson Lamar to launch an absentee-ballot fraud investigation Wednesday.

Nearly 100 "questionable ballot request" complaints have been received recently within the two counties, leading investigators to suggest that hundreds or thousands of absentee ballots might be cast under false pretenses.

The fear is that any number of possibly illegal ballots could be dumped in Orange and Osceola election offices on Nov. 5, potentially swaying election results, state attorney spokesman Randy Means said.

"We know something is going on. And, we know someone is trying to corrupt the vote process with absentee ballots," Means said. "There's no doubt in our mind that there's some campaign . . . trying to cast an illegal ballot."

Officials want area residents to contact county elections offices before 9 a.m. Friday if they have any concerns that their identity or voter registration data or address was used to illegally obtain an absentee ballot.

That's when Orange County election officials begin tabulating absentee ballots. After that, it's too late to object to any suspicious absentee ballot -- it's already been processed.

So far, the potential ballot-rigging scheme appears to involve only Hispanic victims, investigators say.

Possible ballot-scam scenarios involve mailing in falsified registration forms or altering re-registration forms that legitimate voters filled out, officials said. Also, creating new fake voters or steering absentee-ballot requests to the wrong address could allow illegal ballots to be cast, officials said.

Means would not say which campaigns or individuals were thought to be involved, but he said it was just one state race generating complaints.

But Wednesday, state attorney investigator Roger D. Floyd sent letters to state Senate District 19 candidates Tony Suarez, a Republican, and Gary Siplin, a Democrat, related to similar complaints about illegal changes to party affiliations on voter registration cards.

Copies of the state attorney correspondence were obtained Wednesday by the Orlando Sentinel through a public-record request into the Orange County elections office.

According to the letters, investigators began receiving complaints that supporters for each campaign may

016663

have intentionally changed party affiliations on voter registration cards.

Both allegations were related to pre-Sept. 5 primary registrations, when a wrong party affiliation could bar a voter from voting in a closed primary race.

In Siplin's letter, Floyd said that a woman complained she had put an "X" in the "no party affiliation" spot on her registration form when she filled it out. But when she received her voter card in the mail, it said she was Democrat. She suspects someone later put a check mark in the Democratic box, the letter said.

Siplin said, "I don't know anything about it," and directed calls to his attorney, Allen "A. Daniel" Holland, who said more information and proof of the actual card was needed to respond to the complaint. He had not seen the card.

The State Attorney's Office requested Siplin turn over a list of "front desk staff" who worked at his 725 S. Goldwyn Ave. office from July 1 to Aug. 4.

"Mr. Siplin is going to cooperate 100 percent to supply the names of volunteers who worked on his staff" during that period, Holland said, adding that someone could easily lie about a change to cause Siplin embarrassment.

The timing of the complaint, right before the election, further raises concerns, Holland said.

The Suarez complaint letter outlines similar party-changing allegations that could have occurred at two "functions attended by your staff."

Investigators want to know which Suarez staffers worked registration events at the Wal-Mart at 3838 S. Semoran Blvd. on Aug 25, and another event put on by the Latino Leadership Fair at Stonewall Jackson Middle School on Aug. 3.

Suarez said he would cooperate, and that "I don't think that could happen in my campaign." But someone outside his campaign could have done such a thing, he said, adding "It's very difficult to control."

Means would not confirm if the registration complaints from the primary are linked to the absentee ballot probe.

Orange County Democratic Party Chairman Doug Head said internal analysis of voter-roll information showed an unusual number of Hispanic Republicans requesting absentee ballots before the Nov. 5 election -- even though some had failed to cast a ballot or contact election officials in more than four years.

"Something strange is going on out there," Head said.

Orange Republican Party Chairman Lew Oliver said the absentee-ballot process was largely fraud proof, and he'd heard no allegations of anything illegal going on anywhere in the county.

"This is the first anyone has suggested anything of the kind," Oliver said. "It's really, really, really hard to obtain a fraudulent ballot."

David Damron can be reached at ddamron@orlandosentinel.com or 407-420-5311.

Dodgy ballot requests under scrutiny

By Ludmilla Lelis
Sentinel Staff Writer

FL

October 3, 2003

DAYTONA BEACH -- Officials looking into possible election fraud involving requests for absentee ballots for Tuesday's city elections have found 43 forms that give the voter's wrong date of birth and three with forged signatures, Volusia County Elections Supervisor Deanie Lowe said Thursday.

The three forged requests are being forwarded to the State Attorney's Office for further investigation.

Lowe said several of the problem ballots, including those with the forged signatures, were printed on behalf of the "Better Way Campaign," which lists the same address as Terrance Whelan, candidate for the Zone 2 City Commission seat.

Whelan said that he and his campaign staff have been distributing the ballot request forms in several neighborhoods and sending them to the elections office.

However, he says he wasn't aware that there were problems with some of the postcards.

"Everything we did is open and aboveboard," Whelan said. "In a campaign with hundreds of ballot requests, I'm sure that some things may go wrong.

"If somebody wanted to trip us up, someone could have gotten a form and filled it out wrong. We don't have signatures to verify if it was truly the voter that signed it."

Meanwhile, Lowe said there may not be enough time to correct some of the errors and send out the absentee ballots, if voters can't be contacted by phone. All absentee ballots must be completed and received at the elections office by 7 p.m. Tuesday.

"What is frustrating is that you may have some people who legitimately ordered an absentee ballot," Lowe said. "However, I cannot issue one in some of these cases."

The problem forms aren't ballots themselves but printed postcards that request a ballot. Lowe said her office can receive requests by phone or in writing. Written requests, which can be as simple as a letter, have to list the voter's name, date of birth, address and signature.

On the forms suspected of being forgeries, elections workers found that the signatures did not match those on file and that the listed voters, when contacted, said they didn't sign those forms, Lowe said.

For the other problem forms, voters told elections officials that they did want a ballot but that someone else had filled out the form for them, Lowe said. The date of birth on the forms doesn't match the original voter registration records, although some voters said the ballot request lists the correct date of birth, Lowe said. She said she needs written verification from those voters to change the date of birth.

Ludmilla Lelis can be reached at llelis@orlandosentinel.com or 386-253-0964.

Extra Broward mail-in ballots cause fear of fraud

Ballots have been sent to people who moved, raising questions about fraudulent votes in elections in four Broward communities.

BY ERIKA BOLSTAD
ebolstad@herald.com

People who have moved but who remain on Broward County's voter rolls have been sent ballots in an ongoing mail-in election, underscoring the county's problems in purging its list of voters who have died, moved or who just don't vote.

Florida Secretary of State Glenda Hood is investigating the matter and has sent it to her legal department for review, said Broward County Mayor Diana Wasserman-Rubin, who received three extra ballots at her Southwest Ranches home over the weekend.

Ballots for the special mail-in election came for Wasserman-Rubin, her husband and three of the previous occupants of the house. The last owners moved out in July 1999, Wasserman-Rubin said.

The extra ballots raise concerns about a fraudulent election, the mayor said.

"I don't know how many people this has happened to," Wasserman-Rubin said. "How do we make sure the right vote from the right voters gets counted? It's a matter of concern for the integrity of the election."

Four special mail-in elections are currently in progress: one in Southwest Ranches, another in neighborhoods near Cooper City and one each in Deerfield Beach and Pompano Beach.

Ballots in the two North Broward cities aren't scheduled to go out until today or later on this week. Voters must return the ballots by Nov. 4.

ISSUES ONLY

None of the elections involves candidates. Instead, voters are asked to decide on commission district lines, whether to issue bonds, change their charters or join a city.

But unscrupulous people who get ballots for long-gone former residents could fill them out, forge a signature and send them in to be counted, said Roy Fink, husband of Southwest Ranches Mayor Mecca Fink.

"How do you check it? That's the problem," said Fink, whose daughter received a ballot even though she moved out of state four years ago.

Southwest Ranches Town Administrator John Canada said the town received about a dozen phone calls from people who didn't know what to do with the extra ballots. He plans to draft a letter today to Broward Elections Supervisor Miriam Oliphant asking that the signature on each mail-in ballot be compared to the voter's signature her office has on file.

016666

"We want to make sure that only people who are legitimately here have their ballots counted," Canada said.

The extra ballots echo the findings of an August investigation by The Herald, which found that voter rolls in Broward and Miami-Dade counties are bloated with nearly half a million people who have never cast a ballot.

NO-SHOW VOTERS

In Broward, the elections office does not aggressively pursue voters who leave town but keep their county voting cards. The Herald found 475,069 South Florida voters who have ignored every Election Day since they registered. Tens of thousands of them have moved. Some have died or gone to prison.

In a random sample of 100 of these no-show voters, The Herald found people eligible to vote in Broward who had moved to Ocala, New York and as far away as Spain. One so-called active voter is a Coconut Creek man who died last year. Another was in jail for violating probation on an armed robbery conviction -- a felony that should have knocked him off the rolls.

The problem with the ballots comes the week after a team of observers from Hood's office visited Oliphant to see whether she was on track to run a special election early next year. Hood's office raised concerns after Oliphant fired four people earlier this month, including two veteran supervisors who oversaw absentee ballots and poll worker training. A report from the visit is expected to be released later this week.

Oliphant's office has been embroiled in a year of controversy, including a now-closed investigation by the Broward State Attorney's Office and culminating in a budget battle with the Broward County Commission.

Oliphant did not return a phone message from The Herald left at her home Monday night.

Ballot fraud charges investigated

Miami-Dade police question Hialeah housing authority employees and campaign workers about allegations of absentee ballot fraud.

BY REBECCA DELLAGLORIA AND KARL ROSS
rdellagloria@herald.com

A decade after a Hialeah City Council election was overturned for voter fraud, police are investigating whether another election in the city was tainted by absentee ballot abuse.

Miami-Dade public corruption detectives fanned across Hialeah on Friday, questioning employees of the city's public housing agency, as well as friends and relatives of politicians aligned with Mayor Raúl Martínez.

Sources close to the investigation say those interviewed were asked about their alleged handling of absentee ballots gathered from voters -- many of them elderly -- in the city's public housing units.

A decisive edge among absentee voters swung the result of at least one City Council race last November, prompting a federal lawsuit by losing candidate Adriana Narváez. She won at the polls but lost to the incumbent Eduardo "Eddy" González after he collected nearly three times as many absentee votes.

'POLITICAL MACHINE'

Narváez alleges the mayor's "political machine," including Hialeah Housing Authority employees, improperly solicited ballots from elderly residents living in subsidized apartments, even instructing them who to vote for in some cases.

City and housing authority officials have denied any wrongdoing, saying the inquiry is a desperate ploy by a losing candidate unwilling to accept her fate at the polls.

Hialeah Housing Director Alex Morales has acknowledged working long hours on the three council races, but says he did so only during free hours accrued through "comp time." He said Saturday he has not been contacted by police and did not want to comment.

On Friday, a team of Miami-Dade officers interviewed about a dozen people, including several with close ties to politicians on the Martínez-backed slate of candidates.

POLITICAL TIES

These included González's sister, Zoey Prieto; the wife of losing council member Julio Ponce, Yadelkis "Yadi" Ponce; and an aide to Councilman Esteban Bovo, Alfredo Llamedo.

Investigative sources also told The Herald federal agents from the U.S. Department of Housing and Urban Development, as well as the FBI, have been assigned to the case and are cooperating with police.

NO INVOLVEMENT

Martínez on Saturday acknowledged the police investigation, but said it didn't involve him.

"I didn't vote absentee," Martínez said. "I didn't pick up any absentee ballots. I didn't tell anybody to pick up absentee ballots. So should I worry?"

Martínez accused Narvaez's lawyer, Michael Pizzi, of using the media to publicize the allegations and scare those cited in

016668

the lawsuit. Pizzi, a Miami Lakes city councilman, has clashed with Martínez in the past over land use issues.

Pizzi applauded the involvement of investigators, saying he was encouraged by the preliminary results.

"It's a long time coming," Pizzi said. "And it's great news for the people of Hialeah, who've had to put up with this stuff for well over a decade."

Sworn statements given to private investigators working for Pizzi say several voters who live in the city's subsidized housing projects were given ballots and told whom to vote for.

Dinorah Quiros, a resident at 60 E. Third St., said councilman Ponce's wife visited her home in late October.

"She indicated I should vote for her husband, Julio Ponce, Guillermo Zuñiga and Eduardo González," Quiros said in the sworn statement, dated Nov. 28, 2003.

She added: "I voted for the candidates that Yadi Ponce indicated, because I was scared that if I didn't vote for them, I could suffer consequences."

BUILDING ACCESS

The statement noted Ponce is a former housing manager of the building, the Palm Centre, and still had access to its residents.

Ponce could not be reached for comment Saturday.

Another sworn statement, this one from Gloria Reyes of 70 E. Seventh St., tells of another encounter with a man she could not identify, but who had visited during past elections.

"This man filled out my form and I signed it," Reyes told investigators. "He showed me who I had to vote for, indicating where I should mark the ballot. I don't know who I voted for."

Bovo told The Herald that his aide Llamedo was among those questioned by police. He defended his employee's conduct and that of his council colleagues.

"I don't think anybody needs to be afraid of anything," said Bovo, who was not on the ballot in November. "I stand by what the people in the campaign did, and I don't think they did anything illegal."

venture capital subsidiary has committed to invest \$5 million in a venture capital fund that holds a 12 percent interest in Hart Intercivic, a vendor that has qualified to market electronic voting devices in Ohio.

Blackwell's office stated that while SAIC's subsidiary is a passive investor in the venture capital fund and has no role in its management, operation, or investments, the fully-diluted interest of less than 2 percent of Hart Intercivic disqualifies SAIC from assisting in the security inquiries.

Compuware Corporation, based in Detroit, will conduct a technical analysis of each of the four vendor's electronic voting devices. The review will include an examination of the computer source code, and scrutiny of the potential for penetration and points of failure specific to each voting machine.

InfoSentry, based in North Carolina, will conduct in-depth analysis, including on-site inspections and additional verification of claims made by the four vendors concerning security questions previously posed. Further, InfoSentry will assess the functionality and durability of qualified electronic voting systems in environmental conditions common to the use, storage and transport of this equipment. InfoSentry had assisted the secretary of state's office with initial security inquiries of potential vendors during the qualification process.

The four vendors qualified by the state to market electronic voting equipment in Ohio are: Diebold Election Systems; Election Systems and Software (ES&S); Maximus-Hart Intercivic/DFM Associates; and Sequoia Voting Systems.

CONNECTICUT PILOT PROGRAM SEEKS TO COMBAT ABSENTEE VOTE FRAUD

A new Connecticut pilot program, prescribed by law and designed to reform the absentee ballot process, focuses on the absentee ballot application process as a way of preventing fraud and abuse. Connecticut State Elections Enforcement Executive Director Jeffrey Garfield said the Commission believes absentee voting abuses are the number one problem in Connecticut's voting process.

In passing the law the legislature observed that absentee voting abuses persist despite attempts to impose sanctions. Further, it noted that many of these problems arose from a lack of control over the absentee ballot application process. Anyone may distribute absentee ballot applications. Garfield suggested the problem begins with a process that allows candidates and party and campaign workers to go door-to-door distributing applications, or distributing them en masse, coupled with the fact that the applications are open to public inspection. This has produced ballots cast by persons not qualified to do so, and intimidation to vote for or against a candidate.

In recent Connecticut history one elected official lost his job as a result of absentee ballot application abuses. During the past year the Commission has referred evidence of criminal violations to the Chief State's Attorney involving officials in Hartford and New Haven. Former state legislator Barnaby Horton was arrested in August and charged with seven felony counts of absentee ballot fraud in connection with a 2002 primary election. The Commission has also imposed thousands of dollars in civil fines and imposed other sanctions without eradicating the problem.

The new law required the Enforcement Commission to notify all municipalities of the law, and to select three, based on population size, for the pilot project -- one large municipality, one middle-

sized and one small municipality. The legislative body in each municipality must consent to participate, thereby accepting limitations on the absentee ballot application process in their municipalities for elections this year.

The following provisions apply to absentee ballot applications in the three cities.

Applications. Only municipal clerks, registrars of voters, and absentee ballot coordinators appointed by the registrar of voters may issue absentee ballot applications. Applications may be given only to persons who apply for themselves; have been identified by candidates or political parties as potential absentee voters; or are designees of the voter. Designees must be medical caregivers or member of the applicant's family who agrees to do so.

Assistance. Persons ill or disabled may designate someone to assist them in completing an absentee ballot application. For all others, only absentee ballot coordinators may be present and provide assistance in filling out an application outside the office of the registrar. Two absentee ballot coordinators of different parties must provide assistance to applicants who request it. For primary elections, two absentee ballot coordinators representing competing slates or candidates in the primary election must provide this assistance.

Privacy. The list of absentee ballot applicants who have executed applications remains confidential until the third business day before an election or a primary.

Pilot project results. The State Elections Enforcement Commission will survey the election officials and participants in the three municipalities and will report its findings to the General Assembly in January.

SUMMIT COUNTY, OHIO CHANGES PROCEDURES FOR PRE-CHECK SERVICE FOR CANDIDATE PETITIONS

The Summit County, Ohio Board of Elections is changing its procedures for "pre-checking" candidate nomination petitions after original petitions for a candidate for the Akron City Council disappeared too late for that candidate to replace them, triggering a major investigation.

As a service to candidates in the days prior a filing deadline, Summit County offered to pre-check candidates' original petitions to determine whether they were sufficient. If a candidate's valid signatures fell short of the number needed, that candidate still had time to obtain the additional signatures. Whether their pre-checked petitions were sufficient or not, candidates must formally file all the original pages together prior to the deadline.

This year, Joe Finley, a Democratic candidate seeking to represent Ward 2 in the Akron City Council, pre-filed his petitions. Election workers verified that the petition had sufficient valid signatures and recorded details in the computer. When Finley arrived to file his petitions before the deadline, election workers could not locate his petition papers.

Ohio law requires that only original signatures may be used for filing, therefore the board could not place Finley's name on the ballot. Finley obtained a court order placing his name on the September primary election ballot and won the election. His name will now appear on the November general election ballot.

Former Hartford lawmaker accused of vote fraud

CT

(Hartford-AP) -- A Superior Court judge says a former Hartford lawmaker accused of vote fraud will get a special form of probation. Barnaby Horton was arrested last year on charges of unlawful possession of another's absentee ballot, being present as a candidate when ballots were filled out and making a false statement.

State elections officials said he had gone from room to room at a home for the elderly and handicapped and provided them with ballots. They said in some cases, he encouraged residents to check off his name.

A Superior Court judge is expected to detail the terms of the probation later this month. If he meets them, all charges can eventually be erased from his record.

West Haven in pilot program to curb absentee ballot abuse

Rebecca Baker Erwin, Register Staff 09/25/2003

WEST HAVEN — The city will change the way it handles absentee ballot forms as part of a state experiment to reduce election fraud.

West Haven is the largest of three municipalities to join the pilot program, initiated by the state Elections Enforcement Commission.

Under the program, West Haven, Winsted and Kent will ban politicians and their supporters from handing out absentee ballot applications during campaigns for the Nov. 4 election.

Only the city clerk or designated absentee ballot coordinators will be able to send applications to voters. Political candidates can give them the names of voters interested in absentee ballots.

Absentee ballot abuse is "the greatest threat to the elections process," said Joan Andrews, the commission's principal attorney.

Too often, Andrews said, candidates flood elderly and disabled voters with absentee ballot applications and later show up to "help" them fill out the ballots "the right way."

"We'd like to sever that first connection," she said.

She cited the case of Angelo Reyes, a former political candidate in New Haven, who was convicted of tampering with elections in 2001 and 2002 in which he and his sister, Denise Maldonado, were candidates.

Reyes was placed on probation for three years, fined \$2,000 and ordered to do 100 hours of community service.

Andrews said absentee ballot abuse also is a problem in the state's largest cities.

The pilot would help state election commissioners learn if trying to fix "a big-city problem" would hurt small or medium-sized towns.

Under current law, the names of people who send in absentee ballot applications and the dates when absentee ballots are sent to voters are public records.

Andrews said "overzealous" candidates and campaign workers use those records to bombard residents with fliers, phone calls and unannounced visits, trying to steer votes.

"We've had complaints from voters who feel they've been harassed," she said.

So has City Clerk Deborah Collins, who said one frustrated resident received eight to nine political phone calls after requesting an absentee

ballot application.

West Haven Mayor H. Richard Borer said former political candidates in West Haven have picked up hundreds of absentee ballot applications and handed them out on campaign stops.

"They say, 'Here, fill this out' and they know they have the vote in their pocket," Borer said. "The (pilot) program takes politics out of the process."

Borer said the city has "an unusually large number" of absentee ballots, especially during Democratic primaries.

During the 2001 Democratic primary, the city clerk mailed out 1,200 absentee ballot applications and received 600 back. But in the general election a few months later, only 700 applications were requested.

Borer's Republican challenger, Paul Messina, said he believes the program will bring positive results.

"I think people that vote absentee should remain anonymous in the way they voted and this way I hope it will," he said. "It will give them the privacy just like going in the booth."

The pilot program also seeks to cut down on voters who improperly use absentee ballots for convenience, Andrews said.

Under state law, absentee ballots are only for people who are ill, physically disabled, serving in the military, out of town on Election Day, working as a poll worker at a polling place other than their own or whose religion forbids secular activity on Election Day.

FBI in state to monitor elections for fraud

By [The Associated Press](#)

Published on 11/05/2002

Bridgeport (AP) — Federal authorities will step up monitoring for possible voter fraud statewide during Election Day, part of a national initiative.

The extra efforts come as the FBI is investigating potential fraud in Bridgeport's Democratic primary for probate judge and as two men face absentee ballot charges involving two New Haven primaries. A team of U.S. attorneys and FBI agents will be available to receive and review complaints of fraud or other election problems.

"Election fraud corrupts the essence of our representative form of government," U.S. Attorney John A. Danaher III told the Connecticut Post. "As a crime against both the individual and the government, it will be dealt with promptly, aggressively and in full cooperation with all appropriate state authorities."

Secretary of the State Susan Bysiewicz said Monday that uniformed and armed FBI officials would not be a presence at the polls. It wasn't clear where they would be working.

Bysiewicz also expressed concern over reports that the campaign of U.S. Rep. Rob Simmons, R-2nd District, had told Republican registrars to consider requesting police supervision at the polls today if they are concerned about voting fraud or disturbances. Posting police officers at voting places could discourage minorities from voting, said Bysiewicz' spokesman, Larry Perosino.

"We felt there was no basis for their (Simmons') communication to the registrars because there has been no evidence of problems with fraud in the 2nd District," Perosino said. "We're concerned about potentially discouraging people from going to the polls if they're worried about uniformed law-enforcement presence being there, and we thought it was bordering on voter intimidation."

The Simmons campaign said Bysiewicz, a Democrat seeking reelection, based her comments on political motives. The campaign's volunteers simply reminded registrars that Connecticut law allows them to request police supervision if they have reason to believe problems may occur, said Simmons Chief of Staff Todd Mitchell.

"Maybe the secretary of the state should spend a little less time politicking and less time wasting tax dollars on the eve of the election," Mitchell said. "This is page 139 in the national Democrats' playbook. When they are losing a race, at the last minute they pull out the voter-suppression card and put it on the table."

Mitchell said some registrars have reason to worry about voting problems today because union groups and Democratic supporters have told some residents incorrectly that they can register to vote at the polls or that they can vote if they can use mail with their addresses on it as proof of residency.

Regarding the FBI supervision of today's elections, Bysiewicz said that two to four federal officials from the Department of Justice would be on hand in Waterbury to ensure that voting materials are made available in Spanish for the city's Hispanic population. Those officials won't be at the polls, but most likely will work from the registrar's office, Bysiewicz said.

The Justice Department planned to dispatch monitors to polling places in 13 other states as well.

016675

The observers will be watching for any signs of discrimination based on race or problems encountered by the disabled, as well as whether all eligible voters are able to cast a ballot. Widespread voting problems were reported in 2000, particularly in Florida, where the results delayed the declaration of a presidential winner by a month.

Danaher said some election crimes are easily detected, such as bribery, intimidation and ballot forgery. But, he added, it's also a federal offense to "seek out the elderly, the socially disadvantaged or the illiterate for the purpose of subjugating their electoral will."

Federal law also prohibits assisting a voter with casting an absentee ballot, an allegation under investigation in Bridgeport. ■

State probes absentee voting Many ballots cast in county board race

TU

By BERNARD SCHOENBURG
POLITICAL WRITER

The State Board of Elections has opened a formal investigation of possible irregularities involving absentee ballots in Sangamon County after questions about a county board primary race, executive director Dan White said Thursday.

"We're working with the county clerk at this point," White said. "We have the authority to conduct investigations under the Election Code."

If any apparent violations of the law are found, White said, the information will be referred to the Sangamon County state's attorney, the state attorney general or the U.S. attorney's office.

The investigation follows a contentious primary election for the Democratic nomination for the District 19 county board seat. Incumbent Doris Turner defeated Roy Williams Jr. by an unofficial count of 678 to 216. No Republican candidate was on the ballot.

In the 19th, 235 people had applied for absentee ballots and 201 absentee ballots were received by election officials.

Williams has sent allegations of potential wrongdoing to several agencies, including the State Board of Elections. Turner said there was no fraud.

White had indicated before the election that his agency was watching District 19. He said Thursday that the board has now opened a formal investigation.

On Election Day, reporters from The State Journal-Register checked on the whereabouts of 91 of the people registered to vote in District 19 who had applied for absentee ballots and found that more than half were in Springfield that day.

Absentee ballot applications from those people had included a check mark next to the statement: "I expect to be absent from my county of residence" on Election Day. Absentee voting is allowed only in certain circumstances, including when the voter cannot get to his or her polling place.

White said an investigator has been assigned to review the records, and interviews may follow.

"We're cooperating," said Sangamon County Clerk Joe Aiello. "We are providing them with any and all documentation they request. We're taking this thing very seriously."

Calumet City gets new mayor

IL

Judge tosses ballots, gives city clerk election win

Advertisement

By Manya Brachear and Stanley Ziembra, Tribune staff reporters. Tribune staff reporter Joseph Sjoström contributed to this report

September 3, 2003

A Cook County judge Tuesday reversed the outcome of April's Calumet City mayoral election, declaring Michelle Markiewicz Qualkinbush the winner over Greg Skubisz, who had been sworn into office after declaring victory by 24 votes.

Circuit Court Judge Michael Murphy threw out 38 absentee ballots that he determined to have been illegally cast for Skubisz and eliminated about 50 other contested ballots. He then ruled Markiewicz Qualkinbush, the city clerk, had won the election by 27 votes.

Skubisz's attorney, Mike Lavelle, said he filed notice of a planned appeal late Tuesday and also asked that the judge's order be stayed until the appeal is heard. He was given until 5 p.m. Wednesday to file the appeal.

Markiewicz Qualkinbush said if the stay is denied, she could take office by Wednesday night and would hold a news conference on Thursday to outline plans for her administration.

She would be Calumet City's first female mayor, serving the remaining two years in the term of former Mayor Jerry Genova, who was forced to resign in 2001 after being convicted on federal corruption charges. He is in federal prison.

In his ruling, Murphy said former alderman Skubisz deliberately targeted "the sick, the infirm and the confused" to generate absentee ballots.

"After evaluating all the evidence ... the court finds the actions described herein were intentional, deliberate and persistent pursuit of the absentee vote of handicapped voters," Murphy wrote. "The court finds that this pursuit was fraudulent and designed to win an election at all costs."

After copies of Murphy's decision were distributed to attorneys, Markiewicz Qualkinbush said she was elated by the decision.

"This has been a hard fight, and by no means has it been cheap," she said outside of Murphy's courtroom in the Daley Center. "But the people of Calumet City are worth fighting for. This victory is not about me. It's a win for all the people of Calumet City."

The attorney for Skubisz, who has served as mayor since the April 1 election, said the stay he has requested allows Skubisz to remain in office at least until there's a ruling on the appeal. That way, Lavelle said, a lot of "turmoil, confusion, disruption and upheaval" could be avoided if Murphy's ruling is overturned.

016678

"We're not done yet," Skubisz said. "There's no question we won the election. It's just that the election was set aside [at least temporarily] by a technicality."

As for Murphy's ruling, Skubisz, an attorney, said the judge's decision to disqualify absentee ballots could have "a chilling effect on people who want to cast their ballot absentee."

The judge ruled that state election law was violated because some of the absentee ballots cast for Skubisz were mailed or delivered to election officials by someone other than a blood relative, Lavelle said.

"One issue that will be brought up at appeal is that the state law is superseded by the Federal Voting Rights Act," Lavelle said. "The federal law allows absentee voters to choose anyone they want, not just a blood relative, to take their ballots to the mailbox or deliver them to the election office."

The outcome of the Calumet City mayoral election had been in doubt since May when Markiewicz Qualkinbush filed a lawsuit alleging that ballot errors at the polls and the mishandling of some of the absentee ballots by Skubisz's supporters denied her an accurate vote count. She requested a recount and nullification of any votes deemed to have been cast improperly. She contended the recount would show she had won by 78 votes.

During the recount, Markiewicz Qualkinbush's attorneys called more than 70 ballots into question, including absentee ballots they said were illegally handled by Skubisz's campaign workers.

After deducting the contested ballots from Skubisz's Election Day vote totals, Murphy counted a total of 2,530 votes cast for Markiewicz Qualkinbush and 2,503 for Skubisz--a difference of 27 votes. Cook County Clerk David Orr said in a written statement that the decision should serve as a warning to future candidates and their campaigns not to break election laws.

"In reversing the April 1 election, Judge Murphy has sent a strong message that overzealous political workers who take advantage of voters and make up their own rules will not be tolerated," the statement said. Reaction among Calumet City residents to the ruling was mixed.

Dave Ley, 22, a student at Purdue University-Calumet in Hammond, Ind. who works part-time at the Calumet City Library, said he voted for Skubisz because he thought Markiewicz Qualkinbush was too closely aligned with Genova's Democratic organization.

Skubisz "was elected the mayor, and I thought that was that," Ley said. "Everything has been running smoothly and I can't imagine what this (court ruling) will mean. It will bring a lot of confusion, though," he said.

Regina Whitelow, a five-year Calumet City resident, said she voted for Markiewicz Qualkinbush and was pleased with the outcome of the court case.

"I liked Michelle as city clerk. I thought she was very efficient," Whitelow said. City employees declined to comment, although one who had been hired since Skubisz took office said he now expects to be fired.

Skubisz has made several appointments to top posts, including veteran police officer Pamela Cap as police chief. Those could be rescinded if Markiewicz Qualkinbush takes office, Lavelle said.

Markiewicz Qualkinbush declined to say what changes she would make as mayor.

"We'll disclose what we plan to do at the appropriate time," she said Tuesday afternoon.

Anderson gets green light on election challenge

BY JOSEPH RYAN
Times Staff Writer

SCHERERVILLE — A Lake County judge has handed a town judge challenger time and a microphone to prove that voter fraud, allegedly orchestrated by one man, kept him from winning May's primary.

Lake Superior Court Judge Mary Beth Bonaventura decided Thursday to move forward with Kenneth Anderson's election challenge, despite the argument from incumbent Judge Deborah Riga that it's too late.

Riga won the election by 11 votes. Anderson garnered more votes at the polls, but Riga eked out the lead with overwhelming support in absentee ballots.

Anderson tried to persuade an election panel in June to throw out more than 20 absentee votes in her favor. He showed the panel evidence four voters moved out of town years ago, with three of them now living in Illinois. He also said numerous signatures were blatantly forged.

But the election panel voted 2-1 to uphold the primary results, saying the apparent corruption wasn't rampant enough.

Bonaventura's ruling Thursday revitalizes Anderson's efforts to uncover what he believes is a stolen election.

The judge gave him 3-1/2 weeks to question absentee voters under oath and pin down the man he accuses of stealing votes — Bob "Bosko" Grkinich.

"We are going to get all the evidence we can," Anderson said Thursday. "This is a nice step in the right direction."

Riga, who has been avoiding the media, told Bonaventura on Wednesday to throw out Anderson's challenge because state law said the hearing had to be held by June 25. Anderson's attorneys said she can ignore the deadline because they hadn't received election material for the investigation until June 20.

Bonaventura sided with Anderson in Thursday's ruling and also set up a hearing for his appeal to the election panel's decision. Both issues will move forward Aug. 6.

If Anderson convinces the judge corruption spoiled the election, Bonaventura could order a new election for the whole town, or just in the precinct the tainted ballots came from. She could not throw out votes, according to Kristi Robertson, co-director of the Secretary of State's Election Division.

However, the judge also could agree with Anderson's appeal to the election board's decision, and throw out all the votes from the contested precinct, which is in the east side Novo Selo neighborhood.

It is in that precinct Anderson alleges Grkinich stole the election.

The ballots in the name of three Illinois residents were mailed to the home of Gus and Roberta Flores, both of whom have ties to East Chicago politicians.

But Gus Flores has denied he knew about the ballots. Instead, he has suggested his brother-in-law, Grkinich, was behind it. Grkinich, a registered nurse, visits the home regularly to care for his ailing mother.

Grkinich has not returned phone calls, but he has told Gus Flores he will one day clear his name.

Allegedly, the handwriting on the ballots mailed to Flores' home match roughly 20 other absentee ballot applications from the east side precinct. And Anderson said many of those ballot signatures are forged, claiming Grkinich either voted for them or signed the application ballots. Both actions are illegal and would void a ballot.

But Anderson has yet to prove that theory.

During the next three weeks he said he will question all 24 of the mail-in voters from the Novo Selo neighborhood. Twenty-three of those ballots were in Riga's favor.

He also wants to question Grkinich under oath to tighten his case that the votes should be thrown out or the precinct revote.

In the end, the judge will decide whether Anderson's efforts prove rampant voter fraud.

016680

Bonaventura's ruling on Anderson's appeal as well as his challenge also will determine who will hand out justice for traffic violations and minor crimes in Schererville for the next four years.

The Republicans failed to field a candidate for November's town judge election, handing whoever wins these court hearings the key to the courtroom.

Joseph Ryan can be reached at jryan@nwitimes.com or (219) 836-3780.

Judge rejects recount dismissal

BY JOSEPH RYAN
Times Staff Writer

CROWN POINT -- A LaPorte County judge rejected a move Monday by East Chicago Mayor Robert Pastrick to toss out the court challenge to his primary win, sending the contest chugging forward with testimony in Pastrick's defense against voter fraud accusations.

Pastrick's attorneys told LaPorte County Judge Steven King that challenger George Pabey, a city councilman, hadn't proved enough illegal votes to show the election was stolen. The attorneys said even if they gave Pabey the benefit of the doubt on many disputed ballots, he would still fall 143 votes short.

Pabey lost May's Democratic mayoral primary by 278 votes. He won at the polls, but Pastrick pulled out ahead when mail-in ballots were counted. Pabey is challenging the mail-in ballots and has presented evidence throughout the first two weeks of the trial he says shows a pattern of illegal voting spurred by Pastrick's political operation.

King sided with Pabey's argument that the law doesn't require the illegal votes cover the spread of the win. Instead, Pabey's attorneys said they need to show a series of strong-arming and ballot-stealing that leaves the validity of the election in doubt.

"This is not a numbers game," said Nathaniel Ruff, one of Pabey's attorneys.

Ruff contends Pastrick created an influence over voters that wouldn't exist at the polls because city workers were asked to vote absentee and acquire absentee applications, and political newcomers were allegedly given paid election day positions for bringing in absentee votes.

With King shooting down Pastrick's attempt to get the case thrown out, the focus of the trial shifted to his defense, which will attempt to prove the campaign had no malicious intent in signing up absentee voters.

"We readily admit we had a very active campaign to get out the vote," said Terry Smith, one of Pastrick's attorneys. "This is not some vast conspiracy dreamed up by the Pastrick campaign."

Pastrick's defense called election officials and political figures to the stand Wednesday to testify that circulating absentee applications was not an insidious conspiracy, but rather a natural part of a political campaign.

Lake County auditor and head of the county Democrats Stephen "Bob" Stiglich was called to the stand for Pastrick to testify about inner county political workings. Stiglich had unsuccessfully run against Pastrick in the 1980s and in 1999. The most recent face-off between the two was surrounded by voter fraud accusations.

Stiglich testified that flooding the campaign trail with absentee applications is normal and important in getting apathetic residents to vote.

"We do it every time," he said, adding that his own campaign in 1999 focused heavily on acquiring absentee votes.

Pabey's arguments mostly centered on the legal stipulations of absentee balloting, and whether Pastrick workers treated the mail-in ballots as applying to anyone who didn't feel like going to the polls.

"Just because this may be business as usual in East Chicago doesn't make it right," Ruff said.

State law lays out a series of reasons ballots can be sent through the mail, including disability, work and age.

In related matters, attorney Jim Wieser, who is overseeing the case for the Lake County election board, asked King to throw out the case, drawing immediate criticism from another Democratic primary mayoral candidate, Lonnie Randolph. Both Randolph and Wieser are respondents in the case and not working on behalf of either side.

"We are supposed to be neutral parties," Randolph said to Wieser.

Wieser also said he plans to turn over some of the voter fraud evidence to the Lake County election board with the intention that it be submitted to the county prosecutor.

Joseph Ryan can be reached at jryan@nwitimes.com and (219) 836-3780.

Voter fraud trial heads into final stretch

BY JIM MASTERS
Times Correspondent

EAST CHICAGO – As the voter fraud trial against Mayor Robert A. Pastrick heads into closing arguments today, East Chicago residents brace for the final outcome.

The verdict will likely go one of three ways: All or some of Pastrick's absentee ballots will be tossed out; all votes will stand as counted; or LaPorte County Judge Steven E. King will order a new election.

City Councilman George Pabey, who brought the case against Pastrick after losing the Democratic primary for mayor by 278 votes, wants Pastrick's absentee ballots nullified on the basis of widespread fraud. While neither side wants to see a new election, including the Lake County Election Board, which was named as a co-defendant, it would seemingly bode well for Pabey, who won at the polls but lost by virtue of Pastrick's 1,093 absentee ballots.

If attorney Lonnie Randolph, who finished third in the primary and was also named as a co-defendant, chose not to run in a new election, many of his votes could go to Pabey, observers say.

Pastrick's attorneys, Terrance Smith and Michael Bosch, have not hidden the fact that absentee voting was encouraged and widespread in the election, but they say people cast ballots for the candidate of their choice and did so free of political strong-arm tactics, as Pabey has alleged.

Lake County Election Board attorney James Wieser warned against disenfranchising a large block of voters.

After 10 days of testimony and nearly 200 witnesses, Pabey has essentially put the political process on trial in East Chicago. Numerous witnesses could not produce a valid reason for voting absentee. Some witnesses admitted not residing in East Chicago while another admitted his vote was for sale.

Several political heavyweights have taken the stand to answer questions how – for better or worse – elections in East Chicago are traditionally conducted.

Lake County Democratic Party Chairman Stephen Stiglich testified that flooding the campaign trail with absentee ballot applications is normal and important in getting apathetic residents to vote. He admitted employing such practices during his unsuccessful runs against Pastrick in the 1980s and 1999.

Two elected officials with close ties to Pastrick, Lake County Councilman Joel Markovich, D-East Chicago, and North Township Trustee Greg Cvitkovich, both downplayed their roles in the campaign where absentee balloting is concerned.

Markovich described himself as a self-appointed coordinator of absentee balloting in his home precinct, helping people fill out applications "in order to expedite matters." Cvitkovich disavowed any knowledge that absentee ballot applications were being freely distributed from the township offices.

Former East Chicago Republican Party Chairman Robert Cantrell, who according to Cvitkovich works in the East Chicago office under no official title, testified he submitted a limited number of applications for both Republican and Democrat voters.

Cantrell denied any election-related work was conducted in the township offices.

However, township employees Lee Busby and Harry Dean Johnson told of their concerns about political activity taking place in the offices in violation of office policy. Johnson said he overheard Cantrell say he was responsible for Pastrick winning the primary by way of the absentee ballots.

Pastrick campaign operative Andrew Callas offered little in the way of damaging testimony. He testified that he took more than 1,000 absentee ballot applications to Crown Point and made photocopies of each, but destroyed them in the days after the election.

Numerous city employees were questioned about their roles in helping obtain absentee ballots. Quite often, the name Allen "Twig" Simmons surfaced as someone who pressed them into voting absentee.

Simmons denied any heavy-handed tactics, but was called by to court to answer to allegations of witness tampering.

Testimony also took aim at the involvement of East Chicago City Councilman Levones Tolbert, D-6th, who, witnesses said, offered them money to obtain absentee ballot applications.

016633

A blow to the Pastrick defense came Monday when King denied his motion to toss out the court challenge. Wieser also petitioned for the same.

All parties agreed on one thing, that a voting recount was unnecessary and should not be conducted as scheduled.

Pabey was present every day in court, with supporters filling the benches in the courtroom. King thanked the audience Tuesday for their demeanor throughout the trial.

Pastrick appeared on Monday this week and briefly Tuesday. His son, Lake County Coroner David Pastrick, was a frequent visitor.

It's unknown how long King will take to render a decision or how much evidence he'll require to rule if substantial voter fraud existed to the point where a remedy is in order. Until then, Pastrick's eight-term reign as mayor hangs in the balance.

Officials hope to learn from vote-fraud probe

New state laws could turn on findings of Lake County panel, one legislator says.

Associated Press
August 25, 2003

CROWN POINT, Ind. -- Some state officials are watching a grand jury's investigation into vote-fraud allegations in Lake County as new laws are considered to prevent election problems.

State Rep. Chet Dobis, D-Merrillville, said new laws were needed to prevent the theft of elections through illegal absentee balloting, but legislators do not have a clear idea how to correct the problem.

Lake County Prosecutor Bernard Carter sought a grand jury to investigate reports of vote tampering by campaign workers in East Chicago, Schererville and other parts of the county.

Dobis, one of the top Democrats in the Indiana House, said discussions about new state laws could turn on what is discovered in the investigation.

"The only thing we can do is wait for some reports from the grand jury, from Bernie Carter or through a trial," Dobis told The Times of Munster for a story published Sunday.

Judge Steven King presided over a trial challenging absentee voting in the primary victory by East Chicago Mayor Robert Pastrick. King wrote in his opinion that the city's mayoral primary "may be a textbook example of the chicanery that can attend the absentee vote cast by mail."

King said mail-in absentee voting was vulnerable to vote fraud because the ballot is cast in an unmonitored setting where no election official or independent observer can prevent coercion or the offer of money, jobs or other incentives.

"This is what Lake County does," said state Sen. Rose Ann Antich, D-Merrillville. "They aren't afraid of the law, so they will go ahead and do business as usual."

Cam Savage, a spokesman for the Indiana secretary of state's office, said that office was working on proposals to address vote fraud.

"We hope to work with members of both parties and try to get some of those reforms passed," Savage said. "We think there are some significant changes that need to be made in the election code."

Some legislators say the punishment for vote-fraud convictions needs to be made more severe.

"I'd like to make it a felony, and it can't be lenient because he knows somebody," Antich said. "I think that would scare the hell out of people more than anything else."

More absentee ballots, applications turned over

By JOHN MARTIN Courier & Press staff writer 464-7594 or jmartin@evansville.net

October 31, 2003

Two more absentee ballot applications and two ballots were turned over by the Election Board to Evansville police Thursday, as an investigation of alleged fraud slowly moved forward less than a week before the Nov. 4 city election.

Assistant Evansville Police Chief Kent Burnworth said 18 absentee ballot forms are being "actively" investigated by three detectives and one supervising officer. That's down from a stack of 140 that the Election Board gave police on Oct. 14.

Advertisement

for Our Heating
System Special**

Amana

477-7244 AS UNIQUE AS A SNOWFLAKE

"We care about your air"

One case file related to the investigation has been sent by police to Vanderburgh County Prosecutor Stan Levco. That file identified one suspect who has not been charged. Levco has said he will not consider filing charges until after the election.

Burnworth declined to comment when asked if police are looking at any other suspects.

The Election Office has received more than 3,000 requests for absentee ballots, many of which were turned in by Democratic Party workers.

Democrats have accused the Republican-controlled Election Board for handing the investigation to a police department run by Chief Dave Gullede, an appointee of Mayor Russ Lloyd Jr. But Election Board member Don Vowels, the lone Democrat on the three-member Election Board, said Thursday that he is pleased that the board has now inspected every ballot application called into question.

Questions regarding all but about 12 of those 383 applications were resolved by the board. At its Oct. 14 meeting, the board voted to send several applications to police, but did not review them before doing so.

"This seems to have taken on a life of its own," Vowels said of the controversy surrounding absentee voting. "But the Election Board has taken this into our own hands."

Vowels has, however, differed with County Clerk Marsha Abell and Election Board President Mark Foster about several matters, including the two Republicans' decision to send a absentee voting board to a homeless shelter, which produced about 25 applications for mailed ballots. The ballots should have been mailed, said Vowels. The shelter is near the Civic Center, where people can vote absentee in person.

During a Democratic Party rally for city candidates Thursday night at C.K. Newsome Center, speakers took aim at the investigation.

"Don't let the county clerk scare you from voting," said 3rd Ward City Councilman and local Democratic Chairman Steve Melcher, a frequent Abell critic.

016686

Abell, appearing Thursday on WNIN-PBS9's "Shively & Shoulders" program, said she has sought to verify that the large number of people requesting absentee ballots are eligible to vote.

"We made a lot of strides (Thursday)," Abell said. "We have a travel board, as we speak, voting people at the homeless shelter."

Abell said recent changes in state law regarding absentee voting and voter registration need to be reviewed.

"You can register your dog to vote now," Abell said, "because you don't have to be seen in person. I think the law needs to be changed where you have to show some identification."

Vowels, appearing on the same program, said he and Abell "are on common ground that the Legislature needs to look at this," but "my approach is we're stuck with the statutes they dealt us, and we have to deal with them accordingly."

Fraud allegations spur absentee ballot review

BY WILLIAM LAZARUS

Times Staff Writer

In the wake of ongoing and widespread allegations of absentee ballot vote fraud, the Lake County election board plans to look at letting all voters cast absentee ballots by mail.

Such a change would have to be enacted through a state law and would do away with objections that voters cited the wrong reasons for voting absentee. Critics said it would greatly increase the danger of stolen elections.

"It's the worst reform imaginable. It's a gateway to wholesale election fraud," said William Kimberling, a former deputy director of the Federal Election Commission, who has now retired to his family home in Kokomo.

The county's newly formed Lake County Elections Integrity Subcommittee will consider absentee ballot voting by mail and other election issues after its first organizational meeting at 10 a.m. Friday in the commissioners courtroom at the county government center.

Attorney Justin Murphy, the subcommittee's chairman, said both Democratic and Republican Party chairmen are interested in liberalizing the law on absentee ballot voting.

"Oregon votes by mail, period, and 70 percent of the people vote," said Lake County Republican Party Chairman John Curley.

Curley said he believes voters should not have to give reasons why they want to vote absentee ballot by mail, but he said laws against fraud should have teeth.

In any case, Curley said the elections subcommittee should quickly decide on the changes it wants to push in the upcoming legislative session.

Fellow Republican and Indiana Secretary of State Todd Rokita likely won't agree that all voters should be able to cast absentee ballots, according to his spokesman Cam Savage. Rokita is one of the people named to serve on the election subcommittee.

"There are laws in place" to guard against fraud, Savage said. "We saw in the 1999 elections and the 2003 elections in Lake County that those laws aren't being followed. Doing away with the safeguards that are already there and opening (absentee ballot voting by mail) up to everybody might open it up to even more fraud."

Kristi Robertson, Democratic co-director of the Indiana Election Division, said last year the legislature changed state law to allow all voters to cast pre-election absentee ballots inside election offices, without giving reasons for doing so.

Robertson doubted the Indiana Senate would extend the change to absentee ballots by mail, though she believes such a change would make sense.

"If we really want people to vote, we've got to come up with ways of making it easier," Robertson said. "I understand people's concern about vote fraud, but there are already stiff penalties for that."

Kimberling sees it differently.

"It is a mistake to sacrifice the integrity of the process on the altar of turnout," he said. "We could have huge turnout if we allowed illegal voting."

One problem, he said, is that absentee ballot voting by mail occurs in private, without the checks and balances of a public polling place where parties watch each other to make sure voters aren't coerced.

Also, he said, coupling the right to register to vote by mail with absentee ballot voting by mail makes it possible to generate ghost votes en masse.

016688

"It's not as easy to discover as you think because no one ever looks," Kimberling said, adding that is true especially in Indiana where election records are put under seal for 22 months, after which they can be destroyed.

Richard Smolka, editor of Election Administration Reports, a 33-year-old national newsletter for election officials, shared Kimberling's perspective.

"The Department of Justice Public Integrity Section has frequently stated that absentee voting was the principal method of vote fraud in the United States," he said.

Smolka questioned whether existing criminal penalties work.

Also, Smolka said, "The more absentee ballots that are cast, the harder it is to identify the fraudulent ones because of the volume."

Four Charged in Alleged East Chicago Voter Fraud Case

JN

Four people were indicted by a grand jury Monday in an investigation into absentee voting in East Chicago's Democratic mayoral primary.

Allan Simmons is accused of receiving absentee ballots for people who were not eligible to vote in the primary and threatening them if they testified before a grand jury. The 35-year old East Chicago resident faces three counts of attempted obstruction of justice and six counts of ballot fraud.

City councilman George Pabey lost the Democratic nomination for mayor by 278 votes. He claims he would have won if not for hundreds of fraudulent absentee votes cast for Robert Pastrick.

Pastrick won re-election to his ninth term in the heavily Democratic industrial city two weeks ago. Jimmy Lee Franklin, 50, was also indicted and accused of failing to appear before a grand jury.

Robert Croy, 73, and Delores A. Croy, 66, are charged with voter fraud and lying to the grand jury.

December eyed for wrap on voter fraud

By **BYRON ROHRIG** Courier & Press staff writer 464-7426 or brohrig@evansville.net

November 19, 2003

Don't look for a conclusion to the city voter fraud inquiry until December - probably late December.

Vanderburgh County Prosecutor Stan Levco said the latest word he's received from police is that an investigation of alleged absentee voter fraud in this year's city election will be concluded "by the end of the year."

Advertisement

Advertisement for ME (Music, Entertainment) featuring a man playing a guitar. The ad lists categories: - Nightlife - - Advice - - Profiles - - Music - - Bands - - Movies - - Contest - and includes the website www.courierpress.com/ME.

"It would be my intention to try to resolve this before the first of the year," Levco said Tuesday. "But I've only seen one case. I would like to see what other things (police) have found in their investigation."

Police Chief David Gulledge, who was unavailable Tuesday, said last week that the investigation is continuing and that he did not know when it would be wrapped up. Gulledge said 14 more suspect ballots were turned over to police last week, about 30 others were being checked and detectives had finished examining 100 others.

The only case file now in Levco's possession involves Donald Mosby, a Democratic precinct committeeman and an uncle of Vanderburgh County Commissioner David Mosby. Investigators accused Donald Mosby of asking Nelson E. Detalente Sr., a former Evansville man who now lives in Henderson, Ky., to fill in his former Evansville address on an absentee ballot request form.

Levco said he would like to have a case to present next month to a grand jury.

Before the election, Levco declined to proceed with the Mosby case. He later said he would act after the absentee-ballot investigation by police is closed.

Heated, often partisan sessions of the Vanderburgh County Election Board, held for inspection of questionable absentee ballot applications, led up to the Nov. 4 election.

Part of the debate swirled around whether city police, headed by an appointee of Republican Mayor Russ Lloyd Jr., should investigate alleged absentee irregularities.

While some Republicans argued city law enforcement should check into matters involving a city election, some Democrats said the probe should have been handed over to Indiana State Police.

Vote fraud scrutiny to be heightened

BY BILL DOLAN
Times Staff Writer

HAMMOND — U.S. Attorney Joseph Van Bokkelen said his office is gearing up to investigate any vote fraud complaints made during this year's elections.

Lake County was a hotbed of scandal last year over allegations that hundreds of illegal absentee ballots were cast in 2003 in the East Chicago and Schererville spring primary.

Because last year's elections only involved municipal races, federal authorities kept their distance until recent weeks. Sources within federal government said the U.S. Justice Department will move in to assist, if not take over, a stalled investigation by the county prosecutor and Indiana Attorney General's offices.

There will be no delay if vote fraud rears its head in the spring primary, Van Bokkelen said.

"If there is any kind of illegal activity taking place, it's one in which we will have much more ability to look into than we would on just any local election," he said.

He said his chief weapon against voting irregularities is the 1965 Voting Rights Act.

"We can pursue the issues of civil rights, extortion or bribery. Because there is a federal election going on that we can bring in to play, that we could not normally bring into play on a purely local election," he said.

The Voting Rights Act has been used to protect language minorities. Lake County has sizable Spanish- and Serbian-speaking populations, who allegedly were victimized last year.

East Chicago Mayor Robert Pastrick won the mayoral primary last spring with hundreds of absentee ballots, many cast in the names of Hispanics who couldn't read the English instructions.

Pastrick's critics allege his campaign workers filled out many of the ballots for naive foreign-born city residents, in violation of state law that only the voters or their immediate family can write on the form.

The same allegations were made in Schererville, where voters for whom English is a second language said they received help from Bob "Bosko" Grkinich, a Schererville businessman and Democratic committeeman.

Feds stalk vote fraud bounty

BY BILL DOLAN
Times Staff Writer

HAMMOND -- U.S. Justice Department investigators see Lake County's vote fraud scandal as a big game hunt.

A source close to the U.S. Attorney's office said the federal government is targeting those who directed wholesale vote buying, intimidation or fraud to steal elections in East Chicago and Schererville.

Federal authorities said they suspect a conspiracy took place among East Chicago city officials, County Board of Elections and Registration officials and campaign employees of Mayor Robert Pastrick to coordinate the fraudulent casting of hundreds of absentee ballots in the May 6 Democratic primary. They believe a similar, but smaller, racket took place in Schererville.

Sources within the federal government said the U.S. Attorney's office is under pressure to take over an investigation in Crown Point by a special county grand jury that was at best spinning its wheels and at worst leaking evidence to those under suspicion.

U.S. Attorney Joseph Van Bokkelen is expected to announce as early as this week that he is not conducting a hostile takeover, but rather a merger with Indiana Attorney General Steve Carter and Lake County Prosecutor Bernard Carter, who were running the special grand jury in Crown Point.

Ned Ruff, an attorney for East Chicago City Councilman George Pabey, D-at large, said Friday their team of private investigators found a surplus of evidence, which was detailed last summer in Special Lake Superior Court Judge Steven King's 104-page opinion on that city's 2003 Democratic primary.

Pabey lost to East Chicago Mayor Robert Pastrick by 278 votes. Pabey contested that result. King heard three weeks of evidence from witnesses collected by Pabey's lawyers, and threw out 155 absentee ballots, leaving Pastrick with a 123-vote majority.

Ruff said they will continue to argue this March before the Indiana Supreme Court that all absentee ballots cast in Pastrick's name should have been thrown out because of what Ruff calls, "a pattern of fraudulent behavior."

"These were not isolated incidents," he said. "It covered the city. It happened to a lot of different people. It was centrally directed fraud in which the poor, young and naive were targeted.

An organized effort

The names of those who reportedly did the targeting were repeated over and over last summer by witnesses.

Ruff said there wasn't any evidence linking Pastrick to the illegal activity.

King's opinion named North Township Trustee Gregory Cvitkovich and Robert Cantrell, former East Chicago Republican chairman, but not as participants in vote fraud.

Rather, King quotes Cvitkovich and Cantrell as saying candidates (like Pastrick) hire hundreds of unofficial poll workers in the expectation they will cast absentee ballots in the name of their paymaster candidate.

Ruff said there was a large amount of evidence that East Chicago's parks department swelled before last year's primary with employees hired not to promote recreation but Pastrick's re-election.

"Park Superintendent Joe Valdez's name came up over and over," Ruff said. We were told park employees were ordered to vote by absentee ballot, because there was a fear they would get drunk on election day and not get to the polls."

Valdez is awaiting trial this summer on charges he and five other East Chicago political figures illegally spent \$20 million on sidewalk and other concrete work on private property to curry favor with voters before the 1999 Democratic primary election. He is pleading

016693

innocent in that case.

Others named by King as prime players in the East Chicago mayor election include:

* Andrew Callas, who directed Pastrick's campaign, including the collection and photocopying of more than 1,000 absentee ballot applications at Pastrick campaign headquarters before they were sent on to the election board.

* Lake County Councilman Joel Markovich, a precinct committeeman and Pastrick supporter, who admitted hiring 40 people to work at the polls.

* East Chicago Precinct Committeeman Ramon Guillen, who recruited, collected and delivered absentee ballot applications by the dozens, many of them in identical handwriting even though applications are supposed to be filled out only by the voters themselves.

* Alan "Twig" Simmons, a city employee, who was present, according to King, when Lisa Bailey and her mother, Stella Bailey, filled out their ballots. She said Simmons promised to help the two women get jobs and that he would fix Bailey's car.

* Alfred "Bit-a-man" Rodgers, a Pastrick supporter and unsuccessful candidate for City Council, who allegedly promised to pay for an absentee ballot.

* Milan Kesic, who manages a temporary employment service and a Pastrick operative, who obtained 90 absentee ballot applications from his employees and could have had more.

More absentee questions

Allegations in Schererville center on the absentee ballots cast for Schererville Town Judge Deborah Riga and the activities of Bob "Bosko" Grkinich, a Schererville businessman and Democratic committeeman of Schererville's heavily Serbian 10th Precinct.

Riga won the primary by 11 votes, but her nomination was reversed last year by a recount judge who declared challenger Kenneth Anderson the winner after disqualifying 23 absentee ballots in Riga's name.

At the hearing, Anderson's lawyers alleged Grkinich was involved in the illegal possession of absentee ballots and the illegal assistance of absentee voters. Grkinich refused to answer questions about his role in alleged vote fraud on grounds it might incriminate him.

There is no solid indication yet who federal authorities are targeting within the county elections board, but Ruff said Pabey's team believed someone on that staff was helping's Pastrick's campaign.

Ruff said he believes the elections board delayed by several hours reporting their count of nearly 2,000 absentee ballots cast in the East Chicago mayoral primary.

Michael McPhillips, assistant director of the elections department, said the elections board staff from both major parties counted about 7,500 absentee ballots cast throughout the county in the spring of 2003. He said absentee vote totals weren't held back.

Bill Dolan can be reached at bdolan@nwitimes.com or (219) 662-5328.

Abell: It's time to end vote fraud probe

However, clerk still convinced it occurred

By JOHN MARTIN Courier & Press staff writer 464-7594 or jmartin@evansville.net
February 11, 2004

Investigations of alleged fraud in the 2003 Evansville city government election will proceed no further.

Vanderburgh County Clerk Marsha Abell, who said last month that the County Election Board should continue an examination of the election, said Tuesday that it's time to move on.

Advertisement

Holiday bills? Hit delete.

Get free Online Bill Pay and win.

OLD NATIONAL REACH™

Member FDIC

"I think our energies would be better served making sure these things don't happen again," Abell said.

"These things," according to Abell, included irregularities in the absentee voting process. The county election office received more than 3,000 applications for absentee ballots, and signature issues on several ballots led the Election Board to request an Evansville Police Department investigation.

Results of that investigation were presented after the election to a Vanderburgh County grand jury, which returned no indictments.

But Abell said she remained convinced that fraud took place. She said she had evidence a voter knowingly cast two ballots and heard about problems with absentee voting among residents of a Downtown homeless shelter.

There were roadblocks, though, in investigating the issues further, Abell said. She said she asked the police department for its investigative file, but she said the police department said the Election Board would have to issue a subpoena to view it. Don Vowels, the lone Democrat on the Election Board, said moving forward with an investigation would have raised legal questions.

"Mrs. Abell is right about the difficulty of going forward on this because we don't know what the grand jury looked at," Vowels said. "If a grand jury looked at a case and there is (no indictment), they can't be looked at (again) unless new information comes to light after the proceeding."

The investigation of alleged voter fraud became politically charged in the last days before the Nov. 4 election. Mark Foster, the other Republican Election Board member, said he believes the board sent a message that "those who may want to bend the rules know we're not going to sit idly by and let it happen."

In another matter, Vowels made an unsuccessful motion that business cards, which give instructions about the new voting machines, not be distributed by those who demonstrate the county's new election equipment. He objected because the cards, which list the dates of this

016695

year's primary and general elections, twice list Abell's name, and Carla Hayden's name is listed once. Both are candidates in the November election.

The cards also have the names of the other two election board members, including Election Board member Vowels. On the reverse, Abell's name appears with Hayden, the chief deputy clerk who is running for county clerk, and Election Supervisor B.J. Farrell.

Abell is running for Vanderburgh County Council at-large.

Foster said the cards are meant to instruct voters on the new touch-screen voting machines, and the names on the cards, which include county phone numbers, indicate who residents can contact to schedule demonstrations.

Vowels' motion died for lack of a second.

Election Board to act on claims of illegal voting

BY DAVID MITCHELL

Times Staff Writer

VALPARAISO -- The Porter County Election Board voted Tuesday to conduct a hearing on claims of illegal voting in last year's election by children of the former Porter Town Council president.

Board member Dale Brewer requested the action at the close of the group's regular meeting, and asked the county Sheriff's Department to investigate the claims.

According to Brewer, the allegations involved absentee ballots cast by Wesley and Nicole Kozuszek, children of Kathy Kozuszek, who lost her re-election bid last year. Brewer prepared a statement and additional material for the other members of the board.

"The challenge to the ballots was based upon independent, reliable public information obtained from the Chesterton Police Department that the individuals casting the absentee votes did not reside in that voting district, and therefore, were ineligible to cast a vote," according to Brewer's statement.

Brewer had information from the Chesterton Police Department related to a report filed by Wesley Kozuszek in October 2003, after he told police someone stole his vehicle. Police records show a Chesterton address for Nicole and Wesley Kozuszek, making them ineligible to vote in a town of Porter election.

Kathryn Kozuszek said her children have an attorney and would have been at the board's regular meeting had they known the issue would be addressed. Instead, a special meeting is scheduled for April 30, when the Kozuszekes will state their case.

Kozuszek said her children live and are registered to vote in Porter. While her son maintained an apartment to get out of the house on occasion while the family dealt with difficult times last year, Kozuszek said he lived at home in Porter.

"That will be up to the Sheriff's Department to investigate," Brewer said.

Aside from the absentee ballot issue, Kozuszek charged Brewer with abuse of power as a member of the board. On Election Day, Brewer was notified of a Porter poll worker authorized by the county Democratic Party chairman, but that person neither lived in nor was registered to vote in Porter County.

Brewer asked the person to leave. Kozuszek claimed the person tallied people entering the polling place -- a poll book holder -- and is not required to be a county resident.

Brewer agreed the person did not have to be a resident but said he never identified himself as a poll book holder.

Meanwhile, the board resolved a number of alleged campaign finance violations reported following last year's elections. Accusations mainly targeted Democratic candidates in Porter and Hebron, claiming they filed inaccurate campaign finance disclosure forms.

Board Chairman James Bozik said all candidates in question subsequently corrected any errors previously filed. Board officials plan to send an additional letter to candidates reminding them of their obligation to accurately file their paperwork. No more exceptions will be made, and candidates who fail to abide by election laws will pay fines or legal fees, Bozik said.

David Mitchell can be reached at dmitchell@nwitimes.com or (219) 462-5151, ext. 346.

HEADLINE: Election debacle will resonate for years to come

BODY:

Along with the striking story in the New York Times of July 15 on Republican behavior during the Florida election crisis is a second story about Joe Lieberman. He, of course, was the Democratic vice presidential candidate who lost out along with Al Gore, possibly due to his own decency - perhaps naivete - in the face of the raw-knuckled political infighting of this ballot count.

The first story relates how the Republicans pressured Florida election officials to disregard faulty absentee ballots in Bush-leaning counties. The Times' six-month study reports that ballots were flawed because they had no witnesses as required by law, they were without postmarks or were postmarked too late, many were mailed from within the United States, and there were even ballots from voters who voted twice. Florida Secretary of State Katherine Harris had declared that only proper ballots deposited on time should count, but she waived that requirement for overseas ballots which were known in advance to be right-leaning.

While the Republicans were launching their hardball campaign to get every last pro-Bush ballot counted - proper or improper - good-hearted Lieberman said on Meet the Press on Nov. 19 that he favored giving "the benefit of the doubt" to military personnel. He felt their votes should count. It all smacks of Leo Durocher, the hard bitten manager of the New York Giants in the 1950s, who snarled, "Nice guys finish last."

The dispute on Florida absentee ballots in 2000 will resonate for years as will the Republican effort to disenfranchise black voters. We can't kick George W. Bush out of office; that would be unconstitutional. But we can recall the 2000 debacle in 2004.

Edward Rapp, Inverness

Let states tackle election woes

Re: Another good idea for election reform, by Philip Gailey, July 15.

In a timely reminder, editor Philip Gailey references a report out of the Brookings Institution regarding election reform in which author Thomas Mann "warns against seeking a federal solution to a problem that is . . . primarily a state and local responsibility." Mann also suggests "the federal government should create a new independent agency to assist states" seeking solutions to electoral problems.

As a Libertarian, I flinch from suggestions that the federal government should take on more tasks - there is nothing in the Constitution that allows the federal government to do so. On the other hand, there is nothing in law or the Constitution that prevents the states, whether two or 50, from forming the Interstate Cooperative Committee on Ballot Technology and doing precisely what Mann suggests.

If there is to be a nationwide dialogue on how to run an election, let it be managed by the states rather than by Washington's bureaucrats. The Interstate Cooperative Committee won't be able to force a one-size-fits-all solution on its members, but the Federal Ballot Technology Administration might.

Frank Clarke, chairman, Pinellas County Libertarian Party,

Oldsmar

016699

How Bush will be remembered

Re: Bush focus: Get in overseas votes, July 15.

The article regarding the overseas ballots is not very surprising.

What is surprising is that White House spokesman Ari Fleischer believes "the election was decided by the voters of Florida a long time ago" when, in reality, the election was decided by the U.S. Supreme Court.

George W. Bush will always be remembered as the "selected" president.

Sandra Harris, Safety Harbor

Scanner system makes sense

Re: Voting machines.

I am unaware of the individual costs of the units under consideration, but there should be a great difference in the numbers required when comparing "touch screen" and "scanner" use. A polling place would probably require as many touch screen units as the punch card booths now in use. However, polling places would need two or three scanners, (more in high-activity polls) ensuring backup for failures. The scanner would be virtually as fast as dropping a ballot in the ballot box, except where a ballot is rejected. Even then, little time is lost at the machine! Voters would require only privacy stalls, much like those for the punch card system, in which to mark their scanner ballots.

Far fewer electronic devices are required, a "paper trail" is retained, and a "real time" count can be maintained and/or fed directly to an "election center" computer. Costs aside, the "scanner" system should require less inventory, maintenance and "glitch" worry. May common sense prevail!

E.C. Whipple, St. Petersburg

Times should stop obsessing

When will your paper stop obsessing about the Florida presidential recount? It's over. Your guy lost. Forget it!

Pat Jennings, Dunedin

A painful loss . . . or theft

Re: Vote controversy turns to computer records,

July 17.

Gov. Jeb Bush's communication director, Katie Baur, says it's painful to lose an election, but we should all move on.

Losing a precious possession would be painful, but if I suspected it had been stolen from me, it's unlikely I would just move on without an investigation, though I'm sure the alleged thief would appreciate it.

Kay Lawrence, Largo

Harris' role should be scrutinized

Re: Scrutiny of Harris' role revived, July 16.

Thanks for the excellent follow-up story on the shocking New York Times story on how the Republicans corrupted the recount of military ballots.

Note to Mac Stipanovich who says that some people believe Katherine Harris is "evil personified": Count me as someone who doesn't believe that, Mac.

Do, however, count me as someone who believes that if the Times' allegation that Harris allowed her non-partisan office to be used as a partisan "war room" during the recount debacle is correct, Harris should resign.

Pronto!

Jack McCarthy, Tallahassee

An elections chief with ethics

Re: Elections chief recuses herself, July 18.

What a concept, an elections chief with ethics. Deborah Clark is to be commended for taking the high road. It's refreshing to witness such character.

Too bad we cannot say the same for Katherine Harris. From the many articles I've read in the St. Petersburg Times and the New York Times, the screw-up with the overseas absentee ballots lay squarely on her shoulders.

As has been reported, state election law requires overseas ballots to be postmarked by Election Day. She knew this, she even reminded the supervisors of elections statewide in a public statement. But she allowed some 680 flawed (illegal) ballots to be counted. Ballots with late, illegible or missing postmarks. Overseas ballots with domestic postmarks. Ballots with no witness signature. Even absentee ballots that were not requested by the voter. Harris allowed her very partisan wishes (and possible ambassadorship) to blind her to the letter of the law concerning absentee ballots in Florida.

The governor saw the nature of the beast and realized the possible hint of a conflict of interest. He did the only thing he could do and stepped aside (even if only in public).

Now we learn that records on computers used in Harris' office during this period have been erased. Now this brings back some memories.

Gilbert A. Sullivan, St. Petersburg

Be sure your vote is counted

Once again, the liberal Times has seen fit to revisit the 2000 presidential election with articles on the counting of the military votes, Katherine Harris and so on. Will this never die? After the myriad lawsuits for weeks, the Supreme Court spoke and we swore in a new president - George W. Bush - on January 20, 2001.

It's over, kaput; you're beating a dead horse. Let's move on.

That said, let our voters, or those intending to do so, know that there are several essential steps they should take to ensure the proper counting of their vote. Remember, voter error is not sufficient cause for a recount. Familiarize yourself with the ballot you will be using, know what identification is required in order to cast your vote, know what precinct you are in and where your polling place is located, and then - this is important - know your candidates for the various offices. If any of these pose a problem, ask for help from a friend, relative, an attorney or your supervisor of elections. If people go to vote unprepared, they have only themselves to blame if their vote is not counted.

Jim Wright, Clearwater

We won! You lost! Get over it!

As a transplanted Yankee, I often see bumper stickers, etc., relating to a certain war that took place almost 150 years ago in America. Those who lost that war still bemoan the fact and insist that the war isn't really over at all. To them I say, "The war is over! We won! You lost! Get over it!"

Now, as a conservative Republican, I am seeing more and more articles in the Times bemoaning the fact that yet another study has been done concluding that those nasty Republicans did everything in their power to win the 2000 election, and though nothing illegal has been uncovered, the Democrats and the liberal media are just sure that some awful crime was committed. (Of course, to them a Republican in office is a crime.) To them I also say, "The election is over! We won! You lost! Get over it!"

J.R. Carrel, Safety Harbor

Encourage effective solutions

International leaders are meeting in Germany this week to resume negotiations on the implementation of the Kyoto Protocol on Climate Change. President Bush has repudiated the United States' obligation to develop details on how the world will minimize global warming. During the president's recent European tour he pledged that he would not obstruct progress during the climate talks. I hope that Americans will hold President Bush accountable to his word, given that even without our participation, the Kyoto Protocol is a crucial step toward addressing this century's greatest environmental challenge.

As the world's largest emitter of climate changing pollution, the United States should take a lead in reducing emissions.

Americans are renowned for innovative leadership in the business world, yet when it comes to acknowledging our role in global warming we have become an international embarrassment. We must encourage leadership from all elected officials to develop effective solutions to climate change.

Lyndy Worsham, Clearwater

An image that doesn't inspire

Why must you print, seemingly, a picture of President Bush with every article concerning him? We all know what he looks like, and his crafty face certainly does not attract readers or inspire them.

James Wilkins, St. Petersburg

Share your opinions

We invite readers to write to us. Letters for publication should be addressed to Letters to the Editor, P.O. Box 1121, St. Petersburg, FL 33731. They can be sent by e-mail to letters@sptimes.com or by fax to 893-8675.

They should be brief and must include the writer's name, address and phone number. Please include a handwritten signature when possible.

Letters may be edited for clarity, taste and length. We regret that not all letters can be published.

Suspicious absentee ballots?

Political accusations fly both directions

By JOHN MARTIN Courier & Press staff writer 464-7594 or jmartin@evansville.net
October 21, 2003

A Vanderburgh County government attorney said he's worried that an investigation of suspicious absentee balloting is not being handled properly, but the county clerk claims the concerns are simply "a political ploy."

Kevin Winterheimer, attorney for the Democratic-majority Vanderburgh County Commissioners, called into question Monday night how the investigation has been handled by County Clerk Marsha Abell, a Republican.

Advertisement

CLICK HERE for Our Heating System Special

Amana

JACK FROST INC.

477-7244 AS UNIQUE AS A SNOWFLAKE

"We care about your air"

Abell has turned over about 100 absentee ballot applications and fewer than 10 unmarked absentee ballots to Evansville police, who say they are investigating possible fraud.

The ballot applications, Abell said, have irregularities such as incorrect signatures or birth dates.

She said the actual ballots turned over to police were mailed from the Election Office to city voters who supposedly applied for them, but the ballots bounced back to the senders because no one lived at those addresses.

Elections for Evansville mayor, City Council and city clerk will be Nov. 4.

During his regularly scheduled report at Monday night's commissioners meeting, Winterheimer, citing news reports about the voting probe, asked for an emergency meeting of the county Election Board to ensure that the investigation is being done legally. The commissioners do not have the legal authority to call for an Election Board meeting, but Democratic Commissioner Catherine Fanello said the move was meant to relay the commissioners' concern about the investigation. The two Democrats on the three-member commission voted to call for an emergency meeting if Winterheimer's concerns are not settled during a meeting today with Election Board Attorney Les Shively.

Shively said County Commissioners should not issue an "edict" that the Election Board should meet.

"This should be dealt with from an attorney-to-attorney standpoint," Shively said.

The three commissioners agreed that the two attorneys should meet. But Republican Commissioner Suzanne Crouch parted with Democrats David Mosby and Fanello to call for the emergency meeting of the Election Board.

016704

Winterheimer said his concerns include the fact that Abell was quoted as saying she ran the names of some people seeking absentee ballots through court records and found one person with multiple arrest warrants.

The fact that someone has warrants is irrelevant to his ability to legally vote, said Winterheimer.

Winterheimer said he spoke with a co-director of the Indiana secretary of state's Election Division, who described practices such as running would-be absentee voters through court records and giving irregular applications to police as "highly unusual."

Under state law, the Election Board, on which Abell serves, along with Republican Mark Foster and Democrat Don Vowels, is in charge of administering elections. Abell last week told the Election Board that she had discovered irregularities in absentee applications, and she made a motion that police and the county prosecutor's office investigate. The motion passed 3-0.

Winterheimer acknowledged that County Commissioners have no role in running elections, but he said he wants to make sure the right to cast an absentee ballot is being protected.

"This could put a chilling effect on the fundamental right to vote," Winterheimer said.

He also said that if someone sued over being denied an absentee ballot, the county could be liable.

Winterheimer's comments "generated heat but not much light," Shively said.

"No one is interested in doing anything that discourages people from voting in this very important election."

Abell said she's "not the least bit concerned" about Winterheimer's comments. She said everyone who is registered to vote and legally seeks an absentee ballot will get one.

"This is a political ploy," Abell said. "It's strictly political."

Evansville police say they have given high priority to their investigation of possible absentee voting fraud, and detectives are working on the case full-time. The deadline to receive an absentee ballot for the Nov. 4 elections is Monday.

KY

Lexington Herald Leader (KY) - Posted on Mon, Nov. 04, 2002

**Eastern Ky. voting under scrutiny
HIGH NUMBER OF ABSENTEE BALLOTS RAISES CONCERN AMONG ELECTION
WATCHDOGS**

As usual, high numbers of absentee-ballot requests and complaints in some counties have attracted the attention of state and federal election watchdogs, who vowed in news conferences to watch for vote buying, voter intimidation and ballot forgery.

As of Friday, 278 of 47,418 registered voters in Pike County had cast absentee ballots -- a relatively low number compared to 572 in Martin County, where there are only 9,887 registered voters.

The state attorney general's office last week picked up copies of absentee ballot applications in Martin and Pike counties, officials said, but veteran political observers were not impressed.

"I call them 'paper tigers,'" said Gary Ball, editor of the weekly Mountain Citizen in Martin County.

"They're just paying lip service to the problem, coming on Election Day," Ball said. "If they were serious, they would have been in here six weeks ago."

Assistant U.S. Attorney Thomas L. Self, who last week was appointed election officer for the Eastern District of Kentucky, declined comment on Friday.

In Magoffin County, which Salyersville lawyer Gordon Long once described as "the vote-buying capital of the world," newspaper publisher David Prater decided to take the problem into his own hands.

The Salyersville Independent last week offered \$2,500 for information leading to a federal vote-buying indictment.

"We've outbid the buyers," said Prater, who estimated the selling price for votes in the current county election is \$75.

"We're already receiving tips."

Clay County voting under investigation

Federal agents subpoena records of May primary

By Alan Maimon
 amalmon@courier-journal.com
 The Courier-Journal

MANCHESTER, Ky. -- Federal prosecutors are investigating voter fraud in Clay County, five months after a primary campaign during which shots were fired at the county clerk, a supporter of his opponent was wounded and absentee voting was stopped twice.

The clerk, Jennings White, said federal authorities handdelivered a subpoena to his office on Monday asking that all records from the May 28 primary be turned over by this morning.

Barbara Hadley Smith, a spokeswoman for Kentucky Attorney General Ben Chandler, said Chandler's office was notified about the subpoena of election records by the U.S. attorney's office for the Eastern District of Kentucky.

Sheriff Edd Jordan, who twice suspended absentee voting leading up to the primary after long lines of unruly voters showed up at the polls, said he hoped the investigation would expose any vote buying that took place.

"This was no surprise. That election needs to be straightened up," Jordan said of the federal probe.

White lost the Republican primary in his bid for a third term as clerk to challenger Freddy Thompson, who got 59 percent of the vote. But White won the absentee vote count, 522-331.

In all, nearly 5.5 percent of Clay County voters cast their ballots early. Only four other Kentucky counties had a higher percentage of absentee voting, and the statewide average was 1.16 percent.

After the primary, Secretary of State John Y. Brown III said a high percentage of absentee voting is generally a sign of vote buying.

White said Tuesday that he wasn't concerned about the subpoena. "I have no problems with it. Why should they single me out? We're just the bookkeepers," he said.

Thompson said he was confident the investigation would find no wrongdoing by his supporters.

Officials at the U.S. attorney's office declined to confirm that an

~~016708~~

investigation was under way. But federal authorities conducted a similar probe following a 1998 election in Wayne County in which 54 people admitted selling their votes. Four men who were subsequently indicted pleaded guilty to conspiracy to commit vote fraud.

The Clay County primary was marked by a number of unusual circumstances.

On the day of the primary, a Thompson supporter was removed from a voting precinct after he started campaigning for Thompson. At another precinct, more than a third of approximately 700 voters needed assistance reading the names of the candidates in the voting booth.

A week before the vote, White's vehicle was sprayed by gunfire while he was driving, forcing him to get out and flee over a hillside. Hours later, gunfire was reported at Thompson's house. It was unclear whether the shot came from inside or outside the house.

In a separate shooting incident, one of Thompson's supporters was wounded but was not seriously injured.

And four days before the primary, a lawsuit was filed by two election workers claiming that White selectively delayed telling a number of poll workers about mandatory training classes until it was too late for them to attend. A judge declined to intervene in the dispute.

Clay County Attorney Clay Bishop Jr. said he was concerned about the high number of absentee voters in the primary.

"I didn't want anything to do with that foolishness," Bishop said, referring to lines of several hundred people who stood in front of the clerk's office to vote absentee. "I kept my distance from it."

Jordan, the sheriff, said the only way to figure out who may have bought votes would be to subpoena every absentee voter and question them.

The subpoena comes two weeks after Chandler announced an effort to prevent voter fraud in the Nov. 5 election.

Chandler said investigators from his office would coordinate with Kentucky State Police and visit every county clerk before the election to identify potential problems. Chandler said his office would determine from those visits which counties would receive "concentrated monitoring" through Election Day.

The campaign in Clay County this fall has been quieter than the one preceding the primary, although Jordan said a Democratic poll watcher was arrested last week following a verbal attack on employees in the clerk's office.

Yesterday, only a handful of people were in the clerk's office to vote

absentee, and White said only about 25 people voted absentee in the first three days that such voting was available.

Winning the primary often amounts to winning the election in Clay County because most officeholders run as Republicans. Thompson, Jordan and Bishop all have no Democratic opponents.

ISP investigating allegations of absentee voting fraud

Tuesday, April 29, 2003

IN

BY KEN de la BASTIDE

Senior Reporter

Indiana State Police are investigating allegations that Democratic primary absentee ballots were delivered to nursing home residents who traditionally voted for the Republican ticket.

Republican candidate Kevin Smith heard about the allegations. His campaign then turned it over to Madison County Prosecutor Rodney Cummings.

"My campaign filed the complaint," said Smith. "I was contacted about a questionable absentee ballot application. There was something amiss."

Cummings asked Indiana State Police to investigate.

"The investigation should be completed at any time," said Cummings. "The allegations are of felony crimes, depending on the report from the state police."

A worker for the Democratic Party allegedly went to a local nursing home and obtained signatures for two people to cast an absentee ballot.

The two people have always voted Republican. Their switch in parties was noted at the Voters Registration office. The two people said they have always voted Republican and one of them told investigators that if he voted Democrat his ballot was stolen.

Amanda Williams, Republican Party representative in the Voters Registration office, said people in a primary election have to request either a Democrat or Republican ballot.

"It was not proper for me to investigate what I found out as a candidate," Smith said. "There needed to be an independent investigation."

"This is exactly one of the major reasons why I decided to run for mayor," Smith said. "I want to restore honesty and integrity to city government. It is appalling that any person is denied the right to vote."

Absentee ballot requests seized; probe launched

By Vic Ryckaert

vic.ryckaert@indystar.com

November 01, 2002

The Marion County prosecutor's office seized dozens of suspicious absentee ballot applications Thursday as it launched a criminal probe into possible election fraud.

"If people are forging signatures on absentee ballots, that's a crime, and it is our job to investigate it," Prosecutor Scott Newman said in a written statement.

Workers in the Marion County clerk's office reported irregularities in 78 absentee ballot applications for Tuesday's election.

The problems include signatures on applications that do not match those on file with the voter registration board, applications in which the voter's name is misspelled, and correction fluid used to change voters' addresses.

The Marion County Election Board on Wednesday held an emergency hearing on those suspicious applications. It voted to send the ballots to those listed on the applications. But members of the board also made it clear that those absentee ballots will be scrutinized closely on Election Day.

Republican County Clerk Sarah M. Taylor, a member of the Election Board, welcomed the criminal investigation.

"Some violations of election law do cross into criminal matters and are punishable," Taylor said.

She said she found ballot requests for three different voters that appeared to be signed by the same individual. She said it is likely that someone who did not understand the law was trying to help senior citizens or a relatives cast legitimate votes.

"In some cases, people have misunderstandings about their ability to get an absentee ballot on somebody else's behalf," she said. "Until the appropriate people can review it, we're really not sure what we have on our hands."

Absentee voting in East St. Louis investigated

By Doug Moore
Of the Post-Dispatch
Wednesday, Jan. 05 2005

Mo

A second investigation into claims of voter fraud in East St. Louis during the election Nov. 2 has been launched, this time by St. Clair County State's Attorney Robert Haida.

Haida's investigation is limited to 13 absentee votes that were cast from a boardinghouse in East St. Louis. The federal government has declined to talk about its case, but a search warrant issued during an FBI raid at East St. Louis City Hall on Nov. 23 indicates that the reach is much greater.

"Our investigation is separate but not in conflict with the federal government," Haida said Wednesday.

Oliver Hamilton, a Democratic precinct committeeman, owns the boardinghouse, at 1232 Cleveland Avenue, targeted by the investigation.

Hamilton was not among the city's precinct committeemen who were called before a federal grand jury over the past two months. He could not be reached for comment Wednesday.

However, Haida has subpoenaed all those who voted absentee from the house in the election Nov. 2.

Haida would not say when the voters would have to appear before the grand jury, but he said it would not be on Friday, when the next jury meets.

At a news conference at East St. Louis' Election Board four days before the election, state Republicans referred to the house on Cleveland Avenue as one of the "potential instances of massive voter fraud" in East St. Louis.

At that time, Judy Baar Topinka, Illinois treasurer and chairwoman of the state's Republican Party, urged local prosecutors to take the steps to ensure "a free and fair election."

Haida, a Democrat, said Topinka's October visit had nothing to do with his office's decision to begin a vote-fraud investigation.

"We had information that came before, during and after the election that resulted in our action," Haida said.

Republican Party spokesman Jason Gerwig said it did not matter who or what precipitated the county investigation.

"We came down there because it was an issue of fairness, not partisan politics," Gerwig said. "We're pleased to see the state's attorney is moving on an issue worth looking into."

Haida said his office routinely checks absentee ballots after each election and, in this instance, found something that his office wanted to bring before a grand jury. He would not provide details. According to the East St. Louis Election Board, 566 of the 13,442 votes cast in the election Nov. 2 were absentee.

Eleven computer hard drives seized in the East St. Louis City Hall raid were returned on Monday. FBI agents said other items seized were being retained as the investigation continues. The federal government search warrants say the items were taken to help in the investigation of election fraud, mail fraud and "obstruction of an official proceeding by the destruction of records."

016712

*ELECTION*Notes

San Bernardino County, California recruiting Assistant Registrar of Voters. San Bernardino County, Cal. is seeking an Assistant Registrar of Voters to assist with the planning, organizing, implementing, evaluating, and directing the department's election activities. Required: bachelor's degree in business or public administration or a closely related field; three years of management experience, including one year in election work. County application required. An oral examination covering management and problem and issue resolution may be required. Recruitment is open until a sufficient number of qualified applicants have applied. Salary range: \$64,730 to \$82,805. For further information (909) 387-8304, or by e-mail at employment@hr.sbcounty.gov.

NJ

Nevada legislative candidate indicted for absentee vote fraud. An unsuccessful primary election candidate for the Nevada state legislature was indicted this month on charges related to absentee vote fraud in the November, 2002 general election. According to press reports, the indictment charges Gary Lee Horrocks, a tavern owner, with 28 counts of felony voter fraud, 31 counts of forgery, two counts of misdemeanor conspiracy, and one count of burglary. The burglary charge is based on entering a county office with the intent to commit a felony -- deliver fraudulent absentee ballots. Horrocks wife Pam, who allegedly completed absentee ballots and delivered them, was named as an unindicted co-conspirator. Horrocks was one of several candidates in the Republican primary in the 37th Assembly district. The winner of that primary, Francis Allen, lost in November to Democrat Marcus Conklin by a margin of 134 votes.

New Jersey Election Officials get tips on activities for student poll workers. New Jersey election officials attending the 66th annual meeting of the Election Officials Association in Atlantic City recently got ten ideas on how to use student poll workers. The suggestions: set up and break down machinery; give demo on a dummy machine; show demo chart to those in line; help senior citizens move around; bilingual students as interpreters; smile and wear an "ask me" sign; instruct voters on how to get to their correct polling place; thank people after they have voted; before election day visit senior centers and give a demonstration; and, *get the donuts*. The suggestions were offered in material distributed by Freedom's Answer, a non-profit group designed to engage young people in the political process. Doug Bailey, co-founder of Freedom's Answer, spoke at the conference.

FEC continues disclosure exemption for Socialist Workers Party. The Federal Election Commission (FEC) last month voted to continue to exempt the Socialist Workers Party from disclosing campaign finance information through December 31, 2008. The Socialist Workers Party was granted an exemption from disclosure provisions of the campaign finance law by a federal court in 1979. The court later extended the exemptions to 1988. The FEC has granted the exemption since that time. The FEC based its decision on evidence suggesting a reasonable probability that contributors and vendors doing business with the party could face threats, harassment, or reprisals if their names and information about them was disclosed. The FEC renewed a provision that requires SWP committees to assign a code number to each individual contributor from whom it receives contributions in excess of \$200 during a calendar year. This allows the FEC to determine whether that contributor has exceeded the contribution limits of federal law.

County clerk believes investigation could last well beyond Nov. 5 general election

Eight FBI special agents armed with a subpoena rolled into Tonopah early Monday morning and confiscated roughly 60 banker boxes containing thousands of records regarding the 2000 general election and the Sept. 3 primary election. That was viewed as good news by District Attorney Bob Beckett and County Clerk Sam Merlino.

Special Agent Daron Borst had virtually nothing to say regarding what occurred at Tonopah, or why.

"I can't say anything on this due to Dept. of Justice guidelines and other federal laws," Borst said Monday afternoon. "I cannot provide any details on this investigation. Dept. of Justice guidelines are the ones I have to go by."

Borst said he could not comment on the number of agents reported to have gone to Tonopah or why that many might be required. He did offer that the FBI prefers to send as many agents as possible on an investigation in order to conduct it quickly.

Borst said the type of investigation being conducted would not allow for information to be released to the public prior to the conclusion of it, and, "I have no idea when that's going to be."

Nor would Borst say what the FBI was looking for. "It's forbidden for me to talk about that," he said.

Nye County Clerk Sam Merlino said the agents were equally tightlipped with her, though one of them told her the investigation "specifically" addressed allegations of voter fraud. The agents, she said, were precluded from informing Merlino who it was that contacted them.

Sources said Deputy Attorney General and Nye County District Attorney candidate Brian Kunzi contacted the FBI after he was presented with allegations of voter fraud. Kunzi was not available for comment by press time. At any rate, Kunzi reportedly told several people he was compelled to contact the FBI after he received the complaints due to his status as a state prosecutor.

"They took all records from the 2000 general and the 2002 primary elections," Merlino said. "I believe they want to sift

016714

primary elections, Merlino said. "Because they want to go through them to be sure the people who have requested absentee ballots actually exist."

Merlino said the agents arrived unannounced in four white sedans and left the county seat late Monday morning and headed back to the bureau's Las Vegas field office. The records seized included voter ballots, absentee ballots, poll books and registers, said Merlino, who was followed by all eight agents when she had to drive to the old Tonopah courthouse to retrieve records from the 2000 election that are kept in a vault.

"They were polite to us," she said. "They were all wearing black suits and driving white cars and they would not let me out of their sight. It was kind of intimidating, but there was no problem whatsoever."

While FBI officials are prohibited from talking about the investigation, Merlino indicated the inquest might not conclude anytime soon. "They said they would be back right after the (Nov. 5) general election to take those records," she said.

Merlino welcomes the FBI's involvement. "If this cleans it up and we're squeaky clean, that would be good. If they find something we'll deal with it as we're supposed to. If they don't find anything, that would be wonderful."

District Attorney Bob Beckett was also thankful the FBI has become involved. "We'll run our investigation parallel to theirs," said Beckett. "The federal government has many more resources than we do, and hopefully we'll be able to take advantage of those resources."

In the meantime, Beckett said his office has begun its investigation into allegations that Chuck Bondi and others committed perjury or entered into a conspiracy to commit perjury when they filed over 1,200 voter challenges earlier this month. Nearly 200 of those challenges were duplicates or triplicates of the same challenge.

At issue is the manner in which the challenge was mounted. The group, most who are members of Concerned Citizens for Fair Elections, signed their names to each of the written notices, swearing under penalty of perjury they physically inspected each residence they said was abandoned or otherwise not occupied by a registered voter.

More than 220 of the challenges were improper, and several of the signers testified in court last week they did not actually inspect the suspect voter residence.

Of decidedly more importance is the issue of the more than 850 voter registrations that were cancelled due to listing a PO box as the voter's physical address. Such listings are illegal in Nevada and last week Fifth District Judge Robert Lane ordered them expunged from the rolls until and if the voter corrects the defect in his or her registration.

While the figures continue to be studied, a preliminary count conducted by the district attorney's office concluded 232 of the 1,045 voters challenged (minus the 198 duplicates) participated in the Sept. 3 primary. Of those, 141 who voted were subsequently cancelled last week. Those 141 will be

016715

precluded from voting Nov. 5 if they fail to correct any defects listed on their voter registration. The method under which they voted, whether via absentee, early or on election day, has not been determined though those numbers would likely be crunched later this week.

Illegal registrations can be remedied in writing or by providing proof the voter has a physical address in Nye County when they go to the polls.

By 8 a.m. Tuesday, the second day of early voting, election board Chairwoman Kay Floyd said five voters who had been impacted had taken advantage of the opportunity to properly register.

In a Las Vegas Review-Journal article on the subject in Tuesday's edition, the writer quoted unnamed sources as saying they were upset with the results of the Sept. 3 primary. Specifically mentioned was the fact incumbent Sheriff Wade Lieseke was losing badly to challenger Tony DeMeo until absentee ballots were counted and those totals "swayed the race (Lieseke's) way."

Lieseke prevailed over challenger Doug Richards in a similar fashion in 1998. Not mentioned is the fact that Lieseke also pulled majority numbers in early voting in both races as well. DeMeo garnered 2,313 votes to Lieseke's 2,184 in the primary. During early voting held in late August, Lieseke received 779 votes to DeMeo's 565 and Lieseke earned nearly one hundred more votes in absentee voting, 223 to 128 cast for DeMeo.

On FOX 5 News on Tuesday morning, a newscaster said "dead" people were voting in Nye County. She did not mention the source of that information.

There is no evidence to support the allegation, said Merlino, adding, "This is getting out of hand."

Debate bogs down absentee-ballot-fraud probe

By THOMAS BARLAS Staff Writer, (609) 272-7201, [E-Mail](#)

Efforts to get someone to investigate allegations of absentee-ballot fraud during the June primary in Atlantic County apparently are getting bogged down in a debate, waged by letter, over procedure.

It also is creating the unusual situation in which the county's Democratic leader is trying to prod Republican Atlantic County Superintendent of Elections Joanne Armbruster into investigating his own party.

Armbruster apparently is the key to any investigation. Both the state Attorney General's Office and the state Division of Elections contend she is the person to begin any investigation.

At issue is an absentee-ballot drive orchestrated by Atlantic City Council President Craig Callaway.

The Atlantic County Board of Elections formally requested an investigation into the absentee-ballot situation in a recent two-sentence letter to Armbruster.

"You are aware of allegations that have been made in the primary 2003 election," the letter reads. "The board asks that when you take control of the write-in absentee ballots, you take the action you deem appropriate."

However, Armbruster apparently has some problems not only with the letter, but also with election board proceedings, and won't take action until those problems are cleared up.

She contends the board "failed to identify what the allegations are and exactly in what phase of the process you would have this office take appropriate action," according to a letter sent to the election board.

Armbruster further appears to be chastising the election board in the letter for failing to properly review all absentee ballots, a process the board must take before she begins any investigation.

"It is incumbent upon the full board to exhaustively carry out their responsibilities in the processing of the absentee ballots," she writes.

Neither Armbruster nor Mark Stein, the election board chairman, were available for comment Tuesday.

However, Atlantic County Democratic Party Chairman Chuck Chiarello contends Armbruster is finding excuses for avoiding an investigation.

"She can pass the buck and say the Board of Elections didn't do what it should have done," Chiarello said. "She can say that she doesn't have the help she needs."

They're
looking for
you, too.

016717

"I believe big-time fraud was committed with the absentee ballots. She needs to really get moving on this," Chiarello continued.

"I've seen almost an entire month of buck passing from all the different players here," he said.

Callaway, who is a Democrat, and his supporters have run a series of absentee-ballot drives in recent years that have significantly influenced some election results.

Callaway said after the most recent primary that the absentee-ballot drive he orchestrated for Deon Garland was designed to reprimand Democratic 2nd District state Senate candidate Tom Swift for allegedly supporting Atlantic City Council candidates Stephenine Dixon and William Marsh.

Dixon ran against Callaway in the 4th Ward race, and Marsh didn't have Callaway's support.

Another Callaway-orchestrated absentee-ballot drive helped Callaway's brother, Maurice, unseat a popular incumbent in Pleasantville.

Election board members are mixed as to whether many of the write-in candidates' names appear to have been written on the absentee ballots by only a few people.

King event becomes 'march on Board of Elections'

By DEREK HARPER Staff Writer, (609) 272-7203

ATLANTIC CITY - It all started with just a simple flag-raising in tribute to an American civil-rights leader.

But by the end, the police were called and some participants, claiming bias and abuse when they were stopped from protesting alleged voter fraud in the county Board of Elections, promised litigation.

At about noon, more than two dozen people gathered between City Hall and the Atlantic County Building to raise a flag with the image of the Rev. Martin Luther King Jr. in honor of the 40th anniversary of the civil-rights march on Washington.

"We thought it was very good to raise this," said Pleasantville resident Davine W. Reid, 57, who worked for several days to secure city permission for the flag-raising. "We are still not free as a people," said Reid, who is black.

After a short service, Reid said that to her surprise, people were asked to form a line. When they did, they were led around, then inside the county building.

Once inside, the group, which included former NAACP President Pierre Hollingsworth, independent 3rd Ward City Council candidate Willie Norwood and Atlantic County Democratic state Senate candidate Tom Swift, tried to go into the Board of Elections office.

They wanted to protest potential voter fraud issues raised by the use of absentee ballots in the last Atlantic City Council election.

"We want an investigation and we want it now," Hollingsworth said. "We're calling on the attorney general and the county prosecutor. We're just asking for help."

When building security stopped them and called police, the group demanded to see Superintendent of Elections Joanne S. Armbruster and then sang "We Shall Overcome" in the hallway. After some angry speeches, the group broke up and left.

Afterward, building supervisor Wayne Mills said he offered the group a large room nearby to use, but they refused. He said the elections office was too small for the group: "The fire marshal comes up there, he's kicking everybody out."

"Then they start singing 'We Shall Overcome,'" he said. "What are you trying to overcome?"

Outside the elections office, the King flag flew between the U.S. and New

Atlantic City, NJ

Jersey flags. Reid still was perplexed about how her peaceful flag-raising turned into a protest.

"I guess this will be known as the march on the Board of Elections," she said.

Ruling ends vote practice

By Glenn May
TRIBUNE-REVIEW

-  [Larger / Smaller Text](#)

Able-bodied voters casting absentee ballots either must hand-deliver or mail the ballots themselves, the state Supreme Court has ruled.

The decision Monday ends a longtime Allegheny County practice of allowing third parties to gather and deliver the ballots to elections officers.

Disabled or handicapped voters still can have third parties deliver their ballots.

The ruling doesn't change the outcome of the Nov. 4 whisker-thin loss by Westmoreland County Common Pleas Judge John Driscoll for state Superior Court. In fact, the decision took votes away from Driscoll, a Democrat.

The state's highest court invalidated 56 absentee ballot votes cast in Allegheny County in the Nov. 4 election. The 6-0 decision issued Monday unlikely will reverse the outcome of any other races here, officials said.

Several Democrats said the Supreme Court's decision could erect hurdles to voting. Republican officials said the 6-0 ruling closes a potential avenue for election fraud.

"It's a break with tradition that will have effects far beyond this decision," said Lawrence Tabas, the lawyer for state Superior Court Judge Susan P. Gantman, who defeated Driscoll in November. Gantman, a Republican, is a party in the case.

Supreme Court Justice Ronald D. Castille wrote in the court's decision that state election law clearly requires absentee voters to either hand-deliver their own ballots or to mail them to elections officials.

"Our precedent is clear," Castille wrote. "We cannot simply ignore substantive provisions of the elections code."

Allegheny County Elections Director Mark Wolosik did not return telephone calls for comment yesterday.

The dispute stems from an Oct. 27 decision by the Allegheny County Board of Elections to continue to allow third parties to deliver absentee ballots for the Nov. 4 general election.

Before the election, John Pierce and Thomas Stepnick -- last fall's GOP candidates for county treasurer and register of wills -- asked the U.S. District Court in Pittsburgh to halt the practice. U.S. District Judge Joy Flowers Conti determined that the issue should be decided in a state court.

016721

Allegheny County elections officials eventually determined that 56 absentee ballots in the November election had been delivered by third parties.

Pierce and Stepnick filed a lawsuit after the election, asking the Allegheny County Court of Common Pleas to review the validity of the absentee ballot-delivery system. Gantman later joined in the lawsuit.

Allegheny County Judge Joseph James upheld the practice, and Pennsylvania Commonwealth Court affirmed his decision. Pierce, Stepnick and Gantman appealed to the state's top court.

Although the Allegheny County Elections Board might have wanted to encourage more people to vote by allowing third-party deliveries, Castille wrote, the practice is "more likely to invite, rather to remedy, fraud."

Clifford Levine, lawyer for the Democratic State Committee, said no allegations of fraud ever were made over the 56 ballots.

He said the third-party delivery system in Allegheny County had made it easier for people to vote.

"We think it's best for democracy when eligible voters are allowed to vote," Levine said.

Richard Stampahar, chairman of the Republican Committee of Allegheny County, said it used to be common to see Democrat activists carrying bundles of ballots for delivery at election time. He said the practice encouraged fraud.

Stampahar said the Supreme Court decision means Allegheny County will end a tradition long since abandoned in other counties in the state.

Tom Flaherty, chairman of the Allegheny County Democratic Committee, said third-party delivery has been used since before he became politically active more than 25 years ago. He said the deliveries were handled by self-motivated activists and were not party strategy.

Flaherty said it is hard to understand why a voter can mail a ballot but isn't allowed to have someone else deliver it. Still, he said, the local party will abide by the ruling.

Ken Snyder, spokesman for Democratic State Committee Chairman T.J. Rooney, and Dan Hayward, executive director of the Republican State Committee, both said their parties mail absentee ballots to voters, but voters are told to mail or deliver them personally to county elections offices.

Flaherty said the number of ballots delivered by third parties is usually too small to change the outcomes of races.

Gantman defeated Driscoll by 28 votes for the state Superior Court seat.

Tabas said most of the 56 challenged ballots favored Driscoll. Since the Supreme Court invalidated the 56 ballots, Gantman's 1,125,543 to 1,125,515 margin of victory will grow slightly.

Pierce lost by about 65,000 votes; Stepnick lost his race by more than 75,000 votes.

An author on a book about Pennsylvania election law, Tabas said the ruling is another step toward ensuring election practices do not differ from county to county.

016722

"A court sitting in Westmoreland County may not interpret a statute differently than a court in Dauphin County," he said.

The decision voids the absentee ballots of some prominent Allegheny County residents, including U.S. Attorney Mary Beth Buchanan; U.S. Rep. Melissa Hart, R-Bradford Woods; and Elsie Hillman, a prominent GOP power broker.

A HEARING IS SCHEDULED MONDAY REGARDING THE CLARION COUNTY DISTRICT JUSTICE CONTEST BETWEEN NANCY KADUNCE AND DUANE QUINN.

Sports

News-Herald

CLARION - A visiting judge will hear arguments Monday concerning legal challenges in the election involving a Clarion County district justice position.

Clarion-News

Good Times

Judge Carson Brown has been appointed to preside over a 9 a.m. hearing scheduled in response to motions filed by Nancy Kadunce and Duane Quinn.

Local Classifieds

Submit A Classified Ad

Quinn, the Republican candidate who currently holds the office, was declared the winner by eight votes over Democratic opponent Nancy Kadunce in the Nov. 4 general election.

Contact Information

Kadunce has requested a recount of all ballot boxes in the district as well as the disqualification of more than 100 absentee ballots.

She claims in court papers there is a substantial risk of absentee ballot fraud due to the election board's practice of allowing third-party delivery of the ballots.

Quinn has filed documents asking the judge to dismiss Kadunce's

016725

requests.

The election board's certified results showed Quinn with 1,508 votes to Kadunce's 1,500.

Clarion County Judge James Arner and Senior Judge Charles R. Alexander had recused themselves from the matter.

Quinn, of Fisher, has served as district justice since his appointment in 2001. The post serves Sligo Borough and Farmington, Highland, Knox, Millcreek, Monroe, Paint, Piney and Washington townships.

Kadunce, a resident of Highland Township, served as judicial administrative assistant for the district justice office from 1976 until her resignation earlier this year in order to run for the post.

LENGTH: 755 words

HEADLINE: FAX-THE-VOTE PLAN BRINGS MANY UNHAPPY RETURNS

BODY:

Somewhere en route to becoming the villain of the week, Pat Williams put out a bid to collect and transmit the votes of Americans overseas — primarily members of the military, but also citizens living abroad in places the mails don't always reach. Think of Antarctica, Afghanistan and the sands of Iraq.

The idea was simple enough: military and other overseas voters from Missouri and North Dakota could send their requests for absentee ballots either by e-mail, or more likely fax, to Williams' Omega Technologies, in Alexandria, Va. Omega would, in turn, fax those requests to elections offices in those two states, with which it has contracts.

The elections offices would ship the ballots to the voters, who would fill them out and scan them into an e-mail or a paperless fax that would go to Omega's computers. Omega would check the cover sheet and route the ballots in the form of faxes to the elections offices and, it is to be hoped, democracy would be served.

In the spring, Missouri received 22 ballots in this fashion. The rest came by regular mail.

Since that time, Williams has been painted as a Republican operative and a general threat to the republic. She has been accused of subverting the secret ballot and opening the door to election theft on the scale of a Ferdinand Marcos.

"I'm a citizen as well," Williams protested. "I'm a veteran as well." These claims are, of course, a thin defense in an age when veterans put up TV ads attacking one another's service in combat. But Williams, whose own e-mail account recently filled up with hate mail, would like the world to know that she has no plans to steal the election.

Her problems began when the suspicious noticed that Williams had donated more than \$6,000 to the Republican Congressional Campaign Committee — not a terribly impolitic move for a business that bids on government contracts in a town run by Tom DeLay. Initial accounts overlooked the fact that she had also worked as a volunteer and donor in the presidential campaign of Democrat Wesley Clark.

A graduate of Tuskegee Institute, Williams joined the Army straight out of school, worked her way up the ranks into an Army think tank, then retired in 1996 after arthritis overtook her.

"I resent it to my soul when people say I would commit a felony to manipulate the vote," she said.

Such alarms went off because the service members who send their ballots this way must sign a form waiving their rights to a secret ballot, because a faxed ballot is signed to prevent fraud, and someone has to check that signature. The most likely viewer will be the person at the end of the fax machine in Missouri, said Terri Duardaller, a spokeswoman for the elections department there.

She also notes that Article 8, Section 3 of the Missouri Constitution requires that elections workers be sworn not to disclose how any voter voted.

The outcry against Williams also ignores the fact that under the current system, all 50 states will take faxed ballots that also must be signed and witnessed. It just happens that two — Missouri and North Dakota — work directly with Omega to process the ballot requests.

"It is always suggested first and foremost — mail your ballot. The government has never said, 'We want you to send your ballot through this program,'" Williams said.

Of the 22 service members who sent their ballots through the Williams program this spring, Williams saw none of them.

"The process is completely electronic. I don't get any hard copy. It is computer-to-computer, talking, receiving the information," Williams said.

Elections can, of course, be stolen. Legend has it that many years ago, in Westmoreland County, some ballot boxes had false bottoms and unfriendly votes simply fell into a basement room for immediate replacement. In other places, boards have been known to simply issue a fraudulent count. Doubtless some unease over the spectacle in Florida four years ago, where the head of the Bush campaign was also the person who conveniently certified the disputed Palm Beach count, has a few folks nervous.

Then again, technology is often scary to people who easily forget that the same outlet that can electrocute someone can also provide current to a heart-lung machine. It's a matter of how we use it. That's what Pat Williams was thinking.

"It was simple. It was secure. It was practical," she said.

It was also new, and that's why her e-mail is filling up with stuff she'd rather not count just now.

DA says jury out on probe of voting

Albany-- Clyne awaiting final tally before deciding whether to launch investigation of allegations

By CATHY WOODRUFF, Staff writer
First published: Wednesday, March 10, 2004

Albany County District Attorney Paul Clyne is weighing whether to investigate alleged voting irregularities in last week's special primaries for the County Legislature but won't decide until all the ballots are counted.

"At this point, I don't have a specific complaint," Clyne said. "So, I'm going to wait until the dust settles at the Board of Elections," Clyne said.

County elections officials are scheduled to begin counting hundreds of controversial absentee ballots today.

Concerns about the handling of absentee ballots in some legislative districts emerged a few days before the March 2 voting when it was revealed that Third Ward Democratic Leader Jamie Gilkey had filled in more than 140 signed absentee ballot applications with instructions that the ballots be released to him.

In one case, Gilkey acknowledged crossing out the mailing address written in by one voter and replacing it with his own. He said he was worried about proper delivery and handling of the ballots by the elections board staff.

More concerns were raised on primary day, when elections officials found that at least 40 voters had been assigned to the wrong legislative district and polling place. As a result, as many as 10 people apparently cast votes in the wrong legislative contest.

The state Board of Elections has begun investigating one complaint related to Albany's Democratic primaries, said a spokesman for the board, who declined to reveal the specific allegations or the person who submitted the complaint.

Albany County Legislator Wanda Willingham is the Democratic incumbent for District 3 in Albany's Arbor Hill, where many of the alleged irregularities occurred. She is locked in a close race with challenger Jestin Williams, who has Gilkey's support.

Willingham said she expects to submit complaints to both Clyne and the state Board of Elections regarding the primary, but she will wait for more counting to be done.

"We're just working on making sure we file the right papers and make the complaint as complete as possible," she said.

Albany County's election commissioners and their staff began canvassing machines used in last week's voting, which also included a Democratic presidential primary, on Monday.

Willingham and two other candidates -- Ward DeWitt in District 4 and Lucille McKnight in District 2 -- secured a court order Friday impounding all the voting machines and paper ballots used by voters in

Ballot count may end, but not fight

Albany-- Possible losers in county primaries vow to stay in general election

By MICHELE MORGAN BOLTON, Staff reports
First published: Friday, March 12, 2004

Incumbent Wanda Willingham was 15 votes ahead of challenger Jestin Williams Thursday as elections officials pored over absentee ballots from the County Legislature's controversial primary.

But the final tally is still unclear in the District 3 race, where ballots have been plagued by missing signatures, bad addresses and what some consider a questionable effort by Third Ward leader Jamie Gilkey to have 140 of them set aside for personal distribution.

Albany County Board of Elections commissioners Michael Monescalchi and John Graziano Sr. will examine an additional 117 contested District 3 ballots at 3 p.m. today

After they rule on whether the ballots should be opened, a state Supreme Court judge will decide on those that remain in dispute.

Willingham said the number of irregularities could be an indicator that "something went on."

"That remains to be seen in the end," she said. "Will it cost me the primary? It's quite possible, but not the general election."

She was temporarily ahead at 228 votes to Williams' 213 votes.

Paul DerOhannesian, who represents Willingham, said some District 3 residents received ballots with the wrong candidates listed.

Other ballots were sent to people who had never registered to vote. And on and on, he said.

"Every voter in this district should be concerned," he said, indicating that Gilkey seemed to be involved in many of the irregularities.

"What we have here is an effort to keep people from being able to vote because they think they'll lose the election," Gilkey replied, denying any wrongdoing.

"I'm not judge and jury," Williams added. "But now is the time to protect the senior citizens' right to vote."

Williams' attorney, Joshua Ehrlich, called the objections an effort to exclude elderly and disabled people.

On Wednesday, it appeared that Marilyn Hammond had defeated incumbent Lucille McKnight in the Democratic primary for a South End seat, but McKnight vowed to keep running on another ballot line.

With 20 absentee ballots for District 2 still sealed due to objections by McKnight, Hammond is ahead

Ballot dispute heads into court

Albany-- Justice to hear testimony on disputed Democratic primaries

By CATHY WOODRUFF, Staff writer
First published: Wednesday, March 17, 2004

A hearing on scores of disputed absentee ballots that could expose operations at the Albany County Board of Elections to intense public scrutiny is scheduled to begin this morning before state Supreme Court Justice Joseph Teresi.

Teresi is being asked to decide whether some 162 absentee ballots cast in three Albany Democratic primaries for County Legislature should be opened and counted -- or whether their distribution and completion was so flawed that they should be thrown out.

Democratic Elections Commissioner Michael Monescalchi and voters who have complained about the handling of their ballots are among the witnesses expected to testify.

Allegations of irregularities abound concerning absentee ballots issued for the March 2 primary. Most of the objections center on ballot applications and ballots distributed by 3rd Ward Democratic Leader Jamie Gilkey and two associates.

One complaint already made public is from a voter whose ballot application was altered by Gilkey, who replaced her mailing address with instructions that her ballot be given to him. After receiving a complaint from the woman, the board issued a new ballot for her.

In another case, a voter whose ballot was released to Gilkey said a man brought both an application and a ballot to his home at the same time. The board is supposed to issue a ballot only after receiving a valid application.

In his complaint, the voter also said the man tried to leave with his signed ballot envelope without allowing him to vote.

Allegations concerning the ballots Teresi now is being asked to decide include:

Reasons listed for needing the ballots were insufficient and weren't properly scrutinized by the board. Among the reasons given were: "senior citizen, not mobile," and "single mother with child."

There are no applications on file for some ballots returned.

Signatures on ballot envelopes or applications don't match others on file with the board.

Ballot envelopes with signatures of people who say they did not vote.

A proposed settlement that could have averted a hearing and called a new election in District 3 between incumbent Wanda Willingham and Jestin Williams fell apart Tuesday, according to sources close to the candidates and their attorneys.

Williams wants the 115 unopened ballots counted. The current vote totals show Willingham leading by 15 votes over Williams, 228-213.

Joshua Ehrlich, the attorney for Williams and leading candidates Marilyn Hammond in District 2 and Virginia Maffia-Tobler in District 4, said he will ask the judge today to accept the results as they stand in Districts 2 and 4 without the disputed absentees.

There are not enough uncounted ballots in those districts to change the results.

Jurist hears of ballot handoff

Albany-- Democratic ward leader, candidate testify about absentee voting arrangements

By CATHY WOODRUFF, Staff writer
First published: Thursday, March 18, 2004

Third Ward Democratic Leader Jamie Gilkey testified Wednesday that he was the point man for a network of campaign workers who channeled absentee voting applications and ballots for the March 2 Albany County Legislature primary through him to the Board of Elections.

Gilkey said his responsibilities included filling in reasons why voters could not get to the polls and writing instructions that the ballots be released to him by the elections board staff.

He was unable to say, however, whether the voters knew in all cases that he was completing their applications or that their ballots had been designated for pickup by him.

"They were told that, if they were all right with it, we could get the ballots for them," Gilkey said. The option for voters to have the ballots mailed to them "did come up sometimes, but it was not a part of the usual conversation," he added.

Gilkey and Jestin Williams, who is challenging incumbent District 3 Legislator Wanda Willingham, outlined the system during testimony before state Supreme Court Justice Joseph Teresi. The judge is being asked to determine whether some 162 disputed absentee ballots in three Democratic primaries for the Albany County Legislature should be counted.

Testimony is expected to continue today, with lawyers saying it may be necessary for proceedings to move to the homes of some disabled absentee voters to obtain their testimony.

In his testimony Wednesday, Gilkey said that when he did not collect applications personally he relied on oral reports from those who visited the voters and on notes placed on the forms to determine the reasons why absentee ballots were needed.

Williams said he and supporters, including Common Council Member Michael Brown and Gilkey, agreed on the absentee ballot process during a campaign meeting. He and Gilkey have described the strategy as an effort to counteract what they allege were forgeries of ballots in a race against Willingham just over four years ago.

"Mr. Gilkey wanted the ballots to come back to him, because we were talking about trying to protect people's rights to the absentee ballot box," Williams testified. "The absentees I received, I trusted Mr. Gilkey and his honesty. We agreed that the ward leader would be responsible."

Wednesday's testimony was the latest twist in a hotly contested special election ordered by federal courts earlier this year to correct district lines that shortchanged minority voters.

The District 3 race, where Willingham now leads Williams by 15 votes -- with 115 disputed absentee ballots still unopened -- is the closest and most fiercely fought race. But testimony Wednesday pointing to widespread voting irregularities also could also call into question the integrity of balloting in

Districts 2 and 4.

Albany County Democratic Elections Commissioner Michael Monescalchi testified the board has no formal policies for evaluating applications and determining whether ballots should be issued.

"Any employee working in the front office is authorized to review an application for an absentee ballot and issue a ballot if they believe it complies with New York State Election Law," he said.

When asked by attorney Paul DerOhannesian whether he considered some reasons given on applications to be legally sufficient, he said: "The staff made a decision to issue the ballot and I stand by it."

Also on Wednesday, voters Bernard Bryan and Lasone Garland-Bryan testified that they learned after voting that they had been directed to the wrong polling place and voted in the wrong primary.

A poll watcher for the Willingham campaign testified that one machine at School 20 was improperly set up, listing candidates from two different districts.

Second Street resident Ashley Perez testified he was persuaded to vote by absentee for the sake of convenience by a group of visitors that included Williams and said he later regretted the decision.

He also said the reason listed on his application for needing a ballot -- "working during the hours the polls are open" -- was not written by him and is inaccurate. "I am unemployed," he said.

Perez said the application, ballot envelope and ballot all were produced during the same visit. That account raises another issue for Teresi to consider because the Board of Elections is not supposed to issue absentee ballots without an approved application.

Williams later testified that he has never met Perez and did not visit his apartment.

Court hits road in voting dispute

Albany-- Justice Teresi to visit homebound residents for testimony on contested absentee ballots

By CATHY WOODRUFF, Staff writer
First published: Friday, March 19, 2004

State Supreme Court Justice Joseph Teresi is scheduled to bring his court to the kitchens and living rooms of homebound voters today hear their testimony about how and why they cast absentee ballots in the March 2 Democratic primary for Albany County Legislature.

Stops are planned for this afternoon at one home in Albany's South End and three in Arbor Hill to help Teresi determine whether some 162 absentee ballots cast in three Albany Democratic primaries for County Legislature should be opened and counted.

Three candidates -- incumbents Wanda Willingham and Lucille McKnight and Ward DeWitt -- are contesting the ballots, many of which were distributed by Third Ward Democratic leader Jamie Gilkey and associates including city Common Council President Pro Tempore Michael Brown.

Gilkey has acknowledged filling in much of the information written on scores of ballot applications after they were signed by the voters, including instructions that the ballots be released to him.

Candidate Jestin Williams, a political ally of Gilkey who trails Willingham in District 3 by 15 votes, is adamant that the 115 unopened ballots in that district should be opened and counted.

Several voters called to testify on Thursday were unclear about how their ballot applications were filled out after they signed them and other details about their ballots. And in his own testimony, Gilkey acknowledged that, in several instances, he did not have authorization from the voters to pick up their ballots.

He described the absentee voter application drive that he and others with the Williams campaign conceived as the most ambitious effort he's been involved in in several years as a ward leader.

He said the idea was to counteract potential delays at the county Board of Elections and to prevent ballots traditionally entrusted to 12th Ward Leader Joe Jennings, the brother of Mayor Jerry Jennings, from being "flipped" by an opposing campaign.

Phillip Moore, proprietor of the Silver Slipper tavern on Henry Johnson Boulevard, testified that he signed an absentee ballot application after he was approached by Brown, the council leader, because he's busy and he had a dental appointment on March 2.

Despite instructions on his application that the ballot be released to Gilkey, Moore said he never asked for that.

Another voter testified that she recalled signing an application brought to her by Williams and recognized her signature on an absentee ballot envelope, but does not remember marking a ballot.

Another voter said he and his relatives all filled out absentee applications when Gilkey and Brown came to their house, but it was unclear whether the reasons written on the forms for needing absentees were sufficient to meet legal standards.

While the absentee plan was formulated by the Williams campaign team in District 3, Gilkey said the strategy also was used to a lesser degree in District 2, where Marilyn Hammond is running against incumbent legislator Lucille McKnight. Gilkey is the campaign manager for both Williams and Hammond.

He said he expressed doubts about the board's ability to deal with absentee ballots when he visited Deborah Williams-Muhammad, a longtime absentee voter who already had a permanent application on file with the Board of Elections.

"We knew she was on the (permanent absentee) list, and we wanted to see if we could expedite getting that ballot to her," he testified. "We said we did not know how things were going to work with the special election, so she might want to fill out another application to make sure she would get her ballot."

Gilkey acknowledged that he crossed out Williams-Muhammad's mailing instructions without her permission and, instead, wrote his own name and address because "we were not certain how the Board of Elections was going to handle people whose absentee ballots were normally mailed."

Vote to end ballot crisis

Albany -- Judge orders new District 3 primary after election dispute

By CATHY WOODRUFF, Staff writer
First published: Saturday, March 20, 2004

It will take a special election to settle a dispute over a special election for the Albany County Legislature.

Two candidates who vied in a March 2 special Democratic primary in District 3, which covers parts of Arbor Hill, downtown and North Albany, will face off again on April 8.

Under the settlement reached Friday by the candidates in three Democratic primaries, in which scores of contested absentee ballots remain unopened, the current leaders in two other legislative districts will be certified as winners without counting the absentee ballots.

The agreement came as state Supreme Court Justice Joseph Teresi was about to hear a third day of testimony that would have taken him to the residences of four homebound voters. They were to testify about their absentee ballot experiences in the weeks leading up to the March 2 special primary.

The deal also came after hours of testimony embarrassing to the city Democratic organization. The testimony linked city party leaders, including Common Council President Pro Tempore Michael Brown, to a campaign that diverted almost 150 signed absentee ballot applications to 3rd Ward Leader Jamie Gilkey. He would then complete and submit them to the Board of Elections.

Under the agreement outlined by attorneys for the candidates and approved by Teresi, there will be a new District 3 primary between incumbent Wanda Willingham and challenger Jestin Williams. Willingham led Williams 228-213 and had challenged about 115 absentee ballots collected by Gilkey and others involved in Williams' campaign.

The primary will be run with enhanced security, including sheriff's deputies at each of nine polling places, and strict limits on the use of absentee ballots.

The settlement lets stand the results in District 2, where challenger Marilyn Hammond defeated incumbent Lucille McKnight, 244-215, and in District 4, where incumbent Virginia Maffia-Tobler won over Ward DeWitt, 218-168.

McKnight and DeWitt had challenged several absentee ballots, but there were not enough unopened ballots in either election to change the results.

But the candidates in Districts 2 and 4 will meet again in a special election on April 27 for all 39 seats in the County Legislature. McKnight is running on the Working Families Party line, and DeWitt has the Republican line.

Williams and Willingham both said they were satisfied with Friday's settlement, even though it will put them through yet another compressed primary campaign and election.

Willingham said it was worth letting go of her potentially winning lead in the March 2 primary count to reveal such a systematic abuse of absentee ballots.

"The exposure of the absentee ballot process was critical for my community," she said. "That was an age-old process. Never again."

Williams, who had been adamant that he wanted the challenged absentee ballots counted, said he's reassured by the agreement to have a police presence at all the polling places and limits on the number of poll watchers to help keep order. Tensions between the two campaigns boiled over at one polling place during voting March 2.

"I think it's for the common good of the community," he said of the settlement.

Attorneys Joshua Ehrlich -- who represented Williams, Maffia-Tobler and Hammond -- and Paul DerOhannesian -- who represented Willingham, DeWitt and McKnight -- spent much of Friday morning in settlement talks.

The settlement is the latest chapter in the hotly contested special election in new districts created after the 2000 census. Last November's election was postponed amid a court battle over the original district lines drawn by the Albany County Legislature, which shortchanged minority voters. Federal judges ordered the special March primary and special election next month based on a new map.

DerOhannesian, who also represents two civil rights groups that sued the county in the redistricting case, called the revelations in the absentee balloting dispute "further proof of what was proven in federal court. This county has a history of violating minority rights and the rights of all voters."

He described the March 2 primary as "contaminated, corrupted and compromised," undermining the gains in minority voting strength that the redistricting was intended to achieve.

It is unclear whether Gilkey and others involved in the absentee ballot irregularities will face criminal charges as a result of their actions. District Attorney Paul Clyne, who previously said he would wait for the issues to be cleared at the Board of Elections, was unavailable for comment.

Arrest follows irregularities in water board voting

Associated Press

EL PASO, Texas - West Texas law officers have arrested a precinct chairwoman in connection with an investigation into bogus mail-in ballot requests during recent water board elections.

Patricia "Patty" Lee Pinon was arrested Tuesday on charges of four counts of tampering with government records, each of which is a second-degree felony, El Paso County sheriff's spokesman Rick Glancey said.

Authorities said three of the counts are related to Saturday's El Paso County Water Improvement District No. 1 board elections, while the fourth relates to last year's mayoral election.

Pinon, a Democratic chairwoman of Precinct 81, was free on \$5,000 bond.

"She's been a very involved precinct chair for the longest time, and once she gets behind her candidate, she's a hard worker," county Democratic Party Chairman Rick Melendrez told the El Paso Times in Thursday's editions.

In the early-voting period for the water improvement district's election, the district received about 50 suspicious applications for mail-in ballots that appeared to have been filled out by the same person.

The county Elections Department found that four of those applications were in the names of people who had been removed from the voter rolls because they were dead, said Jesus "Chuy" Reyes, the district's interim general manager.

Glancey could not say whether the charges against Pinon are related to those ballot applications or to others.

Arrested Demo implicates others

David Crowder
El Paso Times

TX

Patricia "Pattie" Lee Piñon, who was charged in connection with a voting fraud scheme this week, implicated other unnamed Democratic Party precinct chairpersons in an interview with an investigator, according to the investigator's arrest warrant affidavit.

Piñon

Sheriff's deputies on Tuesday arrested Piñon, the Democratic Party chairwoman for Precinct 81, on four charges of tampering with government records in connection with requests for mail-in ballots from deceased voters.

Three charges were in connection with Saturday's El Paso County Water Improvement District No. 1 election, and the fourth involved last year's El Paso mayoral election.

Sheriff's spokesman Rick Glancey said, "We are pleased with the direction of our investigation, and by no means is it over by virtue of this arrest."

Sheriff's Detective Neil Baker, in his affidavits to obtain three arrest warrants, said Piñon admitted in an interview with him that a year ago she had voters sign numerous blank applications for mail-in ballots that would be used in future elections.

"The defendant Pattie Lee Piñon then admitted that she did not get anyone's permission to send in the application for mail-in ballots (and) that other Democratic Party precinct chairs also did the same," according to one of Baker's affidavits.

Piñon, in the affidavit, said she didn't know the dead voters had died when she sent in applications for early mail-in ballots using their names.

Piñon could not be reached for comment, nor could County Democratic Party Chairman Rick Melendrez. But the previous party chairwoman, Enriqueta "Queta" Fierro, said Thursday that she was aware that some party leaders went after mail-in ballots in elections but she "wasn't close to anybody doing it."

"I didn't know they made copies like that," she said.

Such activities are highly questionable, she conceded, and when asked whether the party needs to deal with the issue, she said, "It probably does, and it probably

016743

will in light of what's happened."

In the affidavit to support the fourth arrest warrant involving last year's mayoral election, sheriff's Detective Regan Conner refers to an earlier investigation that looked into 29 applications for mail-in ballots that the County Elections Department received in one envelope last April.

Among them was one in the name of Verda Ponce, who died in 2002. Baker's affidavit states that Piñon took responsibility for the mail-in ballot applications from dead voters in the water board election, one of whom was Ponce.

Before her arrest Tuesday, Piñon telephoned the interim general manager of the water improvement district, Jesus "Chuy" Reyes, and told him of her involvement, according to Baker's affidavit. Reyes, in turn, called the Sheriff's Department, which led to Piñon's arrest after she voluntarily submitted to an interview.

The four counts of tampering with a government record that Piñon faces are second-degree felonies, each punishable by two to 20 years in prison and a \$10,000 fine.

TX

Ballot-tampering probe requested -- Secretary of state appeals to attorney general

February 26, 2004

Alma Walzer and Ryan Gabrielson

The Monitor

EDINBURG — Texas Secretary of State Geoffrey Connor wants an investigation into the ballot-tampering claims made by four Hidalgo County voters earlier this week.

Connor requested the assistance of Texas Attorney General Greg Abbott to look into complaints filed by four county residents that at least four mail ballots were tampered with.

"We're drafting a letter to the attorney general's office that will be sent today," said Jennifer Waisath, director of communication for the secretary of state. "The matter in Hidalgo County over the mail ballot issue is now in the hands of the A.G.'s office for a full investigation."

The letter sent by Connor to the attorney general, and obtained by The Monitor, indicates that Connor believes several criminal election offenses may have occurred.

"If these allegations are true, several criminal election offenses may have occurred including unlawful assistance, unlawfully influencing a voter and illegal voting," Connor wrote. "I have enclosed a courtesy copy of a newspaper article from the McAllen Monitor, dated Feb. 25, 2004, detailing the alleged criminal conduct.

"In accordance with the recently adopted policy between our offices with respect to alleged criminal election law violations, we are hereby referring these allegations to your office for investigation," Connor wrote.

Hidalgo County Elections Administrator Teresa Navarro hopes the state investigation will be fully under way shortly.

"It could be — the attorney general moves quite quickly," Navarro said. "They are swift and they don't just send one person down, they send two or three."

Two voters from Weslaco and two from the North McAllen/South Edinburg area contacted Navarro on Tuesday, claiming their mail ballots had been tampered with.

Navarro said the voters should have received a blank ballot to fill out that they would then place in an envelope, sign the back of the sealed envelope and mail to the elections department.

Instead, the four voters said they received a sealed envelope with a ballot already inside, along with a note asking them to simply sign the envelope and mail it.

Navarro contacted the secretary of state's office Tuesday afternoon and asked for assistance. An official from the A.G.'s office contacted her on Wednesday and told her that an investigation had been opened, she said.

The A.G.'s office would not comment on the matter.

Tom Kelly, spokesman for Texas Attorney General Greg Abbott, said once they officially receive a letter requesting assistance from the secretary of state, they will "exercise their independence and

016745

latitude" to determine whether they pursue the investigation.

The four voters have been cleared by the elections department and can vote in person on their own, Navarro said. The mail ballots in question remain sealed and are being held under lock and key until the investigators arrive, she said.

Also on Wednesday, a fifth voter came forward about a problem with his mail ballot.

"A mail ballot was returned to the elections department, which is unusual for the post office, for them to mark it as 'moved,'" Navarro said. "The voter said he was told by a politiquera that the ballot was going to be mailed to his home. And he assumed that is what she would do."

A politiquera is a paid representative of a political candidate. The fifth voter claimed the politiquera to whom he referred sent his mail ballot to an address other than his home.

The address on the voter's registration card and the address to which the ballot was mailed do not match, Navarro said.

"We don't know the name of the politiquera, but we're in the process of trying to obtain that information," Navarro said.

All five voters who complained of problems with their mail ballots are older than 65. State law protects their identities, Navarro said.

"I'm disappointed because I don't know how I can prevent someone from going to a voter and tampering with their (mail) ballot," Navarro said.

Anyone caught tampering or stealing mail could face some pretty stiff penalties.

"The crime would be considered mail theft," said Vanessa Kimbrough, a U.S. postal inspector. "It's a felony that carries penalties of up to five years in prison and \$5,000 in fines per piece of stolen mail."

Kimbrough said mail carriers aware of stolen mail are supposed to report it to the postal inspection service.

"If anyone has information about these cases, they should call the inspection service in Houston at (713) 238-4400," Kimbrough said.

Rangers launch mail ballot probe

March 06, 2004
Ryan Gabrielson
The Monitor

EDINBURG — With general voting in the primary election just days away, the Texas Rangers have begun an investigation of the mail ballot fraud allegations that arose last week.

Texas Ranger Sgt. Israel Pacheco said he started his inquiry Thursday after meeting with Hidalgo County Elections Administrator Teresa Navarro to get details of the complaints.

There is no deadline for this investigation, Pacheco said. "We'll just be looking into things as they come."

Two voters in McAllen and two in Weslaco, all older than 65, complained that when their mail ballots arrived, they were already sealed and included a note: "Just sign here."

The complaints were lodged with the elections administration Feb. 24. Two days later, Navarro said she received a mail ballot request from an individual who died in 2001.

Navarro and Hidalgo County District Attorney Rene Guerra said they suspected the complaints stemmed from the work of paid political operatives known in the Rio Grande Valley as politiqueras.

Pacheco has been given the victim names and the names of the politiqueras they suspect are responsible for the fraud, Navarro said.

The Texas Rangers were assigned the cases after Navarro forwarded the complaints to Texas Secretary of State Geoffrey S. Connor, who in turn moved them to the state Attorney General.

Pacheco said the investigation does not have a timeline and that the scope will be determined by the amount of information he receives. While Guerra's office first had indicated it would not have the staff to investigate the ballot fraud claims, he has agreed to prosecute should the Rangers build a case.

"We've already talked to the DA's office and they confirmed they will take the case," Pacheco said.

"(The DA's office) will consider any case generated by our office or any law enforcement having to do with voter fraud," Guerra said. "We don't want to protect any vote fraud."

Friday was the last day of early voting. General voting in the primary begins Tuesday.

"This (investigation) is a good, positive thing they're not waiting until after the election," Navarro said. "I'm glad they are not waiting until after the voting, that they're interviewing people now."

By Friday afternoon, more than 30,000 Hidalgo County residents had voted, Navarro said.

Ryan Gabrielson covers Pharr, San Juan, Alamo and general assignments for The Monitor. You can reach him at (956) 683-4462.

Vote drive worker charged in forgery

By DAVID KRANZ
Argus Leader

published: 10/19/2002

A Rapid City man working for a Native American voter registration drive has been charged with five counts of forgery related to documents submitted under the program.

Lyle Nichols, 45, was arrested Friday and probably will be arraigned Monday, said De Glasgow, chief deputy sheriff for Pennington County.

This is the first arrest arising from recent allegations of voter fraud in and around Native American reservations in South Dakota. Auditors in several West River counties have reported suspicious cases in which documents were submitted in the names of people who were deceased or too young to vote.

Most of the suspected misdeeds focus on a Flandreau woman who formerly worked as an independent contractor for a registration program backed by the Democratic Party.

The Native American Voter Education and Registration Project paid Nichols \$3 for each completed registration. He allegedly forged some names, Glasgow said.

Officials said Nichols turned in 226 registration cards, most of which were fraudulent.

Workers at the Pennington County Auditor's office called the sheriff's department after noticing discrepancies in several forms. In one case, they received a voter registration form for a man who had already registered. But the signature and other information on the new form did not match the old one.

"It looks like what he was doing was pulling names out of the phone book or newspaper," said Pennington County Sheriff Don Holloway. "There were at least two people that were deceased."

Nichols also had worked briefly for the state Democratic Party as an independent contractor, according to its spokeswoman, Sarah Feinberg.

"I am told he worked four hours with the South Dakota Democratic Party in September," she said. "He passed out literature and registered four new voters. We paid him \$46. Those registrations are not the ones that are in question."

Two of the registrations Nichols submitted to the Democrats were duplicates that were not sent to the auditor or turned over to authorities.

"We found it in our system that they were already registered. It is not uncommon to have someone think they are not registered and then register again," Feinberg said.

Nichols' brother also was questioned in connection with the situation, but there was no indication of wrongdoing, officials said.

016749

The South Dakota Republican Party issued a statement late Friday applauding the charges in Pennington County.

The statement, which was not attributed to an individual Republican official, said voter fraud needs to be investigated thoroughly in the state.

“Those found responsible should be prosecuted to the fullest extent of the law,” the statement said.

The attorney general’s office is working in conjunction with federal law enforcement officials to determine the extent of the problem.

The Flandreau woman, Becky Red Earth-Villeda, also known by her Dakota name, Maka Duta, is suspected of falsifying voter-registration and absentee-ballot documents. She has denied any wrongdoing.

Attorney General Mark Barnett has said Democratic Party officials have cooperated with the investigation into Red Earth-Villeda’s case. The party terminated its relationship with Red Earth-Villeda and is not implicated in the case.

The Native American Voter Education and Registration Project is an effort by the United Sioux Tribes. It began in late August with the help of a \$200,000 grant from the Bauman Foundation in Washington, D.C.

Clarence Skye, executive director of United Sioux Tribes, estimates there are 28,000 Native Americans of voting age in South Dakota.

Twenty-one people are part of the effort, canvassing both reservations and off-reservation communities, Skye said. He said workers have registered 5,166 new voters in Rapid City alone, where the last census showed 15,000 Indians.

The Native American Voter Education and Registration Project also is encouraging county officials to provide more polling places on reservations, Skye said. Many Indians do not vote because they cannot get to polls that often are 30 to 40 miles away, he said.

“A lot of our Indian people on the reservations don’t have vehicles. We don’t have good voter turnout because of distances and lack of transportation,” Skye said.

Plans are in the works to hire people to drive Indian voters to the polls, Skye said. A California foundation is being asked to help fund that effort, he said. Some Indians don’t vote because they prefer to remain anonymous, Skye said.

“Many people on the reservations feel that if they register to vote, then the government’s going to be after them for something. It’s kind of a paranoia.

They’re afraid the Internal Revenue Service or somebody else will show up at their door and harass them,” he said.

Skye insists it is not apathy that keeps many Indians from voting.

“I haven’t seen where they don’t care,” he said.

The Associated Press contributed to this story. Reach reporter David Kranz at dkranz@argusleader.com or 331-2302.

**Some S.D. counties list more voters than adults
Dewey, Ziebach among 26 counties showing surplus**

By Carson Walker
Associated Press Writer

SIOUX FALLS - Most South Dakota counties have more adults than registered voters.

But in 26 counties - more than a third of the state's 66 - the voters outnumber people 18 and over, according to a comparison of 2001 census estimates and the latest voter registration numbers.

"People who move away but still use that as a residence to vote - that explains some of the difference," said Kea Warne, election supervisor in the Secretary of State's office.

Of all counties, big or small, Dewey County shows 470 more registered voters than adults. The census estimates its population in 2001 as 3,696. Its voter registration list as of Thursday was 4,166.

Ziebach County also has 226 more registered voters than people 18 and older, according to the numbers.

Dewey and Ziebach are two of several counties where state and federal investigators are looking into allegations of voter registration and absentee ballot fraud.

But several other counties without large American Indian populations also appear to have more voters than people, according to the numbers.

Some counties might appear to lose registered voters because auditors can now more easily eliminate duplicate names, Warne said.

Fraud cases cloud S.D. elections

By DAVID KRANZ, CORRINE OLSON and PETER HARRIMAN
Argus Leader

published: 10/20/2002

10 counties review questionable voter records; observers speculate about effect on Nov. 5

When Harding County Auditor Kathy Glines sifts through voter registration cards each election year, she usually can tell when something isn't right.

She knows, for instance, that among the 17 new registrations her office has received this year are several high school seniors who will vote for the first time next month in this ranching area in northwest South Dakota.

"I would say I know 100 percent of the people here," Glines said.

Familiarity is the first defense against voter registration fraud in South Dakota's rural counties. Auditors, many of whom have lived in the communities for decades, recognize misspelled names, unfamiliar addresses or forms filed by a person who has left town or died.

But this year, in a South Dakota election that has drawn the attention of the nation because it could determine the congressional power structure, the task of verifying voter registrations in places such as Gann Valley and Timber Lake has become more difficult. Thousands of new applications have poured into county auditors' offices as political parties and other advocacy groups conduct extensive registration drives, primarily on the state's Indian reservations. Requests for absentee ballots are running far ahead of typical election years in many counties. And with the stakes so high, every inconsistency and questionable voting document is being scrutinized.

One man has been charged with submitting fraudulent voter registration cards, and a woman who worked as a private contractor with the state Democratic Party is being investigated for falsifying registration cards.

More than 16,700 names have been added to South Dakota voter registration lists since the June primary. More than 4,100 of the registrations - about 25 percent - were filed in

SD

counties near or on Indian reservations.

Argus Leader reporters surveyed South Dakota county auditors, finding:

- Auditors in 10 counties, all but one adjoining a reservation, have forwarded questionable registration forms or absentee ballot requests to the sheriff or state's attorney for investigation.
- Of the nearly 400 questionable documents discovered by the auditors, 338 came from Shannon and Pennington counties, where the two investigations into possible voter fraud are under way.
- Sixteen questionable registration forms have been turned over by Ziebach County officials. Twelve documents in Todd County and at least 10 in Bennett County were forwarded to investigators, according to the survey.

Media coverage of the fraud investigations has put the state's voter registration and absentee ballot system under the microscope. But Attorney General Mark Barnett bristles at the categorization of the two investigations as evidence of widespread voter fraud.

"I'm still only aware of two cases where criminal law may have been violated, and you've heard about those," said Barnett. "I just don't want the suggestion out there that there is widespread fraud when we don't have any evidence of that."

Two investigations

Concerns about possible voter fraud surfaced in South Dakota earlier this month. On Oct. 3, Dewey County Auditor Adele Enright alerted Democratic Party officials to possible irregularities with four absentee ballot applications in her county. According to the party, those documents were submitted by Becky Red Earth-Villeda of Flandreau - also known by her Dakota name Maka Duta - an independent contractor working through the Coordinated Campaign, a get-out-the-vote program organized by the Democratic Party.

Democratic Party lawyers said they contacted the four people named on the absentee ballot applications in question and determined that two of the applications contained signatures not made by the person purporting to make them.

Red Earth-Villeda was terminated as a contractor, according to Sarah Feinberg, a spokeswoman for the Democratic Party and the Coordinated Campaign. Feinberg said Red Earth-Villeda was responsible for a large number of registrations from around the state, and so far the rest of them have checked out.

016754

Federal Election Commission reports show the South Dakota Democratic Party paid Red Earth-Villeda \$12,867 since the beginning of her contract work in mid-June. The money included reimbursement for travel costs and making copies.

Barnett and FBI officials then acknowledged that an investigation, led by federal authorities, was under way.

No charges have been filed. A woman identifying herself as Red Earth-Villeda called a public radio program last week saying she was innocent. Repeated attempts to contact her have been unsuccessful.

On Friday, in a separate case, a Rapid City man, 45-year-old Lyle Nichols, was charged with forgery for allegedly submitting five fraudulent voter registration cards. Workers at the Pennington County auditor's office called the sheriff's department after noticing irregularities in several registration forms.

In one case, the office received a voter registration form for a man who had already registered. But the signature and other information on the new form did not match the old one.

The Native American Voter Education and Registration Project paid Nichols \$3 for every form he returned. That registration effort is a United Sioux Tribes project funded by a grant from the Washington, D.C.-based Bauman Foundation.

Officials said Nichols turned in 226 registration cards, most of which were fraudulent.

If convicted, he faces up to 25 years in prison.

Registration process

Each state determines voter registration and absentee ballot procedures, and those processes vary greatly.

South Dakota law requires eligible voters to register and sets a deadline - 15 days before the election - for registration forms to be filed with county auditors.

In contrast, Minnesota voters can register at the polls on Election Day. North Dakotans are not even required to register to vote. They simply show identification at the polls. In Iowa, voter registration forms are printed in telephone books.

In South Dakota, once a registration is received, the county auditor's office sends a confirmation card to the person who registered. When the voter returns that card, the signature is compared to the original registration.

If the confirmation card is not returned, the voter's name is put on an inactive list, and in order to vote on Election Day,

the person is required to show a picture identification card.

Several auditors surveyed say they aren't familiar with many residents of the state's Indian reservations, and that makes it more difficult for them to verify the validity of those registrations. In addition, many of those new voters list a general delivery mail address, meaning they pick up their mail at a post office.

It's hard for officials to place those residents in a precinct because the auditor doesn't know exactly where they live. Other new reservation voters don't have telephones, so officials cannot call to verify registration information.

Still, the auditors say, many of the irregularities found among registration forms are simple mistakes.

"Two or three people sent in two or three absentee applications, and we caught it," said Lisa Schieffer, Meade County auditor. "I contacted one of the persons, and he explained to me he just wanted to be sure he got a ballot, so he sent one for his post office box, for his work address and for his home address."

In Brookings County, some South Dakota State University students requested absentee ballots, not realizing that they have to make that request in the counties in which they are registered.

Enright, the Dewey County auditor who discovered some questionable absentee ballot requests, said it's not surprising to find irregularities considering the number of new people being registered.

"With a voter registration drive, you have those mistakes every time, and you have a voter drive every time there's an election," she said.

The county voter registration lists are not exact directories, either. Sometimes, residents move to a new address, or out of a county, and don't retract their old registration. Other times, the resident maintains his old voting address in order to vote in that county or city.

The lists are periodically examined and updated to remove names of those who have died or moved, but the registration records still can contain duplications and inaccuracies.

For example, 26 South Dakota counties, including many reservation counties, have more registered voters than their adult population, according to an Associated Press analysis.

But several counties that do not have large Native American populations also appear to have more voters than people, according to those numbers.

Minnehaha County Auditor Sue Roust said those registration numbers may include inactive voters - those who have not

voted in at least four years. If those voters go to the polls on Election Day, they will have to fill out a new voter registration card before being allowed to vote and should not be included in the count of registered voters.

As of Oct. 19, Minnehaha County had 87,221 registered voters, according to Roust. There are also 11,386 inactive voters.

Effect uncertain

Registration efforts are important in the state this election year because the battle for the U.S. Senate between Democratic incumbent Tim Johnson and Republican Rep. John Thune is considered a dead heat. A few thousand votes could determine the outcome, and ultimately the decision could sway the makeup of the Senate over which South Dakota Sen. Tom Daschle now serves as majority leader.

Many of the potential new voters live on Indian reservations where registration numbers and Election Day turnouts are notoriously low but where Democrats are traditionally the favored candidates.

In 1968, just before Bobby Kennedy spoke to Los Angeles supporters in the hotel where he later would be assassinated, he placed a call to South Dakota. He had just won the presidential primary here and wanted to know how he had fared on the Indian reservations. His supporters told Kennedy that he had scored a landslide victory on the Pine Ridge reservation, receiving 878 votes. Eugene McCarthy had earned only nine votes and Lyndon Johnson, 2.

Thirty-four years later, some Native Americans say reservation voters still look to Democrats in national elections.

"The vast majority are voting the Democratic ticket. They probably have no idea who the Democratic candidates are. They don't know who Stephanie Herseth is. But they know who gives them problems," said Herbert Hoover, University of South Dakota history professor and author of several publications on Indian-white relations.

The questions of voter fraud this year, however, probably will hurt the Democratic candidates, said former Republican legislator Lola Schrieber of Gettysburg.

"If there is fraud, it will affect the Democrats. They were the ones who hired the persons to get the registrations," she said.

Bob McCaughey, who ran Republican Sen. Karl Mundt's campaigns, agrees.

"I say that at the coffee group mixed with Republicans and Democrats, and I get a pretty unanimous agreement on that," he said.

Some analysts believe the voter fraud investigations may turn Native Americans away from the polls on Election Day. Some may be fearful of being involved in a controversy, and others could be disillusioned with the entire process.

But Hoover says the issue could play out the opposite way as well.

"When tribal people feel put upon, they will react with greater resolve," he said. "They are no different from any other group. If they are falsely accused, they rally. It could backfire."

Bob Burns, political science professor at South Dakota State University, said it is difficult to predict whether news of the registration investigations will interfere with the fortunes of Sen. Tim Johnson, who heads the Democratic Party ticket in the state.

If the election is decided by a small margin, the loser also may decide to challenge the outcome in court because of fraud concerns.

Past controversy

This is not the first time there has been election-time controversy surrounding attempts to get reservation voters to the polls.

In 1980, Democratic Sen. George McGovern's re-election campaign planned to give away a free television on a reservation.

"It (the television) was in the building next door to the polling place. You came in, looked at the TV, and they had brochures. Winning it didn't require you to vote," said George Cunningham, McGovern's top aide at the time .

Attorney General Mark Meierhenry heard about the giveaway and told the McGovern campaign what they were doing was illegal. The raffle ended immediately, and the television was removed.

"We probably lost some Native American votes because a lot of them never came back. They were scared away. But we weren't the only ones involved in something like that. There were a lot of places giving free food, and nothing was said," Cunningham said.

In the past, buses traveled through the reservations taking people to the polls, and giveaways, including free cigarettes, were used to attract voters.

Cunningham says the current controversy surrounding reservation voter registration forms is likely to hurt the Democrats on Nov. 5.

016758

"It is hardly a positive thing," he said.

Are changes needed?

Voter registration investigations in South Dakota generate national interest because of the nature of the races this election year. But the issue also is newsworthy because South Dakota has such a good election record, said Burns. The state traditionally has among the highest voting turnouts in the country.

"South Dakota has no history of voter fraud. We really have a history of clean politics," Burns said. "That really explains the splash this has made. Even the hint of fraud generates a major stir in South Dakota."

Concerns about the process have caused some to speculate that changes should be made, tightening requirements for registration and absentee balloting.

Barnett said he is generally satisfied with the state's election laws but said the Legislature may want to look at the rules concerning absentee balloting.

In Barnett's view, there is a potential for problem in the fact that voters can register and cast an absentee ballot without ever being seen in the auditor's office.

But Kea Warne, elections supervisor for the secretary of state, said the state's election laws already provide adequate protection against voter fraud.

"Just by seeing what's happening now shows the system is working because county auditors are catching the problems," she said.

Burns said some have suggested the state outlaw the practice of hiring people to collect new registrations.

But Roust questions the wisdom of that move.

"When we have groups who are vastly underrepresented - and we know a lot of people on the reservations aren't registered - it's a big job to get those people involved, and I don't know if you can do that with volunteers," she said.

Burns agrees. "I don't really think the law needs to change. Volunteers can be overzealous as much as workers."

Burns said the potential fraud cases being investigated suggest the people involved were trying to defraud their employers in order to make more money rather than deliberately attempting to defraud the election process.

He wishes people would look at the registration drives from another side.

"All of South Dakota should celebrate the fact that 17,000

(people) previously not registered are going to participate in the election," he said. "That's democracy."

Registration Investigation

- Nearly 17,000 people have registered to vote in South Dakota since the June primary. There are 523,063 potential voters.
- County auditors have turned over to law enforcement nearly 400 voting registration cards or absentee ballot applications because of discrepancies ranging from misspelled names to ballot requests from deceased residents.
- A Rapid City man has been charged with forgery for allegedly submitting fraudulent registration cards.
- The Minnehaha County Auditor's Office has processed more than 4,800 absentee ballot requests. One was questionable and was sent to the state's attorney's office.

**Suspicious voter registrations found
Attorney general denies widespread fraud**
THE ASSOCIATED PRESS

SIOUX FALLS - Auditors in 10 South Dakota counties have turned over nearly 400 questionable voter registration forms to investigators.

All but one of the 10 counties adjoin an American Indian reservation, the Sioux Falls Argus Leader reported Sunday.

Officials in Ziebach County have turned over 16 suspicious voter registration forms to investigators. Twelve documents have been turned over in Todd County and at least 10 in Bennett County.

One man in Pennington County has been charged with submitting fraudulent voter registration cards. And a woman who worked as a private contractor for the state Democratic Party is being investigated for falsifying voter registration documents.

But South Dakota Attorney General Mark Barnett bristles at the idea that the two investigations are evidence of widespread voter fraud in the state.

"I'm still only aware of two cases where criminal law may have been violated and you've heard about those," Barnett said. "I just don't want the suggestion out there that there is widespread fraud when we don't have any evidence of that."

Verifying voter registrations has become more difficult in

this year's election, which has drawn the attention of the nation because it could determine control of the Senate.

Thousands of new applications have poured into county auditors' offices as political parties and other advocacy groups conduct extensive voter registration drives. The state's Indian reservations have been the main focus of those registration drives.

Of the 16,700 new voter registrations in the state, 4,100 of them - about 25 percent - were filed in counties on or near Indian reservations.

Many counties are also seeing a spike in requests for absentee ballots.

Several auditors surveyed by the Argus Leader said they are not familiar with many residents of the state's Indian reservations and that makes it harder for them to verify the validity of those registrations. In addition, many of those new voters list a general delivery mail address, meaning they pick up their mail at a post office.

Still, many of the irregularities found among registration forms are simple mistakes, auditors say.

"Two or three people sent in two or three absentee applications, and we caught it," said Meade County Auditor Lisa Schieffer. "I contacted one of the persons, and he explained to me he just wanted to be sure he got a ballot, so he sent one for his post office box, for his work address and for his home address."

In Brookings County, some South Dakota State University students requested absentee ballots, not realizing that they have to make that request in the counties in which they are registered.

Adele Enright, the Dewey County auditor who discovered some questionable absentee ballot requests, said it is not surprising to find irregularities considering the number of new people being registered.

"With a voter registration drive, you have those mistakes every time, and you have a voter drive every time there's an election," Enright said.

Each state determines voter registration and absentee ballot procedures, and those processes vary from state to state.

South Dakota law requires eligible voters to register and sets a deadline of 15 days before the election for registration forms to be filed with county auditors.

But Minnesota voters can register at the polls on Election Day. North Dakotans are not even required to register to vote. They simply show identification at the polls.

In South Dakota, once a voter registration form is received, the county auditor's office sends a confirmation card to the person who registered. When the voter returns that card, the signature is compared to the original registration.

If the confirmation card is not returned, the voter's name is put on an inactive list, and to vote on Election Day, the person is required to show a picture identification card.

15 false absentee ballot applications found

David Kranz
Argus Leader

published: 10/25/2002

A voter-fraud investigation has turned up 15 bogus absentee ballot applications in South Dakota so far, and more may be coming, Attorney General Mark Barnett said late Thursday.

State and federal agents targeted 25 South Dakota counties after allegations of misconduct surfaced earlier this month, Barnett said.

In each case, signatures were forged on the applications that a person uses to obtain a ballot, he said.

All the alleged instances of ballot fraud discovered so far are tied to Becky Red Earth-Villeda, Barnett said. Red Earth-Villeda - also known by her Dakota name, Maka Duta - was an independent contractor in the Democratic Party's efforts to increase Native American participation in the election.

Investigators believe Red Earth-Villeda, whose contract was terminated by the Democratic Party, may be linked to as many as 1,750 absentee ballot applications in the state, Barnett said.

"I have no idea how many of those might be false," he said.

Also Thursday, the Fall River state's attorney said the names of two women there were used to forge voter registrations in Codington and Minnehaha counties.

The discoveries are the latest development in a controversy over voter registration and absentee ballot discrepancies. The FBI also is investigating allegations that documents were filed on behalf of dead people and children, particularly in and around Native American reservations.

The allegations have raised political tension in South Dakota with 12 days left until the Nov. 5 election, which features particularly tight contests for U.S. Senate and House.

Barnett, a Republican, said charges will be forthcoming. At this point, the activities of Red Earth-Villeda remain the sole

Weather
Temp: 33
of

FURNITURE

Personal Loans

50

focus of the investigation, he said.

"We have 15 cases that we believe were forged absentee ballot applications, and at the end of the day we expect she will be charged," he said.

The Democratic Party initiated an aggressive get-out-the-vote campaign, particularly around reservations, in preparation for the November elections. While both parties traditionally pay staffers to sign up new voters and pursue possible absentee ballot possibilities, the Democrats this year also initiated a program of paying independent contractors on a per-piece basis.

Sarah Feinberg, spokeswoman for the South Dakota Democratic Party, reiterated that the party initiated an investigation on its own when problems first surfaced in early October and notified Dewey County officials of two questionable ballot applications.

The Democratic Party has zero tolerance to anything less than full compliance with state and federal election regulations, she said.

"It is still about one person's activities, and we think it is important that it be resolved before Election Day," she said. "There is no evidence to suggest that one ballot has been affected."

Last week, a Rapid City man who was working under a separate program, sponsored by the United Sioux Tribes, was charged with forging signatures on five registration cards.

On Election Day, it will be up to individual county auditors to determine whether they are comfortable with a signature before they put the ballot in the box, Barnett said.

He would not say how authorities determined which counties Red Earth-Villeda was involved in. The list of counties where the 15 applications were found was not available.

In each case, the investigator tracks down the person whose name is on the application to verify the signature.

"We have interviewed 15 people so far who said, 'That is not my signature.' You have to go out and grind it," Barnett said.

During the probe, one signature was found to be legitimate, and a few people were not sure about theirs, he said.

"We have to go to the bottom and do as many (of 1,750) as we can," Barnett said. "Federal and state agents feel reasonably confident in saying an arrest is likely, but first we want to nail down as much of the facts as we can."

A routine check by the secretary of state's office discovered

016764

at least two more cases of possible forgery on voter registration cards under the names of women in Fall River County, in the southwest corner of the state.

The cards were filled out in July in Minnehaha and Codington counties. But the two Fall River women say they didn't file the registrations, said State's Attorney Lance Russell.

"This is the first time we've had anything regarding Fall River County," Russell, a Republican, said Thursday.

The duplications were discovered after a routine records purge by the secretary of state's office. Using a computer check first initiated in January, the office compares voter registrations from across the state in order to eliminate multiple registrations by the same person.

A duplicate registration isn't necessarily a cause for suspicion, however. More than 9,000 such cases have been discovered since January, said Chris Nelson of the secretary of state's office. But most of the names come up because people move and re-register without telling the first county they have left.

That's not the case with the two Fall River women.

Lynn Putnam received a card in the mail about a month ago, asking her to confirm her registration information. The 27 year-old Edgemont woman - who is Russell's administrative assistant - brought the card with her to work and dropped it off at the auditor's office.

Auditor Sherrill Dryden told Putnam she received a lot of the cards because of the statewide purge.

"She said it's a coincidence that there is a Lynn Putnam in Watertown with your exact same birth date," she said. "She thought it was kind of suspicious because the person in Watertown had registered at the end of July."

Dryden and Russell did some research and discovered there wasn't anybody by that name living in Codington County.

"I don't know who would do it," said Putnam. "I've never lived there."

She didn't think much of it when she received the verification card in the mail.

"I guess, honestly, I thought maybe they sent those cards to anybody," she said. "I thought maybe it was kind of an update thing, that it was standard before the election."

Russell declined to identify the second woman, who was registered in Minnehaha County, citing confidentiality.

Minnehaha County Auditor Sue Roust said Dryden contacted her about a problem after the secretary of state sent out a

016765

list Monday showing duplicate registrations.

"The Fall River County auditor recognized her and talked to her. She said she doesn't live in Minnehaha County and doesn't plan to vote here," Roust said.

When Roust's office was contacted about the possible duplication, she checked the two registrations and found that the signatures on the cards were radically different. Surprisingly, the birth date of the woman was correct on the bogus registration, she said.

In both of the Fall River cases, Republican women were registered as Democrat.

Roust said the registration in Minnehaha County was done in July and was part a voter registration drive. A code is required on the cards which indicates it is part of a drive. It does not tell the auditor which program it was a part of or who registered the person.

The suspected registration in Codington County also was a part of a registration drive, according to Auditor Cindy Brugman.

Both Brugman and Roust said an absentee ballot was not requested for the people who were registered in their counties.

State Editor Patrick Lalley contributed to this article. Reach reporter Corrine Olson at colson@argusleader.com or 331-2311.

Will possible fraud cases shake voters?

Terry Woster
Argus Leader

published: 10/27/2002

Observers debate long-term effect

PIERRE - Elections are fairly fragile institutions.

They are, after all, organized and policed by the same political organizations that compete for the gift of power.

In South Dakota, this social contract has emerged largely unscathed through more than 100 years of electing public servants. But the investigation of possible fraudulent filings of voter registrations and absentee ballot applications - currently under way and focused on two people working under separate voter drives - has prompted discussions of the impact on the Nov. 5 general election.

Officials are quick to point out that the irregularities discovered thus far have not manifested in even one fraudulent vote. But is it possible that in a small state such as South Dakota, where campaign shenanigans are as rare as ballot chads, one bad event could have a disproportional impact on the psyche of the electorate?

The investigation might make headlines and coffee-shop talk, but it should have little impact on public confidence in the state's election system, says a Harvard University government professor with ties to the state.

Thomas Patterson, author of several books about elections and politics in the United States, said drawn-out campaigns and attack advertising are more likely to shake voters' confidence in the election system than will reports of voter registration problems, especially if the possible fraud isn't found to be an extensive and ongoing condition.

"I'm not surprised that this would be a big story there, which it probably wouldn't be in New Jersey, for example," Patterson said. "According to our surveys, voters seem much more likely to be discouraged by the way campaigns are conducted, the endless campaigns. I don't know that they lose trust in the system itself as much as become disenchanted with the way it is run."

Maschino's
WOOD FLOORS

016767

Patterson - who has recently published "The Vanishing Voter," a study of voter involvement in elections and campaigns - is with the Kennedy School of Government at Harvard. He did undergraduate study at South Dakota State University.

State and federal authorities in South Dakota are looking into allegations that a woman working as an independent contractor with the Democratic Party forged signatures on registration cards and absentee ballot applications.

Attorney General Mark Barnett said last week that agents have focused on 25 counties and found 15 apparent cases of forgery on ballot applications. More than 1,700 applications have been linked to the worker - Becky Red Earth-Villeda of Flandreau, also known by her Dakota name Maka Duta - and agents are tracking down each of the applicants to verify their signatures. Charges are probable against Red Earth-Villeda, but the Democratic Party has not been implicated, Barnett said.

A Rapid City man who was working for a voter drive program organized by the United Sioux Tribes has been charged with five counts of forgery in Pennington County for submitting false registrations.

It's unusual to have reports of fraud focusing on individuals in the voter-registration process, as is the case in South Dakota, Patterson said.

"Where the shenanigans usually take place is with those who control the process, not an individual," he said. "What you're facing seems pretty rare."

It's rare enough that Alice Kundert of Mound City can remember nothing quite like it in her four decades as a county official, state auditor, secretary of state and Republican legislator. Unlike Patterson, though, Kundert thinks that just the possibility of wrongdoing in the voting process erodes public confidence and could cause people to shy away from the polls.

"What shakes you about this kind of thing is that the whole system is built on trust, and I'm just sick about this," she said. "It has blemished our image of ourselves. I don't care what other states think. I'm sad that we may think less of ourselves. We should have a lot of pride and confidence in our system of government and in elections. The vote is sacred. If we lose confidence in that, maybe it means some people don't bother to vote who might otherwise take the time."

Mary Ann Bear Heels Cowan of Pierre tends to side with Patterson and sees the investigation as a way to make people understand how important it is to register and vote.

"It bothers us, in a way, when we first hear the news, but as

we listen and read, we see that this really is a problem with perhaps two individuals, not the whole system," said Bear Heels Cowan, a Lakota rights advocate with the group First Voices. "The focus is kind of high right now on it, but I believe the trust is still there, and most people will be responsible."

Merle Lofgren, longtime newspaper publisher in McLaughlin, blames the practice of paying for registrations.

"It's prostituting the vote, and how can you expect people to trust the system after that?" he asked. "Yes, people are going to lose confidence in the system. Maybe it's a big case, and maybe it's small, but no matter how extensive this thing is, how are you going to know if your votes are all real and equal? Democracy shouldn't be paid for with money, not any part of it."

The news that the name of a woman who had died three weeks earlier in a car wreck appeared on a registration card is especially offensive to Lofgren.

"They used to say the biggest voting precinct in Chicago was the cemetery, and now it looks like the littlest precinct in South Dakota is the cemetery in Dewey County," he said.

Kundert said her only personal experience with money in voting was when she campaigned once for a term as auditor and asked for a vote in a small convenience store in a western town.

"The man said, 'How much will you pay me?' I said, 'You just lost it. I don't need your vote,' " she said. "That kind of stuff just

doesn't happen in South Dakota."

That's probably a typical reaction to the news of the investigation, Patterson said. When the Florida voting system came into the national spotlight during the protracted counting of the presidential ballots two years ago, many states believed their own systems were safe from that kind of problem, he said.

"The idea was, this is Florida's problem; this isn't the way we operate," he said.

While he doesn't think one election cycle with questions about voter registration will cause people to lose confidence in the system, Patterson does see the possibility of doubts accumulating over time.

"All of these things are kind of shots at the system, and they could be additive in a way," he said. "If people are already disenchanted with campaigns, and you add this, it possibly could have some effect."

Bear Heels Cowan said the effect may be to encourage

Native Americans and whites to work together on voter registration and voting drives.

"These kinds of things happen for a reason," she said. "It's kind of a push-pull thing: Go vote, make sure you're registered, and now we have a few problems. I believe the people have done a good job overall of getting registrations, and perhaps these questions being raised now will make us all more aware of how much the system relies on trust, maybe even to the point that we'll all work together."

Kundert said South Dakota seldom experiences the pressures of big-time campaigning the way it has this year with the U.S. Senate race between Democrat Tim Johnson and Republican John Thune carrying the potential of deciding political control of that body.

"I don't remember anything like this," she said. "So, you get these reports something might be wrong, and 99 percent of you says real voter fraud couldn't happen here. But 1 percent of you says, gosh, I never thought there'd be any cases of false registrations like this, either. So you start to doubt your trust in the whole thing. And that's pretty sad."

Suspect in voter fraud threatens suit

By DAVID KRANZ
Argus Leader

published: 10/29/2002

Flandreau woman says she's the victim of conspiracy

The Flandreau woman suspected by federal, state and Republican Party officials of being linked to possible voter fraud in several South Dakota counties is fighting back, saying she is a victim of a conspiracy to keep Native Americans from voting.

Becky Red Earth-Villeda, also known by her Dakota name, Maka Duta, said in a statement distributed to news media that she is innocent of any links to the forging of absentee ballot applications, voter registration cards and other wrongdoing in the election process.

She also is contemplating charges of her own against those who accuse her.

Attorney General Mark Barnett expects to file charges against her in the near future, saying at least 15 absentee ballot applications handled by her were found to be irregular.

Red Earth-Villeda, 49, accuses officials of a collective conspiracy against her. They continue to "conspire as Republicans to single out my voter registration and absentee ballot application work product for their explanation to the end of charging only me with violations of state and federal law," she said.

The sole purpose of their probe and threats of charges against her is to increase vote totals for Republican candidates in the Nov. 5 election in South Dakota under "color of law," she said.

Barnett has said he has investigators in 25 counties looking for discrepancies in absentee ballot applications.

So far, there is evidence that she handled more than 1,700 such documents. Of those inspected so far, 15 have been found to be invalid. That process is determined by finding the person who has his name on the application. The person then tells investigators whether it has his actual signature.

016771

Responding to Red Earth-Villeda's conspiracy charges, Barnett said: "It will all sort out in the court of law. We have been conducting hundreds of interviews and continue on the course that I discussed in the past."

Red Earth-Villeda describes herself as "the mother of nine beautiful children, a grandmother of five wonderful grandchildren."

Red Earth-Villeda said that during the course of the year, she has devoted her time and energy to getting Native Americans in South Dakota to register to vote in federal, state and local elections. She said she thoroughly read the South Dakota statutes and laws before beginning her work.

"Through libelous assertions, inferences and innuendos by South Dakota Republican Chair Joel Rosenthal, Republican U.S. Senate candidate John Thune and Republican Attorney General candidate Larry Long ... defamation of my character as a campaign worker to register voters ... is now to my emotional and financial detriment," she said in a written statement.

As a result, South Dakota voters have the false impression that she is responsible for "massive voter registration fraud," Red Earth-Villeda said.

Rosenthal said he has always had the position that there appear to be thousands of irregularities, voters that can't be found, dead people requesting absentee ballots and irregularities in at least 20 counties.

"To my recollection, I have not accused her. She gets her day on trial. Democrats have already said she falsely did two of them," Rosenthal said, referring to voter documents.

"There are a lot of things uncovered, and something isn't right. The people on the reservation deserve to be registered to vote. Both parties ought to be able to register their favorable voters, but I want to have a good election and want people to have confidence," Rosenthal said.

The Thune campaign's position is that Red Earth-Villeda says one thing and the Democratic Party says another.

"We hope the truth will emerge before election day," said Christine Iverson, communications director for the Thune campaign.

Red Earth-Villeda also said Matthew Miller, an FBI agent who interviewed her, did not advise her of her rights. He distorted information she gave him when he filed a written report, she said. Because of the inaccuracies she refused to sign the statement for Miller. She plans today to release a photocopy of the Miller document.

"We're referring all calls to the U.S. attorney's office," said

016772

Dave Heller, supervisor for the FBI office in Sioux Falls.

U.S. Attorney James McMahon would not discuss the case. "I'm not commenting on ongoing investigations," he said.

In the recent controversy, only Red Earth-Villeda has a direct connection to the state Democratic Party registration program, Barnett said.

A Rapid City man, who was working under a separate program run by the United Sioux Tribes, has been charged with five counts of forgery.

Meanwhile, Rosenthal accused Democrats on Monday of "judge shopping" when a law firm for the state Democratic Party asked Federal Judge Lawrence Piersol to be available on election day if they decide to seek an injunction.

Rosenthal said the Democratic Party is putting Piersol in "this untenable ethical position."

Rosenthal should know better, said Sarah Feinberg with the South Dakota Democratic Party.

"He knows it is a standard letter you write at election time. Our lawyer even covered Rosenthal with a copy of the letter as a courtesy," she said.

"In the course of a week, Joel Rosenthal has tried to suppress Native American voting, alienated every state auditor and the secretary of state by suggesting a need for federal election monitors and now discrediting a well-respected federal judge," Feinberg said.

Barnett: No illegal ballots found

David Kranz
Argus Leader

published: 10/31/2002

Contract worker likely to face charges for submitting forms

The investigation into allegations of voter fraud in South Dakota has not turned up any illegally cast ballots but the woman at the center of the controversy still likely will face charges, Attorney General Mark Barnett said late Wednesday.

Barnett said last week that state and federal authorities had found 15 absentee ballot applications with apparently forged signatures. The bad documents surfaced during an investigation of voter abnormalities in 25 counties including registrations for people who were dead or too young to vote.

News of the probe has fueled nationwide speculation about the integrity of Tuesday's election in South Dakota, which features close races for U.S. Senate and House that are part of fierce struggle for control of Congress.

Throughout the controversy, Barnett has smothered discussion of widespread voting irregularities, saying the investigation was focused on one woman, Becky Red Earth-Villeda of Flandreau who was working as independent contractor under a Democratic Party voter drive.

On Wednesday, the attorney general said the woman's actions, while likely criminal, have not led to fraudulent voting.

"So far I have not found that she had any ballots that have been illegally voted," he said in an interview.

Meanwhile, Red Earth-Villeda was interviewed by state and federal agents for six hours Wednesday. Before the meeting she released a statement admitting she signed absentee ballot applications in the name of the 15 voters in Dewey and Ziebach counties but that she did so only after a mix up about how the system works.

She said the 15 voters in question filled out the applications, which she intended to personally deliver to the auditors in

Personal Loans

those two West River counties. But a Democratic Party worker informed her that, in nearly all cases, those forms must be sent through the mail.

At that point, Red Earth-Villeda admits, she duplicated the signatures on new applications and sent them through the system.

"If I erred in doing so, I pray that Attorney General Barnett will agree with me that I erred on the side of angels," she said in a written statement. "I did not abrogate the spirit and letter of the absentee voting law of South Dakota and I did not work fraud on the county auditors"

Barnett said agents have interviewed the 15 people and ballots have not been submitted by them or in their names.

"It is my suspicion that the voter was not involved in the fraudulent procurement" of the ballot, he said.

Interviews in the case will conclude today, he said.

Red Earth-Villeda likely will be charged "sometime next week or possibly sooner," Barnett said.

Those charges probably will include forgery and theft by deception, he said.

Red Earth-Villeda said she hopes to continue her work to bring more Native Americans into the electoral process.

"I pray that the truth will set me free to get as many Native Americans out to vote as I can so that they exercise their most precious and self-determinative right as citizens of the United States, that being the right to vote," she wrote.

An Argus Leader/KSFY-TV poll of likely South Dakota voters shows the much-publicized investigation has some positive effect for Republicans in the election.

Fifteen percent of those surveyed said they are more likely to vote for Republicans because of the controversy. Four percent said they were more likely to vote Democrat.

But the majority, 79 percent, said the allegations would have no effect on Tuesday.

The poll of 805 randomly selected South Dakotans has a margin of error of plus or minus 3.5 percentage points.

The controversy wasn't a deciding factor when James Miller, 64, of Meadow made up his mind to vote Republican in the Senate race.

"But it does seem like the Democrats have their fingers in it with voter problems. I don't think their candidates are responsible, though, probably just the workers," he said.

016775

Both major political parties have engaged in substantial get-out-the-vote campaigns in the run-up to Tuesday's election.

The race between incumbent Sen. Tim Johnson and U.S. Rep. John Thune is among the closest in the nation. A few hundred vote here and there could mean the difference in the race and ultimately control of the Senate.

But the Democrats' practice of paying independent contractors for each registration and absentee ballot application has come under criticism since the allegations of fraud emerged.

Sarah Feinberg, spokeswoman for the South Dakota Democratic Party, said Barnett's statements Wednesday provide a measure of vindication for the voter drive.

"The attorney general's comments show the allegations that have been coming from the state Republican Party and the Thune camp for what they truly are, which is pure political spin," she said.

State Republican Party Chairman Joel Rosenthal could not be reached for comment late Wednesday.

State editor Patrick Lalley contributed to this article. Reach reporter David Kranz at dkranz@argusleader.com or 331-2302.

Absentee forms found burned

Staff & Wire Reports

published: 11/1/2002

Barnett: Flandreau woman tried to destroy originals

Investigators have recovered charred pieces of absentee ballot applications from a Flandreau woman suspected of forging voters' names on such forms.

Attorney General Mark Barnett said Becky Red Earth-Villeda apparently tried to burn the original applications but then decided to retrieve them.

Investigators suspect Red Earth-Villeda tried to copy information including signatures onto new applications.

"It gets stranger every day," Barnett said. "She claims they are the legitimate signatures (on the charred paper)."

The Flandreau woman told Barnett that she copied the names of the applicants from the real documents in order to comply with instructions from Democratic Party officials. Barnett said the woman was told that she could not turn in ballot applications that had been signed but not filled out correctly.

"Many hundreds of those absentee ballot applications that were turned in by her, in fact were her signature, attempting to trace or duplicate the signature on the original form, which was rejected by the party," he said.

Red-Earth-Villeda was hired as an independent contractor by the state Democratic Party. She was fired after a county auditor alerted party officials that forged signatures were showing up on applications for absentee ballots.

Barnett said last week that authorities had found 15 absentee ballot applications with apparently forged signatures. Those documents were discovered during an investigation of voter irregularities in 25 counties.

Despite the suspicions of authorities, only those 15 have been verified by contacting the person whose name is on the application, Barnett said.

Democratic officials have cooperated with the investigation,

Barnett said.

The probe has been laborious because of the sheer volume of election documents in question, he said. Each person whose name is on the application must be contacted by investigators to verify whether it is their signature on the form.

"I have almost 30 agents on this full time, spread out all over South Dakota, going as fast as we can go. We're doing everything we can to sort it out and advise the county auditors," Barnett said. "We're going to be sorting this out for a long time."

No absentee ballots tied to the questionable ballot application forms have been discovered, he stressed.

Investigators interrogated Red Earth-Villeda for several hours on Wednesday. She also released a written statement admitting that she had duplicated signatures but denying wrongdoing.

Kea Warne, state election supervisor, said county auditors are being advised to set aside any absentee ballots that look suspicious.

"If the signatures on the envelopes containing absentee ballots don't match up with the signatures on the applications for those ballots, we're telling auditors to set the ballots aside," she said.

Joyce Hazeltine, secretary of state, said she thinks the election will go smoothly and there will be no problems if questionable absentee ballots are rejected.

"If there's any question, I'm not taking any chances on having a contested election. Let's just not use them," she said.

If absentee ballots are set aside, they would only be considered if any races are within vote margins that allow for recount requests, Warne said.

"The recount board would have the authority to review those uncounted ballots," she said.

Red Earth-Villeda worked in several counties that encompass or border Indian reservations, he said.

"In Buffalo County alone, we probably have 80 or 100 absentee ballot applications that she signed instead of the voter," Barnett said, adding that forgery charges likely would be filed soon in Minnehaha County because that's where the election forms were turned over to the Democratic Party.

SD

**Forged absentee ballot applications could total between 500 and 1,000
Flandreau woman may have charges filed against her today or Monday**

By Joe Kafka
Associated Press Writer

PIERRE - Forgery charges may be filed today or Monday against a Flandreau woman who has worked to get more American Indians and others to vote on Election Day, Attorney General Mark Barnett said Thursday.

State criminal agents, in conjunction with the FBI and tribal authorities, have investigated the activities of Becky Red Earth-Villeda in 25 counties, Barnett said.

The woman was hired as an independent contractor by the state Democratic Party. She was fired after a county auditor alerted party officials that forged signatures were showing up on applications for absentee ballots.

Barnett said investigators have talked to hundreds of people and hoped to finish up their last interviews Thursday night. He said Red Earth-Villeda is suspected of forging voters' names on 500 to 1,000 absentee ballot applications.

"We've found several hundred voters who say, 'That's not my signature,'" the attorney general said.

When Red Earth-Villeda was told by a Democratic Party official that she could not turn in ballot applications that had been signed by voters but were not filled out correctly, she filled out new forms and traced the voters' signatures on them, Barnett said.

"Many hundreds of those absentee ballot applications that were turned in by her, in fact were her signature, attempting to trace or duplicate the signature on the original form, which was rejected by the party," he said.

Investigators interrogated Red Earth-Villeda for several hours on Wednesday. She also released a written statement Wednesday admitting that she had duplicated signatures but denying wrongdoing.

"I did not abrogate the spirit and letter of the absentee voting law of South Dakota," the statement said. "If I erred . . . I pray that Attorney General Barnett will agree with me that I erred on the side of angels."

Democratic officials have cooperated with the investigation, Barnett said.

The probe has been laborious because of the sheer volume of election documents in question, he said.

"I have almost 30 agents on this full time, spread out all over South Dakota, going as fast as we can go. We're doing everything we can to sort it out and advise the county auditors," Barnett said. "We're going to be sorting this out for a long time."

No absentee ballots tied to the questionable ballot application forms have been discovered, he stressed.

"So far, I've found no evidence that she got her hands on any actual ballots," Barnett said. "I'm not saying no illegal ballots were cast."

Kea Warne, state election supervisor, said county auditors are being advised to set aside any absentee ballots that look suspicious.

"If the signatures on the envelopes containing absentee ballots don't match up with the signatures on the applications for those ballots, we're telling auditors to set the ballots aside," she said.

Joyce Hazeltine, secretary of state, said she believes the election will go smoothly and there will be no problems if questionable absentee ballots are rejected.

"If there's any question, I'm not taking any chances on having a contested election. Let's just not use them," she said.

If absentee ballots are set aside, they would only be considered if any races are within vote margins that allow for recount requests, Warne said.

"The recount board would have the authority to review those uncounted ballots," she said.

Barnett said questionable absentee ballot application forms have been found in several counties, although he was not able to immediately identify all of them Thursday because not all criminal agents had yet filed their final reports. Red Earth-Villeda worked in several counties that encompass or border Indian reservations, he said.

"In Buffalo County alone we probably have 80 or 100 absentee ballot applications that she signed instead of the voter," Barnett said, adding that forgery charges would be filed in Minnehaha County because that's where the election forms were turned over to the Democratic Party.

The attorney general said he doesn't think voters who signed the original forms that were incorrectly filled out have done anything wrong.

"I'm convinced that virtually all these voters are completely innocent."

When Becky Red Earth-Villeda was told by a Democratic Party official that she could not turn in ballot applications that had been signed by voters but were not filled out correctly, she filled out new forms and traced the voters' signatures on them, Attorney General Mark Barnett said. No prison in election fraud case

Activist will spend 6 months at House of Correction for absentee ballot forgeries

By DAVE UMHOEFER
dumhoefer@journalsentinel.com

Posted: Feb. 20, 2004

Bolstered by prominent character witnesses, voting-rights activist Vincent Knox avoided prison Friday on three felony convictions that stemmed from an investigation into absentee-voting fraud in a Milwaukee County recall election last March.

Circuit Judge David Hansher rejected a prosecution request for prison time and sentenced Knox to six months in the House of Correction with work-release privileges.

A prosecutor urged Hansher to hold Knox partly responsible for forgeries on 40 of 160 absentee ballots turned in by workers under Knox's supervision during the recall election involving County Board Chairman Lee Holloway. Knox ran a novel absentee drive that put ballots in the hands of his employer, an organization known as the African-American Coalition for Empowerment (ACE).

"Are we going to tolerate ghost votes being cast?" asked prosecutor Kurt Benkley, who sought a three-year sentence for Knox, half of it in prison time. Benkley recounted how a voter in the 5th District race had gone to vote for Holloway's opponent, Yolanda Staples-Lassiter, but effectively was canceled out because an ACE worker had forged an absentee ballot in the voter's name for Holloway.

Benkley argued that the perjury conviction against Knox, for lying to investigators at a John Doe hearing, alone deserved prison time.

"If citizens feel they can lie (at a John Doe hearing) it renders it dull," Benkley said of the seldom-used investigative tactic, in which witnesses are questioned in secret in front of a judge.

Benkley pressed the prosecution's argument that Knox's effort was designed to help Holloway - an allegation that Holloway and Knox have denied under oath. Holloway won the election handily.

Hansher said evidence at trial left it unclear whether there was a grand scheme to defraud, or merely widespread short-cutting by Knox's crew, or both.

"There's more to this than we know," Hansher said, citing the perjury charges leveled against various ACE workers in separate cases.

A jury found Knox guilty last month of three counts relating to a single forged registration card and perjury at a John Doe investigation. The maximum possible sentence was 13 years in prison.

The absentee drive, which city election officials discouraged Knox from undertaking, put absentee ballots in ACE's hands. Knox's crew went door to door in Holloway's district getting people to apply to vote absentee and agree to have the ballot sent to ACE, which then returned to the would-be voters' homes, witnessed their votes and turned in the ballots at City Hall. The drive did not follow that script, trial testimony showed. The unusual process - which Knox calls "vote by mail" - is legal under state law if performed correctly.

Hansher said the case was not a victimless crime. It had tarnished the city's reputation for clean elections, he said.

016781

Knox pleaded for leniency Friday, citing his long activism for minority voting rights. His attorney, Tom Erickson, sought probation and community service for his client.

Three witnesses vouched for Knox's character, among them Vel Phillips, a pioneer in electoral politics who was Milwaukee's first black alderman. In addition, state Sen. Gwendolynne Moore, former county executive candidate Tyrone Dumas and many co-workers, friends and neighbors wrote letters of support.

In addition to the House of Correction time, Knox must serve three years of probation. As a convicted felon, he cannot vote while under supervision. Hansher forbade him from doing voter registration work while on probation.

So far, prosecutors have had mixed success in the absentee investigation, in which nine people were charged. One of the ACE workers, Barbara Triblett, was acquitted at trial last month. Prosecutors shortly after that reduced the charges in another case, against Velma Jackson, to two misdemeanors. Jackson pleaded guilty and was fined \$200.

Barbara A. Burton, another field worker in the absentee drive, pleaded guilty to a misdemeanor in December and was fined \$200.

Five others who worked for ACE under Knox's supervision are awaiting trial on felony charges.

From the Feb. 21, 2004 editions of the Milwaukee Journal Sentinel

Voting-rights activist convicted of fraud

Knox mishandled drive during county recall election, jury decides

By DAVE UMHOEFER
dumhoefer@journalsentinel.com

Posted: Jan. 14, 2004

Milwaukee voting-rights activist Vincent Knox was convicted Wednesday on three felony counts stemming from irregularities in an absentee-balloting drive he ran during a county recall election last March.

A year after he thought he had hit on a novel idea for boosting sluggish African-American voter turnout, Knox is fighting to stay out of prison.

A Milwaukee County Circuit Court jury deliberated five hours before agreeing with the state's contention that Knox, a 25-year veteran of voting-rights causes, had criminally mismanaged aspects of the absentee drive.

Judge David Hansher set sentencing for Feb. 5. Prosecutors, who pledged to seek prison time, sought to hold Knox in jail until sentencing, but Hansher rejected that idea.

Knox's attorney, Tom Erickson, cautioned his client against commenting after the verdict but questioned why Knox was prosecuted for a voter-registration error.

He mentioned the numerous problems with elector signatures in Milwaukee County Sheriff David Clarke's mayoral nomination papers and asked why that was not being investigated.

"It seems curious that Vince Knox, who's spent his whole life getting people to vote, is on trial," Erickson said.

The absentee drive was run by Knox for an organization known as the African-American Coalition for Empowerment (ACE). The move surfaced just days before the recall campaign won by Milwaukee County Board Chairman Lee Holloway.

Holloway hired ACE to help with his campaign, but he testified that the group's absentee drive was separate from his own campaign work and that he was unaware of it. He has not been charged.

The drive, which election officials discouraged Knox from undertaking, put absentee ballots in ACE's hands.

Knox's crew went door to door in Holloway's district getting people to apply to vote absentee and agree to have the ballot sent to ACE, which then returned to the would-be voters' homes, witnessed their votes and turned in the ballots at City Hall. The unusual process - which Knox calls "vote by mail" - is legal under state law if performed correctly.

District Attorney E. Michael McCann responded aggressively when the alleged ballot problems became public. His investigators were at polling places for the March 4 election on Milwaukee's north side and challenged and sealed 10% of the votes cast.

A police handwriting expert had labeled as suspicious the signatures on dozens of absentee ballot envelopes.

In all, Knox and eight other ACE workers were charged. One pleaded guilty to a reduced charge last month. The others are standing trial separately in the weeks ahead.

016793

For Knox's trial, prosecutors argued that ACE's motive was to get absentee votes for Holloway, an allegation they tried to back up through testimony about absentee ballots cast for Holloway by fictitious voters at non-existent addresses.

Although evidence suggested forgery and other mischief plagued the absentee effort, Knox's case turned on one voter registration card bearing his signature as a deputized voter registrar. The purported voter, Willie Dawson, had his name forged on the card by a girlfriend, testimony showed. And Knox's explanation of how he could have witnessed Dawson sign the card apparently held little weight with jurors.

Jury foreman Mark Scott told a reporter that while the jury respected Knox's political credentials, the number of mistakes made by Knox's voter-recruitment crew suggested tampering.

"Your voting rights are a privilege," Scott said. "It's not to be taken lightly."

Knox was convicted of perjury, misconduct as a voter registrar and election fraud, which carry a combined penalty of up to 13 years in prison.

The perjury count stemmed from his testimony at an investigative hearing conducted before charges were filed.

Knox and ACE are well-known in political circles. Knox successfully sued Milwaukee County on a race-related redistricting case.

State charges former mayor with vote fraud

By Laurence Hammack

981-3239

The indictments allege voters were persuaded to cast illegal votes by absentee ballot. [Background on the disputed Gate City voting](#)

GATE CITY - Charles Dougherty was charged Monday with running a campaign of fraud and deceit to win another term as mayor of Gate City.

Dougherty was indicted on 37 felony counts of voter fraud by a Scott County grand jury in the first charges to come from a lengthy investigation of a small-town election marred by allegations of corruption. The indictments allege voters, many of them elderly or prone to manipulation, were approached by the candidate and persuaded to cast illegal votes by absentee ballot.

Although Dougherty was re-elected mayor in May 2004 with a large number of absentee votes, he lost the job a few months later after his opponent, Mark Jenkins, challenged the results in court.

In a complaint filed in circuit court last year, Jenkins blamed not just Dougherty, but also the Scott County registrar's office for some of the voting irregularities.

The office is headed by Willie Mae Kilgore, mother of Republican gubernatorial candidate Jerry Kilgore.

Willie Mae Kilgore has been accused in a separate lawsuit of running the registrar's office in a partisan way, and her role in the 2004 Gate City elections was cited recently when she was asked to resign by the candidate running against her other twin son, Del. Terry Kilgore, R-Scott County.

Yet Joel Branscom, the Botetourt County commonwealth's attorney who was appointed special prosecutor in the case, said the investigation to date has found evidence to support charges only against Dougherty.

Branscom noted that the probe is ongoing.

"When you stir a pot like this, you never know what might come up," he said.

016785

Monday's indictments marked the second legal action in less than a week involving election fraud in far Southwest Virginia. Last Wednesday, the commonwealth's attorney in neighboring Wise County called for a special grand jury to investigate allegations of vote-buying and ballot theft in May's elections for the town council of Appalachia.

Dougherty, a former Scott County sheriff's deputy who works at the county's regional jail, was charged with 18 counts of aiding and abetting in violating the absentee voting process, 17 counts of making a false statement on an absentee ballot application, and two counts of conspiracy.

Many of the charges involve people who gave false reasons for voting by absentee ballot. Absentee voting is allowed in Virginia under certain circumstances, such as for people out of town on Election Day or unable to vote in person because of health reasons. It is a felony to make a false representation on an absentee ballot application.

Critics of the absentee voting process in Virginia say it is easy for an unscrupulous candidate to persuade a voter in private to obtain absentee ballots under false pretenses.

Some of the absentee ballot applications in the Gate City election contain similar reasons for a voter not being able to make it to the polls, such as the ailment of "crippling arthrimism." [sic]

In Dougherty's case, authorities allege, the candidate took it a step further by also assisting the voters in casting their ballots.

Many people told a state police investigator that they "were voted" by the candidate. "It's a new phrase that I am still trying to find a definition for - 'He voted me,'" Branscom said.

In an interview in February, Willie Mae Kilgore said it is the voter's responsibility to be truthful on absentee ballot applications. As registrar, Kilgore said, she must take their word for why they cannot vote in person.

Rather than charge the voters, Branscom chose to hold the candidate accountable.

"When you subject yourself to 370 years in prison for trying to become the mayor of a small town, you're putting your liberties at risk when you do it," he said.

Each one of the 37 charges Dougherty faces carries a maximum punishment of 10 years in prison. He will be allowed to turn himself over to authorities and remain free on

016786

a personal recognizance bond, Branscom said.

Dougherty could not be reached for comment Monday.

In an interview earlier this year, he said he did nothing wrong in the weeks leading up to the town elections of May 4, 2004.

"I've always worked the absentee ballot hard in every election," he said. "That's part of campaigning. When people say they're going to be out of town or in the hospital, I encourage them to go out and vote absentee."

And as it turned out, the absent electorate proved crucial to Dougherty's two-vote re-election victory.

Of 158 absentee ballots cast in the mayor's race - about one of every five votes cast - Dougherty received 138. Jenkins was quick to challenge the results, and a three-judge panel invalidated the election in September. Jenkins was then named mayor by a new town council appointed by the judges.

Jenkins said Monday he was relieved to hear that criminal charges finally have come from the concerns he raised 15 months ago.

"The voting system is something that we should not be messing with," he said. "It's the foundation of freedom."

The mayor said he hopes the investigation will yield additional charges against others whom he believes have been involved in manipulating the absentee vote in Scott County.

"This has been going on for years," he said.

Residents say former mayor filled out ballots

By Laurence Hammack

981-3239

"He done the voting, but I signed the paper," Vernoil Littrell said of Gate City's ex-mayor Charles Dougherty. [Background on the story](#)

GATE CITY - Vernoil Littrell had lots of reasons for not being able to vote in person in last year's town election: For one thing, he was confined to his home, suffering from crippling arthritis and a bad heart.

He was also working a 13-hour shift at Food Lion on Election Day, according to his absentee ballot application - a document that authorities say was falsified. "I don't even go to Food Lion," Littrell said Tuesday. "I don't know why he put all that down."

The "he" Littrell was referring to is Gate City's former mayor Charles Dougherty, who was charged Monday with election fraud and making false statements on absentee ballot applications submitted on behalf of Littrell and 19 other town residents.

In a brief interview Tuesday, Dougherty said he is innocent of the 37 felony indictments returned against him by a Scott County grand jury.

According to Littrell, Dougherty came to his apartment complex last April looking for votes. Seeking re-election at the time, the mayor had a stack of blank absentee ballot applications in his hand.

Littrell said he signed the paperwork that Dougherty filled out. In handwriting that appears similar to that on other absentee ballot applications on file at the county courthouse, the following reasons are listed for Littrell not being able to vote in person: "crippling arthritis; confined to home; heart condition."

He does have arthritis, Littrell said. And he is confined to his home.

But, he said, "I ain't got no heart problem. I went to the doctor last week. My heart's all right."

The absentee ballot application was submitted to the Scott County registrar's office, which issued Littrell a mail-in ballot

016788

- even though the application seems to raise the obvious question of why someone with so many ailments could be working 13 hours at Food Lion.

After the ballot arrived in the mail, Littrell said, Dougherty came back to his apartment to help him vote. The way he tells it, the mayor did more than help. He filled out the ballot, voting for himself.

"He done the voting, but I signed the paper," Littrell said.

Botetourt County Commonwealth's Attorney Joel Branscom, who last year was appointed special prosecutor to oversee a state police investigation of the election, said other people have also said they were "voted" by Dougherty under similar circumstances.

Absentee voting abuses - which are also the subject of a special grand jury investigation into another election in neighboring Wise County - can allow dishonest candidates to amass a stealth electorate by focusing on voters who can easily be manipulated, critics of the process say.

Dougherty made the rounds in Littrell's apartment complex, where most of the residents are elderly or disabled, the 67-year-old Littrell said.

"All the way around," Littrell said, waving his arm to indicate the path taken by the allegedly vote-hungry politician that day.

On the other side of town, Dougherty was also seen knocking on the doors of Clinch View Manor Apartments, a government-subsidized complex for the elderly, disabled and handicapped.

He found Maxie Overbey in the laundry room.

"He hunted me down," Overbey said. "Or he looked 'til he found me, anyway."

Like Littrell, Overbey said she signed a blank absentee ballot application that Dougherty filled out. And like Littrell, her reason for not being able to vote was crippling arthritis.

While she does have a touch of arthritis, Overbey said it never prevented her from driving to the polls to vote in other elections.

Voting by absentee ballot would save her a trip to the polls, Overbey said she was assured by Dougherty. It was only after a state police investigator came knocking on her door that she took a close look at the absentee ballot application.

016789

"Oh, Lord. I hate that I did that," she said. "I got took in by it."

A strong showing of absentee votes helped Dougherty squeak out a two-vote victory on May 4, 2004. But his re-election was later invalidated when his opponent, Mark Jenkins, challenged the results in court. Jenkins was later appointed mayor by a new town council named by a three-judge panel that heard the case.

Now, nearly a year later, the botched town election has gone from being the subject of a lawsuit to an ongoing criminal investigation.

After hearing from a state police investigator Monday, the grand jury charged Dougherty with 18 counts of violating absentee voting procedures, 17 counts of making false statements on ballot applications, and two counts of conspiracy.

In a brief telephone interview, Dougherty said he is innocent.

"It was elderly people, mostly, that I voted," he said. "They were the ones that signed the affidavits saying they couldn't go to the polls.

A short time after proclaiming his innocence, Dougherty turned himself over to authorities and was allowed to remain free on a personal recognizance bond. He is scheduled to be arraigned Aug. 15.

While the charges are pending, Dougherty also will keep his job as a correctional officer at the Southwest Virginia Regional Jail in Duffield. He is presumed innocent of the nonviolent charges, said Maj. Matthew Pilkenton of the regional jail.

In an earlier interview, Scott County registrar Willie Mae Kilgore said it is the voter's responsibility to give an honest answer when requesting permission to vote by absentee ballot. Absentee voting is allowed in Virginia only under certain circumstances, such as a voter being out of town on Election Day or unable to make it to the polls because of illness or disability. Making a false statement on an absentee ballot application is a felony that carries up to 10 years in prison.

But Branscom has said he is not comfortable bringing charges against people who were taken advantage of. To date, Dougherty is the only person charged in the investigation.

Ronald Kindle, who lost a bid for town council in the same election, said Tuesday that he believes the registrar's office

016790

should have known that something was amiss.

He and other town residents questioned whether powerful political connections will prevent the full story from ever being told in a courtroom.

Willie Mae Kilgore is the mother of twin sons, Del. Terry Kilgore, R-Scott County, and GOP gubernatorial candidate Jerry Kilgore. Her husband is the longtime chairman of the Scott County Republican Party, and a third son heads the county economic development authority.

While the registrar's politics have been questioned in lawsuits, Branscom said the criminal investigation has produced no evidence to implicate the office - at least not so far.

"I never say never," the prosecutor said. "But certainly at this point I have no intention of going forward in that direction."

Star-Telegram

D.A. ready to close illegal voting probe

TX

Associated Press

HOUSTON - A seven-month voting fraud investigation that produced nearly 30 indictments is nearing its end, a prosecutor said.

Robertson County District Attorney John Paschall said recently the city of Hearne is ready to put the issue of fraudulent absentee ballots in its May 3 election behind it.

"We have it pretty much under control," Paschall told the Bryan-College Station Eagle in Sunday's editions.

A grand jury investigating the election fraud will be dismissed Wednesday, and no more indictments are expected. A handful of criminal cases in the case are pending.

Allegations of voter fraud surfaced shortly after the election. Defeated mayoral candidates Sally Pryor and Kathy Stracener questioned the results, particularly regarding the high percentage of absentee ballots mailed in by people who claimed to be disabled.

Pryor had copies of hundreds of absentee ballot applications, some with similar signatures, that she had requested before the election.

The newspaper asked the city for copies of those applications, but the election judge had locked them in the ballot box with actual ballots. State law requires that the ballot box remain sealed for 60 days after an election unless a court order is obtained to open it.

The only two people eligible to obtain such a court order - City Attorney Bryan Russ and Mayor Ruben Gomez - initially declined to do so, choosing instead to let the 60-day period pass. Both were elected by wide margins in May.

Gomez changed his mind when the issue didn't die down. The ballot box was opened 19 days after the election, and Paschall obtained the documents for his investigation. The newspaper obtained absentee ballot applications.

The 2000 Census said Hearne had 539 people aged 21 to 64 identified as disabled. The newspaper counted 657 absentee ballot applications from voters claiming to be disabled.

In contrast, the May municipal election in Bryan, a city much larger than Hearne, included 35 absentee ballots from voters saying they were disabled.

In August, Paschall announced 17 people had been indicted on charges of voting fraud, a third-degree felony punishable by two to 10 years in prison and a fine of up to \$10,000. At the top of that list was Charles Workman, who pleaded guilty in October to illegal voting for casting 34 ballots in the Hearne

016792

election.

Workman didn't cast a ballot in his own name, but he voted for nearly three dozen other residents using absentee ballots. He also forged forms saying some people had moved from one home to another.

Workman was sentenced to five years probation and will not be allowed to campaign or collect absentee ballots during that time.

"We're not going to tolerate it," Paschall said. "I certainly hope everyone understands you have to vote your own ballot."

Dallas Morning News -Voters: Mail ballot signatures forged

Candidate denies signing applications; DA investigating
04/22/2003

By DAVE MICHAELS / The Dallas Morning News

A Dallas City Council candidate submitted at least 12 mail ballot applications that contained the forged signatures of voters, according to interviews with voters and the elections administrator.

Clair Conly Woertendyke, a candidate for council District 3, submitted about 265 applications for mail ballots this month. The Dallas County elections department spotted the questionable applications because they appeared to be signed by the same person and came from the same West Dallas precinct. The Dallas County district attorney's office is investigating the possibility of forgery.

In interviews, eight voters said they did not sign the applications that Mr. Woertendyke sent to the elections department. And two of the voters whose applications were submitted moved from West Dallas more than a year ago, neighbors said.

Mr. Woertendyke said he did not forge the signatures and argued that it could not be proved whether the signatures are bogus. He said a voter's relative might have signed the application for the voter, and the voter simply forgot. He said neither he nor his campaign volunteers could ask a voter for identification.

"Most of these seniors ... can't remember what they did yesterday," said Mr. Woertendyke, who lost an election for Dallas County clerk in November. "There is always the possibility that someone in the family signed for it and the person [the voter] did not know."

Bruce Sherbet, Dallas County elections administrator, said Monday that he had sent the applications to the Dallas County district attorney's office for investigation.

"There is no question in my mind that the voters didn't sign those applications," Mr. Sherbet said.

District Attorney Bill Hill said Monday that his prosecutors were investigating the information given them by the elections department.

"We are trying to determine whether or not there were forgeries on these mail-in ballot applications," Mr. Hill said. "And if in fact they were forgeries, who actually committed the offense."

In Texas, residents can vote by mail if they are at least 65 years old, disabled or plan to be gone during the period of early voting and on election day. Voters must sign an application for a mail ballot, which authorizes the elections department to send them a ballot.

Mail ballot controversies

But in Dallas and some other Texas counties, the mail ballot system has been controversial. Campaign workers have visited the homes of elderly voters to influence their votes and even taken ballots before voters could mark them.

A state district judge voided the results of the Dallas City Council District 4 race in 2001 partially because of mail ballot forgeries.

The Texas Legislature is considering a bill that would tighten regulation of mail ballots. One of Mr. Hill's prosecutors, Ben Stool, helped write the bill with state Rep. Steve Wolens, D-Dallas. It increases the criminal penalties related to mail ballot fraud.

All 12 voters are 65 or older. Several cannot leave their homes without the assistance of relatives, the voters and their relatives said. But some said they vote at the polling place and were visibly upset that someone had submitted an application for them.

"That is not my signature on there," said Norman Jones, a 65-year-old retiree who lives on Vilbig Road. "I try to get down to the polling place to vote. I like to make my vote count."

Said Henry Moore Jr., 70: "If I find out who [signed my name], I'll sue them."

Another couple whose applications were sent, Milas and Lorine Franklin, left West Dallas more than a year ago, said Terry Webster, a former neighbor. Another family, the Alvarados, answered the door on the day a reporter visited the house.

When Mr. Woertendyke sent the applications to the elections department, his campaign put Mark Baker's name and address on the envelope. Mr. Woertendyke said Mr. Baker collected most of the applications in the precinct "except for a few that I picked up."

Mr. Baker is a longtime West Dallas resident who serves on the city's Martin Luther King Jr. Community Center Board. Ed Oakley, one of Mr. Woertendyke's opponents in the May 3 election, appointed Mr. Baker to that board.

Connection denied

Mr. Baker said he often tries to help seniors vote by mail. But he denied dealing with the applications that Mr. Sherbet said were forged.

"I have a regular set of people who vote each election," Mr. Baker, 37, said. "These are not the folks I have written up."

But Mr. Baker allowed his name to be written on the envelope that was sent to elections headquarters, he said. Mr. Baker said he collected perhaps 50 of the 265 applications that Mr. Woertendyke sent.

"Clair asked me if he could use my address," Mr. Baker said. "With him being the candidate, he didn't think it was good having it couriered in under his name – for his protection."

Mr. Woertendyke said he used Mr. Baker's name and address because he doesn't believe that the media should know how he conducts his campaigns.

"The media make something out of nothing," he said. "Everything was done perfectly legal, and you didn't have a right to know."

Mr. Woertendyke is campaigning to represent council District 3, an area that covers parts of West Dallas, Oak Cliff and the Mountain Creek area. His opponents are incumbent Mark Housewright and Mr. Oakley, another sitting council member.

Three-way race

Mr. Oakley was drawn into District 3 during redistricting. Mr. Housewright and Mr. Oakley said they were upset to learn about the questionable applications.

Those voters who said their signatures were forged have received mail ballots. Several, such as Mr. Jones, said they intended to vote at a polling place.

To cancel the mail application, the voters must submit a request in writing, Mr. Sherbet said.

Otherwise, they have to take the mail ballot to a polling place, where they must surrender it to an election judge to be allowed to vote in person. That measure is intended to protect against people who would vote twice by casting a ballot on election day and then sending a mail ballot later, Mr. Sherbet said.

But the voters who lose their mail ballot or forget to send a cancellation letter might find themselves locked out on election day.

"It's horrible," Mr. Sherbet said. "These folks could lose their right to vote."

Third ballot recount is being considered

The ballot recount from the Nov. 5 election could last until Wednesday because of lingering questions about what to do with vote tallies handled by three election workers who were fired last week.

Bexar County Judge Nelson Wolff is expected to make a statement today about whether elections officials will have to count about seven disputed precincts for a third time.

County Elections Administrator Cliff Borofsky said the precincts handled by the three-person counting team were set aside last week after problems were discovered during a spot check of the ballot boxes.

The team included two Democrats, Mark Garrett and Mike Miklas; and one Republican, Martha Martin.

District Clerk Reagan Greer filed a complaint with Wolff last week asking that the boxes, which include about seven precincts, be recounted because of an allegation that Garrett switched 12 votes from Republican to Democratic candidates.

Garrett vehemently denies tampering with the votes.

No allegations have been made regarding Miklas and Martin. But Martin filed an affidavit with the county judge's office accusing Garrett of calling votes out too rapidly for her to tabulate them properly.

2 bank robbery suspects arrested

Two bank robbery suspects, linked to separate incidents, were arrested within hours of each other Monday.

Stephen Joy, 23, of Chicago, and Michelle Mitchell, 18, of San Antonio, were each being held at the Bexar County Jail late Monday, and were waiting for their bonds to be set.

Joy was charged with robbery. Mitchell was charged with attempted robbery.

According to the FBI, Joy entered the Compass Bank at 7575 Wurzbach Parkway at 10:15 a.m. and handed a teller a demand note. He fled in a late model Chevrolet Caprice, which was found abandoned a short time later, the FBI said. Joy was arrested after San Antonio police traced the vehicle to him, the FBI said.

Two hours after the robbery at the Compass Bank, authorities said Mitchell entered the Sterling Bank at 2700 N.E. Loop 410 and handed a teller a demand note. She was arrested by a security guard at the counter, the FBI said.

In both incidences, no weapons were used.

Man arrested in postal robberies

U.S. Postal inspectors on Friday arrested a 20-year-old man, alleging he robbed the Serna Post Office twice in a week.

Shortly after 3 p.m. on Nov. 29, a man robbed two clerks at gunpoint and fled.

016798

Postal inspectors were working with San Antonio police, who had been investigating several armed robberies on Austin Highway, when the same post office was robbed again on Dec. 6.

At about 3:30 p.m., the robber fled the post office with stolen money and carjacked an elderly woman in the parking lot.

Authorities on Monday said David Aundra Straughn was charged with robbery and carjacking.

Sickly puppies found in pickup

Three sickly chow-mix puppies that were found in the back of a pickup by students at Northwest Vista College have been turned over to the Humane Society for treatment.

The owner of the vehicle turned the bleeding and weak puppies over to Alamo Community College District police, who in turn took them to the Humane Society/SPCA of Bexar County for quarantine.

The puppies are being treated for mange and secondary illnesses, including eye and bacterial skin infections.

ACCD is considering filing criminal charges against the dogs' owner.

The Humane Society will take care of the puppies until they recover. For more information, call (210) 226-7461.

texas

Collision kills teen in New Braunfels

NEW BRAUNFELS - A Canyon High School student was killed late Sunday in a car wreck that also hospitalized a teenager from Seguin.

Gabriel Villalobos, 17, was declared dead at the scene of the accident. Amber Lane, 17, of Seguin, was taken to Brooke Army Medical Center where she was in critical condition, but improving.

Villalobos was driving a 1994 Kia with Lane as a passenger. His car was struck by a 2000 Chevrolet pickup as Villalobos turned left off Kuehler Avenue on Business 35 North at about 8:10 p.m. Sunday, officials said.

The driver of the pickup was treated and released from McKenna Memorial Hospital.

LaSalle residents sue over prison

Claiming that LaSalle County leaders have acted secretly and without giving proper legal notice to the public, a group of Encinal residents sued Monday to block construction of a new federal detention center there.

The suit, filed against LaSalle County Judge Jimmy Patterson, the county commissioners and the LaSalle County Public Facilities Corp., comes more than a month after the corporation sold \$22 million in high-interest bonds and paid out the proceeds for the project.

"This suit is about the process. It's about violations of the Texas Open Meetings Act," said Donna Lednický of Encinal, one of three named plaintiffs.

Supporters say the detention center will bring 150 badly needed jobs to LaSalle County, and provide a boost to the local economy.

Student imposter is sentenced

HOUSTON - Writing a letter of apology to Rice University and paying back \$107.99 for food he ate in the school's cafeteria are among the punishments a man who posed as a student received Monday.

County Court at Law Judge Jim Anderson sentenced Rodrigo Fernando Montano, 24, to 18 months probation for passing himself off as a Rice student and practicing with the track team.

Montano was charged with theft for signing vouchers in the school's cafeteria to eat lunch.

Montano also must perform 40 hours of community service as part of his sentence.

Man arrested after strip club rampage

WICHITA FALLS - A man upset that his daughter was working at a strip club was arrested after allegedly going on a

rampage in the building, destroying furniture and carrying what appeared to be a pipe bomb, authorities said.

Lee Wayne Lawrence, 41, was in survival gear when taken into custody unharmed at Maximus after police persuaded him to surrender Saturday night, authorities said.

He was charged with aggravated assault and was being held Monday on \$500,000 bond, a jail spokesman said.

Lawrence damaged two 7-foot bubble lamps and a leopard-skin chair and stabbed three table tops with a knife, police said.

Authorities said they were analyzing whether another device he carried was a bomb.

HEADLINE: Gubernatorial election trial highlights

BODY:

The first week of trial has concluded in Republican Dino Rossi's court battle to set aside Democrat Christine Gregoire's Nov. 2 victory in the governor's race. Gregoire won by a scant 129 votes amid many voting irregularities and errors, but the question is whether there is sufficient basis to reverse or nullify the election under state law.

"SINISTER FRAUD:" Republican attorney Dale Foreman alleged in opening statements Monday that "sinister fraud" by high-ranking King County elections officials tipped the election to Gregoire by allowing more illegal votes to be counted in Gregoire-friendly districts. He also alleged ballot-box stuffing and thefts of votes from Rossi.

A fraud finding would have been critical to getting around a 1912 Supreme Court ruling that, in effect, requires the petitioner to show how illegal votes were cast.

TURNING ON KING COUNTY: King County Elections Superintendent Bill Huennekens testified Tuesday that he did not realize a mail-ballot report given to the county's vote canvassing board Nov. 17 had false or incorrect data until later. He also acknowledged errors in ballot counting, including more than 300 provisional ballots fed by voters into Accuvote machines at poll sites before the voters' statuses were verified. Regardless, he said the county followed procedures on dealing with possible felon voters.

MAIL-IN BALLOTS: King County's mail-ballot supervisor, Nicole Way, testified Wednesday that she did not know the mail-in ballot-report numbers were false when she forwarded them to her boss, Garth Fell; Fell then gave them to Huennekens for the vote certification. This appeared to contradict Way's earlier statements in a deposition that she and Fell put false data on the form because they could not properly account for absentee ballots.

MORE VOTES THAN VOTERS: Clark Bensen, a data expert hired by Republicans, testified over Democratic objections Wednesday that Gregoire was favored in five precincts showing more votes than voters credited with voting and that Rossi was disfavored in six precincts showing fewer votes counted than there were voters credited. The implication, according to GOP lawyer Dale Foreman, was that fraud or some other interference led to this "nonrandom" variation in the data, but Democrats say the allegation lacks substance.

STATISTICAL ANALYSIS: Judge John Bridges agreed Thursday to let Republicans present evidence from statistical analyses by two experts that purport to show Rossi would have won. The Rossi victory margin would have been somewhere between 60 and 100 votes if illegal or invalid votes — including those cast illegally by felons or on behalf of dead people — were excluded from the totals, according to the analyses.

JUDGE'S RULING: Bridges said he was reserving judgment on whether he would ultimately accept into evidence the experts' testimony, which Democrats fought to exclude on grounds it is not a reliable way to learn how voters cast ballots.

Bridges explained his decision by saying that he knows the case is destined for appeal to the state Supreme Court and he wants the justices to have "as large a record as possible, for which they may not thank me actually."

"I have some concerns based on the testimony I've heard," Bridges noted. "But I'm going to reserve ruling on this and ask counsel to go ahead and put on their case."

EXPERT TESTIMONY: Republican-hired political science professor Jonathan Katz of the California Institute of

016803

Technology presented his data analysis later Thursday showing that illegal felon votes in Gregoire-friendly precincts likely followed the pattern of other votes in those districts, resulting in her victory. Another Republican consultant, associate professor Anthony Gill of the University of Washington, offered a similar analysis showing that Rossi would win by 94 votes if all invalid votes identified by the GOP were excluded.

Both cited a federal study showing felon voters tend to vote Democratic.

Democrats countered that neither analysis was based on generally accepted science and that both experts failed to account for the full universe of ballots cast improperly, including those in Eastern Washington counties that favored Rossi.

"ECOLOGICAL" FALLACY: Democratic expert Christopher Adolph, an assistant professor at the UW's Center for Statistics and Social Science, said the GOP analyses are invalid and based on a common "ecological" fallacy known to statisticians for 50 years — namely that one could deduce how an individual behaved by knowing something about how a group behaved. He said a better way to learn how individuals voted is to ask them — an impossibility in a case where the identity of many allegedly illegal votes is not known.

To illustrate the fallacy, Adolph used a baseball analogy. If all anyone knew was that the Seattle Mariners' baseball team batted for a .270 average last year, the Republican theory would lead one to infer that Ichiro Suzuki also batted .270 — clearly the wrong answer since Suzuki led the league with a .372 mark and set a record for hits.

THE TRIAL GOES ON: Democrats moved to dismiss the Republicans' case Friday, saying there was no direct evidence showing how illegal votes were cast, which the judge had listed in a May 2 pretrial ruling as one of six tests to meet. Democrats also said there is no evidence of fraud, but Republicans insisted there is circumstantial evidence of wrongdoing and that voting errors and possible fraud make it impossible to know whether Gregoire won.

MAIL-IN BALLOTS: Democrats began presenting evidence, summoning a half-dozen Republican and Democratic county auditors from areas that favored Rossi to testify. They said their election staffs also counted illegal felon ballots; they counted unverified provisional ballots that had been fed improperly into ballot boxes or counting machines; and they had other voting irregularities, including uncounted ballots that turned up after the election, but in smaller numbers than the 96 found in King County and 64 found in Pierce County.

HEADLINE: GOP must back up claim of election fraud; Dino Rossi's attorney claims the governor's election was stolen - a charge that requires evidence of criminality, not just incompetence.

BODY:

Republicans have flung the political "F word" - fraud - at the King County ballot count that made Christine Gregoire governor. Washingtonians will soon find out if the Republicans have the evidence to make it stick.

Until Dino Rossi's challenge of Gregoire's election challenge went to trial Monday, his supporters had largely focused on mistakes made in heavily Democratic King County, either legal ballots that didn't get counted or illegal ballots cast by felons that did.

The Republicans can cite many hundreds of wrongly excluded or included votes - more than enough, in theory, to erase the paper-thin 129-vote lead that put Gregoire into the governor's mansion.

But the trial judge, John Bridges of Chelan County Superior Court, has made it clear that a case built on election mistakes will face a tough test in his courtroom. Merely establishing a large number of mistakes won't do; he wants Rossi's team to demonstrate that the mistakes actually cost him the election.

That will be hard to do without somehow figuring out how many of those secret ballots were cast for him or Gregoire.

It's easier, though, to overturn an election if fraud can be established. On Monday, Rossi's legal team set out to do just that. In King County, GOP attorney Dale Foreman charged, ballot boxes had been stuffed in Gregoire's strongest precincts, while ballots had disappeared in two of Rossi's best precincts.

"This election was stolen from the legal voters of this state by a bizarre combination of illegal voters and bungling bureaucrats," he argued.

And: "The King County data shows partisan bias and not random error."

The Republicans will indeed have a case for fraud if they can show that the election irregularities in King County clearly and consistently favored Gregoire. In fact, that would be the biggest political scandal this state has seen in decades.

But if the evidence Foreman offers consists of "illegal voters" and "bungling bureaucrats," what he's got is the same old collection of felons and King County blunders Washingtonians have been groaning about for months. While incompetent ballot-handling could easily change the outcome of an election as close as this, it can't "steal" the election. For election fraud, you need more: criminal intent, connivance and actual vote-tampering.

Maybe Foreman has substantial circumstantial evidence to back up this charge. He's certainly piqued our interest. But having alleged fraud, he'd better show the court something more than election glitches no one would have noticed had the winning margin been merely close, not microscopic.

08.06.03 Bjorklund says clerk raises more questions with official response

By GARY HARMON *The Daily Sentinel*

Mesa County Clerk Janice Ward's official response to his complaint about the 2002 election "raises more questions than it answers," Tom Bjorklund said Tuesday.

Bjorklund has wrangled for months with the clerk's office and filed a complaint last month asking Colorado Secretary of State Donetta Davidson to investigate discrepancies he discovered in the course of studying records of the election.

In her response to Bjorklund's complaint, Ward described the complaint as meritless and an effort to "cast a cloud of suspicion" on her office.

"They're trying to confuse the issue," Bjorklund said Tuesday, pointing to a section of Ward's response dealing with a group of voters whose names appeared on records supplied by the Colorado secretary of state's office, but not on records supplied by the clerk's office to him less than a week after the election.

The nut of Bjorklund's complaint concerns 67 voters who responded to surveys — and in some cases signed affidavits — that they cast ballots in the primary election.

Ward's response addressed some of those cases, explaining some and in other cases simply noting that there was no record of participation in the 2002 primary.

Bjorklund said that all names of people whose claims to having voted in the election weren't reflected in the records would be passed on for further investigation.

If a voter presents a claim to having cast a ballot in the primary that isn't reflected in the records, "Our office would investigate," said Amy Storm-Farley, chief deputy clerk. "Our office not been approached by any elector directly claiming what Mr. Bjorklund is claiming."

One resident who signed an affidavit that he voted in the primary said Tuesday he was "almost positive" of his participation, though he had no specific recollection of casting a ballot.

"I'm a voter," Don McGuire said.

Voter John Grimsley, who was cited on the Bjorklund list, said he had no specific recollection of voting or not in the primary. Another, Carl Burley, said he remembered specifically voting in the November election, but couldn't recall a specific memory about voting in the primary.

Phone calls to several others on the list weren't returned immediately.

It makes little sense that those voters wouldn't have cast ballots, Bjorklund said, because they tended to be politically active, donating to and organizing campaigns. One was a significant Ward contributor, he said.

Aspects of the dispute now have reached district court and the Mesa County District Attorney's Office.

A hearing is scheduled to continue later this month in a case in which Ward sought a ruling on whether some of the information sought by Bjorklund was public record.

Investigators with the district attorney's office also are studying an affidavit to determine whether a crime was committed when the clerk's office disposed of unsigned signature cards after the election.

The unsigned cards, which were left over after voters presented signed cards to receive ballots at polling places, also are an important part, in their absence, of Bjorklund's case.

The unsigned cards are legitimately a part of the audit trail for the election, Bjorklund said, and their absence is suspect.

Although Ward has promised cooperation, Bjorklund said, the clerk's office "has been less than helpful," in his case.

Officials with the secretary of state are to pick up the primary election records Monday and take them to Denver for an audit.
