# **ELECTION SYSTEMS AND SOFTWARE (ES&S)**

# EVS 5.0.0.0

# PHYSICAL CONFIGURATION AUDIT

# **T59087.01** Appendix A.9

# **1.0 INTRODUCTION**

A Physical Configuration Audit (PCA) of the ES&S EVS 5.0.0.0 Voting System was performed by Wyle Laboratories qualified personnel as part of the certification test campaign. The PCA consisted of inspecting: ElectionWare software, Election Reporting Manager (ERM) software, AutoMark Voter Assist Terminal (VAT) unit, DS200 precinct scan unit, DS850 central scan unit, and all accessories, equipment and documentation used with the system. All software versions, of the ElectionWare, ERM, AutoMark VAT, DS200, and DS850 were identified during the Physical Configuration Audit.

## 1.1 Scope

The EVS 5.0.0.0 System is a paper-based voting system that includes:

- ElectionWare
- Election Results Manager (ERM)
- ES&S Event Log Service
- VAT Previewer
- Removable Media Service
- Precinct Count Digital Scanner DS200
- Voter Assist Terminal AutoMARK A100, AutoMark A200, AutoMark A300
- Central Count Digital Scanner DS850

The DS200, AutoMARK A100/A200, and DS850 have been submitted for testing in previous EAC campaigns. Wyle personnel will analyze each unit to determine prior testing acceptance (annotated later in the test plan) based on modifications to the unit, which includes software, hardware and functional modifications. Based on this data, each unit shall be subjected to the tests required to ensure that all applicable VVSG requirements are met.

The software utilized in the system will also be compared to versions that have been submitted for testing in previous EAC campaigns at Wyle to determine the extent of the source code review required (annotated later in the test plan). Based on this data, Wyle personnel will execute software code review to ensure that all applicable VVSG requirements are met and changes to the software did not affect any operational features of the voting system.

The complete system shall be tested in a full system integration test to ensure all components interact properly in the current system configurations listed in the EVS 5.0.0.0 scope.

#### 1.2 References

The documents listed below were used in the development of the Test Plan and are utilized to perform certification testing.

# **1.3** Terms and Abbreviations

This subsection defines all terms and abbreviations applicable to the development of this PCA Review.

ADA – Americans with Disabilities Act

- ATI Audio Tactile Interface
- CM Configuration Management

- COTS Commercial off the Shelf
- ECO Engineering Change Order
- EAC Election Assistance Commission
- EMS Election Management System
- EUT Equipment Under Test
- ERM Election Reporting Manager
- EVS ES&S Voting System
- LCD Liquid Crystal Display
- IMR Intelligent Mark Recognition
- PCA Physical Configuration Audit
- QA Quality Assurance
- RMS Removable Media Service
- SUT System Under Test
- TDP Technical Data Package
- UELS ES&S Event Log Service
- UPS Uninterruptible Power Supply
- VAT Voter Assist Terminal
- WoP Wyle Operating Procedure
- VSTL Voting System Test Laboratory
- VVSG Voluntary Voting System Guidelines

AutoMARK A300

DS850

#### **1.4** System Overview

The ES&S EVS 5.0.0.0 Election System is a comprehensive suite of vote tabulation equipment and software solutions providing end-to-end election management. The EVS 5.0.0.0 Voting System includes the following core system components detailed in Tables 1-1 and 1-2.

1.8.1.0

2.4.0.0

Tuble I I D v 5 cloudo System Huraware Components				
Component	Hardware Version(s)	<b>Firmware Version</b>		
DS200	1.2	2.7.0.0		
AutoMARK A100	1.0	1.8.1.0		
AutoMARK A200	1.1, 1.3	1.8.1.0		

Table 1-1 EVS 5.0.0.0 System Hardware Components

1.3

1.0

Component	Version
ElectionWare	4.1.0.0
Election Reporting Manager (ERM)	8.6.0.0
ES&S Event Log Service	1.5.0.0
VAT Previewer	1.8.1.0
Removable Media Service	1.4.0.0

#### **1.5** System Hardware

The ES&S EVS 5.0.0.0 System can be set up to support one or more of the following hardware components:

- DS200 Precinct Tabulator
- AutoMARK Voting Assist Terminal
- DS850 Central Tabulator

Each of these components is described in the following paragraphs:

## Precinct Ballot Tabulator: DS200

The precinct ballot tabulator component is the DS200. The DS200 is a digital scan paper ballot tabulator designed for use at the polling place level. After the voter marks a paper ballot, their ballot is inserted into the unit and immediately tabulated. The tabulator uses a high-resolution image-scanning device to image the front and back of the ballot simultaneously. The resulting ballot images are then processed by a proprietary mark recognition engine.

The system includes a 12-inch touch screen display providing voter feedback and poll worker messaging. Once a ballot is tabulated and the system creates cast vote records, the ballot is dropped into an integrated ballot box. The DS200 includes an internal thermal printer for the printing of the zero reports, log reports, and polling place totals upon the official closing of the polls.

## Electronic Ballot Marking Device: AutoMARK Voter Assist Terminal (VAT)

The electronic ballot marking device component is the ES&S AutoMARK Voter Assist Terminal (VAT). The AutoMARK VAT assists voters with disabilities by marking optical scan ballots.

The AutoMARK VAT includes two user interfaces to accommodate voters who are visually or physically impaired or voters who are more comfortable reading or hearing instructions and choices in an alternative language. The AutoMARK is equipped with a touch screen and keypad. The touch-screen interface includes various colors and effects to prompt and guide the voter through the ballot marking process. Each key has both Braille and printed text labels designed to indicate function and a related shape to help the voter determine its use.

Regardless whether the voter uses the touch screen or other audio interface, changes can be made throughout the voting process by navigating back to the appropriate screen and selecting the change or altering selections at the mandatory vote summary screen that closes the ballot marking session.

# Tabulator: DS850

The DS850 is a high-speed, digital scan central ballot counter. During scanning, the DS850 prints a continuous audit log to a dedicated audit log printer and can print results directly from the scanner to a second connected printer. The scanner saves results internally and to results collection media that officials can use to format and print results from a PC running Election Reporting Manager. The DS850 has an optimum throughput rate of 300 ballots per minute and uses cameras and imaging algorithms to image the front and back of a ballot, evaluate the results and sort ballots into discrete bins to maintain continuous scanning.

# **EMS Client Server Configuration**

EVS 5.0.0.0 Voting System Election Management System (EMS) was configured with a Server running Windows Server 2008 R2 and a combination of a client laptop and a client desktop running Windows 7 Professional.

# 1.6 System Software

The EVS 5.0.0.0 Election Management System is an application suite comprised of five components: ElectionWare, Election Reporting Manager (ERM), Removable Media Service (RMS), ES&S Event Log Service (UELS), and VAT Previewer.

## **ElectionWare**

ElectionWare integrates the election administration functionality into a unified application. Its intended use is to define an election and create the resultant media files used by the DS200 tabulator, AutoMark Voter Assist Terminal (VAT), the DS850 Central Ballot Scanner, and Election Reporting Manager (ERM). An integrated ballot viewer allows election officials to view the scanned ballot and captured ballot data side-by-side and Produce ballot reports.

# **Election Reporting Manager (ERM)**

Election Reporting Manager (ERM) generates paper and electronic reports for election workers, candidates, and the media. Jurisdictions can use a separate ERM installation to display updated election totals on a monitor as ballot data is tabulated, and send the results reports directly to the media outlets. ERM supports accumulation and combination of ballot results data from all ES&S tabulators. Precinct and accumulated total reports provide a means to accommodate candidate and media requests for totals and are available upon demand. High-speed printers are configured as part of the system accumulation/reporting stations - PC and related software.

# **Removable Media Service (RMS)**

Removable Media Service (RMS) is an application that runs in the background of the EMS client workstation and supports the graceful insertion and removal of election and results USB media.

# ES&S Event Log Service (ELS)

ES&S Event Log Service is a Windows Service that runs in the background of any active ES&S Election Management software application to monitor the proper functioning of the Windows Event Viewer. The ES&S Event Log Service closes any active ES&S software application if the system detects the improper deactivation of the Windows Event Viewer.

# VAT Previewer

The VAT Previewer is an application within the EMS program that allows the user to preview audio text and screen layout prior to burning Election Day media for the AutoMARK.

The major applications also require other utilities. Below is a list of each application and its associated utilities:

ElectionWare	ERM	<b>Encryption Utilities</b>	Event Log	Removable
			Services	Media Service
PaperBallot	CB_EVT.dll	RSACrypto.EXE		
libCoNG.dll	CB_XML.dll		CreatLog	RMUCli.EXE
EssXML	CB_XMLConv.dll		EssEvt	RmuDLL.DLL
SQL	ERMXMLConvDLL.dll		EssEvtA	RmuSvc.EXE
	ERMXMLData.dll		EssEvtMsg	
	ExitWin.exe		EvtSvc	
	MyDLL.dll		LogEvent	
	RegUtil.dll			
	Shell.exe			
	ShellSetup.exe			

# Table 1-3 EVS 5.0.0.0 Software Utilities

## 1.7 Technical Data Package Overview

As part of the Physical Configuration Audit of the ES&S EVS 5.0.0.0 Voting System, an initial review of the Technical Data Package (TDP) submitted by ES&S was performed to ensure that all documentation required by a user to install, validate, operate, and maintain the system were present.

## 2.0 HARDWARE

## 2.1 Hardware Components

The following is a list of all hardware components in testing, and the quantity of each:

- 5x DS200
- 4x DS850
- 6x AutoMark A100
- 6x AutoMark A200
- 2x AutoMark A300
- 4x UPS
- 9x Headphones
- 3x Sip & Puff
- 1x Workstation Computers
- 1x Laptop Computer
- 1x Server
- 100x USB Transport Media (USB flash drive)
- 20x Compact Flash Card (CF)

# 2.2 Equipment and Accessories

This subsection categorizes the equipment the manufacturer has submitted for testing. Each test element is included in the list of the equipment required for testing of that element, including system hardware, general purpose data processing, communications equipment, and any required test instrumentation.

Equipment	Description	Serial Numbers
DS200 • Hardware v. 1.2 • Firmware v. 2.7.0.0	A digital scan paper ballot tabulator designed for use at the polling place level.	DS0110340034, DS0110340480 ES0108340085, ES0108330100 ES0108340579

## 3.0 SOFTWARE

### 3.1 Software

Table 3-1 lists the software the manufacturer must submit for testing. This section defines the two types of software needed for testing:

- Software used for the testing of hardware, software, and security.
- Supporting software required for the test environment (operating systems, compliers, assemblers, database managers, and any other supporting software).

The EVS 5.0.0.0 software and firmware submitted for review are identified in Table 3-1.

Software/Firmware	Version	Description
ES&S Event Log Service	1.5.0.0	The ES&S Event Log Service is a Windows Service that runs in the background of any active ES&S Election Management software application to monitor the proper functioning of the Windows Event Viewer.
ElectionWare	4.1.0.0	ElectionWare Election Management System software for defining contents, candidates and ballot formats and performing results post-processing.
PaperBallot	3.1.0.0	The PaperBallot utilizes ElectionWare data originally sourced from external election data (Imported text file) or created within ElectionWare's Define Module. Ballot customization is accomplished with the Paper Ballot module.
Election Reporting Manager (ERM)	8.6.0.0	The Election Reporting Manager (ERM) generates paper and electronic reports for election workers, candidates, and the media. The Jurisdictions can use a separate ERM installation to display updated election totals on a monitor as ballot data is tabulated, and send results reports directly to media outlets.
Removable Media Service	1.4.0.0	Removable Media Service (RMS) is an application that runs in the background of the EMS client workstation and supports the graceful insertion and removal of election and results USB media.
DS200	2.7.0.0	The DS200 is a digital scan paper ballot tabulator designed for use at the polling place level.
DS850	2.4.0.0	A high-speed, digital scan central ballot counter. During scanning, the DS850 prints a continuous audit log to a dedicated audit log printer and can print results directly from the scanner to a second connected printer.
AutoMark	1.8.1.0	The AutoMARK <sup>™</sup> Voter Assist Terminal is designed to help voters mark their election ballots when they are visually impaired, physically disabled, or more comfortable reading or hearing instructions and choices in an alternative language.
VAT Previewer	1.8.1.0	The VAT Previewer is an application within the EMS program that allows the user to preview audio text, and screen layout prior to burning election day media for the AutoMARK.

Table 3-1 EVS 5.0.0.0 System Software and Firmware

#### 3.2 EVS 5.0.0.0 System Software

Each AutoMark, DS200, and DS850 unit is loaded with software applications and the machine's firmware. Each unit has specific software and firmware which has been configured specifically for the needs of the AutoMark, DS200, and DS850 units. All software and operating systems used for the AutoMark, DS200, and DS850 hardware was built at Wyle during a Witness Build, using code and scripts reviewed by Wyle.

#### 4.0 TECHNICAL DATA PACKAGE (TDP)

## 4.1 Required Documents for PCA

The following documents are required during the performance of the Physical Configuration Audit to ensure that the manufacturer's TDP provides sufficient instruction for a user to install, validate, operate, and maintain the voting system. Documentation regarding the manufacturer's Configuration Management Plan and Software and Design Specifications was used during the Source Code review to ensure that the software conformed to the manufacturer's specifications. The following table lists the documents utilized during the Physical Configuration audit:

EVS 5.0.0.0 TDP Documents	Version	Doc. No.	Document Code					
Voting System Overview	15.0	01-01	EVS5000_OVR00

#### 5.0 Conclusion

All Hardware and Software undergoing the Certification Process has been inspected. Photographs were taken of hardware components and are included in Appendix A of this document. Serial numbers of all hardware have been recorded as have version numbers for all software. Hardware and software changes that occur throughout the certification process will be recorded and tracked until testing is concluded.
