Testing and Certification Program Director
U.S. Election Assistance Commission
1335 East-West Highway, Suite 4300
Silver Springs, MD 20910

Dear Program Director:

Election Systems & Software respectfully requests the EAC to accept this implementation statement for certification of EVS 6.2.0.0. This modification release includes the following hardware: ExpressTouch Electronic Universal Voting System, ExpressVote XL™ Full-Face Universal Voting System, ExpressVote Universal Voting System hardware 1.0, ExpressVote Universal Voting System hardware 2.1, DS450 Central Tabulator, DS850 Central Tabulator, DS950 Central Tabulator and DS200 Precinct-Based Tabulator. In accordance with the 2005 VVSG v1.0, Volume I, Section 1.6.4, I have included the following information.

1. **EVS 6.2.0.0 System Overview –** This document contains system flow diagrams

2. **Supported Functionality Declaration** – Describes the capabilities supported by the voting system

3. **TDP Trace Matrix** – References all documentation that supports this release

ES&S Voting System 6.2.0.0 (EVS6200) presents a fully integrated suite of election management products that fully comply with the EAC *Voluntary Voting System Guidelines, Version 1.0*. This release introduces the DS950®, a high-speed central count scanner and tabulator with ballot sorting capabilities.

EVS6200 also introduces additional options for transmission of unofficial results data over closed networks. In addition to clients reading results media and the central tabulators transferring data across a closed network, the Regional Results application will provide the ability to read results media from the DS200, ExpressTouch, and ExpressVote XL and transmit the results collection files over a customer dedicated network via the Regional Results software for more efficient results reporting.

With appreciation for the Commissions' assistance I am;

Respectfully:

Sue McKay
Vice President of Federal Certification
