# Test Report for EAC 2005 VVSG Certification Testing Unisyn Voting Solutions OpenElect 1.3.0.2 Voting System

EAC Project Number: UNS1602

Version: Revision B

Date: 3/15/2017

EAC Lab Code 1501

NVLAP LAB CODE 200908-0

# **SIGNATURES**

	<u>SIGNATURES</u>	
Approved by:	Michael Walker, VSTL Project Manager	3/15/17 Date
Approved by:	Fack Coll- Fac Wendy Owens, VSTL Program Manager	
	TR-01-01-UNI-2016-01.01 Rev B	

# **REVISIONS**

Revision	Description	Date
NR	Initial Release	02/21/17
A	Section 1.1 changed word ballots to ballot styles	3/6/17
A	Section 1.1 changed wording from vote files to vote result files	3/6/17
A	Section 1.1 changed wording on the OVCS description	3/6/17
A	Section 1.1 updated title to Table 1-1 include word Proprietary	3/6/17
A	Section 1.1 added sections 1.1.1 Software Components and 1.1.2 Hardware Components	3/6/17
A	Section 1.1 updated table 1-9 with correct info	3/6/17
A	Section 2.2 added period in PCA section	3/6/17
A	Section 2.2.1 updated language to include mention of additional hardware modifications to OVO and OVI	3/6/17
A	Section 2.2.1.1 updated language to include no changes to COTS software	3/6/17
A	Section 2.2.1.1 added table from section 4.0 for Proprietary Software Components Changed from Baseline	3/6/17
A	Section 2.2.1.1 renumbered tables based on addition of new table	3/6/17
A	Section 3 removed duplicated wording for excluded requirements	3/6/17
A	Section 3.1.1 updated language to include pre and post operational status checks	3/6/17
A	Section 3.1.2 updated language to include example of normal and abnormal inputs	3/6/17
A	Section 3.1.2 removed first paragraph of summary findings which included duplicated information	3/6/17
A	Section 3.1.2 removed duplicate language	3/6/17
A	Section 4.0 updated language to include formal recommendation	3/6/17
A	Section 4.0 removed proprietary software table and relocated to section 2.2.1.1 reducing to only change software	3/6/17
В	Final Version with Highlights Removed	3/15/17

#### 1.0 INTRODUCTION

The purpose of this Test Report is to document the procedures that Pro V&V, Inc. followed to perform certification testing during a system modification campaign for the Unisyn Voting Solutions OpenElect Voting System (OVS) Version 1.3.0.2 to the requirements set forth for voting systems in the U.S. Election Assistance Commission (EAC) 2005 Voluntary Voting System Guidelines (VVSG), Version 1.0. Prior to submitting the voting system for testing, Unisyn submitted an application package to the EAC for certification of the OpenElect 1.3.0.2 Voting System modification to the previously certified OVS 1.3 Voting System (Certification Number: 04211950-1.3). The application was accepted by the EAC and the project was assigned the unique Project Number of UNS1602.

#### 1.1 Description and Overview of EAC Certified System Being Modified

The EAC Certified System that is the baseline for the submitted modification is described in the following subsections. All information presented was derived from the previous Certification Test Report, the EAC Certificate of Conformance and/or the System Overview.

The OVS consists of the following components:

- OpenElect Central Suite (OCS)
- OpenElect Voting Optical (OVO)
- OpenElect Voting Interface (OVI-7)
- OpenElect Voting Interface (OVI-VC)
- OpenElect Voting Central Scan (OVCS)

#### **Open Elect Central Suite (OCS)**

The OCS System supports elections on the OVO, OVI-VC, OVI-7 and OVCS systems. It includes Ballot Layout Manager, Election Manager, Election Server, Tabulator Client, Tabulator Server, Adjudicator, and Tabulator Reports. In addition, the OCS includes the Software Server (SS) system for updating and validating the OVO, the OVI-7 and the OVI-VC (voting device) software.

#### **OpenElect Voting Optical (OVO)**

The OVO is a full-page dual-sided optical scan precinct scanner that scans and validates voter ballot pages and provides a summary of all ballot pages cast. The OVO consists of the following components:

• **Personal Computer (PC)** - Computer component (with a touch panel display) has preinstalled server software (that manages data and communication) and client software that provides a user interface for voting and maintenance.

A new election loaded via the Election Server or manually via a Transport Media (TM) sets passwords, parameters, and ballot styles for that election. (Valid ballot styles for a poll location are reinitialized or set on Election Day startup by scanning a ballot header card).

- Transport Media (TM) 1 GB or larger USB thumb drive that provides the means of transporting audit, optional ballot page images and vote result files from the precinct on Election Night to Election Headquarters where the central count system resides.
- Ballot Reader Dual-sided scanner connected to the PC to scan data from marked ballot pages. The Ballot Reader ejects accepted ballot pages into an attached ballot box or rejects unaccepted ballot pages back out to the voter.
- **Printer -** 58 mm thermal receipt printer connected to the PC to print receipts and reports at the OVO.
- **UPS** Uninterruptible power supply is provided as part of the system.

#### **OpenElect Voting Interface (OVI-7)**

The OVI-7 is a ballot marking device (BMD) that supports both ADA, and regional Early Voting requirements. The OVI-7 has a 7-inch display and consists of the following components:

- Personal Computer (PC) Computer component (with a touch panel display) has preinstalled server software that manages data and communication and client software that
  provides user interfaces for voting and maintenance. A new election loaded via the
  Election Server or manually via a Transport Media (TM) sets passwords, parameters,
  audio, and ballot styles for that election.
- Transport Media (TM) USB device with 1 GB or larger storage provides the means of transporting audit files to the OCS system.
- **Printer** 82.5 mm thermal receipt printer is connected to the PC to print OVI Ballots and reports at the OVI.
- **UPS** Uninterruptible power supply is provided as part of the system.

#### **OpenElect Voting Interface (OVI-VC)**

The OVI-VC is a ballot marking device (BMD) that supports both ADA and Regional Early Voting requirements. The OVI-VC has a 15-inch display and consists of the following components:

- Personal Computer (PC) Computer component (with a touch panel display) has preinstalled server software that manages data and communication and client software that
  provides user interfaces for voting and maintenance. A new election loaded via the
  Election Server or manually via a Transport Media (TM) sets passwords, parameters,
  audio, and ballot styles for that election.
- Transport Media (TM) USB device with 1 GB or larger storage provides the means of transporting audit files to the OCS system.
- **Printer** 82.5 mm thermal receipt printer is connected to the PC to print OVI Ballots and reports at the OVI.

• **UPS** - Uninterruptible power supply is provided as part of the system.

#### **OpenElect Voting Central Scan (OVCS)**

The OVCS units reside at election headquarters designated to read absentee, provisional or the entire election's ballots at a central count location in smaller jurisdictions. It can also be used to recount ballots. The OVCS also captures Write-In data images and produces a Write-In image report for manual processing upon request. The OVCS system consists of the following components:

- **PC Desktop** A desktop PC configuration with the following minimum characteristics:
  - PC: 1.8 GHz Processor, 2 GB RAM, 250GB (or larger) Hard Drive, USB Ports, Network Interface Port (Ethernet), CDRW/DVD, Video Port
  - 16:9 LCD
  - Keyboard and Mouse
- **Bulk Scanner** A dual-sided scanner that is connected to the PC to scan data from marked ballots.

#### 1.1.1 Software Components

Table 1-1. Baseline (OVS 1.3) Proprietary Software Components

Firmware/Software	Version
Adjudicator	1.3.0
Ballot Layout Manager	1.3.0
Common (Library)	1.3.0
Election Manager	1.3.0
Election Server	1.3.0
OCS Installer	1.3.0
Regkey Builder	1.3.0
Software Server	1.3.0
Tabulator	1.3.0
Tabulator Client	1.3.0
Tabulator Reports	1.3.0
OVCS Application	1.3.0
OVI Firmware	1.3.0
OVO Firmware	1.3.0
Scripter	1.3.0
Validator	1.3.0
Logger (Library)	1.3.0

#### 2.0 CERTIFICATION TEST BACKGROUND

#### 2.1 Revision History

The OVS 1.3.0.2 is a modification to the previously certified OVS 1.3 Voting System (Certification Number: 04211950-1.3). The results of testing for the previously certified version are provided in NTS Test Report No. PR030407-01, Rev. B. This report is available for viewing on the EAC's website at <a href="https://www.eac.gov">www.eac.gov</a>.

The only change made to the functionality of the voting system was the update concerning the Pennsylvania Straight Party Method of voting. There were no changes made to the system limits, the software system functions, or the supported languages of the voting system. These remain unchanged from the previously certified version.

#### 2.2 Scope of Testing

Pro V&V performed an evaluation of the results from the previous test campaign along with the changes made to the system to determine the scope of testing required for certification of the OVS 1.3.0.2 Based on this evaluation, Pro V&V determined that testing from the previous test campaigns would establish the baseline and that the focus of this test campaign would be on the system update. The following evaluations were performed to verify compliance of the modifications:

#### • Limited TDP Review

A limited TDP Review was performed to ensure that all submitted modifications were accurately documented and that the documents met the requirements of the EAC 2005 VVSG.

#### • Physical Configuration Audit (PCA)

A PCA was performed to compare the voting system submitted for certification testing to the manufacturer's technical documentation. The purpose of the PCA was to verify that the submitted hardware was unmodified from the previously certified voting system.

# Source Code Review, Compliance Build, Trusted Build, and Build Document Review The source code review performed was based on the source code changes made since the previous system was certified.

# • Functional Configuration Audit (execution of the Pennsylvania Test Cases for BMD and Optical Scanner)

The FCA for this test campaign included an assessment of the submitted modifications and included inputs of both normal and abnormal data during test performance. This evaluation

utilized baseline test cases as well as specifically designed test cases and included predefined election definitions for the input data.

#### System Integration Test

The system integration tests were performed to insure the OVS 1.3.0.2 functioned as a complete system testing both Straight Party and Pennsylvania Straight Party Method of voting, including the Pennsylvania Certification General Election, Pro V&V's Gen 1 General Election and Pro V&V's Prim 1 Primary election.

#### Electrical Hardware Testing of the OVO and OVI

Electrical hardware testing was performed on both the OVO and OVI to ensure changes to the system did not alter the system performance under these conditions.

#### 2.2.1 Modification Overview

The submitted software modification for this test campaign consisted of an update to the Pennsylvania Straight Party method of voting on the OVI. There are additional hardware modifications included in this campaign for the OVO and OVI which are detailed below. This update is documented in the Unisyn 1.3.0.2 Enhancement Report dated 11-28-2016.

#### 2.2.1.1 Detailed List of Changes

Descriptions of the submitted updates, as taken from the Unisyn documentation, are described below:

- If the jurisdiction selects 'PA Straight Ticket' option in the Election Manager application, the contest has some special behaviors if it is populated as the result of a straight ticket election. (PA Straight Ticket being selected automatically sets Auto Deselect as true). In this scenario, if a voter selects a party from the straight ticket selection contest, the ballot is populated in accordance to the rules set by the Election Manager setting. When the voter views a contest that is a vote for 2 or more and touches any candidate, then all the candidates selected in that race because of the straight ticket option are deselected and the candidate that was touched is selected. This occurs even if the candidate belongs to the same party as the party selection in the straight ticket contest.
- The Sound script was updated to explain to the voter what happens when selecting an already selected candidate in an N of M contest. When a vote for two or more is populated from a straight ticket selection, hovering with the keypad over a selected candidate will cause the script to read 'to select this candidate, press the square enter button. Selecting this candidate will deselect all previous selections.'
- Straight ticket selection contest was updated to follow the toggle rule for select/deselect, same as any other vote for one contest.

In addition to the software updates to the Election Manager application and the OVI software, Unisyn submitted hardware modifications. These modifications are described in the OVO OVI Updates Configuration Management document submitted by Unisyn. Table 2-1 contains the

updates and brief description of each. There were no changes made to the COTS software for this campaign.

**Table 2-1. OVO/OVI Hardware Updates** 

Item	Reason	ovo	OVI	1.0	1.01	1.1	1.2	1.3	2.0
New Mount for Gate	Improved manufacturing and support	Yes		No	NO	NO	Yes /O	Yes /O	Yes /O
Brass Insert for scanner threads	Updating from plastic to brass insert to secure thread	Yes		Yes /O	Yes/ O	Yes /O	Yes /O	Yes /O	Yes /O
Hole in Plate(s) to access scanner screw	Improve Manufacturing	Yes		No	No	No	Yes /O	Yes /O	Yes /O
Citizen Power Supply	New, Federal Level VI efficiency compliant AC/DC adapter	Yes		No	No	No	Yes /O	Yes /O	Yes /O
Scanner Power Supply	New, Federal Level VI efficiency compliant AC/DC adapter	Yes		No	No	No	Yes /O	Yes /O	Yes /O
PC Power Supply	New, Federal Level VI efficiency compliant AC/DC adapter	Yes		No	No	No	Yes /O	Yes /O	Yes /O
PC Power Supply	New, Federal Level VI efficiency compliant AC/DC adapter		Yes	No	No	No	Yes /O	Yes /O	Yes /O
Star Printer Power Supply	New, Federal Level VI efficiency compliant AC/DC adapter		Yes	No	No	No	Yes /O	Yes /O	Yes /O
G Vision Power Supply	New, Federal Level VI efficiency compliant AC/DC adapter		Yes	No	No	No	Yes /O	Yes /O	Yes /O
G Vision LCD	New version of the GVision 15" LCD. All functionality is the same		Yes	No	No	No	Yes /O	Yes /O	Yes /O
Flat Cable Ferrite added to Scanner		Yes					Yes /O	Yes /O	Yes /O
Ferrite added to AC filter Output			Yes				Yes /O	Yes /O	Yes /O
OVI Reset Button	Added reset button to connect from the board to a switch internal to the OVI		Yes	Yes /O	Yes/ O	Yes /O	Yes /O	Yes /O	Yes /O
Motherboard Version Update	Vendor updating board	Yes	Yes	No	No	No	Yes /O	Yes /O	Yes /O
Disk Version Update	Moving from 350MBs to 500 MBs - same vendor and version	Yes	Yes	Yes /O	Yes/ O	Yes /O	Yes /O	Yes /O	Yes /O
Power Cable	Removes the adapter used on the AC cable with a molded connector	Yes	Yes	No	No	No	Yes /O	Yes /O	Yes /O

<sup>&</sup>quot;O" - Optional

Table 2-2. OVS 1.3.0.2 Proprietary Software Components Changed from Baseline

Firmware/Software	Version
Election Manager	1.3.0.2
OVI Firmware	1.3.0.2

#### 2.2.2 Block Diagram

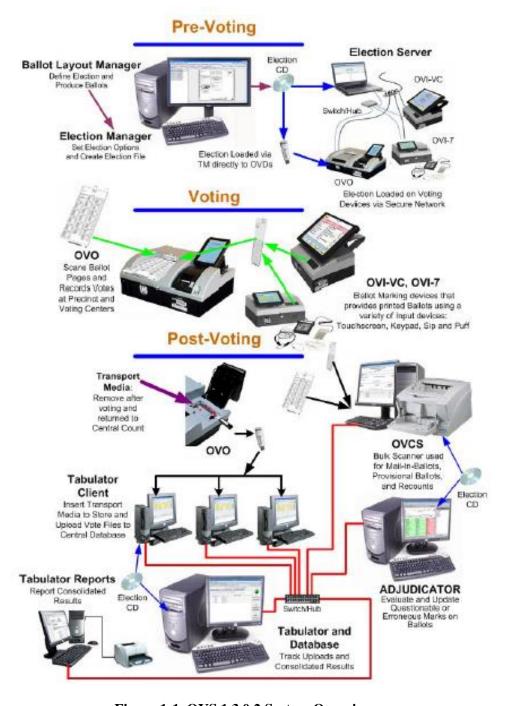

Figure 1-1. OVS 1.3.0.2 System Overview

#### 2.2.3 Supported Languages

The following languages are identified as being supported by the OVS 1.3.0.2 Voting System:

- Armenian
- Cambodian
- Chinese (Cantonese and Mandarin dialects)
- English
- Japanese
- Korean
- Russian
- Spanish
- Tagalog
- Vietnamese

Due to the limited scope of testing, only English ballots were cast during functional testing.

#### 2.2.4 **VVSG**

The OVS 1.3.0.2 Voting System was evaluated against the relevant requirements contained in the EAC 2005 VVSG, Volumes I and II. All requirements that were excluded from the previous test campaign (OVS 1.3) were also deemed not applicable to this test campaign due to the submitted modifications not impacting the specific requirements. The submitted modifications are mapped to the 2005 VVSG requirements in the table below.

**Table 2-3. Modification Requirements Mapping** 

Modification	Description	Impacted 2005 VVSG Requirement
01	Update to the Pennsylvania Straight Party method of	Volume II,
02	voting on the OVI  Straight ticket selection contest was updated to follow the toggle rule for select/deselect, same as any other vote for one contest.	Section 6.7  Volume II, Section 6.7
03	Sound script was updated to explain to the voter what happens when selecting an already selected candidate in an N of M contest	Volume II, Section 6.7
TDP	Section 2.2: SYSTEM OVERVIEW, OpenElect Voting System Release 1.3.0.2 System Overview	Volume II, Section 2.2
TDP	Section 2.5: SOFTWARE DESIGN AND SPECIFICATION, OpenElect Voting System Release 1.3.0.2 Trusted Build, Ballot Layout Manager,	Volume II, Section 2.5
TDP	Section 2.10: PERSONNEL DEPLOYMENT AND TRAINING REQUIREMENTS, OpenElect Voting Systems Release 1.3.0.2 System Operations Procedures: Election Day Poll Worker's Guide OVO and OVI, Election Manager User Guide	Volume II, Section 2.10

Pro V&V determined that the OVO and OVCS source code and software had not been changed for this modification; therefore, Pro V&V did not perform an accuracy test as documented in the EAC 2005 VVSG version 1.0. However, the data from all previous testing was analyzed and examined to insure the totals for each test were accurate. Additionally, a cursory evaluation was performed to verify that the Unisyn QA and CM plans are in compliance.

#### 2.2.5 **RFIs**

There were no RFIs released by the EAC as of the date of test completion that pertained to this test campaign that were not in effect at the time of the baseline system certification.

#### 2.2.6 NOCs

All NOCs released by the EAC as of the date of test completion that pertained to this test campaign and were not in effect at the time of the baseline system certification are listed below:

- NOC 15-01 Test Readiness Review
- NOC 16-02 Trusted Build
- NOC 16-03 Test Case Upload

#### 3.0 TEST FINDINGS AND RECOMMENDATIONS

The OVS 1.3.0.2 Voting System was evaluated against the relevant requirements contained in the EAC 2005 VVSG, Volumes I and II. To determine the scope of testing for certification of the OVS 1.3.0.2, Pro V&V performed an evaluation of the results from the previous test campaign along with the changes made to the system. Based on this evaluation, Pro V&V determined that testing from the previous test campaigns would establish the baseline and that the focus of this test campaign would be on the system update, as detailed in Section 2.2 of this Test Report. The summary findings and recommendations for each area of testing are provided in the following sections.

#### 3.1 Summary Findings and Recommendation

Summary findings for the Hardware Testing, System Level Testing, and Source Code Review are detailed in the relevant sections of this report. In addition to these areas of testing, a Limited TDP Review and a PCA were performed, both of which are described below.

#### **Limited TDP Review**

In order to determine compliance of the modified TDP documents with the EAC 2005 VVSG, a limited TDP review was conducted. This review focused on TDP documents that had been modified since the certification of the baseline system. Any revised documents during the TDP review process were compared with the previous document revision to determine changes made, and the document was re-reviewed to determine whether subject requirements had been met.

A listing of all documents reviewed during the OVS 1.3.0.2 test campaign is provided below:

- OpenElect Voting System Release 1.3.0.2 Trusted Build Applications 1.3.0.2, Document Number: 04-00553, Version 1.17
- OpenElect Central Suite Ballot Layout Manager Release 1.3 Ballot Layout Manager UserGuide Document Number: 04-00428, Version 1.0
- OpenElect Central Suite Election Manager Release 1.3.0.2 Election Manager User Guide Document Number: 04-00427, Version 1.0
- OpenElect Voting Systems Release 1.3.0.2 System Operations Procedures: Election Day Poll Worker's Guide OVO and OVI Document Number: 04-00463, Version 1.0
- OpenElect Voting System Release 1.3.0.2 System Overview Document Number: 04-00446, Version 1.0

#### Physical Configuration Audit (PCA)

A PCA was performed to compare the voting system submitted for certification testing to the manufacturer's technical documentation. The purpose of the PCA was to verify that the submitted hardware was unmodified from the previously certified voting system.

#### 3.1.1 Hardware Testing

Previous hardware examinations were performed on the certified baseline system (OVS 1.3). The updates to the modified system (OVS 1.3.0.2) required no additional environmental hardware testing to be performed; however, the updates did require additional electrical hardware testing to be performed on the OVI and OVO units to ensure changes to the system did not alter the system performance under these conditions. A listing of these tests is provided below.

- Electrical Power Disturbance
- Electromagnetic Radiation
- Electrostatic Disruption
- Electromagnetic Susceptibility
- Electrical Fast Transient
- Lightning Surge
- Conducted RF Immunity
- Magnetic Fields Immunity
- Electrical Supply

Pro V&V utilized a third-party test facility for performance of the electrical tests. All pre and post operational status checks were conducted by Pro V&V personnel. The equipment configurations tested are identified below:

OVI-VC Test Configuration S/N: UVS211027 Support UPS: Minuteman Power Technologies, ETR1500, S/N: AE58080900496 OVO Test Configuration S/N: UVS000036 Support UPS: Minuteman Power Technologies, ETR1500, S/N: AE58080900498 During Emissions and Immunity testing, the OVI was configured to continuously play audio and the OVO was configured to continuously scan ballots in a "shoeshine" mode.

### **Summary Findings**

This section contains a summary of the test results, as taken from the Nemko USA, Inc., EMC Test Report presented in Appendix B.

#### • Electrical Power Disturbance

Test Methods	Minimum Criterion Level	Criterion Level Tested	Compliance Status
	Criterion B and C Voltage	Criterion B and C Voltage	
IEC 61000-4-11:	Dips of 30% and 60%;	Dips of 30% and 60%;	
	Interruptions of >95%,	Interruptions of >95%,	DACC
1994-06	Surges ±15%, Power	Surges ±15%, Power	PASS
Power Disturbance	increase +7.5% and Power	increase +7.5% and Power	
	reductions -12.5%	reductions -12.5%	

#### • Electromagnetic Radiation

Test Methods	Frequency Range	Compliance Status
FCC 15B, Sec. 107, Class "B" Conducted Emissions	0.15 MHz – 30 MHz	PASS
FCC 15B, Sec. 109, Class "B" Radiated Emissions	30 MHz – 18 GHz	PASS

#### • Electrostatic Disruption

Test Methods	Minimum Criterion Level	Criterion Level Tested	Compliance Status
IEC 61000-4-2: 2008 Electrostatic Disruption	Criterion B ±2, ±4, ±8 and ±15 kV Air Discharge, ±8 kV Contact Discharge	Criterion B ±2, ±4, ±8 and ±15 kV Air Discharge, ±8 kV Contact Discharge	PASS

#### • Electromagnetic Susceptibility

Test Methods	Minimum Criterion Level	Criterion Level Tested	Compliance Status
IEC 61000-4-3: 1996	Criterion A	Criterion A	
Electromagnetic	10 V/m from 80-1000	10 V/m from 80-1000	PASS
Susceptibility	MHz (80% AM at 1kHz)	MHz (80% AM at 1kHz)	

#### • Electrical Fast Transient

<b>Test Methods</b>	Minimum Criterion Level	Criterion Level Tested	Compliance Status
IEC 61000-4-4: 1995-01 Electrical Fast Transient	Criterion B	Criterion B	
	Power line pulses of	Power line pulses of	PASS
Electrical Fast Transfent	$\pm 2 \text{ kV}$	$\pm 2 \text{ kV}$	

#### • Lightning Surge

Test Methods	Minimum Criterion	Criterion Level	Compliance
	Level	Tested	Status
IEC 61000-4-5: 1995-02 Lighting Surge	Criterion B ±2kV Common mode and Differential mode	Criterion B ±2kV Common mode and Differential mode	PASS

#### • Conducted RF Immunity

Test Methods	Minimum Criterion	Criterion Level	Compliance
	Level	Tested	Status
IEC 61000-4-6: 1996-04 Conducted RF Immunity	Criterion A 150 kHz - 80 MHz at 10 Vrms 1 kHz 80% amplitude modulated	Criterion A 150 kHz - 80 MHz at 10 Vrms 1 kHz 80% amplitude modulated	PASS

#### • Magnetic Fields Immunity

Upon review of the system change notes, engineering analysis established that Magnetic Fields Immunity Testing (EN 61000-4-8) was not required for retest; therefore, the results of previous test performance were utilized for this test.

#### Electrical Supply

Electrical Supply testing was performed on the OVI and the OVO. Fifty votes were cast on the OVI during a 2-hour battery back-up test (25 each hour). Two hundred ballots were processed on the OVO during a 2-hour battery back-up test (100 each hour). Both components successfully completed the test.

#### 3.1.2 System Level Testing

System Level Testing included the Functional Configuration Audit (FCA), the System Integration Test, and the Accuracy Test. The FCA for this test campaign included an assessment of the submitted modifications and included inputs of both normal and abnormal data during test performance. For example if the system field requires numeric characters normal inputs would be numeric characters only. To verify this is true abnormal inputs would be entered into the fields using alpha numeric characters. The results would be verified and validated to verify the system will only accept the normal data input which would be numeric characters only and a failure would occur if alpha numeric characters were accepted. This evaluation utilized baseline test cases as well as specifically designed test cases and included predefined election definitions for the input data. To meet the requirements of the FCA, the Pennsylvania Test Cases for BMD and Optical Scanner were executed. The system integration tests were performed to insure the OVS 1.3.0.2 functioned as a complete system testing both Straight Party and Pennsylvania Straight Party Method of voting, including the Pennsylvania Certification General Election, Pro V&V's Gen 1 General Election and Pro V&V's Prim 1 Primary election.

#### **Summary Findings**

The FCA was completed successfully with no anomalies or deficiencies noted. All system integration tests were successfully executed. The Pennsylvania test cases detailing the results obtained during testing are included in Appendix A.

#### 3.1.3 Source Code Review

Pro V&V reviewed the submitted source code to the EAC 2005 VVSG and the manufacturer-submitted coding standards. Prior to initiating the software review, Pro V&V verified that the submitted documentation was sufficient to enable: (1) a review of the source code and (2) Pro V&V to design and conduct tests at every level of the software structure to verify that design specifications and performance guidelines were met.

#### **Summary Findings**

<u>Automated Source Code Review:</u> An Automated Source Code Review was performed on the Election Management component and the OVI component source codes. These were the only components that were changed from 1.3 to 1.3.0.2. No source code issues were found during the Automated Source Code review.

<u>Manual Source Code Review:</u> The Manual Source Code review was performed prior to the Compliance and Trusted Builds. The Manual Source Code was a comparison between the 1.3 and the 1.3.0.2 source code and consisted of 100% of the comments of the modified areas.

<u>Compliance Build:</u> The compliance build was performed following the compliance review. Once the compliance review was performed and the source was deemed stable enough to proceed with testing, the source code and all additional packages were compiled into a Compliance Build.

<u>Trusted Build:</u> The trusted build consisted of inspecting customer submitted source code, COTS, and Third Party software products and combining them to create the executable code. This inspection followed the documented process from the "United States Election Assistance Commission Voting System Test Laboratory Program Manual" Section 5.5 – 5.7. *Performance of the trusted build includes the build documentation review.* 

#### 3.2 Anomalies and Resolutions

When a result is encountered during test performance that deviates from what is standard or expected, a root cause analysis is performed. Pro V&V considers it an anomaly if no root cause can be determined. In instances in which a root cause is established, the results are then considered deficiencies. No anomalies occurred during the testing of the OVS 1.3.0.2.

#### 3.3 Deficiencies and Resolutions

Any violation of the specified requirement or a result that is encountered during test performance that deviates from what is standard or expected in which a root cause is established is considered to be a deficiency. Upon occurrence, deficiencies are logged throughout the test campaign in the

Pro V&V tracking system (Mantis) and the EAC Virtual Review Tool (VRT) for disposition and resolution. No deficiencies were encountered during the OVS 1.3.0.2 test campaign.

#### 4.0 RECOMMENDATION FOR CERTIFICATION

The OpenElect Voting System (OVS) Version 1.3.0.2, as presented for testing, successfully met the requirements set forth for voting systems in the U.S. Election Assistance Commission (EAC) 2005 Voluntary Voting System Guidelines (VVSG), Version 1.0. Additionally, Pro V&V, Inc. has determined that the OVS 1.3.0.2 functioned as a complete system during testing both the Straight Party and Pennsylvania Straight Party Method of voting, including the Pennsylvania Certification General Election, Pro V&V's Gen 1 General Election and Pro V&V's Prim 1 Primary election. Based on the test findings, Pro V&V recommends the EAC grant the Unisyn OpenElect Version 1.3.0.2 certification to the EAC 2005 VVSG.

## APPENDIX A

BMD TEST CASES

Tot Con Id		) C-14	ion of Condidates and Occations by Vistor (Remited ADA)
	.S. § 3031.7 Requirement:	(2) Pr	ion of Candidates and Questions by Voter (Regular/ADA)  ovides facilities for voting for such candidates as may be nominated and upon  uestions as may be submitted.
	ive: To determine if a voter l ct candidates and questions.	nas the	Test Configuration: Ballot Marking Device (BMD) and precinct tabulation device are configured as described for normal election day operation by Pennsylvania procedures and/or the device manufacturer.
Test Equipm		None	
	edural Requirements:	None	
Assumptions	:	An ele	ection is loaded on the device and the polls are open, ready for voting.
Step 1000			Description
2000	On the BMD, activate a ballot for	voting.	
	Expected: The ballot is presented	and vote	selections can be input.
	Actual: The ballot was presented a	nd vote	selections could be input.
1010	Select the first candidate in the first	t partisa	n contest excluding a straight party contest.
	Expected: The BMD displays or p excluding a straight party contest.	rovides a	n indication of a vote selection for the first candidate in the first partisan contest
	Actual: The BMD displayed and p excluding a straight party contest.	rovided a	an indication of a vote selection for the first candidate in the first partisan contest
1020	Use the designated method to adva a Vote for Two contest the first tw		ballot to the first "N of M" contest. Select the first "N" candidates in the contest. (e.g. in ates would be selected).
	Expected: The BMD advances to t for the first "N" candidates in the		N of M" contest. Once selected, the BMD displays or provides an indication of a vote $f$ M" contest.
	Actual: The BMD advanced to the for the first "N" candidates in the		of $M$ " contest. Once selected, the BMD displayed and provided an indication of a vote $f$ $M$ " contest.
1030	Use the designated method to adve	ince the l	ballot to the first "Question" contest. Select the "Yes" option in the contest.
	Expected: The BMD advances to t selection for the "Yes" option in the		Question" contest. Once selected, the BMD displays or provides an indication of a vote Question" contest.
	Actual: The BMD advanced to the vote selection for the "Yes" option		nestion" contest. Once selected, the BMD displayed and provided an indication of a rst "Question" contest.
1040	Use the designated method to adva	ince the l	ballot to the second "Question" contest. Select the "No" option in the contest.
	Expected: The BMD advances to t vote selection for the "No" option		d "Question" contest. Once selected, the BMD displays or provides an indication of a cond "Question" contest.
	Actual: The BMD advanced to the vote selection for the "No" option		"Question" contest. Once selected, the BMD displayed and provided an indication of a cond "Question" contest.
			1

1050	Use the designated method to advance the "Ballot Review". Observe the "Ballot Review" to see if the above selections are displayed. Use the designated method to accept the marked ballot. Then, on the precinct tabulation device, cast the voted selections.
	Expected: The BMD advances to the "Ballot Review" screen. After review, the ballot is accepted and is then cast successfully on the precinct tabulation device.
	Actual: The BMD advanced to the "Ballot Review" screen. After review, the ballot was accepted and was then cast successfully on the precinct tabulation device.
1060	Repeat steps 1000-1050 from above using an ADA input device.
	Expected: Repeat 1000X  Repeat 1010X  Repeat 1020X  Repeat 1030X  Repeat 1040X  Repeat 1050X
	Actual: Steps 1000-1050 from above were repeated using an ADA input device.
1070	Disable voting on the BMD. Close the polls on the precinct tabulation device and print the closed polls report tape.
	Expected: The polls closed and a report is printed.
	Actual: The polls were closed and a report was printed.
1080	Review the closed polls report to ensure all selections input above are recorded and reported correctly.
	Expected: The closed polls report presents the accumulated totals for the selections input above.
	Actual: The closed polls report presented the accumulated totals for the selections input above.
Criteria for input by the	Evaluation of the Test Results: The intended selections input above are recorded, stored, and reported as tester.

	entifier: 03 – 25 P.S. § 3031.7(3	S) Straight Party and Pennsylvania Method	
	.S. § 3031.7 Requirements:	(3) Permits each voter, at other than primary elections, to vote a straight political party ticket by one mark or act and, by one mark or act, to vote for all the candidates of one political party for presidential electors and, by one mark or act, to vote for all the candidates of one political party for every office to be voted for, and every such mark or act shall be equivalent to and shall be counted as a vote for every candidate of the political party so marked including its candidates for presidential electors, except with respect to those offices as to which the voter has registered a vote for individual candidates of the same or another political party or political body, in which case the automatic tabulating equipment shall credit the vote for that office only for the candidate individually so selected, notwithstanding the fact that the voter may not have individually voted for the full number of candidates for that office for which he was entitled to vote.	
	ve: To determine if the voting		
Method.	ight party voting and the Pennsy	ylvania device configured as described for normal election day operation by Pennsylvania procedures and/or the device manufacturer.

After revi **Actual: The BMD displayed and p	ew, the ballot is accepted and is then cast successfully on the precinct tabulation device.  rovided an indication of a vote selection for only the partisan contests associated with the first ew, the ballot was accepted and was then cast successfully on the precinct tabulation device.	

1040	
1040	On the BMD, activate a ballot for voting.
	Expected: The ballot is presented and vote selections can be input.
	Actual: The ballot was presented and vote selections could be input.
1050	
1050	Select the option for the second party selection of the straight party.
	Expected: The BMD displays or provides an indication of a vote selection for the second party in the straight party contest.
	Actual: The BMD displayed and provided an indication of a vote selection for the second party in the straight party contest.
1060	Use the designated method to advance through the ballot to each partisan contest. Observe all partisan contests for an indication of a voter selection for all partisan candidates associated with the second straight party selection.
	Expected: The BMD displays or provides an indication of a vote selection for all the partisan candidates in each contest associated with the second straight party selection.
	Actual: The BMD displayed and provided an indication of a vote selection for all the partisan candidates in each contest associated with the second straight party selection.
1070	
	Use the designated method to retreat through the ballot selections to the first "N of M" contest. Select the first partisan candidate that is not the party associated with the second straight party selection. Leave the remainder of the selections under voted.
	Expected: "N" candidates for the party of the second straight party selections should display or provide an indication of the non-selection. The selected candidate should be the only selection displayed or indicated.
	Actual: "N" candidates for the party of the second straight party selections displayed and provided an indication of the non-selection. The selected candidate was the only selection displayed or indicated.
1080	
	Use the designated method to retreat through the ballot to the "Straight Party" contest. Observe the selection for the second straight party selection.
	Expected: The second straight party selections should be displayed or an indication given as selected.
	Actual: The second straight party selections were displayed or indicated.
1090	Use the designated method to advance through the ballot to the second "N of M" contest. Select the first partisan candidate that is not the party associated with the second straight party selection. Leave the remainder of the selections under voted.
	Expected: "N" candidates for the party of the second straight party selections should display or provide an indication of the non-selection. The selected candidate should be the only selection displayed or indicated.
	Actual: "N" candidates for the party of the second straight party selections were displayed and provided an indication of the non-selection. The selected candidate was the only selection displayed or indicated.

1100	
1100	Use the designated method to advance through the remainder of the ballot advancing to the ballot review. Review the selections in the ballot review to verify that the partisan contests associated with the second straight party selections are present with the exception of the "N of M" contests. Use the designated method to accept and mark the ballot. Then, on the precinct tabulation device, use the designated method to cast the voted ballot.
	Expected: The BMD displays or indicates the selection for the partisan contests associated with the second straight party selection for all contests except the first "N of M" contest. The first "N of M" contest displays or indicates the selection of the first candidate that is not associated with the second straight party selection. After review, the ballot is accepted. The ballot is then cast successfully on the precinct tabulation device.
	Actual: The BMD displayed and indicated the selection for the partisan contests associated with the second straight party selection for all contests except the first "N of M" contest. The first "N of M" contest displayed and indicated the selection of the first candidate that is not associated with the second straight party selection. After review, the ballot was accepted. The ballot was then cast successfully on the precinct tabulation device.
1110	On the BMD, activate a ballot for voting.
	Expected: The ballot is presented and vote selections can be input.
	Actual: The ballot was presented and vote selections could be input.
1120	
	Select the option for the first party selection of the straight party.
	Expected: The BMD displays or provides an indication of a vote selection for the first party in the straight party contest.
	Actual: The BMD displayed and provided an indication of a vote selection for the first party in the straight party contest.
1130	Use the designated method to advance through the ballot to each partisan contest. Observe all partisan contests for an indication of a voter selection for all partisan candidates associated with the first straight party selection.
	Expected: The BMD displays or provides an indication of a vote selection for all the partisan candidates in each contest associated with the first straight party selection.
	Actual: The BMD displayed and provided an indication of a vote selection for all the partisan candidates in each contest associated with the first straight party selection.
1140	Use the designated method to retreat through the ballot selections to the first "N of M" contest. Select the first partisan candidate that is associated with the first straight party selection. Leave this contest and the remainder of the selections under voted.
	Expected: "N" candidates for the party of the first straight party selections should display or provide an indication of the non-selection. The selected candidate should be the only selection displayed or indicated.
	Actual: "N" candidates for the party of the first straight party selections were displayed and provided an indication of the non-selection. The selected candidate was the only selection displayed or indicated.

1100	
1150	Use the designated method to advance through the remainder of the ballot advancing to the ballot review. Review the selections in the ballot review to verify that the partisan contests associated with the first straight party selections are present with the exception of the first "N of M" contest. Use the designated method to accept the marked ballot. Then, on the precinct tabulation device, use the designated method to cast the voted ballot.
	Expected: The BMD displays or indicates the selection for the partisan contests associated with the first straight party selection for all contests except the first "N of M" contest. The first "N of M" contest displays or indicates the selection of the second candidate that is associated with the first straight party selection and an under vote. After review, the ballot is accepted and is then cast successfully on the precinct tabulation device.
	Actual: The BMD displayed and indicated the selection for the partisan contests associated with the first straight party selection for all contests except the first "N of M" contest. The first "N of M" contest displayed and indicated the selection of the second candidate that is associated with the first straight party selection and an under vote. After review, the ballot was accepted and was then cast successfully on the precinct tabulation device.
1160	Repeat steps 1000- 1090 from above using an ADA input device.

	Expected: The ballot indicates sel	ections as described above.	
	Actual: The ballot indicated selections as described above.		
1	1		
	1		

1050	Using the designated method, spoil the ballot.
	Expected: The ballot is successfully spoiled and placed in the appropriate envelope.
	Actual: The ballot was successfully spoiled and placed in the appropriate envelope.
1070	
10/0	Obtain a ballot for voting to replace the ballot spoiled in Step 1050.
	Expected: The ballot is blank and vote selections can be made.
	Actual: The ballot was blank and vote selections could be made.
1080	
	Vote for the first candidate in the first all "1 of 1" contest excluding a straight party contest, the first "N" candidates in all "N of M" contests, and select the "No" option in all "Question" contests. The ballot must be marked in such a way as to meet the manufacturer's given criteria for a mark (for example, the oval must be completely filled in with an appropriate marking utensil).
	Expected: The ballot indicates selections as described above.
	Actual: The ballot indicated selections as described above.
1090	Cast the ballot on the optical scan precinct tabulation device.
	Expected: The ballot is cast successfully.
	Actual: The ballot was cast successfully.
1100	
1100	Close the polls and print the closed polls report tape.
	Expected: The polls closed and a report is printed.
	Actual: The polls were closed and a report was printed.
1090	
1090	Review the closed polls report to ensure all selections input above are recorded and reported correctly. The results should indicate two votes for the first candidate in the first all "1 of 1" contest excluding a straight party contest, two votes for the first "N" candidates in all "N of M" contests, and one vote for the "Yes" option and one vote for "No" option in all "Question" contests.
	Expected: The closed polls report presents the accumulated totals for the selections input above.
	Actual: The closed polls report presented the accumulated totals for the selections input above.
Criteria for	Evaluation of the Test Results: The intended selections input above are recorded, stored, and reported as
	tester. The voter input can be changed by navigating through the ballot after a ballot has been reviewed.

Test Case Identifier: 16 – 25 P.S. § 3031.7(16) Public Counter, No Reopening of Polls, Media Security with Tamper Proof Locks and Zero Proof and Tally Reports.		
Test Objective: To determine if the voting of the polls, and supplies a zero proof and ta	(10) If the voting system is of a type which provides for the computation and tabulation of votes at the district level, the district component of the automatic tabulating equipment shall include the following mechanisms or capabilities:  (i) A public counter, the register of which is visible from the outside of the automatic tabulating equipment component into which the ballots are entered, which shall show during any period of operation the total number of ballots entered for computation and tabulation.  (ii) A lock, or locks, by the use of which all operation of the tabulation element of the automatic tabulating equipment is absolutely prevented immediately after the polls are closed or where the tabulation of votes is completed.  (iii) It shall be so constructed and controlled that, during the progress of voting, it shall preclude every person from seeing or knowing the number of votes theretofore registered for any candidate or question; and it shall preclude every person from tampering with the tabulating element.  (iv) If the number of choices recorded for any office or on any question exceeds the number for which the voter is entitled to vote, it shall reject all choices recorded on the ballot for that office or question, provided, that if used during the period of voting it may also have the capacity to indicate to a voter that he has improperly voted for more candidates for any office than he is entitled to vote for any office than he is entitled to vote for any office than he is entitled to vote for any office than he is entitled to vote for any office than he is entitled to vote for any office than he is entitled to vote for any office than he is entitled to vote for any office of any office than he is entitled to vote for any office of any office than he is entitled to vote for any office of any office than he is entitled to vote for any office of any office than he is entitled to vote for any office of any office than he is entitled to vote for any office than he is entitled to vote for any office	
report. Test Equipment:	None	
Special Procedural Requirements:	None	
Assumptions:	The election media is installed but the polls have not been opened.	
Step	Description .	
print "Zero Proof" report, select	olls have not been opened. Use the designated method to open polls. If a response is needed to this option.  inct tabulation device opens the polls and prints a "Zero Proof" report.	
Actual: The optical scan precinct	tabulation device opened the polls and printed a "Zero Proof" report.	
Obtain a blank ballot.		
Expected: The ballot is blank and	i vote selections can be made.	
Actual: The ballot was blank and	vote selections could be made.	

1020	On the straight party contest, mark the first selection in the straight party contest.
	Expected: The ballot indicates a vote selection for the first selection in the straight party contest.
	Actual: The ballot indicated a vote selection for the first selection in the straight party contest.
1030	Proceed to the optical scan precinct tabulation device. Observe the public counter value being 0.
	Expected: The optical scan precinct tabulation device's public counter is visible and the value is 0.
	$\it Actual$ : The optical scan precinct tabulation device's public counter was visible and the value was 0.
1040	Cast the ballot. Observe the acknowledgement of "successful" ballot cast, if provided. Observe the public counter incrementing by one.
	Expected: The optical scan precinct tabulation device successfully cast the ballot and the public counter is incremented. If the ballot was not cast successfully the test is halted.
	Actual: The optical scan precinct tabulation device successfully cast the ballot and the public counter was incremented.
1050	Close the polls and print the closed polls report tape.
	Expected: The polls closed and a report is printed.
	Actual: The polls were closed and a report was printed.
1060	Use the designated method to attempt to reopen the polls.
	Expected: The polls cannot be reopened.
	Actual: The polls could not be reopened.
1070	Place lock on the optical scan precinct tabulation device per Pennsylvania Procedures to ensure all operation of the tabulation element is prevented.
	Expected: The optical scan precinct tabulation device can be secured so that all operation of the tabulation element is prevented.
	Actual: The optical scan precinct tabulation device was secured so that all operation of the tabulation element was prevented.

1070	Review the closed polls report to ensure all selections input above are recorded and reported correctly.
	Expected: The closed polls report presents the accumulated totals for the selections input above.
	Actual: The closed polls report presented the accumulated totals for the selections input above.
6 11 1 6	

Criteria for Evaluation of the Test Results: The intended selections input above are recorded, stored, and reported as input by the tester. The voting device is able to produce a "Zero Proof" and "Tally Report". The voting device has a visible public counter and the counter increments correctly.
