Product Advisory: FYIEWR17356
Product: ERM, Electionware
Version Affected: All EVS versions preceding EVS6000
Publication Date: July 20, 2018
Distribution: External

ISSUE:

ERM does not recognize results from contests associated with a non-geographic precinct if the <Local> district type is used in the election.

SOLUTION:

If using a non-geographic precinct, you cannot use the <Local> district type.

If using the <Local> district type, you cannot use a non-geographic precinct.

Using a Non-Geographic Precinct

1. When creating the election in Electionware, if using a non-geographic precinct, in Capture, you must create at least one district type.

Note

The <Local> district type cannot be deleted, but can be left unused.
2. Add a district for each precinct in the election, using the same name as the precinct.

3. Assign each precinct (ordinarily all splits within the precinct) to its district.

4. Assign each contest to the applicable district(s) of the created district type.

Do not use the <Local> district type.

Using the <Local> District Type

When creating the election in Electionware, if you will be assigning contests to the <Local> district type in Capture, do not use a non-geographic precinct.
