Re: Dominion Voting Systems Corp DVS-101047 Submitted for Approval Update

Dear Victor Vasquez,

The EAC has completed its re-review of Engineering Change Order (ECO) DVS-101047, incorporating updated documentation and analysis from the voting system test laboratory (VSTL). This revised submission corrects clerical errors and omissions in the original VSTL analysis.

The change involves the replacement of the commercially unavailable Cisco CBS350-8T-E-2G with the Cisco 8-Port Managed Switch (C1300-8T-E-2G) as a new COTS component. However, the VSTL analysis previously listed conflicting server types— “Standard” in two places and “Express” in one. The corrected version now consistently identifies the server type as “Express” in all three locations.

Originally the VSTL Analysis Rev. 00 listed VVSG 1.0 certified systems: 5.5, 5.5-A, 5.5-B, 5.5-C, 5.5-D as part of DVS-101047. These 5.5 series of systems were inadvertently included in the original ECO and subsequently removed from this document. Additionally, while outside the scope of the Voluntary Voting System Guidelines (VVSG), the updated Rev. 02 VSTL Analysis removes support for older 5.5 state-certified systems (5.5S, 5.5-BT, 5.5-CS, 5.5-DS) and adds version 5.6-E, which was omitted in Rev. 01.

These updates are clerical in nature and do not affect the system’s reliability, functionality, capability, or operation. Based on the information provided, no further testing is required. The EAC certified systems impacted by this ECO are:

Democracy Suite 5.17
Democracy Suite 5.20

This correspondence confirms that Dominion Voting Systems Corp DVS-101047 is approved.

Sincerely,

Sean Pumphrey
