## Executive Summary

The U.S. Election Assistance Commission (EAC) Election Administration and Voting Survey is the nation's foremost data collection effort on how Americans cast their ballots. The 2008 survey is the third sponsored by the EAC, and forms the basis for three reports: federally mandated reports on the impact of the National Voter Registration Act (NVRA), 42 U.S.C. §1973gg, and the Uniformed and Overseas Citizen Absentee Voting Act (UOCAVA), 42 U.S.C. §1973ff, and this comprehensive report summarizing findings across all areas of the survey.

More than 190 million Americans were reported to be registered to vote in the 2008 Presidential election, an increase of more than 14 million since the last Presidential election. The 2008 EAC survey collected information on how 133,944,538 Americans participated in the election, and while the completeness of State responses varied significantly, valuable voting data were collected from each of the 50 States, four Territories, and the District of Columbia.

The increasing use of alternative means of casting a ballot means that, in 2008, fewer than two- thirds of American voters cast a regular ballot in person at a polling place on Election Day ( $60.2 \%$ ). The rest voted by domestic absentee ballot ( $16.6 \%$ ); by absentee ballot as overseas or uniformed services voters ( $0.7 \%$ ); by early voting before Election Day (13.0\%); or by provisional ballot, the validity of which was decided later (1.3\%). Early voting more than doubled from the 2006 elections, when $6.4 \%$ of voters cast their ballots early.

States transmitted more than 26 million domestic absentee ballots, and 91.1 percent were returned and submitted for counting. In three Western States (Arizona, Colorado, and Washington), more than half of all voters cast their ballots via absentee voting, while a fourth, Oregon, conducts its elections entirely by mail.

Improved data collection on UOCAVA ballots resulted in a more complete picture of voting by uniformed services and overseas voters. States reported transmitting nearly 1 million ballots to UOCAVA voters, and 69.0 percent were returned and submitted for counting. Of UOCAVA ballots returned, 93.6 percent were counted; the
others were rejected for various reasons, including missing deadlines.

Provisional ballots once again proved to be a significant source of both ballots and votes in some States, with more than 2.1 million provisional ballots reported cast nationwide. Three States-California, New York, and Ohio-reported the highest numbers of provisional ballots cast, accounting for 59.4 percent of the nation's total. States counted 67.3 percent of their provisional ballots in whole or in part. More than 600,000 provisional ballots, or 28.2 percent, were rejected, most commonly because it was determined that the voter was not properly registered. States reported using their provisional ballots in different ways; for example, some States issue provisional ballots when voters wish to change their address.

In addition to the voting data, the 2008 survey collected information on a range of election administration topics, from the ages of poll workers to polling places to voting technology. Among the key findings were that States employed 878,360 poll workers in the 2008 election, staffing some 132,237 polling places, or roughly seven poll workers per polling place. As expected, poll workers tend to be older than average, with 60 percent between ages 41 and 70; only twenty percent were aged 71 years or older. These data-the most comprehensive attempt to collect information on the age of poll workers-do suggest, however, that some past estimates of the average age of poll workers were too high.

Nearly half of reporting jurisdictions reported having at least some difficulty in obtaining sufficient numbers of poll workers.

The type of voting technologies vary across and within States. Twenty-one States, the Virgin Islands and the District of Columbia reported deploying 218,370 Direct Recording Electronic (DRE) machines without the ability to produce voter-verified paper ballots. Another 16 States reported using 81,088 DREs which produced voter verified paper audit trails (VVPAT). The most widely deployed technology was the optical or digital scanner that reads voter-marked ballots; 43 States reported using 107,519 such counters in at least some of their jurisdictions.

While significant gaps remain in election data collection, response rates to the survey were higher in 2008 than for the two previous elections, particularly for UOCAVArelated questions. Readers are encouraged to consult the complete county-level data available from the EAC Web site, at www.eac.gov, for complete details, including explanatory comments.

## Introduction

The United States Election Assistance Commission (EAC) is an independent, bipartisan commission created by the Help America Vote Act of 2002 (HAVA). Its mission is to assist State and local election officials with the administration of Federal elections. The EAC provides assistance by disbursing, administering, and auditing Federal funds for States to implement HAVA requirements; conducting studies and other activities to promote the effective administration of Federal elections; and serving as a source of information regarding election administration.

Since 2004, the EAC has collected data on voting, elections, and election administration in the United States. Much of these data support two biennial reports, on voter registration and on voting by uniformed and overseas citizens.

The EAC's data collection has evolved over the past three Federal election cycles. In 2004, the EAC administered two surveys to collect and report information mandated by the National Voter Registration Act (NVRA), 42 U.S.C. §1973gg, and the Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA), 42 U.S.C. §1973ff. It additionally conducted a third survey on other information regarding Federal general elections per provisions found in §241(a) of HAVA, 42 U.S.C. §15381(a).

In 2006, the EAC incorporated these three data collections into a single survey instrument, the 2006 Election Administration and Voting Survey, to reduce the burden of responding to multiple collections of information, facilitate data collection and reporting, and encourage participation by the States.

For 2008, the EAC continued the practice of collecting empirical data through a single survey instrument, while seeking to improve tools and processes. Final approval of the survey was granted by the Office of Management and Budget (OMB) on September 25, 2008, with near-final drafts made available the previous month.

These continuing elections data collection efforts provide the basis for a more comprehensive report on a wider range of election issues. These issues range from voting technology to poll workers to the use of electronic
poll books. This 2008 Election Administration and Voting Survey report is the third such report produced by the EAC.

Detailed information on the 2008 Election Administration and Voting Survey is presented in this report. It contains summaries of the NVRA and UOCAVA reports, and a wealth of new information on the methods Americans used to vote and how State and local administrators ran their elections. Summary information at the State level is included in the tables which accompany the text. In addition, readers are invited to consult the county-level database, available at the EAC's Web site, www.eac.gov, with complete responses, including explanatory comments and data definitions.

## Survey Methodology

The 2008 edition of the survey was the result of discussions with State and local election officials, political scientists, researchers, advocacy groups, and the general public. Revisions to the draft survey were made following review by the EAC's Standards Board and Board of Advisors. ${ }^{1}$ The survey was revised based on input from these groups and the public, which was invited to submit comments after notice of the survey was published in the Federal Register on March 20, 2008 (Vol. 73, no. 55, page 14974). The EAC received 53 substantive comments covering all sections of the questionnaire. The questionnaire was further revised in response to these comments, and the revised draft was distributed to State officials in August and September 2008 for planning purposes.

The survey contained 51 questions in the quantitative section and 22 questions in an accompanying qualitative section called the Statutory Overview, which asked States and territories for information on their election laws, definitions and procedures. Many of the quantitative questions contained multiple parts. Both questionnaires were submitted for approval to the U.S. Office of Management and Budget, which approved the data collection on September 25, 2008 (OMB Control No. 3265-0006, exp. 3/31/2009).

The quantitative portion of the 2008 Election Administration and Voting Survey was composed of six sections:

1. Voter registration, which included questions required by the NVRA;
2. Uniformed and Overseas Citizens Absentee Voting Act, which included questions required by that Act;
3. Domestic civilian absentee ballots;
4. Election Administration, which asked States to report on their precincts, polling places, and poll workers;
5. Provisional Ballots; and

1 The Standards Board comprises 110 State and local election officials, and the Board of Advisors comprises 37 members who represent various national associations, government agencies, and congressional leadership.
6. Election Day Activities, which contained a range of questions, from the number of people who participated in the 2008 election to the types of voting technology employed by local governments.

In addition, in 2008, for the first time, States were asked to report on their State laws, definitions, and procedures in the Statutory Overview. Responses to this portion of the survey are the basis of a separate report available from the EAC. These responses also provide a better understanding of the data analyzed in this report, and highlight the differences between States in how elections are administered.

## States' Collection of Election Information

For 2008, the EAC continued its effort to make the survey available to State officials earlier in the election cycle, and to facilitate the task of responding by providing improved survey instruments and increased technical assistance. The primary survey instrument designed to assist the States in collecting and reporting their statistical data was a Microsoft Excel-based template, preloaded with each State's jurisdictions. Most States submitted their data using this survey instrument. States were also offered a Microsoft Word-based template that could be distributed to their local jurisdictions, and States with single jurisdictions could report their totals through this instrument. Responses were collected through uploads via a project Web site; other data were obtained via e-mail or fax. States were asked to begin sending their responses to the EAC on February 13, 2009. Data collection continued through March and early April 2009, as States reviewed and corrected the data they had submitted. The EAC distributed the collected data to the States for review, and in some cases asked for additional information on data that appeared inconsistent or in error. Finally, in preparation for this report, States were invited to review the tables which accompany this report.

## About the States' Data

Election data collection varied significantly in the 55 States and territories that responded to the 2008 survey. Most States rely at least to some degree on centralized voter registration databases (VRDs) and voter history databases, which allow State election officials to respond to the survey at the local level for many questions. Other States, conversely, collect relatively little election data at the State level, and instead relied on cooperation from county election officials to complete the survey. States and local offices vary widely in the amount of resources devoted to data collection, and in the emphasis placed on data collection. Some States did not collect data in all the categories requested in the survey, and others did not have data for all their local jurisdictions for all variables.

The results of the 2008 Election Administration and Voting Survey are presented in the tables at the end of this report and are summarized in Section 4. Complete results at the local level will also be made available on the EAC's Web site.

Caution is necessary when interpreting these survey data, particularly when comparing these data from year to year or State to State, because of changes to the survey, changes in State tracking of data across time, and the varying levels of completeness in many States' responses. In 2006, the EAC began asking States to produce countylevel (or the equivalent) registration data, rather than the statewide totals asked for previously. Even in States with centralized VRDs, some data may be kept only at the local level, and the level of integration of information between local and State election offices varies across the country. Information on the number of jurisdictions in each State is provided in most of the tables, along with the number of counties included in each State's response.

## Guide to Terms

Active Voter: A voter registration designation indicating the voter is eligible to vote. See also Inactive Voter.

Ballots Cast: Total numbers of ballots submitted by all voters for counting, including by all voting methods (absentee, provisional, early, in a polling place, etc.).

Ballots Counted: Number of ballots actually processed, counted, and recorded as votes.

Domestic Absentee Ballot: A ballot submitted, often by mail, in advance of an election, often by a voter who is unable to be present at the polls on Election Day.

Citizen Voting Age Population (CVAP): Persons who are citizens and of voting age ( 18 years or older). These num-
bers are estimates generated by the U.S. Bureau of the Census. See also Voting Age Population.

Early Voting: Refers generally to any in-person voting that occurred prior to the date of the election at specific polling locations for which there were no special eligibility requirements. Early voting is not considered absentee voting under the State's definitions/requirements for absentee voting.

Electorate: The body of persons eligible to vote.
HAVA: The abbreviation for the Help America Vote Act of 2002, 42 U.S.C. $\$ 15301$ et seq. The text of HAVA and additional information is available at www.eac.gov.

Inactive Voter: A voter whose registration status appears to no longer be current where he or she was registered and who has not attempted to reregister, has not voted, and has not presented him- or herself to vote using the address of record; or one whom election officials have been unable to contact or for whom election officials have been unable to verify registration status. See also Active Voter.

Jurisdictions: Generic term to signify various geographic areas that administer elections. The jurisdictions in this study may include counties, parishes, independent cities, towns or cities, or an entire State (Alaska).

Poll Worker: Election judges, booth workers, wardens, commissioners, or other similar terms that refer to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits, or other documents required to cast a ballot; assist the voter by providing a ballot or setting up the voting machine; and serve other functions as dictated by State law. This does not include observers stationed at polling places or regular election office staff.

Polling Place: A facility staffed with poll workers and equipped with voting equipment, or paper ballots, at which persons cast ballots in person on Election Day. Several precincts may be combined into one polling place.

Precinct: An administrative division representing a geographic area in which voters are provided ballots for particular races. These manageable geographic units may also be referred to as electoral districts, precincts, voting districts, boxes, beats, or wards, depending on State law. The number of registered voters in precincts will vary according to State law.

Provisional Ballot: A ballot provided to an individual who claims he or she is registered and eligible to vote but whose eligibility or registration status cannot be con-
firmed when he or she presents him- or herself to vote.
Section 5: Some jurisdictions are required by Section 5 of the Voting Rights Act, 42 U.S.C. § 1973 et seq., to obtain preclearance from the Department of Justice or the United States District Court for the District of Columbia before implementing a change in a voting standard, practice, or procedure.
Section 203: Some jurisdictions are required by Section 203 of the Voting Rights Act, 42 U.S.C. § 1973 et seq., to provide supplemental voting information to language minority groups.

Spoiled ballots: Ballots that, under the applicable State law, are incorrectly marked or impaired in some way by the voter and turned in by the voter at the polling place or mailed in absentee, with a replacement ballot issued so that the voter can correctly mark the ballot; also referred to in some States as a "voided" ballot.

Voting Age Population (VAP): People who are 18 years of age or older, regardless of whether they are eligible to register to vote, based on estimates made by the Bureau of the Census. Note that not all persons of voting age may be eligible to vote (e.g., felons, individuals judged to be mentally incompetent, noncitizens, etc.). See also Citizen Voting Age Population.

## Survey Results

## REGISTERING TO VOTE

Voting in the United States, in most places, begins with registration. While North Dakota has no voter registration, and other States allow eligible voters to register and vote on the same day, in most States registration takes place weeks or months prior to the casting of ballots. States maintain their voter registration rolls by removing invalid registrations when voters move out of State or die, and keeping eligible and registered voters on the rolls.

The key Federal legislation on voter registration is the National Voter Registration Act, or NVRA, 42 U.S.C. §1973gg. The information presented in this section is offered in greater detail in the EAC report, The Impact of the National Voter Registration Act of 1993 on the Administration of Elections for Federal Office, 2007-2008, available on the EAC's Web site. The report includes complete data tables with totals for each State; data cited in this section are contained in those tables.

## How Many Are Eligible?

The United States Census is required by Article I, Section 2 of the Constitution. Obtaining an accurate and complete census of the population remains a daunting task. Complicating the situation, the decennial census is only a baseline. Population estimates must take into account immigration (both legal and illegal), internal migration, mortality rates, and natural population growth and aging. In 2008, the Census estimated the domestic Voting Age Population (VAP), which includes those 18 years and older, at $233,087,000 .{ }^{2}$ Data by State are shown in Table 30. This reflects the standard estimates for July 1, 2008, meaning that it is 4 months out of date by Election Day. for 2008 are prone to error, particularly for smaller jurisdictions. More information can be obtained at the Population Estimates page of the U.S. Census Bureau at http://www.census.gov/ popest/estimates.html.

## REGISTERING TO VOTE

To be eligible to vote a person must be a U.S. citizen, meet a residency requirement, and have attained the age of 18 by Election Day. Eligibility varies further according to State laws. Persons who have been legally declared mentally incompetent or who have been convicted of a felony and have not had their civil rights legally restored may not be able to vote (based on State law).

Individuals can obtain registration applications from either the local election official in the person's county or city or town of residence, or through registration outreach programs sponsored by various private groups. Federal registration forms and many State forms are now accessible on the Internet.

In addition, individuals can register using the National Mail Voter Registration Form when applying for a driver's license or identity card at their State's Department of Motor Vehicles or the driver's licensing offices, offices providing public assistance, offices providing State-funded programs for people with disabilities, and at Armed Forces recruitment offices.

The National Mail Voter Registration Form is the one document that allows individuals to register to vote from anywhere in the United States. (ND does not have voter registration, WY does not permit mail registration, and NH accepts the form only as a request for absentee.) The form is available at www. eac.gov. *

In 2007 the Census Bureau began releasing State estimates, which include citizen voting age population (CVAP) estimates. The nationwide number for CVAP for 2008 was 213,382,000. The State CVAP data are also reported in Table 30. ${ }^{3}$

## Registration

Even with a good estimate of the number of eligible citizens, not all citizens choose to register to vote. While the NVRA report showed that approximately 81.6 percent of the nation's estimated voting age population of 233 million were registered to vote in the 2008 Presidential election, registration rates varied from a low of 60.6 percent in Wyoming to a high of 98.1 percent in Michigan (excluding North Dakota, which has no voter registration, and Maine, which reported over 100 percent registration rates in the survey).

Most States require eligible persons to register to vote in advance of the election. An increasing number of States are allowing some form of same day or Election Day registration, although State laws vary. (Alaska, Connecticut, and Rhode Island allow those eligible to register on Election Day to vote in the Presidential election only. ${ }^{4}$ ) Other States allow for same day registration for certain types of voters, such as new citizens or recently discharged military personnel.

More than 190 million persons were reported to be registered to vote for the 2008 elections-an increase of more than 14 million over the 4 -year period since the last Presidential election. In the same 4 -year period, the voting age population (VAP) increased 5.7 percent and the percentage of registered voters increased 8.1 percent. The percentage of Americans aged 18 or older who were registered to vote increased from 79.9 percent in 2004 to 81.7 percent in 2006.

3 U.S. Bureau of the Census, American Community Survey, http://www.census.gov/acs/www. The true number of eligible voters is reduced further by variation in State laws such as the eligibility of those convicted of felony crimes and those judged to be mentally incapacitated, and there is little reliable data available on the impact of such laws.

4 Voters who are registered to vote and who have moved within a jurisdiction before an election for federal office are generally entitled to vote in that election even if they did not advise the registrar of the move (42 U.S.C. 1973gg-6(f)).

VOTER REGISTRATION:
THE INTERNET AND SAME DAY REGISTRATION

In 2008, nearly 700,000 Americans are reported to have registered to vote using the Internet, and more States are considering adopting online voter registration, according to data provided by the States.

In 2008, more than 3.6 million citizens took
advantage of same day registration, and almost 1 mil-
lion of these were new voters. *

## Active Versus Inactive Voter Rolls

Once registered, a registrant remains an "active voter," a designation indicating the voter is eligible to vote, until he or she does not vote in a series of elections. In some States, a voter may be moved to an "inactive" list if his or her registration status appears to be no longer current and he or she has not attempted to reregister, has not voted, and has not presented him- or herself to vote at the address of record, or if election officials have been unable to contact or verify the person's registration status.

The EAC's first survey, conducted in 2004, found that States vary in how they report their registration figures. In the 2008 survey, the EAC found that 19 States use both inactive and active in calculating their reported registration totals; 27 reported using a combination of active and inactive; and the other 9 did not respond or chose "other."

## Voter Turnout Rates in 2008

Every eligible voter does not necessarily register to vote, and not every registered voter casts a ballot in each election. In Table 30, voter turnout is reported using three different measures of the eligible population.

First, turnout is reported as a percentage of the total estimated voting age population. This figure is the best possible estimate of the number of individuals living in the United States who are 18 or older as of July 1, 2008, and as noted above, is not "aged" from July to November. This measure leads to the lowest estimates of voter participation in the United States because it does not take into account variations in citizenship status or voter registration. Higher estimates of participation are produced using the additional columns in Table 30, which show the Census estimates of CVAP.

The final column calculates turnout only among those citizens who are registered to vote in their respective States. This last measure provides the highest estimate of voting participation in the country.

## EARLY IN-PERSON VOTING 2008 GENERAL ELECTION

## HOW AMERICANS CAST THEIR BALLOTS

An increasing number of alternatives to voting in person at a polling place on Election Day have expanded the ways that Americans cast their ballots in Federal elections. In some places, such as Oregon and Washington, voters primarily receive and submit their ballots through the mail. Further, more States have adopted "no-excuse" absentee voting, which allows more people to vote by mail or in person before Election Day as a convenience. Fifteen States reported maintaining "permanent absentee" lists, automating the distribution of ballots to voters who request their ballot through the mail in every election. In some communities, election administrators have set up "vote centers," central locations where any voter from any precinct can cast his or her ballot. Finally, voters in Federal elections who encounter challenges or problems at the polling place, such as finding their names removed from the registration rolls, now vote "provisional" ballots, which can be counted later when questions concerning registration are resolved.

Approximately $60 \%$ of Americans who voted in the 2008 Presidential election voted in the traditional way of casting their ballots in person at their local polling place on Election Day. The 2008 survey collected data from 3,974 jurisdictions (of 4,517 total) on how people who participated in the 2008 elections cast their ballot (see Table 29).

HOW AMERICANS VOTED IN THE 2008 GENERAL ELECTION

Of the 133,944,538 voters participating, 80,693,815 $(60.2 \%)$ voted in person at polling places. An additional $22,244,396(16.6 \%)$ voters cast their ballots as domestic absentee voters, and States reported 880,995 UOCAVA voters ( $0.7 \%$ ). ${ }^{5}$

Twenty-two States and two territories reported that $17,379,871$ people ( $13.0 \%$ ) cast their votes before Election Day through various forms of early voting. In several States, early voting made up a sizeable proportion of the

5 UOCAVA data on voter participation differs from UOCAVA ballot data because of variations in how States answered the questions and/or track their data.
total votes cast. For example, in Nevada, North Carolina, Tennessee, and Texas, early voters constituted more than half of all ballots. Early voting increased significantly since 2006, when 6.4 percent of voters cast their ballots early.

Provisional ballots accounted for 1,746,338 ballots, or 1.3 percent of the vote. Provisional balloting is discussed in greater detail in Section IV.

In reporting these totals, States drew from various sources in determining their participation numbers ${ }^{6}$ (see Table 31):

- 18 States and two territories reported using poll book records;
- 19 States drew from totals of ballots counted;
- 19 States used databases of voter histories; and
- 9 States used the total number of votes for the highest office on the ballot.

## Domestic Absentee Voting

Absentee voting covers a range of circumstances under which voters cast their ballots without appearing at a polling place on Election Day. Some States require valid reasons, such as being out of town on Election Day or having a work schedule that precludes making it to the polls. Other States allow any voter who requests it to vote by absentee ballot. Absentee voting has a long history in the United States, dating back to the Civil War, when it was introduced to allow soldiers to vote in the 1864 elections. Absentee voting has gradually expanded through the years, and many States no longer require excuses. Oregon and Washington, have moved to replace their polling place systems entirely with vote-by-mail. ${ }^{7}$

States reported that $26,044,388$ ballots were transmitted to voters for the purposes of absentee voting (see Table 32). The 2008 EAC survey collected data on absentee voting from 48 States, the District of Columbia and three territories.

Approximately 8 out of 10 absentee ballots (23,733,439 ballots, or $91.1 \%$ ) were returned and submitted for counting. Another 226,438 ( $0.9 \%$ ) of the domestic absentee

6 Some States used a combination of methods, resulting in double counting in the totals.

7 In Washington, 38 of 39 counties conduct their elections entirely through the mail. States vary in whether they consider vote-by-mail ballots to be absentee ballots; some States with vote-by-mail reserve the term "absentee" for specific circumstances. Also, the absentee voting discussed in this section generally does not include voters covered by UOCAVA.

HIGHEST ABSENTEE VOTING RATES

| Washington | $87.2 \%$ |
| :--- | :--- |
| Colorado | $62.3 \%$ |
| Arizona | $50.6 \%$ |
| Montana | $42.2 \%$ |
| California | $41.7 \%$ |

REASONS FOR REJECTING ABSENTEE BALLOTS

| Missed deadline | 74,973 | $18.4 \%$ |
| :--- | ---: | ---: |
| Lack of valid signature | 45,693 | $11.2 \%$ |
| Already voted in person | 26,620 | $6.5 \%$ |
| Nonmatching signature | 26,408 | $6.5 \%$ |
| Unsealed envelope | 4,534 | $1.1 \%$ |
| First-time voters lacking required ID | 4,390 | $1.1 \%$ |
| Deceased voter | 2,698 | $0.7 \%$ |
| Unofficial envelope | 1,749 | $0.4 \%$ |
| No proper address | 1,429 | $0.4 \%$ |

ballots were reported to have been returned as undeliverable, $210,730(0.8 \%)$ were spoiled, and for $1,605,620(6.2 \%)$ the status was uncertain. As in past elections, Western States had the highest rates of absentee voting, and one State, Oregon, conducts its elections entirely by mail. On the other hand, in many States absentee voting rates were in the single digits, although problems with States defining absentee voting in different ways makes measurement somewhat challenging.

States report counting 25,276,095 absentee ballots, ${ }^{8}$ and rejecting 407,862 (1.7\%) (see Tables 33, 34a, 34b, and $34 \mathrm{c})$. Two States, Indiana and North Carolina, report rejecting more than 10 percent of their absentee ballots. The reasons for rejecting voters' absentee ballots varied widely. Note that these reasons are for ballots submitted for counting; more than 400,000 absentee ballots were never submitted, but instead were returned as undeliverable or spoiled.

Many States do not track the reasons absentee ballots are rejected, leaving us with an incomplete picture of why these ballots were not counted.

[^0]
## OVERSEAS VOTING

Voting by members of the uniformed services and by U.S. citizens living overseas is an area of critical concern in election administration. The reliance by the United States on local election administration and on casting ballots in physical polling places, as well as State requirements of prior registration, present special difficulties for eligible voters living outside the country. Federal requirements concerning registration and voting by overseas and uniformed services voters is contained in the Uniformed and Overseas Citizens Voting Act (UOCAVA), 42 U.S.C. §1973ff, signed into law in 1986.

Since 2004, the EAC has gathered data on UOCAVA ballots and voters, pursuant to the statutory reporting obligations in UOCAVA and HAVA. In the 2008 survey, 20 questions sought to gather detailed information on overseas voting. What is presented in this section is explained in more detail in the report 2008 Uniformed and Overseas Citizens Voting Act Survey, available at the EAC's Web site, www.eac.gov, which includes complete statewide totals.

Improved data collection of UOCAVA-related information resulted in considerably higher response rates in 2008 than in 2006. For example, in 2008, 91 percent of the 4,517 jurisdictions surveyed were able to report the number of ballots transmitted to overseas civilians, compared with 64 percent of 3,123 jurisdictions surveyed in 2006. While significant gaps remain, better data are gradually becoming available on UOCAVA compliance.

Responding to the survey's UOCAVA questions, States reported transmitting nearly 1 million ballots, either in response to one-time requests from voters or through automatic transmission of ballots under 42 U.S.C. §1973 ff-3(a) of UOCAVA. Five States (California, Florida, New York, Texas, and Washington) each transmitted more than 50,000 ballots, and together accounted for nearly half of the national total of ballots transmitted. Military voters accounted for slightly more of the ballots transmitted than civilian voters.

Of the 989,207 ballots transmitted by uniformed services and overseas civilian voters, 682,341 ballots ( $69.0 \%$ ) were returned and submitted for counting. About 3.3 percent of the ballots transmitted were returned as undeliverable or spoiled. Among the ballots returned and submitted for counting were at least 28,131 Federal Write-in Absentee Ballots (FWAB), which UOCAVA voters can use when their requested ballots do not arrive in time. State tracking of FWAB remains relatively poor, so the actual number of FWAB cast may be greater.

Once submitted, 93.6 percent of UOCAVA ballots were counted. Military voters made up slightly more of the total (48.6\%) than civilian voters (41.2\%). Forty-eight States reported rejecting 39,520 UOCAVA ballots. The most common reason for rejecting a UOCAVA ballot was that the voter missed a deadline; 43.7 percent of rejected ballots were not counted for this reason.

## CASTING AND COUNTING PROVISIONAL VOTES

The 2008 Federal election was the third in which voters in all 50 States, the Territories, and the District of Columbia were allowed to cast a provisional ballot even if their name did not appear on the voter registration rolls in the jurisdiction where they intended to vote, they failed to have the required identification, or their eligibility was challenged by an election official. Pursuant to HAVA, such voters were allowed to cast a provisional ballot, which would be later counted if election officials determined the person was indeed eligible to vote.

Section 302(a) of HAVA establishes the process of provisional balloting:

If an individual declares that such individual is a registered voter in the jurisdiction in which the individual desires to vote and that the individual is eligible to vote in an election for Federal office, but the name of the individual does not appear on the official list of eligible voters for the polling place or an election official asserts that the individual is not eligible to vote, such individual shall be permitted to cast a provisional ballot as follows.

Before the minimum standards set by HAVA, the rules regarding the use of provisional ballots varied widely among the States, and some variation continues. For example, provisional ballots cast outside of the voter's home precinct could be counted in 15 States, while in
other States and the District of Columbia such ballots would not be counted. States with Election Day registration when HAVA was passed in 2002 are not required to offer provisional ballots (exempt from the provisional ballot requirements are Idaho, New Hampshire, North Dakota, Wisconsin, and Wyoming), but Wyoming and Wisconsin reported small numbers of provisional ballots.

California, New York, and Ohio reported the largest number of provisional ballots, accounting for 59.4 percent of all provisional ballots cast nationwide in the 2008 election (see Table 35). ${ }^{9}$ As a share of voters participating, Alaska (6.2\%), California (5.0\%), Arizona (4.6\%), and the District of Columbia (4.6\%) had the largest percentages of polling place voters cast provisional ballots (see Table 29).

In 2008, 1,746,338 people cast a provisional ballot that was either partially or fully counted, or about $1.3 \%$ of all Americans who voted. The rates of provisional balloting did not change much since the last Presidential election, and in 2008, on average 1 of every 40 voters who cast their votes in a polling place in this country cast provisional ballots. More than $1,330,000$ provisional ballots were counted, or 61.8 percent of all the provisional ballots cast. An additional 5.5 percent of all provisional ballots cast

[^1]had part of the ballot counted ( 20 States reported counting partial provisional ballots, generally allowing votes for President to be counted).

The percentage of provisional ballots being counted fell from the midterm election 2 years prior. In 2006, 629,544 provisional ballots were counted, or 79.5 percent of provisional ballots cast. The lower rates of provisional ballots being counted in Presidential elections may reflect the higher proportion of first-time or occasional voters, who may be more likely to face registration questions at the polling place.

Five States and one Territory (Alaska, Iowa, Maine, Montana, Oregon and the Virgin Islands) reported counting more than 90 percent of their provisional ballots, in whole or in part, and an additional seven States reported counting at least 70 percent of their provisional ballots. Conversely, 26 States reported counting fewer than half of their provisional ballots.

## Jurisdiction-wide Acceptance

In the 15 States ${ }^{10}$ that count provisional ballots cast outside of voter's home precinct, 4.6 percent of ballots cast in a polling place were cast as provisional ballots. In the 30 States and District of Columbia that disqualify provisional ballots cast outside the home precinct, provisional ballots were only 1.7 percent of ballots cast in a polling place. States allowing jurisdiction-wide acceptance of provisional ballots and those that did not had almost an identical percentage of their provisional ballots counted-61.9 percent for the jurisdiction-wide States compared with 61.7 percent of other jurisdictions.

## Reasons Provisional Ballots Were Rejected

The reasons for rejecting provisional ballots are shown in Tables 36a and 36b. A majority of provisional ballots (53.6\%) were rejected because the voter was found not to be registered in the State. Another 16.8 percent were voters who sought to vote in a precinct or jurisdiction other than where they were registered, and State laws mandated that such ballots would not be counted.

A total of 2,157,126 provisional ballots were submitted for counting in 2008. States reported that 1,332,218 ( $61.8 \%$ of the provisional ballots) were counted in full, and $118,868(5.5 \%)$ were partially counted. States responding to this item reported that $609,016(28.2 \%)$ were rejected.

10 For a summary of the laws on provisional balloting, see the report 2008 Statutory Overview, available at the EAC Web site: www.eac.gov.

REASONS FOR REJECTING PROVISIONAL BALLOTS

| Voter not registered | 326,154 | $53.6 \%$ |
| :--- | ---: | ---: |
| Wrong precinct | 70,567 | $11.6 \%$ |
| Wrong jurisdiction | 31,797 | $5.2 \%$ |
| Incomplete or illegible ballot or envelope | 23,381 | $3.8 \%$ |
| Lacked ID | 12,321 | $2.0 \%$ |
| No signature | 7,849 | $1.3 \%$ |
| Nonmatching signature | 3,980 | $0.7 \%$ |

Principal reasons for the rejection of a provisional ballot are summarized in the table above.

## ELECTION ADMINISTRATION

Despite the increase in convenience voting options such as no-fault absentee voting and vote-by-mail, 60 percent of Americans cast their vote in the 2008 Presidential election in polling places on Election Day. Providing voting services to these more than 80 million voters requires a massive effort organized through thousands of precincts, polling places, and poll workers across the country.

## Polling Places and Precincts

All States employ some system of precincts (bounded geographic areas to which voters are assigned) and polling places (locations where voting actually takes place) to conduct their elections. In 2008, States operated 185,671 precincts and 132,237 physical polling places (see Table 42).

Of all polling places, 107,334 were separate from official election offices (schools, community halls, and so forth), while a reported 1,816 election offices were open for casting ballots. For early voters, States reported that 5,583 locations were available for early voting, including 2,079 election offices.

## Poll Books

Electronic poll books, or electronic voter lists, are in use in some fashion in 25 States (see Table 37):

- 19 States reported that a total of 419 jurisdictions used electronic poll books to sign in voters;
- 21 States reported that a total of 581 jurisdictions used them to update voter histories;
- 22 States reported that a total of 634 jurisdictions used them to look up polling place assignments for voters; and
- 9 States reported using them for some other purpose.

Most polling places still use preprinted lists of registered voters (see Table 38). In the preponderance of reporting jurisdictions ( 2,209 cases), these books were printed by local jurisdictions, with 505 cases where the printing was arranged by both the local and State jurisdictions.

## Poll Workers

The term "poll worker" encompasses many different names across the United States. Poll workers may be referred to as election judges, booth workers, wardens, commissioners, or other similar terms. As defined in this report, "poll worker" refers to the person or persons who verify the identity of a voter; assist the voter with signing the register, affidavits, or other documents required to cast a ballot; assist the voter by providing a ballot or setting up the voting machine; and serve other functions as dictated by State law. The term does not apply to observers stationed at polling places or to regular election office staff.

The complexity of voting technology and rules in the current era has led States to seek poll workers with specialized technological knowledge. In many States, poll technicians are assigned to help keep voting machines and electronic poll books functioning properly.

Forty-three States and 3 territories reported deploying 878,360 poll workers for Election Day 2008 (see Table 40). California alone used 112,249 poll workers.

The reliance of many jurisdictions on retirees as poll workers has made their age a topic of interest, and for the first time in 2008, the EAC survey asked jurisdictions to report the ages of their poll workers (see Table 40). Thirty States were able to provide at least some data on poll worker ages.

States reported age ranges for 379,926 poll workers. The largest number of poll workers was between 41 and 60 years of age ( $31.6 \%$ ). Another 28.7 percent were between 61 and 70 years of age, the second largest group. One-fifth of poll workers were aged 71 years or older. Young poll workers are relatively rare; only 10.5 percent were 25 years or younger. ${ }^{11}$

The 2008 survey also asked for the first time about the difficulty jurisdictions faced in recruiting adequate numbers of poll workers (see Table 41). Of the 2,828 jurisdictions which answered the question, nearly half ( $45.8 \%$ ) reported having a somewhat difficult or very difficult time

11 The EAC has worked to encourage the recruitment of young poll workers through its College Poll Worker Grant Program, which since 2004 has awarded $\$ 1.65$ million in grants to colleges and nonprofit organizations to work with election offices to recruit, train, and support college student poll workers.
recruiting poll workers, compared with only 31.2 percent that reported having a somewhat easy or very easy time. In 2006, 3.0 percent of polling places were reported as having an insufficient number of poll workers. Staffing the nation's polling places clearly continues to be a challenge for many jurisdictions.

The survey found that there were on average 7 poll workers assigned to each polling place in the United States during the 2008 election (using only those States which reported answers to questions regarding the number of polling places, number of precincts, and number of poll workers). In the 2006 elections, jurisdictions reported an average of 6.1 poll workers per polling place. The additional poll workers were presumably assigned to help with the higher turnout in the Presidential election.

## Voting Technology

Voting technology remains highly dynamic in the United States. Through HAVA, Congress appropriated more than $\$ 3.1$ billion for the EAC to distribute to States to make election administration improvement including the purchase of voting systems.

Voting technology is a difficult topic to measure in the Election Administration and Voting Survey because many jurisdictions use multiple systems. For example, a county may employ a scanner for absentee ballots but an electronic voting machine for in-person voting. Polling places may have more than one type of voting system on Election Day. For this reason, the EAC surveys in 2006 and 2008 have measured the breadth of voting technology being used across the country, and the wealth of local-level data will be of substantial value to researchers.

The 2008 survey collected data on nearly half a million "voting machines." The types of voting technology included the following:

- Direct Recording Electronic (DRE) machines with a voter-verified paper audit trail (VVPAT);
- DRE machines without a VVPAT;
- optical or digital scan systems, in which voters fill out a paper ballot which is then read by a scanner;
- hybrid systems combining a DRE with an optical scanner;
- punch card systems;
- lever machines;
- paper ballots; and
- other systems.

The most common single type of voting machine was a DRE without a paper trail; 23 States reported using 218,370 such machines. The most widely deployed technology across the States, however, is the optical or digital scanner; 43 States reported using 107,519 of these machines in at least some of their jurisdictions.

Sixteen States reported deploying DREs which produce a paper record that can be checked by the voter. Voters in Arkansas, Nevada, and West Virginia were among those most likely to vote on such machines. Most States use more than one type of voting machine, either because of local options or to accommodate voters with special needs.

Lever machines are in use only in New York, while only Idaho reported using punch cards. Thirteen States and 1 territory reported using paper ballots in at least some of their polling places. Seven States provided no information on their voting system.

## Conclusions

The analysis presented above represents only a first step in examining the data contained in the 2008 Election Administration and Voting Survey. Further examination of the State-by-State data, and the county- (or equivalent) level data available at the EAC Web site, will yield further important information on the state of American election administration. As shown by the response rates to the 2008 survey, data collection and reporting in the United States has improved. While users of the data must take into account State differences in definitions and data reporting, and consider the incomplete responses in many categories, the survey is a valuable resource for election administrators, advocates, researchers and the general public.

## APPENDIX A

## Response Rates

Summarized below are the response rates for selected questions in the 2008 Election Administration and Voting Survey, with comparisons to 2006 response rates where available. Coverage varies significantly across the questions. Not all questions were applicable to all States, and response rates could not be calculated in many instances.

| Survey question | Jurisdictions | $\mathbf{2 0 0 8}$ | $\mathbf{2 0 0 6}$ |
| :--- | :--- | :--- | :--- |
| Domestic absentee ballots transmitted | 4,297 of 4,517 | $95.1 \%$ | $\mathrm{n} / \mathrm{a}$ |
| Domestic absentee ballots cast/counted | 4,258 | $94.3 \%$ | $76.2 \%$ |
| Domestic absentee ballots rejected | 4,145 | $91.8 \%$ | $76.2 \%$ |
| Number of poll workers | 3,189 | $70.6 \%$ | $74.4 \%$ |
| Number of precincts | 4,423 | $97.9 \%$ | $95.9 \%$ |
| Number of polling places | 4,340 | $96.1 \%$ | $85.4 \%$ |
| Provisional ballots submitted | 3,753 of 4,063 | $92.4 \%$ | $86.9 \%$ |
| Provisional ballots rejected | 3,225 of 4,063 | $79.4 \%$ | $\mathrm{n} / \mathrm{a}$ |

## APPENDIX B <br> Tables and Cross Reference of Survey Questions to the Tables

## FOOTNOTES TO TABLES

## General Notes:

State: In the interest of consistency in these tables, the term State includes the District of Columbia and the four territories of American Samoa, Guam, Puerto Rico and the Virgin Islands.

Jurisdictions in the Survey: For the 2008 survey, information was requested for each local election administration jurisdiction. Generally this would be the county or county equivalent. The following exceptions may apply (exceptions are noted by an asterisk below the State name in Table 1a):
a) in some states the information was initially compiled by town/city or township;
b) in some states independent cities were treated as counties;
c) in some states the only response was one record for the state, and;
d) in some states the information collected from the towns/cities or townships but was summarized by county.

States in which the town/city or township is the initial unit of collection include the six states in New England and a handful of states in the Midwest. Independent cities were treated as county-level reporting units for the states of Maryland, Virginia, Missouri and Nevada. Selected Election Boards in Illinois and Missouri were also treated as county jurisdictions. State-level information was provided for Alaska which does not have counties. Coverage for the territories varied. See Table 6 for more detail.

Missing Data: Information for several items remains unavailable for several reasons. When information is missing this status may be reflected in various ways but generally by a blank data cell or a zero value. Note that a zero value may also indicate that the jurisdiction Does Not Know, or Does Not Collect, the information. The count of cases, included for most tables but not for all variables, generally reflects the presence of a response from the jurisdiction. For many questions, 0 is a valid response but there is also inconsistency in the entry for the Not Available option. Researchers should consult the jurisdiction-level dataset for more detail. If a calculation is impossible because of missing information, a separate symbol may be indicated, e.g., a series of periods (......).

Sum of Above: The information listed in the tables below the state detail is, for most columns, simply the addition of the information listed in the table. The number of states providing information is indicated as the count of states with information greater than, or in some cases, less than, 0 . The percentages indicated on this line are generally the result of a simple division based upon the appropriate numbers from this line. For the Not Categorized columns, the number and percentage in the Sum of Above line will generally reflect a calculation of the appropriate fields listed on this line.

## Specific Notes for Tables:

Notes specific to each table appear following each table or group of sub-tables.

## CROSS REFERENCE OF SURVEY QUESTIONS TO TABLES

## Section C: Domestic Civilian Absentee Ballots

Question C1: Number of domestic civilian absentee ballots transmitted to voters and the disposition of the ballots
Table 32. Domestic Absentee Ballots Transmitted: Disposition of Ballots
Table 33. Domestic Absentee Ballots: Permanent List; Submitted for Counting: Disposition
Question C2: Existence of a permanent absentee voter registration list
This question was categorical and not coded for tabular display
Question C3: Number of domestic civilian absentee ballots transmitted to voters due to the existence of a permanent list
Table 33. Domestic Absentee Ballots: Permanent List; Submitted for Counting: Disposition
Question C4:Number of domestic civilian absentee ballots submitted for counting and the disposition of the ballots
Table 33. Domestic Absentee Ballots: Permanent List; Submitted for Counting: Disposition
Table 34. Domestic Absentee Ballots: Reasons for Rejection, Parts A, B, and C
Question C5: Number of domestic civilian absentee ballots rejected and the reason for rejection
Table 34. Domestic Absentee Ballots: Reasons for Rejection, Parts A, B, and C

## Section D: Election Administration

## Question D1: Number of precincts

Table 42. Number and Type of Precincts/Polling Places
Table 44. Summary of Selected Factors per Polling Place
Question D2: Number of polling places, types of polling places
Table 42. Number and Type of Precincts/Polling Places
Table 44. Summary of Selected Factors per Polling Place
Question D3: Number of poll workers used
Table 40. Number and Ages of Poll Workers
Table 44. Summary of Selected Factors per Polling Place
Question D4: Age category for poll workers
Table 40. Number and Ages of Poll Workers
Question D5: Difficulty of obtaining a sufficient number of poll workers
Table 41. Difficulty of Obtaining Sufficient Poll Workers

Section E: Provisional Ballots

Question E1: Number of voters who submitted provisional ballots
Table 35. Provisional Ballots Submitted: Disposition of Ballots
Table 36. Provisional Ballots: Reasons for Rejection, Parts A, B, and C

Table 44. Summary of Selected Factors per Polling Place
Question E2: Number of voters who submitted provisional ballots and disposition of the ballots

TABLE 29B. BALLOTS CAST BY MEANS OF VOTING

TABLE 29B. BALLOTS CAST BY MEANS OF VOTING (CONTINUED)

TABLE 29. BALLOTS CAST BY MEANS OF VOTING

Question F1. Number of people who participated in the November 2008 general election.
General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.
Alabama: [Information for the total number of voters participating in the State was provided by a follow-up request.]
Arizona: One county included both provisional ballots and conditional provisional ballots that were counted in their answer. In question F1, a percentage of these votes were considered "Voted at physical polling place" so E2 will not match F1. Another county reported the combined F1d and F1f for F1d.

Arkansas: One county did not include 6 provisional ballots in the total. Two counties could not separate a total 621 absentee ballots between UOCAVA and domestic civilian.

California: One county reported that 1332 provisional ballots were counted as absentee ballots. One county commented, "F1d includes all vote-by-mail ballots not included in the other categories."

Colorado: 23 Counties commented, "Fewer than 25 provisional ballots were counted. Colorado law states that when fewer than 25 provisional ballots are counted, the results of voting by provisional ballot shall be included in mail-in ballot statistics."

Connecticut: Provisional Ballot voters not included in turn-out numbers. Connecticut allows individuals who still reside in Connecticut but who are not registered to vote by Presidential Ballot on Election Day. As such, the vote totals appear in the candidate totals but they are not correspondingly included as registered voters "checked off" as having voted on Election Day because they do not appear on any Official Voter List. Thus, the 41, 631 "other means of voting" would include individuals who cast a Presidential Ballot.

Florida: "Includes all persons submitting a provisional ballot. Not all person voting rejected provisional ballot received vote history"
Illinois: [Information for the total number of voters participating in the State was provided by a follow-up request.]
Indiana: a) Indiana does not have 'early voting.' Indiana allows voters to cast absentee ballots prior to Election Day, but all absentee ballots are counted on Election Day. That is why F1f $=0$ for all counties. b) Absentee ballots were counted as Cast in this survey if the county user placed the ballot in Received status within the Indiana SVRS prior to marking the ballot as "Accepted (Counted)" or "Rejected (Not Counted)." If the county marked the status of the ballot as "Accepted" or "Rejected" before marking it as "Received" those ballot statistics were not added to the total number of Cast ballots, so that Cast ballot counts were not inflated."

Maryland: Election Day polling place voters would include any UOCAVA voters who voted in person at their polling place.
Michigan: Number of provisional ballots $(3,797)$ reflects those provisional ballots that were counted in the polls on Election Day $(1,319)$ and those provisional ballots that were preserved as "envelope" ballots for later evaluation $(2,478)$.
Minnesota: 933 absentee ballots were added and counted at the state level pursuant to court order, making the statewide total $2,921,147$ $(933+2920214=2921147)$. The 933 ballots have not been attributed to any precinct or county in ERS; the survey spreadsheet does not accommodate the addition of this statewide AB total.

Missouri: One county counted rejected provisionals when the state does not. One county excluded rejected absentee, UOCAVA and provisional ballots. Another county did not include rejected domestic civilian absentees.

Nebraska: The New and Former resident numbers are not technically polling place voters. They have been separated from the participant totals. Provisional voters are included in the polling place numbers.

New Hampshire: [Information for the total number of voters participating in the State was provided by a follow-up request.]
North Carolina: "The totals in F1b were calculated by subtracting known absentee totals from the overall ballots cast and reported on
election night. Some absentee ballots were removed (for valid reasons) between Election Day and canvass day, so there may be additional ballots that need to be removed from this total. Also, based on our interpretation of question Fla, we have determined that the survey is really asking about voter history, not just ballots cast. Any voter who showed up and was given a ballot but declined to cast it would not be a part of these totals."

Ohio: For five counties, early voting numbers and absentee numbers were combined into absentee. One county commented, "The difference between F1a and the subtotals is because we operate from two systems - a voter registration system and a vote tabulation system. The numbers do not match because of the combinations of totals from two systems. Both systems needed to be used to identify the numbers requested for this section. We have modified the sources arrived to obtain these totals. in the next section." For one county, 4 provisional ballots counted at the polls with Election Day ballots. One county reported the number civilian absentee ballots that were counted, not that were cast. One county counted 41 absentee transmissions that were not sent back, thus not showing in the breakout.

Oregon: "Absentee figures (F1d) include both Absentee voters as well as UOCAVA voters. Oregon does not have early voting."
Rhode Island: [Information for the total number of voters participating in the State was provided by a follow-up request.]
South Carolina: "Voter Participation statistics are not yet available, but should be available in the next 2-3 weeks. Poll lists are still being processed." [Information for the total number of voters participating in the State was provided by a follow-up request.]

South Dakota: In South Dakota the terms absentee voting and early voting are interchangeable. From the State's submission for the Statutory Overview Section A General states: Absentee - SDCL 12-19-1. Absentee ballot - Persons entitled to vote. A registered voter who is not otherwise disqualified by law from voting in the election may vote by absentee ballot. Early voting - our state law does not reference "early voting". Absentee voting begins six weeks prior to the election and any qualified voter can vote absentee by mail or inperson without providing a reason.
American Samoa: Domestic civilian absentee ballots (F1d) is categorized with early voting (F1f).
Puerto Rico: "In PR we have a special concept of early voting but the ballots and all the statistics are mixed with the regular domestic absentee ballots to protect the secrecy of the vote."

TABLE 30. TURNOUT RATES FOR VOTER PARTICIPATION USING DIFFERENT BASES

Question F1. Calculations for rates of voter participation (turnout) based upon voting age population, citizens of voting age, and registration.

General note: This table represents a comparison of the rates of participation based upon the number of voters participating (F1a) by calculating the rate based upon selected bases. Ranks are assigned for jurisdictions for which complete information is provided. Thus, no rank would be assigned if either element of the information needed to undertake the calculation is missing or if this information is missing from some cases in the jurisdiction. In addition, because information for all factors is not available for the four territories, they are not ranked for any factor.
Reported registration is, with a few exceptions, information also taken from the 2008 Election Administration and Voting Survey (see Tables $1 \mathrm{la}, \mathrm{lb}, 1 \mathrm{c}$, and 1 ld of the NVRA Report Appendix); inclusion of active vs. inactive voters will vary by state. The Estimated Voting Age (VAP) and the Citizens of Voting Age (CVAP) are also taken from the same source, being generated by information released by the Bureau of the Census. The VAP numbers are as of the estimate date of July 1, 2008. The CVAP numbers are estimated from the ACS information for the 2007 3-year ACS applied to the July 1, 2008 VAP numbers. All the information used here and released by the Bureau of the Census share some data issues: a) they are estimates initially founded upon the 2000 Census and an ongoing review of administrative records or, in the case of the ACS, an ongoing survey; b) the estimates are for the domestic/resident population, thus, UOCAVA voters are not included in the relevant universe of the voting population; and c) these population bases do not address the statutory eligibility of any person to register or to vote.
A handful of States did not respond with voter turnout information or did not respond with turnout information for all jurisdictions. These cases are excluded from the rankings with the exception of a few that provided one updated number for the State. The reader should be cognizant of the impact this missing information has on the overall national values.

North Dakota: North Dakota does not have voter registration. [Editor's notes: a) North Dakota is included in the ranks for the sake of comparability with other States; b) some small discrepancy may be noted in tables with respect to the estimated numbers of voting age persons and citizens of voting age as they are used to approximate the universe of the eligible population.]

## TABLE 31. SOURCE USED TO DETERMINE VOTER PARTICIPATION

Questions F1, F2. Number of persons participating and the source of the number of voters.
General Note: The responses to F2, which were text, were coded in order to tabulate the number of voters that participated in the election for each source.

California: One county commented that they used multiple sources
Missouri: "The Secretary of State's office recommended that the local election authorities respond to question Fla by totaling up all ballots cast at the polling place, all domestic civilian absentee ballots cast, all provisional ballots cast, and all UOCAVA ballots cast."

Nevada: One county reported using multiple sources.

TABLE 32. DOMESTIC ABSENTEE BALLOTS TRANSMITTED: DISPOSITION OF BALLOTS

## TABLE 32. DOMESTIC ABSENTEE BALLOTS TRANSMITTED: DISPOSITION OF BALLOTS

Questions C1. Number of domestic civilian absentee ballots transmitted to voters and the disposition of the ballots.

General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.
Arizona: For one county, the spoiled or replaced ballots total for C1d is an amount that is for reference only since these spoiled/replacement ballots issued may or may not have been returned. If they were returned then they would be part of the C1b total. As such, this Cld total is not reflected as part of the grand total shown.

Arkansas: In on county, 13 were too late to count, so total is -13 .
California: For one county, 249 Spoiled or Replaced ballots are combined in C1b total. For one county, Spoiled and replaced are not tracked by issue type. No way to determine UOCAVA from Domestic replaced or spoils. For one county, Clf - Only ballots with a return date and a return status of void are included in this number. For two counties, Clg - Replacement Ballots are also included in the other numbers within the same section. For instance Replacement Ballot could also be included in the returned for counting number. For one county, Cld, the difference of 128 is that 128 were 2nd issues requested by voter. For one county, Does not include second ballots.

Connecticut: Connecticut reported that regular absentees \& Military absentee ballots were both reported in Clb .
Indiana: Absentee ballots were counted as Cast in this survey if the county user placed the ballot in Received status within the Indiana SVRS prior to marking the ballot as "Accepted (Counted)" or "Rejected (Not Counted)." If the county marked the status of the ballot as "Accepted" or "Rejected" before marking it as "Received" those ballot statistics were not added to the total number of Cast ballots, so that Cast ballot counts were not inflated."

Florida: For one county, C1d Returned spoiled or replaced ballots are included in response to C1b, For one county, C1d is included with C1b total.

Minnesota: 39 counties: Undeliverable and spoiled ballot counts reported as "0" may reflect data not reported.; 25 counties: \# issued reflect only ballots the county entered into SVRS application; the count may be under-represented if ballots were issued outside of SVRS Undeliverable and spoiled ballot counts reported as " 0 " may reflect data not reported. 22 counties: \# issued not reported. Undeliverable and spoiled ballot counts reported as " 0 " may reflect data not reported.

Missouri: St. Clair County reports "C1d-7 ballots did not reach the voter so replacement ones were sent. These are not included in the total. Daviess Co reports "C1d - 2 spoiled are included in Clb." Christian Co reports " 14 ballot envelope not signed; 47 ballot envelope not notarized; 2 voter deceased." Pulaski Co reports "In our initial report we did not include the 25 spoiled ballots."

Montana: Any marked "spoiled" are actually "Sent $\backslash$ Void".
Nevada: For one county, C1c: undeliverable and spoiled or replaced ballots counted together.
North Carolina: IMPORTANT NOTICE: "Early voting" in North Carolina is actually in-person absentee voting. Over 2.4 million people voted during one-stop voting in the 2008 general election. The amount of absentee ballots noted in Clb comprises the total number of mail-in absentee ballots that were returned by voters. [UPDATE: The State updated the value for Cla to reflect the count of only ballots actually transmitted.]

Ohio: 3 counties did not track categories, For one county, consists of returned after date \& counted; rejected, uncountable \& undeliverable; military \& non- military OS. For one county, reports did not show spoiled count, so number is increased by 10 . For one county, total includes domestic armed forces absentee ballot information.

Oregon: Ballots returned (C1b) includes both absentee voters and UOCAVA voters: unable to separate out.
Puerto Rico: Puerto Rico defines domestic civilian absentee ballots as the voters that are qualified by Puerto Rico Electoral Law or CEE regulations to request to vote in a special early voting process.

TABLE 33. DOMESTIC ABSENTEE BALLOTS: PERMANENT LIST; SUBMITTED FOR COUNTING: DISPOSITION

Questions C1, C3, C4. Number of domestic civilian absentee ballots transmitted to voters due to the

General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.

## Question C3:

California: For one county, does not include second ballots issued. For one county, vote by mail requests not included. For Solano county, 5,281 ballots were issued to voters in all mail ballot precincts. An indeterminate number of those voters have requested Permanent vote by mail status. It is not possible at this time to present a definitive and accurate number of all ballots issued to Permanent vote by mail voters.

Missouri: Greene Co. reports "This in only the current number of active voters on the Permanently Disabled Absentee List. Due to the different possible classifications of request sources for absentee voters that includes: Illness/Disability, Incapacitated/Caregiver, and Permanently Disabled, the number of voters on the permanent list actually requesting a ballot is not available. Oregon Co. reports "C3: Permanent absentee applicants=15" Butler Co. reports "This is the number list of permanently disabled who are active voters only."

## Question C4:

Arkansas: For one county, did not break out absentee from provisional, so 168 provisional ballots may have been counted twice.
California: For two counties, C4b-Rejected ballots not added to total. For one county, they used a two-card ballot for the Nov. 2008 election. Their vote tally system does not increment when only the B card is counted, so they have a total of -177.
Florida: For one county, C4b does not include returned undeliverable.
Indiana: a) Absentee ballots were counted as Cast in this survey if the county user placed the ballot in Received status within the Indiana SVRS prior to marking the ballot as "Accepted (Counted)" or "Rejected (Not Counted)." If the county marked the status of the ballot as "Accepted" or "Rejected" before marking it as "Received" those ballot statistics were not added to the total number of Cast ballots, so that Cast ballot counts were not inflated. b) At the time this data was collected, not all counties had changed the status of the electronic absentee ballot records to "Counted" in the SVRS, although the county manually counted each ballot in their official election results. The purpose of this column is to explain why Indiana has nearly 110,000 absentee ballots neither counted nor rejected in the table.

Minnesota: 3 counties: \# rejected may be under-reported due to incomplete responses from administering municipalities. 6 counties: \# rejected reflects only ballots the county entered into SVRS application; the count may be under-represented if ballots were not tracked using SVRS. 4 counties: Count only reflects \# of mail ballots rejected. \# of absentee ballots rejected was not reported.

North Carolina: The amount in C4a reflects civilian mail-in absentee ballots. The amount in C4c reflects the in-person absentee ballots that were cast during one-stop early voting. Together, these figures comprise the total number of absentee ballots that were cast in the 2008 general elections.

Ohio: For one county, total includes domestic armed forces absentee ballot information. Another county commented, "plus one undeliverable, it was not returned by the voter."

Oregon: Ballots counted (C4a) and rejected (C4b) include both absentee voters and UOCAVA voters: unable to separate out.
South Carolina: The state does not distinguish between UOCAVA and domestic civilian absentee ballots when counting ballots. They left column C4a blank since it was asking for only domestic civilian absentee ballots counted. The total number of absentee ballots counted is available. The numbers in C4b reflect the number of domestic civilian absentee ballots returned after the deadline, and rejected by default.

TABLE 34. DOMESTIC ABSENTEE BALLOTS: REASONS FOR REJECTION, PARTS A, B AND C

Questions C4, C5. Number of domestic civilian absentee ballots rejected and the reason for rejection. [This table is broken into parts due to the large number of reasons tabulated.]

General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.

## Question C5:

Arizona: For one county, "C5a ballots not received on time are not considered viable ballots that could be counted. As such, these 1,485 ballots are accounted for but were not classified as rejects that were decision or voter error based (e.g. bad signature or no signature). The TOTAL does not reflect the late returns since they are technically not considered ballots that could have been counted in the first place.

California: For one county, C5i also includes those with different resident address then what is on file. For one county, their system comingles challenged vote by mail ballots with challenged provisional ballots. For one county, many challenged ballots were not returned, such as suspended ballots and failsafe challenged ballots, yet the report include these ballots in the category.

Indiana: a) Absentee ballots were counted as Cast in this survey if the county user placed the ballot in Received status within the Indiana SVRS prior to marking the ballot as "Accepted (Counted)" or "Rejected (Not Counted)." If the county marked the status of the ballot as "Accepted" or "Rejected" before marking it as "Received" those ballot statistics were not added to the total number of Cast ballot, so that Cast ballot counts were not inflated. b) Also, a ballot is marked as Rejected in the Indiana SVRS for two reasons; (1) if the ballot was received and not counted or (2) if the ballot was not received back from the voter. Therefore, an absentee ballot marked as "Rejected" in SVRS is not necessarily a "Cast" ballot.

Minnesota: For C5d, cannot distinguish non-matching signature from no signature; combined with A5b. For C5m, cannot distinguish from Not Registered as counted in C5o.

Missouri: Shannon Co reports "Mistake was made on certification of domestic civilian absentees. Total counted equals 498 with 11 rejected." Pike Co. reports "Spoiled/replaced ballots were included in original rejection count - actual total rejected is 22 ".

North Dakota: The reasons for the Other rejections include: Other 1: No postmark, received before canvassing; and Other 2: postmarked on Election Day or after.
Ohio: For two counties, totals include UOCAVA voters. For one county, C5b ballot was a ballot without signature, address or identification provided. For one county, C5h includes ballot not inside Id Envelope \& Id Envelope not sealed.
Oregon: Ballots rejected (C5a-o) includes both absentee voters and UOCAVA voters: unable to separate out.
Tennessee: One county noted 11 rejections, which were military rejections; these were also reported in section B.
Puerto Rico: Puerto Rico defines domestic civilian absentee ballots as the voters that are qualified by Puerto Rico Electoral Law or CEE regulations to request to vote in a special early voting process.

TABLE 35. PROVISIONAL BALLOTS SUBMITTED: DISPOSITION OF BALLOTS

| Question |  | E1a |  | E2a |  |  | E2b |  |  | E2c |  |  | E2d+e |  |  | calc |  |

Questions E1, E2. Number of voters who submitted provisional ballots and disposition of the ballots.
General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.
Also, the term provisional is used here generically though the meaning, availability, and use will vary by State.

## Question E1:

Colorado: 23 Counties commented, "Fewer than 25 provisional ballots were counted. Colorado law states that when fewer than 25 provisional ballots are counted, the results of voting by provisional ballot shall be included in mail-in ballot statistics."
Idaho: Idaho is exempt from having Provisional Ballots because we have Election Day Registration.
Maine: Provisional numbers gathered from a survey of the Clerks.
Minnesota: "Minnesota does not have provisional ballots. (Minnesota is an Election Day Registration State described in section 4(b) of the National Voter Registration Act of 1993 (42 U.S.C. 1973gg-2(b)) and is exempt from provisional voting requirements under HAVA.
Montana: One county reported, "Former EA deleted all data except total \# of provisionals".
New Mexico: One county commented, "The number of ballots may be incorrect as the envelopes \& ballots were put in boxes with regular ballots".
North Dakota: "Provisional ballots in North Dakota are those which are cast after the regular poll closing time in an election which a federal office appears as a result of a federal or state court order or any other order extending the time established for poll closings under state law in effect ten days before the date of that election"

Ohio: One county commented, "The total number of provisional ballots on our official count is 151 . The difference of 10 is, due to lack of funding, we did not have enough optical scan memory cards to account for every situation during the General Election. The ten extra ballots were the military/ overseas/ absentees postmarked by November 3rd and received at a later date."

Oregon: One county commented, "Data incomplete. Did not track the number of all provisional ballots returned and unable to separate from regular ballots at this time."

## Question E2:

Arizona: One county included both provisional ballots and conditional provisional ballots that were counted in their answer. In question F1, a percentage of these votes were considered "Voted at physical polling place" so E2 will not match F1.

California: One county reported that 1332 provisional ballots were counted as absentee ballots.
Colorado: 23 Counties commented, "Fewer than 25 provisional ballots were counted. Colorado law states that when fewer than 25 provisional ballots are counted, the results of voting by provisional ballot shall be included in mail-in ballot statistics."
Florida: "23 Provisional Ballots were not included because no registration record existed on FVRS for these people."
Idaho: Idaho is exempt from having Provisional Ballots because we have Election Day Registration.
Iowa: If the provisional ballot is accepted for counting in Iowa, the entire ballot is tabulated.
Nevada: "In Nevada, provisional ballots only have Federal contests".
Ohio: One county commented, "The total number of provisional ballots on our official count is 151 . The difference of 10 is, due to lack of funding, we did not have enough optical scan memory cards to account for every situation during the General Election. The ten extra ballots were the military/ overseas/ absentees postmarked by November 3rd and received at a later date."

Oregon: Two counties commented, "Data incomplete. Did not track the number of all provisional ballots returned and unable to separate from regular ballots at this time."

TABLE 36A. PROVISIONAL BALLOTS: REASONS FOR REJECTION, PART A

TABLE 36. PROVISIONAL BALLOTS: REASONS FOR REJECTION, PARTS A AND B

Questions E2, E3. Number of provisional ballots rejected and the reason for rejection. [This table is broken into parts due to the large number of reasons tabulated.]

General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.

## Question E3:

Arizona: One county reported, "E3f. The "Ballot missing from envelope" total (322) is not included in the grand total since these ballots were presumptively already counted so they cannot be considered as a provisional that would be counted at central tabulation."

Nebraska: The reported 450 rejected provisional ballots for no signature came from the Voter Registration system. The system reports combine both rejections for no signature, and for an incomplete application. That 450 figure includes both reasons, and not just missing signature.

Wisconsin: Provisional ballots are issued only when (1) an election-day registrant has not provided a valid driver's license number, or (2) a by-mail registrant failed to provide proof of residence. All rejected provisional ballots are for failure to timely provide the missing information.

## TABLE 37. USE OF ELECTRONIC POLL BOOKS/LISTS AT THE POLLING PLACE

Questions F1, F4. Use of electronic poll books at the polling place and the number of voters participating in these polling places.

General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.

## Question F4:

California: 2 counties commented that they were vote by mail only. Another county reported they were piloting 5 electronic poll books.
Colorado: For Colorado, all counties were required to use the "early voting module" through SCORE (the statewide database) as an electronic poll book for early voting purposes. This module allows the user to sign the voter in and to update vote history in real time. Some counties answered "Yes" for certain options based of the "early voting module," not the Election Day module.

Florida: Several counties commented that electronic poll books were only used for early voting. Other counties commented that only a few places in their county used them.
Indiana: The State is aware that some counties setup PCs at polling locations to allow staff or voters to look up polling locations on the SVRS Public Portal (www.indianavoters.in.gov). They used the public portal to reduce security concerns, rather than setting up a PC linked to SVRS. However, the State did not collect this information as part of the 2008 General Election survey.

Maryland: Electronic poll books were used to update polling place voting history but not for provisional or absentee voting credit.
Michigan: Electronic poll book numbers: these numbers were adjusted to reflect true participation of the 40 individual jurisdictions within the 21 counties in the pilot program vs. 21 complete counties (somehow the entire participation for the entire county was reflected vs. the 40 individual jurisdictions).

Missouri: One county signed voters in and updated voter history "at super precincts only".
North Carolina: "To clarify our response to F4d, all one-stop precincts used electronic voter lists during the one-stop registration and absentee voting period. The electronic database was used to sign voters in, print an authorization to vote form (ATV) with appropriate ballot assignment, update voter records, and to process new voter registrations."

North Dakota: With respect to the Total Participants for the participating counties: Electronic poll books were not used to process absentees. Also, electronic poll books were used for Early Voting Use Only in one case, Election Day Use Only in one case, and Both Early and Election Day Use in four cases.

Oregon: "Oregon is a Vote by Mail state. We do not have polling places."
South Dakota: One county only used for absentee voters.
Washington: 39 counties commented, "no poll books".

## TABLE 38. SOURCE OF POLL BOOKS USED AT THE POLLING PLACE

Questions F1, F6. Source of poll books used at the polling place and the number of voters participating in these polling places.

General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.

## Question F6:

Indiana: 12 counties took advantage of the State-provided option to have the SVRS vendor create and ship a disc with the county's poll book files on it. Although the vendor created the files, the county was still responsible for printing them.

Michigan: Counties purchase poll books designed by State from commercial vendors and supply to local jurisdictions.
Nevada: "Clark County prints own poll books at their Election Center".
North Dakota: Three counties commented that electronic poll books are used in one polling location, printed poll books used in all others. With respect to Information Unavailable: two counties used electronic poll books in all polling locations.

Ohio: Two counties had their poll books printed by their boards of election.
Oregon: "Oregon is a Vote by Mail state. We do not have poll books."
Washington: 39 counties commented, "no poll books".
Virgin Islands: For the Virgin Islands, "District Registers were forwarded to the various polls."

TABLE 39. FIRST-TIME MAIL REGISTRANTS; USE OF PRINTED REGISTRATION LISTS AT THE POLLING PLACE

# TABLE 39. FIRST-TIME MAIL REGISTRANTS; USE OF PRINTED REGISTRATION LISTS AT THE POLLING PLACE <br> Questions F1, F3, F5. First-time mail registrants. Uses of printed registration lists at the polling place with the number of voters participating in these polling places. 

## Question F3:

Alabama: In Alabama, all voters must show ID at the polling place.
Arizona: One county reported that "In Arizona everyone who votes at a polling place must provide identification."
California: Two counties reported the number for all first time voters, not just those that registered by mail.
Colorado: Colorado reported, "this was a state-generated statistic based on first time voters marked for ID verification who attempted to vote in the 2008 general election."

Minnesota: Includes only first time voter mail registrants with an existing identification requirement at the time of the election. Indicates the registration information had not been successfully verified.

Missouri: One county only had new voters to their county, not state. Another county reported the number of first time registrations, but doesn't know how many voted.

Montana: Montana has an all-ID provision in law, not just for first-time voters.
Nebraska: When the voters information is matched against other state databases, then the first time voter flag is removed.
Nevada: Two counties commented that if drivers' license number or last 4 of SSN do not match DMV/SSA records, first-time voter must show ID.

North Carolina: "These numbers consist of all first time voters in the November 2008 general election who registered by mail. Not all of these voters were required to provide ID. If a new registrant includes a copy of an acceptable ID source or if the county was able to validate the registrants North Carolina drivers license number, state-issued identification number, or the last four digits of their social security number, no additional ID was required from the voter when he presented himself to vote."
North Dakota: North Dakota does not have voter registration.
Ohio: 14 counties reported that Ohio requires all voters to show ID.
South Dakota: One county commented, "All voters are asked for ID at the polling place. If they do not have an ID with them, they are asked to complete an ID Affidavit."

Puerto Rico: "Puerto Rico, which is exempt from the NVRA, does not permit voters to register by mail except for those voters covered under the UOCAVA. Such voters who register by mail are only allowed to vote in federal elections, however. Consequently, since voters covered by UOCAVA are exempt from the requirement affecting first-time, mail-in registrants and no other voters register by mail, section 303(b) does not apply to Puerto Rico."

## Question F5:

California: 2 counties commented that they were vote by mail only.
Colorado: Multiple counties reported yes, for F5 because they had printed poll books ready as backup. One county commented that they left the answer blank because they did use printed lists but not poll books. Several counties report "no" and commented that they use signature cards. One county reported "Yes" and commented that signature cards were their poll books in F6.

Florida: Multiple counties printed poll books for backup only.
Georgia: Printed poll books are used as a backup for the electronic list.

Maryland: Printed poll books were made as backup for the electronic poll books in Maryland.
Nevada: Some of Nevada's jurisdictions used printed lists of registered voters at the polls.
Oregon: "Oregon is a Vote by Mail state. We do not have polling places."

## TABLE 40. NUMBER AND AGES OF POLL WORKERS

Questions D3, D4. Number of poll workers used and age category.

## Question D3:

Arizona: One county reported that they also hired 178 additional staff as "citizen board Troubleshooters that do not serve as polling place board workers but are assigned several specific polling place locations to assist the board workers at these locations with any issues that arose on Election Day."

Arkansas: One county commented that they reported 100, ( 7 early voting and 93 Election Day). 7 workers for early voting also worked on Election Day. So, only 93 different people working in this election. Another county commented that their answers were only approximations.

Maine: Answers for D3 and D4 were from a survey of poll workers in main.
Minnesota: Number of poll workers as reported by municipal surveys for municipalities and by county survey for mail ballot and unorganized precincts. Where survey information was not supplied, the statutory minimum of judges was assumed.

Mississippi: One county estimated 75 to 100.
Nevada: Does not include 70 high school students from Government Classes helping on Election Day in one county.
Virginia: One county provided approximations.
Washington: One county provided approximations.
Wyoming: One county commented that the total does not include 21 county employees assigned to voter registration.

## Question D4:

Arizona: One county reported that the "numbers reflect all poll workers, night boards, early boards, etc. They may or may not have worked this election."

Arkansas: 2 counties reported that their numbers were approximations: 9 counties were unable to answer the question but commented that the majority of their poll workers were over the age of 60 .
California: Multiple counties commented that their answers were only partial answers.
Florida: One county provided estimates. Another county was missing the ages for 13 people.
Indiana: 2 counties reported that their numbers were approximations: 9 counties were unable to answer the question but commented that the majority of their poll workers were over the age of 60 .
Mississippi: One county provided estimates.
Missouri: One county reported that most of their staff were over 70 .
South Carolina: Poll workers under 18 are considered assistant poll managers. They may have the same responsibilities as other poll managers, but must be assigned in a ratio of no greater than 1 assistant to 2 regular poll managers. The number is D4a represent the assistant poll managers. All other poll managers are $18+$, and no other age breakdown is available.

Virginia: Three counties provided estimates.
Washington: 39 counties commented, "No poll workers; vote by mail".

## TABLE 41. DIFFICULTY OF OBTAINING SUFFICIENT POLL WORKERS

Questions F1, D5. Difficulty of obtaining a sufficient number of poll workers for the election.
General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. For this table, the total used for comparison is the number of cases in the State. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting.

## Question D5:

Arkansas: One county had people calling wanting to work. Another county commented, "this was the first time in 10 years that so many people volunteered to serve as poll workers".

Idaho: This election was very easy, which is not really normal.
Indiana: For Indiana, the political parties are responsible for recruiting poll workers. Many counties commented a need for younger volunteers.

Maryland: Very easy for Democrats; somewhat difficult for Republicans.
Minnesota: The county responses to this question were averages of municipal responses within the counties.
Nebraska: Two counties commented that it was difficult finding Democrats.
Rhode Island: "Applies to each city and town".
South Dakota: Corson County: "Workers are more difficult to find in some precincts than in other precincts." Jackson County: "No interest." Todd County: "Especially interpreters."

American Samoa: Family ties to candidates running for office made recruitment of poll workers somewhat difficult.

## TABLE 42. NUMBER AND TYPE OF PRECINCTS/POLLING PLACES

Questions D1, D2. Number of precincts, number of polling places, types of polling places.
General note: The Balance/Not Categorized column on the table compares the sum of all the categorical responses with the total indicated. If the balance is a positive number the difference is treated as uncategorized responses. If the balance is a negative number (indicated by the parentheses) the difference indicates the sum of the responses is greater than the total indicated; this could occur by an error in data entry or by the inability to correctly categorize some responses, resulting in some over-counting. Note: in this case there appears to be much doublecounting which merely indicates the multiple purposes of some polling places, e.g., an election office being used for both Early Voting and Election Day Voting.

## Question D1:

California: Multiple counties included Vote By Mail precincts in their response. One county included 13 No Eligible Voter Precincts.
Florida: There are 8 precincts in one county that have no voters and are strictly designed to keep the geography contiguous over space. Two other counties included precinct splits.

Iowa: Includes one absentee precinct per county.
Missouri: Two counties reported a total of 104 non-voting precincts were included.
Nevada: One county commented, "on Election Day there is voting available in the Election Office only for non-residents voting for President/Vice President"

Puerto Rico: "The Islands of Puerto Rico electoral jurisdiction after the 2000 Census is divided and described as follows. There are eight senate districts and forty legislative districts in Puerto Rico. Each of the representative districts may include from one to six precincts. There are 110 precincts in Puerto Rico, but these precincts are not equivalent to precincts as the term is traditionally used in the United States and within HAVA. Within these precincts there are currently 1562 election units. These elections units are equivalent to precincts as the term is normally used, as each election unit is one physical polling place location."

## Question D2:

Alaska: In Alaska, the same election offices are open for early voting beginning 15 days prior to Election Day through Election Day. Therefore all election offices were placed in the early voting category.

Arizona: One county reported that "in certain areas some precinct polling places were co-located within the same facility and that is why the "physical polling place location totals is less than the number of precincts existing. A co-located polling place does consist of two different boards specific to a given precinct."

California: California does not have early voting sites, but California does open their election offices 29 days before elections for early voting. Multiple counties counted their election offices twice as an early voting polling place and an Election Day polling place. Two counties (Alpine and Sierra) reported 0 in D2 because they are all mail counties. Two counties reported counting early votes as absentee ballots.

Illinois: D2a is number of polling places on Election Day only - does not include early voting.
Indiana: Indiana does not have 'early voting.' Indiana allows voters to cast absentee ballots prior to Election Day, but all absentee ballots are counted on Election Day. Responses to questions D2e and D2f refer to locations where voters would cast an absentee ballot prior to Election Day.

Maine: Maine does not have Early Voting.
Maryland: No early voting.

Minnesota: Minnesota does not have early voting.
Mississippi: Two counties reported numbers on absentee voting for early voting. They do not have early voting.
Missouri: "Many local election authorities provided a response to question D2f even though Missouri does not have early voting. It appears that many local election authorities responded to question D2f because Missouri law provides for absentee voting (excuse required) that begins six weeks prior to Election Day and may be conducted in the local election authority's office." Kansas City reports " 22 Sites were Double Polls. We administered 5 (including our central polling location) satellite voting centers for absentee voting three weeks prior to Election Day."
New York: "early voting is not permitted"
Ohio: Multiple counties counted the election office twice, once for early voting and once for the Election Day. Many counties commented that they did not.

Oregon: Oregon is a vote-by-mail state. The only "polling place" is the County Elections Office. Oregon does not have early voting.
Rhode Island: "By State law, each polling place is required to have 6 poll workers in each precinct"
South Carolina: "S.C. does not have early voting."
South Dakota: Multiple counties commented that early voting (interchangeable with absentee voting, see note following) is done only at the election office. [Editor's note: This may represent a double counting of the polling places in the table.] In South Dakota the terms absentee voting and early voting are interchangeable. From the State's submission for the Statutory Overview Section A General states: Absentee - SDCL 12-19-1. Absentee ballot-Persons entitled to vote. A registered voter who is not otherwise disqualified by law from voting in the election may vote by absentee ballot. Early voting - our state law does not reference "early voting". Absentee voting begins six weeks prior to the election and any qualified voter can vote absentee by mail or in-person without providing a reason.

## TABLE 43. NUMBER AND TYPE OF VOTING EQUIPMENT

Questions F7. Information on the number and type of voting equipment used in the elections and the purposes for which they are used.

Note: This table is a simple summary of a complex set of information. Researchers are advised to consult the dataset for complete information. The "Sum of All Voting Equipment" is a calculated estimate to enable comparative percentage values. This sum is determined by using the number of machines or counters as well as the number of booths for paper ballots and the "other" types of equipment.

Question F7:
California: Three counties commented, "There was at least one Hart eSlate available at each polling place for voters with disabilities, however, the VVPATs from those voting units were remade onto Mark-A-Vote ballots for tally at the central location."

Michigan: Question F7d: Absentee ballots are processed at central locations or the precinct/polling place at the discretion of local jurisdiction.

Missouri: "F7d is our only counter. It is at the central location for all ballot tallying."
Nebraska: For section F7, all jurisdictions use the AutoMark voter assist terminal for any voters who may be physically, visually, or hearing impaired. This information was placed in F7c to better describe the purpose of these machines.

New Mexico: One county commented, "F7i, Special device accessible to disabled voters was crossed out, and 'Election System and Software' was written".

New York: For F7d: 12 counties use an OpScan central count Absentee System.

TABLE 44. SUMMARY OF SELECTED FACTORS PER POLLING PLACE

## U.S. ELECTION ASSISTANCE COMMISSION

## 2008 Election Administration \& Voting Survey

The ongoing process of improving America's election systems relies in part on having accurate data about the way Americans cast their ballots. In 2002, Congress chartered the U.S. Election Assistance Commission to collect information on the state of American elections and make it widely available to policy makers, advocates, scholars, journalists and the general public. Since 2004, the Commission has sponsored an Election Day Survey as its primary tool for fulfilling that mission. We are pleased to present the 2008 Election Day Survey, and we ask for your help in making it the most complete and accurate survey in its history.

The questions below ask for information about ballots cast; voter registration; overseas and military voting; Election Day activities; voting technology; and other important issues. Many of these questions are mandated by the Help America Vote Act and other federal laws, while other questions were included at the request of the research community or policy makers. The EAC recognizes the burden that asking for this data places on state and local election officials, and we have worked to minimize that burden as much as possible.

In advance, we thank you for your cooperation and look forward to answering any questions you might have.

## Instructions for Completing the 2008 Election Administration \& Voting Survey

1. This survey collects information on election administration issues in local election offices (typically counties or townships) that are responsible for the administration of the November 2008 general election. As such, all data should be reported at the level of the local jurisdiction. However, if a State or Territory desires, a State or Territorial level election office may fill out any or all of the information on behalf of the local election offices under its jurisdiction.
2. Don't leave items blank - always provide an answer to the question asked using the "Data not available" or "Other" categories discussed below, if needed.
3. Use the "Data not available" box if the question asks for details that are not required by your state law or the question asks for information that is not currently collected.
4. You may find it helpful to read an entire section before answering any of the questions in that section.
5. Please attempt to record data according to the categories as they are defined in the question. If your jurisdiction uses a different data classification scheme (for instance, collects data in such a way that combines two or more categories listed in a question), you can use the space provided for "Other" to provide numbers and details on these categories. Use as many "Other" categories as you need to adequately report the relevant statistics for your jurisdiction. If you enter information into the "Other" field, please use the comments field to provide an explanation for the answer.

In the example below, the jurisdiction does not collect separate statistics on the number of duplicate and rejected registration forms, but instead has only one number that represents the total number of registration forms that are either duplicated/or rejected.

## EXAMPLE:

A5. In order to evaluate the workflow of your office over the last election cycle, enter the total number of registration forms your jurisdiction received from all sources during the period from the close of registration for the November 2006 general election until the close of registration for the November 2008 general election. Include here any Election Day or Same Day registrations, if applicable. Also include any special categories of voters who may have extended deadlines, such as returning military personnel, if applicable.

Next, divide the total number of registration application forms received (as entered in A5a) into the following categories. The amounts should sum to the total provided in A4a.

## SECTION A VOTER REGISTRATION

## Roadmap to Section A:

- A1, A2 and A3 ask for information about the number of registered voters in your jurisdiction and how you calculate those statistics.
- A4 asks for information about registration activity on days in which it was possible for a person to both register and vote on the same day.
- A5 asks for information on all registration forms for all types of registration transactions (successful and unsuccessful) received by your office.
- A6 asks for the sources of all registration forms (both successful and unsuccessful).
- A7 asks for the sources of new registrations.
- A8 asks for the sources of duplicate registrations.
- A9 asks for the sources of invalid or rejected registrations.
- A10 asks for information on removal notices sent under NVRA Section 8(d) 2 .
- A11 asks for the number of voters removed from the voter registration rolls and the reason for their removal.

A1. Enter the total number of persons in your jurisdiction who were registered and eligible to vote in the November 2008 general election. Include all persons eligible to vote in the election including special categories of voters with extended deadlines (such as returning military) or any person who may have been able to register and vote on Election Day. Do not include any persons under the age of 18 who may be registered under a "pre-registration" program.
Total $\qquad$
$\qquad$
$\qquad$Data not available

## A1 Comments

$\square$

A2. When, for other official purposes, you report the number of registered voters in your jurisdiction for the November 2008 general election (as in A1) do you include both active and inactive voters in the count, or does your jurisdiction only include active voters? (Select only one)

## A2 Comments

A3. Enter the total number of persons who were registered and eligible to vote in the November 2008 general election into the following categories. Do not include any persons under the age of 18 who may be registered under a "pre-registration" program.

A3b. Inactive .............................................................................
OMB Control No. 3265-0006

## A3 Comments

$\square$

A4. If your state's laws allowed any voters to register and then to vote on the same day (either on or prior to Election Day), enter the total number of registration forms received on those days in which it was possible to both register for and vote in the November 2008 general election. This question includes jurisdictions in states that permit Election Day registration for voting for office of President, such as Connecticut and Rhode Island.

A4a. Total..... $\square$ ......Data not availableDo not allow any voters to register and vote on the same day $\rightarrow \underline{\text { skip to A5 }}$.

Next, divide the total number of registration forms received on days in which it was possible for a person to both register for and vote in the November 2008 general election (as entered in A4a) into the following categories. The amounts should sum to the total provided in A4a.

A5. In order to evaluate the workflow of your office over the last election cycle, enter the total number of registration forms your jurisdiction received from all sources during the period from the close of registration for the November 2006 general election until the close of registration for the November 2008 general election. Include here any Election Day or Same Day registrations, if applicable. Also include any special categories of voters who may have extended deadlines such as returning military personnel, if applicable.

## SECTION B UNIFORMED \& OVERSEAS CITIZENS ABSENTEE VOTING ACT (UOCAVA)

Roadmap to Section B:

- B1 and B2 ask for information about the number and type of UOCAVA absentee ballots transmitted.
- B3 asks for the number and type of all UOCAVA ballots retumed and submitted for counting.
- B4, B5, B6, and B7 asks for information on the type of UOCAVA ballot returned by type of UOCAVA voter.
- B8 asks for the number and type of all UOCAVA ballots counted.
- B9, B10, B11, and B12 asks for information on the type of UOCAVA ballot counted by type of UOCAVA voter.
- B13 asks for the number and type of all UOCAVA ballots rejected.
- B14 asks for the information on reasons why UOCAVA ballots were rejected.
- B15, B16, B17, and B18 asks for information on the type of UOCAVA ballot rejected by type of UOCAVA voter.
- B19 asks for information on how ballots were transmitted to UOCAVA voters.
- B20 asks for information on the status of ballots automatically transmitted to UOCAVA voters.

B1. Enter the total number of absentee ballots transmitted to UOCAVA voters for the November 2008 general election.
B1a. Total $\qquad$
$\square$ .. $\qquad$
$\square$ Data not available

Next, divide the total number of absentee ballots transmitted to UOCAVA voters (as entered in B1a) into the following categories. The amounts should sum to the total provided in B1a.

## SECTION D <br> Election Administration

- D1 asks for the information on the number of precincts in your jurisdiction
- D2 asks for the information on the number and type of polling places in your jurisdiction
- D3, D4, and D5 ask for the information poll workers utilized in the November 2008 general election.

## D1. Enter the total number of precincts in your jurisdictions for the November 2008 general election.

Total $\qquad$
$\square$
$\qquad$ $\square$ Data not available

## D1 Comments

$\square$

D2. Enter the total number of physical polling places in your jurisdiction for the November 2008 general election. Please include physical polling places in operation on Election Day and physical polling places in operation before Election Day (such as early vote centers).
D2a. Total $\qquad$
 $\square$
$\square$
$\qquad$
$\square$ Data not available

Next, divide the total physical polling places in your jurisdiction (as entered in D2a) into the following categories. The amounts should sum to the total provided in D2a. If you do not include election offices in your count of polling places, enter 0 .

## Early voting

## D2 Comments

$\square$

D3. Enter the total number of poll workers used in your jurisdiction for the November 2008 general election.

- Poll workers may include election judges, booth workers, wardens, commissioners, or other similar terms that refer to persons who verify the identity of a voter; assist the voter with signing the register, affidavits or other documents required to cast a ballot; assist the voter by providing the voter with a ballot or setting up the voting machine for the voter; and serving other functions as dictated by state law.
- Include all people recruited specifically for the purposes of working at physical polling places in operation on and/or before Election Day, but, do not include observers stationed at the polling places or regular office staff.

Total. $\qquad$
$\square$
$\qquad$Data not available

## D3 Comments

D4. If your jurisdiction has data on the ages of its poll workers (for example, from voter registration records, payroll records or from poll worker applications), enter the total number of poll workers in each age category.

$\qquad$

## D4 Comments

$\square$

D5. How difficult or easy was it for your jurisdiction to obtain a sufficient number of poll workers for the November 2008 general election?
$\square$....... Very difficult
$\square$....... Somewhat difficult
$\square$....... Neither difficult nor easy
$\square$....... Somewhat easy
$\square$....... Very easy

## SECTION E Provisional Ballots

- E1 and E2 asks for the information on the number and status of provisional ballots submitted.
- E3 asks for the information on reasons why provisional ballots were rejected.

E1. Enter the total number of voters who submitted provisional ballots in the November $\mathbf{2 0 0 8}$ general election.
Total. $\qquad$
$\square$
$\qquad$Data not available

## E1 Comments

$\square$

E2. Next, divide the total number of voters who submitted provisional ballots in the November 2008 general election (as entered in E1) into the following categories.

E2 Comments
$\square$

## E3. Please divide the total number of provisional ballots rejected (as entered in E2c) into the following categories

 indicating the reason why the provision ballots were rejected. The amounts should sum to the total provided in E2c.| E3a. Voter not registered in the state......................................................... |  |
| :---: | :---: |
| E3b. Voter registered in state but attempted to vote in the wrong jurisdiction ...... |  |
| E3c. Voter registered in state but attempted to vote in the wrong precinct.......... |  |
| E3d. Failure to provide sufficient identification. |  |
| E3e. Envelop and/or ballot was incomplete and/or illegible ............................. |  |
| E3f. Ballot missing from envelope............................................................ |  |
| E3g. No signature................................................................................ |  |
| E3h. Non-matching signature |  |
| E3i. Voter already voted |  |
| E3j. Other $\rightarrow$ comments: |  |
| E3k. Other $\rightarrow$ comments: |  |
| E31. Other $\rightarrow$ comments: |  |

| E3n. Other $\rightarrow$ comments: |  |
| E3o. Other $\rightarrow$ comments: |  |
| E3p. Other $\rightarrow$ comments: |  |
| TOTAL .... | E2c |

## SECTION F Election Day Activities

- F1 and F2 ask for turnout figures for the November 2008 general election and the source used to arrive at this number.
- F3 asks for the number of first time voters who registered to vote by mail and, under HAVA 303(b), were subject to provide identification.
- F4 asks for information on electronic poll books or electronic lists of voters that may have been used.
- F5 and F6 ask for information on printed poll books or printed lists of voters that may have been used.
- F7 asks for the type of primary voting equipment used.
- F8 solicits any additional comments jurisdictions may wish to share regarding their Election Day experiences

F1. Enter the total number of people in your jurisdiction who participated in the November 2008 general election. Include all type of voters (civilian and military) by all types of ballots. Include rejected provisional ballots only if your jurisdiction credits the person's vote history even though the provisional ballot was rejected.

F1a. Total. $\qquad$
$\square$ ... $\qquad$Data not available

Next, divide the total number people who participated in the November 2008 general election (as entered in F1a) into the following categories. The amounts should sum to the total provided in F1a.

Data not available

F1b. Voted at a physical polling place on Election Day (not including provisional ballots or absentee ballots dropped off at the polls). $\qquad$
$\square$
$\qquad$
F1c. UOCAVA voters who voted via absentee or FWAB (as in B2) $\qquad$
$\square$

F1d. Voted using a domestic civilian absentee ballot (as in D7c) $\qquad$
$\square$

F1e. Voted using a provisional ballot (as in E2) $\qquad$
$\square$

F1f. Voted at an early vote center $\qquad$
$\square$

F1g. Other $\rightarrow$ comments: $\qquad$ .............................................. $\square$
F1h. Other $\rightarrow$ comments: $\qquad$ ............................................ $\square$
F1i. Other $\rightarrow$ comments: $\qquad$ ............................................. $\square$
$\qquad$

## F1 Comments

$\square$

F2. Indicate the source used to arrive at the total number of voters entered in F1a. (Select only one source.)....... Number of voters checked off by poll workers or who signed poll books at physical poling places plus the number of UOCAVA and other absentee or early voters...... Number of ballots counted at precincts and/or at a central location (including UOCAVA and other absentee or early vote ballots)....... Number of voters generated after "vote history" has been added..... Number of votes cast for the highest office on the ballot........ Other: $\rightarrow$ comments: $\qquad$
F2 Comments
$\square$

F3. Enter the number of voters in your jurisdiction who were first time voters in the state and who registered to vote by mail, and therefore, under HAVA 303(b), were required to provide identification in order to vote and/or have their ballot counted in the November 2008 general election.

Total. $\qquad$
$\square$ . $\qquad$Data not available

F3 Comments
$\square$

F4. Were electronic poll books or electronic lists of voters used at the polling place for the November 2008 general election in your jurisdiction to (select either Yes or No for each item):

|  | Yes | No |
| :---: | :---: | :---: |
| a. Sign voters in. |  |  |
| b. Update voter history ...................................................... |  |  |
| c. Look up polling places.................................................... |  |  |
| d. Other $\rightarrow$ comments: |  |  |
| e. Information unavailable |  |  |

## F4 Comments

$\square$
F5. Did your jurisdiction use printed lists of registered voters at the polls in the November 2008 Federal general election?
Yes ......................................... $\square \rightarrow$ Continue to F6
No ........................................... $\square \rightarrow$ Skip to F7
Information unavailable.............. $\square \rightarrow$ Skip to F7

F5 Comments
$\square$

F6. Did your state print and ship the printed poll books to your local jurisdiction or did your jurisdiction arrange for the printing of the poll books? (Select only one.)

F6 Comments
$\square$
F7. Enter information on the number and type of voting equipment used for the 2008 November general election. Then, for each type of voting equipment,

## END OF SURVEY

## THANK YOU FOR RESPONDING TO THIS SURVEY

* This information collection is required for the EAC to meet its statutory requirements under the Help America Vote Act (HAVA) of 2002 (42 U.S.C. 15301), the National Voter Registration Act (NVRA) ( 42 U.S.C. 1973gg-1 et seq.), and the Uniformed and Overseas Citizens Absentee Voters Act (UOCAVA) (42 U.S.C. 1973ff-1). Respondent's obligation to reply to this information collection is mandatory as required under NVRA (42 U.S.C. 1973gg-1 et seq.) and UOCAVA (42 U.S.C. 1973ff-1); respondents include the fifty states, the District of Columbia, and the U.S. Territories. This information will be made publicly available on the EAC website (www.eac.gov). According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is OMB Control No. 3265-0006 (expires $3 / 31 / 09$ ). The time required to complete this information collection is estimated to average 88 hours per state response. This estimate includes the time for reviewing the instructions, gathering information, and completing the form. Comments regarding this burden estimate should be sent the U.S. Election Assistance Commission - 2008 Election Administration and Voting Survey, 1225 New York Avenue, Suite 1100, Washington, DC 20005.

[^0]:    8 Because of inconsistent data reporting, this number is higher than the number submitted for counting $(23,733,439)$.

[^1]:    9 The different ways that States use provisional ballots makes direct comparisons difficult. Ohio, for example, uses provisional ballots to process voters' change of address requests in addition to providing an alternative means to vote.

[^2]:    Expiration Date: $3 / 31 / 2009$
