- reflects limited but responsible federal participation.

In Ohio, the Secretary of State and the State Plan Committee used those broad parameters, principles and guidelines as the foundation objective for developing this plan. From that platform, the Secretary and State Plan Committee formulated the Ohio Plan to address the following specific issues to meet and exceed the minimum standards of the Help America Vote Act. In greater detail, this report addresses:

1. How Ohio will use requirement payments, distribute and monitor the allocation of these funds to county governments, and what criteria will be used to determine eligibility for these funds.
2. How Ohio will measure the performance of county governments to ensure they are in compliance with the Act.
3. How Ohio will develop programs to provide voter education, election official and poll worker education and training to meet the standards of the Act.
4. How Ohio will establish voting system guidelines and processes.
5. How Ohio will administer these activities and budget for administrative costs, as well as establishing a budget for overall implementation of the plan based on our best estimate of costs.
6. How Ohio will use the requirement payments without reducing state support for voter and election activities below what the state was spending in November, 2000.
7. How Ohio will establish performance goals and measures for county government.

8. How Ohio will create and develop a uniform administrative complaint procedure.

9. How payments under Title I will be used for punch-card replacement in Ohio and how that will affect and enhance the overall implementation of the plan.

10. How Ohio intends to conduct ongoing oversight and management of election reforms and improvements.

As the following section of the report suggests, election reform as envisioned by the Help America Vote Act is not a casual undertaking in Ohio. The demographics of the state reveal a broad mix of urban, rural and mid-size communities. Ohio, for example, has eight urban markets that include three large metropolitan cities — Cleveland, Columbus and Cincinnati. Smaller urban centers include Toledo, Youngstown, Dayton, Akron and Steubenville. Each enjoys its own community culture and election traditions.

In addition to these larger urban centers are mid-size communities like Mansfield and Lima, which represent the balance of Ohio’s Metropolitan Statistical Areas (MSA’s) according to the U.S. Census Bureau. But beyond those 10 communities and the counties they represent are 78 other Ohio counties that reflect a more rural population, including a large portion of Southeast Ohio that is designated as part of the Appalachian region.

The size and composition of Ohio’s population is a challenge to implementation of wholesale election reform in the state, but Ohio also is challenged because of the prevalence of punch-card voting. Nationally, it is estimated that 34.4 percent of the nation’s voters cast their ballot on punch-card voting devices. In Ohio, 72 percent of the state’s voters use this ballot method.
Given that context, we offer the following demographic overview of the State of Ohio to provide the Election Assistance Commission with what we regard to be a valuable foundation perspective for the implementation of election reforms in Ohio.

II. Ohio Demographics

While Ohio remains one of the nation’s leading manufacturing centers, the state, during the past two decades, has made the transition to a more service-industry economy. Nearly 28 percent of Ohio’s 5.4 million employee workforce is now classified as service employees. From 1990 to 2000, the state’s population grew from 10.8 million to 11.3 million.

The state is comprised of 88 counties that occupy nearly 41,000 square miles of land. Ohio is bounded on the south and east by the Ohio River and on the north by Lake Erie.

About 11.5 percent of that population is African-American and 1.9 percent is Hispanic/Latino, according to the most recent Census data. In total, Ohio’s minority population is about 16 percent of the total population.

The median age in the state is 36.2 years of age and, like many other states, is trending older. About two-thirds of Ohio residents live in owner-occupied households and about 29 percent live in renter-occupied dwellings.

The state has a wealth of educational institutions with 15 public four-year universities and 62 private colleges and universities. There are 25 two-year colleges in the state. The largest counties, in rank order and based on 2000 Census data, are:

The state’s major employers include such corporate notables as AK Steel, Daimler Chrysler, Delphi Automotive Systems, Ford Motor Co., General Electric Co., General Motors Corp., Goodyear Tire & Rubber Co., Honda Motor Co. Ltd., Kroger, Nationwide Insurance, Procter & Gamble, TRW Inc. and Wendy’s International.

In total, there are about 240,000 active businesses in Ohio, including about 80,000 farms that represent 14.9 million acres.

The state boasts 115 state parks that provide nearly 115,000 acres of recreational space for Ohio residents. There are six airports in the state with scheduled airline service and another 164 commercial airports and 10 commercial heliports. Transportation arteries
in the state include 1,572 miles of interstate highways, 3,918 miles of U.S. highways, and more than 14,000 miles of state highways. The Ohio Turnpike that ribbons through northern Ohio covers 241 miles from the Indiana state line to the Pennsylvania state line.

### III. State Political/Governmental Structure

Ohio is governed by five major statewide officeholders including Gov. Bob Taft, Attorney General Jim Petro, State Auditor Betty Montgomery, Secretary of State J. Kenneth Blackwell and Treasurer Joseph Deters. The Ohio General Assembly includes 99 members of the Ohio House of Representatives and 33 members of the Ohio Senate. Since 1992, both statewide officeholders and elected legislators are subject to term limits. Statewide officeholders are limited to two four-year terms. In the Ohio General Assembly, House members are limited to four two-year terms and State Senators are limited by two four-year terms.

Some local government officials also are subject to term limits as a result of local ballot initiatives in some Ohio communities.

The Ohio Supreme Court includes seven justices who are elected statewide. The Supreme Court is not subject to term limits. The Chief Justice of the Ohio Supreme Court is Thomas Moyer.

The local government structure in Ohio includes a mix of city and county elected officials, with most cities and villages in Ohio administered by a mayor/council form of government. Some municipalities have an appointed city manager form of government in which an executive is appointed to administer local municipal affairs.

In Ohio local government, there are "statutory" cities that operate largely on the basis of state statutory law and "charter" cities that may adopt so-called "home rule" guidelines to conduct the affairs of local government.

On the county level, 87 of 88 Ohio counties are governed by a Board of County Commissioners, which oversee county administration. Summit County is the only county in Ohio with a county executive/council form of government. The Summit County Council is comprised of eight district council members and three who are elected at large. Ohio counties also elect county auditors, prosecutors, treasurers, clerks of court, judges and county sheriffs.

The state is represented by 18 elected members of the U.S. House of Representatives and, of course, two U.S. Senators.
IV. State of Ohio Elections Systems

Ohio is, pervasively, a punch-card voting state. In total, 69 of Ohio’s 88 counties use punch-card voting. Those 69 counties represent 72.5 percent of all the registered voters in Ohio and 74 percent of the 11,756 voting precincts in the state.

Among the 19 counties that use voting devices other than punch-card ballots, two use automatic voting machines, six have electronic voting devices, and 11 use optical scanning equipment.

The table below (that continues on the following pages) shows a county-by-county listing of the types of voting devices in each of Ohio’s 88 counties. The table also reflects the number of precincts and registered voters in each of those counties as reflected in the November, 2002 General Election, which we use as base data throughout this report (unless otherwise indicated.)

</table>
Of note, two of Ohio’s largest counties - Cuyahoga and Hamilton counties - currently use punch-card ballot devices, as do two other large urban centers in Ohio, Montgomery and Summit counties. Those four counties, alone, account for nearly 3,600 of Ohio’s 11,756 precincts, and more than 2 million of the state’s 7.1 million registered voters. Another large urban center in Ohio, Lucas County, is a lever-machine county.

NOTE: In 2004, the number of registered voters grew to over 7.9 million and the number of precincts was reduced to 11,360.

In February 2001, the Secretary of State conducted an “Elections Summit.”1 Participants included academics, members of the media, local election officials, legislators, and community groups. The group reported the following:

1. Public confidence in the accuracy of punch card voting systems has been seriously undermined.
2. Boards of elections should upgrade their voting systems to new, more trustworthy technology.
3. Comprehensive voter education is critical to successful election operations.
4. A combination of federal, state, and local dollars may be appropriate to fund these technological improvements.
5. Ohio’s current elections standards, based on a combination of secretary of state directives, advisory opinions and rulings, should be codified by the General Assembly.
6. These goals demand immediate attention, or our state runs the risk of repeating the problems of our nation’s most recent presidential election – and suffering irreparable damage to the most important and basic concepts of democracy.

Subsequent to the Summit, a separate committee met to study Ohio’s election systems. They concluded (by a 6-5 committee vote) that because of the safeguards and procedures in Ohio election law, the punch-card voting method was adequate and there

---

was no overwhelming need for a statewide overhaul, particularly without available funding.

While the Secretary of State notes that punch-card voting is not explicitly prohibited under the Help America Vote Act, other requirements of the Act make it impractical to use punch-card voting as a primary voting device in the state.

In a study of "over" and "under" voting in Ohio, it was clearly demonstrated that punch-card voting was unreliable to the extent votes cast by thousands of Ohioans were not being counted in the final election tabulation.

Over-voting occurs when a voter casts a vote for more than one candidate in an election and thus disqualifies their vote in that election. Under-voting occurs when a voter fails to mark a ballot in a particular race or votes for fewer than the number of candidates to be elected.

The following table tracks the combined under/over vote phenomenon in the 2000 presidential election in Ohio’s 88 counties:

</table>

1/12/2005
The data shows 29 counties with the highest over/under vote percentage in the 2000 election were all counties that use the punch-card method of voting. The seven counties with the lowest over/under vote percentage in the 2000 election were all counties that did not use punch cards as their primary voting system.

The Ohio challenge in meeting the voter and election reforms envisioned by the Help America Vote Act is obvious. In simplest terms, Ohio is a large and populous state with a diverse mix of urban and rural voters that predominantly relies on punch-card voting as its prevailing voting mode. Modernizing the state’s election systems will require widespread change throughout the state and in its most populous counties.

The transition will require a solution that must consider large and small counties, rural and urban areas, and adjustments that will affect an overwhelming majority of Ohio voters. The obvious corollary challenge is selecting a system configuration that meets the needs of all those counties, training election officials and poll workers to use new voting systems, and familiarizing Ohio voters with new voting devices.

While on its face, this appears to be a daunting challenge, we are confident Ohio’s State Plan logically anticipates those factors and will meet the guidelines, demands, timetables and expectations of the Help America Vote Act.

---

2 Shelby County, a punch-card county, reported no over/under vote in the county’s vote tabulation in the 2000 presidential election cycle. This would appear to be a reporting error.
V. Voter Trends: the Context for Change and Reform

We pause only for a moment in this report to reflect on voter turnout in Ohio. We do so for several reasons, not the least of which Ohio contemplates election reform and system modernization to take place in a presidential election year when voter turnout is higher and demand on the election system is greatest.

We also explore voter turnout and trends as context for meeting the most desirable benefit and objective of the Act: to restore public confidence in the election system and, subsequently, increase voter participation. While new, more technologically proficient systems, increased voter registration, accessibility and accuracy are hallmarks of Help America Vote, the more encompassing aim of the Act is to invite more voters into the process to exercise their rights and responsibilities as qualified electors.

In developing the State Plan, we must anticipate that voter participation will increase, voter turnout percentages will climb, and demand on the election system will be greater. We can only gauge those factors based on Ohio’s experience in past elections and the historical trends that will serve as a predictor of future trends.

The following table tracks Ohio voter turnout in both gubernatorial elections and presidential elections during the past 24 years.

The chart shows that during the course of the past six gubernatorial elections, voter turnout has averaged about 55.79 percent. During the past six presidential elections, voter turnout in Ohio has averaged 71.33 percent. Based on this historical data, Ohio can generally anticipate about 1.25 million more voters in a presidential election year than in a gubernatorial election cycle.

Even a modest 5 percent gain in that average means 62,500 more voters. Subsequently, based on projected population growth and increased voter participation as a result of election reforms and modernization, our State Plan assumes 150,000 new voters during peak presidential elections growing at an annual rate, after initial implementation of new systems and election reforms, of 3 percent per annum.

As a result, our Plan assumes that growth rate and the recommended voting systems design model proposed in this report anticipates that growth and demand on the state’s election system in future peak presidential voting years. We use the presidential
voting cycle as a base for our plan because that assumes the heaviest potential voter turnout and the busiest times for local boards of elections.

Since 1978, voter participation in the state's gubernatorial elections has grown from 3 million voters to about 3.3 million voters. Since 1980, voter participation in presidential elections has grown from about 4.3 million voters to about 4.8 million voters. Factoring population growth during those decades, those statistics would imply that voter participation has remained relatively flat and, in all likelihood, is trending lower.

We have a high confidence level that the election reforms of the Help America Vote Act will produce more voter activity and a greater number of voters. Ohio doesn't view the Act as a final effort to produce greater voter participation, but the beginning of an expanded effort to entice more voters to exercise their rights and responsibilities to participate in the election process.

We believe modernization and reform require us to actively engage in voter education and to continue to evaluate programs that will produce greater participation in the democratic process. We pledge our effort to continue to explore new and innovative programs that will achieve those objectives.

VI. How Ohio Developed its State Plan

In development of the State Plan, we insisted on inclusion in both creation of the State Plan Committee and in public input into the process. This report represents a broad outreach to minorities, senior citizens, people with disabilities, elected officials, election officials, public interest groups and the public at large.

Our foundation principle in developing this plan was based on the view that such far-reaching reforms to a system so vital to the most fundamental democratic process in our state and nation required a fair, open and dynamic process where there is an opportunity for every voice to be heard. We were proactive in developing a structure to embrace that principle.

As a first step in our process, we widely publicized hearing dates and created a web site that invited public comment and input. We invited written testimony from groups and organizations who wanted to lend their perspective to election reform in Ohio. Additionally, we actively solicited input from critical stakeholders for our public hearings, including key representative voices from among groups such as the Urban League, the League of Women Voters, the Disability Policy Coalition, and the American Association of Retired Persons (AARP).

Our lead-off witness was Chet Kalis of the House Administration Committee, who worked closely with U.S. Rep. Bob Ney, R-Ohio, primary sponsor of the Help America Vote Act of 2002. We asked Mr. Kalis to lay the groundwork for our committee by providing them with a foundation perspective of the Act, its mission, aims and objectives.

The State Plan Committee also heard from Doug Lewis, executive director of The Election Center, a national nonprofit organization serving the elections and voter registration profession. Mr. Lewis developed and authored the Professional Education Program for elections/registration officials – named the best continuing education program in the nation by the National University Continuing Education Association.
Mr. Lewis was able to provide the committee with a national view of election reform and voter registration from the valuable perspective of someone with intricate knowledge of election systems across the nation.

To provide the perspective on Ohio, Dr. Herb Asher, professor emeritus of political science at The Ohio State University, brought election reform home for our State Plan Committee. Few voices are more respected than the voice of Dr. Asher as a knowledgeable expert and commentator about the political and election process in Ohio.

While the State Plan Committee itself included representation from boards of elections, we reached out to three other boards to provide the committee with a strong representative sample of the diverse local election operations in the state. Among those invited to testify were Janet F. Clair, director of the Lake County Board of Elections, Rita Yarman, deputy director of the Knox County Board of Elections, and Terry Burton, deputy director of the Wood County Board of Elections.

The testimony of the three elections officials was particularly valuable to the Committee because Lake and Knox counties are two jurisdictions that recently modernized their election systems. In addition, four other counties – Ross, Pickaway, Mahoning and Franklin counties – currently have electronic-based voting systems. Wood County represents one of the Ohio counties facing an extensive overhaul of its system under the Help America Vote Act.

Dolores Blankenship, advocacy volunteer from AARP, offered the State Plan Committee an incisive look at the election process through the eyes of a senior citizen, and eight witnesses representing the Disability Policy Coalition offered riveting testimony about the Election Day challenges facing voters with disabilities.

The strong presence of people with disabilities in these hearings underscores the importance Ohio attaches to this issue and our resolve to provide physically challenged voters with every opportunity to cast their ballot in a setting that assures their access to the polls and their right to cast a ballot unrestrained by barriers and obstacles that preclude their full participation in the voting process.

Peg Rosenfield, a former state elections official and now a representative of the League of Women Voters of Ohio, provided testimony on behalf of that voter advocacy group, and Ernest Perry of the Columbus Urban League was the voice for that group.

The final witness was Eric Seabrook, chief counsel to the Ohio Secretary of State, who described the administrative complaint procedure envisioned by Secretary of State Blackwell and the potential contracting procedures under review to establish an election system that meets the uniform voting standards of the Help America Vote Act.

The State Plan Committee met in public session on April 3-4 to hear testimony from these witnesses and then reconvened on April 17 for a focused facilitated work session to refine and finalize the State Plan.

We believe the process used to develop the State Plan in Ohio is one of the most aggressive public outreach efforts in the nation. While the aim of the process was to be as inclusive as possible, we think it had the added benefit of educating and informing the committee and citizens of our state about the Help America Vote Act and its far-reaching implications for an improved voting and election system in Ohio.
The open and proactive design of our process signaled to every Ohioan the importance of enacting voter and election reforms in the state, and how that reform was likely to affect their participation in the electoral process.

In addition to the public hearings, the Secretary of State solicited all Ohioans to provide input to the plan by providing written communications with his office or to communicate ideas via the Secretary of State's website. This communication was provided to members of the State Plan Committee and is attached as part of the State Plan.

**VII. Federal Funding Assumptions of the Act**

The Help America Vote Act of 2002 makes available certain federal funding to help achieve requirements and mandates of the Act. The funding components of the Act are reflected in Title I, Title II, Title IV and Title V. In summary, the federal government has agreed to the following federal funding thresholds for each of the Title sections of the Act:

**Title I – Antiquated Machine Buy-Out**
- $325 million for buying out punch-card and lever voting machines.
- $325 million in payments to states to improve election administration.

**Title II – Election Assistance**

- **Requirement Payments**
  - $3 billion for meeting requirements, poll-worker training, voter education, and improving administration of elections.
- **Access Grants**
  - $100 million for increasing polling place access for voters with disabilities
- **Research Grants**
  - $20 million for research and development to improve voting technology
- **Pilot Program Grants**
  - $10 million for pilot programs to test new voting systems and equipment.
- **Protecting and Advocacy Systems Payments**
  - $40 million for state protection and advocacy systems.

**Title V – Help America Vote College Program**
- $5 million to encourage college students to participate in the political process by volunteering as poll workers.

**Title VI – Help America Vote Foundation**
- $5 million to encourage high school students to participate in the political process by volunteering as poll workers.
Of obvious, primary and immediate importance to the State of Ohio is the Title I funding and the state’s share of Title II monies for Requirement Payments for poll-worker training, voter education, and improving administration of elections, as well as federal funds available for Access Grants to make election sites more accessible to people with disabilities. These three specific funding sources enable Ohio to address what we regard to be the core modernization and reform of its election system.

The buy-out program under Title I has special implications for Ohio because of the prevalent use of punch-card voting in the state. Likewise the $325 million being allocated to states to improve election administration is important because these funds represent resources that will be allocated for development of a centralized voter registration system in the state.

The state will apply for research and pilot program grants. But for now, our focus is to first establish a reliable, accurate and fair election system, conduct the training and education necessary to make that system work, and to ensure accessibility of the disabled and physically challenged citizens of our state. The Secretary of State believes Ohio should be particularly aggressive in seeking available federal funds under Title II for access grants to make Ohio’s polling places more accessible to the disabled.

Title I largely represents base funding for Ohio to address the mechanical implementation of the Help America Vote Act. Title II payments represent a source of funding to train, educate and administer the state’s election program once the transition is made from punch-card voting to a more modern mode of voting, and to make poll sites more accessible to people with disabilities. Later in the plan, we discuss allocating a portion of Title II funds to voting system upgrades.

The state will apply for research and pilot program grants. But for now, our focus is to first establish a reliable, accurate and fair election system, conduct the training and education necessary to make that system work, and to ensure accessibility of Ohio’s citizens with disabilities. The Secretary of State believes Ohio should be particularly aggressive in seeking available federal funds under Title II for access grants to make Ohio’s polling places more accessible.

Of note and as it relates to Title V and Title VI of the Act, the Ohio Secretary of State’s office is currently conducting research related to poll worker issues. A component of that research anticipates a greater role for high school and college students in the electoral process, as well as other initiatives that will enhance the identification, selection, education and training of poll workers.

As this State Plan is being submitted, we anticipate that research will be completed and recommendations forthcoming in the next few months about how Ohio will maximize poll-worker recruitment and training, and ensure the presence of quality, qualified poll workers in every precinct.

Such initiatives underscore our determination to not only meet the minimum requirements of the Help America Vote Act of 2002, but to make Ohio a model state for implementation of these reforms and to lead the nation in development and
implementation of a modern, fair, reliable and accurate election system. As U.S. Rep. Bob Ney led the federal initiative to enact the Help America Vote Act, it was the mandate of our State Plan Committee to formulate a plan that makes Ohio a showcase for election reform.

VIII. Distribution of Resources to Local Governments

We first explore our proposed distribution of aid to local government under Title I. Under guidelines of the Act, these funds must be used assuming the following criteria:

- These funds may be used as a reimbursement for costs associated with punch-card or lever machine replacement incurred after Jan. 1, 2001.
- There is a presumption states must ensure compliance in time for the November, 2004 Federal Election.
- Within six months after the date of enactment, Ohio must certify that the state will use the money for punch-card/lever machine replacement, the state will comply with federal laws, and the voting system will meet new voting system standards.

We anticipate that no change in state law or new legislation will be required to carry out the activities required for certification.

At the initial writing, the Congressional Research Service (CRS) estimated that full-funding under the Act, for both Title I and Title II receipts, would total $155,251,155. CRS estimates $116,423,155 of that amount represents Title II funding under the Requirements Payments component of the Act. However, as of this revision date, the Congress has not appropriated the full funding as prescribed in Public Law 107-252.

In addition, the state has appropriated $5.8 million in matching funds for Title II payments, as required by the Act, which means total available funds for implementation of the State Plan in Ohio will be approximately $132 million.

All money in Title II is based on the state’s portion of the nation’s voting age population. The most recent estimate is that Ohio’s 8.5 million voting-age population represents 3.97 percent of the nation’s voting age population of 215.1 million.

Because of the prevalence of punch-card voters in Ohio, we are keenly focused on the distribution of funds under Title I and, more precisely, the buy-out program. The Act stipulates the funds will be distributed to states by multiplying the number of qualifying precincts by $4,000. However, based on available federal funds for this purpose and the number of punch-card and lever-machine jurisdictions in the U.S., it now appears that number likely will be about $3,354 per precinct. As previously mentioned, Ohio has 69 counties designated as punch-card counties.

In addition, two Ohio jurisdictions – Hardin and Lucas counties – feature lever voting machines and would be eligible for funding under the guidelines.
In total, under the formula, the 69 punch-card counties and two lever-machine counties in Ohio means the state would be eligible for about $31 million in federal funds under the buyout program.

However, we know $31 million is insufficient for the counties to purchase modern, reliable voting systems capable of meeting requirements of the Act. Subsequently, our budget for voter and election reforms in Ohio presumes the state will require about $24.2 million to establish a centralized voter registration database and related support for voter education and poll worker training. Our plan calls for the remainder of the Title funds to be allocated to Ohio’s 88 counties to help subsidize installation of new systems and implement other required activities under the Act.

Following is the budget we envision for distribution of the $161 million in funds in Ohio to meet requirements of the Help America Vote Act:

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

In simplest terms, this allocates Help America Vote funds where the money is needed most: in Ohio counties. While it is the responsibility of the Ohio Secretary of State to monitor performance and ensure implementation of the Act, the execution of the Ohio plan, ultimately, will take place at the county level. On that basis, we believe it
prudent to maximize resources for election reform in the counties where election reform will occur.

While much of the focus is on the counties with punch card and lever-machine voting systems, in reality, all 88 Ohio counties will be expected to conduct some form of system modification and upgrade to make the system in Ohio uniform and compliant with the Act. Subsequently, the premise of the Ohio Plan is to look at the voter and election system statewide, based on the distribution of registered voters in each of the 88 counties.

Viewed in that context, the $166 million to be allocated to the counties will be distributed in the following priority order, as federal funds become available:

- Replacement of punch-card and lever-machine voting equipment to the extent that new voting systems would be installed immediately in the 71 affected counties;
- Installation of voting devices compliant with the disability requirements of the Act in all 88 counties;
- Bringing remaining counties into compliance with Section 301 of the Act by funding necessary upgrades and refinements of all other existing systems and equipment.

The Secretary of State reserves the right to distribute the funds to counties based on need and special circumstances.

The Secretary of State defines “need and special circumstances” to mean that it is possible some counties will need less funding and others more funding to meet the compliance standards of the Help America Vote Act. On that basis, the Secretary of State will shift funds as he deems necessary to bring all counties into compliance.

The Secretary of State acknowledges that one county, Mahoning County, took the initiative to convert their voting system to electronic voting after Jan. 1, 2001. Funding consideration will be given to all six Ohio counties using electronic voting equipment to bring those counties into compliance with HAVA.

We think this model provides us with great flexibility to allocate Title I and Title II funds in a way that assures full compliance with the requirements of the Act. Invariably some funds would be shifted away from counties that demonstrate a lesser need and reallocated to counties that demonstrate a greater need. But the allocation method is a fair method that will further assure all counties that adequate funds will be available to fully fund the requirements of the Act at the local level.

The Ohio Secretary of State will establish guidelines as part of the performance measurement for county compliance. When compliant systems are purchased for the counties, the Secretary of State will require transition to new voting systems by all punch-card and lever-machine counties by May 2, 2005. The Secretary of State will provide counties with a list of acceptable vendors to supply the new voting equipment and counties must choose from that approved list by no later than Sept. 1, 2003.

Since the Secretary of State will centralize and oversee this process, the Secretary will ensure compliance with all requirements of the Help America Vote Act. The performance timeline requires the Secretary to establish the list of approved vendors by
Aug. 1, 2003, providing county boards of elections with ample time to review the list, choose the vendor and establish transition to the new voting systems.

To ensure uniformity and compliance, the Secretary of State will stipulate design specifications for voting equipment. If a county fails to select a vendor by Sept. 1, 2003, the Secretary of State will designate a vendor for that county and order installation of new voting equipment in that jurisdiction.

Although the Act required the replacement of punch-cards and lever machines by the General Election in 2004, the Secretary of State wanted these new systems in place in Ohio for the Primary Election to ensure a smooth, seamless transition and full operational capability in time for the presidential election. Due to extenuating circumstances, a waiver was granted in December 2003 giving the Secretary of State until the Primary Election in 2006 to replace punch-card and lever machines.

On May 7, 2004, Governor Taft signed into law Substitute House Bill 262. The Act requires all direct recording electronic voting machines used in Ohio to include a voter verified paper audit trail and changes the process for counties to acquire voting systems using funds made available pursuant to the Help America Vote Act (HAVA) of 2002. As the result of this additional legislative requirement, the Secretary of State was forced to revisit the original decision to allow counties to select between Direct Recording Electronic (DRE) and Precinct Count Optical Scan (PCOS) voting systems. A logical analysis of the requirements of both HAVA and SHB262 showed that in order for the state of Ohio to be in compliance with both federal and state law, meeting both time, costs and certification constraints, the Secretary of State must purchase Precinct Count Optical Scan voting systems through existing contracts already approved by the Controlling Board to satisfy HAVA requirements. While this change limits the flexibility previously offered to the counties when selecting between voting systems, the use of Precinct Count Optical Scan voting systems introduces a new opportunity for counties in the form of improved operational processes. Furthermore, the Secretary of State will allow counties to re-select their vendor based upon the additional mandated requirements of Substitute House Bill 262. All counties must submit in writing to the Secretary of State their vendor selection by February 9, 2005.

The Secretary of State has already established a fund account for all federal monies designated for Ohio under the Act and those funds, as applicable, will be disbursed from that account as our plan is implemented. This account is segregated to reflect federal funds designated for county buy-outs, election administration and Requirements payments.

Reports will be generated to show the allocation and distribution of these funds and that report will be forwarded to the Election Assistance Commission along with a performance report to show the state’s progress and performance in implementing provisions of the Act.
IX. §301. Meeting the Voting System Standards of the Act

The Help America Vote Act requires "uniform and nondiscriminatory election technology" that meets specific voting system standards. Ohio has opted for a program that specifically addresses the requirements of the Act, but provides counties with some degree of flexibility in choice of vendor and how they implement and develop voting systems to meet the particular needs of their region.

Assurance that the state will meet voting system standards specified in the Act is the responsibility of the Secretary of State, so system specifications will be drafted by the Secretary and the list of available vendors will reflect only those companies that submit bids demonstrating their ability to meet the rigorous and unambiguous system specifications and timelines established by the Secretary.

To ensure compliance with the Act, the Secretary of State will appoint a committee comprised of knowledgeable persons in the Secretary's office who have the technical capability to review vendor proposals for electronic voting equipment and tabulating devices and the committee will recommend final adoption of a list of approved vendors that meet system specifications. The committee will review standards set by the Standards Board and make recommendations to the Secretary based on tabulating systems meeting the standards set by the Federal Election Commission.

Additionally, the Secretary of State will ask the state's Board of Voting Machine Examiners to review the recommendations of the committee to ensure the vendors and systems meet not only the requirements of the Act, but are reasonable based on their knowledge of Ohio counties and their voting needs. The Board of Voting Machine Examiners currently provide a valuable service to the Secretary of State in the certification of voting equipment to ensure the equipment meets established certification criteria set by the National Association of State Election Directors.

It is logical this group assist the Secretary in this important endeavor to modernize and reform Ohio's voting systems.

Providing counties with the ability to choose among a list of qualified vendors preserves the involvement of the counties in the vendor process while maximizing the buying power of the state under a state term contract procedure. The Secretary of State will serve as the primary contractor for voting devices in the State of Ohio, embracing the concept that the ultimate beneficiaries of the contract are the counties.
Ultimately, the responsibility for ensuring compliance with the Help America Vote Act of 2002 falls to the chief elections official in the state. But the Secretary of State recognizes the execution of the Act will take place at the county level.

Each vendor chosen to participate in the selection process must demonstrate a capability to serve the whole of the state and, potentially, all 88 counties. Successful vendors must also certify their ability to provide the volume of equipment required to service the state, and demonstrate the organizational capacity to provide statewide support, training and service to county clients.

Eligible vendors must assure their equipment meets a high threshold of security, accuracy and ease of use. They must also ensure timely delivery of equipment to meet the deadlines established by the Secretary of State for full implementation and operation by Feb. 1, 2004. Finally, the financial viability of the vendor will be a consideration for the awarding of contracts.

The Secretary of State believes training and education are essential to the successful deployment of new voting machine equipment. The best technology available is rendered useless unless vendors can provide adequate training and education to ensure both election officials and voters know how to use the equipment efficiently and effortlessly.

To achieve the education and training objective, some states have earmarked a portion of available money specifically for that purpose. We will request vendors designate how much of their proposal specifically applies to training and education.

Absent a recitation of detailed technical requirements listed in the request for proposal that will be issued by the Secretary of State, the Secretary insists successful bidders must provide a system that, at minimum, accomplishes the following:

**General Requirements**

- Guarantees voters will be able to verify their ballot before it is cast and counted. This means the system must include features that allow voters to vote, review their ballot choices and decisions, and correct errors or omissions before submitting their vote for final tabulation.

- As part of the review and correction process, if a voter selects more than the permissible number of candidates for a single office, the system will alert the voter of the selection and its impact, or prevent over-voting. Additionally, the system must give the voter an opportunity to correct the ballot before it is processed and counted.

- In addition to providing equipment, hardware and applicable software to accomplish these features, vendors will be required to include, as a supplement to the system, information materials clearly explaining the operations and functions of the voting equipment, the effect of casting multiple votes for one office, and corrective procedures and processes available to voters. The system also must alert voters when they have failed to vote for a candidate or issue. We envision a simple pamphlet or brochure that
will be available to every voter written in clear language with amplifying graphics.

- The system must ensure the privacy of the voter and confidentiality of the ballot.

Audit Capacity

- While the system allows the vote to be counted and tabulated electronically, the system also must be capable of producing a permanent paper record that can be audited manually. The paper record must be produced in such a way as to function as an official record for any potential recount or any question that might arise subsequent to the election.

This issue was addressed by several witnesses and State Plan Committee members during our public hearings. Almost everyone agrees that to ensure public confidence in any voting system, there must be a paper trail that will provide election officials, the public and media with a permanent, retrievable and readily accessible record and history of the election and provide a traceable mechanism to accommodate questions, election-related issues and recounts.

Ms. Rosenfield of the League of Women Voters told the State Plan Committee that an audit capacity in the form of a paper record was critical to reassure the public and the media that an open and fair election was conducted. We agree and this component is essential to any system configuration advanced by all prospective vendors.

Disability Access

- The system must be accessible for individuals with disabilities, including non-visual accessibility for people who are blind or who have visual impairments, ensuring the same standards for privacy and confidentiality afforded to people without disabilities. This means the voting system for people with disabilities must allow them to vote unassisted. At least one voting device must be available at each polling location that includes, at minimum, audio features. Additional features could include keypad functions and enlarged font size. The system must also include features that accommodate people who have limited mobility. That means the device must be of a sufficient weight and size to be transported within the environs of the voting location in those facilities that may not be readily accessible and sufficiently adjustable to match voters’ eye levels.

During the hearings, we heard from several witnesses with first-hand knowledge of disabilities who underscored for us the importance of not only focusing on voting devices, but the accessibility of polling places. Technology, we were told, does not remedy polling locations that are difficult for people with disabilities to navigate or facilities that lack adequate amenities, such as accessible restrooms.
Karla M. Lortz of Delaware, Ohio, reminded us that voting is a basic American right that should not be restricted or diminished because of a disability. She also emphasized the need to train and educate poll workers about persons with disabilities.

But all of those with disabilities who testified stressed the need to be vigilant about the selection of poll and voter sites to ensure they are barrier free and accessible.

Ohio law requires that a polling place is considered accessible if it is free of barriers that would impede ingress and egress of people with disabilities. The law requires the entrance to be level or feature a nonskid ramp of not more than 8 percent gradient. Doors must be a minimum of 32-inches wide (R.C. 3501.29.)

The Secretary of State will require that all election sites and facilities be reviewed for access to ensure these voting locations meet and, if possible, exceed these minimum standards. At the recommendation of committee member Eric Duffy, the Secretary also will convene a committee to study this issue and to make recommendations about how the state can best address the needs of voters with disabilities.

Alternative Language Accessibility

- Where applicable and in those precincts where substantial non-English speaking populations exist, voting systems must provide alternative language accessibility pursuant to the requirements of the Voting Rights Act of 1965. This alternative-language accommodation shall be available in any precinct where it is determined that 5 percent or more of the registered voters in any precinct might be non-English speaking voters. Each county board of elections is required, 30 days prior to any election, to assure that alternative language mechanisms are available, as mandated by law.

Based on the current composition of the state’s population, there is no concentration of non-English speaking populations that warrant specific activities in this regard. However, as the composition of the state’s population changes, counties will be required to address this issue as the need arises.

Error Rates

- All voting systems in the state must achieve an error rate threshold that complies with error-rate standards established by the Federal Elections Commission (FEC) which are in effect 30 days prior to any election. The Secretary of State will take steps and facilitate measures to require performance of logic and accuracy tests by counties before elections and will require counties to have all system tabulating equipment and programs tested to ensure the correctness of the vote count cast within the error parameters established by the FEC.

Additional Considerations
Although we explore this later in our discussion of voter education, we offer two additional vendor considerations for our system specifications. The Secretary of State invites vendors to consider, as part of their proposal, a model or "practice" voting device that simulates the actual voting machine at the polling place. We believe this feature would provide voters with an opportunity to become more familiar with the voting equipment before actually casting their vote.

In addition, the Secretary of State will ask vendors to make available software that would enable voters to access such simulators on the Secretary's website via the internet. This feature would enable voters, at their leisure, prior to Election Day, to learn more about the equipment they will use at the voting place and practice using the equipment and devices on the internet.

While we regard this to be part of our proposed voter education program, we think these innovations would help voters better understand the new technology, ease their apprehension about the use of new voting technology, and speed the voting process at the polling place.

We think these elements would minimize much of the confusion that invariably will accompany the conversion of voting systems in the majority of Ohio counties. As more and more Ohioans enjoy expanded access to the internet and world wide web, cyberspace would seem to be a logical environment to offer these features as an enhancement to Ohio's voter education program.

Uniform Definition of Vote

Ohio law grants broad authority to the Ohio Secretary of State with regard to election rules and regulations. H.B. 5 passed by the Ohio Legislature in the 124th General Assembly gives the Secretary authority to issue directives and these directives have the same weight as law when applied to election-related matters and issues.

We note this authority in the Secretary's ability to establish a uniform definition of a vote. Currently, Ohio law addresses the definition of a vote for punch-card ballots. Similar legislation was considered for "optical scan" voting devices, but with passage of H.B. 5, the Secretary of State embraced a definition of vote for optical scanning equipment as part of his directives authority.

As is evident, the Secretary of State has the power and authority, via directive, to adjust, modify, revise and refine a uniform definition to meet the state's needs based on the voting systems adopted in the state. However, the Secretary will consult guidelines
We are mindful of an exciting objective of the Help America Vote Act: to engage high school and college students in the process. Several State Plan Committee members noted the desire to better engage young Ohioans in the election process as both a means to recruit bright, knowledgeable students as poll workers and as an opportunity to make more young people stakeholders in the process.

for with the blood, sweat and tears of those who sacrificed their lives on foreign soil. As these citizen patriots retire from the poll worker ranks in Ohio’s election system, we are looking to the future to determine how best we can recruit the next generation of poll workers who will embrace this important Election Day service with the same degree of commitment, enthusiasm and competence of our older poll workers.

We are mindful of an exciting objective of the Help America Vote Act: to engage high school and college students in the process. Several State Plan Committee members noted the desire to better engage young Ohioans in the election process as both a means to recruit bright, knowledgeable students as poll workers and as an opportunity to make more young people stakeholders in the process. Our research is exploring that challenge and opportunity to pass the torch to the next generation. But the research is also looking at other creative options to ensure Ohio has a ready, able and competent corps of poll workers.

Obviously, these poll workers must be adequately trained to render assistance to voters in a competent and knowledgeable way, not only in terms of helping them
understand and use the new technology that accompanies election reform, but also by applying the laws and addressing the myriad of Election Day issues that invariably arise.

Provisional voting, for example, was a challenge for many of our poll workers during past election cycles as Ohio aggressively implemented new procedures to accommodate provisional voters. Our poll workers have successfully navigated provisional voting and have successfully met the needs of provisional voters.

But to adequately train poll workers, we must first train election officials. The Secretary of State will meet that challenge with a number of programs and initiatives. New training seminars will precede each election in Ohio where election directors and their staff will be given an opportunity to learn about new procedures and changes.

The Secretary of State also will enhance its electronic communication with election officials by providing updates and advisories about changes in state and federal election law. Our goal is to provide this information as soon as we have the information in hand.

Additionally, the Secretary of State will conduct an inventory of current training materials and produce new information and guidelines in both written and video formats. The Secretary also has asked his staff to provide election directors with new materials that can supplement the training of poll workers.

To ensure seamless transition to new voting systems, we are asking system vendors to partner with us in the production of clear, graphically-driven pamphlets and brochures that tell voters how the voting devices work. Earlier we mentioned the use of simulators and internet-based simulation of new voting devices to provide voters with an opportunity to try out the new technology even before they enter the voting booth to cast their official ballot.

We think these enhancements and initiatives will advance our implementation of the Help America Vote Act in Ohio and pave the way for a smooth transition to new voting devices and election processes. Some of our preparation for new election processes in Ohio includes some structural changes. We are asking each county board of elections, for example, to designate a training coordinator who will communicate directly with an election training coordinator in the Secretary of State’s office.

It is our aim for these coordinators to meet frequently throughout the year, exchange information and help us think about ways to improve the election system in Ohio.

After the election, we will gather from all 88 counties a report from these coordinators detailing issues, questions and problems they encountered and how they addressed the situation. From these reports, the Secretary of State will use that data and information to respond to election issues and disseminate that information to election directors so they can make refinements at the local level in subsequent elections.

But to glean a voters-eye view of the process and how we can improve the election system, we will distribute to a selected sample of voters in every county a short survey device that will track their voting experience and give them an opportunity to provide us with feedback on how we can improve the process. The survey will be distributed to a pre-determined number sample of voters throughout the state as they exit the voting booth.
We think this innovation is important to better understand voter needs and to view our election process through the eyes of the “consumer.” Information we collect from both coordinators and the sample voters will guide us in developing relevant and meaningful training materials for both election officials and poll workers in future elections.

The Secretary of State also will develop a new “get-out-the-vote” program in Ohio that will encourage more voters to participate in the election process. While such programs currently exist in the Secretary of State’s office, personnel will be dedicated to conducting research and learning more about voter behavior in Ohio.

In early 2004, the Secretary of State launched “Your Vote Counts,” a comprehensive voter education program aimed at better preparing voters for the November 2, 2004 election. The goal was to provide all Ohio voters with the information they need to vote so that we can reduce the opportunity for difficulties on Election Day. This effort entails ensuring every voter gets the same consideration.

The program’s Web site, www.YourVoteCounts.Ohio.org, features educational materials and instructional videos showing how to vote using punch card, optical scan and DRE (electronic) voting machines. Also included in the program printed material and public service messages for television and radio.

In addition, the Secretary of State has made a special effort to reach out to students with his “Xpect More” campaign. The “Xpect More” advertising campaign is aimed at inviting young voters between the age of 18 and 24 into the democratic process. To date, more than 623,000 “Xpect More” brochures have been distributed to students through schools and across Ohio.

In many states, the appeal is often directed at those who are registered to vote, were registered to vote or who have voted in the past. The Secretary of State would like to target potential new first-time voters by coordinating voter recruitment with civics and government teachers in high schools throughout Ohio where there is a captive audience of potential new voters. Additionally, the Secretary would like to initiate research that targets Ohioans who have never voted to learn more about their decision not to participate in the election process and to determine if there are programs and initiatives that can be implemented to address their concerns and entice them to the polls.

Understanding more about voter behavior and non-voter behavior, we believe, is a proactive step we must take to fully embrace the spirit, intent, principles and objectives of the Help America Vote Act.

The proposed budget for these activities is $2.5 million earmarked for voter education, and $5 million set aside for election official and poll-worker training. We propose making election official and poll-worker training funds available as state grants to the counties to supplement local activities and initiatives of the county boards of elections.

As counties deliberate equipment and voting systems, we will encourage them to consider appropriation of available residual funds to voter education and poll worker
training. In crafting local budgets to achieve the objectives of the Help America Vote Act, we believe counties must give consideration to these initiatives to supplement state efforts for education and training.

In order to qualify for these funds, counties must submit to the Secretary of State a detailed plan that identifies proposed programs and initiatives and how the funds would be used. After each General Election, counties would be required to report on the deployment of these programs and their assessment of the value of the education and training.

XI. §302. Provisional Voting and Voting Information

The critical role of provisional voting in election reform was underscored by a college newspaper in Ohio several years ago that reported only 5.4 percent of registered students at Ohio University actually voted during one election cycle in the late 1990s.3

Provisional voting makes it possible for many more of those students to engage and participate in the elections process. Provisional voting is a way to ensure every eligible voter who shows up at the polls on Election Day can cast a ballot.

For purposes of our State Plan, suffice that Ohio and the Secretary of State, as a matter of public policy, embraces the concept that every effort should be made at every board of elections in the state to accommodate every voter who, for whatever reason, does not appear on the certified list of registered voters in any jurisdiction of the state.

incorrectly recorded or just didn’t get entered into the database in time to be reflected on the voter rolls.

Ohio’s system of provisional voting has been successful and voters who otherwise might have been denied a ballot were given an opportunity in recent elections to cast a provisional ballot, and for local boards of elections to determine if those ballots were valid. We have guidelines and procedures in place to address provisional voting in Ohio and we will continue to refine and expand the scope of provisional voting in the state to comply with the spirit, intent and letter of the law in the Help America Vote Act.

The Act requires provisional voting as a condition for receiving federal funding for election reform and Ohio is poised to meet all such requirements. We anticipate the

3 The (Ohio University) Post, Voters still have time, Oct. 11, 2001.
Federal Election Commission will continue to explore this issue and we will make adjustments to provisional voting regulations in the state as those guidelines and adjustments are released.

The Secretary of State also will review, prior to each election, procedures for the handling and processing of provisional votes to ensure full compliance with state and federal guidelines. To provide fullest utilization of the provisional voting mechanism, every local board of elections will be required to adopt provisional voting policies that are weighted more toward inclusion in the voting process than challenges and exclusion in the ballot process.

For purposes of our State Plan, suffice that Ohio and the Secretary of State, as a matter of public policy, embraces the concept that every effort should be made at every board of elections in the state to accommodate every voter who, for whatever reason, does not appear on the certified list of registered voters in any jurisdiction of the state. Provisional voting is a valuable fail-safe mechanism that is an essential component of election reform in Ohio.

Further, we believe those who cast a provisional ballot should have access to mechanisms and procedures that tell them whether their ballot was counted. Toward that end, our budget presumes establishment of a toll-free hotline that will enable provisional voters, after the election, to learn whether their ballot was counted and to receive an explanation about why it wasn't counted if, indeed, a determination was made that it was not a valid vote. We have allocated $250,000 in our State Plan budget to create and maintain such a hotline and encourage local boards to prominently display information by whatever means to advise provisional voters of this follow-up option.

Additionally, information will be available at every precinct and voting location to explain provisional voting procedures and who may cast a provisional vote. Such information should also be readily available on the Secretary of State's website and all county election board websites, where such sites exist.

As part of the National Voter Registration Act, Ohio has endeavored to forge a partnership with other state public agencies in voter registration and it is logical to extend an invitation to these agencies to also educate, advise and alert prospective voters about their provisional voting options in these venues.

Ohio also would expect to partner with the state's media in making voters aware of the provisional option. We contemplate deployment of a series of public service commercials on local television stations in the days preceding elections advising voters of their options for casting a provisional vote. We think a compelling argument can be made to broadcast outlets around the state that full citizen participation in the election process is public service of the highest order.

XII. §303. Statewide Voter Registration and Registration by Mail

Maintaining a viable voter registration list is an essential ingredient in conducting fair and participatory voting processes. Centralizing registration in a single statewide database is a sensible change that ensures uniformity, consistency and reliability. To
accomplish this task, the Secretary of State will seek one vendor to develop a registration system that must meet the needs of voters and elections officials alike.

The system must be sufficiently functional that all eligible voters can register to vote with ease and simplicity. The system must accommodate both written (mail-in registration and in-person registration) and electronic means for voters to initiate the registration process. Registration sites, locations and opportunities must be varied and plentiful.

It is not sufficient that voters would be required to register only at boards of elections or obtain registration materials only at governmental venues. The successful vendor must anticipate a variety of locations and opportunities for citizens to register in both public and private settings. The system must contemplate a solution for converting current voter registration data now housed in local boards of elections and transferring that data to the centralized database in the Secretary of State’s office.

The statewide voter registration system must meet technical demands that will readily allow local boards of elections to seamlessly and effortlessly interface with the state database in a way that assures instant access to all qualified registered voters in their jurisdiction and the state. The system must include sufficient data that provides local election officials with the means to segregate voters by political and geographic boundaries to the extent these officials can create and develop voter lists by precinct and voting location.

The system must include features that permit local elections officials to track the voting history of registered voters, identify those no longer legally registered, and readily accommodate change of address or voting status.

And, finally, the system must anticipate that these records are public records and must be maintained in a way that conforms to state public records law and all other applicable state and federal laws that pertain to voter registration currently in effect.

Our budget presumes a $5 million to $10 million allocation for creation and development of a statewide voter registration system.

Closely akin to the registration issue are voter identification requirements. It was the consensus of both witnesses who testified before the State Plan Committee and the committee itself that the Secretary of State should establish policies that expand rather than restrict the types of instruments used by voters as a means of identification. We believe this is in keeping with the spirit and intent of the Help America Vote Act.

As no voter should be denied an opportunity to cast a provisional ballot in those circumstances where their name might not appear on the voter rolls, neither should a voter be denied an opportunity to vote because of arbitrary and restrictive identification requirements. While it is logical the Secretary of State should work in coordination with agencies such as the Ohio Bureau of Motor Vehicles to validate the identity of new
voters, such identification requirements must, by definition, extend beyond identification devices such as a valid state drivers’ license.

As several Ohioans with disabilities testified, many people with disabilities do not have a drivers’ license. It is the intention of the Secretary of State to extend identification requirements to include any reasonable means of identification such as utility bills, rent receipts or any legal or quasi-legal instrument that bears the name and address of the prospective voter.

The policy of the Secretary of State is that voter challenges on the basis of identification should be judged on a liberal construction of voter ID rather than a restrictive construction that would deny the voter an opportunity to cast a ballot.

Based on testimony provided by Mr. Perry of the Columbus Urban League, the Secretary of State also would like to more closely examine the issue of restoring voter rights to persons released from incarceration in the state’s Department of Rehabilitation and Corrections. There is a widespread perception that these persons, as a result of felony convictions, have forever forfeited their right to participate in the election process. Such is not the case.

Persons who have had their voting rights taken away because of a felony conviction are subject to re-enfranchisement as legal voters to restore their right to vote. As these persons have presumably paid their debt to society as a result of their incarceration, full integration back into society as fully functioning citizens should also presume their eventual re-engagement and participation in the election process.

For these persons, identification also is an issue because drivers’ licenses might have expired during their period of incarceration. At minimum, the Secretary of State pledges to educate election officials and poll workers about the rights and processes available to these individuals.

XIII. §402. Administrative Complaint Procedures and Grievances

To fully facilitate implementation of the Help America Vote Act of 2002, Ohio will establish an administrative complaint procedure to address allegations by any citizen who believes their voting rights have been violated under Title III of the Act.

The complaint and grievance procedures developed by the Secretary of State are constructed toward development of a non-adversarial complaint process where the desired outcome is a solution or remedy of the problem, rather than a highly evidentiary process.

The process adopted by the Secretary of State includes an alternative dispute resolution component that invites parties to seek equitable resolution in that venue as well as through a formal hearing process. When a valid complaint or grievance is filed as part
of this process, it is ultimately the state, and more specifically the Secretary of State, that must provide the appropriate remedy.

We attach, as an addendum to this report, the full text of the proposed procedure. Following, in summary, are the relevant elements of the complaint procedure:

- Any Ohio citizen who believes there is a violation of any provision of Title III of the Help America Vote Act may file a complaint.

- All complaints must be in writing, signed, notarized and be sworn under oath.

- The complainant must be identified by name and mailing address, and the complaint must include a description of the violation alleged to have occurred.

- The complaint must be filed with the Secretary of State along with proof of delivery of a copy of the complaint to each respondent.

- In addition to failure to include any of the foregoing, the Secretary of State may reject the complaint if more than 90 days have lapsed since the final certification of the federal election at issue.

- The Secretary of State must establish procedures and schedules addressing when the complaint will be heard and considered.

- The Secretary of State or designated hearing officer must compile and maintain an official record of any proceeding and include submissions and evidence provided.

- Complaints must be heard and determined by the Secretary of State or designated hearing officer, who is required to prepare a report expressing an opinion about whether a violation did occur within 20 days of the filing of such a complaint.

- Any hearings conducted pursuant to the filing of a complaint must be tape recorded.

- Dates, times and locations of hearings must be established and all parties must be given at least five days notice of such hearings.

- All relevant parties, including the complainant and all respondents may appear at the hearing, testify and present evidence. There is no requirement that any complainant, respondent or any other party to the proceeding be represented by an attorney.
The Secretary of State or a designated hearing officer is required to prepare a transcript of the tape recorded hearing and that transcript is a public record under Ohio's public records law.

A final decision must be rendered within 60 days after the complaint is filed.

If a violation is determined to have occurred, a determination must be issued specifying the appropriate remedy. If a violation is deemed not to have occurred, the complaint must be dismissed.

The remedy may not include any award of monetary damages, costs or attorney fees, and may not include the invalidation of any election or a determination of the validity of any ballot or vote.

The decision under this process is final and is not subject to judicial review.

The complaint and grievance procedure does not preclude any other legal action provided by law.

XIV. Ongoing Performance Measurement

As Ohio anticipates successful implementation of reforms and modernization of its election systems and processes to accomplish its objectives under the Help America Vote Act of 2002, we believe performance measurement is an essential and ongoing requirement to ensure a fair and inclusive election system.

Each year, boards of elections throughout Ohio prepare annual budgets anticipating costs and expenses for conducting elections. We recommend that while each board is preparing their budgets that they also take time to review the improvements they have made in their elections operations during the past year and report their progress in meeting election reform objectives under the Help America Vote Act.

The Secretary of State will compile these annual reports and submit a summary of initiatives, improvements and progress to the Election Assistance Commission. We think this is a way for all election officials in Ohio to remain vigilant of our obligation to continue measuring our performance in making the election process fair and accessible to all Ohioans.

1/12/2005
As stated earlier in this report, we view this opportunity to reform Ohio’s election system not as an end process, but as the beginning of a renewed effort to fully engage our citizens in their most vital civic responsibility in a democratic process. Election reform, after all, is a futile exercise unless citizens view themselves as stakeholders in their local community, their state and the nation.

Our guiding principle in developing this state plan is that voters should willingly and enthusiastically participate in the electoral process, free of obstacles that might inhibit them from participating. To accomplish that, we, as election officials, are obligated to provide them with the best and most modern tools available so they can exercise their right to vote with assurance that every vote and every voter counts and will be counted on Election Day.

No legal voter should be taken for granted and no legal vote should be discounted or, worse, not counted. Every vote cast, every ballot submitted must be treated as if our very system of government and our way of life depends on it, simply because it does. No greater is the obligation of every eligible voter to be an active, knowledgeable and willing participant in the election process, and no greater responsibility as election officials do we have than to ensure those voices are heard and those votes are counted.

XV. Requirements Payments: Maintenance of Effort

As a condition for receiving Requirements payments under the Help America Vote Act, states must maintain expenditures for funded activities “at a level that is not less than the level of such expenditures maintained by the state for the fiscal year ending prior to November, 2000.”

Attached to the State Plan are budget materials that document state spending on election and election administration through the Secretary of State’s office for Fiscal Year 2000 (July 1, 1999 – June 30, 2000.)

The total amount of $2,739,159.04 million does not include reimbursements to county boards of elections for advertising costs related to state issue ballot advertising. The total budget request of the Secretary of State’s office for FY 2004 and FY 2005 are sufficient to fund continued investment in elections at this annual level.

Additionally, the Secretary of State shall include a HAVA-compliance and funding report as part of future biennial budget requests of the Ohio Legislature to certify HAVA-compliant funding and continue Ohio’s maintenance of effort.

XVI. Estimated Timelines for Implementation of the State Plan

Following are key dates and the proposed timetable for implementation of our State Plan:

- March 18, 2003: State Plan Advisory Committee named, public input process defined.
- April 3-4, 2003: State Plan Advisory Committee conducts public hearings.
April 9, 2003: RFP released for statewide voter registration system.

April 17, 2003: State Plan Advisory Committee reconvenes to review draft State Plan.

May 7, 2003: Competitive bids due for voter registration system.

May 13, 2003: State Plan finalized and published for 30-day review.

May 16, 2003: RFP released for voting system vendors.

June 2, 2003: Secretary of State awards bids for voter registration system.

Aug. 1, 2003: Secretary of State awards bids for election systems. County boards of elections notified of eligible system vendors.

Sept. 2, 2003: County boards of elections must notify Secretary of State which vendor they have chosen for election system improvements.

Dec. 1, 2003: Statewide voter registration system installed and fully operational.

March 2, 2004: Primary Election. (Ohio General Assembly considering change of Primary to May, 2004.)

April 29, 2004: Clinton County first to establish Centralized Voter Registration File processes between the county and the Secretary of State.

May 7, 2004: Substitute House Bill 262 enacted.

Nov. 2, 2004: General Election

November 17, 2004: VVPAT requirements distributed for comments.

January 3, 2005: VVPAT rules filed with ICAR.

January 1, 2006: Centralized Statewide Voter Registration File fully implemented.

May 2, 2006: Replacement of punch-card and lever machine complete.

XVII. Plan Submission Presumes Full Federal Funding

Submission of this plan presumes full and timely federal funding. In order for Ohio to meet the ambitious schedule outlined in this State Plan, it is imperative that federal monies be made available to the state on a schedule that is consistent with implementation of the base components of the plan.

Ohio reserves the right to seek waivers stipulated in the Help America Vote Act that allow us to delay implementation of this plan if federal funding is not forthcoming in a timely manner that will enable us to accomplish the objectives outlined in this report to the Election Assistance Commission.
Proceeding without a guarantee of federal funds would create a financial burden for the State of Ohio and its 88 county jurisdictions. While Ohio is anxious to meet and exceed the standards of the Help America Vote Act, implementation is not possible without the federal guarantees that accompany the Act.

The preponderance of unacceptable voting devices in the state underscore the necessity for reform, but it shows the very real and special challenges Ohio faces in fully complying with the Act and the funding that will be required to reconstruct and reconfigure the voting and election systems in the state.

Our pledge is to implement reforms, as outlined in this State Plan, as federal funds become available.

XVIII. The State Plan Committee: HAVA and Beyond

We reserve this section of the report to capture the comments and thoughts of our State Plan Committee. While many of the committee’s recommendations and much of their input is reflected in preceding sections of the report, it was clear this panel of distinguished Ohioans went beyond merely thinking about minimum requirements of the Help America Vote Act and insisted on expanding their mission to address issues that will produce broad and meaningful election reform in our state.

That kind of visionary thinking is precisely what the Secretary of State had in mind when he impaneled the State Plan Committee.

If there was a universal theme that resonated from the committee’s deliberations, it was consensus that Ohio must aggressively engage the next generation of voters and make young people in our state understand their role as stakeholders in the democratic process. It is insufficient, the panel said, to merely invite high school and college students into the process. Ohio, the State Plan Committee said, must be proactive in educating young people about the election process and instill a deeper commitment to engendering student participation in the election process.

State Rep. Nancy Hollister noted that this report should underscore for Ohioans that implementation of the Help America Vote Act in Ohio signals a “change in the governance of the election system” in the state. HAVA, she said, places more responsibility on the Secretary of State to assure a fair, equitable and inclusive election process in Ohio.

Linda Carr, Daisy Duncan Foster and Pastor Aaron Wheeler were particularly passionate in their remarks about this issue and said Ohio should be creative in developing new programs and initiatives to bring young voters into the process. The Committee urged the Secretary of State to aggressively seek available funds under Title V and Title VI funding of the Help America Vote Act to accomplish this critical task.

Additionally, some committee members recommended working with the Ohio Department of Education and the Ohio Board of Regents to explore ways to better educate and encourage political participation by high school and college students. Pastor Wheeler suggested
Ohio public schools should ponder curriculum requirements that focus exclusively on voting and election processes.

State Rep. Nancy Hollister noted that this report should underscore for Ohioans that implementation of the Help America Vote Act in Ohio signals a "change in the governance of the election system" in the state. HAVA, she said, places more responsibility on the Secretary of State to assure a fair, equitable and inclusive election process in Ohio. "We need to acknowledge that," she said.

But Rep. Hollister and other committee members said that shift in governance does not minimize the necessary independence, ongoing role or responsibility of counties to execute election policies within the new governing framework created by the Help America Vote Act.

Committee member Jeff Matthews said county boards of elections must be independent to effectively achieve the objectives of the Help America Vote Act, and Ms. Duncan Foster said boards of elections must feel "some ownership of the process." In that context, it was the consensus of the State Plan Committee that full compliance with the Help America Vote Act requires critical coordination and a strong working relationship between the Secretary of State's office and local boards of elections.

Election officials Guy Reece and Tom Coyne, along with Mr. Matthews, agreed that innovation doesn't end with the Help America Vote Act. They said Ohio must constantly be looking for new methods, new procedures and new ideas to keep the election process viable and invite more Ohioans to exercise their right to vote.

Mr. Reece invited future exploration of election innovations being tested in other states such as open voting, early voting, ballot on demand and expanded availability and use of absentee ballots. Catherine Tencer asked that the Secretary of State consider the flexibility of voting devices that would allow for concepts such as instant runoff voting and proportional representation.

Ms. Tencer also recommended the Secretary of State ensure that the RFP for new language requirement and it should be purchased now while federal funds are available to help Ohio make the transition to new voting equipment.

Ms. Alvarado noted the projected growth of Hispanic populations both nationally and in the State of Ohio. Several committee members agreed that rather than addressing this issue later and incurring cost for conforming equipment, the RFP should anticipate the language requirement and it should be purchased now while federal funds are available to help Ohio make the transition to new voting equipment.
be purchased now while federal funds are available to help Ohio make the transition to new voting equipment.

She said language requirements also need to be considered in education products produced by vendors and election officials in how to use the new voting equipment, as well as in training of poll workers and election officials. She said alternative language issues need to be considered in creation and execution of the grievance process and procedures.

She suggested the Secretary of State consider alternative language policies that exceed the 5 percent threshold.

While preceding sections of the report address monitoring procedures for implementation of the Help America Vote Act in Ohio, Ms. Alvarado said compliance monitoring should be "futuristic" and focus on outcomes. While measuring accomplishments, she said the state and local jurisdictions also should be forward looking and report, for example, where the state expects to be in the next five years and beyond.

She said monitoring and compliance should address issues such as where Ohio wants to be as a state, how we achieve those objectives, who is responsible for implementing these plans, what the funding sources will be for implementation and what will be different when changes, modifications or new procedures are implemented in the election process.

Rep. Hollister agreed there needs to be periodic evaluation of Ohio's progress in meeting voting and election reforms. She suggested a need to pause from time to time to reflect on what has been accomplished, what future reforms need to be considered, and what revenues are available to achieve those objectives.

Mr. Long acknowledged that there might be offsetting costs and efficiencies that could be realized from conversion to electronic voting systems, but he stressed the necessity for full funding of the plan and timely allocation of federal payments to the state to avoid financial burdens on counties already adversely affected by the economy and cuts imposed by the State Legislature.

As expected, much of the panel's deliberation was focused on funding and whether the federal allocation to Ohio was adequate to effect the wholesale change in voting systems in the state. A key voice in that discussion was Larry Long, executive director of the County Commissioners Association of Ohio.
Mr. Long noted that there is concern among county commissioners about whether the federal funding anticipated for implementation of the Help America Vote Act is sufficient to purchase the voting equipment needed to make Ohio HAVA compliant. But a comparable concern, he said, is consideration of future maintenance and replacement costs, as well as related cost issues such as storage requirements for the new equipment.

He acknowledged that there might be offsetting costs and efficiencies that could be realized from conversion to electronic voting systems, but he stressed the necessity for full funding of the plan and timely allocation of federal payments to the state to avoid financial burdens on counties already adversely affected by the economy and cuts imposed by the State Legislature.

Rep. Hollister also discussed the funding issue, suggesting the state, at some future date, might consider bonding options to assist in paying for ongoing costs associated with implementation of the Act, as well as making funds available for voter education, system upgrades and youth participation in the election process.

Further, she said that although there appears to be no immediate need for sweeping changes in state election laws, the state should constantly evaluate that need and enact legislative change as required.

Mr. Coyne emphasized the need for the Secretary of State and local boards of elections to fashion voter system reforms in a way that keeps the process from becoming "vendor-driven." He said county boards need time to assess and evaluate the unique demands in each jurisdiction and recommended the Secretary of State consider meeting the disability requirements of HAVA in time for the 2004 election, but proceed more deliberately on installment of new voting equipment.

In May 2004, Substitute House Bill 262 was enacted into law by Governor Taft which requires all direct recording electronic voting machines used in the State of Ohio to include a voter verified paper audit trail (VVPAT). Substitute House Bill 262 mandates the Secretary of State shall establish by rule standards for the certification of the VVPAT. In addition, the bill created a county electronic voting machine maintenance fund.

XIX. Summary of the State Plan

Section 254 of the Help America Vote Act of 2002 lists the required components of the State Plan and this document fulfills those requirements.

This report demonstrates that Ohio, because of its widespread use of punch-card voting, is perhaps challenged more than other states to reform its election methods and modernize its voting systems. The size of the state, ranking seventh among the 50 states in total population, and the mix of rural and urban population makes the transition even more challenging.

Recognizing the enormity of the task confronting Ohio, some members of the State Plan Committee and witnesses who testified before the committee counseled the Secretary of State to invoke waivers that would allow the state to delay its full implementation of the plan until the 2006 election cycle.
The Secretary of State, however, believes Ohio cannot afford to delay its implementation of the plan because every election cycle that passes is another election where voters are potentially disenfranchised and Ohio votes are lost or miscounted. Ohio, the Secretary of State believes, must be a full participant in the election process and every eligible voter must be afforded the opportunity to be counted as we ponder the critical decisions affecting our local communities, state and nation.

As election officials, if we know voters are disenfranchised and that legitimately cast ballots are being discounted, we have not only a moral obligation to immediately embrace a solution, but a legal obligation to find a remedy and enact measures to prevent that from happening. If even one voter is denied the right to vote, we are obligated, by law, to determine the cause and forge a solution. The evidence is overwhelming that thousands of Ohio voters have been disenfranchised by antiquated voting equipment and that many thousands more have lost confidence in the reliability and accuracy of voting devices currently in use in most of Ohio’s 88 counties.

The Secretary of State has confidence in the election professionals who conduct and administer elections in the State of Ohio, and believes Ohio has the capability to enact reforms that have already taken place in other states.

We are emboldened in our decision to press forward with implementation of this plan based on the experience of Knox and Lake counties in executing successful elections after implementing new systems only weeks before the General Election. The Knox County Board of Elections, which has only four employees, received delivery of new electronic voting devices in October, 1996, a presidential election year, and deployed them in the November General Election.

Lake County issued a request for proposal in April 1999, awarded bids in July of that year, took delivery of a new voting system the following September, and conducted a successful election weeks later in the November General Election.

Under the timetable established in this plan, new voting systems would be installed and operational in time for the Primary Election in 2004, providing local boards of elections with an opportunity to test the new systems before fully engaging them in the 2004 presidential election cycle.

However, we refer to the preceding section of this plan. Full implementation of this plan presumes full funding by the federal government. If the Secretary of State determines that federal funding for implementation of this plan is not forthcoming from the federal government in a timely manner, we will notify the Elections Assistance Commission of our intent to revise this plan and adjust the timetable for implementation.

Since the Federal Government has not appropriated the remaining funding for HAVA, it was necessary for the Secretary of State to modify our state plan and adjust the timetable for implementation. Initially, we had set an aggressive and ambitious full implementation for November 2004. Unfortunately, due to the delays in receiving funding and the establishment of the Elections Assistance Commission, we project full implementation of all HAVA requirements by May 2006.

Boards of Elections should be assured that the Secretary of State will focus all of its available personnel and resources to assist counties in enacting these reforms and meeting the requirements of the Help America Vote Act.
Boards should also be assured the Secretary of State will work with county officials and elections administrators to ensure available resources are distributed as quickly as possible and that cost containment efforts will be undertaken to minimize implementation costs to counties. Based on our analysis, which was reinforced in the testimony of Doug Lewis of The Election Center, we believe conversion of the state’s punch-card voting system to direct recording electronic (DRE) voting devices will generate certain cost efficiencies we believe will minimize cost and expenses to counties, or at least offset some of the implementation costs.

We include in this definition of electronic voting devices the option for some counties to choose optical scanning devices that are HAVA compliant. In counties which have invested in this equipment and prefer these optional voting devices, the Secretary of State will consider deployment of this equipment as acceptable if certain modifications are made to ensure compliance with statewide voting standards. These counties, however, would be required to feature at voting locations electronic voting equipment that accommodates the needs of people with disabilities.

We presume the transition to electronic voting equipment will, at minimum, reduce printing costs in most counties. We believe there are further savings and efficiencies that will be derived from electronic voting that will reduce personnel and labor costs.

The DRE option also will introduce added efficiencies in the election process that will eliminate issues related to “over-votes,” recounts and ensuring full voter participation by persons with disabilities. We also believe an electronic-based voting system will enhance training and education across the spectrum for election officials, voters and poll workers if the system is sufficiently user-friendly.

Based on the foregoing, following is a summary of the State Plan for Ohio based on the requirements delineated in Section 254 of Public Law 107-252:

(1) How the State will use the requirement payment to meet the requirements of Title III, and, if applicable under section 251(a)(2), to carry out other activities to improve the administration of elections.

Ohio will implement new voting systems and procedures that meet the general requirements of Title III ensuring the systems have audit capacity, disability access, and alternative language accessibility, where applicable, and that the systems meet error rate thresholds established by the Federal Elections Commission.
(2) How the State will distribute and monitor the distribution of the
requirements payment to units of local government or other entities in the
State for carrying out the activities described in paragraph (1).

Ohio anticipated federal funding and state matching funds would be about $161
million. Unfortunately, full federal funding was not appropriated and the total federal
funding and state matching funding is approximately $137 million. The Secretary of
State will allocate about $106 million of that amount for installation of new voting
equipment and upgrades of existing voting equipment in Ohio counties, and use the
remaining portion to implement statewide voter registration and establish a
provisional voting hotline. Disbursements in the amount of $5 million will be
available to Ohio's 88 counties for election official and poll worker training.
Additionally, the Secretary of State will make $5 million available for administration
of a statewide voter education program. The Secretary of State will draft guidelines
and reporting requirements to monitor distribution of these funds and to ensure
county compliance with the Help America Vote Act of 2002.

(3) How the State will provide for programs for voter education, election official
education and training, and poll worker training which will assist the State in
meeting the requirements of title III.

See response to No. 2. Additionally, the Secretary of State, in establishing an
authorized vendor list for deployment of new voting equipment, will require vendors
to include, as part of their bid proposal, fund allocation that includes voter education,
election official education and training, and poll worker training. The Secretary of
State also will implement new programs and procedures to supplement these vendor
requirements and efforts at the county level to address these issues.

(4) How the State will adopt voting system guidelines and processes which are
consistent with the requirements of section 301.

See preceding responses. Ohio will replace punch-card voting in the State and require
deployment and installation of electronic-based voting devices that meet the
requirements of the Act. The request for proposal for new voting equipment will be
crafted to presume required features and safeguards that ensure a uniform voting
standard and compliance in all Ohio counties with specific requirements of the Act.

(5) How the State will establish a fund described in subsection (b) for the
purposes of administering the State's activities under this part, including
information on fund management.

Such a fund has already been established by the Secretary of State and will be
monitored by both the Secretary of State and the Auditor of State, as Ohio law applies
to state auditing requirements and reporting procedures. Fund management
procedures include quarterly reports to the Election Assistance Commission to detail
receipt and expenditure of funds, and how those funds were used to meet the objectives of the Act.

(6) The State’s proposed budget for activities under this part, based on the State’s best estimates of the costs of such activities and the amount of funds to be made available.

See response to No. 2 and the fund distribution table on page 23 of the State Plan. The Secretary of State believes full implementation of the plan will require all available federal funding and state matching funds to meet the requirements of the Act.

(7) How the State, in using the requirements payment, will maintain the expenditures of the State for activities funded by the payment at a level that is not less than the level of such expenditures maintained by the State for the fiscal year ending prior to November 2000.

(See Section XV. Requirements Payments: Maintenance of Effort.) Attached to this State Plan are budget materials that show the level of spending for election services by the Secretary of State in FY 2000 and projected levels of spending for FY 2004-05. The Secretary certifies that no federal funds for Requirements payments earmarked for voter reforms and system modernization will be used to supplement the state budget for operation and administration of the office.

(8) How the State will adopt performance goals and measures that will be used by the State to determine its success and the success of units of local government in the State in carrying out the plan, including timetables for meeting each of the elements of the plan, descriptions of criteria the State will use to measure performance and the process used to develop such criteria, and a description of which official is to be held responsible for ensuring that each performance goal is met.

The Secretary of State assumes full responsibility for ensuring compliance with the Act. Specific timetables are included in this plan which requires all punch-card and lever machine counties to install and deploy new voting equipment that meets the uniform standards of the Act by May 2, 2006. The plan also calls for a statewide voter registration system to be in place and fully operational by January 1, 2006. See Section XIV for ongoing performance measurement.

(9) A description of the uniform, nondiscriminatory State-based administrative complaint procedures in effect under section 402.

See attached procedure and refer to Section XIII of the State Plan, Administrative Complaint Procedures and Grievances.
(10) If the State received any payment under Title I, a description of how such payment will affect the activities proposed to be carried out under the plan, including the amount of funds available for such activities.

See response to No. 2. Ohio will use funds from Title I for antiquated systems buyout and to improve election administration activities and procedures. See the fund distribution table on page 23 of the State Plan and allocation and distribution formula described on page 24.

(11) How the State will conduct ongoing management of the plan.

See Section XIV, Ongoing Performance Measurement. Throughout this State Plan is a description of the management practices and procedures outlined by the Secretary of State to ensure compliance with the Act. Any material change in this plan will result in a resubmission of the Plan in accordance with Sections 255 and 256 of the Act.

(12) In the case of a State with a State Plan in effect under this subtitle during the previous fiscal year, a description of how the plan reflects changes from the State Plan for the previous fiscal year and how the State succeeded in carrying out the State Plan for such previous fiscal year.

This State Plan represents Ohio’s initial submission of a State Plan to the Elections Assistance Commission.

(13) A description of the committee which participated in the development of the State Plan in accordance with section 255 and the procedures followed by the committee under such section and section 256.

See page 3, The State Plan Committee, and Section VI, How Ohio Developed its State Plan.

This State Plan respectfully submitted to the Elections Assistance Commission, in accordance with U.S. Public Law 107-252, this 16th day of June, 2003.

J. KENNETH BLACKWELL
Secretary of State

1/12/2005
Changing the Election Landscape in the State of Ohio

A State Plan to implement the Help America Vote Act of 2002 in accordance with Public Law 107-252, §253(b)

"The Act appropriately respects the primacy of state and local governments in the administration of elections, while helping to ensure the integrity and efficiency of voting processes in federal elections by providing federal governmental support for that vital endeavor."

PRESIDENT GEORGE W. BUSH
THE WHITE HOUSE
October 29, 2001
June 16, 2003

Dear Election Assistance Commission and Ohio Voters:

I can think of no greater gift we can give future generations than an electoral process that ensures the integrity of their vote and provides them with an election system that is efficient and fair.

At the very least, we need an election system that assures every vote counts and every voice is heard in electing those who will serve in government and decide the many critical issues we face as citizens. No voter should be excluded from the process because of a disability, as no voter should be excluded because of inadequate, outdated and imprecise voting mechanisms.

That's what this report is all about. That's what the Help America Vote Act of 2002 is all about — fair elections and empowering every voter to exercise their obligation, responsibility and privilege to fully engage in the election process.

Democracy, after all, is a fragile system that relies on the voices and participation of all its citizens, not just a chosen few. Every voter and every vote cast strengthens our democracy and enhances the opportunity to choose the best people for the job of leading our government, at all levels, and deciding those issues that affect our local community, state and nation.

My thanks to the State Plan Committee who worked so diligently to help me create this document that will open a new era for the way we vote in Ohio. Truly, we are dramatically changing the election landscape in our state and in our nation. That is a good thing and probably one of the most important contributions we can make to future generations of Ohioans.

In the final analysis, the Help America Vote Act of 2002 is about inclusion more than it is about all the technical change and new administrative processes and procedures called for in this plan. Inclusion is, after all, the thread that binds the fabric of democracy.

Very truly yours,

J. KENNETH BLACKWELL
Ohio Secretary of State
The Ohio Secretary of State gratefully acknowledges the State Plan Committee for their participation and assistance in the preparation and development of this plan for the strategic implementation of election reforms in the State of Ohio, pursuant to the Help America Vote Act of 2002.

The State Plan Committee

Chairman Dana Walsh, Director of Election Reform, Office of the Secretary of State

Ms. Donna Alvarado, Commissioner, Ohio Commission on Hispanic/Latino Affairs

Ms. Linda Carr, Director of Institutional Initiatives, University of Toledo

Mr. Toni Coyne, Chairman, Cuyahoga County Board of Elections

Mr. Eric Duffy, Director of Field Services, National Federation of the Blind

Ms. Daisy Duncan Foster, Coordinator of Academic Services, University of Dayton

State Rep. Nancy Hollister, P. Marietta

Mr. Larry Long, Executive Director, County Commissioners Association of Ohio

State Sen. Mark Mallory, P. Cincinnati

Mr. Jeff Matthews, Director, Stark County Board of Elections and President, Ohio Association of Election Officials

Mr. Guy Reece, Director, Franklin County Board of Elections

Ms. Catherine Tucker, Legislative Director, Ohio Citizens Action

Pastor Aaron Wheeler, Chairman, Ohio Civil Rights Commission

Attachments and Addendum

June 16, 2003
I. Introduction and Overview

On Oct. 29, 2002, President George Bush signed into law the Help America Vote Act of 2002. The legislation was passed in the U.S. House in late 2001 and was approved by the U.S. Senate the following year.

Much of the law embraces recommendations advanced by the National Commission on Federal Election Reform, a group that included both former Presidents Jimmy Carter and Gerald Ford as its honorary co-chairs. The commission observed that democracy is a precious birthright. But they also noted that each generation must nourish and improve the processes of democracy for its successors.

The Help America Vote Act logically embraces the goals of election reform by expecting all levels of government to provide a democratic process that:

- maintains an accurate list of citizens who are qualified to vote;
- encourages every eligible voter to participate effectively;
- uses equipment that reliably clarifies and registers the voter's choice;
- handles close elections in a foreseeable and fair way;
- operates with equal effectiveness for every citizen and every community; and
- reflects limited but responsible federal participation.

In Ohio, the Secretary of State and the State Plan Committee used those broad parameters, principles and guidelines as the foundation objective for developing this plan. From that platform, the Secretary and State Plan Committee formulated the Ohio Plan to address the following specific issues to meet and exceed the minimum standards of the Help America Vote Act. In greater detail, this report addresses:

1. How Ohio will use requirement payments, distribute and monitor the allocation of these funds to county governments, and what criteria will be used to determine eligibility for these funds.
2. How Ohio will measure the performance of county governments to ensure they are in compliance with the Act.
3. How Ohio will develop programs to provide voter education, election official and poll worker education and training to meet the standards of the Act.
4. How Ohio will establish voting system guidelines and processes.
5. How Ohio will administer these activities and budget for administrative costs, as well as establishing a budget for overall implementation of the plan based on our best estimate of costs.
6. How Ohio will use the requirement payments without reducing state support for voter and election activities below what the state was spending in November, 2000.
7. How Ohio will establish performance goals and measures for county government.
8. How Ohio will create and develop a uniform administrative complaint procedure.
9. How payments under Title I will be used for punch-card replacement in Ohio and how that will affect and enhance the overall implementation of the plan.
10. How Ohio intends to conduct ongoing oversight and management of election reforms and improvements.

As the following section of the report suggests, election reform as envisioned by the Help America Vote Act is not a casual undertaking in Ohio. The demographics of the state reveal a broad mix of urban, rural and mid-size communities. Ohio, for example, has eight urban markets that include three large metropolitan cities – Cleveland, Columbus and Cincinnati. Smaller urban centers include Toledo, Youngstown, Dayton, Akron and Steubenville. Each enjoys its own community culture and election traditions.

In addition to these larger urban centers are mid-size communities like Mansfield and Lima, which represent the balance of Ohio’s Metropolitan Statistical Areas (MSA’s) according to the U.S. Census Bureau. But beyond those 10 communities and the counties they represent are 78 other Ohio counties that reflect a more rural population, including a large portion of Southeast Ohio that is designated as part of the Appalachian region.

The size and composition of Ohio’s population is a challenge to implementation of wholesale election reform in the state, but Ohio also is challenged because of the prevalence of punch-card voting. Nationally, it is estimated that 34.4 percent of the nation’s voters cast their ballot on punch-card voting devices. In Ohio, 72 percent of the state’s voters use this ballot method.
State of Ohio to provide the Election Assistance Commission with what we regard to be a valuable foundation perspective for the implementation of election reforms in Ohio.

II. Ohio Demographics

While Ohio remains one of the nation’s leading manufacturing centers, the state, during the past two decades, has made the transition to a more service-industry economy. Nearly 28 percent of Ohio’s 5.4 million employee workforce is now classified as service employees. From 1990 to 2000, the state’s population grew from 10.8 million to 11.3 million.

The state is comprised of 88 counties that occupy nearly 41,000 square miles of land. Ohio is bounded on the south and east by the Ohio River and on the north by Lake Erie. About 11.5 percent of that population is African-American and 1.9 percent is Hispanic/Latino, according to the most recent Census data. In total, Ohio’s minority population is about 16 percent of the total population.

The median age in the state is 36.2 years of age and, like many other states, is trending older. About two-thirds of Ohio residents live in owner-occupied households and about 29 percent live in renter-occupied dwellings.

The state has a wealth of educational institutions with 15 public four-year universities and 62 private colleges and universities. There are 25 two-year colleges in the state. The largest counties, in rank order and based on 2000 Census data, are:

The state’s major employers include such corporate notables as AK Steel, Daimler Chrysler, Delphi Automotive Systems, Ford Motor Co., General Electric Co., General Motors Corp., Goodyear Tire & Rubber Co., Honda Motor Co. Ltd., Kroger, Nationwide Insurance, Procter & Gamble, TRW Inc. and Wendy’s International.

In total, there are about 240,000 active businesses in Ohio, including about 80,000 farms that represent 14.9 million acres.

The state boasts 115 state parks that provide nearly 115,000 acres of recreational space for Ohio residents. There are six airports in the state with scheduled airline service and another 164 commercial airports and 10 commercial heliports. Transportation arteries in the state include 1,572 miles of interstate highways, 3,918 miles of U.S. highways, and
more than 14,000 miles of state highways. The Ohio Turnpike that ribbons through northern Ohio covers 241 miles from the Indiana state line to the Pennsylvania state line.

III. State Political/Governmental Structure

Ohio is governed by five major statewide officeholders including Gov. Bob Taft, Attorney General Jim Petro, State Auditor Betty Montgomery, Secretary of State J. Kenneth Blackwell and Treasurer Joseph Deters. The Ohio General Assembly includes 99 members of the Ohio House of Representatives and 33 members of the Ohio Senate.

Since 1992, both statewide officeholders and elected legislators are subject to term limits. Statewide officeholders are limited to two four-year terms. In the Ohio General Assembly, House members are limited to four two-year terms and State Senators are limited by two four-year terms.

Some local government officials also are subject to term limits as a result of local ballot initiatives in some Ohio communities.

The Ohio Supreme Court includes seven justices who are elected statewide. The Supreme Court is not subject to term limits. The Chief Justice of the Ohio Supreme Court is Thomas Moyer.

The local government structure in Ohio includes a mix of city and county elected officials, with most cities and villages in Ohio administered by a mayor/council form of government. Some municipalities have an appointed city manager form of government in which an executive is appointed to administer local municipal affairs.

In Ohio local government, there are "statutory" cities that operate largely on the basis of state statutory law and "charter" cities that may adopt so-called "home rule" guidelines to conduct the affairs of local government.

On the county level, 87 of 88 Ohio counties are governed by a Board of Commissioners, which oversee county administration. Summit County is the only county in Ohio with a county executive/council form of government. The Summit County Council is comprised of eight district council members and three who are elected at large. Ohio counties also elect county auditors, prosecutors, treasurers, clerks of court, judges and county sheriffs.

The state is represented by 18 elected members of the U.S. House of Representatives and, of course, two U.S. Senators.
IV. State of Ohio Elections Systems

Ohio is, pervasively, a punch-card voting state. In total, 69 of Ohio’s 88 counties use punch-card voting. Those 69 counties represent 72.5 percent of all the registered voters in Ohio and 74 percent of the 11,756 voting precincts in the state.

Among the 19 counties that use voting devices other than punch-card ballots, two use automatic voting machines, six have electronic voting devices, and 11 use optical scanning equipment.

The table below (that continues on the following pages) shows a county-by-county listing of the types of voting devices in each of Ohio’s 88 counties. The table also reflects the number of precincts and registered voters in each of those counties as reflected in the November, 2002 General Election, which we use as base data throughout this report (unless otherwise indicated.)

June 16, 2003
Of note, two of Ohio’s largest counties – Cuyahoga and Hamilton counties – currently use punch-card ballot devices, as do two other large urban centers in Ohio, Montgomery and Summit counties. Those four counties, alone, account for nearly 3,600 of Ohio’s 11,756 precincts, and more than 2 million of the state’s 7.1 million registered voters. Another large urban center in Ohio, Lucas County, is a lever-machine county.

In February 2001, the Secretary of State conducted an “Elections Summit.”\(^1\) Participants included academics, members of the media, local election officials, legislators, and community groups. The group reported the following:

1. Public confidence in the accuracy of punch card voting systems has been seriously undermined.
2. Boards of elections should upgrade their voting systems to new, more trustworthy technology.
3. Comprehensive voter education is critical to successful election operations.
4. A combination of federal, state, and local dollars may be appropriate to fund these technological improvements.
5. Ohio’s current elections standards, based on a combination of secretary of state directives, advisory opinions and rulings, should be codified by the General Assembly.
6. These goals demand immediate attention, or our state runs the risk of repeating the problems of our nation’s most recent presidential election – and suffering irreparable damage to the most important and basic concepts of democracy.

Subsequent to the Summit, a separate committee met to study Ohio’s election systems. They concluded (by a 6-5 committee vote) that because of the safeguards and procedures in Ohio election law, the punch-card voting method was adequate and there was no overwhelming need for a statewide overhaul, particularly without available funding.

While the Secretary of State notes that punch-card voting is not explicitly prohibited under the Help America Vote Act, other requirements of the Act make it impractical to use punch-card voting as a primary voting device in the state.

In a study of “over” and “under” voting in Ohio, it was clearly demonstrated that punch-card voting was unreliable to the extent votes cast by thousands of Ohioans were not being counted in the final election tabulation.

Over-voting occurs when a voter casts a vote for more than one candidate in an election and thus disqualifies their vote in that election. Under-voting occurs when a voter fails to mark a ballot in a particular race or votes for fewer than the number of candidates to be elected.

The following table tracks the combined under/over vote phenomenon in the 2000 presidential election in Ohio’s 88 counties:

</table>
The data shows 29 counties with the highest over/under vote percentage in the 2000 election were all counties that use the punch-card method of voting. The seven counties with the lowest over/under vote percentage in the 2000 election were all counties that did not use punch cards as their primary voting system.

The Ohio challenge in meeting the voter and election reforms envisioned by the Help America Vote Act is obvious. In simplest terms, Ohio is a large and populous state with a diverse mix of urban and rural voters that predominantly relies on punch-card voting as its prevailing voting mode. Modernizing the state’s election systems will require widespread change throughout the state and in its most populous counties.

The transition will require a solution that must consider large and small counties, rural and urban areas, and adjustments that will affect an overwhelming majority of Ohio voters. The obvious corollary challenge is selecting a system configuration that meets the needs of all those counties, training election officials and poll workers to use new voting systems, and familiarizing Ohio voters with new voting devices.

While on its face, this appears to be a daunting challenge, we are confident Ohio’s State Plan logically anticipates those factors and will meet the guidelines, demands, timetables and expectations of the Help America Vote Act.

---

2 Shelby County, a punch-card county, reported no over/under vote in the county’s vote tabulation in the 2000 presidential election cycle. This would appear to be a reporting error.
V. Voter Trends: the Context for Change and Reform

We pause only for a moment in this report to reflect on voter turnout in Ohio. We do so for several reasons, not the least of which Ohio contemplates election reform and system modernization to take place in a presidential election year when voter turnout is higher and demand on the election system is greatest.

We also explore voter turnout and trends as context for meeting the most desirable benefit and objective of the Act: to restore public confidence in the election system and, subsequently, increase voter participation. While new, more technologically proficient systems, increased voter registration, accessibility and accuracy are hallmarks of Help America Vote, the more encompassing aim of the Act is to invite more voters into the process to exercise their rights and responsibilities as qualified electors.

In developing the State Plan, we must anticipate that voter participation will increase, voter turnout percentages will climb, and demand on the election system will be greater. We can only gauge those factors based on Ohio’s experience in past elections and the historical trends that will serve as a predictor of future trends.

The following table tracks Ohio voter turnout in both gubernatorial elections and presidential elections during the past 24 years.

The chart shows that during the course of the past six gubernatorial elections, voter turnout has averaged about 55.79 percent. During the past six presidential elections, voter turnout in Ohio has averaged 71.33 percent. Based on this historical data, Ohio can generally anticipate about 1.25 million more voters in a presidential election year than in a gubernatorial election cycle.

Even a modest 5 percent gain in that average means 62,500 more voters. Subsequently, based on projected population growth and increased voter participation as a result of election reforms and modernization, our State Plan assumes 150,000 new voters during peak presidential elections growing at an annual rate, after initial implementation of new systems and election reforms, of 3 percent per annum.

As a result, our Plan assumes that growth rate and the recommended voting systems design model proposed in this report anticipates that growth and demand on the state's election system in future peak presidential voting years. We use the presidential voting cycle as a base for our plan because that assumes the heaviest potential voter turnout and the busiest times for local boards of elections.
Since 1978, voter participation in the state’s gubernatorial elections has grown from 3 million voters to about 3.3 million voters. Since 1980, voter participation in presidential elections has grown from about 4.3 million voters to about 4.8 million voters. Factoring population growth during those decades, those statistics would imply that voter participation has remained relatively flat and, in all likelihood, is trending lower.

We have a high confidence level that the election reforms of the Help America Vote Act will produce more voter activity and a greater number of voters. Ohio doesn’t view the Act as a final effort to produce greater voter participation, but the beginning of an expanded effort to entice more voters to exercise their rights and responsibilities to participate in the election process.

We believe modernization and reform require us to actively engage in voter education and to continue to evaluate programs that will produce greater participation in the democratic process. We pledge our effort to continue to explore new and innovative programs that will achieve those objectives.

VI. How Ohio Developed its State Plan

In development of the State Plan, we insisted on inclusion in both creation of the State Plan Committee and in public input into the process. This report represents a broad outreach to minorities, senior citizens, people with disabilities, elected officials, election officials, public interest groups and the public at large.

Our foundation principle in developing this plan was based on the view that such far-reaching reforms to a system so vital to the most fundamental democratic process in our state and nation required a fair, open and dynamic process where there is an opportunity for every voice to be heard. We were proactive in developing a structure to embrace that principle.

As a first step in our process, we widely publicized hearing dates and created a web site that invited public comment and input. We invited written testimony from groups and organizations who wanted to lend their perspective to election reform in Ohio. Additionally, we actively solicited input from critical stakeholders for our public hearings, including key representative voices from among groups such as the Urban League, the League of Women Voters, the Disability Policy Coalition, and the American Association of Retired Persons (AARP).

Our lead-off witness was Chet Kalis of the House Administration Committee, who worked closely with U.S. Rep. Bob Ney, R-Ohio, primary sponsor of the Help America Vote Act of 2002. We asked Mr. Kalis to lay the groundwork for our committee by providing them with a foundation perspective of the Act, its mission, aims and objectives.

The State Plan Committee also heard from Doug Lewis, executive director of The Election Center, a national nonprofit organization serving the elections and voter registration profession. Mr. Lewis developed and authored the Professional Education Program for elections/registration officials – named the best continuing education program in the nation by the National University Continuing Education Association.
Mr. Lewis was able to provide the committee with a national view of election reform and voter registration from the valuable perspective of someone with intricate knowledge of election systems across the nation.

To provide the perspective on Ohio, Dr. Herb Asher, professor emeritus of political science at The Ohio State University, brought election reform home for our State Plan Committee. Few voices are more respected than the voice of Dr. Asher as a knowledgeable expert and commentator about the political and election process in Ohio.

While the State Plan Committee itself included representation from boards of elections, we reached out to three other boards to provide the committee with a strong representative sample of the diverse local election operations in the state. Among those invited to testify were Janet F. Clair, director of the Lake County Board of Elections, Rita Yarman, deputy director of the Knox County Board of Elections, and Terry Burton, deputy director of the Wood County Board of Elections.

The testimony of the three elections officials was particularly valuable to the Committee because Lake and Knox counties are two jurisdictions that recently modernized their election systems. In addition, four other counties – Ross, Pickaway, Mahoning and Franklin counties – currently have electronic-based voting systems. Wood County represents one of the Ohio counties facing an extensive overhaul of its system under the Help America Vote Act.

Dolores Blankenship, advocacy volunteer from AARP, offered the State Plan Committee an incisive look at the election process through the eyes of a senior citizen, and eight witnesses representing the Disability Policy Coalition offered riveting testimony about the Election Day challenges facing voters with disabilities.

The strong presence of people with disabilities in these hearings underscores the importance Ohio attaches to this issue and our resolve to provide physically challenged voters with every opportunity to cast their ballot in a setting that assures their access to the polls and their right to cast a ballot unrestrained by barriers and obstacles that preclude their full participation in the voting process.

Peg Rosenfield, a former state elections official and now a representative of the League of Women Voters of Ohio, provided testimony on behalf of that voter advocacy group, and Ernest Perry of the Columbus Urban League was the voice for that group.

The final witness was Eric Seabrook, chief counsel to the Ohio Secretary of State, who described the administrative complaint procedure envisioned by Secretary of State Blackwell and the potential contracting procedures under review to establish an election system that meets the uniform voting standards of the Help America Vote Act.

The State Plan Committee met in public session on April 3-4 to hear testimony from these witnesses and then reconvened on April 17 for a focused facilitated work session to refine and finalize the State Plan.

We believe the process used to develop the State Plan in Ohio is one of the most aggressive public outreach efforts in the nation. While the aim of the process was to be as inclusive as possible, we think it had the added benefit of educating and informing the committee and citizens of our state about the Help America Vote Act and its far-reaching implications for an improved voting and election system in Ohio.
The open and proactive design of our process signaled to every Ohioan the importance of enacting voter and election reforms in the state, and how that reform was likely to affect their participation in the electoral process.

In addition to the public hearings, the Secretary of State solicited all Ohioans to provide input to the plan by providing written communications with his office or to communicate ideas via the Secretary of State’s website. This communication was provided to members of the State Plan Committee and is attached as part of the State Plan.

VII. Federal Funding Assumptions of the Act

The Help America Vote Act of 2002 makes available certain federal funding to help achieve requirements and mandates of the Act. The funding components of the Act are reflected in Title I, Title II, Title IV and Title V. In summary, the federal government has agreed to the following federal funding thresholds for each of the Title sections of the Act:

Title I – Antiquated Machine Buy-Out
- $325 million for buying out punch-card and lever voting machines.
- $325 million in payments to states to improve election administration.

Title II – Election Assistance

Requirement Payments
- $3 billion for meeting requirements, poll-worker training, voter education, and improving administration of elections.

Access Grants
- $100 million for increasing polling place access for voters with disabilities

Research Grants
- $20 million for research and development to improve voting technology

Pilot Program Grants
- $10 million for pilot programs to test new voting systems and equipment.

Title V – Help America Vote College Program
- $5 million to encourage college students to participate in the political process by volunteering as poll workers.

Title VI – Help America Vote Foundation
- $5 million to encourage high school students to participate in the political process by volunteering as poll workers.
Of obvious, primary and immediate importance to the State of Ohio is the Title I funding and the state’s share of Title II monies for Requirement Payments for poll-worker training, voter education, and improving administration of elections, as well as federal funds available for Access Grants to make election sites more accessible to people with disabilities. These three specific funding sources enable Ohio to address what we regard to be the core modernization and reform of its election system.

The buy-out program under Title I has special implications for Ohio because of the prevalent use of punch-card voting in the state. Likewise the $325 million being allocated to states to improve election administration is important because these funds represent resources that will be allocated for development of a centralized voter registration system in the state.

Title I largely represents base funding for Ohio to address the mechanical implementation of the Help America Vote Act. Title II payments represent a source of funding to train, educate and administer the state’s election program once the transition is made from punch-card voting to a more modern mode of voting, and to make poll sites more accessible to people with disabilities. Later in the plan, we discuss allocating a portion of Title II funds to voting system upgrades.

The state will apply for research and pilot program grants. But for now, our focus is to first establish a reliable, accurate and fair election system, conduct the training and education necessary to make that system work, and to ensure accessibility of the disabled and physically challenged citizens of our state.

Title I largely represents base funding for Ohio to address the mechanical implementation of the Help America Vote Act. Title II payments represent a source of funding to train, educate and administer the state’s election program once the transition is made from punch-card voting to a more modern mode of voting, and to make poll sites more accessible to people with disabilities. Later in the plan, we discuss allocating a portion of Title II funds to voting system upgrades.

Title I largely represents base funding for Ohio to address the mechanical implementation of the Help America Vote Act. Title II payments represent a source of funding to train, educate and administer the state’s election program once the transition is made from punch-card voting to a more modern mode of voting, and to make poll sites more accessible to people with disabilities. Later in the plan, we discuss allocating a portion of Title II funds to voting system upgrades.

Of note and as it relates to Title V and Title VI of the Act, the Ohio Secretary of State’s office is currently conducting research related to poll worker issues. A component of that research anticipates a greater role for high school and college students in the electoral process, as well as other initiatives that will enhance the identification, selection, education and training of poll workers.

As this State Plan is being submitted, we anticipate that research will be completed and recommendations forthcoming in the next few months about how Ohio will maximize poll-worker recruitment and training, and ensure the presence of quality, qualified poll workers in every precinct.

Such initiatives underscore our determination to not only meet the minimum requirements of the Help America Vote Act of 2002, but to make Ohio a model state for implementation of these reforms and to lead the nation in development and
implementation of a modern, fair, reliable and accurate election system. As U.S. Rep. Bob Ney led the federal initiative to enact the Help America Vote Act, it was the mandate of our State Plan Committee to formulate a plan that makes Ohio a showcase for election reform.

VIII. Distribution of Resources to Local Governments

We first explore our proposed distribution of aid to local government under Title I. Under guidelines of the Act, these funds must be used assuming the following criteria:

- These funds may be used as a reimbursement for costs associated with punch-card or lever machine replacement incurred after Jan. 1, 2001.
- There is a presumption states must ensure compliance in time for the November, 2004 Federal Election.
- Within six months after the date of enactment, Ohio must certify that the state will use the money for punch-card/lever machine replacement, the state will comply with federal laws, and the voting system will meet new voting system standards.

We anticipate that no change in state law or new legislation will be required to carry out the activities required for certification.

At this writing, the Congressional Research Service (CRS) estimates that full-funding under the Act, for both Title I and Title II receipts, will total $155,251,155. CRS estimates $116,423,155 of that amount represents Title II funding under the Requirements Payments component of the Act.

In addition, the state has appropriated $5.8 million in matching funds for Title II payments, as required by the Act, which means total available funds for implementation of the State Plan in Ohio will be approximately $161 million.

All money in Title II is based on the state’s portion of the nation’s voting age population. The most recent estimate is that Ohio’s 8.5 million voting-age population represents 3.97 percent of the nation’s voting age population of 215.1 million.

Because of the prevalence of punch-card voters in Ohio, we are keenly focused on the distribution of funds under Title I and, more precisely, the buy-out program. The Act stipulates the funds will be distributed to states by multiplying the number of qualifying precincts by $4,000. However, based on available federal funds for this purpose and the number of punch-card and lever-machine jurisdictions in the U.S., it now appears that number likely will be about $3,354 per precinct. As previously mentioned, Ohio has 69 counties designated as punch-card counties.

In addition, two Ohio jurisdictions – Hardin and Lucas counties – feature lever voting machines and would be eligible for funding under the guidelines.

In total, under the formula, the 69 punch-card counties and two lever-machine counties in Ohio means the state would be eligible for about $31 million in federal funds under the buyout program.
However, we know $31 million is insufficient for the counties to purchase modern, reliable voting systems capable of meeting requirements of the Act. Subsequently, our budget for voter and election reforms in Ohio presumes the state will require about $24.2 million to establish a centralized voter registration database and related support for voter education and poll worker training. Our plan calls for the remainder of the Title funds to be allocated to Ohio’s 88 counties to help subsidize installation of new systems and implement other required activities under the Act.

Following is the budget we envision for distribution of the $161 million in funds in Ohio to meet requirements of the Help America Vote Act:

<table>

</tr>
</tbody>
</table>

In simplest terms, this allocates Help America Vote funds where the money is needed most: in Ohio counties. While it is the responsibility of the Ohio Secretary of State to monitor performance and ensure implementation of the Act, the execution of the Ohio plan, ultimately, will take place at the county level. On that basis, we believe it prudent to maximize resources for election reform in the counties where election reform will occur.
While much of the focus is on the counties with punch card and lever-machine voting systems, in reality, all 88 Ohio counties will be expected to conduct some form of system modification and upgrade to make the system in Ohio uniform and compliant with the Act. Subsequently, the premise of the Ohio Plan is to look at the voter and election system statewide, based on the distribution of registered voters in each of the 88 counties. Viewed in that context, the $136 million to be allocated to the counties will be distributed in the following priority order, as federal funds become available:

- Replacement of punch-card and lever-machine voting equipment to the extent that new voting systems would be installed immediately in the 71 affected counties;
- Installation of voting devices compliant with the disability requirements of the Act in all 88 counties;
- Bringing remaining counties into compliance with Section 301 of the Act by funding necessary upgrades and refinements of all other existing systems and equipment.

The Secretary of State reserves the right to distribute the funds to counties based on need and special circumstances. The Secretary of State defines “need and special circumstances” to mean that it is possible some counties will need less funding and others more funding to meet the compliance standards of the Help America Vote Act. On that basis, the Secretary of State will shift funds as he deems necessary to bring all counties into compliance.

The Secretary of State acknowledges that one county, Mahoning County, took the initiative to convert their voting system to electronic voting after Jan. 1, 2001. Funding consideration will be given to all six Ohio counties using electronic voting equipment to bring those counties into compliance with HAVA.

We think this model provides us with great flexibility to allocate Title I and Title II funds in a way that assures full compliance with the requirements of the Act. Invariably some funds would be shifted away from counties that demonstrate a lesser need and reallocated to counties that demonstrate a greater need. But the allocation method is a fair method that will further assure all counties that adequate funds will be available to fully fund the requirements of the Act at the local level.

The Ohio Secretary of State will establish guidelines as part of the performance measurement for county compliance. When compliant systems are purchased for the counties, the Secretary of State will require transition to new voting systems by all punch-card and lever-machine counties by Feb. 1, 2004. The Secretary of State will provide counties with a list of acceptable vendors to supply the new voting equipment and counties must choose from that approved list by no later than Sept. 1, 2003.

Since the Secretary of State will centralize and oversee this process, the Secretary will ensure compliance with all requirements of the Help America Vote Act. The performance timeline requires the Secretary to establish the list of approved vendors by Aug. 1, 2003, providing county boards of elections with ample time to review the list, choose the vendor and establish transition to the new voting systems between Sept. 1, 2003 and Feb. 1, 2004.
To ensure uniformity and compliance, the Secretary of State will stipulate design specifications for voting equipment. If a county fails to select a vendor by Sept. 1, 2003, the Secretary of State will designate a vendor for that county and order installation of new voting equipment in that jurisdiction by the Feb. 1, 2004 deadline.

Although the Act requires the replacement of punch-cards and lever machines by the General Election in 2004, the Secretary of State wants these new systems in place in Ohio for the Primary Election to ensure a smooth, seamless transition and full operational capability in time for the presidential election.

The Secretary of State has already established a fund account for all federal monies designated for Ohio under the Act and those funds, as applicable, will be disbursed from that account as our plan is implemented. This account is segregated to reflect federal funds designated for county buy-outs, election administration and Requirements payments.

Reports will be generated to show the allocation and distribution of these funds and that report will be forwarded to the Election Assistance Commission along with a performance report to show the state's progress and performance in implementing provisions of the Act.

IX. §301. Meeting the Voting System Standards of the Act

The Help America Vote Act requires "uniform and nondiscriminatory election technology" that meets specific voting system standards. Ohio has opted for a program that specifically addresses the requirements of the Act, but provides counties with some degree of flexibility in choice of vendor and how they implement and develop voting systems to meet the particular needs of their region.

Assurance that the state will meet voting system standards specified in the Act is the responsibility of the Secretary of State, so system specifications will be drafted by the Secretary and the list of available vendors will reflect only those companies that submit bids demonstrating their ability to meet the rigorous and unambiguous system specifications and timelines established by the Secretary.

To ensure compliance with the Act, the Secretary of State will appoint a committee comprised of knowledgeable persons in the Secretary's office who have the technical capability to review vendor proposals for electronic voting equipment and tabulating devices and the committee will recommend final adoption of a list of approved vendors that meet system specifications. The committee will review standards set by the Standards Board and
make recommendations to the Secretary based on tabulating systems meeting the standards set by the Federal Election Commission.

Additionally, the Secretary of State will ask the state’s Board of Voting Machine Examiners to review the recommendations of the committee to ensure the vendors and systems meet not only the requirements of the Act, but are reasonable based on their knowledge of Ohio counties and their voting needs. The Board of Voting Machine Examiners currently provide a valuable service to the Secretary of State in the certification of voting equipment to ensure the equipment meets established certification criteria set by the National Association of State Election Directors.

It is logical this group assist the Secretary in this important endeavor to modernize and reform Ohio’s voting systems.

Providing counties with the ability to choose among a list of qualified vendors preserves the involvement of the counties in the vendor process while maximizing the buying power of the state under a state term contract procedure. The Secretary of State will serve as the primary contractor for voting devices in the State of Ohio, embracing the concept that the ultimate beneficiaries of the contract are the counties.

Ultimately, the responsibility for ensuring compliance with the Help America Vote Act of 2002 falls to the chief elections official in the state. But the Secretary of State recognizes the execution of the Act will take place at the county level.

Each vendor chosen to participate in the selection process must demonstrate a capability to serve the whole of the state and, potentially, all 88 counties. Successful vendors must also certify their ability to provide the volume of equipment required to service the state, and demonstrate the organizational capacity to provide statewide support, training and service to county clients.

Eligible vendors must assure their equipment meets a high threshold of security, accuracy and ease of use. They must also ensure timely delivery of equipment to meet the deadlines established by the Secretary of State for full implementation and operation by Feb. 1, 2004. Finally, the financial viability of the vendor will be a consideration for the awarding of contracts.

The Secretary of State believes training and education are essential to the successful deployment of new voting machine equipment. The best technology available is rendered useless unless vendors can provide adequate training and education to ensure both election officials and voters know how to use the equipment efficiently and effortlessly.

To achieve the education and training objective, some states have earmarked a portion of available money specifically for that purpose. We will request vendors designate how much of their proposal specifically applies to training and education.

Absent a recitation of detailed technical requirements listed in the request for proposal that will be issued by the Secretary of State, the Secretary insists successful bidders must provide a system that, at minimum, accomplishes the following:

**General Requirements**

- Guarantees voters will be able to verify their ballot before it is cast and counted. This means the system must include features that allow voters to
vote, review their ballot choices and decisions, and correct errors or omissions before submitting their vote for final tabulation.

- As part of the review and correction process, if a voter selects more than the permissible number of candidates for a single office, the system will alert the voter of the selection and its impact, or prevent over-voting. Additionally, the system must give the voter an opportunity to correct the ballot before it is processed and counted.

- In addition to providing equipment, hardware and applicable software to accomplish these features, vendors will be required to include, as a supplement to the system, information materials clearly explaining the operations and functions of the voting equipment, the effect of casting multiple votes for one office, and corrective procedures and processes available to voters. The system also must alert voters when they have failed to vote for a candidate or issue. We envision a simple pamphlet or brochure that will be available to every voter written in clear language with amplifying graphics.

- The system must ensure the privacy of the voter and confidentiality of the ballot.

Audit Capacity

- While the system allows the vote to be counted and tabulated electronically, the system also must be capable of producing a permanent paper record that can be audited manually. The paper record must be produced in such a way as to function as an official record for any potential recount or any question that might arise subsequent to the election.

This issue was addressed by several witnesses and State Plan Committee members during our public hearings. Almost everyone agrees that to ensure public confidence in any voting system, there must be a paper trail that will provide election officials, the public and media with a permanent, retrievable and readily accessible record and history of the election and provide a traceable mechanism to accommodate questions, election-related issues and recounts.

Ms. Rosenfield of the League of Women Voters told the State Plan Committee that an audit capacity in the form of a paper record was critical to reassure the public and the media that an open and fair election was conducted. We agree and this component is essential to any system configuration advanced by all prospective vendors.

Disability Access

- The system must be accessible for individuals with disabilities, including non-visual accessibility for people who are blind or who have visual impairments,
ensuring the same standards for privacy and confidentiality afforded to people without disabilities. This means the voting system for people with disabilities must allow them to vote unassisted. At least one voting device must be available at each polling location that includes, at minimum, audio features. Additional features could include keypad functions and enlarged font size. The system must also include features that accommodate people who have limited mobility. That means the device must be of a sufficient weight and size to be transported within the environs of the voting location in those facilities that may not be readily accessible and sufficiently adjustable to match voters' eye levels.

During the hearings, we heard from several witnesses with first-hand knowledge of disabilities who underscored for us the importance of not only focusing on voting devices, but the accessibility of polling places. Technology, we were told, does not remedy polling locations that are difficult for people with disabilities to navigate or facilities that lack adequate amenities, such as accessible restrooms.

Karla M. Lortz of Delaware, Ohio, reminded us that voting is a basic American right that should not be restricted or diminished because of a disability. She also emphasized the need to train and educate poll workers about persons with disabilities.

But all of those with disabilities who testified stressed the need to be vigilant about the selection of poll and voter sites to ensure they are barrier free and accessible.

Ohio law requires that a polling place is considered accessible if it is free of barriers that would impede ingress and egress of people with disabilities. The law requires the entrance to be level or feature a nonskid ramp of not more than 8 percent gradient. Doors must be a minimum of 32-inches wide (R.C. 3501.29.)

The Secretary of State will require that all election sites and facilities be reviewed for access to ensure these voting locations meet and, if possible, exceed these minimum standards. At the recommendation of committee member Eric Duffy, the Secretary also will convene a committee to study this issue and to make recommendations about how the state can best address the needs of voters with disabilities.

Alternative Language Accessibility

- Where applicable and in those precincts where substantial non-English speaking populations exist, voting systems must provide alternative language accessibility pursuant to the requirements of the Voting Rights Act of 1965. This alternative-language accommodation shall be available in any precinct where it is determined that 5 percent or more of the registered voters in any precinct might be non-English speaking voters. Each county board of elections is required, 30 days prior to any election, to assure that alternative language mechanisms are available, as mandated by law.

Based on the current composition of the state’s population, there is no concentration of non-English speaking populations that warrant specific activities in this
regard. However, as the composition of the state’s population changes, counties will be required to address this issue as the need arises.

**Error Rates**

- All voting systems in the state must achieve an error rate threshold that complies with error-rate standards established by the Federal Elections Commission (FEC) which are in effect 30 days prior to any election. The Secretary of State will take steps and facilitate measures to require performance of logic and accuracy tests by counties before elections and will require counties to have all system tabulating equipment and programs tested to ensure the correctness of the vote count cast within the error parameters established by the FEC.

**Additional Considerations**

Although we explore this later in our discussion of voter education, we offer two additional vendor considerations for our system specifications. The Secretary of State invites vendors to consider, as part of their proposal, a model or “practice” voting device that simulates the actual voting machine at the polling place. We believe this feature would provide voters with an opportunity to become more familiar with the voting equipment before actually casting their vote.

These so-called simulators, we believe, would provide some voters with a greater comfort level at the polling place if they are provided an opportunity to “practice” on a simulated voting device.

In addition, the Secretary of State will ask vendors to make available software that will enable voters to access such simulators on the Secretary’s website via the internet. This feature would enable voters, at their leisure, prior to Election Day, to learn more about the equipment they will use at the voting place and practice using the equipment and devices on the internet.

While we regard this to be part of our proposed voter education program, we think these innovations would help voters better understand the new technology, ease their apprehension about the use of new voting technology, and speed the voting process at the polling place.

We think these elements would minimize much of the confusion that invariably will accompany the conversion of voting systems in the majority of Ohio counties. As more and more Ohioans enjoy expanded access to the internet and world wide web,
cyberspace would seem to be a logical environment to offer these features as an enhancement to Ohio's voter education program.

Uniform Definition of Vote

Ohio law grants broad authority to the Ohio Secretary of State with regard to election rules and regulations. H.B. 5 passed by the Ohio Legislature in the 124th General Assembly gives the Secretary authority to issue directives and these directives have the same weight as law when applied to election-related matters and issues.

We note this authority in the Secretary's ability to establish a uniform definition of a vote. Currently, Ohio law addresses the definition of a vote for punch-card ballots. Similar legislation was considered for "optical scan" voting devices, but with passage of H.B. 5, the Secretary of State embraced a definition of vote for optical scanning equipment as part of his directives authority.

As is evident, the Secretary of State has the power and authority, via directive, to adjust, modify, revise and refine a uniform definition to meet the state's needs based on the voting systems adopted in the state. However, the Secretary will consult guidelines established by the Federal Election Commission, the Voting Rights Act and all other federal authority in establishing a uniform definition of a vote in Ohio.

We include with the plan, as an attachment, the language that gives the Secretary of State this authority.

X. Voter Education, Election Official and Poll Worker Training

Achieving the mechanical and technological change of the Help America Vote Act of 2002 is only part of the challenge of enacting true modernization and reform of Ohio's voting system. While devices will enhance the efficiency of Ohio's voting and election process, voter education and training of election officials and poll workers is critical to full implementation of the reforms to the benefit of Ohio voters.

Earlier in this report, we alluded to research currently being conducted by the Secretary of State's office to improve poll worker recruitment, training, education and retention. That effort addresses the reality that many of our current poll workers are from a generation that places a premium on voting, elections and the democratic process. Many of our poll workers are senior citizens who very much value freedom and free election processes as a result of their experiences in growing up in the World War II and Korea era.

To these marvelous citizens, voting isn't just a right it's an obligation and a
precious American birthright that has been paid for with the blood, sweat and tears of those who sacrificed their lives on foreign soil. As these citizen patriots retire from the poll worker ranks in Ohio’s election system, we are looking to the future to determine how best we can recruit the next generation of poll workers who will embrace this important Election Day service with the same degree of commitment, enthusiasm and competence of our older poll workers.

We are mindful of an exciting objective of the Help America Vote Act: to engage high school and college students in the process. Several State Plan Committee members noted the desire to better engage young Ohioans in the election process as both a means to recruit bright, knowledgeable students as poll workers and as an opportunity to make more young people stakeholders in the process. Our research is exploring that challenge and opportunity to pass the torch to the next generation. But the research is also looking at other creative options to ensure Ohio has a ready, able and competent corps of poll workers.

 Obviously, these poll workers must be adequately trained to render assistance to voters in a competent and knowledgeable way, not only in terms of helping them understand and use the new technology that accompanies election reform, but also by applying the laws and addressing the myriad of Election Day issues that invariably arise.

 Provisional voting, for example, was a challenge for many of our poll workers during past election cycles as Ohio aggressively implemented new procedures to accommodate provisional voters. Our poll workers have successfully navigated provisional voting and have successfully met the needs of provisional voters.

 But to adequately train poll workers, we must first train election officials. The Secretary of State will meet that challenge with a number of programs and initiatives. New training seminars will precede each election in Ohio where election directors and their staff will be given an opportunity to learn about new procedures and changes.

 The Secretary of State also will enhance its electronic communication with election officials by providing updates and advisories about changes in state and federal election law. Our goal is to provide this information as soon as we have the information in hand.

 Additionally, the Secretary of State will conduct an inventory of current training materials and produce new information and guidelines in both written and video formats. The Secretary also has asked his staff to provide election directors with new materials that can supplement the training of poll workers.

 To ensure seamless transition to new voting systems, we are asking system vendors to partner with us in the production of clear, graphically-driven pamphlets and brochures that tell voters how the voting devices work. Earlier we mentioned the use of simulators and internet-based simulation of new voting devices to provide voters with an opportunity to try out the new technology even before they enter the voting booth to cast their official ballot.

 We think these enhancements and initiatives will advance our implementation of the Help America Vote Act in Ohio and pave the way for a smooth transition to new voting devices and election processes. Some of our preparation for new election processes in Ohio includes some structural changes. We are asking each county board of
elections, for example, to designate a training coordinator who will communicate directly with an election training coordinator in the Secretary of State’s office.

It is our aim for these coordinators to meet frequently throughout the year, exchange information and help us think about ways to improve the election system in Ohio.

After the election, we will gather from all 88 counties a report from these coordinators detailing issues, questions and problems they encountered and how they addressed the situation. From these reports, the Secretary of State will use that data and information to respond to election issues and disseminate that information to election directors so they can make refinements at the local level in subsequent elections.

But to glean a voters-eye view of the process and how we can improve the election system, we will distribute to a selected sample of voters in every county a short survey device that will track their voting experience and give them an opportunity to provide us with feedback on how we can improve the process. The survey will be distributed to a pre-determined number sample of voters throughout the state as they exit the voting booth.

We think this innovation is important to better understand voter needs and to view our election process through the eyes of the “consumer.” Information we collect from both coordinators and the sample voters will guide us in developing relevant and meaningful training materials for both election officials and poll workers in future elections.

The Secretary of State also will develop a new “get-out-the-vote” program in Ohio that will encourage more voters to participate in the election process. While such programs currently exist in the Secretary of State’s office, personnel will be dedicated to conducting research and learning more about voter behavior in Ohio.

In many states, the appeal is often directed at those who are registered to vote, were registered to vote or who have voted in the past. The Secretary of State would like to target potential new first-time voters by coordinating voter recruitment with civics and government teachers in high schools throughout Ohio where there is a captive audience of potential new voters. Additionally, the Secretary would like to initiate research that targets Ohioans who have never voted to learn more about their decision not to participate in the election process and to determine if there are programs and initiatives that can be implemented to address their concerns and entice them to the polls.

Understanding more about voter behavior and non-voter behavior, we believe, is a proactive step we must take to fully embrace the spirit, intent, principles and objectives of the Help America Vote Act.

The proposed budget for these activities is $10 million to $15 million, with $5 million to $10 million earmarked for voter education, and $5 million set aside for election official and poll-worker training. We propose making election official and poll-worker training funds available as state
grants to the counties to supplement local activities and initiatives of the county boards of elections.

As counties deliberate equipment and voting systems, we will encourage them to consider appropriation of available residual funds to voter education and poll worker training. In crafting local budgets to achieve the objectives of the Help America Vote Act, we believe counties must give consideration to these initiatives to supplement state efforts for education and training.

In order to qualify for these funds, counties must submit to the Secretary of State a detailed plan that identifies proposed programs and initiatives and how the funds would be used. After each General Election, counties would be required to report on the deployment of these programs and their assessment of the value of the education and training.

XI. §302. Provisional Voting and Voting Information

The critical role of provisional voting in election reform was underscored by a college newspaper in Ohio several years ago that reported only 5.4 percent of registered students at Ohio University actually voted during one election cycle in the late 1990s. Provisional voting makes it possible for many more of those students to engage and participate in the elections process. Provisional voting is a way to ensure every eligible voter who shows up at the polls on Election Day can cast a ballot.

The National Voter Registration Act, or so-called “motor voter” law, protects those who changed their residence, but what about those who, for example, were incorrectly purged from the voter registration list? Ohio is sensitive to this issue and the Secretary of State is committed to making sure every voter and every vote counts. The Secretary understands that no matter what reforms are enacted, human error will always be a factor in voter registration. No voter should be disenfranchised just because someone made a mistake, or the paperwork on a change of address was overlooked, misplaced, incorrectly recorded or just didn’t get entered into the database in time to be reflected on the voter rolls.

Ohio’s system of provisional voting has been successful and voters who otherwise might have been denied a ballot were given an opportunity in recent elections to cast a provisional ballot, and for local boards of elections to determine if those ballots were valid. We have guidelines and procedures in place to address provisional voting in Ohio.

---

3 The (Ohio University) Post, Voters still have time, Oct. 11, 2001.
and we will continue to refine and expand the scope of provisional voting in the state to comply with the spirit, intent and letter of the law in the Help America Vote Act.

The Act requires provisional voting as a condition for receiving federal funding for election reform and Ohio is poised to meet all such requirements. We anticipate the Federal Election Commission will continue to explore this issue and we will make adjustments to provisional voting regulations in the state as those guidelines and adjustments are released.

The Secretary of State also will review, prior to each election, procedures for the handling and processing of provisional votes to ensure full compliance with state and federal guidelines. To provide fullest utilization of the provisional voting mechanism, every local board of elections will be required to adopt provisional voting policies that are weighted more toward inclusion in the voting process than challenges and exclusion in the ballot process.

For purposes of our State Plan, suffice that Ohio and the Secretary of State, as a matter of public policy, embraces the concept that every effort should be made at every board of elections in the state to accommodate every voter who, for whatever reason, does not appear on the certified list of registered voters in any jurisdiction of the state. Provisional voting is a valuable fail-safe mechanism that is an essential component of election reform in Ohio.

Further, we believe those who cast a provisional ballot should have access to mechanisms and procedures that tell them whether their ballot was counted. Toward that end, our budget presumes establishment of a toll-free hotline that will enable provisional voters, after the election, to learn whether their ballot was counted and to receive an explanation about why it wasn’t counted if, indeed, a determination was made that it was not a valid vote. We have allocated $250,000 in our State Plan budget to create and maintain such a hotline and encourage local boards to prominently display information by whatever means to advise provisional voters of this follow-up option.

Additionally, information will be available at every precinct and voting location to explain provisional voting procedures and who may cast a provisional vote. Such information should also be readily available on the Secretary of State’s website and all county election board websites, where such sites exist.

As part of the National Voter Registration Act, Ohio has endeavored to forge a partnership with other state public agencies in voter registration and it is logical to extend an invitation to these agencies to also educate, advise and alert prospective voters about their provisional voting options in these venues.

Ohio also would expect to partner with the state’s media in making voters aware of the provisional option. We contemplate deployment of a series of public service commercials on local television stations in the days preceding elections advising voters of their options for casting a provisional vote. We think a compelling argument can be made to broadcast outlets around the state that full citizen participation in the election process is public service of the highest order.
XII. §303. Statewide Voter Registration and Registration by Mail

Maintaining a viable voter registration list is an essential ingredient in conducting fair and participatory voting processes. Centralizing registration in a single statewide database is a sensible change that ensures uniformity, consistency and reliability. To accomplish this task, the Secretary of State will seek one vendor to develop a registration system that must meet the needs of voters and elections officials alike.

The system must be sufficiently functional that all eligible voters can register to vote with ease and simplicity. The system must accommodate both written (mail-in registration and in-person registration) and electronic means for voters to initiate the registration process. Registration sites, locations and opportunities must be varied and plentiful.

It is not sufficient that voters would be required to register only at boards of elections or obtain registration materials only at governmental venues. The successful vendor must anticipate a variety of locations and opportunities for citizens to register in both public and private settings. The system must contemplate a solution for converting current voter registration data now housed in local boards of elections and transferring that data to the centralized database in the Secretary of State’s office.

The statewide voter registration system must meet technical demands that will readily allow local boards of elections to seamlessly and effortlessly interface with the state database in a way that assures instant access to all qualified registered voters in their jurisdiction and the state. The system must include sufficient data that provides local election officials with the means to segregate voters by political and geographic boundaries to the extent these officials can create and develop voter lists by precinct and voting location.

The system must include features that permit local elections officials to track the voting history of registered voters, identify those no longer legally registered, and readily accommodate change of address or voting status.

And, finally, the system must anticipate that these records are public records and must be maintained in a way that conforms to state public records law and all other applicable state and federal laws that pertain to voter registration currently in effect.

Our budget presumes a $5 million to $10 million allocation for creation and development of a statewide voter registration system.

Closely akin to the registration issue are voter identification requirements. It was the consensus of both witnesses who testified before the State Plan Committee and the committee itself that the Secretary of State should establish policies that expand rather than restrict the types of instruments used by voters as a means of identification. We believe this is in keeping with the spirit and intent of the Help America Vote Act.
As no voter should be denied an opportunity to cast a provisional ballot in those circumstances where their name might not appear on the voter rolls, neither should a voter be denied an opportunity to vote because of arbitrary and restrictive identification requirements. While it is logical the Secretary of State should work in coordination with agencies such as the Ohio Bureau of Motor Vehicles to validate the identity of new voters, such identification requirements must, by definition, extend beyond identification devices such as a valid state drivers’ license.

As several Ohioans with disabilities testified, many people with disabilities do not have a drivers’ license. It is the intention of the Secretary of State to extend identification requirements to include any reasonable means of identification such as utility bills, rent receipts or any legal or quasi-legal instrument that bears the name and address of the prospective voter.

The policy of the Secretary of State is that voter challenges on the basis of identification should be judged on a liberal construction of voter ID rather than a restrictive construction that would deny the voter an opportunity to cast a ballot.

Based on testimony provided by Mr. Perry of the Columbus Urban League, the Secretary of State also would like to more closely examine the issue of restoring voter rights to persons released from incarceration in the state’s Department of Rehabilitation and Corrections. There is a widespread perception that these persons, as a result of felony convictions, have forever forfeited their right to participate in the election process. Such is not the case.

Persons who have had their voting rights taken away because of a felony conviction are subject to re-enfranchisement as legal voters to restore their right to vote. As these persons have presumably paid their debt to society as a result of their incarceration, full integration back into society as fully functioning citizens should also presume their eventual re-engagement and participation in the election process.

For these persons, identification also is an issue because drivers’ licenses might have expired during their period of incarceration. At minimum, the Secretary of State pledges to educate election officials and poll workers about the rights and processes available to these individuals.

XIII. §402. Administrative Complaint Procedures and Grievances

To fully facilitate implementation of the Help America Vote Act of 2002, Ohio will establish an administrative complaint procedure to address allegations by any citizen who believes their voting rights have been violated under Title III of the Act.

The complaint and grievance procedures developed by the Secretary of State are constructed toward development of a non-adversarial complaint process where the desired outcome is a
solution or remedy of the problem, rather than a highly evidentiary process.

The process adopted by the Secretary of State includes an alternative dispute resolution component that invites parties to seek equitable resolution in that venue as well as through a formal hearing process. When a valid complaint or grievance is filed as part of this process, it is ultimately the state, and more specifically the Secretary of State, that must provide the appropriate remedy.

We attach, as an addendum to this report, the full text of the proposed procedure. Following, in summary, are the relevant elements of the complaint procedure:

- Any Ohio citizen who believes there is a violation of any provision of Title III of the Help America Vote Act may file a complaint.
- All complaints must be in writing, signed, notarized and be sworn under oath.
- The complainant must be identified by name and mailing address, and the complaint must include a description of the violation alleged to have occurred.
- The complaint must be filed with the Secretary of State along with proof of delivery of a copy of the complaint to each respondent.
- In addition to failure to include any of the foregoing, the Secretary of State may reject the complaint if more than 90 days have lapsed since the final certification of the federal election at issue.
- The Secretary of State must establish procedures and schedules addressing when the complaint will be heard and considered.
- The Secretary of State or designated hearing officer must compile and maintain an official record of any proceeding and include submissions and evidence provided.
- Complaints must be heard and determined by the Secretary of State or designated hearing officer, who is required to prepare a report expressing an opinion about whether a violation did occur within 20 days of the filing of such a complaint.
- Any hearings conducted pursuant to the filing of a complaint must be tape recorded.
- Dates, times and locations of hearings must be established and all parties must be given at least five days notice of such hearings.
- All relevant parties, including the complainant and all respondents may appear at the hearing, testify and present evidence. There is no requirement that any
complainant, respondent or any other party to the proceeding be represented by an attorney.

- The Secretary of State or a designated hearing officer is required to prepare a transcript of the tape recorded hearing and that transcript is a public record under Ohio's public records law.

- A final decision must be rendered within 60 days after the complaint is filed.

- If a violation is determined to have occurred, a determination must be issued specifying the appropriate remedy. If a violation is deemed not to have occurred, the complaint must be dismissed.

- The remedy may not include any award of monetary damages, costs or attorney fees, and may not include the invalidation of any election or a determination of the validity of any ballot or vote.

- The decision under this process is final and is not subject to judicial review.

- The complaint and grievance procedure does not preclude any other legal action provided by law.

XIV. Ongoing Performance Measurement

As Ohio anticipates successful implementation of reforms and modernization of its election systems and processes to accomplish its objectives under the Help America Vote Act of 2002, we believe performance measurement is an essential and ongoing requirement to ensure a fair and inclusive election system.

Each year, boards of elections throughout Ohio prepare annual budgets anticipating costs and expenses for conducting elections. We recommend that while each board is preparing their budgets that they also take time to review the improvements they have made in their elections operations during the past year and report their progress in meeting election reform objectives under the Help America Vote Act. The Secretary of State will compile these annual reports and submit a summary of initiatives, improvements and progress to the Election Assistance Commission. We think this is a way for
all election officials in Ohio to remain vigilant of our obligation to continue measuring our performance in making the election process fair and accessible to all Ohioans.

As stated earlier in this report, we view this opportunity to reform Ohio's election system not as an end process, but as the beginning of a renewed effort to fully engage our citizens in their most vital civic responsibility in a democratic process. Election reform, after all, is a futile exercise unless citizens view themselves as stakeholders in their local community, their state and the nation.

Our guiding principle in developing this state plan is that voters should willingly and enthusiastically participate in the electoral process, free of obstacles that might inhibit them from participating. To accomplish that, we, as election officials, are obligated to provide them with the best and most modern tools available so they can exercise their right to vote with assurance that every vote and every voter counts and will be counted on Election Day.

No legal voter should be taken for granted and no legal vote should be discounted or, worse, not counted. Every vote cast, every ballot submitted must be treated as if our very system of government and our way of life depends on it, simply because it does. No greater is the obligation of every eligible voter to be an active, knowledgeable and willing participant in the election process, and no greater responsibility as election officials do we have than to ensure those voices are heard and those votes are counted.

XV. Requirements Payments: Maintenance of Effort

As a condition for receiving Requirements payments under the Help America Vote Act, states must maintain expenditures for funded activities "at a level that is not less than the level of such expenditures maintained by the state for the fiscal year ending prior to November, 2000."

Attached to the State Plan are budget materials that document state spending on election and election administration through the Secretary of State’s office for Fiscal Year 2000 (July 1, 1999 – June 30, 2000.)

The total amount of $2,739,159.04 million does not include reimbursements to county boards of elections for advertising costs related to state issue ballot advertising. The total budget request of the Secretary of State’s office for FY 2004 and FY 2005 are sufficient to fund continued investment in elections at this annual level.

Additionally, the Secretary of State shall include a HAVA-compliance and funding report as part of future biennial budget requests of the Ohio Legislature to certify HAVA-compliant funding and continue Ohio’s maintenance of effort.
XVI. Estimated Timelines for Implementation of the State Plan

Following are key dates and the proposed timetable for implementation of our State Plan:

- March 18, 2003: State Plan Advisory Committee named, public input process defined.
- April 3-4, 2003: State Plan Advisory Committee conducts public hearings.
- April 9, 2003: RFP released for statewide voter registration system.
- April 17, 2003: State Plan Advisory Committee reconvenes to review draft State Plan.
- May 7, 2003: Competitive bids due for voter registration system.
- May 13, 2003: State Plan finalized and published for 30-day review.
- May 16, 2003: RFP released for voting system vendors.
- June 2, 2003: Secretary of State awards bids for voter registration system.
- Aug. 1, 2003: Secretary of State awards bids for election systems. County boards of elections notified of eligible system vendors.
- Sept. 2, 2003: County boards of elections must notify Secretary of State which vendor they have chosen for election system improvements.
- Dec. 1, 2003: Statewide voter registration system installed and fully operational.
- Feb. 1, 2004: Replacement of punch-card and lever-machine complete.
- March 2, 2004: Primary Election. (Ohio General Assembly considering change of Primary to May, 2004.)
- Nov. 2, 2004: General Election

XVII. Plan Submission Presumes Full Federal Funding

Submission of this plan presumes full and timely federal funding. In order for Ohio to meet the ambitious schedule outlined in this State Plan, it is imperative that federal monies be made available to the state on a schedule that is consistent with implementation of the base components of the plan.

Ohio reserves the right to seek waivers stipulated in the Help America Vote Act that allow us to delay implementation of this plan if federal funding is not forthcoming in a timely manner that will enable us to accomplish the objectives outlined in this report to the Election Assistance Commission.

Proceeding without a guarantee of federal funds would create a financial burden for the State of Ohio and its 88 county jurisdictions. While Ohio is anxious to meet and exceed the standards of the Help America Vote Act, implementation is not possible without the federal guarantees that accompany the Act.

The preponderance of unacceptable voting devices in the state underscore the necessity for reform, but it shows the very real and special challenges Ohio faces in fully
complying with the Act and the funding that will be required to reconstruct and reconfigure the voting and election systems in the state.

Our pledge is to implement reforms, as outlined in this State Plan, as federal funds become available.

XVIII. The State Plan Committee: HAVA and Beyond

We reserve this section of the report to capture the comments and thoughts of our State Plan Committee. While many of the committee’s recommendations and much of their input is reflected in preceding sections of the report, it was clear this panel of distinguished Ohioans went beyond merely thinking about minimum requirements of the Help America Vote Act and insisted on expanding their mission to address issues that will produce broad and meaningful election reform in our state.

That kind of visionary thinking is precisely what the Secretary of State had in mind when he impaneled the State Plan Committee.

If there was a universal theme that resonated from the committee’s deliberations, it was consensus that Ohio must aggressively engage the next generation of voters and make young people in our state understand their role as stakeholders in the democratic process. It is insufficient, the panel said, to merely invite high school and college students into the election process. Ohio, the State Plan Committee said, must be proactive in educating young people about the election process and instill a deeper commitment to engendering student participation in the election process.

Linda Carr, Daisy Duncan Foster and Pastor Aaron Wheeler were particularly passionate in their remarks about this issue and said Ohio should be creative in developing new programs and initiatives to bring young voters into the process. The Committee urged the Secretary of State to aggressively seek available funds under Title V and Title VI funding of the Help America Vote Act to accomplish this critical task.

Additionally, committee members recommended working with the Ohio Department of Education and the Ohio Board of Regents to explore ways to better educate and encourage political participation by high school and college students. Pastor Wheeler suggested Ohio public schools should ponder curriculum requirements that focus exclusively on voting and election processes.

State Rep. Nancy Hollister noted that this report should underscore for Ohioans that implementation of the Help America Vote Act in Ohio signals a “change in the governance of the election system” in the state. HAVA, she said, places more responsibility on the Secretary of State to assure a fair, equitable and inclusive election process in Ohio.
responsibility on the Secretary of State to assure a fair, equitable and inclusive election process in Ohio. "We need to acknowledge that," she said.

But Rep. Hollister and other committee members said that shift in governance does not minimize the necessary independence, ongoing role or responsibility of counties to execute election policies within the new governing framework created by the Help America Vote Act.

Committee member Jeff Matthews said county boards of elections must be independent to effectively achieve the objectives of the Help America Vote Act, and Ms. Duncan Foster said boards of elections must feel "some ownership of the process." In that context, it was the consensus of the State Plan Committee that full compliance with the Help America Vote Act requires critical coordination and a strong working relationship between the Secretary of State's office and local boards of elections.

Election officials Guy Reece and Tom Coyne, along with Mr. Matthews, agreed that innovation doesn't end with the Help America Vote Act. They said Ohio must constantly be looking for new methods, new procedures and new ideas to keep the election process viable and invite more Ohioans to exercise their right to vote.

Mr. Reece invited future exploration of election innovations being tested in other states such as open voting, early voting, ballot on demand and expanded availability and use of absentee ballots. Catherine Turcer asked that the Secretary of State consider the flexibility of voting devices that would allow for concepts such as instant runoff voting and proportional representation.

Ms. Turcer also recommended the Secretary of State ensure that the RFP for new voting equipment carefully consider the necessity for strong auditing capability that would provide a spot-check feature for pre-testing. Ms. Turcer and Donna Alvarado said alternative language capability also should be included in the RFP in anticipation of changing future demographics in the state.

Ms. Alvarado noted the projected growth of Hispanic populations both nationally and in the State of Ohio. Several committee members agreed that rather than addressing this issue later and incurring cost for conforming equipment, the RFP should anticipate the language requirement and it should be purchased now while federal funds are available to help Ohio make the transition to new voting equipment.
She said language requirements also need to be considered in education products produced by vendors and election officials in how to use the new voting equipment, as well as in training of poll workers and election officials. She said alternative language issues need to be considered in creation and execution of the grievance process and procedures.

She suggested the Secretary of State consider alternative language policies that exceed the 5 percent threshold.

While preceding sections of the report address monitoring procedures for implementation of the Help America Vote Act in Ohio, Ms. Alvarado said compliance monitoring should be “futuristic” and focus on outcomes. While measuring accomplishments, she said the state and local jurisdictions also should be forward looking and report, for example, where the state expects to be in the next five years and beyond.

She said monitoring and compliance should address issues such as where Ohio wants to be as a state, how we achieve those objectives, who is responsible for implementing these plans, what the funding sources will be for implementation and what will be different when changes, modifications or new procedures are implemented in the election process.

Rep. Hollister agreed there needs to be periodic evaluation of Ohio’s progress in meeting voting and election reforms. She suggested a need to pause from time to time to reflect on what has been accomplished, what future reforms need to be considered, and what revenues are available to achieve those objectives.

A primary focus in the deliberation of the State Plan Committee was how Ohio could best address disability issues related to implementation of the Help America Vote Act. Eric Duffy said the issue of physical barriers is a real and pressing issue that calls for creative solutions in Ohio. He emphasized that Ohio must consider not only what takes place inside the voting place, but what physical barriers exist that hinder access outside the building.

Pastor Wheeler, chairman of the Ohio Civil Rights Commission, offered the assistance of that agency in working with the Secretary of State in exploring solutions to that issue.

As expected, much of the panel’s deliberation was focused on funding and whether the federal allocation to Ohio was adequate to effect the wholesale change in voting systems in the state. A key voice in that discussion was Larry Long, executive director of the County Commissioners Association of Ohio.

Mr. Long noted that there is concern among county commissioners about whether the federal funding anticipated for implementation of the Help America Vote Act is sufficient to purchase the voting equipment needed to make Ohio HAVA compliant. But
a comparable concern, he said, is consideration of future maintenance and replacement costs, as well as related cost issues such as storage requirements for the new equipment. He acknowledged that there might be offsetting costs and efficiencies that could be realized from conversion to electronic voting systems, but he stressed the necessity for full funding of the plan and timely allocation of federal payments to the state to avoid financial burdens on counties already adversely affected by the economy and cuts imposed by the State Legislature.

Rep. Hollister also discussed the funding issue, suggesting the state, at some future date, might consider bonding options to assist in paying for ongoing costs associated with implementation of the Act, as well as making funds available for voter education, system upgrades and youth participation in the election process.

Further, she said that although there appears to be no immediate need for sweeping changes in state election laws, the state should constantly evaluate that need and enact legislative change as required.

Mr. Coyne emphasized the need for the Secretary of State and local boards of elections to fashion voter system reforms in a way that keeps the process from becoming "vendor-driven." He said county boards need time to assess and evaluate the unique demands in each jurisdiction and recommended the Secretary of State consider meeting the disability requirements of HAVA in time for the 2004 election, but proceed more deliberately on installment of new voting equipment.

XIX. Summary of the State Plan

Section 254 of the Help America Vote Act of 2002 lists the required components of the State Plan and this document fulfills those requirements.

This report demonstrates that Ohio, because of its widespread use of punch-card voting, is perhaps challenged more than other states to reform its election methods and modernize its voting systems. The size of the state, ranking seventh among the 50 states in total population, and the mix of rural and urban population makes the transition even more challenging.

Recognizing the enormity of the task confronting Ohio, some members of the State Plan Committee and witnesses who testified before the committee counseled the Secretary of State to invoke waivers that would allow the state to delay its full implementation of the plan until the 2006 election cycle.

The Secretary of State, however, believes Ohio cannot afford to delay its implementation of the plan because every election cycle that passes is another election where voters are potentially disenfranchised and Ohio votes are lost or miscounted. Ohio, the Secretary of State believes, must be a full participant in the election process and every eligible voter must be afforded the
opportunity to be counted as we ponder the critical decisions affecting our local communities, state and nation.

As election officials, if we know voters are disenfranchised and that legitimately cast ballots are being discounted, we have not only a moral obligation to immediately embrace a solution, but a legal obligation to find a remedy and enact measures to prevent that from happening. If even one voter is denied the right to vote, we are obligated, by law, to determine the cause and forge a solution. The evidence is overwhelming that thousands of Ohio voters have been disenfranchised by antiquated voting equipment and that many thousands more have lost confidence in the reliability and accuracy of voting devices currently in use in most of Ohio’s 88 counties.

The Secretary of State has confidence in the election professionals who conduct and administer elections in the State of Ohio, and believes Ohio has the capability to enact reforms that have already taken place in other states.

We are emboldened in our decision to press forward with implementation of this plan based on the experience of Knox and Lake counties in executing successful elections after implementing new systems only weeks before the General Election. The Knox County Board of Elections, which has only four employees, received delivery of new electronic voting devices in October, 1996, a presidential election year, and deployed them in the November General Election.

Lake County issued a request for proposal in April 1999, awarded bids in July of that year, took delivery of a new voting system the following September, and conducted a successful election weeks later in the November General Election.

Under the timetable established in this plan, new voting systems would be installed and operational in time for the Primary Election in 2004, providing local boards of elections with an opportunity to test the new systems before fully engaging them in the 2004 presidential election cycle.

However, we refer to the preceding section of this plan. Full implementation of this plan presumes full funding by the federal government. If the Secretary of State determines that federal funding for implementation of this plan is not forthcoming from the federal government in a timely manner, we will notify the Elections Assistance Commission of our intent to revise this plan and adjust the timetable for implementation.

Boards of Elections should be assured that the Secretary of State will focus all of its available personnel and resources to assist counties in enacting these reforms and meeting the requirements of the Help America Vote Act.

Boards should also be assured the Secretary of State will work with county officials and elections administrators to ensure available resources are distributed as quickly as possible and that cost containment efforts will be undertaken to minimize implementation costs to counties. Based on our analysis, which was reinforced in the testimony of Doug Lewis of The Election Center, we believe conversion of the state’s punch-card voting system to direct recording electronic (DRE) voting devices will generate certain cost efficiencies we believe will minimize cost and expenses to counties, or at least offset some of the implementation costs.

June 16, 2003
We include in this definition of electronic voting devices the option for some counties to choose optical scanning devices that are HAVA compliant. In counties which have invested in this equipment and prefer these optional voting devices, the Secretary of State will consider deployment of this equipment as acceptable if certain modifications are made to ensure compliance with statewide voting standards. These counties, however, would be required to feature at voting locations electronic voting equipment that accommodates the needs of people with disabilities.

We presume the transition to electronic voting equipment will, at minimum, reduce printing costs in most counties. We believe there are further savings and efficiencies that will be derived from electronic voting that will reduce personnel and labor costs.

The DRE option also will introduce added efficiencies in the election process that will eliminate issues related to “over-votes,” recounts and ensuring full voter participation by persons with disabilities. We also believe an electronic-based voting system will enhance training and education across the spectrum for election officials, voters and poll workers if the system is sufficiently user-friendly.

Based on the foregoing, following is a summary of the State Plan for Ohio based on the requirements delineated in Section 254 of Public Law 107-252:

(1) How the State will use the requirement payment to meet the requirements of Title III, and, if applicable under section 251(a)(2), to carry out other activities to improve the administration of elections.

Ohio will implement new voting systems and procedures that meet the general requirements of Title III ensuring the systems have audit capacity, disability access, and alternative language accessibility, where applicable, and that the systems meet error rate thresholds established by the Federal Elections Commission.

(2) How the State will distribute and monitor the distribution of the requirements payment to units of local government or other entities in the State for carrying out the activities described in paragraph (1).

Ohio anticipates federal funding and state matching funds will be about $161 million. The Secretary of State will allocate about $136 million of that amount for installation of new voting equipment and upgrades of existing voting equipment in Ohio counties, and use the remaining portion to implement statewide voter registration and establish a provisional voting hotline. Disbursements in the amount of $5 million will be
available to Ohio’s 88 counties for election official and poll worker training. Additionally, the Secretary of State will make $5 million to $10 million available for administration of a statewide voter education program. The Secretary of State will draft guidelines and reporting requirements to monitor distribution of these funds and to ensure county compliance with the Help America Vote Act of 2002.

(3) How the State will provide for programs for voter education, election official education and training, and poll worker training which will assist the State in meeting the requirements of title III.

See response to No. 2. Additionally, the Secretary of State, in establishing an authorized vendor list for deployment of new voting equipment, will require vendors to include, as part of their bid proposal, fund allocation that includes voter education, election official education and training, and poll worker training. The Secretary of State also will implement new programs and procedures to supplement these vendor requirements and efforts at the county level to address these issues.

(4) How the State will adopt voting system guidelines and processes which are consistent with the requirements of section 301.

See preceding responses. Ohio will replace punch-card voting in the State and require deployment and installation of electronic-based voting devices that meet the requirements of the Act. The request for proposal for new voting equipment will be crafted to presume required features and safeguards that ensure a uniform voting standard and compliance in all Ohio counties with specific requirements of the Act.

(5) How the State will establish a fund described in subsection (b) for the purposes of administering the State’s activities under this part, including information on fund management.

Such a fund has already been established by the Secretary of State and will be monitored by both the Secretary of State and the Auditor of State, as Ohio law applies to state auditing requirements and reporting procedures. Fund management procedures include quarterly reports to the Election Assistance Commission to detail receipt and expenditure of funds, and how those funds were used to meet the objectives of the Act.

(6) The State’s proposed budget for activities under this part, based on the State’s best estimates of the costs of such activities and the amount of funds to be made available.

See response to No. 2 and the fund distribution table on page 23 of the State Plan. The Secretary of State believes full implementation of the plan will require all available federal funding and state matching funds to meet the requirements of the Act.
(7) How the State, in using the requirements payment, will maintain the expenditures of the State for activities funded by the payment at a level that is not less than the level of such expenditures maintained by the State for the fiscal year ending prior to November 2000.

(See Section XV. Requirements Payments: Maintenance of Effort.) Attached to this State Plan are budget materials that show the level of spending for election services by the Secretary of State in FY 2000 and projected levels of spending for FY 2004-05. The Secretary certifies that no federal funds for Requirements payments earmarked for voter reforms and system modernization will be used to supplement the state budget for operation and administration of the office.

(8) How the State will adopt performance goals and measures that will be used by the State to determine its success and the success of units of local government in the State in carrying out the plan, including timetables for meeting each of the elements of the plan, descriptions of criteria the State will use to measure performance and the process used to develop such criteria, and a description of which official is to be held responsible for ensuring that each performance goal is met.

The Secretary of State assumes full responsibility for ensuring compliance with the Act. Specific timetables are included in this plan which requires all punch-card and lever machine counties to install and deploy new voting equipment that meets the uniform standards of the Act by Feb. 1, 2004. All other counties will be compliant with the Act by Jan. 1, 2006. The plan calls for a statewide voter registration system to be in place and fully operational by Dec. 1, 2003. See Section XIV for ongoing performance measurement. Additionally, the Secretary of State will ensure compliance of all county boards by Sept. 1, 2003 by assigning a vendor to any county which has failed to select a vendor for election system improvements.

(9) A description of the uniform, nondiscriminatory State-based administrative complaint procedures in effect under section 402.

See attached procedure and refer to Section XIII of the State Plan, Administrative Complaint Procedures and Grievances.

(10) If the State received any payment under Title I, a description of how such payment will affect the activities proposed to be carried out under the plan, including the amount of funds available for such activities.

See response to No. 2. Ohio will use funds from Title I for antiquated systems buyout and to improve election administration activities and procedures. See the fund distribution table on page 23 of the State Plan and allocation and distribution formula described on page 24.
(11) How the State will conduct ongoing management of the plan.

See Section XIV, Ongoing Performance Measurement. Throughout this State Plan is a description of the management practices and procedures outlined by the Secretary of State to ensure compliance with the Act. Any material change in this plan will result in a resubmission of the Plan in accordance with Sections 255 and 256 of the Act.

(12) In the case of a State with a State Plan in effect under this subtitle during the previous fiscal year, a description of how the plan reflects changes from the State Plan for the previous fiscal year and how the State succeeded in carrying out the State Plan for such previous fiscal year.

This State Plan represents Ohio’s initial submission of a State Plan to the Elections Assistance Commission.

(13) A description of the committee which participated in the development of the State Plan in accordance with section 255 and the procedures followed by the committee under such section and section 256.

See page 3, The State Plan Committee, and Section VI, How Ohio Developed its State Plan.

This State Plan respectfully submitted to the Elections Assistance Commission, in accordance with U.S. Public Law 107-252, this 16th day of June, 2003.

J. KENNETH BLACKWELL
Secretary of State
The State of Ohio

June 16, 2003
Office of the Ohio Secretary of State

Election Complaint Procedure Adopted Pursuant to Section 402 of the Help America Vote Act of 2002

Section 1. Authority.
These complaint procedures are established as required by the Help America Vote Act of 2002 [hereafter referred to as HAVA], P.L. 107-252, Section 402, and in accordance with the Ohio State Plan created pursuant to HAVA.

Section 2. Purpose.
These rules are promulgated to establish State-based uniform, nondiscriminatory administrative complaint procedures under which all complaints alleging violations of Title III of HAVA, sections 301 through 312, may be promptly and efficiently resolved and all complaints of merit will be appropriately remedied by the State of Ohio.

Section 3. Definitions.
As used in this complaint procedure, the following terms shall have the following meanings:
(A) "Complainant" means the person who files a complaint under this chapter.
(B) "Federal election" means a primary, special primary or general election at which a federal office appears on the ballot.
(C) "Respondent" means any state or local election official whose actions are asserted, in a complaint under this chapter, to be in violation of Title III.
(D) "State or local election official" means the Secretary of State, any member of a county board of elections, or any person employed by either the secretary or a county board of elections whose responsibilities include or directly relate to the administration of any federal election.

Section 4. Applicability.
(A) Any person who believes there is a violation of any provision of Title III of HAVA (including a violation which has occurred, is occurring, or is about to occur) may file a complaint.
(B) These procedures shall apply only to complaints raised under Title III of HAVA.
(C) Other complaints related to the conduct of elections shall be raised with the responsible public official(s), United States or Ohio prosecutors, or the Ohio Secretary of State as appropriate under 42 U.S.C. § 1973 et seq.; 42 U.S.C. § 12101 et seq.; 42 U.S.C. § 701; and other applicable laws.

Section 5. Form of Complaint.
(A) The complaint must be in writing and notarized, and signed and sworn to by the person filing the complaint. The complaint must set forth the complainant's name, mailing address and telephone
number, and each alleged violation of Title III of HAVA, and must include a clear and concise
description of each alleged violation that is sufficiently detailed to apprise both the respondent and the
decision maker of the nature of each alleged violation.

(B) The complaint may name witnesses to the alleged violation and include their written statements; may
include documentary evidence supporting the allegations; and may also identify the sections,
subsections, and paragraphs of HAVA alleged to have been violated.

(C) The Secretary of State shall establish a complaint form to be used, although complaints received in
substantially the same form and meeting all the legal requirements of subsection (A), above, shall be
accepted.

Section 6. Place and Method of Filing Complaints.

The complaint shall be filed, along with adequate proof of mailing or delivery of a copy of the complaint to
each Respondent, with the Office of the Ohio Secretary of State, Elections Division, 180 E. Broad Street,
15th Floor, Columbus, Ohio 43215. Telephonic, electronic, and facsimile complaints will not be accepted.
There is no fee for filing a complaint.

Section 7. Service of Papers on all Parties.

(A) When a complaint alleges violations by a county board of elections, the Secretary of State or the
Secretary’s designee shall promptly transmit a copy of the complaint to the county board of elections
and permit the board to respond on its own behalf.

(B) A copy of each piece of correspondence between the complainant or the county board of elections and
the Secretary of State, the Secretary’s designee, or the hearing officer, shall be filed with the Office of
the Secretary of State. Copies of the correspondence and filings shall simultaneously be mailed to the
hearing officer, if his or her identity and address are known, and to the opposing party, if any.

Section 8. Maintenance and Confidentiality of Official Agency Record.

(A) The Secretary of State shall be the official custodian of the record of each complaint.

(B) The record shall contain:

(1) A copy of the complaint, including any amendments made with the permission of the Secretary of
State or the Secretary’s designee;

(2) A copy of any written submissions by the complainant, respondents, or other interested persons,
including any responses or replies thereto permitted under the schedule or by the Secretary of State
or the Secretary’s designee;

(3) Copies of all notices and correspondence with regard to the complaint;

(4) Originals or copies of any tangible evidence produced;

(5) The results of any investigation conducted;

(6) Other documents received or generated by the Secretary of State, his or her designee, or the
hearing officer, concerning the substance and/or procedure applied to resolution of the complaint; and

(7) A copy of any final determination made regarding the complaint.

(C) All records are confidential until there is a final resolution of each complaint. If the complainant makes
a timely request for a hearing, the record shall be confidential until the hearing is finally resolved.
Section 9. Initial Screening.

(A) The complaint shall be screened by the Secretary of State or a person designated by the Secretary to determine if it meets the criteria in HAVA and these rules.

(B) The Secretary of State or the Secretary’s designee shall examine each complaint and may reject it for filing if:
   (1) The complaint is not signed and notarized under oath;
   (2) The complaint does not identify the complainant or include an adequate mailing address;
   (3) The complaint does not allege on its face a violation of Title III with regard to a federal election; or
   (4) More than 90 days have elapsed since the final certification of the federal election at issue.

(C) If the complaint does not meet the criteria in HAVA and these rules as stated herein, it shall be dismissed, although it may also be referred to other appropriate authorities.

(D) If the complaint is dismissed, a designee of the Secretary of State shall send notice of the dismissal and a copy of these rules to the complainant. The notice shall advise the complainant that he or she is not precluded from refiling a complaint which conforms to the legal requirements.

(E) The Secretary of State or the Secretary’s designee shall do all the following:
   (1) Take all necessary steps to prepare the complaint for determination;
   (2) In coordination with the parties, shall establish a schedule under which the complainant and respondent or respondents, as well as any other interested persons, may file any written submissions concerning the complaint, and under which the complaint shall be finally determined;
   (3) Provide copies of the official record to the decision maker in a timely manner.

(F) When the Secretary of State, or any employee of the Secretary, is a Respondent, the functions assigned to the Secretary under this administration procedure shall, to the greatest extent possible, be performed by individuals not directly involved in the facts giving rise to the complaint.

Section 10. Consolidation of Complaints.

The Secretary of State or the Secretary’s designee may consolidate complaints and resolve them together if they relate to the same actions or events, or if they raise common questions of law or fact, or if the Secretary or the Secretary’s designee otherwise deem such consolidation appropriate.

Section 11. Administrative Resolution.

(A) Complaints filed pursuant to this procedure shall be heard and determined by the Secretary of State or the Secretary’s designee, and that determination shall be final.

(B) Following the initial screening, complaints shall be resolved informally if possible. Complaints shall be evaluated, and a decision rendered, based upon the written submissions, unless the complainant requests a hearing on the record. A request must be made in writing to the secretary of state no later than 10 days after the filing of the complaint, or in the original complaint itself, but not in any amendment filed more than 10 days after the original complaint.

(C) The Secretary of State or the Secretary’s designee shall take all necessary steps to prepare the complaint for determination and, in coordination with the parties, shall establish a schedule under which the complainant and respondent or respondents, as well as any other interested persons, may file any written submissions concerning the complaint, and under which the complaint shall be finally determined.
(D) The Secretary of State or the Secretary’s designee shall consider all information filed and shall conduct an informal investigation of the complaint as appropriate, including contacting the persons alleged to have violated HAVA or alleged to be about to violate HAVA.

(E) Based on the agency record, the Secretary of State or the Secretary’s designee may enter a decision and order, which may include an appropriate remedy. When the decision is that no violation of HAVA, Title III, has or is about to occur, the complaint shall be dismissed and the results of the procedures published on the website of the Office of the Secretary of State.

(F) The Secretary of State or the Secretary’s designee shall send the decision and order to the complainant by appropriate means including proof of delivery to the address provided by the complainant.

(G) The Secretary of State or the Secretary’s designee simultaneously shall send a copy of the decision and order to the election official, if any, who was alleged, directly or indirectly, to have violated or be about to violate Title III of HAVA.

(H) Along with the decision and order, the Secretary of State or the Secretary’s designee shall notify the complainant of his or her right to request a hearing on the record if not satisfied. The request shall be in writing and received within 10 calendar days after the complainant’s receipt of the decision and order. Such requests may be submitted by facsimile or e-mail as well.

Section 12. Administrative Hearing.

(A) An informal administrative hearing shall be conducted following timely receipt of a written request for a hearing on the record in accordance with Section 11(B) of this procedure.

(B) The Secretary of State or the Secretary’s designee shall promptly establish a date, time, and location for the hearing. The hearing shall occur within a reasonable period of time. The hearing shall be open to the public.

(C) The Secretary of State or the Secretary’s designee shall provide not less than five days notice of the hearing to the complainant, each respondent, and any other person who has requested notice in writing. Notice shall be provided by mail and by posting on the Secretary of State’s Web site, and by such other means as the Secretary deems appropriate.

(D) The Secretary of State may preside over the hearing or may designate a hearing officer to conduct the matter and to prepare a recommended decision and order.

(E) Any complainant, respondent, or other person may file a written brief or memorandum within five business days of the conclusion of the hearing, but no responsive brief or memoranda will be accepted without authorization of the Secretary of State or the hearing officer.

(F) The Ohio Administrative Procedure Act, the Ohio Rules of Civil Procedure, the Ohio Rules of Evidence, and the Ohio Rules of Appellate Procedure shall not apply to these proceedings.

Section 13. Objectives and Procedure of Administrative Hearing.

(A) The Secretary of State or the hearing officer has considerable discretion in how the hearing is conducted, although the overriding consideration is to provide a speedy, fair and efficient method by which the parties may be heard and the matter decided in order to support and effectuate the letter and spirit of HAVA.

(B) The Secretary of State or the hearing officer shall have a copy of the record of the complaint(s) to be heard.
(C) The Secretary of State or the hearing officer shall introduce the matter on the record and explain the procedures to be followed.

(D) The complainant, any respondent, or any other interested member of the public may appear at the hearing and testify or present tangible evidence in connection with the complaint. Each witness shall be sworn. A complainant, respondent, or other person may, but need not, be represented by an attorney.

(E) The hearing officer may limit the testimony, if necessary, to ensure that all interested participants are able to present their views or to assure completion of the hearing within a reasonable time.

(F) The hearing officer may recess the hearing and reconvene at a later date, time, and place announced publicly at the hearing.

(G) The Secretary of State or the hearing officer may participate during the presentations of the parties at any time.

(H) At the conclusion of the hearing, the Secretary of State or the hearing officer shall take the matter under advisement and promptly prepare or recommend a decision and order for the Secretary of State.

Section 14. Recording of Administrative Hearing.

An audio recording shall be made of the proceedings. The Secretary of State is obligated to prepare a transcript of the audio recording, but such a transcript shall be prepared at the expense of the person requesting the transcript.

If any party prefers to have a court reporter record the proceedings, he or she may do so at his or her own expense.

Section 15. Special Accommodations at the Administrative Hearing.

Individuals with disabilities shall inform the Secretary of State or his or her designee at least 5 business days before the informal hearing of any special accommodations they require. They may have people assist them and speak for them as desired.

Section 16. Final Decision.

(A) The Secretary of State retains authority on behalf of the State of Ohio to make the final decision in each instance from the initial screening through a hearing on the record. The Secretary of State's determination shall be final and shall not be subject to judicial review.

(B) The Secretary of State shall determine whether, under a preponderance of the evidence, a violation of Title III has been established. If the Secretary determines that a violation has occurred, then a written determination shall be issued specifying the appropriate remedy. If the Secretary determines that no violation has been established, the complaint shall be dismissed.

(C) Upon deciding a meritorious complaint, the Secretary of State shall order an appropriate remedy.

(D) Upon the Secretary of State's entry of the final decision and order into the record, the Secretary shall also deliver the decision and order to the complainant by appropriate means, including proof of delivery, to the address provided by the complainant and to the other parties, if any.

(E) If the final decision and order result in the dismissal of the complaint, the result of the procedures shall be published on the website of the Secretary of State.
Section 17. Appropriate Remedies.

(A) The Secretary of State has discretion to determine the nature of an appropriate remedy when a complaint has led to the establishment of a violation of Title III of HAVA.

(B) An appropriate remedy may detail actions to be taken or procedures to be followed by election officials, and it may include a corrective action plan.

(C) The officials required to take the corrective action shall report to the Secretary of State or his designee the steps taken in accordance with the requirements and schedule provided in the decision and order.

(D) Appropriate remedies are limited to those which are designed to assure compliance with Title III of HAVA. The remedy may not include any award of monetary damages, costs, or attorney fees, and may not include the invalidation of any primary or election or a determination of the validity of any ballot or vote. Remedies addressing the validity of any primary or election or of any ballot or vote may be obtained only as otherwise provided by law.

(E) A complaint filed pursuant to this chapter does not constitute an election contest pursuant to sections 3515.08 through 3515.16, inclusive, of the Revised Code of Ohio.

Section 18. Time Allowed for Entire Process.

(A) The State has 90 days within which to make a final determination with respect to a complaint. The period begins with the date of the filing of the complaint.

(B) The time limit may be extended only with consent of the complainant and all opposing parties, if there are any.

(C) When multiple complaints that have been consolidated, all deadlines in these rules shall be determined by the date the last complaint was filed.

(D) When multiple complaints have been consolidated, an extension of time shall apply only to those complainants who have consented to the extension of time.

(E) Consent for an extension of time shall be in writing and filed with the Secretary of State before the 90-day period expires.

(F) The Secretary of State or the hearing officer is authorized to grant reasonable extensions of time at the request of the parties as qualified above.

Section 19. Results of Failure to Conclude the Hearing Process within the Time Allowed.

(A) When a complaint has not been finally resolved within the 90-day period, the Secretary of State must refer the complaint to the local bar association, state bar association, or a third party certified Alternative Dispute Resolution (ADR) professional to be resolved within 60 days under alternative dispute resolution procedures. The decision as to which of these to employ will be decided on a case-by-case basis which will take into account the convenience of all interested parties as well as the efficiency of the process.

(B) When complaints have been consolidated and some complainants have not consented to an extension of the 90-day deadline, their complaints shall be subject to separation from the others and treatment under this section.

(C) The person designated to provide the ADR, hereafter referred to as the ADR hearing officer, shall have a copy of the agency record of the proceedings.
(D) With one exception, the ADR hearing officer shall adhere to this Election Complaint Procedure in resolving the complaint. The exception is that the ADR hearing officer may conduct an administrative hearing in accordance with the hearing procedures set forth in sections 119.07 through 119.13 of the Revised Code of Ohio, with time lines adjusted to fit the time allowed. Conduct of the hearing in accordance with these procedures does not alter the authority of the Secretary of State as the final decision maker.

(E) The ADR hearing officer shall conclude the matter as expeditiously as possible and shall forward his or her recommended decision and order to the Secretary of State within the time allowed by the Secretary of State.

(F) The Secretary of State shall enter the final decision and order no later than 60 calendar days after the expiration of the 90-day period.
ADMINISTRATIVE COMPLAINT FORM

This form may be used by any person alleging a violation of Title III of the Help America Vote Act of 2002 (42 U.S.C. §15481-15485)

Mail or hand-deliver the signed and notarized complaint to:
Office of the Ohio Secretary of State
Election Reform Division
180 E. Broad Street, 15th Floor
Columbus, OH 43215

Complaint cannot be filed by fax or e-mail.
Please type or print all information.

DeForest B. Soaries, Jr., Chairman
U.S. Election Assistance Commission
1225 New York Ave., NW
Suite 1100
Washington, D.C. 20005

Dear Mr. Soaries:

The certification statement for the State of Ohio dated June 1, 2004 was for the release of federal fiscal year 2003 and 2004 requirements payments. Please do not hesitate to contact my office if you have any questions or need any additional information.

Sincerely,

J. Kenneth Blackwell
Office of the Ohio Secretary of State

Election Complaint Procedure Adopted Pursuant to
Section 402 of the Help America Vote Act of 2002

Section 1. Authority.
These complaint procedures are established as required by the Help America Vote Act of 2002 [hereafter referred to as HAVA], P.L. 107-252, Section 402, and in accordance with the Ohio State Plan created pursuant to HAVA.

Section 2. Purpose.
These rules are promulgated to establish State-based uniform, nondiscriminatory administrative complaint procedures under which all complaints alleging violations of Title III of HAVA, sections 301 through 312, may be promptly and efficiently resolved and all complaints of merit will be appropriately remedied by the State of Ohio.

Section 3. Definitions.
As used in this complaint procedure, the following terms shall have the following meanings:

(A) “Complainant” means the person who files a complaint under this chapter.

(B) “Federal election” means a primary, special primary or general election at which a federal office appears on the ballot.

(C) “Respondent” means any state or local election official whose actions are asserted, in a complaint under this chapter, to be in violation of Title III.

(D) “State or local election official” means the Secretary of State, any member of a county board of elections, or any person employed by either the secretary or a county board of elections whose responsibilities include or directly relate to the administration of any federal election.

Section 4. Applicability.
(A) Any person who believes there is a violation of any provision of Title III of HAVA (including a violation which has occurred, is occurring, or is about to occur) may file a complaint.

(B) These procedures shall apply only to complaints raised under Title III of HAVA.

(C) Other complaints related to the conduct of elections shall be raised with the responsible public official(s), United States or Ohio prosecutors, or the Ohio Secretary of State as appropriate under 42 U.S.C. § 1973 et seq.; 42 U.S.C. § 12101 et seq.; 42 U.S.C. § 701; and other applicable laws.

Section 5. Form of Complaint.
(A) The complaint must be in writing and notarized, and signed and sworn to by the person filing the complaint. The complaint must set forth the complainant's name, mailing address and telephone. 021902
number, and each alleged violation of Title III of HAVA, and must include a clear and concise
description of each alleged violation that is sufficiently detailed to apprise both the respondent and the
decision maker of the nature of each alleged violation.

(B) The complaint may name witnesses to the alleged violation and include their written statements; may
include documentary evidence supporting the allegations; and may also identify the sections,
subsections, and paragraphs of HAVA alleged to have been violated.

(C) The Secretary of State shall establish a complaint form to be used, although complaints received in
substantially the same form and meeting all the legal requirements of subsection (A), above, shall be
accepted.

Section 6. Place and Method of Filing Complaints.
The complaint shall be filed, along with adequate proof of mailing or delivery of a copy of the complaint to
each Respondent, with the Office of the Ohio Secretary of State, Elections Division, 180 E. Broad Street,
15th Floor, Columbus, Ohio 43215. Telephonic, electronic, and facsimile complaints will not be accepted.
There is no fee for filing a complaint.

Section 7. Service of Papers on all Parties.
(A) When a complaint alleges violations by a county board of elections, the Secretary of State or the
Secretary’s designee shall promptly transmit a copy of the complaint to the county board of elections
and permit the board to respond on its own behalf.

(B) A copy of each piece of correspondence between the complainant or the county board of elections and
the Secretary of State, the Secretary’s designee, or the hearing officer, shall be filed with the Office of
the Secretary of State. Copies of the correspondence and filings shall simultaneously be mailed to the
hearing officer, if his or her identity and address are known, and to the opposing party, if any.

Section 8. Maintenance and Confidentiality of Official Agency Record.
(A) The Secretary of State shall be the official custodian of the record of each complaint.

(B) The record shall contain:
(1) A copy of the complaint, including any amendments made with the permission of the Secretary of
State or the Secretary’s designee;
(2) A copy of any written submissions by the complainant, respondents, or other interested persons,
including any responses or replies thereto permitted under the schedule or by the Secretary of State
or the Secretary’s designee;
(3) Copies of all notices and correspondence with regard to the complaint;
(4) Originals or copies of any tangible evidence produced;
(5) The results of any investigation conducted;
(6) Other documents received or generated by the Secretary of State, his or her designee, or the
hearing officer, concerning the substance and/or procedure applied to resolution of the complaint;
and
(7) A copy of any final determination made regarding the complaint.

(C) All records are confidential until there is a final resolution of each complaint. If the complainant makes
a timely request for a hearing, the record shall be confidential until the hearing is finally resolved.
Section 9. Initial Screening.

(A) The complaint shall be screened by the Secretary of State or a person designated by the Secretary to determine if it meets the criteria in HAVA and these rules.

(B) The Secretary of State or the Secretary's designee shall examine each complaint and may reject it for filing if:
   (1) The complaint is not signed and notarized under oath;
   (2) The complaint does not identify the complainant or include an adequate mailing address;
   (3) The complaint does not allege on its face a violation of Title III with regard to a federal election; or
   (4) More than 90 days have elapsed since the final certification of the federal election at issue.

(C) If the complaint does not meet the criteria in HAVA and these rules as stated herein, it shall be dismissed, although it may also be referred to other appropriate authorities.

(D) If the complaint is dismissed, a designee of the Secretary of State shall send notice of the dismissal and a copy of these rules to the complainant. The notice shall advise the complainant that he or she is not precluded from refiling a complaint which conforms to the legal requirements.

(E) The Secretary of State or the Secretary's designee shall do all the following:
   (1) Take all necessary steps to prepare the complaint for determination;
   (2) In coordination with the parties, shall establish a schedule under which the complainant and respondent or respondents, as well as any other interested persons, may file any written submissions concerning the complaint, and under which the complaint shall be finally determined;
   (3) Provide copies of the official record to the decision maker in a timely manner.

(F) When the Secretary of State, or any employee of the Secretary, is a Respondent, the functions assigned to the Secretary under this administration procedure shall, to the greatest extent possible, be performed by individuals not directly involved in the facts giving rise to the complaint.

Section 10. Consolidation of Complaints.

The Secretary of State or the Secretary's designee may consolidate complaints and resolve them together if they relate to the same actions or events, or if they raise common questions of law or fact, or if the Secretary or the Secretary's designee otherwise deem such consolidation appropriate.

Section 11. Administrative Resolution.

(A) Complaints filed pursuant to this procedure shall be heard and determined by the Secretary of State or the Secretary's designee, and that determination shall be final.

(B) Following the initial screening, complaints shall be resolved informally if possible. Complaints shall be evaluated, and a decision rendered, based upon the written submissions, unless the complainant requests a hearing on the record. A request must be made in writing to the secretary of state no later than 10 days after the filing of the complaint, or in the original complaint itself, but not in any amendment filed more than 10 days after the original complaint.

(C) The Secretary of State or the Secretary's designee shall take all necessary steps to prepare the complaint for determination and, in coordination with the parties, shall establish a schedule under which the complainant and respondent or respondents, as well as any other interested persons, may file any written submissions concerning the complaint, and under which the complaint shall be finally determined.
(D) The Secretary of State or the Secretary's designee shall consider all information filed and shall conduct an informal investigation of the complaint as appropriate, including contacting the persons alleged to have violated HAVA or alleged to be about to violate HAVA.

(E) Based on the agency record, the Secretary of State or the Secretary's designee may enter a decision and order, which may include an appropriate remedy. When the decision is that no violation of HAVA, Title III, has or is about to occur, the complaint shall be dismissed and the results of the procedures published on the website of the Office of the Secretary of State.

(F) The Secretary of State or the Secretary's designee shall send the decision and order to the complainant by appropriate means including proof of delivery to the address provided by the complainant.

(G) The Secretary of State or the Secretary's designee simultaneously shall send a copy of the decision and order to the election official, if any, who was alleged, directly or indirectly, to have violated or be about to violate Title III of HAVA.

(H) Along with the decision and order, the Secretary of State or the Secretary's designee shall notify the complainant of his or her right to request a hearing on the record if not satisfied. The request shall be in writing and received within 10 calendar days after the complainant’s receipt of the decision and order. Such requests may be submitted by facsimile or e-mail as well.

Section 12. Administrative Hearing.

(A) An informal administrative hearing shall be conducted following timely receipt of a written request for a hearing on the record in accordance with Section 11(B) of this procedure.

(B) The Secretary of State or the Secretary's designee shall promptly establish a date, time, and location for the hearing. The hearing shall occur within a reasonable period of time. The hearing shall be open to the public.

(C) The Secretary of State or the Secretary's designee shall provide not less than five days notice of the hearing to the complainant, each respondent, and any other person who has requested notice in writing. Notice shall be provided by mail and by posting on the Secretary of State's Web site, and by such other means as the Secretary deems appropriate.

(D) The Secretary of State may preside over the hearing or may designate a hearing officer to conduct the matter and to prepare a recommended decision and order.

(E) Any complainant, respondent, or other person may file a written brief or memorandum within five business days of the conclusion of the hearing, but no responsive brief or memoranda will be accepted without authorization of the Secretary of State or the hearing officer.

(F) The Ohio Administrative Procedure Act, the Ohio Rules of Civil Procedure, the Ohio Rules of Evidence, and the Ohio Rules of Appellate Procedure shall not apply to these proceedings.

Section 13. Objectives and Procedure of Administrative Hearing.

(A) The Secretary of State or the hearing officer has considerable discretion in how the hearing is conducted, although the overriding consideration is to provide a speedy, fair and efficient method by which the parties may be heard and the matter decided in order to support and effectuate the letter and spirit of HAVA.

(B) The Secretary of State or the hearing officer shall have a copy of the record of the complaint(s) to be heard.
(C) The Secretary of State or the hearing officer shall introduce the matter on the record and explain the procedures to be followed.

(D) The complainant, any respondent, or any other interested member of the public may appear at the hearing and testify or present tangible evidence in connection with the complaint. Each witness shall be sworn. A complainant, respondent, or other person may, but need not, be represented by an attorney.

(E) The hearing officer may limit the testimony, if necessary, to ensure that all interested participants are able to present their views or to assure completion of the hearing within a reasonable time.

(F) The hearing officer may recess the hearing and reconvene at a later date, time, and place announced publicly at the hearing.

(G) The Secretary of State or the hearing officer may participate during the presentations of the parties at any time.

(H) At the conclusion of the hearing, the Secretary of State or the hearing officer shall take the matter under advisement and promptly prepare or recommend a decision and order for the Secretary of State.

Section 14. Recording of Administrative Hearing.

An audio recording shall be made of the proceedings. The Secretary of State is obligated to prepare a transcript of the audio recording, but such a transcript shall be prepared at the expense of the person requesting the transcript.

If any party prefers to have a court reporter record the proceedings, he or she may do so at his or her own expense.

Section 15. Special Accommodations at the Administrative Hearing.

Individuals with disabilities shall inform the Secretary of State or his or her designee at least 5 business days before the informal hearing of any special accommodations they require. They may have people assist them and speak for them as desired.

Section 16. Final Decision.

(A) The Secretary of State retains authority on behalf of the State of Ohio to make the final decision in each instance from the initial screening through a hearing on the record. The Secretary of State’s determination shall be final and shall not be subject to judicial review.

(B) The Secretary of State shall determine whether, under a preponderance of the evidence, a violation of Title III has been established. If the Secretary determines that a violation has occurred, then a written determination shall be issued specifying the appropriate remedy. If the Secretary determines that no violation has been established, the complaint shall be dismissed.

(C) Upon deciding a meritorious complaint, the Secretary of State shall order an appropriate remedy.

(D) Upon the Secretary of State’s entry of the final decision and order into the record, the Secretary shall also deliver the decision and order to the complainant by appropriate means, including proof of delivery, to the address provided by the complainant and to the other parties, if any.

(E) If the final decision and order result in the dismissal of the complaint, the result of the procedures shall be published on the website of the Secretary of State.
Section 17. Appropriate Remedies.

(A) The Secretary of State has discretion to determine the nature of an appropriate remedy when a complaint has led to the establishment of a violation of Title III of HAVA.

(B) An appropriate remedy may detail actions to be taken or procedures to be followed by election officials, and it may include a corrective action plan.

(C) The officials required to take the corrective action shall report to the Secretary of State or his designee the steps taken in accordance with the requirements and schedule provided in the decision and order.

(D) Appropriate remedies are limited to those which are designed to assure compliance with Title III of HAVA. The remedy may not include any award of monetary damages, costs, or attorney fees, and may not include the invalidation of any primary or election or a determination of the validity of any ballot or vote. Remedies addressing the validity of any primary or election or of any ballot or vote may be obtained only as otherwise provided by law.

(E) A complaint filed pursuant to this chapter does not constitute an election contest pursuant to sections 3515.08 through 3515.16, inclusive, of the Revised Code of Ohio.

Section 18. Time Allowed for Entire Process.

(A) The State has 90 days within which to make a final determination with respect to a complaint. The period begins with the date of the filing of the complaint.

(B) The time limit may be extended only with consent of the complainant and all opposing parties, if there are any.

(C) When multiple complaints that have been consolidated, all deadlines in these rules shall be determined by the date the last complaint was filed.

(D) When multiple complaints have been consolidated, an extension of time shall apply only to those complainants who have consented to the extension of time.

(E) Consent for an extension of time shall be in writing and filed with the Secretary of State before the 90-day period expires.

(F) The Secretary of State or the hearing officer is authorized to grant reasonable extensions of time at the request of the parties as qualified above.

Section 19. Results of Failure to Conclude the Hearing Process within the Time Allowed.

(A) When a complaint has not been finally resolved within the 90-day period, the Secretary of State must refer the complaint to the local bar association, state bar association, or a third party certified Alternative Dispute Resolution (ADR) professional to be resolved within 60 days under alternative dispute resolution procedures. The decision as to which of these to employ will be decided on a case-by-case basis which will take into account the convenience of all interested parties as well as the efficiency of the process.

(B) When complaints have been consolidated and some complainants have not consented to an extension of the 90-day deadline, their complaints shall be subject to separation from the others and treatment under this section.

(C) The person designated to provide the ADR, hereafter referred to as the ADR hearing officer, shall have a copy of the agency record of the proceedings.
(D) With one exception, the ADR hearing officer shall adhere to this Election Complaint Procedure in resolving the complaint. The exception is that the ADR hearing officer may conduct an administrative hearing in accordance with the hearing procedures set forth in sections 119.07 through 119.13 of the Revised Code of Ohio, with time lines adjusted to fit the time allowed. Conduct of the hearing in accordance with these procedures does not alter the authority of the Secretary of State as the final decision maker.

(E) The ADR hearing officer shall conclude the matter as expeditiously as possible and shall forward his or her recommended decision and order to the Secretary of State within the time allowed by the Secretary of State.

(F) The Secretary of State shall enter the final decision and order no later than 60 calendar days after the expiration of the 90-day period.

###
ADMINISTRATIVE COMPLAINT FORM

This form may be used by any person alleging a violation of Title III of the Help America Vote Act of 2002 (42 U.S.C. §15481-15485)

Mail or hand-deliver the signed and notarized complaint to:
Office of the Ohio Secretary of State
Election Reform Division
180 E. Broad Street, 15th Floor
Columbus, OH 43215

Complaint cannot be filed by fax or e-mail.
Please type or print all information.

My Commission expires ________________

WHOEVER COMMITS ELECTION FALSIFICATION IS GUILTY OF A FELONY OF THE FIFTH DEGREE.
As no voter should be denied an opportunity to cast a provisional ballot in those circumstances where their name might not appear on the voter rolls, neither should a voter be denied an opportunity to vote because of arbitrary and restrictive identification requirements. While it is logical the Secretary of State should work in coordination with agencies such as the Ohio Bureau of Motor Vehicles to validate the identity of new voters, such identification requirements must, by definition, extend beyond identification devices such as a valid state drivers’ license.

As several Ohioans with disabilities testified, many people with disabilities do not have a drivers’ license. It is the intention of the Secretary of State to extend identification requirements to include any reasonable means of identification such as utility bills, rent receipts or any legal or quasi-legal instrument that bears the name and address of the prospective voter.

The policy of the Secretary of State is that voter challenges on the basis of identification should be judged on a liberal construction of voter ID rather than a restrictive construction that would deny the voter an opportunity to cast a ballot.

Based on testimony provided by Mr. Perry of the Columbus Urban League, the Secretary of State also would like to more closely examine the issue of restoring voter rights to persons released from incarceration in the state’s Department of Rehabilitation and Corrections. There is a widespread perception that these persons, as a result of felony convictions, have forever forfeited their right to participate in the election process. Such is not the case.

Persons who have had their voting rights taken away because of a felony conviction are subject to re-enfranchisement as legal voters to restore their right to vote. As these persons have presumably paid their debt to society as a result of their incarceration, full integration back into society as fully functioning citizens should also presume their eventual re-engagement and participation in the election process.

For these persons, identification also is an issue because drivers’ licenses might have expired during their period of incarceration. At minimum, the Secretary of State pledges to educate election officials and poll workers about the rights and processes available to these individuals.

XIII. §402. Administrative Complaint Procedures and Grievances

To fully facilitate implementation of the Help America Vote Act of 2002, Ohio will establish an administrative complaint procedure to address allegations by any citizen who believes their voting rights have been violated under Title III of the Act.

The complaint and grievance procedures developed by the Secretary of State are constructed toward development of a non-adversarial complaint process where the desired outcome is a solution or remedy of the problem, rather than a highly evidentiary process.
solution or remedy of the problem, rather than a highly evidentiary process.

The process adopted by the Secretary of State includes an alternative dispute resolution component that invites parties to seek equitable resolution in that venue as well as through a formal hearing process. When a valid complaint or grievance is filed as part of this process, it is ultimately the state, and more specifically the Secretary of State, that must provide the appropriate remedy.

We attach, as an addendum to this report, the full text of the proposed procedure. Following, in summary, are the relevant elements of the complaint procedure:

- Any Ohio citizen who believes there is a violation of any provision of Title III of the Help America Vote Act may file a complaint.

- All complaints must be in writing, signed, notarized and be sworn under oath.

- The complainant must be identified by name and mailing address, and the complaint must include a description of the violation alleged to have occurred.

- The complaint must be filed with the Secretary of State along with proof of delivery of a copy of the complaint to each respondent.

- In addition to failure to include any of the foregoing, the Secretary of State may reject the complaint if more than 90 days have lapsed since the final certification of the federal election at issue.

- The Secretary of State must establish procedures and schedules addressing when the complaint will be heard and considered.

- The Secretary of State or designated hearing officer must compile and maintain an official record of any proceeding and include submissions and evidence provided.

- Complaints must be heard and determined by the Secretary of State or designated hearing officer, who is required to prepare a report expressing an opinion about whether a violation did occur within 20 days of the filing of such a complaint.

- Any hearings conducted pursuant to the filing of a complaint must be tape recorded.

- Dates, times and locations of hearings must be established and all parties must be given at least five days notice of such hearings.

- All relevant parties, including the complainant and all respondents may appear at the hearing, testify and present evidence. There is no requirement that any
complainant, respondent or any other party to the proceeding be represented by an attorney.

- The Secretary of State or a designated hearing officer is required to prepare a transcript of the tape recorded hearing and that transcript is a public record under Ohio’s public records law.

- A final decision must be rendered within 60 days after the complaint is filed.

- If a violation is determined to have occurred, a determination must be issued specifying the appropriate remedy. If a violation is deemed not to have occurred, the complaint must be dismissed.

- The remedy may not include any award of monetary damages, costs or attorney fees, and may not include the invalidation of any election or a determination of the validity of any ballot or vote.

- The decision under this process is final and is not subject to judicial review.

- The complaint and grievance procedure does not preclude any other legal action provided by law.

XIV. Ongoing Performance Measurement

As Ohio anticipates successful implementation of reforms and modernization of its election systems and processes to accomplish its objectives under the Help America Vote Act of 2002, we believe performance measurement is an essential and ongoing requirement to ensure a fair and inclusive election system.

Each year, boards of elections throughout Ohio prepare annual budgets anticipating costs and expenses for conducting elections. We recommend that while each board is preparing their budgets that they also take time to review the improvements they have made in their elections operations during the past year and report their progress in meeting election reform objectives under the Help America Vote Act.
Office of the Ohio Secretary of State

Election Complaint Procedure Adopted Pursuant to Section 402 of the Help America Vote Act of 2002

Section 1. Authority.

These complaint procedures are authorized as required by the Help America Vote Act of 2002 (hereinafter referred to as HAVA) Pub.L. 107-252, Section 402, and in accordance with the Ohio State Plan created pursuant to HAVA.

Section 2. Purpose.

These rules are promulgated to establish State-based uniform, nondiscriminatory, administrative complaint procedures under which all complaints alleging violations of Title III of HAVA, Sections 501 through 512, may be promptly and efficiently resolved and all complaints of merit will be appropriately remedied by the State of Ohio.

Section 3. Definitions.

As used in this complaint procedure, the following terms shall have the following meanings:

(A) "Complainant" means the person who files a complaint under this chapter.

(B) "Federal election" means a primary, special primary or general election at which a federal officer is a candidate on the ballot.

(C) "Respondent" means any state or local election official whose actions are asserted, in a complaint under this chapter, to be in violation of Title III.

(D) "State or local election official" means the Secretary of State, any member of a county board of elections, or any person employed by either the secretary or a county board of elections whose responsibilities include or directly relate to the administration of any federal election.

Section 4. Availability.

(A) Any person who believes there is a violation of any provision of Title III of HAVA (including a violation which has occurred, is occurring, or is about to occur) may file a complaint.

(B) These procedures shall apply only to complaints raised under Title III of HAVA.

(C) Other complaints related to the conduct of elections shall be raised with the responsible public official(s). United States or Ohio procedure, or the Ohio Secretary of State as appropriate under 42 U.S.C. § 1973 et seq. 42 U.S.C. § 12101 et seq. 42 U.S.C. §§ 701; and other applicable laws.

Section 5. Form of Complaint.

(A) The complaint must be in writing and signed, and signed and sworn to by the person filing the complaint. The complaint must set forth the complainant's name, mailing address and telephone number.
The complaint may name witnesses to the alleged violation and include their written statements, and may also identify the sections, subsections, and paragraphs of HAVA alleged to have been violated.

(C) The Secretary of State shall establish a complaint form to be used, although complaints received in substantially the same form and meeting all the legal requirements of subsection (A), above, shall be accepted.

Section 6. Place and Method of Filing Complaints.
The complaint shall be filed, along with adequate proof of mailing or delivery of a copy of the complaint to each Respondent, with the Office of the Ohio Secretary of State, Elections Division, 180 E. Broad Street, 12th Floor, Columbus, Ohio 43216. Telephone, electronic, and facsimile complaints will not be accepted. There is no fee for filing a complaint.

Section 7. Service of Papers on All Parties.
(A) When a complaint alleges violations by a county board of elections, the Secretary of State or the Secretary's designee shall promptly transmit a copy of the complaint to the county board of elections and the Secretary of State, the Secretary's designee, or the hearing officer, shall be filed with the Office of the Secretary of State. Copies of the correspondence and filings shall simultaneously be mailed to the hearing officer, his or her identity and address are known, and to the opposing party, if any.

(A) The Secretary of State shall be the official custodian of the record of each complaint.

(B) The record shall contain:
1. A copy of the complaint, including any attachments made with the permission of the Secretary of State or the Secretary's designee;
2. A copy of any written submissions by the complainant, respondents, or other interested persons, including any responses or replies thereto permitted under the schedule or by the Secretary of State or the Secretary's designee;
3. Copies of all notices and communications with regard to the complaint;
4. Original or copies of any tangible evidence produced;
5. The results of any investigation conducted;
6. The hearing officer, commission the existence and procedure applied to resolution of the complaint; and
7. A copy of any final determination made regarding the complaint.

(C) All records are confidential until the hearing. If the complaint makes a timely request for a hearing, the record shall be confidential until the hearing is finally resolved.

Section 9. Initial Screening.
(A) The complaint shall be served by the Secretary of State or a person designated by the Secretary to determine if it meets the criteria in HAVA and these rules.

(B) The Secretary of State or the Secretary's designee shall examine each complaint and may reject it for filing if:
1. The complaint is signed and notarized under oath;
2. The complaint does not identify the complainant or include an adequate mailing address;
3. The complaint does not allege on its face a violation of Title III with regard to a federal election; or
4. More than 90 days have elapsed since the filing certification of the federal election at issue.

(C) If the complaint does not meet the criteria in HAVA and these rules as stated herein, it shall be dismissed, although it may also be referred to other appropriate authorities.

(D) If the complaint is dismissed, a designee of the Secretary of State shall send notice of the dismissal and a copy of these rules to the complainant. The notice shall advise the complainant that he or she is not precluded from filing a complaint which conforms to the legal requirements.

(E) The Secretary of State or the Secretary's designee may do all of the following:
1. Take all necessary steps to prepare the complaint for determination;
2. In coordination with the parties, establish a schedule under which the complaint and respondent's submissions are exchanged; and under which the complaint shall be finally determined;
3. Provide copies of the official record to the decision maker in a timely manner.

(F) When the Secretary of State, or any employee of the Secretary, is a Respondent, the functions assigned to the Secretary under this administration procedure shall, to the greatest extent possible, be performed by individuals not directly involved in the facts giving rise to the complaint.

Section 10. Consolidation of Complaints.
The Secretary of State or the Secretary's designee may consolidate complaints and resolve them together if they relate to the same actions or events, or if they raise common questions of fact or law. If the Secretary or the Secretary's designee otherwise deems such consolidation appropriate.

Section 11. Administrative Resolution.
(A) Complaints filed pursuant to this procedure shall be heard and determined by the Secretary of State or the Secretary's designee, and that determination shall be final.

(B) Following the initial screening, complaints shall be resolved informally if possible. Complaints shall be evaluated and a decision rendered, based upon the written submissions, unless the complainant requests a hearing on the record. A request must be made to the secretary of state no later than 10 days after the filing of the complaint, or in the original complaint itself, but not in any amendment filed more than 10 days after the original complaint.

(C) The Secretary of State or the Secretary's designee shall take all necessary steps to prepare the complaint for determination and, in coordination with the parties, shall establish a schedule under which the complaint and respondent's submissions, as well as any other interested persons, may file any written submissions concerning the complaint, and under which the complaint shall be finally determined.
(D) The Secretary of State or the Secretary's designee shall consider all information filed and shall conduct an informal investigation of the complaint as appropriate, including contacting the person alleged to have violated HAVA or alleged to be about to violate HAVA.

(E) Based on the agency records, the Secretary of State or the Secretary's designee may enter a decision and order, which may include an appropriate remedy. When the decision is that no violation of HAVA, Title 12, has or is about to occur, the complaint shall be dismissed and the results of the procedures published on the website of the Office of the Secretary of State.

(F) The Secretary of State or the Secretary's designee shall send the decision and order to the complaint by appropriate means including proof of delivery to the address provided by the complainant.

(G) The Secretary of State or the Secretary's designee simultaneously shall send a copy of the decision and order to the election official, if any, who was alleged, directly, or indirectly, to have violated or be about to violate Title III of HAVA.

(H) Along with the decision and order, the Secretary of State or the Secretary's designee shall notify the complainant of his or her right to request a hearing on the record if not satisfied. The request shall be in writing and received within 10 calendar days after the complainant's receipt of the decision and order. Such requests may be submitted by facsimile or e-mail as well.

Section 12. Administrative Hearing.

(A) An informal administrative hearing shall be conducted following timely receipt of a written request for a hearing on the record in accordance with Section 11(D) of this procedure.

(B) The Secretary of State or the Secretary's designee shall promptly establish a date, time, and location for the hearing. The hearing shall occur within a reasonable period of time. The hearing shall be open to the public.

(C) The Secretary of State or the Secretary's designee shall provide at least five days notice of the hearing to the complainant, each respondent, and any other person who has requested notice in writing. Notice shall be provided by mail and by posting on the Secretary of State's Website, and by such other means as the Secretary deems appropriate.

(D) The Secretary of State may grant an extension of time over the hearing or may designate a hearing officer to conduct the matter and to prepare a recommended decision and order.

(E) Any complainant, respondent, or other person may file written brief or memorandum within five business days of the conclusion of the hearing, but no responsive brief or memorandum will be accepted without authorization of the Secretary of State or the hearing officer.

(F) The Ohio Administrative Procedure Act, the Ohio Rules of Civil Procedure, the Ohio Rules of Evidence, and the Ohio Rules of Appellate Procedure shall not apply to these proceedings.

Section 13. Objectives and Procedure of Administrative Hearing.

(A) The Secretary of State or the hearing officer has considerable discretion in how the hearing is conducted, although the overriding consideration is to provide a speedy, fair and efficient method by which the parties may be heard and the matter decided in a manner to ensure and facilitate the letter and spirit of HAVA.

(B) The Secretary of State or the hearing officer shall have a copy of the record of the complaint(s) to be heard.

(C) The Secretary of State or the hearing officer shall introduce the matter on the record and explain the procedures to be followed.

(D) The complainant, any respondents, or any other interested member of the public may appear at the hearing and submit or present tangible evidence in connection with the complaint. Each witness shall be sworn. A complainant, respondent, or other person may, but need not, be represented by an attorney.

(E) The hearing officer may limit the testimony, if necessary, to ensure that all interested participants are able to present their views or to assure completion of the hearing within a reasonable time.

(F) The hearing officer may record the hearing and costume at a later date, time, and place announced publicly at the hearing.

(G) The Secretary of State or the hearing officer may participate during the presentations of the parties at any time.

(H) At the conclusion of the hearing, the Secretary of State or the hearing officer shall take the matter under advisement and promptly prepare a decision and order for the Secretary of State.

Section 14. Recording of Administrative Hearing.

An audio recording shall be made of the proceeding. The Secretary of State is obligated to prepare a transcript of the audio recording, but such a transcript shall be prepared at the expense of the person requesting the transcript.

If any party prefers to have a court reporter record the proceeding, he or she may do so at his or her own expense.

Section 15. Special Accommodations at the Administrative Hearing.

Individuals with disabilities shall deliver the Secretary of State or his or her designee at least 5 business days before the informal hearing of any special accommodations they require. They may have people assist them and speak for them as desired.

Section 16. Final Decision.

(A) The Secretary of State shall state in writing the final decision in each instance from the initial hearing through a hearing on the record. The Secretary of State's determination shall be final and shall not be subject to judicial review.

(B) The Secretary of State shall determine whether, under a preponderance of the evidence, a violation of Title III has been established. If the Secretary determines that a violation has occurred, then a written determination shall be issued specifying the appropriate remedy. If the Secretary determines that no violation has been established, the complaint shall be dismissed.

(C) Upon deciding a meritorious complaint, the Secretary of State shall order an appropriate remedy.

(D) Upon the Secretary of State's entry of the final decision and order into the record, the Secretary shall deliver the decision and order to the complainant by appropriate means, including proof of delivery, to the address provided by the complainant and to the other parties, if any.

(E) If the final decision and order result in the dismissal of the complaint, the result of the procedure shall be published on the website of the Secretary of State.

Ohio HAVA Administrative Complaint Procedure (2003-12)
Section 17. Appropriate Remedies.

(A) The Secretary of State has discretion to determine the nature of an appropriate remedy when a complaint has led to the establishment of a violation of Title III of HAVA.

(B) An appropriate remedy may detail actions to be taken or procedures to be followed by election officials, and it may include a corrective action plan.

(C) The officials required to take the corrective action shall report to the Secretary of State his determination of the steps taken in accordance with the requirements and schedule provided in the decision and order.

(D) Appropriate remedies are limited to those which are designed to assure compliance with Title III of HAVA. The remedy may not include any award of monetary damages, costs, or attorney fees, and may not include the invalidation of any primary or election or a determination of the validity of any ballot or vote. Remedies addressing the validity of any primary or election or of any ballot or vote may be obtained only as otherwise provided by law.

(E) A complaint filed pursuant to this chapter does not constitute an election contest pursuant to sections 3515.08 through 3515.16, inclusive, of the Revised Code of Ohio.

(A) The State has 90 days within which to make a final determination with respect to a complaint. The period begins with the date of the filing of the complaint.

(B) Time limit may be extended only with consent of the complainant and all opposing parties, if there are any.

(C) When multiple complaints that have been consolidated, all deadlines in these rules shall be determined by the date the last complaint was filed.

(D) When multiple complaints have been consolidated, an extension of time shall apply only to those complaints who have consented to the extension of time.

(E) Consent for an extension of time shall be in writing and filed with the Secretary of State before the 90-day period expires.

(F) The Secretary of State or the hearing officer is authorized to grant reasonable extensions of time at the request of the parties as qualified above.

Section 19. Results of Failure to Conclude the Hearing Process within the Time Allowed.

(A) When a complaint has not been finally resolved within the 90-day period, the Secretary of State must refer the complaint to the local bar association, state bar association, or a third party certified Alternative Dispute Resolution (ADR) professional to be resolved within 60 days under alternative dispute resolution procedures. The decision as to which of these to employ will be decided on a case-by-case basis which will take into account the convenience of all interested parties as well as the efficiency of the process.

(B) When complaints have been consolidated and some complainants have not consented to an extension of the 90-day deadline, such complaints shall be subject to separation from the others and treatment under this section.

(C) The person designated to provide the ADR, hereafter referred to as the ADR hearing officer, shall have a copy of the agency record of the proceedings.

(D) With one exception, the ADR hearing officer shall adhere to this Election Complaint Procedure in resolving the complaint. The exception is that the ADR hearing officer may conduct an administrative hearing in accordance with the hearing procedures set forth in sections 119.07 through 119.13 of the Revised Code of Ohio, with time limits adjusted as fit the time allowed. Conduct of the hearing in accordance with these procedures does not alter the authority of the Secretary of State as the final decision maker.

(E) The ADR hearing officer shall conclude the matter as expeditiously as possible and shall forward his or her recommendation and decision to the Secretary of State within the time allowed by the Secretary of State.

(F) The Secretary of State shall enter the final decision and order no later than 60 calendar days after the expiration of the 90-day period.
HAVA Complaint Procedures

OAR 165-001-0090

1. The purpose of this rule is to adopt procedures for the receipt and disposition of complaints filed with the Secretary of State, Elections Division alleging violations of Title III of the Help America Vote Act of 2002 (HAVA). The rule is intended to fully comply with all federal requirements for the complaint procedure, as described in Section 402 of HAVA (P.L. 107-252).

2. The procedures described in this rule are to be used solely for complaints filed alleging a violation of Title III of HAVA. Title III includes voting system standards, accessibility of voting systems to persons with disabilities, instructions on correcting voting errors, identification requirements for voting in federal elections if registration was by mail, computized voter registration, contents of registration forms and provisional voting.

3. State and county elections officials are encouraged to resolve HAVA complaints informally if possible. If informal resolution is not possible, and a person wishes to file a formal HAVA complaint under this procedure, the person shall use the HAVA complaint form (551.020). The complaint shall be accepted and processed only if made in writing, signed under oath by the person filing the complaint, and notarized. The complaint form shall be filed directly with the Secretary of State, Elections Division. If the complaint is submitted to a county elections office, the county elections officials shall promptly forward the original complaint to the Elections Division. The complaint shall be considered filed on the date it is received at the office of the Elections Division.

4. Upon receipt of a complaint, the Elections Division staff will review the complaint to determine if it alleges a violation of Title III of HAVA. If the complaint does not allege a violation of Title III, the complaint will be dismissed, with a letter providing to the complainant explaining the reasons for the dismissal. If the complaint alleges a violation of Title III, the complaint will be acknowledged in writing, and the complainant will be offered the opportunity to request a hearing on the record. A hearing on the record may be provided by telephone or in person. The Elections Division staff will then request information from other persons who may have information related to the substance of the complaint. When the responses are received, copies will be sent to the complainant to provide the opportunity for the complainant to respond or rebut the information provided. If the complaint is unresolved, the Division will prepare a determination letter based on the information provided. The determination letter will address whether any violation of Title III has occurred and address how to resolve the problem to avoid its occurrence in the future.

5. If a hearing on the record is scheduled, the Division will decide whether the hearing is to be conducted by telephone or in person. The complainant and other persons who have relevant information to provide will be invited to participate. The hearing will be conducted before an Elections Division employee. The purpose of the hearing is to determine whether any procedure required by Title III was not correctly followed, and to develop a plan to make sure the violation, if any, does not happen again. The hearing is to be conducted as a fact-finding, problem-solving forum. A record must be kept, including copies of any documents submitted and minutes, a tape or other record of the hearing.

6. Whether the complaint is resolved through the procedures of subsections (4) or (5) of this rule, the final determination will be prepared by the Elections Division. If the outcome of the proceeding requires the provision of a remedy, the remedy must conform to state law and will not include financial payments to complainants or civil penalties against other individuals. Remedies may include written findings that a violation of Title III has occurred, strategies for insuring that that violation does not occur again, and, if it appears that the complaint involves a systemic problem, possible actions by the Elections Division to provide better instructions, training or procedures to all election officials to avoid future violations.

7. Final determination letters will be signed by the Secretary of State or Deputy Secretary of State. All determination letters will be posted on the Division's website. A copy of the final determination will be...

December 24, 2003

Dear Ms. Bonsall:

This correspondence is to certify that the State of Ohio is respectfully requesting a waiver of the January 1, 2004, deadline for the deployment of a computerized statewide voter registration list as required in Section 303(a) of the Help America Vote Act of 2002 (HAVA). We are requesting this waiver as outlined in Section 303(d)(1)(B) of HAVA. This correspondence is also to certify that Ohio will meet the requirements of Section 303(a) of HAVA by January 1, 2006.

The State of Ohio is committed to completing this project as quickly as possible. The building of a computerized statewide voter registration list is one of the most important provisions of HAVA and is one of the core responsibilities of our office and Ohio's 88 county boards of elections. The delay in the passage of HAVA and the subsequent appropriation of funds to the states forced us to delay planning of this major project, thereby not leaving us with enough time to complete the project by the January 1, 2004 deadline. Although we have made great strides toward fully developing and implementing our statewide voter file, and will complete it long before the deadline of January 1, 2006, approval of this waiver request will allow the state of Ohio time to fully comply with the requirements of Section 303(a) of HAVA.

Although HAVA requires this waiver request to be sent to the new Election Assistance Commission, the National Association of Secretaries of State recommended that states send this request to the Federal Election Commission until such time as the Election Assistance Commission is in place. I will be forwarding a copy of this request to the Election Assistance Commission once it is operational.

Thank you for your assistance with this request. If you need any additional information concerning our development of the computerized statewide voter registration list, please do not hesitate to contact my Director of Election Reform, Dana Walch, at (614) 728-8361.

Sincerely,

J. Kenneth Blackwell

Prepared by Lori Jordan 1/15/2004
Limited Use of Section 101 Funds

- Title III requirements
- Improving the administration of Federal elections
- Educating voters on voting rights, voting procedures and voting technology
- Training election officials, workers, and volunteers
- Developing state plan
- Improving, acquiring, leasing or replacing voting equipment
- Improving the accessibility and quantity of polling places
- 800 hotlines for voters to obtain election information and/or report complaints of fraud or voting rights violations
Memorandum

To: U.S. Election Assistance Commission

From: DilipC. Mehta, Chief Financial Officer

Date: January 20, 2005

RE: HAVA Section 101 and 102 reporting

Attached please find Ohio’s SF-269 reports for Section 101 and Section 102 for the period ending December 31, 2004.

Ohio’s Narrative Report  
Consolidated Report on HAVA Title I, Section 101 Fund  
January 1, 2005 through and including December 31, 2005  
Due February 28, 2006

On behalf of Ohio Secretary of State, J. Kenneth Blackwell, I am submitting Ohio’s Narrative Report as required by Public Law 107-252 (the Help America Vote Act (HAVA) of 2002). Below are some the highlights that Ohio has achieved through the implementation of HAVA:

Section 101 Funds:

- Ohio negotiated the lowest price in the Nation for voting systems to ensure that every Ohio County would have state-of-the-art equipment.

- From the beginning, Ohio sought input from election officials and voting experts for methods to ensure a smooth and seamless transition from punch cards to new voting systems.

- Before final State certifications for Direct Recording Electronic (DRE) models were issued, Secretary Blackwell engaged Compuware Corporation to conduct extensive security reassessments and revalidations. This included the Nation’s most thorough review of all hardware and software, including source code and voter-verifiable printer accessories.

- Further, before the 2005 General Election, each of the 15,000 new machines was individually tested for accuracy by an independent verification and validation vendor.

- Ohio’s first large-scale use of electronic voting systems (which included voter-verifiable paper trails) was a great success during the November 8, 2005 General Election.

- Nearly one million voters used more than 15,000 new voting machines and the Ohio Secretary of State’s office was overwhelmed with positive reports.

- More than 20,000 poll workers and election officials attended over 671 training classes of at least three hours in length.

- We created a short internet how-to, step-by-step video for our YourVoteCountsOhio.org web site for the TSx AccuVote DRE machine in both high and low bandwidth file sizes for easy access in three different media player formats: QuickTime, Windows Media, and Flash. A step-by-step HTML guide to the AccuVote TSx, based on the video, was also available to people who were unable to download the video.

021972
• In addition, a Flash based interactive simulation of how to use the TSx machine was created to supplement our voter outreach efforts.

• We also produced a how-to, step-by-step, four color tri-fold brochure template for the TSx, which could be customized for each individual county. These brochure PDF files were available on our YourVoteCountsOhio.org website in high and low resolution formats for voters to download and print.

• We also produced the same brochure in a wallet-sized template for counties to use. Approximately 1.5 million tri-folds and 250,000 wallet sized were delivered prior to the November election. For the one county using the AccuVote-OS, an optical scan machine, we created a step-by-step four-color tri-fold brochure template, which could be customized for that County. A PDF file of the brochure was available on our YourVoteCountsOhio.org website for voters to download and print. We also created a short internet how-to, step-by-step video for our YourVoteCountsOhio.org website to demonstrate the AccuVote-OS.

• Our office created two comprehensive poll worker training videos demonstrating the proper way to set-up, open and close the polls on Election Day for the AccuVote TSx and AccuVote-OS machines which were distributed to all counties using Diebold machines in the November 2005 General Election. Counties had the option of a DVD or VHS format.

• Four hundred roving technicians traveled to polling locations where the new electronic voting machines were used. The technicians answered questions and addressed any problems when necessary. Also, each precinct was equipped with emergency paper ballots in case of technical difficulties not immediately correctable.

• Voters with disabilities were able to use the features of the new systems to vote without assistance, ensuring the privacy that all other voters expect and deserve.

• Ohio’s Computerized Statewide Voter Registration List was fully operational as of December 9, 2005.

• Ohio submitted a revised State Plan, Changing the Election Landscape in the State of Ohio, which was published in the Federal Register May 7, 2005.

• Fifty-seven Ohio counties selected a direct recording electronic (DRE) voting device with a voter verified paper audit trail (VVPAT)

• Thirty-one Ohio counties will use a combination of a precinct count optical scan system as the primary voting system with either a DRE/VVPAT or an AutoMARK combination to meet the requirements of HAVA for individuals with disabilities.

• Over of Ohio’s 88 counties have already successfully used Section 301 compliant voting systems in the November 2005 General Election. Efforts are currently
underway to test the remaining counties' equipment prior to use in Ohio's first Federal election, which is the May 2\textsuperscript{nd} primary.

**Standard Form 209 (Rev. 7-97)**

**Prescribed by OMB Circulars A-102 and A-110**
On behalf of Ohio Secretary of State, J. Kenneth Blackwell, I am submitting Ohio’s Narrative Report as required by Public Law 107-252 (the Help America Vote Act (HAVA) of 2002). Below are some the highlights that Ohio has achieved through the implementation of HAVA:

**Section 101 Funds:**

- Ohio negotiated the lowest price in the Nation for voting systems to ensure that every Ohio County would have state-of-the-art equipment.

- From the beginning, Ohio sought input from election officials and voting experts for methods to ensure a smooth and seamless transition from punch cards to new voting systems.

- Before final State certifications for Direct Recording Electronic (DRE) models were issued, Secretary Blackwell engaged Compuware Corporation to conduct extensive security reassessments and revalidations. This included the Nation’s most thorough review of all hardware and software, including source code and voter-verifiable printer accessories.

- Further, before the 2005 General Election, each of the 15,000 new machines was individually tested for accuracy by an independent verification and validation vendor.

- Ohio’s first large-scale use of electronic voting systems (which included voter-verifiable paper trails) was a great success during the November 8, 2005 General Election.

- Nearly one million voters used more than 15,000 new voting machines and the Ohio Secretary of State’s office was overwhelmed with positive reports.

- More than 20,000 poll workers and election officials attended over 671 training classes of at least three hours in length.

- We created a short internet how-to, step-by-step video for our YourVoteCountsOhio.org web site for the TSx AccuVote DRE machine in both high and low bandwidth file sizes for easy access in three different media player formats: QuickTime, Windows Media, and Flash. A step-by-step HTML guide to the AccuVote TSx, based on the video, was also available to people who were unable to download the video.
In addition, a Flash based interactive simulation of how to use the TSx machine was created to supplement our voter outreach efforts.

We also produced a how-to, step-by-step, four color tri-fold brochure template for the TSx, which could be customized for each individual county. These brochure PDF files were available on our YourVoteCountsOhio.org website in high and low resolution formats for voters to download and print.

We also produced the same brochure in a wallet-sized template for counties to use. Approximately 1.5 million tri-folds and 250,000 wallet sized were delivered prior to the November election. For the one county using the AccuVote-OS, an optical scan machine, we created a step-by-step four-color tri-fold brochure template, which could be customized for that County. A PDF file of the brochure was available on our YourVoteCountsOhio.org web site for voters to download and print. We also created a short internet how-to, step-by-step video for our YourVoteCountsOhio.org web site to demonstrate the AccuVote-OS.

Our office created two comprehensive poll worker training videos demonstrating the proper way to set-up, open and close the polls on Election Day for the AccuVote TSx and AccuVote-OS machines which were distributed to all counties using Diebold machines in the November 2005 General Election. Counties had the option of a DVD or VHS format.

Four hundred roving technicians traveled to polling locations where the new electronic voting machines were used. The technicians answered questions and addressed any problems when necessary. Also, each precinct was equipped with emergency paper ballots in case of technical difficulties not immediately correctable.

Voters with disabilities were able to use the features of the new systems to vote without assistance, ensuring the privacy that all other voters expect and deserve.

Ohio’s Computerized Statewide Voter Registration List was fully operational as of December 9, 2005.

Ohio submitted a revised State Plan, Changing the Election Landscape in the State of Ohio, which was published in the Federal Register May 7, 2005.

Fifty-seven Ohio counties selected a direct recording electronic (DRE) voting device with a voter verified paper audit trail (VVPAT)

Thirty-one Ohio counties will use a combination of a precinct count optical scan system as the primary voting system with either a DRE/VVPAT or an AutoMARK combination to meet the requirements of HAVA for individuals with disabilities.

Over of Ohio’s 88 counties have already successfully used Section 301 compliant voting systems in the November 2005 General Election. Efforts are currently
underway to test the remaining counties' equipment prior to use in Ohio's first Federal election, which is the May 2nd primary.

RE: Certification—HAVA 102 Funding

Dear Secretary Blackwell,

The purpose of this letter is to obtain a certification from you, as Ohio’s Chief State Election Official, regarding the state’s use of funds provided under section 102 of the Help America Vote Act (HAVA). These funds were granted to the state for the replacement of punch card or lever voting machines (42 U.S.C. §15302). The U.S. Election Assistance Commission (EAC or Commission) is the Federal agency responsible for administering HAVA §102 funds. On May 2, 2006, Ohio held its first election for Federal office in 2006. The date of this election represents the deadline for the state’s use of the Federal funds it received pursuant to HAVA section 102. Now that this deadline has passed, the state must demonstrate that the funds it received were used for the purpose and by the deadlines set forth in HAVA (42 U.S.C. § 15302 (a) & (b)). A certification document has been enclosed for this purpose. If Ohio cannot certify the proper and timely use of the 102 funds, HAVA requires that they are returned to the EAC to be dispersed as requirements payments. (42 U.S.C. §§ 15304 & 15401).

Replacement of Voting Systems. In order to avoid repayment of funds, Ohio will be required to certify the total number of qualified precincts which have replaced all punch card or lever machines in time for the first election for Federal office in 2006 that took place on May 2, 2006. This means that no punch card or lever voting systems were used in the qualified precinct. The replacement systems must (1) not use punch cards or levers, (2) meet the requirements of HAVA section 301 (42 U.S.C. §15481) and (3) comply with all other relevant Federal statutory requirements (noted in 42 U.S.C. §15545). Failure to demonstrate compliance will require repayment. The repayment provisions of HAVA require repayment of funds on a prorated basis. The rate is established by taking the total number of qualifying precincts which have fully met

---

43 HAVA initially mandated that the 102 Funds be used to replace voting systems in time for the regularly scheduled general election for Federal office in November 2004. However, the statute provided for the receipt of a waiver extending compliance to the first election for Federal office held after January 1, 2006. (42 USC §15302(a)(3) (A) & (B)). Your state requested and received this waiver. HAVA allows no additional extension of the deadline.
44 Those precincts which used punch card or lever machines to administer the regularly scheduled general election for Federal office held in November of 2000.
45 Replaced punch card or lever voting systems may not be transferred for use in a different precinct.
the requirements of HAVA, as a function of the total number of qualifying precincts within the State. (See 42 USC §15302(d)).

**Timely Expenditure of Funds.** To avoid repayment, Ohio must also show that all HAVA 102 funds received were used for their designated purpose prior to the May 2, 2006 HAVA deadline. This means that all 102 funds were either expended (finally transferred to another party for consideration) and/or obligated in such a way that the state incurred a legally enforceable liability to another party (such as a local government or contractor) for the full value of its 102 funding. Ohio must be able to document and certify the status of the 102 funding it received. In the event Ohio possesses unobligated 102 funds after the deadline, the state will be required to return either an amount equal to the noncompliant precinct percentage, as discussed above, or the total amount of unobligated 102 funds, whichever is greater.

**Certification.** As Chief State Election Official, we ask that you carefully review the enclosed certification and its instructions. The document shall be filled out by initialing each statement that is true and accurate. If a statement may not be certified as true and accurate it must be lined through and a written and signed explanation attached (see instructions in italics). The certification must be completed and received by the Commission no later than July 7, 2006. Failure to timely file the enclosed certification will result in the Commission’s forwarding of this matter to the EAC’s Office of the Inspector General for action.

Thank you for your attention to this matter. All questions or correspondence should be directed to Edgardo Cortes, Election Assistance Commission, 102 Funds Certification, 1225 New York Ave., NW, Suite 1100, Washington, D.C. 20005 [(202) 566-3100].

Sincerely,

Thomas R. Wilkey
Executive Director

Enclosure
CERTIFICATION: USE OF HAVA SECTION 102 FUNDS AND REPLACEMENT OF PUNCH CARD AND LEVER MACHINES

I, the undersigned, having investigated or caused to be investigated each matter, below; certify, affirm and acknowledge that each of the following numbered statements, and any attachments to this certification document, are true and accurately reflect the status, condition and operations of Ohio (hereinafter “state”) as they related to the use and status of Help America Vote Act (HAVA) Section 102 Funds and the replacement of punch card or lever machines.

I understand that by certifying the information below, I am making a statement or representation to the U.S. Election Assistance Commission, an independent Federal Agency, necessary for the agency to determine Ohio’s required compliance with HAVA Section 102. (42 U.S.C. §15302). Compliance with HAVA Section 102 is required by the state as a result of its accepting Federal funds under that provision. As a condition of receiving 102 funds, the state certified that it would “use the payment... to replace punch card voting systems or lever voting systems (as the case may be) in the qualifying precincts within the state by the deadline prescribed... [first election for Federal office held after January 1, 2006].” (42 U.S.C. §15302(b)).

I further understand that to the extent any of the below (or attached) representations or certifications are found to be materially false, the Federal funds received by the state will be subject to audit and possible recoupment. Further, such false statements may subject the undersigned to criminal prosecution under 18 U.S.C. §1001 or other Federal Statutes.

I. BACKGROUND. Read the statements below and initial the items that you certify as true and accurate. If you are not able to certify one or more of the following statements, you must line through the statement at issue and attach a signed explanation identifying it and explaining why it may not be certified. The statement (attachment) should provide all necessary facts and concisely explain the conditions that make certification a problem. The explanation shall be labeled “Attachment A, Background.”

   Initials: _____

2. Triggering Election. The First Election for Federal office in 2006 (triggering the deadline noted in 42 U.S.C. 15302 (a)(3)(B)) for the state was held on May 2, 2006.

   Initials: _____

3. Funds Received. The State received $30,667,664 in Federal Funds pursuant to HAVA section 102.

   Initials: _____
II. PUNCH CARD OR LEVER MACHINE REPLACEMENT. Read the statements below and initial the items that you certify as true and accurate. If you are not able to certify one or more of the below statements, you must line through the statement at issue and attach a signed explanation identifying it and explaining why it may not be certified. The statement (attachment) should provide all necessary facts and concisely explain the conditions that make certification a problem. The explanation shall be labeled "Attachment B, Punch Card or Lever Machine Replacement."

1. Qualified Precincts. The State had 9,607 total qualified precincts (precincts which used punch card or lever machines to administer the regularly scheduled general election for Federal office held in November of 2000).

   Initials:_____

2. Qualified Precincts: No Punch Card or Lever Machine Used. None of the qualifying precincts, noted in statement 1 above, used a lever or punch card machine in an election for Federal office on or after May 2, 2006.

   Initials:_____

3. No Punch Card or Lever Machine Used in State. No precinct in the state used a punch card or lever machine for an election for Federal office on or after May 2, 2006.

   Initials:_____

4. Replacement Machines. All machines purchased, leased or otherwise procured to replace punch card or lever machines in qualifying precincts meet the requirements of HAVA section 301 (42 U.S.C. §15481) and comply with all other relevant Federal statutory requirements (noted in 42 U.S.C. §15545). This includes the requirement that each polling place have at least one voting system equipped for individuals with disabilities. Please provide (below) a complete list of all voting systems procured, leased or otherwise obtained to replace the state's punch card or lever machines.

   If you need additional space, please continue this table on a separate, signed attachment.

   Initials:_____

5. Voting Systems in Place. All voting systems procured to replace punch card or lever machines were in place and used in the state’s May 2, 2006 Federal election.

   Initials:_____

022027
III. HAVA § 102 FUNDS. Read the statements below and initial the items that you certify as true and accurate. If you are not able to certify to either response “a” or “b” in statement 1 or statement 2, below, you must line through the statement and attach a signed document explaining why you could not make a certification. The explanation (attachment) should provide all necessary facts and concisely explain the conditions that make certification a problem. The explanation shall be labeled “Attachment C, HAVA §102 Funds.”

1. Status of HAVA §102 Funds. Please check the statement below that applies to your state. (Check only one statement).

   (a) The state had none of the $30,667,664 it received pursuant to HAVA §102 remaining in its election fund after May 2, 2006. This means that as of this date, all 102 funds were expended. Funds are expended when finally transferred to another party (manufacturer or vendor) for consideration (voting system).

   (b) The state had only obligated funds remaining in its election fund after May 2, 2006. This means that as of this date, all funds were either expended or obligated. Funds are expended when finally transferred to another party (manufacturer or vendor) for consideration (voting system). Funds are properly obligated when the state has incurred a legally enforceable liability (such as a grant agreement, contract or lease) to another party (such as a local government or contractor) for a specific portion of the 102 funds. If the state had only obligated funds in its election funds after the above date, attach a statement explaining the obligation(s). This statement must clearly explain and state the value of the obligated funds remaining and the nature of the obligation. Documentation regarding the obligation should also be attached and explained (e.g. documents from vendor contracts or agreements with local governments). This explanation and supporting documentation shall be labeled “Attachment D, Obligated Funds.”

   Initials: __________

2. Use of HAVA §102 Funds. All HAVA §102 funds expended or obligated by the state were used to replace punch card or lever machines in qualifying precincts per 42 U.S.C. §15302(a)(2).

   Initials: __________

I, by signing my name below, certify, affirm and acknowledge, under penalty of Federal law, that each of the above numbered paragraphs initialed above accurately represent the operations, conditions and practices of Ohio as they related to the use and status of HAVA Section 102 Funds and the replacement of punch card or lever machines.

Signed this day, ____________________:

March 24, 2006

J. Kenneth Blackwell  
Secretary of State  
180 East Broad Street, 16th Floor  
Columbus, Ohio 43215  

RE: Verification of Information Regarding HAVA 102 Funding  

Dear Secretary Blackwell,

Federal records indicate that Ohio received Federal funds pursuant to Section 102 of the Help America Vote Act of 2002 (HAVA) for the replacement of punch card or lever voting machines (42 U.S.C. §15302). This letter seeks to verify certain information your office has previously provided, as an initial step in the U.S. Election Assistance Commission’s (EAC) efforts to determine whether the funds you received were used for the purpose and by the deadlines set forth in HAVA (42 U.S.C. §15302 (a) & (b)).

As a condition of receiving 102 funds, Ohio certified that it would “use the payment... to replace punch card voting systems or lever voting systems (as the case may be) in the qualifying precincts within the state by the deadline prescribed [first election for Federal office held after January 1, 2006].”¹¹ (42 U.S.C. §15302(b)). Thus, HAVA requires (1) all punch card or lever machines in each qualifying precinct be replaced by the HAVA deadline and (2) that all 102 money be used by this deadline. Failure to meet these requirements may require repayment of 102 funds. Ultimately, the EAC will require Ohio to certify its compliance. Thus, you, as the Chief State Election Official, must ensure records are available and sufficient to make and support such a certification.

Replacement of Voting Systems. In order to avoid repayment of funds, Ohio will be required to certify the total number of qualified precincts (those precincts which used punch card or lever machines to administer the regularly scheduled general election for Federal office held in November of 2000) that have replaced all such machines in time for the first election for

¹¹ HAVA initially mandated that the 102 Funds be used to replace voting systems in time for the regularly scheduled general election for Federal office in November 2004. However, the statute provided for the receipt of a waiver extending compliance to the first election for Federal office held after January 1, 2006. (42 USC §15302(a)(3)). Your state requested and received this waiver. HAVA allows no additional waiver or extension of the deadline.
Federal office in 2006. The replacement machines must not use punch cards or levers, meet the requirements of HAVA section 301 (42 U.S.C. §15481) and comply with all other relevant Federal statutory requirements (noted in 42 U.S.C. §15545). Failure to demonstrate compliance will require repayment.

The repayment provisions of HAVA require repayment of funds on a prorated basis. The rate is established by taking the total number of qualifying precincts who have fully met the requirements of HAVA, as a function of the total number of qualifying precincts within the State. (See 42 USC §15302(d)).

Timely Expenditure of Funds. All funds must be used for their designated purpose prior to the HAVA deadline. This means that as of the first election for Federal office in 2006, all 102 funds must be obligated. While this does not necessarily require that all 102 funds be “spent” (finally transferred to another party for consideration) by the HAVA deadline, it does require that all funds be obligated in such a way that the state has incurred a legally enforceable liability to another party (such as a local government or contractor) for the full value of its 102 funding. Ohio must be able to document and certify the status of the 102 funding it received. This includes certifying that any 102 funding not expended by the HAVA deadline were properly obligated. In the event Ohio possesses unobligated 102 funds after the first election for Federal office held in 2006, the state will be required to return either an amount equal to the noncompliant precinct percentage, as discussed above, or the total amount of unobligated 102 funds, whichever is greater.

Verification of EAC Data. EAC is responsible for administrating the 102 funds granted by HAVA. As we begin this process we would like to verify certain information we have previously gathered. This information is listed below.

- The first election for Federal office in 2006 (triggering the deadline noted in 42 U.S.C. 15302 102 (a)(3)(B)) in Ohio is scheduled for May 2, 2006.
- Ohio has 9607 total qualified precincts (precincts which used punch card or lever machines to administer the regularly scheduled general election for Federal office held in November of 2000).
- Ohio has $0 in 102 funds remaining in its election fund.

As chief state election official, you must verify the information above. If the information is correct, please note such in writing to the EAC. If the

12This means that there may be no punch card or lever voting systems operating in the precinct. Further, these systems may not be transferred for use in a different precinct.
information above is incorrect, either because it was incorrectly reported previously or has changed, please provide the corrected data and explain the basis for the change. All correspondence should be sent to Edgardo Cortés, 102 Funds Verification, 1225 New York Ave., NW, Suite 1100, Washington, D.C. 20005.

Thank you for your attention to this matter. Please provide your response to this letter no later than April 12, 2006. The information you provide will help expedite our review of your HAVA 102 Funds. If you have any questions, please contact Mr. Cortés at (202) 566-3100.

Sincerely,

[Signature]

Thomas Wilkey
Executive Director
April 7, 2006

Mr. Thomas Wilkey  
Executive Director  
U.S. Election Assistance Commission  
1225 New York Avenue, NW  
Suite 1100  
Washington, DC 20005

RE: Verification of Information Regarding HAVA 102 Funding

Dear Mr. Wilkey:

This is to acknowledge receipt of your correspondence of March 24th to Secretary Blackwell regarding disbursement of funds from Section 102 of the Help America Vote Act of 2002 (HAVA).

Please be advised that Ohio has followed all of the guidelines associated with disbursement of funds from Section 102 (42 U.S.C. § 15302(b)). All Ohio Counties that used punch card and/or lever machines in previous elections have replaced those systems with new HAVA approved voting systems. Let this letter serve as certification that the 74 counties that conducted the 2000 November Federal election using punch card or lever voting system have indeed replaced their voting systems.

Regarding your request to re-verify the information the EAC has previously gathered from Ohio, I am confirming that:

- Ohio’s first Federal is May 2nd;
- Ohio had 9,607 precincts operating punch card and/or lever machines to administer the 2000 November Federal election,
- Ohio has a zero balance in Section 102 funding.

If you have any questions, please feel free to contact our Director of Elections, Judy Grady, at 614-466-2585.

Sincerely,

Monty Lobb  
Assistant Secretary of State

Ohio’s Narrative Report
Consolidated Report on HAVA Title II, Section 251 Fund
October 1, 2004 through and including September 30, 2005
Due March 30, 2006

On behalf of Ohio Secretary of State, J. Kenneth Blackwell, I am submitting Ohio’s Narrative Report as required by Public Law 107-252 (the Help America Vote Act (HAVA) of 2002). Below are some of the highlights that Ohio has achieved through the implementation of HAVA:

Section 251 Funds:

- Ohio negotiated the lowest price in the Nation for voting systems to ensure that every Ohio County would have state-of-the-art equipment.

- From the beginning, Ohio sought input from election officials and voting experts for methods to ensure a smooth and seamless transition from punch cards to new voting systems.

- Before final State certifications for Direct Recording Electronic (DRE) models were issued, Secretary Blackwell engaged Compuware Corporation to conduct extensive security reassessments and revalidations. This included the Nation’s most thorough review of all hardware and software, including source code and voter-verifiable printer accessories.

- Further, before the 2005 General Election, each of the 15,000 new machines was individually tested for accuracy by an independent verification and validation vendor.

- Ohio’s first large-scale use of electronic voting systems (which included voter-verifiable paper trails) was a great success during the November 8, 2005 General Election.

- Nearly one million voters used more than 15,000 new voting machines and the Ohio Secretary of State’s office was overwhelmed with positive reports.

- More than 20,000 poll workers and election officials attended over 671 training classes of at least three hours in length.

- We created a short internet how-to, step-by-step video for our YourVoteCountsOhia.org web site for the TSx AccuVote DRE machine in both high and low bandwidth file sizes for easy access in three different media player formats: QuickTime, Windows Media, and Flash. A step-by-step HTML guide to the AccuVote TSx, based on the video, was also available to people who were unable to download the video.
In addition, a Flash based interactive simulation of how to use the TSx machine was created to supplement our voter outreach efforts.

We also produced a how-to, step-by-step, four color tri-fold brochure template for the TSx, which could be customized for each individual county. These brochure PDF files were available on our YourVoteCountsOhio.org website in high and low resolution formats for voters to download and print.

We also produced the same brochure in a wallet-sized template for counties to use. Approximately 1.5 million tri-folds and 250,000 wallet sized were delivered prior to the November election. For the one county using the AccuVote-OS, an optical scan machine, we created a step-by-step four-color tri-fold brochure template, which could be customized for that County. A PDF file of the brochure was available on our YourVoteCountsOhio.org web site for voters to download and print. We also created a short internet how-to, step-by-step video for our YourVoteCountsOhio.org web site to demonstrate the AccuVote-OS.

Our office created two comprehensive poll worker training videos demonstrating the proper way to set-up, open and close the polls on Election Day for the AccuVote TSx and AccuVote-OS machines which were distributed to all counties using Diebold machines in the November 2005 General Election. Counties had the option of a DVD or VHS format.

Four hundred roving technicians traveled to polling locations where the new electronic voting machines were used. The technicians answered questions and addressed any problems when necessary. Also, each precinct was equipped with emergency paper ballots in case of technical difficulties not immediately correctable.

Voters with disabilities were able to use the features of the new systems to vote without assistance, ensuring the privacy that all other voters expect and deserve.

Ohio’s Computerized Statewide Voter Registration List was fully operational as of December 9, 2005.

Ohio submitted a revised State Plan, Changing the Election Landscape in the State of Ohio, which was published in the Federal Register May 7, 2005.

Fifty-seven Ohio counties selected a direct recording electronic (DRE) voting device with a voter verified paper audit trail (VVPAT)

Thirty-one Ohio counties will use a combination of a precinct count optical scan system as the primary voting system with either a DRE/VVPAT or an AutoMARK combination to meet the requirements of HAVA for individuals with disabilities.

Over of Ohio’s 88 counties have already successfully used Section 301 compliant voting systems in the November 2005 General Election. Efforts are currently
underway to test the remaining counties’ equipment prior to use in Ohio’s first Federal election, which is the May 2nd primary.

## Financial Status Report (Long Form)

### Recipient Organization
- **Name and Address:**
  - **Ohio Secretary of State Office**
  - **180 E. Broad St., 16th Fl.**
  - **Columbus, OH 43215**

### Funding Grant Information
- **Grant Period:**
  - **From:** 10/1/2002
  - **To:** 12/31/2004

### Grants and Funding
1. **Total Outlays**
   - Previously Reported: 2,236,764.48
   - This Period: 4,633,894.99
   - Cumulative: 6,870,659.47

2. **Recipient's Share of Net Outlays Consisting of:**
   - **a. Third party (in-kind) contributions:** 0.00
   - **b. Other Federal awards authorized to be used to match this award:** 0.00
   - **c. Program income in accordance with the matching or cost sharing alternative:** 0.00
   - **d. All other recipient outlays not shown on lines e, f, or g:** 0.00
   - **e. Total recipient share of net outlays (Sum of lines e, f, g, and h):** 0.00

### Federal Share of Net Outlays
1. **Total Unliquidated Obligations:**
   - Federal Share: 659,884.32

2. **Recipient's Share of Unliquidated Obligations:**
   - Federal Share: 0.00

### Program Income
1. **Program Income, Consisting of:**
   - **q. Disbursed program income shown on lines c and/or g above:** 0.00
   - **r. Undisbursed program income:** 0.00

### Indirect Expenses
- **Type of Rate (Place ‘X’ in appropriate line):**
  - Provisional: 0.00
  - Predetermined: 0.00
  - Final: 0.00
  - Fixed: 0.00

### Remarks
- *Section 102 has no liquidated or unliquidated obligations during this reporting period. The state match of $5,600,000.00 has been appropriated at this time as state fund 026 for section 251 (b).*

### Certification
- *I certify to the best of my knowledge and belief that this report is correct and complete and that all outlays and unliquidated obligations are for the purposes set forth in the award documents.*

---

DATE: June 17, 2004

TO: Governor Taft

FAX NUMBER: 614-466-9354

FROM: Peggy Sims

NUMBER OF PAGES (INCLUDING COVER PAGE): 5

MESSAGE

ORIGINAL TO FOLLOW BY MAIL.
June 17, 2004

The Honorable Bob Taft
Governor
Office of the Governor
77 South High Street, 30th Floor
Columbus, Ohio 43215-6117

Dear Governor Taft:

The U.S. Elections Assistance Commission is pleased to inform you that the Help America Vote Act of 2002 ("HAVA") allocation appropriated for your State is now available for disbursement.

HAVA requires the chief executive officer of the State, or designee, in consultation with the chief State election official, to file with the U.S. Election Assistance Commission ("EAC") a statement certifying that the State is in compliance with the conditions set forth in section 253(b) in order to be eligible for a fiscal year's requirements payment. The EAC received a certification statement from your State on June 10, 2004 declaring your State's eligibility for the requirements payment(s) appropriated in fiscal year(s) 2003 and 2004.

Accordingly, the EAC has notified the U.S. General Services Administration ("GSA") that approximately $90,992,517 should be disbursed to your State. Your State should receive these funds within five business days, provided your State has given GSA the information needed for the electronic transfer.

Use of Funds

In accordance with HAVA Section 251(b), these funds are to be used only to meet the requirements of HAVA Title III, except that your State may use these payment to carry out other activities to improve the administration of elections for Federal office if the State certifies to the EAC that:

- the State has implemented the requirements of Title III; or
- the amount to be expended with respect to such other activities does not exceed an amount equal to the minimum requirements payment amount applicable to the State.
Section 251(c) of the Act also explains that a State may use a requirements payment:

- as a reimbursement for costs incurred in obtaining voting equipment which meets the requirements of section 301 (voting systems standards) if the State obtains the equipment after the regularly scheduled general election for Federal office held in November 2000, notwithstanding the Act’s maintenance of effort requirements; and
- for any costs for voting equipment which meets the requirements of section 301 that were incurred pursuant to a multi-year contract on or after January 1, 2001, except that the amount that the State is otherwise required to contribute under the maintenance of effort requirements must be increased by the amount of the payment made with respect to such multiyear contract.

Conforming to Applicable Federal Guidelines

Please note that the following Office of Management and Budget guidelines apply to these federal funds:

- A-87 - Cost Principles for State, Local and Indian Tribal Governments (Cost Principles).
- Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments ("Common Rule", Administrative Requirements, 53 FR 8087, March 11, 1988)
- A-133 – Audits of States, Local Governments, and Non-Profit Organizations (Single Audits, Audit Requirements).

These guidelines may be found at:

http://www.whitehouse.gov/omb/circulars/index.html

Material Changes to State Plans

Section 254(a)(11) of HAVA prohibits a State from making material change(s) to the State plan unless the change:

1 Maintenance of effort is addressed in HAVA section 254(a)(7), which requires the State to describe how it will maintain the expenditures of the State for activities funded by the requirements payment at a level that is not less than the level of such expenditures maintained by the State for the fiscal year ending prior to November 2000.
is developed and published in the *Federal Register* in accordance with Section 255 in the same manner as the State plan; 
- is subject to public notice and comment in accordance with Section 256 in the same manner as the State plan; and 
- takes effect only after the expiration of the 30-day period which begins on the date the change is published in the *Federal Register*.

Accordingly, if your State does make any material change(s) to your current State plan for which you are receiving this requirements payment, you must file an amended State plan with the EAC. The amended State plan filed with the EAC may be limited to describing in reasonable detail the changes that have been made between the amended State plan and the State plan currently in effect.

**Reporting**

Also note that HAVA Section 258 requires your State to submit a report to the EAC on the activities conducted with the funds provided during the federal fiscal year, which runs from October 1 through September 30. This report must include:

- a list of expenditures made with respect to each category of activities described for the use of funds;
- the number and type of articles of voting equipment obtained with the funds; and
- an analysis and description of:
  - the activities funded to meet HAVA requirements; and
  - how such activities conform to the submitted State plan.

This report is due no later than six months after the end of each fiscal year. Accordingly, you should file your first report with the EAC no later than March 30, 2005. States should submit Standard Form 269 as part of this report. This form may be found at the following web site:

http://www.whitehouse.gov/omb/grants/grants_forms.html

**Recordkeeping and Audits**

HAVA Title IX requires recipients of payments under the Act to keep records consistent with sound accounting principles to facilitate an effective audit. It authorizes the EAC to audit or examine books, documents, papers and records of any recipient that are deemed pertinent to the payment and stipulates that the provision applies to all recipients of payments under the Act. Such recipients would include local jurisdictions that received funds through the State as a result of the requirements payments.
HAVA also requires that all funds provided under the Act are subject to mandatory audit by the Comptroller General at least once during the lifetime of the program, with the same access to records as the grant-making office. If the Comptroller General determines that an excess payment has been made or the recipient is not in compliance, the recipient must pay the grant-making office an amount that reflects the excess payment or the proportion representing noncompliance.

Assistance

If you have any questions about this matter, please have your staff contact Peggy Sims, EAC Research Specialist, by email at psims@eac.gov or by phone at 1-866-747-1471 (toll free) or 202-566-3100.

Sincerely yours,

DeForest B. Soaries, Jr.
Chairman
implementation of a modern, fair, reliable and accurate election system. As U.S. Rep. Bob Ney led the federal initiative to enact the Help America Vote Act, it was the mandate of our State Plan Committee to formulate a plan that makes Ohio a showcase for election reform.

VIII. Distribution of Resources to Local Governments

We first explore our proposed distribution of aid to local government under Title I. Under guidelines of the Act, these funds must be used assuming the following criteria:

- These funds may be used as a reimbursement for costs associated with punch-card or lever machine replacement incurred after Jan. 1, 2001.
- There is a presumption states must ensure compliance in time for the November, 2004 Federal Election.
- Within six months after the date of enactment, Ohio must certify that the state will use the money for punch-card/lever machine replacement, the state will comply with federal laws, and the voting system will meet new voting system standards.

We anticipate that no change in state law or new legislation will be required to carry out the activities required for certification.

At this writing, the Congressional Research Service (CRS) estimates that full-funding under the Act, for both Title I and Title II receipts, will total $155,251,155. CRS estimates $116,423,155 of that amount represents Title II funding under the Requirements Payments component of the Act.

In addition, the state has appropriated $5.8 million in matching funds for Title II payments, as required by the Act, which means total available funds for implementation of the State Plan in Ohio will be approximately $161 million.

All money in Title II is based on the state’s portion of the nation’s voting age population. The most recent estimate is that Ohio’s 8.5 million voting-age population represents 3.97 percent of the nation’s voting age population of 215.1 million.

Because of the prevalence of punch-card voters in Ohio, we are keenly focused on the distribution of funds under Title I and, more precisely, the buy-out program. The Act stipulates the funds will be distributed to states by multiplying the number of qualifying precincts by $4,000. However, based on available federal funds for this purpose and the number of punch-card and lever-machine jurisdictions in the U.S., it now appears that number likely will be about $3,354 per precinct. As previously mentioned, Ohio has 69 counties designated as punch-card counties.

In addition, two Ohio jurisdictions – Hardin and Lucas counties – feature lever voting machines and would be eligible for funding under the guidelines.

In total, under the formula, the 69 punch-card counties and two lever-machine counties in Ohio means the state would be eligible for about $31 million in federal funds under the buyout program.
However, we know $31 million is insufficient for the counties to purchase modern, reliable voting systems capable of meeting requirements of the Act. Subsequently, our budget for voter and election reforms in Ohio presumes the state will require about $24.2 million to establish a centralized voter registration database and related support for voter education and poll worker training. Our plan calls for the remainder of the Title funds to be allocated to Ohio’s 88 counties to help subsidize installation of new systems and implement other required activities under the Act.

Following is the budget we envision for distribution of the $161 million in funds in Ohio to meet requirements of the Help America Vote Act:

<table>
<thead>
<tr>
<th>Activity</th>
<th>Fund Distribution</th>
<th>Jurisdiction</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voter Registration Database</td>
<td>$5 million to $10 million</td>
<td>State</td>
<td>Develop statewide voter registration database</td>
</tr>
<tr>
<td>Voter Education</td>
<td>$5 million to $10 million</td>
<td>State</td>
<td>Administered by the State in coordination with the counties</td>
</tr>
<tr>
<td>Poll Worker Training</td>
<td>$5 million</td>
<td>State</td>
<td>To be distributed as grants to counties</td>
</tr>
<tr>
<td>Administrative Expenses</td>
<td>$2 million</td>
<td>State</td>
<td>For state personnel to administer and monitor HAVA implementation</td>
</tr>
<tr>
<td>Provisional Voter Hotline</td>
<td>$250,000</td>
<td>State</td>
<td>To establish a state hotline for provisional voters</td>
</tr>
<tr>
<td>Miscellaneous</td>
<td>$2 million</td>
<td>State</td>
<td>For associated costs of implementing HAVA</td>
</tr>
<tr>
<td>Voting Equipment and other Activities</td>
<td>$136 million</td>
<td>State on behalf of Counties</td>
<td>For new voting equipment and to meet other HAVA requirements</td>
</tr>
</tbody>
</table>

In simplest terms, this allocates Help America Vote funds where the money is needed most: in Ohio counties. While it is the responsibility of the Ohio Secretary of State to monitor performance and ensure implementation of the Act, the execution of the Ohio plan, ultimately, will take place at the county level. On that basis, we believe it prudent to maximize resources for election reform in the counties where election reform will occur.

June 16, 2003
While much of the focus is on the counties with punch card and lever-machine voting systems, in reality, all 88 Ohio counties will be expected to conduct some form of system modification and upgrade to make the system in Ohio uniform and compliant with the Act. Subsequently, the premise of the Ohio Plan is to look at the voter and election system statewide, based on the distribution of registered voters in each of the 88 counties. Viewed in that context, the $136 million to be allocated to the counties will be distributed in the following priority order, as federal funds become available:

- Replacement of punch-card and lever-machine voting equipment to the extent that new voting systems would be installed immediately in the 71 affected counties;
- Installation of voting devices compliant with the disability requirements of the Act in all 88 counties;
- Bringing remaining counties into compliance with Section 301 of the Act by funding necessary upgrades and refinements of all other existing systems and equipment.

The Secretary of State reserves the right to distribute the funds to counties based on need and special circumstances. The Secretary of State defines “need and special circumstances” to mean that it is possible some counties will need less funding and others more funding to meet the compliance standards of the Help America Vote Act. On that basis, the Secretary of State will shift funds as he deems necessary to bring all counties into compliance.

The Secretary of State acknowledges that one county, Mahoning County, took the initiative to convert their voting system to electronic voting after Jan. 1, 2001. Funding consideration will be given to all six Ohio counties using electronic voting equipment to bring those counties into compliance with HAVA.

We think this model provides us with great flexibility to allocate Title I and Title II funds in a way that assures full compliance with the requirements of the Act. Invariably some funds would be shifted away from counties that demonstrate a lesser need and reallocated to counties that demonstrate a greater need. But the allocation method is a fair method that will further assure all counties that adequate funds will be available to fully fund the requirements of the Act at the local level.

The Ohio Secretary of State will establish guidelines as part of the performance measurement for county compliance. When compliant systems are purchased for the counties, the Secretary of State will require transition to new voting systems by all punch-card and lever-machine counties by Feb. 1, 2004. The Secretary of State will provide counties with a list of acceptable vendors to supply the new voting equipment and counties must choose from that approved list by no later than Sept. 1, 2003.

Since the Secretary of State will centralize and oversee this process, the Secretary will ensure compliance with all requirements of the Help America Vote Act. The performance timeline requires the Secretary to establish the list of approved vendors by Aug. 1, 2003, providing county boards of elections with ample time to review the list, choose the vendor and establish transition to the new voting systems between Sept. 1, 2003 and Feb. 1, 2004.
To ensure uniformity and compliance, the Secretary of State will stipulate design specifications for voting equipment. If a county fails to select a vendor by Sept. 1, 2003, the Secretary of State will designate a vendor for that county and order installation of new voting equipment in that jurisdiction by the Feb. 1, 2004 deadline.

Although the Act requires the replacement of punch-cards and lever machines by the General Election in 2004, the Secretary of State wants these new systems in place in Ohio for the Primary Election to ensure a smooth, seamless transition and full operational capability in time for the presidential election.

The Secretary of State has already established a fund account for all federal monies designated for Ohio under the Act and those funds, as applicable, will be disbursed from that account as our plan is implemented. This account is segregated to reflect federal funds designated for county buy-outs, election administration and Requirements payments.

Reports will be generated to show the allocation and distribution of these funds and that report will be forwarded to the Election Assistance Commission along with a performance report to show the state’s progress and performance in implementing provisions of the Act.

IX. §301. Meeting the Voting System Standards of the Act

The Help America Vote Act requires “uniform and nondiscriminatory election technology” that meets specific voting system standards. Ohio has opted for a program that specifically addresses the requirements of the Act, but provides counties with some degree of flexibility in choice of vendor and how they implement and develop voting systems to meet the particular needs of their region.

Assurance that the state will meet voting system standards specified in the Act is the responsibility of the Secretary of State, so system specifications will be drafted by the Secretary and the list of available vendors will reflect only those companies that submit bids demonstrating their ability to meet the rigorous and unambiguous system specifications and timelines established by the Secretary.

To ensure compliance with the Act, the Secretary of State will appoint a committee comprised of knowledgeable persons in the Secretary’s office who have the technical capability to review vendor proposals for electronic voting equipment and tabulating devices and the committee will recommend final adoption of a list of approved vendors that meet system specifications. The committee will review standards set by the Standards Board and

The Honorable J. Kenneth Blackwell
Secretary of State
180 E. Broad Street, 16th Floor
Columbus, Ohio 43215

Dear Mr. Blackwell:

Enclosed, please find a copy of a letter sent by the U.S. Election Assistance Commission (EAC) to the chief executive officer of your State. This letter summarizes provisions for filing statements of certification to receive requirements payments in accordance with the Help America Vote Act of 2002 (HAVA).

As you may know, to receive funds for a fiscal year, HAVA requires the chief executive officer of the State, or designee, in consultation with the chief State election official, to file with the EAC a statement certifying that the State is in compliance with the conditions set forth in HAVA Section 253(b). I hope that the enclosed letter helps you in this process.

Should you have any questions or need further clarification as to the contents of the attached letter, please do not hesitate to contact Peggy Sims at 1-866-747-1471 (toll free) or 202-566-3100.

Sincerely yours,

DeForest B. Soaries, Jr.
Chairman

Enclosure
May 6, 2004

The Honorable Bob Taft
Governor
77 South High Street, 30th Floor
Columbus, OH 43215-6117

Dear Governor Taft:

The Help America Vote Act (hereafter “HAVA” or the “Act”) authorizes payments to States, U.S. Territories and the District of Columbia (hereafter “States”) to assist in meeting the “Uniform and Nondiscriminatory Election Technology and Administration Requirements” in Title III of the Act. In order to be eligible for receipt of a requirements payment, a State must file with the U.S. Election Assistance Commission (hereafter “EAC” or “Commission”) a certification statement for the fiscal year, which declares that such State is in compliance with the required conditions set forth in section 253(b) of the Act. Title II requirements payments for Fiscal Years 2003 and 2004 are available at this time.

Timing for Filing a Statement of Certification (Section 253(a) and (d))

To receive funds for a fiscal year, HAVA requires the chief executive officer of the State, or designee, in consultation with the chief State election official, to file with the EAC a statement certifying that the State is in compliance with the conditions set forth in section 253(b). This statement may not be filed until after the expiration of a 45-day period that began on March 24, 2004 — which was the day that all 55 State plans were published in the Federal Register by the Commission. The 45-day period expires on May 8, 2004.

Language for Statement of Certification (Section 253(a))

Recommended language for the certification statement is contained in Section 253(a) of the Act. Thus, the certification statement for a fiscal year may state the following:

“________________________ hereby certifies that it is in compliance with the requirements referred to in section 253(b) of the Help America Vote Act of 2002.”

For the purpose of the requirements payments, the chief State election official is the individual designated by the State under section 10 of the National Voter Registration Act of 1993 (42 U.S.C. 1973gg-8) to be responsible for coordination of the States responsibilities under such Act.
Condition for Receipt of Funds (Section 253(b))

The conditions for receipt of a requirements payment contained in section 253(b) require that a state certify to the Commission that, for the fiscal year(s) in which funds are requested, it:

- has filed a State plan with the EAC covering the fiscal year and which the State certifies:
  - contains each of the elements required to be in the State plan, according to section 254, including how the State will establish a State Election Fund in accordance with section 254(b);[113]
  - is developed in accordance with section 255, which describes the process of using a committee of appropriate individuals, including the chief election officials of the two most populous jurisdictions, other local election officials, stakeholders (including representatives of groups of individuals with disabilities), and other citizens to develop the plan; and
  - meets the 30-day public notice and comment requirements of section 256.

- has filed with the EAC a plan for the implementation of the uniform, non-discriminatory administrative complaint procedures required under section 402 (or has included such a plan in the State plan), and has such procedures in place. If the State does not include such an implementation plan in the State plan, the Federal Register publication and the committee development requirements of sections 255(b) and 256 apply to the implementation of the administrative complaint procedure in the same manner as they apply to the State plan.

- is in compliance with each of the following federal laws as they apply to the Act:
  - The Voting Rights Act of 1965;
  - The Voting Accessibility for the Elderly and Handicapped Act;
  - The Uniformed and Overseas Citizens Absentee Voting Act;
  - The National Voter Registration Act of 1993;
  - The Americans with Disabilities Act of 1990; and

- has provided that, to the extent that any portion of the Title II requirements payment is used for activities other than meeting the requirements of Title III:
  - the State's proposed uses of the requirements payment are not inconsistent with the requirements of Title III; and

---

113 Section 254(b)(1) and (2) of the Act describes the State Election Fund as a fund that is established in the treasury of the State government, which must be used by the State exclusively to carry out the activities for which the requirements payment (title II, Subtitle D, Part 1) is made to the State, and which consists of:

- amounts appropriated or otherwise made available by the State for carrying out the activities for which the requirements payment is made;
- the requirements payment to the State;
- such other amounts as may be appropriated under law; and
- interest earned on deposits of the fund.

HAVA section 254(b)(3) provides that, in the case of a State that requires State legislation to establish a State Election Fund, the EAC is required to defer disbursement of the requirements payment to such State until such time as legislation establishing the fund is enacted.
the use of the funds under this paragraph is consistent with the requirements of section 251(b); and

has appropriated funds for carrying out the activities for which the requirements payment is made in an amount equal to 5 percent of the total amount to be spent for such activities (taking into account the requirements payment and the amount spent by the State) and, in the case of a State that uses a requirements payment as a reimbursement for voting equipment under 251(c)(2), an additional amount equal to the amount of such reimbursement.14

Accordingly, prior to submission of a certification statement for a fiscal year(s) to the EAC, the Commission strongly encourages all States to verify compliance with the required conditions set forth in section 253(b). Should the Commission have any concerns that a particular State – which has submitted a certification statement to the EAC – has not met one of the required conditions, the EAC will immediately contact that particular State and/or communicate its concern in writing.

General Services Administration (GSA) Procedures for Payments

GSA, which will disburse the Title II requirements payments to States under the direction of the EAC, requests that the following procedures be used for disbursement and receipt of these payments:

- **Step One – Registration.** State representatives should contact Sharon Pugh (Sharon.Pugh@GSA.gov) or Brad Farris (Brad.Farris@GSA.gov) on (816) 823-3108, as soon as possible, with information on State contact points, including name, address and email address. These contacts may very well be the same personnel that GSA worked with in distributing HAVA Title I funding. GSA will verify this information.

- **Step Two – EFT Setup.** GSA will contact the State representatives to obtain banking information required for an Electronic Funds Transfer (EFT). Again, this may be the same information submitted for HAVA Title I funding. Payments should be made into the Election Fund described in HAVA Section 254(b)(1). All funds will be disbursed via EFT.

- **Step Three – State Certification Statement to EAC** – States will submit required certification information to the EAC, as outlined above, after the completion of the 45-day period for publication of the State plan in the Federal Register.

- **Step Four – Notification to GSA by EAC** – Based upon the certification statement, the EAC will notify GSA that a State is due receipt of its Title II payment for a particular fiscal year (i.e., either FY 2003 funds, FY 2004 funds, or both).

- **Step Five – Disbursement of Title II Funds** – GSA will disburse the Title II funds for a particular fiscal year to the accounts specified by the States, and will notify the States and the EAC of the disbursement in writing.

14 For purposes of declaring sufficient funds are available for the State to carry out activities to meet Title III requirements, if the requirements payment is to be used as a reimbursement for voting equipment obtained on and after January 1, 2004 through multi-year contracts, the activity is not treated as an activity to meet Title III requirements.
Finally, the Commission has received numerous inquiries regarding the concern that the Title II requirements funds will no longer be available for disbursement to the States after the end of the current fiscal year (i.e., September 30, 2004). However, the Commission points to section 257(b) of the Act, which states in part:

“(b) AVAILABILITY- Any amounts appropriated pursuant to the authority of subsection (a) shall remain available without fiscal year limitation until expended.” (Emphasis added.)

Based upon the above statutory language, the Commission believes Congress’ intent was clear in that the Title II funds remain available to the States until fully disbursed by the EAC.

The Commission looks forward to working closely with all States as we enter into this next phase of HAVA implementation. Should you have any questions or need further clarification as to the contents of this letter, please do not hesitate to contact Peggy Sims at 1-866-747-1471 (toll free) or 202-566-3100.

Sincerely yours,

DeForest B. Soaries, Jr.
Chairman

cc: The Honorable J. Kenneth Blackwell, Ohio Secretary of State
MESSAGE

ORIGINAL TO FOLLOW BY MAIL.
June 17, 2004

The Honorable J. Kenneth Blackwell
Secretary of State
180 East Broad Street, 16th Floor
Columbus, Ohio 43215

Dear Secretary Blackwell:

The U. S. Elections Assistance Commission is pleased to inform you that the Help America Vote Act of 2002 ("HAVA") allocation appropriated for your State is now available for disbursement.

HAVA requires the chief executive officer of the State, or designee, in consultation with the chief State election official, to file with the U.S. Election Assistance Commission ("EAC") a statement certifying that the State is in compliance with the conditions set forth in section 253(b) in order to be eligible for a fiscal year's requirements payment. The EAC received a certification statement from your State on June 10, 2004 declaring your State's eligibility for the requirements payment(s) appropriated in fiscal year(s) 2003 and 2004.

Accordingly, the EAC has notified the U.S. General Services Administration ("GSA") that approximately $90,992,517 should be disbursed to your State. Your State should receive these funds within five business days, provided your State has given GSA the information needed for the electronic transfer.

Use of Funds

In accordance with HAVA Section 251(b), these funds are to be used only to meet the requirements of HAVA Title III, except that your State may use these payment to carry out other activities to improve the administration of elections for Federal office if the State certifies to the EAC that:

- the State has implemented the requirements of Title III; or
- the amount to be expended with respect to such other activities does not exceed an amount equal to the minimum requirements payment amount applicable to the State.
Section 251(c) of the Act also explains that a State may use a requirements payment:

- as a reimbursement for costs incurred in obtaining voting equipment which meets the requirements of section 301 (voting systems standards) if the State obtains the equipment after the regularly scheduled general election for Federal office held in November 2000, notwithstanding the Act's maintenance of effort requirements; and
- for any costs for voting equipment which meets the requirements of section 301 that were incurred pursuant to a multi-year contract on or after January 1, 2001, except that the amount that the State is otherwise required to contribute under the maintenance of effort requirements must be increased by the amount of the payment made with respect to such multiyear contract.

Conforming to Applicable Federal Guidelines

Please note that the following Office of Management and Budget guidelines apply to these federal funds:

- A-87 - Cost Principles for State, Local and Indian Tribal Governments (Cost Principles).
- Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments ("Common Rule", Administrative Requirements, 53 FR 8087, March 11, 1988)
- A-133 – Audits of States, Local Governments, and Non-Profit Organizations (Single Audits, Audit Requirements).

These guidelines may be found at:

http://www.whitehouse.gov/omb/circulars/index.html

Material Changes to State Plans

Section 254(a)(11) of HAVA prohibits a State from making material change(s) to the State plan unless the change:

1 Maintenance of effort is addressed in HAVA section 254(a)(7), which requires the State to describe how it will maintain the expenditures of the State for activities funded by the requirements payment at a level that is not less than the level of such expenditures maintained by the State for the fiscal year ending prior to November 2000.
is developed and published in the *Federal Register* in accordance with Section 255 in the same manner as the State plan; is subject to public notice and comment in accordance with Section 256 in the same manner as the State plan; and takes effect only after the expiration of the 30-day period which begins on the date the change is published in the *Federal Register*.

Accordingly, if your State does make any material change(s) to your current State plan for which you are receiving this requirements payment, you must file an amended State plan with the EAC. The amended State plan filed with the EAC may be limited to describing in reasonable detail the changes that have been made between the amended State plan and the State plan currently in effect.

**Reporting**

Also note that HAVA Section 258 requires your State to submit a report to the EAC on the activities conducted with the funds provided during the federal fiscal year, which runs from October 1 through September 30. This report must include:

- a list of expenditures made with respect to each category of activities described for the use of funds;
- the number and type of articles of voting equipment obtained with the funds; and
- an analysis and description of:
  - the activities funded to meet HAVA requirements; and
  - how such activities conform to the submitted State plan.

This report is due no later than six months after the end of each fiscal year. Accordingly, you should file your first report with the EAC no later than March 30, 2005. States should submit Standard Form 269 as part of this report. This form may be found at the following web site:

http://www.whitehouse.gov/omb/grants/grants_forms.html

**Recordkeeping and Audits**

HAVA Title IX requires recipients of payments under the Act to keep records consistent with sound accounting principles to facilitate an effective audit. It authorizes the EAC to audit or examine books, documents, papers and records of any recipient that are deemed pertinent to the payment and stipulates that the provision applies to all recipients of payments under the Act. Such recipients would include local jurisdictions that received funds through the State as a result of the requirements payments.
HAVA also requires that all funds provided under the Act are subject to mandatory audit by the Comptroller General at least once during the lifetime of the program, with the same access to records as the grant-making office. If the Comptroller General determines that an excess payment has been made or the recipient is not in compliance, the recipient must pay the grant-making office an amount that reflects the excess payment or the proportion representing noncompliance.

Assistance

If you have any questions about this matter, please have your staff contact Peggy Sims, EAC Research Specialist, by email at psims@eac.gov or by phone at 1-866-747-1471 (toll free) or 202-566-3100.

Sincerely yours,

DeForest B. Soaries, Jr.
Chairman
June 1, 2004

The U.S. Election Assistance Commission
DeForest B. Soaries, Chairman
1225 New York Avenue – Suite 1100
Washington, D.C. 20005

Dear Mr. Soaries:

We have received your letter of May 6, 2004 and hereby certify that the State of Ohio is in compliance with the requirements referred to in section 253 (b) of the Help America Vote Act of 2002. Ohio has created and designated specific fund groups for receipt of federal funds under the Help America Vote Act of 2002 (HAVA) and charged the Secretary of State with responsibility for communicating to you the proper account information for distribution and receipt of these funds. You should expect contact from SOS Chief Financial Officer Dilip Mehta, or his staff, to complete all technical details relating to the transmission of HAVA funds to Ohio.

Thank you for your notification of funds availability and prompt attention to the needs of states. We look forward to an ongoing partnership with the Election Assistance Commission in our compliance with HAVA and all related statues.

Sincerely,

Bob Taft
Governor

J. Kenneth Blackwell
Secretary of State
Lori:

The requirements payments award notice did not include a CFDA number because we did not have the number at that time. We were told that we did not need one because the payments did not qualify as discretionary grants. Nevertheless, many States called to ask for a number because they use the number to track the funds. Consequently, we began jumping through the hoops necessary to obtain the number. The CFDA number for the requirements payments was confirmed earlier in the same week that I sent the message to you. It is on the web at http://12.46.245.173/pls/portal30/CATALOG.PROGRAM_TEXT_RPT.SHOW?p_arg_names=prog_nbr&p_arg_values=90.401.

Regarding the number you put on the first requirements payments report, I'll just place a copy of your email in the report folder, for now. Hope all is well with you.

Peggy Sims

email: psims@eac.gov

Hi Peggy,

Our original report filed last year for the requirements payments used the CFDA 39.011. Do we need to attach a corrected report to this year's report? Also, I checked the CFDA website when we received our requirement payments and did not see that CFDA number. There was no mention of it in the award letter either. When did that information become available?

Just curious so I will know how to proceed.

Thanks and have a great weekend!

Lori Jordan
Finance Grants Manager
Hello, HAVA Administrators and Financial Officers:

This is to confirm that a Catalogue of Federal Domestic Assistance (CFDA) number has been assigned to the "requirements payments" distributed by the U.S. Election Assistance Commission (EAC) under Title II of the Help America Vote Act. CFDA numbers reflect the government agency providing the funds and the program under which the monies were distributed. The CFDA numbers assigned thus far to HAVA programs are:

- **39.011** - Title I, sections 101 and 102 - election reform payments [distributed by the General Services Administration (GSA) in 2003].
- **93.617** - Title II, section 261 - grants to States for voting access for individuals with disabilities [aka EAD, distributed by the U.S. Department of Health and Human Services (HHS) in 2003, and 2005].
- **93.618** - Title II, section 291 - grants to State protection and advocacy systems to promote voting access for individuals with disabilities [distributed by HHS in 2003, 2004, and 2005; authorized for distribution in 2006].
- **90.400** - Help America Vote College Program - grants to promote the participation of college students as nonpartisan poll workers [distributed by EAC in 2004; may be distributed in 2005].
distribut in future years].
• 90.401 - Title II, section 251 - "requirements payments" [provided by EAC, beginning in 2004].

Some confusion has been caused by the removal of the HAVA Title I listing from the CFDA website (http://12.45.245.173/cfda/cfda.html). This was done without consulting with EAC. I suspect that the entry was removed by GSA for the following reasons:

• The CFDA number for the Title I funds has a GSA designation;
• No more funds are to be distributed under this program; and
• In accordance with HAVA Section 902(b)(4), EAC is responsible for auditing these funds.

I have discussed the matter with EAC’s General Counsel, Julie Thompson. It is our position that, for tracking purposes, States and local jurisdictions should continue to use the GSA number originally assigned to the Title I funds. EAC cannot seek a new number for these funds because HAVA does not authorize EAC to make Title I payments.

I hope this information helps. Let me know if you need further assistance.

Sincerely,

Peggy Sims

The Honorable J. Kenneth Blackwell
Secretary of State
180 East Broad Street, 16th Floor
Columbus Ohio 43215

Dear Secretary Blackwell:

This letter serves as a reminder that reports on funds provided to States under the Help America Vote Act of 2002 (HAVA), Title I, Sections 101 and 102, and Title II, Section 251, are due soon to the U.S. Election Assistance Commission (EAC). Attached is a chart summarizing the due dates for the reports, the CFDA numbers applicable to the funds provided, the coverage dates for each report, and the form and content of the reports.

All reports on the HAVA Title I funds and Title II, Section 251 requirements payments should be submitted to the following address:

State HAVA Funding Reports
U.S. Election Assistance Commission
1225 New York Avenue, NW – Suite 1100
Washington, DC 20005

If you have any questions about this matter, please contact Peggy Sims, Election Research Specialist. You can reach her by email at psims@eac.gov, or by phone at 1-866-747-1471 (toll free) or 202-566-3120.

Sincerely yours,

Paul S. DeGregorio
Chairman

1 Reports are due if the State has received funds under the HAVA title and section noted, and has not previously reported the expenditure of all such funds (including interest earned and, in the case of Title II, Section 251 payments, the 5% match).  
The Honorable J. Kenneth Blackwell  
Secretary of State  
180 East Broad Street, 16th Floor  
Columbus, Ohio 43215  

Dear Secretary Blackwell:  

This letter is in response to numerous State inquiries about future reporting responsibilities for funds provided under Title I, Sections 101 and 102, of the Help America Vote Act (HAVA).  

In a July 2003 letter, the General Services Administration (GSA) notified your State that separate reports for Section 101 and 102 funds, covering financial activity from the date of GSA’s disbursement of the funds to your State through December 31, 2003, were to be filed with GSA by January 21, 2004. GSA noted that States should report using Standard Form 269, with a separate form to be filed for Section 101 and, if applicable, 102 funds received by the State. GSA required each funding recipient to submit verification of actual purchases and expenditures.  

The GSA letter also noted that the agency would provide information from these reports to Election Assistance Commission (EAC), once it was up and running, and that reporting dates would be subject to change by EAC. EAC has assumed the responsibility for receiving reports regarding these funds, in accordance with the agency’s assumption of its audit responsibilities under HAVA, Title IX, Section 902.  

EAC therefore requests that your State file your next report(s) no later than February 28, 2005 regarding all HAVA Title I funds provided to your State that had not been disbursed as of December 31, 2003 (the closing date of the report to GSA). Separate reports must be filed for the Section 101 and, if applicable, 102 funds that were received by your State; should cover financial activity during the period beginning January 1, 2004 and ending December 31, 2004; and must include the following information:  

- a detailed list of expenditures by program, function, or task (including dollar amount) made with respect to each category of activities described for the permissible use of funds in HAVA sections 101(b) and 102(a)(2);
• the number and type of articles of voting equipment obtained with the funds; and

• an analysis and description of:
  o the activities funded to meet HAVA requirements; and
  o how such activities conform to the submitted State plan.

States should submit Standard Form 269 as part of each report. This form may be found at the http://www.whitehouse.gov/omb/grants/sf269.pdf.

Subsequent reports providing the same information on HAVA Title I expenditures will be due annually on February 28, covering the financial activity for the previous calendar year, until the State has filed final reports indicating that no such funds remain to be disbursed.

All reports on the HAVA Title I funds must be submitted to the following address:

State HAVA Funding Reports  
U.S. Election Assistance Commission  
1225 New York Avenue, NW – Suite 1100  
Washington, DC 20005

Freedom of Information Act Request Letter

Re: Freedom of Information Act Request (Privacy Act Request)

Dear FOIA Officer:

This is a request under the Freedom of Information Act.

I request that a copy of the following documents of "credit card purchasers list" of whom purchase in NAICS Codes, 423210/ 423430/ 424120/ 541519/ 811212 be provided to me: these are NAICS Codes related to buyers of toner cartridges, printers, computer products, office supplies, printer service and office furniture. We are a 100% small minority women owned, on GSA and are 8(a) certified.

In order to help to determine my status to assess fees, you should know that I am in sales of toner cartridges, printers, computer products, office supplies, printer service (break fix) and office furniture. We are a 100% small minority women owned, on GSA and are 8(a) certified company. Majority of our customers are the government and in order for us to do business with your agency we will need a list of credit card holders names, phone numbers and if possible addresses with there approval to send out our catalogs for the use to market our products and services.

Commercial user:

- Affiliated with a private corporation and am seeking information for use in the company's business.
- Federal Tax Identification Number: 54-1829993
- 8(a) Certification letter: see Attachment
- Company Capabilities letter: see Attachment
- I am a United States citizen and the president of the company is as well, both with a permanent residence in the United States; Verification of identity: see Attachments

I am willing to pay fees for this request up to a maximum of $10. If you estimate that the fees will exceed this limit, please inform me first. As for the information provided to us by the Bureau FOIA Offices there should be no fees.

Thank you for your consideration of this request.

Sincerely,

Shavonne
(703) 352-2029 ext. 102
Ms. Harris,

Your FOIA request of Dec. 5, 2006 requested the following information about the Dec. 4 Technical Guidelines Development Committee meeting: 1) A copy of the sunshine notice for this meeting, along with identification of where and when this appeared; 2) A copy of the minutes of the meeting, including the specifics on who voted on each item and what their vote was; and 3) a copy of any transcript, tape, or video of the meeting.

All of this information is publicly available at http://vote.nist.gov/meeting20061204.htm. For your information, I have also attached the notice as it appeared in the Federal Register and the parliamentarian's official record of votes, which will be considered for approval at the next plenary meeting. (The vote is also available in the transcript that is available at the above website.)

In the future, please direct FOIA requests to me at the address below or via fax number 202-566-3127.

Please let me know if I can be of further assistance.

FOIA REQUEST
Fee benefit requested
Fee waiver requested
Expedited review requested

Dear FOI Officer:

Pursuant to the federal Freedom of Information Act, 5 U.S.C. § 552, I request access to and copies of all public documents, including letters, memos, reports and other paperwork, related to the application submitted by Ciber Inc. of Greenwood Village, Colo., for accreditation by the U.S. Election Assistance Commission.

As a representative of the news media I am only required to pay for the direct cost of duplication after the first 100 pages. Through this request, I am gathering information on the performance of Ciber Inc. that is of current interest to the public because the company is New York's contractor for voting machine testing and, depending on the outcome of the EAC's accreditation process, the company's status with New York could be affected. The issue is in the public interest because New York is one of the last states to comply with the federal Help America Vote Act. This information is being sought on behalf of Gannett News Service for dissemination to the general public.

Please waive any applicable fees. Release of the information is in the public interest because it will contribute significantly to public understanding of government operations and activities.

If my request is denied in whole or part, I ask that you justify all deletions by reference to specific exemptions of the act. I will also expect you to release all segregable portions of otherwise exempt material. Of course, reserve the right to appeal your decision to withhold any information or to deny a waiver of fees.

As I am making this request as a journalist and this information is of timely value, I would appreciate your communicating with me by telephone, rather than by mail, if you have questions regarding this request.

Please provide expedited review of this request which concerns a matter of urgency. As a journalist, I am primarily engaged in disseminating information. The public has an urgent need for information about Ciber Inc. because New York has suspended testing until it gets more
information about Ciber's status with the EAC. The public has a right to know as soon as possible whether there are any legitimate concerns about Ciber Inc. as far as the EAC is concerned. I certify that my statements concerning the need for expedited review are true and correct to the best of my knowledge and belief.

I look forward to your reply within 20 business days, as the statute requires.

Thank you for your assistance.

Sincerely,

Cara Matthews

February 9, 2007

Mr. Todd Valentine
New York State Board of Elections
40 Steuben Street
Albany, New York 12207-2108

Dear Mr. Valentine:

This letter is in response to your Freedom of Information Act (FOIA) request received by the U. S. Election Assistance Commission (EAC) on January 11, 2007. The request sought copies of reports related to CIBER Incorporated's application to the EAC's interim test laboratory accreditation program.

On January 26, I emailed documents responsive to your request. I know you are interested in this issue, so I have also attached correspondence that EAC has generated since your original request.

The EAC has decided to waive the processing fees for your request. If you interpret any portion of this response as an adverse action, you will have an opportunity to appeal it to the Election Assistance Commission. Your appeal must be in writing and sent to the address noted on the above letterhead. Any appeal submitted, must be postmarked no later than 60 calendar days from the date of EAC's final response letter. Please include your reasons for reconsideration and attach a copy of this and subsequent EAC responses.

Sincerely,

Jeannie Layson
Director of Communications
U.S. Election Assistance Commission

January 8, 2007

Dear Sirs,

On behalf of the New York State Board of Elections, I am requesting copies of any and all reports made to, by or in the possession of the Election Assistance Commission regarding the certification of CIBER as an independent testing authority.

Sincerely,

Todd D. Valentine  
Special Counsel
February 1, 2007

Mr. Wally Birdseye
President, Federal Solutions
CIBER Federal Solutions
7900 Westpark Drive
McLean, VA 22102-3105

Mr. Birdseye,

In light of EAC's two assessor reports and the subsequent information CIBER has provided regarding its accreditation, EAC's assessor has outlined the specific issues that CIBER must address before it can receive an EAC interim accreditation. This determination is attached. As you know, these assessments followed ISO/IEC Standard 17025 and NIST Handbooks 150 and 150-22.

In order to document your compliance with the attached assessor's determination, please submit (to EAC and the assessor) a narrative report detailing the steps taken in response to each noted deficiency. The report must attach copies of all manuals, procedures or other documentation created or modified in response to the assessor's determination.

CIBER must satisfy all of the above non-conformity issues no later than 5:30pm (EST) March 5, 2007 in order to be considered for EAC interim accreditation. If you cannot meet these requirements within that timeframe, your application for interim accreditation will not be considered further. Should you or your staff have further questions related to this letter and the attached document, please contact the Director of Testing and Certification, Brian J. Hancock.

I look forward to your response to these items.

Summary of actions needed to complete the CIBER Interim Accreditation

The following is a list of follow-up actions needed to complete the accreditation. Although the CIBER responses met the 30 day deadline, many of the responses are merely open admissions that further work needs to be done and the actual compliance has still to be demonstrated.

Abbreviations used:
ACAR – CIBER’s Audit Corrective Action Request. These are the records of action taken or proposed for management tracking.
COTS – Commercial Off The Shelf hardware and software.
HAVA – Help America Vote Act
ISO – International Standards Organization. The ISO 17025 is an international standard for testing laboratories.
ITA – Independent Test Authority or Agent. Term used for voting system test labs prior to HAVA.
NVLAP – National Voluntary Laboratory Accreditation Program
TM – Test Method. CIBER’s document system that contains test methods and other procedures used to manage the testing operations.
VSTL – Voting System Test Laboratory. Laboratories to be accredited under NVLAP and EAC under terms required by HAVA. VSTL accreditation will replace the ITA and this interim ITA accreditation.

The NVLAP Handbook 150 and 150-22 and associated checklists were used as publicly available source copies for the ISO 17025 requirements as they provide consistent breakdown of the requirements and include, in the Handbook 150-22 checklist, some program specific requirements established for voting system test labs. The Handbook 150-22 checklist was modified slightly for this Interim Accreditation. The use of the NVLAP documents should not imply that this assessment is sanctioned by NVLAP, qualifies CIBER’s management program for NVLAP accreditation, or binds NVLAP to recognizing this assessment findings. A separate NVLAP assessment may agree or disagree with the findings of this assessment. References in the ACAR below refer to the these checklists.

1. ACAR 4.2.7 #1. No action required. This was an observation of a requirement that CIBER needs to be prepared to respond to but not required at this time.
2. ACAR 4.3.1 #1. CIBER is to provide a schedule for the Internal Audit (reference 4.14.1) and Management Review (reference 4.15.1) that ensures these management events will occur within a specified regular period.
3. ACAR 4.4 #1. (See also ACAR 5.4#4) The TM 2 procedures for negotiating contractual documents and verbal agreements needs to updated to identify:
   a. What test methods will be used for the given voting system design (reference 4.4.1 a) and c)).
   b. Approved deviations on those test methods.
   c. Which test methods will be outside of the core-requirements for CIBER (reference 5.4.6) and performed by Wyle.
d. What test methods will be subcontracted or contracted separately to other accredited labs (reference 4.4.3) because they are outside the core-requirements or because are needed as additional resources

e. Any additional testing that has been requested by the customer that is outside the scope of accreditation as an Interim ITA (reference 5.4.6).

4. ACAR 4.5 #. Define Wyle’s role(s) under the terms of a sub-contractor.
   a. What test methods will be performed under Wyle’s role as an Interim Hardware ITA with CIBER taking the contracting role.
   b. Specify how Wyle will report or participate in the final report in this role.
   c. Specify what test methods under Wyle’s role as an accredited test lab under other programs will be performed by Wyle. (These will require formal reports under the standards of that program).

5. ACAR 4.7 #1. No action required. This was an observation of an advantage in using a standard test method versus a customer derived test method.

6. ACAR 4.8 #1. Complete the proposed change. There are other legitimate sources of complaints besides the customer which you need to have a method of recognizing and accepting for review.

7. ACAR 4.9 #1. Similar to 4.8 #1. Complete the proposed change. There are other sources of legitimate reports which may indicate non-conformance than internal workers.

8. ACAR 4.11, 4.12, 4.13, 4.15. Provide the schedule for 4.14.1 and 4.15.1 and provide a report or list of the actions taken by the Management Review and its date.

9. ACAR 4.13 #1. No action required for this report. The item was an alert that you need to be looking at changes from the released EAC Testing and Certification Program Manual.

10. ACAR 4.13 #2. Provide disposal instructions for the quality and technical records.

11. ACAR 5.2 #1 Provide a method to document that your people critical to the test results are qualified, trained, competency verified, and that a record exists to show when they were authorized/re-qualified to perform their duties. Provide a copy of the record for current test engineers and Quality Manager. Test criteria: If a test engineer is identified as executing a test method of a test campaign, a record should exist that he was qualified before he signed off on the test.

12. ACAR 5.3 #1 The location was temporary and will not apply. Defer this requirement for full review at the next accreditation event when you are installed in the new location. Provide a floor plan and details for security access controls for the new location. (Provide your new address and contact information.)

13. ACAR 5.4 #1 The test plan and test report should identify the test methods and any deviations to the test plans for all the VVS-2002 with HAVA Section 301 requirements. Where a test method is performed and reported in another report, the test method’s report should be identified and, if current to the given report, attached.

14. ACAR 5.4 #2 Any test method used must be validated and the validation reported and recorded. If the test method for a standard test method (for example the Mil-Std environmental tests) is modified, the modification must be validated and documented. Provide validation procedures and the validation report on at least
one each test method for a functional requirement and a security requirement. Identify which of your test methods are validated and which will require some actual testing to complete.

15. ACAR 5.4 #3 If the customer configures any part of the voting system, then the laboratory shall verify the configuration, including all installed software such as operating system or applications. Provide a procedure for verifying the installed configuration or make changes to procedures to require any such changes to be performed by a CIBER qualified test engineer.

16. ACAR 5.4 #4 The test lab needs to identify in contracting documents, test plans, and test reports which test methods they are responsible for and which tests are done by others. Requirements for this response are the same as in ACAR 4.4 #1

17. ACAR 5.5 #1 Only equipment used for testing must be included in the in-house inventory and identified for maintenance and other actions to ensure that it in condition and setup correctly to be used in testing. Provide a copy of the inventory showing the equipment you have identified for testing and its current status.

18. ACAR 5.10#1 Two issues:
   a. If the customer request testing outside the scope of accreditation (additional testing requirements or alternate testing criteria) the test method may be included but must be identified as outside the scope of the certification and must not interfere or degrade with the standard tests. It may be a more stringent test. Specify how you will include these within your report.
   b. If the test is outside the lab’s core-requirement but part of the overall compliance review, an accredited lab for that test must complete the test and report on it. The report must be identified and included within the final report. Specify how you will include these reports.

19. ACAR 6.0-01 Complete the proposed changes and provide them for review.
20. ACAR 6.0-02 Validate and provide procedures for the use of Using Exam Diff Pro or any other software tools.
21. ACAR 6.0-03 Provide the procedure for the Accessibility requirements and identify whether CIBER or Wyle is going to assess these requirements.
22. ACAR 6.0-04 Provide the procedure to assess the quality of constructions and to identify whether CIBER or Wyle will perform the procedure.
23. ACAR 6.0-05 Need to develop procedure for supporting the non-core requirement method for hardware transportation and storage. This should include developing, validating, and preparing the Operational Status Test.
24. ACAR 6.0-06 Identify what is needed to setup the EMC and electrical test suite. This should include developing, validating, and preparing the Operational Status Test or alternate test programs to support operational modes needed for the EMC and electrical test suites.
25. ACAR 6.0-07. Modify the report template to support reporting on the hardware environmental, EMC and electrical, and Safety tests and inspections. Provide instructions for validating and reporting the validations of the test methods used.
26. ACAR 6.0-08. Update the Requirements Checklist to include the HAVA requirements and develop the test methods to test them. Provide a complete
checklist. Note that this no longer just the functional requirements but includes hardware, performance, and security issues also.

27. ACAR 6.0-09. Develop and validate the procedure for performing an Accuracy test on COTS, non-COTs, ballot Scanner, DRE (with and without VVPAT), precinct counter, central counter, and ballot marking devices. The procedure should include a test election(s), specification of one or more test decks, and setup to validate vote count/ballot storage and transfer to the system's jurisdiction level reporting component(s) to consolidate and report final vote totals. Provide the full test method.

28. ACAR 6.0-10. Do the same for the procedures and validate the test election to support the 163 hr Reliability tests. If vendor simulations are used for either the electromagnetic compatibility, accuracy, or reliability testing, specify how you will validate and document the simulated test as being equivalent to an actual election operation.

29. ACAR 6.0-11. This requirement can be deleted. Your testing should include provisions for testing volume limits but they will be in terms of the vendor specification.

30. ACAR 6.0-12. Develop the security test method, Ensure the requirements in Vol II, Section 6.2 are included and the results reported. Provide a copy of the test method or methods.

31. ACAR 6.0-13. Develop the test method to be used for the Telecommunication tests. Verify that you or Wyle has the resources to perform the tests. Ensure that the requirements of Voting System Standards-2002 Volume 1 Section 5.2 are tested or incorporated in other test plans where applicable. Provide a copy of the test method(s).

Overall: The bulk of this involves identifying and providing test methods information or reporting procedures for the full range of requirements in the voting system standards. CIBER is responsible for the full coverage of the requirements in the final report even though other qualified labs may be performing the actual test or reviews. During the assessment CIBER was requested to provide a Requirements checklist (see ACAR 6.0-08 as a specific example) which lists all the requirement specifications that CIBER recognizes are to be verified and to show how those requirements are to be satisfied. In CIBER's response CIBER indicated that they were unaware of many of these requirements, expecting them to be covered by Wyle. To ensure there are no remaining areas not being reviewed, CIBER should complete the analysis of the 2002 Voting System Standards with the HAVA Section 301 requirements included and provide a summary checklist identifying where those requirements are addressed and who (CIBER/Wyle/qualified lab) is expected to perform and report on the requirement with reference to the applicable test method documents.

CIBER does not need to develop every test method but does need to provide a reference to any established test method that will be used. The test method referenced must be available for review. CIBER shall need to provide any procedural instructions or modifications needed to invoke a test method done by another qualified lab or to validate that the test was appropriate for inclusion in the final report.
January 26, 2007

Mr. Wally Birdseye
President, Federal Solutions
CIBER Federal Solutions
7900 Westpark Drive
McLean, VA 22102-3105

Mr. Birdseye,

We write this letter to update you on our review of your interim accreditation application. As you know from our January 10, 2007 meeting, the U.S. Election Assistance Commission (EAC) has received your January 3rd memorandum responding to our second assessment (December 6-8, 2006). We have also received your letters dated January 11, 2007 and January 18, 2007 (received January 24, 2007). Presently, EAC’s assessor and Certification Program Director are reviewing this information.

As you know, the EAC has received a list of recommended laboratories from the National Institute of Standards and Technology. This recommendation is a keystone of the accreditation process mandated by the Help America Vote Act. The EAC expects to make a decision regarding accreditation on the recommended laboratories in the near future. The purpose of the interim accreditation program was to serve as a stop gap, accrediting laboratories to test voting systems prior to the availability of NIST recommended laboratories. Thus, the need and purpose of the interim program is drawing to a close. I expect the Commission will vote to close this program as soon as February 8, 2007. The EAC recognizes that CIBER has taken significant steps to address many of the non-conformities identified during its assessment. We know you are anxious to finish the work you have started. The EAC also seeks to draw this matter to a close.

Next week you will receive another letter from the EAC outlining the specific actions CIBER must take in order to qualify for interim accreditation. As of the date of this letter, CIBER will have 30 days to satisfy these requirements. This is a reasonable amount of time for CIBER to resolve all remaining issues. If you cannot meet such requirements within the timeframe your application for interim accreditation will not be considered further.

Thomas R. Wilkey
Executive Director
January 26, 2007

Mr. Wally Birdseye

RE:  Release of assessment reports and other documentation related to CIBER’s interim accreditation status

Dear Mr. Birdseye:

Over the past weeks, the U.S. Election Assistance Commission (EAC) has received numerous inquiries regarding why information related to CIBER’s status in the EAC Interim Accreditation Process was not available on the EAC web site. These inquiries included requests for assessment reports produced as a part of that program. EAC, in consultation with the National Institute of Standards and Technology, believed that it was improper to publish documents related to an accreditation assessment that is not complete.

On January 25, 2007, a CIBER representative informed EAC staff that CIBER has released to a third party assessment reports, correspondence and CIBER responses. This release has made these documents public. Since CIBER has taken action to make this information public, it is incumbent upon EAC to publish this information, despite the fact that CIBER still has not completed the interim accreditation process. EAC will make the same information available to all members of the public, today, by posting the information on its web site.

If you have any questions related to EAC’s action, please direct those questions to Brian Hancock, Director of Testing and Certification.

Sincerely,

Thomas R. Wilkey  
Executive Director

cc:  Charles K. Sweeney II (CSweeney@ciber.com)  
Shawn Southworth (SSouthworth@ciber.com)
Memo to: Tom Wilkey  
Date: January 3, 2007  
Subject: Election Assistance Commission Accreditation

CC:  Wally Birdseye, President CIBER Federal  
     Terry DeBell, CIBER Manager of Internal Audit and Compliance  
     Steve Freeman, Election Assistance Commission Auditor

Mr. Wilkey,

This memo is in response to our recent accreditation audit effort that was performed the week of December 6th – 8th, 2006 by Steve Freeman. We have noted Mr. Freeman’s non-conformance items and have created Corrective Actions (which are included as part of this document) to address each item identified during the audit. Our Executive Management Steering Committee has reviewed and approved the responses to the Audit Corrective Action Requests.

Please note that some of the items identified by Mr. Freeman have been completed while others are being addressed but require additional effort to complete.

We believe we have done what is necessary to achieve interim accreditation. We would appreciate any comments and/or feedback to ensure that we are proceeding in a manner that will address all EAC concerns.

If you have any questions or would like to discuss our approach please feel free to contact me directly.

Please accept this letter as our official written response regarding resolution or correction of nonconformities as required.

Sincerely,

Shawn Southworth  
CIBER Inc.  
ITA Practice Director
1 Internal Audit

<table>
<thead>
<tr>
<th>Site Name: ITA Practice</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIST Handbook 150 Checklist Section: Top management shall ensure that the integrity of the management system is maintained when changes to the management system are planned and implemented</td>
</tr>
</tbody>
</table>

Nonconformance: 4.2.7 (HDB 150) requirement to maintain integrity during planned change is a new accreditation requirement that needs some basic attention to initial setup.

Requirement: (The laboratory shall:) have managerial and technical personnel who, irrespective of other responsibilities, have the authority and resources needed to carry out their duties, including the implementation, maintenance and improvement of the management system, and to identify the occurrence of departures from the management system or from the procedures for performing tests and/or calibrations, and to initiate actions to prevent or minimize such departures;

Findings: Our understanding of these concerns are:
- We need a stronger process for notifying the ITA of changes to the management system
- We need a stronger process for reviewing suggested changes to ensure that these changes do not impair other areas of the management process or the test methods

Auditor Name: Steve Freeman
Name of Site Management: Shawn Southworth

Corrective Action: (Describe how the noncompliance will be resolved.)

The following process will be defined further and included in the ITA Practice Operations Manual.

The QA Manager is the only one authorized to make changes to the QA process documents. The QA Manager meets with the ITA staff on a monthly basis to discuss process improvement changes recommended on SharePoint. The effects of the suggested process improvements are discussed at this meeting with: ITA Practice Director, test engineers, TDP reviewers, and other applicable staff members. The QA Manager will take notes throughout this meeting and will implement those suggestions agreed upon and approved by the Practice Director. All changes to the process documents are marked in blue. The new document is then saved in the Processes Under Development folder under “In Review” to await review and approval by the EMSC. The QA Manager will notify the EMSC Chair and the Practice Director. These two entities must review the suggested changes for the overall impact to the management system and test methods. These entities will notify the QA Manager of any additional changes. If no changes are required, the EMSC moves the document from Process under improvement to “Approved.” The QA Manager then posts the revised documents on the Process Library.

If changes are required, the QA Manager holds a second meeting with the Practice Director to again determine the impact of the changes to the whole system. Once the Practice Director approves the changes, the QA Manager again submits the documents to the EMSC. This process continues until all parties agree on the new documents. Appropriate levels of EAC review will be included in this process as necessary.

Proposed Completion Date: (Date that the action(s) described above will be completed.)
January 9.

Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy
was confusing, personnel failed to follow instructions).

This non conformance was due to a new requirement in the handbook, as well as a need for additional clarification. This process was already taking place, but it was not specified clearly in our process documentation.

Additional Comments/Notes: (i.e., Person assigned responsibility for task,)
Amber Willburn

2 Internal Audit

Audit Corrective Action Request

ACAR: 4.3 num 1
Audit Date: Dec. 6-8

Site Name: ITA Practice

NIST Handbook 150 Checklist Section: Unknown (comment found under 4.3 Document Control)

Nonconformance: Not necessarily a non-conformance. A comment from Steve: As a comment, the definition of the periodic cycle for these events was not as well defined with a tendency to point to the next event rather than show how these events were to be scheduled but this expected to be resolved before the next review.

Requirement: May come from Requirement 4.3.2.2: documents are periodically reviewed and, where necessary, revised to ensure continuing suitability and compliance with applicable requirements;

Findings: Our understanding of these concerns are:
- We need a matrix included in our POM that outlines a specific schedule for reviewing the documents. We have a basic schedule (annually, etc), but we need to have them more frequently.
- This requirement also needs the SharePoint calendar to be more complete than it is.
- We also need to flesh out our process for ensuing reviews

Auditor Name: Steve Freeman

Name of Site Management: Shawn Southworth

To be completed by Site Management within 30 Business Days of Receipt:

Corrective Action: (Describe how the noncompliance will be resolved.)

The following process will be defined further and included in the ITA Practice Operations Manual.

In Section 11.2 Plan QA Activities, we need to define our schedule for reviewing the QA documents, and perhaps even include in the document control section a reference to this schedule. QA meetings are held monthly, during this time, all process improvement requests are reviewed and discussed for inclusion in the next version of the QA documents. The QA manager maintains working copies of new versions with inclusions in the QA worksite. Every six months, the QA Manager will produce the new versions of the QA documents for review by the ITA Practice Director and EMSC. All changes, besides minor editing and wordsmithing, must have already been discussed during the monthly QA meetings. The Practice Director and EMSC may assign additional technical and/or quality personnel to review the QA documents for clarity, correctness, and consistency. All changes are related back to the QA manager. The QA Manager then incorporates the approved changes and submits the documents for review again. This process continues until all parties agree.

Although this review of the QA documents occurs every 6 months, it may be necessary to submit new versions of the documents or hold a document review prior to this meeting. Events that may cause a change in QA document review include changes to policy as directed by the EAC, changes in CIBER policy, major process improvements found during testing, or other events such as nonconformance's, staff changes, or any other issue or concern noted by the Practice Director, QA Manager, or EMSC. Should one of these events occur, the QA Manager, ITA Practice Director, and EMSC must be immediately notified. The QA Manager will call a meeting to discuss the changes to the practice documents, and the above noted process will commence.

Proposed Completion Date: (Date that the action(s) described above will be completed.)

January 9.

022163
Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).

This comment was due to the ITA’s relatively loose handling of meetings. Since we are a small group, we often just call each other down the hall for a meeting, especially if something is critical. Document reviews have already been occurring, but they have not been captured as efficiently in the POM.

Additional Comments/Notes: (i.e., Person assigned responsibility for task.)

## Internal Audit

### Audit Corrective Action Request

<table>
<thead>
<tr>
<th>Site Name: ITA Practice</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIST Handbook 150-22 Checklist Section: 5.4.6 Test and calibration methods and method validation</td>
</tr>
</tbody>
</table>

**Nonconformance:** Not necessarily a non-conformance. A comment from Steve: A “test method” (TM 2) for Negotiating supports the policies for the review of requests, tenders, and contracts. The basic process showed no issues or problems. Specific items that needed to be identified in a negotiation such as the areas where the CIBER ITA Practice was not qualified under the scope of accreditation (HDBK 150-22, 5.4.6) were identified in the later sections where encountered.

**Requirement:** May come from Requirement 4.3.2.2: The laboratory shall clearly identify any test methods included in the test campaign that are outside of the laboratory's scope of accreditation.

**Findings:** Our understanding of these concerns are:
- We need to include steps in our negotiation process that includes notifying the clients of those test requirements that are outside the scope of our testing.
- This process needs to be found in our test plan, test reports, and all other items.

| Auditor Name: Steve Freeman |
| Name of Site Management: Shawn Southworth |

**Corrective Action:** (Describe how the noncompliance will be resolved.)

The following process will be defined further and included in the ITA Practice Operations Manual.

Although not a formal nonconformance, this item is the beginning of one of our major nonconformance issues about the test methods and our relationship with Wyle. As we get these items solidified, they may affect this area. Regardless, we will add a step in our contracts section that specifically addresses CIBER's scope of accreditation.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

January 9.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).

The delineation between Wyle's scope of accreditation and ours has not been clarified at this moment. We were not aware that this was an issue, or that our scope of testing would change. Additionally, the NIST 150-22 was only brought to our attention at this latest audit.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task,)

Shawn Southworth is currently working with Wyle to determine the scope of accreditation. Amber Willburn is responsible for including this step into the negotiation process.

**Site response completed by:** Amber Willburn

**Date:** 2006-12-19
Nonconformance: The specific non-conformance is unclear; however, we did receive a nonconformance for this item. A comment from Steve: CIBER has an exclusive Team Partnering agreement with Wyle Labs based on Wyle’s current EAC Interim accreditation.

The relationship of the lead lab under the NVLAP 150/150-22 procedures and EAC preliminary guidance needs some clarification in the instructions to recognize the accredited voting system test lab’s increased responsibility under the core requirements as compared with past practice of software/hardware lab. The current procedures for subcontracting recognize the need for the subcontracted tests to be with a lab accredited for the appropriate scope of testing but CIBER is just recognizing that their scope of responsibility for the testing has shifted and they need to be more responsible in the direction and performance of tests formally conducted by the ‘hardware’ labs. With Wyle’s experience and current accreditation, this extended responsibility is blurred as Wyle is in a position to provide more of the service and management than would otherwise be expected.

CIBER will need to pay attention to develop practices in what had formerly been a Hardware ITA exclusive area. Some later non conformance will be in specific areas where CIBER needs to include more details on the full range of test requirements, recognizing their own out of scope status requiring the use of other labs with the appropriate accreditation and CIBERs responsibility in these cases to provide contractual specification of test operation and setup configuration information.

Requirement: Specific reference is not made. May come from Requirement 4.5 Subcontracting of tests and calibrations

4.5.1 When a laboratory subcontracts work whether because of unforeseen reasons (e.g., workload, need for further expertise or temporary incapacity) or on a continuing basis (e.g., through permanent subcontracting, agency or franchising arrangements), this work shall be placed with a competent subcontractor. A competent subcontractor is one that, for example, complies with this handbook for the work in question.

4.5.2 The laboratory shall advise the customer of the arrangement in writing and, when appropriate, gain the approval of the customer, preferably in writing.

4.5.3 The laboratory is responsible to the customer for the subcontractor’s work, except in the case where the customer or a regulatory authority specifies which subcontractor is to be used.

4.5.4 The laboratory shall maintain a register of all subcontractors that it uses for tests and/or calibrations and a record of the evidence of compliance with this handbook for the work in question.

Findings: Our understanding of these concerns are:
- The EAC must still clarify the scope of accreditation for Wyle and the expectations they have for the VSTLs.
- We need a better definition of the Wyle/CIBER partnership
• We need to write into our policies and practice a more thorough validation of efforts, including creating one test report instead of two.
• Need to define in our contract section a better delineation of responsibilities for CIBER, including notifying the client of all tests considered out of scope for CIBER, Inc.
• Need to include in our TM documents more palpable configuration management techniques to ensure a streamlined and consistent testing environment.

It is our understanding that the EAC now wants only to deal with 1 testing lab, instead of two as we have it broken up. Implications from this change need to be reviewed in greater detail to determine how the new Wyle/CIBER organization will look. Again, the nonconformance in this section are vague, but deal with the greater question of "core requirements" as is being defined by the EAC.

Auditor Name: Steve Freeman	 Name of Site Management: Shawn Southworth

To be completed by Site Management within 30 Business Days of Receipt:
Corrective Action: (Describe how the noncompliance will be resolved.)

At the moment, Shawn is working with Wyle to outline the relationship between the two companies. Additionally, we have requested clarification from the EAC on the "core" and "non core" requirements and how they are accrediting the two.

While these actions items are being completed, we are writing stronger contract language in our negotiation process. We are also reviewing with our legal department any changes that need to be made in MSA, SAL, NDAs, and subcontractor agreements.

Additionally, we need to write into our TM document the fact that we bear overall responsibility for the test. We are no longer just responsible for the software testing, but the entire test. As such, we need to work with Wyle to determine validation efforts for their test methods, as well as develop process for the core requirements. We need to write into our Test Plans and test reports those items that are outside the scope of our accreditation to ensure the EAC, vendors, and as necessary, the general public can retrace the test process.

Proposed Completion Date: (Date that the action(s) described above will be completed.)

TBD. Many of these items are in process now and will be reviewed on weekly status calls. However, we are awaiting clarification on some items from the EAC. We can not continue on the process for determining and understanding the relationship between Wyle/CIBER until these clarifications are made.

Changes to the documents will occur by January 9, or soon after, again depending on the clarification from EAC and CIBER legal.

Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as "oversight" and describe HOW the "oversight" happened (i.e., policy was confusing, personnel failed to follow instructions)).

The delineation between Wyle's scope of accreditation and ours has not been clarified at this moment. We were not aware that this was an issue, or that our scope of testing would change. Greater clarification on the CIBER/Wyle team was needed; however, it was not addressed due to the relatively "mom and pop" type shop the ITA was running. Many of the conversations occurred out of professional trust and a long experience of partnership between the two agencies. Also, the fast-paced process of testing did not allow for some of these issues to be brought to light until the audit was initially conducted.

Additional Comments/Notes: (i.e., Person assigned responsibility for task.)
Shawn Southworth is currently working with Wyle to determine the scope of accreditation. Amber Willburn is responsible for including changes to the POM and TM. Amber will work with Shawn.
and in many instances Jack to ensure the information is correct.

<th>ACAR: 4.7 num 1</th>
<th>Audit Date: Dec. 6-8</th>
</tr>
</thead>
</table>

**NIST Handbook 150 Checklist Section:** 4.5 SUBCONTRACTING OF TESTS AND CALIBRATIONS

**Nonconformance:** This was not noted as a non-conformance: Steve's note: Although not noted in the checklist, it may be worth noting the emphasis on working with previously prepared and validated test methods to provide standard conforming tests rather than acceding too quickly to requests to modify tests at request to vendors.

**Requirement:** Not noted as a requirements.

**Findings:** Our understanding of these concerns are:

- We need to add stronger language in our TM about altering test methods. CIBER does have a deviation form that is to be filled out whenever modifications are made for certain machines.
- While certain variables will have to be modified for each vendor (due to the system’s capabilities); CIBER needs to follow approved TM and make these methods more applicable to all vendors.

**Auditor Name:** Steve Freeman  
**Name of Site Management:** Shawn Southworth

**To be completed by Site Management within 30 Business Days of Receipt:**

**Corrective Action:** (Describe how the noncompliance will be resolved.)

We need to make the process and reasons for deviation more distinct in our TM. Steve provided suggestions and comments during the audit. These comments and suggestions must be evaluated for inclusion in the TM.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

January 9th.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).

At the moment, we have not had an opportunity to test the new methods on actual projects. Until this time comes, we will not know for sure how our standardized test methods will perform. The cause of this comment seems to be that we did not know what was missing until it was pointed out.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task.)

Amber Willburn will add comments from Steve into TM. These will be discussed with Shawn and Jack for applicability and correctness.

**Site response completed by:** Amber Willburn  
**Date:** 2006-12-19
### Audit Corrective Action Request

<table>
<thead>
<tr>
<th>Site Name: ITA Practice</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIST Handbook 150 Checklist Section: 4.5 SUBCONTRACTING OF TESTS AND CALIBRATIONS</td>
</tr>
</tbody>
</table>

**Nonconformance:** This was not noted as a non-conformance: Steve's note: The program is restricted to customer complaints and other sources of complaints are not routinely submitted.

**Requirement:** Not noted as a requirement.

**Findings:** Our understanding of these concerns are:

- Once the EAC has developed a process for complaints, CIBER will adopt whatever form they have. In the meantime, we need to develop a process for handling complaints besides those from customers, such as EA Complaints, general public complaints, subcontractor complaints, etc.
- Additionally, we need to define "customer complaints." At the moment, we consider customer complaints as formal complaints levied against the ITA. We have a separate process for handling customer issues. These two items need to be defined better, and the process for managing customer issues needs to be included in the POM.

**Auditor Name:** Steve Freeman

**Name of Site Management:** Shawn Southworth

---

**Corrective Action:** (Describe how the noncompliance will be resolved.)

The following process needs to be expanded and added to the POM and TM (as applicable).

CIBER defines customer complaints as those issues for which the customer and CIBER ITA have not reached an amenable agreement during the course of a conversation, or as those items for which the customer would like to file a formal complaint that will ascend through the CIBER chain.

CIBER defines Customer Issues as those items for which the customer has concerns and has brought them up before the ITA PM or Practice Director. Issues can also be raised by members of the ITA team of by other entities, beyond the customer. Issues are logged and tracked using the SharePoint tool.

All complaints or issues from the EAC will be handled as Customer Complaints.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

January 9th.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as "oversight" and describe HOW the "oversight" happened (i.e., policy was confusing, personnel failed to follow instructions)).

The difference between these two items has never been discussed due to the new implementation of the SharePoint tool for ITA. Also, issues were handled on the spot with customers, and did not necessitate additional processes.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task,)

Amber Willburn
### Internal Audit

**Site Name:** ITA Practice  
**Audit Corrective Action Request**  
**ACAR:** 4.9 num 1  
**Audit Date:** Dec. 6-8

<table>
<thead>
<tr>
<th>NIST Handbook 150 Checklist Section: 4.5 SUBCONTRACTING OF TESTS AND CALIBRATIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Nonconformance:</strong> No formal non-conformances were noted, but this item was included in the non-conformance report: Steve's note: CIBER is to consider changes to recognize EAC or related stakeholder reports of non-conformance, possible through official EAC process communication or otherwise provide a path (see comments on Complaints) for recognizing such inputs from legitimate stakeholders.</td>
</tr>
<tr>
<td><strong>Requirement:</strong> Not noted as a requirement.</td>
</tr>
<tr>
<td><strong>Findings:</strong> Our understanding of these concerns are:</td>
</tr>
<tr>
<td>- Once the EAC has developed a process for addressing non-conformances, CIBER will adopt whatever form they have. In the meantime, we need to develop a process for handling non-conformance from the EAC, general public, and other shareholders.</td>
</tr>
</tbody>
</table>
| **Auditor Name:** Steve Freeman  
**Name of Site Management:** Shawn Southworth |

---

**Corrective Action:** (Describe how the noncompliance will be resolved.)  

The following process needs to be expanded and added to the POM and TM (as applicable).  

All non-conformance issues, including those from the EAC and other applicable stakeholders must be reported in the issues log. Issues can also be raised by members of the ITA team of by other entities, beyond the customer. Issues are logged and tracked using the SharePoint tool.  

All complaints or issues from the EAC will be handled as Customer Complaints. Non-conformances will be weighted by the Practice Director as to whether they should be noted as issues (smaller items that can be resolved on a project), or a Customer Complaint (those items that have bearing on the ITA Practice as a whole).  

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)  
January 9th.  

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).  

The requirement for addressing non-conformance from the EAC is relatively new. As such, we have not included the appropriate verbiage into our process.  

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task,)

<tr>
<td>NIST Handbook 150 Checklist Section: 4.11 CORRECTIVE ACTION, 4.12 PREVENTIVE ACTION, 4.14 INTERNAL AUDITS, 4.15 MANAGEMENT REVIEWS</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Nonconformance: No formal non-conformances were noted, but the executive management review had not yet taken place at the time of the audit.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Requirement: Items 4.11, 4.12, 4.14, and 4.15 all have a statement requiring the review by management. These items have been addressed in a single ACAR report because they all relate to the main issue of completing our annual Management Review found in section: 4.15.1</td>
<td>In accordance with a predetermined schedule and procedure, the laboratory's top management shall periodically conduct a review of the laboratory's management system and testing and/or calibration activities to ensure their continuing suitability and effectiveness, and to introduce necessary changes or improvements.</td>
<td></td>
</tr>
<tr>
<td>Findings: Our understanding of these concerns are: • The Management Review had not taken place, but had been scheduled, prior to the Audit. • The Management Review had also been a CAR from the internal audit.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Auditor Name: Steve Freeman</td>
<td>Name of Site Management: Shawn Southworth</td>
<td></td>
</tr>
</tbody>
</table>

To be completed by Site Management within 30 Business Days of Receipt:

**Corrective Action:** (Describe how the noncompliance will be resolved.)

The Management Review has already been completed, but active steps must be taken to ensure the review continues. Also, We are anticipating quarterly Management Reviews due to the inordinate amount of changes anticipated in the ITA. These changes will mostly revolve around the implementation of and gradual improvement changes to the ITA QA, operations, and test methods.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

Dec 8th.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).

The requirement for addressing management reviews is relatively new. However, CIBER requires a similar process that we had not been following due to poor communication between CIBER management and the ITA. This communication process has since been rectified.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task,)

Shawn Southworth and the EMSC

Audit Corrective Action Request

Site Name: ITA Practice
NIST Handbook 150 Checklist Section: 4.13 Control of Records

Nonconformance: No formal non-conformances were noted, but Steve noted: No disposal procedures are specified and are to be developed. Check with next assessment review.

Requirement: 4.13.1.3 The laboratory shall establish and maintain procedures for identification, collection, indexing, access, filing, storage, maintenance and disposal of quality and technical records. Quality records shall include reports from internal audits and management reviews as well as records of corrective and preventive actions.

Findings: Our understanding of these concerns are:
- The CIBER ITA must describe our process for disposing of records.

Auditor Name: Steve Freeman  Name of Site Management: Shawn Southworth

To be completed by Site Management within 30 Business Days of Receipt:
Corrective Action: (Describe how the noncompliance will be resolved.)
CIBER ITA already has a process for disposing of records as written in our security procedures. This process must be elaborated upon and included in the POM.

Proposed Completion Date: (Date that the action(s) described above will be completed.)
January 9th.

Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).
The CIBER ITA has not included the specifics of how records are destroyed, although there is a standard process in place.

Additional Comments/Notes: (i.e., Person assigned responsibility for task,)
Amber Willburn will work with Diane Gray and Shawn Southworth to capture the disposal process for inclusion in the POM.

Site response completed by: Amber Willburn
Date: 2006-12-19
## 11 Internal Audit

<table>
<thead>
<tr>
<th>Audit Corrective Action Request</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACAR: 5.2 num 1</td>
</tr>
<tr>
<td>Audit Date: Dec. 6-8</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Site Name: ITA Practice</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIST Handbook 150 Checklist Section: 5.2 Personnel</td>
</tr>
</tbody>
</table>

### Nonconformance:
No clear designator that a test engineer is qualified or for what methods. Also Steve noted: The training records, while showing an active training program were inconsistent with different names a scope of training for the same activity. No standardized training plan appears to exist beyond corporate policy of Security and 30 day training.

### Requirement:
No specific requirement is mentioned, however the 5.2 personnel section requires in several areas that the competency of key personnel is verified.

### Findings:
Our understanding of these concerns are:
- The CIBER ITA must include in the training summaries, or in another area, the date that the practice director or program manager validated the competency of the staff.
- The ITA must standardize the training plans and refer to each training plan the same to enable efficient tracking of training.
- We need to create a standardized method of validating training. In some methods, this is done through current testing processes, and for other methods, an interview of the technical ability should be conducted.
- We need to create a training plan for each position, as well as support positions.

### Auditor Name:
Steve Freeman

### Name of Site Management:
Shawn Southworth

### Corrective Action:
We are currently in the process of creating training presentations for the POM and for each test method. Accompanying training documentations (i.e. tests, review questions, etc.) are also being developed, while other already existing training items must be included in the training plans.

Once these training presentations are completed, we will have a standardized naming convention to include in the training summaries. As well as a more streamlined process for validating this training.

We are developing a tracking module that will include: Name, Training area (i.e. TDP, Security, and POM), Trainer, Date Competency was reviewed, Reviewer, Date Approved, Date of Reevaluation, and Re-Evaluator. This matrix will be included on the ITA Portal with access granted to Shawn and applicable Project Managers, as necessary. This process must be detailed in the POM.

Once the training presentations are complete, we will be able to develop training plans for each key position. The training plans will be included in the POM.

### Proposed Completion Date:
January 25th

### Root Cause of Noncompliance:
We used the training plans for CIBER Federal and were unaware that they were not complete enough for the EAC. The consistency item is due to our communication with the CSM. We have already begun clarifying the training that is occurring and has occurred.
Amber Willburn will work with Shawn and applicable members of the ITA to capture their information. Amber is also working with John Manning and Theresa Smith to develop training presentations, matrices, and plans.

Site response completed by: Amber Willburn
Date: 2006-12-19
### Audit Corrective Action Request

<table>
<thead>
<tr>
<th>Site Name: ITA Practice</th>

<tbody>
<tr>
<td>NIST Handbook 150 Checklist Section: 5.2 Personnel</td>
</tr>
</tbody>
</table>

**Nonconformance:** The non-conformance is unclear. Steve's comments do not include a clear recommendation or suggestion. Possible non-conformance could include: Procedures for remote operation require the CIBER test team are defined but consist mainly of taking control of security conditions to ensure reduced risk of interference with testing.

**Requirement:** No specific requirement is mentioned.

**Findings:** Our understanding of these concerns are:
- CIBER needs to elaborate on our partnership with Wyle, as well as our existing environmental controls at a client site.

**Auditor Name:** Steve Freeman  
**Name of Site Management:** Shawn Southworth

**To be completed by Site Management within 30 Business Days of Receipt:**

**Corrective Action:** (Describe how the noncompliance will be resolved.)

We are currently discussing Wyle's scope of accreditation as noted in previous ACARs.

We will include more detail on our process for controlling testing at client sites. Steve made a few comments on his checklist that he copies for us. We will glean areas to improve from these comments.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

January 9th.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).

We believe that a greater level of detail was required than we had anticipated.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task,)

Amber Willburn

**Date:** 2006-12-19
### 13 Internal Audit

**Audit Corrective Action Request**  
**ACAR: 5.4 num 1**  
**Audit Date: Dec. 6-8**

<table>
<thead>
<tr>
<th>Site Name: ITA Practice</th>
</tr>
</thead>
<tbody>
<tr>
<td>NIST Handbook 150 Checklist Section: 5.2 Personnel</td>
</tr>
</tbody>
</table>

**Nonconformance: The TM does not provide for the inclusion of the non-core test requirements in the test plan or test report. Although not a core requirement, the lab needs to include it in the test planning and report for direction and integration with the voting system test report as a single document supporting a system certification.**

**Requirement: No specific requirement is mentioned.**

**Findings: Our understanding of these concerns are:**

- We need to include the methods for the non-core testing into our test methods
- We need to include our processes for including these in the test plan and report

**Auditor Name: Steve Freeman**  
**Name of Site Management: Shawn Southworth**

**To be completed by Site Management within 30 Business Days of Receipt:**

**Corrective Action: (Describe how the noncompliance will be resolved.)**

We are currently discussing Wyle's scope of accreditation as noted in previous ACARs.

We are also working with Wyle to understand the best way to include these methods in our test report and test plan. Once this is established, we will include these processes in the TM document.

**Proposed Completion Date: (Date that the action(s) described above will be completed.)**

January 25th.

**Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).**

We did not understand that these methods needed to be included in our methods document.

**Additional Comments/Notes: (i.e., Person assigned responsibility for task,)**

Shawn Southworth is working with Wyle. Once all is established, Amber Willburn will include these into the TM.

**Site response completed by: Amber Willburn**  
**Date: 2006-12-19**

**Nonconformance:** The test method for the core requirements lack validation and reports for the validation of the tests. They appear to be too general for validation in some cases.

**Requirement:** No specific requirement is mentioned.

**Findings:** Our understanding of these concerns are:
- We need to include the methods for the non-core testing into our test methods
- We need to include our processes for including these in the test plan and report
- We need process for validating that the test methods are correct and applicable to the test

**Auditor Name:** Steve Freeman  
**Name of Site Management:** Shawn Southworth

---

**Corrective Action:** (Describe how the noncompliance will be resolved.)

We are currently discussing Wyle's scope of accreditation as noted in previous ACARS.

We are also working with Wyle to understand the best way to validate their methods. Once this is established, we will include these processes in the TM document.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

January 25th.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as "oversight" and describe HOW the "oversight" happened (i.e., policy was confusing, personnel failed to follow instructions)).

We did not understand that these methods needed to be included in our methods document.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task.)
Shawn Southworth is working with Wyle. Once all is established, Amber Willburn will include these into the TM.

**Site response completed by:** Amber Willburn  
**Date:** 2006-12-19
| 15 Internal Audit | Audit Corrective Action Request | ACAR: 5.4 num 3  
| Audit Date: Dec. 6-8 |
|---|---|---|
| Site Name: ITA Practice |
| NIST Handbook 150 Checklist Section: 5.2 Personnel |
| Nonconformance: The TM specifies the application will be installed by the vendor and fails to provide verification that the software installed matches the Witnessed Build including the operating system and third party software. |
| Requirement: No specific requirement is mentioned. |
| Findings: Our understanding of these concerns are: |
| • We need to provide more detailed configuration management processes |
| Auditor Name: Steve Freeman  
Name of Site Management: Shawn Southworth |
| To be completed by Site Management within 30 Business Days of Receipt: |
| Corrective Action: (Describe how the noncompliance will be resolved.) |
| CIBER already has a process for verifying version of software installed, operating system, and 3rd party software. We need to capture this information and include it in the Witness Build section. As the TM is written, the CM processes is defined in its own section. CM needs to reiterated throughout the entire TM, especially in the Witness Build section. |
| Proposed Completion Date: (Date that the action(s) described above will be completed.) |
| January 25th. |
| Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)). |
| We did not include the appropriate level of detail. |
| Additional Comments/Notes: (i.e., Person assigned responsibility for task,)  
Shawn Southworth is working determining the process. Once all is established, Amber Willburn will include it into the TM. |
| Site response completed by: Amber Willburn  
Date: 2006-12-19 |
### Nonconformance

The test lab needs to explicitly identify tests that it does not hold accreditation.

### Requirement

No specific requirement is mentioned.

### Findings

- We need to identify in our test plan, report, etc, those tests that we hold accreditation for.

### Corrective Action

We are writing in our test plans those tests for which we are accredited. Also, in our test reports, when we identify the test methods use, and in the background section, we are identifying those tests for which we are accredited.

In connection with this corrective action, we are actively requesting additional information from the EAC on the test for which we will be accredited. At this moment, it is not clear what our accreditation will cover, and what we will need to rely on Wyle for. We are meeting with Wyle to help address some of these concerns.

### Proposed Completion Date

January 25th.

### Root Cause of Noncompliance

We did not know that the accreditation for Wyle and CIBER would be different than we had anticipated.

### Additional Comments/Notes

Shawn Southworth is working with Wyle and the EAC to determine the scope of accreditation.

### Site response completed by: Amber Willburn

Date: 2006-12-27
Nonconformance: TM provides for test equipment (support, not the equipment to be tested and certified); to be checked in and inventoried but does not include provisions for maintenance, setup and validation that is operating correctly and for the intended purpose, handling of damaged equipment, or disposal for either CIBER owned or rented equipment or that provided by the vendor for testing such as certified pieces needed to complete test objectives.

In the latter case, readiness testing, care, validation, and setup verification are equally important as for the Equipment under test but needs the care extended beyond the actual test campaign. This area should be relatively minor unless specialized equipment is involved.

This section was not completely reviewed due to time limits and little applicability.

Requirement: No specific requirement is mentioned.

Findings: Our understanding of these concerns are:
- We need to include in our inventory control process a provision for the maintenance, setup, validation, handling of damaged equipment, and disposal of equipment
- We need to define further the process for CIBER owned and vendor-provided equipment

Auditor Name: Steve Freeman  
Name of Site Management: Shawn Southworth

Corrective Action: (Describe how the noncompliance will be resolved.)

In our Inventory Control Process, we are adding the following sections:
- Maintenance of equipment—
  - This section will describe all of the CIBER owned equipment and our process for maintaining these items, such as personal computers, software, and any other items identified (at this moment, no other items are identified).
  - This section will also identify how we maintain vendor equipment, including our environmental conditions, etc.
- Equipment setup—
  - In this section, we will outline the process for setting up vendor equipment to be tested, such as how they are assigned lab space, etc.
- Validation of equipment—
  - In this section, we will identify the process for validating that the vendor has provided the correct version, that the equipment (hardware and software) work as described, that the equipment is applicable for the test.
  - We will also address the process for validating CIBER’s software packages used for the test.
  - We will address the process for validating our Hardware partner’s process of validating hardware.
- Handling of damaged equipment—
  - We already have a process for handling damaged equipment, but it needs to be pulled out and elaborated upon.
- Disposal of Equipment—
  - We have a process for disposing of vendor-related equipment.
  - We need to outline CIBER’s process for disposing of equipment.
**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

January 25th.

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as "oversight" and describe HOW the "oversight" happened (i.e., policy was confusing, personnel failed to follow instructions)).

We have been following many of the corporate policies for CIBER equipment, and the vendor policies for their equipment. We have not taken the step to write down all of these policies in one document.

**Additional Comments/Notes:** (i.e., Person assigned responsibility for task,)

Diane Gray.

Site response completed by: Amber Willburn  
Date: 2006-12-27
Nonconformance: Work by other accredited labs needs to be identified (test plan and contract also) and validated that the lab is qualified. The results need to be validated that they are appropriate for the report. If the work is outside of the scope of accreditation for the contracting lab, this condition needs to be explicitly stated (ref 5.4.6 in the HDBK 150-22).

HDBK 150/150-22 requires specification of processing for reports for other purposes. Note that this involves branding issues where claiming the authority as an accredited lab may not be appropriate. Recognized alternate reports are for state certification and internal to the vendor.

Requirement:
5.4.6 The laboratory shall clearly identify any test methods included in the test campaign that are outside of the laboratory's scope of accreditation.

Findings: Our understanding of these concerns are:
- We need to include in our negotiation with the customer, test plan, and test report all work done outside the accreditation for the contracting lab
- We need a process for verifying that the lab is qualified to do the work

Corrective Action: (Describe how the noncompliance will be resolved.)

In our negotiation process, we need to include a statement about notifying the customer of all work outside the scope of our accreditation.

We will need to include a process for validating that the other lab is qualified. We are working with Wyle to develop a streamlined process for this. Also, we are seeking clarification on the scope of accreditation for both CIBER and Wyle.

Proposed Completion Date: (Date that the action(s) described above will be completed.)

TBD. The items that only need to be included in our processes will be completed by Jan 25th. However, we must wait for our scope of accreditation and Wyle's before we can proceed on these items.

Root Cause of Noncompliance: (Describe the reason that the noncompliance arose. Please refrain from using reasons such as “oversight” and describe HOW the “oversight” happened (i.e., policy was confusing, personnel failed to follow instructions)).

We were not aware of the NIST 150 – 22 checklist until the audit.

Additional Comments/Notes: (i.e., Person assigned responsibility for task.)

Amber Willburn and Shawn Southworth.

**Nonconformance:**

**Requirement:** NIST HDBK 150-22 Section 6 Technical Supplement Section item 1.k

**Findings:** Test plan should include the tests that are not in the core responsibilities but are still required for the certification of the system. The test plan is to be complete for all requirements. Where the test requirements are outside of the core tests, the plan should identify the accredited lab to be used, what materials and directions need to be given to the lab, what support is to be provided, how the labs report will be validated (correct configuration for the certification, appropriate operations for a voting system) and how the report is to be included in the final report.

**Auditor Name:** Steve Freeman  
**Name of Site Management:** Shawn Southworth

**To be completed by Site Management within 5 Business Days of Receipt:**

**Corrective Action:** (Describe how the noncompliance will be resolved.)

Define tests that are not in the core responsibilities. Identify all accredited labs used, what materials and directions need to be given to the lab, what support is to be provided, how the labs report will be validated and how the report is to be included in the final report.

**Proposed Completion Date:** (Date that the action(s) described above will be completed.)

TDB

**Root Cause of Noncompliance:** (Describe the reason that the noncompliance arose. Please refrain from using reasons such as "oversight" and describe HOW the "oversight" happened (i.e., policy was confusing, personnel failed to follow instructions)).

At the time of writing our process and procedure documents we were unaware of these requirements.

Election Assistance Commission (EAC)
Interim Accreditation
Independent Test Authorities (ITA)

Assessment Report

CIBER

Conducted: Dec 06-08, 2006
Huntsville, AL

Assessor: Steven V. Freeman
Introduction

This accreditation assessment was a follow-up to an earlier assessment of CIBER Inc.'s ITA Practices office under the Election Assistance Commission (EAC) Interim Accreditation Program conducted in July 2006. The assessment used the NIST Handbook 150-2006, NVLAP Procedures (HB 150) and General Requirements and NIST Handbook 150-22-2005 NVLAP Voting System Testing (HB 150-22) as the criteria for certification. The interim program is designed to accredit ITAs formerly authorized under the National Association of State Election Directors (NASED) accreditation program to continue voting system testing under an EAC accreditation until such time as the NVLAP/EAC joint accreditation has qualified one or more testing laboratories as Voting System Test Laboratory (VSTL).

The July assessment found that the CIBER ITA Practice program in non-compliance in four areas:

a. There was no record of an internal audit or management review performed since the creation of the policy and procedures for ITA Practice. That was not serious in itself because there may be delays but queries about records from the last audit to the corporate office with related responsibilities did not indicate the results were available for corrective action at the ITA Practice level.

b. The corporate quality manual requires the ITA Practice Director to maintain a log of Corrective Action Reports (CARs). The CARs are also required at other points to capture and track complaints, reports of non-compliance, and other problems which should receive management review and follow-up.

c. QA Representatives were named last year to provide local people responsible for QA requirements in the absence of the remote QA manager. Their major role was to perform Process Conformance Audit at the end of each test campaign of the test and test report to ensure conformance to processes and procedures. No Process Conformance Audit has been done since the creation of the requirement.

d. During review of requirements for standard testing methods, the ITA Practice Director stated that they could not use standard methods but either used the vendor's tests or created new tests for each system's test. The requirement for standard test methods is necessary to ensure that consistent and conforming testing is applied for each tested system. The standard test method provides a base for comparison against the vendor's tests and, when system variations require some adaptation, the changes needed are reported based on the pre-defined established test method.

In addition to these items, the July assessment went through issues and expected features needing development based on the application of the new ISO 17025 requirements as presented in the checklists prepared from the HB 150 and HB 150-22 criteria. CIBER ITA Practices and Wyle Labs had formed a Team Partnership for performing the testing but the policies and procedures needed further development to define each lab's responsibility with one lab (the 'VSTL' in HB 150 and HB 150-22 terms) taking the primary responsibility for managing and reporting the complete voting system test results. Additional requirements resulting from applying the ISO 17025 standards for more complete reporting were also reviewed and copies of the checklists were left.

CIBER was not granted an interim accreditation but was given a 120 day response period to submit corrections. Based on the documentation presented as a response, this follow-up assessment was conducted in Huntsville during the period of December 6-8 at the CIBER ITA Practice office in Huntsville.
Summary of Findings

A thorough internal audit was performed after the July assessment and a plan for correction developed [NC Item a] Within corporate CIBER, an Executive Management Steering Committee was created consisting of the President of CIBER Federal Civilian, VP Contracts Federal, and a Consulting Services Manager to perform high management oversight and ensure adequate resources would be available. Personnel have been brought in to assist in revising the program and to assist with responsibilities in the Quality Assurance (QA) and Project Management roles pending the staffing of additional staffing positions for ongoing support. [NC Item c].

The management documents were completely rewritten and updated, reducing the number of documents and confusion over what requirements were where. The new structure has two manuals plus associated forms.

- ITA Practice Operational Manual (POM)  
- CIBER ITA Test Methods (TM).

QA procedures and a test projects (simulated) were performed using the actual staff to make sure the procedures, tools, and resources such as the Corrective Action Report (CAR) input forms and logs were linked, active, and accessible (permissions granted) for ITA Practice personnel. The CAR contained entries resulting from the internal audit. [NC Item b.]

CIBER has entered a Team Partnering agreement with Wyle where Wyle will be performing the non-core hardware based test requirements under separate scope of accreditation programs. In this review, CIBER was reminded that, under the Interim scope, CIBER will be responsible for the overall program. CIBER still needs to develop procedures in what had formerly been a Hardware ITA exclusive area, recognizing their own out of scope status for some requirements requiring the use of other labs with the appropriate accreditation. The procedures shall include CIBER's responsibility in these cases to provide contractual specification of test operation and setup configuration information.

CIBER ITA Practice currently has no test projects in house to test and validate these new procedures and can not complete minor corrections and adjustments until they do so.

Minor revisions and non-compliant items identified as needed include:
2. Records showing when and for what methods test engineers are qualified.
3. Including reporting of non-core requirement testing in the Test Plan and Report
4. Validation of test methods for the core requirement test methods.
5. The TM specifies the application will be installed by the vendor and fails to provide verification that the software installed matches the Witnessed Build including the operating system and third party software.
6. The ITA needs to explicitly specify in contracts and reports which test methods that the ITA does not hold accreditation for and what accredited lab will be used for such tests.
7. Test methods and tools need to be validated and the validation documented.
8. In the Functional Requirements checklist, need to incorporate HAVA 301 requirements in with the Voting System Standard (VSS-2002) requirements.
9. Need to include Accuracy test details in TM. Some issues exist over whether automated testing using simulated voter inputs are acceptable for this test, especially in the environmental phase of the test.
10. Need to include Reliability test details in TM.
11. Need to calculate and report the Availability Index in TM.
12. Need to include volume tests
13. Need to include required security tests in TM and in Test Report.
14. Need to include Telecommunication tests (in System Integration testing)
(Other tests and requirements may need to be developed in the TM but were not reviewed in this assessment.)

**Recommendation**

CIBER has made substantive improvements in the documentation and implementation of the quality assurance policies and procedures. A similar level of improvement is provided in the CIBER Test Method procedures and the potential exists to develop and respond as additional requirements are recognized as needing to be included.

If CIBER is accredited, their initial test plans and some of the more critical tests such as accuracy, reliability, and security should be subject to test plan review and on-site observers until the TM has had a chance to be validated and samples of the test reports are available to verify the level of reporting is adequate. This should include clarification of the tasks to be performed by CIBER personnel and Wyle personnel.

EAC Interim Accreditation Program On Site Assessment- CIBER

SIGNATURE SHEET

Lab Legal Name: CIBER, Inc
Address: CIBER ITA Practices  
7501 South Memorial Parkway, Suite 107  
Huntsville, AL 35802

Assessor: Steven V. Freeman  

On-Site Assessment Dates:  6-8 Dec 2006
Prior Assessment Visit:  20 Jul 2006

This report was presented on-site at the conclusion of the visit and presents a summary of the findings.

Resolution of previous findings
The quality management and technical documents describing the procedures for documenting and conduction of a test campaign had been completely revised prior to the assessment visit. Test methods (cases) have been developed and added in the form of the Test Methods document. In addition, personnel have been brought in to assist in revising the program and to assist with responsibilities in the Quality Assurance (QA) and Project Management roles. Within corporate CIBER, an Executive Management Steering Committee was created consisting of the President of CIBER Federal Civilian, VP Contracts Federal, and a Consulting Services Manager to perform high management oversight. Finally, QA records and logs were activated to store, track, and follow-up records of Corrective Action Reports (CAR) and audit findings.

Latest Internal Audit: 15 November 2006, Terry L. Debell,  
Manger, Internal Audit & Compliance

Latest Management Review: (Pending)  
Executive Management Steering Committee

Acknowledgement of Receipt

The assessor has discussed the contents of this report with members of the laboratory management who agree to respond in writing to EAC regarding resolution or correction of any nonconformities noted within 30 days of the date of this report.

Signature of Authorized Representatives or designee

   c. Terry Debell, Center for Project Performance
2. Center for Project Performance: Terry Debell, Manager, Internal Audit & Compliance
3. Business Unit Leader: Robert MacFarlane, Federal Civilian Branch
4. ITA Practice Director: #Shawn Southworth
5. Project Manager: *#Kelly Rohacek
6. QA Configuration Manager: *Amber Willburn
7. Test Engineers:
8. Document Reviewer: Diane Grey
8. Senior Software Engineer: *Victor (Vic) Daily
9. Software Engineer: Jack Cobb

# Primary Contacts.

*New Personnel (Resumes attached):
1. Amber Willburn, Proposal Manager, has been working with Shawn Southworth, the ITA Practices Director, and other resident staff to revise the documentation and develop the processes for the quality management of the certification testing. She serves as the acting QA Manager but is expected to be replaced by a permanent position for a full-time resident QA Manager. Amber has been mentored within the QA operations by Terry Debell, Manager, Internal Audit & Compliance.

2. Kelly Rohacek, Project Manager, has been added to the staff to assist in the project management of the test campaigns/projects. In this position she will be the Technical Lead Contact. She is mentored by John Manning, Consulting Services Manager.

3. Victor (Vic) P. Daily, Senior Software Engineer, has been added to the Test Engineers/Software Engineers.
ON-SITE ASSESSMENT NARRATIVE SUMMARY

CHANGES TO CURRENT OR REQUESTED SCOPE OF ACCREDITATION

EAC Interim Independent Test Authority (ITA)

ACCREDITATION STANDARD

NIST Handbook 150,
NIST Handbook 150-22,
As a documented accreditation standard to be used by the new Voting System Test Laboratory Accreditation Program, these handbooks apply the requirements of ISO/IEC 17025. The EAC accreditation program will require accreditation under the NIST National Volunteer Laboratory Accreditation Program (NVLAP) on completion of the full accreditation program for new labs and prior labs who complete the upgrade. This assessment was to update the accreditation of prior ITA labs as an Interim program to ensure availability of testing labs during the transition from the NASED accreditation which was terminated in July 2006 until the VSTL accreditation program had established

OVERALL SUMMARY

The management documents were completely rewritten and updated, reducing the number of documents and confusion over what requirements were where. The new structure has two manuals plus associated forms.
- ITA Practice Operational Manual (POM) Quality Management program
- CIBER ITA Test Methods (TM) Technical test procedures

These manuals and associated forms and record files are stored on the CIBER sharepoint service supporting controlled access for CIBER offices across the country. The ITA Practice files and document/records are located under the ITA Portal and provide version and access control to maintain separation of test campaign documentation between authorized users while giving all the project team access to the resource they need.

As part of this effort, QA procedures and a test projects (simulated) were performed using the actual staff to make sure the procedures, tools, and resources such as the Corrective Action Report (CAR) input forms and logs were linked, active, and accessible (permissions granted) for ITA Practice personnel.

CIBER has entered a Team Partnering agreement with Wyle where Wyle will be performing the non-core hardware based test requirements under separate scope of accreditation programs. In this review, CIBER was reminded that, under the Interim scope, CIBER will be responsible for the overall program.

CIBER ITA Practice currently has no test projects in house to test and validate these new procedures and can not complete minor corrections and adjustments until they do so. The large rewrite has resulted in new nonconformist observations listed in the following sections which CIBER is expected to respond to within 30 days.
4.1 ORGANIZATION

In response to the previous assessment, CIBER has responded by providing resources to support:

a. QA Configuration Manager. Ms Willburn has been attached to provide support in QA and QA Management documentation until a full-time QA manager can be approved and hired.

b. Kelly Rohacel has been assigned as Project Manager to steer the test campaign projects and the completion of tasks and products with review.

c. The President of CIBER Federal formed an Executive Management Steering Committee (EMSC) and to provide high level management attention and overview through the corporate CIBER audit and other QA reporting paths and to ensure that the process improvement activities received the attention and resources needed.

d. Key management positions were tasked to provide mentoring support to the new key personnel and for follow up attention.

All this may be an initial flush of action and response but the activities included the activation, test, and use communication paths to establish use and practice. In the next assessment review, the organization support indicated in the Organization chart should be checked for continuation of support.

No non-conformicities were identified.

4.2 MANAGEMENT SYSTEM

The management documentation was changed from four or more major documents to two major documents supported by forms and some independent procedures.

ITA Practice Operations Manual provides a more streamlined management procedures document.

CIBER ITA Test Methods captures the technical test procedures, documentation and reporting.

Upward management processes and reporting are defined through corporate CIBER procedures to maintain communications channels and ensure follow up review of issues and problems.

The CIBER Sharepoint Internet service hosts the ITA Portal that is the control point for documents, reports, tracking logs, and resources. Access through sharepoint allows individual access control to define and limit access to specific resources and maintain separation of information/procedures with version control showing active versions and control access to only the active versions as needed.

4.2.7 (HDBK150) requirement to maintain integrity during planned change is a new accreditation requirement that needs some basic attention to initial setup.
### 4.3 DOCUMENT CONTROL

The CIBER Sharepoint Internet service hosts the ITA Portal that is the control point for documents, reports, tracking logs, and resources. Access through sharepoint allows individual access control to define and limit access to specific resources and maintain version separation of information/procedures with seamless version control showing active versions and control access to only the current versions as needed.

The ITA Portal home hosts a calendar that the QA manager keeps posted to show upcoming QA events and required reporting. As a comment, the definition of the periodic cycle for these events was not as well defined with a tendency to point to the next event rather than show how these events were to be scheduled but this expected to resolved before the next review.

No non-conformities were identified

### 4.4 REVIEW OF REQUESTS, TENDERS AND CONTRACTS

A "test method" (TM 2) for Negotiating supports the policies for the review of requests, tenders, and contracts. The basic process showed no issues or problems. Specific items that needed to be identified in a negotiation such as the areas where the CIBER ITA Practice was not qualified under the scope of accreditation (HDBK 150-22, 5.4.6) were identified in the later sections where encountered.

No non-conforming items were noted.
4.5 SUBCONTRACTING OF TESTS AND CALIBRATIONS

CIBER has an exclusive Team Partnering agreement with Wyle Labs based on Wyle's current EAC Interim accreditation.

The relationship of the lead lab under the NVLAP 150/150-22 procedures and EAC preliminary guidance needs some clarification in the instructions to recognize the accredited voting system test lab’s increased responsibility under the core requirements as compared with past practice of software/hardware lab. The current procedures for subcontracting recognize the need for the subcontracted tests to be with a lab accredited for the appropriate scope of testing but CIBER is just recognizing that their scope of responsibility for the testing has shifted and they need to be more responsible in the direction and performance of tests formally conducted by the 'hardware' labs. With Wyle’s experience and current accreditation, this extended responsibility is blurred as Wyle is in a position to provide more of the service and management than would otherwise.

CIBER will need to pay attention to develop practices in what had formerly been a Hardware ITA exclusive area. Some later non conformance will be in specific areas where CIBER needs to include more details on the full range of test requirements, recognizing their own out of scope status requiring the use of other labs with the appropriate accreditation and CIBERs responsibility in these cases to provide contractual specification of test operation and setup configuration information.

4.6 PURCHASING SERVICES AND SUPPLIES

Not applicable
4.7 SERVICE TO THE CUSTOMER

CIBER has a strong customer service orientation. Although not noted in the checklist, it may be worth noting the emphasis on working with previously prepared and validated test methods to provide standard conforming tests rather than acceding too quickly to requests to modify tests at request to vendors. The increased role of providing monitoring and direction by EAC as a regulatory body will also support more consistent reporting of the conformance of tested systems.

No non-conforming items were noted.

4.8 COMPLAINTS

CIBER has a Customer Complaint/feedback Survey system which is independently under the control of upper management and is routinely used as part of the management review cycle. This process has been actively in use for other units of CIBER but no complaints have been submitted against the ITA Practice activity and survey reports have been favorable. The program is restricted to customer complaints and other sources of complaints are not routinely submitted.

No non-conforming items were noted.
4.9 CONTROL OF NONCONFORMING TESTING AND/OR CALIBRATION WORK

Calibration work does not apply at this time.

Basic policy and procedures follow recommended practices based on the NIST Handbook standards (ISO 17025) but there is no evidence that the process worked since there have been no non-conforming reports submitted. Test cases on this and other processes were made to ensure that the form linkage and operation worked and would post a report. In the assessment it was noted that the only source of non-conforming reports was from internal audit reports. CIBER is to consider changes to recognize EAC or related stakeholder reports of non-conformance, possible through official EAC process communication or otherwise provide a path (see comments on Complaints) for recognizing such inputs from legitimate stakeholders.

No formal non-conformance issues were identified.

4.10 IMPROVEMENT

An active program and policy statements recognizing and supporting on-going improvement was noted in the management procedures.

No non-conformance issues were noted.
4.11 CORRECTIVE ACTION

Prior visit observation that the corporate CIBER required CARs log was not active and showed no reports has been corrected. Test cases were added to validate the operation and use. No action had been taken on the management review and monitoring because the annual management review that would review and take follow up action had not occurred yet but is expected within the next week.

No non-conformance items have been identified.

4.12 PREVENTIVE ACTION

Processing of review of management indicators, including the review of audit forwarded Corrective Action Requests (CARS), was not observed due to lack of activity. Two Audit directed CARS (ACARS) have been placed into the log to suggest improvements to the CARS upload operation but have not yet processed by the annual management review (see above).

No non-conformance items have been identified.
4.13 CONTROL OF RECORDS

The sharepoint ITA Portal supports the storage, maintenance and control of records as well as documents. Under this the records are identified, ownership is established and versioning is automatically performed. All management and test records are uploaded to the appropriate sharepoint directory with the exception of HR sensitive records which are processed, along other networks to preserve confidentiality. Hardcopy manual records are stored in QA/CM secure filing cabinets and logged in a directory log in a directory within the ITA Portal. Test campaign records are stored in Project Workbooks with different directories for each vendor to maintain separation and protection of records.

Current record retention is the life of the project + 3 years. CIBER is to review the new EAC Certification Program Manual and consider adopting the matching retention for election records. No disposal procedures are specified and are to be developed. Check with next assessment review.

Backup copies are saved daily and maintained in another location by corporate policy. The policy includes the periodic test of backup recovery.

The records for each test were not checked for the identity of personnel responsible as there are no Project Workbooks active (pending accreditation). However, procedures/test methods do require such records. No non-conforming issues were identified.

4.14 INTERNAL AUDITS

The last internal audit was completed 15 Nov in response to the previous assessment report by Terry Debell from the CIBER Center for Project Improvements. Improvements have been initiated out of that audit and it is to be reviewed in the next management review (pending) by the Executive Management Steering Committee (see organization Information).

No non-conforming issues identified
4.15 MANAGEMENT REVIEWS

Non-conforming item. No management reviews had been made yet. However, the prior assessment report and internal audit have started major performance improvement actions including the management review requested by next week. A copy of the management review report was made available and I confirmed that the items in 4.15.1 were all included. (Copied from the HDBK 150 checklist).

This item is pending evidence to show that it is functioning but seems to be more a matter of timing at this time.
5.1 GENERAL

The technical test procedures have been completely rewritten into the CIBER ITA Test Methods. The organization of the document is oriented to the description used in the HDBK 150-22 Technical Supplement (Section 6.0) showing the test/review areas from the Voting System Standards (VSS) 2002 core responsibilities.

5.2 PERSONNEL

Resumes, position description, and training records were reviewed for the new personnel:
Amber Willburn  QA Manager (temp)
Kelly Rohcek  Test Project Manager
Vic Daily  Software Engineer (Tech Engineer)

Amber was brought in primarily as a technical writer to assist in preparing the QA management documentation and resources. She has little prior experience of the position but here work on developing the program under the Mentorship of Terry Debell has prepared to some degree.

Kelly Rohcek is highly qualified as a technical Project Manager but lacks voting system experience.

Vic Daily has extensive technical testing background but lacks voting experience.

Position descriptions were adequate and gave relevant information.
The training records, while showing an active training program were inconsistent with different names scope of training for the same activity. No standardized training plan appears to exist beyond corporate policy of Security and 30 day training.

Non-conforming. No clear designator that a test engineer is qualified or for what methods.
5.3 ACCOMMODATION AND ENVIRONMENTAL CONDITIONS

Current space small and crowded, especially with new staffing. Cyphers locks on front and back door. Site can "accommodate" four vendors by placing them into the offices which also contain people and storage. This is a temporary situation with a move schedule to place them closer to their Team Partner Wyle Labs.

For the Accuracy and Reliability Environmental Operating test, environmental conditions are a critical condition of the test but this level of facilities is to be gained through the services of a sub-contractor/Team partner. Other tests can require more space but these may be conducted at the Hardware Team Partner facility where the environmental controls are more appropriate to their scope of accreditation.

Testing at a vendor site may involve more significant conditions. Procedures for remote operation require the CIBER test team are defined but consist mainly of taking control of security conditions to ensure reduced risk of interference with testing.

5.4 TEST AND CALIBRATION METHODS AND METHOD VALIDATION

The Test Method document lists different sets of test activities required for all voting system testing. In reviewing the coverage of these sets, test methods were not listed for a number of test objectives, primarily those which have formerly been the responsibility of the "hardware ITA" such as the Transportation and Storage, EMC, accessibility. Most of these have their own test accreditation process are not part of the core requirements for the test lab.

Non-conform. The TM does not provide for the inclusion of the non-core test requirements in the test plan or test report. Although not a core requirement, the lab needs to include it in the test planning and report for direction and integration with the voting system test report as a single document supporting a system certification.

Non-Conform, the test method for the core requirements lack validation and reports for the validation of the tests. They appear to be too general for validation in some cases.

(See section 6 for more specific listing of missing test methods)

Non-Conform, The TM specifies the application will be installed by the vendor and fails to provide verification that the software installed matches the Witnessed Build including the operating system and third party software.

Non-conform. The test lab needs to explicitly identify tests that it does not hold accreditation.
5.5 EQUIPMENT

TM provides for test equipment (support, not the equipment to be tested and certified); to be checked in and inventoried but does not include provisions for maintenance, setup and validation that is operating correctly and for the intended purpose, handling of damaged equipment, or disposal for either CIBER owned or rented equipment or that provided by the vendor for testing such as certified pieces needed to complete test objectives.

In the latter case, readiness testing, care, validation, and setup verification are equally important as for the Equipment under test but needs the care extended beyond the actual test campaign. This area should be relatively minor unless specialized equipment is involved.

This section was not completely reviewed due to time limits and little applicability.

5.6 MEASUREMENT TRACEABILITY

Not applicable at this time
5.7 SAMPLING

Not applicable

5.8 HANDLING OF TEST AND CALIBRATION ITEMS

(Handling and care of the actual Equipment Under Test (EUT))

(not reviewed in detail due to time but it has parallel issues to 5.5 and the test equipment)
5.9 ASSURING THE QUALITY OF TEST AND CALIBRATION RESULTS

Not reviewed due to time.

5.10 REPORTING THE RESULTS

Non-conform. Work by other accredited labs needs to be identified (test plan and contract also) and validated that the lab is qualified. The results need to be validated that they are appropriate for the report. If the work is outside of the scope of accreditation for the contracting lab, this condition needs to be explicitly stated (ref 5.4.6 in the HDBK 150-22)

HDBK 150/150-22 requires specification of processing for reports for other purposes. Note that this involves branding issues where claiming the authority as an accredited lab may not be appropriate. Recognized alternate reports are for state certification and internal to the vendor.
6.0 TECHNICAL SUPPLEMENT
Voting System Test Campaign
Procedures and Methods

The review included an overview of required test requirement categories and where they are to be reported in the Certification test report. The following items were found missing or requiring further work:

TDP Review:
1. k. TM 4. Test plan should include the tests that are not in the core responsibilities but are still required for the certification of the system. The test plan is to be complete for all requirements. Where the test requirements are outside of the core tests, the plan should identify the accredited lab to be used, what materials and directions need to be given to the lab, what support is to be provided, how the labs report will be validated (correct configuration for the certification, appropriate operations for a voting system) and how the report is to be included in the final report.

Source Code Review
2. d. Need to validate Using Exam Diff Pro and provide validation report.

Physical Configuration Audit
3. b. Accessibility CIBER provides test cases to Wyle
3 c. Construction to be included in planning and reports but identifies as out of the scope of accreditation for CIBER and performed by accredited lab (Wyle);
3 e. Hardware transportation and storage tests needed to be included but identifies as out of the scope of accreditation for CIBER and performed by accredited lab (Wyle);
3. f. EMC and electrical test suit identifies as out of the scope of accreditation for CIBER and performed by accredited lab (Wyle);
3. i. Include tests above in report.

Functional Configuration Audit
4 e. Verify HAVA functional requirements
   In the Functional Requirements Checklist v.1.1 need to update for HAVA 301 requirements that are not in current VSS 2002 list.

System Integration Tests
5. a. Accuracy
5 b. Reliability
   Also need AI to be calculated and reported
5 c. Volume tests (could not find in review but may be there)
5 d. Security tests, need to perform and add to report layout
5. f. Telecommunication tests per VSS 2002/HAVA
ATTACHMENTS

1. Resumes for New Personnel
Ms. Willburn is a Proposal Manager with over five years of writing experience. She has played a key role in furnishing proposal and business development expertise in support of defining/refining company proposal development processes and procedures. Provided writing and editing for technical documentation and business development tasks as needed, including design and direction for graphics. In addition, she has defined and prepared documentation schedules, outlines, writing assignments, themes, and discriminators. Provided other as-requested technical writing and document review support to various company business units. Developed and designed marketing collateral for federal clients and inter-office fact sheets on current CIBER technologies. Lastly, Ms. Willburn has exceptional communication and interpersonal skills which allow her to work effectively with all levels of management and personnel.

EDUCATION, CERTIFICATIONS & TRAINING

BA, English, University of Colorado at Colorado Springs, 2004
Certificate in Professional and Technical Writing, University of Colorado at Colorado Springs, 2004

TECHNICAL EXPERIENCE

PROFESSIONAL EXPERIENCE

CIBER, Inc., Proposal Manager 7/04 – Present
• Furnished proposal and business development expertise in support of defining/refining company proposal development processes and procedures.
• Provided writing and editing for technical documentation and business development tasks as needed, including design and direction for graphics.
• Defined and prepared documentation schedules, outlines, writing assignments, themes, and discriminators.
• Provided other as-requested technical writing and document review support to various company business units.
• Developed and designed marketing collateral for federal clients and inter-office fact sheets on current CIBER technologies.

Project Excel Writing Center
Writing Tutor, Newsletter Editor 2002 – 2004
• Worked with students on technical documents and taught grammar and document design.
• Edited student papers over online forum.
• Instituted first Excel Center newsletter and acted as editor.
• Designed layout and graphics for newsletter.
• Assigned writing responsibilities to contributors.
AMBER WILLBURN
Proposal Manager

Asylum Youth Project
Director
Summer 2002
- Implemented youth center for a small rural town.
- Designed all marketing material and developed Procedures and Policies manual for volunteers.
- Provided monthly progress, cost reports, and a large season-end report to Board of Directives.

Scribe
Reporter
2001 – 2002
- For a small newspaper, contributed numerous articles, including front page news. Responsibilities included locating newsworthy stories, interviewing eye witnesses, and writing and editing articles.
A Senior Project Manager professional with expertise in Banking, Information Technology (IT), Manufacturing, Supply Chain, and Defense and Aerospace programs. Seventeen years of proven management expertise with a strong business sense for converting business needs into development solutions.

TECHNICAL EXPERIENCE

PROFESSIONAL EXPERIENCE

SANMINA SCI, (Huntsville, AL) 12/05 – 10/06
Program Manager / IPT Lead

Managed "build to print" programs in the Defense and Aerospace division of Sanmina – SCI. Completed 1440 hours in project initiation, planning, execution, and control by;
• High level performance in the Program Managers role for a 37M program of In Flight Entertainment (IFE) products for an Avionics customer – France and US, managing two of the five products
• Promoted to Program Manager with in three months by learning the manufacturing industry, its standards and processes as an IPT Lead.
• Lead New Product Implementation (NPI) team's in preparation for new electronic product induction. Planned, executed and controlled "build to print" schedules at the manufacturing, supply chain- material planning, and change controls levels of the program.

NATIONAL CITY BANK, (Cleveland, OH) 7/04 – 11/05
Senior Project Manager

Managed the installation of large integrated projects for loan origination in the Lending Portfolio of National City's IS organization. Completed 1920 hours in project initiation, planning, execution, control and closure by applying;
• The application and management of iterative development using Fusion /Agile methodology and coordinating it with the life cycle of waterfall methodology.
• Managed a 4.5M National Home Equity broker on line origination system development project.
• Coordinated and lead the project through initiation, project approval and the first two releases of five and then successfully transitioned future releases with the sustaining Project Manager.
• Managed the implementation of a 2.5M Loan Express system for a best in class initiative.
• Managed a 1.3 M project for the new business venture of on-line loan applications with Lending Tree. Participated on the board of reviews as a subject matter expert for the new project office rewrites of processes and new methodologies for project management.
KELLY ROHACEK  
Project Manager

ROBERT HALF CONSULTING, (Cleveland, OH)  
Senior Project Manager  
6/03 – 7/04

Managed strategic initiatives and the installation of integrated systems. Completed 2040 hours in RFP processes, project initiation, and full project life cycle management for the clients of Key Bank and National City by;
- Successfully and quickly creating the schedule and demonstration of the Request for Proposal (RFP) process and defined process attributes.
- Coordinating demonstrations and sandbox sessions for product understanding.
- Created financial proposals that included vendor package and labor costs.
- Learned and applied the new roll out of Rational Unified Process Methodologies and tools with an in-flight project team.
- Successfully managed an infrastructure project through the redesigning of an external and internal network solution.
- Performed and planned validations and test strategies with the RUP methodologies using Clear Quest, Test Manager and Rational Rose tools.

HANDLEMAN COMPANY, (Troy, MI)  
Senior Project Manager  
4/01 – 4/03

Managed teams in project activities with staff ranging up to 30 team members. Completed 2,800 hours in Project Management practices by;
- Successfully installing major projects such as a new multi-million dollar sorter, new business system implementation into Canada, Oracle 3.08/11i upgrade, Discreet Order system and the ERP Oracle solution.
- Lead international projects in England, Canada, Mexico, Puerto Rico, and the Virgin Islands working with diverse cultures and business practices to achieve corporate goals.
- Introduced new processes of Project Management PMI and Software development guidelines (SDLC) as a member of the SEPG committee, ensuring adherence to methodology standards.
- Managed teams in requirement gathering, development, validation and testing, implementation and deployment.
- Awarded the "Caught in the Act of Excellence". Awarded twice for strategic project installations
- Demonstrated practices in estimating, budget, and financial tracking of projects.
- Certified/participation in quality concepts, tracking and application of the project life cycle.

MICHIGAN NATIONAL BANK, (Lansing, MI)  
Project Office Manager  
7/99 – 3/01
Incorporated and lead the induction of a Project Office into the IT division of Michigan National operations center. Completed 1850 hours in Project Management practices managing a staff of five that supported the project office time tracking and project portfolio business by:

- Training and managing compliance of the CMM and Methodology rollout in IT
- Supporting the strategic vision of system development through holding an active position on the board of project initiatives
- Lead the introduction and training of Risk Management rollout in IT
- Implemented processes for Quality Assurance teams using the Mercury Automated tool for validation and test scripting. (customized process for Michigan)
- Presented a project management concept to students of the University of Namibia, Africa.
- Lead the planning effort and implemented the business plan model for management of IT System Solutions division
- Achieved CMM level three award by implementing business practice improvements in the project office and through out the IT divisions
- Implemented the Quality Management and assurance models to the development staff through training and process presentations
- Preformed the instruction and implementation of the time tracking tool - Primavera Team Play, retiring the Niku / ABT workbench product from production

NATIONAL CITY / FIRST OF AMERICA, (Kalamazoo, MI) 6/89 – 6/99
Project Manager II 1996-1999
Managed 12 programmers of the Special Projects Force and completed 4120 hours in Project Management practices by;

- Successfully managing multiple projects related to the year 2000 preparations.
- Lead the conversation of Desk Top applications for Lotus/Ami Pro to Microsoft Word/Excel office suites
- Preformed /planned validations in unit, system, integration, production readiness, and end user testing
- Lead the consolidation efforts of the Project Office of First of America and National City

Business Analyst 1989-1996
- Successfully implemented small project work and gained project leadership responsibilities by completing 3250 hours of Project Management practice by;
- Coordinating all project work for the Hogan systems by priority and business needs
- Leading requirements gathering and feasibility studies in the initiation and requirements phase of the project life cycle
- Performing/executing test plans and validations in unit, system, integration, production readiness, and end user testing for Hogan system
- Using and applying Project Management practices as a junior project manager and moving into a senior project manager's role.
Mr. Daily is a Senior Software Engineer with over 12 years experience specializing in certification, support and deployment of technical software applications. Self-motivated team member possessing excellent interpersonal and communication skills. Familiar with ISO 9000 and CMM methodology.

PROFESSIONAL EXPERIENCE

Intergraph Corporation, Huntsville, Alabama 1994 – Present

Senior Software Engineer, 1997 – Present
Responsible for software certification and validation of Intergraph's SmartPlant 3D application software. Develop and execute formal test plans which correspond to detailed software specifications. Document findings during testing and submit detailed program change requests and trouble reports to software developers. Retest software before deployment to verify conformance to customer's expectations.

Provide support and direct interface with customers to coordinate on-site deployment of complete operating system and application software.

Senior Software Engineer, 1994 – 1997
System implementation specialist of the U.S. Army's Digital Storage and Retrieval Data System (DSREDS) and Joint Engineering Data Management System (JEDMICS). Responsible for configuring UNIX, Windows NT and IBM PC (DOS / Windows) hardware to various software platforms. Edited vector and digital data utilizing Intergraph application software conforming to MIL-STD-1840B file standards. Provided technical support to MICOM user base in addition to eight additional Army installations.

Sverdrup Technology, Huntsville, Alabama 1989 -1993
Mechanical Designer

Utilized Intergraph's Engineering Modeling Software (IIEMS) to support NASA's Marshall Space Flight Center Science & Engineering Directorate. Design tasks ranged from intricate man-rated flight hardware to large structural steel components. Duties included performing conceptual design, three dimensional modeling, two dimensional detailing, interference checking, extracting mass properties, stress analysis, trade studies, producibility and procurement for all design tasks. All final drawings conformed to standards, DOD-D-1000B, DOD-STD-100C, MSFC-STD-555B and ANSI Y14.5M.

DJO (7/06)
NIST HANDBOOK 150 CHECKLIST
(Adapted for EAC Interim Accreditation)

Instructions to the Assessor: This checklist addresses the general accreditation criteria prescribed in NIST Handbook 150, NVLAP Procedures and General Requirements (2006 edition). The checklist items are numbered to correspond to the requirements found in Clauses 4 and 5, and Annexes A and B of the handbook. Items marked with • indicate a change in requirements from the 2001 edition of NIST Handbook 150.

Place an "X" beside each checklist item that represents a nonconformity. Place a "C" beside each item on which you are commenting for other reasons. Record the item number and written nonconformity explanation and/or comment on the comment sheet(s) at the end of the checklist. Write "OK" beside all other items you observed or verified as compliant at the laboratory.

EAC Interim Accreditation. This checklist is adapted for use in the EAC Interim Accreditation

4 Management requirements for accreditation

4.1 Organization

_OK_ 4.1.1 The laboratory or the organization of which it is part shall be an entity that can be held legally responsible.

Legal name of laboratory ownership: CIBER, Inc

Format Note: Legal name is all caps for CIBER

emann_ 4.1.2 It is the responsibility of the laboratory to carry out its testing and calibration activities in such a way as to meet the requirements of this handbook and to satisfy the needs of the customer, the regulatory authorities or organizations providing recognition.

emann_ 4.1.3 The management system shall cover work carried out in the laboratory's permanent facilities, at sites away from its permanent facilities, or in associated temporary or mobile facilities.

emann_ 4.1.4 If the laboratory is part of an organization performing activities other than testing and/or calibration, the responsibilities of key personnel in the organization that have an involvement or influence on the testing and/or calibration activities of the laboratory shall be defined in order to identify potential conflicts of interest.

NOTE 1 Where a laboratory is part of a larger organization, the organizational arrangements should be such that departments having conflicting interests, such as production, commercial marketing or financing do not adversely influence the laboratory's compliance with the requirements of this handbook.

NOTE 2 If the laboratory wishes to be recognized as a third-party laboratory, it should be able to demonstrate that it is impartial and that it and its personnel are free from any undue commercial, financial and other pressures which might influence their technical judgment. The third-party testing or calibration laboratory should not engage in any activities that may endanger the trust in its independence of judgment and integrity in relation to its testing or calibration activities.
4.1.5 The laboratory shall:

a) have managerial and technical personnel who, irrespective of other responsibilities, have the authority and resources needed to carry out their duties, including the implementation, maintenance and improvement of the management system, and to identify the occurrence of departures from the management system or from the procedures for performing tests and/or calibrations, and to initiate actions to prevent or minimize such departures (see also 5.2);

b) have arrangements to ensure that its management and personnel are free from any undue internal and external commercial, financial and other pressures and influences that may adversely affect the quality of their work;

c) have policies and procedures to ensure the protection of its customers’ confidential information and proprietary rights, including procedures for protecting the electronic storage and transmission of results;

d) have policies and procedures to avoid involvement in any activities that would diminish confidence in its competence, impartiality, judgement or operational integrity;

e) define the organization and management structure of the laboratory, its place in any parent organization, and the relationships between quality management, technical operations and support services;

f) specify the responsibility, authority and interrelationships of all personnel who manage, perform or verify work affecting the quality of the tests and/or calibrations;

g) provide adequate supervision of testing and calibration staff, including trainees, by persons familiar with methods and procedures, purpose of each test and/or calibration, and with the assessment of the test or calibration results;

h) have technical management which has overall responsibility for the technical operations and the provision of the resources needed to ensure the required quality of laboratory operations;

Name of person:  
Area of responsibility:  
Repeat as necessary:

i) appoint a member of staff as quality manager (however named) who, irrespective of other duties and responsibilities, shall have defined responsibility and authority for ensuring that the management system related to quality is implemented and followed at all times; the quality manager shall have direct access to the highest level of management at which decisions...
are made on laboratory policy or resources;

Name of person:

- Amber Wilson (see 150-22 Checklist Item)
- J. John Elslinger

appoint deputies for key managerial personnel (see Note).

Name(s):
- PM: Reilly
Name(s): Lead Test Engineer (in original list as Software Engineer)
Name(s): Com: < líder pero, fdo CV shipping on record.

- k) ensure that its personnel are aware of the relevance and importance of their activities and how they contribute to the achievement of the objectives of the management system.

As part of management review

[NOTE] Individuals may have more than one function and it may be impractical to appoint deputies for every function.

4.1.6 Top management shall ensure that the appropriate communication processes are established within the laboratory and that communication takes place regarding the effectiveness of the management system.

As part of the security commitment, the responsibility to communicate to others as well as to act upon communications.

4.2 Management system

4.2.1

a) The laboratory shall establish, implement and maintain a management system appropriate to the scope of its activities.

b) The laboratory shall document its policies, systems, programs, procedures and instructions to the extent necessary to assure the quality of the test and/or calibration results.

c) The system's documentation shall be communicated to, understood by, available to, and implemented by the appropriate personnel.

4.2.2 The laboratory's management system policies related to quality, including a quality policy statement, shall be defined in a quality manual (however named). The overall objectives shall be established, and shall be reviewed during management review.

Date of most recent quality manual: 11/2/2006

The quality policy statement shall be issued under the authority of top management. It shall include at least the following:

a) the laboratory management's commitment to good professional practice and to the quality of its testing and calibration in servicing its customers;

b) the management's statement of the laboratory's standard of service;

c) the purpose of the management system related to quality;

NIST HANDBOOK 150 CHECKLIST (REV. 2006-03-08)
d) a requirement that all personnel concerned with testing and calibration activities within the laboratory familiarize themselves with the quality documentation and implement the policies and procedures in their work; and

e) the laboratory management's commitment to comply with this handbook and to continually improve the effectiveness of the management system.

NOTE The quality policy statement should be concise and may include the requirement that tests and calibrations shall always be carried out in accordance with stated methods and customers' requirements. When the test and/or calibration laboratory is part of a larger organization, some quality policy elements may be in other documents.

4.2.3 Top management shall provide evidence of commitment to the development and implementation of the management system and to continually improve its effectiveness.

4.2.4 Top management shall communicate to the organization the importance of meeting customer requirements as well as statutory and regulatory requirements.

4.2.5 The quality manual shall include or make reference to the supporting procedures including technical procedures.

4.2.6 The roles and responsibilities of technical management and the quality manager, including their responsibility for ensuring compliance with this handbook, shall be defined in the quality manual.

4.2.7 Top management shall ensure that the integrity of the management system is maintained when changes to the management system are planned and implemented.

4.3 Document control

4.3.1 General

The laboratory shall establish and maintain procedures to control all documents that form part of its management system (internally generated or from external sources), such as regulations, standards, other normative documents, test and/or calibration methods, as well as drawings, software, specifications, instructions and manuals.

NOTE 1 In this context "document" could be policy statements, procedures, specifications, calibration tables, charts, text books, posters, notices, memoranda, software, drawings, plans, etc. These may be on various media, whether hard copy or electronic, and they may be digital, analog, photographic or written.

NOTE 2 The control of data related to testing and calibration is covered in 5.4.7. The control of records is covered in 4.13.
4.3.2 Document approval and issue

4.3.2.1

(a) All documents issued to personnel in the laboratory as part of the management system shall be reviewed and approved for use by authorized personnel prior to issue.

(b) A master list or an equivalent document control procedure identifying the current revision status and distribution of documents in the management system shall be established and be readily available to preclude the use of invalid and/or obsolete documents.

4.3.2.2 The procedure(s) adopted shall ensure that:

(a) authorized editions of appropriate documents are available at all locations where operations essential to the effective functioning of the laboratory are performed;

(b) documents are periodically reviewed and, where necessary, revised to ensure continuing suitability and compliance with applicable requirements;

(c) invalid or obsolete documents are promptly removed from all points of issue or use, or otherwise assured against unintended use;

(d) obsolete documents retained for either legal or knowledge preservation purposes are suitably marked.

4.3.2.3 Management system documents generated by the laboratory shall be uniquely identified. Such identification shall include:

(a) the date of issue and/or revision identification,

(b) page numbering,

(c) the total number of pages or a mark to signify the end of the document, and

(d) the issuing authority(ies).

4.3.3 Document changes

4.3.3.1 Changes to documents shall be reviewed and approved by the same function that performed the original review unless specifically designated otherwise. The designated personnel shall have access to pertinent background information upon which to base their review and approval.

4.3.3.2 Where practicable, the altered or new text shall be identified in the document or the appropriate attachments.
4.3.3.3

a) If the laboratory's document control system allows for the amendment of documents by hand pending the reissue of the documents, the procedures and authorities for such amendments shall be defined.

b) Amendments shall be clearly marked, initialed and dated. A revised document shall be formally reissued as soon as practicable.

4.3.3.4 Procedures shall be established to describe how changes in documents maintained in computerized systems are made and controlled.

4.4 Review of requests, tenders and contracts

4.4.1 The laboratory shall establish and maintain procedures for the review of requests, tenders and contracts. The policies and procedures for these reviews leading to a contract for testing and/or calibration shall ensure that:

a) the requirements, including the methods to be used, are adequately defined, documented and understood (see 5.4.2);

b) the laboratory has the capability and resources to meet the requirements;

c) the appropriate test and/or calibration method is selected and is capable of meeting the customers' requirements (see 5.4.2);

d) Any differences between the request or tender and the contract shall be resolved before any work commences. Each contract shall be acceptable both to the laboratory and the customer.

NOTE 1 The request, tender and contract review should be conducted in a practical and efficient manner, and the effect of financial, legal and time schedule aspects should be taken into account. For internal customers, reviews of requests, tenders and contracts can be performed in a simplified way.

NOTE 2 The review of capability should establish that the laboratory possesses the necessary physical, personnel and information resources, and that the laboratory's personnel have the skills and expertise necessary for the performance of the tests and/or calibrations in question. The review may also encompass results of earlier participation in interlaboratory comparisons or proficiency testing and/or the running of trial test or calibration programs using samples or items of known value in order to determine uncertainties of measurement, limits of detection, confidence limits, etc.

NOTE 3 A contract may be any written or oral agreement to provide a customer with testing and/or calibration services.

4.4.2 Records of reviews, including any significant changes, shall be maintained. Records shall also be maintained of pertinent discussions with a customer relating to the customer's requirements or the results of the work during the period of execution of the contract.
NOTE For review of routine and other simple tasks, the date and the identification (e.g., the initials) of the person in the laboratory responsible for carrying out the contracted work are considered adequate. For repetitive routine tasks, the review need be made only at the initial enquiry stage or on granting of the contract for ongoing routine work performed under a general agreement with the customer, provided that the customer's requirements remain unchanged. For new, complex or advanced testing and/or calibration tasks, a more comprehensive record should be maintained.

4.4.3 The review shall also cover any work that is subcontracted by the laboratory.

4.4.4 The customer shall be informed of any deviation from the contract.

4.4.5 If a contract needs to be amended after work has commenced, the same contract review process shall be repeated and any amendments shall be communicated to all affected personnel.

4.5 Subcontracting of tests and calibrations

4.5.1 When a laboratory subcontracts work whether because of unforeseen reasons (e.g., workload, need for further expertise or temporary incapacity) or on a continuing basis (e.g., through permanent subcontracting, agency or franchising arrangements), this work shall be placed with a competent subcontractor. A competent subcontractor is one that, for example, complies with this handbook for the work in question.

4.5.2 The laboratory shall advise the customer of the arrangement in writing and, when appropriate, gain the approval of the customer, preferably in writing.

4.5.3 The laboratory is responsible to the customer for the subcontractor's work, except in the case where the customer or a regulatory authority specifies which subcontractor is to be used.

4.5.4 The laboratory shall maintain a register of all subcontractors that it uses for tests and/or calibrations and a record of the evidence of compliance with this handbook for the work in question.

4.6 Purchasing services and supplies

4.6.1 The laboratory shall have a policy and procedure(s) for the selection and purchasing of services and supplies it uses that affect the quality of the tests and/or calibrations. Procedures shall exist for the purchase, reception and storage of reagents and laboratory consumable materials relevant for the tests and calibrations.

4.6.2 a) The laboratory shall ensure that purchased supplies and reagents and consumable materials that affect the quality of tests and/or calibrations are not used until they have been inspected or otherwise verified as complying with standard specifications or requirements defined in the methods for the tests and/or calibrations concerned. These services and supplies used shall comply...
with specified requirements.

b) Records of actions taken to check compliance shall be maintained.

4.6.3 Purchasing documents for items affecting the quality of laboratory output shall contain data describing the services and supplies ordered. These purchasing documents shall be reviewed and approved for technical content prior to release.

NOTE The description may include type, class, grade, precise identification, specifications, drawings, inspection instructions, other technical data including approval of test results, the quality required and the management system standard under which they were made.

4.6.4

a) The laboratory shall evaluate suppliers of critical consumables, supplies and services which affect the quality of testing and calibration, and

b) shall maintain records of these evaluations and list those approved.

4.7 Service to the customer

4.7.1 The laboratory shall be willing to cooperate with customers or their representatives in clarifying the customer's request and in monitoring the laboratory's performance in relation to the work performed, provided that the laboratory ensures confidentiality to other customers.

NOTE 1 Such cooperation may include:

a) providing the customer or the customer's representative reasonable access to relevant areas of the laboratory for the witnessing of tests and/or calibrations performed for the customer;

b) preparation, packaging, and dispatch of test and/or calibration items needed by the customer for verification purposes.

NOTE 2 Customers value the maintenance of good communication, advice and guidance in technical matters, and opinions and interpretations based on results. Communication with the customer, especially in large assignments, should be maintained throughout the work. The laboratory should inform the customer of any delays or major deviations in the performance of the tests and/or calibrations.

4.7.2 The laboratory shall seek feedback, both positive and negative, from its customers. The feedback shall be used and analyzed to improve the management system, testing and calibration activities and customer service.

NOTE Examples of the types of feedback include customer satisfaction surveys and review of test or calibration reports with customers.
4.8 Complaints

4.8.1 The laboratory shall have a policy and procedure for the resolution of complaints received from customers or other parties.

4.8.2 Records shall be maintained of all complaints and of the investigations and corrective actions taken by the laboratory (see also 4.11).

4.9 Control of nonconforming testing and/or calibration work

4.9.1 The laboratory shall have a policy and procedures that shall be implemented when any aspect of its testing and/or calibration work, or the results of this work, do not conform to its own procedures or the agreed requirements of the customer. The policy and procedures shall ensure that:

   a) the responsibilities and authorities for the management of nonconforming work are designated and actions (including halting of work and withholding of test reports and calibration certificates, as necessary) are defined and taken when nonconforming work is identified;

   b) an evaluation of the significance of the nonconforming work is made;

   c) correction is taken immediately, together with any decision about the acceptability of the nonconforming work;

   d) where necessary, the customer is notified and work is recalled;

   e) the responsibility for authorizing the resumption of work is defined.

NOTE Identification of nonconforming work or problems with the management system or with testing and/or calibration activities can occur at various places within the management system and technical operations. Examples are customer complaints, quality control, instrument calibration, checking of consumable materials, staff observations or supervision, test report and calibration certificate checking, management reviews and internal or external audits.

4.9.2 Where the evaluation indicates that the nonconforming work could recur or that there is doubt about the compliance of the laboratory’s operations with its own policies and procedures, the corrective action procedures given in 4.11 shall be promptly followed.

4.10 Improvement

The laboratory shall continually improve the effectiveness of its management system through the use of the quality policy, quality objectives, audit results, analysis of data, corrective and preventive actions and management review.
4.11 Corrective action

4.11.1 General

The laboratory shall establish a policy and a procedure and shall designate appropriate authorities for implementing corrective action when nonconforming work or departures from the policies and procedures in the management system or technical operations have been identified.

NOTE A problem with the management system or with the technical operations of the laboratory may be identified through a variety of activities, such as control of nonconforming work, internal or external audits, management reviews, feedback from customers and from staff observations.

4.11.2 Cause analysis

The procedure for corrective action shall start with an investigation to determine the root cause(s) of the problem.

NOTE Cause analysis is the key and sometimes the most difficult part in the corrective action procedure. Often the root cause is not obvious and thus a careful analysis of all potential causes of the problem is required. Potential causes could include customer requirements, the samples, sample specifications, methods and procedures, staff skills and training, consumables, or equipment and its calibration.

4.11.3 Selection and implementation of corrective actions

a) Where corrective action is needed, the laboratory shall identify potential corrective actions. It shall select and implement the action(s) most likely to eliminate the problem and to prevent recurrence.

b) Corrective actions shall be to a degree appropriate to the magnitude and the risk of the problem.

c) The laboratory shall document and implement any required changes resulting from corrective action investigations.

4.11.4 Monitoring of corrective actions

The laboratory shall monitor the results to ensure that the corrective actions taken have been effective.

4.11.5 Additional audits

Where the identification of nonconformities or departures casts doubts on the laboratory's compliance with its own policies and procedures, or on its compliance with this handbook, the laboratory shall ensure that the appropriate areas of activity are audited in accordance with 4.14 as soon as possible.

NOTE Such additional audits often follow the implementation of the corrective actions to confirm their effectiveness. An additional audit should be necessary only when a
4.12 Preventive action

4.12.1

a) Needed improvements and potential sources of nonconformities, either technical or concerning the management system, shall be identified.

b) When improvement opportunities are identified or if preventive action is required, action plans shall be developed, implemented and monitored to reduce the likelihood of the occurrence of such nonconformities and to take advantage of the opportunities for improvement.

NOTE 1 Preventive action is a proactive process to identify opportunities for improvement rather than a reaction to the identification of problems or complaints.

NOTE 2 Apart from the review of the operational procedures, the preventive action might involve analysis of data, including trend and risk analyses and proficiency-testing results.

4.13 Control of records

4.13.1 General

4.13.1.1 The laboratory shall establish and maintain procedures for identification, collection, indexing, access, filing, storage, maintenance and disposal of quality and technical records. Quality records shall include reports from internal audits and management reviews as well as records of corrective and preventive actions.

4.13.1.2 All records shall be legible and shall be stored and retained in such a way that they are readily retrievable in facilities that provide a suitable environment to prevent damage or deterioration and to prevent loss.

4.13.1.3 All records shall be held secure and in confidence.

4.13.1.4 The laboratory shall have procedures to protect and back up records stored electronically and to prevent unauthorized access to or amendment of these records.
4.13.2 Technical records

4.13.2.1

4.13.2.1.1 a) The laboratory shall retain records of original observations, derived data and sufficient information to establish an audit trail, calibration records, staff records and a copy of each test report or calibration certificate issued, for a defined period.

4.13.2.1.2 b) The records for each test or calibration shall contain sufficient information to facilitate, if possible, identification of factors affecting the uncertainty and to enable the test or calibration to be repeated under conditions as close as possible to the original.

4.13.2.1.3 c) The records shall include the identity of personnel responsible for the sampling, performance of each test and/or calibration and checking of results.

NOTE 1 In certain fields it may be impossible or impracticable to retain records of all original observations.

NOTE 2 Technical records are accumulations of data (see 5.4.7) and information which result from carrying out tests and/or calibrations and which indicate whether specified quality or process parameters are achieved. They may include forms, contracts, work sheets, work books, check sheets, work notes, control graphs, external and internal test reports and calibration certificates, customers' notes, papers and feedback.

4.13.2.2 Observations, data and calculations shall be recorded at the time they are made and shall be identifiable to the specific task.

4.13.2.3 When mistakes occur in records, each mistake shall be crossed out, not erased, made illegible or deleted, and the correct value entered alongside. All such alterations to records shall be signed or initialed by the person making the correction.

4.14 Internal audits

4.14.1 a) The laboratory shall periodically, and in accordance with a predetermined schedule and procedure, conduct internal audits of its activities to verify that its operations continue to comply with the requirements of the management system and this handbook. The internal audit program shall address all elements of the management system, including the testing and/or calibration activities. It is the responsibility of the quality manager to plan and organize audits as required by the schedule and requested by management.
LAB: CIBER 6-8 Dec 2006

Dates of most recent internal audit: 15 Nov 2005

Note to assessor: Attach a copy of the full internal audit schedule.

Such audits shall be carried out by trained and qualified personnel who are, wherever resources permit, independent of the activity to be audited.

NOTE The cycle for internal auditing should normally be completed in one year.

4.14.2 When audit findings cast doubt on the effectiveness of the operations or on the correctness or validity of the laboratory's test or calibration results, the laboratory shall take timely corrective action, and shall notify customers in writing if investigations show that the laboratory results may have been affected.

4.14.3 The area of activity audited, the audit findings and corrective actions that arise from them shall be recorded.

4.14.4 Follow-up audit activities shall verify and record the implementation and effectiveness of the corrective action taken.

4.15 Management reviews

4.15.1 In accordance with a predetermined schedule and procedure, the laboratory's top management shall periodically conduct a review of the laboratory's management system and testing and/or calibration activities to ensure their continuing suitability and effectiveness, and to introduce necessary changes or improvements.

Date(s) of most recent management review: 15 Nov 2005

What is the review schedule?  Annually.

The review shall take account of:

- the suitability of policies and procedures;
- reports from managerial and supervisory personnel;
- the outcome of recent internal audits;
- corrective and preventive actions;
- assessments by external bodies;
- the results of interlaboratory comparisons or proficiency tests;
- changes in the volume and type of the work;
- customer feedback;
- complaints;
recommendations for improvement;

other relevant factors, such as quality control activities, resources and staff training.

NOTE 1 A typical period for conducting a management review is once every 12 months.

NOTE 2 Results should feed into the laboratory planning system and should include the goals, objectives and action plans for the coming year.

NOTE 3 A management review includes consideration of related subjects at regular management meetings.

4.15.2

a) Findings from management reviews and the actions that arise from them shall be recorded.

b) The management shall ensure that those actions are carried out within an appropriate and agreed timescale.

5 Technical requirements for accreditation

5.1 General

5.1.1 Many factors determine the correctness and reliability of the tests and/or calibrations performed by a laboratory. These factors include contributions from:

i) human factors (5.2);

ii) accommodation and environmental conditions (5.3);

iii) test and calibration methods and method validation (5.4);

iv) equipment (5.5);

v) measurement traceability (5.6 and Annex B);

vi) sampling (5.7);

vii) the handling of test and calibration items (5.8).

5.1.2 The extent to which the factors contribute to the total uncertainty of measurement differs considerably between (types of) tests and between (types of) calibrations. The laboratory shall take account of these factors in developing test and calibration methods and procedures, in the training and qualification of personnel, and in the selection and calibration of the equipment it uses.
5.2 Personnel

5.2.1

a) The laboratory management shall ensure the competence of all who operate specific equipment, perform tests and/or calibrations, evaluate results, and sign test reports and calibration certificates.

b) When using staff who are undergoing training, appropriate supervision shall be provided. Personnel performing specific tasks shall be qualified on the basis of appropriate education, training, experience and/or demonstrated skills, as required.

NOTE 1 In some technical areas (e.g., nondestructive testing) it may be required that the personnel performing certain tasks hold personnel certification. The laboratory is responsible for fulfilling specified personnel certification requirements. The requirements for personnel certification might be regulatory, included in the standards for the specific technical field, or required by the customer.

NOTE 2 The personnel responsible for the opinions and interpretation included in test reports should, in addition to the appropriate qualifications, training, experience and satisfactory knowledge of the testing carried out, also have:

i) relevant knowledge of the technology used for the manufacturing of the items, materials, products, etc. tested, or the way they are used or intended to be used, and of the defects or degradations which may occur during or in service;

ii) knowledge of the general requirements expressed in the legislation and standards; and

iii) an understanding of the significance of deviations found with regard to the normal use of the items, materials, products, etc. concerned.

5.2.2

a) The management of the laboratory shall formulate the goals with respect to the education, training and skills of the laboratory personnel.

b) The laboratory shall have a policy and procedures for identifying training needs and providing training of personnel.

c) The training program shall be relevant to the present and anticipated tasks of the laboratory.

d) The effectiveness of the training actions taken shall be evaluated.

5.2.3

a) The laboratory shall use personnel who are employed by, or under contract to, the laboratory.
5.2.4 The laboratory shall maintain current job descriptions for managerial, technical and key support personnel involved in tests and/or calibrations.

NOTE: 5.2.4 Job descriptions can be defined in many ways. As a minimum, the following should be defined:

i) the responsibilities with respect to performing tests and/or calibrations;
ii) the responsibilities with respect to the planning of tests and/or calibrations and evaluation of results;
iii) the responsibilities for reporting opinions and interpretations;
iv) the responsibilities with respect to method modification and development and validation of new methods;
v) expertise and experience required;
v) qualifications and training programs;
vi) managerial duties.

5.2.5

a) The management shall authorize specific personnel to perform particular types of sampling, test and/or calibration, to issue test reports and calibration certificates, to give opinions and interpretations and to operate particular types of equipment.

b) The laboratory shall maintain records of the relevant authorization(s), competence, educational and professional qualifications, training, skills and experience of all technical personnel, including contracted personnel.

c) This information shall be readily available and shall include the date on which authorization and/or competence is confirmed.

NVLAP Note: This requirement also applies to Approved Signatories (see 1.5.2).

5.3 Accommodation and environmental conditions

5.3.1

a) Laboratory facilities for testing and/or calibration, including but not limited to energy sources, lighting and environmental conditions, shall be
such as to facilitate correct performance of the tests and/or calibrations.

The laboratory shall ensure that the environmental conditions do not invalidate the results or adversely affect the required quality of any measurement. Particular care shall be taken when sampling and tests and/or calibrations are undertaken at sites other than a permanent laboratory facility.

The technical requirements for accommodation and environmental conditions that can affect the results of tests and calibrations shall be documented.

5.3.2

The laboratory shall monitor, control and record environmental conditions as required by the relevant specifications, methods and procedures or where they influence the quality of the results. Due attention shall be paid, for example, to biological sterility, dust, electromagnetic disturbances, radiation, humidity, electrical supply, temperature, and sound and vibration levels, as appropriate to the technical activities concerned.

5.3.3

Tests and calibrations shall be stopped when the environmental conditions jeopardize the results of the tests and/or calibrations.

5.3.4

Access to and use of areas affecting the quality of the tests and/or calibrations shall be controlled. The laboratory shall determine the extent of control based on its particular circumstances.

5.3.5

Measures shall be taken to ensure good housekeeping in the laboratory. Special procedures shall be prepared where necessary.

5.4 Test and calibration methods and method validation

5.4.1 General

The laboratory shall use appropriate methods and procedures for all tests and/or calibrations within its scope. These include sampling, handling, storage, and preparation of items to be tested and/or calibrated, and, where appropriate, an estimation of the measurement uncertainty as well as statistical techniques for analysis of test and/or calibration data.

The laboratory shall have instructions on the use and operation of all relevant equipment, and on the handling and preparation of items for testing and/or calibration, or both, where the absence of such instructions could jeopardize the results of tests and/or calibrations.
c) All instructions, standards, manuals and reference data relevant to the work of the laboratory shall be kept up to date and shall be made readily available to personnel (see 4.3).

NOTE: International, regional or national standards or other recognized specifications that contain sufficient and concise information on how to perform the tests and/or calibrations do not need to be supplemented or rewritten as internal procedures if these standards are written in a way that they can be used as published by the operating staff in a laboratory. It may be necessary to provide additional documentation for optional steps in the method or additional details.

5.4.2 Selection of methods

a) The laboratory shall use test and/or calibration methods, including methods for sampling, which meet the needs of the customer and which are appropriate for the tests and/or calibrations it undertakes. Methods published in international, regional or national standards shall preferably be used. The laboratory shall ensure that it uses the latest valid edition of a standard unless it is not appropriate or possible to do so. If necessary, the standard shall be supplemented with additional details to ensure consistent application.

b) When the customer does not specify the method to be used, the laboratory shall select appropriate methods that have been published either in international, regional or national standards, or by reputable technical organizations, or in relevant scientific texts or journals, or as specified by the manufacturer of the equipment. Laboratory-developed methods or methods adopted by the laboratory may also be used if they are appropriate for the intended use and if they are validated.

c) The customer shall be informed as to the method chosen.

Tm 2.1.1 Determine test method

Tm 2.1.1.2 Additional test methods are not needed to address CMC or RTB. Include in determining method.

Tm 2.1.1.3 The method adopted shall be confirmed.

Tm 2.1.1.4 The laboratory shall confirm that it can properly operate standard methods before introducing the tests or calibrations. If the standard method changes, the confirmation shall be repeated.

Tm 2.1.1.5 The laboratory shall inform the customer when the method proposed by the customer is considered to be inappropriate or out of date.

5.4.3 Laboratory-developed methods

Tm 2.1.2 The introduction of test and calibration methods developed by the laboratory for its own use shall be a planned activity and shall be assigned to qualified personnel equipped with adequate resources.

Tm 2.1.2.1 Plans shall be updated as development proceeds and effective communication amongst all personnel involved shall be ensured.

NIST HANDBOOK 150 CHECKLIST (REV. 2006-03-08)
5.4.4 Non-standard methods

a) When it is necessary to use methods not covered by standard methods, these shall be subject to agreement with the customer and shall include a clear specification of the customer’s requirements and the purpose of the test and/or calibration.

b) The method developed shall have been validated appropriately before use.

NOTE: For new test and/or calibration methods, procedures should be developed prior to the tests and/or calibrations being performed and should contain at least the following information:

a) appropriate identification;

b) scope;

c) description of the type of item to be tested or calibrated;

d) parameters or quantities and ranges to be determined;

e) apparatus and equipment, including technical performance requirements;

f) reference standards and reference materials required;

g) environmental conditions required and any stabilization period needed;

h) description of the procedure, including:

i) affixing of identification marks, handling, transporting, storing and preparation of items;

ii) checks to be made before the work is started;

iii) checks that the equipment is working properly and, where required, calibration and adjustment of the equipment before each use;

iv) the method of recording the observations and results, v) any safety measures to be observed;

i) criteria and/or requirements for approval/rejection;

j) data to be recorded and method of analysis and presentation;

k) the uncertainty or the procedure for estimating uncertainty.

5.4.5 Validation of methods

5.4.5.1 Validation is the confirmation by examination and the provision of objective evidence that the particular requirements for a specific
intended use are fulfilled.

5.4.5.2

a) The laboratory shall validate non-standard methods, laboratory-designed/developed methods, standard methods used outside their intended scope, and amplifications and modifications of standard methods to confirm that the methods are fit for the intended use. The validation shall be as extensive as is necessary to meet the needs of the given application or field of application.

b) The laboratory shall record the results obtained, the procedure used for the validation, and a statement as to whether the method is fit for the intended use.

NOTE 1 Validation may include procedures for sampling, handling and transportation.

NOTE 2 The techniques used for the determination of the performance of a method should be one of, or a combination of, the following:

i) calibration using reference standards or reference materials;

ii) comparison of results achieved with other methods;

iii) interlaboratory comparisons;

iv) systematic assessment of the factors influencing the result;

v) assessment of the uncertainty of the results based on scientific understanding of the theoretical principles of the method and practical experience.

NOTE 3 When some changes are made in the validated non-standard methods, the influence of such changes should be documented and, if appropriate, a new validation should be carried out.

5.4.5.3 The range and accuracy of the values obtainable from validated methods (e.g., the uncertainty of the results, detection limit, selectivity of the method, linearity, limit of repeatability and/or reproducibility, robustness against external influences and/or cross-sensitivity against interference from the matrix of the sample/test object), as assessed for the intended use, shall be relevant to the customers' needs.

NOTE 1 Validation includes specification of the requirements, determination of the characteristics of the methods, a check that the requirements can be fulfilled by using the method, and a statement on the validity.

NOTE 2 As method-development proceeds, regular review should be carried out to verify that the needs of the customer are still being fulfilled. Any change in requirements requiring modifications to the development plan should be approved and authorized.

NOTE 3 Validation is always a balance between costs, risks and technical possibilities. There are many cases in which the range and uncertainty of the values (e.g., accuracy, detection limit, selectivity, linearity, repeatability, reproducibility, robustness and cross-sensitivity) can only be given in a simplified way due to lack of information.
5.4.6 Estimation of uncertainty of measurement

5.4.6.1 A calibration laboratory, or a testing laboratory performing its own calibrations, shall have and shall apply a procedure to estimate the uncertainty of measurement for all calibrations and types of calibrations.

5.4.6.2 Testing laboratories shall have and shall apply procedures for estimating uncertainty of measurement. In certain cases the nature of the test method may preclude rigorous, metrologically and statistically valid, calculation of uncertainty of measurement. In these cases the laboratory shall at least attempt to identify all the components of uncertainty and make a reasonable estimation, and shall ensure that the form of reporting of the result does not give a wrong impression of the uncertainty. Reasonable estimation shall be based on knowledge of the performance of the method and on the measurement scope and shall make use of, for example, previous experience and validation data.

NOTE 1 The degree of rigor needed in an estimation of uncertainty of measurement depends on factors such as:

i) the requirements of the test method;

ii) the requirements of the customer;

iii) the existence of narrow limits on which decisions on conformity to a specification are based.

NOTE 2 In those cases where a well recognized test method specifies limits to the values of the major sources of uncertainty of measurement and specifies the form of presentation of calculated results, the laboratory is considered to have satisfied this clause by following the test method and reporting instructions (see 5.10).

5.4.6.3 When estimating the uncertainty of measurement, all uncertainty components which are of importance in the given situation shall be taken into account using appropriate methods of analysis.

NOTE 1 Sources contributing to the uncertainty include, but are not necessarily limited to, the reference standards and reference materials used, methods and equipment used, environmental conditions, properties and condition of the item being tested or calibrated, and the operator.

NOTE 2 The predicted long-term behavior of the tested and/or calibrated item is not normally taken into account when estimating the measurement uncertainty.

NOTE 3 For further information, see ISO 5725 and the Guide to the Expression of Uncertainty in Measurement (see 1.4).

5.4.7 Control of data

5.4.7.1 Calculations and data transfers shall be subject to appropriate checks in a
systematic manner.

5.4.7.2 When computers or automated equipment are used for the acquisition, processing, recording, reporting, storage or retrieval of test or calibration data, the laboratory shall ensure that:

a) computer software developed by the user is documented in sufficient detail and is suitably validated as being adequate for use;

b) procedures are established and implemented for protecting the data; such procedures shall include, but not be limited to, integrity and confidentiality of data entry or collection, data storage, data transmission and data processing;

c) computers and automated equipment are maintained to ensure proper functioning and are provided with the environmental and operating conditions necessary to maintain the integrity of test and calibration data.

NOTE Commercial off-the-shelf software (e.g., word processing, database and statistical programs) in general use within their designed application range may be considered to be sufficiently validated. However, laboratory software configuration/modifications should be validated as in 5.4.7.2 a).

5.5 Equipment

5.5.1

a) The laboratory shall be furnished with all items of sampling, measurement and test equipment required for the correct performance of the tests and/or calibrations (including sampling, preparation of test and/or calibration items, processing and analysis of test and/or calibration data).

b) In those cases where the laboratory needs to use equipment outside its permanent control, it shall ensure that the requirements of this handbook are met.

5.5.2

a) Equipment and its software used for testing, calibration and sampling shall be capable of achieving the accuracy required and shall comply with specifications relevant to the tests and/or calibrations concerned.

b) Calibration programs shall be established for key quantities or values of the instruments where these properties have a significant effect on the results.

c) Before being placed into service, equipment (including that used for sampling) shall be calibrated or checked to establish that it meets the laboratory's specification requirements and complies with the relevant standard specifications. It shall be checked and/or calibrated before use (see 5.6).
5.5.3 Equipment shall be operated by authorized personnel. Up-to-date instructions on the use and maintenance of equipment (including any relevant manuals provided by the manufacturer of the equipment) shall be readily available for use by the appropriate laboratory personnel.

5.5.4 Each item of equipment and its software used for testing and calibration significant to the result shall, when practicable, be uniquely identified.

5.5.5 Records shall be maintained of each item of equipment and its software significant to the tests and/or calibrations performed. The records shall include at least the following:
   a) the identity of the item of equipment and its software;
   b) the manufacturer's name, type identification, and serial number or other unique identification;
   c) checks that equipment complies with the specification (see 5.5.2);
   d) the current location, where appropriate;
   e) the manufacturer's instructions, if available, or reference to their location;
   f) dates, results and copies of reports and certificates of all calibrations, adjustments, acceptance criteria, and the due date of next calibration;
   g) the maintenance plan, where appropriate, and maintenance carried out to date;
   h) any damage, malfunction, modification or repair to the equipment.

5.5.6 The laboratory shall have procedures for safe handling, transport, storage, use and planned maintenance of measuring equipment to ensure proper functioning and in order to prevent contamination or deterioration. Additional procedures may be necessary when measuring equipment is used outside the permanent laboratory for tests, calibrations or sampling.

5.5.7 a) Equipment that has been subjected to overloading or mishandling, gives suspect results, or has been shown to be defective or outside specified limits, shall be taken out of service. It shall be isolated to prevent its use or clearly labeled or marked as being out of service until it has been repaired and shown by calibration or test to perform correctly.

b) The laboratory shall examine the effect of the defect or departure from specified limits on previous tests and/or calibrations and shall institute the "Control of nonconforming work" procedure (see 4.9).
5.5.8 Whenever practicable, all equipment under the control of the laboratory and requiring calibration shall be labeled, coded or otherwise identified to indicate the status of calibration, including the date when last calibrated and the date or expiration criteria when recalibration is due.

5.5.9 When, for whatever reason, equipment goes outside the direct control of the laboratory, the laboratory shall ensure that the function and calibration status of the equipment are checked and shown to be satisfactory before the equipment is returned to service.

5.5.10 When intermediate checks are needed to maintain confidence in the calibration status of the equipment, these checks shall be carried out according to a defined procedure.

5.5.11 Where calibrations give rise to a set of correction factors, the laboratory shall have procedures to ensure that copies (e.g., in computer software) are correctly updated.

5.5.12 Test and calibration equipment, including both hardware and software, shall be safeguarded from adjustments which would invalidate the test and/or calibration results.

NOTE: Such a program should include a system for selecting, using, calibrating, checking, controlling and maintaining measurement standards, reference materials used as measurement standards, and measuring and test equipment used to perform tests and calibrations.

NVLAP Note: See Annex B for requirements for the implementation of traceability policy in NVLAP-accredited laboratories.

5.6 Measurement traceability

5.6.1 General

a) All equipment used for tests and/or calibrations, including equipment for subsidiary measurements (e.g., for environmental conditions) having a significant effect on the accuracy or validity of the result of the test, calibration or sampling shall be calibrated before being put into service.

b) The laboratory shall have an established program and procedure for the calibration of its equipment.

For calibration laboratories, the program for calibration of equipment shall be designed and operated so as to ensure that calibrations and measurements made by the laboratory are traceable to the International System of Units (SI) (Système international d'unités).
A calibration laboratory establishes traceability of its own measurement standards and measuring instruments to the SI by means of an unbroken chain of calibrations or comparisons linking them to relevant primary standards of the SI units of measurement. The link to SI units may be achieved by reference to national measurement standards. National measurement standards may be primary standards, which are primary realizations of the SI units or agreed representations of SI units based on fundamental physical constants, or they may be secondary standards which are standards calibrated by another national metrology institute.

b) When using external calibration services, traceability of measurement shall be assured by the use of calibration services from laboratories that can demonstrate competence, measurement capability and traceability.

c) The calibration certificates issued by these laboratories shall contain the measurement results, including the measurement uncertainty and/or a statement of compliance with an identified metrological specification (see also 5.10.4.2).

NOTE 1 Calibration laboratories fulfilling the requirements of this handbook are considered to be competent. A calibration certificate bearing an accreditation body logo from a calibration laboratory accredited to this handbook, for the calibration concerned, is sufficient evidence of traceability of the calibration data reported.

NOTE 2 Traceability to SI units of measurement may be achieved by reference to an appropriate primary standard (see VIM:1993, 6.4) or by reference to a natural constant, the value of which in terms of the relevant SI unit is known and recommended by the General Conference of Weights and Measures (CGPM) and the International Committee for Weights and Measures (CIPM).

NOTE 3 Calibration laboratories that maintain their own primary standard or representation of SI units based on fundamental physical constants can claim traceability to the SI system only after these standards have been compared, directly or indirectly, with other similar standards of a national metrology institute.

NOTE 4 The term "identified metrological specification" means that it must be clear from the calibration certificate which specification the measurements have been compared with, by including the specification or by giving an unambiguous reference to the specification.

NOTE 5 When the terms "international standard" or "national standard" are used in connection with traceability, it is assumed that these standards fulfill the properties of primary standards for the realization of SI units.

NOTE 6 Traceability to national measurement standards does not necessarily require the use of the national metrology institute of the country in which the laboratory is located.

NOTE 7 If a calibration laboratory wishes or needs to obtain traceability from a national metrology institute other than in its own country, this laboratory should select a national metrology institute that actively participates in the activities of BIPM either directly or through regional groups.

NOTE 8 The unbroken chain of calibrations or comparisons may be achieved in several steps carried out by different laboratories that can demonstrate traceability.
5.6.2.1.2 There are certain calibrations that currently cannot be strictly made in SI units. In these cases, calibration shall provide confidence in measurements by establishing traceability to appropriate measurement standards such as:

a) the use of certified reference materials provided by a competent supplier to give a reliable physical or chemical characterization of a material;

b) the use of specified methods and/or consensus standards that are clearly described and agreed by all parties concerned.

c) Participation in a suitable program of interlaboratory comparisons is required where possible.

5.6.2.2 Testing

5.6.2.2.1 For testing laboratories, the requirements given in 5.6.2.1 apply for measuring and test equipment with measuring functions used, unless it has been established that the associated contribution from the calibration contributes little to the total uncertainty of the test result. When this situation arises, the laboratory shall ensure that the equipment used can provide the uncertainty of measurement needed.

NOTE The extent to which the requirements in 5.6.2.1 should be followed depends on the relative contribution of the calibration uncertainty to the total uncertainty. If calibration is the dominant factor, the requirements should be strictly followed.

5.6.2.2.2 Where traceability of measurements to SI units is not possible and/or not relevant, the same requirements for traceability to, for example, certified reference materials, agreed methods and/or consensus standards, are required as for calibration laboratories (see 5.6.2.1.2).

5.6.3 Reference standards and reference materials

5.6.3.1 Reference standards

a) The laboratory shall have a program and procedure for the calibration of its reference standards.

b) Reference standards shall be calibrated by a body that can provide traceability as described in 5.6.2.1.

c) Such reference standards of measurement held by the laboratory shall be used for calibration only and for no other purpose, unless it can be shown that their performance as reference standards would not be invalidated. Reference standards shall be calibrated before and after any adjustment.

5.6.3.2 Reference materials

Reference materials shall, where possible, be traceable to SI units of measurement, or to certified reference materials. Internal reference materials shall be checked as far
as is technically and economically practicable.

5.6.3.3 Intermediate checks

Checks needed to maintain confidence in the calibration status of reference, primary, transfer or working standards and reference materials shall be carried out according to defined procedures and schedules.

5.6.3.4 Transport and storage

The laboratory shall have procedures for safe handling, transport, storage and use of reference standards and reference materials in order to prevent contamination or deterioration and in order to protect their integrity.

NOTE Additional procedures may be necessary when reference standards and reference materials are used outside the permanent laboratory for tests, calibrations or sampling.

5.7 Sampling

5.7.1

a) The laboratory shall have a sampling plan and procedures for sampling when it carries out sampling of substances, materials or products for subsequent testing or calibration.

b) The sampling plan as well as the sampling procedure shall be available at the location where sampling is undertaken. Sampling plans shall, whenever reasonable, be based on appropriate statistical methods. The sampling process shall address the factors to be controlled to ensure the validity of the test and calibration results.

NOTE 1 Sampling is a defined procedure whereby a part of a substance, material or product is taken to provide for testing or calibration of a representative sample of the whole. Sampling may also be required by the appropriate specification for which the substance, material or product is to be tested or calibrated. In certain cases (e.g., forensic analysis), the sample may not be representative but is determined by availability.

NOTE 2 Sampling procedures should describe the selection, sampling plan, withdrawal and preparation of a sample or samples from a substance, material or product to yield the required information.

5.7.2 Where the customer requires deviations, additions or exclusions from the documented sampling procedure, these shall be recorded in detail with the appropriate sampling data and shall be included in all documents containing test and/or calibration results, and shall be communicated to the appropriate personnel.

5.7.3 The laboratory shall have procedures for recording relevant data and operations relating to sampling that forms part of the testing or calibration that is undertaken. These records shall include the sampling procedure used, the identification of the sampler, environmental conditions (if relevant) and diagrams or other equivalent means to identify the sampling location as necessary and, if appropriate, the statistics the sampling procedures are
5.8 Handling of test and calibration items

5.8.1 The laboratory shall have procedures for the transportation, receipt, handling, protection, storage, retention and/or disposal of test and/or calibration items, including all provisions necessary to protect the integrity of the test or calibration item, and to protect the interests of the laboratory and the customer.

5.8.2 a) The laboratory shall have a system for identifying test and/or calibration items.

b) The identification shall be retained throughout the life of the item in the laboratory.

c) The system shall be designed and operated so as to ensure that items cannot be confused physically or when referred to in records or other documents.

d) The system shall, if appropriate, accommodate a sub-division of groups of items and the transfer of items within and from the laboratory.

5.8.3 a) Upon receipt of the test or calibration item, abnormalities or departures from normal or specified conditions, as described in the test or calibration method, shall be recorded.

b) When there is doubt as to the suitability of an item for test or calibration, or when an item does not conform to the description provided, or the test or calibration required is not specified in sufficient detail, the laboratory shall consult the customer for further instructions before proceeding and shall record the discussion.

5.8.4 a) The laboratory shall have procedures and appropriate facilities for avoiding deterioration, loss or damage to the test or calibration item during storage, handling and preparation.

b) Handling instructions provided with the item shall be followed.

c) When items have to be stored or conditioned under specified environmental conditions, these conditions shall be maintained, monitored and recorded.

d) Where a test or calibration item or a portion of an item is to be held secure, the laboratory shall have arrangements for storage and security that protect the condition and integrity of the secured items or portions concerned.
NOTE 1 Where test items are to be returned into service after testing, special care is required to ensure that they are not damaged or injured during the handling, testing or storing/waiting processes.

NOTE 2 A sampling procedure and information on storage and transport of samples, including information on sampling factors influencing the test or calibration result, should be provided to those responsible for taking and transporting the samples.

NOTE 3 Reasons for keeping a test or calibration item secure can be for reasons of record, safety or value, or to enable complementary tests and/or calibrations to be performed later.

5.9 Assuring the quality of test and calibration results

5.9.1

a) The laboratory shall have quality control procedures for monitoring the validity of tests and calibrations undertaken.

b) The resulting data shall be recorded in such a way that trends are detectable and, where practicable, statistical techniques shall be applied to the reviewing of the results.

c) This monitoring shall be planned and reviewed and may include, but not be limited to, the following:

   1) regular use of certified reference materials and/or internal quality control using secondary reference materials;

   2) participation in interlaboratory comparison or proficiency-testing programs;

   3) replicate tests or calibrations using the same or different methods;

   4) retesting or recalibration of retained items;

   5) correlation of results for different characteristics of an item.

NOTE The selected methods should be appropriate for the type and volume of the work undertaken.

5.9.2 Quality control data shall be analyzed and, where they are found to be outside pre-defined criteria, planned action shall be taken to correct the problem and to prevent incorrect results from being reported.

5.10 Reporting the results

5.10.1 General

a) The results of each test, calibration, or series of tests or calibrations carried out by the laboratory shall be reported accurately, clearly, unambiguously and objectively, and in accordance with any specific
instructions in the test or calibration methods.

b) The results shall be reported, usually in a test report or a calibration certificate (see Note 1), and shall include all the information requested by the customer and necessary for the interpretation of the test or calibration results and all information required by the method used. This information is normally that required by 5.10.2, and 5.10.3 or 5.10.4.

c) In the case of tests or calibrations performed for internal customers, or in the case of a written agreement with the customer, the results may be reported in a simplified way. Any information listed in 5.10.2 to 5.10.4 which is not reported to the customer shall be readily available in the laboratory which carried out the tests and/or calibrations.

NOTE 1 Test reports and calibration certificates are sometimes called test certificates and calibration reports, respectively.

NOTE 2 The test reports or calibration certificates may be issued as hard copy or by electronic data transfer provided that the requirements of this handbook are met.

5.10.2 Test reports and calibration certificates

Each test report or calibration certificate shall include at least the following information, unless the laboratory has valid reasons for not doing so:

a) a title (e.g., "Test Report" or "Calibration Certificate");

b) the name and address of the laboratory, and the location where the tests and/or calibrations were carried out, if different from the address of the laboratory;

c) unique identification of the test report or calibration certificate (such as the serial number), and on each page an identification in order to ensure that the page is recognized as a part of the test report or calibration certificate, and a clear identification of the end of the test report or calibration certificate;

d) the name and address of the customer;

e) identification of the method used;

f) a description of, the condition of, and unambiguous identification of the item(s) tested or calibrated;

g) the date of receipt of the test or calibration item(s) where this is critical to the validity and application of the results, and the date(s) of performance of the test or calibration;

h) reference to the sampling plan and procedures used by the laboratory or other bodies where these are relevant to the validity or application of the results;

i) the test or calibration results with, where appropriate, the units of
measurement;

j) the name(s), function(s) and signature(s) or equivalent identification of person(s) authorizing the test report or calibration certificate;

k) where relevant, a statement to the effect that the results relate only to the items tested or calibrated.

NVLAP Note: NVLAP defines the person(s) who authorizes the test report or calibration certificate as the Approved Signatory (see 1.5.2).

NOTE 1 Hard copies of test reports and calibration certificates should also include the page number and total number of pages.

NOTE 2 It is recommended that laboratories include a statement specifying that the test report or calibration certificate shall not be reproduced except in full, without written approval of the laboratory.

5.10.3 Test reports

5.10.3.1 In addition to the requirements listed in 5.10.2, test reports shall, where necessary for the interpretation of the test results, include the following:

a) deviations from, additions to, or exclusions from the test method, and information on specific test conditions, such as environmental conditions;

b) where relevant, a statement of compliance/non-compliance with requirements and/or specifications;

c) where applicable, a statement on the estimated uncertainty of measurement; information on uncertainty is needed in test reports when it is relevant to the validity or application of the test results, when a customer's instruction so requires, or when the uncertainty affects compliance to a specification limit;

d) where appropriate and needed, opinions and interpretations (see 5.10.5);

e) additional information which may be required by specific methods, customers or groups of customers.

5.10.3.2 In addition to the requirements listed in 5.10.2 and 5.10.3.1, test reports containing the results of sampling shall include the following, where necessary for the interpretation of test results:

a) the date of sampling;

b) unambiguous identification of the substance, material or product sampled (including the name of the manufacturer, the model or type of designation and serial numbers as appropriate);

c) the location of sampling, including any diagrams, sketches or photographs;

d) a reference to the sampling plan and procedures used;
e) details of any environmental conditions during sampling that may affect the interpretation of the test results;

f) any standard or other specification for the sampling method or procedure, and deviations, additions to or exclusions from the specification concerned.

5.10.4 Calibration certificates

5.10.4.1 In addition to the requirements listed in 5.10.2, calibration certificates shall include the following, where necessary for the interpretation of calibration results:

a) the conditions (e.g., environmental) under which the calibrations were made that have an influence on the measurement results;

b) the uncertainty of measurement and/or a statement of compliance with an identified metrological specification or clauses thereof;

c) evidence that the measurements are traceable (see Note 2 in 5.6.2.1.1).

5.10.4.2

a) The calibration certificate shall relate only to quantities and the results of functional tests.

b) If a statement of compliance with a specification is made, this shall identify which clauses of the specification are met or not met.

c) When a statement of compliance with a specification is made omitting the measurement results and associated uncertainties, the laboratory shall record those results and maintain them for possible future reference.

d) When statements of compliance are made, the uncertainty of measurement shall be taken into account.

5.10.4.3 When an instrument for calibration has been adjusted or repaired, the calibration results before and after adjustment or repair, if available, shall be reported.

5.10.4.4 A calibration certificate (or calibration label) shall not contain any recommendation on the calibration interval except where this has been agreed with the customer. This requirement may be superseded by legal regulations.

5.10.5 Opinions and interpretations

When opinions and interpretations are included, the laboratory shall document the basis upon which the opinions and interpretations have been made. Opinions and interpretations shall be clearly marked as such in a test report.

NOTE 1 Opinions and interpretations should not be confused with inspections and product certifications as intended in ISO/IEC 17020 and ISO/IEC Guide 65.
NOTE 2 Opinions and interpretations included in a test report may comprise, but not be limited to, the following:

i) an opinion on the statement of compliance/noncompliance of the results with requirements;

ii) fulfillment of contractual requirements;

iii) recommendations on how to use the results;

iv) guidance to be used for improvements.

NOTE 3 In many cases it might be appropriate to communicate the opinions and interpretations by direct dialogue with the customer. Such dialogue should be written down.

5.10.6 Testing and calibration results obtained from subcontractors

a) When the test report contains results of tests performed by subcontractors, these results shall be clearly identified.

b) The subcontractor shall report the results in writing or electronically.

c) When a calibration has been subcontracted, the laboratory performing the work shall issue the calibration certificate to the contracting laboratory.

5.10.7 Electronic transmission of results

In the case of transmission of test or calibration results by telephone, telex, facsimile or other electronic or electromagnetic means, the requirements of this handbook shall be met (see also 5.4.7).

5.10.8 Format of reports and certificates

The format shall be designed to accommodate each type of test or calibration carried out and to minimize the possibility of misunderstanding or misuse.

NOTE 1 Attention should be given to the layout of the test report or calibration certificate, especially with regard to the presentation of the test or calibration data and ease of assimilation by the reader.

NOTE 2 The headings should be standardized as far as possible.

5.10.9 Amendments to test reports and calibration certificates

a) Material amendments to a test report or calibration certificate after issue shall be made only in the form of a further document, or data transfer, which includes the statement.

b) Such amendments shall meet all the requirements of this handbook.
When it is necessary to issue a complete new test report or calibration certificate, this shall be uniquely identified and shall contain a reference to the original that it replaces.
Annex A (normative)

Referencing NVLAP accreditation

A.1 Conditions for referencing the NVLAP term, logo, and symbol

The term NVLAP and the NVLAP logo are registered marks of the Federal Government, which retains exclusive rights to control the use thereof. Permission to use the term and symbol (NVLAP logo with approved caption) is granted to NVLAP accredited laboratories for the limited purpose of announcing their accredited status, and for use on reports that describe only testing or calibration within the scope of accreditation. NVLAP reserves the right to control the quality of the use of the NVLAP term, logo, and symbol.

In order to become and remain accredited, laboratories shall comply with the following conditions pertaining to the use of the term NVLAP, the NVLAP logo, and NVLAP symbol. Failure to comply with these conditions may result in suspension or revocation of a laboratory's accreditation.

a) An applicant laboratory that has not yet achieved accreditation may make reference to its applicant status. If the NVLAP Lab Code is used, it shall be accompanied by a statement accurately reflecting the laboratory's status. An applicant laboratory shall not use the NVLAP term, logo or symbol in a manner that implies accreditation.

b) The laboratory shall have a policy and procedure for controlling the use of the term NVLAP and the NVLAP symbol.

c) The term and/or symbol shall not be used in a manner that brings NVLAP into disrepute or misrepresents a laboratory's scope of accreditation or accredited status.

d) When the term NVLAP is used to reference a laboratory's accredited status, it shall be accompanied by the NVLAP Lab Code.

e) When the NVLAP symbol used to reference a laboratory's accredited status, it shall be comprised of the NVLAP logo and the NVLAP Lab Code in an approved caption. The caption shall appear below and in close proximity to the logo. The following captions have been approved by NVLAP:

- "For the scope of accreditation under NVLAP Lab Code 000000-0"
- "NVLAP Lab Code 000000-0".

See Annex A of NIST Handbook 150 for examples of the logo with captions.
When the NVLAP symbol is used, the form of the NVLAP logo must conform to the following guidelines:

1) The logo shall stand by itself and shall not be combined with any other logo, symbol, or graphic.

2) The aspect ratio (width to height) shall be 2.25 to 1.

3) The logo and caption shall be of a size that allows the caption to be easily read. The size of the caption shall not exceed the size of the logo itself.

4) The logo shall appear in black, blue, or other color approved by NVLAP, and may be filled or unfilled. In the case of a filled logo, the same color shall be used for the outline and the fill.

The name of at least one Approved Signatory shall appear on a test or calibration report that displays the NVLAP symbol or references NVLAP accreditation. A computer-generated report may have the Approved Signatory's name printed along with the test or calibration results, as long as there is evidence that there is a system in place to ensure that the report cannot be generated without the review and consent of the Approved Signatory. There may be legal or contractual requirements for original signatures to appear on the report.

When the term and/or symbol are used on test or calibration reports, such use shall be limited to reports in which some or all of the data are from tests or calibrations performed by the laboratory under its scope of accreditation.

A test or calibration report that contains both data covered by the accreditation and data not covered by the accreditation shall clearly identify the data that are not covered by the accreditation.

The report must prominently display the following statement at the beginning of the report: "This report contains data that are not covered by the NVLAP accreditation."

When the term and/or symbol are used on test or calibration reports that also include work done by subcontracted laboratories, such use shall be limited to reports in which some or all of the data are from tests or calibrations performed by the laboratory under its scope of accreditation.

A test or calibration report that contains both data covered by the accreditation and data provided by a subcontractor shall clearly identify the data that were provided by the subcontracted laboratory.
3) The report must prominently display the following statement at the beginning of the report: "This report contains data that were produced under subcontract by Laboratory X." If the subcontracted laboratory is accredited by NVLAP, then its Lab Code should also be stated.

4) If the subcontracted laboratory is accredited by a body other than NVLAP, then the name of the accreditation body and the laboratory's number or other unique identifier should also be stated. If the subcontracted laboratory is not accredited, then this must be stated.

j) Each test or calibration report bearing the term and/or symbol shall include a statement that the report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

k) When used in a contract or proposal, the term and/or symbol shall be accompanied by a description of the laboratory's scope of accreditation and current accreditation status.

l) Laboratories shall not use the terms certified or registered when referencing their NVLAP accreditation or conformance to ISO/IEC 17025 requirements. The correct term is accredited.
Annex B (normative)

Implementation of traceability policy in accredited laboratories

B.1 Policy overview

It is a fundamental requirement that the results of all accredited calibrations and the results of all calibrations required to support accredited tests shall be traceable to the SI (the International System of Units) through standards maintained by the National Institute of Standards and Technology (NIST) or other internationally recognized national metrology institutes (NMIs). NIST Handbook 150 (and ISO/IEC 17025) details the specific requirements for traceability to be met by testing and calibration laboratories. This annex provides guidance as to how these requirements may be met and how traceability of measurement can be assured by an accredited laboratory.

Internationally recognized NMIs are those that are signatory to the Comité International des Poids et Mesures (CIPM) Mutual Recognition Arrangement (MRA) titled “Mutual recognition of national measurement standards and of calibration and measurement certificates issued by national metrology institutes” and that have the necessary calibration services listed in Appendix C of the MRA, Calibration and Measurement Capabilities (CMC). For more details on the CIPM MRA and the CMC database, please see <http://www.bipm.org/en/convention/mra/> or visit the NVLAP web site.

B.2 General

a) Laboratories shall be able to demonstrate proper use of traceable standards and test and measurement equipment by competent laboratory personnel in a suitable environment in performing the tests for which accreditation is desired or held. This demonstration will include the determination of the appropriate measurement uncertainty.

b) Calibration certificates received by NVLAP-accredited testing and calibration laboratories with new or recalibrated equipment shall meet the requirements of ISO/IEC 17025. The certificates must include the uncertainty of measurement and/or a statement of compliance with an identified metrological specification or clauses thereof.

Note to assessor: The NVLAP assessor(s) must, for each measurement parameter, indicate which method the laboratory has employed to achieve traceability. Select from B.3.1, B.3.2, B.3.3, B.3.4, or B.3.5 below. If B.3.4 or B.3.5 is selected, supporting documentation is also required as indicated.
B.3 Demonstration of traceability

**B.3.1** NVLAP-accredited laboratories may submit appropriate physical standards and test and measurement equipment directly to NIST or, when appropriate, to another national metrology institute. Accredited laboratories may obtain certified reference materials from NIST (called Standard Reference Materials under copyright) or from another national metrology institute. Use of a national metrology institute other than NIST shall be documented and will be assessed by NVLAP.

**B.3.2** Testing laboratories that perform calibrations only for themselves do not need to be accredited as calibration laboratories. Calibration laboratories that perform specific calibrations only for themselves to support their accredited services do not need to be accredited for those calibrations. For the purpose of assuring traceability, an accredited laboratory may calibrate its own equipment if the appropriate requirements of NIST Handbook 150 have been met.

**B.3.3** NVLAP-accredited laboratories that do not demonstrate traceability as described in B.3.1 or B.3.2, shall use accredited calibration laboratory services wherever available. Accredited calibration laboratories are those accredited by NVLAP or by any accrediting body with which NVLAP has a mutual recognition arrangement. A listing of NVLAP-accredited calibration laboratories and of accreditation bodies with which NVLAP currently has agreements is available from NVLAP.

**B.3.4** If a NVLAP-accredited laboratory submits physical standards or test and measurement equipment to a calibration service provider that is not accredited by NVLAP or by an accrediting body with which NVLAP has a mutual recognition arrangement, the laboratory shall:

- **a)** document that an appropriate accredited calibration service provider is not available;
- **b)** audit the claim of traceability of the provider of the calibration service and document the following areas related to the calibration and claim of traceability of its standards and test and measurement equipment:
  1) information regarding assessment of the quality system used by the calibration service provider,
  2) the calibration procedure(s) used by the calibration service provider,
  3) the physical standards or other test and measurement equipment used by the calibration service provider (including evidence of traceability to standards maintained by NIST or an appropriate national metrology institute and copies of relevant calibration certificates),
  4) information regarding the calibration intervals of relevant standards or other test and measurement equipment.
5) the environmental conditions of the laboratory,

6) the method(s) by which uncertainties are determined (e.g., Guide to the Expression of Uncertainty in Measurement (GUM), and

7) the relative uncertainties achieved at all steps of the process;

c) pursue the traceability chain until traceability to appropriate stated references is completely validated, when a calibration service provider submits physical standards and/or test and measurement equipment used in the calibration to another laboratory(s) not accredited by NVLAP;

d) enter the audit documentation, including all findings of nonconformance and resolutions of these findings, into the laboratory's quality management record-keeping system.

NOTE An on-site visit to the provider of the calibration service is encouraged, but is not required as long as the information listed above is obtained and otherwise verified. Self-declaration of compliance to ISO/IEC 17025 or other relevant standards by a calibration service provider is not acceptable evidence of verification of traceability. Citation of a NIST Test Number by the calibration service provider likewise is not acceptable evidence of verification of traceability.

B.3.5 If traceable calibration services are not available or appropriate, laboratories may demonstrate comparison to a widely used standard that is clearly specified and mutually agreeable to all parties concerned, particularly in measurements where NIST does not maintain a U.S. national standard. For example, NIST does not maintain a standard for all hardness testing scales. There are several widely used commercial standards available for hardness. However, these standards may not all give equivalent measurement results; therefore, it is important to specify which standard is used and to obtain agreement among all parties involved that the choice made is acceptable.
Instructions to the Assessor: Use this sheet to document comments and nonconformities. For each, identify the appropriate item number from the checklist. Identify comments with a "C" and nonconformities with an "X." If additional space is needed, make copies of this page (or use additional blank sheets).

NIST HANDBOOK 150 CHECKLIST (REV. 2009-03-08)
### Instructions to the Assessor
Use this sheet to document comments and nonconformities. For each, identify the appropriate item number from the checklist. Identify comments with a "C" and nonconformities with an "X." If additional space is needed, make copies of this page (or use additional blank sheets).

Mr. Wally Birdseye
President, Federal Solutions
CIBER Federal Solutions
7900 Westpark Drive
McLean, VA 22102-3105

Dear Mr. Birdseye:

As you know, the accreditation assessment for ITA Practices Ciber, Huntsville, Alabama, was conducted to support the EAC interim testing program pending implementation of the full EAC Testing and Certification and program. The full program will be conducted in cooperation with the National Voluntary Laboratory Accreditation Program (NVLAP) under NIST. The interim program is intended to accredit independent, non-governmental test laboratories formerly authorized under the National Association of State Election Directors (NASED). This will allow these labs to continue voting system testing under a limited EAC accreditation.

The EAC interim accreditation report for Ciber Inc. notes that the voting system operation is a small branch office of corporate Ciber with the official title of ITA Practice, Ciber, Inc. The report finds that the responsibility of managing, defining and implementing Ciber's ISO 9001 compliant corporate quality management system is vested in another branch office of Ciber. Although ITA Practice, Ciber, created processes and procedures in 2005 to follow the management directive, the lab assessor found that processes are not presently implemented or followed. The report further finds that currently, ITA Practice, Ciber is not following their own defined processes and procedures to ensure the quality of their work product. The interim accreditation report notes in its assessment of ITA Practice, Ciber, that:

"CIBER has not shown the resources to provide a reliable product. The current quality management plan requires more time to spend on managing the process than they appear to have available and it was clear during the assessment visit that they had not accepted that they have a responsibility to provide quality reviewed reports that show what was done in testing."

Given the findings of the laboratory assessment, prior to receiving interim accreditation from the EAC, Ciber must implement the cure outlined below.
Ciber or another EAC accredited laboratory taking responsibility for ITA Ciber operations must implement a policy and system of voting system testing and quality assurance that meets ISO/IEC 17025 and NIST handbook 150-2006. Specifically, the following issues must be addressed and the following remedies implemented. The lab must:

a. Assign resources, adopt policies and implement systems for developing standardized tests to be used in evaluating the functionality of voting systems and voting system software. Neither ITA Practices, Ciber nor any of its partners will be permitted to rely on test plans suggested by a voting system manufacturer.

b. Assign resources, adopt policies and implement systems for quality review and control of all tests performed on voting systems and the report of results from those tests. This shall include provisions to assure that all required tests have been performed by ITA Practices, Ciber or its accredited partner lab.

After ITA Practices, Ciber has implemented the above requirements it must request a follow-up laboratory assessment. This request shall be made in writing to me. The document should certify that you have met the requirements of this letter. EAC will schedule a one-day reassessment visit by an accredited laboratory assessor to verify that appropriate processes have been implemented to correct the deficiencies noted in the original assessment. This reassessment will take place within 90 days of the EAC’s receipt of the documentation from Ciber. Should you have any questions regarding this notification, please contact Brian Hancock in our office at either 202-566-3122 or by email at BHancock@eac.gov

Sincerely,

Thomas Wilkey
Executive Director, EAC
Election Assistance Commission (EAC)
Interim Accreditation
Independent Test Authorities (ITA)

Assessment Report

CIBER & Wyle

Conducted: Jul 17-22, 2006
Huntsville, AL

Assessor: Steven V. Freeman
Introduction

This accreditation assessment was conducted to support an interim program pending implementation of the full EAC Accreditation program in cooperation with the National Voluntary Laboratory Accreditation Program (NVLAP) under NIST Handbook 150-2006, NVLAP Procedures and General Requirements and NIST Handbook 150-22-2005 NVLAP Voting System Testing (HB 150-22). The interim program is designed to accredit ITAs formerly authorized under the National Association of State Election Directors (NASED) accreditation program to continue voting system testing under an EAC accreditation until such time as the NVLAP/EAC joint accreditation has qualified one or more testing laboratories as Voting System Test Laboratory (VSTL).

Summary of Findings

Under NASED, Wyle Laboratories and CIBER, Inc. were separately accredited as Hardware and Software ITAs. Under those roles, Wyle tested the principle voting devices—those components that received the votes of the voter and performed the basic tally operation. CIBER tested the Election Management System (EMS) and Reporting System components that performed consolidation of voting results from multiple voting devices on a general purpose computer such as a Commercial Off The Shelf (COTS) workstation or server. Wyle and CIBER have since formed an exclusive team agreement to work with each other as a joint testing cooperative to perform the full voting system certification testing. The source code review of software resident to the voting or vote tallying device which had been Wyle's responsibility has actually been performed by CIBER or source code reviewers working with CIBER in the last year or more.

Wyle has a long identity as a voting system testing lab being the first accredited under the NASED program. Wyle brought to the program a strong background in environmental testing of DOD systems and holds separate accreditation such as the American Association for Laboratory Accreditation (A2LA) for the major hardware test methods required for voting system accreditation. Wyle has a well-defined quality management system in the terms of ISO/IEC 17025 which is generally exercised and used. The corporate culture and higher level management support are compatible with and help support quality management practices.

The CIBER ITA operation is actually a small branch office, ITA Practice, CIBER, Inc, operating independently from the corporate CIBER operations. Corporate CIBER’s quality management system (which is ISO 9001 compliant) places the responsibility to define and implement the quality program under the ISO/IEC 17025 requirements at the ITA Practice Director’s level but places the QA Manager responsible at a branch office (PPQA Group) located remotely from ITA Practice location. ITA Practice's Process and Project Quality Assurance Plan (PQPAP) [Apr 2005] policy document and supporting processes and procedures were created last year but critical processes were not implemented nor procedures followed. ITA Practice, CIBER is unable to follow their own defined processes and procedures to ensure the quality of their work.

Although Wyle and CIBER are working together, they have distinctly different quality management programs and different levels of proficiency about following those programs. In the Hardware/Software division, Wyle tests only to the boundaries of the device—they do not, as a rule, perform any operations on the EMS or Reporting system components and limit the interaction with transfer media to the input/output ports of the specific device. CIBER performs more of the system integration testing by producing variations of election definitions which they either provide to Wyle or operate the voting devices to produce results to use in the Reporting system testing but generally do not exercise a wide function of the voting device, leaving that testing to Wyle. Wyle reports follow ISO/IEC guidelines and tend to be reasonably complete.
descriptions of what testing was performed although they don't always indicate where a test was only done in an earlier version. In a number of reports over the last year, Wyle has indicated that CIBER is expected to complete certain tests involving the EMS or Reporting systems. CIBER's reports provide limited or no descriptions of the testing performed so a reader or reviewer can not tell if all the testing was completed. Cross checking between CIBER and Wyle reports has revealed at times that neither ITA has performed certain tests, expecting that the test was done by the other.

Wyle has a demonstrated capability to do well in the limited scope of hardware testing and some related functional testing but does not have the internal resources to perform what is being identified for the new VSTLs as the core requirement testing. With the right partner Wyle could potentially be a full scale test lab but needs to develop the internal resources to be able to take a lead in system integration testing and end-to-end functional testing including more aggressive security testing.

CIBER has not shown the resources to provide a reliable product. The current quality management plan requires more time to spend on managing the process than they appear to have available and it was clear during the assessment visit that they had not accepted that they have a responsibility to provide quality reviewed reports that show what was done in testing. The ITA Practice Director indicated during the assessment that their difficulties were that corporate CIBER did not allow for the personnel resource time for quality management functions but there may be other alternatives for allocating the resources.

In addition, during the review, ITA Practice Director indicated that the testing for a product tends to either use vendor developed tests or new tests developed specifically for the product—they have no standard test methods defined. This makes their testing dependent on the vendor input and vulnerable to unique vendor interpretations rather than a core validated set of internal references for training and testing.

A proposal was made that Wyle take the lead and provide direction on qualify management reviews, audits, test planning, and report writing. CIBER would add software review and election definition experience with possibly some security expertise through corporate CIBER. Wyle, under this proposal, would be fully responsible for the coordination of testing and the final report. CIBER/Wyle would need to work out additional criteria to standardized test plans, determine the who and how review of the TDP would be conducted, and the contract oversight relations.

All the ITAs need to complete a review of the VSS 2002 and new VVSG 2005 and update the requirements cross-reference matrix to be used to identify which requirements have been tested and where or when. The former matrix developed jointly between the ITAs is missing significant requirements and variations on requirements. (Note: Shawn Southworth, ITA Practice Director, reports that CIBER does not have that version of the checklist.)

**Recommendation**

Wyle to continue as a Hardware ITA, eventually serving as a resource lab for environmental hardware testing for new VSTLs or move to becoming a VSTL by taking responsibility for full system testing with possible subcontracting to CIBER or another qualified group.

CIBER ITA Practice continues only with the support of Wyle or a commitment from corporate CIBER to provide management assistance in getting the quality system functioning and fuller reporting of results with a review in 120 days.

(signed)
Steven V. Freeman

EAC Technical Supplement Checklist:

Review test lab procedures/standards for the following elements of the VSS 2002 (and equivalent VVSG 2005).

(W) Wyle  
(C) Ciber  
Core voting system tests:

1. Technical Data Package review,

   a. Verify that TDP contains required document content and identify vendor's document meeting requirements.  
      (C) Initial TDP Review  
      (W) Test Procedures, Sect 1.

   b. Identification of deliverables: Documents or manuals to be delivered to client for operation, maintenance, and training.  
      (C) Not identified.  
      (W) Not identified.

   c. Terms and references. Unique usage  
      (C) Need to add  
      (W) Need to add

   d. Review of documents for completeness and consistency  
      (C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 4  
      (W) Test Procedures No VSS-2002,

   e. Quality Assurance plan  
      (C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 4 Step 9  
      (W) Quality Assurance Test Procedure Need reference identification

   f. Configuration Management  
      (C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 4 Step 9. May need to add attention to identifying EUT for configuration purposes  
      (W) Configuration Management Test Procedure. Need reference identification

   g. Review of System release change log  
      (C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 4 TDP Step 7, 9  
      Sec 5 Source Code reviews.  
      (W) Test Procedures. May need to add.

   h. Review of vendor tests. Includes but not limited to:  
      i. Readiness Check  
      ii. Operational Status Check  
      (C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 8.1 Test Data and Procedure Preparation. May need to add specifics for validating Readiness Check and Operational Status Check.  
      (W) Test Procedures 2.0 PreQualification Tests. Verification at the Polling Place Test Procedure (Needs document identification).i May need to add specifics for validating Readiness/Operational Status Check.  
      Note: Wyle providing validation of the Readiness/Operational Status Check for Ciber.

   i. Review of prior test lab tests  
      (C) Section 7. Qualification Previously Qualified Software. May need to expand  
      (W) Need to add

   j. TDP Document Trace matrix directory. Matching the document requirements to the vendor's document names or titles.  
      (W) Test Procedures, Sec 1
Use the Requirements of the FECVSS 2002 Trace to Vendor Testing and Technical Data Package.

Initial TDP Review Checklist.doc

k Production of formal Test Plan (VSS 2002-Vol II, App A)
(C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 8.1 Test Data and Procedure Preparation.

(W) Test Procedures, Sec I and Appendix A (Volume I, FEC VSS 2002 Functional Requirements) Note that this does not include Volume II requirements
QD XI-1, Test Control Program includes development Test Plan.

2 Source code review,
Wyle no longer does source code review. All source code review for Wyle testing is done by Ciber. This constitutes a change in the scope of accreditation for Wyle/Ciber.

a Catalog of source code
(C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 5. Need to develop and add. Currently produce a master list of all files submitted as part of the source code and provide with some reports. This list includes source code, make files, .dlls and other files which may or may not be reviewed or relevant
(W) Defer to Ciber for source code review.

b Catalog of compilation environment including COTS components of build
(C) Needs to add. Request copy of new procedure for Witnessed Build which is expected to address this.

c Determination of changes from prior review
(C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 5, Step 4. Perform a diff comparison on files submitted for a change to verify what has changed and checking with vendor’s change log. May need to specify documenting what files (source and installed) are changed.

d Review for coding conventions and integrity requirements
(C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 5. Step 6 lists the exceptions currently identified from the VSS standards.

i Demonstrate

(C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 5. Only those items currently listed in VSS 2002 and documented in Step 6 are examined. Source code reviewers are expected to report any strange code or process they notice that would be considered a security breach. Current list includes the following with known security implications:

Q: 5.4.2d Unbound area not protected
R: 5.4.2f Case statement with no default area
S: 5.4.2g Possible vote counter overflow Needs attention. This requirement should expect that an overflow condition is prevented or detected and reported for operator action.
FF: 5.4.2v If else operator used more than once. Incorrect. Needs adjustment
HH: 4.2.2 Self modifying, Dynamic Loaded, Interpreted code. Needs development
HH: 4.2.2 Unbound Area, Pointer Values, Dynamic Memory unprotected. Needs development.

Other items under VSS 2002 code review have security implications in terms of features to aid in detection or to prevent hiding unsecure code. Although not specifically required by VSS 2002, issues such as hardcoded passwords or passphrases or 'backdoors' should be included and provisions specified to client on how such issues will be reported or treated. See topic on reporting anomalies.
Demonstrate

Deliverables

f Report of results.
(C) Document No. ITA 2002 QTP R1.0 04-15-0, Sec 5. Note comments about catalogs of file.

g Witnessed build from verified source code and COTS.
(C) The procedures in the current document is being superceded by a revision to be provided.

3 Physical configuration audit,

a Configuration verification against Configuration Management plan.
(C) Performed during final Functional Configuration Test. ????

(W) Test Procedures 4.2. Hardware Configuration. See comment in TDP area issue.

b Accessibility standards
(C) Expect hardware ITA

(W) Accessibility Test Procedure, VSS Volume I, Section 2.2.7, Common Standards
2.2.7.1 (svf: physical size and position). Needs to provide specification of table height for item b. See Title 29, CFR, 1910.

Accessibility Test Procedure, VSS Volume I, Section 2.2.7, Common Standards 2.2.7.2
(svf: acoustical and tactile)

c Construction

Section 3.4.2, Durability. This requirement lacks adequate guidance for test method
Section 3.4.3, Reliability.
Section 3.4.4, Maintainability
Section 3.4.4.1 Physical Attributes supporting maintenance.
Section 3.4.4.2 Additional Attributes.

Section 3.4.5, Availability. Also, VS Test Procedure 6.9, Need to calculate and report Ai. Under ISO/IEC 17025 procedures this will need to include reporting the basis for the calculation including assumptions made to create proposed values for some of the factors.

Section 3.4.6, Product Marking.
Section 3.4.7, Workmanship.

VS Test Procedure, 6.10 Product Safety under product safety review to ensure compliance with UL 60950-1. This includes review of requirements for features specified under entire section 3.4 in terms of safety concerns excepting possibility Durability. In Design, Construction, and Maintenance Characteristics Test Procedure, need to develop and/or reference test method standard (possibly referencing UL 60950-1)

d Validity of operations provided in deliverable manuals

(C) During functional test, need specification of procedure for software operation.
(W) During functional test, need specification of procedure for equipment operation.

e Hardware transportation and storage tests.

(C)

(W) Environmental Control Transit and Storage Test Procedure, VSS Volume I,
Section 3.2.2.14. Need to develop reference to Operational Status Test to include validation and repeatability between all the tests. Should reference use of the test for both pre-test and post-test determination of operability.

f Hardware operational environmental test.
Note: The system integration tests for accuracy and reliability (e.1. and 2. below) are conducted in conjunction with this test and the final criteria include all components used to consolidate polling place and jurisdiction results from individual voting machines. 

(W) Wyle considers a system crash or “abend” as a failure. Resetting the machine is not an acceptable recovery. Check against the VSS 2002 shows the section which specified ‘acceptable’ errors is not in the final version and Wyle’s approach is correct. Need to address the issue of including extended operation of the user interface and not use exclusive automated testing.

---

EMC and electrical test suit. If test is submitted from a third-party source

\begin{enumerate}
\item Verify test lab is accredited by MRP body
\item Verify equipment under test is for same configuration as being certified
\item Verify that operational status check was appropriate
\end{enumerate}

(C) Refer to Wyle

(W) VS Test Procedure 6.5 Test Operations Procedures – Electrical Performance Requirements Test Procedures,
Electrical Power Disturbance
Electrostatic Disruption
Electromagnetic Susceptibility
Electrical Fast Transients
Lightning Surge
Conducted RF Immunity
Magnetic Fields Immunity

---

Safety inspection.

(C) Covered under construction
---Deliverables---

Reports for the hardware, EMC and electrical, and Safety tests and inspections. If necessary (i.e. from third party source), provide a statement reporting the results of the verification on the applicability of the reports.

(C) Need to develop. (Tech Guide #3??)

(W) QD V-1. Instructions, Procedures, and Certification Reports
QD VII-1. Supplier Evaluation and Suppliers List. For third-party report.

Directory of deliverables, including hardware and software setup and both application and COTS installed files. (Part of witnessed build documentation)

(C) Need to develop process. Have form and procedures.

   (C) QTP Sect 12. Final System Level Testing
---Deliverables---
h Report on tests performed and their results.
(C) QTP Sect 12, Step 7 Prepare anomaly list. May need to include specifics for HAVA provisional balloting, absentee ballot consolidation, and write-in resolution.

6 Qualification Test Report
(C) QTR Template (not uniquely identified/ versioned under document control)
(W) QD V-1 Instructions, Procedures, and Certification Reports

a Introduction.
(C) QTR Template Sec 1 (copied supplied is not current. need update).
1.1 Test Agency History and Capability
1.2 Document Overview
(W) Have an electronic copy that is "cut and paste" but not controlled master. This has been a source of error in the past. Need to develop.

b Qualification Test Background (B2)

i General Information about the qualification test process. (For outside readers not familiar with the ITA testing).
(C) standard boilerplate text.
(W) standard boilerplate

ii A list and definition of all terms and nomenclature peculiar to the hardware, the software, or the test report.
(W) QD V-1. Sec 4.0 Terms and Definitions.

c System Identification (B3). This is the test hardware and software used in this test.
(C) QTR Sec 5.4
(W) QD V-1 Sec 4.9 Test Hardware/Software description Sec 4.

i System name and major subcomponents. Sec 3
ii System Version. Sec 3
iii Test support hardware.
(W) Materials required for testing QTR Sec 5.0 (ISO/IEC 17025 5.10.2 f)
(C) QTR Sec 3. Hardware Support

iv Specific documents (deliverables) from the TDP used to support testing
(W) QTR Sec 5.3.
(C) QTR Sec 3 Documentation provided to support testing. Need to specify which are part of the vendor deliverables.

d System Overview (B4). Describes the voting system in terms of

i its overall design structure,
ii technologies used,
iii processing capacity claimed by the vendor and
iv modes of operation.

v (May) include other products that interface with the voting system. Note:
Shall include components necessary to consolidate and produce final results including telecommunications.

(C) QTR Sec 4
(W) QTR Sec 4

e Qualification Test Results (B5). "This section provides a summary of the results of the testing process, and indicates any special considerations that affect the conclusions derived from the test results. This summary includes:

i Acceptability of the system design and construction based on the performance and software source code review.
(C) QTR Sect 5
(W) QTR Sect 6
The degree to which the hardware and software meet the vendor's specifications and the standards, and the acceptability of the vendor's technical and user documentation

(C) QTR Sect 5 by subsection
(W) QTR 1.3 Summary

General findings on maintainability

(1) Includes notation of specific procedures or activities that are difficult to perform.

(C) Need to add to template in System Overview
(W) Attach A as a note.

Identification and description of any deficiencies that remain uncorrected after completion of the qualification test

(1) that has caused or is judged to be capable of causing the loss or corruption of voting data, providing sufficient detail to support a recommendation to reject the system being tested.

(2) deficiency in compliance with the security requirements,

(3) deficiency in compliance with the accuracy requirements,

(4) deficiency in data retention, and

(5) deficiency audit requirements are fully described);

Note: In practice, vendors will not allow reports to be published if it has this level of deficiency.

(C) At end of each Appendix. Need to add to QTR Template/procedure
(W) Located after body of report using a standard Notice of Anomaly (NOA)

Recommendations to EAC for approval or rejection

(C) QTR 5.4, Includes summary description of the system configuration to be certified
(W) QTR 1.3 (Executive Summary) including system configuration to be certified.

Note: Deficiencies that do not result in a loss or corruption of voting data shall not necessarily be a cause for rejection. (Identified as "anomaly")

Appendix Test Operations and Findings (B6)

(1) Additional details of test results needed to enable understanding of the conclusions. B. b. Organized to reflect the Qualification Test Plan.

(2) Summaries of the results of

• hardware examinations,

• operating and non-operating hardware tests,

• software module tests,

• software function tests, and

• system-level tests (including

• security and

• telecommunications tests, and

• the results of the Physical and

• Functional Configuration Audits)

Appendix Test Data Analysis (B7)

• summary records of the test data and

• the details of the analysis. The analysis includes

• a comparison of the vendor's hardware and software specifications to the test data, together with

• any mathematical or statistical procedure used for data reduction and processing.
(W) In attachments B through ---, based on relevant standards appropriate for the specific tests.
(C) No known requirements under current scope of operation. Will need to adopt/ensure as part of including specific hardware tests.
Purpose and Application.

1.1 Purpose. The following checklist was developed for use in the Election Assistance Commission (EAC) Interim Accreditation for Independent Test Authority Labs (ITAs). This program is an interim program pending implementation of the full EAC Accreditation program in cooperation with the National Voluntary Laboratory Accreditation Program (NVLAP) under NIST Handbook 150-2006, NVLAP Procedures and General Requirements and NIST Handbook 150-22-2005 NVLAP Voting System Testing (HB 150-22). The interim program is designed to accredit ITAs formerly authorized under the National Association of State Election Directors (NASED) accreditation program to continue voting system testing under an EAC accreditation until such time as the NVLAP/EAC joint accreditation has qualified at least one testing laboratory as Voting System Test Laboratory (VSTL).

1.2 Background. The NASED ITAs were accredited under the NASED Program Handbook 9201, Accreditation of Independent Testing Authorities for Voting System Qualification Testing, (Rev A), 7 Apr 2001. (HB 9201). The HB 9201 was based on Department of Defense standards such as MILSTD-490A and MIL-STD-2167A which had been deleted or superceded by the time of the Rev A release. Rev A was to have been a temporary revision pending the completion of the new voting system standards in 2002 (which was to add a much larger scope of accreditation to include the election management software integration with vote tallying equipment as a voting system.) The Help America Vote Act (HAVA) provisions took the responsibility from NASED and the revision was cancelled pending the development of a new program under EAC and NIST.

1.3 Usage. For the purpose of this accreditation, the management documents provided by the candidate lab were developed under the NASED HBK but will be assessed using ISO/IEC 17025 criteria. As such, it is expected that the documented policy and procedures may not explicitly follow the language and procedures recommended under ISO/IEC 17025 but that the underlying program may support a quality management program that meets the intent of ISO/IEC 17025. On the items below, the assessor will place a
- "X" on substantive discrepancies to be considered in the accreditation decision.
- "C"omments on items where some work is needed to bring the program into compliance with ISO/IEC 17025 but procedures used support the integrity of the testing process.
- "OK" where published procedures and policies are supported by evidence of implementation/ A technical supplement checklist will include Voting System Standards/HAVA requirements for specific review, assessment, or testing.

Note: In general, the Voting System testing is not a calibration activity as intended under ISO/IEC 17025. Calibrated instruments are used in the environmental testing.

(The number in parenthesis is a back reference to page reference to ISO/IEC 17025)

3 Terms and definitions (2)

3.1 Election Assistance Commission (EAC).

3.2 Federal Election Commission (FEC).

4 Management requirements (2)

4.1 Organization (2)

4.1.1 The laboratory or the organization of which it is part shall be an entity that can be held legally responsible

Legal Name: __ CIBER, Inc ______ Format Note: Legal name is all caps for CIBER

4.1.2 It is the responsibility of the laboratory to carry out its testing and calibration activities in such a way as to meet the requirements of this International Standard and to satisfy the needs of the customer, the regulatory authorities or organizations providing recognition.

The EAC shall be identified as the organization providing recognition and as the governing regulatory authority.

Need to make change

Currently, QTP Sec 17. As part of the Test Complaint Procedure.

Sec 1.3.

4.1.3 The management system shall cover work carried out in the laboratory's permanent facilities, at site away from its permanent facilities, or in associated temporary or mobile facilities.

CQMM 1. Indicated that the ITA Practice, CIBER, Inc. shall define and use their quality program independently but compliant to the parent CIBER's Custom Solution Division's program within the terms of the ISO/IEC 17025 requirements. The actual QA Manager is specified in the QA policies and procedures.

4.1.4 If the laboratory is part of an organization performing activities other than testing and/or calibration, the responsibilities of key personnel in the organization that have an involvement or influence on the testing and/or calibration activities of the laboratory shall be defined in order to identify potential conflicts of interest.

NOTE 1 Where a laboratory is part of a larger organization, the organizational arrangements should be such that departments having conflicting interests, such as production, commercial marketing or financing do not adversely influence the laboratory's compliance with the requirements of this International Standard.

NOTE 2 If the laboratory wishes to be recognized as a third-party laboratory, it should be able to demonstrate that it is impartial and that it and its personnel are free from any undue commercial, financial and other pressures which might influence their technical judgment. The third-party testing or calibration laboratory should not engage in any activities that may endanger the trust in its independence of judgment and integrity in relation to its testing or calibration activities.

See organization charts:

Overall CIBER, Inc.
ITA Practice.

QTPVS Para 1, Introduction
PQAP, Sec 3, pg 4

(VS 4.1.1) Employee cannot develop and test a product or otherwise consult for a client and then test as ITA the client. Need to develop or confirm from CIBER corporate policy.

4.1.5 The laboratory shall

a) have managerial and technical personnel who, irrespective of other responsibilities, have the authority and resources needed to carry out their duties, including the implementation, maintenance and improvement of the management system, and to identify the occurrence of departures from the management system or from the procedures for performing tests and/or calibrations, and to initiate actions to prevent or minimize such departures (see also 5.2);

PQAP, Sec 3, pg 4

b) have arrangements to ensure that its management and personnel are free from any undue internal and external commercial, financial and other pressures and influences that may adversely affect the quality of their work;

Need to add. Billing and contracting are done outside ITA Practices and ITA Practices Director.

c) have policies and procedures to ensure the protection of its customers' confidential information and proprietary rights, including procedures for protecting the electronic storage and transmission of results;

PQAP, Sec 3 geographically separated office with their own filing network and file system (VS-4.1.2) Covered.

d) have policies and procedures to avoid involvement in any activities that would diminish confidence in its competence, impartiality, judgement or operational integrity;

Certification of Laboratory Conditions and Practices for EAC. 12 Jan 05.
QTP Sec 1

e) define the organization and management structure of the laboratory, its place in any parent organization, and the relationships between quality management, technical operations and support services;

See organization chart

f) specify the responsibility, authority and interrelationships of all personnel who manage, perform or verify work affecting the quality of the tests and/or calibrations;

(See also 5.2)
PQAP, ITA organization and the table of Roles and Responsibilities
g) provide adequate supervision of testing and calibration staff, including trainees, by persons familiar with methods and procedures, purpose of each test and/or calibration, and with the assessment of the test or calibration results;

(See also 5.2)
Need to add. ITA Practices is using processes to make sure personnel are qualified before working independently but do not have a statement of policy to cover supervision while new hires are being qualified or changes of position to a function where not previously qualified.

h) have technical management which has overall responsibility for the technical operations and the provision of the resources needed to ensure the required quality of laboratory operations;

ITA Practice Director. See QTAP, Sec 3. Currently there are only three full time employees so many positions will overlap.

i) appoint a member of staff as quality manager (however named) who, irrespective of other duties and responsibilities, shall have defined responsibility and authority for ensuring that the management system related to quality is implemented and followed at all times; the quality manager shall have direct access to the highest level of management at which decisions are made on laboratory policy or resources;

PQAP, pg 6 & 7 ITA QA Representatives are assigned to advise the ITA Practices Director directly on QA issues. Currently these are T. Dunn and J. Price (independent subcontractors)

j) appoint deputies for key managerial personnel (see Note);

Not documented. Currently Jack Cobb but not reflected in organizational chart.

k) (New) ensure that its personnel are aware of the relevance and importance of their activities and how they contribute to the achievement of the objectives of the management system.

With three people sitting down at some table.

NOTE Individuals may have more than one function and it may be impractical to appoint deputies for every function.

4.1.6 (New) Top management shall ensure that appropriate communication processes are established within the laboratory and that communication takes place regarding the effectiveness of the management system.

Emails and conversations. Small organization.

4.2 Management system (3)

4.2.1 The laboratory shall establish, implement and maintain a management system appropriate to the scope of its activities. The laboratory shall document its policies, systems, programmes, procedures and instructions to the extent necessary to assure the quality of the test and/or calibration results. The system's documentation shall be communicated to, understood by, available to, and implemented by the appropriate personnel.
4.2.2 The laboratory's management system policies related to quality, including a quality policy statement, shall be defined in a quality manual (however named). The overall objectives shall be established, and shall be reviewed during management review. The quality policy statement shall be issued under the authority of top management. It shall include at least the following:

PPQA, Apr 2005 Sec 1. Purpose, authorized under ITA Practices Director and Director of Federal Systems

PQAP, Sec 1. Purpose

a) the laboratory management’s commitment to good professional practice and to the quality of its testing and calibration in servicing its customers;

b) the management’s statement of the laboratory’s standard of service;

Should consider strengthening this part of statement more explicitly.

c) the purpose of the management system related to quality;

d) a requirement that all personnel concerned with testing and calibration activities within the laboratory familiarize themselves with the quality documentation and implement the policies and procedures in their work; and

Need to add to ITA Practices QA document. All in office are involved in working with the QA procedures. Currently, CIBER corporate requires each employee to receive and sign off on a statement.

e) (New) the laboratory management’s commitment to comply with this International Standard and to continually improve the effectiveness of the management system.

Need to add.

4.2.3 (New) Top management shall provide evidence of commitment to the development and implementation of the management system and to continually improving its effectiveness.

Need to add or document from corporate

4.2.4 (New) Top management shall communicate to the organization the importance of meeting customer requirements as well as statutory and regulatory requirements.

Need to add or document from corporate

4.2.5 –a) The quality manual shall include or make reference to the supporting procedures including technical procedures.

PPQAP does identify and reference both PPQA and QTP.

–b) It shall outline the structure of the documentation used in the management system.

PPQAP 1.3
4.2.6 The roles and responsibilities of technical management and the quality manager,
including their responsibility for ensuring compliance with this International Standard,
shall be defined in the quality manual.
PPQAP 3.1 Explains the roles and separation of QA Representatives to the testing
activity.

4.2.7 (New) Top management shall ensure that the integrity of the management system is
maintained when changes to the management system are planned and implemented.
Need reference from corporate

(VS-4.2.2- ensuring QA Manual considers topics)
a) internal audits and management review;

PPQA 8.2.3

b) writing and implementing system procedures;

PPQA, 8.2.2.

c) writing and implementing system instructions;

Do not currently have instructions at this level.
d) staff training and individual development plans;

CIBER Policies and Procedures Training Ver 2.3
e) contract review;

Need to develop
f) staff members who work at home and at alternate work sites outside the laboratory (e.g.,
telecommuting);

Need to specify
g) referencing EAC accreditation and use of the EAC branding.

Modify for reflect EAC rather than NASED. EAC will need to provide further guidance.

(VS-4.2.3) The following program-specific procedures shall be included with the quality
manual when it is submitted as part of the application package:

a) review of the vendor Technical Data Package (VSS-2002, Volume II, Section 2). This
procedure shall include:

QTP, Sec 4 TDP Review. Need to review and update to include the following.

Use in preparing Qualification/National Certification Test Plan. (Ref VSS Vol
II,2.1,See also V1,9.)
Format. Table of content, abstracts, and cross-index against the VSS/VVSG
documentation requirements (Ref: VSS Vol II,2.1.1.3)

Provisions for placing the TDP in escrow for reference in state certification and
acceptance testing. (Ref: VSS Vol II, 2.1.2)
Note: Completion of the TDP Review includes the validation of user procedures and
operation manuals against the actual equipment.
Note: vendor diagnostics and simulations must be validated.

b) selecting the laboratory staff for a Qualification/National Certification test team;
Need to develop.

c) writing a Qualification/National Certification Test Plan for first-time testing and testing of modified systems (Ref VSS-2002, Volume II, Appendix A);
QTP, Sec 8 Qualification Test Plan.
d) writing Test Operation Procedure (Ref VSS-2002, Volume II, Appendix A.6.4);
Need to develop. Currently, CIBER performs the customized tests from knowledge and information from the TDP review but does not have a reference copy that defines the common process used in all test campaigns.
e) conducting testing at a customer's site (if the laboratory offers such services);
NOTE: Reference NASED Tech Guide 3
Need to develop.
f) writing a Qualification/National Certification Test Report (VSS-2002, Volume II, Appendix B);
g) reviewing the Configuration Management Plan (VSS-2002, Volume II, Section 2.11);
QTP Sect. 1.5 Configuration Management During Qualification.
h) ensuring the protection of proprietary information against threat from persons outside the laboratory, from visitora to the laboratory, from laboratory personnel without a need to know, and from other unauthorized persons;
(contained elsewhere in ISO/IEC 17025)
i) cooperating with the EAC during test campaigns;
Need to update.
Have created a draft form and need to complete and validate. Needs acceptance review and possible further expansion based on review.

4.3 Document control (4)
4.3.1 General (4)

Under CIBER corporate policies, approved master copies of the QA policies and manuals are stored under a corporate server Sharepoint subdirectory for the individual divisions. Personnel within the appropriate division and corporate QA management responsibility have access.

For internal to ITA Practices, they have a process but have not documented the process. The samples of documents shown lack identification, version identification and other required features. Need to document and develop further.

4.3.2 Document approval and Issue. (4)
4.3.2.1 a) Have a working process requiring approval by ITA Practices Director. Need to document and develop further.
b) Master List. Using the 'Roadmap' but the 'Roadmap' is limited to product testing documents and does not include QA and others. Need to develop.

4.3.2.2 The procedure(s) adopted shall ensure that:
   a) authorized editions Need to develop
   b) periodically reviewed Need to develop
   c) Invalid or obsolete removed/assured against intended use Need to develop
   d) obsolete documents retained Need to develop

4.3.2.3 Uniquely Identified Not being done, need to develop
   a) date of issue/revision
   b) page numbering
   c) the total number of pages or mark for end of document
   d) issuing authority

4.3.3 Document changes (5)

4.3.3.1 Review and Approval process. Only for the Qualification Test process but not for all controlled documents. PPQA, Sec 7-8.2 for covered documents. Need to be expanded.

4.3.3.2 New or altered text marked or Identified. Document and do.

4.3.3.3 a) If permitted to amend by hand, document and authorize
   b) clearly marked, initialed and date. If authorized, document.

4.3.3.4 Making changes to electronic records.

4.4 Review of requests, tenders and contracts (5)

4.4.1 Procedures for ibid.
   QQTP, Sec 3 TDP Review.
   QTP, Sec 1.4

Need to develop

a). Requirements known and understood

(VS-4.4.1) Consider HAVA, VSS/VSG, EAC directives, and,

(VS-4.4.3) if required, specific state requirements and does not circumvent the Federal standards.

(VS-4.4.4) If involved, check that state requirements are current.
b). Capability and resources

c). Have test method or need to develop.

d). Client has to approve

4.4.2 Records of reviews. Need to develop procedures.

4.4.3 Review of subcontract work. Need to develop

4.4.4 Reporting deviations from contract. Need to develop

4.4.5 Contract amendments. Need to develop.

4.5 Subcontracting of tests and calibrations (6)

4.5.1 (4.4.3) Needs to be accredited for the scope of test. Needs to develop. Currently comply with existing or in process subcontract.

4.5.2 Advise the customer Need to develop procedure Currently complying

4.5.3 Responsible for subcontracting work (NASED Guideline #4) Complying NASED Guideline #4. Needs to develop

4.5.4 Approved vendor list. Needs to develop and create.

4.6 Purchasing services and supplies (6) Does not apply at this time.

4.7 Service to the customer (6)

4.7.1 Cooperation with customer but protect other customers confidentiality

4.7.2 (New) Feedback. PQAP, 8.3 and sample survey, including CIBER Policy and Procedure for processing survey (Internal Customer Satisfaction Surveys.

4.8 Complaints (7)

4.8.1 Laboratory policy and procedure: QTP, Sec 17. Need to specify that a record needs to be made and kept.

4.8.2 Make a record. Have a Test Complaint Process Document

4.9 Control of nonconforming testing and/or calibration work (7)

4.9.1 Master Services Agreement (CIBER corporate document-standard contract with vendors) provides some specific guidance but ITA Practices may need to provide additional procedures to cover the following:

a) Responsibility and authority for managing of non-conforming.

b) Evaluation and Initial determination

c) Immediate corrective action

d) Where necessary, customer notified and work recalled.
(VS-4.9.1) Where necessary, EAC—especially if for accepted report and certified system.

e) Responsibility for authorizing resuming of work, if halted.

4.9.2 Where non-conforming work could recur or doubt exists of laboratory compliance with own policies and procedures, corrective action in 4.11 shall be promptly followed. Need to develop

4.10 Improvement (7)

The laboratory shall continually improve the effectiveness of its management system through the use of the quality policy, quality objectives, audit results, analysis of data, corrective and preventive actions and management review.

4.11 Corrective action. (8)

4.11.1 General (8)

PPQAP, Sec 8.2 Suggestions, Issues and Corrective Action Requests (CARs)

PQAP, requires ITA Practices to create Corrective Action Log. Not created. Need procedures

4.11.2 Cause analysis (8)

4.11.3 Selection and implementation of corrective actions. (8)

4.11.4 Monitoring of corrective actions (8)

4.11.5 Additional audits (8)

4.12 Preventive action (8)

4.12.1 a) Handled as discussions within office. Need to develop procedure and management tracking process.

b) (New) Action plan for identified preventative action

4.12.2 Procedures to initiate and application of controls

4.13 Control of records (9)

4.13.1 General (9)

4.13.1.1 QTP, Sec 15 Archive and Qualification Test Artifacts. Observed checkout log and directory

4.13.1.2—Storage of files. Not seen were QA records such as audit reports which are stored with corporate QA.
4.13.2 Technical records (9)

4.13.2.1 a) QTP, Sec 15 Archive and Qualification Test Artifacts. Observed checkout log and directory.

b) Found vendor manuals, sample ballots, test ballots, test voting results, handwritten notes, CDs, scripts, weekly status reports and communication with customer. Have not accumulated enough to exceed available, local storage.

c) Not noticed. Handwritten copies marked but printed copies did not have

4.13.2.2 No test log requirements defined or practices that shows records are complete and identifiable. May need to develop better practice.

4.13.2.3 a) Very little handwritten/hardcopy notes.

b) TDP reviews, spreadsheet makes new entries but don’t lock entries to prevent later changes. Need develop

4.14 Internal audits (9)

4.14.1 a) PQAP 8.2.3 Internal audits are performed by a separate corporate office Process and Product Quality Audit(s) (PPQA Group) with specific training, independence, from observed activity, and direct top management access.

PPQA, Sec 7.2 PPQA Reviews When: ITA Practice Director requests a project review by the PPQA at least once each calendar year and the event of changes in staff, scope of accreditation, facilities, or equipment.

PQAP, 8.1.2 Plan Quality Assurance Events lists ITA Project Audit (yearly), Quality Assurance Training on staff change, and Accreditation Audit by ITA Accreditation Committee

Date of last internal audit: (2005)

This program is actually managed outside of the ITA Practice responsibilities. Copies of the report were not available to the ITA Practice Director. PQAP defines that any recommendations are reported in CARs. However, ITA Director does not have a log and reports there were no previous CARs (procedure was created last year and may not have been in place for last action). May need to request contact with PPQA group. Terry Debell, Manager Internal Audit and Compliance. 303-267-3820.

Also have project oriented internal audits by the ITA QA Representatives which perform a Process Conformance Audit at the end of each Qualification Test. A report is to be provided to the ITA Director and CARs for any recommendations for deficiencies. There have been no Process Performance Audits. The Representatives were assigned last year.
b) The CIBER corporate program ensures training of audit personnel. The ITA QA Representatives

PQAP provides for creation of CARs which the ITA Director must provide for reviews to include monitor the actions from the CARs.

4.14.2 PQAP 8.2.2 2nd paragraph. The CARs created are to trigger corrective action including involvement of the ITA Practice Director. Need to add notification of customers in writing if investigations show that laboratory results may have been affected.

4.14.3 The PQAP CARs procedure would appear to satisfy requirement for recorded.

4.14.4 Need to identify procedures for follow up of CARs or, if not defined, develop.

4.15 Management reviews (10)

4.15.1 May be in Corporate

X Date of most recent management review: (the review last year may qualify as a management review)

- Actions from previous review (CARs)
- Reports from third party assessment groups
- Customer Audit (feedback) reports
- Internal audit reports, including any associated corrective action
- Documented problems arising from lack of procedural adherence
- Results of proficiency testing and any inter-laboratory comparisons.
- Corrective action requests and any preventative actions taken
- Details of customer complaints and feedback
- Staff training
- Current adequacy of staff, equipment, and facility resources
- Future plans and projections for new work, staff, equipment, and other requirements.
- Summary of annual review and revision activity for all controlled generic

5 Technical requirements (10)

5.1 General (10)

5.1.1 (no comment)

5.1.2
I) human factors. QTP Sect 3.2.2 Job Description for ITA Practice Director

- Software Analyst
- TD Specialist
- ITA QA Representatives
- Configuration Mgr
- Test Engineer

ii) accommodation and environmental QTP, Sec 15.1 Archiving.

PPQAP Sec 3.2.1 Facilities and Equipment

iii) test ... methods and method validation. QTP Sec 3 through 17

iv) equipment. Not prepared

v) measurement traceability N/A except as applies to calibrated equipment

vi) sampling N/A except as applies to calibrated equipment

vii) the handling of test and calibration items. QTP, Sec 3 for TDP, 6 for equipment

5.2 Personnel (11)

5.2.1 a) Ensuring qualification of personnel. CIBER Policies & Procedures Training, Ver 2.2 1/1/06. (on Corporate server) general policy.

Source Code Review Qualification Test. Consists of spreadsheet with sample code and list of items to find. A partial copy of Vol I 4.2.3, and edited Vol II coding convention standards. Does not include issues about problem such as integrity and security issues. Just used to see if basic competency exists

All other is based on experience performing the tests. No training for security, testing procedures. Corporate training requirements for corporate procedures and quality program. No formal training on voting requirements such as the VSS, state laws variations. Such information is acquired through discussion and vendor designs. May result in problems in critical evaluation of vendor design.

b) Providing supervision during activity where personnel are becoming qualified.

Only one person has been added since creation of office so training has been informal. He observed and participated with experienced technical staff until deemed ready. Need documented policy or procedure

5.2.2 a) Documented goals in the form of formal Position Description containing requirements for Educational Requirements, Professional Certificates, work related experience and other requirements.

b) CIBER Training also establishes corporate required training. No supplemental training is defined for the differences required for the ITA Practices under ISO/IEC 17025 based standards (new) or division specific.
c) The training program as it exists based on corporate training is not completely relevant.

d) (new).

(VS-4.5.2) Positions assigned

Laboratory Director: Shawn Southworth, ITA Practices Director
Technical Director: Shawn Southworth, ITA Practices Director
Authorized Representative: Shawn Southworth, ITA Practices Director
Approved Signatory Personnel: Shawn Southworth, ITA Practices Director

Team Leaders: Shawn Southworth, ITA Practices Director

Jack Cobb, Systems Software Analyst, 

training record available and reviewed Does not verify J. Cobb is qualified to test.

Quality Manager: Paul Rainville, Director of Delivery.
prainville@ciber.com
703-610-6400 x 6475

Not listed on Org chart. External to ITA Practices office.

ITA QA Representatives: (defined as local staff/employees with responsibilities to monitor QA requirements, assigned in org chart and PD)

Tom Dunn No training records or record of designated as qualification
Jennifer Price No training records or record of designated as qualification

5.2.3 Personnel,

a) employed and/or contracted personnel. All personnel assigned qualify under this requirement

b) CIBER Policy and Procedure. Subcontractor Monitoring. Feedback from client of manager is collected and a performance assessment is made. Records held at divisional office. No policy/procedure for training or qualifying for competency. Corporate training appears to be irrelevant for them.

5.2.4 Job descriptions. Available and complete. Individuals identified as assigned to position in QTP Organization Chart in Sect 3. Recommended that the names be removed from the QTP Org Chart and the information be provided in other forms.

5.2.5 Authorizations for testing.

b). Training record reviewed for Jack Cobb. Does not include record of authorization for performing tests. No record exists for subcontracted employees.
5.3.2. (VS-5.2.3) The laboratory shall notify both accreditation agency and the EAC within 30 days of any change in key personnel. When key personnel are added to the staff, the notification of changes shall include a current resume for each new staff member. This requirement is based on direction given under the initial NASED accreditation and is to be transferred to EAC. Need to develop/update.

Note 1: ‘Key Personnel’ is considered here to be the personnel identified in VS-4.5.2 above.

Note 2: ‘both accreditation agency’ is a residue from NASED as accreditation agency. It has not been confirmed that the future accreditation agency will require this but this was statement is extracted and updated from a draft for that agency. For this accreditation, the accreditation body is EAC.

5.3 Accommodation and environmental conditions (12)

5.3.1 a) Laboratory facilities for testing and/or calibration, including but not limited to energy sources, lighting and environmental conditions, shall be such as to facilitate correct performance of the tests and/or calibrations. The office is a basic administrative office with adequate lighting and support. No special needs outside of environmental testing requirement performed by other labs.

b) The laboratory shall ensure that the environmental conditions do not invalidate the results or adversely affect the required quality of any measurement. N/A for base office.

Note: Particular care shall be taken when sampling and tests and/or-calibrations are undertaken at sites other than a permanent laboratory facility.

c) The technical requirements for accommodation and environmental conditions that can affect the results of tests and calibrations shall be documented. N/A.

5.3.2 (VS-5.3.1) a) The laboratory shall have adequate facilities to conduct the voting system testing that it offers. This includes facilities for staff training, record keeping, document storage, and software storage.

b) If testing activities are conducted at more than one location, all locations shall meet the EAC requirements, and mechanisms shall be in place to ensure secure communication between all locations.

(VS-5.3.2)

5.3.3

a) The laboratory shall monitor, control and record environmental conditions as required by the relevant specifications, methods and procedures or where they influence the quality of the results.

b) Tests and calibrations shall be stopped when the environmental conditions jeopardize the results of the tests and/or calibrations.

5.3.3
5.3.4 Access to and use of areas affecting the quality of the tests and/or calibrations shall be controlled. The laboratory shall determine the extent of control based on its particular conditions.

(VS-5.3.6) If the laboratory is conducting its tests at a customer site or other location outside the laboratory facility, the environment shall conform, as appropriate, to the requirements for a laboratory environment. If a customer’s system on which a test is conducted is potentially open to access by unauthorized entities during test, the ITA shall control the test environment. This is to ensure that the systems are in a defined state compliant with the requirements for the test before starting to perform testing work and that the systems ensure that unauthorized entities do not gain access during testing. Ref NASED Technical Guideline #4. Draft procedures exit and are awaiting approval.

5.3.5 Good housekeeping. Observed reasonable office house-keeping.

5.4 Test and calibration methods and method validation (12)

5.4.1 General (12)

QTP, Sec 1.4 through 10.

a) The laboratory shall use appropriate methods and procedures for all tests and/or calibrations within its scope.

b) The laboratory shall have instructions on the use and operation of all relevant equipment, and on the handling and preparation of items for testing and/or calibration, or both, where the absence of such instructions could jeopardize the results of tests and/or calibrations. Not widely needed at Ciber. May need to look at such an instruction to provide the control of operating system setup as an example.

c) All instructions, standards, manuals and reference data relevant to the work of the laboratory shall be kept up to date and shall be made readily available to personnel (see 4.3).

d) Deviation from test and calibration methods shall occur only if the deviation has been documented, technically justified, authorized, and accepted by the customer. Need to develop.

5.4.2 Selection of methods (13)

Currently limited to broad based QTP for test areas such as TDP Review, Source Code Review, Functional Testing. Need to develop more specific test procedures that provide a standard base for testing between vendors.

a) Preferred test methods from International, regional, or national standards. (VS 5.4.1) methods required in VSS/VSG shall be used.

b) Additional details to supplement standard method.

d) Customer informed and agrees.

e) Shall confirm that it can properly be performed. (See under review of tenders, etc.)

(VS-5.4.2) Validation of the test method will be included in documentation.
5.4.3 Laboratory-developed methods (13)
   a)

5.4.4 Non-standard methods (13).

5.4.5 Validation of methods (14).

5.4.5.1 Validation definition

   Validation is the confirmation by examination and the provision of objective evidence that the particular requirements for a specific intended use are fulfilled.

5.4.5.2 The laboratory shall validate non-standard methods, laboratory-designed/developed methods, standard methods used outside their intended scope, and amplifications and modifications of standard methods to confirm that the methods are fit for the intended use. The validation shall be as extensive as is necessary to meet the needs of the given application or field of application. The laboratory shall record the results obtained, the procedure used for the validation, and a statement as to whether the method is fit for the intended use.

5.4.6 Estimation of uncertainty of measurement (14) N/A May need to develop in the future.

5.4.7 Control of data (15)

5.4.7.1 Calculation and data transfers.

   Calculations and data transfers shall be subject to appropriate checks in a systematic manner.

5.4.7.2 When computers or automated equipment are used for the acquisition, processing, recording, reporting, storage or retrieval of test or calibration data, the laboratory shall ensure that:

   a) computer software developed by the user is documented in sufficient detail and is suitably validated as being adequate for use; Will need to develop for test tools and utilities used for testing provided by a vendor.

   b) procedures are established and implemented for protecting the data; such procedures shall include, but not be limited to, integrity and confidentiality of data entry or collection, data storage, data transmission and data processing; May need to develop.

   c) computers and automated equipment are maintained to ensure proper functioning and are provided with the environmental and operating conditions necessary to maintain the integrity of test and calibration data.
5.5 Equipment (15). N/A However, review these requirements because they may apply and give guidance for some concerns and issues for working with the vendor supplied equipment refer 5.5.5. May need to apply to actual equipment under test.

5.6 Measurement traceability (17). N/A except as applies to calibrated equipment

5.7 Sampling (19). N/A. Program currently does not deal with sampling from manufacturing production.

5.8 Handling of test and calibration items (19).

5.8.1 The laboratory shall have procedures for the transportation, receipt, handling, protection, storage, retention and/or disposal of test and/or calibration items, including all provisions necessary to protect the integrity of the test or calibration item, and to protect the interests of the laboratory and the customer.

Section 5.10
Election Assistance Commission (EAC)
Interim Accreditation
Independent Test Authorities (ITA)

Assessment Report

SysTest Labs, L.C.C.
with
Percept Technology Labs

Conducted: Jul 10-12, 2006
Denver, CO

Assessor: Steven V. Freeman
Introduction

This accreditation assessment was conducted to support an interim program pending implementation of the full EAC Accreditation program in cooperation with the National Voluntary Laboratory Accreditation Program (NVLAP) under NIST Handbook 150-2006, NVLAP Procedures and General Requirements and NIST Handbook 150-22-2005 NVLAP Voting System Testing (HB 150-22). The interim program is designed to accredit ITAs formerly authorized under the National Association of State Election Directors (NASED) accreditation program to continue voting system testing under an EAC accreditation until such time as the NVLAP/EAC joint accreditation has qualified one or more testing laboratories as Voting System Test Laboratory (VSTL).

Summary of Findings

SysTest Labs with Percept Technology has the basic capability to perform a full range of voting system tests under the Federal Election Commission (FEC) Voting System Standards (VSS-2002). Their qualify management system was written to the earlier NASED Handbook 9201-A, 2001. They are in the process of converting their system to NIST Handbook 150-2006 but currently have a mix between the two. There was evidence through reviews, edits, and approval processes that they are actively engaged in developing and improving their processes and their personnel and top management are fully involved in a quality system and the necessary adaptations to respond to new requirements.

To perform this assessment, an interim checklist was created to implement the requirements of ISO/IEC 17025 as the NVLAP standards and checklists could not be used. This same checklist is being used for all three ITAs to check compliance and a work copy is being delivered to the labs for their reference on meeting unsatisfied requirements.

Deficiencies found in SysTest Labs/Precept assessment are classed as:

- on-going work which is expected to show progress and follow-up at the next assessment review but may not necessarily be fully completed as a continuous process of improvement,
- minor deficiencies whose correction are to available for review to EAC within 120 days or an alternative date set between the lab and EAC.
- major deficiencies which the lab needs to respond to within 30 days with a plan of corrective action and scheduled return visit.

On-going work. All the deficiencies in this category are due to the drafting and rewriting of the new procedures to the ISO/IEC standards. The process of reviewing, rewriting, and approving new procedures is an on-going process and should show evidence of the underlying quality management process is being used. This area also includes the process of adapting new EAC procedures which have not yet been approved.

Minor deficiencies:

1. The internal audits were against specific procedures or issues and did not encompass the review of management qualify processes required under the accreditation guidelines. This is ameliorated by the fact the review and revision on going with the change over to the new Quality System Manual is performing the same function, only lacking the formal record keeping of issues and corrective action plans needed to support the annual management review.
2. There is no record of a formal management review during the past year that could be presented for the assessment. Top management involvement with the change over to the new Quality System Manual, like the internal audits, is performing much of the same function with weekly management reviews but lacks formal record and the overall review of progress over the longer time period of an annual review.

3. There is no formal recording of complaints and reports of non-compliance for review and analysis. Complaints are being handled immediately and through weekly management reviews but there is not the formal record of the complaints that would support analysis of trends or follow-up review through later audits or management reviews.

4. Test methods exist as templates and test scripts but need to be placed under the controlled document system and their validation, where required, documented. The new SLPs planned or in draft are providing the mechanism to do this but do not include the validation component.

5. The copy of the VSS-2002 used was not current and the checklist used to trace completion of requirements derived from that VSS-2002 version was not complete. A new checklist to correct this problem should include adoption of the VVSG-2005 changes where appropriate. Note: this problem exists for all the labs as the checklist involved; was initially created and intended to be used as a common reference; the correction and replacement should involve a similar common document.

Major deficiencies.

1. Several of the labs used as subcontracted labs are not accredited by an IOC/IEC 17025 based accreditation body. This problem is partially a problem within the standards and EAC draft policies themselves as 17025 accreditation is not necessarily the appropriate method for validating labs performing the tests under quality standards (for example, the safety and accessibility standards). However, an accreditation program does exist for the Mil-Std 810 standards but is not held by the subcontracted lab, APT, performing the related tests.

Recommendation

Accreditation should be continued as a full service ITA provisionally based on continued development and follow through on the reported deficiencies, to be reviewed in 120 days or at such time as directed by the EAC. Some issues are dependent on clarification of procedures through the EAC.

(signed)

Technical Supplement:

Review test lab procedures/standards for the following elements of the VSS 2002 (and WSG 2005).

Core voting system tests:
- **1** Technical Data Package review,
- **OK/C** SLP-VC-07 PCA Documentation Review
  - PCA Document Review
    - a Verify that TDP contains required document content and identify vendor's document meeting requirements.
  - OK Vendor provides document trace and SysTest uses the trace to complete the PCA Doc
    Develops one for each configuration component and the 12 required documents from the
    VSS/VVSG
- **b** Identification of deliverables: Documents or manuals to be delivered to client for
  operation, maintenance, and training.
- **C** Task vendor to provide a list of deliverable documents or manuals.
  Supported in QTR, Section 3. “The TDP User/Owner manuals that would be part of the
  certified system delivered to a purchaser of the system are as follows:
- **c** Terms and references.
- **OK** Entry in QTP/QTR Template to include items needing identification
- **d** Review of documents for completeness and consistency
- **OK** SLP-VC-07 5.1.3.
  Documents are examined by subject expert, e.g., Software Specification is reviewed by
  Source Code team, against VSS requirements in that area.
- **e** Quality Assurance plan
- **OK** SLP-VC-07, PCA Doc-
  Performed as part of PCA review.
- **f** Configuration Management
- **OK** SLP-VC-07, PCA Doc-Quality Assurance
  Performed as part of PCA review
  Also examined and exercised in the Witnessed Build
- **g** Review of System release change log
  SLP-VC-07, PCA Doc-Change Notes
- **h** Review of vendor tests. *Includes but not limited to:*
  i Readiness Check
  ii Operational Status Check
  SLP-VC-08, PCA
  FCA Doc. Have separate template for Software, Hardware, Hardware/Software
  No sampling of vendor tests (perform test method validation)
- **i** Review of prior test lab tests
  See comments under PCA on accepting reports from other labs.
  If using other ITA reports on earlier product tests, need to validate and report the
  justification for acceptance of the report.
- **----Deliverables----**
- **j** TDP Document Trace matrix directory. Matching the document requirements to the
  vendor’s document names or titles.
- **OK** See above, In application package, exhibit 1.6
- **k** Production of formal Test Plan
  SLP-VC-05, Qualification Test Plan (Original qualification or modified system)
  Template QTP included in application package Exhibit 1.10
SysTest produced a Pre-Qualification Test Report (QAM 4.1.2) which summarized the results for the test and verification documentation, System Operation, Software, and Hardware Specification reviews. It provides a method to document and report discrepancies in the TDP/PCA document reviews to be resolved and document resolutions. SysTest has replaced this with the production of actual Test Plan to include the discrepancy report. This discrepancy report is carried through and provided as part of the Qualification Test Report.

2 Source code review,
QAM 4.1.3
QSM 4.1.1.9 This is mainly a reference to identifying and assigning personnel to the source code review

SLP-VC-11, PCA Source Code Review provides the procedures
SysTest has created a set of ‘definitions’ for different languages: C, C++, C#, Cobol, Delphi, HTML, Java, Oracle SQL, Perl, Powerbuilder, (MS) SQL, Visual Basic, XML. These ‘definitions’ are tables for reporting against the VSS/VVSG requirements and are used to identify requirements that may not apply.

a Catalog of source code
The SLP-VC-11 does not describe use of Module-Finder. Needs instructions for use.

b Catalog of compilation environment including COTS components of build
SLP-VC-13 Rev 03, 5.1.2 Verify environment to identify components of the build. If changed components are identified or are revealed, the vendor is required to resolve. SysTest requiring copies of the licensed versions to verify use of valid COTS and to assist in detecting modified components but not listed in procedures. Procedures update to include

c Determination of changes from prior review.
SLP-VC-11, Rev 05. 5.3.1. Working off the vendor supplied change documentation but also performing code differences against the components supplied for the Witnessed Build.

d Review for coding conventions and integrity requirements
SysTest has created a set of ‘definitions’ for different languages: C, C++, C#, Cobol, Delphi, HTML, Java, Oracle SQL, Perl, Powerbuilder, (MS) SQL, Visual Basic, XML. These ‘definitions’ are tables for reporting against the VSS/VVSG requirements and are used to identify requirements that may not apply. The Module-Finder utility runs a check against some of the requirements to highlight and identify modules requiring specific attention but all modules are subject to a human review by at least two and sometimes more reviewers. This procedure was witnessed. Needs to be recorded in procedures.

e Review for security.
Need documentation of specific features and practices used to review for security. This is being performed by knowledgeable human reviewers. Specific issues currently under review are unbound arrays, pointers, and dynamic structures. SysTest has also, in the past, detected and reported on ‘race track’ vulnerabilities. Needed for future development is an active process to recognize and adapt reviews to pick up on new vulnerabilities.

i Demonstrate
-----Deliverables-----

f Report of results
SLP-VC-11 PCA Source Code Review, 5.4.2 This process is basically include the source code review forms into the report following code statistics such as line counts provided by the Module-Finder. It is organized by functionality and language. Detailed module by module reports are not provided in the Qualification report but are available through archived test documentation.
Witnessed build from verified source code and COTS.

SLP-VC-13.
Discussed need to identify modules which were reviewed and which executables are changed. Changes in executables may occur due to build procedure changes or COTS library changes rather than reviewed source code changes. Need to review Guideline 3 on Witnessed Build for documentation required with the Witnessed Build. Specifically missing currently is the report to include observed anomalies from the source code review.

3 Physical configuration audit,
QAM 3.27 Performing Accuracy and Reliability Testing
QSM (refers to SLP)
SLP-VC-09 PCA Software and Hardware Configuration Audit
SLP-VC-23 Hardware Test Management
PC Configuration Checklist

Organization:
Percept handles test cases against hardware requirements
Derek handles System configuration and environmental description
Jennifer handles System configuration-functional
TC-history provides document change history.
Includes VSS requirement for each item.

Configuration verification against Configuration Management plan
SLP-VC-09, 5.2.2 Verify the test environment. Verifies the equipment under test, manuals, and supplies presented for testing match the equipment/documentation reviewed in TDP. Should include physical inspection of components and parts to see that the equipment design is as defined in documentation include the APL. After any mitigation, the equipment is audited to ensure configuration is defined and consistent with documentation. Need to update SLP to reflect the mitigation audit. Procedures include pictures and physical descriptions of changes and to confirm any Engineering Changes (EC) are complete. Also discussed issue of component marking to reflect version control and identification. May need to include diagrams or pictures where a marking change is required.

Accessibility standards
SLP-VC-23, 5.2 includes provisions for the Common Standards portion of the Accessibility Checklist (a tab in the PCA checklist). SyTest performs the physical measurements; Percept performs the other checks.
Minor note: VSS 2002/VVSG 2005 do not specify the table height involving a access limits for someone in a wheel chair. 28 CFR Ch. I (7-1-94) under Americans Disability Act, identifies the max height as 34 inches for table mounted or elevated equipment. Recommended to SyTest to include the reference and use in their test method.

Construction, including safety
SLP-VC-23/VSS Vol I 3.2.8. (Note: Typo in VSS 2002. Section 3.2.8 refers to 29 CFR where App B references 20 CFR. VVSG 2005 corrects to 29 CFR). Test is performed in Safety Lab under standard methods for 29 CFR.

Validity of operations provided in deliverable manuals
SLP-VC-23/09. Need to update to include reference to maintainability test case. Percept, under Maintainability Test Case, reviews maintenance manuals
SyTest, under SLP-VC-12 Preparing Test Cases, 5.1.4 to include testing of the vendor's manuals. Recommendation to include a statement in the Deliverable section of the report to recognize these manuals have been reviewed.
e. **Hardware transportation and storage tests.**

SLP-VC-23, Table 1, Environmental Hardware.

Issues to consider is ensuring the equipment tested is the same configuration used in final certification and that the operational status check has been validated. Need to include details for operational status check to ensure full verification of components and design. Will involve changes to several SLP. SysTest has been working with ensuring the operational status test is comprehensive and been revising test cases to allow for more comprehensive check.

f. **Hardware operational environmental test.**

Note: The system integration tests for accuracy and reliability (e. 1. and 2. below) are conducted in conjunction with this test and the final criteria include all components used to consolidated polling place and jurisdiction results from individual voting machines. See below e1 and 2.

g. **EMC and electrical test suit.**

SLP-VC-23, Table 1, Environmental Hardware.

Criterion performs this test with oversight by Percept. Criterion is fully accredited for these test under NVLAP. Issue may occur if the vendor brings in reports from other test labs. Need to add procedures to provide review/acceptance criteria for third party reports based on the following three criteria:

i. Verify test lab is accredited by MRP body
ii. Verify equipment under test is for same configuration as being certified
iii. Verify that operational status check/operations was applicable to a voting system operation.

h. **Safety inspection.**

SLP-VC-23. See item c above. In addition, consider the issue of the third party reports.

i. Verify test lab is accredited by MRP body
ii. Verify equipment under test is for same configuration as being certified
iii. Verify that operational status check was appropriate

---Deliverables---

i. Reports for the hardware, EMC and electrical, and Safety tests and inspections.

If necessary, provide a statement reporting the results of the verification on the applicability of the reports.

SLP-VC-23, 5.6. Need to add procedures to when requested to accept third party reports to document validation of the report for acceptability.

j. Directory of deliverables, including hardware and software setup and both application and COTS installed files. (Part of witnessed build documentation)

Qualification Report Template Rev 1.00 , 7.4 Appendix for qualification configuration and as a element in the Witnessed Build package. Need to add specifics about designating COTS components that are necessary for certified configuration.

4. **Functional configuration audit,**

QAM 4.1.1 through 4.21.8 Qualification Review and Test Documents.

QSM (references into SLP) May need to provide overview of test structures and requirements. Needs to provide a section with the generic voting system requirements provided in QAM 4.1.1 through 4.21.8.

SLP-VC-08 Vendor Test Review

Note: not all deficiencies will result in a recommendation to not certify.
SLP-VC-18 Discrepancy report and Test/Review Corrections.

5  System integration tests,

a  Accuracy. For non-COTS systems, includes 48 hr environmental operating test.
SLP-VC-23. Table 1 (Need to add accuracy under Environmental Hardware Test table) Earlier had not been doing this test under the 48 hr environment. They have revised procedure.
Need to ensure that the accuracy test includes the transfer of results and accumulation to the consolidated reporting.

b  Reliability. For non-COTS systems, includes 48 hr environmental operating test.
SLP-VC-23. Table 1.
Need to ensure that the reliability test includes the transfer of results and accumulation to the consolidated reporting.

c  Volume tests, and

d  Security tests.
§ 5. Qualification Test Report

6 Qualification Test Background (B2)
   a) General Information about the qualification test process. (For outside readers not familiar with the ITA testing).
   b) A list and definition of all terms and nomenclature peculiar to the hardware, the software, or the test report.

c) System Identification (B3). This is the test hardware and software used in this test.
   i) System name and major subcomponents.
   ii) System Version.
   iii) Test support hardware and
   iv) Specific documents (deliverables) from the TDP used to support testing.

d) System Overview (B4). Describes the voting system in terms of:
   i) its overall design structure,
   ii) technologies used,
   iii) processing capacity claimed by the vendor and
   iv) modes of operation.
   v) (May) include other products that interface with the voting system. Note:
      Shall include components necessary to consolidate and produce final results including telecommunications.

e) Qualification Test Results (B5). "This section provides a summary of the results of the testing process, and indicates any special considerations that affect the conclusions derived from the test results. This summary includes:
   i) Acceptability of the system design and construction based on the performance and software source code review.
   ii) The degree to which the hardware and software meet the vendor’s specifications and the standards, and the acceptability of the vendor’s technical and user documentation.
   iii) General findings on maintainability
      (1) Includes notation of specific procedures or activities that are difficult to perform.
   iv) d) Identification and description of any deficiencies that remain uncorrected after completion of the qualification test
      (1) that has caused or is judged to be capable of causing the loss or corruption of voting data, providing sufficient detail to support a recommendation to reject the system being tested.
      (2) deficiency in compliance with the security requirements,
      (3) deficiency in compliance with the accuracy requirements,
      (4) deficiency in data retention, and
      (5) deficiency audit requirements are fully described); and
   v) Recommendations to NASED ITA committee for approval or rejection.
   vi) Note: Deficiencies that do not result in a loss or corruption of voting data shall not necessarily be a cause for rejection.
Appendix Test Operations and Findings (B6)

i. Additional details of test results needed to enable understanding of the conclusions. B. b. Organized to reflect the Qualification Test Plan.

ii. Summaries of the results of

(1) hardware examinations,
(2) operating and non-operating hardware tests,
(3) software module tests,
(4) software function tests, and
(5) system-level tests (including
(6) security and
(7) telecommunications tests, and
(8) the results of the Physical and
(9) Functional Configuration Audits)

Appendix Test Data Analysis (B7)

i. Summary records of the test data and
ii. The details of the analysis. The analysis includes

(1) a comparison of the vendor's hardware and software specifications to the test data, together with
(2) any mathematical or statistical procedure used for data reduction and processing.
